## Acknowledgments

The 1963 Census of Manufactures was conducted under the direction of Maxwell R. Conklin, Chief, and Owen C. Gretton, Assistant Chief, of the Industry Division, Within the Industry Division, program responsibility along industry lines was shared by the following individuals who participated importantly in the entire census program: Willis K. Jordan, Foods, Textiles, and Apparel; Cyril M. Wildes, Lumber, Paper, and Chemicals; and Paul F. Berard and Clarence H. Olsen, Metals, Machinery, and Equipment. Edward A. Robinson was responsible for the concepts and definitions of establishment-type data, for preparation of the introductory text to the volumes, and for planning the content of the statistical tables in the area and subject reports.

Louis J. Owen, Assistant Chief for Production and Process Statistics, was responsible for the concepts followed in the product and materials inquiries and for the data on industrial water consumption and fuels and electric energy used. Jack L. Ogus, Assistant Chief for Statistical Methods, assisted by Donald F. Clark, was responsible for statistical methods and sampling techniques. Elmer S. Biles played an important role in developing the criteria for reviewing the tabulated data and supervised the review of the geographic statistics and much of the subject-volume materials for completeness and accuracy. Frank A. Hanna, a consultant to the Bureau of the Census, assisted in writing portions of the text.

William Cooper supervised the application of the system of industrial classification of establishments. Robert Torene made important contributions to the geographic statistics volume as well as to other phases of the census, and William R. Gray and Kenneth R. Brimmer made similar contributions to the product and materials inquiries. Alan I. Blum coordinated the work of the Division's professional staff at the Jeffersonville, Ind., Operations Office. The preparation of the manuscript for printing, within the Industry Division was the responsibility of Angela R. Daly.

Professional personnel in the commodity areas of the Industry Division developed the report forms for the various industries, reviewed the tabulations, and prepared the industry texts that accompanied the data. The respective areas and the individuals in charge during the census were as follows: Foods, John S. Berube and Charles A. Nicholls; Textiles, Robert J. Nealon; Apparel, Evelyn W. Colburn; Lumber and Furniture, Robert E. Bates; Paper, Printing, and Publishing Lawrence J. LaMoure; Chemicals, Reese R. Morgan; Nonmetallic Minerals, Keith B. Willis; Primary Metals and Intermediate Metal Products, Malcolm E. Bernhardt; Machinery, Conrad J. Jacobs; and Electrical Machinery and Transportation Equipment, Bernard B. Bernsten. The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowl edgment statements appearing in the 80 industry reports published separately prior to their assembly into the Industry Volume.

Systems and procedures used in processing the reports were developed in the former Economic Operations Division. Marion D. Bingham, Chief, and in the present Systems Division, Sol Dolleck, Chief, assisted by Samuel Schweid, Nathan Lesowitz, and Jack Margolis. Mary H. Johnson and Roger O. Lepage, assisted by Paul E. Poissant, developed and supervised the computer programing under he direction of Eugene L. Wendt. Clerical procedures were developed by Joseph N. Brooks and William W. Perry under the supervision of Carl Mueller. Quality control plans and procedures were developed by George Minton, Maxwell R. Jeane, and John F. Powell, under the direction of Herman H. Fasteau. Robert D. Krook, Executive Officer, Census Operations Office at Jeffersonville. Ind., assisted by Gene P. King and Waller Wynne, Jr., was responsible for the phases of the proc essing operations performed there. Data processing and related operations were performed by the former Data Processing Systems Division under Robert F. Drury, Chief.

Staff members in other divisions and offices of the Census Bureau also made significant contributions to the 1963 census. Arthur Horowitz, in his capacity as Census of Manufactures Coordinator, made important contributions to the planning and operational phases of the work. Murray Dessel of the Economic Research and Analysis Division coordinated the overall processing of the large multiunit companies and provided the statistics on central administrative offices and auxiliaries. Harold T. Goldstein of that Division was responsible for co ordinating industry coding concepts in manufactures with those followed in the business and mineral industries fields. Conrad J. Thoren and George W. Morris of the Geography Division supervised the preparation of the maps and charts. Geraldine Censky and Frances Bresnahan of the Administrative and Publications Services Division provided editorial supervision and publication planning.

Library of Congress Card No. A66-7830

## Preface

This is one of a series of volumes presenting the final results of the 1963 Census of Manufactures. The quinquennial census for 1963 was a large-scale undertaking and its success depended upon important contributions from a large number of private and public individuals and organizations. An essential element in the census was the fine cooperation received from over 300,000 manufacturing establishments in completing the appropriate report forms.

The advice and counsel of trade associations, individual manufacturing companies, government agencies, and research organizations were most valuable in determining the content of the census reports, especially the product and materials inquiries. The Advisory Council on Federal Reports provided special assistance in determining the feasibility of collecting various types of data. Precensus exchanges of ideas with the Census advisory committees of the American Statistical Association, the American Economic Association, and the American Marketing Association contributed significantly to the planning phases of the census. Timely publicity was given the manufactures census by chambers of commerce, local newspapers, trade papers, and television and radio stations.

## Census of Manufactures

## Publication Program

Final results of the 1963 Census of Manufactures are published in three volumes, each containing a specific type of data.

## VOLUME I. SUMMARY AND SUBJECT STATISTICS

In addition to a summary chapter presenting the basic data historically for industries and geographic areas, separate chapters present data on a subject basis. Chapter titles are as follows:

1. General Summary
2. Size of Establishments
3. Type of Organization
4. Manufacturers' Inventories
5. Expenditures for Plant and Equipment
6. Power Equipment in Manufacturing Industries
7. Fuels and Electric Energy
8. Selected Materials Consumed
9. Selected Metalworking Operations
10. Water Use in Manufacturing
11. Concentration Ratios in Manufacturing Industries
Three special reports are also included in this volume: Manufacturing Activitiy in Government Establishments, Shipments of Defense Oriented Industries, and Origin of Exports of Manufactured Products. Each of the chapters in this volume was previously published as a separate report (Series MC63(1)-, numbers 1 to 10. Chapter 11 was issued as a special report for the Senate Subcommittee on Antitrust and Monopoly.)

## VOLUME II. INDUSTRY STATISTICS

This volume contains separate chapters for each of 80 groups of related industries which cover approximately 430 individual industries. Statistics are shown on detailed product shipments and materials consumption in terms of quantity and value, cost of fuels and electric energy, value added by manufacture, employment, payrolls, inventories, and capital expenditures. Selected statistics are included for earlier census years. This volume is published in two parts. Part 1 contains a general summary chapter and chapters for SIC Major Groups 20 to 28 , as well as chapters for related industries within these major groups; Part 2 contains chapters for SIC Major Groups 29 to 39 and 19 as well as chapters for related industries within these major groups. A special report, Manufacturing Activity in Government

Establishments, is included in both parts of this volume. The 80 related-industry chapters were previously published as separate reports in series MC63(2)-, 19A to 39D.

## VOLUME III. AREA STATISTICS

This volume contains separate chapters for each State and the District of Columbia. The statistics include all-manufacturing totals for the State and its standard metropolitan statistical areas, counties, and cities with populations of 10,000 or more, with industry detail for the larger areas. The volume also includes a summary chapter presenting data for each of the nine geographic divisions and a special report, Manufacturing Activity in Government Establishments. Each State chapter was previously published as a separate report in Series MC63(3)-, 1 to 51.

## OTHER REPORTS

Two series of reports have been issued showing the number of manufacturing establishments in each of the approximately 430 manufacturing industries classified according to their employment size class and the State and county within which they are located. The first series places emphasis on the industry, showing data by location (State and county). Nine separate reports present data for 20 major industry groups. The second series places emphasis on the location showing data by industry. Nine reports-one for each of the nine geographic divisions of the United States-were published in this series. The series titles are as follows:

Location of Manufacturing Plants by Industry, County, and Employment Size (MC63(S)-3, numbers 1 to 9 )
Location of Manufacturing Plants by County, Industry, and Employment Size (MC63(S)4, numbers 1 to 9 )

## The 1963 Census of Mineral Industries Publication Program

The 1963 Census of Mineral Industries was conducted jointly with the census of manufactures. This census was similar in scope and in publication program. Final results are published in two volumes, as follows:

Volume I. Summary and Industry Statistics, contains a summary chapter, 5 subjecttype chapters, and 18 chapters showing related mineral industries.

Volume II. Area Statistics, contains separate chapters for each State (Delaware, Maryland, and the District of Columbia are combined).

page
Table Column Heads ..... vi
Data Item Guide to Industry Statistics ..... xiii
Industry Chapter Descriptions ..... x v
Introduction ..... 1
Major Groups:
Petroleum and Coal Products ..... 29-1
Rubber and Plastics Products, N.E.C. ..... 30-1
Leather and Leather Products ..... 31-1
Stone, Clay, and Glass Products ..... 32-1
Primary Metal Industries ..... 33-1
Fabricated Metal Products ..... 34-1
Machinery, Except Electrical ..... 35-1
Electrical Machinery ..... 36-1
Transportation Equipment ..... 37-1
Instruments and Related Products ..... 38-1
Miscellaneous Manufacturing ..... 39-1
Ordnance and Accessories ..... 19-1
Special Report: Manufacturing Activity in Government Establishments ..... SR-1
Appendixes:
A Comparability of Census of Manufactures in Terms of the Value Added Measure ..... A-1
B Industry Descriptions ..... B-1
C Composition of Industries in the 1963 Standard Industrial Classification ..... C-1
D Census Report Forms and Punch Cards ..... D-1
E Authority for Census: Title 13, United States Code ..... E-1
F Standard Metropolitan Statistical Areas ..... F-1
G Current Industrial Reports (CIR) Commodity Statistics ..... G-1
H Comparability of Product Classes Between the 1963 and 1958
Censuses of Manufactures ..... $\mathrm{H}-1$
I Alphabetic Index of Manufactured Products ..... I-1

The chapters of this volume were published earlier as separate reports in the 1963 Census of Manufactures series MC63(2)-, 19A to 39D.

Data in this volume include all significant corrections uncovered after publication of the separate reports. The 1958 and other historical data include all significant corrections made since the latest publication of these figures.

## TABLE COLUMN HEADS: GENERAL SUMMARY TABLES

table 1. General Statistics for Operating Manufacturing Establishments: 1963 and Earlier Years

| Year (Selected years, 1849 to 1963) | Establishments |  | Proprietors and partners <br> (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted | Capital expenditures, new | Index of industrial production |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total <br> (number) | With 20 employees or more (number) |  | Total <br> (number) | Payroll <br> $(\$ 1,000)$ | Total <br> (number) | Man-hours <br> $(1,000)$ | Wages <br> $(\$ 1,000)$ |  |  |  |

## TABLE COLUMN HEADS: INDUSTRY CHAPTER TABLES--Continued

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $\mathbf{A}$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

|  | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $\begin{gathered} \text { Ind. } \\ \text { code } \\ \text { (4-digit) } \end{gathered}$ |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio Col. B <br> $\overline{\mathrm{Col} . \mathrm{B}+\mathrm{C}}$ <br> (percent) | Total, made in all industries <br> $(\$ 1,000)$ | Made in this industry $(\$ 1,000)$ | Made in other industries $(\$ 1,000)$ | Coverage ratio <br> Col. B <br> Col. F <br> (percent) |
|  |  | A | B | C | D | E | F | G | H | 1 |

## TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

## table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

| Product | Product | Total production | Total shipments including interplant transfers |  | Transfer s to other plants of the same company |  | Producedandconsumedin sameestablish-ment( 1,000 pounds $)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Product <br> code | Product and year | Indexes $(1954=100)$ |  |
| :---: | :---: | :---: | :---: |
|  |  | Production | Unit value |

table 6c. Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958 to 1963

| Code | Product class | 1963 | 1962 | 1961 | 1960 | 1959 | 1958 | 1954 | 1947 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

| Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments |
| :---: | :---: | :---: | :---: | :---: | :---: |

table 7A. Materials by Kind: 1963 and 1958

| Code | Material <br> (List of materials varies with each industry) | Basis | Unit of measure | 1963 |  |  |  | 1958 |  |  |  |

## tABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry special ization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Appendix A for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Valueadded bymanufacture,adjusted( $\$ 1,000$ ) | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | $\begin{gathered} \text { Capital } \\ \text { expend- } \\ \text { itures, } \\ \text { new } \\ (\$ 1,000) \\ \hline \end{gathered}$ |

## B - PRODUCTS AND MATERIALS

## Industry Chapter Descriptions

Chapters in this volume are coded to industries as classified in the Standard Industrial Classification (SIC) system. Pages are numbered with a chapter identification prefix; for example, the chapter on Weaving Mills in Major

## PART I

Major Group 20-FOOD AND KINDRED PRODUCTS
20A Meat Products
2011 Meat slaughtering plants
2013 Meat processing plants
2015 Poultry dressing plants
20B Dairies
2021 Creamery butter
2022 Natural and process cheese
2023 Condensed and evaporated milk
2024 Ice cream and frozen desserts
2026 Fluid milk
20C Canned and Frozen Foods
2031 Canned and cured seafoods
2032 Canned specialties
2033 Canned fruits and vegetables
2034 Dehydrated foods products
2035 Pickles, sauces, salad dressings
2036 Fresh or frozen packaged fish
2037 Frozen fruits and vegetables
20D Grain Mills
2041 Flour mills
2042 Prepared animal feeds
2043 Cereal preparations
2044 Rice milling
2045 Blended and prepared flour
2046 Wet corn milling
20E Bakery Products
2051 Bread and related products
2052 Biscuit, crackers, and cookies
20F Sugar and Confectionery Products
2061 Raw cane sugar
2062 Cane sugar refining
2063 Beet sugar
2071 Confectionery products
2072 Chocolate and cocoa products
2073 Chewing gum
20G Beverages
2082 Malt liquors
2083 Malt
2084 Wines and brandy
2085 Distilled liquor, except brandy
2086 Bottled and canned soft drinks
2087 Flavorings
20H Fats and Oils
2091 Cottonseed oil mills
2092 Soybean oil mills
2093 Vegetable oil mills, n.e.c.
2094 Animal and marine fats and oils
2096 Shortening and cooking oils

Group 22 will begin on page 22A-1. The list below shows the prefix identification for each chapter and the SIC industries included under each title. Chapters for both parts of this volume are shown.

201 Miscellaneous Food Products
2095 Roasted coffee
2097 Manufactured ice
2098 Macaroni and spaghetti
2099 Food preparations, n.e.c.

## Major Group 21-TOBACCO MANUFACTURES

21A Tobacco Products
2111 Cigarettes
2121 Cigars
2131 Chewing and smoking tobacco
2141 Tobacco stemming and redrying

## Major Group 22-TEXTILE MILL PRODUCTS

22A Weaving Mills
2211 Weaving mills, cotton
2221 Weaving mills, synthetics
2231 Weaving, finishing mills, wool
2241 Narrow fabric mills
22B Knitting Mills
2251 Women's hosiery, except socks
2252 Hosiery, n.e.c.
2253 Knit outerwear mills
2254 Knit underwear mills
2256 Knit fabric mills
2259 Knitting mills, n.e.c.
22C Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods
2261 Finishing plants, cotton
2262 Finishing plants, synthetic
2269 Finishing plants, n.e.c.
22D Floor Covering Mills
2271 Woven carpets and rugs
2272 Tufted carpets and rugs
2279 Carpets and rugs, n.e.c.
22E Yarn and Thread Mills
2281 Yarn mills, except wool
2282 Throwing and winding mills
2283 Wool yarn mills
2284 Thread mills
22F Miscellaneous Textile Goods
2291 Felt goods, n.e.c.
2292 Lace goods
2293 Padding and upholstery filling
2294 Processed textile waste
2295 Coated fabric, not rubberized
2296 Tire cord and fabric
2297 Scouring and combing plants

2298 Cordage and twine
2299 Textile goods, n.e.c.

2491 Wood preserving
2499 Wood products, n.e.c.

## Major Group 23-APPAREL AND RELATED PRODUCTS

```
23A Men's and Boys' Apparel
    2311 Men's and boys' suits and coats
    2321 Men's dress shirts and nightwear
    2322 Men's and boys' underwear
    2323 Men's and boys' neckwear
    2327 Separate trousers
    2328 Work clothing
    2329 Men's and boys' clothing, n.e.c.
23B Women's and Misses' Outerwear
    2331 Blouses

3334 Primary aluminum
3339 Primary nonferrous metals, n.e.c.
3341 Secondary nonferrous metals
33D Nonferrous Metal Mill and Foundry Products
3351 Copper rolling and drawing
3352 Aluminum rolling and drawing
3356 Rolling and drawing, n.e.c.
3357 Nonferrous wire drawing, etc.
3361 Aluminum castings
3362 Brass, bronze, copper castings
3369 Nonferrous castings, n.e.c.
33E Forgings and Miscellaneous Primary Metal Industries
3391 Iron and steel forgings
3392 Nonferrous forgings
3399 Primary metal industries, n.e.c.

## Major Group 34-FABRICATED METAL PRODUCTS

34A Metal Cans, Cutlery, Hand Tools, and General Hardware
3411 Metal cans
3421 Cutlery
3423 Hand and edge tools
3425 Hand saws and saw blades
3429 Hardware, n.e.c.
34B Heating Apparatus, Except Electric, and Plumbing Fixtures
3431 Metal Plumbing fixtures
3432 Plumbing fittings, brass goods
3433 Heating equipment, except electric
34C Fabricated Structural Metal Products
3441 Fabricated structural steel
3442 Metal doors, sash, and trim
3443 Boiler shop products
3444 Sheet metal work
3446 Architectural metal work
3449 Miscellaneous metal work, n.e.c.
34D Screw Machine Products, Bolts, Metal Stampings, and Metal Services
3451 Screw machine products
3452 Bolts, nuts, rivets, and washers
3461 Metal stampings
3471 Plating and polishing
3479 Metal coating, engraving, etc.

34E Fabricated Metal Products, N.E.C.
3481 Fabricated wire products, n.e.c.
3491 Metal barrels, drums, and pails
3492 Safes and vaults
3493 Steel springs
3494 Valves and pipe fittings
3496 Collapsible tubes
3497 Metal foil and leaf
3498 Fabricated pipe and fittings
3499 Fabricated metal products, n.e.c.

Major Group 35-MACHINERY, EXCEPT ELECTRICAL
35A Engines and Turbines and Farm Machinery and Equipment
3511 Steam engines and turbines
3519 Internal combustion engines
3522 Farm machinery and equipment

14. Man-hours of Production and Related Workers

## I. GENERAL

## 1. ROLE OF THE CENSUS OF MANUFACTURES

The census of manufactures provides a detailed profile of the largest sector of the American economy. That census obtains, from every manufacturing plant with one employee or more, information on its input of labor and materials, its output of products, its location, and the legal form of organization of the owning firm. This information is obtained in sufficient detail to permit its classification by industry, by size of plant, by the homogeneity of its output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

The census of manufactures is conducted simultaneously with the censuses of mineral industries, wholesale and retail trade and selected services, and transportation. ${ }^{1}$ This has facilitated the statistical coverage of the entire range of activities of most enterprises and a consequent improvement in the capability of the Bureau of the Census to deal effectively with the statistical problems of identifying establishments which support manufacturing activity, such as central administrative offices, auxiliaries, and sales branches; and to classify entire enterprises into industrial categories.

25. Special Inquiries
26. Special Reports Shown in Volume 1, Summary and Subject Statistics
27. Imputation of Data
28. Confidentiality of Data for Individual Companies
29. Abbreviations

General statistics information (i.e., total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures is published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); overall measures of manufacturing activity are shown at the county and individual city level down to cities of 10,000 or more population. This information constitutes a periodic inventory of the Nation's manufacturing economy that provides a benchmark for measuring the changes in that structure.

The census of manufactures also provides a benchmark from which more frequent surveys can be developed on a scientific sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an annual survey of manufactures on a sample basis during the intervening years. At the end of each 5 -year census, a new sample is drawn relying on the overall characteristics described by the census itself. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains
less detailed information on products, materials consumption, and equipment. ${ }^{2}$

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other important indicators of the economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the input-output studies of the Office of Business Economics. The information derived from the census of manufactures is also used by the Federal Reserve Board in cooperation with the Census Bureau to develop indexes of industrial production for census years. This index is used as a benchmark for the monthly Federal Reserve Index of Industrial Production-a key monthly indicator of current economic activity.

[^2]The concurrent collection of comparable data on wholesale and retail trades, selected services, manufacturing, and minerals in the censuses beginning with 1954 has permitted the Census Bureau to develop its Enterprise Statistics Program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Likewise, through the Enterprise Statistics Program, it is possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

## 2. ECONOMIC SIGNIFICANCE OF MANUFACTURING SECTOR

Manufacturing is the largest sector in the country's economy. In 1963, manufacturing establishments employed approximately 17 million persons of a civilian labor force of 75 million. During the 35 -year period, 1929 to 1963, income originating in manufacturing has averaged 30 percent of national income (see table A). Wholesale and retail trade, the next largest sector, averaged about 15 percent.

The need for frequent and comprehensive statistics on manufactures derives as

TABLE A. National Income, Total and Amounts Originating in Durable and Nondurable Manufactures, for Selected Years
(Dollar values in billions)

| Year | National income | National income originating in-- |  |  |  |  |

much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole.

Within manufacturing, durable goods industries accounted for about 57 percent of all manufactures for that period. However, they tend to be more volatile than nondurable goods, accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. Of the census years since 1919, only 1925, 1935, 1939, 1947, and 1963 have not included some part of a period of contraction and a consequent underrepresentation of durable goods in the total. (See table B.)

Geographic Location of Manufactures.The preponderance of manufacturing in the United States is predominantly in the Northeast as is shown in table C, page 4. Over the years, however, there has been a shift to the South and West.

Size Distribution of Manufacturing Plants.-Most manufacturing establishments require a substantial amount of capital and ordinarily a considerable volume of business for efficient operation. While there are many small plants, they account for relatively little of the Nation's production. Thus, as shown in table D, half the plants have less than 10 employees but they account for only 3 percent of the value added by manufacture.

## 3. EARLIER CENSUSES

The census of manufactures for 1963 is the 27 th such census for the United States. The first census of manufactures covered 1809 and, with the exception of 1829, a census was taken at 10 -year intervals in connection with the decennial census of population up to and including 1899. It was conducted at 5 -year intervals from 1904 through 1919, and every other year from 1921 through 1939. The census was suspended during World War II, but it was resumed for 1947. Legislation enacted in 1948 provided for a census every 5 years, cov-

graphical structure of the manufacturing sector which is closely comparable over long periods of time.

## 4. DEFINITION OF MANUFACTURING

Manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (e.g., baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for the trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which do not undertake physical production but perform only the entrepreneural functions of buying the materials, designing, and marketing the product, and have the actual production done on contract (e.g., apparel jobbers).

In addition to the production of goods and manufacturing services, manufacturing plants engage in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary activities associated with the conduct of the establishment as a manufacturing entity; e.g., management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like. Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the fig. ures for operating manufacturing establishments and are included in the data shown for
central administrative offices and auxiliaries (see sections 8 (form ṆC-X6) and 11 of the text).

The following types of activities, while having many of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are exclud. ed from the census:
(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, cotton ginning, egg hatching, and similar activities closely associated with agriculture are excluded.
(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census; for example, stone and clay mining at cement, lime, and clay products plants.
(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.
(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.
(e) Production of coke for own use by establishments owned by public utility companies.
On the other hand, the census of manufactures excludes manufacturing at locations which are not primarily manufacturing plants: (1) Manufacturing by retail establishments which sell most of their products on the premises directly to household consumers, e.g., retail bakeries, ice cream stores, and feed stores; (2) manufacturing by construction contractors at the site, e.g., production of paving mixtures; and (3) manufacturing by educational, eleemosynary, and penal institutions.

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment
into the appropriate major economic sector is more difficult.

In the 1963 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on an ap. proximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and other inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable inputs per dollar of receipts.

Data were obtained on the manufacturing activities during 1963 of establishments owned and operated by the Federal Government (military arsenals, Navy yards, etc.) and of Federal and State prisons for the purpose of presenting complete information on manufacturing operations in the United States. Statistics on the employment, value added by manufacture, and products manufactured by the Department of Defense establishments and the quantity and value of products made in Federal and State prisons are shown in a separate chapter in each manufactures volume. These data are not included in any of the individual industry or industry group totals or area statistics appearing in the census of manufactures volumes. However, information on govern-ment-owned, privately operated establishments is included throughout the statistical tables in the appropriate industry on the same basis as privately owned and operated plants.

## 5. THE STANDARD INDUSTRIAL CLASSIFICATION (SIC)

The specific industry coding and groupings in the 1963 Census of Manufactures follow the structure of the Standard Industrial Classification Manual, published by the Bureau of the Budget. This manual, which is a classification structure for the entire national economy, was first issued in 1939.4 In the

[^5]manufacturing sector, the manual built upon the Bureau of the Census manufacturing industry classifications developed over the years. The SIC was developed for use in classifying establishments by type of activity in which they are engaged in order to facilitate the collection, tabulation, and publication of data relating to establishments and to promote uniformity and comparability in the presentation of statistical data by government agencies, trade associations, research organizations, and others.

The SIC divides all activities into broad industrial divisions (manufacturing, mining, retail trade, agriculture, etc.). It further subdivides each division into major industry groups, then into industry groups, and finally into detailed industries. The numbering system provides flexibility, permitting use of classification at various levels of detail according to the specific needs and uses desired. Employing a decimal system of coding, the Major Industry Group is assigned two digits (Major Group 20 for Food and Kindred Products), the Industry Group, three digits (Group 201 for Meat Products), and the industry, four digits (Industry 2011 for Meat Packing Plants). Thus, for each 4-digit industry, it is possible to identify the Industry Group to which it belongs by the first three digits of its code and, by its first two digits, the Major Industry Group. For the manufacturing division, the 21 2-digit SIC Major Groups (19 to 39) are subdivided into 149 3 -digit SIC Groups (191 to 398) and into 427 4 -digit industries (1911 to 3999). While the SIC contains 427 industries, the Bureau of the Census combines three industries in the automotive area into one, for a total of 425 industries.

Most of the 425 manufacturing industries are defined in terms of a specific group of related products. Usually, the products are made of similar materials and by similar processes, and are competitive. In determining the boundaries of product-defined industries, ${ }^{5}$ it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. A small number of industries are basically defined by material used as well as final product of the plant.

[^6]There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (i.e., secondary products), and (c) use similar materials or processes. (See sections 15, 16, 18, and 24). While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; i.e., for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries. Consequently, the census is the primary instrument for effecting revisions in the SIC manufacturing sector.'

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line"' of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single gen-eral-purpose system of classification can satisfy these diverse needs only partially; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2 - and 3 -digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4 -digit industries are susceptible to allocation to such categories, while the 2 -digit SIC groups are not.

[^7]To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4 -digit SIC industries into "subindustries." This device is employed where there are wide disparities in the operating ratios of the plants in the industry because of differences in the degree of intraplant vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 65 manufacturing industries for editing purposes and many were regarded as sufficiently significant to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multi-outlet bakeries; many apparel industries (Group 23) are subclassified into manufacturers, contractors, jobbers; the lumber industry (2421) by degree of integration, etc.

To provide a further measurement of variations within 4 -digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization. (See section 24 for a more complete discussion of product specialization data.)

## 6. ESTABLISHMENT BASIS OF REPORTING

The census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

Census tabulations of establishment reports, therefore, differ substantially from those prepared on a company basis; i.e., from consolidated reports which combine various types of activities at different locations (thereby yielding a net sales figure for the industry exclusive of interplant transfers but making meaningful geographic tabulations of employment and value added impossible). These consolidated reports also include nonmanufacturing activities of companies primarily engaged in manufacturing. Census figures will also differ to some extent from other tabulations based on establishment reports where the definition of an establishment, as to location and line of activity, is not applied in the same manner.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC
industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not of serious proportion so that the filing of separate reports would not be warranted as a practical matter, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in the companies' records to provide establishment-type reporting.

SIC industry definitions take account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulp mills operated in combination with paper mills are included in one report.

In 1963 and 1958, as in earlier years, a minimum size limit was set for including establishments in the census. Reports were required from all establishments employing one or more persons at any time during the census year. The same size limitation has applied since 1947 in censuses and annual surveys of manufactures. In the 1939 and earlier censuses, establishments with less than $\$ 5,000$ value of products were excluded. The change in the minimum size limit in 1947 has not appreciably affected the historical comparability of earlier census figures except for data on number of establishments for a few industries.

A special study of manufacturing plants with no employees in 1958 was made to analyze the amount of manufacturing activity conducted by these very small establishments. While there were over 50,000 manufacturing establishments in this category in that year, they had only about one-quarter of 1 percent of the total value of shipments of all manufacturing.

The SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. At one extreme are
the 21 very broad 2 -digit groups and at the other about 10,000 individual 7 -digit products. In between are approximately 150 3-digit groups, 425 4-digit industries, and 1,100 5 -digit product classes. The 7 -digit products and 5 -digit product classes are considered the primary products of the industry with the same first four digits as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishments is derived from a summation of values for 7 -digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, payrolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in table 6 of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6 ), the composition of the industry's output as shown in tables $5 A$ and $5 B$ should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from these tables 5A and 5B. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments (both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, may be included those establishments which are vertically integrated and those
which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

In many industries, there are some large plants with a product-mix such that the value of secondary products is as large as or larger than the value of primary products. In the Annual Survey of Manufactures (ASM), these plants are prevented from shifting back and forth among industries because of only minor shifts in products by the application of a "resistance formula" in assigning industry classifications.

The formula gives approximately equal weight to the need for statistical measurement of change in an industry and the measurement of an industry's status at a point in time.

The resistance technique for large establishments was introduced for the first time in the quinquennial census in 1963 and was applied to certainty cases in the ASM panel for 1963.

The 1963 industrial classification of an ASM plant with 100 employees or more was allowed change from that assigned in 1962 where-
(1) The new primary activity constituted 60 percent or more of its total value of shipments, or
(2) The new primary activity, while less than 60 percent, was at least twice as great as the old primary activity in the current year, or
(3) The new primary activity, if it did not meet either of the first two conditions, exceeded the old primary activity by at least 20 percent in both the current and the preceding year.
Where the establishment's industry classification coded in the "annual survey" manner differed from that developed independently from the 1963 census report, the annual survey code took precedence, except where additional census tests not available in the annual survey justified the census code (e.g., type of materials consumed, type of operations, special inquiries).

## 7. GEOGRAPHIC AREAS

Census Regions, Divisions, and States.For over a century, the Census Bureau has presented data for States and major sections of the United States related not only by geographic proximity but also by similarities of agriculture, industry, and social characteristics. Since the 1909 Census of Manufactures, the present nine Census geographic divisions have been used. Beginning with the 1939 census, the nine divisions were grouped further into four broad geographic regions: Northeast, South, North Central, and West.

Not only are these State groupings convenient for the summary presentation of data below the U.S. level, but they are essential to presenting a maximum of geographic information for those individual industries in which application of the census disclosure law pre. cludes the publication of individual State data. (See the discussion in section 28, Confidentiality of Data for Individual Companies.) The relative importance of manufacturing among the States and divisions is shown in table E.

In Volume III, Area Statistics, industry detail is shown wherever possible under the rules of confidentiality at the regional, State, county, and standard metropolitan statistical area (SMSA) levels, in addition to the allmanufacturing totals. The level of industry detail shown for each area is as follows:

State-2•, 3-, and 4-digit industry detail;

County-2. and 3-digit industry totals, but only for those industry groups which have 500 em. ployees or more in the industry group in the county;

City-information only at the all-manufacturing level for cities of 10,000 or more population according to the 1960 Census of Population or later special censuses conducted by the Bureau of the Census.

Standard Metropolitan Statistical Areas.-The SMSA's for which data are shown are those defined by the Bureau of the Budget
(Value in millions of dollars)

Note: Detailed figures may not add to the totals because of independent rounding.
in 1964. ${ }^{7}$ An SMSA is a county or group of contiguous counties (except in New England) which contains at least one central city of 50,000 inhabitants or more or "twin cities" with a combined population of at least 50,000. In addition to the county or counties, containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central city. In New England, towns and cities rather than counties are the units used in defining an SMSA. Thus an area may contain not only highly industrialized counties but also adjoining counties which, though primarily residential in character, con-

[^8]tribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Industry group (2. and 3.digit) statistics as well as all-manufacturing totals are published for SMSA's with 40,000 to 190,000 manufacturing employees. Detailed industry (4-digit) statistics are published for SMSA's with more than 190,000 employees. These industry statistics for each area are presented in table 6 in the report for each State. There are 75 SMSA's with more than 40,000 employees, and 15 with more than 190,000.

Assignment of Geographic Area Codes.In the census of manufactures, as in the entire economic census, each individual establishment (plant) was assigned a geographic code that indicated the State, the county, and the city in which it was located. Most manufacturing activities require a permanent structure and fixed equipment so that the location of a plant usually can be specified with little or no ambiguity. Plants which straddle boundary lines are classified as located within the more populous of the two areas in which some part of the plant is located.

In previous censuses, the geographic code was assigned manually to every report after a clerical review of the physical location reported by the respondent. In 1963, the report form was precoded by high-speed electronic equipment prior to mailing through the use of an extensive file of addresses classified by place. Only those reports which indicated differences between the mailing address and the reported physical location were manually coded after receipt.

## 8. THE CENSUS REPORT FORMS

The diversity of manufacturing activities in the United States made it necessary to use about 200 different report forms to collect information on the products shipped and materials used by the 425 manufacturing industries. In order to obtain the data essential to the census in a manner consistent with cost considerations and reportability by the respondent, it was decided to require detail information only from larger plants. For the numerous smaller plants, typically having less detailed records and representing a very minor portion of manufacturing activity, data requirements were limited to a relatively few key items on a series of short forms. All plants in the annual survey of manufactures sample reported on standard forms irrespective of their employment size. Using the administrative records of the Social Security Administration in conjunction with existing Bureau of the Census records, it was possible to determine correctly, in most cases, the specific questionnaire each manufacturing establishment should receive.

Information was obtained on all 1963 report forms regarding the physical location, Social Security employer identification number, company affiliation, and legal form of ownership. These kinds of information were necessary to assure control over the completeness of coverage (see section 9, Development of the Mailing List), and also permitted the classification of each establishment by geographic location and type of organization. (See section 26, Special Reports.)

Standard Forms.-All ASM establishments and all of the larger non-annual survey establishments received the standard (long) form which contained the full census detail.

Each standard form called for the same general items regardless of the industry: Total employment, total payrolls, production-worker employment and man-hours by quarter, pro-duction-worker wages, material costs, value of shipments, fuel and electric energy costs, inventories by type, and capital expenditures by type. However, the forms differed in the detailed inquiries on the quantity and value of products shipped and the quantity and cost of individual materials consumed. There were also miscellaneous inquiries such as type of operation and equipment used, departmental inquiries, special details on delivery operations, etc., that were unique to an individual in. dustry or industry groups.

Information on the gross book value of total fixed assets in place (structures and equipment combined) at the end of 1962 and at the end of 1963, and on rental expenditures for buildings and for equipment during 1963 was requested of establishments in the 1963 Annual Survey of Manufactures sample panel. This special information will be published beginning with the 1964 Annual Survey of Manufactures.

Short Forms.-A short form was mailed to establishments with less than 6 em ployees except in a few industries where it was sent to those with less than 10 employees. This form required considerably less detail; e.g., total employment and payrolls without any detail on production workers, cost of materials as a grand total, and value of shipments in terms of broad classes of products. No information was requested on inventories or capital expenditures.

However, for the few industries in which small plants account for a significant proportion of the total value of shipments or employment, special modifications were made to collect some detail on the individual products shipped and less frequently on the types of materials used. These industries consisted of logging and sawmills, concrete products, dairy products, meat products, and several printing and publishing industries.

Form MA-101, Manufacturing Plants Under Construction During 1963.-This form was designed to obtain data on capital expenditures by large manufacturing firms for new plants under construction during 1963 but not yet in operation at the end of the year. It was mailed to all multiestablishment companies with 250 employees or more. It was also mailed to any other company which indicated on one of its establishment report forms, in a special check-box section, that it had a plant under construction but not yet in operation. Each such plant was coded geographically and to a 4-digit industry from the description given of its expected activity. The information obtained on form MA-101 was integrated into
new capital expenditures figures in all tables of the 1963 Census of Manufactures. (For further discussion, see section 22, Expenditures for Plant and Equipment.)

Form NC-X6, Central Administrative Offices and Auxiliary Establishments.-Separate reports were required from each multiestablishment company which indicated that it was operating a separate central administrative office or auxiliary (i.e., a warehouse, a research laboratory, a garage, a repair shop, etc.) serving one or more of its operating establishments. Each auxiliary establishment for which a report on form NC-X6 was submitted was classified as to the nature of the activity it perfortned and as to the 2-digit industry category of the establishment(s) which it primarily served. The form requested information on employment as of March 15 and payrolls for the year, as well as a percentage breakdown of its employment total, by the type of activity that the employees were performing-administrative work, research and development work, warehousing, direct selling, etc. In addition to this information, the report form also collected data on the total sales that were made for the company from the central office or auxiliary, the cost of research and development work done, value of inventories held, and the capital expenditures for structures and equipment.

The information on the central administrative offices (CAO) and auxiliaries has been tabulated separately and appears as part of the Census Bureau's report, Enterprise Statistics 1963, Part 2, Central Administrative Offices and Auxiliaries. In that publication, information will appear not only by 2-digit industry of the establishments served but also by type of function performed and industry category of owning company. In the census of manufactures, the employment and payrolls of central administrative offices and auxiliaries serving manufacturing have been added to the
figures for operating establishments into the State, county, standard metropolitan statistical area, and city all-manufacturing totals. Wherever industry detail is provided, the employment and payroll at the central administrative offices and auxiliaries appear as a separate 2-digit industry category at the end of the list of industries. In the manufacturing sertor, in 1963 , there were approximately 5,300 such establishments which accounted for 726 thousand employees with payrolls of $\$ 6.6$ billion, representing 4 percent and 7 percent, respectively, of the totals of all manufacturing employment and payrolls. It should be noted also that employment of CAO's has been increasing more rapidly than employment of operating establishments, partially the result of the tendency of larger companies to centralize operations formerly carried on a decentralized basis at each plant. (See table F.)

## Other Related Forms in the 1963 Economic Censuses:

Form NC.KL, Company Summary Report Form.-This form requested, for the consolidated company, information on payrolls, employment, sales or receipts, inventories, capital expenditures, value of assets, and rental payments. It was restricted to companies with 250 employees or more in the industries included in the economic censuses.

Based on information filed on the establishment reports of the multiestablishment companies, the entire company was classified into 1 of 179 enterprise industry categories developed by grouping the Standard Industrial Classification industries. A special report, Enterprise Statistics, 1963, Part 1, General Report on Industrial Organization, provides tables showing the characteristics and diversification of these multiestablishment companies as derived from the information on census establishment reports.

TABLE F. Comparison of Employment and Payrolls at Operating Manufacturing Establishments and Central Administrative Offices
and Other Auxiliaries Serving Them

| Period | Operating establishments |  | Central administrative offices and auxiliaries ${ }^{1}$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Employees$(1,000)$ | Payrolls <br> (billion dollars) | Employees$(1,000)$ | Payrolls <br> (billion dollars) | As a percent of total ${ }^{1}$ |  |
|  |  |  |  |  | Employees | Payrolls |
| 1963. | 16,234 | 93.3 | 726 | 6.6 | 4.3 | 6.6 |
| 1958. | 15,423 | 73.9 | 602 | 4.5 | 3.8 | 5.7 |
| 1954.. | 15,645 | 63.0 | 453 | 2.9 | 2.8 | 4.4 |
| Percentage increase: |  |  | 20 | 47 | (X) | (X) |
| 1958 to 1963...... | 6 -1 | 26 17 | 20 33 | 47 54 | (X) | (X) |

[^9]Form CB-51, Wholesale Sales Branches and Sales Offices of Manufacturing Companies.-As part of the census of business, information was collected on the sales branches and sales offices of manufacturing companies. In addition to figures on employment and payrolls, these forms requested information on inventories held at and sales, by merchandise line, from these locations. The merchandise lines in the census of business for these wholesale branches and offices are very similar to the classes of products used in the manufacturing area. The totals of the two areas cannot be directly compared inasmuch as the sales from the sales branches and offices include products which were bought and resold as well as those of the company's own manufacture.

## Special Surveys Relating to the

 1963 Census of Manufactures.-In addition to the information collected on the standard 1963 census of business, manufactures, and mineral industries forms, additional information was collected on special survey forms. The census of manufactures publications also contain the data collected in these various special but related surveys, as described below. The publications, described below, appear as chapters in Volume I, Summary and Subject Statistics.Form MC-D3, Department of Defense Establishments, and MC-D4, Penal Institutions were used to collect information on government-owned and government-operated manufacturing establishments. These forms were used to collect information on two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information is provided on employment, man-hours, payrolls, cost and value of work done, by industry group and by State. For prison industries, however, only product data is included in the census of manufactures reports. For a detailed description of the methods used to collect this information and the data presented, see the Special Report, Manufacturing Activity in Government Establishments, at the end of this volume.

Form MC-D12, Supplementary Inquiries for 1962.-In order to reduce the burden of the 1963 census on the respondent and the Census Bureau, information on horsepower rating of equipment in place by type of equipment, fuels consumed by the type of fuel, and electric energy was collected for 1962 and restricted to those establishments included in the annual survey of manufactures. In previous censuses, this information had been requested
on the standard census forms. Information is published on these items by industry, by State, and by standard metropolitan statistical area. Within State or standard metropolitan statistical area, 2 -digit industry detail is provided wherever possible. For details on this special survey, see Volume I, Summary and Subject Statistics, chapters 6 and 7.

Form MA-175, Report on Shipments to or Receipts for Work Done for the Federal Government Agencies and Their Contractors and Suppliers for 1963.-To measure the impact of government procurement on the economy and on geographic areas, form MA-175 was mailed to approximately 2,500 annual survey of manufactures establishments accounting for over 95 percent of all shipments and receipts of 30 defense-oriented industries which account for the major portion of government procurement. The survey provided information on the value of products shipped to or receipts for work done for Federal agencies, their contractors, subcontractors and sup. pliers. The information was further subdivided into shipments or receipts on government prime contracts and to other manufacturers in the ultimate performance of Federal Government contracts.

Information on employment and value of shipments by class of product and by Federal agency is provided. Likewise, information is available for States and SMSA's by broad industry groups within each geographic area wherever possible.

Special Survey Form MA-161, Origin of Exports of Manufactured Products. This report form was mailed to a special subsample of the annual survey of manufactures plants with 100 employees or more and exporting more than $\$ 25$ thousand per year. The report provides information on the value of manufacturers' exports by State, standard metropolitan statistical area, and by industry of the producing plant.

MC-D13, Industrial Water Use, 1964.-This special survey, although collecting data for the year 1964, was conducted as part of the 1963 Census of Manufactures. The form was mailed to approximately 10,000 establishments which had indicated on their census of manufactures form consumption of 20 million gallons or more of water in 1963. Information is provided on water intake and discharge by industry and by area.

## 9. DEVELOPMENT OF THE MAILING LIST

The manufacturing plants included in the census of manufactures were identified as part of the overall program to develop the mailing list for the 1963 censuses of business, manufactures, and mineral industries.

The Internal Revenue Service (IRS) maintains a comprehensive list of names and addresses of legal entities with one employee or more which are required to file quarterly tax returns under the Federal Insurance Contributions Act. To each of these legal entities, IRS has assigned a unique employer identification (EI) number. Arrangements were made to obtain this list of El numbers for the selection of those companies which were to be included in the 1963 censuses of business, manufactures, and mineral industries. Since this list contained many companies not within the scope of the economic censuses, it was matched to a similar list of El numbers maintained by the Social Security Administration (SSA). In cooperation with IRS, the SSA assigns an industry code to every El number based on information reported by the taxpayer when he applied for an El number. Only those El numbers with industry codes within scope of the economic censuses were included in the basic mailing list.

This list of El numbers provided the industry code necessary to select the current report form and a payroll size code to determine whether a standard or a short form was to be mailed. However, the list was defective in one basic respect: The El number applies to a legal entity and not to an individual establishment, the basic unit for which census data is required.

Therefore, it was necessary to supplement this list by contacting all known or possible multiestablishment companies to obtain a list of their individual plants or business locations. In January of 1963, a precanvass form (NC-X1, Listing of Establishments) was sent to all companies that had indicated in the 1958 Census of Manufactures or the 1962 Annual Survey of Manufactures that they were operating at more than one location. In addition, all "apparent" single-establishment companies in the IRS-SSA file of El numbers with sizeable employment were included in this precanvass.

For the known multiestablishment companies, the Census Bureau prelisted the establishments as they had been last reported to the Census Bureau (the 1958 census except for the manufacturing companies which had reported for their manufacturing establishments in the 1962 Annual Survey of Manufactures). The company was requested to update this list by deleting closed locations, correcting the addresses, reporting the current El numbers used for each plant, as well as adding any locations operated but not already included in the listing. The El numbers reported for these multiestablishment companies were excluded from the list of El numbers obtained from IRS-SSA prior to mailing the 1963 census report forms. Thus, the 1963 Census of Manufactures list for single-establishment companies was obtained from the IRS-SSA, but the list of plants of mul-
tiunit companies was obtained directly from those companies by a special precensus survey.

While the IRS-SSA list was generally adequate in providing sufficient industry and size information to determine the proper form for mailing, a number of the EI numbers did not have precise industry or size information associated with them. A special form (NC-X3, General Report) was mailed to all such companies in the 1963 censuses of business, manufactures, and mineral industries. Since it was assumed that these establishments were quite small, only limited statistics were required. On the basis of the information reported, these establishments were coded and included in the basic tabulations. If the NC-X3 indicated substantial activity, the company was recontacted with a standard census form.

The 1963 census was distributed and returned by mail. The very large complex multiestablishment companies were mailed their report forms in November 1963 to give them as much lead time as possible to meet the substantial demands of the 1963 census on their statistical staffs. Report forms for the smaller companies were mailed in January 1964. Collection was completed by August 1964. All mailing and receiving, including the various reminder mailings as well as routine editing, coding, and card punching, was done at the Census Bureau's Operations Office in Jeffersonville, Ind. The more difficult problem reports and all reports from very large companies were sent to Washington for review prior to punching. The punched data were transmitted to Washington through a telephone computer link-up and all computer processing, review of the tabulated data, and the preparation of the publications were performed there.

## 10. COMPLETENESS OF COVERAGE AND ACCURACY OF THE DATA

Since the 1963 mailing list was considered to be complete, no field coverage check was conducted. There was a concerted effort to assure completeness of coverage through systematic reminders at 4 - to 6 -week intervals including the use of certified mail, telegrams and, for the larger companies, telephone calls.

Considerable attention has been devoted to assuring completeness and correctness of the reporting by large companies. In the early stages of processing, the individual establishment reports of the very large companies were reviewed along with the company summary report, form NC-K1, to make certain that the company had included reports for all its establishments and subsidiaries and that there was no duplication in reporting among manufacturing, minerals, central offices, and sales branches and offices. The NC-K1 was also a vehicle for the company to report changes in ownership since the census precanvass was
conducted in the preceding year. Accurate company affiliation information is necessary, it should be noted, to enable the Census Bureau to review the tabulations to assure confidentiality of the data; to provide statistics for the "enterprise statistics" program; and, in manufacturing, to prepare the company concentration ratics by industry and product class. Part 2 of form NC-K1 required that the parent company reconcile its payroll figures by employer identification numbers filed with the Internal Revenue Service to those reported on the individual censuses of manufactures, business, and mineral reports. As a result of this comparison, omissions were detected as well as duplication of the reporting within the census establishment file.

As part of the computer edit of the data, all "annual suvey of manufactures" establishments in the census were matched to the list of establishments in the 1962 Annual Survey of Manufactures. All large unmatched establishments were reviewed to make certain that plants which changed ownership, were newly established, or had been closed down since 1962 were properly handled. Furthermore, during the review of the published data, whenever there was a significant change from the previous year in the totals for each industry or geographic area, the reports were checked out individually to make certain that there was no inadvertent omission or duplication in reporting between years, and that the change was valid.

All report forms in manufacturing were audited by the computer. The figures reported in 1963 by each of the 60,000 annual survey of manufactures establishments were compared to those reported in 1962. Establishments with significant increases or decreases in any data item or with significant changes in selected operating ratios (e.g., cost of materials per dollar of shipments, payroll per employee, production-worker wages per manhour, etc.) were identified for subsequent review by the Bureau's statisticians. Small establishments with problems were tentatively accepted or modified by the computer but annotated for subsequent examination.

The operating ratios of the 250,000 smaller establishments not in the annual survey of manufactures were edited against industry averages developed from the 1958 Census of Manufactures and brought up to date through the 1962 Annual Survey of Manufactures data. In the review of the tabulations prior to the publication of the final reports, the selected operating ratios for all establishments were analyzed and the mean ratio for all establishments in each industry determined. A frequency distribution of establishments according to operating ratio class was prepared, and those establishments whose ratios were more than two standard deviations from the industry
average were isolated as "outliers," examined and, if necessary, corrected. A similar type of analysis was made for the individual products shipped and the individual materials consumed. A unit value was calculated for each item reported by an establishment. An industry average unit value was also calculated and a frequency distribution tabulation of unit values prepared. Extreme unit-value cases were isolated and corrected during the preliminary and final table review.

## II. EXPLANATIONS OF TERMS USED IN COLLECTION AND PUBLICATION OF DATA

## 11. EMPLOYMENT AND RELATED ITEMS— GENERAL

The census of manufactures provides information on employment and payrolls at operating establishments and central administrative offices and auxiliaries. The standard form for operating establishments collected the number of production workers by quarter and all other employees as of the 15 th of March, as well as annual payrolls for production workers and other employees separately. Form NC-X6, Central Administrative Offices and Auxiliaries, collected figures on employment as of March 15 and payrolls for the year.

In presenting the data, the employment and payrolls of central administrative offices and auxiliaries which serve manufacturing plants are included in the all-industries totals in every summary table (U.S., State, standard metropolitan statistical area, county, and city). However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2 -digit industry group of the establishments they served. Thus, in all tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group following the industries in Major Groups 39 and 19.

Separate statistics for all central administrative offices and auxiliaries including those of nonmanufacturing companies will be published as part of the 1963 censuses of business, manufactures, and mineral industries in Enterprise Statistics 1963, Part 2, Central Administrative Offices and Auxiliaries. In that publication, information will appear not only by 2-digit industry of the establishments served but also by type of function performed and industry category of owning company.

## 12. EMPLOYMENT OF OPERATING MANUFACTURING ESTABLISHMENTS

All Employees.-The category "all employees" comprises all full-time and part-time employees on the payrolls of operating manufacturing establishments who worked or re-
ceived pay for any part of the pay period which included the 12th and ended nearest the 15th of the months specified on the report form. At the all-industry level, the employees of central administrative offices and auxiliaries are included. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Excluded are members of the Armed Forces and pensioners carried on the active rolls but not working during the period. Officers of corporations are included as employees; proprietors and partners of unincorporated firms, however, are excluded from the total.

Production and Related Workers.This category comprises workers (up through the working foreman level) engaged in fabricating, processing, assembling, inspection, receiving, storage, handling, packing, warehousing, shipping (but not delivering), maintenance, repair, janitorial, watchman services, product development, auxiliary production for plant's own use (e.g., power plant), recordkeeping, and other services closely associated with these production operations at the establishment covered by the report. Supervisory employees above the working foreman level are excluded from this category.

All Other Employees.-_"All other employees" are nonproduction personnel of the manufacturing establishment, including those engaged in the following activities: Factory supervision above the working foreman level, sales (including driver salesmen), sales delivery (highway truck drivers and their helpers), advertising, credit, collection, installation and servicing of own products, clerical and routine office functions, executive, purchasing, financing, legal, personnel (including cafeteria, medical, etc.), professional, and technical. Also included are employees on the payroll of the manufacturing establishment engaged in the construction of major additions or alterations to the plant and utilized as a separate work force.

Average Employment.-The 1963 Census of Manufactures report forms requested employment figures for "production and related workers" for four selected pay periods (i.e., production worker midmonth employment in March, May, August, and November). For "all other employees'" only a mid-March figure was requested. Thus, the "annual average" of operating establishments is composed of an average of the four monthly figures for the "production workers" plus the March figure for "all other employees."

This approach was initiated in the intercensal annual surveys of manufactures to simplify the schedule format and lighten the reporting burden of respondents, since it was found that the average of these selected pay
periods approximates very closely the average employment for the year that would be obtained from the 12 pay periods for almost all industries.

The employment figure shown for all industries in most tables is the 4 -month average.

For a few highly seasonal industries, production-worker figures were collected for all 12 months and are shown in Volume II, table 3 , for those industries.

## 13. PAYROLLS OF OPERATING MANUFAC. TURING ESTABLISHMENTS

For each industry, this total includes the gross earnings paid in the calendar year 1963 to all employees on the payroll of operating manufacturing establishments. Respondents were told they could follow the definition of payrolls used for calculating the Federal withholding tax. It includes all forms of compensation such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners, if an unincorporated concern. Also excluded are payments to members of Armed Forces and pensioners carried on the active payroll of manufacturing establishments.

The 1963 census definition of payrolls, identical to that recommended to all Federal statistical agencies by the Bureau of the Budg. et, is also the same as the 1958 census definition. It should be noted that this definition does not include employers' Social Security contributions, or other nonpayroll labor costs such as employees' pension plans, group insurance premiums, and workmen's compensation.

As in the case of employment figures, the payrolls of separate central administrative offices and auxiliary units of multiestablishment companies are not included in the totals for individual industries or industry groups.

## 14. MAN-HOURS OF PRODUCTION AND RELATED WORKERS

This total consists of all plant manhours of production and related workers as defined above. It represents all man-hours worked or paid for at the plant including actual overtime hours (not straight-time equivalent hours.) It excludes hours paid for vacations, holidays, or sick leave, when the employee was not at the plant. Where employees elected to work during the vacation period, only actual hours worked by such employees were reported.

Man-hours were generally well reported except in some industries, like apparel, where work is commonly performed on a piece-rate basis. However, man-hours were not collected for the very small establishments which were mailed special short forms (see section 8). Experience has shown that these small establishments have difficulty in distinguishing between production and other types of employees. Manhours were estimated for these small establishments as well as for other nonreporters. Because estimating was largely confined to small establishments, there is no significant qualification to the validity of overall industry and geographic area totals for man-hours, except for sawmills and a few other industries characterized by small establishments. However, the man-hour figures for establishments with fewer than 10 employees, shown in the size of establishment tables, should be interpreted with this factor in mind.

## 15. MATERIALS

Cost of Materials, Etc., Consumed.-A summary inquiry on the 1963 census report forms requested information on the cost of materials, supplies, semifinished goods, fuels, and electric energy, actually consumed or put into production during the year and the cost of products purchased for resale, by each manufacturing establishment, whether purchased, withdrawn from inventories, or received from other establishments of the company. Included also were the costs of materials supplied by the establishment which were processed elsewhere on contract for the establishment. (The products produced elsewhere under contract for the establishment are included in the value of shipments of the establishments; see section 16 , value of shipments).
"Cost" was defined as the direct charges actually paid or payable for items consumed or put into production during the year, after discounts, and including freight charges and other direct charges incurred by the establishment in acquiring the materials.

To arrive at the industry total "cost of materials, etc.," separate figures were obtained for (a) the total delivered cost of all raw materials, semifinished goods, parts, components, containers, scrap, and supplies consumed or put into production in 1963; (b) the amount paid for electric energy purchased; (c) the amount paid for all fuels consumed for heat, power, or the generation of electricity; (d) the cost of work done by others on materials or parts furnished by manufacturing established (contract work); and (e) the cost of products bought and resold in the same condition.

It should be noted that the cost of fuel consumed under " $c$ " above does not include fuel used as a material in the manufacturing process; for example, coal used in the produc-
tion of coke. Such costs were included with other materials cost in category "a" above.

The total excludes the cost of services used, such as advertising, insurance, telephone, etc., and developmental, research, and consulting services of other establishments. It also excludes overhead costs, such as depreciation charges, rent, interest, royalties, etc., and it excludes materials, machinery, and equipment used in plant expansion or capitalized repairs which are chargeable to fixed assets accounts.

For materials received from other plants of the same company or from a central materials depot (whether at the same or different physical location), the respondent was asked to value the items at their full economic value as produced, plus freight and other direct handling charges. The respondent was asked to check, where possible, that reported costs equaled the value of shipments reported for the items by the company's plant which produced and transferred the goods plus the freight and other direct charges (see value of shipments, section 16).

A summation of industry cost of materials figures to industry group totals results in large and unknown amounts of duplication, owing to the addition of costs reported by related industries engaged in successive fabrication stages in the production of finished manufactured products. For this reason, cost-of-materials figures shown at the industry group ( 2 and 3 -digit) and all-industry levels must be used with caution. With some important exceptions (such as refrigeration machinery, radios and television receiving sets, and motor vehicles and parts), this duplication is not significant within individual 4 -digit industries.

Individual Materials Consumed.—In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected on 633 specific materials.

Of these materials, 314 were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining 319 "partial coverage" materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Consumption information was also collected for an additional 492 items which were produced and consumed in the same plant as part of the product sections of the report forms.

Because American industry uses an enormous variety of materials, the number of materials for which "complete coverage" consumption data ( 90 percent or higher) were ob-
tained had to be strictly limited. The selection of a particular material for such coverage was, therefore, based on the following criteria:
(1) The importance of the material as measured by the total value of U.S. consumption of the material;
(2) The percentage of total consumption accounted for by manufacturing establishments;
(3) The availability of consumption information from manufacturers' records; and
(4) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.
The materials included on a limited coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry.

The individual materials are shown by industry of the consuming establishment in Volume II, table 7's. In Volume I, Summary and Subject Statistics, information is shown for most of the complete-coverage materials according to industry and geographic area of consuming establishment.

The data on materials consumed relate generally to the quantity and cost of materials purchased or transferred from other plants of the same company. However, for selected materials which are also importantly produced for use within the same establishment, information was requested on such "captive" production in quantity terms only.

Some undercoverage exists in the statistics for most individual materials. The undercoverage results from the fact that:
(1) Individual materials consumption information was obtained only from establishments using one of the census of manufactures standard forms, except on industries for which the short forms were modified to request consumption of a limited number of important materials. For the most part, therefore, plants with a very small number of employees are not represented in these statistics.
(2) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the mininmum amount was $\$ 5,000$.

The use of such cutoffs, as well as the use of short forms, is not believed to have had a significant effect on the totals for most materials. However, for industries where a sizeable proportion of the activity is accounted for by small establishments or where a specified material is used in relatively small quantities, the above limitations may be of some consequence.

## 16. PRODUCTS

Value of Shipments.-Except in a few industries, the respondents were instructed to report net selling values, f.o.b. plant, after discount and allowances and excluding freight charges and excise taxes. In a few industries, specifically noted in the text of the industry chapters, Volume II, delivered prices were acceptable if delivery was included as an integral part of the plant operations, such as in the milk and bakery industries.

Manufacturers were asked to include as products shipped, not only the products made in the establishment but also those made elsewhere under contract from the materials owned by the establishment. Included were all products sold, transferred to other plants of the same company, or shipped on consignment.

In addition, manufacturers reported receipts for contract work performed for others, resales (i.e., the value of all products resold without further processing), receipts for miscellaneous activities such as sale of scrap and refuse, and the value of installation and repair work performed by the plant employees. Although the value of products bought and resold without further processing is included in the value of shipments totals for each industry, it is excluded from the figures for individual products or classes of products.

Multiestablishment companies were asked to report value information for each establishment as if it were a separate economic unit. They were instructed to report the value of all products transferred to other plants of the company at their full economic value; i.e., to include, in addition to direct cost of production, a reasonable proportion of company overhead and profits.

Individual Products.-In the 1963 census program, information was collected on the output of approximately 10,000 individual product items. The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases it may be much more detailed and in other cases it is more aggregative. For example, "pharmaceutical preparations" was distributed
into nearly 100 items, whereas, "automotive gasoline" was reported as a single item.

Some 6,000 of the product items were listed separately on the 1963 census report forms. Data for the remaining 4,000 products were obtained in the monthly, quarterly, or annual surveys comprising the Current Industrial Reports series of the Census Bureau. ${ }^{8}$ Totals for the year 1963 for these items as derived from the commodity surveys are shown in the "products shipped" table (table 6) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation. Appendix F contains a complete listing of the surveys in the Current Industrial Reports program with page references in Volume II where the data appear.

The list of products for which separate information was collected was prepared after consultation with industry and government representatives. Comparability with previous figures was given considerable weight in the selection of product categories so that comparable 1958 information is presented for most products.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected.

As mentioned earlier, shipments include both commercial shipments and transfers of products to other plants of the same company. For industries in which a considerable portion of the total shipments are transferred to other plants of the same company, separate information on interplant transfers was also collected. Moreover, for products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total production and often consumption of the item within the plant was collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of Products.-For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5 -digit code for the class of product, and a 4 -digit code for the total pri-

[^10]mary products in an industry (see section 6 for application of coding structure to the assignment of SIC codes for establishments).

The 10,000 product items in the 1963 census (including products from the Current Industrial Reports program) were grouped into approximately 1,100 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6D provides information on the value of shipments of product classes by State; and table 5B, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4 -digit industry value of shipments and the 4 -digit product group value of shipments. In table 8, the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class of product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

## 17. INDEXES OF PRODUCTION AND UNIT VALUE.

Based on the type of quantity and value statistics shown in table 6A's of the Industry Volume, preliminary indexes of production and unit value (value of shipments divided by quantity of shipments) have been constructed for the primary products of the industry produced or shipped by all producers, including those in other industries. These indexes are shown in table 6B's of the industry
chapters. The 1958 unit values were used as weights in construction of a weighted aggregative production index. A unit-value index, weighted by quantity of production or shipments, was also constructed. The latter index was used, where necessary, to deflate value of shipments of products for which no satisfactory quantity data were available.

A special census of manufactures report will be issued, in cooperation with the Federal Reserve Board, on indexes of production, consolidating the information shown in the 6B tables into group and total indexes and discussing in some detail the objectives and methodology of the indexes and the data problems and limitations. That report will contain revisions of the table 6B indexes and will include indexes for some industries not previously published.

## 18. INDUSTRY AND COMMODITY <br> AP. PROACHES TO VALUE OF SHIPMENTS

In the census of manufactures tables, value of shipments figures are shown for 4 -digit industry and 4 -digit product groups which are primary to an industry. Both categories are identified by the same 4 -digit number and title. However, the two sets of figures must be distinguished carefully in use.

Under the industry approach, each plant is assigned to one or the other of the approximately 4254 -digit industries. This is done primarily to secure information on payrolls, man-hours, cost of materials, value added by manufacture, and other matters which relate to the operations of the entire plant. As part of this process, the entire shipments of the plant are also assigned to a particular industry. This will include its output not only of products classified in the industry (primary products) but of products classified in other industries as well (secondary products) and miscellaneous receipts and resales. The value of shipments on an industry basis appears in tables described as "General Statistics" (e.g., most tables in Volume I; and tables 1, 2, 3, 4, and 8 in Volume II).

Tables 6A through 6C in the industry chapters of Volume II are tabulated on a commodity basis and provide value-of-shipments figures for 4 -digit product groups as well as 5 -digit product classes and 7 -digit products on a wherever-made basis. The 4 -digit value figures are derived by aggregating the values of individual products (or product classes) shipped, irrespective of the industry code of the establishment shipping them. Thus, the 4 -digit product-group total avoids the complications of secondary products and miscellaneous receipts inherent in the 4 -digit industry value of ship. ments.

From census to census, the value figures for some 4 -digit product groups show
greater stability than the comparable 4 -digit industry value of shipments. The latter includes the contribution of some establishments which are highly diversified and only marginally coded to the industry. Minor and temporary shifts in product mix could reclassify such establishments from one industry to another without any substantial or permanent change in their operations. In the annual survey of manufactures and the 1963 Census of Manufactures, this erratic shifting was minimized by the application of a resistance factor which required that large establishments ( 100 employees or more) be reclassified only if there was a very substantial shift in product mix or evidence that the newer product mix remained stable over a number of years. (See also section 6 above.)

## 19. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregate of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries includes large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as motor vehicles and parts, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2 -digit and 3 -digit industry groups because these totals often include industries which represent successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the "Food Group" and the addition of pulp mills to paper mills in the "Paper and Allied Products Group" of industries. Estimates of the overall extent of this duplication indicate that the value of manufactured products exclusive of such duplication-the value of finished manufac-tures-tends to approximate two-thirds of the total value of products reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, these data are not shown in the geographic area tables (Volume III) and caution is urged with their use when they are provided at the 2 - and 3 -digit industry group level in Volumes I and II.

Even where no significant amount of duplication is involved, value of shipments figures are deficient as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry.

The difference between the industry and the commodity approach can be illustrated by the example of fabricated structural steel.

While the major share of the output of these products comes from plants which are principally engaged in their production, substantial quantities are also manufactured by plants classified in other industries, such as boilershop products, sheet-metal work, and miscellaneous metal work. At the same time, plants classified in the fabricated metal products industry also manufacture products of other industries. The resultant overlapping is evident from the excerpt from table 5B in the Industry Volume, below.

Thus, it will be seen that of the total shipments of $\$ 1,916$ million by plants classified in the fabricated structural metal industry, $\$ 1,432$ million consisted of products of this industry, while $\$ 237$ million consisted of products of other industries, and $\$ 247$ million of miscellaneous receipts. Shipments of fabricated structural steel products totaled $\$ 1,604$ million, of which $\$ 172$ million was contributed by plants classified in other industries.

It should be noted that the figures shown in table $5 B$ for the total value of shipments of the 5 -digit product classes and the 4-digit product groups are the subtotals and totals of the individual products in table 6A which bear the same first 5 -digit and 4 -digit code numbers.

In order to measure the extent to which industry and product statistics may be compared, two measures have been developedthe "specialization ratio" and the "coverage ratio." The specialization ratio measures the extent to which the plants in an industry spe-
cialize in making the products primary to that industry. It is derived by dividing the total output (both primary and secondary products) of the industry's plants into their output of products primary to the industry. Thus, in the above illustration, the specialization ratio is 0.86 ; that is, shipments of fabricated structural steel products account for 86 percent of all products made and shipped by plants in that industry ( $1,432 \div 1,669=.86$ ). The coverage ratio measures the extent to which the products primary to an industry are shipped by plants classified in that industry. In the illustration, the coverage ratio is 0.89 ; that is, 89 percent of all shipments of fabricated structural steel products was made by plants primarily engaged in the manufacture of these products $(1,432 \div 1,604=.89)$. These ratios appear in tables 1 and 5 A in the industry chapters, Volume II, and in appendix B, industry descrip. tions, Volumes I and III.

In table $G$, industries are grouped by 1963 specialization and coverage ratios. In 1963, as in 1958, approximately 95 percent of manufacturing employment is included in industries with specialization of 80 percent or higher. Nine of 412 industries, for which the industry (primary product) specialization ratio was published for 1963, had ratios of 100 percent and 218, with 56 percent of the employment in all industries for which the ratios were published, had ratios between 90 and 99 percent. Only 29 of the 412 industries showed ratios below 80 percent. The higher the ratio, the smaller the output of secondary products; conversely, the lower the industry specialization

[^12]ratio, the higher the output of secondary products. Lower industry specialization ratios give evidence of diversity of output by an industry and overlap with other industries. Over time, decreasing industry specialization ratios would be a manifestation of the need for revision of the classification structure.

## 20. VALUE ADDED

Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year. ${ }^{9}$

[^13]Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude, as described in the paragraph below, purchased services. Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

Value added by manufacture should not be confused with "national income originating in manufacturing," as presented in the national income by industrial origin estimates compiled by the Office of Business Economics (OBE), Department of Commerce. (See tables H and I.) The latter measure is the sum of factor costs incurred by an industry in production and is, therefore, a more "net" concept of value added than that used in the census of manufactures. "Income originating" excludes,

Source: Survey of Current Business, July 1966 p. 15.
in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income originating estimates are prepared from company rather than establishment data. This method results in the inclusion of some part of the net value added by nonmanufacturing establishments of companies classified as being primarily manufacturing, and conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classified as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases income originating. (In fact, in the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one major industry group in
which OBE "income originating" exceeds Census "value added by manufacture.')

Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income orig. inating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about $\$ 15$ billion of the $\$ 148$ billion of value added in 1957 were maintenance and repairs, $\$ 4.5$ billion; insurance, $\$ .7$ billion; property taxes, $\$ 1.5$ billion; rental payments, $\$ 1.4$ billion; and depreciation, $\$ 7.3$ billion. The residual value added, $\$ 132$ billion was approximately $\$ 16$ billion in excess of national income of $\$ 116$ billion.

Table J presents an approximate reconciliation of national income and value added figures for manutacturing in 1957. The national income estimates for payrolls and other fac-
(In billions of dollars)

tor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimates appearing in table H . It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by $\$ 35$ billion of which $\$ 15$ billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the $\$ 35$ billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion in value added of indirect business taxes and depreciation which are excluded by definition from national income.

## 21. INVENTORIES

The value of beginning-of-year and end-of-year inventories, respectively, held by each manufacturing establishment was obtained in the 1963 census. Separate inventory figures
were requested for (1) finished products; (2) work in process; and (3) materials, supplies, fuel, and other inventories.

Respondents were asked to report their inventories at approximate current costs, if feasible; otherwise "at book values." Since different methods of inventory valuation are used (LIFO, FIFO, etc.), the definition of the value of inventories aggregate for all establishments in an industry is not precise. The figures on change in inventory between the beginning and the end of the year are of considerably greater significance.

In using inventory data by stage of fabrication for all industries and at the 2 -digit industry level, the following should be noted: An item treated as a finished product by an establishment in one industry may be reported as a raw material by another establishment in a different industry. For example, the finished product inventories of a steel mill would be reported as raw materials by a stamping plant. Such differences are present in the inventory figures by stage of fabrication shown for individual industries, industry groups, and all manufacturing which are merely aggregates of figures reported by establishments in specified
industries. Further, the total finished goods inventory for "all manufacturing" includes items that are not finished manufactured products.

For a few industries in the food group, there are special problems in the handling of inventories by stage of fabrication. These are industries in which the production cycle is short, the products are usually stored under controlled conditions, and the products are aged. Included among such types of products are meat products, stemmed and dried tobacco, cheese, and whiskey. It is not clear whether such products should be treated as finished goods inventories or as work in process while in storage.

In the meat processing industries, establishments were allowed to report finished products and work in process combined as finished products. In the distilling industry, products stored for aging were to be reported as finished products. In all foods industries, substantial finished goods inventories have been reported. These data have been summarized in the inventory tables in a consistent manner for all of the years included in this report.

## 22. EXPENDITURES FOR PLANT AND EQUIP. MENT

In the 1963 census, manufacturers were asked to report expenditures made during the year for permanent additions and major alterations to their plants, as well as for new machinery and equipment purchases, that were chargeable to fixed asset accounts of manufacturing establishments and were of a type for which depreciation accounts are ordinarily maintained. Expenditures for machinery and equipment were to include those made for replacement purposes, as well as for additions to plant capacity. Excluded from such expenditure totals are costs of maintenance and repairs charged as current operating expense; new facilities and equipment leased from nonmanufacturing concerns; new facilities owned by the Federal Government but operated under contract by private companies; and plant and equipment furnished to the manufacturer by communities and organizations.

In addition to total capital expenditures, respondents were requested to indicate the following subtotals: (a) New structures and additions to plant (including major alterations and capitalized repairs and improvements); (b) new machinery and new equipment (including capitalized repairs and improvements); and (c) expenditures for used plant and used equip. ment acquired from others (including the U.S. Government). In most tables of these publications, the statistics on capital expenditures are confined to a total of new plant and equipment (items " $a$ " and " $b$ " above). However, in table 3 of the industry chapters in Volume II, and in Expenditures for Plant and Equipment, chapter

5 in Volume I, separate figures are shown for each type of expenditure.

The figures include (a) the expenditures made at manufacturing plants that were in operation during any part of the year, plus (b) expenditures made at plants that were not as yet in production. The data on capital expenditures for plants not in production at the end of 1963 were collected on a separate report form (MA-101) requesting companies to report the value of new plant and new equip. ment put in place during the year. The form also requested description of the type of products that would be made so that the establishment could be classified into a 4 -digit industry. This form was sent to (a) the 1,500 largest manufacturing companies; (b) all other companies which indicated on the census of manufactures establishment report form or the "Listing of Establishments" Form NC-X-1 that they had one or more manufacturing plants under construction but not yet in operation at the close of 1963.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Office of Business Eco-nomics-Securities and Exchange Commission survey. (See table K below.) In addition to normal sampling variation, a major source of differences is to be found in the scope of the two series. Census data relate only to manufacturing establishments, whereas the OBE-SEC series cover all establishments of manufacturing companies-nonmanufacturing as well as manfacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from the OBE-SEC series but included in Census figures.

TABLE K. Expenditures for New Plant and Equipment for Manu-facturing-OBE-SEC and Census of Manufactures Compared
(In billions of dollars)

| Year | OBE SEC | Census | Census as percent of OBE SEC |
| :---: | :---: | :---: | :---: |
| 1963. | \$15.7 | \$11.4 | 0.73 |
| 1962. | 14.7 | 10.0 | 0.68 |
| 1961. | 13.6 | 9.8 | 0.72 |
| 1960. | 14.5 | 10.0 | 0.69 |
| 1959. | 12.1 | 9.3 | 0.77 |
| 1958. | 11.4 | 9.6 | 0.84 |
| 1954. | 11.0 | 8.2 | 0.74 |
| 1947. | 8.7 | ${ }^{1} 6.0$ | 0.69 |

Source: U.ミ. Department of Commerce, Office of Business Economics Business Statistics, 1963, and the Census of Manufactures.
${ }^{1}$ Excludes plants under construction but not yet in operation.

Both series, it should be noted, exclude expenditures for plant and equipment at establishments owned by the Federal Government but operated under lease or contract by private companies.

## 23. FUELS, ELECTRIC ENERGY, AND POWER EQUIPMENT

In industry table 7B, Volume II, and in chapter 6 , Volume I, information on the use of detailed fuels and electric energy and on the horsepower of power equipment in place is provided for the year 1962. This information was collected as part of the 1963 Census of Manufactures on a special sample survey, "MC-D-12, Supplementary Inquiries for 1962." The information was collected for the year prior to the regular census in order to reduce the reporting burden on the respondents and the tabulation burden on the Bureau of the Census during a major census year. The survey report form was mailed to all establishments included in the 1962 Annual Survey of Manufactures. Insofar as these figures are based on a sample, they must be considered approximations and subject to sampling error. A more complete discussion of the compilation and limitations of these data appear in the introductory text to chapter 6, Volume I.

Totals for prime movers and electric motors are shown separately. The horsepower ratings for "prime movers" include information for such types of power equipment as internal combustion engines, steam and hydraulic turbines, and reciprocating steam engines. The totals for prime movers are further separated between those driving electric generators and those used for other purposes. The statistics for prime movers not driving generators exclude data for automobiles, trucks, and other highway equipment.

The aggregate horsepower figure represents the unduplicated rating for total installed equipment and thus provides a measure of the mechanical power available in manufacturing establishments. The figure is derived by summing the horsepower rating of prime movers and that for electric motors driven by purchased electricity. To secure the latter figure, the total horsepower for electric motors was distributed, by establishment, into two categories: Motors driven by purchased electricity and motors driven by energy generated at the establishment. For the relatively small number of establishments which both generate and purchase electricity, the total horsepower for electric motors was prorated on the basis of the ratio of the net quantity purchased to the net total for electricity consumed.

As in past censuses, respondents were requested to report horsepower of stand-by equipment as well as equipment in operation at the end of the year, including all prime movers and motors in mobile (except automo-
biles, trucks, and other highway equipment) as well as in stationary equipment.

Separate data are shown for coal, coke, fuel oil, gas, and other fuels used for heat and power; purchased electric energy; electric energy generated by manufacturing establishments; and energy generated less sold. Total figures for purchased fuels and electric energy were published as part of the 1962 Annual Survey of Manufactures at the 2 -digit major group and selected 3 -digit industry group levels.

## 24. PLANT SPECIALIZATION DATA

As discussed above, the relationship between the product output and the statistics on employment, payrolls, cost of materials, and value of shipments for an industry can be measured by the specialization ratio and the coverage ratio for the industry. At the aggregate industry level, these data relationships are presented in tables 5A and 5B of the industry reports. For each establishment, two measures of its degree of specialization are prepared: (1) A 4-digit primary product-specialization ratio which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5 -digit primary product-class specialization code which is the sum of the largest 5 -digit product-class value divided by the sum of its primary and secondary products (contract work and miscellaneous receipts and resales are not included in these calculations). For example, assume that an establishment reported the following:

| Total value of shipments | \$1,000 |
| :---: | :---: |
| Miscellaneous receipts and resales | 15 |
| Total products shipped | 985 |
| 32721 Concrete pipe products | 100 |
| 32722 Precast concrete products | 785 |
| 32730 Ready mixed concrete | 100 |

This plant would be coded into the 4-digit SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ( $\$ 885 \div 985$ ); it would be subclassified into the 5 -digit class 32722 , Precast Concrete, with a primary product class specialization ratio of 80 percent.

In the census of manufactures, general statistics (employment, payrolls, cost of materials, value of shipments, etc.) have been tabulated to 4 -digit industry and 5 -digit primary product-class levels on the basis of assigning the plant totals to the principal 4 - and 5 -digit codes representing its output. Table 8 of the industry chapter, Volume II, provides general statistics for those 4 - and 5 -digit industry categories with subtotals for the two largest specialization classes ( 90 percent and over, 75 to 90 percent). Not all industries and product classes can be shown in table 8 without disclosing figures for individual companies.

Certain product classes are primary to more than one industry. The industry classification of establishments primarily producing such classes of products is determined on the basis of the kind of operation performed in the establishment; e.g., making the product from purchased materials or from materials produced at the same location. In the plant specialization data (table 8), product classes primary to two or more industries are shown in each of the respective industries. For each industry, the specialization data by industry and product class include only those establishments producing the class of product in the manner defined (e.g., lubricating oils from purchased materials).

Table 8 of the Industry Volume permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup ( 5 -digit). For example, where the ratios of various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by shifts in product mix. It should be noted that for those industries in which a production process results in the manufacture of byproducts or other similarly higher correlated products which are separate product classes in the census, the degree of specialization in each of the product classes tends to be somewhat lower.

Differences in the degree of integration of production processes within establishments are often more important than the element of product mix. A partial measure of differences arising from this factor can be derived for some industries through the metalworking operations or other equipment data. For some other industries, data on the production and use of products within the same establishments may be used as an approximate measure.

## III. SPECIAL INQUIRIES, REPORTS, AND PROCEDURES

## 25. SPECIAL INQUIRIES

Selected Metalworking Operations.For all industries in SIC Major Groups 35 and 37, and for selected 4 -digit industries in Groups 19, 33, 34, 36, and 38, the 1963 census included a special inquiry on "Selected Metalworking and Related Operations'" to provide a measure of certain metalworking and related facilities in manufacturing. The following operations were included in this inquiry: foundry (iron or steel); foundry (nonferrous, except die castings); die casting (nonferrous metal only); forging-presses, hammers, or upsetters; electroplating and other plating; gal-
vanizing and other hot-dip coating; heat treating of metals for production purposes; automatic screw machine department; machine shop; tool and die shop, if separate from machine shop; pattern shop (foundry patterns on-ly-metal, wood, etc.); plate or structural fabrication; stamping, blanking, and forming of metals; painting, lacquering, and enameling of metals; plastics molding; assembly of product; and shipping department (including packing and crating).

In Volume I, Chapter 9, Selected Metalworking Operations, the number of establishments performing these operations and the number of production workers engaged in these operations classified by size of the specific operation are shown by industry in table 1 and, for selected operations, by geographic division and State in table 2. The size distribution is based on the number of production workers usually employed in the operation. In addition, for selected industries, the actual number of man-hours worked by production workers in specified operations is also shown. The metalworking operations data by industry are also presented in table 9 of the industry chapters in Volume II.

Information on selected metalworking operations was obtained for practically all industries where such operations are important. For individual industries or groups of industries, the inquiry on metalworking and related operations was tailored to fit the principal operations that were characteristic of those industries.

In many industries, however, small establishments reported on a short form that did not include the inquiry on metalworking operations. Also, a few larger establishments that filed standard forms did not report their metalworking operations. This has resulted in an understatement of the number of establishments maintaining specific operations, primarily in the smallest size class, and to a much smaller degree an understatement of the total number of production workers in the operation.

An approximation of the coverage in terms of number of production workers is provided for both industry and geographic totals. The coverage for most industries is over 90 degree an understatement of the total number larger establishments predominate.

For foundry operations, the number of plants operating foundries consists of the number reporting the operation for each industry plus the number of establishments classified in the foundries industries. For forg. ings operations, the number of plants operating forge shops consists of the number reporting the operation for each industry plus the number of establishments classified in the forgings industries. In footnotes to table 1,

1963 data are shown for the number of establishments classified in these industries. For example, in addition to establishments shown in the table as operating foundries and die casting facilities, the number of establishments classified in the foundry industries is given in the footnote. In the State table, separate columns have been included giving the number of establishments classified in these industries in each State. Similarly, the form used by respondents in industry 3471, Planting and Polishing, did not include the metalworking inquiry. Consequently, data for establishments in these latter industries were presented in the same manner as for the foundry industries.

A limited inquiry covering machine shops and pattern-shop operations was included for the foundry industries, and an inquiry covering machine shops and tool and die shops was included for the forgings industries.

Selected Equipment Data.—An inventory of textile equipment in place was obtained for a number of the important machines used in the basic textile industries. These data, grouped by type of operation or industry activity of the plant, are shown in a separate chapter in the Industry Volume. Information regarding the coverage of the inquiry is also shown.

Special Departmental Reports.-For paper plants, stone and clay plants, steel plants, aluminum rolling mills, brass mills, and nonferrous wire drawing and insulating plants, where vertically integrated activities are characteristic of establishment operations, selected employment information regarding certain departmental activities was obtained in the 1963 census, as had been done in the 1958 census. Information relating to pulping departments, printing employment, and presses in paper and paperboard converting plants, quarrying activities, and selected operations in steel plants, aluminum rolling mills, brass mills, and nonferrous wire drawing and insulating plants is shown in the chapters for these industries in the Industry Volume.

Distribution of Products or Sales.There was a series of special inquiries which collected information on the distribution of specific products; e.g., sales of packaged milk by retail and wholesale routes; the number and payroll of delivery employees engaged in the milk, bakery, soft drink, and beer industries; sale of books and storage batteries by class of customer; the circulation of periodicals by type of periodical and frequency of issue; production of shoes and slippers by type of construction.

The data resulting from these selected special inquiries on the standard census forms appear in the chapters for the industry in Volume II.

## 26. SUBJECT REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

In Volume I, there are several summary reports on inventories, capital expenditures, size of establishments, type of organization, power equipment in place, fuels and electric energy, materials consumed, water use, shipments of defense-related products, operations of government-owned establishments, exports of manufactured products, and the degree of concentration in manufacturing.

Most of these chapters are merely summarizations or special compilations of data reported on the standard census forms and presented in the industry or area chapters. Others, however, are the result of information collected on special surveys. The introduction to each of these latter reports describes the report form used, and the sampling or compilation techniques used to assemble the data.

The following chapters which are recompilations of basic data reported on the census of manufactures report forms should be noted.

Size of Establishment.-Each establishment in the census is coded not only to an industry and geographic location but also by its size based on the average number of em. ployees for the year. These size tabulations provide significant insight into the variations in operating ratios among plants within an industry and between industries. Information on the number of establishments, employment, payrolls, value added, value of shipments, and capital expenditures is presented for 10 employment size classes in each industry in table 4, Volume II, and in chapter 2, Summary Volume I. In Volume I, size information at the 2-digit industry and all-manufacturing levels is presented.

## Type of Organization:

Multiunit, Single-Unit Estab-lishments.-Information on whether plants are independent or part of multiestablishment companies contributes importantly to our knowledge of the structure of manufactures in the United States. However, this classification is affected by the way the census of manufactures is conducted. Prior to the 1954 census, the census of manufactures was conducted independently and the multiunit classification was assigned if the company operated more than one manufacturing plant. Beginning in 1954, it has been part of the overall census of business, manufactures, and mineral industries and the multiunit classification applies to companies that may have only one manufacturing plant but also operate separate retail, wholesale, service, or minerals establishment, or a separate administrative office.

The proportion of employees and of value added by manufacture accounted for by multiunit plants has grown rapidly since 1947. (See table L.)

## TABLE L. Multiunit Plants as a Percentage of Total Manufacturing

| Year | Employees | Value added by manufacture |
| :---: | :---: | :---: |
| 1963............... | 68 | 76 |
| 1958............... | 65 | 74 |
| 1954............... | 61 | 68 |
| 1947............... | 56 | 59 |

However, some of the increase from 1947 to 1954 was a consequence of taking the censuses of manufactures, mining, trade, and services simultaneously in 1954, but not in 1947.

Legal Form of Organization.Each establishment was asked to report the forms of organization of the company which operated it; e.g., corporation, partnership, proprietorship, cooperative. In chapter 3, Volume I, selected general statistics are shown for each 4-digit industry for each of these forms of business organization. Cooperatives are combined with "other" forms of business organization because of the disclosure problems. In manufacturing, about half the plants are operated by corporations but these plants account for about 95 percent of value added by manufacture.

Concentration Ratios in Manufactur-ing.-In chapter 11 of Volume I, information is provided on the share of all manufacturing accounted for by the 50, 100, 150, and 200 largest manufacturing companies ranked by their total value added in manufacturing for 1963, 1958, 1954, and 1947. Information is also shown for the share of value of shipments in each 4 -digit industry accounted for by the 4, 8 , 20 , and 50 largest companies in each of these industries. A description of the methods used in compiling these data accompanies the tables in Volume I.

## 27. IMPUTATION OF DATA

Each "key" census total called for on the standard forms had its counterpart in the various short forms. The short forms, however, did not require the detailed distribution of such totals (see section 8, The Census Report Forms). It was necessary, therefore, to impute figures for these missing detail items in order to publish universe totals of manufacturing activity.

Imputation of missing items, which was done on an industry basis, was made feasible
by use of the Census Bureau's high-speed electronic computer. The procedures for imputa. tion were of two types: (1) Production workers, production-worker wages, and man-hours were imputed from fixed ratios specified in advance from historical relationships of these items to total employees and total payroll; (2) other items, such as capital expenditures and inventories, were imputed on the basis of their historical relationship to value of shipments. Missing detail was generally imputed on the basis of the historical relationship of the item to its respective total.

For industries characterized by establishments of some size, the percentage of imputation of general measures such as employment and payrolls, cost of materials, inventories, expenditures, and the like is negligible; for the industries in which small establishments account for a significant portion of the total, the percent may go as high as 10 or 25 , but this occurs only in a handful of industries. Of the various statistics, man-hours worked tended to have a higher degree of imputation than the other items due to difficulties in reporting those data by small and medium. size establishments.

The major exceptions to the imputation procedure for missing data were the detailed products and materials, metalworking operations, and equipment inquiries. The value of products and the cost of materials, parts, supplies and containers for establishments not reporting the detailed inquiries were treated as "unspecified" materials or products in the appropriate tables. For metalworking operations and equipment, the statistics were based on establishments reporting data, with appropriate measures of coverage shown in the tables.

## 28. CONFIDENTIALITY OF DATA FOR INDIVIDUAL COMPANIES

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In the 1963 census, as in previous censuses, preference was given to geographic regions and divisions over individual States in applying disclosure rules; similarly, States took precedence over standard metropolitan areas, while such areas were given preference over counties, and counties over cities. In tables showing industry detail, major industry group (2-digit) totals were given preference over industry group (3-digit) totals which, in turn, had precedence over individual (4-digit) industries. Similarly, in product tables, 4 -digit product groupings took precedence over 5-digit product classes; the latter were given precedence over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show
regional data for an industry, even at the cost of withholding data for some (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is increased.

For each producing State not shown separately in table 2 of the Industry Volume, a footnote gives the number of establishments and either an employment range or the actual employment figure. The employment is shown in a range if the State had less than 1,000 employees, and the employment data represented the total for only one or two companies, or if the exact figure would permit deriving (by subtraction) the number of employees in other States represented by only one or two companies. In addition, figures for States with less than 100 employees are shown only in the footnote together with the number of establishments and employment in a range.

In the Area Volume, figures are not shown for a county or for an industry within a State, metropolitan area, or principal industrial county if the publication of such statistics would disclose information for individual companies. In table 4 of that Volume, however, the number of establishments is shown for every county and the number of employees for most counties represented by three or more companies. Moreover, all counties having manufacturing establishments are included in table 7 , showing for each county, the distribution by employment size of establishments in each major industry group.

A special series of publications entitled "Location of Manufacturing Plants" was originally developed for the 1954 census and has been continued in subsequent censuses. In these publications are tables showing the number of establishments cross-classified by 4-digit industry, county, and employment size class. This is the maximum information which can be provided at such narrow industry-areasize categories without disclosing figures for individual companies. These data are designed to meet the needs of (a) those involved in economic development programs at the regional, State, and local area levels, (b) those engaged in industrial market analysis or allocation of
sales territories, and (c) those concerned with industrial dispersion, regional shifts of industry, and similar problems. For a more complete description of the content of these publıcations, see the publication statement in the introduction of this volume.

For industries with few establishments or considerable geographic concentration, it has frequently been necessary to use geographic regions broader than the traditional nine census divisions in order to show all plants by some geographic grouping. For this purpose the following combinations of Census divisions have been used:

NORTHEAST<br>New England<br>Middle Atlantic<br>NORTH CENTRAL<br>East North Central<br>West North Central<br>SOUTH<br>South Atlantic<br>East South Central<br>West South Central<br>WEST<br>Mountain<br>Pacific

## 29. ABBREVIATIONS

The following abbreviations and symbols occur frequently in tables and footnotes:

| - | Zero |
| :--- | :--- |
| X | Not applicable |
| NA | Not available |
| n.e.c. | Not elsewhere classified |
| n.s.k. | Not specified by kind |
| lin. | Linear |
| equiv. | Equivalent |
| hp | Horsepower |
| kw.-hrs. | Kilowatt-hours <br> D |
| Withheld to avoid disclosing fig- <br> ures for individual companies |  |
| SIC | Standard Industrial Classifica- <br> tion |

Other abbreviations, such as Ib., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

# Petroleum and Coal Products 

29A Petroleum refining and related industries

This major group includes establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials. Establishments manufacturing and distributing gas (water or coke oven) to consumers are classified in public utilities industries, and those primarily engaged in producing coke and byproducts in Major Group 33. Establishments primarily engaged in producing crude petroleum, natural gas, natural gasoline, and cycle condensation are classified in mining industries.

## Petroleum and Coal Products: Major Group 29

Value Added by Manufacture by State: 1963

## table 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. Revised.
The figures for 1939 through 1963 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to which
ata for such employees are included in the figures for earlier years is not known. and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufac ture.
${ }^{3}$ The total value of shipments and cost of materials for industry groups (2- and 3digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.
not yet in operation. not yet in operation,
shown for manufacturer's central administratishments 1954, 1958, and 1963 data are shown for manufacturer's central administrative offices and auxiliary units. Similar
data are show for the years $1949-1953$ and $1955-1957$ in annual survey of manufactures volumes. Data for these units are not available for the years prior to 1949.
${ }^{6}$ The 1957 edition of the Standard Industrial Classification classifies beehive coke ovens and byproduct coke ovens in Major Group 33. Such establishments were previously included in Major Group 29, Petroleum and Coal Products. However, this change was
reflected in the tabulations for $1955^{\circ}$ to 1957 annual surveys of manufactures. Data for 1954 were retabulated on this basis and are the source of the datude beehive and byproduct coke ovens
${ }^{7}$ Theselfigures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manuractures volumes for this period.

The 1947 figures have been revised to exclude data for by-product coke plants operated in conjunction with public utilities manufacturing and distributing gas, and to include data for establishments primerily engaged in shipping lubricants and greases made from animal and vegetable oils (classified in Industry 2899 in 1947). The figures for 1949 to 1953 can not be revised to include these greases.
${ }^{9}$ Figures for years prior to 1939 exclude byproduct coke ovens owned by city gas companies. Such ovens represent less than 2 percent of the total value of products for the petrolewn and coal products group for 1939.

## ricating oils. 1929 exis

 blocks. These industries represented 4 percent of the figure for number of production blocks. These industries represented 4 percent of the figure for number of productice petroleum and coal products group for 1929. Prior to 1929, the lubricants, n.e.c. industry is included in the series for chemical and allied products group.${ }^{12}$ Figures for years prior to 1909 exclude fuel briquets and roofing felts and coatings. For 1909, these industries represented 6 percent of the figure for mumber of production workers and 9 percent of the figure for value added by manufacture shown for the petroleum and coal products group.

## TABLE 3. Detailed Statistics: 1963

[^15]
## PETROLEUM REFINING AND RELATED INDUSTRIES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SlC Code and Title<br>2911-Petroleum Refining<br>2951 -Paving Mixtures and Blocks<br>2952-Asphalt Felts and Coatings<br>2992-Lubricating Oils and Greases<br>2999-Products of Petroleum and Coal, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 2911-PETROLEUM REFINING

This industry comprises establishments primarily engaged in producing gasoline, kerosene, distillate fuel oils, residual fuel oils, lubricants, and other products from crude petroleum, and its fractionation products either through straight distillation of crude oil, redistillation of unfinished petroleum derivatives, cracking or other processes. Establishments primarily engaged in producing natural gasoline from natural gas are classified in mining industries. Those manufacturing lubricating oils and greases by blending and compounding purchased materials are included in industry 2992. For a detailed list of products of industry 2911 , refer to table 6A, product codes 2911011 to 2911951.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Petroleum Refining Industry totaled $\$ 16,497$ million. This amount included shipments of refined petroleum products (primary products) valued at $\$ 15,479$ million, shipments of other products (secondary products) valued at $\$ 341$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at $\$ 677$ million.

This industry's shipments of refined petroleum products represented 98 percent of its total product shipments. The industry specialization ratio in 1958 was also 98 percent. Secondary products shipped by this industry in 1963 consisted mainly of miscellaneous acyclic chemicals and chemical products ( $\$ 123$ million), and cyclic intermediates ( $\$ 41$ million).

Shipments of refined petroleum products by this industry represented 97 percent of all shipments of these products ( $\$ 15,983$ million) by all industries. In 1958 the coverage ratio was 98 percent.

Lubricating oils, lubricating oil base stocks,and lubricating greases are not only produced by petroleum refineries but are also produced from purchased materials by plants blending and compounding lubricants and classified in industry 2992, Lubricating Oils and Greases. Plants classified in industries 2911 and 2992 shipped substantially all of the lubricating oils and greases valued at $\$ 1,210$ million, with industry 2911 accounting for 65 percent.

Oils are frequently transferred from one refinery to another for further processing and blending. This introduces some duplications in the "Value of products shipped" by the Petroleum Refining lndustry, as shown in tables 1, 2, and 5. To eliminate duplication in the statistics for individual products, figures were collected on the amount of oil received by refineries during the year. Net (unduplicated) shipments were calculated, for the United States as a whole, by subtracting "Receipts" from the quantity shipped (see table 6A). These net shipments represent the quantity of petroleum products made available for consumption by the "Petroleum Refining" and "Lubricating Oils and Greases" Industries.

Industry 2911 also includes establishments primarily engaged in the production of petroleum based chemicals (petrochemicals). In 1963 there were 22 establishments with total shipments of $\$ 455$ million producing liquefied refinery gases and aromatics (see table 3 ).

Detailed product statistics for liquefied gases used as chemical raw material were not collected since these data are reported to the United States Tariff Commission and published in the report "Synthetic Organic Chemicals, United States Production and Sales."

Unlike most manufacturing industries where the receipts for contract work are reported as such, plants in industry 2911 processing oil on a contract basis for other companies were requested to report the commercial cost of all materials received and the market values, f.o.b. plant, for the products shipped.

Petroleum product statistics shown in this report are not directly comparable with the Bureau of Mines figures published in the Minerals Yearbook. The census of manufactures collects data on shipments, whereas the Bureau of Mines figures are in terms of "output" (production).

Data showing net shipments of gas liquids and related products covered in the 1963 economic censuses appear in the reports for the 1963 Census of Mineral Industries. Table 7 A contains data showing the consumption of selected materials. Other data relating to "inputs" of materials appear as "receipts" in table 6A. Because fuel is an important item and furnishes a supply of material for alternative uses at the refinery, data showing United States totals consumed in the refineries appear in table 7 E .

The production index for the primary products of the industry increased to 138 in 1963 from the 1958 level of 115 . The unit value index for 1963 was 96 compared to 104 in 1958. Both indexes were computed on a basis of $1954=100$.

## 2951 -PAVING MIXTURES AND BLOCKS

This industry comprises establishments primarily engaged in manufacturing asphalt and tar paving mixtures, and paving blocks made of asphalt, creosoted wood, and various compositions of asphalt or tar with other materials. Establishments primarily engaged in manufacturing brick, concrete, granite, and stone paving blocks are classified in Major Group 32. For a detailed list of products of industry 2951, refer to table 6A, product codes 2951011 to 2951098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Paving Mixtures and Blocks Industry totaled $\$ 427$ million. This amount included shipments of paving mixtures and blocks (primary products) valued at $\$ 359$ million, shipments of other products (secondary products) valued at $\$ 31$ million, and miscellaneous receipts at $\$ 38$ million.

This industry's shipments of paving mixtures and blocks represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent. Secondary products shipped by this industry in 1963 consisted mainly of crushed and broken miscellaneous stone ( $\$ 9$ million) and ready-mixed concrete ( $\$ 7$ million).

Shipments of paving mixtures and blocks by this industry represented 89 percent of all shipments of these products ( $\$ 403$ million) by all industries. In 1958 the coverage ratio was 85 percent. Other industries shipping paving mixtures and blocks consisted mainly of industry 3273, Ready Mixed Concrete, $\$ 15$ million; and industry 2952, Asphalt Felts and Coatings, $\$ 8$ million.

## 2952-ASPHALT FELTS AND COATINGS

This industry comprises establishments primarily engaged in manufacturing asphalt and other saturated roofing felts in roll or shingle form, either smooth or faced with grit, and in manufacturing roofing cements and coatings. Establishments primarily engaged in manufacturing paint are classified in industry 2851. For a detailed list of products of industry 2952, refer to table 6A, product codes 2952111 to 2952398.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Asphalt Felts and Coatings Industry totaled $\$ 528$ million. This amount included shipments of asphalt felts and coatings (primary products) valued at $\$ 424$ million, shipments of other products (secondary products) valued at $\$ 48$ million, and miscellaneous receipts (mainly resales) at $\$ 56$ million.

This industry's shipments of asphalt felts and coatings represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was also 90 percent. Secondary products shipped by this industry in 1963 included asbestos textiles and other asbestos and asbestos cement products ( $\$ 15$ million), and paving mixtures and blocks ( $\$ 8$ million).

Shipments of asphalt felts and coatings by this industry represented 92 percent of all shipments of these products ( $\$ 459$ million) by all industries. In 1958 the coverage ratio was also 92 percent. Other industries shipping asphalt felts and coatings includes industry 2851, Paints and Allied Products, $\$ 5$ million; and industry 2951, Paving Mixtures and Blocks, \$3 million.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 2952, e.g., asphalt and tar saturated felts and boards for nonbuilding use, 75 percent; and asphalt and tar coatings, cements, and pitches, 81 percent.

Monthly data on the quantity of asphalt and tar roofing and siding products are available from Current Industrial Reports Series M29A, "Asphalt and Tar Roofing and Siding Products."

The production index for the primary products of the industry increased to 118 in 1963 from the 1958 level of 105 . The unit value index for 1963 was 102 compared to 101 in 1958. Both indexes were computed on a basis of $1954=100$.

## 2992-LUBRICATING OILS AND GREASES

This industry comprises establishments primarily engaged in blending and compounding lubricating oils and greases from purchased mineral, animal, and vegetable materials. Petroleum refineries engaged in the production of lubricating oils and greases are classified in industry 2911. For a detailed list of products of industry 2992, refer to table 6A, product codes 2992611 to 2992751.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Lubricating Oils and Greases Industry totaled $\$ 471$ million. This amount included shipments of lubricating oils and greases (primary products) valued at $\$ 399$ million, shipments of other products (secondary products) valued at $\$ 40$ million, and miscellaneous receipts (mainly resales) at $\$ 32$ million.

This industry's shipments of lubricating oils and greases represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent.

Shipments of lubricating oils and greases by this industry represented 33 percent of all shipments of these products ( $\$ 1,210$ million) by all industries. In 1958 the coverage ratio was 35 percent. However, lubricating oils and greases are also primary to industry 2911, Petroleum Refining. A coverage ratio computed on the basis of including both industries to which lubricating oils and greases are primary would total 98 percent in 1963. Lubricating oils and greases (primary products) shipped by industry 2911, Petroleum Refining, totaled $\$ 782$ million. Other industries shipping lubricating oils and greases consisted mainly of industry 2842, Polishes and Sanitation Goods, $\$ 3$ million; and industry 2899, Chemical Preparations, N.E.C., $\$ 3$ million.

The production index for the primary products of the industry increased to 163 in 1963 from the 1958 level of 103 . The unit value index for 1963 was 124 compared to 119 in 1958. Both indexes were computed on a basis of $1954=100$.

## 2999-PRODUCTS OF PETROLEUM AND COAL, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing fuel briquets, boulets, packaged fuel, powdered fuel, and other products of petroleum and coal, n.e.c. Wood charcoal briquets are classified in industry 2861 . For a detailed list of products of industry 2999 , refer to table 6A, product codes 2999015 to 2999098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Petroleum and Coal Products, N.E.C., Industry totaled $\$ 72$ million. This amount included shipments of products of petroleum and coal, n.e.c., (primary products) valued at $\$ 63$ million, shipments of other products (secondary products) valued at $\$ 3$ million, and miscellaneous receipts (mainly resales) at $\$ 6$ million.

This industry's shipments of products of petroleum and coal, n.e.c., represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent.

Shipments of petroleum and coal products, n.e.c., by this industry represented 91 percent of all shipments of these products ( $\$ 69$ million) by all industries. In 1958 the coverage ratio was 96 percent.

The figures for fuel briquets and packaged fuel appearing in this report exclude the quantities and amounts shipped by establishments producing wood charcoal briquets (industry 2861) as well as establishments classified in nonmanufacturing industries. They, therefore, differ from the figures published by the Bureau of Mines, United States Department of Interior, in the Minerals Yearbook which includes data for nonmanufacturing establishments such as retail or wholesale coal yards and public utilities which produce some fuel briquets as a secondary activity. The census figures for fuel briquets also include information for briquets made from charcoal and sawdust, data for which are omitted by the Bureau of Mines.

## PETROLEUM AND COAL PRODUCTS, N.E.C.: SIC 299

table 1. General Statistics: 1963 and Earlier Years

| Year | Companies <br> (number) | Establishments |  | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

Note: See appendix A for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustrnent is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard
(z) Less than $\$ 500$ thousand
(D) Withheld to avoid disclosing figures for individual companies
(NA) Not available.
(X) Not
applicable. (Z) Less than $\$ 500$ thousand. n.e.c. Not elsewhere classified.
basis of a consistency review.
These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufacturcs. These estinates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishonts. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures show in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
"Beginning with the year 1939 establishments engaged in re-refining crankease drainings and other used oils have been included in the figures for "Petroleum refining;" for earlier years, such establishments were included under "Lubricating oils and greases".
${ }^{3}$ The figures for "Paving mixtures and blocks" prior to 1929 are not sufficiently comparable with those for later years to be shown in this table because they include data for quarrying and crushing stone which is classified in mineral industries.

4Data for certain asbestos products are included in the figures for 1909.
${ }^{5}$ Included in the coverage ratio shown for this industry are lubricating oils and greases which are also primary to Industry 291l, Petroleum Refining. A 1963 coverage ratio computed on the basis of including both industries to which lubricating oils and greases are primary would total 98 percent: 65 percent by industry 2911, and 33 percent by industry 2992. The remaining 2 percent was shipped by establishments in other industries. computed on the basis of excluding industry 2911, the 1963 coverage ratio is 93 percent for industry 2992. (Also see tables 5A and 5B.)
${ }^{6}$ The 1947 data have been revised for comparability with 1954 by including data for establishments primarily engaged in shipping lubricants and greases made from animal and animal and vegetable oils (classified in industry 2899 in 1947). The figures for $1929-1939$ are comparable with those for 1947 and 1954.
${ }^{7}$ The figures for 1935 and years prior to 1929 include only lubricating greases and, therefore, are not sufficiently comparable with other years to be given in this table.
${ }^{8}$ Includes fuel briquets and packaged fuel (except wood charcoal briquets). Comparable figures are not available prior to 1947.

General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 2911, Petroleum Refining: New England-New Hampshire, 1 (1-19); Massachusetts, 3 (122); Rhode Island, 1 (100-249); Connecticut, 2 (20-99); Middle Atlantic-New York, 8 (975); West North Central-Minnesota, 6 (824); Missouri, 2 (500-999); North Dakota, 2 (250-499); Nebraska, 2 (20-99); South Atlantic-Delaware, 2 (500-999); Maryland, 3 (332); Virginia, 3 ( $250-499$ ); West Virginia, 2 (250-499); South Carolina, l (20-99); Georgia, 4 (131); Florida, 4 (20-99); East South Central-Kentucky, 4 (744); Tennessee, l (100-249); Alabama, 6 (100-249); Mountain-Montana, 9 (500-999); Wyoming, 10 (1000-2499); Colorado, 4 (100-249); New Mexico, 6 (250-499); Arizona, 2 (1-19); Pacific-Washington, 9 (1108); Oregon, 3 (20-99); Alaska, 2 (20-99); Hawaii, 1 (100-249).

## TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

## Footnotes for Table 2-29A-Continued

IC 2951, Paving Mixtures and Blocks: New England-Maine, 3 (20-99); New Hampshire, 3 (20-99); Vermont, 1 (1-19); Rhode Island, 3 (1-19); East North Central-Wisconsin, 8 (20-99); West North Central-Minnesota, 7 (20-99); Iowa, 9 (20-99); North Dakota, 1 (1-19); South Dakota, 1 (1-19); Nebraska, 2 (1-19); Kansas, 5 (20-99); South Atlantic-Delaware, 5 (20-99); Virginia, 9 (100-249); West Virginia, 18 (100-249); North Carolina, 8 (20-99); South Carolina, 8 (20-99); Georgia, 9 (20-99); East South Central-Kentucky, 11 (20-99); Tennessee, 14 (20-99); Mississippi, 8 (20-99); West South Central-Arkansas, 4 (20-99); Oklahoma, 7 (20-99); Mountain-Montana, l (1-19); Idaho, l (1-19); Arizona, 4 (20-99); Utah, 5 (20-99); Nevada, 2 (20-99); Pacific-Oregon, 5 (20-99); Hawaii, 1 (20-99).
IC 2952, Asphalt Felts and Coatings: New England-Massachusetts, 7 (500-999); Connecticut, 2 (20-99); West North Central-Minnesota, 5 (250-499); Kansas, 1 (1-19); South Atlantic-Delaware, 2 (20-99); Maryland, 3 (119); Virginia, 1 (1-19); West Virginia, 2 (100-249); North Carolina, 3 (20-99); South Carolina, 1 (100-249); East South Central-Kentucky, 2 (20-99); Tennessee, 6 ( 213 ); Mississippi, 1 (100-249); West South Central-Arkansas, 4 (250-499); Oklahoma, 2 (100-249); Mountain-Colorado, 2 (20-99); New Mexico, 2 (100-249); Arizona, i (1-19); Utah, 2 (20-99); Pacific-Washington, 3 (20-99); Oregon, 7 (248).
IC 2992, Lubricating Oils and Greases: New England-Massachusetts, 13 (100-249); Connecticut, l (20-99); Middle Atlantic-New York, 29 (250-499); New Jersey, 23 (1000-2499); East North Central-Ohio, 36 (1001); Indiana, 4 (100-249); Illinois, 31 (1091); Michigan, 25 (274); West North CentralMinnesota, 6 (100-249); Iowa, 4 (20-99); Nebraska, 2 (100-249); Kansas, 7 (100-249); South Atlantic—Delaware, 1 (1-19); Maryland, 5 (100-249); Virginia, 1 (1-19); North Carolina, 1 (1-19); South Carolina, 1 (1-19); Georgia, 5 (20-99); Florida, 2 (20-99); East South Central-Kentucky, 1 (1-19); Tennessee, 3 (1-19); Alabama, 2 (1-19); Mississippi, 2 (20-99); West South Central-Arkansas, 1 (1-19); Louisiana, 6 (250-499); Oklahoma, 6 (100-249); Texas, 21 (142); Mountain-Wyoming, 1 (1-19); Utah, 1 (1-19); Pacific-Washington, 6 (20-99); Oregon, 1 (1-19); California, 43 (445). IC 2999, Petroleum and Coal Products, N.E.C.: New England-Maine, l (1-19); Middle Atlantic-New York, 1 (1-19); New Jersey, 2 (1-19); East North Central-Ohio, 4 (20-99); Indiana, 2 (1-19); Tllinois, 5 (191); Michigan, 3 (20-99); Wisconsin, 5 (20-99); West North Central-Minnesota, 1 (l-19); Missouri, 4 (417); North Dakota, 1 (20-99); South Atlantic-West Virginia, 3 (20-99); North Carolina, 1 (1-19); South Carolina, 1 (1-19); Georgia, 2 (1-19); East South Central-Tennessee, 2 (1-19); Mississippi, 3 (1-19); West South Central-Arkansas, 1 (1-19); Louisiana, 1 (20-99); Oklahoma, 2 (1-19); Texas, 6 (189); Mountain-Wyoming, 1 (20-99); Arizona, 1 (1-19); Utah, 1 (1-19); Pacific -Oregon, 1 (1-19); California, 6 (182). ${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 eport showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

#### Abstract

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such

as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\text { Col. B }}{\text { Col. B+C }} \text { (percent) }$ | Total, made in all industries $(\$ 1,000)$ | Made in this industry $(\$ 1,000)$ | Made in other industries $(\$ 1,000)$ | Coverage ratio $\frac{\mathrm{Col} . \mathrm{B}}{\mathrm{Col} . \mathrm{F}}$ <br> (percent) |

Note: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
n.e.c. Not elsewhere classified.
${ }^{1}$ Includes lubricating oils and greases which are also primary to industry 2992, Lubricating Oils and Greases.
${ }^{2}$ Included in the figures shown for this industry are lubricating oils and greases which are also primary to industry 2911 , Petroleum Refining.

 on the basis of excluding industry 2911, the 1963 coverage ratio is 93 percent for industry 2992.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (nrimary nroducts). (b) products classified in other industries (secondary products). and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

[^20]table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Product class codes 29118, 29119, and 29110 are not primary to industry 2992 and are therefore excluded from the total for primary products of industry 2992 and are included in the total for "Other industries."

See footnotes at end of table.

TABLE 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

[^22]
# table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued 

## Footnotes for Table 6A-29A-Continued

${ }^{5}$ Includes all finished gasolines (other than aviation and automotive gasoline), finished base stocks, and blending agents such as alkylate, polymers (dimer, codimer, etc.), hydropolymers (hydrodimer, hydrocodimer, etc.), cumene, isopetane, isohexane, neohexane, isoheptane, iso-octane, motor benzol (benzene), and other blending agents derived from petroleum (excludes natural gasoline).
${ }^{6}$ Includes range oils, signal oil, mineral seal oil, mineral colza oil, longtime burning oil, $300^{\circ}$ oil, and insecticide base.
${ }^{7}$ Product code 2911400 included with 2911451 for 1963.
${ }^{8}$ Includes ethane, propane, propene, butane, butene, propane-butane mixtures, pentane, butadiene, and other liquefied hydrocarban gases. Receipts and shipments exclude liquef ied petroleum gases from natural gasoline plants.
${ }^{9} 1963$ figures are not directly comparable with those for 1958 because liquefied refinery gases and aromatics for 1963 (formerly defined as liquefied petroleun gases), product class code 29115, include undetermined amounts previously reported as other finished petroleum products, product class code 29110.
${ }^{10}$ product code 2911511, included in code 2911598 for 1963.
${ }^{11}$ Detailed product statistics for liquefied gases used as chemical raw material are published by the United States Tariff Commission in the report "Synthetic Organic Chemicals, United States Production and Sales."
${ }_{12}$ Although respondents were requested to report receipts in the same manner as billed by the shipper, the figures indicate that items billed as other oils by the shipper were sometimes reported as receipts of "umfinished oils" or "lubricating oil base stock" for the refinery receiving these oils.
${ }^{13}$ Includes such products as cracking stock, unfinished gasoline, requiring further distillation, naphtha stocks, soaps, wax distillate, and other unfinished petroleum oils. Excludes lubricating oil base stocks, natural gasoline and cycle condensates.
${ }^{14}$ Includes light, medium, neutral, heavy neutral, and residual stocks.
${ }^{15}$ Includes flux for paving, roofing, waterproofing, mastic, and other purposes; cut-back asphalt, emulsified asphalt and fluxes made in petroleum refineries, and other liquid asphaltic products except road oil and fuel oil used for heating purposes.
${ }^{16}$ Includes asphalt for paving, roofing, waterproofing, briquetting, mastic, pipe coating, molding composition, and other heavy asphalt products.
${ }^{17}$ Product code 2911000, "Products of petroleum refining, n.s.k.," included in figure for code 29110, "Other finished petroleum products, including waxes."
${ }^{18} 1958$ figure, which was previously published in quantities of thousand pounds, has been converted to thousand barrels on the basis of 280 pounds per barrel.
${ }^{19}$ Represents residual asphaltic oil used for surface treatment of roads and highways.
${ }^{2}{ }^{\circ}$ Includes petroleum ether, rubber solvent, mineral spirits (petroleum spirits), varmish makers' and painters' naphtha, high-solvency naphtha, benzol diluent, lacquer diluent, cleaners' naphtha, stoddard solvent, extraction solvents, and other petroleum distillates shipped as solvents.
${ }^{21}$ Represents amorphous paraffin of melting point not under $145^{\circ}$.
${ }^{22}$ Includes oils for lubricating purposes and such nonlubrication purposes as transformer oil, hydraulic oil, processing oil, quenching oil, and liquid rust preventative.
${ }^{23}$ For 1963, lubricants and similar oils containing animal and vegetable oils made in petroleum refineries, product code 2911651 , valued at less than $\$ 1$ million, are included in lubricants and similar oils containing petroleum oils made in petroleum refineries, code 2911611. The exact figure is withheld to avoid disclosing figures of individual companies. For 1958, code 2911651 is included with code 2992651.
${ }^{24}$ Includes greases for aviation, automotive, industrial, and railroad uses; launching grease, and cutting, drawing, and grinding compounds and paste. Also includes paste rust-preventative compounds and thread compounds. See also footnote 22.
${ }^{25} 1958$ figure, which was previously published in quantities of thousand pounds, has been converted to thousand barrels an the basis of 315 pounds per barrel.
${ }^{2}{ }^{6}$ Product code 2992700 included with code 2992751 for 1963.
${ }^{27}$ Excludes data for quantities produced in petroleum refineries, which are included in the statistics for code 2911911 , asphalt of 200 penetration and over, in industry 2911, Petroleum Refining.
${ }^{2}{ }^{8}$ Product code 2952231 included with code 2952200 for 1958.

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Includes $\$ 12,845$ thousand of "products of petroleum refining not specified by kind."

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

#### Abstract

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are

listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, there fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: the standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the bais of a general consistency review.

# table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for estabishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

# Rubber and Plastics Products, N.E.C. 

30 A Rubber and miscellaneous plastics products

This major group includes establishments manufacturing from natural, synthetic, or reclaimed rubber, gutta percha, balata, or gutta siak rubber products such as tires, rubber footwear, mechanical rubber goods, heels and soles, flooring, and rubber sundries. Automobile tire repair shops engaged in recapping and retreading automobile tires are classified in services. Major Group 30 also includes establishments engaged in molding plastics products for the trade and fabricating miscellaneous finished plastics products. The manufacture of elastic webbing is classified in Major Group 22; products made of elastic webbing and garments made from rubberized fabrics in Major Group 23; synthetic rubber in lndustry 2822; and plastics materials in the forms of sheets, rods, tubes, granules, powders, and liquids in Industry 2821.

## table 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

The figures for 1939 to 1963 include data for employees at manufacturing establishments who were engaged in distribution and in construction work. The extent to which
ata for such employees were included in the figures for earlier years is not known.
and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the rials, supplies, fuel, electric energy and contract work, plus the net change in the of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.
${ }^{3}$ The total value of shipments and cost of materials for industry groups (2- and 3digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

The figures for 1958 to 1963 include expenditures for plants under construction and
not yet in operation.
${ }^{5}$ Based upon the 1957 revisions of the Standard Industrial Classification Mamal, establishments engaged in molding plastics products for the trade and fabricating miscellaneous finished plastics products were reclassified from Major Group 39, Miscelladata for plastic products. ata for plastic products.
${ }^{6}$ In addition to data for operating establishments 1954, 1958, and 1963 figures are shown for manufacturer ${ }^{\dagger}$ 's central administrative offices and auxiliary units. Similar tures volumes. Data for these units are not available for the years prior to 1949 .
${ }^{7}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{6}$ The figures for 1925 to 1963, but not for earlier years, include data for establishments primarily engaged in manufacture of rubber cement and rubber toy ballons. Value added by manufacture for 1925, excluding data for these establishments and on a basis comparable with earlier years, was $\$ 536.6$ million.

## RUBBER AND MISCELLANEOUS PLASTICS PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title
3011-Tires and lnner Tubes
3021-Rubber Footwear
3031 -Reclaimed Rubber
3069-Fabricated Rubber Products, Not Elsewhere Classified
3079-Miscellaneous Plastics Products
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3011-TIRES AND INNER TUBES

This industry comprises establishments primarily engaged in the manufacture of pneumatic casings, inner tubes, and solid and cushion tires for all types of vehicles, airplanes, farm equipment, and children's vehicles, as well as tire repair and tire retreading (camelback) materials. For a detailed list of products of industry 3011 , refer to table 6 A , product codes 3011111 to 3011539 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Tires and lnner Tubes lndustry totaled $\$ 2,950$ million. This amount included shipments of tires and inner tubes (primary products) valued at $\$ 2,399$ million, and shipments of other products (secondary products) and miscellaneous receipts (mainly resales) valued at $\$ 551$ million.

Shipments of tires and inner tubes by this industry represented 99 percent of all shipments of these products ( $\$ 2,420$ million) by all industries. In 1958 the coverage ratio was also 99 percent. Other industries shipping tires and inner tubes consisted mainly of industry 3069, Rubber Products, N.E.C.; and industry 3949, Sporting and Athletic Goods.

The production index for the primary products of the industry increased to 145 in 1963 from the 1958 level of 110 . The unit value index for 1963 was 96 compared to 113 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3021—RUBBER FOOTWEAR

This industry comprises establishments primarily engaged in the manufacture of all rubber footwear, waterproof fabric upper footwear, and other fabric upper footwear having rubber soles vulcanized to the uppers. For a detailed list of products of industry 3021, refer to table 6A, product codes 3021011 to 3021098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Rubber Footwear Industry totaled $\$ 354$ million. This amount included shipments of rubber footwear (primary products) valued at $\$ 305$ million, shipments of other products (secondary products) valued at $\$ 23$ million, and miscellaneous receipts (mainly resales) at $\$ 26$ million.

This industry's shipments of rubber footwear represented 93 percent of its total product shipments. Secondary products shipped by this industry in 1963 consisted mainly of rubber products, n.e.c. ( $\$ 9$ million), and boot and shoe cut stock and findings.

Shipments of rubber footwear by this industry represented 90 percent of all shipments of these products ( $\$ 340$ million) by all industries. Other industries shipping rubber footwear consisted mainly of industry 3142, House Slippers.

The production index for the primary products of the industry increased to 203 in 1963 from the 1958 level of 127 . The unit value index for 1963 was 101 compared to 103 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3031 -RECLAIMED RUBBER

This industry comprises establishments primarily engaged in reclaiming rubber from used tires, scrap, and miscellaneous waste rubber articles by processes which result in a devulcanized, depolymerized, or regenerated, replasticized product containing added ingredients. This product is sold for use as a raw material in the manufacture of rubber goods with or without a mixture with natural or synthetic rubber.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Reclaimed Rubber Industry totaled $\$ 49$ million. This amount included shipments of reclaimed rubber (primary products) valued at $\$ 43$ million, and shipments of other products (secondary products) and miscellaneous receipts valued at $\$ 6$ million.

Secondary products shipped by this industry in 1963 consisted mainly of rubber products, n.e.c.

Shipments of reclaimed rubber by this industry represented 77 percent of all shipments of these products ( $\$ 55$ million) by all industries. In 1958 the coverage ratio was 72 percent. Other industries shipping reclaimed rubber consisted mainly of industry 2818, Organic Chemicals, N.E.C., and industry 3011, Tires and Inner Tubes.

The production index for the primary products of the industry increased to 107 in 1963 from the 1958 level of 100 . The unit value index for 1963 was 117 compared to 107 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3069—FABRICATED RUBBER PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the manufacture of industrial and mechanical rubber goods, rubberized fabrics and vulcanized rubber clothing, and miscellaneous rubber specialties and sundries. For a detailed list of products of industry 3069, refer to table 6A, product codes 3069000 to 3069898.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Rubber Products, N.E.C., Industry totaled $\$ 2,598$ million. This amount included shipments of rubber products, n.e.c., (primary products) valued at $\$ 2,085$ million, shipments of other products (secondary products) valued at $\$ 343$ million, and miscellaneous receipts (mainly resales) at $\$ 170$ million.

This industry's shipments of rubber products, n.e.c., represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was also 86 percent. Secondary products shipped by this industry in 1963 consisted mainly of consumer and commercial plastics products, n.e.c. ( $\$ 29$ million), foamed plastics products ( $\$ 28$ million), and rubber footwear.

Shipments of rubber products, n.e.c., by this industry represented 89 percent of all shipments of these products ( $\$ 2,356$ million) by all industries. In 1958 the coverage ratio was 86 percent. Other industries shipping rubber products, n.e.c., consisted mainly of industry 3011, Tires and Inner Tubes, $\$ 115$ million; and industry 3079, Plastics Products, N.E.C., \$25 million.

The production index for the primary products of the industry increased to 143 in 1963 from the 1958 level of 106 . The unit value index for 1963 was 102 compared to 104 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3079-MISCELLANEOUS PLASTICS PRODUCTS

This industry comprises establishments primarily engaged in molding primary plastics for the trade, in manufacturing film, sheets, sheeting, rods, tubes, and other stock shapes from purchased resins, and in fabricating miscellaneous finished plastics products. For a detailed list of products of industry 3079 , refer to table 6A, product codes 3079000 to 3079898.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Plastics Products, N.E.C., Industry totaled $\$ 3,165$ million. This amount included shipments of plastics products, n.e.c. (primary products) valued at $\$ 2,812$ million, shipments of other products (secondary products) valued at $\$ 251$ million, and miscellaneous receipts (mainly products bought and resold without further manufacture) at $\$ 102$ million.

This industry's shipments of plastics products, n.e.c., represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 consisted mainly of custom compounded purchased resins ( $\$ 24$ million), and games and toys, except dolls and children's vehicles ( $\$ 17$ million).

Shipments of plastics products, n.e.c., by this industry represented 80 percent of all shipments of these products ( $\$ 3,495$ million) by all industries. In 1958 the coverage ratio was 85 percent.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustrnent is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results, that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so the industry is not comparable. The 1957 and earlier figures are on the old SIC definition of the industry.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes $\$ 2$ million or more shipped by establishments classified in industry 3949, Sporting and Athletic Goods, but exact data are withheld to avoid disclosing individual company figures.
${ }^{2}$ Includes $\$ 2$ million or more shipped by establishments classified in industry 3142, House Slippers, but exact data are withheld to avoid disclosing individual company figures.
${ }^{3}$ Includes $\$ 2$ million or more shipped by establishments classified in industry 2818, Organic Chemicals, N.E.C., and in industry 3633, Household Laundry Equipment, but exact data are withheld to avoid disclosing individual company figures.
${ }^{4}$ Includes \$2 million or more shipped by establishments classified in each of the following industries: 3079, Plastics Products, N.E.C.; 3494, Valves and Pipe Fittings; 3561, Pumps and Compressors; and 3644, Noncurrent Carrying Devices. Exact data are withheld to avoid disclosing individual company figures.
${ }^{5}$ Includes $\$ 3,166$ thousand shipped by establishments classified in industry 2291, Felt Goods, N.E.C., and $\$ 8,415$ thousand shipped by establishments classified in industry 3079, Plastics Products, N.E.C.
${ }^{6}$ Includes $\$ 3,848$ thousand shipped by establishments classified in industry 3079, Plastics Products, N.E.C.
${ }^{7}$ Includes $\$ 4,306$ thousand shipped by establishments classified in industry 3121, Industrial Leather Belting, $\$ 12$, 480 thousand shipped by establishments classified in Industry 3293, Gaskets and Insulations, and $\$ 12,831$ thousand shipped by establishments classified in industry 3555 , Printing Trades Machinery. In addition, $\$ 2$ million or more was shipped by establishments classified in industry 3842, Surgical Appliances and Supplies, but exact data are withheld to avoid disclosing individual company figures.
${ }^{8}$ Includes $\$ 7,326$ thousand shipped by establishments classified in industry 3131, Footwear Cut Stock. In addition, $\$ 2$ million or more was shipped by establishments classified in industry 2821, Phastics Materials and Resins, but exact data are withheld to avoid disclosing individual company figures.
${ }^{9}$ Includes $\$ 2$ million or more shipped by establishments classified in industry 2342, Corsets and Allied Garments, but exact data are withheld to avoid disclosing individual company figures.
${ }^{10}$ Includes $\$ 2,871$ thousand shipped by establishments classified in industry 2295, Coated Fabric, Not Rubberized, $\$ 2,373$ thousand shipped by establishments classified in industry 2821, Plastics Materials and Resins, and $\$ 2,907$ thousand shipped by establishments classified in industry 3079 , Plastics Products, N.E.C. In addition, shipments of $\$ 2$ million or more were made by establishments classified in the following industries, but exact data are withheld to avoid disclosing individual company figures: 2291, Felt Goods, N.E.C.; 2641, Paper Coating and Glazing; 2818, Organic Chemicals, N.E.C.; and 2891, Glue and Gelatin.
${ }^{11}$ Includes shipments of $\$ 2$ million or more in product class 31310, Boot and shoe cut stock and findings, but exact data are withheld to avoid disclosing individual company figures.
${ }^{12}$ Includes shipments of $\$ 2$ million or more in each of the following product classes, but exact data are withheld to avoid disclosing individual company figures: 22562, Circular knit fabrics; 22952, Resin-coated fabrics; 26414, Pressure sensitive tape; 26495, Other converted paper and board products; 28430, Surface active and finishing agents; 28993, Essential oils, fireworks, and pyrotechnics, and chemicals and chemical preparations, n.e.c.; 31210 , Industrial leather belting and packing; 32926, Vinyl asbestos floor tile; 32933, Packing, except leather, rubber, and metal, and asbestos insulations; 34612, Job stampings, except automotive; 34942, Fittings and unions for piping systems; 37175, Parts and accessories for passenger cars, trucks, and busses, shipped to motor vehicle manufacturers; 37291, Other aircraft parts and auxiliary equipment; 37292, Guided missile components and subassemblies, n.e.c.; 38421, Surgical, orthopedic, and prosthetic appliances and supplies; and 38423, Personal industrial safety devices.

TABLE 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

| Product code | Product | Unit of measure | 1963 |  |  | 1958 |  |  |

## table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

| Product code | Product | Value of shipments including interplant transfers $(\$ 1,000)$ |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  |  | 1963 | 1958 |  |
| 3079- -- | PLASTICS PRODUCTS, N.E.C.-Continued <br> Consumer and commercial plastics products, n.e.c.-Continued |  |  |  |
| 30798 -- |  |  |  |  |
| 3079000 | Plastics products, n.s.k: |  |  |  |
|  | As reported in census of manufactures........... As reported in Current Industrial Reports M3OD. | $\begin{aligned} & 138,068 \\ & 113,897 \end{aligned}$ |  | $\begin{array}{r} 79,400 \\ (\mathrm{NA}) \end{array}$ |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ Includes crumb or ground rubber (grindings of scrap not devulcanized by the pan or digester process) in 1958 . Crumb or ground rubber data were not collected in 1963.
${ }^{2}$ For 1958, quantity in 1,000 pounds.
${ }^{3}$ Because of changes in classification, 1963 and 1958 product lines are, for the most part, not comparable. In 1958 the only unsupported film, sheet, and sheeting separately classified were vinyl and polyethylene; other unsupported film, sheets, sheeting, rods, tubes, and other stock shapes made from purchased resins were reported in other classifications. For quantities of resins consumed in producing individual product lines see current Industrial Reports Series MBOD, "Shipments of Selected Plastics Products."
${ }^{4}$ The difference between the value of shipments reported in the census of manufactures and the value reported in the Current Industrial Reports Series M3OD is accounted for in part by plastics products reported in the census of manufactures as products of.industry 3079, Plastics Products, N.E.C., without sufficient description to recode properly into a more correct product code in other industries and by new producers reporting in the census of manufactures but not included in the 1963 Current Industrial Reports.

[^31]TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes:

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## Table 7C. Rubber Consumed in the Rubber Products Industries, by Geographic Areas: 1963

| 168 | Foam and sponge rubber...... | 18,869 | 66,525 | 793 | 52,969 | 29,775 | 943 |
| 169 | Other, including flotation equipment, tank tracks, etc. | 34,896 | 105,450 | 20,932 | 23,819 | 64,651 | 24,434 |
| 170 | Tread and cements. | 13,036 | 7,365 | 2,452 | 14,751 | 10,876 | 1,906 |
| 171 | Footwear. ..... | 20,050 | 15,169 | 1,257 | 18,995 | 5,013 | 1,410 |
| 172 | Shoe products (heels, soles and findings). | 2,696 | 49,821 | 6,067 | 8,038 | 46,778 | 9,369 |
| 173 | Druggist and medical sundries ........................ | 5,601 | 1,333 | 15 | 4,259 | 736 | 5 |
| 174 | Compounds and mixtures (produced for sale as such) ${ }^{1}$ | 10,190 | 18,214 | 6,915 | 5,841 | 4,318 | 1,659 |
| 175 | All other rubber products, including proofed goods. | 19,984 | 20,619 | 2,990 | 13,955 | 15,441 | 4,236 |

${ }^{1}$ Respondents were requested to include in this table the rubber reported in table 7A under code 306980. Since this involves some duplication of rubber reported above under code 174, the quantities in code 174 were reduced so that total rubber consumed would equal the totals reported in tables 7A for codes 086113-15, 282203-09, and 303101.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

See footnotes at end of table.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963-Continued

# Leather and Leather Products 

31A Tanning; shoes; industrial leather goods
31B Leather gloves; luggage; and misc. leather goods

This major group includes establishments engaged in tanning, currying, and finishing hides and skins; and establishments manufacturing finished leather and artificial leather products and some similar products made of other materials. Leather "converters" who assign hides and skins to contractors for tanning and finishing are included in Industry 3111, Leather Tanning and Finishing.

Standard Notes: - Represents zero, (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
${ }^{1}$ The figures for 1939 through 1963 include data for employees of manufacturing establishments who were engaged in disbribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known. ${ }^{\text {F For }}$ the period 1954 to 1963, figures represent adjusted value added by manufacture and for earlier years, madjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the of the year, without adjustment for price changes. For industries reporting the value of production, the adjustment for the change in finished products inventories was not made Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933 , cost of contract work was not subtracted from value of products in calculating value added by manufacture. See Introduction, "Value
${ }^{3}$ The cost of materials and value of shipments figures ( $2-$ and 3 - digit) include unlishments within the same industry classification. For a more complete explanation, see Introduction.
${ }^{4}$ For 1958 to 1963 , includes expenditures for establishments under construction but not in operation.

FIn addition to data for operating establishments, 1954, 1958, and 1963 data are shown for manufacturers' central administrative orfices and auxiliary units. Similar data are shown for the years 1949-1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962, or prior to 1949.

These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete estimates are published in the mnual survey of menufecures volumes for this period

${ }^{1}$ The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

## TANNING; FOOTWEAR; INDUSTRIAL LEATHER GOODS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3111--Leather Tanning and Finishing
3121 - Industrial Leather Belting and Packing
3131 --Boot and Shoe Cut Stock and Findings
3141 - Footwear, Except House Slippers and Rubber Footwear
3142-House Slippers
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owred by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3111--LEATHER TANNING AND FINISHING

This industry comprises establishments primarily engaged in tanning, currying and finishing hides and skins into leather. This industry also includes leather converters, who buy hides and skins and have them processed into leather on a contract basis by others. For a detailed list of products of industry 3111 , refer to table 6A, product codes 3111111 to 3111911.
ratterns of Operation. -The leather tanning and finishing industry is characterized by three major types of establishment operations: (1) "regular tanneries," (2) leather "converters," and (3) "contract tanneries." The regular tannery purchases raw materials, employs production workers in the plant to tan, curry, and finish the hides and skins, and sells the finished product; in effect, this establishment type performs all of the usual manufacturing functions within one establishment.

The leather converter, on the other hand, typically performs only the entrepreneurial functions of the manufacturing concern, such as buying raw materials, arranging with outside factories (contract tanneries) for the production of the finished leathers, and marketing the finished product. The actual tanning and finishing of the hides and skins is done on contract by the contract tanneries. The contract tanner employs production
workers in his own establishment to process materials owned by converters, makes products to specification, and does not become involved in the sale of the finished product.

Methods of Reporting on Census Questionnaires.-Typically, the regular tannery reports figures on employment (including production workers), cost of hides, skins, and other raw materials, and the value of shipments of prodicts made by him from his own materials. The leather converter will show, in addition to his cost of raw materials, a cost for contract work, and the shipments of products made for him from his own materials. The typical leather converter's questionnaire shows few, if any, production workers but labor costs are indirectly reflected in his report on cost of contract work. The contract tanner, on the other hand, reports figures on employment (primarily production workers). Instead of showing the shipments of the leathers which he processed (which would duplicate the data reported by his principals), the contractor reports his receipts for the contract work done for leather converters on their materials. His materials costs and contract receipts do not include any costs for materials which he has processed but did not own.

Classification of Establishments.--Since these different methods of operation lead to significant differences in the various relationships between wages and salaries paid, cost of materials, value of shipments, and value added by manufacture, plants were classified by their primary method of operation, as regular tanneries, converters, or contract tanneries. Separate statistics for each group are shown in tables 2 to 4.

It should be noted, however, that some establishments in industry 3111 employ more than one method of operating. For example, some establishments act as both a regular tannery and a leather converter, or as a regular and a contract tannery. In assigning the primary method of operation for manufacturer-converter plants, the relationship between wages and salaries paid to the cost of contract work was the determining factor. If direct wage and salary payments were less than payments for contract work, the plant was classified as a converter. For plants operating as both regular and contract tanneries, the relationship between the value of shipments of products made for their own account was compared with the receipts for work done on materials owned by other establishments to determine the plant's primary method of operation.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Leather Tanning and Finishing Industry in 1963 totaled $\$ 758$ million. This amount included shipments of tanned, curried and finished leather (primary products) valued at $\$ 633$ million, shipments of other products (secondary products) valued at $\$ 5$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at $\$ 120$ million.

This industry's shipments of tanned, curried and finished leather in 1963 represented 99 percent of its total product shipments. The industry specialization ratio in 1958 was 100 percent.

The production index for the primary products of the industry decreased to 90 in 1963 from the 1958 level of 99 . The unit value index for 1963 was 113 compared to 103 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3121 -INDUSTRIAL LEAT'HER BELTING AND PACKING

This industry comprises establishments primarily engaged in manufacturing industrial leather products, such as transmission belting, mechanical packings, and textile leather.

Establishments primarily engaged in manufacturing leather gaskets are classified in industry 3293, Steam and Other Packing and Pipe and Boiler Covering. For a detailed list of products of industry 3121, refer to table 6A, product codes 3121013 to 3121098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Industrial Leather Belting Industry in 1963 totaled $\$ 51.9$ million. This amount included shipments of industrial leather belting and packing (primary products) valued at $\$ 42.5$ million, shipments of other products (secondary products) valued at $\$ 5.2$ million, and miscellaneous receipts (mainly products bought and resold without further processing) at $\$ 4.2$ million.

This industry's shipments of $\$ 42.5$ million in 1963 represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 90 percent. Secondary products shipped by this industry in 1963 consisted mainly of mechanical rubber goods, n.e.c. ( $\$ 4.3$ million).

## 3131-BOOT AND SHOE CUT STOCK AND FINDINGS

This industry comprises establishments primarily engaged in manufacturing leather soles, inner soles, and other boot and shoe cut stock and findings. This industry also includes finished wood heels. Establishments primarily engaged in manufacturing heels, soling strips, and soles made of rubber, composition, plastics, and fiber are classified in Major Group 30, Rubber and Miscellaneous Plastics Products. For a detailed list of products of industry 3131, refer to table 6A, product codes 3131011 to 3131069 .

It should be noted that the statistics for the Footwear Cut Stock Industry include only establishments primarily producing for the commercial market or for transfer to other plants of the same company. The figures shown in table 6A on the shipments of footwear cut stock and findings do not include the production of these products made and consumed in integrated shoe manufacturing plants.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Footwear Cut Stock Industry in 1963 totaled $\$ 229.3$ million. This amount included shipments of boot and shoe cut stock and findings (primary products) valued at $\$ 202.4$ million, shipments of other products (secondary products) valued at $\$ 14.1$ million, and miscellaneous receipts (mainly products bought and resold without further processing) at $\$ 12.7$ million.

This industry's shipments of boot and shoe cut stock and findings in 1963 represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 consisted mainly of rubber heels and soles ( $\$ 7.3$ million), and leather tanning and finishing ( $\$ 1.3$ million).

The production index for the primary products of the industry decreased to 79 in 1963 from the 1958 level of 89 . The unit value index for 1963 was 113 compared to 111 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3141 -FOOTWEAR, EXCEPT HOUSE SLIPPERS AND RUBBER FOOTWEAR

This industry comprises establishments primarily engaged in the manufacture of boots and shoes designed primarily for street, work, play or sport wear. Establishments
primarily engaged in the production of suchprotective footwear as rubbers, rubber boots, storm shoes, galoshes and other footwear with rubber soles vulcanized to fabric uppers are classified in industry 3021 . For a detailed list of products of industry 3141, refer to table 6A, product codes 3141101 to 3141710 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 6A or in the value of shipments or value added data shown in table 1.

Value of shipments and other receipts of the Shoes, Except Rubber Industry in 1963 totaled $\$ 2,249$ million. This amount included shipments of shoes, except rubber (primary products) valued at $\$ 2,174$ million, shipments of other products (secondary products) valued at $\$ 26$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 49$ million.

This industry's shipments of shoes, except rubber in 1963 represented 99 percent of its total product shipments. The industry specialization ratio in 1958 was also 99 percent. Secondary products shipped by this industry in 1963 consisted mainly of house slippers ( $\$ 17$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 26 percent of the total industry shipments are represented by plants specializing in men's dress shoes, including play shoes; and 48 percent in women's dress, work, and play shoes.

Shipments of shoes, except rubber, by this industry in 1963 represented 99 percent of all shipments of these products ( $\$ 2,197$ million) by all industries. In 1958 the coverage ratio was also 99 percent.

The production index for the primary products of the industry increased to 112 in 1963 from the 1958 level of 110 . The unit value index for 1963 was 111 compared to 103 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3142—HOUSE SLIPPERS

This industry comprises establishments primarily engaged in manufacturing house slippers of leather or other materials. For a detailed list of products of industry 3142, refer to table 6A, product code 3142061 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Establishments in this industry were requested to report "value of shipments" in 1963 and "value of production" in prior years. This change was made as a result of a review
of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in table 6A or in the value of shipments or value added data shown in table 1.

Value of shipments and other receipts of the House Slippers Industry in 1963 totaled $\$ 123$ million. This amount included shipments of house slippers (primary products) valued at $\$ 108$ million, shipments of other products (secondary products) valued at $\$ 12$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 3$ million.

This industry's shipments of house slippers in 1963 represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 90 percent.

Shipments of house slippers by this industry in 1963 represented 85 percent of all shipments of these products ( $\$ 128$ million) by all industries. In 1958 the coverage ratio was 85 percent.

The production index for the primary products of the industry increased to 146 in 1963 from the 1953 level of 131. The unit value index for 1963 was 94 compared to 95 in 1958. Both indexes were computed on a basis of $1954=100$.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: For 1954-1963 figures represent ad justed value added, which is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. For 1958, however, value of production rather than value of shipments was collected for industries 3141 , Footwear, Except Rubber, and 3142, House Slippers. In computing 1958 adjusted value added for these industries, the net change of only work-inprocess inventories is included. For years prior to 1954 figures represent unadjusted value added. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

## Standard Notes: - Represents zero. <br> (D) Withheld to avoid disclosing figures for individual companies. <br> (NA) Not available. <br> (X) Not

 applicable.(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period, The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Data for Alaska and Hawaii are included.
${ }^{3}$ For 1957 and earlier years estimates with a standard error.
${ }^{4}$ In this industry which contains a very large number of very small establishments, there is a possibility that some of these small establishments may have been misclassified as to industry. This would not affect the statistics other than the number of establishments.
${ }^{5}$ Figures for 1933 and earlier years were obtained by combining the data for two former industries: "Boot and shoe cut stock, not made in boot and shoe factories," and "Boot and shoe cut findings, not made in boot and shoe factories."
${ }^{6}$ See text regarding comparability of 1963 and prior years.
7 "Footwear, except rubber" and "House slippers" formerly constituted a single classification. The separate figures for $1939-1963$ have been combined in order that statistics can be shown for the entire period 1899-1963.
${ }^{8}$ Comparable data are not available due to significant revisions in the 1947 classifications of plants and products in this industry.

(D) Withheld to avoid disclosing figures for individual companies.
${ }^{i}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3111, Leather Tanning and Finishing: New England-Maine, 13 (2,059); Vermont, 1 (100-249); Connecticut, 2 (20-99); East North Central-0hio, 11
(500-999); Indiana, 2 (100-249); West North Central-Minnesota, 3 (361); Missouri, 5 (100-249); Nebraska, 1 (20-99); South Atlantic-Maryland, 1
(100-249); Virginia, 4 (592); West Virginia, 5 (508); North Carolina, 2 (100-249); South Carolina, 1 (1-19); East South Central-Kentucky, 2 (100249); West South Central—Louisiana, l (1-19); Texas, 4 (103); Mountain-Colorado, 1 (1-19); Utah, 1 (1-19); Pacific-Washington, 2 (1-19); Oregon, 3 (20-99).
SIC 3121, Industrial Leather Belting: New England-New Hampshire, 1 (100-249); Massachusetts, 12 (20-99); Rhode Island, 2 (1-19); Connecticut, 2 (1-19); Middle Atlantic-New Jersey, 3 (284); East North Central-Ohio, 3 (662); Michigan, 4 (100-249); Wisconsin, 2 (250-499); West North CentralMissouri, 3 '(20-99); South Atlantic-Delaware, 1 (20-99); Maryland, 1 (1-19); North Carolina, 9 (20-99); South Carolina, 5 (20-99); Georgia, 3 (20-99);'West South Central-Louisiana, I (1-19); Texas, l (l-19); Pacific-California, 7 (518).
SIC 3131, Footwear Cut Stock: New England-Vermont, 2 (20-99); Connecticut, 1 (1-19); Middle Atlantic-New Jersey, 3 (20-99); Pennsylvania, 22 (500-999); East North Central-Indiana, l (20-99); Michigan, l (20-99); Wisconsin, 7 (100-249); West North Central-Iowa, l (1-19); Missouri, 37 (1,000-2,499); South Atlantic-Maryland, l (1-19); Virginia, 3 (114); North Carolina, l (20-99); Florida, 1 (20-99); East South CentralKentucky, 2 (20-99); Tennessee, 4 (250-499); West South Central-0klahoma, 1 (1-19); Texas, 3 (20-99); Pacific-Oregon, 4 (1-19).
SIC 3141, Shoes, Except Rubber: New England-Maine, 74 (10,000 and over); New Hampshire, 60 ( 10,000 and over) ; East North Central-Ohio, 20 (7,087); Michigan, 7 (2,161); West North Central-Iowa, 2 (100-249); Nebraska, 2 (20-99); Kansas, 4 (20-99); South Atlantic-Maryland, 11 (1,000-2,499); Virginia, 10 (3,017); West Virginia, 1 (250-499); Georgia, 10 ( $2,500-4,999$ ); Florida, 14 (500-999); East South Central-Tennessee, 37 (10,000 and over); Alabama, 4 (500-999); Mississippi, 5 (2,005); Mountain-New Mexico. 3 (104); Arizona, 3 (20-99); Pacific-Washington. 3 (20-99); Oregon, 4 (1-19); California, 55 (2,500-4,999).
SIC 3142, House Slippers: New England-Maine, 4 (20-99); Vermont, 1 (1-19); Rhode Island, 1 (20-99); Connecticut, 3 (307); East North Central-Ohio 3 (347); Indiana, 1 (100-249); Illinois, 2 (20-99); West North Central-Minnesota, 1 (20-99); Missouri, 5 (500-999); Kansas, 1 (0); South AtlanticMaryland, 1 (100-249); Ceorgia, 1 (20-99); Florida, 1 (1-19); East South Central-Tennessee, 1 (1-19); West South Central-Arkansas, 1 (100-249); Texas, 4 (111); Pacific—Oregon, 1 (0); California, 1 (1-19); Hawaii, 1 (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total employment (either actual or in the size ranges) for such Statos
${ }^{3}$ See text regarding comparability for 1963 and prior years.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.
Standard Notes: applicable.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[^37] class.
table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

| An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such <br> as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I . |  |  |  |  |  |  |  |  |  |  |

Note: See Introduction for an explanation of terms used.
${ }^{1}$ Represents value of production rather than value of shipments (see text).

## TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

${ }^{1}$ Represents the quantity and value of shipments of products made by or for companies from their own materials. See text for more detailed explanation.
${ }^{2}$ For this product, more detailed data were collected for 1958. This information is shown in the 1958 Census of Manufactures Volume.
${ }^{3}$ Quantity estimated based on the quantity-value relationship reported for other products of the product class.
${ }^{4}$ Contract receipts are not included in the total shown for tanned, curried, and finished leather. For 1963 , contract receipts include all receipts for tanning and finishing done for others on their materials regardless of the industry classification of the establishments. For 1958, contract receipts include all receipts for contract work done for others on their materials by establishments classified in industry 3lll, Leather Tanning and Finishing.
${ }^{5}$ For 1958 , product code 3121013 includes the following: Flat leather belting, $\$ 5,136$ thousand; Other leather belting, \$2,879 thousand; and Industrial leather belting, not specified by kind, $\$ 1,696$ thousand. Data for these products were not collected separately for 1963 .
${ }^{6}$ Figures exclude footwear and cut stock and findings made from rubber and elastomer resins and plastics which are not primary to industry 3131. Data on the shipments of rubber and elastomer resin footwear cut stock are included with the figures for industry 3069, Fabricated Rubber Products, n.e.c.; footwear cut stock and findings made from plastics are included with figures for industry 3079, Miscellaneous Plastic Products.
${ }^{7}$ For 1958, includes 1,320 thousand dozen pairs of leather counters valued at $\$ 1,791$ thousand, and 22,475 thousand dozen pairs of other counters valued at $\$ 9,972$ thousand. Data for these products were not collected separately for 1963.
${ }^{8}$ For 1958, includes 335 thousand dozen pairs of leather counters valued at $\$ 488$ thousand, and 3,653 thousand dozen pairs of counters of other materials valued at $\$ 1,102$ thousand. Data for these products were not collected separately for 1963.
${ }^{9}$ For 1958, includes 859 thousand dozen pairs of midsoles valued at $\$ 2,246$ thousand; 6,549 thousand dozen pairs of heel lifts and top lifts valued at $\$ 2,458$ thousand; and upper (vamps, quarters, tips, and tongues, etc.) valued at $\$ 3,305$ thousand. Data for these products were not collected separately for 1963.
${ }^{11}$ For 1958 , includes 1,660 thousand dozen pairs of platforms, valued at $\$ 2,017$ thousand, for which data were not collected separately for 1963 .
${ }^{11}$ For 1958, represents value of production (see text).
${ }^{12}$ The constructions shown in this table relate to the method of outersole attachment. In addition to those specified, companies were asked to report two additional categories: Moccasins with outersole attached, and moccasins having no line of demarcation between the sole and upper. An investigation showed that a substantial number of companies producing moccasins with outersole attached had included them with cemented, welt, etc. depending on the method of attachment of the outersole. It was also apparent that moccasins having no line of demarcation between the sole and upper were not completely reported. Figures reported for these two categories, therefore, have been included in the "construction not specified" column, by type of footwear.
${ }^{13}$ Production data on footwear with sole vulcanized to fabric upper, including sneakers, are presented in the 1963 Census of Manufactures report on rubber footwear, SIC Code 3021.
${ }^{14}$ The constructions listed are those for which separate data are available for 1958. More detailed information for 1963 for the "other constructions" category is shown above.
${ }^{15}$ For 1958 , includes 1,657 thousand pairs of men's play shoe's for which separate data were not collected by type of construction.
${ }^{16}$ For 1958, figures for misses' play shoes are included with those for women's shoes. For 1963, they are included with misses'.
${ }^{17}$ Data by method of construction are not available for 1958.

[^39](S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manu-
 lishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ Contract receipts are not included in the total show for Leather tanning and finishing. For 1963, contract receipts include all receipts for tanning and finishing done for others on their materials regardless of the industry classification of the establishments. Prior to 1963, contract receipts include all receipts for contract work done for others on their materials by establishments classified in industry 31il, Leather Tanning and Finishing.
${ }^{3} 1958$ represents value of production rather than value of shipments (see text).
${ }^{4}$ The figures shown for 1947 are not completely comparable due to differences in reporting by manufacturers of sandal-type snoes. The 1947 data for play shoes, which are not included in the product class detail, are as follows: Men's, youths', and boys', 740 thousand pairs, $\$ 2,429$ thousand; Womens' and misses', 29,510 thousand pairs, $\$ 73,294$ thousand; Children's, 773 thousand pairs, $\$ 1,236$ thousand; Infants' and babies', 756 thousand pairs, $\$ 1,014$ thousand.
${ }^{5}$ Quantity estimated using the average unit value reported by other shoe producing companies reporting both quantity and value of shipments.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

[^40]pplicable. (Z) Less than $\$ 1$ million reported. n.e.c. Not elsewhere classified.
${ }^{1}$ For the specified product classes, shipmenter of $\$ 1$ million or more were reported for the States listed, but the exact figures are withheld to avoid disclosure of individual company figures: 31111, Maine, Vermont, Ohio, Indiana, Minnesota, Missouri, Maryland, Virginia, North Carolina, Georgia, Kentucky, and California; 31113, New Hampshire, Massachusetts, New York, Wisconsin, North Carolina, and Tennessee; 31114, Massachusetts, Connecticut, New Jersey, Pennsylvania, Illinois, Michigan, and Delaware; 31411, New Hampshire, Connecticut, New York, New Jersey, Indiana, Illinois, Michigan, Minnesota, Missouri, Virginia, West Virginia, North Carolina, Georgia, Kentucky, Tennessee, Arkansas, and Texas; 31412, New York, Pennsylvania, Michigan, Minnesota, Missouri Maryland, North Carolina, Georgia, Alabama, Arkansas, and California; 31413, New York, Ohio, Michigan, Missouri, Virginia, North Carolina, and Kentucky; 31414 , Indiana, Michigan, Wisconsin, Minnesota, Virginia, Georgia, Florida, Kentucky, and Tennessee; 31415, New York, Indiana, Illinois, Michigan, Missouri, Georgia, and Mississippi; 31416, New York, Wisconsin, and Kentucky; 31417, New Hampshire, New York, Illinois, and Wisconsin.
${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.
${ }^{3}$ See text regarding comparability of 1963 and 1958 data.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. (Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## LEATHER GLOVES; LUGGAGE; AND MISCELLANEOUS LEATHER GOODS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3151-Leather Dress, Semidress, and Work Gloves<br>3161-Luggage<br>3171-Women's Handbags and Purses<br>3172-Personal Leather Goods, Except Handbags and Purses<br>3199-Leather Goods, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

With the exception of the Leather Gloves Industry (SIC 3151), the products of these industries are made from both leather and nonleather materials. For example, plants primarily engaged in making luggage (whether from plastics, leather, or other materials) are classified in the luggage industry; the basis for classification is the type of product rather than the kind of raw material used.

## 3151-LEATHER DRESS, SEMIDRESS, AND WORK GLOVES

This industry comprises establishments primarily engaged in manufacturing dress, semidress, and work gloves exclusively of leather. Establishments primarily engaged in manufacturing sporting and athletic gloves are classified in industry 3949; and dress, semidress, and work gloves and mittens of cloth, or cloth and leather combined, in industry 2381. For a detailed list of products of industry 3151, refer to table 6A, product codes 3151012 to 3151079 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Leather Gloves Industry in 1963 totaled $\$ 81$ million. This amount included shipments of leather dress, semidress, and work gloves (primary products) valued at $\$ 55$ million, shipments of other products (secondary products) valued at $\$ 13$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 12$ million.

This industry's shipments of leather gloves in 1963 represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 consisted mainly of fabric dress gloves and mittens ( $\$ 9$ million), and fabric work gloves and mittens ( $\$ 3$ million).

Shipments of leather dress, semidress, and work gloves by this industry in 1963 represented 89 percent of all shipments of these products ( $\$ 62$ million) by all industries. In 1958 the coverage ratio was 86 percent.

Establishments in this industry were requested to report value of shipments in 1963 and value of production in prior years. This change was made as a result of a review of the reporting which indicated that the value of shipments data were more generally available from company records and were usually reported in place of value of production. This change does not significantly affect the comparability between 1963 and prior years for the product statistics shown in tables 6 A or in the industry's value of shipments shown in tables 1 to 4 .

The production index for the primary products of the industry increased to 123 in 1963 from the 1958 level of 103 . The unit value index for 1963 was 115 compared to 109 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3161-LUGGAGE

This industry comprises establishments primarily engaged in manufacturing luggage of leather or other materials. For a detailed list of products of industry 3161, refer to table 6A, product codes 3161015 to 3161098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Luggage Industry in 1963 totaled $\$ 210$ million. This amount included shipments of luggage (primary products) valued at $\$ 192$ million, shipments of other products (secondary products) valued at $\$ 10$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 8$ million.

This industry's shipments of luggage in 1963 represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was also 95 percent.

Shipments of luggage by this industry in 1963 represented 94 percent of all shipments of these products ( $\$ 205$ million) by all industries. In 1958 the coverage ratio was 95 percent. Other industries shipping luggage consisted mainly of industry 3172, Small Leather Goods, $\$ 2,048$ million.

As a result of revisions to the 1957 Standard Industrial Cla'sification, data for this industry for 1957 and earlier years are not directly comparaole to those for 1958 to 1963. The extent of noncomparability is described in the text for industry 3161 which appears in the 1958 Census of Manufactures, volume II, part 2.

The production index for the primary products of the industry increased to 120 in 1963 from the 1958 level of 106 . The unit value index for 1963 was 115 compared to 104 in 1958. Both indexes were computed on a basis of $1954=100$.

Establishments shipping luggage, travel kits, billfolds, wallets, and French purses also report monthly on Census Form M31E, Luggage, Briefcases, and Personal Leather Goods. The 1963 data compiled from this survey are shown in table 6A together with the com-
parable totals reported in the census of manufactures. The M31E survey was initiated in 1960.

The two sets of 1963 data differ primarily because of the different procedures used in deriving the totals. All manufacturing plants are included in the census of manufactures. The monthly M31E data, on the other hand, are estimates based on reports received from a sample of all producers benchmarked to their 1958 Census of Manufactures reports. Over a period of time, most samples, including this one, are subject to increasing errors pending rebenchmarking to a complete universe. It appears that the sample for the luggage and personal leather goods survey did not completely reflect the changes in business activity of the nonsample companies and consequently the estimates differed from the results of the complete census.

In addition, the data available for the benchmark year (1958) were in less detail than that collected in the M31E survey. Therefore, "average" estimating factors were used for some of the detail items. This fact significantly affected the level of some of these estimates.

## 3171-WOMEN'S HANDBAGS AND PURSES

This industry comprises establishments primarily engaged in manufacturing women's handbags and purses of leather or other materials, except precious metal (industry 3911). For a detailed list of products of industry 3171, refer to table 6A, product codes 3171011 to 3171071 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Handbags and Purses lndustry in 1963 totaled $\$ 280$ million. This amount included shipments of ladies' and children's handbags and purses (primary products) valued at $\$ 261$ million, shipments of other products (secondary products) valued at $\$ 7$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 12$ million.

This industry's shipments of handbags and purses in 1963 represented 98 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent.

Shipments of handbags and purses by this industry in 1963 represented 98 percent of all shipments of these products ( $\$ 266$ million) by all industries. In 1958 the coverage ratio was 98 percent. Another industry shipping handbags and purses was industry 3172 , Small Leather Goods, $\$ 2$ million.

The production index for the primary products of the industry increased to 117 in 1963 from the 1958 level of 107 . The unit value index for 1963 was 127 compared to 111 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3172—PERSONAL LEATHER GOODS, EXCEPT HANDBAGS AND PURSES

This industry comprises establishments primarily engaged in manufacturing small articles, such as billfolds, key cases and coin purses of leather or other materials, except precious metal (industry 3911). For a detailed list of products in industry 3172, refer to table 6A, product codes 3172011 to 3172055 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Small Leather Goods Industry in 1963 totaled $\$ 159$ million. This amount included shipments of personal leather goods, except
handbags and purses, (primary products) valued at $\$ 141$ million, shipments of other products (secondary products) valued at $\$ 6$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 12$ million.

This industry's shipments of small leather goods in 1963 represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 consisted mainly of luggage ( $\$ 2$ million), and handbags and purses (\$2 million).

Shipments of personal leather goods, except handbags and purses; by this industry in 1963 represented 92 percent of all shipments of these products ( $\$ 154$ million) by all industries. In 1958 the coverage ratio was 87 percent.

As a result of revisions to the 1957 Standard Industrial Classification, data for this industry for 1957 and earlier years are not directly comparable to those for 1958 to 1963. The extent of noncomparability is described in the text for industry 3172 which appears in the 1958 Census of Manufactures, volume II, part 2.

The production index for the primary products of the industry increased to 130 in 1963 from the 1958 level of 112. The unit value index for 1963 was 99 compared to 102 in 1958. Both indexes were computed on a basis of $1954=100$.

Establishments shipping luggage, travel kits, billfolds, wallets, and French purses also report monthly on Census Form M31E, Luggage, Briefcases, and Personal Leather Goods. The 1963 data compiled from this survey are shown in table 6A, together with the comparable totals reported in the census of manufactures. The M31E survey was initiated in 1960.

The two sets of 1963 data differ primarily because of the different procedures used in deriving the totals. All manufacturing plants reported in the census of manufactures. The monthly M31E data, on the other hand, are estimates based on reports received from a sample of all producers benchmarked to their 1958 Census of Manufactures reports. Over a period of time, most samples, including this one, are subject to increasing errors pending rebenchmarking to a complete universe. It appears that the sample for the luggage and personal leather goods survey did not completely reflect the changes in business activity of the nonsample companies and consequently the estimates differed from the results of the complete census.

In addition, the data available for the benchmark year (1958) were in less detail than that collected in the M31E survey. Therefore, "average" estimating factors were used for some of the detail items. This fact significantly affected the level of some of these estimates.

## 3199-LEATHER GOODS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing leather goods, n.e.c., such as saddlery, harness, and whips; embossed leather goods; leather desk sets; and razor straps. For a detailed list of products of industry 3199, refer to table 6A, product codes 3199011 to 3199098.

Establishments primarily engaged in manufacturing leather garments are classified in industry 2386, Leather and Sheeplined Clothing; leather belts in industry 2387, Apparel Belts; leather gaskets in industry 3293, Gaskets and Insulations; leather buffing wheels in industry 3291, Abrasive Products; and leather costume jewelry in industry 3961, Costume Jewelry.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Leather Goods, N.E.C., Industry in 1963 totaled $\$ 67$ million. This amount included shipments of saddlery, harness and whip and other leather products, n.e.c. (primary products) valued at $\$ 55$ million, shipments of other products (secondary products) valued at $\$ 4$ million, and miscellaneous receipts (mainly contract work on materials owned by others), at $\$ 8$ million.

This industry's shipments of leather goods, n.e.c., in 1963 represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent.

Shipments of saddlery, harness and whip and other leather products, n.e.c., by this industry in 1963 represented 82 percent of all shipments of these products ( $\$ 67$ million) by all industries. In 1958 the coverage ratio was 84 percent.

NOTR: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual conpanies. (NA) Not available. ( X ) Not applicable. (Z) Less than $\$ 500$ thousand. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ See text regarding comparability of 1963 data with earlier years.
${ }^{2}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a conplete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{3}$ The 1957 Standard Industrial Classification combined in this industry two industries which were separate in the 1945 Standard Industrial Classification. These were: Leather dress gloves and leather work gloves. The data for 1947-1954 for these two industries have been combined. Prior to 1947, leather work gloves and leather dress gloves constituted a single industry.
${ }^{4}$ Data for Alaska and Hawaii are not included for 1957 and prior years.
${ }^{5}$ This industry contains a number of very small establishments, some of which may have been misclassified as to industry in 1954 . This would not affect the statistics other than the number of establishments.
${ }^{6}$ The figures for 1925-1963 do not include data for gloves and mittens of cloth and leather combined, whereas the figures for earlier years include data for these products.

7 The figures for 1899 include data for a few establishments making gloves and mittens from materials other than leather.
$8_{\text {A }}$ revision in the definition of the Luggage Industry was introduced in the 1957 Standard Industrial Classification so that the industry is not exactly comparable to years prior to 1958. The 1957 and earlier figures are on the old SIC definition of the industry. The details of the revision are described in the text.
${ }^{9 " H a n d b a g s ~ a n d ~ P u r s e s " ~ a n d ~ " S m a l l ~ L e a t h e r ~ G o o d s " ~ f o r m e r l y ~ c o n s t i t u t e d ~ o n e ~ i n d u s t r y . ~ S e p a r a t e ~ f i g u r e s ~ f o r ~ p r i o r ~ y e a r s ~ a r e ~ n o t ~ a v a i l a b l e . ~}$
${ }^{10}$ The 1957 Standard Industrial Classification combined in this industry two industries with several product revisions which were separate in the 1945 Standard Industrial Classification. These were Small Leather Goods (old SIC Industry 3172) and Jewelry and Instrument Cases (old SIC Industry 3986). The data for 1954 and earlier years for these two industries have been combined. The details of the revisions are described in the text.
${ }^{11}$ Comparable figures for earlier years are not available.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. <br> code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio <br> Col. B <br> Col. B+C <br> (percent) | Total, made in all industries $(\$ 1,000)$ | Made in this industry $(\$ 1,000)$ | Made in other industries $(\$ 1,000)$ | Coverage ratio <br> Col. B <br> Col. F <br> (percent) |

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

| 3199000 | Leather goods, n.s.k... | 11,562 |  | 16,485 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Establishments in this industry were requested to report value of shipments in 1963 and value of production in 1958 . this change does not significantly affect the comparability of the data for the two years. (See text.)
${ }^{2}$ Includes only all-leather gloves and mittens. Leather and fabric combinations are classified in industry 2381, Fabric Dress and Work Gloves. ${ }^{3}$ The quantity data reported on Census Annual Form MA-23D. "Gloves and Mittens" represent quantity produced rather than quantity shipped. ${ }^{4}$ Quantity estimated, based on average quantity-value relationship of all other products.
${ }^{5}$ The reasons for the differences between the 1963 data collected in the census of manufactures and the current monthly survey M31E are discussed in the text. The M31E survey was not conducted in 1958, and all data for that vear are from the census of manufactures.
${ }^{6}$ For 1963, data collected in the census of manufactures are not completely comparable to those collected on the census monthly survey M3lE to the extent that vanity cases are included in the monthly survey data but are classified in industry 3172, Small Leather Goods, in the census of manufactures.
${ }^{7}$ For 1958, separate data were not collected for zippered hand luggage. Figures for this item were included with women's and men's hand luggage, as applicable. Therefore, the data are not comparable to the 1963 information. Detailed figures were collected in 1958 by type of material (leather, plastic, and other) and are published in the census of manufactures report for that year.
${ }^{8}$ For 1958, figures for attaché cases and catalog cases were not collected separately but were included with "Other Luggage."
${ }^{9}$ For 1963, quantity data for these items were also collected on Census Form M31E, Luggage, Briefcases, and Personal Leather Goods. Since this survey was begun in 1960, comparsble data are not available for 1958. The 1958 data are as collected in the census of manufactures for that year. ${ }^{10}$ For 1953 , no category was provided to report billfolds, wallets, and French purses of materials other than leather and plastic in either the eensus of manufactures or survey M3IE. No information is available on where these were reported for 1963.
${ }^{11}$ The data as reported in the census of manufactures are not completely comparable to the data reported on survey M31E. On survey M31E, vanity cases are included with "Other women's hand luggage", product code 3161025, while on the census they are included in product code 3172019. The quantity of this item is not known.
${ }^{12}$ The products of this industry only include leather goods that are not classified in other industries. (See text.)

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes (1954 = 100) |  |

| 31720 | Personal leather goods, except handbags and purses. | 154,270 | 139,622 | 127, 350 | 135,094 | 145,100 | $4.134,728$ | 121,314 | (NA) |
| 31990 | Saddlery, harness and whip and other leather products, n.e.c......................... | 67,066 | 67,809 | 63,777 | 63,194 | 63,912 | 61,198 | 54,332 | 64,056 |

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(x) Not
applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ See text regarding comparability of 1963 data with earlier years.
${ }_{4}^{3}$ See footnote 3, table 1.
${ }^{4}$ See footnote 10 , table 1.
table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

| Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| DRESS AND WORK GLOVES AND MITTENS, ALL LEATHER (31510) | $1963{ }^{1}$ | DRESS AND WORK GLOVES AND MITTENS, ALL LEATHER (31510)-Continued | $1963{ }^{\text {² }}$ | DRESS AND WORK CLOVES AND MITTENS, ALL LEATHER (31510) -Continued | $1963{ }^{1}$ |  |
|  | 61,942 | $\begin{aligned} & \text { East North Central........... } \\ & \text { Inlinois.................. } \\ & \text { Wisconsin................. } \end{aligned}$ | 17,585 |  | $\begin{aligned} & 6,850 \\ & 2,880 \end{aligned}$ |  |
| United States, total... |  |  | $\begin{aligned} & 5,531 \\ & 8,122 \end{aligned}$ | South. Tennessee |  |  |
| Northeast. | $\begin{aligned} & 29,898 \\ & 28,275 \end{aligned}$ | West North Central.........Iowa................... | 4,829 | West.. |  | 2,780 |
| New York. . . . . . . . . . . . . . . . |  |  | 2,704 | California |  | 1,480 |

${ }^{1}$ For the specified product classes shipments of $\$ 1$ million or more were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 31510-Indiana, Michigan, Minnesota, and Arkansas.

## table 7A. Materials by Kind: 1963 and 1958

[^42]
## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power

 "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
(Z) Less than 500 horsepower.
n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated
 consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

# Stone, Clay, and Glass Products 

## 32A Glass products

32B Cement and structural clay products
32C Pottery and related products
32D Concrete, plaster, and cut stone products
32E Abrasive, asbestos, and miscellaneous nonmetallic mineral products

This major group includes establishments engaged in manufacturing flat glass and other glass products, cement, structural clay products, pottery, concrete, and gypsum products, cut stone products, abrasive and asbestos products, etc., from materials taken principally from the earth in the form of stone, clay, and sand. When separate reports are available for mines and quarries operated by manufacturing establishments classified in this major group, the mining activities are classified in mining industries; when separate reports are not available, the mining activities are classified with the manufacturing operations and classified as manufacturing industries.

$r_{\text {Figures }}$ for establishments primarily engaged in producing readymixed concrete are excluded for 1954, 1947, and 1939. In 1958, the value added in ready-mixed concrete establishments represented 12 percent of the total value added for the stone, clay, and glass products, and in 1937, less than 1 percent. As indicated in the introductory text, cerain quarries, operated as parts of manufacturing establishments, are included in the stone, clay and glass products industries but separate figures for such mining activity ere also obtained in the last three censuses. The value added at quarries operated in conjunction with these manufacturing establishments (including value added in producin mineral products consumed in the same establishnent) was $\$ 321,240$ thousand in 1963; $\$ 360,992$ thousand in 1958; and $\$ 193,636$ thousand in 1954. Further detail on such mining operations are included in the Census of Mineral Industries reports.
${ }^{2}$ The figures for 1939 through 1954 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not knowr.
${ }^{3}$ For the period 1954 to 1963, figures represent adjusted value added by manuf acture and for earlier years, unadjusted value added. Adjusted value added is equal to value
of shipments (including resales of finished products) less cost of finished products,
materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year.
${ }^{4}$ The total value of shipments and cost of materials for industry groups (2- and 3digit) include extensive duplication arising from shipnents between establishments in the same industry classification. For more complete explanation, see Introduction.

The figures for 1958 to 1963 include expenditures for plants under construction and not yet in operation.
din data are shown for the years 1949 to 1963 in the annual surver or manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959-1962 or prior to 1949.
These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

industry. For a more complete explanation, see Introduction. groups (2-and 3-digit) include extensive duplication arising from shipments between establishments in the same

## GLASS PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3211-Flat Glass<br>3221-Glass Containers<br>3229-Pressed and Blown Glass and Glassware, N.E.C.<br>3231-Glass Products, Made of Purchased Glass

This group of industries includes establishments primarily engaged in manufacturing flat glass and glass products not specifically classified in other industries. For example, establishments primarily engaged in manufacturing the following glass products are not included in this group of industries: Complete electric light bulbs, electronic or X-ray tubes (classified in Major Group 36, Electrical Machinery and Equipment), ophthalmic goods, including prescription sun glasses and eye-protective goggles (classified in industry 3851, Ophthalmic Goods), glass fabrics (classified in industry 2221, Weaving Mills, Synthetic), glass insulation (classified in industry 3296, Mineral Wool).

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables lto 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3211--FLAT GLASS

This industry comprises establishments primarily engaged in manufacturing flat glass, including plate glass, window glass, rolled glass, figured and wire glass, opalescent and obscured glass, and cathedral and skylight glass. This industry also includes establishments that produce laminated glass from glass produced in the same establishment. Establishments primarily engaged in manufacturing laminated glass from purchased flat glass are classified in industry 3231, Glass Products, Made of Purchased Glass. For a detailed list of primary products of industry 3211, refer to table 6A, product codes 3211122 to 3211498 and 3231311 to 3231698.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Flat Glass Industry in 1963 totaled $\$ 549$ million. This amount included shipments of flat and laminated glass (primary prod-
ucts), and other products (secondary products) valued at $\$ 536$ million, and miscellaneous receipts at $\$ 13$ million. Separate value of shipments data for primary and secondary products are withheld to avoid disclosing figures for individual companies.

This industry's shipments of flatglass, including laminated in 1963 represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was also 90 percent.

The production index for the primary products of the industry increased to 139 in 1963 from the 1958 level of 98 . The unit value index for 1963 was 107 compared to 112 in 1958. The computation of the indexes included laminated glass made in the Flat Glass lndustry (3211) and laminated glass made in the Products of Purchased Glass lndustry (3231). Both indexes were computed on a basis of $1954=100$.

Table 6 presents data for the total "shipments and interplant transfers" of flat glass. It should be noted, however, that some of the flat glass reported as "shipments and interplant transfers" does not reach the ultimate consumer as flat glass, but is instead used by establishments in industry 3231 in the production of laminated glass and other glass products. These data are shown in table 7 for industry 3231.

A quarterly survey on Business and Defense Services Administration form BDSAF-375, "Flat Glass" collects statistics on flat glass (except laminated glass-code 32113 and other flat glass-code 3211498 ) in the same detail that is presented in this report. These statistics are summarized and published quarterly in Current lndustrial Reports Series BDSAF-375, Flat Glass.

## 3221-GLASS CONTAINERS

This industry comprises establishments primarily engaged in manufacturing glass containers for commercial packing and bottling, and for home canning. Products of this industry may be machine-made or hand-made and include carboys, cosmetic jars, fruit jars, medicine bottles, milk bottles, vials, and beverage and beer bottles. For a more detailed list of primary products of industry 3221, refer to table 6A, product codes 3221011 to 3221062 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Glass Containers lndustry in 1963 totaled $\$ 1,004$ million. This amount included shipments of glass containers (primary products), valued at $\$ 973$ million, shipments of other products (secondary products) valued at $\$ 7$ million and miscellaneous receipts at $\$ 24$ million.

This industry's shipments of glass containers in 1963 represented 99 percent of its total product shipments. The industry specialization ratio in 1958 was also 99 percent.

Shipments of glass containers by this industry in 1963 represented 99 percent of all shipments of these products ( $\$ 982$ million) by all industries. In 1958 the coverage ratio was also 99 percent. Other industries shipping glass containers (primary products) consisted mainly of industry 3229, Pressed and Blown Glass, N.E.C.

The production index for the primary products of the industry increased to 141 in 1963 from the 1958 level of 114 . The unit value index for 1963 was 111 compared to 117 in 1958. Both indexes were computed on a basis of $1954=100$.

A monthly survey on Census Form M32G, "Glass Containers," collects statistics on quantity of machine-made containers in the same detail that is presented in this re-
port. These statistics are summarized and published monthly in Current lndustrial Reports, Series M32G, Glass Containers.

## 3229-PRESSED AND BLOWN GLASS AND GLASSWARE, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing glass and glassware, not elsewhere classified, pressed, blown, or shaped from glass produced in the same establishment. Establishments primarily engaged in manufacturing textile type glass fibers are also included in this industry, but establishments primarily engaged in manufacturing glass wool insulation products are classified in industry 3296 , Mineral Wool.

Establishments primarily engaged in the production of pressed lenses for headlights, beacons, and lanterns are also included in this industry, but establishments primarily engaged in the production of optical lenses are classified in industry 3831, Optical lnstruments and Lenses. Establishments primarily engaged in manufacturing glass containers are classified in industry 3221, Glass Containers, and complete electric light bulbs in industry 3641, Electric Lamps. For a detailed list of products of industry 3229, refer to table 6A, product codes 3229111 to 3229417.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Pressed and Blown Glass, N.E.C., Industry in 1963 totaled $\$ 631$ million. This amount included shipments of pressed and blown glass, n.e.c., (primary products), valued at $\$ 600$ million, shipments of other products (secondary products) valued at $\$ 23$ million, and miscellaneous receipts at $\$ 8$ million.

This industry's shipments of pressed and blown glass, n.e.c., in 1963 represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent. Secondary products shipped by this industry in 1963 consisted mainly of glass containers and lighting fixtures.

Shipments of pressed and blown glass, n.e.c., by this industry in 1963 represented 97 percent of all shipments of these products ( $\$ 615$ million) by all industries. In 1958 the coverage ratio was also 97 percent. Other industries shipping pressed and blown glass, n.e.c. (primary products) consisted mainly of industry 3221, Glass Containers. $\$ 3$ million; and industry 3296, Mineral Wool, $\$ 7$ million.

An annual survey on Census Form MA-32E, "Consumer, Scientific, Technical and lndustrial Glassware" (formerly "Pressed and Blown Glassware") collects statistics in the same detail that is presented in this report. These statistics are sumnarized and published annually in Current lndustrial Reports, Series M32E, "Consumer, Scientific, Technical and lndustrial Glassware" (formerly "Pressed and Blown Glassware").

## 3231 -GLASS PRODUCTS, MADE OF PURCHASED GLASS

This industry comprises establishments primarily engaged in manufacturing glass products from purchased glass, including laminated glass, tempered glass, stained, leaded, ornamented, and decorated glass; mirrors; cutware; scientific-apparatus glass; glass novelties; mosaic glass; cut, beveled; and etched glass. Establishments primarily engaged in manufacturing optical lenses and opthalmic lenses are classified in Major Group 38, lnstruments and Related Products; glass insulation in industry 3296; Mineral Wool and glass fabrics in industry 2221, Weaving Mills, Synthetic. For a detailed list of products of industry 3231 , refer to table 6A, product codes 3231511 to 3231698 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Products of Purchased Glass Industry in 1963 totaled $\$ 627$ million. This amount included shipments of primary and secondary products and miscellaneous receipts. Separate value of shipments data for primary and secondary products and miscellaneous receipts are withheld to avoid disclosing figures for individual companies.

This industry's shipments of products of purchased glass in 1963 represented over 90 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent.

PRODUCTS OF PURCHASED GLASS: SIC 323

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(
(NA) Not available
. (X) Not applicable.
$(S)$ Withneld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimata or on the basis of a consistency review.
n.e.c. Not elsewhere classified.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the ampal survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing estab lishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data
${ }^{2}$ This is a minimum percentage. The exact figure cannot be shown without disclosing figures for individual companies.
${ }^{3}$ "Flat Glass," "Glass Containers," and "Pressed and Blow Glassware, N.E.C." constituted a single classification "Glass" prior to 1937. The separate industry figures shom for 1937-1963 have been combined in order that comparable statistics can be show for the period lo99-1963
${ }^{4}$ Due to misclassification of small establishments in 1954 no separate establishment count is available for industries 3229 and 3231 . Combined establishment count for industries 3229 and 3231 in 1954: 1,146 establishments; with 20 or more employees: 310.
table 2. General Statistics, by Geographic Areas: 1963 and 1958

See footnotes at end of table.

${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 321l, Flat Glass: East North Central-Ohio, 4 (4,143); Indiana, 2 (250-499); Illinois, 2 (500-999); Michigan, 1 (1,000-2,499); Missouri, 2 (1,000-2,499); South Atlantic-Maryland, 1 (500-999); East South Central-Tennessee, 3 (2,500-4,999); West South Central-Arkansas, 1 (250-499); Iouisiana, 1 (500-999); Oklahoma, 2 ( $1,000-2,499$ ) ; Pacific-California, 1 (20-99).
SIC 3221, Glass Containers: New England-Connecticut, 1 (100-249); Middle Atlantic-New York, 7 (1,000-2,499); New Jersey, 13 (9,395); East North Central-Ohio, 2 ( $1,000-2,499$ ); Indiana, $9(6,586)$; Michigan, $2(2,099)$; West North Central-Minnesota, $2(2,500-4,999)$; South Atlantic- West
Virginia, 6 ( 4,213 ); North Carolina, 3 (250-499); South Carolina, 1 (500-999); Georgia, 2 (1,000-2,499); Florida, 2 (500-999); East South
Central-Tennessee, l (500-999); Alabama, 1 (250-499); Mississippi, 2 (500-999); West South Central-Arkansas, 1 (100-249); Louisiana, 2 (250-499); Oklahoma, 5 (1,000-2,499); Texas, 3 (1,000-2,499); Mountain-Arizona, 1 (1-19); Pacific-Washington, 1 (250-499); Oregon, 1 (250-499); California, 16 (5,000-9,999).
SIC 3229, Pressed and Blown Glass, n.e.c.: New England-Rhode Island, 2 ( $1,000-2,499$ ); Middle Atlantic-New York, 8 (2,500-4,999); New Jersey, 3 (1,842); East North Central-Ohio, 19 ( 10,000 and over); Indiana, 4 (1,101); Illinois, 2 (100-249); Michigan, 1 (500-999); South Atlantic-Virginia,
1 (250-499); West Virginia, 34 ( 6,946 ) ; North Carolina, 1 ( $1,000-2,499$ ); South Carolina, $2(1,000-2,499$ ); East South Central-Kentucky, 4 (1,000-
2,499) ; Tennessee, l (250-499); Mississippi, l (20-99); West South Central-Arkansas, 1 (100-249); Oklahoma, 3 (500-999); Texas, 1 (1-19).
SIC 3231, Products of Purchased Glass: New England-Maine, 1 (20-99); New Hampshire, 3 (20-99); Rhode Island, 8 (20-99); West North Central-
Minnesota, 16 (100-249); Iowa, 2 (1-19); Nebraska, 2 (1-19); Kansas, 5 (20-99); South Atlantic-Delaware, 2 (20-99); District of Columbia, 1(1-19);
South Carolina, 1 (1-19); East South Central-Kentucky, 5 (20-99); Tennessee, 10 (466); Mississippi, 2 (100-299); West South Central-Arkansas, 4
(20-99); Louisiana, 5 (1-19); Oklahoma, 5 (20-99); Mountain-Colorado, 7 (20-99); New Mexico, 2 (1-19); Arizona, 2 (20-99); Utah, 3 (1-19);
Pacific-Washington, 7 (20-99); Oregon, 12 (20-99); Hawaii, 6 (20-99).
${ }^{2}$ This state or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

## - Represents zero.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{1}$ Includes capital expenditures for plants under construction but not in operation which constitute approximately $\$ 2-5$ million of the total for the size class.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for ag industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

NOTE: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
n.e.c. Not elsewhere classified
${ }^{1}$ This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.
${ }^{2}$ Includes laminated glass (product classes 32113 and 32313 ) which is primary to industry 3211 when made by primary glass producers, and industry 3231 when made from purchased glass. Separate totals withheld to avoid disclosing figures of individual companies.

## table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the tota! value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes totals for laminated glass (product classes 32113 and 32313 ) which is primary to industry 3211 when made by primary glass producers, and industry 3231, when made from purchased glass. Separate totals are withheld to avoid disclosing figures for individual companies.
${ }^{2}$ Industry 3229, Pressed and Blown Glass, N.E.C., had shipments totaling over $\$ 2$ million. The exact figure is withheld to avoid disclosing figures for individual companies.
${ }^{3}$ Includes the following product class which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures-26530, Corrugated and solid fiber boxes.
${ }^{4}$ Includes $\$ 3$ million shipped by industry 3221, Glass Containers; and $\$ 7$ million shipped by industry 3296 , Mineral Wool.
${ }^{5}$ Includes the following product classes which totaled $\$ 2$ million or more, but are withheld to avoid disclosing individual company figures- 32210 , Glass containers; 36343, Other small household electrical appliances; 36422, Commercial and institutional type electric fixtures; and 36423 , Industrial type electric fixtures.

n.e.c. Not elsewhere classified.

Includes laminated glass made in industry 3211, Flat Glass, and industry 3231, Products of Purchased Glass.
${ }^{2}$ Not shown pending further review of data covering products not included below.
table 6C. Product Classes-Value Shipped by All Manufacturing Establishments, 1947, 1954, 1958 to 1963

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963

In thousands of dollars. Statistics are shown for selected product classes which are economically
significant and which have production that is geographically dispersed, provided that the disper-
sion is not approximated by the data in the geographic table for the industry (table 2) and they sion is not approximated by the data in the geographic table for the industry (table 2) and they
are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

${ }^{1}$ For the specified product classes, production of over $\$ 1$ million were reported for 1963 for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 32291, New York, Pennsylvania, Ohio, Indiana, Oklahoma, and California; 32292, Rhode Island, New York, Pennsylvania, Ohio, Indiana, Michigan, Kentucky, and Oklahoma; 32293, Phode Island, Pennsylvania, Ohio, Kansas, West Virginia, North Carolina, South Carolina, and Tennessee; 32294, Rhode Island, New York, New Jersey, Pennsylvania, Ohio, Indiana, Virginia, West Virginia, Kentucky, and Oklahoma; 32315, Connecticut, Illinois, Michigan, Tennessee, Mississippi, and Arkansas; 32316, Rhode Island, Virginia, and Tennessee.

| Driven by energy generated at establishment................ do.... | 32 | 4 | - | 7 |
| Aggregate horsepower per 100 production workers. | 1,769 | 821 | 610 | 567 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipmant as of Decembar 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specializa tion in products primary to their industry. The measures of plant specialization shown are (1) industry special ization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## CEMENT AND STRUCTURAL CLAY PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3241 --Cement, Hydraulic<br>3251-Brick and Structural Clay Tile<br>3253-Ceramic Wall and Floor Tile<br>3255-Clay Refractories<br>3259--Structural Clay Products, Not Elsewhere Classified

Establishments primarily engaged in manufacturing cement, brick, ceramic tile, clay refractories and other structural clay products included in their census of manufactures reports all of the activities at each establishment including the operation of mines, pits, or quarries at the same site. Selected data for mining and quarrying activities operated in conjunction with the manufacturing plant were reported separately in the 1963 Census of Manufactures by those establishments reporting on "standard forms" and are shown in tables 3 and 9 in this report, as well as in the 1963 reports for the census of mineral industries. "Small" establishments reporting on "short forms" were not required to report separate data for mining or quarrying done in conjunction with manufacturing. The limitations to the statistics resulting from this exclusion of "small" establishments is covered in the table footnotes.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6 A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3241 --CEMENT, HYDRAULIC

This industry comprises establishments primarily engaged in manufacturing hydraulic cement, including portland, natural, masonry, and puzzolan cements. For a detailed list of products of industry 3241, refer to table 6A, product codes 3241011 to 3241051 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Cement, Hydraulic, Industry totaled $\$ 1,177$ million. This amount included shipments of hydraulic cement, including containers (primary products) valued at $\$ 1,158$ million, shipments of other products (secondary products)
valued at $\$ 10$ million, and miscellaneous receipts, at $\$ 9$ million. Virtually all of the hydraulic cement produced both in 1963 and 1958 was produced by plants classified in this industry.

This industry's shipments of hydraulic cement represented 99 percent of its total product shipments. The industry specialization ratio in 1958 was also 99 percent.

The production index for the primary products of the industry increased to 125 in 1963 from the 1958 level of 113 . The unit value index for 1963 was 117 compared to 116 in 1958. Both indexes were computed on a basis of $1954=100$.

In its annual report, Minerals Yearbook, the U.S. Department of the Interior, Bureau of Mines, publishes more detailed figures on the products listed in table 6A of this report. The variation between Bureau of Mines summary totals and the data appearing in this report are due to (1) inclusion of cost of containers and interplant transfers in Census Bureau figures and (2) differences in the reports submitted to the two agencies by individual companies.

## 3251 - BRICK AND STRUCTURAL CLAY TILE

This industry comprises establishments primarily engaged in manufacturing clay building brick, vitrified paving brick and hollow structural tile. Establishments primarily engaged in manufacturing clay firebrick are classified in industry 3255, Clay Refractories; nonclay firebrick in industry 3297, Nonclay Refractories; sand lime brick in industry 3299 , Nonmetallic Minerals, N.E.C.; and glass brick in industry 3229, Pressed and Blown Glass, N.E.C. For a detailed list of products of industry 3251, refer to table 6A, product codes 3251111 to 3251251 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Brick and Structural Tile Industry totaled $\$ 325$ million. This amount included shipments of brick and structural clay tile (primary products) valued at $\$ 303$ million, shipments of other products (secondary products) valued at $\$ 7$ million, and miscellaneous receipts, at $\$ 15$ million.

This industry's shipments of brick and structural clay tile represented 98 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent. Secondary products shipped by this industry in 1963 consisted mainly of structural clay products, n.e.c. (\$5 million).

Shipments of brick and structural tile by this industry represented 98 percent of all shipments of these products ( $\$ 308$ million) by all industries. In 1958, the coverage ratio was also 98 percent.

The production index for the primary products of the industry increased to 102 in 1963 from the 1958 level of 96 . The unit value index for 1963 was 125 compared to 115 in 1958. Both indexes were computed on a basis of $1954=100$.

Monthly data, including geographic information, are published on the production and shipments of brick (product code 3251111) and glazed brick and structural hollow tile (product codes 3251211,3251231 , and 3251251) in Current Industrial Reports series M32D, Clay Construction Products. The monthly survey is conducted on a sample basis and includes estimates for approximately 200 small establishments not included in the survey. The degree of estimation is shown in the monthly publications.

## 3253-CERAMIC WALL AND FLOOR TILE

This industry comprises establishments primarily engaged in manufacturing ceramic mosaic tile, glazed wall tile, quarry tile, and other types of ceramic wall and floor tile. Establishments primarily engaged in manufacturing hollow structural tile and ceramic and salt glazed facing tile are classified in industry 3251, Brick and Structural Tile; drain tile in industry 3259, Structural Clay Products, N.E.C.; asphalt floor tile in industry 3292, Asbestos Products; rubber tile in industry 3069, Rubber Products, N.E.C.; cork wall and floor tile in industry 2499, Wood Products, N.E.C; and other hard surface floor coverings in industry 3982, Hard Surface Floor Coverings. China and earthenware bathroom accessories (towel racks, soap cups, etc.) are classified in industry 3261, Vitreous Plumbing Fixtures. For a detailed list of products of industry 3253, refer to table 6A, product codes 3253013 to 3253071 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Ceramic Wall and Floor Tile Industry totaled $\$ 165$ million. This amount included shipments of ceramic wall and floor tile (primary products) valued at $\$ 143$ million, shipments of other products (secondary products) valued at $\$ 7$ million, and miscellaneous receipts, at $\$ 15$ millior.

This industry's shipments of ceramic wall and floor tile represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent.

Shipments of ceramic wall and floor tile by this industry represented 99 percent of all shipments of these products ( $\$ 143$ million) by all industries. In 1958 the coverage ratio was also 99 percent.

The production index for the primary products of the industry increased to 157 in 1963 from the 1958 level of 127. The unit value index for 1963 was 98 compared to 106 in 1958. Both indexes were computed on a basis of $1954=100$.

Monthly data, including geographic information, are published on the production and shipments of ceramic wall and floor tile in Current Industrial Reports series M32D, Clay Construction Products. Estimates not exceeding 5 percent of total shipments are made for small establishments not included in the monthly survey.

## 3255-CLAY REFRACTORIES

This industry comprises establishments primarily engaged in manufacturing clay firebrick, refractory bonding mortars, and other heat-resisting clay products such as glass-house tank blocks, stoppers, floaters, and rings. Establishments primarily engaged in manufacturing nonclay refractories, as well as all graphite refractories whether of carbon bond or ceramic bond, are classified in industry 3297, Nonclay Refractories. For a detailed list of products of industry 3255 , refer to table 6A, product codes 3255011 to 3255094.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Clay Refractories Industry totaled $\$ 192$ million. This amount included shipments of clay refractories (primary products) valued at $\$ 168$ million, shipments of other products (secondary products) valued at $\$ 16$ million, and miscellaneous receipts, at $\$ 8$ million.

This industry's shipments of clay refractories represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary prod-
ucts shipped by this industry in 1963 consisted mainly of nonclay refractories ( $\$ 9$ million), and minerals and earths, ground or otherwise treated ( $\$ 2$ million).

Shipments of clay refractories by this industry represented 93 percent of all shipments of these products ( $\$ 181$ million) by all industries. In 1958 the coverage ratio was 92 percent. Other industries shipping clay refractories consisted mainly of industry 3297, nonclay refractories $\$ 8$ million.

The production index for the primary products of the industry increased to 123 in 1963 from the 1958 level of 94 . The unit value index for 1963 was 128 compared to 131 in 1958. Both indexes were computed on a basis of $1954=100$.

Quarterly data on the shipments of clay refractories are published in Current Industrial Reports series M32C, Refractories. The detailed product information for 1963 as it appears in table 6A of this report was obtained from the 1964 Annual Summary (M32C (64)-5) from this series. Since detailed product statistics are reported quarterly, manufacturers were required to report only total shipments of clay refractories in the census of manufactures. A comparison on the totals as reported in the quarterly survey and the census of manufactures appears in table 6A.

## 3259--STRUCTURAL CLAY PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing clay sewer pipe and kindred products made of clay, and structural clay products, n.e.c., such as architectural terra cotta, roofing tile, stove lining, flue lining, chimney pipes, thimbles and tops, wall coping, segment blocks, drain tile and adobe brick. Establishments primarily engaged in manufacturing concrete sewer pipe are classified in industry 3272 , Other Concrete Products; cast iron pipe in industry 3321, Gray lron Foundries; and plastic pipe in industry 3079, Plastics Products, N.E.C. For a detailed list of products of industry 3259 , refer to table 6A, product codes 3259111 to 3259298.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Structural Clay Products, N. E. C., Industry totaled $\$ 160$ million. This amount included shipments of structural clay products, n.e.c. (primary products) valued at $\$ 135$ million, shipments of other products (secondary products) valued at $\$ 17$ million, and miscellaneous receipts, at $\$ 8$ million.

This industry's shipments of structural clay products, n.e.c., represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 97 percent. Secondary products shipped by this industry in 1963 consisted mainly of construction plastics products (\$12 million).

Shipments of structural clay products, n.e.c., by this industry represented 95 percent of all shipments of these products ( $\$ 141$ million) by all industries. In 1958 the coverage ratio was 94 percent. Other industries shipping structural clay products, n.e.c., consisted mainly of industry 3251 , Brick and Structural Tile, $\$ 5$ million.

The production index for the primary products of the industry increased slightly to 101 in 1963 from the 1958 level of 100. The unit value index for 1963 was 130 compared to 120 in 1958. Both indexes were computed on a basis of $1954=100$.

Monthly data, including geographic information, are published on the production and shipments of clay sewer pipe and fittings (product code 3259111) in Current Industrial Reports series M32D, Clay Construction Products.

table 1. General Statistics: 1963 and Earlier Years

| Year | Companies (number) | Establishments |  | All employees |  | Production workers |  |  | Value added by manufacture, adjusted <br> $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

## table 1. General Statistics: 1963 and Earlier Years-Continued

Footnotes for Table 1-32B

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior io lig5 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimute or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }_{2}{ }^{\text {rBrick }}$ and Structural Tile," "Ceramic Wall and Floor Tile," "Sewer Pipe," "Clay Refractories" and "Structural Clay Products, N.E.C." together with "Nonclay Refractories," formerly constituted a single industry classification, "Clay Products (other than pottery) and Nonclay Refractories," figures for which are shown in this table for the period 1914-1937.
${ }^{3} \mathrm{~A}$ revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Figures for 1957 and earlier years are on the basis of the old SIC definition of the industry. Data for 1958 was retabulated to provide data comparable to that shown for 1957 and earlier years. The details of these revisions are described in Volume II, Industry Statistics, 1958 Census of Manufactures.
${ }^{4}$ The 1957 Standard Industrial Classification combined in this industry, industry 3254, Sewer Pipe and industry 3259, Structural Clay Products, N.E.C., which were separate in the 1945 Standard Industrial Classification. The data for 1957 and earlier years for these two industries have been combined to provide comparable data. The details of the revisions are described in Volume II, Industry Statistics, 1958 Census of Manufactures.
${ }^{5}$ Includes data for establishments engaged primarily in the manufacture of nonclay refractories. For 1937 the statistics included for these establishments are as follows: Number of establishments - 40; All employees, total - 5,990; Payroll - \$7, 218 thousand; Production workers, total 5,641; Production workers, wages - $\$ 6,331$ thousand; Value added by manufacture - $\$ 15,919$ thousand; Cost of materials - $\$ 12,538$ thousand; Value of shipments - $\$ 28,457$ thousand.

Not elsewhere classified.

${ }^{1}$ Separate detailed data are not available for "small" establishments that operated mines (ineluding clay pits) or quarries in conjunction
With manifacturins operations but reported on "short forms." These establishments are included with "Establishmentis Without Mining or
रuarrying Activity."
${ }^{2}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{\text {T The }}$ proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all
manufacturing establishments.

TABLE 4. Selected Statistics, by Employment Size of Establishments: 1963

[^51]
## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

[^52] applicable.
n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

Includes over \$2 million shipped by establishments classified in industry 2812, Alkalies and Chlorine. The exact amount is withheld to avoid
disclosing figures of individual companies.
${ }^{2}$ Includes $\$ 8$ million shipped by establishments classified in industry 3297, Nonclay Refractories.
${ }^{3}$ Includes $\$ 2$ million in shipments of product class 32950, Minerals and earths, ground or otherwise treated.
${ }^{4}$ Includes $\$ 5$ million shipped by establishments classified in industry 3251 , Brick and Structural Tile.
${ }^{5}$ Includes $\$ 12$ million in shipments of product class, 30796, Construction plastics products.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

[^53]table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available.

## (X) Not applicable.

(S) Does not meet publication standards.
n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }_{2}^{1}$ For 1963 included in values of products shipped.
${ }^{2}$ "Calcined" as applied to diaspore and bauxite implies heat treatment short of fusion for volume stability prior to use in a refractory product.
In the process, volatile materials are driven off and chemical changes take place.
${ }^{3}$ Excludes data for mullite and extra-high alumina refractories. These products are included with mullite and extra-high alumina brick and shapes in Industry 3297, Nonclay Refractories.

4 The subdivisions are in accordance with the ASTIM Classification Cl55, the respective groups being 16, 20 , and 23 and higher.
${ }^{5}$ Includes bonding mortars which contain up to $60 \% \mathrm{Al}_{2} \mathrm{O}_{3}$, dry basis. Bonding mortars which contain more than $60 \% \mathrm{Al}_{2} \mathrm{O}_{3}$ dry basis are included in Industry 3297, Nonclay Refractories.
${ }^{6}$ Includes products referred to as plastic fire brick and the less plastic materials intended for ramming into place after the addition of water (when shipped in dry form). Excludes mixes made of mullite or extra-high alumina. Mixes made of these products are included in Industry 3297 , Nonclay Refractories.
${ }^{7}$ Represents shipments for direct use as finished refractory products by establishments classified in "manufacturing" industries, and excludes shipments to refractory producers for processing in the manufacture of brick and other refractories. Includes data for calcined clay, ground brick, and siliceous and other gunning mixes.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

IThe figures for $1959-1962$ represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey $_{\text {then }}$ of.manufactures. These estimates, therefore, may differ from the results that would be obtained from a complete canvass of all manufacturing establishments.
${ }^{2}$ Source: Current Industrial Reports Series M32D, Clay Construction Products.
${ }^{3}$ It appears the estimates derived for 1959-1962 are overstated between 2 and 12 percent, based on a comparison of the totals obtained from Current Industrial Reports Series M32D, Clay Construction Products and the Censuses of Manufactures for 1958 and 1963. The comparable shipments figures as published in Series M32D are as follows:

| $\frac{\text { Year }}{1963}$ | $\frac{\$ 1,000}{137,854}$ | $\frac{\text { Year }}{1960}$ | $\frac{\$ 1,000}{129,524}$ |
| :--- | :--- | :--- | :--- |
| 1962 | 135,526 | 1959 | 141 |
| 1961 | 124,301 | 1958 | 119,179 |

## TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments |

| Electric motors, total.........................................do.... | 2,611 | 392 | 48 | 145 | 113 |
| Driven by purchased energy................................................... Driven by energy generated at establishment.................do..... | 2,085 526 | 391 1 | 47 1 | 144 1 | 113 |
| Aggregate horsepower per 100 production workers. | 9,570 | 1,674 | 523 | 1,480 | 1,330 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for l962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, thereiore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withneld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. (Z) Less than 500 horsepower. n.e.c. Not elsewhere classified
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## POTTERY AND RELATED PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3261 - Vitreous China Plumbing Fixtures and China and Earthenware Fittings and Bathroom Accessories
3262-Vitreous China Table and Kitchen Articles
3263-Fine Earthenware (Whiteware) Table and Kitchen Articles
3264-Porcelain Electrical Supplies
3269 - Pottery Products, Not Elsewhere Classified
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3261 -VITREOUS CHINA PLUMBING FIXTURES AND CHINA AND EARTHENWARE FITTINGS AND BATHROOM ACCESSORIES

This industry comprises establishments primarily engaged in manufacturing china plumbing fixtures and china and earthenware fittings and bathroom accessories. For a detailed list of products of industry 3261 , refer to table 6A, product codes 3261011 to 3261051.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Vitreous Plumbing Fixtures Industry totaled $\$ 156$ million. This amount included shipments of vitreous plumbing fixtures (primary products) valued at $\$ 139$ million, shipments of other products (secondary products) valued at $\$ 5$ million, and miscellaneous receipts at $\$ 12$ million.

This industry's shipments of vitreous plumbing fixtures represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was also 97 percent. Secondary products shipped by this industry in 1963 consisted mainly of plumbing fixture fittings and trim (brass goods).

Shipments of vitreous plumbing fixtures by this industry represented 97 percent of all shipments of these products ( $\$ 144$ million) by all industries. In 1958 the coverage ratio was also 97 percent. Other industries shipping vitreous plumbing fixtures consisted mainly of industry 3431, Metal Plumbing Fixtures.

The production index for the primary products of the industry increased to 140 in 1963 from the 1958 level of 110 . The unit value index for 1963 was 88 compared to 102 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3262-VITREOUS CHINA TABLE AND KITCHEN ARTICLES

This industry comprises establishments primarily engaged in manufacturing vitreous china table and kitchen articles for use in households and in hotels, restaurants, and other commercial institutions for preparing, serving, or storing food or drink. Establishments primarily engaged in manufacturing fine (semivitreous) types of earthenware (whiteware) table and kitchen articles are classified in industry 3263. For a detailed list of products of industry 3262, refer to table 6A, product codes 3262018 to 3262052 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Vitreous China Food Utensils Industry totaled $\$ 51$ million. This amount included shipments of vitreous china food utensils (primary products) valued at $\$ 47$ million, shipments of other products (secondary products) and miscellaneous receipts at $\$ 3$ million.

This industry's shipments of vitreous china food utensils represented over 90 percent of its total product shipments. The exact percentage is withheld to avoid disclosing figures of individual companies. The industry specialization ratio in 1958 was 96 percent.

Shipments of vitreous china food utensils by this industry represented 91 percent of all shipments of these products ( $\$ 52$ million) by all industries. In 1958 the coverage ratio was 96 percent. Other industries shipping vitreous china food utensils consisted mainly of industry 3263, Earthenware Food Utensils.

The production index for the primary products of the industry increased to 90 in 1963 from the 1958 level of 88 . The unit value index for 1963 was 119 compared to 123 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3263-FINE EARTHENWARE (WHITEWARE) TABLE AND KITCHEN ARTICLES

This industry comprises establishments primarily engaged in manufacturing fine (semivitreous) types of earthenware table and kitchen articles for preparing, serving, or storing food or drink. Establishments primarily engaged in manufacturing vitreous china table and kitchen articles are classified in industry 3262. For a detailed list of products of industry 3263 , refer to table 6A, product codes 3263012 to 3263052 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Fine Earthenware Food Utensils Industry totaled $\$ 59$ million. This amount included shipments of fine earthenware food utensils (primary products) valued at $\$ 53$ million, shipments of other products (secondary products) valued at $\$ 5$ million, and miscellaneous receipts at $\$ 2$ million.

This industry's shipments of fine earthenware food utensils represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent. Secondary products shipped by this industry in 1963 consisted mainly of fine vitreous china food utensils.

Shipments of fine earthenware food utensils by this industry represented 91 percent of all shipments of these products ( $\$ 58$ million) by all industries. In 1958 the coverage ratio was also 91 percent. Other industries shipping fine earthenware food utensils consisted mainly of industry 3253, Ceramic Wall and Floor Tile.

The production index for the primary products of the industry increased to 78 in 1963 from the 1958 level of 60 . The unit value index for 1963 was 106 compared to 127 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3264-PORCELAIN ELECTRICAL SUPPLIES

This industry comprises establishments primarily engaged in the manufacture of porcelain electrical insulators, molded porcelain parts for electrical devices, steatite electrical products and other electrical supplies from clay and other ceramic materials. For a detailed list of products of industry 3264, refer to table 6A, codes 3264012 to 3264098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Porcelain Electrical Supplies Industry totaled $\$ 132$ million. This amount included shipments of porcelain electrical supplies (primary products) valued at $\$ 115$ million, shipments of other products (secondary products) valued at $\$ 12$ million, and miscellaneous receipts at $\$ 5$ million.

This industry's shipments of porcelain electrical supplies represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent. Secondary products shipped by this industry in 1963 consisted mainly of pottery products, n.e.c. ( $\$ 3$ million), and current-carrying wiring devices (over $\$ 2$ million).

Shipments of porcelain electrical supplies by this industry represented 95 percent of all shipments of these products ( $\$ 121$ million) by all industries. $\ln 1958$ the coverage ratio was 93 percent. Other industries shipping porcelain electrical supplies consisted mainly of industry 3269, Pottery Products, N.E.C.

## 3269-POTTERY PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in firing and decorating white china and earthenware for the trade and manufacturing art and ornamental pottery, industrial and laboratory pottery, stoneware and coarse earthenware table and kitchen articles, unglazed red earthenware florists' articles, and other pottery products not elsewhere classified. For a detailed list of products of industry 3269, refer to table 6 A, product codes 3269011 to 3269091 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Pottery Products, N.E.C., Industry totaled $\$ 96$ million. This amount included shipments of pottery products, n.e.c.,(primary products) valued at $\$ 73$ million, shipments of other products (secondary products) valued at $\$ 11$ million, and miscellaneous receipts at $\$ 12$ million.

This industry's shipments of pottery products, n.e.c., represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 consisted mainly of porcelain electrical supplies.

Shipments of pottery products, n.e.c., by this industry represented 89 percent of all shipments of these products ( $\$ 81$ million) by all industries. In 1958 the coverage ratio was 90 percent. Other industries shipping pottery products, n.e.c., consisted mainly of industry 3264, Porcelain Electrical Supplies, $\$ 3$ million.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unad justed value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustrnent is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Establishments primarily engaged in manufacturing vitreous china household food utensils are excluded from the 1939 and 1937 figures for "Vitreous china food utensils" and included in the figures for "Pottery products, n.e.c." Five establishments were primarily engaged in making these products in 1947.
${ }^{3}$ Excludes data for establishments which manufactured steatite and other ceramic electrical products.
${ }^{4}$ The 1957 Standard Industrial Classification combined in this industry two industries which were separate in the 1945 Standard Industrial Classification. These were: SIC 3265, China Decorating for the Trade, and SIC 3269, Pottery Products, N.E.C. The data for 1957 and earlier years for these two industries have been combined.
${ }^{5}$ Revised to include data for Alaska and Hawaii.

## table 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

## Footnotes for Table 2-32C

n.e.c. Not elsewhere classified.
$1_{\text {General }}$ statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3261, Vitreous Plumbing Fixtures: New England-Connecticut, 2 (250-499); Middle Atlantic-New York, 2 ( $1-19$ ); Pennsylvania, 3 (1,000-2,499); East North Central-Ohio, 4 (1,000-2,499); Wisconsin, 2 (1,000-2,499); West North Central—Missouri, 1 (20-99); Kansas, 1 (20-99); South AtlanticGeorgia, 1 (20-99); East South Central-Alabama, 1 (20-99); West South Central-Louisiana, 1 (250-499); Texas, 4 (445).
SIC 3262, Vitreous China Food Utensils: Middle Atlantic-New York, 5 (1,000-2,499); New Jersey, 2 (500-999); East North Central-Ohio, 6 (1,000-2,499); Illinois, l (20-99); West North Central—Missouri, l (1-19); South Atlantic-West Virginia, 2 (100-249); Florida, 1 (1-19); West South CentralOklahoma, 1 (1-19); Pacific-California, 8 (468).
SIC 3263, Fine Earthenware Food Utensils: Middle Atlantic-New Jersey, 1 (100-249); Pennsylvania, 1 (100-249); East North Central-Illinois, l (500-999); Michigan, 1 (250-499); West North Central—Minnesota, 1 (100-249); West South Central—Oklahoma, (20-99); Mountain-Arizona, 1 (1-19); Pacific-California, 3 (250-499).
SIC 3264, Porcelain Electrical Supplies: New England-Massachusetts, 3 (20-99); Rhode Island, 1 (1-19); Connecticut, 2 (100-249); Middle AtlanticNew Jersey, 17 (500-999); East North Central-Indiana, l (1-19); Illinois, 2 (250-499); Michigan, l (500-999); Wisconsin, 2 (500-999); South Atlantic—Maryland, 4 (500-999); West Virginia, 4 (289); South Carolina, 1 (20-99); East South Central—Tennessee, 3 (1,000-2,499); PacificWashington, 1 (1-19); California, 14 (100-249).
SIC 3269, Pottery Products, N.E.C.: New England Maine, 4 (1-19); New Hampshire, 4 (1-19); Vermont, 2 (1-19); Massachusetts, 8 (20-99); Rhode Island, 2 (1-19); Connecticut, 6 (20-99); East North Central-Indiana, 5 (20-99); Michigan, 6 (20-99); Wisconsin, 5 (1-19); West North Central-Minnesota, 1 (1-19); Iowa, 2 (1-19); Missouri, 6 (20-99); North Dakota, 1 (1-19); South Dakota, 1 (1-19); Nebraska, 1 (1-19); Kansas, 3 (20-99); South
Atlantic-Maryland, 1 (1-19); Virginia, 4 (20-99); West Virginia, 5 (20-99); North Carolina, 9 (20-99); South Carolina, 1 (1-19); Georgia, 9 (20-99); Florida, 13 (20-99); East South Central-Kentucky, 13 (414); Tennessee, 6 (20-99); Alabama, 3 (1-19); Mississippi, 4 (1-19); West South CentralArkansas, 2 (20-99); Louisiana, 1 (1-19); Oklahoma, 2 (1-19); Mountain-Colorado, 8 (1,023); Arizona, 3 (1-19); Utah, 1 (1-19); Pacific-Washington, 4 (1-19); Oregon, 3 (20-99); Hawaii, 4 (20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.
${ }^{3}$ Revised to include data for Alaska and Hawaii.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }_{3}^{2}$ This is a minimum percentage. The exact percentage is withheld to avoid disclosing figures for individual companies.
${ }^{3}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufac-
${ }^{\text {turing establishments. }}$ Cost of contract work included with cost of materials, parts, containers, and supplies to avoid disclosing figures of individual companies.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\qquad$ <br> Col. NOTE: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable.
n.e.c. Not elsewhere classified.
ihis is a minimum percentage. The exact percentage is withheld to avoid disclosing figures for individual companies.
${ }^{2}$ Does not include data for Alaska and Hawaii

## TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
recelpts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

[^57](D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

See footnotes at end of table.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ The source of the quantity data for codes 3261014-3261026 is Current Industrial Reports Series M34E(63)-5, Plumbing Fixtures. No separate quantity data for vitreous and semivitreous sinks, laundry trays, sink and laundry tray combinations, and other plumbing fixtures are available since these items were combined with similar items made of other materials in the M34E report.
${ }^{2}$ Represents vitreous china only. In addition, shipments valued at $\$ 2,398,000$ in 1963 and $\$ 2,236,000$ in 1958 were reported for plumbing fixtures made of earthenware, concrete, and composition.
${ }^{3}$ Includes value of metal fittings when shipped as an integral part of the ceramic product.
${ }^{4}$ Does not include data for Alaska and Hawaii.

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes (1954 = 100) |  |
| :---: | :---: | :---: | :---: |

| 32690 | Pottery products, including china decorating for the trade, n.e.c............................. | 81,376 | 77,657 | 73,356 | 76,777 | 78,053 | ${ }^{3} 74,981$ | 61,899 | 53,961 |

n.e.c. Not elsewhere classified.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manu-

 in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Includes value of metal fittings when shipped as an integral part.
${ }^{3}$ Does not include data for Alaska and Hawaii.

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ miltion and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote I

| Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments |
| :---: | :---: | :---: | :---: | :---: | :---: |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors ascociated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified. (Z) Tess than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| $\begin{gathered} \text { industry } \\ \text { or } \\ \text { product } \\ \text { class } \\ \text { code } \\ \hline \end{gathered}$ | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Valueadded bymanufacture,adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

## CONCRETE, PLASTER, AND CUT STONE PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3271--Concrete Brick and Block
3272 --Concrete Products, Except Block and Brick
3273 --Ready Mixed Concrete
3274 --Lime
3275 -Gypsum Products
3281 --Cut Stone and Stone Products

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3271-CONCRETE BRICK AND BLOCK

This industry comprises establishments primarily engaged in manufacturing concrete building blocks and brick from a combination of cement and aggregate. Contractors engaged in concrete construction work are classified in the construction industries, and building materials dealers primarily engaged in mixing and delivering ready mixed concrete. in industry 3273 . For a detailed list of products of industry 3271, refer to table 6 A, product codes 3271011 to 3271000 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Concrete Block and Brick Industry totaled $\$ 505$ million. This amount included shipments of concrete block and brick (primary products) valued at $\$ 395$ million, shipments of other products (secondary products) valued at $\$ 36$ million, and miscellaneous receipts. at $\$ 74$ million.

This industry's shipments of concrete block and brick represented 92 percent of its total product shipments. Secondary products shipped by this industry in 1963 consisted mainly of precast concrete products, $\$ 13$ million, and ready mixed concrete, $\$ 11$ million.

Shipments of concrete block and brick by this industry represented 84 percent of all shipments of these products ( $\$ 472$ million) by all industries. Other industries shipping
concrete block and brick (primary products) consisted mainly of industry 3273, Ready Mixed Concrete, $\$ 53$ million, and industry 3272 , Concrete Products, $\$ 22$ million.

The production index for the primary products of the industry increased to 121 in 1963 from the 1958 level of 101. The unit value index for 1963 was 111. Both indexes were computed on a basis of $1954=100$.

## 3272-CONCRETE PRODUCTS, EXCEPT BLOCK AND BRICK

This industry comprises establishments primarily engaged in manufacturing concrete products, except block and brick, from a combination of cement and aggregate. Contractors engaged in concrete construction work are classified in the construction industries and building materials dealers primarily engaged in mixing and delivering ready mixed concrete in industry 3273 . For a detailed list of products of industry 3272 , refer to table 6A, product codes 3272107 to 3272000 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Concrete Products Industry totaled $\$ 926$ million. This amount included shipments of concrete products (primary products) valued at $\$ 807$ million, shipments of other products (secondary products) valued at $\$ 48$ million, and miscellaneous receipts, at $\$ 71$ million.

This industry's shipments of concrete products represented 94 percent of its total product shipments. Secondary products shipped by this industry consisted mainly of concrete brick and block, $\$ 22$ million, and ready mixed concrete, $\$ 10$ million.

Shipments of concrete products by this industry represented 94 percent of all shipments of these products ( $\$ 862$ million) by all industries. Other industries shipping concrete products (primary products) consisted mainly of industry 3271 , Concrete Block and Brick, $\$ 20$ million, and industry 3273, Ready Mixed Concrete, $\$ 24$ million.

## 3273-READY MIXED CONCRETE

This industry comprises establishments primarily engaged in manufacturing Portland cement concrete, manufactured and delivered to a purchaser in a plastic and unhardened state. This industry includes production and sale of central mixed concrete, shrink mixed concrete and transit mixed concrete.

The Ready Mixed Concrete Industry was included for the first time in the census of manufactures for 1958. No comparable figures are available for years prior to 1958. For detailed data on products of industry 3273 , refer to table 6 A, product code 3273011 .

Value of shipments and other receipts of the Ready Mixed Concrete Industry totaled $\$ 2,293$ million. This amount included shipments of ready mixed concrete (primary products) valued at $\$ 1,924$ million, shipments of other products (secondary products) valued at $\$ 173$ million, and miscellaneous receipts, at $\$ 195$ million.

This industry's shipments of ready mixed concrete represented 92 percent of its total product shipments. Secondary products shipped by this industry consisted mainly of common sand and gravel, $\$ 53$ million, and concrete block and brick, $\$ 53$ million.

Shipments of ready mixed concrete by this industry represented 98 percent of all shipments of these products ( $\$ 1,971$ million) by all industries. Other industries shipping ready mixed concrete consisted mainly of industry 3271 , Concrete Block and Brick, $\$ 11$ million, and industry 3272, Concrete Products, $\$ 10$ million.

The production index for the primary products of the industry increased to 182 in 1963 from the 1958 level of 144 . The unit value index for 1963 was 119 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3274--LIME

This industry comprises establishments primarily engaged in manufacturing quicklime, hydrated lime, and dead burned dolomite from limestone, dolomite shells, or other substances. For a detailed list of products of industry 3274 , refer to table 6A, products codes 3274011 to 3274000 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Lime Industry totaled $\$: 64$ million. This amount included shipments of lime (primary products) valued at $\$ 129$ million, shipments of other products (secondary products) valued at $\$ 28$ million, and miscellaneous receipts at $\$ 8$ million.

This industry's shipments of lime represented 82 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. Secondary products shipped by this industry in 1963 consisted mainly of crushed and broken limestone, $\$ 17$ million.

Shipments of lime by this industry represented 94 percent of all shipments of these products ( $\$ 137$ million) by all industries. In 1958, the coverage ratio was 95 percent.

The production index for the primary products of the industry increased to 123 in 1963 from the 1958 level of 111. The unit value index for 1963 was 119 compared to 108 in 1958. Both indexes were computed on a basis of $1954=100$.
ln its annual report. Minerals Yearbook, the U.S. Department of the lnterior, Bureau of Mines, publishes detailed figures on the products listed in table 6A of this report. The variations between Bureau of Mines summary totals and the data appearing in this report are due to (1) inclusion of cost of containers and interplant transfers in Census Bureau figures and (2) differences in the reports submitted to the two agencies by individual companies.

## 3275-GYPSUM PRODUCTS

This industry comprises establishments primarily engaged in manufacturing plaster, plasterboard, and other products composed wholly or chiefly of gypsum. For a detailed list of products of industry 3275, refer to table 6A, product codes 3275111 to 3275000.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Gypsum Products lndustry totaled $\$ 425$ million. This amount included shipments of gypsum products (primary products) valued at $\$ 396$ million, shipments of other products (secondary products) valued at $\$ 13$ million, and miscellaneous receipts at $\$ 17$ million.

This industry's shipments of gypsum products represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent.

Shipments of gypsum products by this industry represented 98 percent of all shipments of these products ( $\$ 405$ million) by all industries. In 1958, the coverage ratio was also 98 percent.

The U.S. Department of the Interior, Bureau of Mines, in its annual Minerals Yearbook. publishes more detailed data on the production, shipment, and consumption of gypsum and gypsum products. The variation between the two sets of data is due primarily to (1) inclusion of cost of containers and interplant transfers in Census Bureau figures and (2) differences in the reports from individual companies submitted to the two agencies.

## 3281 --CUT STONE AND STONE PRODUCTS

This industry comprises establishments primarily engaged in cutting, shaping, and finishing marble, granite, slate, and other stone for building and miscellaneous uses. Establishments primarily engaged in buying or selling partly finished monuments and tombstones, but performing no work on the stones other than lettering, finishing, or shaping to custom order, are classified in trade industries. The cutting of grindstones, pulpstones, and whetstones at the quarry is classified in mining industries. For a detailed list of products of industry 3281 , refer to table 6A, product codes 3281111 to 3281000.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Cut Stone and Stone Products Industry totaled $\$ 217$ million. This amount included shipments of cut stone and stone products (primary products) valued at $\$ 190$ million, shipments of other products (secondary products) valued at $\$ 12$ million, and miscellaneous receipts (mainly resales), at $\$ 15$ million.

This industry's shipments of cut stone and stone products represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 consisted mainly of other rough dimension stone, $\$ 3$ million, and rough dimension limestone, $\$ 2$ million.

Shipments of cut stone and stone products by this industry represented 99 percent of all shipments of these products ( $\$ 191$ million) by all industries. In 1958 the coverage ratio was 97 percent.

 table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production

 equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no

 manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1} T h e s e ~ f i g u r e s ~ r e p r e s e n t ~ e s t i m a t e s ~ d e r i v e d ~ f r o m ~ a ~ r e p r e s e n t a t i v e ~ s a m p l e ~ o f ~ m a n u f a c t u r i n g ~ e s t a b l i s h m e n t s ~ c a n v a s s e d ~ i n ~ t h e ~ a n n u a l ~ s u r v e y ~ o f ~ m a n u-~$
 lishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The
 data.
${ }^{2}$ A revision in the definition of this industry was introduced in the 1957 standard industrial classification so that data for the industry prior
 to $\frac{1958}{3}$.
${ }^{3}$ Industries 3271 and 3272 were a single industry in 1957 and earlier years. They are shown combined for 1958 so that historical data may be presented. Data for Alaska and Hawaii are not included.

4 The Ready Mixed Concrete Industry was included for the first time in the 1958 Census of Manufactures. No comparable figures are available for earlier years.
${ }^{5}$ Data for earlier years not comparable because dressing plants operated in conjunction with quarries were not included.

${ }^{1}$ Iess than 20 establishments (not including establishments reporting on "short forms") reported the operation of a mine or quarry in conjunction with manufacturing activity.
${ }^{2}$ Separate detailed data are not available for "small" establishments that operated mines or quarries in conjunction with manufacturing operations but
${ }_{3}{ }^{3}$ The
${ }^{4}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{4}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.
${ }^{5}$ Separate detailed data are not available for approximately 80 "small" establishments that operated quarries in conjunction with dressing plants and reported on "short forms." Data for these establishments are included with "Establishments dressing stone only." The total value of shipments of these "small" establishments is less than $\$ 7$ million.

TABlE 4. Selected Statistics, by Employment Size of Establishments: 1963

[^62]
## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

| Prod. class code | Class of products and miscellaneous receipts | $\begin{aligned} & \text { All } \\ & \text { industries } \end{aligned}$ | $\begin{aligned} & \text { Concrete } \\ & \text { block } \\ & \text { and } \\ & \text { brick } \\ & \text { (SIC 3271) } \end{aligned}$ | Other concrete products (SIC 3272) | Ready mixed concrete (SIC 3273) | $\underset{(\mathrm{SIC} 3274)}{\text { Lime }}$ | Gypsum products (SIC 3275) | Cut stone and stone products (SIC 3281) | Crushed and broken limestone (SIC 1422) | Construction sand and gravel (SIC 1442) | Other industries |

## applicable.

(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the
basis of a consistency review.
n.s.k. Not specified by kind.
${ }^{1}$ See footnote 1 , table 1.
${ }^{2}$ Includes estimate for shipments of $\$ 30,452$ thousand of concrete block and brick not specified by kind.
${ }^{3}$ Includes estimate for shipments of $\$ 18,453$ thousand of concrete block and brick not specified by kind.
4 See footnote 2, table 6A.
${ }^{5}$ Includes estimate for shipments of $\$ 195,919$ thousand of ready mixed concrete for which quantity was not reported.
${ }^{6}$ Includes estimate for shipments of $\$ 519,077$ thousand of ready mixed concrete for which quantity was not reported.
${ }^{7}$ See footnote 5 , table 1.
${ }^{8}$ The 1947 data represent only the products of dressing plants not operated in conjunction with quarries.

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Aggregate horsepower per 100 production workers. | 1,973 | 1,042 | 1,615 | 4,296 | 4,349 | 1,494 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishnents. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies,
(NA) Not available.
(X) Not applicable. (Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## AbRASIVE, ASBESTOS, AND MISCELLANEOUS NONMETALLIC MINERAL PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3291-Abrasive Products<br>3292-Asbestos Products<br>3293-Steam and Other Packing, and Pipe and Boiler Covering<br>3295-Minerals and Earths, Ground or Otherwise Treated<br>3296-Mineral Wool<br>3297-Nonclay Refractories<br>3299-Nonmetallic Mineral Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3291-ABRASIVE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing abrasive grinding wheels of natural or synthetic materials, and other abrasive products. The cutting of grindstones, pulpstones, and whetstones at the quarry is classified in mining industries. For a detailed list of products of industry 3291, refer to table 6A, product codes 3291117 to 3291498 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Abrasive Products Industry totaled $\$ 704$ million. This amount included shipments of abrasive products (primary products) valued at $\$ 541$ million.

This industry's shipments of abrasive products represented over 70 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. The exact percentage for 1963 is withheld to avoid disclosing figures for individual companies.

Shipments of abrasive products by this industry represented 95 percent of all shipments of these products ( $\$ 572$ million) by all industries. In 1958, the coverage ratio was 96
percent. Other industries shipping abrasive products included industry 3541 , MetalCutting Machine Tools, and industry 3545, Machine Tool Accessories.

## 3292-ASBESTOS PRODUCTS

This industry comprises establishments primarily engaged in manufacturing asbestos textiles, asbestos friction materials, vinyl asbestos floor tile, and other commodities composed wholly or chiefly of asbestos, except asbestos paper (industry 2661), steam and other packing, pipe and boiler covering, and gaskets (industry 3293). For a detailed list of products of industry 3292, refer to table 6 A , product codes 3292211 to 3292798.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Asbestos Products lndustry totaled $\$ 509$ million. This amount included shipments of asbestos products (primary products) valued at $\$ 459$ million, shipments of other products (secondary products) valued at $\$ 24$ million, and miscellaneous receipts at $\$ 26$ million.

This industry's shipments of asbestos products represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 89 percent. Secondary products shipped by this industry in 1963 consisted mainly of packing (except leather, rubber, and metal) and asbestos insulations and gaskets, all types.

Shipments of asbestos products by this industry represented 91 percent of all shipments of these products ( $\$ 506$ million) by all industries. In 1958 the coverage ratio was 92 percent. Other industries shipping asbestos products included industry 2952, Asphalt Felts and Coatings, and industry 3293, Gaskets and Insulations.

The production index for the primary products of the industry increased to 136 in 1963 from the 1958 level of 112 . The unit value index for 1963 was 112, the same level as in 1958. Both indexes were computed on a basis of $1954=100$.

## 3293-STEAM AND OTHER PACKING, AND PIPE AND BOILER COVERING

This industry comprises establishments primarily engaged in manufacturing gaskets (all types); packing for steam, water, and other pipe joints, and for engines, air compressors, etc.; and asbestos insulating materials. Establishments primarily engaged in manufacturing leather packing are classified in industry 3121, rubber packing in industry 3069, and metal packing in industry 3599 . Establishments primarily engaged in manufacturing mineral wool and insulation products,therefore, are classified in industry 3296. For a detailed list of products of industry 3293, refer to table 6A, product codes 3293211 to 3293351 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Gaskets and lnsulations lndustry totaled $\$ 279$ million. This amount included shipments of gaskets and insulations (primary products) valued at $\$ 206$ million, shipments of other products (secondary products) valued at $\$ 48$ million, and miscellaneous receipts at $\$ 26$ million.

This industry's shipments of gaskets and insulations represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 consisted mainly of mechanical rubber goods ( $\$ 12$ million), and carburetors, pistons, and other machine shop products.

Shipments of gaskets and insulations by this industry represented 78 percent of all shipments of these products ( $\$ 262$ million) by all industries. In 1958 the coverage ratio was 69 percent. Other industries shipping gaskets and insulations consisted mainly of industry 3069, Rubber Products, N.E.C., and industry 3292, Asbestos Products.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product class of industry 3293, e.g., 32933 Packing, except leather, rubber, and metal and asbestos insulation, 67 percent.

## 3295-MINERALS AND EARTHS, GROUND OR OTHERWISE TREATED

This industry comprises establishments operating without a mine and primarily engaged in crushing, grinding, pulverizing, or otherwise preparing clay, ceramic, and refractory minerals (of the type in minerals Group 145); barite (mined by industry 1472); miscellaneous nonmetallic minerals, except fuels (talc, gypsum, graphite, and other minerals of the type classified in minerals Group 149); or in crushing slag or preparing roofing granules. However, establishments preparing such nonmetallic minerals or roofing granules in conjunction with a mine at the site are classified in the mineral industries. The crushing and grinding of stone; the preparation of sand and gravel (minerals Group 144) and of chemical and fertilizer minerals, except barite (minerals Group 147, except industry 1472) are classified in the mineral industries whether or not the establishment includes a mine. The beneficiation or preparation of metallic ores and the cleaning and grading of coal at the mine or at separately operated preparation plants are classified in the mineral industries. For a detailed list of products of industry 3295, refer to table 6A, product codes 3295011 to 3295098.
The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to (1) the reclassification of exfoliated vermiculate from industry 3296 to industry 3295 (1958 data have been revised to reflect this change) and (2) the inclusion of roofing granules produced in conjunction with mining operations in the mineral industries for 1963. In prior years these roofing granule plants were included in industry 3295. Data for prior years have not been revised to avoid disclosing figures for individual companies.
Value of shipments and other receipts of the Minerals, Ground or Treated,1ndustry totaled $\$ 204$ million. This amount included shipments of minerals and earths, ground or otherwise treated (primary products), valued at $\$ 175$ million, shipments of other products (secondary products) valued at $\$ 11$ million, and miscellaneous receipts at $\$ 18$ million.

This industry's shipments of minerals and earths, ground or otherwise treated,represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent.

Shipments of minerals and earths, ground or otherwise treated, by this industry represented 86 percent of all shipments of these products ( $\$ 203$ million) by all industries. In 1958 the coverage ratio was 85 percent. Other industries shipping minerals and earths, ground or otherwise treated, are industry 3275, Gypsum Products, $\$ 6$ million; and industry 3273, Ready-Mixed Concrete, $\$ 4$ million.

## 3296-MINERAL WOOL

This industry comprises establishments primarily engaged in manufacturing mineral wool and mineral wool insulation products made of such silicious materials as rock, slag, and glass, or combinations thereof. Establishments primarily engaged in manufacturing asbestos insulation products are classified in industries 3292 and 3293;
textile type glass fibers in industry 3229 and exfoliated vermiculite products in industry 3295. For a detailed list of products of industry 3296, refer to table 6A, product codes 3296111 to 3296298.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to the reclassification of exfoliated vermiculite from industry 3296 to industry 3295 . The 1958 data have been revised to reflect this change.

Value of shipments and other receipts of the Mineral Wool Industry totaled $\$ 392$ million. This amount included shipments of mineral wool (primary products) valued at $\$ 342$ million, shipments of other products (secondary products) valued at $\$ 37$ million, and miscellaneous receipts, at $\$ 13$ million.

This industry's shipments of mineral wool represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 consisted mainly of industrial plastics products and general industrial machinery.

Shipments of mineral wool by this industry represented 96 percent of all shipments of these products ( $\$ 356$ million) by all industries. In 1958 the coverage ratio was 95 percent. Other industries shipping mineral wool include industry 2661, Building Paper and Board Mills; and industry 3293, Gaskets and Insulations.

The production index for the primary products of the industry increased to 283 in 1963 from the 1958 level of 168 . The unit value index for 1963 was 76 compared to 86 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3297-NONCLAY REFRACTORIES

This industry comprises establishments primarily engaged in manufacturing refractories and crucibles made of materials other than clay. This industry also includes establishments primarily engaged in manufacturing all graphite refractories, whether of carbon bond or ceramic bond. Establishments primarily engaged in manufacturing clay refractories are classified in industry 3255. For a detailed list of products of industry 3297, refer to table 6A, product codes 3297012 to 3297098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Nonclay Refractories lndustry totaled $\$ 250$ million. This amount included shipments of nonclay refractories (primary products) valued at $\$ 226$ million, shipments of other products (secondary products) valued at $\$ 15$ million, and miscellaneous receipts, at $\$ 9$ million.

This industry's shipments of nonclay refractories represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 consisted mainly of clay refractories (\$8 million), and minerals and earths, ground or treated ( 43 million).

Shipments of nonclay refractories by this industry represented 88 percent of all shipments of these products ( $\$ 257$ million) by all industries. In 1958 the coverage ratio was 89 percent. Other industries shipping nonclay refractories include industry 3255, Clay Refractories, $\$ 9$ million; and industry 3291, Abrasive Products. Quarterly information on the shipments of refractories by type is collected on Form M32C and published
in Current Industrial Reports Series M32C. Manufacturers were required to report total value of refractories shipped only in the 1963 Census of Manufactures. The detailed product information published in table 6A was obtained from Current Industrial Reports Series M32C(64)-5, Refractories. The total value as reported in the census of manufactures is also shown in table 6A.

The production index for the primary products of the industry increased to 154 in 1963 from the 1958 level of 120 . The unit value index for 1963 was 130 compared to 122 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3299-NONMETALLIC MINERALS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the factory production of statuary and art goods made of plaster of paris and papier-mache; in manufacturing sand lime products, sheet mica products, and other nonmetallic mineral products, n.e.c. For a detailed list of products of industry 3299, refer to table 6A, product codes 3299053 to 3299098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Nonmetallic Products, N.E.C., Industry totaled $\$ 96$ million. This amount included shipments of nonmetallic mineral products, n.e.c., (primary products) valued at $\$ 80$ million, shipments of other products (secondary products) valued at $\$ 13$ million, and miscellaneous receipts, at $\$ 4$ million.

This industry's shipments of nonmetallic products, n.e.c., represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 consisted mainly of industrial product finishes, except lacquers and mineral wool for industrial and equipment insulation.

Shipments of nonmetallic products, n.e.c., by this industry represent 96 percent of all shipments of these products ( $\$ 83$ million) by all industries. In 1958 the coverage ratio was 85 percent.

table 1. General Statistics: 1963 and Earlier Years

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior a 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{2}$ This is a minimum percentage; the exact percentage is withheld to avoid disclosing figures of individual companies.
${ }^{2}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data
${ }^{3}$ Plants producing roofing granules and plants producing dead-burned magnesia or magnesite in conjunction with mining operations are classified in the mineral industries for 1963. In prior years these plants were included in industry 3295, Minerals, Ground or Treated. Prior years' data have not been revise to avoid disclosing figures of individual comoanies.
${ }^{4}$ Establishments primarily engaged in producing exfoliated vermiculate were reclassified from industry 3296, Mineral Wool, to industry 3295 , Minerals, Ground or Treated, in 1963. For 1958 the data have been revised to reflect this change; however, data for the years 1959-1962 have not. The value of shipments of these plants was approximately $\$ 11$ million in 1958.
${ }^{5}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that data for the industry prior to 1958 are not directly comparable. Details of this revision are described in the 1958 Census of Manufactures Volume II, Industry Statistics.

(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3291, Abrasive Products: New England-New Hampshire, 3 (100-249); Phode Island, 2 (100-249); East North Central-Ohio, 43 (1,000-2,499);
Wisconsin, 8 (250-499); West North Central-Minnesota, 2 (2,500-4,999); Missouri, 2 (20-99); Kansas, 1 (1-19); South Atlantic-North Carolina, 3
(103); Georgia, 5 (20-99); Florida, 2 (1-19); East South Central-Tennessee, 4 (20-99); Alabama, 2 (20-99); Mississippi, 2 (100-249); West South

Central—Arkansas, 2 (1-19); Texas, 1 (1-19); Mountain-Idaho, 2 (1-19); New Mexico, 1 (1-19); Pacific—Washington, 2 (100-249); Oregon, 2 (20-99); Califormia, 25 (466).
SIC 3292, Asbestos Products: New England-New Hampshire, 2 (250-499); Connecticut, 5 (1,000-2,499); East North Central-Ohio, 4 (250-499); Michigan, 1 (1-19); Wisconsin, l (1-19); West North Central-Missouri, 5 (250-499); Kansas, 1 (1-19); South Atlantic-Virginia, 3 (505); North Carolina, 3 (500-999); South Carolina, 2 (500-999); Georgia, 3 (163); Florida, 1 (1-19); East South Central—Alabama, 1 (20-99); Mississippi, 2 (100-249).
SIC 3293, Gaskets and Insulations: West North Central-Missouri, 7 (20-99); Nebraska, l (1-19); Kansas, 3 (20-99); South Atlantic-Maryland, 3 (20-99); Virginia, 1 (250-499); West Virginia, 1 (20-99); North Carolina, 2 (1-19); Georgia, 3 (1-19); Florida, 1 (1-19); East South CentralTennessee, 3 (250-499); Alabama, 2 (20-99); Mississippi, 1 (1-19); West South Central-Oklahoma, 3 (20-99); Mountain-Colorado, 2 (1-19); New Mexico, 1 (1-19); Pacific-Washington, 5 (1-19); Oregon, 1 (1-19).
SIC 3295, Minerals, Ground or Treated: New England-New Hampshire, i (1-19); Massachusetts, 8 (100-249); Connecticut, 1 (1-19); West North CentralMinnesota, 5 (20-99); Missouri, 7 (20-99); North Dakota, 1 (1-19); South Dakota, 2 (1-19); Nebraska, 3 (20-99); Kansas, 1 (1-19); South AtlanticDelaware, l (1-19); West Virginia, 7 (20-99); South Carolina, 3 (20-99); Florida, 7 (20-99); East South Central—Kentucky, 3 (20-99); Tennessee, 9 (20-99); Mississippi, 1 (100-249); West South Central-Arkansas, 3 (20-99); Louisiana, 9 (100-249); Oklahoma, 1 (1-19); Mountain-Montana, 8 (20-99); Idaho, 2 (1-19); Colorado, 8 (20-99); New Mexico, 2 (1-19); Arizona, 8 (20-99); Utah, 7 (141); Nevada, 1 (1-19); Pacific—Washington, 9 (20-99); Oregon, 5 (20-99); Hawaii, 1 (1-19).
SIC 3296, Mineral Wool: New England-Massachusetts, 2 (20-99); Rhode Island, 1 (1-19); East North Central-Ohio, 13 (3,306); Illinois, 6 (113); Michigan, 3 (20-99); Wisconsin, 2 (100-249); West North Central-Minnesota, 3 (130); Missouri, 2 (250-499); South Dakota, 1 (1-19); Kansas, 4 (1,000-2,499); South Atlantic-Virginia, 1 (1-19); West Virginia, 2 (250-499); South Carolina, 1 (1-19); Georgia, 1 (1-19); Florida, 3 (504); East South Central-Kentucky, 2 (20-99); Tennessee, 5 (100-249); West South Central-Arkansas, 1 (20-99); Louisiana, 1 (1-19); Texas, 7 (100-249); Mountain-Colorado, 2 (100-249); Arizona, 1 (1-19); Pacific-Washington, 4 (20-99); California, 14 (1,872); Hawaii, 1 (1-19).
SIC 3297, Nonclay Refractories: New England-Massachusetts, 2 (20-99); Connecticut, 3 (100-249); East North Central-IIlinois, 7 (248); Michigan, 3 (167); South Atlantic-Delaware, 1 (1-19); Maryland, 3 (1,000-2,499); West Virginia, 1 (20-99); North Carolina, 2 (20-99); East South CentralKentucky, 2 (500-999); Tennessee, 2 (100-249); Alabama, 2 (20-99); Mississippi, 1 (250-499); West South Central-Texas, 2 (20-99); MountainMontana, 1 (1-19); Colorado, 2 (100-249); Utah, 2 (20-99); Pacific-California, 4 (235).
SIC 3299, Nonmetallic Products, N.E.C.: New England-New Hampshire, 1 (250-499); Massachusetts, 11 (291); East North Central-Indiana, 3 (1-19); Wisconsin, 8 (20-99); West North Central-Minnesota 5 (20-99); Iowa, 3 (1-19); Missouri, 14 (20-99); South Dakota, 1 (1-19); Nebraska, 1 (1-19); Kansas, l (1-19); South Atlantic-Maryland, 2 (1-19); District of Columbia, 2 (20-99); Virginia, 4 (250-499); West Virginia, 2 (1-19); North Carolina, 4 (175); Georgia, 5 (136); Florida, 11 (20-99); East South Central-Kentucky, 4 (20-99); Tennessee, 1 (1-19); Alabama, 1 (1-19); Mississippi, 3 (20-99); West South Central-Arkansas, 1 (100-249); Louisiana, 1 (1-19); Oklahoma, 4 (1-19); Texas, 10 (20-99); MountainWyoming, 1 (1-19); Colorado, 4 (1-19); New Mexico, I (1-19); Arizona, 2 (20-99); Utah, 1 (1-19); Nevada, 1 (1-19); Pacific—Washington, 5 (20-99); Oregon, 3 (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total employment (either actual or in size ranges) for such States.
${ }^{3}$ See footnotes 3 and 4 on table 1 .

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left. $n$.e.c. Not elsewhere classified.
${ }^{1}$ Includes capital expenditures between $\$ 200$ thousand and $\$ 500$ thousand for plants under construction but not in operation.
${ }^{2}$ Includes capital expenditures between $\$ 1$ million and $\$ 2$ million for plants under construction but not in operation.
${ }^{3}$ Includes capital expenditures between $\$ 2$ million and $\$ 5$ million for plants under construction but not in operation.
${ }^{4}$ Includes capital expenditures between $\$ 50$ million and $\$ 100 \mathrm{million}$ for plants under construction but not in operation.

# TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\text { Col. ## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for tanges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

$1_{\text {Not }}$ directly comparable. In 1958 synthetic diamonds were classified in industry 3913, Lapidary Work. The amount is withheld to avoid disclosing figures for individual companies.
${ }_{3}^{2}$ See footnote 4 , table 1
${ }^{3}$ See footnote 3, table 1.
${ }^{4}$ Included in figure for code 3296098 for 1958.
${ }^{5}$ Included in figures for codes 3296128 and 3296298 for 1963.
${ }^{6}$ Molten cast brick and shapes are included with "Forsterite, pyrophillite, molten cast and other nonclay brick and shapes."
${ }^{7}$ Molten cast refractories are made by fusing refractory oxides as in an electric furnace and pouring the molten material into molds to form finished shapes
${ }^{8}$ Fused as applied to bauxite and alumina means complete melting, as in an electric furnace; the product is crushed and graded for use in the refractory. Dense-sintered alumina refers to heat treatment (short of melting) to render it relatively volume-stable for use in a refractory.
${ }^{9}$ Represents shipments for direct use as finished refractory products by establishments classified in "manufacturing" industries, and excludes shipments to refractory producers for processing in the manufacture of brick and other refractories.

## TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for l962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)~6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated
 consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

# Primary Metal Industries 

33A Blast furnaces, steel works, and rolling and finishing mills<br>33B Iron and steel foundries<br>33C Smelting and refining of nonferrous metals alloys<br>33D Nonferrous metal mill and foundry products.<br>33E Forgings and misc. primary metal industries

This major group includes establishments engaged in the smelting and refining of ferrous and nonferrous metals from ore, pig, or scrap; in the rolling, drawing, and alloying of ferrous and nonferrous metals; in the manufacture of castings, forgings, and other basic products of ferrous and nonferrous metals; and in the manufacture of nails, spikes, and insulated wire and cable. This major group also includes the production of coke.

Primary Metal Industries: Major Group 33
Value Added by Manufacture by State: 1963

## table 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for
 shnents who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known. For the period 1954 to 1963, figures represent ad justed value added by manuf acture and for earlier years, madjusted value added. Ad justed value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no ad justment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."
it) ind digit) include extensive duplication arising from shipprents between establishments in the same industry classification. For a more complete explanation, see Introduction, not yet in operation.
${ }_{5}$ In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative office and auxiliary units are show for the
years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957-1959 to 1962, and prior to 1949. ${ }^{6}$ The 1957 edition of the Standard Industrial Classification classifies beehive coke included in Major Group 29, Petroleum and Coal Products. However, this change was reflected in the tabulations for the 1955 to 1957 annual surveys of manufactures. Data for 1954 were retabulated on this basis and are the source of the data labeled "Revised." ${ }^{7}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{8}$ The figures for 1939 to 1958 are not entirely comparable with those for 1937 because the 1937 figures (a) include data for establishments primarily engaged in producing certain nonferrous bearings and aluminum products (ship bunks, ornamental metal work,
stampings, novelties, valves and fittings, machined castings and tags), and (b) exclude starnpings, novelties, valves and fittings, machined castings and tags), and (b) exclude data $o r$ establishments primarily engaged making electrometallugical products, ing of
 because of large elements of noncomparability in the earlier statistics of a number of industries included in the primary metal group.

${ }^{1}$ The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same
inousiry. For a more complete explanation, see Introduction.

## BLAST FURNACES, STEEL WORKS, AND ROLLING AND FINISHING MILLS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3312-Blast Furnaces (Including Coke Ovens), Steel Works, and Rolling Mills
3313-Electrometallurgical Products
3315-Steel Wire Drawing and Steel Nails and Spikes
3316-Cold Rolled Sheet, Strip, and Bars
3317-Steel Pipe and Tubes
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3312-BLAST FURNACES (INCLUDING COKE OVENS), STEEL WORKS, AND ROLLING MILLS

This industry comprises establishments primarily engaged in manufacturing hot metal, pig iron, silvery pig iron, and ferroalloys from iron ore and iron and steel scrap; converting pig iron, scrap iron, and scrap steel into steel; and in hot rolling iron and steel into basic shapes such as plates, sheets, strips, rods, bars, and tubing. Merchant blast furnaces and byproduct or beehive coke ovens are also included in this industry. For a detailed list of products of industry 3312, refer to table 6A, product codes 3312011 to 3312965.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Included in this industry are all establishments engaged in the manufacture of blast furnace ferroalloys. However, establishments which manufacture ferro or nonferrous additive alloys by electrometallurgical process are classified in industry 3313, Electrometallurgical Products. Also, establishments which draw wire from purchased rod and bar; establishments which perform only cold rolling, drawing, or finishing operations; and establishments which produce welded, seamless, and heavy riveted pipe from purchased materials are not included in industry 3312, but are included in industry 3315 , Steel Wire Drawing, Etc.; industry 3316, Cold Finishing of Steel Shapes; and industry 3317, Steel Pipe and Tube, respectively.

Total cost of materials and the total value of shipments in industry 3312 include extensive duplication resulting from the use of the products of some establishments as materials by others. Some quantities of coke are transferred to blast furnaces which have no affiliated coke ovens, and considerable quantities of pig iron are transferred from blast furnaces to partially integrated mills. In addition, steel ingots, semifinished shapes, and finished shapes and forms are transferred from one establishment to another for further processing. The value of such shipments appears twice in the total value of shipments; and a corresponding duplication enters into the total cost of materials, etc. This duplication does not exist in the data on value added by manufacture.

As a means of developing a net value of shipments figure, the cost of steel shapes received by establishments in industry 3312 was collected as a separate materials consumed item, and, as shown in table 7A, totaled approximately $\$ 1.68$ billion. In addition, the cost of pig iron consumed in this industry totaled approximately $\$ 0.38$ billion. Also, the cost of coke used as a fuel in this industry totaled $\$ 0.22$ billion. On this basis, the value of materials shipped or transferred between plants within this industry totaled approximately $\$ 2.28$ billion. Subtracting this value from the total value of shipments of approximately $\$ 16.61$ billion gives a net value (excluding duplication) of $\$ 14.33$ billion. A similar adjustment to the total cost of materials, supplies, etc., figure provides a net cost figure of $\$ 5,924$ million. Adjusting the cost of fuels on this same basis provides a net cost of fuels of $\$ 360$ million.

As stated in the opening paragraph above, this industry includes a variety of operations ranging from coke ovens through steel producing facilities to fabricating activities. Accordingly, in order to provide a measure of the relative importance of these departments data were collected on man-hours worked and production worker wages paid for each of several departments. The resulting data are shown in table 9A.

Also, based on the data for these various departmental operations it was possible to further classify the establishments of this industry into four subindustries, i.e., fully integrated establishments, partially integrated establishments with blast furnaces, partially integrated establishments without blast furnaces, and nonintegrated establishments. For purposes of this classification system an establishment was defined as follows: fully integrated if the establishment consisted of coke ovens, blast furnaces, steel furnaces, and rolling and finishing mills; partially integrated establishment with blast furnaces if the establishment consisted of blast furnaces, steel furnaces, and rolling and finishing mills; partially integrated establishment without blast furnaces if the establishment consisted of steel furnaces and either rolling and finishing mills or a forging department; nonintegrated for all other establishments including beehive coke ovens, byproduct coke ovens operated independently of blast furnaces and steel departments, merchant blast furnaces and establishments with hot rolling and finishing operations.

In a few cases, operations which are in fact fully integrated are classified as partially integrated or nonintegrated because separate reports were collected either because the operations are conducted in different cities or counties, or the company treats the operations separately for their own administrative reasons.

The subindustry data shown in tables $1,2,3,4.5 \mathrm{~B}, 7 \mathrm{~A}, 8$, and 9 are based on this sytem of classification.

The 1963 census obtained data on shipments of steel mill shapes at broad product class levels only. This is the source of the data in table 6A described "As reported in census of manufactures." More detailed product data were obtained on Annual Survey Form MA-33B, and published in Current lndustrial Reports Series M33B, Steel Mill Products. These data are shown in tables 6A-2 and 6A-3.

Annual Survey Form MA-33B obtained data on the total production of steel at three broad levels of output: ingots; semifinished shapes and forms (blooms, billets, wire rods, skelp, etc.); and finished mill shapes and forms. For each of these groups, the steel mills were requested to report production in the form in which the shape (a) passed from one group to the next, (b) was shipped from the establishment, or (c) was consumed in the establishment in the manufacture of fabricated products. The production figures shown in tables 6A-2 and 6A-3 include data on production derived from this method of reporting. Production figures shown for ingots represent the total production of ingots. Production figures shown for finished shapes and forms are the tonnages of these shapes produced at the steel mill for shipments (either outside the steel industry, or to other steel mills) or for consumption in the manufacture of fabricated products. The production of all semifinished shapes and forms combined represent total production of semifinished shapes and forms for sale and transfer and also for use in the same plant in the manufacture of either other steel mill shapes or fabricated products.

Net shipments of steel products (as derived from Survey Form MA-33B) including both the shipments to establishments outside the steel industry and the amounts consumed in the steel mills in the production of fabricated products and for maintenance, repair, and operating supplies, are shown in table 6A-4.

The figures on steel mill shapes shown in tables 6A-1 to 6A-4 include the manufacture of these products in separate cold rolling and drawing establishments, wire drawing plants, and pipe mills as well as steel mills. The receipts of steel at these plants have been taken into account in deriving the net shipment figures shown in table 6A-4.

While the primary products of the industry include a broad range of products, the establishments tend to group themselves into specific product classes within the industry. The extent of this specialization is indicated in table 8. Approximately 32 percent in hot rolled bars and bar shapes, plates, structural shapes, and piling, and 27 percent of the total value added by manufacture are represented by plants specializing in hot rolled sheet and strip, including tin mill products.

Data on shipments of pig iron, by grade, are published by the Bureau of Mines in its Minerals Yearbook. These data are reprinted in table 6A-5 and differ from the data reported in the census in that they include the tonnages of pig iron produced and consumed in the same establishment. Other differences of minor consequence also exist.

The production index for the primary products of the industry increased to 118 in 1963 from the 1958 level of 95 . The unit value index for 1963 was 120 compared to 123 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3313—ELECTROMETALLURGICAL PRODUCTS

This industry comprises establishments primarily engaged in manufacturing ferro and nonferrous additive alloys by electrometallurgical processes, including high percentage ferroalloys and high percentage nonferrous additive alloys. For a detailed list of products of industry 3313 , refer to table 6A, product codes 3313111 to 3313498 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electrometallurgical Products Industry totaled $\$ 382$ million. This amount included shipments of electrometallurgical products (primary products) valued at $\$ 317$ million.

This industry's shipments of electrometallurgical products represented 85 to 90 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent.

Shipments of electrometallurgical products by this industry represented 77 percent of all shipments of these products ( $\$ 412$ million) by all industries. In 1958 the coverage ratio was 76 percent. Other industries shipping electrometallurgical products consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $\$ 69$ million.

The production index for the primary products of the industry increased to 126 in 1963 from the 1958 level of 105 . The unit value index for 1963 was 89 compared to 117 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3315-STEEL WIRE DRAWING AND STEEL NAILS AND SPIKES

This industry comprises establishments primarily engaged in drawing wire from purchased iron or steel rods, bars, or wire and which may be engaged in the further manufacture of products made from wire; and those primarily engaged in manufacturing steel nails and spikes from purchased material. Rolling mills engaged in the production of ferrous wire from wire rods or hot rolled bars produced in the same establishment are classified in industry 3312. Establishments primarily engaged in drawing nonferrous wire are classified in Group 335. For a detailed list of products of industry 3315, refer to table 6A, product codes 3315111 to 3315998.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Steel Wire Drawing, Etc., Industry totaled $\$ 592$ million. This amount included shipments of steel wire and fabricated wire products (primary products) valued at $\$ 509$ million, shipments of other products (secondary products) valued at $\$ 62$ million, and miscellaneous receipts at $\$ 22$ million.

This industry's shipments of steel wire and fabricated wire products represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent.

Shipments of steel wire and fabricated wire products by this industry represented 30 percent of all shipments of these products ( $\$ 1,672$ million) by all industries. In 1958 the coverage ratio was 26 percent. Other industries shipping steel wire and fabricated wire products consisted mainly of industry 3312, Blast Furnaces and Steel Mills, $\$ 626$ million; and industry 3481, Fabricated Wire Products, N.E.C., $\$ 463$ million.

The production index for the primary products of the industry increased to 99 in 1963 from the 1958 level of 94 . The unit value index for 1963 was 123 compared to 122 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3316-COLD ROLLED SHEET, STRIP, AND BARS

This industry comprises establishments primarily engaged in (1) cold rolling steel sheets and strip from purchased hot rolled sheets; (2) cold drawing steel bars and steel shapes from purchased hot rolled steel bars; and (3) producing other cold finished steel. Establishments primarily engaged in the production of steel, including hot rolled steel sheets, and further cold rolling such sheets are classified in industry 3312. For a detailed list of products of industry 3316, refer to table 6A, product codes 3316701 to 3316801.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Cold Finishing of Steel Shapes Industry totaled $\$ 752$ million. This amount included shipments of cold rolled sheet, strip, and bars (primary products) valued at $\$ 661$ million, shipments of other products (secondary products) valued at $\$ 43$ million, and miscellaneous receipts (mainly resales) at $\$ 47$ million.

This industry's shipments of cold rolled sheet, strip, and bars represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 63 percent of the total industry shipments are represented by plants specializing in product class 33167 , Cold rolled sheet and strip.

Shipments of cold rolled sheet, strip, and bars by this industry represented 20 percent of all shipments of these products ( $\$ 3,333$ million) by all industries. In 1958 the coverage ratio was 18 percent. Other industries shipping cold rolled sheet, strip, and bars consisted mainly of industry 3312 , Blast Furnaces and Steel Mills, $\$ 2,647$ million.

The production index for the primary products of the industry increased to 138 in 1963 from the 1958 level of 103 . The unit value index for 1963 was 126 compared to 125 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3317-STEEL PIPE AND TUBES

This industry comprises establishments primarily engaged in the production of welded or seamless steel pipe and tubes and heavy riveted steel pipe from purchased materials. Establishments primarily engaged in the production of steel, including steel skelp or steel blanks, tube rounds, or pierced billets are classified in industry 3312.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Steel Pipe and Tube Industry totaled $\$ 809$ million. This amount included shipments of steel pipe and tube (primary products) valued at $\$ 707$ million, shipments of other products (secondary products) valued at $\$ 73$ million, and miscellaneous receipts (mainly resales) at $\$ 28$ million.

This industry's shipments of steel pipe and tube represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent.

Shipments of steel pipe and tube by this industry represented 37 percent of all shipments of these products ( $\$ 1,887$ million) by all industries. In 1958 the coverage ratio was 40 percent. Other industries shipping steel pipe and tube consisted mainly of industry 3312 , Blast Furnaces and Steel Mills, $\$ 1,137$ million.

The production index for the primary products of the industry increased to 99 in 1963 from the 1958 level of 90 . The unit value index for 1963 was 120 compared to 127 in 1958. Both indexes were computed on a basis of $1954=100$.

table 1. General Statistics: 1963 and Earlier Years

## table 1. General Statistics: 1963 and Earlier Years-Continued

## Footnotes for table 1-33A

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable
Includes expenditures for plants under construction but not in operation. T'nis information was not collected in 1939 and 1947 and is not available by 4 -digit industry for 1954.
${ }^{2}$ The value of shipments and cost of materials for this industry includes extensive duplication arising from shipments between establishments in the same industry classification. For further explanation see text.
${ }^{3}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

4Data for Alaska and Hawaii are excluded for 1957 and earlier years.
${ }^{5}$ Prior to 1939 "Steel works and rolling mills" and "Steel foundries" constituted a single industry. Separate figures for these two industries were obtained for 1937 and 1929 from special tabulations of the returns for those years. Separate data for subsequent years have been combined in order that statistics may be shown for other years. Data for "Steel foundries" for 1963 are shown in MC63(2)-33B, Iron and Steel Foundries.
${ }^{6}$ Definitions are as follows: Fully integrated works are establishments having coke ovens, blast furnaces, steel works, and rolling and finishing mills or a forging department; partially integrated works with blast furnaces are establishments having blast furnaces, steel works, and rolling and finishing mills or a forging department; partially integrated works without blast furnaces are establishnents having steel works, and rolling and finishing mills or a forging department; nonintegrated works represent all other types of establishments in this industry including beehive coke ovens, byproduct coke ovens operated independently of blast furnaces and steel departments; merchant blast furnaces, and establishments with hotrolling and finishing operations. In a few cases, operations which are, in fact, fully integrated, are classified as partially integrated or nonintegrated because separate establishment reports were collected either because the operations are conducted in different cities or towns, or the company treats the operations separately for their own administrative reasons.
${ }_{8}^{7}$ No comparable data are available for earlier years.
${ }^{8}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior year are not available.

## table 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

Footnotes for Table 2-33A

Standard Notes: - Represents zero.
applicable
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3312, Blast Furnaces and Steel Mills: New England—Massachusetts, 2 (1,000-2,499); Rhode Island, 1 (500-999); Connecticut, 3 (l,006); East North Central-Wisconsin, 2 ( $250-499$ ); West North Central—Minnesota, 3 (2,500-4,999); Missouri, 5 (2,500-4, 999); South Atlantic-Delaware, l
(1,000-2,499); Maryland, 4 (10,000 and over); West Virginia, 7 (12,795); North Carolina, 2 (100-249); South Carolina, 1 (20-99); Georgia, 1 (1,000-2,499); Florida, 2 (100-249); East South Central-Alabama, 14 (10,000 and over); Mississippi, 1 (100-249); West South Central-0kiahoma, 1 (250-499); Texas, 4 ( 7,511 ); Mountain-Colorado, 2 ( $5,000-9,999$ ); Arizona, 2 (20-99); Utah, 1 (2,500-4,999); Pacific-Washington, 3 (1,168); Oregon, 1 (250-499); Hawaii, 1 (100-249).
SIC 3312-11, Fully integrated works: Middle Atlantic-New York, l (10,000 and over); Pennsylvania, 9 (10,000 and over); East North Central-Illinois, (10,000 and over); Michigan, l (5,000-9,999); West North Central-Minnesota, l (1,000-2,499); South Atlantic-Maryland, l (10,000 and over); West Virginia, l (10,000 and over); East South Central-Alabama, 2 (10,000 and over); West South Central-Texas, 2 (5,000-9,999); Mountain-Colorado, 1 ( $5,000-9,999$ ); Utah, 1 ( $2,500-4,999$ ) ; Pacific-California, 1 ( $5,000-9,999$ ).
SIC 3312-12, Partially integrated works with blast furnaces: Middle Atlantic-New York, 2 (2,500-4,999); Pennsylvania, 3 (10,000 and over); East North Central-Illinois, 1 (5,000-9,999); Michigan, 1 (2,500-4,999); East South Central-Kentucky, 1 (2,500-4, 999).
SIC 3312-13, Partially integrated works without blast furnaces: New England-Rhode Island, l (500-999); Connecticut, l (500-999); Middle AtlanticNew Jersey, 1 (1,000-2,499); East North Central-Indiana, 3 (2,500-4,999); Michigan, 2 (5,000-9,999); West North Central-Missouri, 1(2,500-4,999); South Atlantic-Maryland, 2 (2,500-4,999); Virginia, 2 (250-499); West Virginia, 1 (500-999); North Carolina, 1 (100-249); South Carolina, l (20-99); Georgia, 1 (1,000-2,499); Florida, 1 (100-249); East South Central-Kentucky, 2 (1,000-2,499); Tennessee, 1 (250-499); Alabama, 3 (1,000-2,499); Mississippi, 1 (100-249); West South Central-Oklahoma, 1 (250-499); Texas, 1 (500-999); Pacific—Washington, 1 (500-999); Oregon, 1 (250-499); California, 8 ( $5,000-9$, 999); Hawaii, 1 (100-249).
SIC 3312-14, Nonintegrated works: New England-Massachusetts, 2 ( $1,000-2,499$ ); Connecticut, 2 (250-499); Middle Atlantic-New York, 11 (1,000-2,499); New Jersey, 3 (1,000-2,499) ; East North Central-Indiana, 6 (5,000-9,999); Michigan, 7 (2,500-4,999); Wisconsin, 2 (250-499); West North CentralMinnesota, 2 (100-249); Missouri, 4 (250-499); South Atlantic—Delaware, l (1,000-2,499); Maryland, l (1-19); Virginia, 11 (250-499); West Virginia, 5 (1,000-2,499); North Carolina, l (1-19); Florida, 1 (20-99); East South Central-Kentucky, 2 (250-499); Tennessee, 4 (1,000-2,499); Alabama, 9 (2,500-4,999); West South Central-Texas, 1 (100-249); Mountain-Colorado, 1 (20-99); Arizona, 2 (20-99); Pacific-Washington, 2 (100-249) ; California, 8 (500-999).
SIC 3313, Electrometallurgical Products: Middle Atlantic-New York, 3 (1,000-2,499); New Jersey, l (100-249); Pennsylvania, 1 (20-99); East North Central-Indiana, I (1-19); Illinois, 3 (100-249); Michigan, I (20-99); West North Central-Iowa, I (250-499); South Atlantic- West Virginia, 10 (1,000-2,499); South Carolina, 1 (250-499); East South Central-Kentucky, 1 (500-999); Tennessee, 3 (500-999); Alabama, 1 (250-499); West South Central-Texas, 1 (100-249); Mountain-Montana, l (1-19); Pacific-Washington, 1 (20-99); Oregon, 3 (520); California, 2 (1-19);
SIC 3315, Steel Wire Drawing, Etc.: New England-New Hampshire, 3 (348); Rhode Island, 2 (500-999); Connecticut, 9 (1,000-2,499); Middle AtlanticPennsylvania, 15 (1,000-2,499); East North Central-Indiana, 4 (500-999); Michigan, 5 (500-999); Wisconsin, 3 (427); West North CentralMinnesota, I (1-19); Iowa, 2 (_00-249); Missouri, 1 (100-249); South Atlantic-West Virginia, 1 (20-99); North Carolina, 1 (100-249); Georgia, 2 (20-99); Florida, 6 (100-249); East South Central-Kentucky, 2 (250-499); Tennessee, 2 (100-249); West South Central-Louisiana, 1 (20-99); Texas, 5 (100-249); Mountain-Colorado, 2 (20-99); Pacific-Washington, 1 (1-19); California, 20 (1,184).
SIC 3316, Cold Finishing of Steel Shapes: New England-Massachusetts, 6 (500-999); Rhode Island, 1 (250-499); East North Central-Illinois, 4 (500-999); Wisconsin, 1 (20-99); South Atlantic—Maryland, 2 (100-249); West Virginia, 1 (100-249); Pacific-Washington, 2 (20-99); California, 10 (100-249).
SIC 3317, Steel Pipe and Tube: New England-Massachusetts, l (20-99); Connecticut, l (1-19); Middle Atlantic-New York, 7 (250-499); New Jersey, 11 (500-999) ; East North Central—Indiana, 4 (446); Wisconsin, 3 (1,522); West North Central-Minnesota, 1 (20-99); Iowa, 1 (100-249); Missouri, 1 (1-19); South Atlantic-Georgia, 3 (20-99); East South Central-Kentucky, 1 (100-249); Tennessee, 2 (250-499); Alabama, 1 (100-249); Mississippi, 2 (20-99); West South Central-Louisiana, 2 (250-499); Mountain-Colorado, 2 (20-99); Utah, 1 (100-249); Pacific-Washington, l (20-99).
${ }^{2}$ Figures on cost of materials and value of shipments for industry 3312, Blast Furnaces and Steel Mills, include extensive duplication arising
from shipments between establishments in the same industry classification. This also applies to the subindustries of industry 3312. ${ }^{3}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958
report showed the number of establishnents and total employment (either actual or in size ranges) for such States.
${ }^{4}$ See footnote 6 , table 1 for definition of these industries.

TABLE 3. Detailed Statistics: 1963

| Item | Blast furnaces and steel mills (SIC 3312) |  |  |  |  |

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representin the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\text { Col. B }}{\text { Col. B+C }}$ <br> (percent) | Total, made in all industries $(\$ 1,000)$ | Made in this industry $(\$ 1,000)$ | Made in other industries $(\$ 1,000)$ | Coverage ratio <br> Col. B Col. NOTE: See Introduction for an explanation of terms used.
${ }^{1}$ The value of shipments for the industry in 1963 totaled $\$ 16,611$ million. This value, however, includes duplication in that the products of some establishments are used as materials by others. See text for fuller explanation. Specialization ratio computed on the basis of net value of shipments would approximate 94 percent. A coverage ratio for this industry cannot be precisely computed. However, such a ratio would exceed 86 percent. Comparable ratios for 1958 were: specialization, 94 percent; coverage, 84 percent.

Includes small amount of primary products made in other industries to avoid disclosing individual company figures. This amount, however, constitutes less than 2 percent of the total.
${ }^{3}$ Miscellaneous receipts included with secondary products.
TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1963
In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions receipts. The value of shipments of the primary products of the specified industry reported by
of dollars. The "All industries" column shows the total value of shipments of the primary prod-
establishments not classified in that industry is shown under the caption "Other industries." In-
 columns provided that the figures for individual companies are not thereby disclosed.

## TABLE 6A-1. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Excludes quantities produced in byproduct coke ovens operated in conjunction with utilities manufacturing and distributing gas.
${ }^{2}$ Data for product code 3312183 included with product codes 3312192,3312193 and 3312194 . The 1958 total for product class 33121 and 33130 includes ferrochrome and ferrosilicon which are excluded from the comparable 1963 total.
${ }^{3}$ Excludes shipments of steel processed on a conversion basis from nonsteel producing companies. Detailed data by shape and grade and net shipments figures appear in tables 6A-2, 6A-3 and 6A-4.
${ }^{4}$ Data reported in the census of manufactures differ from comparable figures reported in Annual Survey MA-33B chiefly due to companies not included in the annual survey. In addition there were minor differences between figures for a few companies reporting in the two surveys.
${ }^{5}$ These figures are not strictly comparable with tonnage shipments shown in Current Industrial Reports Series M-33c, Comnercial Steel Forgings, in that the latter includes only forgings for sale, whereas the 1963 and 1958 Censuses of Manufactures include interplant transfers of forgings. Accordingly, a direct comparison with the monthly Current Industrial Reports Series is not possible. Forgings produced and consumed within the same plant are not included in either the census or the Current Industrial Reports figures. The estimated annual totals reported in the monthly current Industrial Reports survey for commercial steel forgings were as follows:

|  | 1963 | 1958 |
| :--- | ---: | ---: |
|  | Short tons | Short tons |
| Carbon....................... | 156,074 | 92,096 |
| Alloy, including stainiess. | 219,936 | 163,480 |

${ }^{6}$ In 1958 product codes 3312921, 3391921, 3312961 and 3391941 were combined.
${ }^{7}$ In 1958 product codes $3312923,3391922,3312963$ and 3391942 were combined.
${ }^{8}$ In 1958 product codes 3312925, 3391923, 3312965 and 3391943 were combined.
${ }^{9}$ For detailed data see products of industry 3312 above.
${ }^{10}$ For 1958, data for product code 3481519, Nonferrous metal insect wire screening, other than copper and copper-base alloy, and aluminum, is included with product code 3481490 , Other wire cloth and woven wire products.
${ }^{11}$ For 1958 , data for product code 3481400 , Wire cloth and woven wire products, not specified by kind, includes data for product code 3481500 , Nonferrous wire cloth and other woven nonferrous wire products, not specified by kind.
TABLE 6A-2. Steel Mill Products-Receipts, Production, Consumption, and Shipments: 1963
 See footnotes at end of table.
TABLE 6A-2. Steel Mill Products-Receipts, Production, Consumption, and Shipments: 1963-Continued

[^80]Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
 ${ }^{3}$ Represents the quantity and value of shipnents by steel works and wire drawing plants. Total shipments of these products by all establishments in 1963 are shown in table 6 .

TABLE 6A-4. Steel Mill Products-Net Shipments: 1958 to 1963-Continued

| Product |
| :---: |

Source: Current Industrial Reports Series M33B, Steel Mill Products.
${ }^{1}$ Derived by subtracting the steel mills' receipts of each steel mill shape from the total of shipments to other companies, transfers to other plants, and tonnage consumed in steel mills in the production of fabricated products and as maintenance, repair, and operating supplies. For practical purposes, net shipments amount to zero for some products. Due to material in transit, this results in negative figures for a few items. Where products are grouped together for calculation of net shipments, some of the individual products within the group may represent negative figures. In such cases, the negative figures for the individual products were subtracted from the net shipments of the other products and an overall net shipments total is shown.
${ }^{2}$ Represents wire products produced within steel works and wire drawing establishments.
${ }^{3}$ Electrical strip is included with electrical sheet.

${ }^{1}$ These indexes have been computed on a "wherever-made" basis--that is, they reflect the shipments and production reported by mills operating rolling and finishing facilities but no steel furnaces, as well as by steel mills (industry 3312 establishments). In the case of product classes 33121 and 33122 , the production indexes have been independently derived from production data while the unit value indexes have been determined in the usual manner by reference to shipments detail.
${ }^{2}$ These indexes are based on shipments data reported by the Bureau of Mines, Department of Interior. (Table 6A-6 presents the 1963 and 1958 detail relative to these ferroalloys used in the computation of these indexes.)

## table 6C. Product Classes-Value Shipped by All Manufacturing Establishments, 1947, 1954, 1958 to 1963

[^84] applicable. n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data,
${ }^{2}$ Source: Current Industrial Reports Series M33D, Steel Mill Products.
${ }^{3}$ Includes total for product class 33919, Open die hammer and press forgings (produced from purchased materials), which is primary to 3391.

TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically
significant and which have production that is geographically dispersed, provided that the disper-
sion is not approximated by the data in the geographic table for the industry (table 2) and they
are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

[^85]table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958-Continued

${ }^{1}$ For the specified product classes shipments of $\$ 1$ million or more were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 33120, Massachusetts, Indiana, Illinois, Missouri, Delaware, West Virginia, Alabama, Texas, Colorado, and California; 33121, 33131, and 33134, Connecticut, New Jersey, Wisconsin, Minnesota, Iowa, Missouri, Maryland, Texas, Colorado, Arizona, Utah, Oregon, and California; 33122, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, Indiana, Illinois, Minnesota, Missouri, Maryland, West Virginia, Kentucky, Alabama, Texas, Colorado, and California; 33123, Rhode Island, New York, New Jersey, Pennsylvania, Illinois, Michigan, Maryland, West Virginia, Georgia, Kentucky, Alabama, Utah, Washington, and California; 33124, Connecticut, New York, New Jersey, Missouri, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Mississippi, Oklahoma, Texas, Colorado, Utah, Washington, Oregon, and Hawaii; 33125 and 33155, Rhode Island, Connecticut, Minnesota, Missouri, Maryland, Georgia, Alabama, Texas, and Colorado; 33126 and 33176 , Connecticut, Minnesota, Iowa, Missouri, Maryiand, West Virginia, Georgia, Kentucky, Tennessee, Mississippi, Louisiana, Texas, Colorado, Utah, Washington, and California; 33127 and 33167, Massachusetts, Rhode Island, Illinois, Maryland, West Virginia, Kentucky, and Alabama; 33128 and 33168 , New York, New Jersey, Michigan, Wisconsin, Maryland, Alabama, Texas, Colorado, and Califormia; 33129 and 33919 , Connecticut, New Jersey, Indiana, Wisconsin, and Washington; 33151 and 34811, Massachusetts, Connecticut, Indiana, Illinois, Wisconsin, Missouri, Maryland, Virginia, Georgia, Florida, Colorado, Washington, and California; 33152, New Hampshire, Rhode Island, Connecticut, Pennsylvania, Wisconsin, Minnesota, Missouri, Maryland, West Virginia, North Carolina, Georgia, Kentucky, Alabama, Texas, Colorado, and California; 33156 and 34816 , Connecticut, Minnesota, Iowa, Missouri, Maryland, Florida, Alabama, Louisiana, Oklahoma, and Colorado; 33157 and 34814, Connecticut, Indiana, Michigan, Missouri, Maryland, Kentucky, Colorado, and Oregon; 33159 and 34819, Rhode Island, Delaware, Louisiana, Oklahoma, and Colorado.
${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.
${ }^{3}$ Includes a total of $\$ 1,166,564$ for the East North Central Division.
table 7A. Materials by Kind: 1963 and 1958

See footnotes at end of table.

## table 7A. Materials by Kind: 1963 and 1958-Continued

[^86]
## table 7a. Materials by Kind: 1963 and 1958-Continued

Standard Notes: - Represents zero. ( $D$ ) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not sepcified by kind.
${ }^{1}{ }^{1}$ For definition of subindustries see footnote 6 , table 1 .
${ }^{2}$ Total cost of materials, etc., contains extensive duplication. This duplication arises because the products of some establishments are used as materials by other establishments in the same industry. For the industry as a whole the extent of this duplication is approximated by totaling the cost of pig iron, ingots, and semifinished shapes purchased for further processing. Estimated unduplicated cost of materials obtained by this method is $\$ 5,923$ million. The comparable 1958 figure was $\$ 4,886$ million. The extent of duplication for subindustries cannot be measured accurately because such purchases cross subindustry lines.
${ }^{3}$ In addition, pig iron produced and consumed in the same establishment was 56,369 thousand short tons. In 1958, the comparable figure was 47,499 thousand short tons. For 1963, the combined total for partially integrated works including both those with and those without blast furnaces were $6,645,431$ short tons at a delivered cost of $\$ 304,625$ thousand.
${ }_{4}$ In addition, 55,510 short tons of ferromanganese were produced and consumed in the same establishment. The comparable figure for 1958 was 59,408 short tons.
${ }^{5}$ Excludes spiegeleisen produced and consumed in the same establishment.
${ }^{6}$ In addition, 15,572 short tons of other ferroalloys were produced and consumed in the same establishment.
${ }^{7}$ For 1963, excludes sulfuric acid produced and consumed in the same establishment. For 1958, includes sulfuric acid produced and consumed in the same establishment.
${ }^{8}$ In addition 9,613,198 thousand cubic feet of oxygen were produced and consumed in the same establishment.
${ }^{9}$ For 1963, includes cost of manganese ore and nickel. For 1958, includes cost of sulfuric acid, copper, and oxygen.
${ }^{10}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumad were not requested and (b) total cost of materials reported for establishments winch failed to report the costs of individual materials on "standard forms" and (c) discrepancies between total cost of materials and detailed materials on the reports for other establishments.

# table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

#### Abstract

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry <br> or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted ( $\$ 1,000$ ) | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capitalexpend-itures,new$(\$ 1,000)$ |

## IRON AND STEEL FOUNDRIES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SlC Code and Title<br>3321--Gray lron Foundries<br>3322-Malleable lron Foundries<br>3323--Steel Foundries

This group is comprised of three foundry industries, namely industry 3321, Gray lron Foundries; industry 3322, Malleable lron Foundries; and industry 3323, Steel Foundries. These foundry industries comprise establishments primarily engaged in manufacturing gray-iron castings, including cast gray-iron pipe and fittings (3321), malleable iron castings (3322), and steel castings (3323)。

For these industries, captive production (that is, the tonnage of castings produced for incorporation into the final product of the plant or company) is a particularly important factor. Distinction is made between rough castings and castings which are machined or further processed and incorporated into other products. The removal of gates, risers, sprues, and tumbling, dipping, and sand blasting, do not constitute machining. Plants primarily engaged in manufacturing castings are included in the foundry industries; plants primarily engaged in further processing castings into parts for metal products or machinery are classified in other major groups.

For the 1963 Census of Manufactures separate establishment reports were received from all commercial (jobbing) foundries and from those captive foundries which were operated as separate establishments by the reporting companies. These two groups comprise the types of establishments included in industries 3321,3322 , and 3323 . However, where the captive foundry operation was completely integrated with the operation of the entire plant, no separate establishment report was received for the foundry activity. In these instances, data were obtained on the tonnage of castings produced and consumed and on the number of employees usually engaged in the captive foundry operation. However, establishments with such foundry departments were classified on the basis of the plant's final product and accordingly, the general statistics on employment, payrolls, cost of materials, etc., are included in the data for such industries as plumbing fixtures (3431), and farm machinery and equipment (3522), etc.

The data shown in table 6A on shipments and transfers of iron and steel castings represent total shipments and transfers including the quantity of castings shipped by establishments classified in industries other than the foundry industries (3321, 3322, and 3323). For those industries where captive foundry departments are particularly important, data on the tonnage of castings produced and consumed are shown in table 7 of the individual industry reports covering the specific industries.

During 1963, the Bureau of the Census also collected and published monthly data on shipments of iron and steel castings. These monthly data were derived from a sample survey and were published in Current Industrial Reports Series M33-1, Iron and Steel Castings. The M33-1 series includes data for both commercial and captive foundry production and shows separately shipments "for sale" and shipments "for own use."
lt should be specifically noted that the value data on shipments of iron and steel castings in table 6A do not include the value of the large quantity of castings produced by establishments classified in other industries which produce castings only for incorporation into their own products or for internal use but not for sale as such.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3321 --GRAY 1RON FOUNDR1ES

This industry comprises establishments primarily engaged in manufacturing gray iron castings, including cast iron pressure and soil pipe and fittings. Establishments primarily engaged in manufacturing valves and fittings, except plumbers' brass goods and fittings, are classified in industry 3494, Valves and Pipe Fittings. For a detailed list of products of industry 3321, refer to table 6A, product codes 3321111 to 3321498.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Gray lron Foundries Industry in 1963 totaled $\$ 1,985$ million. This amount included shipments of gray iron castings (primary products) valued at $\$ 1,794$ million, shipments of other products (secondary products) valued at $\$ 134$ million, and miscellaneous receipts (mainly receipts for resales), at $\$ 56$ million.

This industry's shipments of gray iron castings in 1963 represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent. Secondary products shipped by this industry in 1963 included malleable iron castings ( $\$ 22$ million), and aluminum and aluminum-base alloy castings ( $\$ 17$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 85 percent of the total industry shipments are represented by plants specializing in product classes; 60 percent in miscellaneous gray iron castings; 12 percent in cast iron pressure pipe and fittings; and 8 percent in cast iron soil pipe and fittings.

Shipments of gray iron castings by this industry in 1963 represented 88 percent of all shipments of these products ( $\$ 2,046$ million) by all industries. In 1958 the coverage ratio was 87 percent. Other industries shipping gray iron castings (primary products) included industry 3312, Steel Mill Products, $\$ 92$ million; industry 3323, Steel Castings, $\$ 27$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product class of industry 3321 , e.g., molds for heavy steel ingots, 54 percent.

## 3322-MALLEABLE IRON FOUNDRIES

This industry comprises establishments primarily engaged in manufacturing malleable iron castings. For a detailed list of products of industry 3322, refer to table 6A, product codes 3322021 to 3322031 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Malleable Iron Foundries Industry in 1963 totaled $\$ 318$ million. This amount included shipments of malleable iron castings (primary products) valued at $\$ 272$ million, shipments of other products (secondary products) valued at $\$ 42$ million, and miscellaneous receipts (mainly receipts for resales) at $\$ 3$ million.

This industry's shipments of malleable iron castings in 1963 represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 consisted mainly of miscellaneous gray iron castings ( $\$ 21$ million).

Shipments of malleable iron castings by this industry in 1963 represented 87 percent of all shipments of these products ( $\$ 314$ million) by all industries. In 1958 the coverage ratio was 90 percent. Other industries shipping malleable iron castings (primary products) consisted mainly of industry 3321, Gray Iron Foundries, $\$ 22$ million.

The production index for the primary products of the industry increased to 124 in 1963 from the 1958 level of 84 . The unit value index for 1963 was 123 compared to 118 in 1958. Both indexes were computed on a basis of $1954=100$.

3323-STEEL FOUNDRIES
This industry comprises establishments primarily engaged in manufacturing steel castings. For a detailed list of products of industry 3323, refer to table 6A, product codes 3323012 to 3323061 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Steel Foundries lndustry in 1963 totaled $\$ 871$ million. This amount included shipments of steel castings (primary products) valued at $\$ 726$ million, shipments of other products (secondary products) valued at $\$ 129$ million, and miscellaneous receipts (mainly receipts for resales), at $\$ 17$ million.

This industry's shipments of steel castings in 1963 represented 85 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 included miscellaneous gray iron castings ( $\$ 20$ million), and street cars, parts and attachments for railroad cars and street cars and rebuilt passenger and freight train cars ( $\$ 19$ million).

Shipments of steel castings by this industry in 1963 represented 89 percent of all shipments of these products ( $\$ 815$ million) by all industries. In 1958 the coverage ratio was 86 percent. Other industries shipping steel castings (primary products) included industry 3312, Steel Mill Products, $\$ 22$ million; and industry 3321, Gray Iron Foundries, $\$ 15$ million.

The production index for the primary products of the industry increased to 114 in 1963 from the 1958 level of 89 . The unit value index for 1963 was 134 compared to 124 in 1958. Both indexes were computed on a basis of $1954=100$.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to l935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ No comparable figures are available for earlier years.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\text { Col. ## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry:

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable, n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes shipments which totaled $\$ 2$ million or more for industry 3312, Blast Furnaces and Steel Mills; and 3323, Steel Foundries, but are withheld to avoid disclosing individual company figures.
${ }^{2}$ Includes $\$ 3$ million shipped by industry 3433, Heating Equipment, Except Electric; $\$ 2$ million by industry 3494, Valves and Pipe Fittings; $\$ 2$ million by industry 3519, Internal Combustion Engines; \$21 million by industry 3522, Farm Machinery and Equipment; \$5 million by industry 354l, Metal-cutting Machine Tools; $\$ 4$ million by industry 3552, Textile Machinery; $\$ 4$ million by industry 3554 , Paper Irldustries Machinery; $\$ 3$ million by industry 3559 , Special Industry Machinery, N.E.C.; \$2 million by industry 3561, Pumps, and Compressors; \$9 million by industry 3599, Miscellaneous Machinery; and \$18 million by industry 3717, Motor Vehicles and Parts. In addition the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: Industry 3548, Metalworking Machinery, N.E.C. and industry 3553, Woodworking Machinery.
${ }^{3}$ Includes $\$ 2$ million shipped by industry 3494, Valves and Pipe Fittings. In addition the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: Industry 3323, Steel Foundries; and industry 3559 , Special Industry Machinery, N.E.C.

4ncludes $\$ 6$ million shipped by industry 3361, Aluminum Castings; $\$ 6$ million by industry 3362, Brass, Bronze, Copper Castings; $\$ 7$ million shipped by industry 3531, Construction Machinery; and $\$ 2$ million by industry 3561, Pumps and Compressors. In addition the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: Industry 2499, Wood Products, N.E.C.; industry 3391 , Iron and Steel Forgings; industry 3548, Metalworking Machinery, N.E.C.; and industry 3566, Power Transmission Equipment.
${ }^{5}$ Includes the following product classes which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 33176 , Steel pipe and tube; 34431, Heat exchangers and steam condensers; 34990, Fabricated metal products, n.e.c.; 35197, Parts and accessories for internal combustion engines; 35222, Wheel tractors and parts and attachments; and 35313, Parts and attachments for tracklaying and contractors'off-highway wheel tractors.
${ }^{6}$ Includes the following product class which totaled $\$ 2$ million or more but is withheld to avoid disclosing individual company figures: 34231, Mechanics' hand service tools.
${ }^{7}$ Includes the following product classes which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 19310, Tanks and tank components; 3321l, Molds and stools for heavy steel ingots; 33220, Malleable iron castings; 33560, Nonferrous rolling and drawing, n.e.c.; 33919 , Open die press; and hammer forgings; 34432, Fabricated steel plate; 34990, Fabricated metal products, n.e.c.; 35481 , Rolling mill machinery and equipment; 37413, Parts for locomotives and rebuilt locomotives; and 37422, Freight train cars, new.

(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

${ }^{1}$ For the specified product classes shipments of over $\$ 1$ million were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 33211, New York, Ohio, Michigan, West Virginia, Kentucky, Colorado, Utah, and California; 33212, Massachusetts, Ohio, Illinois, Iowa, Virginia, Tennessee, Utah, and California; 33213, New York, Pennsylvania, Ohio, Michigan, Missouri, Maryland, Virginia, North Carolina, Florida, Tennessee, Texas, and Oregon; 33214, New Hampshire, Nebraska, South Dakota; 33220, New Hampshire, Massachusetts, Rhode Island, Minnesota, Iowa, Missouri, and Texas; 33230, New Hampshire, Minnesota, Iowa, Nebraska, Kansas, Delaware, West Virginia, Florida, Tennessee, Arkansas, Oklahoma, and Arizona.
${ }^{2}$ Shipments of over $\$ 1$ million were reported but exact figures are withheld to avoid disclosure of individual company figures.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for l962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors
 associated with these estinates are published in the reports "Fuels and Electric E
"Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Valueadded bymanufacture,adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

|  | 111 | 43 | 47 | 21 | 1,200 | 100 | 401 |  |

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production worker employment on the last line of the table below.

| Item | Industry |  |  |
| :---: | :---: | :---: | :---: |
|  | 3321 | 3322 | 3323 |
| Total number of establishments in the industry. | 1,139 | 81 | 267 |
| Number of establishments which reported one or more of the specified operations. | 438 $65-70$ | 56 $85-90$ | 150 $80-85$ |
| Percent of industry production workers in these establishments.................... | 65-70 | $85-90$ | 80-85 |
| Number of establishments which reported "none" of the operations apply Percent of industry production workers in these establishments..... | 334 $20-25$ | 15 $10-15$ | 70 $10-15$ |
| Percent of industry production workers in establishments which completed metalworking operations inquiry. | 90-95 | 95-100 | 90-95 |

(D) Withheld to avoid disclosing figures for individual companies.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. These are not, based on total employmeri in the establishment.

## SmELTING AND REFINING OF NONFERROUS METALS AND ALLOYS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3331 -Primary Smelting and Refining of Copper<br>3332-Primary Smelting and Refining of Lead<br>3333-Primary Smelting and Refining of Zinc<br>3334-Primary Production of Aluminum<br>3339-Primary Smelting and Refining of Nonferrous Metals, Not Elsewhere Classified<br>3341 -Secondary Smelting, Refining, and Alloying of Nonferrous Metals and Alloys

Industries in this group produce primary and secondary nonferrous metals and alloys from ores and concentrates and from scrap. The five primary industries ( 3331 to 3339) are chiefly engaged in extracting metals from ores, concentrates, precipitates, etc. They include (1) establishments which perform smelting operations only and produce metals such as blister copper and lead base bullion, that are not yet of commercial grades; (2) establishments which refine the products of the smelters and produce commercially pure metal; and (3) those which produce refined metals from the ores and concentrates in a single continuous operation. These industries do not include milling or concentrating operations since these are generally located at mine sites and are considered as mineral operations rather than manufacturing activities. Such operations are covered in the 1963 Census of Mineral Industries (Major Group 10-Metal Mining). Also excluded are establishments which produce alumina from bauxite and those which process ores and concentrates primarily for the purpose of producing chemicals, such as zinc oxide. Such establishments are included in the chemical group of manufacturing industries. Primary smelters and refiners may also produce considerable quantities of such chemicals as sulfuric acid, zinc oxide, etc.

Inasmuch as many of the companies in the smelting and refining field operate their own mines and milling and concentrating plants, it has been difficult to establish a satisfactory value of the ore or concentrate transferred from the mine to the smelter. In an effort to achieve uniformity and to conform to reporting by smelters purchasing ore from other companies, the instructions accompanying the 1963 and 1958 report forms specified that such transfers should be reported at an approximate commercial value. In practice, this instruction was not feasible in all cases. In some instances there does not exist a comparable commercial form of the ore or concentrate transferred and in others, to convert to an approximate commercial value would have been unrealistic in view of the actual operations of the various establishments of an integrated company.

Since censuses of manufactures and of mineral industries were being conducted at the same time for 1963 and 1958, it was possible to check the reasonableness of the values of ores and concentrates transferred from mine and mill to smelter as reported by integrated companies. In a number of instances, the value f.o.b. mine and mills reported on the minerals form exceeded the cost of this material shown as an input on the manufactures report, whereas the latter figure should exceed the mine value by approximately
the transportation and handling costs. In such cases, the respondent was queried and more reasonable value and cost figures were obtained. These adjustments usually resulted in increased cost figures on the manufactures report, and consequently, reduced the computed "value added by manufacture."

In addition to the integration of mine and smelter, some companies operate both smelting and refining facilities while some are fully integrated from mine through refinery. The transfer of blister copper to refineries operated by the same company was often reported at other than commercial value for the reasons cited above. However, inasmuch as both the smelter and refinery are classified in the same industry, these estimated value figures do not cause a distortion of "value added" for the industry as a whole. However, the commodity data on shipments of smelter product and materials data on the consumption of these items are affected. For the copper industry, separate data are shown below for smelters and for refineries. These data must also be interpreted in the light of these limitations.

While a few companies transfer their refined product to fabricating plants under their own ownership, the effect of transfer values on the total figures is much less in this area. Often, while the refinery and fabricating plants may be under the same general financial control, the organizations are so distinct that the transfer of materials is made on the same basis as a commercial transaction.

For industries 3331 to 3339 , toll processing is a particularly important activity and a considerable portion of the metal produced is handled on this basis, i.e., is processed by the smelter or the refinery for the owner of the metal for a fee. The fee may be a money payment or may be a combination of a money payment and a provision that the processing plant keep some of the metal. For both the 1963 and 1958 censuses of manufactures, no distinction was made between the plant's shipments of products produced from its own material and the shipments of metal retained as part of the fee for toll processing. However, separate data were reported for the metal returned to toll customers and for the fees received for toll processing.

Data on the tonnages of metals produced by plants engaged in primary smelting and refining of nonferrous metals are published annually by the Bureau of Mines of the U.S. Department of Interior in its Mineral Yearbook. Minor variations exist between the data shown here and those published by the Bureau of Mines. In addition to minor differences occurring from the submittal of separate reports to different agencies, reasons for the variation are the use by the Bureau of the Census of gross weight as contrasted with metal content by the Bureau of Mines for some metals and adjustments made by the Bureau of Mines for the amount of metal estimated as produced from scrap instead of ores or concentrates.

In general, the same definitions were used by the Bureau of the Census in the collection of product statistics as are used by the Bureau of Mines. In particular, it might be noted that the tonnages of refined lead and copper, produced by plants making refined lead and copper directly from ores and concentrates, are included in the lead base bullion and blister copper figures to arrive at a balance between the blister copper and refined copper figures and base bullion and refined lead figures. These tonnages have been considered as blister copper and lead base bullion produced and consumed in the same plant.

The production and shipments data shown in table 6A represent total production from materials of both domestic and foreign sources. The production and shipment figures shown for primary smelters and refiners include the production from scrap as well as from primary sources such as ores, concentrates, etc. A measure of the extent of secondary production by primary smelters and refiners is shown in table 7 which contains information on the quantity of scrap consumed. Also, a certain amount of the duplication arises if the data shown in table 6A for unalloyed and alloyed metals are combined in that unalloyed metals
are consumed by secondary smelters in producing metal alloys. This duplication can be measured by reference to the quantities of unalloyed metal consumed by secondary plants shown in table 7.

Data on the production of selected nonferrous metals by industry are presented in table 6A. These production data include quantities produced for sale, for interplant transfer, and for further consumption within the producing plant as well as toll production. However, the coverage ratios shown in table 5A are based on dollar value of shipments (including transfers to other plants of the company) but exclude the value of nonferrous metals produced and consumed within the same plant as well as shipments of metals produced for other companies on a toll basis.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3331—PRIMARY SMELTING AND REFINING OF COPPER

This industry comprises establishments primarily engaged in smelting copper from the ore, and in refining copper by electrolytic or other processes. Establishments primarily engaged in rolling, drawing, or extruding copper are classified in industry 3351. For a detailed list of products of industry 3331, refer to table 6A, product codes 3331111 to 3331215.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Inasmuch as this industry includes both establishments smelting copper from ore, concentrates, etc., and establishments refining copper by electrolytic or other processes, the total cost of materials and the total value of shipments for this industry include extensive duplication resulting from the use of the products of the smelters as materials for the refiners. Thus, the value of blister copper, which represents an intermediate stage in the production of refined copper, appears twice in the total value of shipments and a corresponding duplication enters into the total cost of materials.

This problem of duplication is largely eliminated by treating smelters and refiners separately and by presenting individual figures for each group. The following table shows separate general statistics-employment, value added, value of shipments, etc., for the smelters and for the refiners of copper. In order to have the necessary data to prepare this table, where the smelting and refining operations at a single location are distinctly separate stages in the production of the metal, separate reports for smelting and refining departments were obtained. When separate smelting and refining stages are not necessary, such as in the case with copper produced by leaching and the production of Lake Superior copper, the establishments have been classified as refiners.

| Item | 1963 |  | $1958{ }^{\text {r }}$ |  |

| Value added by manufacture, ad justed.........do.. | 126,319 | 159,191 | 76,460 | 89,736 |
| Cost of materials, fuel, electricity, contract work, and resales....................................do.. | 538,685 | 431,289 | 345,836 | 347,398 |
| Value of shipments.............................do.. | 653,650 | 591,807 | 417,837 | 445,581 |

[^92]Value of shipments and other receipts of the Primary Copper Industry totaled $\$ 1,245$ million. This amount included shipments of primary copper (primary products) valued at $\$ 1,049$ million, shipments of other products (secondary products) valued at $\$ 103$ million, and miscellaneous receipts (mainly toll smelting of materials owned by others) at $\$ 93$ million.

The production index for the primary products of the industry increased to 140 in 1963 from the 1958 level of 112. The unit value index for 1963 was 105 compared to 90 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3332--PRIMARY SMELTING AND REFINING OF LEAD

This industry comprises establishments primarily engaged in smelting lead from the ore, and in refining lead by any process. Establishments primarily engaged in rolling, drawing, or extruding lead are classified in industry 3356. For a detailed list of products of industry 3332, refer to table 6A, product codes 3332111 to 3332398.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

This industry includes both establishments smelting lead ores and concentrates and establishments refining lead and, accordingly, the total cost of materials and the total value of shipments for this industry include extensive duplication resulting from the use of the products of the smelter (lead-base bullion) as the material for the refiners. Thus, the value of the lead-base bullion, which represents an intermediate stage in the production of refined lead, appears twice in the total value of shipments and a corresponding duplication enters into the total cost of materials.

Value of shipments and other receipts of the Primary Lead lndustry totaled $\$ 265$ million.

## 3333-PRIMARY SMELTING AND REFINING OF ZINC

This industry comprises establishments primarily engaged in smelting zinc from the ore, and in refining zinc by any process. Establishments primarily engaged in rolling, drawing,
or extruding zinc are classified in industry 3356. For a detailed list of products of industry 3333, refer to table 6A, product codes 3333111 to 3333461.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Primary Zinc Industry totaled $\$ 282$ million. This amount included shipments of refined zinc (primary products) valued at $\$ 251$ million, shipments of other products (secondary products) valued at $\$ 21$ million, and miscellaneous receipts (mainly toll smelting of materials owned by others), at $\$ 10$ million.

This industry's shipments of refined zinc represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 90 percent. Secondary products shipped by this industry in 1963 consisted mainly of sulfuric acid ( $\$ 6$ million) and miscellaneous nonferrous metals, n.e.c. ( $\$ 8$ million).

Shipments of refined zinc by this industry represented 81 percent of all shipments of these products ( $\$ 309$ million) by all industries. In 1958 the coverage ratio was 76 percent. Other industries shipping refined zinc consisted mainly of industry 3341, Secondary Nonferrous Metals, $\$ 45$ million.

The production index for the primary products of the industry increased to 125 in 1963 from the 1958 level of 101. The unit value index for 1963 was 96 compared to 92 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3334--PRIMARY PRODUCTION OF ALUMINUM

This industry comprises establishments primarily engaged in producing aluminum from alumina, and in refining aluminum by any process. Establishments primarily engaged in rolling, drawing, or extruding aluminum are classified in industry 3352 . For a detailed list of products of industry 3334, refer to table 6A, product codes 3334711 to 3334881.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Primary Aluminum Industry totaled $\$ 1,090$ million. This amount included shipments of primary aluminum (primary products) valued at $\$ 1,070$ million, and miscellaneous receipts (mainly resales) at $\$ 20$ million.

This industry's shipments of primary aluminum represented 100 percent of its total product shipments. The industry specialization ratio in 1958 was also 100 percent.

Shipments of primary aluminum by this industry represented 75 percent of all shipments of these products ( $\$ 1,420$ million) by all industries. In 1958 the coverage ratio was 76 percent. Other industries shipping primary aluminum consisted mainly of industry 3352 , Aluminum Rolling and Drawing, $\$ 98$ million; and industry 3341, Secondary Nonferrous Metals, $\$ 245$ million.

The production index for the primary products of the industry increased to 201 in 1963 from the 1958 level of 113 . The unit value index for 1963 was 109 compared to 121 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3339—PRIMARY SMELTING AND REFINING OF NONFERROUS METALS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in smelting and refining nonferrous metals, n.e.c. Establishments primarily engaged in rolling, drawing, and
extruding these nonferrous primary metals are classified in industry 3356 , and the production of bullion at the site of the mine is classified in the mining industries. For a detailed list of products of industry 3339, refer to table 6A, product codes 3339511 to 3339798.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Primary Nonferrous Metals, N.E.C. Industry totaled $\$ 212$ million. This amount included shipments of primary nonferrous metals, n.e.c. (primary products) valued at $\$ 170$ million, shipments of other products (secondary products) valued at $\$ 35$ million, and miscellaneous receipts (mainly resales) at $\$ 7$ million.

This industry's shipments of primary nonferrous metals represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent. Secondary products shipped by this industry in 1963 included reagent and high purity grades of inorganic chemicals ( $\$ 6$ million), and rolled, drawn, and extruded nonferrous mill products, n.e.c. (\$8 million).

Shipments of primary nonferrous metals, n.e.c., by this industry represented 39 percent of all shipments of these products ( $\$ 439$ million) by all industries. In 1958 the coverage ratio was 24 percent. Other industries shipping primary nonferrous metals, n.e.c., consisted mainly of industry 3331, Primary Copper, $\$ 93$ million; and industry 3341, Secondary Nonferrous Metals, $\$ 88$ million.

## 3341 —SECONDARY SMELTING, REFINING, AND ALLOYING OF NONFERROUS METALS AND ALLOYS.

This industry comprises establishments primarily engaged in recovering nonferrous metals and alloys from new and used scrap and dross, but which are not engaged in further fabrication. This industry includes establishments engaged in both the recovery and alloying of precious metals. Plants engaged in the recovery of tin through secondary smelting and refining, as well as by chemical processes are included in this industry. Establishments primarily engaged in assembling, sorting, and breaking up scrap metal, without smelting and refining are classified in trade industries. For a detailed list of products of industry 3341 , refer to table. 6 A, product codes 3341211 to 3341811.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the SecondaryNonferrous Metals Industry totaled $\$ 1,045$ million. This amount included shipments of secondary nonferrous metals (primary products) valued at $\$ 814$ million, shipments of other products (secondary products) valued at $\$ 55$ million, and miscellaneous receipts (mainly resales) at $\$ 177$ million.

This industry's shipments of secondary nonferrous metals represented 94 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 included reagent and high purity grades of purity inorganic chemicals ( $\$ 9$ million), and nonferrous rolling and drawing, n.e.c. ( $\$ 17$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 27 percent of the total industry shipments are represented by plants specializing in product class 33412, Secondary copper; 26 percent in product class

33413, Secondary lead; and 25 percent in product class 33417 , Aluminum ingot, produced by secondary smelters.

Shipments of secondary nonferrous metals by this industry represented 26 percent of all shipments of these products ( $\$ 3,103$ million) by all industries. In 1958 the coverage ratio was 30 percent.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3341, e.g., Refined lead, 69 percent; Refined zinc, 16 percent; Aluminum ingot, 19 percent; Aluminum extrusion billet, 7 percent.

SECONDARY NONFERROUS METALS: SIC 334

## table 1. General Statistics: 1963 and Earlier Years

INDUSTRIES 3331, 3332, 3333, and 3339.-PRIMARY COPPER, PRIMARY LEAD, PRIMARY ZINC, AND PRIMARY NONFERROUS METALS, N.E.C.-CONTINued

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
$(S)$ Withheld because the estimates did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
n.e.c. Not elsewhere classified.
${ }^{1}$ The value of shipments and cost of materials for this industry include extensive duplication arising from shipments between establishments in the same industry. These data are not shown for the years 1947-1957. For further explanation see appendix A, "Value of Shipments."
${ }^{2}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{3}$ No comparable figures are available for earlier years.
${ }^{4}$ Data for 1954 have been revised to exclude establishments originally classified in this industry. Accordingly, data for 1953 and earlier years are not comparable with 1954-1963. Selected data for 1954 on a basis comparable with data for earlier years are as follows: Number of establishments, 360; total employment, 15,775; unad justed value added by manufacture, $\$ 142,329$ thousand; cost of materials, $\$ 657,519$ thousand; and value of shipments, $\$ 807,725$ thousand.

(X) Not

## applicable.

n.e.c. Not elsewhere classified
The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.
${ }^{3}$ Omitted because of extensive duplication of value of shipments and cost of materials. The duplication varies because products shipped by some establishments are consumed as materials by other establishments in the same industry.

## table 4. Selected Statistics, by Employment Size of Establishments: 1963

- Represents zero.
(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left. n.e.c. Not elsewhere classified.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assi gned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Specialization and coverage ratios have not been calculated for industries 3331, Primary Copper, and 3332, Primary Lead, because the shipments of primary products for these industries contain extensive duplication.

Included in this industry is refined zinc which is also primary to industry 3341, Secondary Nonferrous Metals. A coverage ratio computed on the basis of including both industries to which refined zinc is primary would total 96 percent; 81 percent by industry 3333 and 15 percent by industry 3341. The remainder was shipped by establishments in other industries.
${ }^{3}$ Included in this industry are aluminum-base alloys which are also primary to industry 3341 , Secondary Nonferrous Metals, and industry 3352 , Aluminum Rolling and Drawing. A coverage ratio computed on the basis of including all three industries to which aluminum-base alloys are primary would total 96 percent; 75 percent by industry 3334 , 17 percent by industry 3341 , and 4 percent by industry 3352 . The remainder was shipped by establishments in other industries.
${ }^{4}$ Included in this industry are refined nonferrous alloys, n.e.c., which are also primary to industry 334l, Secondary Nonferrous Metals. A coverage ratio computed on the basis of including both industries to which refined nonferrous alloys, n.e.c., are primary would total 59 percent; 39 percent by industry 3339 , and 20 percent by industry 3341 . The remaining 41 percent was shipped by establishments classified in other industries.
${ }^{5}$ Included in this industry are refined copper, lead, zinc, aluminum, precious metals, and other nonferrous metals. Each of these product classes is also primary to the comparable primary smelting and refining industry in Group 333. A coverage ratio computed on the basis of including both industries to which the classes are primary would total 89 percent; 26 percent by industry 3341 , and 63 percent by primary nonferrous smelters and refiners. The remaining ll percent was shipped by establishments in other industries.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the
primary products of the industry by all manufacturing industries. The next column(s) shows the
total value of shipments of the specified industry divided among (a) products classified in the in-
dustry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ Value of shipments for this industry, or group of products, includes extensive duplication arising from shipments between establishments in the same industry classification. For further explanation see appendix A, "Value of Shipments."
${ }^{2}$ Includes total for product class 33412, Secondary copper (ingot, shot, etc.), which is primary to industry 3341.
${ }^{3}$ Includes product class 28193, Sulfuric acid, which totals $\$ 2$ million or more but is withheld to avoid disclosing individual company figures.
${ }_{5}^{4}$ Includes total for product class 33413 , Secondary lead (ingot, shot, etc.), which is primary to industry 3341.
${ }^{5}$ Represents mainly industry 3356, Rolling and Drawing, N.E.C.
${ }^{6}$ Represents mainly receipts received for smelting or refining metal on a toll basis.
${ }^{7}$ Includes total for product class 33414, Secondary zinc (ingot, shot, etc.), which is primary to industry 3341.
${ }^{8}$ Includes product class 28162, Other white opaque pigments, which totals $\$ 2$ million or more, but is withheld to avoid disclosing individual company figures.
${ }^{9}$ Includes total for product class 33417 , Aluminum ingot produced by secondary smelters, which is primary to industry 3341 ; and product class 33527 , Aluminum ingot, produced in aluminum rolling mills, which is primary to industry 3352.
${ }^{10}$ Includes total for product class 33417, Aluminum ingot produced by secondary smelters which is primary to industry 3341 ; and product class 33527 ,
Aluminum ingot produced in aluminum rolling mills, which is primary to industry 3352.
${ }^{11}$ Includes $\$ 49,024$ thousand shipped by industry 3352, Aluminum Rolling and Drawing.
${ }^{12}$ Includes total for product class 33418 , Aluminum extrusion billet, produced by secondary refiners, which is primary to industry 3341 ; and product class 33528, Aluminum extrusion billet, produced in aluminum rolling mills, which is primary to industry 3352 .
${ }^{13}$ Includes $\$ 48,745$ thousand shipped by industry 3352, Aluminum Rolling and Drawing.
${ }^{14}$ Represents mainly resales.
${ }^{15}$ Includes total for product class 33415 , Precious metals, produced by secondary refiners (pig, ingot, shot, etc.) primary to industry 3341.
${ }^{16}$ Includes total for product class 33416, Other secondary nonferrous metals (pig, ingot, shot, etc.), which is primary to industry 3341.
${ }^{17}$ Includes $\$ 2.6$ million shipped by industry 2819, Inorganic Chemicals, N.E.C.; $\$ 2.8$ million shipped by industry 3356 , Rolling and Drawing, N.E.C.; $\$ 93$ million shipped by industry 3331 , Primary Copper; and $\$ 9.7$ million shipped by industry 3333, Primary Zinc. In addition, industry 3332 , Primary Lead, had shipments which totaled $\$ 2$ million or more, but is withheld to avoid disclosing figures for individual companies.
${ }^{18}$ Includes the following product classes which total $\$ 2$ million or more, but are withheld to avoid disclosing individual company figures: 33412 , Secondary copper (ingot, shot, etc.); and 33417, Aluminum ingot. produced by secondary smelters.
${ }^{19}$ Includes total for product class 33312, Refined primary copper, made in Primary Copper Industry, which is primary to industry 3331.
${ }^{20}$ See also industry 3331 above.
${ }^{21}$ Includes total for product class 33334, Refined primary lead, made in Primary Lead Industry, which is primary to industry 3332.
${ }^{22}$ See also industry 3332 above.
${ }^{23}$ Includes total for product class 33334 , Refined primary zinc products, made in Primary Zinc Industry, which is primary to industry 3333.
${ }^{24}$ See also industry 3333 above.
${ }^{25}$ Includes total for product class 33395 , Precious metals (primary smelting), made in Primary Nonferrous Metals, N.E.C., Industry, which is primary to industry 3339.
${ }^{26}$ See also industry 3339 above.
${ }^{27}$ Includes total for product class 33397, Other primary nonferrous metals, including magnesium, smelted or refined, made in Frimary Nonferrous Metals, N.E.C., Industry, which is primary to industry 3339.
${ }^{28}$ Includes total for product class 33347 , Aluminum ingot, produced in primary aluminum reduction plants, which is primary to industry 3334 , and product class 33527, Aluminum ingot, produced in aluminum rolling mills, which is primary to industry 3352.
${ }^{29}$ See also industry 3334 above.
${ }^{30}$ Includes total for product class 33348 , Aluminum extrusion billet, produced in primary aluminum reduction plants, which is primary to industry 3334, and product class 33528, Aluminum extrusion billet, produced in aluminum rolling mills which is primary to industry 3352 .
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

| Product code | Product | Total production ${ }^{2}$ (gross weight) | Shipments including interplant transfers ${ }^{1}$ |  |  |  |  |  | Shipments of products made from materials owned by others ${ }^{3}$ (gross weight) | Produced and consumed in the same plant in manufacture of other products (gross weight) |

Note: For each product included in this table, data were collected on the quantity of metal "received" from toll processors either for (1) consumption in producing other products: (2) shipment to customers; or (3) shipment to customers directly from the toll processor. However, these figures cannot be published without revealing the operations of individual companies, except for aluminum ingot and aluminum extrusion billet for which such receipts totaled 15,025 and 44,794 short tons, respectively.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes shipments of these products produced on a toll basis by others. Where data are shown separately for the various industries producing these products, such shipments are included in the industry for the establishment owning the material. However, production data are included in the industry of the toll processor.
${ }^{2}$ Includes toll production. For 1963 toll production was separately measured. However, since the differences between toll production and toll shipments (shipments of products made from materials owned by others) are minor, toll production is not shown separately.
${ }^{3}$ Includes shipments to other smelters and refiners, shipments to consumers and to some nonmanufacturing companies which sell direct to consumers.
${ }^{4}$ Includes antimonial lead, babbitt metal, solder, type metal and other lead- and tin-base alloys.
${ }^{5}$ Of this amount, $\$ 4,155$ thousand was reported by industry 3341, Secondary Nonferrous Metals, and $\$ 930$ thousand by other industries.
${ }^{6}$ Most of the aluminum ingot and billet (alloys) produced by aluminum rolling mills represent duplication of tonnages reported by the primary aluminum industry in that the metal produced by the rolling mills is made from ingot produced in primary aluminum plants.
${ }^{7}$ Aluminum ingot and aluminum extrusion billet are primary to the primary aluminum industry, aluminum rolling mills, and secondary smelters and refiners. Detail is shown under product classes 33347 and 33348 in 1963. For 1958, the comparable product classes are 33341 in industry 3334 and 33411 in industry 3341.
${ }^{8}$ Refined copper is primary to both primary copper and secondary smelters and refiners. Detail is shown under product class 33312.
${ }^{9}$ Refined lead is primary to both primary lead and secondary smelters and refiners. Detail is shown under product class 33323.
${ }^{10}$ Refined zinc is primary to both primary zinc and secondary smelters and refiners. Detail is shown under product class 33334.
${ }^{11}$ Refined precious metals are primary to both primary nonferrous metals, n.e.c., and secondary smelters and refiners. Detail is shown under product class 33395.
${ }^{12}$ Other nonferrous metals, smelted or refined, are primary to both primary nonferrous metals, n.e.c., and secondary smelters and refiners. Detail is shown under product class 33397.
${ }^{13}$ Of this amount $\$ 4,452$ thousand was reported by industry 3341, Secondary Nonferrous Metals, and $\$ 1,564$ thousand by other industries.
${ }^{14}$ Excludes ingot and billet produced and consumed in rolling mills.

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes (1954 = 100) |  |
| :---: | :---: | :---: | :---: |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ Includes product class 33412, Secondary copper, (ingot, shot, etc.), made by secondary smelters, which is primary to industry 3341.
${ }^{3}$ Includes product class 33413, Secondary lead (ingot, shot, etc.), made by secondary smelters, which is primary to industry 3341.
${ }^{4}$ Includes product class 33414, Secondary zinc (ingot, shot, etc.), made by secondary smelters, which is primary to industry 3341.
${ }^{5}$ Includes product class 33417, Aluminum ingot, produced by secondary nonferrous smelters, which is primary to industry 3341 and product class 33527, Aluminum ingot, produced in aluminum rolling mills, which is primary to industry 3352.
${ }^{6}$ Includes product class 33418, Aluminum extrusion billet, produced by secondary smelters, which is primary to industry 3341, and 33528, Aluminum extrusion billet, produced in aluminum rolling mills, which is primary to industry 3352 .
${ }^{7}$ Includes product class 33415 , Precious metals, produced by secondary refineries (pig ingot, shot, etc.), which is primary to industry 3341.
${ }^{8}$ Includes product class 33416, Other secondary nonferrous metals (pig, ingot, shot, etc.), shipped by secondary smelters, which is primary to industry 3341 .
${ }^{9}$ The product classes within industry 3341 include the values for the comparable product class for the specified metal for Industry Group $333-$ as listed below. The total for 3341 - includes all such product classes. Also, product class 33417 includes 33527 , Aluminum ingot,and product class 33418 includes 33528, Aluminum extrusion billet, both made in aluminum rolling mills which are primary to industry 3352 .

33412 comparable to 33312
33413 comparable to 33323
33414 comparable to 33334
33415 comparable to 33395
33416 comparable to 33397
33417 comparable to 33347
33418 comparable to 33348

## TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million $\mathrm{o}^{千}$ the individual product classes are listed in footnote 1.

[^97]
## table 7A. Materials by Kind: 1963 and 1958

See footnotes at end of table.

## TABLE 7A. Materials by Kind: 1963 and 1958-Continued

|  | Material | Unit of measure | 1963 |  | 1958 |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Code |  |  | Quantity | Delivered cost <br> $(\$ 1,000)$ | Quantity | Delivered cost <br> $(\$ 1,000)$ |
|  | - |  | INDUSTRY 3341.-SECONDARY NONFERROUS METALS ${ }^{1}$-Continued |  |  |  |
|  | Tin: |  |  |  |  |  |
| $333976$ | Refined unalloyed tin..................................................... | Short tons... |  | 31,202 |  | 17,012 |
| 999815 | Tin plate scrap (purchased scrap only).............................. | ...do.. | $352,630$ | 9,094 | $501,288$ | 11,832 |
| 970099 | All other materials and components, parts, containers and supplies consumed. |  | - | 161,903 | - | 133,922 |

[^98] applicable.
${ }^{1}$ smelting and refining establishments were instructed to include in their reports the quantity and cost of purchased materials which they processed or furnished to others for toll processing, but to exclude materials processed on a toll basis for others. Accordingly, the data shown in this table excludes considerable quantities of materials consumed by establishments in these industries in the production of the products shown in table 6A.
${ }^{2}$ The cost of materials for this industry includes extensive duplication. This duplication arises because the products of some establishments are used as materials by other establishments in the same industry.
${ }^{3}$ Includes leaching ores received in crude form from mines by leaching plants operated in conjunction with smelting and refining operations. Such ores represent about half the total quantity of ores, concentrates and precipitates consumed but about 15 percent of the value of these materials.

4 Excludes materials consumed by establishments producing copper by leaching or from Lake Superior ores as no distinct blister stage exists in the production at these establishments.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

| Aggregate horsepower per 100 production workers.................... | 4,205 | 3,063 | 6,645 | 17,102 | 2,817 | 1,119 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors
 "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary pius secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## NONFERROUS METAL MILL AND FOUNDRY PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3351 -Rolling, Drawing, and Extruding of Copper<br>3352-Rolling, Drawing, and Extruding of Aluminum<br>3356-Rolling, Drawing, and Extruding of Nonferrous Metals, Except Copper and Aluminum<br>3357-Drawing and lnsulating of Nonferrous Wire<br>3361 - Aluminum Castings<br>3362-Brass, Bronze, Copper, Copper-Base Alloy Castings<br>3369--Nonferrous Castings, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for eachestablishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3351 -ROLLING, DRAWING, AND EXTRUDING OF COPPER

This industry comprises establishments primarily engaged in rolling, drawing, and extruding copper, brass, bronze, and other copper base alloy basic shapes, such as plate, sheet, strip, bar, and tubing. Establishments primarily engaged in recovering copper and its alloys from scrap or dross are classified in industry 3341. For a detailed list of products of industry 3351, refer to table $6 \mathrm{~A}-1$ product codes 3351111 to 3351288.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Copper Rolling and Drawing lndustry totaled $\$ 1,657$ million. This amount included shipments of rolled, drawn, and extruded copper (primary products) valued at $\$ 1,409$ million, shipments of other products (secondary products) valued at $\$ 154$ million, and miscellaneous receipts at $\$ 94$ million.

This industry's shipments of rolled, drawn, and extruded copper represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent.

Shipments of rolled, drawn, and extruded copper by this industry represented 91 percent of all shipments of these products ( $\$ 1,545$ million) by all industries. $\ln 1958$ the coverage ratio was 94 percent.

The production index for the primary products of the industry increased to 129 in 1963 from the 1958 level of 88 . The unit value index for 1963 was 100 compared to 99 in 1958. Both indexes were computed on a basis of $1954=100$.

This industry includes a variety of operations ranging from rod, wire, tube, and flat products mills to machine shop and fabricating activities. Accordingly, in order to provide a measure of the relative importance of these departments, data were coilected on manhours worked and production worker wages paid for each of several departments. The resulting data are shown in table 9A.

Also, based on the data reported for these various departmental operations, it was possible to further classify the establishments of this industry into two "subindustries," i.e., establishments with casting facilities and establishments without casting facilities.

Separate data are shown for these subindustries in tables $1,2,3,4,5 \mathrm{~B}, 7 \mathrm{~A}, 8$, and 9 A .

## 3352-ROLLING, DR AWING, AND EXTRUDING OF ALUMINUM

This industry comprises establishments primarily engaged in rolling, drawing, and extruding aluminum and aluminum base alloy basic shapes, such as plate, sheet, strip, bar, tubing, and foil. For a detailed list of products of industry 3352, refer to table 6A-1, product codes 3352111 to 3352811 .
The code number as well as the definition of this industry was unchanged between 1958 and 1963.
Value of shipments and other receipts of the Aluminum Rolling and Drawing lndustry totaled $\$ 2,196$ million. This amount included shipments of rolled, drawn, and extruded aluminum (primary products) valued at $\$ 1,758$ million, shipments of other products (secondary products) valued at $\$ 304$ million, and miscellaneous receipts at $\$ 134$ million.

This industry's shipments of rolled, drawn, and extruded aluminum represented 85 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included sheet metal roofing and siding and roof drainage equipment ( $\$ 30$ million), and metal foil and leaf ( $\$ 121$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 49 percent of the total industry shipments are represented by plants specializing in product class 33522 , aluminum plate and sheet (including foil stock).

Shipments of rolled, drawn, and extruded aluminum by this industry represented 93 percent of all shipments of these products ( $\$ 1,899$ million) by all industries. In 1958 the coverage ratio was 92 percent.

The production index for the primary products of the industry increased to 214 in 1963 from the 1958 level of 136 . The unit value index for 1963 was 98 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

This industry includes a variety of operations ranging from melting (except foundry) through mills such as sheet and plate; foil rolling; wire, rod and bar; extrusion; and tube to fabricating activities. Accordingly, in order to provide a measure of the relative importance of these departments, data were collected on man-hours worked and production worker wages paid, for each of several departments. The resulting data are shown in table 9A.

In addition, companies with establishments classified in this industry were queried as to whether or not the company also operated aluminum reduction facilities. Based on this inquiry, it was possible to further classify the establishments into two "subindustries," i.e., establishments operated by primary (integrated) producers, and establishments operated by nonintegrated producers. This subindustry classification system differs significantly from the subindustry definitions used in industries 3312, Blast Furnaces and Steel Mills; 3351, Copper Rolling and Drawing; and 3357, Nonferrous Wire Drawing, Etc., in that the definition for these other primary metal industries are based on the types of facilities existing at each separate establishment.

Separate data are shown for the subindustries of this industry in tables $1,3,4$, and 9A.

## 3356-ROLLING, DRAWING, AND EXTRUDING OF NONFERROUS METALS, EXCEPT COPPER AND ALUMINUM

This industry comprises establishments primarily engaged in rolling, drawing, and extruding nonferrous metals other than copper (industry 3351), and aluminum (industry 3352). The products of this industry are produced in the form of basic shapes such as plate, sheet, strip, bar, and tubing. Establishments primarily engaged in recovering nonferrous metals and alloys from scrap or dross are classified in industry 3341; in manufacturing gold, silver, tin, and other foils, except aluminum, in industry 3497; and aluminum foil in industry 3352 . For a detailed list of products of industry 3356, refer to table 6A-1, product codes 3356043 to 3356098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Rolling and Drawing, N.E.C., Industry totaled $\$ 641$ million. This amount included shipments of rolled, drawn, and extruded nonferrous metals, n.e.c. (primary products) valued at $\$ 511$ million, shipments of other products (secondary products) valued at $\$ 99$ million, and miscellaneous receipts (mainly resales) at $\$ 30$ million.

This industry's shipments of rolled, drawn, and extruded nonferrous metals, n.e.c., represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 77 percent.

Shipments of rolled, drawn, and extruded nonferrous metals, n.e.c., by this industry represented 81 percent of all shipments of these products ( $\$ 631$ million) by all industries. In 1958 the coverage ratio was 82 percent. Other industries shipping rolled, drawn, and extruded nonferrous metals, n.e.c., included industry 3351, Copper Rolling and Drawing. \$19 million; and industry 3341, Secondary Nonferrous Metals, $\$ 17$ million.

The production index for the primary products of the industry increased to 168 in 1963 from the 1958 level of 116 . The unit value index for 1963 was 104 compared to 103 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3357--DRAWING AND INSULATING OF NONFERROUS WIRE

This industry comprises establishments primarily engaged in drawing, drawing and insulating, and insulating wire and cable of nonferrous metals from purchased wire bars, rods, or wire. For a detailed list of products of industry 3357, refer to table 6A-1, product codes 3357111 to 3357998 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Since this industry includes both wire drawing (including wire redrawing) establishments, and establishments insulating wire and cable from purchased wire, some duplication of value exists in both the value of shipments and cost of materials, etc., for the industry. However, as shown in the data on materials consumed in table 7A for copper and aluminum wire for redrawing, and copper and aluminum bare wire, such duplication approximates $\$ 160$ million, less than 15 percent of the total cost of materials, etc., for the industry.

Value of shipments and other receipts of the Nonferrous Wire Drawing, Etc., Industry totaled $\$ 2,118$ million. This amount included shipments of drawn and insulated nonferrous wire (primary products) valued at $\$ 1,885$ million, shipments of other products (secondary products) valued at $\$ 176$ million, and miscellaneous receipts at $\$ 56$ million.

This industry's shipments of drawn and insulated nonferrous wire represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 36 percent of the total industry shipments are represented by plants specializing in product class 33574 , communication wire and cable, and 23 percent in product class 33579 , other insulated wire and cable, n.e.c.

Shipments of drawn and insulated nonferrous wire by this industry represented 86 percent of all shipments of these products ( $\$ 2,185$ million) by all industries. In 1958 the coverage ratio was 83 percent.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3357 , e.g., aluminum and aluminum-base alloy wire and cable (including ACSR), 52 percent; other bare nonferrous metal wire made in nonferrous wire drawing plants, 57 percent; nonferrous wire cloth and other woven wire products, 30 percent; and appliance wire and cord and flexible cord sets, 61 percent.

The production index for the primary products of the industry increased to 146 in 1963 from the 1958 level of 112 . The unit value index for 1963 was 103 compared to 102 in 1958. Both indexes were computed on a basis of $1954=100$.

This industry includes a variety of operations ranging from rod mill, and wire drawing mill through insulating to fabricating activities. Accordingly, in order to provide a measure of the relative importance of these departments, data were collected on manhours worked and production worker wages paid, for each of several departments. The resulting data are shown in table 9A.

Also, based on the data reported for these various departmental operations, it was possible to further classify the establishments into four "subindustries," i.e., establishments with wire drawing department and rod mill, establishments with wire drawing department with neither a rod mill nor an insulating department, establishments with wire drawing and insulating departments but without rod mill, and establishments without a wire drawing department.

The subindustry data shown in tables $1,2,3,4,5 B, 7 A, 8$, and 9 A are based on this system of classification.

## NONFERROUS FOUNDRIES

This group is comprised of three foundry industries, namely industry 3361, Aluminum Castings, industry 3362, Brass, Bronze, Copper Castings, and industry 3369, Nonferrous Castings, N.E.C. These foundry industries comprise establishments primarily engaged
in manufacturing aluminum castings, including cast aluminum cooking utensils (3361), brass, bronze, and copper castings including unmachined bearings and bushings (3362), and other nonferrous castings (3369).

For these industries, captive production (that is, the tonnage of castings produced for incorporation into the final product of the plant or company) is a particularly important factor. Distinction is made between rough castings and castings which are machined or further processed and incorporated into other products. The removal of gates, risers, sprues, and tumbling, dipping, and sand blasting do not constitute machining. Plants primarily engaged in manufacturing castings are included in the foundry industries; plants primarily engaged in further processing castings into parts for metal products or machinery are classified in other major groups.

For the 1963 and 1958 Census of Manufactures separate establishment reports were received from all commercial (jobbing) foundries and from those captive foundries which were operated as separate establishments by the reporting companies. These two groups comprise the types of establishments included in industries 3361, 3362, and 3369. However, where the captive foundry operation was completely integrated with the operations of the entire plant, no separate establishment report was received for the foundry activity. In these instances data were obtained on the tonnage of castings produced and consumed and on the number of employees usually engaged in the captive foundry operation. However, establishments with such foundry departments were classified on the basis of the plant's final product and accordingly, the general statistics on employment, payrolls, cost of materials, etc., are included in the data for such industries as Plumbing Fittings, Brass Goods (3432) and Valves and Pipe Fittings (3494), etc.

The data shown in table 6A-1 for nonferrous castings represent total shipments and transfers including the quantity of castings shipped by establishments classified in industries other than the foundry industries (3361, 3362, and 3369). For those industries where captive foundry departments are particularly important, data on the tonnage of castings produced and consumed are shown in table 7A of the individual industry reports covering the specific industries.

During 1963 and 1958 the Bureau of the Census also collected and published monthly data on shipments of nonferrous castings. These monthly data were derived from a sample survey and were published in Current Industrial Reports Series M33E, Nonferrous Castings. The M33E series includes data for both commercial and captive foundry production and shows separately shipments "for sale" and shipments "for own use."

It should be specifically noted that the quantity and value data on shipments of nonferrous castings in table 6A-1 do not include the quantity and value of the large quantity of castings produced by establishments classified in other industries which produce castings only for incorporation into their own products or for internal use but not for sale as such.

## 3361—ALUMINUM CASTINGS

This industry comprises establishments primarily engaged in manufacturing castings and die castings of aluminum. For a detailed list of products of industry 3361, refer to table 6A-1, product codes 3361011 to 3361075 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Aluminum Castings Industry totaled $\$ 640$ million. This amount included shipments of aluminum and aluminum-base alloy castings (primary products) valued at $\$ 505$ million, shipments of other products (secondary products) valued at $\$ 122$ million, and miscellaneous receipts at $\$ 14$ million.

This industry's shipments of aluminum and aluminum-base alloys castings represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 79 percent. Secondary products shipped by this industry in 1963 consisted mainly of nonferrous castings, n.e.c. ( $\$ 60$ million), and special dies and tools, die sets, jigs and fixtures ( $\$ 18$ million).

Shipments of aluminum and aluminum-base alloy castings by this industry represented 83 percent of all shipments of these products ( $\$ 607$ million) by all industries. In 1958 the coverage ratio was 81 percent. Other industries shipping aluminum and aluminum-base alloy castings included industry 3362, Brass, Bronze, Copper Castings, $\$ 18$ million; and industry 3369, Nonferrous Castings, N.E.C., $\$ 39$ million.

The production index for the primary products of the industry increased to 174 in 1963 from the 1958 level of 103. The unit value index for 1963 was 92 compared to 102 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3362-BRASS, BRONZE, COPPER, COPPER-BASE ALLOY CASTINGS

This industry comprises establishments primarily engaged in manufacturing castings and die castings of copper and copper-base alloy. For a detailed list of products of industry 3362 , refer to table 6 A-1, product codes 3362011 to 3362071 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Brass, Bronze, Copper Castings Industry totaled $\$ 288$ million. This amount included shipments of copper and copper-base alloy castings (primary products) valued at $\$ 235$ million, shipments of other products (secondary products) valued at $\$ 44$ million, and miscellaneous receipts at $\$ 9$ million.

This industry's shipments of copper and copper-base alloy castings represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 consisted mainly of aluminum and aluminum-base alloy castings ( $\$ 18$ million), and steel castings ( $\$ 6$ million).

Shipments of copper and copper-base alloy castings by this industry represented 78 percent of all shipments of these products ( $\$ 300$ million) by all industries. In 1958 the coverage ratio was 81 percent. Other industries shipping copper and copper-base alloy castings included industry 3361, Aluminum Castings, $\$ 16$ million; and industry 3321, Gray Iron Foundries, $\$ 10$ million.

The production index for the primary products of the industry increased to 99 in 1963 from the 1958 level of 77 . The unit value index for 1963 was 129 compared to 123 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3369-NONFERROUS CASTINGS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing castings and die castings of nonferrous materials, except aluminum, copper, and copper-base alloys. For a detailed list of products of industry 3369, refer to table 6A-1, product codes 3369011 to 3369098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Nonferrous Castings, N.E.C., Industry totaled $\$ 303$ million. This amount included shipments of nonferrous castings, n.e.c. (primary
products) valued at $\$ 229$ million, shipments of other products (secondary products) valued at $\$ 64$ million, and miscellaneous receipts (mainly resales) at $\$ 9$ million.

This industry's shipments of nonferrous castings, n.e.c., represented 78 percent of its total product shipments. The industry specialization ratio in 1958 was also 78 percent. Secondary products shipped by this industry in 1963 consisted mainly of aluminum and aluminum-base alloy castings ( $\$ 39$ million), and special dies and tools, die sets, jigs and fixtures ( $\$ 10$ million).

Shipments of nonferrous castings, n.e.c., by this industry represented 75 percent of all shipments of these products ( $\$ 306$ million) by all industries. In 1958 the coverage ratio was 77 percent. Other industries shipping nonferrous castings, n.e.c., consisted mainly of industry 3361, Aluminum Castings, $\$ 60$ million; and industry 3321, Gray Iron Foundries, $\$ 3$ million.

The production index for the primary products of the industry increased to 125 in 1963 from the 1958 level of 95 . The unit value index for 1963 was 110 compared to 111 in 1958. Both indexes were computed on a basis of $1954=100$.

## table 1. General Statistics: 1963 and Earlier Years-Continued

## Footnotes for Table 1-330-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
$1_{\text {These }}$ figures represent estimates derived from a representative sample of manufacturing establishnents canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry is not comparable. The 1957 and earlier figures are on the old SIC definition of the industry.
${ }^{3}$ No comparable figures are available for earlier years.
${ }^{4}$ The subindustry separation for industry 3351 is based on the presence or lack of presence of the department described as "casting (except foundry)." See table 9A.
${ }^{5}$ Integrated producers represent companies which operate primary aluminum reduction facilities.
${ }^{6}$ Data for 1954 have been revised to include establishments originally classified in other industries. Accordingly, data for 1953 and earlier years are not comparable with 1954 and 1958. Selected data for 1954 and 1958 on a basis comparable with earlier years are as follows: number of establishments, 98 ; total employment, 10,381 ; and unadjusted value added by manufacture, $\$ 99,907$ thousand. Since the effect of this revision has more significance on the cost of materials and value of shipments, data for these items are not shown for 1953 and earlier years.
${ }^{7}$ Due to revision in the Standard Industrial Classification in 1957, data prior to 1958 are not available.
${ }^{8}$ Prior to 1958, these establishments were treated as a separate industry, SIC 3631, Insulated Wire and Cable. Selected data are available for 1958 as follows: Total number of establishments, 172; number of establishments with 20 or more employees, 91 ; number of employees, 17,105; adjusted value added by manufacture, $\$ 154,248$ thousand.
${ }^{9}$ The three industries shown above were a single industry in 1957 and earlier years. They are shown combined so that historical data may be presented.

applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown
below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3351, Copper Rolling and Drawing: New England-Massachusetts, 2 (500-999); Rhode Island, 5 (500-999); East North Central-Indiana, 2 (1,0002,499); Wisconsin, 3 (1,411); West North Central-Minnesota, 2 (20-99); South Atlantic-Maryland, 1 (1,000-2,499); West Virginia, 1 (1-19); East South Central-Tennessee, l (20-99); Alabana, l (500-999); Mountain-Montana, l (100-249).
SIC 3351-21, Establishments with casting departments: New England-Massachusetts, 1 (100-249); Rhode Island, 2 (500-999); Connecticut, 11 (5,0009,999) ; Middle Atlantic-New York, 1 (1,000-2,499) ; New Jersey, 3 (1,000-2,499); Pennsylvania, 3 (1,000-2,499); East North Central-Ohio, 1 (1,0002,499) ; Indiana, 1 (1,000-2,499); Illinois,4 (2,500-4,999); Michigan, 3 (1,000-2,499); Wisconsin, 1 (1,000-2,499); South Atlantic-Maryland, 1 (1,0002,499); East South Central-Alabama, 1 (500-999); Pacific-California, 3 (500-999).
SIC 3351-22, Establishments without casting departments: New England-Massachusetts, 1 (500-999); Rhode Island, 3 (100-249); Connecticut, 15 (2,5004,999); Middle Atlantic-New York, 8 (1,000-2,499); New Jersey, 12 (500-999); Pennsylvania, 12 (1,000-2,499); East North Central-Ohio, 5 (1,0002,499); Indiana, 1 (20-99); Illinois, 1 (1-19); Michigan, 8 (1,000-2,499); Wisconsin, 2 (100-249); West North Central-Minnesota, 2 (20-99); South Atlantic-West Virginia-1 (1-19); East South Central-Tennessee, 1 (20-99); Mountain-Montana, 1 (100-249); Pacific-California, 3 (250-499);
SIC 3352, Aluminum Rolling and Drawing: New England-New Hampshire, 1 (20-99); Massachusetts, 5 (100-249); Rhode Island, 1 (20-99); Connecticut, 4 (291); East North Central-Indiana, 11 (2,992); Wisconsin, 1 (100-249); West North Central-Iowa, 2 (2, 500-4, 999); Missouri, 2 (250-499); Nebraska, 1 (1-19); Kansas, 2 (20-99); South Atlantic-Maryland, 2 (500-999); Virginia, 6 (1,000-2,499); West Virginia, 2 (1,000-2,499); North Carolina, 4 (818); South Carolina, l (20-99); Georgia, 4 (835); Florida, 7 (488); East South Central-Kentucky, 7 (1,000-2,499); Tennessee, 3 (4,773); Alabama, 3 (3,221); Mississippi, 2 (100-249); West South Central-Arkansas, 2 (250-499); Texas, 5 (500-999); Mountain-Arizona, 4 (1,0002,499); Pacific-Washington, 4 ( $2,500-4,999$ ).
SIC 3356, Rolling and Drawing, N.E.C.: New England-Maine, 1 (100-249); Rhode Island, 5 (100-249); Connecticut, 6 (538); East North Central-Indiana, 6 (2,500-4,999); Wisconsin, 1 (1-19); South Atlantic-Virginia, 1 (1-19); West Virginia, 1 (1,000-2,499); North Carolina, 3 (150); Georgia, 3 (20-99); Fiorida, 2 (20-99); East South Central-Tennessee, 1 (1-19); Alabana, 1 (20-99); West South Central-0klahoma, 1 (20-99); Texas, 5 (100249); Mountain-Colorado, 1 (1-19); Arizona, l (1-19); Nevada, 1 (500-999); Pacific-California, 9 (250).

SIC 3357, Nonferrous Wire Drawings, Etc.: East North Central-Ohio, 9 (250-499); Michigan, 11 (1,000-2,499); West North Central-Minnesota, 1 (1-19); Iowa, 1 (100-249); Missouri, 5 (500-999); Nebraska, 2 (500-999); South Atlantic-Delaware, 1 (20-99); Maryland, 3 (2,601); West Virginia, 1 (1-19); North Carolina 3 (381); Georgia, 4 (359); Florida, 1 (100-249); East South Central-Kentucky, 1 (20-99); Ternessee, 1 (20-99); Alabama, 1 (1-19); West South Central-Oklahoma, 1 (1-19); Pacific—Washington, 2 (100-249); Oregon, 1 (1-19); Califormia, 35 (2,333).
SIC 3357-11, Wire drawing with rod mill: New England-Massachusetts, 1 (1,000-2,499); Rhode Island, 2 (500-999); Cornecticut, 2 (500-999); Middle Atlantic-New York, 2 (250-499); New Jersey, 4 (1,000-2,499); Pennsylvania, 4 (500-999); East North Central-Ohio, 1 (100-249); Illinois, 5 (1,0002,499); Michigan, 3 (500-999); West North Central-Missouri, 1 (250-499); Pacific-California, 1(1,000-2,499).
SIC 3357-12, Wire drawing with neither rod mill nor insulating department: New England-Massachusetts, 2 (250-499); Rhode Island, 1 (1-19); Connecticut, 5 (250-499); Midale Atlantic-New Jersey, 4 (500-999); Pennsylvania, 3 (250-499); East North Central-Illinois, 4 (100-249); Michigan, 1 (1-19); Wisconsin, 1 (250-499); West North Central-Iowa, 1 (100-249); South Atlantic-North Carolina, 1 (1-19); Georgia, 3 (100-249); East South Central-Kentucky, 1 (20-99); West South Central-Texas, 1 (1-19); Pacific-Washington, 1 (100-249); Califormia, 4 (100-249).
SIC 3357-13, Wire drawing without rod mill but with insulating department: New England-New Hampshire, 1 (20-99); Vermont, 2 (100-249); Massachusetts, 5 (2,500-4,999); Middle Atlantic-New Jersey, 9 (2,500-4,999); Pennsylvania, 4 (500-999); East North Central-Ohio, 1 (20-99); Indiana, 4 (2,5004,999); Michigan, 4 (1,000-2,499); West North Central-Nebraska, 1 (500-999); South Atlantic-Maryland, l (1,000-2,499); North Carolina, 1 (250499); Georgia, 1 (100-249); Florida, (100-249); West South Central-Texas, 1 (100-249); Pacific-California, 5 (500-999).

SIC $3357-14$, Establishnents without wire drawing department: New England-New Hampshire, a (250-499); Vermont, 1 (100-249); Rhode Island, 3 (500-999); Middle Atlantic-New York, 19 (500-999); Pernsylvania, 3 (250-499); East North Central-Ohio, 7 (100-249); Indiana, 4 (500-999); Michigan, 3 (100249); West North Central-Minnesota, 1 (1-19); Missouri, 4 (250-499); Nebraska, 1 (1-19); South Atlantic-Delaware, 1 (20-99); Maryland, 2 (250-499); West Virginia, 1 (1-19); North Carolina, 1 (20-99); East South Central-Tennessee, 1 (20-99); Alabama, 1 (1-19); West South Central-0klahoma, l (1-19); Texas, 3 (500-999); Pacific—Washington, 1 (100-249);.Oregon, 1 (1-19); California, 25 (1,000-2,499).
SIC 3361, Aluminum Castings: New England-New Hampshire, 3 (231); Rhode Island, 7 (20-99); West North Central-Nebraska, 3 (20-99); Kansas, 8 (100249); South Atlantic-Delaware, 2 (1-19); Virginia, 3 (100-249); Soutk. Carolina, 5 (20-99); Georgia, 13 (100-249); East South Central-Kentucky, 4 (250-499); Ternessee, 12 (20-99); Alabama, 4 (500-999); Mississippi, 1 (1-19); West South Central-Louisiana, 1 (1-19); Oklahoma, 6 (100-249); Mountain-Colorado, 10 (20-99); New Mexico, 2 (1-19); Arizona, 2 (1-19); Utah, 1 (1-19); Pacific-Washington, 5 (20-99).

## table 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

## Footnotes for Table 2-33D-Continued

SIC 3362, Brass, Bronze, Copper Castings: New England—Maine, 3 (20-99); New Hampshire, 2 (100-249); Rhode Island, 6 (20-99); East North CentralIndiana, 20 (411); Wisconsin, 24 (1,056); West North Central-Minnesota, 6 (119); Iowa, 4 (20-99); Kansas, 3 (20-99); South Atlantic-Maryland, 3 (20-99); West Virginia, 5 (20-99); North Carolina, 2 (1-19); South Carolina, 1 (1-19); Georgia, 2 (20-99); Florida, 4 (20-99); East South Central-Kentucky, 1 (1-19); Tennessee, 1 (1-19); West South Central-Arkansas, 2 ( $500-999$ ); Louisiana, 2 (1-19); 0klahoma, 7 (20-99); MountainColorado, 5 (100-249); Arizona, 1 (1-19); Utah, 1 (20-99); Pacific-Washington, 8 (20-99); Oregon, 6 (20-99).
SIC 3369, Nonferrous Castings, N.E.C.: New England-New Hampshire, l (1-19); Vermont, l (1-19); Rhode Island, 8 (20-99); East North CentralIndiana, 5 (648); Wisconsin, 6 (286); West North Central-Minnesota, 7 (228); Iowa, 4 (320); South Atlantic-Delaware, l (l-19); Maryland, l (20-99); Virginia, 1 (1-19); West Virginia, 2 (20-99); North Carolina, 2 (20-99); East South Central-Tennessee, 4 (20-99); Alabama, 1 (1-19); Mississippi, 2 (1-19); West South Central-Louisiana, 1 (1-19); Oklahoma, 2 (20-99); Mountain-Colorado, 3 (1-19); Arizona, 1 (1-19); PacificWashington, 2 (1-19); Oregon, 2 (20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958
report showed the number of establishments and total employment (either actual or in size ranges) for such States.
${ }^{3}$ See footnote 4 , table 1 for subindustry definitions.

## TABLE 3. Detailed Statistics: 1963

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
${ }^{1}$ See footnote 4, table 1 for subindustry definitions.
${ }^{2}$ See footnote 5, table 1 for subindustry definitions.
${ }^{3}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{4}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

- Represents zero.
(D) Withheld to avoid disclosure. Data for this item are insluded in the underscored figures at the left.
${ }_{2}^{1}$ Includes capital expenditures of approximately $\$ 5-\$ 10$ million for plants under construction but not in operation.
${ }^{2}$ See footnote 4 , table 1 for subindustry definitions.
${ }^{3}$ Includes capital expenditures of approximately $\$ 200-\$ 500$ thousand for plants under construction but not in operation.
${ }^{4}$ See footnote 5 , table 1 for subindustry definition.

# TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

An establishment is assigned to an industry based on the shipment values of products representing
the largest amount considered as primary to an industry. Frequently the establishment shipments
comprise mixtures of products assigned to an industry (primary products), those considered pri-
mary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: See Introduction for an explanation of terms used.
n.e.c. Not elsewhere classified.

Included in this industry is aluminum and aluminum-base alloy wire (including ACSR) which is also primary to industry 3357, Nonferrous Wire Drawing, Etc. A coverage ratio computed on the basis of including both industries to which aluminum and aluminum-base alloy wire (including ACSR) is primary, in 1963 would total 96 percent; 93 percent by industry 3352, and 3 percent by industry 3357. The remaining 4 percent was shipped by establishments in other industries. For 1958 the comparable percentages were: 96 percent; 92 percent by industry 3352 , and 4 percent by industry 3357 . The remaining 4 percent was shipped by establishments in other industries.
${ }^{2}$ Included in this industry is other nonferrous metal wire, which is also primary to industry 3357, Nonferrous Wire Drawing, Etc. A coverage ratio computed on the basis of including both industries to which nonferrous metal wire is primary in 1963 would total 85 percent; 81 percent by industry 3356, and 4 percent by industry 3357. The remaining 15 percent was shipped by establishments in other industries. For 1958 the comparable percentages were: 87 percent; 82 percent by industry 3356, and 5 percent by industry 3357. The remaining 13 percent was shipped by establishments in other industries.
${ }^{3}$ Included in this industry are aluminum and aluminum-base alloy wire (including ACSR), other nonferrous metal wire, nonferrous woven wire products, and appliance wire and cord and flexible cord sets which are also primary, respectively, to industries 3352, Aluminum Rolling and Drawing; 3356, Rolling and Drawing, Etc.; 3481, Fabricated Wire Products, N.E.C.; and 3699, Electrical Products,N.E.C. A coverage ratio computed on the basis of including the industries to which these products are primary in 1963 would total 94 percent; 76 percent by industry 3357 , and 8 percent by industries 3352 , 3356 , 3481, and 3699. The remaining 6 percent was shipped by establishments in other industries. For 1958 the comparable percentages were: 93 percent; 84 percent by industry 3357, and 9 percent by industries 3352, 3356, 3481, and 3699. The remaining 7 percent was shipped by establishments in other industries.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousarids of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts). (b) products classified in other industries (secondary products). and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{\text {Represents }}$ receipts for nonferrous metal mills and nonferrous wire drawing establishments.
${ }^{2}$ Includes shipments of these products produced on a toll basis by others.
${ }^{3}$ Data are also shown in Current Industrial Reports Series BDSAF-84, "Shipments of Copper-Base Mill and Foundry Products." See table 6A-2.
${ }^{4}$ Data are also shown in Current Industrial Reports Series M33-2, "Aluminum Ingot and Mill Products." See table 6A-2.
${ }^{5}$ Data for ACSR and aluminum cable, bare, are also published monthly in Current Industrial Reports Series M33-2, "Aluminum Ingot and Mill Products." Net quantity of shipments as reported in this series for the year 1963 and 1958 totaled 136,127, and 87,424 short tons, respectively. However, these quantities represent aluminum content only. The 149,100 short tons and 92,608 short tons reported in the census of manufactures for 1963 and 1958 , respectively, represent gross weight.
${ }^{6}$ Differs from quantity data published in Current Industrial Reports Series M33-2, "Aluminum Ingot and Mill Products," in that no data are included in the plain aluminum foil figures for that quantity of plain foil which is produced and converted in the same establishment. As shown in Current
Industrial Reports, net shipments of aluminum foil totaled 161 thousand short tons in 1963 and 100 thousand short tons in 1958.
${ }^{7}$ Represents aluminum ingot and aluminum extrusion billet made only by establishments classified in industry 3352, Aluminum Rolling and Drawing. Comparable shipments for plants classified in industries 3334, Primary Aluminum, and 3341, Secondary Nonferrous Metals, and other industries are as follows:

| Item | Total shipments |  | Other companies |  | Interplant transfers |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA)

## Not available. <br> (X) Not applicable.

The figures in the table above differ significantly from those published in the preliminary report for this industry, in that the latter report included the activities of other industries.
${ }^{8}$ Most of the aluminum ingot and billet (alloys) produced by aluminum rolling mills represent duplication of tonnages reported by the primary aluminum industry in that metal produced by the rolling mills is made from ingot produced in primary aluminum plants.
${ }^{9}$ Excludes an unspecified amount of ACSR produced on a toll basis. This tonnage is included in the Current Industrial Reports.
${ }^{10}$ Quantity figures are shown in terms of metal weight.
${ }^{11}$ Laminated foil made from purchased aluminum foil, totaled 8,113 short tons metal content valued at $\$ 17,497$ thousand.

(D) Withheld to avoid disclosing figures for individual companies.
(NA)
${ }^{13}$ Data are also published in Current Industrial Series M33G, "Magnesiun Mill Products." See table 6A-2.
${ }^{14}$ Data are also published in Current Industrial Series BDSAF-263, "Titanium Ingot and Mill Products." See table 6A-2.
${ }^{15}$ Includes $\$ 25,831$ thousand produced in industry 3357, Nonferrous Wire Drawing, Etc.
${ }^{16}$ Includes $\$ 20,371$ thousand produced in industry 3357, Nonferrous Wire Drawing, Etc.
${ }^{17}$ For detailed data see products of industry 3352, above.
${ }^{18}$ Production, including toll production, for these products totaled as follows: unalloyed wire for electrical transmission, 378,853; strand and cable, 264,151.
${ }^{19}$ For detailed data see products of industry 3356, above.
${ }^{20}$ For 1958 , data for product code 3481519 , Nonferrous metal insect wire screening, other than copper and copper-base alloy, and aluminum, are included with product code 3481498 , Other wire cloth and woven wire products.
${ }^{21}$ This quantity was valued at $\$ 5,599$ thousand. The remaining $\$ 1,435$ thousand were reported without quantity.
${ }^{22}$ For 1958 , data for product code 3481400 , wire cloth and woven wire products, not specified by kind, include data for product code 3481500 , Nonferrous wire cloth and other nonferrous woven wire products, not specified by kind.
${ }^{23}$ of these totals, the following represents the value of shipments of insulated wire and cable transferred from one plant of a company to another plant of the same company:

| Product class <br> code | Thousand <br> dollars |
| :---: | :---: |
| 33574 | 17,831 |
| 33577 | 67,146 |
| 3378 | 5,458 |
| 33579 | 12,185 |

${ }^{24}$ In 1958, product codes 3357615 and 3699615 are combined with codes 3357613 and 3699613 , respectively.
${ }^{25}$ These data differ from the quantities published in Current Industrial Reports Series M33E, "Nonferrous Castings," in that no data are included for castings produced by captive foundry departments of plants classified in other industries. In addition, certain products are reported as castings in the monthly survey which in the census of manufactures are classified as finished products in other industries.

## TABLE 6A-2. Net Shipments of Selected Nonferrous Metal Rolled, Drawn, and Extruded Products: 1958 to 1963

See footnotes at end of table.

## TABLE 6A-2. Net Shipments of Selected Nonferrous Metal Rolled, Drawn, and Extruded Products: 1958 to 1963-Continued

| Product | 1963 | 1962 | 1961 | 1960 | 1959 | 1958 |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Magnesium mill products ${ }^{1}$. | 12,403 | 11,557 | 10,640 | 10,328 | 11,085 | 9,351 |
| Titanium mill products ${ }^{1}$. | 6,112 | 6,521 | 135,147 | 135,071 | 133,211 | 132,594 |
| Sheet, plate and strip. | 1,235 | 1,227 | 1,124 | 1,021 | 934 | (X) |
| Forging and extrusion billet | 3,625 | 3,973 | 2,657 | 2,835 | 1,527 | 1,015 |
| Rod, bar, wire, and extrusions (other than tubing) ${ }^{14}$ | 1,162 | 1,140 | 1,094 | 1,215 | - 750 | 647 |

 mills in the production of fabricated products) by such mills.
${ }^{1}$ Source: These data are derived from the following Current Industrial Reports Series:

| Metal | Series | Title |
| :--- | :--- | :--- |
| Copper | BDSAF-84 | Copper-Base Mill and Foundry Products |
| Aluminum | M33-2 | Aluminum Ingot and Mill Products |
| Magnesium | M33G | Magnesium Mill Products |
| Titanium | BDSAF-263 | Titanium Ingot and Mill Products |

${ }^{2}$ Data represent metal weight, except for wire products, which are reported in copper content.
 and discing operation.
${ }^{4}$ Excludes electrical wire.
${ }^{5}$ Represents uninsulated, bare wire, tinned and/or alloy coated.
${ }^{6}$ Data represents aluminum and aluminum alloy content.
${ }^{7}$ For 1958-1961, nonheat-treatable plate is included with nonheat-treatable sheet.
${ }^{8}$ For 1958-1961, heat-treatable plate is included with heat-treatable sheet.
 alloys other than 2000 and 7000 series.
 in the 2000 and 7000 series.
${ }^{11}$ Includes a small amount of rolled structural shapes.
${ }^{12}$ Includes a small amount of heat-treatable welded tube.
 than 1 percent for total mill shapes and less than 3 percent for each specific shape.
${ }^{14}$ For 1958-1962 all extrusions are included with pipe and tubing.
table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

n.e.c. Not elsewhere classified.
${ }^{1}$ Adjusted to include aluminum ingot and aluminum extrusion billet made in aluminum rolling mills (product classes 33527 and 33528 ) which were not separately reported in the 1954-1958 pexiod.
${ }^{2}$ These indexes have been computed on a "wherever-made" basis-that is, they reflect the shipments of these products reported by establishments without regard to their plant specialization (industry classification).
${ }^{3}$ Adjusted to include product classes for which separate indexes are not shown due to lack of adequate quantity information (note particularly the omission of product classes 33574, 33576 and 33579).
table 6c. Product Classes-Value Shipped by All Manufacturing Establishments, 1947, 1954, 1958 to 1963

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than \$1 million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1992," MC63(1)-6.

(X) Not
(Z) Less than 500 horsepower. applicable.
$(S)$ Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

See footnotes at end of table.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963-Continued

See footnotes at end of table.

## FORGINGS AND MISCELLANEOUS PRIMARY METAL INDUSTRIES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3391-Iron and Steel Forgings<br>3392-Nonferrous Forgings<br>3399—Primary Metal Industries, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3391-IRON AND STEEL FORGINGS

This industry comprises establishments primarily engaged in manufacturing iron and steel forgings with or without the use of dies. These establishments generally operate on a job or order basis, manufacturing forgings for sale to others or for interplant transfer. Establishments which produce iron and steel forgings and which are also engaged in fabricating operations such as machining, assembling, etc., in manufacturing a specified product are classified in the industry of the specified product. Iron and steel forgings are made to a considerable extent by establishments classified in other industries that produce forgings for incorporation, in the same establishment, into such products as machinery, motor vehicles, etc. Steel rolling mills producing iron and steel forgings are classified in industry 3312, Blast Furnaces and Steel Mills. For a detailed list of products of industry 3391, refer to table 6A, product codes 3391111 to 3391943.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Iron and Steel Forgings Industry totaled $\$ 869$ million. This amount included shipments of iron and steel forgings (primary products) valued at $\$ 745$ million, shipments of other products (secondary products) valued at $\$ 88$ million, and miscellaneous receipts (mainly resales) at $\$ 36$ million.

This industry's shipments of iron and steel forgings represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 consisted mainly of nonferrous forgings ( $\$ 30$ million), and metal fittings and unions for piping systems (\$23 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 74 percent of the total industry shipments are represented by plants specializing in product class 33911 , Drop, upset, and press steel forgings (closed die).

Shipments of iron and steel forgings by this industry represented 69 percent of all shipments of these products ( $\$ 1,076$ million) by all industries. In 1958 the coverage ratio was 72 percent. Another industry shipping iron and steel forgings was industry 3312, Blast Furnaces and Steel Mills, $\$ 152$ million.

The production index for the primary products of the industry increased to 121 in 1963 from the 1958 level of 86 . The unit value index for 1963 was 129 compared to 125 in 1958. Both indexes were computed on a basis of $1954=100$.

Industry 3391 includes establishments in two main categories: those producing iron and steel forgings for sale to the trade (commercial forge shops), and those producing forgings for use by other plants of the same company (captive forge shops). A few plants in this industry produce forgings both for sale and for interplant transfer. In addition, forgings are also produced in forgings departments of establishments classified (on the basis of their final product) in other industries. In the 1963 Census of Manufactures, establishments in the fabricated metal product and machinery industries (Major Groups 34 to 37) having such "captive" forging departments (either ferrous or nonferrous) reported data on the approximate number of employees engaged in this activity as well as similar data for 13 other metal fabricating operations such as foundry, stamping, etc. These data are shown in table 9 of the reports covering the 4 -digit industries within these major groups and are summarized in Volume I, General Summary. Also, for those industries where the "captive" production of iron and steel forgings is of particular importance, the quantity of iron and steel forgings produced and consumed within such industries is shown in the materials consumed table in the reports covering these industries.

Materials consumed data, shown in table 7A of this report represent only those tonnages consumed by establishments classified in industry 3391, including consumption for secondary products. For this reason they cannot be related directly to the tonnages of forgings shown in table 6A which represent the total shipments of steel forgings, including those shipped by establishments classified in other industries.

Detailed figures on shipments of commercial steel forgings are collected on a monthly basis by the Bureau of the Census and published in Current Industrial Reports Series M33C, Commercial Steel Forgings. Footnote 2, table 6A, shows totals for the data collected in the monthly survey for 1963 and 1958. The monthly data are estimated industry totals derived from a canvass of large commercial forge shops only.

## 3392-NONFERROUS FORGINGS

This industry comprises establishments primarily engaged in manufacturing nonferrous forgings with or without the use of dies. These establishments generally operate on a job or order basis, manufacturing forgings for sale to others or for interplant transfer. Establishments which produce nonferrous forgings and which are also engaged in fabricating operations such as machining, assembling, etc., in manufacturing a specified product are classified in the industry of the specified product. Nonferrous forgings are made to a considerable extent by establishments classified in other industries that produce forgings for incorporation, in the same establishment, into such products as machinery, motor vehicles, etc. For a detailed list of products of industry 3392, refer to table 6A, product codes 3392011 to 3392098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Nonferrous Forgings lndustry totaled $\$ 165$ million. This amount included shipments of nonferrous forgings (primary products) valued at $\$ 108$ million, shipments of other products (secondary products) valued at $\$ 48$ million, and miscellaneous receipts (mainly scrap and salable refuse) at $\$ 9$ million.

This industry's shipments of nonferrous forgings represented 69 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 included drop, upset, and press steel forgings (closed die) ( $\$ 16$ million), and special dies and tools, die sets, jigs, and fixtures ( $\$ 6$ million).

Shipments of nonferrous forgings by this industry represented 55 percent of all shipments of these products ( $\$ 198$ million) by all industries. ln 1958 the coverage ratio was 60 percent. Other industries shipping nonferrous forgings consisted mainly of industry 3351, Copper Rolling and Drawing, $\$ 14$ million; and industry 3391, lron and Steel Forgings, \$30 million.

The production index for the primary products of the industry increased to 181 in 1963 from the 1958 level of 108 . The unit value index for 1963 was 107 compared to 120 in 1958. Both indexes were computed on a basis of $1954=100$.

Industry 3392 includes establishments in two main categories: those producing nonferrous forgings for sale to the trade (commercial forge shops), and those producing forgings for use by other plants of the same company (captive forge shops). In addition, a few plants in this industry produce forgings both for sale and for interplant transfer.

No data are available on nonferrous forgings which are produced and consumed within the same establishment in the manufacture of further fabricated products. In some instances, the fabricated product may require relatively little fabrication or processing beyond the rough forging stage. Nevertheless, establishments primarily engaged in producing such items are classified as fabricated product plants in the appropriate industry in Major Groups 34 to 37, Fabricated Metal Products, Machinery, and Transportation Equipment.

Industry 3392, Nonferrous Forgings (as defined in the 1957 edition of the Standard Industrial Classification Manual), was not treated as a separate industry in the 1954 Census of Manufactures, nor in the 1955-1957 Annual Surveys of Manufactures. For years prior to 1958, nonferrous forge shops were included in industry 3399, Primary Metal Industries, N.E.C. This industry also included establishments primarily engaged in either cold-rolling of steel sheet and strip, cold-finishing of steel bar, production of metal powders and paste, or annealing and heat treating of steel for the trade. General statistics data for plants specializing in the production of nonferrous forgings were published in table 8, Volume II, Part 2 of the 1954 Census of Manufactures. This is the source of the 1954 data published in table 1.

## 3399-PRIMARY METAL INDUSTRIES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing primary metal products, n.e.c., such as nonferrous nails, brads, and spikes; metal powder, flakes, and paste; and establishments primarily engaged in heat treating of metal for the trade. For a detailed list of products of industry 3399, refer to table 6A, product codes 3399111 to 3399611 .

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due to the inclusion of those establishments primarily engaged in reclaiming metallics from slag.

Value of shipments and other receipts of the Primary Metal Industries, N.E.C., totaled $\$ 285$ million. This amount included shipments of primary metal industries, n.e.c. (primary products) valued at $\$ 234$ million, shipments of other products (secondary products) valued at $\$ 18$ million, and miscellaneous receipts (mainly for reclaiming metallics from slag) at $\$ 32$ million.

This industry's shipments of primary metals industries, n.e.c., represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent.

Shipments of primary metal industries, n.e.c., by this industry represented 87 percent of all shipments of these products ( $\$ 270$ million) by all industries. ln 1958 the coverage ratio was also 87 percent. Other industries shipping primary metal industries n.e.c., consisted mainly of industry 3356, Rolling and Drawing, N.E.C., $\$ 5.7$ million; and industry 3545, Machine Tool Accessories, $\$ 4.5$ million.

Industry 3399, by definition, includes establishments which fall into four significantly different categories: (1) those producing metal powders and paste; (2) those producing nonferrous nails, brads and spikes; (3) those annealing and heat treating metal for the trade; and (4) those reclaiming metallics from slag. Accordingly, the manufacturing plants included in this industry involve different processes depending upon the type of product produced or operation performed. Of the 754 establishments classified in this industry 69 establishments with 3,043 employees were primarily engaged in producing metal powders, flake and paste; 423 establishments with 8,961 employees were primarily engaged in such services as heat treating, annealing, etc. The remaining 262 establishments with employment totaling 2,952 were engaged in producing nonferrous nails, brads and spikes; reclaimed metallics from slag; or reported shipments of primary metal products, not specified by kind.

Industry 3399, Primary Metal Industries, N.E.C. (as defined in the 1957 edition of the Standard lndustrial Classification Manual) was not treated as a separate industry in the 1954 Census of Manufactures nor the 1955-1957 Annual Surveys of Manufactures. For years prior to 1958, establishments engaged in the production of metal powders and paste and those annealing and heat treating steel for the trade were included in industry 3399, Primary Metal Industries, N.E.C. However, industry 3399 also included establishments primarily engaged in either cold-rolling of steel sheet and strip, cold-finishing of steel bar or production of nonferrous forgings. Establishments producing nonferrous nails, brads and spikes were included, prior to 1958, in industry 3481, Nails and Spikes. Industry 3481 also included establishments producing ferrous nails and spikes.

General statistics data for plants specializing in the production of metal powder and paste and those annealing and heat treating metal for the trade were tabulated in the 1954 Census of Manufactures. The data for powder mills were published in table 8, Volume 11, Part 2, but the data for annealing and heat treating establishments were not published. The data for 1954 published in table 1 of this report are derived from the published and unpublished data described above. Establishments specializing in the production of nonferrous nails, brads and spikes, while not included in the 1954 figures, would not affect significantly the comparability of these data.

## table 1. General Statistics: 1963 and Earlier Years

| Year | Companies (number) | Establishments |  | All employees |  | Production workers |  |  | Value added by manufacture adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All enployees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustrnent is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero
(D) Withheld to avoid disclosure of individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

Includes data for Alaska and Hawaii.
${ }^{2}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
Figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{3}$ The figures for 1939 are not strictly comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was $\$ 52.9$ million.
${ }^{4}$ Industries 3392 and 3399 as defined for 1958 and later years, were not treated as separate industries prior to 1958 . See text for detailed discussion.
${ }^{5}$ The figures for 1963 are not strictly comparable with those for earlier years. Value added by manufacturers for 1963 on a basis comparable with earlier years was $\$ 176.8$ million.

TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. <br> code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^106]${ }^{1}$ Included in this industry are open die hammer and press forgings which are also primary to industry 3312, Blast Furnaces and Steel Mills. A
coverage ratio computed on the basis of including both industries to which open die hammer and press forgings are primary would total 80 percent;
69 percent by industry 3391 and 11 percent by industry 3312 . The remaining 20 percent was shipped by establishments in other industries.
${ }^{2}$ See footnote 5, table 1.
${ }^{3}$ Consists largely of receipts for reclaiming metallics from slag.

# table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963 

#### Abstract

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millious of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous

receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

# table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued 

## Footnotes for Table 6A-33E

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes product class 33129, open die hammer and press forgings made in blast furnaces and steel mills.
${ }^{2}$ These figures are not strictly comparable with tonnage figures shown in Current Industrial Reports Series M33C, Commercial Steel Forgings, in that the latter include only forgings for sale, whereas the 1963 and 1958 Census of Manufactures also include interplant transfers of forgings. Accordingly, a direct comparison with the monthly Current Industrial Reports Series is not possible. Forgings produced and consumed are not included in either the cansus or the Current Industrial Reports figures. The annual totals in the monthly Current Industrial feports survey for comercial steel forgings were as follows:

| Item | $\begin{gathered} 1963 \\ \text { (short tons) } \end{gathered}$ | $\begin{gathered} 1958 \\ \text { (short tons) } \end{gathered}$ |
| :---: | :---: | :---: |
| Closed die (drop, upset and press) forgings: |  |  |
| Carbon. | 785,267 | 528,716 |
| Alloy, including stainless | 391,346 | 295,141 |
| Open die hammer and press forgings: |  |  |
| Carbon... | 156,074 | 92,096 |
| Alloy, including stainles | 219,936 | 163,480 |

${ }^{3}$ In 1958 product codes 3312921, 3391921, 3312961, and 3391941 were combined.
${ }^{4}$ In 1958 product codes 3312923, 3391922, 3312963, and 3391942 were combined.
${ }^{5}$ In 1958 product codes $3312925,3391923,3312965$, and 3391943 were combined.
${ }^{6}$ In 1958, magnesium and magnesium-base alloy forgings were included with "Other nonferrous forgings" (3392098).
7 Monthly figures are also shown in Current Industrial Reports Series M33-2, Aluminum Ingot and Mill Products.
${ }^{8}$ Represents aluminum content.
${ }^{9}$ Quarterly figures are also shown in Current Industrial Reports Series BDSAF-84, Shipments of Copper-Base Mill and Foundry Products.
${ }^{1}$ R Represents copper content.
${ }^{11}$ Represents iron content.
${ }^{12}$ Consists almost exclusively of receipts for work done on materials owned by others. Includes only work done by establishments classified in industry 3399.
table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes (1954 = 100) |  |
| :---: | :---: | :---: | :---: |
|  |  | Production | Unit value |
| 339-- | Primary metal industries, n.e.c. ${ }^{1}$..............1963.. ${ }^{\text {1958.. }}$ | 138 91 | 125 124 |
| 3391- | Iron and steel forgings............................... $1963 .$. | 121 86 | 129 125 |
| 33911 | Closed die (drop, upset and press) forgings.....1963.. | 109 83 | 130 125 |
| 33919 | Open die hammer and press forgings made in <br>  | 175 93 | 126 126 |
| 3392- | Nonferrous forgings.................................... $1963 .$. | 181 108 | 107 |
| 3399- | Primary metal industries, n.e.c.....................1963.. ${ }^{\text {1958.. }}$ | $\left(\begin{array}{l}1 \\ (1) \\ \hline\end{array}\right.$ | $(1)$ $(1)$ |
| 33991 | Metal powders and paste........................... 1963. 1958.. | 188 94 | 105 <br> 116 |

n.e.c. Not elsewhere classified.
$1_{\text {Adjusted to }}$ include products of industry 3399, for which separate indexes are not shown because comparable quantity data were not obtained for a significant portion of product classes 33992 and 33996.

TABLE 6C. Product Classes-Value Shipped by All Manufacturing Establishments, 1947, 1954, 1958 to 1963

| (In thousands of dollars) |  |  |  |  |  |  |  |  |  |

| 33920 | Nonferrous forgings. | 198,416 | 223,151 | 164,717 | 151,032 | 151,303 | -131,995 | 112,359 | 29,374 |
| 3399- | Primary metal industries, n.e.c............... | 270,496 | 228,104 | 191,341 | 184,392 | 178,422 | 150,498 | (NA) | (NA) |
| 33991 | Metal powders and paste.................. | 106,832 | 88,553 | 70,287 | 71,325 | 73,684 | 55,108 | 50,349 | 19,288 |
| 33992 | Other primary metal products, including nonferrous nails, brads, spikes, and staples. $\qquad$ | 11,248 |  |  |  |  | (2,051 | 5,429 | (NA) |
| 33996 | Heat treating of steel for the trade....... | 140, 288 | \} 139,551 | 121,054 | 113,067 | 104,738 | 85,258 | (NA) | (NA) |
| 33990 | Primary metal industries, n.e.c., n.s.k.... | 12,128 |  |  |  |  | 8,081 | 2,049 | (NA) |

Standard Notes: - Reoresents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable. n. $\quad$ Not elsewhere classified.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ Includes total for product class 33129 , Press and hammer steel forgings (made in steel mills), which is primary to industry 3312.

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. (Z) Less than \$l million reported.

 Nevada.
${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.

## table 7A. Materials by Kind: 1963 and 1958

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies,
(NA) Not available
(X) Not
applicable. n.s.k. Not specified by kind
${ }^{1}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{2}$ Comparable data are not available for 1958.

## TABLE 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

| Item | Iron and steel forgings (SIC 3391) | Nonferrous forgings (SIC 3392) | Primary metal industries, n.e.c. (SIC 3399) |
| :---: | :---: | :---: | :---: |
| Total cost of purchased fuels and electric energy................................. $\$ 1,000 . .$. | 31,421 | 4,545 | 10,173 |

| Bituminous coal, lignite, and anthracite: | 488 | (S) |  |
|  | 3,447 | (S) | (S) |
| Coke and breeze: <br> Quantity. | (s) | - |  |
|  | (S) | - | (S) |
| Fuel oil (distillate and residual): <br> Quantity......................................................... 1,000 barrels of 42 gallons... | 2,440 | 78 | (s) |
| Cost.............................................................................. $\$ 1,000 . .$. | 9,832 | 257 | (S) |
| Gas (natural, manufactured, still, blast furnace, and coke oven): Quantity. $\qquad$ | 17,853 | 2,063 |  |
| Cost................................................................................ $\$ 1.000 . .$. | 9,758 | 1,447 | 4,235 |
| Other fuels.........................................................................do...... | (S) | (S) | 528 |
| Electric energy: |  |  |  |
| Furchased: |  |  |  |
| Quantity.................................................................................................. | 554 7 |  | 386 4 |
| Cost..................................................................................... $\$ 1,000 .$. | 7,777 | 2,468 | 4,907 |
| Generated less sold....................................................million kw.-hrs.. | 8 | - | - |
| Aggregate horsepower of prime movers and electric motors driven by purchased energy (December 31), total.......................................................... $\$ 1,000 .$. | 572 | 126 | 103 |
| Prime movers, total......................................................................d. ${ }^{\text {do. }}$ | 53 | 5 | 6 |
| Driving generators........................................................................do. | 19 | 1 | (2) |
| Not driving generators...............................................................do..... | 34 | 4 | 6 |
| Electric motors, total....................................................................do. ${ }^{\text {do. }}$ | 525 | 122 | 97 |
| Driven by purchased energy..........................................................do. ${ }^{\text {do. }}$ | 519 | 122 | 97 |
| Driven by energy generated at establishment........................................do....... | 6 | - | - |
| Aggregate horsepower per 100 production workers | 1,764 | 2,111 | 1,070 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes:
: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. (z) Less than 500 horsepower. n.e.c. Not elsewhere classified.
( S ) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| $\begin{gathered} \text { Industry } \\ \text { or } \\ \text { product } \\ \text { class } \\ \text { code } \\ \hline \end{gathered}$ | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | ```Value added by manufacture, adjusted ($1,000)``` | Cost of materials <br> $(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

| Percent of industry production workers in establishments which corpleted the metalworking ooperations inquiry. | (85-90) | (95-100) |

[^108]
# Fabricated Metal Products 

34A Metal cans, cutlery, hand tools, and general hardware<br>34B Heating apparatus, except electric, and plumbing fixtures<br>34C Fabricated structural metal products<br>34D Screw machine products, bolts, metal stampings, and metal services

34E Fabricated metal products, n.e.c.

This major group includes establishments primarily engaged in manufacturing a wide variety of fabricated metal products. Other important segments of the metal fabricating industries are classified in other major groups such as machinery, in Major Groups 35 and 36, transportation equipment in Major Group 37, instruments and related products in Major Group 38, jewelry and silverware in Major Group 39, and metal furniture and fixtures in Major Group 25.

The industries included in this major group encompass a varied group of fabricated metal finished products (cutlery, hardware, oil burners, plumbing fixtures, metal doors, safes, etc.), materials or components for incorporation into other products (sheet metal work, steel springs, bolts and nuts, etc.), containers (metal cans, metal shipping barrels and drums, and collapsible tubes), and service operations performed on a job or order basis for the trade (for example, galvanizing, coating, and engraving).

The products of Major Group 34 are used by establishments in other manufacturing in-dustries-in construction, mines, farms, transportation, commerce, and in households. The
basic metals consumed are generally produced by establishments in Major Group 33, Primary Metal Industries.

Data on the number of establishments engaged in selected metalworking operations and the number of employees working in the operations are shown in table 9 for the 4 -digit industries in Major Group 34. The operations shown in that table do not represent, of course, a complete list or, for many metal fabricating industries in this group, even the most important ones. Although the production processes in this area adhere to a general pattern of specified metalworking and metal fabricating operations (e.g. machine shop, steel plate fabrication, etc.), there is a substantial variation in the number and types of processes performed by an individual establishment as well as from industry to industry. Within many of these industries, establishments typically purchase mill shapes and carry out the entire fabricating of the metal until it emerges as a finished product. In other industries, however, such as in the plumbing and nonelectric heating subgroup, the establishments may be primarily engaged in assembling component parts produced by other companies or other plants of the same company.

## Fabricated Metal Products: Major Group 34

Value Added by Manufacture by State: 1963

table 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
sents zero.
${ }^{1}$ The figures for 1939 through 1963 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.
${ }^{2}$ For the period 1954 to 1963, figures represent adjusted value added by manuf acture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."

The total value of shipments and cost of materials for industry groups (2- and $3-$ digit) include extensive duplication arising from shipments between establishments in the same classification. For a more complete explanation, see Introduction.
not yet in not yet in operation.
operating establishments, figures for employment and payroll
for manufacturing central administrative orfice and auxiliary units are shown for the
years 1949 to 1953 in the annual survey of manufactures volumes. Data for these years are not available for the years 1955 to 1957, 1959 to 1962, and prior to 1949
${ }^{6}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

The figures for 1939 to 1963 are not entirely comparable with those for 1937 because the 1937 figures exclude data for establishments primarily engaged in producing lawn sprinklers, spun ware, nonferrous metal novelties, tackle blocks, aluminum ornamental work, aluminum stampings, and machine knives (except metalworking) and include data for establishments primarily engaged in making caulking guns, toilet seats, brooders, cast aluminum cooking ware, and hair clippers. Value added for 1939 on a basis strictly comparable with 1937 was $\$ 1,340.4$ million.
1937 The figures for 1935 and earlier years are not sufficiently comparable with those for 1937 to 1963 to be shown in this table principally because of the inclusion in earlier years of data for establishments primarily engaged in the manuracture of valves and
fittings, except plumbers' and the exclusion of data for establishments primarily engaged in the manufacture of stamped, pressed, and spun aluminum ware.

industry. value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

# METAL CANS, CUTLERY, HAND TOOLS, AND GENERAL HARDWARE 

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3411-Metal Cans
3421-Cutlery
3423-Hand and Edge Tools, Except Machine Tools and Hand Saws
3425-Hand Saws and Saw Blades
3429-Hardware, Not Elsewhere Classified
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3411-METAL CANS

This industry comprises establishments primarily engaged in manufacturing metal cans from purchased tinplate, terneplate, blackplate, or enameled sheet metal. Establishments primarily engaged in the manufacture of composite cans made partly of metal and partly of nonmetallic materials (such as fiberboard) are excluded from this industry. For a detailed list of products of industry 3411 , refer to table 6A, product codes 3411001 to 3411091 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal Cans Industry totaled $\$ 2,075$ million. This amount included shipments of metal cans (primary products) valued at $\$ 1,960$ million, shipments of other products (secondary products) valued at $\$ 63$ million, and miscellaneous receipts (mainly sales of products bought and resold), at $\$ 52$ million.

This industry's shipments of metal cans represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent. Secondary products shipped by this industry in 1963 included steel shipping pails ( $\$ 12$ million).

Shipments of metal cans by this industry represented 98 percent of all shipments of these products ( $\$ 2,002$ million) by all industries. In 1958 the coverage ratio was 99 percent. Other industries shipping metal cans (primary products) included industry 3491, Metal Barrels, Drums, and Pails, $\$ 7$ million.

The production index for the primary products of the industry increased to 123 in 1963 from the 1958 level of 113 . The unit value index for 1963 was 122 compared to 117 in 1958. Both indexes were computed on a basis of $1954=100$.

Detailed figures on the shipments of metal cans are collected on a monthly basis by the Bureau of the Census on Form M34D. Table 6A shows totals for the data collected in the monthly survey and in the census of manufactures for the same period. The differences are due to minor revisions in the reports for some companies. Both the census of manufactures data for industry 3411 and the monthly survey include data for "captive" production, that is, the production of cans for use by the producing company. Most of these "captive" establishments are part of food, petroleum, and paint companies.

The monthly survey data are reported in terms of base boxes of metal consumed in the manufacture of cans. Also reported separately are the base boxes of steel (tinplate) and aluminum consumed in the manufacture of cans. For 1963 the base boxes of steel (tinplate) have been converted to short tons by use of the factor 23.5 base boxes per short ton of steel. For 1958 the conversion factors which appear in the table below were applied to individual types of cans.

The weight of aluminum consumed in producing metal cans was reported separately and totaled 43,321 short tons in 1963. Aluminum was not a significant factor in the production of metal cans in 1958.

Certain of the larger companies operating establishments classified in industry 3411 also have establishments producing other types of metal containers as well as containers made of other materials and which are classified in other industries; for example: steel shipping barrels, drums, and pails in industry 3491, Metal Barrels, Drums, and Pails; paper and paperboard boxes, drums, etc., in Major Group 26, Paper and Allied Products.

| Type of can | Base boxes per short ton of steel |
| :---: | :---: |
| Fruit and vegetable (including juice). | 21.4 |
| Evaporated and condensed milk. | 25.0 |
| Other dairy products. | 20.4 |
| Meat (including poultry). | 21.7 |
| Fish and seafood | 23.0 |
| Coffee | 21.3 |
| Lard and shortening | 21.7 |
| Soft drink | 22.1 |
| Beer | 20.6 |
| Pet food | 24.0 |
| Oil, open-top (1 quart and 5 quart). | 23.3 |
| All other food (including soup and baby food cans) | 23.0 |
| All other nonfood | 21.2 |

## 3421-CUTLERY

This industry comprises establishments primarily engaged in manufacturing cutlery. Establishments primarily engaged in manufacturing table cutlery made entirely of metal are classified in industry 3914 ; those manufacturing electric razors, in industry 3634; and those manufacturing hair clippers for human use, in industry 3999, and for animal use, in industry 3522. For a detailed list of products of industry 3421 , refer to table 6 A, product codes 3421111 to 3421251 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Cutlery Industry totaled $\$ 283$ million. This amount included shipments of cutlery (primary products) valued at $\$ 246$ million; shipments of other products (secondary products) valued at $\$ 30$ million; and miscellaneous receipts (mainly sales of products bought and resold): at $\$ 7$ million.

This industry's shipments of cutlery represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent.

Shipments of cutlery by this industry represented 97 percent of all shipments of these products ( $\$ 254$ million) by all industries. In 1958 the coverage ratio was 98 percent. Another industry shipping cutlery (primary products) was industry 3423 , Hand and Edge Tools, $\$ 4$ million.

## 3423-HAND AND EDGE TOOLS, EXCEPT MACHINE TOOLS AND HAND SAWS

This industry comprises establishments primarily engaged in manufacturing files and other hand and edge tools for metalworking, woodworking, and general maintenance. Establishments primarily engaged in manufacturing saws are classified in industry 3425; and metal cutting dies and power driven hand tools, and attachments and accessories for machine tools in Major Group 35. For a detailed list of products of industry 3423, refer to table 6A, product codes 3423111 to 3423398.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Hand and Edge Tools lndustry totaled $\$ 566$ million. This amount included shipments of hand and edge tools (primary products) valued at $\$ 445$ million, shipments of other products (secondary products) valued at $\$ 69$ million, and miscellaneous receipts (mainly sale of products bought and resold) at $\$ 51$ million.

This industry's shipments of hand and edge tools represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included hand saws, saw blades, and saw accessories ( $\$ 6$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 51 percent of the total industry shipments are represented by plants specializing in mechanics' hand service tools; and 28 percent in files, rasps, and file accessories and other hand tools.

Shipments of hand and edge tools by this industry represented 84 percent of all shipments of these products ( $\$ 536$ million) by all industries. In 1958 the coverage ratio was 85 percent. Other industries shipping hand and edge tools (primary products) included industry 3429, Hardware, N.E.C., $\$ 4$ million; and industry 3421, Cutlery, $\$ 3$ million.

## 3425-HAND SAWS AND SAW BLADES

This industry comprises establishments primarily engaged in manufacturing hand saws and saw blades for hand and power driven saws. Establishments primarily engaged in manufacturing power driven sawing machines are classified in Major Group 35. For a
detailed list of products of industry 3425 , refer to table 6 A , product codes 3425011 to 3425049.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Hand Saws and Saw Blades lndustry totaled $\$ 103$ million. This amount included shipments of hand saws and saw blades (primary products) valued at $\$ 72$ million; shipments of other products (secondary products) valued at $\$ 20$ million; and miscellaneous receipts at $\$ 11$ million.

This industry's shipments of hand saws and saw blades represented 78 percent of its total product shipments. The industry specialization ratio in 1958 was 82 percent.

Shipments of hand saws and saw blades by this industry in 1963 represented 85 percent of all shipments of these products ( $\$ 85$ million) by all industries. In 1958 the coverage ratio was 90 percent.

The production index for the primary products of the industry increased to 89 in 1963 from the 1958 level of 88 . The unit value index for 1963 was 148 compared to 134 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3429—HARDW ARE, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing miscellaneous metal products usually termed "hardware" and not elsewhere classified. Establishments primarily engaged in manufacturing bolts and nuts are classified in industry 3452, nails and spikes in Major Group 33, cutlery in industry 3421, hand tools in industry 3423, and pole line and transmission hardware in Major Group 36. For a detailed list of products of industry 3429 , refer to table 6 A , product codes 3429111 to 3429598.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Hardware, N.E.C., Industry totaled $\$ 1,785$ million. This amount included shipments of hardware, n.e.c.,(primary products) valued at $\$ 1.553$ million; shipments of other products (secondary products) valued at $\$ 158$ million; and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 74$ million.

This industry's shipments of hardware, n.e.c., represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 89 percent. Secondary products shipped by this industry in 1963 included fabricated metal products, n.e.c. ( $\$ 13$ million), and job stampings, except automatic ( $\$ 8$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 48 percent of the total industry shipments are represented by plants specializing in transportation hardware, and 28 percent in builders' hardware.

Shipments of hardware, n.e.c., by this industry represented 93 percent of all shipments of these products ( $\$ 1,663$ million) by all industries. In 1958 the coverage ratio was also 93 percent. Other industries shipping hardware, n.e.c., included industry 3461, Metal Stampings, $\$ 13$ million; industry 3537, lndustrial Trucks and Tractors, $\$ 6$ million; and industry 3964, Needles, Pins, and Fasteners, $\$ 6$ million.

 table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the l5th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production

 rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manu-
 lishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ Data for Alaska and Hawaii are excluded for 1958 and earlier years.
${ }^{3}$ Figures for 1958-1963 and 1929 and earlier years do not include dairymens' tinware.
${ }^{4}$ A number of small establishments were misclassified into industry 3411 that should have been included in other industries. This affects the total establishments and total company counts and the number of establishments in the smaller size classes for industry 3411 , but has no
appreciable effect on the employment, value of shipments and other statistics of this industry.
${ }^{5}$ The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with arlier years was $\$ 123.6$ million.

Data for stamped tinware, other than tin cans, are excluded from the figures for 1925-1935.
""Metal cans" was formerly a part of the discontinued industry "Tinsmitting, coppersmitting and sheet iron working." Separate figures for l899 are, therefore, not available.
${ }^{8}$ No comparable data are available for earlier years.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "0ther industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies
(NA) Not available
(X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
$(S)$ Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry special ization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials $(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

## HEATING APPARATUS, EXCEPT ELECTRIC, AND PLUMBING FIXTURES

This report shows 1963 Census of Manufactures statistics for establishments classified in.each of the following industries:

SIC Code and Title<br>3431-Enameled Iron and Metal Sanitary Ware<br>3432-Plumbing Fixture Fittings and Trim (Brass Goods)<br>3433-Heating Equipment, Except Electric

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact sould be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3431-ENAMELED IRON AND METAL SANITARY WARE

This industry comprises establishments primarily engaged in manufacturing enameled iron, cast iron, or pressed metal sanitary ware. Establishments primarily engaged in manufacturing vitreous and semivitreous pottery sanitary ware are classified in industry 3261; and those manufacturing porcelain enameled kitchen, household, and hospital ware in industry 3461 . For a detailed list of products of industry 3431 , refer to table 6A, product codes 3431002 to 3431098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal Plumbing Fixtures Industry in 1963 totaled $\$ 234$ million. This amount included shipments of metal plumbing fixtures (primary products) valued at $\$ 184$ million, shipments of other products (secondary products) valued at $\$ 34$ million, and miscellaneous receipts (mainly resales) at $\$ 16$ million.

This industry's shipments of metal plumbing fixtures in 1963 represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was also 84 percent. Secondary products shipped by this industry in 1963 consisted mainly of plumbing fixture fittings and trim (brass goods).

Shipments of metal plumbing fixtures by this industry in 1963 represented 91 percent of all shipments of these products ( $\$ 204$ million) by all industries. In 1958 the coverage ratio was 92 percent. Another industry shipping metal plumbing fixtures included industry 3461, Metal Stampings, $\$ 9.3$ million.

The production index for the primary products of the industry increased to 136 in 1963 from the 1958 level of 104. The unit value index for 1963 was 72 compared to 83 in 1958. Both indexes were computed on a basis of $1954=100$.

Industry 3431 includes establishments which fall into two significantly different categories, namely those producing cast iron plumbing fixtures and those producing metal fixtures of pressed metal. Accordingly, the manufacturing plants included in this industry involve different manufacturing processes depending upon the line of products produced. Those fixture plants producing cast iron fixtures include significant foundry operations while the pressed metal fixture plants are more closelyallied to metal fabricating plants producing their product by forming processes (stamping, drawing, etc.).

The operations of the largest establishments in this industry cover the entire production process including the casting of the fixture, through the machining, finishing, and assembly operations. In general these processes are carried on at a single manufacturing plant. However, in a few instances the foundry operations were performed at separate locations and, accordingly, those separate foundries were classified in the foundry industries (SlC industries $3321,3322,3323,3361,3362$ and 3369). In the latter case the plants classified in this industry would be limited to machining and finishing operations on castings received from their associated plants.

Certain of the companies operating plants classified in this industry also have establishments producing allied products classified in other industries. For example, the larger fixture manufacturers also have plants engaged in manufacturing fixture fittings and such allied products as vitreous china fixtures, kitchen cabinets, warm air furnaces, boilers and other consumer durable items in the plumbing and heating line.

As is shown in table 7, certain of the more important materials consumed by the industry are pig iron, and iron and steel scrap metal consumed in the foundry operations and steel mill shapes and forms. In addition, data are also shown for the quantity of iron castings produced and consumed within the plants classified in this industry.

Data on shipments of plumbing fixtures were collected by the Bureau of the Census on a quarterly basis on Form M34E. The detailed statistics shown in table 6A were taken from the quarterly survey.

## 3432--PLUMBING FIXTURE FITTINGS AND TRIM (BRASS GOODS)

This industry comprises establishments primarily engaged in manufacturing plumbing fixture fittings and trim (brass goods). Establishments primarily engaged in the manufacture of steam or water line valves are classified in industry 3494. For a detailed list of products of industry 3432, refer to table 6A, product codes 3432001 to 3432098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Plumbing Fittings, Brass Goods, Industry in 1963 totaled $\$ 334$ million. This amount included shipments of plumbing fixture fittings and trim, brass goods (primary products ) valued at $\$ 274$ million, shipments of other products (secondary products) valued at $\$ 31$ million, and miscellaneous receipts (mainly resales) at $\$ 29$ million.

This industry's shipments of plumbing fixture fittings and trim, brass goods, in 1963 represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included metal valves for piping systems (except plumbing and heating valves) ( $\$ 3.2$ million),
and plumbing and heating valves and specialties (except plumbers brass goods) (\$3.2 million).

Shipments of plumbing fixture fittings and trim, brass goods, by this industry in 1963 represented 83 percent of all shipments of these products ( $\$ 330$ million) by all industries. In 1958 the coverage ratio was also 83 percent. Another industry shipping plumbing fixture fittings and trim, brass goods included industry 3494, Valves and Pipe Fittings, $\$ 10.8$ million.

The production index for the primary products of the industry increased to 167 in 1963 from the 1958 level of 123 . The unit value index for 1963 was 93 compared to 99 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3433-HEATING EQUIPMENT, EXCEPT ELECTRIC

This industry comprises establishments primarily engaged in manufacturing heating equipment for all purposes other than power, including all gas, oil, and stoker coal fired equipment for the automatic utilization of gaseous, liquid, and solid fuels. Establishments primarily engaged in manufacturing electric stoves and ranges are classified in industry 3631; boiler shops primarily engaged in the production of industrial, power, and marine boilers in industry 3443; and industrial process furnaces and ovens in industry 3567. For a detailed list of products of industry 3433 , refer to table 6 A , product codes 3433110 to 3433698.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Heating Equipment, Except Electric, Industry in 1963 totaled $\$ 1,020$ million. This amount included shipments of heating equipment, except electric (primary products) valued at $\$ 721$ million, shipments of other products (secondary products) valued at $\$ 226$ million, and miscellaneous receipts of $\$ 73$ million.

This industry's shipments of heating equipment, except electric, in 1963 represented 76 percent of its total product shipments. The industry specialization ratio in 1958 was 81 percent. Secondary products shipped by this industry in 1963 included steel power boilers, parts and attachments (over 15 p.s.i. steam working pressure) ( $\$ 18.6$ million), and heat transfer equipment ( $\$ 77.6$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 22 percent of the total industry shipments are represented by plants specializing in product class 34332, Warm air furnaces (except floor and wall), except parts; and 30 percent in product class 34336, Other heating equipment (except electric) and parts for nonelectric heating equipment.

Shipments of heating equipment, except electric, by this industry in 1963 represented 81 percent of all shipments of these products ( $\$ 893$ million) by all industries. In 1958 the coverage ratio was 80 percent. Another industry shipping heating equipment, except electric was industry 3585, Refrigeration Machinery, $\$ 69.2$ million.

The production index for the primary products of the industry increased to 116 in 1963 from the 1958 level of 103 . The unit value index for 1963 was 105 compared to 110 in 1958. Both indexes were computed on a basis of $1954=100$.

Inasmuch as the primary products of industry 3433 represent a wide and heterogeneous group of heating equipment products, the establishments in this industry are involved in
a variety of manufacturing processes. Many heating equipment plants are engaged in metal fabricating activities, namely, stamping and forming. In addition, a significant number of the establishments in the industry are engaged in foundry and plate fabricating activities.

Some of the companies operating plants classified in industry 3433 have establishments engaged in the production of allied products such as metal tanks, electric and nonelectric ranges, electric and nonelectric water heaters and other consumer durable items principally in the heating and cooking line.

The establishments of this industry vary greatly in the degree to which they manufacture the components used in the production of heating and cooking equipment. Some manufacturers produce practically all of the component parts and incorporate only such purchased parts as the motor, electrical controls, and blowers. Other manufacturers produce only a small part of the complete unit purchasing most of the components from other manufacturers and limiting their manufacturing activities to assembly operations.

Data are shown in table 6A for "oil burners sold separately." These statistics exclude the quantity and value of oil burners which were both produced and incorporated into other types of heating equipment in the same plant. In these instances the value of the boileror furnace-burner unit includes the value of the oil burner.

Data on shipments of domestic heating stoves, mechanical stokers, oil burners, and furnaces were collected during 1963 by the Bureau of the Census on Annual Form MA-34N, Heating and Cooking Equipment (Except Electric). The product data shown for 1963 in table 6A are from that source.

Data for unit ventilators, unit heaters, and parts for unit heaters and ventilators, and heat transfer coils were collected during 1963 by the Bureau of the Census on a quarterly basis on Form M35H, Fans and Blowers. The product data shown in table 6A were taken from the quarterly survey.

 rather than shipments.

## Standard Notes: - Represents zero. <br> (D) Withheld to avoid disclosing figures for individual companies. <br> (NA) Not available. <br> (X) Not

applicable
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }_{2}^{A}$ revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for $1958-1963$ are not comparable with those for earlier years.
${ }^{3}$ The two industries shown above were a single industry in 1957 and earlier years. They are shown combined so that historical data may be presented.
${ }^{4}$ No comparable figures are available for earlier years.

- Represents zero.
(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{1}$ Includes capital expenditures for plants under construction but not in operation which constitute $\$ 1-\$ 2$ million ofthe total for the industry.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

[^119]
# TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963 

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

## Standard Notes: - Represents zero.

 applicable. n.s.k Not specified by kind.(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not_available.
(X) Not
${ }^{1}$ The quantity data for plumbing fixtures were obtained from Census Quarterly Survey M34E. In this survey it is necessary to combine certain metal fixtures with fixtures made of other materials such as vitreous china, concrete, etc. Accordingly the quantity data do not relate exactly to the value figures shown for enameled iron and metal plumbing fixtures.
${ }^{2}$ Differs from value of shipments of metal plumbing fixtures reported in the Census Quarterly Survey due to different methods of reporting values in the two surveys.
${ }^{3}$ The quantity data for vitreous china plumbing fixtures. were obtained from the Census Quarterly Survey M34E. No separate quantity data for vitreous and semivitreous sinks, laundry trays, and other plumbing fixtures are available since these items were combined, in the quarterly survey, with similar items made of other materials.
${ }^{4}$ Represents vitreous china only. In addition, shipments of $\$ 2,398$ thousand and $\$ 2,236$ thousand were reported for 1963 and 1958 , respectively, for ${ }^{5}$ plumbing fixtures made of glazed earthenware, concrete, and composition.
${ }^{5}$ For 1958, product codes 34320 , 19, 29, 39, and 48 are included with product code 3432098.
${ }^{6}$ Excludes furnace-burner and boiler-burner units, product codes 3433151, 59, 65, 31, 39, and 45. The total number of oil burners including such units is 563,227 in 1963 and 624,888 in 1958.
${ }^{7}$ Conmercial and industrial burners are those with consumption rates of 6 gallon per hour or more.
${ }^{8}$ In 1958, the value of steam or hot water heating elements were included with the value for gas-fired unit heaters.
${ }^{9}$ Conversion stoker-a conversion stoker is a mechanical stoker which may be installed in any of the common types of furraces or boilers.
${ }^{10}$ Integral unit-an integral unit consists of a boiler or furnace, an automatic coal-feeding mechanism, accessories, and usually a metal enclosure, the whole assembly having been designed as a complete, compact and coordinated heating unit.
${ }^{11}$ Parts for unit heaters and unit ventilators are included with other heating equipment, except electric, and parts for other heating equipment, except electric, code 3433698 for 1958.

[^122]TABLE 6C. Product Classes-Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958 to 1963

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishnents. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

Source: Current Industrial Reports Series M34N "Heating and Cooking Equipment."

## TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than \$1 million of the individual product classes are listed in footnote 1 .

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. applicable. n.s.k. Not specified by kind.

## (NA) Not available.

## table 7A. Materials by Kind: 1963 and 1958-Continued

${ }^{1}$ Data are not available for castings produced and consumed in the same establishment except for iron castings which totaled 187,541 short tons in 1963 and 211,467 short tons in 1958.
${ }^{2}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{3}$ For 1963, data for aluminum and aluminum-base alloy, sheet, plate, and foil, are included with "All other aluminum mill shapes and forms." ${ }^{4}$ No data are available for castings produced and consumed in the same establishment
${ }^{5}$ No data are available for 1963 on the quantities of electric motors and generators produced and consumed in the same establishment. In 1958 , there were 119,909 units of code 362115, other fractional horsepower electric motors produced and consumed in the same establishment.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

| Electric motors, total..................................................................do.... | 125 | 61 | 183 |
| Driven by purchased energy.........................................................d. ${ }^{\text {do.... }}$ | 110 | 61 | 183 |
| Driven by energy generated at establishment......................................do.... | 14 | - | - |
| Aggregate horsepower per 100 production workers............................................ | 1,740 | 625 | 686 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
(Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry special ization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available

## table 9. Establishments, Production Workers, and Man-Hours for Selected Metalworking Operations: 1963

## table 9. Establishments, Production Workers, and Man-Hours for Selected Metalworking Operations: 1963-Continued

Footnotes for Table9-34B

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production worker employment on the last line of the table below.

| Intem |
| :--- |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
${ }^{\text {These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the }}$ establishment.

## FABRICATED STRUCTURAL METAL PRODUCTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3441-Fabricated Structural Steel<br>3442-Metal Doors, Sash, Frames, Molding, and Trim<br>3443-Fabricated Plate Work (Boiler Shops)<br>3444-Sheet Metal Work<br>3446-Architectural and Ornamental Metal Work<br>3449-Miscellaneous Metal Work

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3441—FABRICATED STRUCTURAL STEEL

This industry comprises establishments primarily engaged in manufacturing fabricated iron and steel or other metal for structural purposes, for bridges, buildings, and sections for ships, boats, and barges. Establishments primarily engaged in manufacturing metal doors, sash, frames, molding, and trim are classified in industry 3442; and fabrication work done by construction contractors at the site of construction is classified in construction industries. For a detailed list of products of industry 3441 , refer to table 6A, product codes 3441121 to 3441398 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Fabricated Structural Steel Industry in 1963 totaled $\$ 1,916$ million. This amount included shipments of fabricated structural steel (primary products) valued at $\$ 1,432$ million, shipments of other products (secondary products) valued at $\$ 237$ million, and miscellaneous receipts (mainly receipts for resales) at $\$ 247$ million.

This industry's shipments of fabricated structural steel in 1963 represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 included miscellaneous metal building materials ( $\$ 57$ million) and ornamental and structural metal work ( $\$ 31$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 69 percent of the total industry shipments are represented by plants specializing in fabricated structural metal for buildings.

Shipments of fabricated structural steel by this industry in 1963 represented 89 percent of all shipments of these products ( $\$ 1,604$ million) by all industries. In 1958 the coverage ratio was 91 percent. Other industries shipping fabricated structural steel included industry 3443, Boiler Shops, \$32million; and industry 3444, Sheet Metal Work, $\$ 12$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product class of industry 3441 , other fabricated structural metal, 77 percent.
The production index for the primary products of the industry increased to 119 in 1963 from the 1958 level of 114. The unit value index for 1963 was 120 compared to 126 in 1958. Both indexes were computed on a basis of $1954=100$.

3442--METAL DOORS, SASH, FRAMES, MOLDING, AND TRIM
This industry comprises establishments primarily engaged in manufacturing ferrous and nonferrous metal and metal covered doors and sash, window and door frames and screens, molding, and trim. For a detailed list of products of industry 3442 , refer to table 6A, product codes 3442113 to 3442551 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal Doors, Sash and Trim Industry in 1963 totaled $\$ 1,254$ million. This amount included shipments of metal doors, sash and trim (primary products), valued at $\$ 1,046$ million, shipments of other products (secondary products) valued at $\$ 136$ million, and miscellaneous receipts (mainly receipts for resales) at $\$ 72$ million.

This industry's shipments of metal doors, sash, frames, and molding and trim in 1963 represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included miscellaneous metal building materials ( $\$ 32$ million) and sheet metal, roofing, drainage and siding equipment ( $\$ 16$ million).

Shipments of metal doors, sash and trim by this industry in 1963 represented 94 percent of all shipments of these products ( $\$ 1,107$ million) by all industries. In 1958 the coverage ratio was 93 percent. Other industries shipping metal doors, sash and trim included industry 3441, Fabricated Structural Metal, \$11 million; and industry 3449, Miscellaneous Metal Work, $\$ 7$ million.

The production index for the primary products of the industry increased to 158 in 1963 from the 1958 level of 146 . The unit value index for 1963 was 94 compared to 99 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3443-FABRICATED PLATE WORK (BOILER SHOPS)

This industry comprises establishments primarily engaged in manufacturing power and marine boilers, pressure and nonpressure tanks, processing and storage vessels, heat exchangers, weldments and similar products, by the process of cutting, forming and joining metal plates, shapes, bars, sheet, pipe mill products and tubing to custom or standard design for factory of field assembly. Establishments primarily engaged in
manufacturing nonelectric heating apparatus other than power boilers are classified in industry 3433, and household cooking apparatus in industry 3631. For a detailed list of products of industry 3443, refer to table 6A, product codes 3443111 to 3443959.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Boiler Shops Industry in 1963 totaled $\$ 1,623$ million. This amount included shipments of boiler shop products (primary products), valued at $\$ 1,311$ million, shipments of other products (secondary products) valued at $\$ 168$ million, and miscellaneous receipts (largely receipts for resales) at $\$ 144$ million.

This industry's shipments of boiler shop products in 1963 represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was also 89 percent. Secondary products shipped by this industry in 1963 included fabricated structural metal for buildings ( $\$ 21$ million), and general industrial machinery and equipment, n.e.c. (\$12 million).

Shipments of boiler shop products by this industry in 1963 represented 83 percent of all shipments of these products ( $\$ 1,581$ million) by all industries. In 1958 the coverage ratio was also 83 percent. Other industries shipping fabricated plate works (boiler shops) included industry 3441, Fabricated Structural Metal, $\$ 45$ million; and industry 3433, Nonelectric Heating Equipment, $\$ 22$ million.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3443 , e.g., heat exchangers and steam condensers, 67 percent; fabricated steel plate, 73 percent; steel power boilers, parts and attachments, 93 percent; gas cylinders, 65 percent; metal tanks and vessels, custom fabricated and field erected, 97 percent.

## 3444-SHEET METAL WORK

This industry comprises establishments primarily engaged in manufacturing sheet metal work for buildings (not including fabrication work done by construction contractors at the place of construction) and manufacturing sheet metal stovepipes, light tanks, etc. For a detailed list of products of industry 3444, refer to table 6A, product codes 344111 to 3444398 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Sheet Metal Work Industry in 1963 totaled $\$ 1,304$ million. This amount included shipments of sheet metal work (primary products) valued at $\$ 1,031$ million, shipments of other products (secondary products) valued at $\$ 139$ million, and miscellaneous receipts (mainly receipts for resales) at $\$ 134$ million.

This industry's shipments of sheet metal work in 1963 represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was also 88 percent. Secondary products shipped by this industry in 1963 included fabricated structural metal for buildings ( $\$ 11$ million) and metal tanks complete at factory (standard line, nonpressure) ( $\$ 9$ million).

Shipments of sheet metal work by this industry in 1963 represented 78 percent of all shipments of these products ( $\$ 1,325$ million) by all industries. In 1958 the coverage ratio was 82 percent. Other industries shipping sheet metal work included industry 3312, Blast Furnaces and Steel Mills, $\$ 42$ million; and industry 3442, Metal Doors, Sash and Trim, $\$ 32$ million. These shipment totals do not take into account the volume of
sheet metal work performed by nonmanufacturing establishments, for example, the production of heating and ventilating ducts by plumbing and heating contractors, the production of skylights by roofing contractors, etc.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3444 , e.g., sheet metal roofing, siding, and drainage equipment, 62 percent.

## 3446-ARCHITECTURAL AND ORNAMENTAL METAL WORK

This industry comprises establishments primarily engaged in manufacturing architectural and ornamental metal work of ferrous and nonferrous metals, such as stairs and staircases, open steel flooring (grating), fire escapes, grills, railings, and fences and gates except wire. Establishments primarily engaged in manufacturing prefabricated and portable metal buildings and parts, and miscellaneous metal work are classified in industry 3449 . For a detailed list of products of industry 3446 , refer to table 6A, product codes 3446011 to 3446041 .

Both the code number and content for this industry for 1963 were changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is that architectural and ornamental works which were formally included as part of industry 3449 now comprise this new industry.

Value of shipments and other receipts of the Structural Metal Work Industry in 1963 totaled $\$ 206$ million. This amount included shipments of architectural and ornamental metal work (primary products) valued at $\$ 219$ million, shipments of other products (secondary products) valued at $\$ 36$ million, and miscellaneous receipts (mainly receipts for resales) at $\$ 14$ million.

This industry's shipments of architectural and ornamental metal work in 1963 represented 86 percent of its total product shipments. Secondary products shipped by this industry in 1963 included fabricated steel plate ( $\$ 4$ million) and other fabricated structural metal ( $\$ 2$ million).

Shipments of architectural and ornamental metal work by this industry in 1963 represented 71 percent of all shipments of these products ( $\$ 306$ million) by all industries. Other industries shipping architectural and ornamental metal work consisted mainly of industry 3441, Fabricated Structural Metal, $\$ 31$ million; and industry 3449, Miscellaneous Metal Work, N.E.C., $\$ 17$ million.

## 3449-MISCELLANEOUS METAL WORK

This industry comprises establishments primarily engaged in manufacturing miscellaneous ferrous and nonferrous metal work, such as prefabricated and portable metal buildings and parts, metal plaster bases, fabricated bar joists and concrete reinforcing bars, and prefabricated exterior metal panels. For a detailed list of products of industry 3449 , refer to table 6A, product codes 3449211 to 3449379 .

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been significantly changed from the classification system used in 1958. The change in the composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, results from the separation of architectural and ornamental work as a separate industry. Such establishments were previously part of this industry.

Value of shipments and other receipts of the Miscellaneous Metal Work Industry in 1963 totaled $\$ 704$ million. This amount included shipments of miscellaneous metal work (primary products) valued at $\$ 542$ million, shipments of other products (secondary products) valued at $\$ 68$ million, and miscellaneous receipts (mainly receipts for resales) at $\$ 92$ million.

This industry's shipments of miscellaneous metal work in 1963 represented 89 percent of its total product shipments. Secondary products shipped by this industry in 1963 included ornamental and structural metal work ( $\$ 17$ million) and fabricated structural metal for buildings ( $\$ 10$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 63 percent of the total industry shipments are represented by plants specializing in product class 34493 , miscellaneous metal building materials and curtain wall.

Shipments of miscellaneous metal work by this industry in 1963 represented 68 percent of all shipments of these products ( $\$ 793$ million) by all industries. Other industries shipping miscellaneous metal work included industry 3312, blast furnaces and steel mills, $\$ 90$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3449 , prefabricated and portable metal buildings, 81 percent; 34493, miscellaneous metal building materials, 59 percent.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Includes data for Alaska and Hawaii.
${ }^{3}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry is not conparable. The 1957 and earlier figures are on the old SIC definition of the industry.

Excludes data for Alaska and Hawaii. Number of "All Employees" in these two States was between 100 and 249.
${ }^{5}$ The figures for 1947 have been revised for comparability with the figures for 1951-1958 by including data for establishments primarily engaged in the manufacture of "Metal storm doors and sash." Value added by manufacture for 1947 on a basis comparable with 1939 , 1949 and 1950 , which have not been revised, was \$117.6 million.
${ }^{6}$ The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with earlier years was $\$ 29.2$ million.
${ }^{7}$ "Boiler shop products" was formerly a part of the discontinued industry "Foundry and machine-shop products, n.e.c." Separate figures for earlier years are, therefore, not available.
${ }^{8}$ Data for Alaska and Hawaii are not included.
${ }^{9}$ Figures for 1929 and earlier years do not include data for sheetmetal dairymen's supplies, classified for these years in the discontinued industry Dairymen's supplies, etc."
${ }^{10}$ "Sheetmetal work" was formerly a part of the discontinued industry "Tinsmithing, coppersmithing, and sheet iron working." Separate figures for 1899 are, therefore, not available.
${ }^{11}$ Industry 3446 was not a separate industry in the 1958 Census of Manufactures but was part of SIC 3449, Miscellaneous Metal Work, N.E.C. However, data were published in 1958 for plants classified in SIC 3449 specializing in the production of ornamental and structural metal work. This is the source of the separate data for industries 3446 and 3449 . In like manner, data were published in 1954 for plants classified in SIC 3441 (1945 edi tion) specializing in those products now classified in industries 3446 and 3449 .
${ }^{12}$ For 1963 , a sizeable number of small establishments (under 20 employees) may have been misclassified in industry 3449, Miscellaneous Metal Work, because of insufficient product information. Although this has a significant effect on the number of establishments for this industry it has a very small effect on any of the other statistics, i.e., number of employees, salaries and wages, value added, etc. It is estimated that the effect on
these principal statistics is less than 3 percent.
${ }^{13}$ Prior to 1963 "Architectural Metal Work" and "Miscellaneous Metal Work" constituted a single industry. Combined data for these two industries were obtained for 1958-1962.

TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958

(D) Withheld to avoid disclosing figures for individual companies.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3441, Fabricated Structural Steel: New England-New Hampshire, 2 (20-99); Vermont, 3 (100-249); West North Central-North Dakota, 2 (100-249); South Dakota, 2 (100-249); South Atlantic—Delaware, 1 (1-19); District of Columbia, 2 (20-99); West Virginia, 9 (500-999); Mountain-Wyoming, 1 (1-19); New Mexico, 3 (20-99); Nevada, 3 (20-99); Pacific-Alaska, 1 (20-99); Hawaii, 4 (100-249).
SIC 3442, Metal Doors, Sash, and Trim: West North Central-North Dakota, 2 (1-19); South Dakota, 3 (1-19); South Atlantic-Delaware, 5 (20-99); District of Columbia, 3 (1-19); West Virginia, 10 (20-99); Mountain-Montana, 3 (1-19); Idaho, 2 (1-19); New Mexico, 1 (20-99); Arizona, 6 (20-99); Utah, 6 (100-249); Nevada, 2 (1-19); Pacific-Oregon, 15 (250-499); Alaska, 1 (1-19); Hawaii, 2 (20-99).
SIC 3443, Boiler shop products: New England-Maine, 3 (1-19); New Hampshire, 4 (20-99); Vermont, l (1-19); Rhode Island, 7 (20-99); West North Central-North Dakota, 1 (1-19); South Dakota, 4 (20-99); South Atlantic-District of Columbia, 1 (20-99); West Virginia, 4 (20-99); East South Central-Tennessee, 16 ( 4,080 ); Mississippi, 6 ( 1,118 ); Mountain-Montana, 2 (20-99); Idaho, 3 (110); Wyoming, 1 (1-19); New Mexico, 4 (20-99); Arizona, 2 (20-99); Nevada, 1 (1-19); Pacific-Washington, 24 (250-499); Alaska, 2 (1-19).
SIC 3414, Sheet Metal Work: New England-Maine, 7 (20-99); Vermont, 3 (20-99); West North Central-North Dakota, 3 (20-99); South Dakota, 7 (243); South Atlantic-Delaware, 3 (1-19); District of Columbia, 3 (184); South Carolina, 28 (137); Mountain-Montana, 7 (20-99); Idaho, 7 (20-99); Wyoming, 4 (20-99); New Mexico, 4 (20-99); Nevada, 1 (20-99); Pacific-Alaska, 3 (1-19); Hawaii, 3 (20-99).
SIC 3446, Architectural Metal Work: New England-Maine, 1 (1-19); New Hampshire, 3 (1-19); Vermont, I (l-19); Rhode Island, 6 (1-19); West North Central-Iowa, 13 (20-99); South Dakota, 1 (1-19); South Atlantic-Delaware, 6 (20-99); District of Columbia. 6 (20-99); West Virginia. 4 (1-19); North Carolina, 26 (20-99); East South Central-Tennessee, 29 (153); Mississippi, 6 (20-99); West South Central-Arkansas, 10 (20-99); Louisiana, 19 (20-99); Mountain-Montana, 2 (1-19); Idaho, 4 (1-19); New Mexico, 4 (1-19); Arizona, 7 (500-999); Nevada, 3 (20-99); Pacific-Washington, 21 (20-99); Oregon, 9 (20-99); Alaska, l (1-19); Hawaii, l (1-19).
SIC 3449, Miscellaneous Metal Work: New England-Maine, 1 (20-99); New Hampshire; 1 (1-19); Rhode Isiand, 3 (20-99); Connecticut, 4 (20-99); East North Central-Wisconsin, 6 (20-99); West North Central-Iowa, 5 (250-499); South Dakota, 1 (1-19); South Atlantic-Delaware, 1 (20-99); West Virginia, 3 (250-499); South Carolina, 8 (250-499); East South Central-Tennessee, 17 (329); Mississippi, 3 (20-99); Mountain-Idano, 1 (1-19); New Mexico, 4 (20-99); Arizona, 6 (143); Utah, 2 (20-99); Nevada, 1 (20-99); Pacific—Washington, 10 (20-99); Hawaii, 1 (1-19).
${ }^{2}$ This State was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.
${ }^{3}$ Comparable data for 1958 are not available because of revisions in the Standard Industrial classifications (see text for description of this change).

## Note: Detailed figures may not add to the totals because of independent rounding.

- Represents zero. (D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{I}$ Includes capital expenditures of $\$ 1-2$ million for plants under construction but not in operation, the exact amount is withheld to avoid disclosing information for individual companies.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

Note: See table 1, Explanation of terms, for primary product specialization and coverage ratios.
${ }^{1}$ Comparable data for 1958 are not available because of revisions in the Standard Industrial Classification (see text for description of this change).

## table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the miscellaneous receipts. The value of shipments of the primary products of the specified industry
primary products of the industry by all manufacturing industries. The next column(s) shows the
reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown
in separate columns provided that the figures for individual companies are not thereby disclosed.
