## table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Note: Data for 1958 exclude Alaska and Hawaii.

- Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. n.s.k. Not specified by kind.
(X) Not applicable.
${ }^{1}$ For some products value data only were reported by some establishments. In those instances where such values amounted to less than 10 percent of the total value of the product, an estimated quantity figure has been included in the total quantity for the product.
${ }^{2}$ In 1958 "Fabricated structural metal for bridges, not specified by kind" and "Other fabricated structurai metal, not specified by kind" were combined with "Fabricated structural metal for buildings, not specified by kind."
${ }^{3}$ Does not include structural metal fabricated for own use by establishments building ships.
${ }^{4}$ In 1958, metal doors constructed of metals other than iron and steel or aluminum were included with those of aluminum construction when such were collected separately and with those of iron and steel and aluminum construction when such doors were treated as a single product.
${ }^{5}$ This quantity was valued at $\$ 17,915$ thousand. The remaining $\$ 5,807$ thousand was reported without quantity
${ }^{6}$ This quantity was valued at $\$ 17,609$ thousand. The remaining $\$ 6,914$ thousand was reported without quantity.
${ }^{7}$ This quantity was valued at $\$ 148,374$ thousand. The remaining $\$ 22,925$ thousand was reported without quantity.
${ }^{8}$ This quantity was valued at $\$ 111,156$ thousand. The remaining $\$ 12,196$ thousand was reported without quantity.
${ }^{9}$ This quantity was valued at $\$ 4,838$ thousand. The remaining $\$ 767$ thousand was reported without quantity.
10 This quantity was valued at $\$ 33,833$ thousand. The remaining $\$ 7,476$ thousand was reported without quantity.
${ }^{11}$ Data represent thousands of linear feet.
${ }^{12}$ The product class structure for this industry has been revised effective with 1963. Accordingly, totals for selected product classes differ from previously published figures.

131958 data for products 3443200 and 3443400 are not, separately, comparable with data for 1963 . The total for these two products is comparable.
${ }^{14}$ Data differ from related data published in Current Industrial Reports Series M34G, "Steel Power Boilers" because of the following factors:
(a) In survey M34G the data represent new orders whereas Census of Manufactures data represent shipments.
(b) In survey M34G the data relate to boilers of 100 square feet of heating surface and over whereas the Census of Manufactures includes those of under 100 square feet of heating surface.
${ }^{15}$ In 1958, marine boilers were not reported separately from stationary power boilers.
${ }_{16}$ In 1958, product code 3443700 is combined with product code 3443500 .
${ }^{17}$ This quantity was valued at $\$ 30,529$ thousand. The remaining $\$ 5,358$ thousand represents value for which no quantity was reported.
${ }^{18}$ This quantity was valued at $\$ 79,206$ thousand. The remaining $\$ 12,615$ thousand represents value for which no quantity was reported.
${ }^{19}$ This quantity was valued at $\$ 23,843$ thousand. The remaining $\$ 3,675$ thousand represents value for which no quantity was reported.
${ }^{20}$ This quantity was valued at $\$ 12,790$ thousand. The remaining $\$ 1,910$ thousand represents value for which no quantity was reported.
${ }^{21}$ Metal siding of other than steel and aluminum, product code 3444119 is included with metal roofing of other than steel and aluminum, 3444115 .
${ }^{22}$ In 1958, all sheet-metal work, not specified by kind, is included in product code 3444000.
${ }^{23}$ Because of the lack of sufficient product detail on the reports for small establishments in the 1958 Census of Manufactures it was not possible to
effect a precise distinction between fabricated structural iron and steel, not specified by kind (3441000) and miscellaneous metal work, not specified
by kind. Accordingly, the value of such shipments, $\$ 130,111$ thousand, are included in the data for SIC 3441.

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes ( $1954=100)$ |  |
| :---: | :---: | :---: | :---: |

(NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the
basis of a consistency review.
${ }^{1}$ The product class structure has been revised effective with 1963, accordingly, totals for selected product classes differ from previously published figures
${ }_{3}^{2}$ This product class was previously included with product class 34435 .
${ }^{3}$ Product classes 34438 and 34439 were previously a single product class 34436 , Metal tanks and vessels, custom fabricated at the factory.
${ }^{4}$ This product class was previously identified as product class 34491.
${ }^{5}$ This 4 digit product class group previously included product class 34460 , Architectural and ornamental metal work.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Eavipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard
Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ Industry 3446 was part of industry 3449 in the year 1962.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All empioyees |  | Production workers |  |  | Value added by manufacture, adjusted ( $\$ 1,000$ ) | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ |

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of tris undercoverage is shown in terms of production worker employment on the last line of the table below.

| Item | Industry |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3441 | 3442 | 3443 | 3444 | 3446 | 3449 |
| Total number of establishments in the industry........................................... | 1,718 | 1,817 | 1,383 | 3,250 | 1,334 | 697 |
| Number of establishments which reported one or more of the specified operations........ Percent of industry production workers in these establishments........................ | $\begin{array}{r} 866 \\ 70-75 \end{array}$ | $\begin{array}{r} 362 \\ 45-50 \end{array}$ | 637 $70-75$ | 811 $50-55$ | 226 $60-65$ | 169 $60-65$ |
| Number of establishments which reported that "none" of the operations apply. | 250 | 634 | 194 | 710 | 157 | 134 |
| Percent of industry production workers in these establishments.. | 1-5 | 10-15 | 1-5 | 10-15 | 15-20 | 10-15 |
| Percent of industry production workers in establishments which completed metalworking operations inquiry. | 75-80 | 60-65 | 75-80 | 60-65 | 75-80 | 70-75 |

(D) Withheld to avoid disclosing figures for individual companies.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not, as in table 4 , based on total employment in the establishment.

## SCREW MACHINE PRODUCTS, BOLTS, METAL STAMPINGS, AND METAL SERVICES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3451 -Screw Machine Products<br>3452-Bolts, Nuts, Rivets, and Washers<br>3461-Metal Stampings<br>3471 -Electroplating, Plating, Polishing, Anodizing, and Coloring<br>3479-Coating, Engraving, and Allied Services, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3451 -SCREW MACHINE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing automatic or hand screw machine products from rod, bar, or tube stock of metal, fiber, plastics, or other materials. The products of this industry consist of a wide variety of unassembled parts and are usually manufactured on a job or order basis. Establishments primarily engaged in manufacturing standard bolts, nuts, rivets, screws, and other industrial fasteners on headers, threaders, and nut forming machines are classified in industry 3452. For a detailed list of products of industry 3451 , refer to table 6A, product codes 3451012 to 3451098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Screw Machine Products Industry totaled $\$ 589$ million. This amount included shipments of screw machine products (primary products) valued at $\$ 539$ million, shipments of other products (secondary products) valued at $\$ 19$ million, and miscellaneous receipts at $\$ 32$ million.

This industry's shipments of screw machine products represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent. Secondary products shipped by this industry in 1963 included bolts, nuts, and other standard industrial fasteners ( $\$ 4.4$ million), and headed products (produced by cold and hot heading) other than industrial fasteners ( $\$ 2.8$ million).

Shipments of screw machine products by this industry represented 90 percent of all shipments of these products ( $\$ 599$ million) by all industries. In 1958 the coverage ratio was 87 percent. Other industries shipping screw machine products included industry 3452, Bolts, Nuts, Rivets, and Washers, \$21.3 million; and industry 3717, Motor Vehicles and Parts, $\$ 5.6$ million.
Industry 3451 includes establishments producing a wide variety of items such as small machinery parts, etc., on hand operated and automatic screw machines from rod, bar, and tube stock and from castings and forgings. These products are produced almost entirely on a job or order basis. Included are screw machine departments or plants of companies primarily engaged in producing finished end products where such activities could be reported separately. However, in many instances captive screw machine operations were so integrated with other activities that separate reports were not obtained and the entire establishment was classified on the basis of its primary products.
As shown in table 7A, the principal materials consumed by the screw machine products industry are carbon steel bar stock and copper rod, bar, and mechanical wire. These materials, together with the other specific materials listed in table 7A accounted for 63 percent of the total cost of materials consumed by this industry.

## 3452—BOLTS, NUTS, RIVETS, AND WASHERS

This industry comprises establishments primarily engaged in manufacturing bolts, nuts, screws, rivets, washers, formed and threaded wire goods, and special industrial fasteners. Rolling mills engaged in manufacturing similar products are classified in Major Group 33, and establishments primarily engaged in manufacturing screw machine products in industry 3451 . For a detailed list of products of industry 3452 , refer to table 6A, product codes 3452101 to 3452398 .
The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Bolts, Nuts, Rivets, and Washers Industry totaled $\$ 1,218$ million. This amount included shipments of bolts, nuts, rivets, and washers (primary products) valued at $\$ 1,058$ million, shipments of other products (secondary products) valued at $\$ 92$ million, and miscellaneous receipts (mainly resales) at $\$ 68$ million.

This industry's shipments of bolts, nuts, rivets, and washers represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included screw machine products ( $\$ 21.3$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 74 percent of the total industry shipments are represented by plants specializing in product class 34521, Bolts, nuts, and other standard industrial fasteners.

Shipments of bolts, nuts, rivets, and washers by this industry represented 90 percent of all shipments of these products ( $\$ 1,176$ million) by all industries. In 1958 the coverage ratio was 87 percent.

Plants included in industry 3452 in general are engaged in the manufacture of bolts, nuts, screws, and rivets of standard types and sizes on heading, threading, and nut forming machines. These establishments may be also engaged in the production of special industrial fasteners which require special or added operations or the use of special tools and fixtures. These items include bolts, nuts, screws, etc., of nonstandard types and sizes and special fasteners made by stamping and other forming processes. To a lesser extent these plants manufacture standard type bolts, nuts, screws, etc., on automatic and hand operated screw machines.

The selected materials listed in table 7 accounted for 70 percent of the total cost of materials consumed by industry 3452 establishments. Carbon steel bars and wire, the two principal materials consumed, represented 41 percent of the cost of materials used by the bolt, nut, washer, and rivet industry.

The production index for the primary products of the industry increased to 137 in 1963 from the 1958 level of 99 . The unit value index for 1963 was 124 compared to 123 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3461 -METAL STAMPINGS

This industry comprises establishments primarily engaged in manufacturing metal stampings. These establishments generally operate on a job or order basis, manufacturing metal stampings for sale to others or for interplant transfer. Establishments which produce metal stampings for incorporation in end products produced in the same establishment are classified on the basis of the end products. For a detailed list of products of industry 3461, refer to table 6A, product codes 3461111 to 3461898.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Establishments in industry 3461 produce both job stampings and finished end products. Job stampings are made from materials owned by the stamping establishments as well as from materials owned by the customer and processed by the stamping establishments on a contract or commission basis. These stampings are mainly parts which are sold to manufacturers for incorporation into any of a wide variety of products such as refrigerators, agricultural machinery, radio, and television sets. Finished end products manufactured by establishments in this industry include cooking, kitchen, and hospital utensils (including domestic pressure cookers and porcelain enameled utensils), pails, ash cans, garbage cans, perforated metal products, metal commercial and home canning closures, as well as a large variety of miscellaneous items. Table 8 presents selected statistics for establishments classified according to their degree of specialization in the primary products of this industry.

Value of shipments and other receipts of the Metal Stampings Industry totaled $\$ 2,679$ million. This amount included shipments of metal stampings (primary products) valued at $\$ 2,135$ million, shipments of other products (secondary products) valued at $\$ 410$ million, and miscellaneous receipts (mainly resales) at $\$ 134$ million.

This industry's shipments of metal stampings represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 included special dies and tools, die sets, jigs, and fixtures ( $\$ 66$ million), and other small household electric appliances ( $\$ 31$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 27 percent of the total industry shipments are represented by plants specializing in product class 34612 , Job stamping, except automotive; and 31 percent in product class 34613 , Automotive job stampings.

Shipments of metal stampings by this industry represented 86 percent of all shipments of these products ( $\$ 2,484$ million) by all industries. In 1958 the coverage ratio was 87 percent.

This coverage ratio measures only the coverage of this industry in terms of the total measurable output of metal stampings. This output is limited to the value of stampings
(including the specific stamped products which are classified as primary products of this industry) which were produced for sale or for interplant transfer by establishments classified in industry 3461 and by establishments in other industries where these products were produced as secondary products. However, no data are available on the value of stampings produced and used as component parts by establishments classified in other industries. Such a value, if it could be measured, might approximate or even exceed the total value of all stampings produced commercially or for interplant transfer. While no such value figure is available, table 9 for most of the industries within Major Groups 34, 35, 36, and 37, does show the importance of specific metalworking operations including "stamping, blanking, forming, and drawing." These data are based on the number of employees engaged in the operations listed.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3461, e.g., 34614, Stamped and spun hospital utensils and cooking and kitchen household utensils, aluminum, 99 percent; and 34618 , Other stamped and pressed metal end products, 74 percent.
lndustry 3461 includes the stamping departments of establishments primarily engaged in producing fabricated metal products where such stamping activities could be reported separately. However, where captive stamping operations were closely integrated with other activities, such as in the production of household appliances, farm equipment, motor vehicles, etc., separate reports were not obtained.

Plants in the Metal Stampings Industry commonly perform a number of auxiliary metalworking operations. As shown in table 9 , a considerable number of establishments in this industry maintain tool and die departments and machine shops for the production of stamping and forming dies used in their metal fabricating operations.

The Bureau of the Census collects monthlydata on commercial and home canning closures of metal which are primary products of industry 3461 . These statistics are published in the Current Industrial Reports Series M34H, Closures for Glass Containers and Crowns. The census figures shown in table 6A differ slightly from the sum of the 1963 monthly data for metal closures because a few establishments not included in the monthly survey reported the manufacture of metal closures in the census. In other instances manufacturers covered by the monthly survey submitted revised annual data on their 1963 census reports. The monthly survey M34H also covers closures other than metal. Since these products, such as plastic caps and paper closures, are not primary products of industry 3461 they have been classified in other appropriate industries for the census.

## 3471-ELECTROPLATING, PLATING, POLISHING, ANODIZING, AND COLORING

This industry comprises establishments primarily engaged in all types of electroplating, plating, anodizing, coloring, and finishing of metals and formed products for the trade. Most of the work done in this industry is done on materials owned by others.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Plating and Polishing lndustry totaled $\$ 518$ million. This amount included shipments of electroplating, plating, and polishing (primary products) valued at $\$ 502$ million, shipments of other products (secondary products) valued at $\$ 10$ million, and miscellaneous receipts (mainly resales) at $\$ 5$ million.

3479-COATING, ENGRAVING, AND ALLIED SERVICES, NOT ELSEWHERE CLASSIFIED
This industry comprises establishments primarily engaged in performing the following types of services on metals: (1) enameling, lacquering, and varnishing metal products
for the trade; (2) hot dip galvanizing of mill sheets, plates and bars, castings, and formed products fabricated of iron and steel; in hot dip coating such items with aluminum, lead, or zinc; in retinning cans and utensils; (3) in engraving, chasing and etching jewelry, silverware, notarial and other seals and other metal products for the trade and for job contracting for purposes other than printing; (4) and other metal services, n.e.c. Establishments primarily engaged in electroplating, plating, polishing, anodizing, coloring, and finishing of metals and formed products for the trade are classified in industry 3471 ; and those producing porcelain enameled products in industry 3461. For a detailed list of products of industry 3479 , refer to table 6A, product codes 3479011 to 3479051.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal Coating, Engraving, Etc., Industry totaled $\$ 322$ million. This amount included shipments of coating, engraving, and allied services, n.e.c. (primary products) valued at $\$ 286$ million, shipments of other products (secondary products) valued at $\$ 23$ million, and miscellaneous receipts (mainly resales), at $\$ 13$ million.

Industry 3479 includes establishments engaged primarily in enameling materials owned by others. Establishments primarily engaged in manufacturing vitreous-enameled products from their own materials are included in industry 3461. In addition, industry 3479 covers both vitreous and other types of enameling (such as baked enameling) whereas industry 3461 includes only vitreous-enameling establishments as well as those producing other types of metal stampings.

This industry includes establishments primarily engaged in galvanizing iron and steel sheets or formed products; in coating iron sheets or formed products with aluminum, lead, or zinc; and in retinning cans and utensils. Most of the work done in this industry is done on materials owned by others. Rolling mills engaged in galvanizing, tinning, and other coating are classified in industry 3312, Blast Furnaces and Steel Mills, and establishments primarily engaged in manufacturing galvanized steel wire from purchased metal rods or bars are classified in industry 3315, Steel Wire Drawing, Etc.

Also included are establishments primarily engaged in engraving, chasing, and etching jewelry, silverware, notarial seals, and other metal products for the trade, for purposes other than printing. Establishments primarily engaged in preparing metal lithographic plates and in printing from such media are classified in industry 2752, Printing, Lithographic; establishments primarily engaged in engraving and etching steel and copper plates and in using these plates to print stationery, visiting cards, etc., are included in industry 2753, Engraving and Plate Printing; and establishments primarily engaged in preparing photoengraved plates (halftones and line-cuts) are classified in industry 2793, Photoengraving.

METAL STAMPINGS: SIC 346

table 1. General Statistics: 1963 and Earlier Years

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustrnent is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

## table 1. General Statistics: 1963 and Earlier Years-Continued

## Footnotes for Table 1-34D-Continued

Standard Notes: - Represents zoro.
(D) Withheld to avoid disclosing figures for individual conpanies.
(NA) Not available.
(X) Not applicable.
 basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishnents canvassed in the annuel survey of manu-
 lishonts. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The
 data.
${ }^{2}$ The figures for 1939 are not entirely comparable with those for earlier years. However, the figures for the "Bolts, nuts, washers, and rivets" and the "Screw machine products" industries have been combined so that figures can be shown for the period $1899-1958$.
${ }^{3}$ No comparable figures are available prior to 1939.
${ }^{4}$ In this industry which contains a large number of very small establishments there is a possibility that some of these small establishments have been misclassified as to industry. This would not significantly affect the statistics other than the number of establishments.
${ }^{5}$ Relationships not meaningful because of the predominance of miscellaneous receipts, particularly receipts for contract and commission work on materials owned by others.
${ }^{6}$ No comparable figures are available prior to 1937.

TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958

${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown
below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3451, Screw Machine Products: New England-Maine, 1 (1-19); New Harmshire, 4 (20-99); Vermont, 3 (20-99); Fhode Island, 43 (555); West North Central-Iowa, 7 (100-249); Nebraska, 3 (20-99); Kansas, 3 (20-99); South Atlantic-Maryland, 7 (100-249); West Virginia, 1 (20-99); North Carolina, 2 (1-19); South Carolina, 1 (1-19); Ceorgia, 4 (20-99); Florida, 14 (20-99); East South Central-Tennessee, 5 (100-249); Alabama, 2 (20-99); West South Central-Arkansas, 5 (20-99); Oklahoma, 2 (20-99); Texas, 12 (100-249); Mountain-Arizona, 5 (20-99); Pacific-Washington, 6 (20-99); Oregon, 4 (20-99).
SIC 3452, Bolts, Nuts, Rivets, and Washers: New England-New Hanpshire, 3 (100-249); Vermont, 1 (1-19); Rhode Island, 11 (855); West North Central-Minnesota, 4 (250-499); Iowa, l (20-99); Kansas, l (1-19); South Atlantic-Delaware, l (1-19); Maryland, 2 (100-249); Virginia, 1 (100-249); North Carolina, 2 (1000-2499); Georgia, l (1-19); Florida, 4 (124); East South Central-Kentucky, 1 (100-249); Tennessee, 3 (1-19); Alabama, 6 (500-999) ; Mississippi, 2 (100-249); West South Central-Oklahoma, 5 (100-249); Texas, 11 (250-499); Mountain-Arizona, 1 (1-19); Paciric-Washington, 3 (20-99); Oregon, I (20-99).
SIC 3461, Metal Stampings: New England-Maine, 1 (20-99); New Harpshire, 4 (20-99); Vermont, 2 (1-19); West North Central-North Dakota, 2 (1-19); Nebraska, 5 (20-99); Kansas, 2 (100-249); South Atlantic-Delaware, 2 (250-499); Virginia, 1 (1-19); South Carolina, 4 (549); Florida, 11 (250-499); East South Central-Tennessee, 21 (1630); Mississippi, 7 (828); West South Central-Arkansas, 2 (20-99); Louisiana, 5 (316); 0klahoma, 6 (20-99); Mountain-Wyoming, 1 (20-99); Colorado, 7 (20-99); Arizona, 1 (1-19); Utah, 3 (20-99); Nevada, 1 (1-19); Pacific-Oregon, 13 (20-99).
SIC 3471, Plating and Polishing: New England-Maine, 1 (1-19); New Hampshire, 5 (20-99); Vermont, 3 (1-19); West North Central-Iowa, 16 (100249); Nebraska, 1 (1-19); South Atlantic-Delaware, 2 (1-19); District of Columbia, 5 (20-99); West Virginia, 4 (20-99); South Carolina, 6 (100-249); Georgia, 12 (636); East South Central-Alabama, 16 (100-249); Mississippi, 3 (20-99); West South Central-Arkansas, 5 (100-249); Louisiana, 7 (20-99); Mountain-Montana, 1 (1-19); Idaho, 2 (1-19); New Mexico, 3 (1-19); Utah, 7 (20-99); Nevada, 2 (1-19); PacificHawaii, 5 (20-99).
SIC 3479, Metal Coating, Engraving, Etc.: New England-Maine, 1 (1-19); New Harpshire, 1 (1-19); Connecticut, 29 (250-499); East North CentralOhio, 76 (2124); Indiana, 12 (498); Wisconsin, 26 (449); West North Central-Iowa, 4 (20-99); Missouri, 33 (464); South Dakota, 1 (1-19); Nebraska, 3 (1-19); Kansas, 4 (1-19); South Atlantic—Delaware, 1 (20-99); Virginia, 5 (20-99); North Carolina, 4 (20-99); South Carolina, 2 (20-99); Georgia, 4 (177); East South Central-Alabama, 8 (100-249); Mississippi, 1 (1-19); West South Central-Arkansas, 1 (1-19); Louisiana, 8 (100-249); Mountain-Idaho, 1 (1-19); Wyoming, I (1-19); New Mexico, 1 (1-19); Arizona, 5 (1-19); Utah, 2 (1-19); Pacific-Washington, 15 (20-99); Oregon, 13 (20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958
report showed the number of establishments and total employment (either actual or in size ranges) for such States.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{1}$ Includes capital expenditures of approximately $\$ 1-\$ 2$ million for plants under construction but not in operation.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE: See Introduction for an explanation of terms used.
${ }^{1}$ Specialization ratio is not meaningful because of the predominance of receipts for contract and commission work on materials owned by others. Such receipts are treated as primary products for this industry.
${ }^{2}$ Data on receipts for plating and polishing are not available for establishments classified outside industry 3471.
${ }^{3}$ Data on receipts for metal coating and engraving, etc. are not available for establishments classified outside industry 3479 .

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

#### Abstract

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c) miscellaneous

receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." In. dustries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind
${ }^{1}$ Data are limited to vitreous-enameled products produced from materials owned by the producing company. Data no not include the value of receipts for enameling work done on materials owned by others (enameling of products for the trade).
${ }^{2}$ Data are limited to washing machine parts (sold separately).
${ }^{3}$ "Job stampings" are mainly parts which are sold to other manufactures for incorporation into their own products. Job stampings may be made from materials owned by the establishment or from materials owned by the customer. These figures represent only those stampings made from materials owned by the establishment performing the stamping operation.
${ }^{4}$ Data represent electrical appliance stampings (except refrigeration and washing machines).
${ }^{5}$ Figures for 1963 and 1958 as reported on Monthly Survey M34H, "Closures for Containers", are as follows:

| Product | Unit of measure | Quantity of shipments including interplant transfers |  |
| :---: | :---: | :---: | :---: |
|  |  | 1963 | 1958 |
| Metal commercial closures for glass containers: |  |  |  |
| Aluminum screw thread and lug type. | 1,000 units... | 1,913,304 | 1,973,869 |
| Tin mill screw thread and lug type. | ...do......... | 7,280,227 | 7,776,361 |
| Vacuum types, aluminum and tin.... | .do. |  | \{ 4,301,953 |
| Other types, aluminum and tin mill. | do. | ) 6,553,092 | $\{600,916$ |
| Metal closures for metal and plastic containers. | ...do......... | 1,103,215 | (NA) |
| Crowns. . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . . | 1,000 gross... | 315,771 | 306,765 |
| Home canning closures for glass containers, total. | . . do. ........ | 9,991 | 14,382 |
| Tin mill products: |  |  |  |
| Metal lids......... |  | 7,648 |  |
| Metal screw bands. |  |  | 3,005 |
| Other home canning closures, including zinc screw caps and bands (one-piece), glass lids, shoulder seal jar rings, top seal jar rings and other type home canning closures. | ..do.......... | \} 2,343 | $\left\{\begin{array}{l} \\ 942\end{array}\right.$ |

(NA) Not available.
${ }^{6}$ For 1958 product code 3461849 is combined with product code 3461898.
${ }^{7}$ Value consists principally of receipts for work done on materials owned by others. The value represents only work done by establishments classified in the industry to which the product (service) is primary.

TABLE 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes ( $1954=100)$ |  |
| :---: | :---: | :---: | :---: |
|  |  | Production | Unit value |
| 345-- | Screw machine products, bolts, etc.............. $\begin{array}{r}1963 . . \\ 1958 . .\end{array}$ | $\left(\begin{array}{l}1 \\ (1)\end{array}\right.$ | $\left(\begin{array}{l}1 \\ (1)\end{array}\right.$ |
| 3451- | Screw machine products......................................... $1963 .$. 1958.. | (1) $(1)$ | $\left(\begin{array}{l}1 \\ (1)\end{array}\right.$ |
| 3452- | Bolts, nuts, rivets, and washers ${ }^{2}$.................... $1963 .$. | 137 99 | 124 |
| 34521 | Standard industrial fasteners (bolts, nuts, screws, etc.)................................................ $1963 .$. | 118 95 | 124 123 |
| 3461- | Metal stampings.................................................... . $1963 .$. | $\left(\begin{array}{l}1 \\ (1) \\ \\ \\ \end{array}\right.$ | $\left(\begin{array}{l}1 \\ (1)\end{array}\right.$ |

n.e.c. Not elsewhere classified.
${ }^{1}$ Not shown because comparable quantity data were not obtained for a significant portion of these products.
${ }^{2}$ Adjusted to include special industrial fasteners (product class 34522) and headed products produced by cold and hot heading, other than industrial fasteners (product class 34523).
${ }^{3}$ Not applicable to these service industries-namely, plating and polishing (industry 3471) and metal coating, engraving, etc. (industry 3479).

## table 6c. Product Classes-Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958 to 1963

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (x) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manu-
factures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments.
The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Data for product class 34523, Headed products (produced by cold and hot heading) other than industrial fasteners, are included with product class 34522, Special industrial fasteners (nonstandard).
${ }^{3}$ Represents only work done by establishments classified in the industry to which the product (service) is primary.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

See footnotes at end of table.

## TABLE 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels, and electric energy for 1962 and horsepower of power equipmint as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment -in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963-Continued

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  | Total (number) | $\begin{aligned} & \text { Payroll } \\ & (\$ 1,000) \\ & \hline \end{aligned}$ | Total (number) | Man-hours $(1,000)$ | $\begin{aligned} & \text { Wages } \\ & (\$ 1,000) \end{aligned}$ |  |  |  |  |
| 3461- | METAL STAMPINGS-Continued |  |  |  |  |  |  |  |  |  |  |

# TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1963 

NOTE: Very small establishments were not requested to report their metal working operations, and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item | Industry |  |  |
| :---: | :---: | :---: | :---: |
|  | 3451 | 3452 | 3461 |
| Total number of establishments in the industry | 1,874 | 573 | 2,574 |
| Number of establishments which reported one or more of the specified operations. Percent of industry production workers in these establishments..................... | $\begin{array}{r} 956 \\ 80-85 \end{array}$ | 317 $75-80$ | $\begin{aligned} & 1,442 \\ & 80-85 \end{aligned}$ |
| Number of establishments which reported "none" of the operations apply. Percent of industry production workers in these establishments...... | $\begin{array}{r} 54 \\ 0-5 \end{array}$ | 62 $5-10$ | 93 $0-5$ |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry. | 85-90 | 80-85 | 80-85 |

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.
${ }^{2}$ Industry 3451 is composed of establishments primarily engaged in producing screw machine products. However, only 860 of the 1,874 establishments classified in the industry reported such operations. Most of the remaining establishments in the industry, consisting of small plants with fewer than 5 employees, reported on"short-form" schedules which did not include a metalworking operations inquiry. In addition, there is evidence that some of the establishments with 5 to 20 employees did not answer this inquiry. Also, some establishments in this industry probably have no automatic screw machines but are limited to hand-operated screw machines.
${ }^{3}$ Since industry 3461 is composed of establishments primarily engaged in producing metal stanpings, all establishments classified in the industry should have reported stamping, blanking and forming operations. However, only 1,328 of the $\mid 2,574$ establishments classified in the industry reported such operations; 93 establishments reported no metalworking operations; and the remainder, consisting mainly of small plants with fewer than 5 employees reported on "short-form" schedules which did not include a metalworking_operation inquiry. In addition, there is evidence that many of the establishments with 5 to 49 employees did not answer this inquiry.

## FABRICATED METAL PRODUCTS, N.E.C.

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SlC Code and Title<br>3481-Miscellaneous Fabricated Wire Products<br>3491 -Metal Shipping Barrels, Drums, Kegs, and Pails<br>3492-Safes and Vaults<br>3493-Steel Springs<br>3494-Valves and Pipe Fittings, Except Plumbers' Brass Goods<br>3496-Collapsible Tubes<br>3497-Metal Foil and Leaf<br>3498-Fabricated Pipe and Fabricated Pipe Fittings<br>3499-Fabricated Metal Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3481 -MISCELLANEOUS FABRICATED WIRE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing miscellaneous fabricated wire products from purchased wire. Rolling mills engaged in manufacturing wire products are classified in Major Group 33; establishments manufacturing nonferrous wire nails and spikes in industry 3399; those drawing and insulating nonferrous wire in industry 3357; and those assembling wire bedsprings or seats are classified in Major Group 25. For a detailed list of products of industry 3481, refer to table 6A, product codes 3481111 to 3481998 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Fabricated Wire Products, N.E.C., Industry in 1963 totaled $\$ 1,031$ million. This amount included shipments of fabricated wire products (primary products) valued at $\$ 904$ million, shipments of other products (secondary products) valued at $\$ 71$ million, and miscellaneous receipts (mainly receipts for sale of products bought and resold) at $\$ 56$ million.

This industry's shipments of fabricated wire products in 1963 represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included steel springs ( $\$ 14$ million) and metal stampings (\$6 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 15 percent of the total industry shipments are represented by plants specializing in precision mechanical springs; 22 percent in other wire springs; and 32 percent in other fabricated wire products.

Shipments of fabricated wire products, n.e.c., by this industry in 1963 represented 65 percent of all shipments of these products ( $\$ 1,399$ million) by all industries. In 1958 the coverage ratio was 64 percent. Industry 3315, Steel Wire Drawing, Etc., shipped $\$ 186$ million of fabricated wire products.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3481 , e.g., noninsulated ferrous wire rope, etc., 43 percent; precision mechanical springs, 86 percent; other wire springs, 87 percent; and fencing and fence gates, 46 percent.

The production index for the primary products of the industry decreased to 122 in 1963 from the 1958 level of 106 . The unit value index for 1963 was 118 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3491 -METAL SHIPPING BARRELS, DRUMS, KEGS, AND PAILS

This industry comprises establishments primarily engaged in manufacturing ferrous and nonferrous shipping barrels, drums, kegs, and pails. For a detailed list of products of industry 3491 , refer to table 6A, product codes 3491111 to 3491331.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal Barrels, Drums, and Pails Industry in 1963 totaled $\$ 303$ million. This amount included shipments of metal barrels, drums, kegs, and pails (primary products) valued at $\$ 275$ million, shipments of other products (secondary products) valued at $\$ 23$ million, and miscellaneous receipts (mainly receipts for sale of products bought and resold) at $\$ 6$ million.

This industry's shipments of metal barrels, drums, kegs, and pails in 1963 represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was also 92 percent. Secondary products shipped by this industry in 1963 included metal cans (\$7 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 72 percent of the total industry shipments are represented by plants specializing in steel shipping barrels and drums.

Shipments of metal barrels, drums, kegs, and pails by this industry in 1963 represented 86 percent of all shipments of these products ( $\$ 318$ million) by all industries. In 1958 the coverage ratio was also 86 percent. Other industries shipping metal barrels, drums, kegs, and pails included industry 3411 , Metal Cans, $\$ 11.7$ million; and industry 3461 , Metal Stampings, $\$ 7.3$ million.

The production index for the primary products of the industry increased to 110 in 1963 from the 1958 level of 102 . The unit value index for 1963 was 132 compared to 121 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3492-SAFES AND VAULTS

This industry comprises establishments primarily engaged in manufacturing fire or burglary resistive steel safes and vaults (except concrete grave vaults-industry 3272 , and metal grave vaults-industry 3988), and similar fire or burglary resistive products. For a detailed list of products of industry 3492, refer to table 6A, product codes 3492013 to 3492098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Safes and Vaults lndustry in 1963 totaled \$78 million.

This industry's shipments of safes and vaults in 1963 represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 82 percent.

Shipments of safes and vaults by this industry in 1963 represented between 90 and 95 percent of all shipments of these products ( $\$ 59$ million) by all industries. ln 1958 the coverage ratio was 97 percent.

## 3493-STEEL SPRINGS

This industry comprises establishments primarily engaged in manufacturing leaf springs, hot wound springs, and coiled flat springs. Establishments primarily engaged in manufacturing wire springs are classified in industry 3481, and rolling mills manufacturing steel springs in industry 3312. For a detailed list of products of industry 3493, refer to table 6A, product codes 3493011 to 3493098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Steel Springs Industry in 1963 totaled $\$ 158$ million. This amount included shipments of steel springs (primary products) valued at $\$ 137$ million, shipments of other products (secondary products) valued at $\$ 14$ million, and miscellaneous receipts at $\$ 7$ million.

This industry's shipments of steel springs in 1963 represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 81 percent. Secondary products shipped by this industry in 1963 included precision mechanical springs ( $\$ 7$ million).

Shipments of steel springs by this industry in 1963 represented 67 percent of all shipments of these products ( $\$ 205$ million) by all industries. In 1958 the coverage ratio was 69 percent. Other industries shipping steel springs included industry 3481, Fabricated Wire Products, N.E.C., $\$ 16$ million.

The production index for the primary products of the industry increased to 124 in 1963 from the 1958 level of 89 . The unit value index for 1963 was 125 compared to 116 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3494-VALVES AND PIPE FITTINGS, EXCEPT PLUMBERS' BRASS GOODS

This industry comprises establishments primarily engaged in manufacturing valves for controlling the flow of liquids or gases in pipes and mains, and for machinery. Establishments primarily engaged in manufacturing faucets, spigots, and similar plumbers' brass goods and fittings are classified in industry 3432. For a detailed list of products of industry 3494, refer to table 6A, product codes 3494111 to 3494498 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Valves and Pipe Fittings Industry in 1963 totaled $\$ 1,589$ million. This amount included shipments of valves and pipe fittings (primary products) valued at $\$ 1,300$ million, shipments of other products (secondary products) valued at $\$ 214$ million, and miscellaneous receipts (mainly receipts for products bought and resold) at $\$ 74$ million.

This industry's shipments of valves and pipe fittings in 1963 represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent. Secondary products shipped by this industry in 1963 included aircraft engine parts and accessories ( $\$ 13$ million) and other refrigeration and air-conditioning equipment ( $\$ 12$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 46 percent of the total industry shipments are represented by plants specializing in metal valves for piping systems and 31 percent in metal fittings and unions for piping systems.

Shipments of valves and pipe fittings by this industry in 1963 represented 85 percent of all shipments of these products ( $\$ 1,525$ million) by all industries. In 1958 the coverage ratio was 88 percent. Other industries shipping valves and pipe fittings included industry 3561, Pumps and Compressors, $\$ 34$ million; and industry 3533, Oil Field Machinery, \$5 million.

The production index for the primary products of the industry increased to 129 in 1963 from the 1958 level of 104 . The unit value index for 1963 was 127 compared to 125 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3496-COLLAPSIBLE TUBES

This industry comprises establishments primarily engaged in manufacturing collapsible tubes defined as cylindrical containers for viscous products, made of thin flexible metal, usually of tin, tin-lined lead, lead, lead-tin alloy, or aluminum, with integral shoulder and neck, provided with an appropriate size opening in the throat, and usually with a screw cap made of plastic material for closure over the neck. For a detailed list of products of industry 3496, refer to table 6A, product codes 3496011 to 3496029.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Collapsible Tubes Industry in 1963 totaled $\$ 51$ million. This amount included shipments of collapsible tubes (primary products) valued at $\$ 44$ million, shipments of other products (secondary products) valued at $\$ 6$ million, and miscellaneous receipts (mainly receipts for products bought and resold) at $\$ 1$ million.

This industry's shipments of collapsible tubes in 1963 represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent.

Shipments of collapsible tubes by this industry in 1963 represented 100 percent of all shipments of these products ( $\$ 44$ million) by all industries. In 1958 the coverage ratio was also 100 percent.

The production index for the primary products of the industry increased to 115 in 1963 from the 1958 level of 98 . The unit value index for 1963 was 112 compared to 111 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3497-METAL FOIL AND LEAF

This industry comprises establishments primarily engaged in manufacturing gold, silver, tin, and other metal foil (including converted metal foil) and leaf. Establishments primarily engaged in manufacturing plain aluminum foil are classified in industry 3352. For a detailed list of products of industry 3497, refer to table 6A, product codes 3497023 to 3497057 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal Foil and Leaf Industry in 1963 totaled $\$ 181$ million. This amount included shipments of metal foil and leaf (primary products) valued at $\$ 147$ million, shipments of other products (secondary products) valued at $\$ 29$ million, and miscellaneous receipts at $\$ 5$ million.

This industry's shipments of metal foil and leaf in 1963 represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. Secondary products shipped by this industry in 1963 included miscellaneous gravure printing (\$4 million).

Shipments of metal foil and leaf by this industry in 1963 represented 45 percent of all shipments of these products ( $\$ 330$ million) by all industries. In 1958 the coverage ratio was 52 percent. Other industries shipping metal foil and leaf consisted mainly of industry 3352, Aluminum Rolling and Drawing, $\$ 135$ million; and industry 2641, Paper Coating and Glazing, $\$ 18$ million.

The production index for the primary products of the industry increased to 177 in 1963 from the 1958 level of 84 . The unit value index for 1963 was 131 compared to 128 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3498-FABRICATED PIPE AND FABRICATED PIPE FITTINGS

This industry comprises establishments primarily engaged in fabricating pipe and pipe fittings from purchased pipe, by cutting, threading, bending, etc. Establishments primarily engaged in manufacturing cast iron pipe and fittings, including cast and forged pipe fittings which have been machined and threaded, are classified in industry 3321 ; welded and heavy riveted pipe in industry 3317; and seamless steel pipe in industry 3317. Establishments primarily engaged in manufacturing products, such as bannisters. railings, and grilles from pipe are classified in industry 3446. For a detailed list of products of industry 3498 , refer to table 6A, product codes 3498013 to 3498019 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Fabricated Pipe and Fittings Industry in 1963 totaled $\$ 306$ million. This amount included shipments of fabricated pipe and
fittings (primary products) valued at $\$ 260$ million, shipments of other products (secondary products) valued at $\$ 21$ million, and miscellaneous receipts (mainly receipts for products bought and resold) at $\$ 25$ million.

This industry's shipments of fabricated pipe and fittings in 1963 represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 89 percent.

Shipments of fabricated pipe and fittings by this industry in 1963 represented 91 percent of all shipments of these products ( $\$ 287$ million) by all industries. In 1958 the coverage ratio was 93 percent. Other industries shipping fabricated pipe and fittings (primary products) included industry 3494, Valves and Pipe Fittings, $\$ 4$ million; and industry 3499, Fabricated Metal Products, N.E.C., $\$ 3$ million.

## 3499-FABRICATED METAL PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing fabricated metal products, not elsewhere classified. Establishments primarily engaged in manufacturing advertising novelties are classified in industry 3993. For a detailed list of products of industry 3499, refer to table 6A, product codes 3499051 to 3499059.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Fabricated Metal Products, N.E.C., Industry in 1963 totaled $\$ 573$ million. This amount included shipments of fabricated metal products, n.e.c. (primary products) valued at $\$ 469$ million, shipments of other products (secondary products) valued at $\$ 60$ million, and miscellaneous receipts (mainly receipts for products bought and resold) at $\$ 44$ million.

This industry's shipments of fabricated metal products in 1963 represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent. Secondary products shipped by this industry in 1963 included wood products, n.e.c. (\$3 million), job stampings, except automotive ( $\$ 2$ million), and fabricated pipe and fittings (\$3 million).

Shipments of fabricated metal products, n.e.c., by this industry in 1963 represented 62 percent of all shipments of these products ( $\$ 753$ million) by all industries. In 1958 the coverage ratio was also 62 percent. Other industries shipping fabricated metal products included industry 3429, Hardware, N.E.C., $\$ 13$ million; and industry 3461, Metal Stampings, $\$ 12$ million.

FABRICATED WIRE PRODUCTS, N.E.C.: SIC 348

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the l5th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior ol 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Data for Alaska and Hawaii are excluded for years prior to 1958.
${ }^{3}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification, accordingly, the data for 19581963 are not comparable with those for earlier years.
${ }^{4}$ No separate figures are available for prior years.
table 2. General Statistics, by Geographic Areas: 1963 and 1958

## TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

Footnotes for Table 2-34E-Continued

${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3481. Fabricated Wire Products, N.E.C.: New England—Maine, 2 (1-19); New Hampshire, 2 (1-19); Vermont, 2 (1-19); West North Central-North Dakota,

1 (1-19); Nebraska, 6 (20-99); South Atlantic—Delaware, 1 (20-99); Virginia, 3 (164); West Virginia, 1 (20-99); South Carolina, 2 (1-19);
East South Central-Kentucky, 10 (500-999); Mississippi, 8 (250-499); West South Central—Arkansas, 4 (20-99); Louisiana, 5 (20-99); MountainNew Mexico, 1 (1-19); Arizona, 11 (100-249); Utah, 4 (20-99); Pacific-Oregon, 17 (100-249); Hawaii, 2 (20-99).
SIC 3491, Metal Barrels, Drums, and Pails: New England—Massachusetts, 4 (20-99); Connecticut, 2 (20-99); East North Central-Indiana, 1 (100-249); Michigan, 4 (20-99); Wisconsin, 4 (100-249); West North Central-Minnesota, 2 (100-249); Iowa, 2 (20-99); Missouri, 2 (20-99); Kansas, 2 (100-249); South Atlantic-Maryland, 1 (20-99); West Virginia, 4 (20-99); South Carolina, 1 (1-19); Georgia, 4 (20-99); Florida, 2 (20-99); East South CentralTennessee, 1 (20-99); Alabama, 5 (100-249); Mississippi, 2 (1-19); West South Central-Louisiana, 6 (500-999); Oklahoma, 2 (1-19); MountainColorado, 2 (1-19); Pacific-Washington, 1 (1-19); Oregon, 1 (1-19).
SIC 3492, Safes and Vaults: New England—Connecticut, 1 (1-19); Middle Atlantic-New York, 3 (20-99); Pennsylvania, 1 (20-99); East North CentralOhio, 9(2,911); Indiana, 3 (100-249); Illinois, 2 (1-19); South Atlantic-Florida, l (1-19); West South Central-Texas, 2 (20-99); PacificCalifornia, 10 (179).
SIC 3493, Steel Springs: New England-Vermont, l (1-19); Massachusetts, 2 (20-99); Connecticut, 5 (20-99); Middle Atlantic-New Jersey, l (l-19); Pennsylvania, 14 (1,000-2,499); East North Central-Ohio, 7 (742); Indiana, 4 (574); West North Central-Minnesota, 1 (1-19); Iowa, 1 (20-99); Missouri, 3 (20-99); South Atlantic-North Carolina, 1 (1-19); Florida, 1 (1-19); East South Central—Mississippi, 1 (100-249); West South CentralTexas, 6 (101); Pacific-Washington, 3 (20-99) Oregon, 1 (20-99); Hawaii, 1 (1-19).
SIC 3494, Valves and Pipe Fittings: New England—Maine, 2 (20-99); New Hampshire, 1 (100-249); Rhode Island,8(1,000-2,400); West North CentralMinnesota, 5 (645); Nebraska, 2 (250-499); Kansas, 4 (100-249); South Atlantic-Delaware, 2 (100-249); Maryland, 2 (20-99); Virginia, 3 (154); West Virginia, 2 (250-499); North Carolina, 4 (250-499); Georgia, 2 (250-499); Florida, 9 (152); East South Central-Kentucky, 6 (2,037); Tennessee, 6 (1,220); West South Central-Arkansas, 8 (250-499); Louisiana, 2 (500-999); Mountain-Wyoming, 1 (1-19); Colorado, 6 (566); Arizona, 1 (1-19); Utah, 1 (20-99); Pacific-Washington, 4 (1-19); Oregon, 4 (100-249).
SIC 3496, Collapsible Tubes: New England-Rhode Island, 1 (20-99); Connecticut, 1 (500-999); Middle Atlantic-New York, l (1-19); New Jersey, 7 (1,000-2,499);Pennsylvania, 2 (250-499); East North Central—Ohio, l (1-19); Indiana, 1 (20-99); Illinois, 1 (100-249); Michigan, 2 (20-99); Wisconsin,
1 (1-19); West North Central-Iowa, 1 (20-99); South Atlantic-West Virginia, l (500-999); East South Central-Kentucky, l (100-249); West South Central-Arkansas, 1 (100-249); Pacific-California, 2 (20-99).
SIC 3497, Metal Foil and Leaf: New England-Vermont, 2 (20-99); Massachusetts, 3 (116); Middle Atlantic-New York, 13 (250-499); Pennsylvania, 2 (20-99); East North Central-Ohio, 3 (500-999); Indiana, l (100-249); Illinois, 8 (577); West North Central-Missouri, I (250-499); South Atlantic-Maryland, 1 (20-99); Virginia, 2 (500-999); North Carolina, 1 (20-99); East South Central—Kentucky, 4 (500-999); West South Central-Texas, 1 (l-19); PacificWashington, 1 (1-19); California, 7 (500-999).
SIC 3498, Fabricated Pipes and Fittings: New England—Maine, 2 (20-99); Rhode Island, 1 (20-99); Connecticut, 8 (100-249); East North Central-Indiana, 6 (231); Wisconsin, ll (247); West North Central—Minnesota, l (20-99); Iowa, 1 (1-19); Nebraska, l (l-19); Kansas, 2 (20-99); South Atlantic-Delaware, 2 (100-249); Maryland, 2 (20-99); Virginia, 2 (1-19); West Virginia, l (250-499); North Carolina, 4 (202); South Carolina, 1 (20-99); Georgia, 2 (20-99); East South Central-Tennessee, 2 (20-99); Alabama, 1 (20-99); Mississippi, 3 (1-19); West South Central-Iouisiana, 2 (l-19); Oklahoma, 3 (20-99); Mountain-Colorado, 1 (20-99); New Mexico, 1 (1-19); Arizona, 1 (1-19); Pacific-Washington, 5 (20-99); Oregon, 6 (250-499).
SIC 3499, Fabricated Metal Products, N.E.C.: New England-Maine, 2 (20-99); New Hampshire, 3 (20-99); Vermont, 1 (1-19); West North Central-Missouri, 9 29 (814); North Dakota, 1 (1-19); South Dakota, 2 (1-19); Nebraska, 3 (1-19); Kansas, 12 (20-99); South Atlantic-District of Columbia, 1 (1-19); Virginia, 9 (20-99); West Virginia, 5 (163); North Carolina, 6 (122); South Carolina, 6 (100-249); East South Central-Tennessee, 5 (20-99); Alabama, 5 (20-99); Mississippi, l (1-19); West South Central_Arkansas, 7 (318); Oklahoma, 12 (120); Mountain Montana, 2 (1-19); Idaho, 1 (1-19); Wyoming, 2 (1-19); New Mexico, 1 (1-19); Arizona, 6 (100-249); Utah, 3 (1-19); Nevada, 2 (1-19); Pacific-Washington, 9 (20-99); Oregon, 12 (20-99); Hawaii, 1 (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of iractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terns used.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufac-
turing establishments.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | Total $(\$ 1,000)$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\frac{\mathrm{Col} \cdot \mathrm{~B}}{\mathrm{Col} \cdot \mathrm{~B}+\mathrm{C}}$ <br> (percent) | Total, made in all industries $(\$ 1,000)$ | Made in this industry <br> $(\$ 1,000)$ | Made in other industries $(\$ 1,000)$ | Coverage ratio <br> Col. B <br> Col. F <br> (percent) |
|  |  | A | B | C | D | E | F | G | H | 1 |

NOTE: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable n.e.c. Not elsewhere classified
${ }_{1}$ Included in this industry are selected fabricated wire products (see footnotes $3,7,10$, and 12 in table 5 ) which are also primary to industry 3315 , Steel Wire Drawing, Etc. A coverage ratio computed on the basis of including both industries to which these products are primary would total 79 percent; 65 percent by industry 3481 and 14 percent by industry 3315. The remaining 21 percent was shipped by establishments in other industries, including industry 3312, Blast Furnaces and Steel Mills, and industry 3357, Nonferrous Wire Drawing, Etc.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

[^141]TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

- Represents zero. plicable
n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes values for those industries for which separate data could not be published without revealing the operations of individual companies.
${ }^{2}$ Includes total for product class 33151, Noninsulated ferrous wire rope, cable, and strand, produced from wire draw in the same establishment, which is primary to industry 3315.
${ }^{3}$ Includes shipments totaling over $\$ 2$ million for industry 3352, Aluminum Rolling and Drawing, which is withheld to avoid disclosing individual company figures.
${ }^{4}$ Includes shipments totaling over $\$ 2$ million which is withheld to avoid disclosing individual company figures for industry 3315 , Steel Wire Drawing, Ftc., and industry 3316, Cold Finishing of Steel Shapes.
${ }^{5}$ Includes shipments totaling over $\$ 2$ million which is withheld to avoid disclosing individual company figures for industry 3315 , Steel Wire Drawing, etc., and industry 3429, Hardware, N.E.C.
${ }_{7}{ }^{6}$ Includes total for product class 33157 , Wire cloth and other woven wire products, made in wire drawing plants which is primary to industry 3315.
${ }^{7}$ Includes shipments totaling over $\$ 2$ million which is withheld to avoid disclosing individual company figures for industry 3357 , Nonferrous Wire Drawing, Etc., and industry 3548, Metal Working Machinery, N.E.C.
${ }^{8}$ Includes total for product class 33575 , Nonferrous wire cloth and other woven wire products, made in nonferrous wire drawing plants which is primary to industry 3357.

Includes $\$ 2$ million shipped by industry 3442 , Metal Doors, Sash, and Trim.
${ }^{10}$ Includes total for product class 33156 , Fencing and fence gates, made in wire drawing plants which is primary to industry 3315.
${ }^{11}$ Includes total for product class 33159 , Other fabricated ferrous wire products, except springs made in wire drawing plants which is primary to industry 3315
${ }^{12}$ Includes $\$ 2$ million shipped by industry 3/44, Fabricated Structural Steel; $\$ 6$ million shipped by industry 3/49, Miscellaneous Metal Work, N.E.C.; and $\$ 3$ million shipped by industry 3461, Metal Stampings. In addition shipments of over $\$ 2$ million were reported by industry 2541 , Metal Household Furniture, and industry 3554, Paper Industries Machinery, which are withheld to avoid disclosing individual company figures.
${ }^{13}$ Includes $\$ 11.7$ million shipped by industry 34ll, Metal Cans and $\$ 7.3$ million shipped by industry 3461 , Metal Stampings.
${ }^{14}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies:
3461, Metal Stampings, and 3639, Household Appliances, N.E.C.
${ }^{13}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3461. Metal Stanqings and 3729, Aircraft Equipment, N.E.C.
${ }^{16}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 26551 , Paperboard and other fiber drums, and 34412, Fabricated structural iron and steel for bridges.
${ }^{17}$ Includes $\$ 15.8$ million shipped by industry 3481, Fabricated Wire Products, N.E.C. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3391, Iron and Steel Forgings, and 3717, Motor Vehicles and Parts.

#### Abstract

Footnotes for Table 5B-34E--Continued ${ }^{18}$ Includes $\$ 3.2$ million shipped by industry 3432, Plumbing Fittings, Brass Goods. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3392, Nonferrous Forgings; 3433, Heating Equipment, Except Electric; 3443, Boiler Shop Products; 3511, Steam Engines and Turbines; 3599, Miscellaneous Machinery; and 3717, Motor Vehicles and Parts. ${ }^{19}$ Includes $\$ 3.2$ million shipped by industry 3432, Plumbing Fittings, Brass Goods, and $\$ 4.0$ million shipped by industry 3433, Heating Equipment, Except Electric; and industry 3561, Pumps and Compressors had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies. ${ }^{2}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 33911 , Drop, upset and press steel forgings (closed die) forgings; 33919, Open die or smith forgings (open frame hanmer or press); 33920, Nonferrous forgings; 34443, Other sheet metal work; 35227, Lawn mowers and parts; 35323, All other mining machinery (complete units); 35332, Other oil and gas-field drilling machinery and equipment; 35483, Acetylene welding and cutting apparatus; 35612, Hydraulic fluid power pumps and motors; 35641, Industrial fans and blowers; 35851, Heat transfer equipment; 35860, Measuring and dispensing pumps; 36220, General industry power circuit devices and controls; 36441 , Pole line and transmission hardware; 36795, other electronic components and accessories, n.e.c., including parts for electronic tubes (except glass blanks); and 37175 , Parts and accessories for passenger cars, trucks, and busses, shipped to motor vehicle manufacturers. ${ }^{21}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 2643, Bags, Except Textile Bags; and 3356, Rolling and Drawing, N.E.C. ${ }^{23}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 264l6, Other coated and processed paper, except wrappers; 26432, Specialty bags and liners; 26510, Folding paperboard boxes and cartons, except ice cream, butter, margarine, frozen food, etc.; and 34141, Sheet, metal roofing and siding, and roof drainage equipment. ${ }^{23}$ In addition, the following industries had shipment which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 2911, Petroleun Refining; 3533, Oil Field Machinery; and 3597, Miscellaneous Machinery. ${ }^{2} 4$ Includes the following produrt classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 34944 , Other metal valves and fittings, except plumbers' brass goods and fittings; and 35690, General industrial machinery, n.e.c. ${ }^{25}$ Includes $\$ 4.1$ million shipped by industry 2499, Wood Products, N.E.C.; \$+.l million shipped by industry 2514, Metal Household Furniture; $\$ 3.7$ million shipped by industry 2542, Metal Partitions and Fixtures; $\$ 2.1$ million shipped by industry 3423, Hand and Edge Tools; \$2.2 million shipped by industry 3442, Metal Doors, Sash, and Trim; $\$ 2.9$ million shipped by industry 3443, Boiler Shop Products; \$6.0 million shipped by industry 3494, Valves and Pipe Fittings; $\$ 3.8$ million shipped by industry 3559, Special Industry Machines, N.E.C.; $\$ 4.8$ million shipped by industry 3585 , Refrigeration Machinery; $\$ 4.4$ million shipped by industry 3644, Noncurrent Carrying Devices; $\$ 3.2$ million shipped by industry 3717 , Motor Vehicles and Parts; and $\$ 6.6$ million shipped by industry 3729, Aircraft Equipment, N.E.C. In addition the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 2515, Mattresses and Bedsprings; 264l, Paper Coating and Glazing; 332l, Gray Iron Foundries; 3323, Steel Foundries; 3425, Hand Saws and Saw Blades; 3522, Farm Machinery and Equipment; 3531, Construction Machinery; 3552, Textile Machinery; 3562, Bell and Roller Bearings; 3631, Household Cooking Equipment; 3639, Household Appliances, N.E.C.; 3642, Lighting Fixtures; 3643, Current Carrying Devices; 3742, Railroad and Street Cars; and 3843, Dantal Equipment and Supplies. ${ }^{2}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual cormany figures: 25144 , Other metal household furniture; 35451, Small cutting tools for mashine tools and metal working machinery; 35690, General industrial machinery, n.e.c.; and 39142, Flatware.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. plicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ This quantity was valued at $\$ 61,700$ thousand. The remaining $\$ 14,844$ thousand was reported without quantity.
${ }^{2}$ This quantity was valued at $\$ 10,428$ thousand. The remaining $\$ 3,254$ thousand was reported without quantity.
${ }^{3}$ This quantity was valued at $\$ 2,916$ thousand. The remaining $\$ 473$ thousand was reported without quantity.
4 For 1958, data for product code 3481519 , Nonferrous metal insect wire screening, other than copper and copper-base alloy, and aluminum, are included with product code 3481498 , Other wire cloth and woven wire products.

5 For 1958 , data for product code 3481400 , Wire cloth and woven wire products, not specified by kind, include data for product code 3481500 , Nonferrous wire cloth and other woven nonferrous wire products, not specified by kind.
${ }^{6}$ This quantity was valued at $\$ 5,599$ thousand. The remaining $\$ 1,435$ thousand was reported without quantity.
${ }^{7}$ Steel shipping packages, kegs, and pails are defined as single-walled shipping containers with a range of capacity from 1 to 12 gallons inclusive, constructed of steel sheet of 29 gauge and heavier. This definition does not include tin cans (packers' cans, general line cans, and beer cans), terneplate oil containers, fluid milk shipping containers, ice cream cans, gas cylinders, beer barrels, reconditioned barrels and drums, or containers not commercially usuable in the transportation of commodities.
${ }^{8}$ Steel shipping barrels and drums are defined as single-walled cylindrical or bilged shipping containers, with a range of capacity from 12 to 132 gallons, constructed of steel. This definition does not include tin cans (packers cans, general line cans, and beer cans), terneplate oil containers, high and low pressure gas steel cylinders, fluid milk shipping containers, ice cream cans, or containers not commercially usuable in the transportation of commodities.
${ }^{\text {Safes }}$ and chests are shown as fire-resistive or burglary-resistive, depending on the primary purpose for which they are built.
${ }^{10}$ More detailed data are available in Current Industrial Reports Series M26F, "Converted Flexible Packaging Products". There are inconsistencies in classification in these two surveys. These differences will be resolved in the 1964 report in the M26F series.
${ }^{11}$ In 1958 these data are limited to laminated foil made from purchased aluminum foil.
${ }^{12}$ More detailed data on converted aluminum foil are available in Current Industrial Reports Series M34P, "Aluminum Foil Converted". That report contains data on poundages of aluminum foil converted by end use. However, it is not possible to precisely compare the data in this industry with data in the annual Current Industrial Report. Some of the products for which aluminum foil consumption is reported in the annual survey are produced for use by the same company to package a conmodity. In such cases, the converted aluminum foil product is not included in this industry but is included as a portion of the value of the packaged conmodity.
${ }^{13}$ Data for product code 349703 included with product code 3497036 .

 data.
${ }^{2}$ Includes product class 33151 , Noninsulated ferrous wire rope, cable, and strand produced from wire drawn, which is primary to industry 3315.
${ }^{3}$ Includes product class 33157 , Wire cloth and other woven wire products made in wire drawing plants, which is primary to industry 3315 .
${ }^{4}$ Includes product class 33575 , Nonferrous wire cloth and other woven wire products made in nonferrous wire drawing plants, which is primary to industry 3357.

Includes product class 33156 , Fencing and fence gates made in wire drawing plants, which is primary to industry 3315.
${ }^{6}$ Includes product class 33159 , Other fabricated ferrous wire products, except springs made in wire drawing plants, which is primary to industry 3315.
${ }^{7}$ Does not include pipe hangars and pipe supports, for which data is not available.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  |

| 976000 | Materials, containers, supplies, n.s.k. ${ }^{2}$. |  | (x) | 50,813 | (NA) | (NA) |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Does not include tonnages of castings or forgings produced and consumed in the same establishment.
${ }^{2}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not reported and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{3}$ In 1963, 258,392 short tons of iron castings, 6,003 short tons of steel castings, and 122,917 thousand pounds of copper and copper-base alloy castings were produced and consumed in the same establishment. 1963 data for aluminum and aluminum-base alloy castings produced and consumed in the same establishment are not available. The comparable figure for copper and copper-base alloy castings in 1958 is 61, 231 thousand pounds. Data for other types of castings produced and consumed in the same establishment are not available for 1958.

43,934 short tons of forgings were produced and consumed in the same establishment in 1958. The comparable data for 1963 are not available.
${ }^{5}$ Data on total consumption of aluminum foil are available, by end use, in Current Industrial Reports Series M34P, Aluminum Foil Converted. The data in the Current Industrial Report include consumption by all establishments such as foil mills, foil converters, and others including food processing and other establishments converting foil for purposes of packaging a product. Data in this report are limited to establishments classified in the metal foil and leaf industry.

| Aggregate horsepower per 100 production workers. | 535 | 1,637 | 821 | 1,038 | 1,011 | 248 | 1,069 | 975 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard exror associated
 consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable
n.e.c. Not elsewhere classified.
hese size groups are based on the number of production workers in the specified operation. They are not based on total employment of the establishment.

# Machinery, Except Electrical 

35A Engines and turbines and farm machinery and equipment<br>35B Construction, mining, and materials handl ing machinery and equipment<br>35C Metalworking machinery and equipment<br>35D Special industry machinery, except metalworking machinery<br>35E General industrial machinery and equipment<br>35F Office, computing, and accounting machines

35G Service industry machines and machine shops

This major group includes establishments primarily engaged in producing a wide variety of machinery and equipment itemis. The industries included in this major group encompass the whole range of industrial machinery, other than electrical. To a considerable extent, the products fall into the producers' heavy equipment category, are frequently of a complex character, and are produced both to individual order and as standard items. Industries in groups 351 to 358 are defined in terms of end products, and the parts, attachments, and accessories for these items are included in the industry of this end product unless specifically classified elsewhere in the Standard Industrial Classification. The volume of shipments of machinery parts and accessories in some industries constitutes a significant portion of total shipments. These parts producers are generally smaller establishments but there are a large number of them. Group 359, Machine Shops, includes plants producing a broad variety of miscellaneous parts made by job machine shops.

Group 352 includes farm machines and wheeltractors, while group 353 comprises all types of earth-moving equipment, including tracklaying tractors and contractors' off-highway type tractors, mining machinery, and materialshandling equipment. The end products of plants in groups 351 to 356 are usually capital equipment, bought and used, not only by manufacturing companies but also at mines, farms, and in transportation, construction and commerce. Groups 357 and 358 include products for commercial and service use such as measuring and
dispensing pumps, office and store machines, and commercial refrigeration equipment.

Plants primarily engaged in rebuilding machinery or equipment on a factory basis were formerly included in this ma jor group. However, such rebuilding activities are now classified according to the original industry classification of the product being rebuilt. Plants primarily rebuilding automotive parts are included in Major Group 37. Plants primarily rebuilding machine tools, metalworking machinery, and office and store machines are included in the industry of the plants producing the original equipment. Table 6A for each industry will show the industries in which rebuilding activities are included with the volume of such rebuilding.

The individual establishments within Major Group 35 frequently produce products falling into two or more SIC 4 -digit industries. In fact, many of the larger establishments produce a significant amount of products secondary to the industry in which they are classified. These secondary products however, tend to be similar to the primary products of the establishment in the material used in their manufacture, type of labor employed to produce them, and nature of the processes involved in the production line.

Establishments in this group of industries typically maintain machine shops, tool and die rooms, and heat-treating facilities. Frequently the establishment, particularly if it is of some size, will also operate a pattern shop, screwmachine department, and stamping facility. With
greater variation depending upon the particular 4 -digit industry, the physical plant may contain a foundry, forge shop, plate fabrication, electroplating, galvanizing, or other metal processing department. Data on the number of establishments engaged in a selected number of the more important of these operations and the number of employees working in the operations are shown in table 9 for each of the 4 -digit industries in this major group. The metalworking operations shown in that table do not represent, of course, a complete list or, for many metal fabricating industries, even those which are most important. There are a number of significantactivities such as assembly, subassembly, finishing, etc., which were covered only for selected industries.

Although the production processes in this area adhere to a general pattern of specified metalworking and metal fabricating operations, there is a substantial variation in the number and types of processes performed by an individual establishment as well as from industry to industry. Within a single 4 -digit industry, certain establishments may be exclusively engaged in assembling component parts produced by other plants. Another group of plants may purchase rough castings or mill shapes and carry out the entire fabricating of the metal until it emerges as a finished product. In other instances, the casting of the metal will be performed by the establishment itself.

## Machinery, Except Electrical: Major Group 35

Value Added by Manufacture by State: 1963

## TABLE 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents zero.
(D) Withheld to avold disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
The figures for 1939 through 1963 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which
data for such employees are included in the figures for 1937 is not known.
For 1954 to 1958 represents adjusted value added. For 1953 and earlier years represents unadjusted value added. See text for more detailed explanation.
The total value of shipments and cost of materials for industry groups (2- and 3same industry classification. For a more complete explanation, see Introductionts in the ${ }^{4}$ The figures for 1958 to 1963 include expenditures for plants under constructio not yet in operation.
${ }^{5}$ Data for number of employees at manufacturers' central administrative offices and annual survey of shown in this table for 1954, 1958, and 1963 and for 1949 to 1953 in 1955 to 1957 and for the years prior to 1949.
${ }^{6}$ These figures represent estimates derived from a representative sample of manufac-
turing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete estimates are published in the annual survey of manufactures volumes for this period

7 The figures for 1939 to 1963 are not entirely corarabie with those for 1937 becuse
1937 figures (a) include data for establishments primarily engaged in the manufacture of thermostats and gauges, heat treating of steel, machine knives, and tackle blocks, and (b) exclude data for establishments primarily engaged in the manufacture of vacuum cleaners, turbo-generators and water-wheel generator sets, hair clippers for animal use, cleaners, turbo-generators and water-wheel generator sets, hair clippers for animal use,
brooders, nonferrous bearings, certain industrial furnaces and ovens, time-stamps and time-recording machines, dictating machines, certain valves and fittings (except plumbers ') and cauiking guns. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $\$ 1,989.6$ million.
${ }^{8}$ The figures prior to 1937 are not sufficiently comparable to those for later years to be shown in this table principally because they include data for establishments primarily engaged in the manufacture of aircraft engines and in machine shop repairs.

Standari Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. ( X ) Not applicable.
The value of shipments and cost of materials for industry groups (2-and 3-digit) include ertensive duplication arising from shipments between establishments in the same
industry. For a more complete explanation, see Introduction.

## ENGINES AND TURBINES AND FARM MACHINERY AND EQUIPMENT

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3511-Steam Engines; Steam, Gas, and Hydraulic Turbines; and Steam, Gas, and Hydraulic Turbine Generator Set Units
3519-Internal Combustion Engines, Not Elsewhere Classified
3522-Farm Machinery and Equipment
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3511 -STEAM ENGINES; STEAM, GAS, AND HYDRAULIC TURBINES; AND STEAM, GAS and HYDRaULlC TURBINE GENERATOR SET UNITS

This industry comprises establishments primarily engaged in manufacturing steam engines; steam turbines; hydraulic turbines; gas turbines, except aircraft; and complete steam, gas, and hydraulic turbine generator set units. Establishments primarily engaged in building or rebuilding locomotives are classified in industry 3741; and those manufacturing nonautomotive generators which are not part of a turbine generator set in industry 3621. For a detailed list of products of industry 3511 , refer to table 6 A, product codes 3511112 to 3511273 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Steam Engines and Turbines Industry totaled $\$ 616$ million. This amount included shipments of steam engines and turbines (primary products) valued at $\$ 485$ million, shipments of other products (secondary products) valued at $\$ 88$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 43$ million.

This industry's shipments of steam engines and turbines represented 85 percent of its total product shipments. The industry specialization ratio in 1958 was 78 percent. Secondary products shipped by this industry in 1963 include heat exchangers and steam condensers, over $\$ 10$ million, and speed changers, industrial high speed drives and gears, over $\$ 5$ million.

Shipments of steam engines and turbines by this industry represented 82 percent of all shipments of these products ( $\$ 589$ million) by all industries. In 1958 the coverage ratio was 94 percent. Other industries shipping steam engines and turbines include industry 3722, Aircraft Engines and Parts, \$43 million; and industry 3561, Pumps and Compressors, over $\$ 10$ million.

A few of the establishments engaged in manufacturing steam engines and turbines also installed the steam engines and turbines they produced. For 1963, establishments in industry 3511 reported receipts for installation totaling $\$ 3$ million. The employment statistics for this industry include only employees attached to the manufacturing establishments and exclude local labor hired in the field for installation and erection work.

The production index for the primary products of the industry increased to 157 in 1963 from the 1958 level of 146 . The unit value index for 1963 was 78 compared to 108 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3519-INTERNAL COMBUSTION ENGINES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing diesel, semidiesel, or other internal combustion engines, n.e.c., for stationary, marine, traction, and other uses. Establishments primarily engaged in manufacturing aircraft engines, including rocket engines, are classified in industry 3722; automotive engines except diesel in industry 3714; and engine generator sets in industry 3621 . For a list of products of industry 3519 , refer to table 6A, product codes 3519100 to 3519715 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Internal Combustion Engines Industry totaled $\$ 1,474$ million. This amount included shipments of internal combustion engines, n.e.c. (primary products) valued at $\$ 1,210$ million, shipments of other products (secondary products) valued at $\$ 197$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 66$ million.

This industry's shipments of internal combustion engines represented 86 percent of its total products shipments. The industry specialization ratio in 1958 was 90 percent. Secondary products shipped by this industry in 1963 include parts and accessories for passenger cars, trucks, and busses shipped to motor vehicle manufactures ( $\$ 40$ million), and prime mover generator sets, except steam or hydraulic turbines ( $\$ 38$ million).

Inasmučh as industry 3519 includes all establishments primarily engaged in manufacturing internal combustion engines (except automotive and aircraft), significantly different types of establishments are included. The most important difference concerns the type of engines produced. One distinct group comprises plants primarily manufacturing gasoline engines and another comprises those primarily manufacturing diesel engines. Within the first group another significant difference concerns the size of gasoline engines produced. Establishments producing small gasoline engines for power lawn mowers, garden tractors, small engine generators, pumps, etc., are included as well as plants principally producing large gasoline engines for industrial uses, large generator sets, tractors, farm equipment, etc. Establishments producing outboard motors are also included. For diesel engines, likewise, a difference exists as to size of engine produced. Certain plants produce only large diesel engines for locomotives, diesel-electric sets, etc.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 48 percent of the total industry shipments are represented by plants specializing in diesel and semidiesel engines; and 18 percent in parts and attachments for internal combustion engines (except aircraft and automotive engines and gas turbines).

The coverage ratio for an individual product class may vary significantly from that for the 4 -digit industry for the following product class of industry 3519 , e.g., gas engines (except gas turbines), 47 percent.

Shipments of internal combustion engines by this industry represented 86 percent of all shipments of these products ( $\$ 1,414$ million) by all industries. In 1958 the coverage ration was 82 percent. Other industries shipping internal combustion engines include industry 3522, Farm Machinery and Equipment, over $\$ 22$ million; and industry 3717, Motor Vehicles and Parts, $\$ 19$ million.

Internal combustion engines are produced captively in significant quantities by establishments classified in other industries, which incorporate the engines into other products (tractors, lawn mowers, etc.) made in the same establishment. The product statistics shown in tables 6A-1 through 6A-6 include data for engines produced and incorporated into the establishments own end products as well as data for engines transferred to plants of the same company. Data on engines sold to other companies also are shown separately. These data were compiled from supplemental reports filed by manufacturers of end products incorporating engines of their own manufacture.

Product data similar to that shown in tables 6A-1 through 6A-6 have been collected and compiled annually since 1950 by the Bureau of the Census and published in Current lndustrial Reports Series M35L, Internal Combustion Engines.

The production index for the primary products of the industry increased to 150 in 1963 from the 1958 level of 108 . The unit value index for 1963 was 102 compared to 114 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3522-FARM MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing farm machinery, including equipment and wheel tractors, for use in the preparation and maintenance of the soil; planting and harvesting of the crop; preparing, on the farm, crops for market; or for use in performing other farm operations and processes. This industry includes wheel tractors except contractors' off-highway type which are classified in industry 3531. Establishments primarily engaged in manufacturing industrial trucks, tractors, and trailers used for handling materials in industrial plants, depots, and docks are classified in industry 3537; and farm handtools in group 342. For a detailed list of products of industry 3522, refer to table 6A, product codes 3522281 to 3522898.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Farm Machinery and Equipment Industry totaled $\$ 2,842$ million. This amount included shipments of farm machinery and equipment (primary products) valued at $\$ 2,412$ million, shipments of other products (secondary products) valued at $\$ 308$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 122$ million.

This industry's shipments of farm machinery and equipment represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 90 percent. Secondary products shipped by this industry in 1963 include scrapers, graders, rollers, and off-highway trucks, trailers, and wagons, excluding parts ( $\$ 26$ million), and other transportation equipment ( $\$ 25$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the
different product classes. The extent to this specialization is indicated in table 8. Approximately 32 percent of the total industry shipments are represented by plants specializing in wheel tractors and parts and attachments (except garden and contractors' offhighway); and 20 percent in harvesting machinery.

Shipments of farm machinery and equipment by this industry represented 95 percent of all shipments of these products ( $\$ 2,542$ million) by all industries. In 1958 the coverage ratio was 94 percent. Other industries shipping farm machinery and equipment include industry 3717, Motor Vehicles and Parts, $\$ 25$ million; and industry 3531, Construction Machinery, over $\$ 13$ million.

Industry 3522 includes establishments producing a wide range of farm machinery and equipment including not only wheel tractors and equipment for raising and harvesting crops but also such other equipment as dairy equipment (milking machines, cream separators, etc.), poultry equipment (incubators, brooders, etc.), barn and barnyard equipment (barn cleaners, stock tanks, etc.), and machines for preparing crops for market (corn shellers, feed grinders, etc.).

Inasmuch as industry 3522 covers such a wide range of products, the operations of the plants classified in this industry differ in some respects. Those plants engaged in manufacturing wheel tractors and self-propelled equipment such as combines, corn pickers, hay balers, etc., and to a lesser extent those manufacturing equipment for mounting on tractors or to be drawn by tractors, include large assembly operations in addition to the processes and operations involved in manufacturing the component parts. Also included within this industry are plants whose operations are largely limited to metal fabricating such as those primarily engaged in producing cattle stalls, animal stock tanks, poultry brooders, etc.

applicable.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown
below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 351-, Engines and Turbines, total: New England-New Hampshire, 1 (1-19); Massachusetts, 6 ( 8,198 ); Rhode Island, 1 (1-19); Connecticut, 6 (1,0002,499); Middle Atlantic-New York, 10 (7,551); Pennsylvania, 8 ( 16,078 ); East North Central-Ohio, 8 (2,282); Indiana, 6 (5,994); West North Central-Minnesota, 6 (693); Iowa, 5 (1,000-2,499); Missouri, 6 (250-499); South Atlantic-North Carolina, I (1-19); Georgia, 2 (1-19); Florida, 6 (20-99) ; East South Central-Tennessee, 1 (1-19); West South Central-Louisiana 1 (20-99); Oklahoma, 1 (1-19); Texas, 4 (465); Mountain-Colorado, 1 (100-249); Pacific-Washington, 3 (20-99); Oregon, 1 (20-99); California, 21 (2,500-4,999).
SIC 3511, Stean Engines and Turbines: New England-Massachusetts, 4 (5,000-9,999); Middle Atlantic-New York, 3 (6,246); Pennsylvania, 6 (10,000 and over); East North Central-Ohio, 1 (20-99); Wisconsin, 1 (1,000-2,499); West North Central-Iowa, 1 (100-249); South Atlantic-Florida, 1 (20-99); Pacific-California, 2 ( $1,000-2,499$ );
SIC 3519, Internal Combustion Engines: New England-New Hampshire, 1 (1-19); Massachusetts, 2 (1,000-2,499); Rhode Island, 1 (1-19); Connecticut, 3 (1,000-2,499); Middle Atlantic-New York, 6 (1,305); Pennsylvania, 2 (1,000-2,499); East North Central-Ohio, 7 (1,000-2,499); Indiana, 6 (5,994); Wisconsin, 21 (10,000 and over); West North Central-Minnesota, 6 (693); Iowa, 4 (1,000-2,499); Missouri, 6 (250-499); South Atlantic-North Carolina, 1 (1-19); Georgia, 2 (1-19); Florida, 5 (20-99); East South Central-Tennessee, 1 (1-19); West South Central—Louisiana, l (20-99); Oklahoma, 1 (1-19); Texas, 4 (465); Mountain-Colorado, 1 (100-249); Pacific-Washington, 3 (20-99); Oregon, 1 (20-99).
SIC 3522, Farm Machinery and Equipment: New England-Maine, 8 (20-99); New Hampshire, 1 (1-19); Vermont, 4 (20-99); Massachusetts, 7 (20-99); Rhode Island, 1 (1-19); Connecticut, 7 (20-99); Middle Atlantic-New York, 36 ( 1,940 ); Pennsylvania, 35 (2,952); South Atlantic-Delaware, 2 (20-99); Maryland, 2 (20-99); West Virginia, 1 (250-499); South Carolina, 7 (100); East South Central—Kentucky, 11 (4,090); Mountain—Montana, 8 (20-99); New Mexico, 3 (1-19); Pacific-Oregon, 19 (250-499); Hawaii, 1 (20-99);
${ }^{2}$ This State or region was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

|  |
| ---: | :--- |

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of t:ousands rather than rounding in computer operations. See Introduction for an explanation of terms used.
${ }^{1}$ The proportion of product shipnents (both prinary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

- Represents zero.
(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{1}$ Includes capital expenditures of approximately $\$ 2-\$ 5 \mathrm{million}$ for plants under construction but not in operation.

# TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

An establishment is assigned to an industry based on the shipment values of products representing
the largest amount considered as primary to an industry. Frequently the establishment shipments
comprise mixtures of froducts assigned to an industry (primary products), those considered pri-
mary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
eceipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

| 3522771 | Parts for lawn mowers. | (X) | (X) | 21,940 | (X) | 15,681 |
| 3522798 | Other (including gang-cutting units, sickle-bar mowers shipped as complete units, lawn edgers, special cutting units, snow blowers and snow throwers). | (X) | (X) | 35,765 | (X) | 9,800 |
| 3522700 | Lawn mowers and parts, n.s.k | (X) | (X) | 4,644 | (X) | 5,927 |
| 3522000 | Farm machinery and equipment, n.s. | ( X ) | (X) | 71,458 | (X) | 34,706 |
| Standard Notes: - Represents zero. <br> (D) Withheld to avoid disclosing figures for individual companies. <br> (NA) Not available. <br> (x) Not <br> applicable. n.s.k. Not specified by kind. <br> ${ }^{1}$ Of this total, 27 had a rated capacity of $24,999 \mathrm{hp}$. or under and 51 had a capacity of $25,000 \mathrm{hp}$. or over. <br> ${ }^{2}$ For 1958, the 456 units shipped had a rated horsepower capacity as follows: $20-199 \mathrm{hp} ., 96 ; 200-499 \mathrm{hp} ., 59$; $500-999 \mathrm{hp}$. , 218 ; and $1,000 \mathrm{hp}$. and over, 83. Comparable data for 1963 are not available. <br> ${ }^{3}$ Includes the value of gears. <br> ${ }^{4}$ For these products, figures were also collected in the Bureau of the Census commodity survey program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified groups of products for which separate figures had previously been collected in the conmodity survey. In most cases, the value figures reported in the census of manufactures for each group of products agreed closely with the corresponding figures reported in the commodity survey. However, there were minor differences between the census figures and the comodity survey figures. These variations were due primarily to the following reasons: <br> a. Better coverage in census of manufactures program. Coverage in the annual surveys will be supplemented by adding respondents not currently in the survey but making the specified product according to their census of manufactures report. <br> b. Use of different reporting periods (calendar year vs. fiscal year). <br> c. Use of estimates in reporting figures on the cormodity survey, whereas census of manufactures figures generally represent more exact shipment figures. |  |  |  |  |  |  |

|  |  |  |  |  |  |  |  |  |
| See tables 6A-1 to 6A-7 for more detailed product data. <br> ${ }^{5}$ Dual-fuel engines shipped in 1958 were included with diesel and semidiesel (except automotive). <br> ${ }^{6}$ Includes dual-fuel engines. |  |  |  |  |  |  |

## TABLE 6A-2. Gasoline Engines, by Horsepower Rating and Piston Displacement: 1963 and 1958

See footnotes at end of table.

## table 6A-2. Gasoline Engines, by Horsepower Rating and Piston Displacement: 1963 and 1958-Continued

Note: Includes gas-gasoline engines; excludes outboard, automotive, and aircraft engines.
Source: Current Industrial Reports Series M35L, Internal Combustion Engines.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
${ }^{1}$ Represents total number of engines shipped and produced and incorporated into products of the same company.
${ }^{2}$ Represents engines produced and incorporated (in the same plant) into products such as construction machinery; farm machinery; tractors; enginegenerator sets; and other products.

TABLE 6A-3. Diesel Engines (Except Automotive), by Horsepower Rating and Piston Displacement: 1963 and 1958

See footnotes at end of table.

## TABLE 6A-3. Diesel Engines (Except Automotive), by Horsepower Rating and Piston Displacement: 1963 and 1958-Continued

Source: Current Industrial Reports Series M35L,Internal Combustion Engines.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies
(NA) Not available.
(X) Not
applicable.
${ }^{1}$ Represents total number of engines shipped and produced and incorporated into products of the same company.
${ }^{2}$ See footnote 2 , table 6A-1.
${ }^{3}$ Includes for 1963, 71 dual-fuel engines of which 28 valued at $\$ 3.1$ million were shipped. . In 1958 a total of 61 dual-fuel engines valued at $\$ 10.0$ million were shipped.

## TABLE 6A-4. Gas Engines (Except Automotive), by Horsepower Rating and Piston Displacement: 1963 and 1958

Source: Current Industrial Reports Series M35L, Internal Combustion Engines.
${ }_{2}^{1}$ Represents total number of engines shipped and produced and incorporated into products of the same company.
${ }^{2}$ Shipments to other companies and interplant transfers are combined to avoid disclosing figures for individual companies.
${ }^{3}$ See footnote 2, table 6A-1.

[^151]Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(Na) Not available.
(x) Not
applicable.
${ }^{1}$ Represents total number of engines shipped and produced and incorporated into products of the same company, including interplant transfers.
${ }^{2}$ Over 95 percent of these engines operated at between 751-1,500 r.p.m.
${ }^{3}$ Over 95 percent of these engines operated at between 1,501 and 2,999 r.p.m.
${ }^{4}$ Over 95 percent of these engines were liquid cooled.
${ }^{5}$ Over 80 percent of these engines were 4 -cycle engines.
${ }^{6}$ Over 90 percent of these engines were 4-cycle engines.

## table 6A-6. Internal Combustion Engines (Except Outboard, <br> Automotive, and Aircraft), by Number of Cylinders and by Type of Engine: 1963 and 1958

[^152]
## TABLE 6A-7. Internal Combustion Engines (Except Outboard, Automotive, and Aircraft), by Type of Engine and Service Designed for: 1963

Source: Current Industrial Reports Series M35L, Internal Combustion Engines.
${ }^{1}$ Represents total number of engines shipped or produced and incorporated into products at the same establishment.
${ }^{2}$ These values are limited to engines shipped to other companies and therefore differ from values shown in table 1 which also include the values for engines shipped as interplant transfers.
${ }^{3}$ Includes number of engines transferred to other plants of the same company and the number of engines produced and incorporated (in the same plant) into products such as construction machinery, farm machinery, tractors, engine generator sets, and other products.

It is likely that these figures are understated since shipments of gasoline-driven generator sets totaled 53,296 in 1963 and 51,383 in 1962. (See Current Industrial Reports Series M36H, Motors and Cenerators.) Some gasoline engines for eventual use in generator sets have apparently been reported as utilities, marine, government, or research.
${ }_{6}$ Over 95 percent of these engines produced were reported for use on farm machinery (agricultural tractors, combines, etc.).
${ }^{6}$ Over 90 percent of these engines were reported for general industrial use.
${ }^{7}$ Data for a few engines shipped as interplant transfers have been included with shipments to other companies to avoid disclosing figures for individual companies.

Note: The Census product codes shown in parentheses associated with product groups represent those codes used in the 1963 Census of Manufactures and correspond to those Census product codes in table 6A. Other 7-digit product codes represent those used in Current Industrial Reports M35A or M35S for 1963.

Source: Current Industrial Reports Series M35S, Tractors (product codes 3522203-23); and Current Industrial Reports Series M35A, Farm Machinery and Equipment (product codes 3522311-3522998).

Standard Notes: - Represents zero. (NA) Not available. (X) Not applicable.
(D) Withheld to avoid disclosing figures for individual companies. Data for these products for 1963 only are included in the totals. Where applicable both quantity and value of export shipments have been combined with domestic shipments.
(S) Pipeline milker units data suppressed due to incomplete coverage.
${ }^{1}$ The horsepower rating for these tractors are based on the corrected maximun belt or P.T.O. horsepower.
${ }^{2}$ Data are limited to attachments and parts shipped by companies manufacturing complete tractors.
${ }^{3}$ The total export figures for 1958 reflect only the sum of publishable products and, therefore, exclude data withheld to avoid disclosing figures of individual companies. Total domestic figures for 1958 include all domestic shipments and, also, include those export figures withheld to avoid disclosing figures of individual companies.

4Excludes pipeline milker units.
${ }^{5}$ Data for crean separators capacity 500 pounds or less per hour included with parts and attachments.
${ }^{6}$ Effective with 1963 respondents were requested to use the following definition for reporting: "Garden tractors are defined as tractors weighing less than 1,200 pounds (basic machine), typically powered by air-cooled engines with fewer than four cylinders and total piston displacement of under 45 cubic inches. Such tractors are further distinguished from farm tractors in that they usually carry an engine horsepower rating but not a belt horsepower rating." The 1958 reference list for Form MA35A carried no definition of garden tractors.
${ }^{7}$ Data for drawn corn and cotton type cultivators included with other cultivators and weeders.
${ }^{8}$ Excludes value of stanchions shipped with stalls.

|  | 1958.. | (3) | (3) |

[^157] Marine steam turbines have been excluded from the computation of unit value but their shipments are reflected in the production index.
${ }^{2}$ These indexes are based on piston size (displacement) quantities rather than on number of engines. The 4-digit (industry) level of production for the products of 3519 has been adjusted to include product class 35197 (parts and accessories for internal combustion engines) as well as product class 35196 (other internal combustion engines).
${ }^{3}$ Indexes for this group (primary products of industry 3522) are not shown pending further review of quantity and related shipments data.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ These figures represent the sum of 5 -digit product class data obtained from Current Industrial Reports and from the census of manufactures or the annual survey of manufactures.
${ }^{3}$ Source for these data are as listed below:
35191 ( 35193 Current Industrial Reports Series M35L
35223,7
4, 5, $\}$ Current Industrial Reports Series M35A
${ }^{4}$ Excludes value of parts sold to other plants producing wheel tractors.

# table 6D. Product Classes-Value Shipped by All Manufaciuring Establishments, by Geographic Areas: 1963 and 1953 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote $l$.

## TABLE 7A. Materials by Kind: 1963 and 1958-Continued

Footnotes for Table 7A-35A

[^160]
## table 7b. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

[^161] equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry special ization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

## TABLE 9. Establishments and Production Workers for Selected Metalworking Operations: 1963-Continued

| Metalworking operations | Number of establishments |  |  |  | Employment in the specified operation |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Number of production workers ${ }^{1}$ |  |  | Total | Number of production workers ${ }^{1}$ |  |  |
|  |  | 1 to 4 | 5 to 19 | $20 \text { or }$ more |  | 1 to 4 | 5 to 19 | 20 or more |
|  | INDUSTRY 3522.-FARM MACHINERY AND EQUIPMENT-Continued |  |  |  |  |  |  |  |
| Plate or structural fabrication........................ | 263 | 113 | 110 | 40 | 2,741 | 225 | 1,049 | 1,467 |
| Stamping, blanking and forming of metals............. | 437 | 204 | 158 | 75 | 6,484 | 375 | 1,545 | 4,564 |
| Painting, lacquering and enameling on metals......... | 546 | 437 | 81 | 28 | 2,472 | 685 | 762 | 1,025 |
| Assembly of product................................... | 545 | 216 | 184 | 145 | 15,696 | 394 | 1,707 | 13,595 |
| Shipping department, including packing and crating... | 538 | 388 | 112 | 38 | 3,822 | 695 | 968 | 2,159 |

Note: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item | Industry |  |  |
| :---: | :---: | :---: | :---: |
|  | 3511 | 3519 | 3522 |
| Total number of establishments in the industry. | 22 | 143 | 1,568 |
| Number of establishments which reported one or more of the specified operations. | 20 | 95 | 711 |
| Percent of industry production workers in these establishments....... | 90-95 | 90-95 | 85-90 |
| Number of establishments which reported "none" of the operations apply........................ | 1 | 2 | 23 |
| Percent of industry production workers in these establishments................................ | 0-5 | 0-5 | 0-5 |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry. | 95-100 | 95-100 | 90-95 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

## CONSTRUCTION, MINING AND MATERIALS HANDLING MACHINERY AND EQUIPMENT

This report shows 1963 Census of Manufactures statistics for establishments classified n each of the following industries:

SIC Code and Title<br>3531 -Construction Machinery and Equipment<br>3532-Mining Machinery and Equipment, Except Oil Field Machinery and Equipment<br>3533-Oil Field Machinery and Equipment<br>3534-Elevators and Moving Stairways<br>3535--Conveyors and Conveying Equipment<br>3536-Hoists, Industrial Cranes, and Monorail Systems<br>3537-Industrial Trucks, Tractors, Trailers, and Stackers

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3531 -CONSTRUCTION MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing heavy machinery and equipment used by the construction industries, such as bulldozers; concrete mixers; cranes, except industrial plant; dredging machinery; pavers, and power shovels. Establishments primarily engaged in manufacturing mining equipment are classified in industry 3532, and well drilling machinery in industry 3533. For a detailed list of products of industry 3531, refer to table 6A, product codes 3531103 to 3531998.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Construction Machinery Industry totaled $\$ 2,696$ million. This amount included shipments of construction machinery (primary products) valued at $\$ 2,332$ million, shipments of other products (secondary products) valued at $\$ 229$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 134$ million.

This industry's shipments of construction machinery represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 89 percent. Secondary products shipped by this industry in 1963 include farm machinery and equipment ( $\$ 20$ million) and motor vehicles and parts ( $\$ 15$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 21 percent of the total industry shipments are represented by plants specializing in scrapers, graders, rollers, and off-highway trucks, trailers, and wagons, excluding parts; and 20 percent in power cranes, draglines, shovels, and parts.

Shipments of construction machinery by this industry represented 89 percent of all shipments of these products ( $\$ 2,624$ million) by all industries. ln 1958 the coverage ratio was 90 percent.

The plants included in industry 3531 are, for the most part, typical of the heavy equipment industries. Their primary operations involve the fabricating of heavy materials (steel bars, plates and structural shapes) and the assembly of the complete machinery and equipment. Because of the wide range of construction equipment included within this industry, significantly different types of plants are involved. Those plants with a product line limited to the production of equipment for mounting on tractors or to the manufacture of draglines, buckets, and repair parts for construction machinery, etc., differ in at least one important respect from those plants producing complete machines, such as power cranes and shovels, motor graders, concrete mixers, pavers, and asphalt plants. In the first instance the operations are confined mostly to fabricating with only limited assembly operations being involved. The plants producing complete machines, however. involve extensive assembly operations in addition to such primary production activities as foundry, forging, and plate and structural fabricating operations.

An indication of the types of metalworking operations performed by all establishments classified in industry 3531 is shown in table 9 . This table presents data on the number of plants performing selected metalworking operations and the approximate size of these operations based on employment.

## 3532-MINING MACHINERY AND EQUIPMENT, EXCEPT OlL F1ELD MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing heavy machinery and equipment used by the mining industries, such as coal breakers, mine cars, mineral cleaning machinery, concentration machinery, core drills, coal cutters, portable rock drills, and rock crushing machinery. Establishments primarily engaged in manufacturing construction machinery are classified in industry 3531, well drilling machinery in industry 3533 , and coal and ore conveyors in industry 3535 . For a detailed list of products of industry 3532 , refer to table 6 A , product codes 3532113 to 3532475 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Mining Machinery and Equipment Industry totaled $\$ 418$ million. This amount included shipments of mining machinery (primary products) valued at $\$ 274$ million, shipments of other products (secondary products) valued at $\$ 92$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 51$ million.

This industry's shipments of mining machinery represented 75 percent of its total product shipments. The industry specialization ratio in 1958 was 72 percent. Secondary products shipped by this industry in 1963 include conveyors and conveying equipment ( $\$ 6$ million). and hoists ( $\$ 3$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8 . Approximately 43 percent of total industry shipments are represented by plants specializing in parts and attachments for mining machinery, and 29 percent in underground mining machinery.

Shipments of mining machinery and equipment by this industry represented 82 percent of all shipments of these products ( $\$ 336$ million) by all industries. $\ln 1958$ the coverage ratio was 78 percent. Industry 3545 , Machine Tool Accessories, shipped $\$ 8$ million of mining machinery and equipment.

## 3533-OIL FIELD MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing machinery and equipment for use in oil and gas fields, or for drilling water wells. For a detailed list of products of industry 3533, refer to table 6A, product codes 3533111 to 3533431.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Oil Field Machinery Industry totaled $\$ 667$ million. This amount included shipments of oil field machinery (primary products) valued at $\$ 519$ million, shipments of other products (secondary products) valued at $\$ 59$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 88$ million.

This industry's shipments of oil field machinery represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent. Secondary products shipped by this industry in 1963 include pumps and compressors ( $\$ 11$ million) and construction machinery ( $\$ 5$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 48 percent of the total industry shipments are represented by plants specializing in oil and gas field production machinery, and 37 percent in rotary oil and gas field drilling machines.

Shipments of oil field machinery by this industry represented 91 percent of all shipments of these products ( $\$ 573$ million) by all industries. In 1958 the coverage ratio was 94 percent.

It should be noted that industry 3533 includes only manufacturing plants engaged in the production of oil field machinery and equipment. Establishments primarily engaged in exploration, drilling, and well operation and maintenance are covered in the 1963 Census of Mineral Industries. In those instances where manufacturing plants were operated by companies primarily engaged in such nonmanufacturing activities as servicing and supplying the petroleum industry, separate establishment reports were obtained covering their manufacturing activities and such activities are included in industry 3533.

As shown in table 2, the plants classified in this industry are concentrated in or near the petroleum producing areas. Of the 408 plants classified in this industry, 315 plants are located in Texas, California, and Oklahoma.

## 3534-ELEVATORS AND MOVING STAIR WAYS

This industry comprises establishments primarily engaged in manufacturing passenger or freight elevators, automobile lifts, dumb waiters, and moving stairways. Establishments primarily engaged in manufacturing commercial conveyors systems and equipment are classified in industry 3535 , and farm elevators in industry 3522 . For a detailed list of products of industry 3534, refer to table 6A, product codes 3534011 to 3534097.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Some establishments classified in industry 3534 installed elevators and escalators which they produced in 1963. When the product was installed or erected by the regular labor force operating out of the manufacturing plant, the employment and payroll as well as the receipts for installation services are included in the statistics. However, if this equipment was installed or erected by a labor force separate from the regular force attached to the manufacturing plant, the installation costs and the income from installation were excluded from the report. The data in such instances include the engineering and supervising personnel on the regular plant payroll who were engaged in installing or testing the products. Where the installation was performed by a separate company, even though the services of that separate company may have been contracted for by the manufacturing plant, the installation costs and the receipts for installation were excluded from the report of the manufacturing plant.

Value of shipments and other receipts of the Elevators and Moving Stairways Industry totaled $\$ 319$ million. This amount included shipments of elevators and moving stairways (primary products) valued at $\$ 235$ million, shipments of other products (secondary products) valued at $\$ 8$ million, and miscellaneous receipts (mainly receipts for installation) at $\$ 75$ million.

This industry's shipments of elevators and moving stairways represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was also 97 percent.

Shipments of elevators and moving stairways by this industry represented 95 percent of all shipments of these products ( $\$ 248$ million) by all industries. In 1958 the coverage ratio was 80 percent.

The production index for the primary products of the industry increased to 173 in 1963 from the 1958 level of 109 . The unit value index for 1963 was 111 compared to 118 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3535-CONVEYORS AND CONVEY1NG EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing conveyors and conveying equipment for installation in factories, warehouses, mines, and other industrial and commercial establishments. Establishments primarily engaged in manufacturing passenger or freight elevators, dumb waiters, and moving stairways are classified in industry 3534 , and overhead traveling cranes and monorail systems in industry 3536. For a detailed list of products of industry 3535 , refer to table 6 A , product codes 3535111 to 3535211 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Some establishments classified in industry 3535, installed conveyors and conveying equipment they produced in 1963. The procedure described above for industry 3534
concerning the reporting of installation employees and receipts was also followed for establishments producing conveyors and conveying equipment.

Value of shipments and other receipts of the Conveyors lndustry totaled $\$ 495$ million. This amount included shipments of conveyors (primary products) valued at $\$ 342$ million, shipments of other products (secondary products) valued at $\$ 78$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 74$ million.

This industry's shipments of conveyors represented 82 percent of its total product shipments. The industry specialization ratio in 1958 was 81 percent. Secondary products shipped by this industry in 1963 include general industry machinery, n.e.c. ( $\$ 6$ million), and special industry machinery ( $\$ 5$ million).

Shipments of conveyors by this industry represented 83 percent of all shipments of these products ( $\$ 415$ million) by all industries. In 1958 the coverage ratio was 78 percent. Other industries shipping conveyors include industry 3566, Power Transmission Equipment, $\$ 17$ million, and industry 3531 , Construction Machinery, $\$ 8$ million.

## 3536-HOISTS, INDUSTRIAL CRANES, AND MONORAIL SYSTEMS

This industry comprises establishments primarily engaged in manufacturing overhead traveling cranes, hoists, and monorail systems for installation in factories, warehouses, and other industrial and commercial establishments. For a detailed list of products of industry 3536, refer to table 6A, product codes 3536112 to 3536255.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Some establishments classified in industry 3536 installed hoists, cranes, and monorail systems they produced in 1963. The procedure described above for industry 3534 concerning the reporting of installation employees and receipts was also followed for establishments producing hoists, cranes, and monorail systems.

Value of shipments and other receipts of the Hoists, Cranes, and Monorails Industry totaled $\$ 220$ million. This amount included shipments of hoists, cranes, and monorail systems (primary products) valued at $\$ 157$ million, shipments of other products (secondary products) valued at $\$ 40$ million, and miscellaneous receipts (mainly receipts for repair work) at $\$ 23$ million.

This industry's shipments of hoists, cranes, and monorail systems represented 80 percent of its total product shipments. The industry specialization ratio in 1958 was 79 percent. Secondary products shipped by this industry in 1963 include construction machinery ( $\$ 7$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8 . Approximately 64 percent of the total industry shipments are represented by plants specializing in overhead traveling cranes and monorail systems, and 35 percent in hoists.

Shipments of hoists, cranes, and monorail systems by this industry represented 70 percent of all shipments of these products ( $\$ 224$ million) by all industries. In 1958 the coverage ratio was 78 percent. Industry 3531 , Construction Machinery, accounted for $\$ 12$ million of shipments of hoists.

The production index for the primary products of the industry increased to 142 in 1963 from the 1958 level of 84 . The unit value index for 1963 was 97 compared to 124 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3537--INDUSTRIAL TRUCKS, TRACTORS, TRAILERS, AND STACKERS

This industry comprises establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, stackers (truck type), and related equipment, used for handling materials on floors and paved surfaces in and around industrial and commercial plants, depots, docks, and terminals. Establishments primarily engaged in manufacturing motor vehicles and motor vehicle type trailers are classified in Group 371; farm type wheel tractors in industry 3522; wheel tractor shovel loaders, tracklaying tractors in industry 3531; and wood pallets and skids in industry 2499. For a detailed list of products of industry 3537 , refer to table 6A, product codes 3537011 to 3537081.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Industrial Trucks and Tractors Industry totaled $\$ 447$ million. This amount included shipments of industrial trucks and tractors (primary products) valued at $\$ 370$ million, shipments of other products (secondary products) valued at $\$ 43$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 33$ million.

This industry's shipments of industrial trucks and tractors represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 include "other hardware" ( $\$ 6$ million).

Shipments of industrial trucks and tractors by this industry represented 81 percent of all shipments of these products ( $\$ 459$ million) by all industries. In 1958 the coverage ratio was 84 percent. Other industries shipping industrial trucks and tractors include industry 3717, Motor Vehicles and Parts, $\$ 26$ million, and industry 3531, Construction Machinery, $\$ 8$ million.

table 1. General Statistics: 1963 and Earlier Years

| Year | Companies (number) | Establishments |  | All employees |  | Production workers |  |  | $\begin{gathered} \text { Value } \\ \text { added by } \\ \text { manufacture, } \\ \text { adjusted } \\ (\$ 1,000) \\ \hline \end{gathered}$ | Cost of materials$(\$ 1,000)$ | Value of shipments <br> $(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unad justed value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
$l_{\text {These }}$ figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ No comparable figures are available for earlier years.

[^164]TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primany to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE: See Introduction for an explanation of terms used.

# TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963 

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Industry 3522, Farm Machinery and Equipment, had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies.
${ }^{2}$ Includes $\$ 11.1$ million shipped by industry 3522, Farm Machinery and Equipment, and $\$ 5.7$ million by industry 3537, Industrial Trucks and Tractors. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3321, Gray Iron Foundries; 3519, Internal Combustion Engines; and 3717, Motor Vehicles and Parts.
${ }^{3}$ Includes $\$ 8.2$ million shipped by industry 3731, Ship Building and Repairing. In addition, the following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3717, Motor Vehicles and Parts.
${ }^{4}$ Industry 3561, Pumps and Compressors, had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies.
${ }^{5}$ Includes $\$ 26.1$ million shipped by industry 3522, Farm Machinery and Equipment, and $\$ 13.5$ million by industry 3717, Motor Vehicles and Parts. In addition, the following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3537, Industrial Trucks and Tractors.

Includes $\$ 10.9$ million shipped by industry 3522, Farm Machinery and Equipment; $\$ 31.4$ million by industry 3532, Mining Machinery and Equipment; $\$ 4$ million by industry 3533, Oil Field Machinery; $\$ 5.1$ million by industry 3536 , Hoists, Cranes, and Monorails; $\$ 2.9$ million by industry 3561 , Pumps and Cormpessors; and, $\$ 5.3$ million by industry 3717, Motor Vehicles and Parts. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3537, Industrial Trucks and Tractors, and 3742, Railroad and Street Cars.
${ }^{7}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 33911 , Drop, upset and press steel forgings (closed die); 34336, Other heating equipment (except electric) and parts for nonelectric heating equipment; 34493, Miscellaneous metal building materials and curtain wall; 35192, Diesel and semidiesel engines; 35197, Parts and accessories for internal combustion engines; 35333, Oil and gas field production machinery and equipment (except pumps); 35334, Other oil and gas field machinery and tools (except pumps), including water wells; 35419, Parts for metal cutting type machine tools sold separately, and rebuilt machine tools; 35522, Parts and attachments for textile machinery; 35531, Woodworking machinery (except machinery designed primarily for home workshops, garages, and service shops), including parts, attachments, and accessories; and 37150, Truck trailers.
${ }^{8}$ Includes $\$ 8$ million shipped by industry 3545, Machine Tool Accessories. In addition, the following industry has shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3533, Oil Field Machinery.
${ }^{9}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 34814 , Ferrous wire cloth and other woven ferrous wire products not produced by wire drainers; 35197, Parts and accessories for internal combustion engines; 35362, Overhead traveling cranes and monorail systems; 35513, Other industrial food products machinery, including parts and attachments for all types of industrial food products machinery; 35595, Other special industry machinery and equipment; 35663, Other mechanical power transmission equipment; 35690, General industrial machinery, noe.c.; 36214, Prime mover generator sets, except steam or hydraulic turbine.
${ }^{10}$ Includes shipments of $\$ 2$ million by industry 3561, Pumps and Compressors. In addition, industry 3494, Valves and Pipe Fittings had shipments of $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies.
${ }^{11}$ Includes $\$ 7.2$ million shipped by industry 3561, Purmp and Compressors. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3312, Blast Furnaces and Steel Mills; 3392, Nonferrous Forgings; 3531, Construction Machinery; and 3586, Measuring and Dispensing Pumps.
${ }^{12}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 19110, Guns, howitzers, and mortars and related equipment over 30 mm (or over 1.18 inches); 35324, Parts and attachments for mining machinery; 35662 , Speed changers, industrial high speed drives and gears; and 37292, Guided missile components and subassemblies, n.e.c.
${ }^{13}$ Includes shipments of over $\$ 2$ million but is withheld to avoid disclosing figures for individual companies by industry 3442 , Metal Doors, Sash, and Trim.
ncludes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 35690, General industrial machinery, n.e.c.; and 39492, Other sporting and athletic goods.
${ }^{15}$ Includes $\$ 2.5$ million shipped by industry 2542, Metal Partitions and Fixtures; $\$ 8.2$ million by industry 3531, Construction Machinery; $\$ 5.7$ million by industry 3532, Mining Machinery and Equipment; and $\$ 2.1$ million by industry 3551, Food Products Machinery. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3562 , Ball and Roller Bearings; 3566, Power Transmission Equipment; and 3713, Truck and Bus Bodies.
${ }^{16}$ Includes $\$ 16.6$ million shipped by industry 3566 , Power Transmission and Equipment.
${ }^{17}$ Includes $\$ 2$ million or more of the following product classes but are withheld to avoid disclosing figures of individual companies: 34295 , other hardware; 3441l, Fabricated structural iron and steel for buildings; and 34460, Architectural and ornamental metal work (except curtain wall and other exterior panels).
${ }^{18}$ Includes $\$ 12.1$ million shipped by industry 3531, Construction Machinery; $\$ 3.2$ million by industry 3532, Mining Machinery and Equipment. In addition, the following industries shipped \$2 million or more but are withheld to avoid disclosing figures for individual companies: 3423, Hand and Edge Tools; 3441, Fabricated Structural Steel; 3548, Metalworking Machinery, N.E.C.; and 3621, Motors and Cenerators.
${ }^{19}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3531, Construction Machinery, and 3532, Mining Machinery and Equipment.
${ }^{20}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 35370 , Industrial trucks and tractors; 35591, Chemical manufacturing industries machinery and equipment; and 37292, Guided missile components and subassemblies, n.e.c.
${ }_{21}$ Includes $\$ 7.8$ million shipped by industry 3531, Construction Machinery, and $\$ 25.8$ million shipped by industry 3717 , Motor Vehicles and Parts. In addition, the following industries shipped $\$ 2$ million or more but are withheld to avoid disclosing figures of individual companies: 348l, Fabricated Wire Products, N.E.C.; 3519, Internal Combustion Engines; 3522, Farm Machinery and Equipment; 3536, Hoists, Cranes, and Monorails; 3566, Power Transmission Equipment; and 3599, Miscellaneous Machinery.
${ }^{22}$ Includes the following product classes with shipments of $\$ 2$ million or more but are withheld to avoid disclosing figures of individual companies: 34313, Parts and attachments for tracklaying and contractors ${ }^{1}$ off-highway wheel tractors; 35318, Scrapers, graders, rollers, and off-highway trucks, trailers, and wagons, excluding parts; 35319, Other construction machinery and equipment, including construction machinery parts, n.e.c.; 37130, Truck and bus bodies for sale separately (including those made on purchased chassis); and 37175, Parts and accessories for passenger cars, trucks, and buses shipped to motor vehicle manufacturers.

| 3537041 | All other trucks (operator riding) and tractors, including diesel, compressed-air powered, etc. | (X) | 14,433 | (X) | 5,901 |
| 3537051 | Portable elevators (stackers) excluding farm type. $\qquad$ Hand trucks and trailers, including dollies and platform trucks: | 3,769 | 4,313 | 2,870 | 3,771 |
| 3537061 | Hand lift. | (X) | 10,000 | (X) | 11,366 |
| 3537065 | Other hand trucks and trailers, including two wheel, four wheel, dollies, and platform trucks. | (X) | 32,177 | (X) | $30,395$ |
| 3537071 | Metal pallets and skids (excluding wood and metal combination)... | (X) | 12,098 | (X) | 6,786 |
| 3537081 | Parts and attachments and miscellaneous equipment (sold separately). | (X) | 91,737 | (X) | 44,752 |
| 3537000 | Industrial trucks and trailers, n.s.k. | (X) | 31,562 | (X) | 23,604 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Suppressed because the data did not meet publication standards.
${ }^{1}$ For these products, data were also collected in the census annual conmodity survey program. In lieu of asking for detailed statistics on these products in the censuses of manufactures, respondents were asked to report only value of shipments for specified products or classes of products for which separate figures had previously been collected in the commodity survey. In most cases, the value figures reported in the censuses of manufactures for each product or class of products agreed closely with the corresponding figures reported in the commodity survey. However, there were some differences between the census figures and the commodity survey figures. These variations were due primarily to the following reasons:
a. Use of different reporting periods (calendar year vs. fiscal year).
b. Use of different base for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the commodity survey whereas census of manufactures figures generally represent more exact shipments figures.
${ }^{2}$ Represents wheeled tractors designed primarily to be used as towing units for scrapers, trailers, wagons, and similar types of towed equipment for use on natural terrain but restricted by State laws or regulations from operating on public highways.
${ }^{3}$ Machines shipped primarily as independent dozing or pushing units characterized with approximate equal weight fore and aft with all wheel drive as differentiated from machines designed for integral hook-up towing.
${ }^{4}$ Data exclude those crawler tractors produced as components of complete tractor-shovel-loaders. The 1958 horsepower ratings for these tractors are based on maximum corrected drawbar horsepower.
${ }^{5}$ For 1958, selected types of construction machinery for which figures were collected on Census Annual Form MA-35D or Quarterly Form M35D but which could not be published are included with cranes except construction power cranes. These products include scrapers, 2 - and 4 -wheel, under 7 cubic yard standard struck capacity; winches (towing, logging and oil field types) for mounting on tractors; cranes for mounting on tractors; wheel tractors (truck type), off-highway type, 2 and 3 axle models; and portable drills, churn drill type, water well and blast hole.
${ }^{6}$ parts and attachments for tracklaying type and wheel type tractor shovel loaders are included with parts and attachments for construction machinery and equipment (sold separately) (except parts and attachments for power cranes, draglines and shovels) (codes 3531985), for 1958.
${ }^{7}$ Tandem units are reported as two separate unitc.
${ }^{8}$ Represents vehicles normally operated off the public highway and specially designed to transport materials, property, or equipment on mining, construction, logging, petroleum development, and similar projects. These vehicles are of such size or weight as to be normally restricted by State laws or regulations from operating on public highways.
${ }^{9}$ Excludes front-end loaders shipped to producers of complete tractor-shovel loaders (integral units).
${ }^{10}$ Includes figures for dense medium vessels (3532153), centrifuges (3532158), concentrating spirals (3532163), thickeners (3531264) and filters (3532165).
${ }^{12}$ Represents crushers and crushing plants.
${ }^{12}$ Represents pulverizers and grinders.
${ }^{13}$ Represents screening plants, washing plants and combination washing and screening plants.
${ }^{14}$ Comparable data were also collected on Census Annual Form MA-35F, "Mining Machinery and Equipment." Data collected in the census of manufactures indicate a degree of undercoverage in the MA-35F Annual Commodity Survey.
${ }^{15}$ For 1958 , this value includes parts and attachments for monorail systems.

## table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes (1954 = 100) |  |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishnents. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this pericd. The figures shown
in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Source: Current Industrial Reports Series M35D, Construction Machinery, and M35S, Tractors (Except Garden Tractors). These data exclude the value of parts and attachments for wheel type shovel loaders. In addition data for 1958 and 1959 exclude parts and attachnents for tracklaying type shovel loaders.
${ }^{3}$ Includes the value of parts and attachments for wheel type shovel loaders. In addition data for 1958 and 1959 include parts and attachments for tracklaying type shovel loaders.

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958-Continued 

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. (Z) Less than $\$ 1$ million reported.

 Texas, Washington, and Califormia.
${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.

(NA) Not available.
(x) Not

## applicable. (Z) Less than 500 horsepower.

( $S$ ) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

See footnotes at end of table.

(NA) Not available.
(X) Not
applicable
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishments.

## METALWORKING MACHINERY AND EQUIPMENT

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3541-Machine Tools, Metal-Cutting Types<br>3542-Machine Tools, Metal-Forming Types<br>3544-Special Dies and Tools, Die Sets, Jigs, and Fixtures<br>3545-Machine Tool Accessories and Measuring Devices<br>3548-Metalworking Machinery, Except Machine Tools

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

These five industries include plants primarily engaged in the production of machines, tools, and equipment for use principally in fabricating metal products. The machinery and equipment included in these industries encompass the entire range of metalworking processes utilizing cutting and forming operations. Plants in industries 3541,3542 , and 3548 produce complete machines such as lathes, drilling machines, grinding and polishing machines, presses, die-casting machines, and rolling-mill equipment; plants in industries 3544 and 3545 manufacture equipment and tools for use with those machines, such as dies, jigs, fixtures, cutting tools, work holding devices, industrial molds, and precision measuring instruments.

As a means of providing for consistent reporting of machinery produced on a subcontract basis, machine tool and metalworking machinery manufacturers were instructed to include in their report all machines produced for them by others on a subcontract basis. Conversely, the plants producing such machines were instructed to exclude such products from their shipments reports and to show all receipts for subcontract work as "receipts for work done for others on their own materials."

## 3541-MACHINE TOOLS, METAL-CUTTING TYPES

This industry comprises establishments primarily engaged in manufacturing power-driven machines, not supported in the hands of an operator when in use, that shape metal by cutting or use of electrical techniques; the rebuilding of such machine tools, and the manufacture of replacement parts for them. Metalworking, or primarily metalworking machine tools designed primarily for home workshops are also included. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623 ; and portable power-driven hand tools, machinery and gas welding and cutting equipment,
and automotive maintenance equipment in industry 3548. For a detailed list of products of industry 3541 , refer to table 6A, product codes 3541111 to 3541941 .
The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal-Cutting Machine Tools lndustry totaled $\$ 1,061$ million. This amount included shipments of machine tools, metal-cutting types (primary products), valued at $\$ 805$ million, shipments of other products (secondary products) valued at $\$ 188$ million, and miscellaneous receipts (largely products bought and resold) at $\$ 68$ million.

This industry's shipments of metal-cutting machine tools represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 include small cutting tools for machine tools and metalworking machinery ( $\$ 30$ million), and other attachments and accessories for machine tools and metalworking machinery ( $\$ 28$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 26 percent of the total industry shipments are represented by plants specializing in lathes; and 16 percent in milling machines.

Shipments of machine tools, metal-cutting types, by this industry represented 87 percent of all shipments of these products ( $\$ 925$ million) by all industries. In 1958 the coverage ratio was 89 percent. Other industries shipping machine tools, metal-cutting type, include industry 3545, Machine Tool Accessories, $\$ 29$ million; and industry 3542, Metal-Forming Machine Tools, $\$ 5$ million.

While machine tools are usually built for industrial purposes, some types of small size, light construction, and low price are designed primarily for the home workshop, the laboratory, the service shop, or the like. Light machine tools, usually of more precise construction than the home workshop type, are also used in industrial plants, either in batteries to accomplish the same purpose as one or two heavier machine tools, as accessory equipment in the company's machine shop, as "standby machines," or for special types of work. In some industries where a light machine tool more adequately serves the purpose at hand, this type of tool is part of the main production line. Home workshop tools may be used incidentally in industrial establishments, but this is the exception rather than the rule. Home workshop machine tools (other than power-driven hand tools) which were designed primarily for metalworking or for use on metal and wood are classified in industry 3541 . However, those that are designed primarily for woodworking are classified in industry 3553, Woodworking Machinery.

The product detail shown in table 6A is essentially the same as that published in Current Industrial Report Series M35W, Machine Tools. The Current lndustrial Report does not include data on machines designed primarily for home workshops, garages, service shops, etc., nor does it include figures for rebuilt machine tools.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3541, e.g., lathes, 96 percent; other machine tools (including those designated primarily for home workshops, laboratories, etc.), 77 percent; boring machines, 94 percent; parts for metal-cutting type machine tools sold separately and rebuilt machine tools, 82 percent.

The production index for the primary products of the industry increased to 82 in 1963 from the 1958 level of 52 . The unit value index for 1963 was 112 compared to 113 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3542--MACHINE TOOLS, METAL-FORMING TYPES

This industry comprises establishments primarily engaged in manufacturing power-driven machines, not supported in the hands of an operator while in use, for pressing, forging, hammering, extruding, shearing, bending, or die casting metal into shape. This industry also includes rebuilding such machine tools and manufacturing repair parts for them. Establishments primarily engaged in the manufacture of electric welding equipment are classified in industry 3623; portable power-driven hand tools, machinery and gas welding and cutting equipment, and automotive maintenance equipment in industry 3548. For a detailed list of products of industry 3842, refer to table 6A, product codes 3542411 to 3542475.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metal-Forming Machine Tools Industry totaled $\$ 441$ million. This amount included shipments of machine tools, metal-forming types (primary products) valued at $\$ 351$ million, shipments of other products (secondary products) valued at $\$ 58$ million, and miscellaneous receipts at $\$ 33$ million.

This industry's shipments of metal-forming machine tools represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 82 percent. Secondary products shipped by this industry in 1963 include special dies and tools, die sets, jigs, and fixtures ( $\$ 20$ million), and parts for metal-cutting type machine tools, sold separately, and rebuilt machine tools ( $\$ 3$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 39 percent of the total industry shipments are represented by plants specializing in presses, including forging presses; and 20 percent in punching, shearing, bending, and forming machines.

Shipments of machine tools, metal-forming types, by this industry in 1963 represented 79 percent of all shipments of these products ( $\$ 445$ million) by all industries. In 1958 the coverage ratio was 80 percent. Other industries shipping machine tools, metal-forming types, include industry 3541 , Metal-Cutting Machine Tools, $\$ 17$ million; and industry 3548, Metalworking Machinery, N.E.C., over $\$ 12$ million.

The product detail shown in table 6A is essentially the same as that collected by the Bureau of the Census each year since 1950 and published in the Current Industrial Report Series M35W, Metalworking Machinery. The Current Industrial Report does not include data on rebuilt machines.

## 3544--SPECIAL DIES AND TOOLS, DIE SETS, JIGS, AND FIXTURES

This industry comprises establishments primarily engaged in manufacturing, on a job or order basis, special tools and fixtures for use with machine tools, hammers, die casting machines, and presses. The products of establishments classified in this industry include a wide variety of special toolings, such as dies; punches; die sets and components, and subpresses; jigs and fixtures; and special checking devices. Establishments primarily engaged in manufacturing metal molds for use with foundry plaster working, rubber working, plastic working, glass working, and similar machinery are also included. For a detailed list of products of industry 3544 , refer to table 6A, product codes 3544112 to 3544263.

This industry comprises establishments commonly known as contract tool and die shops; also included are captive tool and die shops of metal-products producers, where such shops were separately operated and separate reports were filed. However, the total value of shipments excludes the captive production of tool and die departments making these products for the exclusive use of the producing establishment.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Special Dies and Tools Industry totaled $\$ 1,389$ million. This amount included shipments of special dies and tools, die sets, jigs, and fixtures (primary products) valued at $\$ 1,164$ million, shipments of other products (secondary products) valued at $\$ 85$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at $\$ 139$ million.

This industry's shipments of special dies and tools represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was also 93 percent. Secondary products shipped by this industry in 1963 include carburetors, pistons, and other machine shop products ( $\$ 12$ million), and job stampings, except automotive ( $\$ 11$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 66 percent of the total industry shipments are represented by plants specializing in special dies and tools, die sets, jigs, and fixtures; and 15 percent in industrial molds.

Shipments of special dies and tools, die sets, jigs, and fixtures by this industry represented 72 percent of all shipments of these products ( $\$ 1,608$ million) by all industries. In 1958 the coverage ratio was 69 percent. Other industries shipping special dies and tools, die sets, jigs, and fixtures include industry 3461, Metal Stampings, $\$ 66$ million; and industry 3545, Machine Tool Accessories, $\$ 22$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3544, e.g., industrial molds, 83 percent; and special dies and tools, die sets, jigs, and fixtures, 67 percent.

## 3545-MACHINE TOOL ACCESSORIES AND MEASURING DEVICES

This industry comprises establishments primarily engaged in manufacturing cutting tools, machinists' precision measuring tools, and attachments and accessories for machine tools and for other metalworking machinery, n.e.c. For a detailed list of products of industry 3545 , refer to table 6A, product codes 3545113 to 3545351 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Machine Tool Accessories Industry totaled $\$ 787$ million. This amount included shipments of machine tool accessories and measuring devices (primary products) valued at $\$ 616$ million, shipments of other products (secondary products) valued at $\$ 122$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 50$ million.

This industry's shipments of machine tool accessories represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 include special dies and tools, die sets, jigs, and fixtures ( $\$ 22$ million), and other machine tools (including those designed primarily for home workshops, laboratories, etc.) ( $\$ 10$ million).

While the primary products of the industry represent more than once class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 71 percent of the total industry shipments are represented by plants specializing in small cutting tools for machine tools and metalworking machinery.

Shipments of machine tool accessories and measuring devices by this industry represented 84 percent of all shipments of these products ( $\$ 732$ million) by all industries. In 1958 the coverage ratio was 85 percent. Another industry shipping machine tool accessories and measuring devices was industry 3541, Metal-Cutting Machine Tools, $\$ 69$ million.

## 3548-METALWORKING MACHINERY, EXCEPT MACHINE TOOLS

This industry comprises establishments primarily engaged in manufacturing metalworking machinery such as rolling mill machinery and equipment, power-driven hand tools, welding equipment, wire fabricating machinery and equipment, and automotive maintenance machinery and equipment. Establishments primarily engaged in manufacturing machine tools, metal-cutting types, are classified in industry 3541, and those primarily engaged in manufacturing machine tools, metal-forming types, in industry 3542. For a detailed list of products of industry 3548, refer to table 6A, product codes 3548115 to 3548598.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Metalworking Machinery, N.E.C., Industry totaled $\$ 796$ million. This amount included shipments of metalworking machinery, except machine tools, and power-driven hand tools (primary products) valued at $\$ 616$ million, shipments of other products (secondary products) valued at $\$ 109$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 72$ million.

This industry's shipments of metalworking machinery, n.e.c., represented 85 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 include hoists ( $\$ 7$ million), and fractional horsepower motors ( $\$ 7$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 46 percent of the total industry shipments are represented by plants specializing in power-driven hand tools; and 35 percent in rolling mill machinery and equipment.

Shipments of metalworking machinery, except machine tools, and power-driven hand tools by this industry in 1963 represented 88 percent of all shipments of these products ( $\$ 702$ million) by all industries. ln 1958 the coverage ratio was 85 percent.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3548, e.g., automobile maintenance equipment, 73 percent; acetylene welding and cutting apparatus, 78 percent; and other metalworking machinery, 75 percent.

# table 1. General Statistics: 1963 and Earlier Years

NOIE: See Introcuction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipnents: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ Comparable data are not available for earlier years.
${ }^{3}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification; therefore, the data for $1958-1963$ are not comparable with those for earlier years.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

NOTE: See Introduction for an explanation of terms used.
n.e.c. Not elsewhere classified.

# TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963 

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

# table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued 

Note: The nomenclature used to describe products (Industries 3541 and 3542 ) included in Current Industrial Reports Series M35W "Metalworking Machinery" was revised for many products between 1958 and 1963, accordingly, these data may not be strictly comparable.
*Includes some machines with an average value of under $\$ 1,000$.
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ For these products, data were also collected on Census Quarterly Form M35W. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected on the Quarterly Form M35W. In most cases, the value figures reported in the census of manufactures for each class of products agreed closely with the corresponding figures reported in the quarterly survey. However, there were some differences between the census figures and the quarterly survey figures. These variations were due primarily to the following reasons:
a. Census of manufactures reports correctly including all accessories or attachments ordered and shipped with the machine. In some cases the quarterly survey represents only the value of the basic machine. This is the most significant factor for these differences.
b. Use of different bases for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the quarterly survey, whereas census of manufactures figures generally represent more exact shipments figures.
d. Better coverage in the census of manufactures program. Quarterly current commodity survey detail for 1963 in most instances have been revised to reflect data from respondents not previously included. For product code 3548545 , coverage in the quarterly survey will be supplemented by adding respondents not currently in the survey but making the specified product according to their census of manuractures report.
${ }^{2}$ Some machines with an average value of under $\$ 1,000$ for codes 3541231,3541253 , and 3541261 are included with code 3541299.
${ }^{3}$ All machines with an average value of under $\$ 1,000$ for codes 3541433,3541451 and 3541467 are included with "All other grinding machines."
${ }^{4}$ Product code 3541439 included with "All other grinding machines."
${ }^{5}$ Some machines with an average value of under $\$ 1,000$ for codes 3541533 and 3541551 are included with code 3541599 .
"All other manufacturing and toolroom lathes" included with "All other lathes." Also "All other lathes" includes brush and floor light duty type turret lathes with turret attachments.
${ }^{7}$ Data are limited to ram type turret lathes,
${ }^{8}$ Some machines with an average value of under $\$ 1,000$ for codes 3541626,3541629 and 3541695 are included with code 3541699.
${ }^{9}$ Includes data for codes 3541711-3541799 and 3541811-3541891.
10 "Vertical and other shapers and slotters" included with "All other metal-cutting machine tools."
${ }^{11}$ All machines with an average value of under $\$ 1,000$ for codes 3541763 and 3541767 are included with code 35417.69. For 1958, code 3541767 included with code 3541769.
${ }^{12}$ All machines with an average value of under $\$ 1,000$ for code 3541772 are included with code 3541779 .
${ }^{13}$ Bolt threading machines and all machines with an average value of under $\$ 1,000$ for code 3541777 are included with 3541778 .
${ }^{14}$ Includes for 1963 reaming machines (including rifling machines); screw and nut slotting machines; electro-erosion machines; ultrasonic machines; and electrolytic machines.
${ }^{15}$ Includes data for product codes 3542411-98 and 3542511-37
${ }^{16}$ Manually operated punching and shearing machines valued at $\$ 1,000$ or over are included with other punching and shearing machines.
${ }^{17}$ Machines with an average value of under $\$ 1,000$ for codes 3542421 and 3542451 are included with product code 3542498 .
${ }^{18}$ For 1963, power type bending and forming machines with an average value of under $\$ 1,000$ are included with manual machines.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.

These figures represent estimates derived from a representative sample or manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ These figures represent the sum of 5-digit product class data obtained from Current Industrial Reports Series M35W "Metalworking Machinery" and from the census of manufactures or the annual survey of manufactures.
${ }^{3}$ Source: Current Industrial Reports Series M35W, "Metalworking Machinery.
${ }^{4}$ Product class 35440 included with product class 35441 for 1958-1962.
${ }^{5}$ Excludes industrial molds made and used in the same establishment.

# table 6D Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

See footnotes at end of table.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958-Continued 

${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available
(X) Not applicable. n.e.c. Not elsewhere classified.
$(S)$ Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

See footnotes at end of table.

| Tool and die shop......................................... . | 69 | 34 | 24 | 11 | 736 | 64 | 225 | 447 |
| Foundry pattern shop................. . . . . . . . . . . . . . . . . | 11 | 7 | 3 | 1 | 91 | 18 | (D) | (D) |
| Plate or structural fabrication. | 46 | 21 | 10 | 15 | 1,281 | 46 | 95 | 1,140 |
| Stamping, blanking and forming of metals............. | 42 | 34 | 2 | 6 | 344 | (D) | (D) | 278 |
| Painting, lacquering and enameling on metals......... | 84 | 77 | 5 | 2 | 204 | 114 | (D) | (D) |

Note: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item | INDUSTRY |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3541 | 3542 | 3544 | 3545 | 3548 |
| Total number of establishments in the industry. | 801 | 366 | 5,896 | 1,038 | 435 |
| Number of establishments which reported one or more of the specified operations. Percent of industry production workers in these establishments..... | $\begin{array}{r} 390 \\ 90-95 \end{array}$ | $\begin{array}{r} 195 \\ 85-90 \end{array}$ | 2,603 $75-80$ | $\begin{array}{r} 435 \\ 80-85 \end{array}$ | $\begin{array}{r} 212 \\ 85-90 \end{array}$ |
| Number of establishments which reported "none" of the operations apply...................................................................................... Percent of industry production workers in these establishments.... | 26 $0-5$ | 6 $0-5$ | 191 $0-5$ | 79 $5-10$ | 18 $0-5$ |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry................................. | 95-100 | 85-90 | 75-80 | 85-90 | 90-95 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

## SPECIAL INDUSTRY MACHINERY, EXCEPT METALWORKING MACHINERY

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SlC Code and Title

3551 - Food Products Machinery
3552--Textile Machinery
3553-- Woodworking Machinery
3554-Paper Industries Machinery
3555--Printing Trades Machinery and Equipment
3559--Special Industry Machinery, Not Elsewhere Classified
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3551-FOOD PRODUCTS MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for use by the food products and beverage manufacturing industries in the preparation, canning, or packaging of food products; and parts and attachments for such machinery. Establishments primarily engaged in manufacturing industrial refrigeration machinery are classified in Group 358. For a detailed list of products of industry 3551, refer to table 6A, product codes 3551111 to 3551381 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the food products machinery Industry in 1963 totaled $\$ 641$ million. This amount included shipments of food products machinery (primary products) valued at $\$ 451$ million, shipments of other products (secondary products) valued at $\$ 72$ million, and miscellaneous receipts (including significant sales of products bought and resold), at $\$ 118$ million.

This industry's shipments of food products machinery in 1963 represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 include Special Industry Machinery ( $\$ 20$ million), and General Industrial Machinery, N.E.C. (\$11 million).

Shipments of food products machinery by this industry in 1963 represented 87 percent of all shipments of these products ( $\$ 517$ million) by all industries. In 1958 the coverage ratio was 84 percent. Another industry shipping food products machinery was industry 3559, Special Industry Machinery, $\$ 20$ million.

## 3552-TEXTILE MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for the textile industries, and extra parts, attachments, and accessories. Establishments primarily engaged in manufacturing domestic or industrial sewing machines are classified in industry 3636. For a detailed list of products of industry 3552, refer to table 6A, product codes 3552113 to 3552298 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Textile Machinery Industry in 1963 totaléd $\$ 543$ million. This amount included shipments of textile-industries machinery (primary products) valued at $\$ 468$ million, shipments of other products (secondary products) valued at $\$ 38$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 37$ million.

This industry's shipments of textile-industries machinery in 1963 represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 include all other gray iron castings $\$ 4$ million, metal stampings $\$ 2$ million, food products machinery $\$ 3$ million, printing trades machinery $\$ 3$ million and other special industry machinery $\$ 5$ million.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 55 percent of the total industry shipments are represented by plants specializing in textile machinery; and 40 percent in parts and attachments for textile machinery.

Shipments of textile-industries machinery by this industry in 1963 represented 94 percent of all shipments of these products ( $\$ 499$ million) by all industries. In 1958 the coverage ratio was also 94 percent.

## 3553--WOODWORKING MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for sawmills, planing mills, cabinet and furniture makers, pattern makers, and veneer workers, establishments primarily engaged in manufacturing hand tools such as planes, axes, drawknives, and hand saws are classified in Group 342; and portable power driven hand tools in industry 3548. For a detailed list of products of industry 3553, refer to table 6A, product codes 3553112 to 3553298 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Woodworking Machinery Industry in 1963 totaled $\$ 253$ million. This amount included shipments of woodworking machinery (pri-
mary products), valued at $\$ 179$ million, shipments of other products (secondary products) valued at $\$ 52$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 22$ million.

This industry's shipments of woodworking machinery in 1963 represented 77 percent of its total product shipments. The industry specialization ratio in 1958 was 78 percent. Secondary products shipped by this industry in 1963 include farm machinery and equipment $\$ 3$ million, and grinding and polishing machines $\$ 2$ million.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 85 percent of the total industry shipments are represented by plants specializing in woodworking machines, except home workshops.

Shipments of woodworking machinery of this industry in 1963 represented 81 percent of all shipments of these products ( $\$ 221$ million) by all industries. In 1958 the coverage ratio was 86 percent. Another industry shipping woodworking machinery (primary products) was industry 3541, Metal-Cutting Machine Tools, $\$ 9$ million.

The production index for the primary products of the industry increased to 111 in 1963 from the 1958 level of 99 . The unit value index for 1963 was 119 compared to 108 in 1958. Both indexes were computed on a basis of 1954-100.

## 3554--P APER INDUSTRIES MACHINERY

This industry comprises establishments primarily engaged in manufacturing machinery for the paper-pulp, paper, and paper-product industries. Establishments primarily engaged in manufacturing printing trades machinery are classified in industry 3555. For a detailed list of products of industry 3554 , refer to table 6 A, product codes 3554011 to 3554081 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Paper Industries Machinery lndustry in 1963 totaled $\$ 404$ million. This amount included shipments of paper industries machinery (primary products), valued at $\$ 313$ million, shipments of other products (secondary products) valued at $\$ 42$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 49$ million.

This industry's shipments of paper industries machinery in 1963 represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 includes special industry machinery n.e.c. ( $\$ 14$ million), and all other gray iron castings ( $\$ 4$ million).

Shipments of paper industries machinery of this industry in 1963 represented 90 percent of all shipments of these products ( $\$ 348$ million) by all industries. In 1958 the coverage ratio was 91 percent. Another industry shipping paper industries machinery (primary products) was industry 3559, Special Industry Machines, N.E.C., $\$ 11$ million.

The production index for the primary products of the industry increased to 202 in 1963 from the 1958 level of 144 . The unit value index for 1963 was 98 compared to 111 in 1958. Both indexes were computed on a basis of 1954-100.

## 3555-PRINTING TRADES MACHINERY AND EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing machinery and equipment used by the printing and bookbinding trades. Establishments primarily engaged in manufacturing textile printing machinery are classified in industry 3552. For a detailed list of products of industry 3555 , refer to table 6 A, product codes 3555111 to 3555298 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Printing Trades Machinery Industry in 1963 totaled $\$ 448$ million. This amount included shipments of printing trades machinery (primary products), valued at $\$ 369$ million, shipments of other products (secondary products) valued at $\$ 18$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 61$ million.

This industry's shipments of printing trades machinery in 1963 represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was also 95 percent. Secondary products shipped by this industry in 1963 include fabricated rubber products, n.e.c. ( $\$ 4$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 40 percent of the total industry shipments are represented by plants specializing in printing presses and 55 percent in other printing trades machinery.

Shipments of printing trades machinery by this industry in 1963 represented 92 percent of all shipments of these products ( $\$ 403$ million) by all industries. In 1958 the coverage ratio was 91 percent.

The production index for the primary products of the industry decreased to 141 in 1963 from the 1958 level of 118 . The unit value index for 1963 was 123 compared to 100 in 1958. Both indexes were computed on a basis of 1954-100.

## 3559-SPECIAL INDUSTRY MACHINERY, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing special industry machinery, n.e.c., such as smelting and refining equipment, cement making, clay working, cotton ginning, glass making, hat making, incandescent lamp making, leather working, paint making, rubber working, cigar and cigarette making, tobacco working, shoe making, and stone working machinery. For a detailed list of products of industry 3559 , refer to table 6A, product codes 3559111 to 3559593.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Special Industry Machinery, N.E.C., Industry in 1963 totaled $\$ 1,015$ million. This amount included shipments of special industry machinery (primary products) valued at $\$ 734$ million, shipments of other products (secondary products) valued at $\$ 150$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 130$ million.

This industry's shipments of special industry machinery, n.e.c., in 1963 represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was also 83 percent. Secondary products shipped by this industry in 1963 include general industrial machinery, n.e.c., ( $\$ 16$ million), other industrial food products machinery ( $\$ 13$ million) and paper industries machinery ( $\$ 11$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 15 percent of the total industry shipments are represented by plants specializing in plastics-working machinery; 15 percent in chemical manufacturing industry machinery; and 48 percent in other special industrial machinery.

Shipments of special industry machinery, n.e.c., by this industry in 1963 represented 74 percent of all shipments of these products ( $\$ 988$ million) by all industries. In 1958 the coverage ratio was 77 percent. Other industries shipping special industry machinery (primary products) includes industry 3551, Food Products Machinery, $\$ 14$ million; and industry 3541, Machine Tools, Metal Cutting Type, $\$ 16$ million.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to l935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available.
(X) Not applicable.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
n.e.c. Not elsewhere classified.
$1_{\text {These }}$ figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ The figures for 1939 are not entirely comparable with those for earlier years. Value added by manufacture for 1939 on a basis comparable with 1937 was $\$ 58.9$ million for "Food-products machinery." No comparable figures are available for "Woodworking machinery" prior to 1939.
${ }^{3}$ "Food-products machinery" and "Paper-industries machinery" were not shown as separate industries prior to 1937 , but were included with the industry formerly designated "Machinery, n.e.c."
"The figures for "Textile machinery" for 1937 and earlier years are not entirely comparable with those for later years because they include data for establishments reporting roll covering or re-covering as their major activity. Figures for 1937 include 44 such establishments having $\$ 1.1$ million total value of products.
${ }^{5}$ "Textile machinery" was not shown as a separate industry prior to 1919, but was included with the industry formerly designated "Foundry and machine shop products."
${ }^{6}$ Prior to 1935, "Printing-trades machinery" was included among the three discontinued industries "Printers' supplies," "Engravers' materials," and "Foundry and machine shop products." Separate figures are, therefore, not available for earlier years.
${ }^{7}$ The 1957 edition of the Standard Industrial Classification redefined industry 3559 to include establishments primarily engaged in manufacturing electric and fuel-fired nonmetallic processing industrial furnaces, ovens, kilns, and lehrs which were formerly classified in industry 3567 , Industrial Furnaces and Ovens. The effect of this change in definition is negligible, amounting to less than one percent both in total number of employees and value of shipments for 1958.

[^181](D) Withheld to avoid disclosing figures for individual companies.
n.e.c. Not elsewhere classified.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3551, Food Products Machinery: New England-Maine, 1 (1-19); Vermont, 2 (1-19); Rhode Island, l (1-19); Connecticut, 8(645); Middle AtlanticNew Jersey, 24 (343); Pennsylvania, 36 (1737); West North Central—North Dakota, 1 (1-19); South Dakota, 1 (1-19); Nebraska, 3 (1-19);
South Atlantic-Delaware, 1 (1-19); Virginia, 8 (394) ; North Carolina, 4 (250-499); East South Central-Tennessee, 2 (1-19); Alabama, 1 (1-19); Mississippi, 2 (1-19); West South Central—Arkansas, 4 (20-99); OkJahoma, 7 (104); Mountain-Idaho, 1 (1-19); Colorado, 3 (100-249); Arizona, 1 (1-19); Utah, 2 (100-249); Nevada, 1 (1-19); Pacific—Oregon, 6 (118); Hawaii, 1 (100-249).
SIC 3552, Textile Machinery: New England-Maine, 5 (450); New Hampshire, 5 (1,465); Connecticut, 7 (20-99); East North Central-Illinois, 7 (866); Michigan, 3 (1-19); Wisconsin, 4 (20-99); West North Central-Minnesota, 1 (1-19); Iowa, 2 (1-19); Missouri, 1 (20-99); Nebraska, 1 (1-19); South Atlantic-Delaware, l (20-99); Virginia, 3 (20-99); Florida, 4 (20-99); East South Central—Kentucky, 4 (100-249); Tennessee, 4 (399); Alabama, 4 (100); West South Central—Louisiana, 1 (1-19); Texas, 1 (1-19); Mountain—Utah, 1 (1-19); Pacific—Washington, 1 (1-19); Oregon, 1 (1-19); California, 6 (20-99).
SIC 3553, Woodworking Machinery: New England-Maine, 3 (1-19); New Hampshire, 3 (20-99); Massachusetts, 13 (397); Connecticut, 1 (1-19); Middle Atlantic—New Jersey, 3 (261); Pennsylvania, 9 (514); West North Central—Minnesota, 7 ( 873 ); Missouri, 5 (112); South Atlantic-Virginia, 1 (1-19); West Virginia, 1 (1-19) ; North Carolina, 10 (794); South Carolina, 1 (1-19); Georgia, 3 (185); East South Central-Kentucky, 3 (1-19); Alabama, 2 (100-249); Mississippi, 3 (250-499); West South Central—Arkansas, 3, (20-99); Louisiana, 1 (100-249); Texas, 7 (100-249); Mountain-Colorado, 1 (1-19); New Mexico, 1 (1-19); Utah, 1 (1-19).
SIC 3554, Paper Industries Machinery: New England-Maine, 3 (20-99); Rhode Island, 4 (473); Connecticut, 4 (1-19); East North Central-Indiana, 4 (109); Illinois, 4 (20-99); Michigan, 4 (20-99) ; West North Central-Minnesota, 3 (20-99); Missouri, 2 (1-19); Kansas, 2 (1-19); South AtlanticMaryland, 4 (461); Virginia, 2 (100-249); West Virginia, 1 (1-19); South Carolina, 1 (1-19); Florida, 5 (20-99); East South Central-Kentucky, 1 (20-99); Alabama, 3 (20-99); West South Central—Arkansas, 1 (20-99); Louisiana, 2 (20-99); Oklahoma, 1 (1-19); Pacific—Washington, 1 (250-499); Oregon, 2 (20-99); California, 8 (196).
SIC 3555, Printing Trades Machinery: New England-New Hampshire, 4 (455); Vermont, 1 (1-19); Massachusetts, 21 (578); Rhode Island, 3 (1-19); East North Central-Indiana, 3 (20-99); Wisconsin, 8 (106); West North Central-Minnesota, 10 (108); Iowa, 5 (20-99); Nebraska, 3 (1-19); Kansas, 2 (100-249); South Atlantic-Maryland, 7 (20-99); District of Columbia, 1 (1-19); North Carolina, 5 (1-19); Georgia, 5 (20-99); Florida, 1 (1-19); East South Central-Tennessee, 3 (1-19); Alabama, 2 (1-19); West South Central-Louisiana, 1 (1-19); Oklahoma, 2 (20-99); Mountain-Colorado, 1 (1-19); New Mexico, 1 (20-99); Arizona, 2 (1-19); Pacific-Oregon, 1 (1-19).
SIC 3559, Special Industry Machines, N.E.C.: New England-Maine, 5 (20-99); New Hampshire, 3 (1-19); Vermont, 3 (128); West North Central-North Dakota, 2 (20-99); South Dakota, 1 (1-19); Kansas, 6 (197); South Atlantic—Delaware, 5 (500-999); Maryland, 7 (1,135); District of Columbia, l (1-19); West Virginia, 3 (20-99); South Carolina, 3 (20-99); East South Central—Kentucky, 9 (100-249); Mississippi, 2 (1-19); West South CentralArkansas, 1 (20-99); Louisiana, 4 (100-249); Mountain-Idaho, 1 (20-99); Colorado, 5 (176); Arizona, 4 (20-99); Utah, 2 (20-99); Pacific-Washington, 13 (250-499); Hawaii, 1 (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958
report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detail figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.
${ }^{-}$Represents zero. (D) Withheld to avoid disclosing figures for individual companies. n.e.c. Not elsewhere classified.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

# table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next colurin(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

- Represents zero. (X) Not applicable.
n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 3443 , Boiler Shop Products, and 3522, Farm Machinery and Equipment.
${ }^{2}$ The following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing individual company figures: 3532, Mining Machinery and Equipment.
${ }^{3}$ Includes chemical manufacturing industries machinery and equipment (product class 35591) valued at $\$ 13,511$ thousand.
4ncludes the following product class which totaled $\$ 2$ million or more but i.s withheld to avoid disclosing individual company figures: 3554 , Paper Industries Machinery.
${ }^{5}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual cormpanies: 3541, Metal-Cutting Machine Tools, and 3559, Special Industry Machines, N.E.C.

6 The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3531, Construction Machinery, and 3717, Motor Vehicles and Parts.
${ }^{7}$ Includes the following product classes which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 34990 , Fabricated metal products, n.e.c., and 35790, Addressing, dictating, duplicating and other office machines, n.e.c.
${ }^{8}$ Includes $\$ 9,157$ thousand shipped by industry 3541, Metal-Cutting Machine Tools. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3522, Farm Machinery and Equipment; 3531, Construction Machinery; and, 3542, Metal-Forming Machine Tools.
${ }^{9}$ The following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: industry 3621, Motors and Cenerators.
${ }^{10}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 33214, All other gray iron castings; 35422, Special industrial fasteners; 35195, Outboard motors; 35197, Parts and accessories for internal combustion engines; and, 37176 , Parts and accessories for passenger cars, trucks and busses shipped to other than motor vehicle manufacturers.
${ }^{11}$ Includes $\$ 11,217$ thousand shipped by industry 3559 , Special Industry Machines, N.E.C. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: industry 3315, Steel Wire Drawing, Etc.; industry 3551, Food Products Machinery; and, industry 3731, Ship Building and Repairing.
${ }^{12}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 34819 , Other fabricated wire products, not produced by wire drawers; 35551, Printing presses; 35663, Other mechanical power-transmission equipment; and 35690, Ceneral industrial machinery, n.e.c.
${ }^{13}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3552 Textile Machinery, and 3554, Paper Industries Machinery.
${ }^{14}$ Includes $\$ 5,543$ thousand shipped by industry 3069 , Rubber Products, N.E.C. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclesing figures for individual companies: 3011, Tires and Inner Tubes, 3551, Copper Rolling and Drawing, and 3622, Industrial Controls, 3572, Typewriters.
${ }^{15}$ Includes the following product classes which totaled $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 3552 ,
Textile Machinery, and 35790, Office machines, n.e.c.
${ }^{16}$ Includes shipments for the specified amounts (in thousands) for the following industries: $\$ 2,996$ by industry 3443, Boiler Shop Products; $\$ 13,511$ by industry 3551 , Food Products Machinery. In addition, the following industries each shipped $\$ 2$ million or more, but are withheld to avoid disclosing figures for individual companies: 3536, Hoists, Cranes and Monorails; 3554, Paper Industries Machinery; 3567, Industrial Furnaces and Ovens; and 3742, Railroad and Street Cars.
${ }^{17}$ Over $\$ 2$ million was shipped by industry 3541, Metal-Cutting Machine Tools. The exact figure is withheld to avoid disclosing data for individual companies.

Includes $\$ 16,489$ thousand from industry 3541, Metal-Cutting Machine Tools. In addition, over $\$ 2$ million was shipped by industry 3554 , Paper Industries Machinery.
${ }^{19}$ Over $\$ 2$ million was shipped by industry 3544, Special Dies and Tools. The exact figure is withheld to avoid disclosing data for individual companies.
${ }^{20}$ Includes shipments for the specified amounts (in thousands) for the following industries: $\$ 4,676$ by industry 3443, Boiler Shop Products; $\$ 5,227$ by industry 3535, Elevators and Moving Stairways; $\$ 4,040$ by industry 3548, Metalworking Machinery; $\$ 3,243$ by industry 3551 , Food Products Machinery; $\$ 5,266$ by industry 3552, Textile Machinery; $\$ 2,461$ by industry 3553 , Woodworking Machinery; $\$ 9,843$ by industry 3567 , Industrial Furnaces and Ovens; $\$ 2,007$ by industry 3569, General Industry Machines, N.E.C.; $\$ 3,010$ by industry 3599, Miscellaneous Machinery; and, $\$ 3,984$ by industry 3731 , ship Building and Repairing. In addition each of the following industries reported more than $\$ 2 \mathrm{million}$ : 1999, Ordnance and Accessories, N.E.C.; 3211, Flat Glass, 3356, Rolling and Drawing, N.E.C.; 3532, Mining Machinery and Equipment; 3545, Machine Tool Accessories; 3585, Refrigeration Machinery; 3586,Measuring and Dispensing Purps; 3641, Electric Lamps; 3661, Telephone; Telegraph Apparatus; 3674, Semiconductors; 3861, Photographic Equipment.
${ }^{21}$ Includes shipments of over $\$ 2$ million for each of the following product classes: 32914, Metal abrasives; 33220, Malleable iron castings; 35414, Grinding and polishing machines; 35422, Presses including forging presses; 35521, Textile machinery; 35642, Dust collection, air purification equipment and air washers; 37292, Guided missile components and subassemblies, n.e.c.; and, 38213, Industrial process instruments.

[^183]
# table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued 

- Represents zero, (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
(X) Not applicable.
${ }^{1}$ Figures for "Butter, cheese, dry milk and ice cream packaging machines" and "Uncasers and casers" are included with "Other dairy and milk products processing plant machinery and equipment.
${ }^{2}$ Includes power-driven machines for use by hotels, restaurants, institutions, meat markets, butcher shops, food-product stores, and similar commercial organizations.
${ }^{3}$ For combination slicing and wrapping machines the number and value of slicing units are included with slicing machines and the number and value of wrapping units with wrapping machines.
${ }_{5}{ }_{5}$ For 1958 "Labeling machines" are included with "Other food bottling machinery, except dairy."
${ }^{5}$ Figures for "Uncasers and casers" are included with "Carbonators and other food bottling machinery, except dairy."
${ }^{6}$ Data for combing machines (product code 3552132) are included with data for other fiber-to-fabric machinery (product code 3552155).
${ }^{7}$ Data for power looms (product codes 3552164 and 3552168 ) are included with data for other fabric machinery (product code 3552184).
${ }^{8}$ Some equipment in this product class may be leased rather than sold outright. For leased equipment, estimates of the value of products produced were reported. These estimates approximate the value of the products had they been sold outright and are based on market values of the products, tax or insurance valuations, etc.

[^185]
# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the disperare not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  |

| Aggregate horsepower per 100 production workers..................... | 636 | 660 | 484 | 920 | 659 | 809 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1) -6.
-Represents zero. (Z) Less than 500 hp .
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); cost of fuel less than $\$ 50$ thousand; quantity of electric energy less than 5 million kw.-hrs.; to avoid disclosing figures of individual companies; or on the basis of a general consistency review.
n.e.c. Not elsewhere classified.

# table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## table 9. Establishments and Production Workers for Selected Metalworking Operations: 1963-Continued

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production worker employment on the last line of the table below.

| Item | Industry |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3551 | 3552 | 3553 | 3554 | 3555 | 3559 |
| Total number of establishments in the industry........................................... | 681 | 561 | 249 | 217 | 490 | 1,092 |
| Number of establishments which reported one or more of the specified operations......... | 353 | 261 | 143 | 125 | 162 | 537 |
| Percent of industry production workers in these establishments....................... | 80-85 | 80-85 | 90-95 | 90-95 | 80-85 | 85-90 |
| Number of establishments which reported "none" of the operations apply.................... |  |  | 5 | 10 | 54 | 31 |
| Percent of industry production workers in these establishments....................... | 0-5 | 0-5 | 0-5 | 0-5 | 0-5 | 0-5 |
| Percent of industry production workers in establishments which completed metalworking operations inquiry. | 80-85 | 80-85 | 90-95 | 95-100 | 85-90 | 85-90 |

- Represents zero. n.e.c. Not elsewhere classified.
(D) Withheld to avoid disclosing figures for individual companies.
lThese size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

## gENERAL INDUSTRIAL MACHINERY AND EQUIPMENT

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3561-Pumps, Air and Gas Compressors, and Pumping Equipment<br>3562-Ball and Roller Bearings<br>3564-Blowers, Exhaust and Ventilating Fans<br>3565-Industrial Patterns<br>3566-Mechanical Power Transmission Equipment, Except Ball and Roller Bearings<br>3567-lndustrial Process Furnaces and Ovens<br>3569-General Industrial Machinery and Equipment, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3561 - PUMPS, AIR AND GAS COMPRESSORS, AND PUMPING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing pumps, compressors, and pumping equipment for general industrial use. Establishments primarily engaged in manufacturing measuring and dispensing pumps for gasoline service station use are classified in industry 3586; and ice making, refrigerating, and air conditioning units in industry 3585 . For a detailed list of products of industry 3561 , refer to table 6A, product codes 3561101 to 3561611 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Pumps and Compressors industry totaled $\$ 1,419$ million. This amount included shipments of pumps and compressors (primary products) valued at $\$ 1,070$ million, shipments of other products (secondary products) valued at $\$ 186$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 163$ million.

This industry's shipments of pumps and compressors represented 85 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary
products shipped by this industry in 1963 include other metal valves and fittings ( $\$ 22$ million), and parts and accessories for internal combustion engines ( $\$ 12$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 29 percent of the total industry shipments are represented by plants specializing in industrial pumps, except fluid power; and 27 percent in air and gas compressors, except refrigeration.

Shipments of pumps and compressors by this industry represented 86 percent of all shipments of these products ( $\$ 1,249$ million) by all industries. In 1958 the coverage ratio was 85 percent. Other industries shipping pumps and compressors (primary products) include industry 3519, Internal Combustion Engines, $\$ 26$ million; and industry 3494, Valves and Pipe Fittings, \$16 million.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3561 , e.g., Domestic water systems and pumps, 93 percent; and Hydraulic fluid power pumps and motors, 76 percent.

The production index for the primary products of the industry increased to 147 in 1963 from the 1958 level of 101 . The unit value index for 1963 was 95 compared to 113 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3562-BALL AND ROLLER BEARINGS

This industry comprises establishments primarily engaged in manufacturing ball and roller bearings and parts. Establishments primarily engaged in manufacturing bearings, except ball and roller, are classified in industry 3566. For a detailed list of products of industry 3562 , refer to table 6A, product codes 3562111 to 3562451 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Ball and Roller Bearings Industry totaled $\$ 999$ million. This amount included shipments of ball and rollerbearings (primary products) valued at $\$ 946$ million, shipments of other products (secondary products) valued at $\$ 32$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 21$ million.

This industry's shipments of ball and roller bearings represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 98 percent. Secondary products shipped by this industry in 1963 include power transmission equipment ( $\$ 5$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 48 percent of the total industry shipments are represented by plants specializing in roller bearings, complete; and 42 percent in ball bearings, complete.

Shipments of ball and roller bearings by this industry represented 98 percent of all shipments of these products ( $\$ 961$ million) by all industries. In 1958 the coverage ratio was also 98 percent. Other industries shipping ball and roller bearings include industry 3566 , Power Transmission Equipment, $\$ 12$ million.

## 3564—BLOWERS, EXHAUST AND VENTILATING FANS

This industry comprises establishments primarily engaged in manufacturing blowers, and exhaust and ventilating fans for general industrial, commercial, and household use. Establishments primarily engaged in manufacturing complete air conditioning units are classified in industry 3585 , and free air circulating fans for use on desks, pedestals, or wall brackets in industry 3634 . For a detailed list of products of industry 3564 , refer to table 6A, product codes 3564111 to 3564255 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Blowers and Fans Industry totaled $\$ 315$ million. This amount included shipments of blowers and fans (primary products) valued at $\$ 237$ million, shipments of other products (secondary products) valued at $\$ 51$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 28$ million.

This industry's shipments of blowers and fans represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was also 83 percent. Secondary products shipped by this industry in 1963 includes nonelectric heating equipment (\$9 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 69 percent of the total industry shipments are represented by plants specializing in industrial fans and blowers; and 24 percent in dust collection, air purification equipment, and air washers.

Shipments of blowers and fans by this industry represented 79 percent of all shipments of these products ( $\$ 299$ million) by all industries. In 1958 the coverage ratio was also 79 percent. Other industries shipping blowers and fans include industry 3585 , Refrigeration Machinery, $\$ 12$ million; and industry 3444, Sheet Metal Work, $\$ 8$ million.

## 3565-INDUSTRIAL PATTERNS

This industry comprises establishments primarily engaged in manufacturing industrial patterns. For a detailed list of products of industry 3565 , refer to table 6 A , product codes 3565011 to 3565098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Industrial Patterns Industry totaled \$141 million. This amount included shipments of industrial patterns (primary products) valued at $\$ 128$ million, shipments of other products (secondary products) valued at $\$ 6$ million, and miscellaneous receipts at $\$ 7$ million.

This industry's shipments of industrial patterns represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 95 percent.

Shipments of industrial patterns by this industry represented 80 percent of all shipments of these products ( $\$ 160$ million) by all industries. In 1958 the coverage ratio was 74 percent. Other industries shipping industrial patterns (primary products) include industry 3321, Gray Iron Foundries, $\$ 10$ million; and industry 3323, Steel Foundries, $\$ 6$ million.

## 3566-MECHANICAL POWER TRANSMISSION EQUIPMENT, EXCEPT BALL AND ROLLER BEARINGS

This industry comprises establishments primarily engaged in manufacturing mechanical power transmission equipment and parts for industrial machinery. Establishments primarily engaged in manufacturing automotive, tank, and tractor power transmission equipment are classified in industry 3714 (census industry 3717); aircraft power transmission equipment in industry 3729; and ball and roller bearings in industry 3562. For a detailed list of products of industry 3566, refer to table 6A, product codes 3566115 to 3566398 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Power Transmission Equipment lndustry totaled $\$ 889$ million. This amount included shipments of power transmission equipment (primary products) valued at $\$ 696$ million, shipments of other products (secondary products) valued at $\$ 130$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 63$ million.

This industry's shipments of mechanical power transmission equipment represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. Secondary products shipped by this industry in 1963 include motor vehicles and parts ( $\$ 30$ million), and conveyors ( $\$ 19$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 37 percent of the total industry shipments are represented by plants specializing in speed changers, industrial high-speed drives and gears.

Shipments of power transmission equipment by this industry represented 79 percent of all shipments of these products ( $\$ 883$ million) by all industries. $\ln 1958$ the coverage ratio was also 79 percent. Other industries shipping mechanical power transmission equipment (primary products) include industry 3717, Motor Vehicles and Parts, \$34 million; and industry 3621, Motors and Generators, $\$ 22$ million.

## 3567-1NDUSTRIAL PROCESS FURNACES AND OVENS

This industry comprises establishments primarily engaged in manufacturing industrial process furnaces, ovens, induction and dielectric heating equipment, and related devices. For a detailed list of products of industry 3567 , refer to table 6 A, product codes 3567111 to 3567391 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Industrial Furnaces and Ovens Industry totaled $\$ 279$ million. This amount included shipments of industrial furnaces and ovens (primary products) valued at $\$ 202$ million, shipments of other products (secondary products) valued at $\$ 40$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 37$ million

This industry's shipments of industrial furnaces and ovens represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 include special industry machines, n.e.c. (\$15 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 41 percent of the total industry shipments are represented by plants specializing in high frequency induction and dielectric heating equipment and 34 percent in fuel-fired industrial furnaces and ovens, metal processing.

Shipments of industrial furnaces and ovens by this industry represented 85 percent of all shipments of these products ( $\$ 238$ million) by all industries. In 1958 the coverage ratio was 83 percent.

The production index for the primary products of the industry increased to 126 in 1963 from the 1958 level of 91 . The unit value index for 1963 was 111 compared to 114 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3569-GENERAL INDUSTR1AL MACHINERY ANDEQUIPMENT, NOT ELSEWHERE CLASSIF1ED

This industry comprises establishments primarily engaged in manufacturing machinery, equipment, and components for general industrial use, and for which no special classification is provided. Machine shops primarily engaged in producing machine and equipment parts, usually on a job or order basis, are classified in industry 3599. For a detailed list of products of industry 3569, refer to table 6A, product codes 3569012 to 3569098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the General lndustry Machines, N.E.C., Industry totaled $\$ 691$ million. This amount included shipments of general industry machines, n.e.c., (primary products) valued at $\$ 463$ million, shipments of other products (secondary products) valued at $\$ 93$ million, and miscellaneous receipts (mainly receipts for research and development) at $\$ 136$ million.

This industry's shipments of general industry machines, n.e.c., represented 83 percent of its total product shipments (primary and secondary). The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 include nonelectric heating equipment ( $\$ 15 \mathrm{million}$ ) and metalworking machines, n.e.c. ( $\$ 8$ million).

Shipments of general industry machines, n.e.c., by this industry represented 70 percent of all shipments of these products ( $\$ 664$ million) by all industries. In 1958 the coverage ratio was 74 percent. Other industries shipping general industry machinery, n.e.c. (primary products) include industry 3559, Special lndustry Machines, N.E.C., $\$ 16$ million; and industry 3599, Miscellaneous Machinery, $\$ 13$ million.

${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3561, Pumps and Compressors: New England-New Hampshire, 1 (20-99); Rhode Island, 4 (250-499); Connecticut, 7 (1,525); West North CentralMinnesota, 11 (454); South Dakota, l (1-19); Nebraska, 3 (873); Kansas, 9 (500-999); South Atlantic—Delaware, l (1-19); Maryland, 5 (20-99); Virginia, 2 (20-99); West Virginia, 2 (1-19); East South Central—Kentucky, 3 (20-99); Tennessee, 5 (310); Alabama, 1 (100-249); Mississippi, 3 (100-249); West South Central-Arkansas, 3 (261); Louisiana, 3 (1-19); Mountain-Wyoming, 1 (1-19); Colorado, 6 (196); New Mexico, 1 (1-19); Arizona, 2 (20-99); Utah, 2 (100-249); Nevada, 1 (1-19); Pacific-Washington, 3 (1-19); Oregon, 3 (20-99); Hawaii, 1 (1-19).
SIC 3562, Ball and Roller Bearings: New England-New Hampshire, 4 ( $1,000-2,499$ ); Massachusetts, 4 (250-499); Middle Atlantic-New Jersey, 8 (3,959); Pennsylvania, 17 ( 5,127 ); East North Central-Ohio, 9 ( 10,700 ); Indiana, 8 (1,000-2,499); Wisconsin, 1 (20-99); West North Central-Missouri, 1 (1-19); Kansas, l (20-99); South Atlantic-Virginia, 2 (100-249); North Carolina, l (20-99); South Carolina, 4 (455); Florida, l (1-19); East South Central-Tennessee, l (100-249); West South Central-Oklahoma, 2 (250-499).
SIC 3564, Blowers and Fans: New England-Massachusetts, 10 (1,000-2,499); Connecticut, 6 (1,000-2,499); West North Central-Iowa, 1 (1-19); Missouri, 5 (20-99); Kansas, 2 (1-19); South Atlantic-Delaware, 3 (1-19); North Carolina, 2 (20-99); East South Central-Kentucky, 4 (91l); Tennessee, 7 (20-99); Alabama, 2 (100-249); Mississippi, 1 (1-19); West South Central-Arkansas, 1 (20-99); Louisiana, 3 (20-99); Oklahoma, 1 (20-99); Mountain-Colorado, 3 (20-99); Arizona, 3 (1-19); Utah, 1 (1-19); Pacific-Washington, 4 (20-99); Oregon, 1 (1-19).
SIC 3565, Industrial Patterns: New England-Maine, 1 (1-19); New Hampshire, 5 (1-19); Vermont, 1 (1-19); Rhode Island, 9 (20-99); Middle AtlanticNew Jersey, 54 (185); Pennsylvania, 96 (646); East North Central—Ohio, 152 (1,157); Wisconsin, 80 (574); West North Central—Minnesota, 19 (102); Iowa, 8 (20-99); Nebraska, 3 (1-19); Kansas, 10 (20-99); South Atlantic-Delaware, 2 (1-19); Maryland, 4 (20-99); Virginia, 3 (20-99); West Virginia, 3 (20-99); North Carolina, 6 (20-99); South Carolina, 2 (1-19); Georgia, 3 (1-19); Florida, 2 (1-19); East South Central-Kentucky, 6 (1-19); Tennessee, 5 (20-99); West South Central—Louisiana, 2 (1-19); Oklahoma, 8 (20-99); Texas, 20 (1-99); Mountain-Colorado, 9 (20-99); Arizona, 2 (1-19); Utah, 1 (1-19); Pacific-Washington, 9 (20-99); Oregon, 10 (20-99).
SIC 3566, Power Transmission Equipment: New England—Maine, 1 (1-19); Vermont, 2 (20-99); Rhode Island, 2 (20-99); West North Central-Nebraska, 1 (20-99); Kansas, 3 (100-249); South Atlantic—Maryland, 3 (923); South Carolina, 2 (100-249); Georgia, 2 (1-19); Florida, 3 (1-19); East South Central-Kentucky, 2 (250-499); Tennessee, l (20-99); West South Central—Arkansas, 3 (20-99); Oklahoma, 3 (20-99); Mountain-Colorado, 5 (256); Pacific-Washington, 2 (20-99); Oregon, 5 (20-99)
SIC 3567, Industrial Furnaces and Ovens: New England-New Hampshire, 2 (100-249); Rhode Island, 3 (183); Connecticut, 4 (100-249); East North Central-Indiana, 5 (500-999); Wisconsin, 2 (250-499); West North Central-Iowa, l (1-19); Missouri, 3 (100-249); Kansas, 1 (1-19); South Atlantic-Maryland, 1 (1-19); West Virginia, 1 (1-19); North Carolina, 1 (1-19); Florida, 3 (1-19); East South Central-Alabama, 1 (20-99); West South Central-0klahoma, 1 (1-19); Texas, 4 (20-99); Mountain-Colorado, 1 (100-249); Arizona, 1 (1-19); Utah, 1 (1-19); Pacific-Washington, 5 (20-99); Oregon, 1 (1-19).
SIC 3569, General Industry Machines, N.E.C.: New England-Maine, I (100-249); New Hampshire, 2 (250-499); Rhode Island, 3 (177); West North CentralNorth Dakota, 1 (1-19); South Dakota, 2 (100-249); Nebraska, 3 (149); South Atlantic-Delaware, 1 (1-19); Maryland, 7 (20-99); Virginia, 4 (20-99); West Virginia, 2 (20-99); South Carolina, 2 (20-99); Georgia, 3 (238); East South Central-Kentucky, 5 (250-499); Tennessee, 7 (579); Mississippi, 2 (20-99); West South Central-Arkansas, 3 (20-99); Louisiana, 2 (100-249); Oklahoma, 7 (276); Mountain-Colorado, 2 (20-99); Arizona, 1 (20-99); Utah, 4 (329); Pacific-Washington, 7 (166); Oregon, 6 (20-99).
${ }^{\text {This }}$ State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

|  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

 in computer operations. See Introduction for an explanation of tems used

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. Selected Statistics, by Employment Size of Establishments: 1963

[^191](D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
class.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shioment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

## Prod. class code

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
pplicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind
${ }^{1}$ Includes $\$ 3.9$ million shipped by industry 3494, Valves and Pipe Fittings, $\$ 2.5$ million by industry 3531, Construction Machinery, and $\$ 6.9$ million by industry 3621, Motors and Generators. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3522, Farm Machinery and Equipment; 3561, Promps and Compressors; 3541, Metal-Cutting Machine Tools; 3586, Measuring and Dispensing Pumps; 3589, Service Industry Machines, N.E.C.; and, 3731, Ship Building and Repairing.
${ }^{2}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3494, Valves and Pipe Fittings; 3599, Miscellaneous Machinery; and, 3729, Aircraft Equipment, N.E.C.
${ }^{3}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3443, Boiler Shop Products; 3511, Steam Engines and Turbines; and, 3519, Internal Combustion Engines.

4ncludes $\$ 2.1$ million shipped by industry 3494, Valves and Pipe Fittings; and $\$ 6.7$ million by industry 3533, Oil Field Machinery.
${ }^{5}$ Includes $\$ 3.8$ million shipped by industry 3533, Oil Field Machinery. In addition, the following industries had shipments which totaled $\$ 2$ million million or more but are withheld to avoid disclosing figures for individual companies: 3519, Internal Combustion Engines; 3621, Motors and Generators; 3644, Noncurrent Carrying Devices; and, 3729, Aircraf't Equipment, N.E.C.
${ }^{6}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 30692 , Rubber hose and tubing; 33230, Steel castings; 34336, Other heating equipment (except electric) and parts for nonelectric heating equipment; 35112 , Steam, gas, and hydraulic turbine and parts, steam engines and parts; and 35334, Other oil and gas field machinery and tools (except pumps), including water wells.
${ }^{7}$ Includes the following product classes which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 33620, Copper and copper-base alloy castings; 34990, Fabricated metal products, n.e.c.; 35351, Conveyors and conveying equipment (except hoists and farn elevators); and 37175, Parts and accessories for passenger cars, trucks, and busses, shipped to other than motor vehicle manufacturers.
${ }^{8}$ Includes $\$ 6.8$ million shipped by industry 3443 , Boiler Shop Products, and $\$ 8.9$ million by industry 3585, Refrigeration Machinery. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3444, Sheet Metal Work; 3494, Valves and Pipe Fittings; 3599, Miscellaneous Machinery; and 3621, Motors and Cenerators.
${ }^{9}$ Includes $\$ 4.9$ million shipped by industry 3444, Sheet Metal Work, and $\$ 2.9$ million by industry 3585, Refrigeration Machinery. In addition, the following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3559, Special Industry Machines, N.E.C.
${ }^{10}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 35663 , Other mechanical power transmission equipment; 35851, Heat transfer equipment; 36430, Current carrying wiring devices, including lightning rods;
and, 36992. Lamp bulb components (except glass flasks) and electrical products.
${ }^{11}$ Includes $\$ 3.8$ million shipped by industry 3362, Brass, Bronze, Copper Castings; $\$ 3.8$ million by industry 3562 , Ball and Roller Bearings; and $\$ 14.4$ million by industry 3717, Motor Vehicles and Parts. In addition, the following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3722, Aircraft Engines and Parts.
${ }^{12}$ Includes $\$ 3.4$ million shipped by industry 3541, Metal-Cutting Machine Tools, and $\$ 21.6$ million by industry 3621 , Motors and Generators. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3511, Steam Engines and Turbines; 3533, Oil Field Machinery; 3548, Metalworking Machinery, N.E.C.; 3561, Pumps and Compressors; 3717, Motor Vehicles and Parts; 3729, Aircraft Equipment, N.E.C.
${ }^{13}$ Includes $\$ 17.2$ million shipped by industry 3717, Motor Vehicles and Parts. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3431, Metal Plumbing Fixtures; 3532, Mining Machinery and Equipment; 3535, Conveyors; 3554, Paper Industries Machinery; 3564, Blowers and Fans; 3722, Aircraft Engines and Parts; and 3821, Mechanical Measuring Devices.
${ }^{14}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 33230 , Steel castings; 35370, Industrial trucks and tractors; and 35623, Mounted bearings.
${ }^{15}$ The following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3441, Fabricated Structural Steel.
${ }^{16}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3446, Architectural Metal Work; 3693, X-Ray Apparatus and Tubes; and 3717, Motor Vehicles and Parts.
${ }^{17}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 35322 , Crushing, pulverizing, and screening plants, stationary, and 38213, Industrial process instruments.
${ }^{18}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3079, Plastics Products, N.E.C.; 3296, Mineral Wool; 3444, Sheet Metal Work; 3498, Fabricated Pipe and Fittings; 3522, Farm Machinery and Equipment; 3531, Construction Machinery; 3532, Mining Machinery and Equipment; 3534, Elevators and Moving Stairways; 3541, Metal-Cutting Machine Tools; 3582 , Commercial Laundry Equipment; 3585, Refrigeration Machinery; 3621, Motors and Generators; 3731, Ship Building and Repairing; and 3821, Mechanical Measuring Devices.
${ }^{19}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures; 28993 , Essential oils, fireworks, and pyrotechnics, chemicals and chemical preparations, n.e.c.; 34612, Job stampings, except automotive.

table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ The value figure for each product line in 1958 included both the value of the pump or compressor and the value of the drivers when shipped with the driven unit. See footnote 3 for explanation of reporting such values in 1963.
${ }^{2}$ For these products, data were also collected in the Census Commodity Survey Program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified classes of products for which separate figures had previously been collected on the annual, quarterly, or monthly form. In most cases, the value figures reported in the census of manufactures for each class of product agreed closely with the corresponding figures reported in the commodity surveys. However, there were some differences between the census figures and the commodity survey figures. These variations were due primarily to the following reasons:
a. Use of different reporting periods (calendar year vs. fiscal year).
b. Use of different bases for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the comodity surveys, whereas census of manufactures figures generally represent more exact shipments figures.

Footnotes continued on next page.

## table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

## Footnotes for Table 6A-35E--Continued

${ }^{3}$ The value of drivers was reported only at the product class level. For each product line, value figures exclude, except as noted for codes 3561452-57, the value of drivers (electric motors or prime movers) shipped with that product. Separate data on the value of drivers are not available for product class 35613. See footnote 1 for explanation of reporting such values in 1958.
${ }_{5}^{4}$ Does not include hydraulic fluid power pumps for power steering units in passenger automobiles. In 1958 such data are included.
${ }^{5}$ Included with product code 3561596 , Other punps.
${ }^{6}$ Includes the value of drivers.
${ }^{7}$ Includes compressors for air brake systems used in transportation equipment and pneumatic (air) power compressors and motors.
${ }^{8}$ Data reported in the census of manufactures differ from comparable figures reported in Annual Survey MA-35P chiefly due to companies not included in the Annual Survey. In addition, there were minor differences between figures for a few companies reporting in the two surveys. ${ }^{9}$ Represents "Other pumps and compressors" and includes dry vacuum pumps. No separate figures are available for "Other pumps" compared with "Other compressors."
${ }^{10}$ of these totals, the following figures (in millions of dollars) represent the value of shipments of ball and roller bearings transferred from one plant of a company to another plant of the same company:

| Product <br> code | 1963 | 1958 |
| :--- | ---: | ---: |
| $3562-$ | 108 | 86 |
| 35621 | 13 | 21 |
| 35622 | 95 | 65 |
| 35624 |  |  |

${ }^{11}$ In 1963 represents 8,043 thousand units; for 1958 represents 4,911 thousand units.
${ }^{12}$ In 1963 represents 934 thousand units; for 1958 represents 771 thousand units.
13 Excludes captive production of industrial patterns.
${ }^{14}$ No quantity data available for 1958.
${ }^{15}$ Represents the value of gear motor reducer elements only. Does not include the value of electric motors shipped as part of gear motor reducer elements.
${ }^{16}$ Represents shipments of industrial furnaces and ovens produced by manufacturing establishments only. Does not include industrial furnaces and ovens erected at the site by engineering and construction firms which purchase component parts for such furnaces and ovens.
${ }^{7}$ Establishments classified in industry 3567 reported a breakdown of shipments of industrial furnaces and ovens between "Field assembled" and

 assembled" $\$ 66$ million and "Factory assembled" $\$ 73$ million. "Field assembled" represents installations erected at the site by the manufacturer, either using his own labor force or utilizing local labor under the supervision of the manufacturer's factory personnel.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for l962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. (Z) Less than 500 horsepower. n.e.c Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated
 consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Valueadded bymanufacture,adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new $(\$ 1,000)$ |

Note: Very small establishments were not requested to report their metalworking operations and in some instances a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production worker employment on the last line of the table below:

| Item | Industry |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3561 | 3562 | 3564 | 3565 | 3566 | 3567 | 3569 |
| Total number of establishments in the industry...................... | 642 | 125 | 237 | 1,209 | 532 | 239 | 778 |
| Number of establishments which reported one or more of the specified operations.............................................................. Percent of industry production workers in these establishments... | 334 $80-85$ | 99 $95-100$ | 106 $80-85$ | 449 $60-65$ | 316 $85-90$ | 121 $80-85$ | 348 $65-70$ |
| Number of establishments which reported "none" of the operations apply. <br> Percent of industry production workers in these establishments.... | 56 $0-5$ | 6 $0-5$ | $\begin{aligned} & (x) \\ & (x) \end{aligned}$ | 100 $10-15$ | 56 $0-5$ | 17 $5-10$ | 68 $0-5$ |
| Percent of industry production workers in establishments which completed metalworking operations inquiry | 80-85 | 95-100 | 80-85 | 75-80 | 85-90 | 90-95 | 70-75 |

[^200] applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees in each specific operation. They are not based on total employment in the establishment.

## OFFICE, COMPUTING, AND ACCOUNTING MACHINES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3571 -Computing and Accounting Machines, Including Cash Registers<br>3572-Typewriters<br>3576-Scales and Balances, Except Laboratory<br>3579-Office Machines, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

3571-COMPUTING AND ACCOUNTING MACHINES, INCLUDING CASH REGISTERS
This industry comprises establishments primarily engaged in manufacturing computing machines including electronic, accounting machines, and cash register. Establishments primarily engaged in manufacturing typewriters are classified in industry 3572, and office duplicating machines and devices and autographic registers in industry 3579. For a detailed list of products of industry 3571, refer to table 6A, product codes 3571101 to 3571297 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Computing and Related Machines Industry totaled $\$ 2,020$ million. This amount included shipments of computing and related machines (primary products) valued at $\$ 1,752$ million, shipments of other products (secondary products) valued at $\$ 122$ million, and miscellaneous receipts (largely sales of products bought and resold) at $\$ 145$ million.

This industry's shipments of computing and related machines represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each
of the different product classes. The extent of this specialization is indicated in table 8. Approximately 54 percent of the total industry shipments are represented by plants specializing in computing and accounting machines, including cash registers; and 45 percent in electronic data processing machines and associated equipment, except typewriters.

Shipments of computing and related machines by this industry represented 94 percent of all shipments of these products ( $\$ 1,859$ million) by all industries. In 1958 the coverage ratio was 91 percent. Other industries shipping computing and related machines include industry 3662, Radio, TV Communications Equipment, $\$ 44$ million; and industry 3572, Typewriters, over $\$ 22$ million.

## 3572-TYPEWRITERS

This industry comprises establishments primarily engaged in manufacturing typewriters and parts. For a detailed list of products of industry 3572, refer to table6A, product codes 3572001 to 3572098 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Typewriters Industry totaled $\$ 315$ million. This amount included shipments of typewriters (primary products) valued at $\$ 262$ million, shipments of other products (secondary products) valued at $\$ 45$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 8$ million.

This industry's shipments of typewriters represented 85 percent of its total product shipments. The industry specialization ratio in 1958 was 82 percent. Secondary products shipped by this industry in 1963 include computing and related machines of over $\$ 22$ million.

Shipments of typewriters by this industry represented 99 percent of all shipments of these products ( $\$ 265$ million) by all industries. In 1958 the coverage ratio was also 99 percent.

The production index for the primary products of the industry increased to 158 in 1963 from the 1958 level of 116. The unit value index for 1963 was 119 compared to 115 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3576-SCALES AND BALANCES, EXCEPT LABORATORY

This industry comprises establishments primarily engaged in manufacturing weighing and force measuring machines and devices of all types, except those regarded as scientific apparatus for laboratory and experimental work which are classified in industry 3811. For a detailed list of products of industry 3576 , refer to table 6 A , product codes 3576011 to 3576084 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Scales and Balances Industry totaled $\$ 98$ million. This amount included shipments of scales and balances (primary products) valued at $\$ 87$ million, shipments of other products (secondary products) valued at $\$ 7$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 4$ million.

This industry's shipments of scales and balances represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent.

Shipments of scales and balances by this industry represented 97 percent of all shipments of these products ( $\$ 90$ million) by all industries. In 1958 the coverage ratio was also 97 percent.

## 3579—OFFICE MACHINES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing office machines and devices, n.e.c. Establishments primarily engaged in manufacturing computing machines and cash registers are classified in industry 3571, typewriters in industry 3572, and photocopy and microfilm equipment in industry 3861. For a detailed list of products of industry 3579, refer to table 6A, product codes 3579010 to 3579091 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Office Machines, N.E.C., Industry totaled $\$ 349$ million. This amount included shipments of office machines, n.e.c. (primary products) valued at $\$ 223$ million, shipments of other products (secondary products) valued at $\$ 51$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 76$ million.

This industry's shipments of office machines, n.e.c., represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent. Secondary products shipped by this industry in 1963 included other fabricated wire products, not produced by wire drawers ( $\$ 7$ million), and computing and related machines (over $\$ 4$ million).

Shipments of office machines, n.e.c., by this industry represented 81 percent of all shipments of these products ( $\$ 276$ million) by all industries. In 1958, the coverage ratio was 85 percent. Another industry shipping office machines, n.e.c., was industry 3315, Steel Wire Drawing, $\$ 7$ million.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample, of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. ${ }_{2}^{2}$ A A revision in the definition of this industry was industry are not strictly comparable with those for earlier years. The 1957 and earlier years are based on the old SIC definition of the industry.
${ }^{3}$ Comparable figures are not available for prior years.
table 2. General Statistics, by Geographic Areas: 1963 and 1958

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left. n.e.c. Not elsewhere classified. ${ }^{1}$ Includes capital expenditures for plants under construction but not in operation of approximately $\$ 200-\$ 500$ thousand.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

Standard Notes: - Represents zero. (D) Witheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ These figures represent the sum of 5 -digit product class data obtained from Current Industrial Reports Series M35R and the census of manufactures
or the annual survey of manufactures.
${ }^{3}$ Source: Current Industrial Reports Series M35R "Office Computing and Accounting Machines."

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments |

| Driven by energy generated at establishment...............do.... | 30 | - | (z) | - |
| Aggregate horsepower per 100 production workers........... | 339 | 270 | 444 | 401 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(x) Not applicable. (Z) Less than 500 horsepower. n.e.c Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

NOTE: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is show in terms of production-worker employment on the last line of the table below:

| Item | Industry |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 3571 | 3572 | 3576 | 3579 |
| Total number of establishments in the industry.................................... | 248 | 21 | 85 | 161 |
| Number of establishments which reported one or more of the specified operations. Percent of industry production workers in these establishments................... | $\begin{array}{r} 137 \\ 95-100 \end{array}$ | $\begin{array}{r} 15 \\ 95-100 \end{array}$ | r $\begin{array}{r}45 \\ 80-85\end{array}$ | 73 $75-80$ |
| Number of establishments which reported "none" of the operations apply........... Percent of industry production workers in these establishments.................... | $\begin{array}{r} 15 \\ 0-5 \end{array}$ | 3 0.5 | - $\begin{array}{r}1 \\ 0-5\end{array}$ | 3 $0-5$ |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry. | 95-100 | 95-100 | 80-85 | 80-85 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

## SERVICE INDUSTRY MACHINES AND MACHINE SHOPS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3581-Automatic Merchandising Machines<br>3582-Commercial Laundry, Dry Cleaning, and Pressing Machines<br>3585--Refrigerators; Refrigeration Machinery, Except Household; and Complete Air-Conditioning Units<br>3586-Measuring and Dispensing Pumps<br>3589-Service Industry Machines, Not Elsewhere Classified<br>3599-Miscellaneous Machinery, Except Electrical

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3581 -AUTOMATIC MERCHANDISING MACHINES

This industry comprises establishments primarily engaged in manufacturing automatic merchandising units; also referred to as vending machines (excluding music, amusement, or gaming machines), and coin operated mechanisms for such machines. For a detailed list of products of industry 3581, refer to table 6A, product codes 3581002 to 3581269.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Automatic Vending Machines Industry totaled $\$ 238$ million. This amount included shipments of automatic vending machines and parts (primary products) valued at $\$ 187$ million, shipments of other products (secondary products) valued at $\$ 44$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 7$ million.

This industry's shipments of automatic vending machines represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent. Secondary products shipped by this industry in 1963 included refrigeration machinery ( $\$ 7$ million).

Shipments of automatic vending machines by this industry represented 90 percent of all shipments of these products ( $\$ 207$ million) by all industries. In 1958 the coverage ratio
was 92 percent. Another industry shipping automatic vending machines was industry 3585, Refrigeration Machinery, $\$ 4$ million.

The production index for the primary products of the industry increased to 189 in 1963 from the 1958 level of 140 . The unit value index for 1963 was 133 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3582-COMMERCIAL LAUNDRY, DRY CLEANING, AND PRESSING MACHINES

This industry comprises establishments primarily engaged in manufacturing laundry and dry cleaning equipment and pressing machines for commercial and industrial use. Establishments primarily engaged in manufacturing household laundry equipment are classified in industry 3633. Although the SIC classifies coin-operated household washing machines in industry 3582, data for these machines are included in the 1963 Census of Manufactures, as in 1958, in industry 3633. For a detailed list of products of industry 3582, refer to table 6A, product codes 3582021 to 3582091.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Commercial Laundry Equipment lndustry totaled $\$ 137$ million. This amount included shipments of commercial laundry, dry cleaning, and pressing machines (primary products) valued at $\$ 116$ million, shipments of other products (secondary products) valued at $\$ 12$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 9$ million.

This industry's shipments of commercial laundry equipment represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent.

Shipments of commercial laundry, dry cleaning, and pressing machines by this industry represented 89 percent of all shipments of these products ( $\$ 130$ million) by all industries. ln 1958 the coverage ratio was 95 percent. Another industry shipping commercial laundry equipment was industry 3633, Household Laundry Equipment.

The production index for the primary products of the industry increased to 202 in 1963 from the 1958 level of 122. The unit value index for 1963 was 84 compared to 114 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3585-REFRIGERATORS; REFRIGERATION MACHINERY, EXCEPT HOUSEHOLD; AND COMPLETE AIR-CONDITIONING UNITS

This industry comprises establishments primarily engaged in manufacturing equipment and systems utilizing the basic refrigeration cycle, including mechanical and absorption refrigerators for commercial and industrial use; refrigeration machinery; and complete air-conditioning units for domestic, commercial, and industrial use. Establishments primarily engaged in manufacturing soda fountains and beer dispensing equipment are classified in this industry, and those primarily engaged in manufacturing household refrigerators and home and farm freezers in industry 3632. For a detailed list of products of industry 3585 , refer to table 6A, product codes 3585101 to 3585798 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.
Value of shipments and other receipts of the Refrigeration Machinery Industry totaled $\$ 1,928$ million. This amount include shipments of refrigeration machinery (primary products) valued at $\$ 1,588$ million, shipments of other products (secondary products) valued at $\$ 194$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 146$ million.

The specialization and coverage ratios have not been calculated for industry 3585 as the data from which these ratios are obtained include extensive duplication. This results from the fact that products of some establishments in the industry are consumed as materials by other establishments in the same industry. This is especially true of refrigeration and air-conditioning components which may be shipped to producers of complete refrigeration and air-conditioning equipment where they are again included in both the cost of materials and the value of shipments.

Industry 3585 comprises two major establishment types. One group of establishments specializes primarily in the manufacture of compressors, condensers, and other components for air-conditioning and commercial refrigeration. Many of these establishments also produce complete air-conditioning equipment as well as subassemblies for airconditioning and commercial refrigeration equipment. These establishments also rely on other establishments for their motors and other electrical equipment.

The other major segment of industry 3585 covers the production of commercial refrigeration equipment such as walk-in and reach-in refrigerators, display cases for meat, dairy, and other food products, low temperature freezing and dispensing equipment, florist cabinets, etc. Although significant amounts of metal are consumed in the manufacture of these products, many of these items contain substantial amounts of wood, glass, and other nonmetallic materials. Some types of commercial refrigeration equipment are shipped from the factory without compressors, condensing units or refrigeration equipment. These "remote type units" are then installed at the site with the suitable refrigeration components.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 60 percent of the total industry shipments are represented by plants specializing in heat transfer equipment; and 15 percent in commercial refrigerations.

The production index for the primary products of the industry increased to 208 in 1963 from the 1958 level of 135 . The unit value index for 1963 was 86 compared to 90 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3586-MEASURING AND DISPENSING PUMPS

This industry comprises establishments primarily engaged in manufacturing measuring and dispensing pumps commonly used in service and filling stations for dispensing gasoline, oil, and grease, including grease guns. Establishments primarily engaged in manufacturing pumps, compressors, and pumping equipment for general industrial use are classified in industry 3561. For a detailed list of products of industry 3586, refer to table 6A, product codes 3586011 to 3586098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Measuring and Dispensing Pumps Industry totaled $\$ 159$ million. This amount included shipments of measuring and dispensing pumps (primary products) valued at $\$ 103$ million, shipments of other products (secondary products) valued at $\$ 38$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 19$ million.

This industry's shipments of measuring and dispensing pumps represented 73 percent of its total product shipments. The industry specialization ratio in 1958 was 75 percent.

Secondary products shipped by this industry in 1963 included pumps and compressors ( $\$ 10$ million).

Shipments of measuring and dispensing pumps by this industry represented 85 percent of all shipments of these products ( $\$ 121$ million) by all industries. In 1958 the coverage ratio was 89 percent. Another industry shipping measuring and dispensing pumps was industry 3561, Pumps and Compressors, $\$ 7$ million.

The production index for the primary products of the industry increased to 113 in 1963 from the 1958 level of 79 . The unit value index for 1963 was 133 compared to 138 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3589-SERVICE INDUSTRY MACHINES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing machines and equipment, not elsewhere classified, for use in service industries, such as floor sanding machines, industrial vacuum cleaners, scrubbing machines, commercial cooking and food warming equipment, and commercial dishwashing machines. Establishments primarily engaged in manufacturing household electrical appliances are classified in group 363 . For a detailed list of products of industry 3589 , refer to table 6A, product codes 3589111 to 3589398 .

The code number for this industry in the Standard Industrial Classification manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. Establishments primarily engaged in producing industrial vacuum cleaners are now classified in industry 3589. Such establishments were formerly classified in industry 3584.

Value of shipments and other receipts of the Service Industry Machines, N.E.C., Industry totaled $\$ 378$ million. This amount included shipments of service industry machines, n.e.c., (primary products) valued at $\$ 288$ million, shipments of other products (secondary products) valued at $\$ 46$ million, and miscellaneous receipts (mainly sales of products bought and resold) at $\$ 44$ million.

This industry's shipments of service industry machines, n.e.c., represented 86 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 54 percent of the total industry shipments are represented by plants specializing in service industry machines and parts; and 34 percent in commercial cooking and food warming equipment.

Shipments of service industry machines, n.e.c., by this industry represented 84 percent of all shipments of these products ( $\$ 342$ million) by all industries. In 1958 the coverage ratio was 81 percent.

The production index for the primary products of the industry increased to 202 in 1963 from the 1958 level of 143 . The unit value index for 1963 was 116 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3599-MISCELLANEOUS MACHINERY, EXCEPT ELECTRICAL

This industry comprises establishments primarily engaged in manufacturing machinery and parts except electrical, not elsewhere classified, such as pistons and piston rings. carburetors, metallic packing, and amusement park equipment. This industry also
includes establishments primarily engaged in producing or repairing machine and equipment parts, not elsewhere classified, on a job or order basis for others. These establishments usually operate on a job or order basis and are equipped with machine tools and other power-driven metalworking machinery capable of manufacturing a wide range of machine and equipment parts. Machine shops classified in this industry are characterized by their method of operation rather than their product, and the fact that they may be primarily engaged in repair work does not exclude them from this classification; however, machine shops engaged exclusively in repair work are classified in repair industries.

Although generally characterized by method of operation rather than type of product, establishments primarily engaged in manufacturing the following products are classified in industry 3599: Metal bellows, bushings machined from purchased castings, carburetors, catapults, boiler-tube cleaners, valve cores, hydraulic cylinders, iron flasks, flexible metal hose and tubing, metallic packing (except asbestos-metallic), pistons and piston rings, and intake and exhaust valves for internal combustion engines. For a detailed list of products of industry 3599, refer to table 6A, product codes 3599011 to 3599098.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Miscellaneous Machinery Industry totaled $\$ 2,036$ million. This amount included shipments of machine shop products (primary products) valued at $\$ 1,440$ million, shipments of other products (secondary products) valued at $\$ 157$ million, and miscellaneous receipts (mainly contract work on materials owned by others) at $\$ 439$ million.

This industry's shipments of machine shop products represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 92 percent. Secondary products shipped by this industry in 1963 include parts and accessories for passenger cars, trucks, and busses shipped to other than motor vehicle manufactures ( $\$ 21$ million), and general industrial machinery, n.e.c. ( $\$ 13$ million).

Shipments of machine shop products by this industry represented 90 percent of all shipments of these products ( $\$ 1,606$ million) by all industries. In 1958 the coverage ratio was also 90 percent.

Since machining is a common operation in most of the establishments producing metal products, many of the metal products establishments classified in industries other than industry 3599 maintain machine shop departments for their own use. Data for captive machine shops appear in the metalworking operations table (table 9) for individual industries.

table 1. General Statistics: 1963 and Earlier Years

| Year | Companies (number) | Establishments |  | All employees |  | Production workers |  |  | Value added by manufacture, adjusted <br> $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

Note: See appendix A for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel; electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior io 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Represents establishments specializing in producing automatic vending machines but excludes establishments producing coin-operated mechanisms for such machines. The former establishments accounted for an estimated 80-90 percent of the total value of shipments of all establishments primarily engaged in producing automatic vending machines and coin-operated mechanisms for such machines.
${ }^{3}$ No comparable figures are available for earlier years.
${ }^{4}$ The value of shipments and cost of materials for this industry includes extensive duplication arising from shipments between establishments in the same industry classification. Accordingly, the specialization ratios and coverage ratios are not shown. For further explanation see introductory text.
${ }^{5}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for $1958-1963$ are not comparable with those for earlier years.

${ }^{\text {General }}$ statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3581, Automatic Vending Machines: New England-Massachusetts, 4 (1,000-2,499); Fhode Island, 1 (20-99); Connecticut, 1 (250-499); Middle AtlanticNew Jersey, 6 (697); East North Central-Ohio, 7 (157); Indiana, 6 (300); Michigan, 6 (547); Wisconsin, 4 (477); West North Central-Iowa, 4 (133); Nebraska, 1 (1-19); Kansas, 3 (100-249); South Atlantic-Maryland, 4 (250-499); District of Columbia, 1 (1-19); West Virginia, 1 (100-249); North Carolina, 1 (1-19); Georgia, 3 (20-99); Florida, 4 (20-99); East South Central-Tennessee, 3 (448); Alabama, 1 (1-19); West South CentralArkansas, 1 (20-99); Oklahoma, 2 (1-19); Mountain-Arizona, 2 (1-19); Utah, 1 (1-19).
SIC 3582, Commercial Laundry Equipment: New England-Maine, 1 (100-249); Fhode Island, 1 (1-19); Connecticut, 4 (20-99); Middle Atlantic-New Jersey, 5 (100-249); Pennsylvania, 5 (20-99); East North Central-Indiana, 5 (20-99); Illinois, 17 ( $1,000-2,499$ ); Michigan, 5 (124); Wisconsin, 2 (100-249); West North Central-Minnesota, 4 (612); Missouri, 3 (100-249); Nebraska, 1 (1-19); Kansas, 1 (100-249); South Atlantic-Maryland, 1 (1-19); Virginia, 1 (1-19); Georgia, 1 (20-99); Florida, 1 (1-19); East South Central-Kentucky, 2 (250-499); Tennessee, 2 (100-249); Alabama, 2 (1-19): West South Central-Arkansas, 2 (20-99); Louisiana, 1 (100-249); Oklahoma, 3 (20-99); Mountain-Colorado, 1 (1-19); Utah, 1 (250-499); Pacific-Pacific-Washington, 1 (20-99); California, 10 (20-99).
SIC 3585, Refrigeration Machinery: New England-Massachusetts, 15 (764); Rhode Island, 5 (133); West North Central-Iowa, 6 (761); Nebraska, 2 (1-19); Kansas, 6 (250-499); South Atlantic-Delaware, 1 (100-249); Maryland, 5 (270); Virginia, 4 (966); West Virginia, 2 (20-99); South Carolina, 3 (20-99); East South Central—Kentucky, 4 (1,376); Alabama, 5 (717); Mississippi, 3 (493); West South Central-Louisiana, 4 (20-99); MountainIdaho, 1 (20-99); Colorado, 4 (20-99); New Mexico, 3 (20-99); Utah, 1 (100-249); Nevada, 1 (20-99); Pacific-Oregon, 13 (100-249); Hawaii, 1 (1-19)
SIC 3586, Measuring and Dispensing Pumps: New England-Vermont, 1 (100-249); Massachusetts, 3 (1,000-2,499); Middle Atlantic-New Jersey, 1 (1-19); Pennsylvania, 3 (500-999); East North Central-0hio, 4 (227); Indiana, 3 (500-999); Illinois, 2 (500-999); Michigan, 3 (381); Wisconsin, 1 (20-99); West North Central-Minnesota, 3 (516); Iowa, 1 (100-249); Missouri, 1 (500-999); Nebraska, 1 (1-19); South Atlantic-Maryland, 1 (250-499); North Carolina, l (1-19); Florida, 1 (1-19); East South Central-Tennessee, 1 (250-499); West South Central-Oklahoma, 1 (1-19); Texas, 1 (100-249); Mountain-Colorado, I (1-19); Pacific-California, 4 (20-99).
SIC 3589, Service Industry Machines, N.E.C.: New England-New Hampshire, 2 (100-249); Vermont, 1 (20-99); Rhode Island, 2 (1-19); Connecticut, 6 (20-99); West North Central-Iowa, 2 (20-99); Nebraska, 3 (20-99); Kansas, 3 (238); South Atlantic-Maryland, 3 (255); Virginia, 2 (1-19); West Virginia, 1 (1-19); North Carolina, 6 (100-249); South Carolina, 1 (1-19); Georgia, 3 (1-19); East South Central-Kentucky, 2 (100-249); Tennessee, 1 (1-19); Alabama, 2 (1-19); West South Central-Louisiana, 8 (100-249); Oklahoma, 5 (1-19); Texas, 18 (100-249); MountainColorado, 7 (20-99); New Mexico, 1 (1-19); Arizona, 1 (1-19); Utah, 2 (1-19); Pacific-Washington, 3 (20-99); Oregon, 2 (20-99); Hawaii, 1 (1-19).
SIC 3599, Miscellaneous Machinery: East North Central-Indiana, 279 ( 5,872 ); Michigan, 834 (13,896); Wisconsin, 315 ( 3,291 ); West North CentralNorth Dakota, 18 (20-99); South Dakota, 11 (209); Mountain-Montana, 24 (20-99); Wyoming, 16 (20-99); Arizona, 83 (1,023); Nevada, 11 (20-99); Pacific-Alaska, 8 (20-99); Hawaii, 15 )20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total employment (either actual or in size ranges) for such States.
${ }^{3}$ Data for 1958 exclude those establishments primarily engaged in producing industrial vacuum cleaners. In 1958 there were 18 such establishments
with 432 employees and a value added (adjusted) of \$4,256 thousand.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See appendix A for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manurac-
turing establishments.
${ }^{3}$ The specialization and coverage ratios are not shown for industry 3585 as the data from which these ratios are obtained include extensive duplication because the products of some establishments in the industry are consumed as materials by other establishments in the industry.
${ }^{4}$ For this industry respondents additionally reported the number of production workers in the pay period ended nearest the 15 th of each month. This information is sumarized below. The average number of production workers appearing above and in tables 1,2 , and 8 are computed on the basis of the average for the months of March, May, August and November.

| Average number of production workers |  |  |
| :---: | :---: | :---: |
| 12 months ..... 50,298 | May . . . . . . . . 53,170 | September..... 48,338 |

[^208]
## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $\mathbf{A}$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\begin{aligned} & \text { Total } \\ & (\$ 1,000) \end{aligned}$ | Primary products $(\$ 1,000)$ | Secondary products $(\$ 1,000)$ | Miscellaneous receipts $(\$ 1,000)$ | Primary product specialization ratio $\qquad$ Col. Note: See appendix A for an explanation of terms used.
n.e.c. Not elsewhere classified.
${ }^{1}$ The total value of shipments of refrigeration machinery includes extensive duplication resulting from the use of products of certain establishments as materials by others within the same industry. Accordingly, the specialization and coverage ratios have not been calculated.

## table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products c the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Includes $\$ 3.9$ million shipped by industry 3585, Refrigeration Machinery. In addition, the following industry had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3651, Radio and TV Receiving Sets.
${ }^{2}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 36341 , Electric fans, except industrial type; 36343, Other small household electric appliances; 36350, Household vacuum cleaners, including parts and attachments; 36393, Other household appliances and parts; and 36513, Recorders, audio amplifiers, phonographs, tuners, speaker systems, and other audio equipment and accessories.
${ }^{3}$ Includes $\$ 7$ million shipped by industry 3633, Household Laundry Equipment.
4Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 35690 , General industrial machinery, n.e.c., and 38213, Industrial process instruments.
${ }^{5}$ The total value of shipments of the Refrigeration Machinery Industry includes extensive duplication resulting from the use of products of some establishments in the industry as materials by others within the same industry.
${ }^{6}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3494, Valves and Pipe Fittings; 3564, Blowers and Fans; 3631, Household Cooking Equipment; 3639, Household Appliances, N.E.C.; 3651, Radio and TV Receiving Sets; 3717, Motor Vehicles and Parts; and 3729, Aircraft Equipment, N.E.C.
${ }^{7}$ Includes $\$ 17.5$ million shipped by industry 3632, Household Refrigerators. In addition, the following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3589, Service Industry Machines, N.E.C.

The following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3631 , Household Cooking Equipment.
${ }^{9}$ The following industry had shipments which totaled $\$ 2$ million or more but is withheld to avoid disclosing figures for individual companies: 3351 , Copper Rolling and Drawing.
${ }^{10}$ Includes $\$ 7.4$ million shipped by industry 3433, Heating Equipment, Except Electric; $\$ 12.3$ million shipped by industry 3494, Valves and Pipe Fittings; and $\$ 10.1$ million shipped by industry 3632, Household Refrigerators. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3567, Industrial Furnaces and Ovens; 3569, General Industry Machines, N.E.C.; 3723, Aircraft Propellers and Parts; and 3729, Aircraft Equipment, N.E.C.
${ }^{11}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 19310, Tanks and tank components; 19410, Sighting and fire-control equipment made from purchased lenses; 24331, Fabricated structural framing and wood laminates, ready-cut wood buildings; and panels or sections for prefabricated buildings; 33620, Copper and copper-base alloy castings; 34333, Cast iron heating boilers, radiators, and convectors, except parts; 34334, Domestic heating stoves (except electric), except parts; 34431, Heat exchangers and steam condensers; 34434, Gas cylinders; 35112, Steam, gas, and hydraulic turbine and parts; steam engines and parts; 35424 , Parts for metal forming machine tools and rebuilt metal forming machinery; 35481, Rolling-mill machinery and equipment; 35595, Other special industry machinery, and equipment; 35690, General industrial machinery, n.e.c.; 36312, Household ovens and ranges, equipment and parts, except electric; 37175, Parts and accessories for passenger cars, trucks and busses, shipped to motor vehicle manufacturers; 37176, Parts and accessories for passenger cars, trucks, and busses shipped to other than motor vehicle manufacturers; and 37413, Parts for locomotives, for sale separately, and rebuilt locomotives.
${ }^{12}$ Includes $\$ 6.9$ million shipped by industry 3561, Pumps and Compressors. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3494, Valves and Pipe Fittings; and 3548, Metalworking Machinery, N.E.C.
${ }^{13}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 34942 , Metal fittings and unions for piping systems; 34944, Other metal valves and fittings, except plumbers' brass goods and fittings; 35333 , Oil and gas field production machinery and equipment (except pumps); and 35595, Other special industry machinery and equipment.
${ }^{14}$ The following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3631, Household Cooking Equipment; and 3634, Electric Housewares and Fans.

# TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued 

Footnotes for Table 5B--35G-Continued
${ }^{15}$ Includes $\$ 3.8$ million shipped by industry 3639, Household Appliances, N.E.C. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 2842, Polishes and Sanitation Goods, and 3535 , Conveyors.
${ }_{16}$ Includes $\$ 2.3$ million shipped by industry 3548, Metalworking Machinery, N.E.C.
${ }^{17}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 35482 , Power-driven hand tools including parts and attachments; 356ll, Industrial pumps except hydraulic fluid power; 35853, Commercial refrigeration equipment; and 38213 , Industrial process instruments.
${ }^{18}$ Includes $\$ 4.5$ million shipped by industry 3323, Steel Foundries; $\$ 2.2$ million by industry 3361, Aluminum Castings; $\$ 2.3$ million by industry 3494, Valves and Pipe Fittings; $\$ 3.8$ million by industry 3541, Metal-Cutting Machine Tools; \$11.9 million by industry 3544 , Special Dies and Tools; $\$ 2.4$ million by industry 3548, Metalworking Machinery, N.E.C.; $\$ 3$ million by industry 3559, Special Industry Machines, N.E.C.; $\$ 6.9$ million by industry 3561, Pumps and Compressors; $\$ 6.1$ million by industry 3569, General Industry Machines, N.E.C.; $\$ 8.9$ million by industry 3717 , Motor Vehicles and Parts; and $\$ 13.5$ million by industry 3729, Aircraft Equipment, N.E.C. In addition, the following industries had shipments which totaled $\$ 2$ million or more but are withheld to avoid disclosing figures for individual companies: 3293, Gaskets and Insulations; 3312, Blast Furnaces and Steel Mills; 3352, Aluminum Rolling and Drawing; 3441, Fabricated Structural Steel; 3461, Metal Stampings; 3624, Carbon and Graphite Products; 3679, Electronic Components, N.E.C.; 3694, Engine Electrical Equipment; 3731, Ship Building and Repairing; and 3821, Mechanical Measuring Devices.
${ }^{19}$ Includes the following product classes which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 19293 , Ammunition, n.e.c.; 19990, Ordnance and accessories, n.e.c.; 32933, Packing, except leather, rubber, and metal, and asbestos insulations; 34431, Heat exchangers and steam condensers; 34941, Metal valves for piping systems (except plumbing and heating valves); 34980, Fabricated pipe and fittings; 35370, Industrial trucks and tractors; 35641, Industrial fans and blowers; 36945, Other complete electrical equipment for internal combustion engines; 36946, Components and parts for engine electrical equipment; 37176, Parts and accessories for passenger cars, trucks and busses, shipped to other than motor vehicle manufacturers; and 38214, Motor vehicle instruments, except electric.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

| Product code | Product | Total shipments including interplant transfers |  |  |  |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.s.k. Not specified by kind.
${ }^{1}$ For these products, data were also collected in the census annual conmodity survey program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified products or classes of products for which separate figures had previously been collected on the annual form. In most cases, the value figures reported in the census of manufactures for each product or class of products agreed closely with the corresponding figures reported in the annual survey. However, there were some differences between the census figures and the annual survey figures amounting generally to less than 1 percent at the industry level. These variations were due primarily to the following reasons:
a. Use of different reporting periods (calendar year vs. fiscal year).
b. Use of different bases for reporting value (company sales vs. factory production).
c. Use of estimates in reporting data on the annual survey whereas census of manufactures figures generally represent more exact shipments figures.
${ }^{2}$ These products are primarily coffee vending machines though they may also vend hot chocolate and/or hot soup from the same cabinet.
${ }^{3}$ In 1958 data for canned beverages are included with other vending machines for beverages.
${ }^{4}$ Includes packaged milk (indoor and outdoor); milk (bulk or cup); beverage combination (hot and cold); hot beverages such as hot chocolate and/or hot soup (except canned soup) not sold in a combination machine with coffee; and package dry ingredients for mixing into beverages.
${ }^{5}$ Includes vending machines for such conmodities as apples; cookies, crackers, and biscuits; popcorn, pastry; ice cream; and package chewing gum.
${ }^{6}$ Includes vending machines for such products as cosmetics and toiletries, novelties, detergents, newspapers, and stationery supplies.
${ }^{7}$ Includes automatic vending machines and parts, not specified by kind.
${ }^{8}$ Excludes coin-operated mechanisms.
${ }^{9}$ The total value of shipments of refrigeration machinery includes extensive duplication resulting from the use of products of some establishments
in the industry as materials by others within the same industry
${ }^{10}$ This product class includes on Census Form MA-35M products coded in the 35854 and 35852 groups.
${ }^{11}$ For 1963, a total of 68,631 units valued at $\$ 33,935$ thousand in the under $97,000 \mathrm{~B} . \mathrm{t} . \mathrm{u} . / \mathrm{hr}$. category were shipped. A breakdown between
"Horizontal" types and "Other" types was also obtained for units in this category. Of this total, 55,087 units valued at \$24,221 thousand represented "Horizontal" types. The corresponding figures for horizontal types under 97,999 B.t.u./hr. in 1958 were 44,809 units valued at $\$ 17,348$ thousand.
${ }^{12}$ Data for 1963 include units for household refrigerators. Such units are excluded from figures for 1958.
${ }^{13}$ Figures for compressor bodies 10 hp . and under hermetic-type motor compressors also include compressor bodies 10 hp . and under open-type compressors and (for 1958 only) 15 and 20 hp . open and hermetic types.
${ }^{14}$ Represents 20 hp . and under hermetic-type motor cormpressors.
${ }^{15}$ Excludes automotive air-conditioning compressors.
${ }^{16}$ No detail by horsepower is available for these units.
${ }^{17}$ Twin pumps are counted as one unit.
${ }^{18}$ Twin pumps are counted as two units.
${ }^{19}$ For 1963, data on noncomputing gasoline dispensing pumps are included with other measuring and dispensing pumps.
${ }^{20}$ Represents parts and accessories for commercial electric cooking equipment.
${ }^{21}$ The 1958 and 1963 figures are not directly comparable because of the apparent inclusion of some carburetors and valves in industry 3717 , "Motor Vehicles and Parts" in 1958.
${ }^{22}$ This figure differs from comprable totals shown in other tables because of inclusion of corrections that were introduced too late for inclusion in those tables. The effect on total figures is less than 5 percent.

## TABLE 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

[^213]
# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

#### Abstract

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are

listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments | Product class and geographic area | Value of shipments |  |

| Aggregate horsepower per 100 production workers.................... | 443 | 578 | 760 | 731 | 423 | 749 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. (Z) Less than 500 horsepower.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Appendix A for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

|  | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials $(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ |

| Percent of industry production workers in establishments which completed metalworking operations inquiry. | 85-90 | 85-90 | 90-95 | 95-100 | 80-85 | 70-75 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishnent.

# Electrical Machinery 

36A Electrical transmission, distribution, and industrial apparatus

36B Household appliances
36C Electric lighting and wiring equipment
36D Communication equipment, including radio and TV, and e lectron components and accessories
36E Miscellaneous electrical machinery, equipment and supplies

This major group covers establishments primarily engaged in manufacturing machinery, apparatus and supplies for the generation, storage, transmission, transformation, and utilization of electrical energy.

A number of products which are sometimes considered "as belonging" in electrical equipment are classified in other major groups in the 1957 edition of the Standard Industrial Classification Manual in use for 1963. For example, machinery or equipment powered by built-in or detachable electric motors, such as machine tools and other metalworking equipment, commercial laundry and dry cleaning equipment, industrial vacuum cleaners, and office and store machines are classified in Major Group 35, Machinery, Except Electrical. Establishments primarily engaged in producing glass insulators, glass blanks for bulbs, and porcelain electrical supplies are classified in Major Group 32; those producing electric furnaces and ovens, turbogenerators and gas welding apparatus in Major Group 35; and those making automatic temperature controls in Major Group 38.

Industries included in Major Group 36 are typically defined in terms of products and may include both electrical and electronic equipment. Industry groups 365,366 , and 367 include the bulk of electronic equipment in this major group, i.e., radios, television sets, electron tubes, etc., but they also encompass some communications equipment other than electronic. Both electrical and electronic testing equipment are included in industry 3611, Electric Measuring Instruments. Most of the other industries in

Major Group 36 include products generally defined as electrical rather thanelectronic. Electronic components are frequently produced and consumed at the same location by establishments classifed in this major group. Thus, there are (1) plants, solely engaged in producing electronic components, (2) plants producing electronic components and assembling them into finished products, and (3) plants which assemble components produced elsewhere either in other plants of the same company or by other companies. Other types of componentsand equipment in Major Group 36 such as motors, generators, and motor-generator sets are not uncommonly produced for incorporation into other products made in the same plant.

Products included in Major Group 36 consist of equipment and apparatus for industrial or commercial use as well as goods for household consumption. For example, group 364 includes such consumer durable goods as electric lamps, lighting fixtures, and wiring devices and supplies, as well as similar products for commercial or industrial use. Group 363 consists of household electric appliances such as ranges, ovens, water heaters, fans and small electric appliances, household refrigerators and freezers, household laundry equipment, sewing machines, and vacuum cleaners.

Data on selected materials consumed (principally the metal items) by each of the 4-digit industries are shown in the respective table 7A's. The number of establishments engaged in some of the more important metalworking operations and the number of employees work-
ing in each operation are shown in table 9 for the 4 -digit industries. The materials and metalworking operations shown in tables 7A and 9 do not represent, of course, a complete list or, for many industries in this group, even the most important ones. There are a number of significant activities such as assembly, subassembly, welding, etc., which are not covered in all instances. Although the production processes in this area adhere to a general pattern of metalworking and fabricating operations (e.g., machine shop, tool and die room, etc.), there are substantial variations in the numbers and types of processes performed by an individual establishment as well as from industry
to industry. Within many of these industries establishments typically purchase mill shapes and castings and carry out the entire fabricating of the metal until it emerges as a finished product. In other industries, however, such as radio and television receiving sets, establishments may be primarily engaged in assembling component parts products by other companies or other plants of the same company. Also, not all industries consume significant amounts of metals or engage in metalworking operations, e.g., Carbon and Graphite Products (industry 3624), Electric Lamps (industry 364 ), Phonograph Records (industry 3652), and Batteries (industries 369 and 3692).

## Electrical Machinery: Major Group 36

Value Added by Manufacture by State: 1963

## table 1. General Statistics: 1963 and Earlier Years

Standard Notes: - Represents Zero. (D) individual companies. $\quad$ (NA) Not available. (D) (X). Not applicable
${ }^{1}$ The figures for 1939 through 2963 include data for employees of manufacturing estab-
lishments who are engaged in distribution and construction work. The extent to which
data for such employees are included in the figures for earlier years is not known.
For the period 1954 to 1963, figures represent adjusted value added by manuf acture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value or 1 inished products and work-in-process inventories between the beginning and end value of products (excluding resales of supplies, fue , ectric energy and contract work; no adjustrent is made for chan supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products
${ }^{3}$ The total value of shipmen
digit) includes extensive duplicand cost of materials for industry groups (2-and 3the same industry classification. For a more complete explanation, see Introduction.

The figures for 1958 to 1963 include expenditures for plants under construction and
${ }^{5}$ Data for 1947, 1954, and later years, exclude establishments primarily engaged in the manufacture of automatic temperature controls, whereas data for 1949 to 1953 include these establishments.
${ }^{6}$ In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manuractures volumes. Data for these units
are not available for the years 1955 to 1957, 1959 to 1962, and prior to 1949.
${ }^{7}$ Figures for 1958 to 1963 , for operating manufacturing establishments are not strictly comparable with prior years due to revisions of the Standard Industrial Classification
system. Prior to 1958, data excludes establishments primarily engaged in the manuracture of household ranges and ovens; household refrigerators and home and farm freezers, household laundry equipment; household vacuum cleaners; sewing machines; water heaters, except electric; and other household appliances. Establishnents primarily engaged i
the manufacture of hearing aids; high frequency, induction, and dielectric heating the manufacture of hearing aids; high frequency, induction, and dielectric heating
apparatus; comercial food warming equipment; industrial electric heating units and deapparatus; connercial food warming equipment; industrial electric heating units and
vices; and insulated wire and cable made from purchased wire, are included in data vices; and insu
prior to 1958.
${ }_{8}{ }^{7}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete estimates are published in the annual survey of manufactures volumes for this period esta for 1939 and facture of electric (ary) shavers. ufacture of electric (dry) shavers.

Figures for 1937 and earlier years include data for establishments primarily engaged dictating machines and electric industrialbo-generators and water-wheel generator sets, basis comparable with earlier years was $\$ 1,000$ million.
${ }^{11}$ The figures for 1933 and earlier years include data for establishments primarily engaged in the manufacture of certain types of beauty and barber-shop equipment classified for later years in the "Miscellaneous manufactures" industries.
ligures for 1925 and earlier years include data for establishments primarily engaged in the manufacture of certain types of mechanical refrigerators, classified for later years in the machinery (except electrical) industries
${ }^{13}$ The figures for 1899 and 1904 include data for establishments primarily engaged in the manufacture of signs and advertising novelties, classified for later years in the "Miscellaneous manufactures" industries.

## ELECTRICAL TRANSMISSION, DISTRIBUTION, AND INDUSTRIAL APPARATUS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3611-Electric Measuring lnstruments and Test Equipment<br>3612-Power, Distribution, and Specialty Transformers<br>3613-Switchgear and Switchboard Apparatus<br>3621-Motors and Generators<br>3622--lndustrial Controls<br>3623-Welding Apparatus<br>3624-Carbon and Graphite Products<br>3629-Electrical Industrial Apparatus, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

In addition to the 1963 Census of Manufactures product statistics shown in table 6A, detail as published in the 1963 Current Industrial Reports Series are also shown.

## 3611-ELECTRIC MEASURING INSTRUMENTS AND TEST EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing pocket, portable, panelboard, and graphic recording instruments for measuring electricity such as voltmeters, ammeters, watt meters, watthour meters, demand meters, and other meters and indicating instruments. This industry also includes establishments primarily engaged in manufacturing analyzers for testing the electrical characteristics of internal combustion engines, radio apparatus, etc. For a detailed list of products of industry 3611, refer to table 6A, product codes 3611110 to 3611385 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electric Measuring lnstruments lndustry totaled $\$ 749$ million. This amount included shipments of electric measuring instruments (primary products) valued at $\$ 588$ million, shipments of other products (secondary products) valued at $\$ 112$ million, and miscellaneous receipts (mainly resales) at $\$ 48$ million.

This industry's shipments of electric measuring instruments represented 84 percent of its total product shipments. The industry specialization ratio in 1958 was 74 percent. Secondary products shipped by this industry in 1963 consisted mainly of other electronic components and accessories, n.e.c. ( $\$ 18$ million), and electronic military, industrial, and commercial equipment, n.e.c. ( $\$ 10$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 45 percent of the total industry shipments are represented by plants specializing in product class 36112 , Test equipment for testing electrical, radio, and communication circuits and motors.

Shipments of electric measuring instruments by this industry represented 78 percent of all shipments of these products ( $\$ 756$ million) by all industries. In 1958 the coverage ratio was 81 percent. Other industries shipping electric measuring instruments consisted mainly of industry 3662, Radio, TV Communications Equipment, $\$ 33$ million; and industry 3821, Mechanical Measuring Devices, $\$ 22$ million.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3611, e.g., 36111, Integrating instruments, electrical, 96 percent; 36113, Other electrical measuring instruments, 71 percent; and 36110 , Electrical measuring instruments, n.s.k., 97 percent.

## 3612—POWER, DISTRIBUTION, AND SPECIALTY TRANSFORMERS

This industry comprises establishments primarily engaged in manufacturing power, distribution, and specialty transformers. Establishments primarily engaged in manufacturing radio frequency or voice frequency transformers, coils, or chokes are classified in industry 3679, and resistor welding transformers in industry 3623. For a detailed list of products of industry 3612, refer to table 6A, product codes 3612111 to 3612384.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Transformers Industry totaled $\$ 723$ million. This amount included shipments or power, distribution, and specialty transformers (primary products) valued at $\$ 652$ million, shipments of other products (secondary products) valued at $\$ 58$ million, and miscellaneous receipts (mainly resales) at $\$ 12$ million.

This industry's shipments of transformers represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent. Secondary products shipped by this industry in 1963 consisted mainly of other electrical measuring instruments ( $\$ 10$ million), and coils, transformers, reactors, and chokes for electronic applications ( $\$ 4$ million).

Shipments of transformers by this industry represented 94 percent of all shipments of these products ( $\$ 692$ million) by all industries. In 1958 the coverage ratio was 93 percent. Other industries shipping transformers consisted mainly of industry 3642, Lighting Fixtures, $\$ 6$ million.

The production index for the primary products of the industry increased to 125 in 1963 from the 1958 level of 88 . The unit value index for 1963 was 89 compared to 114 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3613-SWITCHGEAR AND SWITCHBOARD APPARATUS

This industry comprises establishments primarily engaged in manufacturing switchgear and switchboard apparatus. Important products of this industry include power switches, circuit breakers, power switching equipment, and similar switchgear for general industrial application; switchboards and cubicles, control and metering panels, power fuse mountings, and similar switchboard apparatus and supplies. Establishments primarily engaged in manufacturing industrial controls are classified in industry 3622 , and those manufacturing current carrying wiring devices in industry 3643 . For a detailed list of products of industry 3613, refer to table 6A, product codes 3613111 to 3613493.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Switchgear and Switchboards lndustry totaled $\$ 1,094$ million. This amount included shipments of switchgear and switchboard apparatus (primary products) valued at $\$ 897$ million, shipments of other products (secondary products) valued at $\$ 136$ million, and miscellaneous receipts (mainly resales) at $\$ 61$ million.

This industry's shipments of switchgear and switchboard apparatus represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 80 percent. Secondary products shipped by this industry in 1963 consisted mainly of general industry power circuit devices and controls ( $\$ 67$ million), current carrying wiring devices, including lightning rods and electric conduit and conduit fittings (\$6 million each).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 46 percent of the total industry shipments are represented by plants specializing in product class 36131, Switchgear, including power switchgear assemblies and other switching and interrupting devices 2300 volts and over; and 29 percent in product class 36133 , Low voltage panelboards and distribution boards and switching and interrupting devices 750 volts and under.

Shipments of switchgear and switchboards by this industry represented 89 percent of all shipments of these products ( $\$ 1,008$ million) by all industries. In 1958 the coverage ratio was 90 percent. Other industries shipping switchgear and switchboard apparatus consisted mainly of industry 3622, Industrial Controls, $\$ 28$ million; and industry 3643 , Current Carrying Devices, \$10-\$20 million.

The production index for the primary products of the industry increased to 125 in 1963 from the 1958 level of 109 . The unit value index for 1963 was 112 compared to 113 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3621-MOTORS AND GENERATORS

This industry comprises establishments primarily engaged in manufacturing electric motors (except starting motors) and power generators; motor generator sets; railway motors and control equipment; and motors, generators, and control equipment for gasoline electric and oil electric busses and trucks. Establishments primarily engaged in manufacturing turbo-generators are classified in industry 3611 , and starting motors and battery charging generators for internal combustion engines in industry 3694. For a detailed list of products of industry 3621 , refer to table 6 A , product codes 3621101 to 3621611.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Motors and Generators lndustry totaled $\$ 1,710$ million. This amount included shipments of motors and generators (primary products) valued at $\$ 1,332$ million, shipments of other products (secondary products) valued at $\$ 308$ million, and miscellaneous receipts (mainly resales) at $\$ 70$ million.

This industry's shipments of motors and generators represented 81 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. Secondary products shipped by this industry in 1963 consisted mainly of speed changers, industrial high speed drivers, and gears ( $\$ 22$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 46 percent of the total industry shipments are represented by plants specializing in product class 36211, Fractional horsepower motors; and 32 percent in 36212, Integral horsepower motors and generators, except land transportation.

Shipments of motors and generators by this industry represented 84 percent of all shipments of these products ( $\$ 1,578$ million) by all industries. In 1958 the coverage ratio was 85 percent.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3621 , e.g., Fractional horsepower motors, 91 percent; lntegral horsepower motors and generators, except land transportation, 92 percent; Land transportation motors, generators, and control equipment and parts, and Prime moving generator sets, except steam or hydraulic turbines, combined, 40 percent; and Motor generators and other rotating equipment, 92 percent.

## 3622--INDUSTR1AL CONTROLS

This industry comprises establishments primarily engaged in manufacturing motor starters and controllers, control accessories, electronic controls, and other industrial controls. Establishments primarily engaged in manufacturing automatic temperature controls are classified in industry 3822. For a detailed list of products of industry 3622 , refer to table 6 A , product codes 3622012 to 3622099 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the lndustrial Controls lndustry totaled $\$ 649$ million. This amount included shipments of industrial controls (primary products) valued at $\$ 500$ million, shipments of other products (secondary products) valued at $\$ 129$ million, and miscellaneous receipts (mainly resales) at $\$ 19$ million.

This industry's shipments of industrial controls represented 79 percent of its total product shipments. The industry specialization ratio in 1958 also was 79 percent. Secondary products shipped by this industry in 1963 consisted mainly of resistors for electronic application ( $\$ 57$ million), and switchgear, including power switchgear assemblies and other switching and interrupting devices 2300 volts and over ( $\$ 23$ million).

Shipments of industrial controls by this industry represented 79 percent of all shipments of these products ( $\$ 633$ million) by all industries. In 1958 the coverage ratio was 70 percent. Other industries shipping industrial controls consisted mainly of industry

3613, Switchgear and Switchboards, $\$ 67$ million; and industry 3822, Automatic Temperature Controls, $\$ 13$ million.

## 3623-WELDING APPARATUS

This industry comprises establishments primarily engaged in manufacturing welding apparatus and accessories. Establishments which coat only and those which draw the wire and coat it are also included. Establishments primarily engaged in manufacturing gas welding apparatus are classified in industry 3548. For a detailed list of products of industry 3623 , refer to table 6A, product codes 3623111 to 3623381.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electric Welding Apparatus Industry totaled $\$ 330$ million. This amount included shipments of electric welding apparatus (primary products) valued at $\$ 288$ million, shipments of other products (secondary products) valued at $\$ 20$ million, and miscellaneous receipts (mainly resales) at $\$ 22$ million.

This industry's shipments of electric welding apparatus represented 93 percent of its total product shipments. The industry specialization ratio in 1958 also was 93 percent. Secondary products shipped by this industry in 1963 consisted mainly of essential oils, fireworks, and pyrotechnics and chemicals and chemical preparations, n.e.c. (\$5-\$10 million).

While the primary products of the industry represent more than one class of products, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 53 percent of the total industry shipments are represented by plants specializing in product class 36232, Arc welding electrodes, metal.

Shipments of electric welding apparatus by this industry represented 89 percent of all shipments of these products ( $\$ 325$ million) by all industries. In 1958 the coverage ratio was 92 percent. Other industries shipping electric welding apparatus consisted mainly of industry 3621, Motors and Generators, $\$ 5-\$ 10$ million.

The production index for the primary products of the industry increased to 154 in 1963 from the 1958 level of 113 . The unit value index for 1963 was 132 compared to 129 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3624-CARBON AND GRAPHITE PRODUCTS

This industry comprises establishments primarily engaged in manufacturing lighting carbons; carbon, graphite, and metal graphite brushes, and brush stock; carbon or graphite electrodes for thermal and electrolytic uses; and other carbon, graphite, and metal graphite products for use in the electrical industries. For a detailed list of products of industry 3624 , refer to table 6A, product codes 3624011 to 3624089.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Carbon and Graphite Products Industry totaled $\$ 227$ million. This amount included shipments of carbon and graphite products (primary products) valued at $\$ 209$ million, shipments of other products (secondary products) valued at $\$ 16$ million, and miscellaneous receipts (mainly resales) at $\$ 2$ million.

This industry's shipments of carbon and graphite products represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 97 percent. Secondary products shipped by this industry in 1963 consisted mainly of resistors for electronic applications ( $\$ 2-\$ 5$ million).

Shipments of carbon and, graphite products by this industry represented 96 percent of all shipments of these products ( $\$ 218$ million) by all industries. In 1958 the coverage ratio was 95 percent. Other industries shipping carbon and graphite products consisted mainly of industry 3621, Motors and Generators (over $\$ 2$ million); and industry 3694, Engine Electrical Equipment ( $\$ 2-\$ 5$ million).

## 3629—ELECTRICAL INDUSTRIAL APPARATUS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing industrial and commercial electric apparatus and equipment, n.e.c., such as blasting machines, fixed and variable capacitors and condensers, and rectifiers for industrial applications. Establishments primarily engaged in manufacturing fixed and variable capacitors and condensers for electronic end products are classified in industry 3679 and rectifiers for electronic end products in industry 3674. For a detailed list of products of industry 3629 , refer to table 6A, product codes 3629111 to 3629398.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electric lndustrial Goods, N.E.C., Industry totaled $\$ 238$ million. This amount included shipments of electric industrial goods, n.e.c. (primary products) valued at $\$ 180$ million, shipments of other products (secondary products) valued at $\$ 46$ million, and miscellaneous receipts (mainly resales) at $\$ 12$ million.

This industry's shipments of electric industrial goods, n.e.c., represented 80 percent of its total product shipments. The industry specialization ratio in 1958 was 71 percent. Secondary products shipped by this industry in 1963 consisted mainly of coils, transformers, reactors, and chokes for electronic applications ( $\$ 2$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 22 percent of the total industry shipments are represented by plants specializing in product class 36291, Capacitors for industrial use (except for electronic applications); 26 percent in 36292, Rectifying apparatus; and 48 percent in 36293 , Other electrical equipment for industrial use.

Shipments of electric industrial goods, n.e.c., by this industry represented 72 percent of all shipments of these products ( $\$ 250$ million) by all industries. ln 1958 the coverage ratio was 73 percent. Other industries shipping electrical industrial goods, n.e.c., consisted mainly of industry 3622, lndustrial Controls, $\$ 4$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3629 , e.g., product class 36292, Rectifying apparatus, 57 percent; and, product class 36293 , Other electrical equipment for industrial use, 80 percent.

INDUSTRY 3624.-CARBON AND GRAPHITE PRODUCTS

## table 1. General Statistics: 1963 and Earlier Years-Continued

## Footnotes for Table 1-36A-Continued

NOTE: See introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production rather than shipments.
Standard Notes:

- Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }_{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishnents. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures show in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Data for Alaska and Hawaii are not included.
${ }^{3}$ Industries 3613 and 3622 were single industry 3616 (old SIC) prior to 1958.
${ }^{4}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry is not comparable. The 1957 and earlier figures are on the old SIC definition of the industry.
table 2. General Statistics, by Geographic Areas: 1963 and 1958

SIC 3621, Motors and Generators: New England-New Hampshire, 2 (250-499); Massachusetts, 7 (500-999); West North Central-Iowa, 3 (100-249); Missouri, 8 (4,667); Nebraska, 2 (20-99); South Atlantic-Maryland, 2 (250-499); West Virginia, 1 (20-99); North Carolina, 2 (1,000-2,499); South Carolina, 2 (1,000-2,499); Florida, 6 (20-99); East South Central-Kentucky, 2 (500-999); Tennessee, 7 (1, 640); Mississippi, 1 (100-249); West South Central-Louisiana, 2 (20-99); Oklahoma, 2 (100-249); Texas, 6 (20-99); Mountain-Colorado, 5' (683); New Mexico, 1 (1-19); Arizona, 3 (1-19); Nevada, 1 (1-19); Pacific-0regon, 1 (20-99); California, 54 (4,507).
SIC 3622, Industrial Controls: New England-New Hampshire, 1 (1-19); Rhode Island, 2 (1-19); East North Central-Indiana, 3 (1,057); Michigan, 29 (1,089); West North Central-Minnesota, 7 (250-499); Iowa, 1 (1-19); Missouri, 4 (500-999); Nebraska, 1 (1-19); South Atlantic-Maryland, 6 (250-499); District of Columbia, 2 (20-99); Virginia, 2 (2,500-4,999); West Virginia, 1 (1-19); North Carolina, 2 (250-499); Georgia, 2 (20-99); Florida, 1 (20-99); East South Central-Kentucky, 2 (20-99); Tennessee, 2 (1-19); Alabama, 1 (1-19); Mississippi, 1 (1-19); West South CentralOklahoma, 2 (250-499); Texas, 15 (250-499); Mountain-Colorado, 3 (1-19); Arizona, 2 (20-99); Utah, 2 (20-99); Nevada, 1 (1-19); Pacific Washington, 5 (20-99); Oregon, 9 (20-99).
SIC 3623, Electric Welding Apparatus: New England-Massachusetts, 6 (20-99); Connecticut, 5 (100-249); Middle Atlantic-New Jersey, 7 (100-249); East North Central-Indiana, l (1-19); Illinois, 10 (500-999); West North Central—Minnesota, 6 (100-249); Kansas, 1 (20-99); South AtlanticMaryland, 2 (250-499); Virginia, l (1-19); West Virginia, l (1-19); Florida, l (1-19); East South Central-Alabama, l (20-99); West South Cen-tral-Arkansas, 1 (1-19); Oklahoma, 2 (20-99); Mountain-Colorado, 2 (100-249); Pacific—Washington, 1 (20-99); Oregon, l (1-19); California, 13 (509).
SIC 3624, Carbon and Graphite Products: New England-Massachusetts, 1 (20-99); Connecticut, 2 (1-19); Middle Atlantic-New Jersey, 2 (100-249); East North Central-Ohio, 8 (1,939); Illinois, 3 (250-499); Michigan, 3 (687); Wisconsin, 2 (100-249); South Atlantic-West Virginia, 2 (100-249); North Carolina, 1 (500-999); East South Central-Tennessee, l (500-999); Alabama, l (20-99); Pacific-California, 5 (131).
SIC 3629, Electric Industrial Goods, N.E.C.: New England-Maine, 1 (100-249); New Hampshire, 2 (20-99); Rhode Island, 3 (20-99); East North Central-Ohio, 16 (1,823); Indiana, 14 (1,000-2,499); Wisconsin, 3 (250-499); West North Central-Missouri, 3 (20-99); Nebraska, 2 (1-19); South Atlantic-Virginia, 2 (20-99); West Virginia, 2 (100-249); Georgia, 2 (1-19); Florida, 1 (1-19); East South Central-Kentucky, 1 (20-99); Mississippi, 1 (20-99); West South Central-Oklahoma, 1 (1-19); Texas, I (250-499); Mountain-Wyoming, 1 (20-99); Colorado, 1 (1-19); Arizona, $\frac{1}{2}$ (20-99); Nevada, 1 (1-19); Pacific-Washington, 2 (20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958
report showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Witiheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable.
The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of prinary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left. n.e.c. Not elsewhere classified.
${ }^{1}$ Includes capital expenditures of approximately $\$ 1-\$ 2$ million for plants under construction but not in operation.
${ }^{2}$ Includes capital expenditures of approximately $\$ 100-\$ 200$ thousand for plants under construction but not in operation.

# TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958 

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| $\begin{aligned} & \text { Ind } \\ & \text { code } \end{aligned}$ | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

Note: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
applicable. n.e.c. Not elsewhere classified.

## TABLE 5B. Industry-Product Analysis—Shipments by Product Class aṇd Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

# TABLE 6A-4. Motors and Generators: 1963 and 1958--Continued 

36212 --

3621201
Integral horsepower motors and generators, other than for land transportation equipment (for a.c. and d.c. motors, 200 hp . and below, the horsepower shown is for open type frame at a speed of 1,800 r.p.m. Motors at other speeds and enclosures have been converted to equivalent ratings at 1,800 r.p.m.), total ${ }^{1}$.
Integral horsepower motors (excluding cranking motors for internal combustion engines; propulsion motors for land transportation; motors mounted on the same shaft as arc welding generators; and hermetics): Aircraft and space motors (including a.c. and d.c. but excluding generators) all integral hp. ratings.

Alternating current:
Single phase, all hp. ratings.
Polyphase-induction:
1-5 hp....
21-50 hp.
$51-125 \mathrm{hp}$.
126-200 hp
$201-500 \mathrm{hp} .$.
Over 500 hp .
Synchronous motors:
$450 \mathrm{r} . \mathrm{p} . \mathrm{m}$. or below (all hp. ratings).
Above 450 r.p.m. (all hp. ratings).
Direct current motors and generators (excluding all arc welding generators, battery charging generators for internal combustion engines and generators used as an integral part of land transportation equipment):
3621241
3621242
3621243
3621246
3621247
3621248
l-5 hp. (3/4-4 kw.)
5.1-20 hp. (4.1-15 kw.)
$21-50 \mathrm{hp}$. ( $16-40 \mathrm{kw}$.).
51-200 hp. (41-150 kw.)
201-500 hp. (151-400 kw.) Over 500 hp . (over 400 kw .).

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimite or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errols associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data

[^230]
# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1 .

| Driven by energy generated at establishment.............do.... | - | 4 | 8 | 39 | - | (Z) | - | - |
| Aggregate horsepower per 100 production workers.................... | 188 | 1,741 | 309 | 742 | 270 | 783 | 2,013 | 621 |

Note: Detail may not add to totals because of independent rounding. Figures ror fuess and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(Z) Less than 500 horsepower.
n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry special ization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

[^233]
## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963-Continued

See footnotes at end of table.

## HOUSEHOLD APPLIANCES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3631-Household Cooking Equipment<br>3632-Household Refrigerators and Home and Farm Freezers<br>3633--Household Laundry Equipment<br>3634-Electric Housewares and Fans<br>3635-Household Vacuum Cleaners<br>3636-Sewing Machines<br>3639-Household Appliances, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3631-HOUSEHOLD COOKING EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing household cooking equipment, such as stoves, ranges and ovens. Establishments primarily engaged in manufacturing household cooking appliances, such as hot plates, grills, percolators, and toasters are classified in industry 3634. Establishments primarily engaged in manufacturing commercial cooking equipment are classified in industry 3589. For a detailed list of products of industry 3631, refer to table 6A, product codes 3631111 to 3631298.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Household Cooking Equipment Industry totaled $\$ 473$ million. This amount included shipments of household cooking equipment (primary products) valued at $\$ 384$ million, shipments of other products (secondary products) valued at $\$ 60$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 30$ million.

This industry's shipments of household cooking equipment represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 88 percent.

Secondary products shipped by this industry in 1963 include other household appliances and parts ( $\$ 6$ million), and domestic heating stoves (except electric) ( $\$ 5$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 62 percent of the total industry shipments are represented by plants specializing in household ovens and ranges, equipment and parts, except electric; and 38 percent in electric household ranges and ovens.

Shipments of household cooking equipment by this industry represented 72 percent of all shipments of these products ( $\$ 537$ million) by all industries. In 1958 the coverage ratio was also 72 percent. Other industries shipping household cooking equipment include industry 3433, Heating Equipment, Except Electric, $\$ 10$ million; and industry 3633, Household Laundry Equipment, over $\$ 4$ million.

The production index for the primary products of the industry increased to 114 in 1963 from the 1958 level of 90 . The unit value index for 1963 was 104 compared to 107 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3632-HOUSEHOLD REFRIGERATORS AND HOME AND FARM FREEZERS

This industry comprises establishments primarily engaged in manufacturing household refrigerators and home and farm freezers. Establishments primarily engaged in manufacturing commercial and industrial refrigeration equipment, packaged room coolers, and dehumidifiers are classified in industry 3585. For a detailed list of products of industry 3632 , refer to table 6A, product codes 3632111 to 3632229.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Household Refrigerators lndustry totaled $\$ 1,307$ million. This amount included shipments of household refrigerators and freezers (primary products) valued at $\$ 831$ million, shipments of other products (secondary products) valued at $\$ 432$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 44$ million.

This industry's shipments of household refrigerators represented 66 percent of its total product shipments. The industry specialization ratio in 1958 was 74 percent. Secondary products shipped by this industry in 1963 include heat transfer equipment ( $\$ 148$ million), and compressors and compressor units, all refrigerants ( $\$ 54$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 93 percent of the total industry shipments are represented by plants specializing in household refrigerators; and 7 percent in home and farm freezers.

Shipments of household refrigerators by this industry represented 99 percent of all shipments of these products ( $\$ 832$ million) by all industries. In 1958 the coverage ratio was 98 percent.

The production index for the primary products of the industry increased to 156 in 1963 from the 1958 level of 112 . The unit value index for 1963 was 72 compared to 87 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3633-HOUSEHOLD LAUNDRY EQUIPMENT

This industry comprises establishments primarily engaged in manufacturing laundry equipment such as washing machines, wringers, driers, and ironers for household use. Establishments primarily engaged in manufacturing commercial laundry equipment are classified in industry 3582. Although the SIC classifies coin-operated washing machines in industry 3582, data for these machines are included in the 1963 Census of Manufactures in industry 3633 as in 1958. For a detailed list of products of industry 3633, refer to table 6A, product codes 3633131 to 3633298 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Household Laundry Equipment Industry totaled $\$ 760$ million. This amount included shipments of household laundry equipment (primary products) valued at $\$ 664$ million, shipments of other products (secondary products) valued at $\$ 79$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 17$ million.

This industry's shipments of household laundry equipment represented 89 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 consisted mainly of commercial laundry, dry cleaning, and pressing machinery and equipment ( $\$ 7$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 97 percent of the total industry shipments are represented by plants specializing in household mechanical washing machines, dryers, and washer-dryer combinations; and 3 percent in other household laundry equipment and parts.

Shipments of household laundry equipment by this industry represented 87 percent of all shipments of these products ( $\$ 766$ million) by all industries. ln 1958 the coverage ratio was 91 percent. Other industries shipping household laundry equipment include industry 3632, Household Refrigerators, over $\$ 50$ million.

The production index for the primary products of the industry increased to 134 in 1963 from the 1958 level of 117 . The unit value index for 1963 was 96 compared to 103 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3634-ELECTRIC HOUSEWARES AND FANS

This industry comprises establishments primarily engaged in manufacturing electric housewares for heating, cooking, and other purposes; and electric fans. lmportant products of this industry include electric air heaters, bed covering, blenders, broilers, deep fat fryers, flat irons, food mixers, hot plates, percolators and coffee makers, roasters, toasters, desk and bracket fans, and hassock or floor fans. For a detailed list of products of industry 3634 , refer to table 6 A , product codes 3634111 to 3634431 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electric Housewares and Fans Industry totaled $\$ 850$ million. This amount included shipments of electric housewares and fans (primary products) valued at $\$ 658$ million, shipments of other products (secondary products) valued at $\$ 101$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 91$ million.

This industry's shipments of electric housewares and fans represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 24 percent of the total industry shipments are represented by plants specializing in electric fans, except industrial type; and 74 percent in other small household electric appliances except parts and electric razors.

Shipments of electric housewares and fans by this industry represented 81 percent of all shipments of these products ( $\$ 810$ million) by all industries. In 1958 the coverage ratio was 82 percent. Other industries shipping electric housewares and fans include industry 3461, Metal Stampings $\$ 31$ million; and industry 3631, Household Cooking Equipment, over $\$ 6$ million.

The production index for the primary products of the industry increased to 189 in 1963 from the 1958 level of 108. The unit value index for 1963 was 86 compared to 101 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3635-HOUSEHOLD VACUUM CLEANERS

This industry comprises establishments primarily engaged in manufacturing vacuum cleaners for household use. Establishments primarily engaged in manufacturing vacuum cleaners for industrial use are classified in industry 3584. For a detailed list of products of industry 3635, refer to table 6A, product codes 3635011 to 3635071.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Household Vacuum Cleaners Industry totaled $\$ 175$ million. This amount included shipments of household vacuum cleaners (primary products) valued at $\$ 146$ million, shipments of other products (secondary products) valued at $\$ 23$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 6$ million.

This industry's shipments of household vacuum cleaners represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent.

Shipments of household vacuum cleaners by this industry represented 80 percent of all shipments of these products ( $\$ 183$ million) by all industries. In 1958 the coverage ratio was 83 percent. Other industries shipping household vacuum cleaners include industry 3639, Household Appliances, N.E.C., over $\$ 10$ million; and industry 3634, Electric Housewares and Fans, over $\$ 2$ million.

The production index for the primary products of the industry increased to 145 in 1963 from the 1958 level of 119 . The unit value index for 1963 was 93 compared to 96 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3636-SEWING MACHINES

This industry comprises establishments primarily engaged in manufacturing sewing machines for domestic and industrial use. For a detailed list of products of industry 3636, refer to table 6A, product codes 3636011 to 3636081.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Sewing Machines lndustry totaled $\$ 117$ million. This amount included shipments of sewing machines (primary products) valued at $\$ 101$ million.

This industry's shipments of sewing machines represented 90 to 95 percent of its total product shipments. The industry specialization ratio in 1958 was 97 percent.

Shipments of sewing machines by this industry represented 96 percent of all shipments of these products ( $\$ 105$ million) by all industries. ln 1958 the coverage ratio was 94 percent.

The production index for the primary products of the industry decreased to 76 in 1963 from the 1958 level of 78 . The unit value index for 1963 was 128 compared to 117 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3639-HOUSEHOLD APPLIANCES NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing household appliances, n.e.c., such as hot water heaters, dishwashers, and food waste disposal units. For a detailed list of products of industry 3639, refer to table 6A, product codes 3639111 to 3639391 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Household Appliances, N.E.C., Industry totaled $\$ 435$ million. This amount included shipments of household appliances, n.e.c. (primary products) valued at $\$ 327$ million, shipments of other products (secondary products) valued at $\$ 90$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 18$ million.

This industry's shipments of household appliances, n.e.c., represented 79 percent of its total product shipments. The industry specialization ratio in 1958 was also 79 percent. Secondary products shipped by this industry in 1963 include other heating equipment (except electric) and parts for nonelectric heating equipment ( $\$ 13$ million), and household vacuum cleaners, including parts and attachments, over ( $\$ 10$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 48 percent of the total industry shipments are represented by plants specializing in household water heaters, except electric.

Shipments of household appliances, n.e.c., by this industry represented 79 percent of all shipments of these products ( $\$ 415$ million) by all industries. $\ln 1958$ the coverage ratio was 83 percent.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3639 , e.g., water heaters, electric, 87 percent; water heaters, except electric, 93 percent; and other household appliances and parts, 67 percent.

The production index for the primary products of the industry increased to 195 in 1963 from the 1958 level of 140 . The unit value index for 1963 was 83 compared to 95 in 1958. Both indexes were computed on a basis of $1954=100$.

## table 1. General Statistics: 1963 and Earlier Years

| Year | Companies (number) | Establishments |  | All employees |  | Production workers |  |  | Value added by manufacture, adjusted $(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

[^234]Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard exror of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishnents canvassed in the annual survey of manu-
 lishunents. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The
 data.
${ }^{2}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 1963 and 1958 are not comparable with those for earlier years.
${ }^{3}$ A minor revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that the industry is not strictly comparable. The 1957 and earlier figures are on the old SIC derinition of the industry which included industrial vacuum cleaners and parts.

${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3631, Household Cooking Equipment: New England-Massachusetts, 2 (20-99); Connecticut, l (100-249); Middle Atlantic-New York, 7 (1,338); East North Central-Ohio, 4 (1,000-2,499); Indiana, 1 (1-19); Michigan, 5 (1-19); Wisconsin, 2 (1, 000-2,499); West North Central-Missouri, 1 (20-99); South Atlantic-District of Columbia, l (1-19); East South Central-Kentucky, 2 (1,000-2,499); Tennessee, 10 (3,143); Alabama, 1 (1-19); Mississippi, 1 (100-249); West South Central-0klahoma, 3 (20-99); Texas, 3 (1-19).
SIC 3632, Household Refrigerators: New England-Massachusetts, 1 (1-19); Middle Atlantic-New York, 3 (100-249); East North Central-0hio, 2 (10,000 and over); Indiana, 4 ( $5,000-9,999$ ); Illinois, 3 ( 2,968 ); West North Central-Minnesota, 4 ( 2,105 ); Iowa, 1 ( $500-999$ ); Missouri, 1 (1-19); East South Central-Kentucky, 1 (2,500-4,999); West South Central-Arkansas, 1 (1,000-2,499); Texas, 1 (100-249); Pacific-California, 2 (1-19).
SIC 3633, Household Laundry Equipment: Middle Atlantic -New York, 4 (250-499); Pennsylvania, 1 ( 2504499 ); East North Central-Ohio, 5 ( 6,486 ); Indiana, 1 (1-19); Illinois, 4 (2,882); Michigan, 6 (1,916); Wisconsin, 6 (1,000-2,499); West North Central-Minnesota, 1 (20-99); Iowa, 6 (2,599); Nebraska, 1 (1-19); East South Central-Kentucky, 1 (1,000-2,499); Pacific-Oregon, 1 (1-19); Califormia, 2 (1-19).
SIC 3634, Electric Housewares and Fans: New England-Maine, 1 (1-19); New Hampshire, 1 (1-19); Rhode Island, 1 (1-19); Connecticut, 14 (5, 130); Middle Atlantic -New Jersey, 18 (219); Pennsylvania, 9 (2,059); East North Central-Ohio, 9 (2,377); Indiana, 8 (765); Michigan, 16 (182); West North Central-Minnesota, 7 (152); Iowa, 1 (1-19); Kansas 2 (1-19); South Atlantic-Delaware, 1 (100-249); Maryland, 2 (250-499); Virginia, 1 (20-99); West Virginia, 1 (20-99); South Carolina, 3 (458); Georgia, 2 (20-99); Florida, 5 (20-99); East South Central-Kentucky, 2 (500-999); Mississippi, 6 (1,000-2,499); West South Central—Arkansas, 3 (500-999); Louisiana, 3 (20-99); Oklahoma, l (1-19); Texas, 6 (359); Mountain Colorado, 2 (1-19); Arizona, 1 (1-19); Pacific-Washington, 4 (20-99); Oregon, 3 (20-99).
SIC 3635, Household Vacuum Cleaners: New England-Connecticut, l (1,000-2,499); Middle Atlantic-New Jersey, l (1-19); Pennsylvania, l (20-99); East North Central-Ohio, 10 (3,155); Illinois, 3 (1,054); Michigan, 1 (1-19); Wisconsin, 1 (1-19); West North Central-Iowa, 1 (1-19); South Atlantic-Florida, l (1-19); West South Central-Oklahoma, 2 (20-99); Mountain-Colorado, 1 (1-19); Pacific-Oregon, 1 (20-99); Califormia, 4 (188).
SIC 3636, Sewing Machines: New England-Maine, 2 (1-19); New Hampshire, 1 (1-19); Massachusetts, 8 (454); Connecticut, 2 (1,000-2,499); Middle Atlantic-New York, 45 (704); New Jersey, 6 (2,500-4,999); Pennsylvania, 4 (1-19); East North Central-Illinois, 5 (1,201); Michigan, l (1-19); West North Central-Minnesota, 2 (20-99); South Atlantic-Maryland, l (20-99); North Carolina, 1 (1-19); Florida, 1 (1-19); East South CentralTennessee, l (1-19); Alabama, l (1-19); Mississippi, l (1-19); West South Central-Texas, 1 (1-19); Mountain-Arizona, 1 (1-19); PacificCaliformia, 2 (1-19).
SIC 3639, Houschold Appliances, N.E.C.: New England-Massachusetts, 2 (500-999); Rhode Island, 1 (100-249); Connecticut, 1 (20-99); Middle Atlantic-New Jersey, 1 (1-19); Pennsylvania, 4 (250-499); East North Central-Michigan, 5 (504); Wisconsin, 8 (855); West North Central-Iowa, 1 (20-99); Missouri, 1 (20-99); Nebraska, 1 (20-99); Kansas, 1 (1-19); South Atlantic-Maryland, 1 (100-249); Georgia, 1 (20-99); Florida, 4 (20-99); East South Central-Kentucky, 2 (1,000-2,499); Tennessee, 9 (500-999); Mississippi, 1 (1-19); West South Central-Oklahoma, 1 (20-99); Texas, 4 (284); Mountain-Colorado, 1 (1-19); Pacific-Washington, 5 (227); Oregon, 2 (20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

|  |
| :---: | :---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: | ---: |

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introcuction for an explanation of terms used.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies
(NA) Not available
(X) Not applicable.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.
${ }^{3}$ In addition respondents were requested to report total production workers for each month. This information is as follows: January, 33,689;
February, 33,564; March, 34,078; April, 34,625; May, 35,652; June, 35,957; July, 34,407; August, 34,021; September, 35,766; October, 35,995; November, 37,177; December, 37,634; The average number of production workers for the year based on a 12 month average was 35,214 . This average differs from that shown in this table, table 1, 2, and 8 because they are based on a four month average.

## table 4. Selected Statistics, by Employment Size of Establishments: 1963

[^235]
## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

## TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" colunin shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shoments of the speciffed industry divided among (a) products classified in the industry (primary nroducts). (b) products classified in other industries (secondary products). and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963-Continued

${ }^{1}$ These figures represent estinates derived from a representative sample of manufacturing establishnents canvassed in the annual survey of manufacturcs. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishaents. The standard errors associated with these estimates are published in the annual survey of manuractures volumics for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{2}$ Excludes parts and accessories for electric water heaters.
${ }^{3}$ These 4-digit totals represent the sum of 5 -digit product class data obtained from census of manufactures or the Annual Survey of Manufactures and Current Industrial Reports.
${ }^{4}$ The source for these data are listed below:
\(\left.$$

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

(D) Withheld to avoid disclosing figures for individual conpanies.
(NA) Not available.
(x) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ In addition, in 1963 establishnents in industry 3631 produced 6,062 short tons of iron castings for incorporation into other items produced at the same establishment. The camparable figure in 1958 was 7,105 short tons.
${ }^{2}$ Represents estimates published in Mc58(1)-7 (Supplement), "Selected Materials Consumed," from data collected in a supplemental survey on Form MA-131, "Consumption of Materials, Parts, Containers, and Supplies During 1958." This survey was limited to large establishments in selected chemical, machinery and equipment industries and resulted in estimates which are subject to greater error than are the figures on materials consumption collected as a regular part of the census of manufactures.
${ }^{3}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{4}$ Includes bars and bar shapes; quantity, 9,418 short tons and value $\$ 2,076$ thousand.
${ }^{5}$ In addition, in 1963 establishments in industry 3634 produced 8,388 thousand all other fractional horsepower electric motors for incorporation into items produced at the same establishment. The comparable figure for 1958 was 5,527 thousand.
${ }^{6}$ In addition, in 1963, establishments in industry 3635 produced 2,536 thousand fractional horsepower electric motors produced and incorporated into items at the same establishment. The comparable figure for 1958 was 1,619 thousand.

| Aggregate horsepower per 100 production workers. | 848 | 637 | 847 | 380 | 548 | 705 | 735 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors
 "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. (Z) Less than 500 horsepower. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primiary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

See footnotes at end of table.

## table 9. Establishments, Production Workers, and Man-Hours for Selected Metalworking Operations: 1963-Continued

| Metalworking operations | Number of establishments |  |  |  | Employment in the specified operation |  |  |  | Man-hours worked by production workers in the specified operation $(1,000)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Total | Number of production workers ${ }^{1}$ |  |  | Total | Number of production workers ${ }^{1}$ |  |  |  |
|  |  | 1 to 4 | 5 to 19 | $\begin{aligned} & 20 \text { or } \\ & \text { more } \end{aligned}$ |  | 1 to 4 | 5 to 19 | $20 \text { or }$ more |  |
| Plate or structural fabrication. <br> Stamping, blanking and forming of metals. <br> Painting, lacquering and enameling on metals. <br> Plastics molding.. <br> Assembly of product. <br> Shipping department, including packing and crating... <br> All other operations such as maintenance, warehousing, etc. | INDUSTRY 3639.-HOUSEHOLD APPLIANCES, N.E.C.-Continued |  |  |  |  |  |  |  |  |
|  |  | 213 | 417 | 1 | $\begin{array}{r} 102 \\ 1,059 \end{array}$ | (D) | (D) | (D) | 207 |
|  | 45 |  |  | 15 |  |  | 172 | 860 | 2,226 |
|  | 48 | 13 30 | 8 | 10 | 632 |  | 69 | 515 | 1,483 |
|  | 5 | 3 | 1 | 1 | (D)4,124 |  |  | (D) | (D) |
|  | 55 | 9 | 18 | 28 |  | (D) | (D) | 3,902 | 8,356685 |
|  | 51 | 31 | 15 | 5 | 337 | 53 | 129 | 155 |  |
|  | 39 | 14 | 9 | 16 | 1,324 | 21 | 112 | 1,191 | 2,795 |

Note: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item | Industry |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3631 | 3632 | 3633 | 3634 | 3635 | 3636 | 3639 |
| Total number of establishments in the industry. | 83 | 34. | 39 | 312 | 34 | 86 | 112 |
| Number of establishments which reported one or more of the specified operations | 47 | 24 | 29 | 122 | 16 | 26 | 68 |
| Percent of industry production workers in these establishments. | 80-85 | 90-95 | 95-100 | 80-85 | 90-95 | 85-90 | 80-85 |
| Number of establishments which reported "none" of the operations apply. | 0 | 0 | 1 | 0 | 0 | 0 | 0 |
| Percent of industry production workers in these establishments. | 0 | 0 | 0-5 | 0 | 0 | 0 | 0 |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry | 80-85 | 90-95 | 95-100 | 80-85 | 90-95 | 85-90 | 80-85 |

Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

## ELECTRIC LIGHTING AND WIRING EQUIPMENT

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

## SIC Code and Title

3641-Electric Lamps<br>3642-Lighting Fixtures<br>3643-Current Carrying Wiring Devices<br>3644-Noncurrent Carrying Wiring Devices

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables $1-4$ ) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table $5 A$ which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3641 -ELECTRIC LAMPS

This industry comprises establishments primarily engaged in manufacturing electric bulbs, tubes, and related light sources. Important products of this industry include incandescent filament lamps, vapor and fluorescent lamps, photoflash and photoflood lamps, electrotherapeutic lamp units for ultra-violet and infra-red radiation, and other electric light sources. Establishments primarily engaged in manufacturing glass blanks for bulbs are classified in industry 3229 ; and lamp components, such as supports, filaments, lead-in wires and cold cathode fluorescent lamp electrodes in industry 3699. For a detailed list of products of industry 3641 , refer to table 6 A , product codes 3641021 to 3641063 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electric Lamps Industry totaled $\$ 575$ million. This amount included shipments of electric lamps (primary products) valued at $\$ 523$ million, shipments of other products (secondary products) valued at $\$ 30$ million, and miscellaneous receipts (mainly resales) at $\$ 22$ million.

This industry's shipments of electric lamps represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent. Secondary products shipped by this industry in 1963 consisted mainly of other special industry machinery and equipment, and lamp bulb components.

Shipments of electric lamps by this industry represented 96 percent of all shipments of these products ( $\$ 546$ million) by all industries. In 1958 the coverage ratio was 98 percent.

The production index for the primary products of the industry increased to 153 in 1963 from the 1958 level of 116. The unit value index for 1963 was 111 compared to 110 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3642-LIGHTING F1XTURES

This industry comprises establishments primarily engaged in manufacturing lighting fixtures and equipment of any type, including electric and gas lighting fixtures; carbide, kerosene, and gasoline lamps; and metal reflectors and fittings. Establishments primarily engaged in producing glassware for lighting fixtures are classified in Major Group 32; and electric light bulbs, tubes, and related light sources in industry 3641. For a detailed list of products of industry 3642, refer to table 6A, product codes 3642110 to 3642761 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Lighting Fixtures Industry totaled $\$ 1,159$ million. This amount included shipments of lighting fixtures (primary products) valued at $\$ 1,039$ million, shipments of other products (secondary products) valued at $\$ 84$ million, and miscellaneous receipts (mainly resales), at $\$ 36$ million.

This industry's shipments of lighting fixtures represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included specialty transformers and fluorescent ballasts ( $\$ 6$ million) and current-carrying wiring devices ( $\$ 4$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 28 percent of the total industry shipments are represented by plants specializing in product class 36422; 15 percent each in product classes 36421 and 36427; and 14 percent in product class 36424 .

Shipments of lighting fixtures by this industry represented 93 percent of all shipments of these products ( $\$ 1,116$ million) by all industries. In 1958 the coverage ratio was 94 percent. Another industry shipping lighting fixtures was industry 3644, Noncurrent Carrying Wiring Devices, $\$ 11$ million.

## 3643-CURRENT CARRYING WIRING DEVICES

This industry comprises establishments primarily engaged in manufacturing currentcarrying wiring devices. Important products of this industry include attachment plugs and caps, convenience outlets, lamp sockets and receptacles, snap switches, conductor connectors, overhead trolley line material, rail bonds for both propulsion and signal circuits, lightning arrestors, and other lightning protective equipment. For a detailed list of products of industry 3643, refer to table 6A, product codes 3643001 to 3643098.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been changed from the classification system used in 1958. The change in the composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due to the reclassification of electronic connectors into industry 3679, Electronic Components, N.E.C. In 1958 electronic connectors were included in this industry.

Value of shipments and other receipts of the Current Carrying Devices Industry totaled $\$ 616$ million. This amount included shipments of current carrying devices (primary products) valued at $\$ 464$ million, shipments of other products (secondary products) valued at $\$ 117$ million, and miscellaneous receipts (mainly resales), at $\$ 35$ million.

This industry's shipments of current carrying devices represented 80 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 included other electronic components, n.e.c. ( $\$ 17$ million), and appliance wire and cord (made from purchased materials) ( $\$ 13$ million).

Shipments of current carrying devices by this industry represented 83 percent of all shipments of these products ( $\$ 562$ million) by all industries. $\ln 1958$ the coverage ratio was 79 percent. Other industries shipping current carrying devices included industry 3644, Noncurrent Carrying Devices, $\$ 24$ million; and industry 3679, Electronic Components, N.E.C., $\$ 11$ million.

The production index for the primary products of the industry increased to 191 in 1963 from the 1958 level of 169 . The unit value index for 1963 was 116 compared to 106 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3644--NONCURRENT CARRYING WIRING DEVICES

This industry comprises establishments primarily engaged in manufacturing noncurrent carrying wiring devices. Important products of this industry include conduits and fittings, electrical insulators and insulation materials, except porcelain insulators (industry 3624) and glass insulators (industy 3229); outlet, switch and fuse boxes; and pole line hardware. For a detailed list of products of industry 3644, refer to table 6A, product codes 3644111 to 3644323 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Noncurrent Carrying Devices lndustry totaled $\$ 479$ million. This amount included shipments of noncurrent carrying devices (primary products) valued at $\$ 352$ million, shipments of other products (secondary products) valued at $\$ 103$ million, and miscellaneous receipts (mainly resales), at $\$ 24$ million.

This industry's shipments of noncurrent carrying devices represented 77 percent of its total product shipments. The industry specialization ratio in 1958 was 78 percent. Secondary products shipped by this industry in 1963 included current carrying devices ( $\$ 24$ million) and outdoor lighting equipment ( $\$ 11$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 50 percent of the total industry shipments are represented by plants specializing in product class 36442 .

Shipments of noncurrent carrying devices by this industry represented 80 percent of all shipments of these products ( $\$ 439$ million) by all industries. $\ln 1958$ the coverage ratio was 89 percent. Other industries shipping noncurrent carrying devices included industry 3317, Steel Pipe and Tube, $\$ 10$ million; industry 3352, Aluminum Rolling and Drawing, $\$ 12$ million; and industry 3643, Current Carrying Devices, $\$ 11$ million.
The production index for the primary products of the industry increased to 186 in 1963 from the 1958 level of 107 . The unit value index for 1963 was 99 compared to 112 in 1958. Both indexes were computed on a basis of $1954=100$.

## table 1. General Statistics: 1963 and Earlier Years

| Year | Companies <br> (number) | Establistiments |  | All employees |  | Production workers |  |  | Value added by manufacture, adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | Capital expenditures, new$(\$ 1,000)$ | Spe-cialization ratio (percent) | Coverage ratio (percent) |

## - Represents Zero.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.

1 Includes capital expenditures for plants under construction but not in operation which constitute $\$ 1,000-2,000$ thousand of the total for the size class.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through $D$ and the primary product specialization ratio in column $E$. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

# TABLE 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963 

In thousands of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products), (b) products classified in other industries (secondary products), and (c)
miscellaneous receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

Standard Notes: - Represents zero.

individual company figures
${ }^{4}$ Includes shipments of over $\$ 2$ million by each of the following industries, but the exact values are withheld to avoid disclosing individual company figures: 3229, Pressed and Blown Glass, N.E.C., and 3644, Noncurrent Carrying Devices

Includes shipments of over $\$ 2$ million by industry 3717, Motor Vehicles and Parts. However, the exact value is withheld to avoid disclosing individual company figures
${ }^{6}$ Includes shipments of $\$ 11,461$ thousand by industry 3644, Noncurrent Carrying Devices. In addition, includes shipments of over $\$ 2$ million by industry 3441 , Fabricated Structural Steel. However, the exact value is withheld to avoid disclosing individual company figures.
${ }^{7}$ Includes shipments of $\$ 2,651$ thousand by industry 3692, Primary Batteries, Dry and Wet. In addition, includes shipments of over $\$ 2$ million by ndustry 3433, Heating Equipment, Except Electric. However, the exact value is withheld to avoid disclosing individual company figures.
${ }^{8}$ Includes shipments of over $\$ 2$ million for each of the following product classes, the exact values of which are withheld to avoid disclosing individual company figures: 32315, Mirrors; 24990, Fabricated metal products, n.e.c.; 36112, Test equipnent for testing electrical, radio, and conmunication circuits and motors; 26391, Capacitors for industrial use (except for electronic applications); 36410, Electric lamps (bulbs only) including sealed beam lamps; 36920, Primary batteries, dry and wet; 37175, Parts and accessories for passenger cars, trucks, and busses, shipped
${ }^{9}$ Includes $\$ 5,824$ thousand shipped by industry 3613, Switchgear and Switchboards; $\$ 4,204$ thousand shipped by industry 3642 , Lighting Fixtures; $\$ 24,327$ thousand shipped by industry 3644, Noncurrent Carrying Devices; and $\$ 10,615$ thousand shipped by industry 3679 , Electronic Components, N.E.C. In addition, the following industries each shipped $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: industry 3264, Porcelain Electric Supplies; industry 3356, Rolling and Drawing, N.E.C.; industry 3544, Special Dies and Tools; industry 3612, Transformers; industry 3622, Industrial Controls; industry 3629, Electric Industrial Goods, N.E.C.; industry 3661, Telephone; Telegraph Apparatus; industry 3694, Engine Electrical Equipment; and, industry 3871, Watches and Clocks.
${ }^{10}$ Includes the following product classes each of which total $\$ 2$ million or more, but are withheld to avoid disclosing individual company figures: 34990 , Fabricated metal products, n.e.c.; 36131, Switchgear, including power switchgear assemblies and other switching and interrupting devices 2,300 volts and over; 36134, Fuses and fuse equipment under 2,300 volts; 36220, General industry power circuit devices and controls; 36233, Resistance welders, components, accessories, and electrodes; 36945; Other complete electrical equipment for intermal combustion engines; 36992, Lamp bulb components (except blanks) and other electrical products; and, 39120, Jewelers' findings and materials.
${ }^{1}$ Includes $\$ 9,742$ thousand shipped by industry 3317, Steel Pipe and Tube; $\$ 12,161$ thousand shipped by industry 3352, Aluminum Rolling and Drawing; $\$ 4,182$ thousand by industry 3357, Nonferrous Wire Drawing; $\$ 5,799$ thousand by industry 3613, Switchgear and Switchboards; and, $\$ 7,083$ thousand shipped by industry 3643, Current Carrying Devices. In addition, the following industries each shipped $\$ 2$ million or more, but exact values are withheld to avoid disclosing individual company figures: industry 3312, Blast Furnaces and Steel Mills, and industry 3351, Copper Rolling and Drawing.
${ }^{12}$ Includes $\$ 4,040$ thousand shipped by industry 3643, Current Carrying Devices.
${ }^{13}$ Includes .the following product classes each of which total $\$ 2$ million or more but are withheld to avoid disclosing individual company figures: 30692, Rubber hose and tubing; 33126, Steel pipe and tube (produced in steel mills); 33579, Other insulated wire and cable, n.e.c.; 34231, Mechanics' hand service tools; 34522, Special industrial fasteners (nonstandard); 35616, Parts and attachments for pumps, air and gas compressors, and pumping equipment; 36131, Switchgear, including power switchgear assemblies and other switching and interrupting devices 2,300 volts and over; 36423 , Industrial type electric fixtures; 36623, Intercommuication equipment (except telephone and telegraph) and electric alarm and signal systems and devices; and, 37294, Receipts and development on missile parts and components, n.e.c.
table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958

| Product code | Product | 1963 |  |  | 1958 |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Standard Notes: -Represents zero
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(x) Not applicable.
n.s.k. Not specified by kind.
${ }^{1}$ The total shipments of photoflash lamps for 1963 includes 148.2 million blue photoflash lamps, valued at $\$ 11,619$ thousand; the comparable 1958 figures are 85.7 million blue photoflash lamps, valued at $\$ 7,011$ thousand
${ }^{2}$ Includes lamps for special services such as sign and display lighting; aviation; street; railway; spot and flood lighting; train and country home lighting; showcase; other items for special application; and large incandescent lamps under 15 watts and other than $100-130$ volts.
${ }^{3}$ Includes lamps for use in toys, pin games, surgical, medical, and dental instruments, and for special applications.
${ }_{5}^{4}$ Includes power groove VHO, SHO lamps.
${ }^{5}$ Includes pre-heat rapid starting lamps.
${ }^{6}$ In the 1958 Census of Manufactures product class 36427 was part of product class 36421 . Accordingly the 1958 value for portable resiadential type electrical fixtures, not specified by kind, are included in product code 3642110.
${ }^{7}$ Excludes indoor signs.
${ }^{8}$ Of this total, shipments of other motor vehicle lighting equipment (such as parking lights, dome lights, taillights, etc.) to motor vehicle manufacturers accounted for $\$ 48,863$ thousand; shipments of such equipment to all other customers for $\$ 12,493$ thousand. Shipments of headlight fixtures (exclusive of bulbs) accounted for the remaining $\$ 18,483$ thousand.
${ }^{9}$ Includes $\$ 14,020$ thousand of incandescent fixtures and $\$ 1,930$ thousand of fluorescent fixtures.
${ }^{10}$ For 1958, figures probably exclude components (sold separately) and renewal parts for outdoor lighting equipment.
${ }^{11}$ Excludes ballasts.
${ }^{12}$ Differs from previously published data. Electronic connectors valued at 66,436 thousand are now included in industry 3679 , Electronic Components, N.E.C., rather than this industry.
${ }^{13}$ For 1958, figures for "Precision (1/8" gap or less) snap-acting switches" are included with "Other current carrying wiring devices, " product code 3643098.
${ }^{14}$ Includes current carrying wiring devices, not specified by kind.
${ }^{15}$ For 1958, data for codes $3644221,3644222,2644223$, and 3644224 are included with code 3644236.

## table 6B: Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958

| Product code | Product and year | Indexes (1954 = 100) |  |
| :---: | :---: | :---: | :---: |
|  |  | Production | Unit value |

Sticable Notes: - Represents zero
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
$(S)$ Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ For 1959-1962, product classes 36427, Portable lamps (residential: table, floor, wall, etc.) was included with product class 36421 , Residential type electric fixtures, except portable. For 1947, 1954, and 1958, the comparable product class figures have been derived from the detailed product statistics.
${ }^{3}$ This product class previously included electronic connectors but has been redefined in the 1963 Census of Manufactures to exclude this product. The value of shipments including electronic connectors are as follows: 1963, \$828,235 thousand; 1962, \$768,718. thousand; 1961, \$636,748 thousand; 1960, $\$ 622,336$ thousand; 1959, $\$ 615,715$ thousand; 1958, $\$ 514,921$ thousand; 1954, $\$ 285,163$ thousand; and 1947, $\$ 170,266$ thousand,

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

| Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  | Product class and geographic area | Value of shipments |  |

## NA Not available.

$Z$ Less than $\$ 1$ million.

 Minnesota, and West Virginia.
${ }^{2}$ Totaled $\$ 1$ million or more but exact figure is withheld to avoid disclosing figures for individual companies.
${ }^{3}$ In 1958 West North Central was combined with East North Central.
4 In 1958 New England was combined with Middle Atlantic.
${ }^{5}$ In 1958 New England and South were combined with West.

## table 7A. Materials by Kind: 1963 and 1958

TABLE 7A. Materials by Kind: 1963 and 1958-Continued

[^244]
## table 7A. Materials by Kind: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.s.k. Not specified by kind.
${ }^{1}$ Represent estimates published in MC58(1)-7 (Supplement) "Selected Materials Consumed" from data collected in a supplemental survey on Form MA- 131 "Consumption of Materials, Parts, Containers, and Supplies During 1958." This survey was limited to large establishments in selected chemical, machinery and equipment industries and produced data which are subject to greater qualification than those collected in the census of manufacturers itself.
${ }^{2}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{3}$ Does not include castings produced and consumed in the same establishment.
QQuantity is not available for bare wire. However, between 1,000 and 1,500 thousand pounds of insulated wire and cable were consumed by industry 3644.
${ }^{5}$ The quantities of aluminum and aluminum-base alloy castings produced for incorporation into other items produced at the same establishment cannot be published. The 1958 figure was 3,082 thousand pounds.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not
(Z) Less than 500 horsepower applicable.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Percent of industry production workers in establishments which completed metalworking operations inquiry. | 95-100 | 80-85 | 85-90 | 90-95 |

(D) Withheld to avoid disclosing figures for individual companies. (X) Not applicable.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

## COMMUNICATION EQUIPMENT. INCLUDING RADIO AND TV, AND ELECTRON COMPONENTS AND ACCESSORIES

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title
3651-Radio and Television Receiving Sets, Except Communication Types
3652-Phonograph Records
3661-Telephone and Telegraph Apparatus
3662-Radio and Television Transmitting, Signaling, and Detection Equipment and Apparatus
3671-Radio and Television Receiving Type Electron Tubes, Except Cathode Ray 3672-Cathode Ray Picture Tubes
3673-Transmitting, Industrial, and Special Purpose Electron Tubes
3674-Semiconductors (Solid State) and Related Devices
3679-Electronic Components and Accessories, Not Elsewhere Classified
The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

Industries included in this report produce the bulk of electronic equipment, i.e., radios, television sets, electron tubes, etc., but also produce communications equipment other than electronic (industry 3661).

Component parts are generally included in the industry of the end product with the exception of certain general purpose components which are specifically classified elsewhere in the Standard Industrial Classification. Electronic components are frequently produced and consumed at the same location by establishments classified in this major group. Thus, there are (1) plants solely engaged in producing electronic components; (2) plants producing electronic components and assembling them into finished products; and (3) plants which assemble components produced elsewhere either in other plants of the same company or by other companies.

## 3651-RADIO AND TELEVISION RECEIVING SETS, EXCEPT COMMUNICATION TYPES

This industry comprises establishments primarily engaged in the manufacture of electronic equipment for home entertainment. This industry also includes establishments primarily engaged in manufacturing public address systems, and music distribution apparatus except records. Establishments primarily engaged in manufacturing records are classified in
industry 3652 ; radio and television receiving type tubes in industry 3671 ; and television receiving type cathode ray tubes in industry 3672 . For a detailed list of products of industry 3651 , refer to table $6 \mathrm{~A}-2$, product codes 3651101 to 3651394.

The code number for this industry in the Standard lndustrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to the reclassification of TV tuners from industry 3651 to industry 3662, Radio, TV Communications Equipment.

Value of shipments and other receipts of the Radio and TV Receiving Sets lndustry totaled $\$ 2,255$ million. This amount included shipments of radio and TV receiving sets (primary products) valued at $\$ 1,992$ million, shipments of other products (secondary products) valued at $\$ 191$ million, and miscellaneous receipts (mainly resales) at $\$ 72$ million.

This industry's shipments of radio and TV receiving sets represented 91 percent of its total product shipments. The industry specialization ratio in 1958 also was 91 percent. Secondary products shipped by this industry in 1963 consisted mainly of electronic components and accessories ( $\$ 43$ million), and coils, transformers, reactors, and chokes for electronic application ( $\$ 20$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 62 percent of the total industry shipments are represented by plants specializing in product class 36512 , Household television receivers, including television combinations; 20 percent in 36511 , Household and automobile radios, and radio-phonograph combinations; and 17 percent in 36513 , Recorders, audio-amplifiers, phonographs, tuners, speaker systems and other audio equipment and accessories.

Shipments of radio and TV receiving sets by this industry represented 96 percent of all shipments of these products ( $\$ 2,071$ million) by all industries. In 1958 the coverage ratio was 92 percent. Other industries shipping radio and TV receiving sets consisted mainly of industry 3679, Electronic Components, N.E.C., $\$ 14$ million; and industry 3662, Radio, TV Communications Equipment, $\$ 12$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product class of industry 3651, e.g., 36512, Household television receivers, including television combinations, 100 percent.

The production index for the primary products of the industry increased to 161 in 1963 from the 1958 level of 99 . The unit value index for 1963 was 83 compared to 97 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3652-PHONOGRAPH RECORDS

This industry comprises establishments primarily engaged in the manufacture of phonograph records and prerecorded tape. Establishments primarily engaged in manufacturing electronic equipment for home entertainment, except records, are classified in industry 3651. For a detailed list of products of industry 3652 , refer to table $6 \mathrm{~A}-1$, product codes 3652022 to 3652091 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Phonograph Records lndustry totaled $\$ 180$ million. This amount included shipments of phonograph records and prerecorded tape (primary products) valued at $\$ 174$ million, shipments of other products (secondary products) valued at $\$ 4$ million, and miscellaneous receipts (mainly resales) at $\$ 2$ million.

This industry's shipments of phonograph records and prerecorded tape represented 99 percent of its total product shipments. The industry specialization ratio in 1958 was 97 percent.

Shipments of phonograph records and prerecorded tape by this industry in 1963 represented 97 percent of all shipments of these products ( $\$ 179$ million) by all industries. In 1958 the coverage ratio was 98 percent.

The production index for the primary products of the industry increased to 221 in 1963 from the 1958 level of 178 . The unit value index for 1963 was 106 compared to 101 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3661-TELEPHONE AND TELEGRAPH APPARATUS

This industry comprises establishments primarily engaged in the manufacture of wire and wireless telephone and telegraph equipment, and parts especially designed for telephone and telegraph use. For a detailed list of products of industry 3661, refer to table 6A-1, product codes 3661111 to 3661281 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Data on cost of materials and value of shipments of the Telephone; Telegraph Apparatus Industry include extensive duplication resulting from the transfer of products such as telephone and telegraph components to establishments producing complete telephone and telegraph equipment. The value of such shipments are duplicated in the rotal value of shipments. A corresponding duplication enters into the total cost of materials. The data shown for value added by manufacture (value of shipments less cost of materials, etc.) avoid this duplication.

Value of shipments and other receipts of the Telephone and Telegraph Apparatus Industry totaled $\$ 1,736$ million. This amount included shipments of telephone; telegraph apparatus (primary products) valued at $\$ 1,463$ million, shipments of other products (secondary products) valued at $\$ 192$ million, and miscellaneous receipts (mainly resales) at $\$ 80$ million.

This industry's shipments of telephone and telegraph apparatus represented 95 percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent. The exact percentage, however, is not very meaningful due to the duplication described above. Secondary products shipped by this industry in 1963 consisted mainly of commercial, industrial, and military electronic communication equipment (except broadcast equipment and home-type intercommunication equipment), $\$ 43$ million.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 45 percent of the total industry shipments are represented by plants specializing in product class 36611 , Telephone switching and switchboard equipment, and 54 percent in 36612, Other telephone and telegraph (wire) apparatus, equipment, and components.

Shipments of telephone and telegraph apparatus by this industry represented 95 percent of all shipments of these products ( $\$ 1,538$ million) by all industries. In 1958 the coverage ratio was 99 percent. The exact percentages, however, are not very meaningful due to the duplication described above. Other industries shipping telephone and telegraph apparatus consisted mainly of industry 3662 , Radio, TV Communications Equipment, $\$ 20-\$ 50$ million.

## 3662-RADIO AND TELEVISION TRANSMITTING, SIGNALING, ANDDETECTION EQUIPMENT AND APPARATUS

This industry comprises establishments primarily engaged in manufacturing (1) radio and television broadcasting equipment; (2) electric communication equipment and parts, except telephone and telegraph; (3) electronic field detection apparatus, light and heat emission operating apparatus, object detection apparatus and navigational electronic equipment, and aircraft and missile control systems; and (4) other electric and electronic communication and signaling products, not elsewhere classified. Establishments primarily engaged in manufacturing transmitting tubes are classified in industry 3673. For a detailed list of products of industry 3662, refer to table 6A-3, product codes 3662121 to 3662812.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to the reclassification of TV tuners to industry 3662 from industry 3651, Radio and TV Receiving Sets.

During the period 1958-1963 reports received from some large establishments indicated a change from the manufacture primarily of such individual instruments as those used for indicating air speed, rate-of-climb, angle-of-yaw and similar flight characteristics, and gyroscopes which are sold separately, to primarily manufacturing complete instrumentation systems for navigation, guidance, check-out, etc. The major impact of this change has been on the classification of products and, consequently, the SIC coding of these large establishments. This change in reporting was brought to light by the initiation by the Census Bureau of detailed commodity surveys in the fields of electronic products and instrumentation. The electronic and associated products report (MA-36N) was started covering the year 1961 and the instruments series (MA-38B) was broadened for 1963 to encompass most types of instruments following an introductory report for 1961 and 1962 covering industrial process instruments and test and measuring equipment. Annual statistics from both reports are published in the Current Industrial Reports Series.

In both the 1958 Census of Manufactures and the Annual Survey of Manufactures from 1959 through 1962 the classification of systems was not sufficiently spelled out in the product inquiries of these programs, especially at the 5 -digit product class level. However, with the introduction in the MA-36N and MA-38B surveys of detailed 7 -digit product information which itself is used to build up to broader 5 -digit product class totals, these totals, although they should be the same as those reported on Form MA-100 (Annual Survey of Manufactures), have differed. The respondents affected have identified the proportion of earlier years' output which consisted of systems rather than instruments as such, which was the manner in which the items were originally reported.

In view of the above, the annual data for 1958-1962 have been revised, as indicated with the symbol " $r$ " in the appropriate tables. Because of the shift in recent years from instruments which are classified in industry 3811 to complete systems which are classified in industry 3662 , the year-to-year changes are of dubious validity for the industries considered separately. The two industries taken in combination, however, would yield significant measures of activity in the general area.

Value of shipments and other receipts of the Radio, TV Communications Equipment Industry totaled $\$ 7,146$ million. This amount included shipments of radio and TV communications equipment (primary products) valued at $\$ 5,512$ million, shipments of other products (secondary products) valued at $\$ 750$ million, and miscellaneous receipts (mainly receipts for research and development work) at $\$ 883$ million.

This industry's shipments of radio and TV communications equipment represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was 86 percent. Secondary products shipped by this industry in 1963 consisted mainly of aircraft, flight, nautical and navigational instruments, and automatic pilots ( $\$ 169$ million), and other electronic components and accessories, n.e.c. (\$73 million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8 . Approximately 20 percent of the total industry shipments are represented by plants specializing in product classes 36621, Commercial, industrial, and military electronic communication equipment; 32 percent in 36625 , Electronic search and detection apparatus, including radar, infrared and sonar; and 21 percent in 36628 , Missile-borne and space vehicle-borne navigation and guidance systems and equipment.

Shipments of radio and TV communications equipment by this industry represented 91 percent of all shipments of these products ( $\$ 6,052$ million) by all industries. In 1958 the coverage ratio was 83 percent. Other industries shipping radio and TV communications equipment consisted mainly of industry 3679, Electronic Components, N.E.C., $\$ 39$ million; and industry 3661, Telephone; Telegraph Apparatus, $\$ 43$ million.
The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3662, e.g., 36623, Intercommunication equipment and electric alarm and signal systems and devices, 76 percent; 36624, Electronic navigational aids, except missile-borne and space vehicle-borne equipment, 97 percent; 36626, Electronic military, industrial and commercial equipment, n.e.c., 82 percent; and, 36627, Space satellite-borne communication systems, 100 percent.

## 3671-RADIO AND TELEVISION RECEIVING TYPE ELECTRON TUBES, EXCEPT CATHODE RAY

This industry comprises establishments primarily engaged in the manufacture of radio and television receiving type electron tubes, except cathode ray tubes. Establishments primarily engaged in manufacturing television receiving type cathode ray tubes are classified in industry 3672; transmitting tubes in industry 3673; X-ray tubes in industry 3693; and electronic equipment for home entertainment, except tubes in industry 3651. For a detailed list of products of industry 3671, refer to table 6A-3, product codes 3671011 to 3671015.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electron Tubes, Receiving Type, Industry totaled $\$ 321$ million. This amount included shipments of receiving type electron tubes (primary products) valued at $\$ 272$ million, shipments of other products (secondary products) valued at $\$ 34$ million, and miscellaneous receipts (mainly resales) at $\$ 15$ million.

This industry's shipments of receiving type electron tubes represented 89 percent of its total product shipments. The industry specialization ratio in 1958 also was 89 percent. Secondary products shipped by this industry in 1963 consisted mainly of transmitting, industrial, and special purpose electron tubes (except X-ray) (\$15 million), and electronic components and accessories, n.e.c. ( $\$ 17$ million).

Shipments of receiving type electron tubes by this industry in 1963 represented 95 percent of all shipments of these products ( $\$ 288$ million) by all industries. ln 1958 the coverage ratio was 96 percent. Other industries shipping receiving type electron tubes consisted mainly of industry 3661, Telephone; Telegraph Apparatus, and industry 3674, Semiconductors, over $\$ 2$ million each.

The product index for the primary products of the industry decreased to 91 in 1963 from the 1958 level of 104 . The unit value index for 1963 was 109 compared to 113 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3672-CATHODE RAY PlCTURE TUBES

This industry comprises establishments primarily engaged in manufacturing television receiving type cathode ray tubes. Establishments primarily engaged in manufacturing other radio and television receiving type electron tubes are classified in industry 3671 ; and transmitting tubes in industry 3673. For a detailed list of products of industry 3672 , refer to table 6A-3, product codes 3672013 to 3672015 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Cathode Ray Picture Tubes Industry totaled $\$ 269$ million. This amount included shipments of cathode ray picture tubes (primary products) valued at $\$ 224$ million, and shipments of other products (secondary products) and miscellaneous receipts valued at $\$ 45$ million.

This industry's shipments of cathode ray picture tubes represented between $85-90$ percent of its total product shipments. The industry specialization ratio in 1958 was 96 percent. Secondary products shipped by this industry in 1963 consisted mainly of other electronic components and accessories (\$4 million).

Shipments of cathode ray picture tubes by this industry represented 90 percent of all shipments of these products ( $\$ 249$ million) by all industries. In 1958 the coverage ratio was 84 percent. Other industries shipping cathode ray picture tubes consisted mainly of industry 3651, Radio and TV Receiving Sets, industry 3673 , Electron Tubes, Transmitting, and industry 3674, Semiconductors, over $\$ 2$ million each.

The production index for the primary products of the industry increased to 110 in 1963 from the 1958 level of 92 . The unit value index for 1963 was 106 compared to 91 in 1958. Both indexes were computed on a basis of $1954=100$.

3673-TRANSMITT1NG, INDUSTR1AL, AND SPECIAL PURPOSE ELECTRON TUBES
This industry comprises establishments primarily engaged in manufacturing transmitting, industrial, and special purpose electron tubes. Establishments primarily engaged in manufacturing radio and television transmitting equipment are classified in industry 3662 ; radio and television receiving tubes in industry 3671 ; television type cathode ray tubes in industry 3672 ; and X-ray tubes in industry 3693. For a detailed list of products of industry 3673 , refer to table 6A-3, product codes 3673011 to 3673096 .

The code number as well as the definition of the industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electron Tubes, Transmitting, Industry totaled $\$ 300$ million. This amount included shipments of electron tubes, transmitting (primary products) valued at $\$ 214$ million, shipments of other products (secondary products) valued at $\$ 53$ million, and miscellaneous receipts (mainly resales) at $\$ 33$ million.

This industry's shipments of electron tubes, transmitting, represented 80 percent of its total product shipments. The industry specialization ratio in 1958 was 83 percent. Secondary products shipped by this industry in 1963 consisted mainly of other electronic components and accessories, n.e.c. (\$6 million), and electronic military, industrial, and commercial equipment, n.e.c. (\$3 million).

Shipments of electron tubes, transmitting, by this industry represented 75 percent of all shipments of these products ( $\$ 287$ million) by all industries. In 1958 the coverage ratio was 81 percent. Other industries shipping electron tubes, transmitting, consisted mainly of industry 3671, Electron Tubes, Receiving Type, $\$ 15$ million; and industry 3662, Radio, TV Communications Equipment, $\$ 12$ million.

The production index for the primary products of the industry increased to 166 in 1963 from the 1958 level of 130 . The unit value index for 1963 was 111 compared to 110 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3674-SEMICONDUCTORS (SOLID STATE) AND RELATED DEVICES

This industry comprises establishments primarily engaged in the manufacture of semiconductor (solid state) and related devices, such as semiconductor diodes and stacks, including rectifiers; transistors; solar cells; and light sensitive semiconductor (solid state) devices. This industry is now a separate one under the Standard Industrial Classification System. In 1958, the SIC included it as part of industry 3679. For a detailed list of products of industry 3674, refer to table 6A-3, product codes 3674013 to 3674096 .

Value of shipments and other receipts of the Semiconductors Industry totaled $\$ 688$ million. This amount included shipments of solid state semiconductor devices (primary products) valued at $\$ 575$ million, shipments of other products (secondary products) valued at $\$ 76$ million, and miscellaneous receipts (mainly receipts for research and developmental work) at $\$ 36$ million.

This industry's shipments of solid state semiconductor devices represented 88 percent of its total product shipments. Secondary products shipped by this industry in 1963 consisted mainly of electronic components and accessories, n.e.c. ( $\$ 29$ million) and capacitors for electronic applications ( $\$ 4$ million).

Shipments of solid state semiconductor devices by this industry represented 92 percent of all shipments of these products ( $\$ 623$ million) by all industries. Another industry shipping solid state semiconductor devices was industry 3679, Electronic Components, N.E.C., $\$ 15$ million.

## 3679-ELECTRONIC COMPONENTS AND ACCESSORIES, NOTELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing specialty resistors for electronic end products; solid state electronic devices and similar devices; inductors, electronic transformers and capacitors; and, other electronic components, n.e.c. Establishments primarily engaged in manufacturing resistors, inductors, and transformers for telephone and telegraph apparatus are classified in industry 3661 ; and electric lamps in industry 3641 . For a detailed list of products of industry 3679 , refer to table 6A-3, product codes 3679212 to 3679598.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been significantly changed from the classification system used in 1958. The composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to
the setting up of separate industry 3674 for those establishments producing solid state semiconductor devices; and, the inclusion in 1963 of electronic connectors, which were previously classified in industry 3643, Current Carrying Devices.

Value of shipments and other receipts of the Electronic Components, N.E.C., Industry totaled $\$ 2,332$ million. This amount included shipments of electronic components, n.e.c. (primary products) valued at $\$ 1,944$ million, shipments of other products (secondary products) valued at $\$ 243$ million, and miscellaneous receipts (mainly resales) at $\$ 146$ million.

This industry's shipments of electronic components, n.e.c., represented 89 percent of its total product shipments. Secondary products shipped by this industry in 1963 consisted mainly of electronic military, industrial, and commercial equipment, n.e.c. ( $\$ 32$ million) and optical instruments and lenses (except sighting and fire-control equipment), \$17 million.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 56 percent of the total industry shipments are represented by plants specializing in product class 36795 , Other electronic components and accessories.

Shipments of electronic components, n.e.c., by this industry represented 78 percent of all shipments of these products ( $\$ 2,501$ million) by all industries. Other industries shipping electronic components, n.e.c., consisted mainly of industry 3571, Computing and Related Machines, $\$ 75$ million; and industry 3662, Radio, TV Communications Equipment, $\$ 82$ million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3679 , e.g., 36792, Capacitors for electronic applications, 94 percent; 36793, Resistors for electronic applications, 74 percent; 36794, Coils, transformers, reactors, and chokes for electronic applications, 85 percent; and 36795, Other electronic components and accessories, n.e.c., 72 percent.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All erployees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all ermployees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unad.justed value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939, the figures represent value of production rather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. Revised. n.e.c. Not elsewhere classified.
(S) Withheld because the estirnate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establislynents canvassed in the annual survey of manufactures. These estimates, therefor, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishnents. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. See text for explanation concerning shift from individual instruments to systems.
${ }^{2}$ A revision in the definition of this industry was introduced in the 1957 Standard Industrial Classification so that comparable data for prior years are not available. See text for explanation concerning shift from individual instruments to systems.
${ }^{3}$ Data for Alaska and Hawaii are not included for 1958 and previous years.
${ }^{4}$ The value of shipments and cost of materials for this industry include extensive duplication arising from shipments between establishments in the same industry classifications. For further explanation see text.
${ }^{5}$ For 1958 and 1963 a number of small establishnents (under 20 employees) may have been misclassified in industry 3661 , Telephone and Telegraph Apparatus because of insufficient product information. Although this has a significant effect on the number of establishments for this industry it has virtually no effect or any of the other statistics, i.e., number of employees, salaries and wages, value added, etc. It is estimated that the effect on these principal statistics is less than l percent.
${ }^{6}$ The exact figures show, while correct to the extent that they are mathematical calculations, are not very meaningful because of extensive duplication in the value of shipments. See introductory text for this industry.
${ }^{7}$ This industry was included in industry 3679 in the 1958 Census of Manufactures. Accordingly, no estimates are available for 1959-1962, or for years prior to 1958. The figures for 1958 are based on a special tabulation.
${ }^{8}$ This industry included the semiconductor devices manufacturers (present SIC 3674) in 1958. Accordingly, no estimates are available for 1959-1962, or for years prior to 1958. The figures for 1958 are based on a special tabulation.
table 2. General Statistics, by Geographic Areas: 1963 and 1958

## TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958-Continued

Footnotes for Table 2-36D-Continued

${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3651, Radio and TV Receiving Sets: New England-Maine, 1 (100-249); Massachusetts, 12 (1,000-2,499); Middle Atlantic-New Jersey, 19 (4, 726 ); Pennsylvania, 8 (3,319); East North Central-Ohio, 10 (979); Indiana, 15 (14,565); Wisconsin, 3 (299); West North Central-Minnesota, 6 (500-999); Missouri, 1 (20-99); Kansas, 3 (1-19); South Atiantic—Maryland, l (1-19); District of Columbia, l (1-19); Virginia, 1 (1-19); North Carolina, 1 (20-99); South Carolina, 1 (1-19); Georgia, 1 (20-99); Florida, 4 (1-19); East South Central-Kentucky, 3 (250-499); Tennessee, 2 (1,000-2,499); West South Central-Arkansas, 5 (1,000-2,499); Oklahoma 2 (100-249); Texas, 10 ( $1,000-2,499$ ); Mountain-Colorado, 2 (1-19); Arizona, 1 (1-19); Nevada, I (1-19); Pacific-Washington, 1 (1-19).
SIC 3652, Phonograph Records: New England-New Hampshire, I (20-99); Massachusetts, '1 (20-99); Connecticut, 4 (500-999); Middle Atlantio-New Jersey, 26 (2,336); Pennsylvania, 11 (1,119); East North Central-Ohio, 4 (126); Indiana, 3 (2,249); Michigan, 3 (20-99); West North Central-Minnesota, 2 (20-99); South Atlantic-Maryland, l (1-19); Florida, 3 (20-99); East South Central—Kentucky, l (1-19); Tennessee, 5 (20-99); Mississippi, l (20-99); West South Central-Arkansas, 1 (1-19); Louisiana, 1 (1-19); Texas, 4 (20-99); Mountain-Arizona, I (1-19); Pacific-Hawaii, 2 (1-19). SIC 3661, Telephones; Telegraph Apparatus: New England-New Hampshire, 1 (20-99); Massachusetts, 5 (9,966); Connecticut, 2 (250-499); Middle Atlantic-New York, 19 ( 5,471 ); New Jersey, 8 (10,000 and over); Pennsylvania, 1 (1-19); East North Central-Ohio, 5 ( 6,626 ); Indiana, 2 ( $5,000-9,999$ ); Illínois, 15 (29,213); Wisconsin, 1 (100-249); West North Central-Minnesota, 1 (100-249); Iowa, 1 (1-19); Missouri, 3 (4,022); Nebraska, 1 ( $2,500-4,999$ ); South Atlantic—Maryland, 1 (2,500-4,999); Virginia, 2 (500-999); East South Central-Kentucky, 1 (1-19); Tennessee, 2 (500-999); Mississippi, 1 (250-499); West South Central—Arkansas, 1 (250-499); Oklahoma, 2 (2,500-4,999); Texas, 2 (1-19); Pacific-0regon, 1 (20-99); California, $12(2,823)$.
SIC 3662, Radio, TV Communications Equipment: New England-Maine, l (1-19); Massachusetts, 83 (30,726); Rhode Island, 3 (746); Connecticut, 40 (5,000-9,999); Middle Atlantic-New York, 176 ( 68,204 ); New Jersey, 108 ( 10,000 and over); Pennsylvania, 61 ( 10,000 and over); East North CentralOhio, $37((8,429)$; Indiana, $20(5,000-9,999)$; Illinois, 68 ( 14,350 ); Wisconsin, 13 ( $5,000-9,999$ ); West North Central-Minnesota, 9 (5,000-9,999); Iowa, 5 ( $5,000-9,999$ ); Missouri, 10 (836); South Dakota, 1 (1-19); Kansas, 3 (304); South Atlantic-Delaware, 1 (1-19); Maryland, 28 (10,000 and over); District of Columbia, 3 (20-99); West Virginia, 1 (20-99); North Carolina, 8 (9,908); South Carolina, 2 (20-99); Georgia, 4 (20-99); East South Central-Kentucky, 4 (100-249); Tennessee, 6 (2,500-4,999); Alabama, 2 (500-999); West South Central-Arkansas, 2 (100-249); Louisiana, 2 (20-99); Oklahoma, 9 ( $2,500-4,999$ ); Mountain-Arizona, 7 (3,155); Utah, 3 (500-999); Nevada, 2 (100-249); Pacific—Oregon, 3 (20-99); California, 256 (94,071); Alaska, I (1-19).
SIC 3671, Electron Tubes, Receiving Type: New England-Massachusetts, 5 (2,500-4,999); Middle Atlantic-New York, 6 (1,175); New Jersey, 7 (8,242); Pennsylvania, 7 (2,500-4,999); East North Central-Ohio, 2 (1,000-2,499); Indiana, 2 (1,000-2,499); Illinois, 3 (20-99); West North CentralMinnesota, 1 (1-19); Iowa, 1 (1,000-2,499); Nebraska, 1 (1-19); South Atlantic-Maryland, 1 (1-19); South Carolina, 1 (1-19); East South CentralKentucky, 1 (2,500-4,999); Alabama, 1 (100-249); Pacific-Califormia, 3 (20-99).
SIC 3672, Cathode Ray Picture Tubes: New England-New Harppshire, 1 (1-19); 'Massachusetts, 6 (20-99); Midale Atlantic-New York, 11 (569); New Jersey, 10 (231); Pennsylvania, 11 ( 4,092 ); East North Central-Ohio, 11 ( $1,000-2,499$ ); Indiana, 4 ( $1,000-2,499$ ); Illinois, 14 ( 2,126 ); Michigan, 7 (20-99); West North Central-Minnesota, 4 (1-19); Iowa, 1 (1-19); Missouri, 4 (1-19); South Dakota, 1 (1-19); Nebraska, 1 (1-19); Kansas, 2 (1-19); South Atlantic-Virginia, 2 (20-99); North Carolina, 2 (1-19); Georgia, 5 (122); Florida, 4 (20-99); East South Central-Kentucky, 2 (1-19); Tennessee, 5 (1-19); Alabama, 7 (1-19); Mississippi, 2 (1-19); West South Central-Arkansas, 1 (1-19); Louisiana, 4 (20-99); Oklahoma, 2 (1-19); Texas, 5 (20-99); Mountain-Colorado, 2 (1-19); New Mexico, 1 (1-19); Arizona, 4 (1-19); Utah, 1 (1-19); Pacific—Washington, 2 (1-19); Oregon, 2 (1-19); California, 9 (125); Hawaii, I (1-19).
SIC 3673, Electron Tubes, Transmitting: New England-Massachusetts, 5 (2,915); Connecticut, 3 (1,000-2,499); Middle Atlantic-Pennsylvania, 2 (250-499); South Atlantic-Virginia, l (100-249); Florida, l (500-999); East South Central—Mississippi, 1 (1-19); West South Central-Texas, 2 (100-249); Mountain-Utah, 1 (250-499).
SIC 3674, Semiconductors: New England-Maine, 1 (500-999); New Hampshire, 1 (500-999); Rhode Island, 3 (500-999); Connecticut, 6 (1,000-2,499); East North Central-Ohio, 1 (1,000-2,499); Illinois, 7 (626); West North Central—Minnesota, 1 (20-99); South Atlantic-Florida, I (1-19); East South Central-Mississippi, 1 (1-19); West South Central-Texas, 2 (5,000-9, 999); Mountain-Arizona, 4 (5,260).
SIC 3679, Electronic Components, N.E.C.: New England-New Hampshire, 16 ( $2,500-4,999$ ); Vermont, 4 ( $1,000-2$,499); Rhode Island, 10 (500-999); East North Central—Indiana, 43 ( 7,342 ); West North Central—Minnesota, 34 (2,361); Iowa, 12 (1,000-2,499); Missouri, 14 ( 800 ); South Dakota, 2 (100-249); Kansas, 11 ( $1,000-2,499$ ); South Atlantic-Delaware, 4 (20-99); Maryland, 24 (1,000-2,499); District of Columbia, 1 (20-99); Virginia, 13 (5,624); South Carolina, 5 (2,500-4,999); Georgia, 4 (1-19); Florida, 47 (1,475); East South Central—Kentucky, 6 (100-249); Alabama, 3 (776); Mississippi, 2 (250-499); West South Central-Arkansas, 1 (1-19); Louisiana, 2 (1-19); Oklahoma, 5 (100-249); Mountain-Idaho, 2 (20-99); New Mexico, 6 (20-99); Arizona, 11 (502); Utah, 3 (250-499); Nevada, 2 (1-19); Pacific-Washington, 7 (100-249); Oregon, 5 (20-99).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such states.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: See Introduction for an explanation of terms used.
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. $\mathrm{r}_{\text {Revised }}$.
${ }^{1}$ The exact percentages shown, while correct to the extent that they are mathematical calculations, are not very meaningful because of duplication in the value of shipments. See introductory text for this industry.
${ }^{2}$ For 1963, secondary products are included with miscellaneous receipts. The specialization ratio is between $85-90$ percent.

## table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary praducts), (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

## table 6A-1. Products and Product Classes—Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Footnotes for table 6A-1-36D--Continued

${ }^{2}$ For these products, figures were alco collected in the Bureau of the Census commodity survey program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified groups of products for which separate figures had previously been collected in the commodity survey. In most cases, the value figures reported in the census of manufactures for each group of products agreed closely with the corresponding figures reported in the commodity survey. However, there were minor differences between the census figures and the commodity survey figures. These variations were due primarily to the following reasons:
a. Better coverage in census of manufactures program. Coverage in the annual surveys will be supplemented by adding respondents not currently in the survey but making the specified product according to their census of manufactures report.
b. Use of different reporting periods (calendar year vs. fiscal year).
c. Use of estimates in reporting figures on the commodity survey, whereas census of manufactures figures generally represent more exact shipment figures.

See tables 6A-2 and 6A-3 for more detailed product data.
 under code 3651320.
 for sale separately, in order to avoid disclosing figures of individual companies.
${ }^{5}$ Includes $\$ 66,436$ thousand of connectors for electronic application which were previously classified in industry 3643 , Current Carrying Devices.
${ }^{6}$ Data for 1958 for product class 36792, Capacitors for electronic applications, include $\$ 9$, 449 thousand for permeability tuning devices. These tuning devices are included in product class 36794 , Coils, transformers, reactors, and chokes for electronic applications in l963.

n.e.c. Not elsewhere classified.
${ }^{1}$ Not shown because comparable quantity data were not obtained for the majority of these products measured in terms of value.
${ }^{2}$ Unit value indexes based on shipments data for telephone instrument sets; production indexes derived by including in addition the values for other telephone apparatus and equipment shipped.
${ }^{3}$ Not shown pending further review of quantity and price information reported in 1963 to determine comparability with data reported for 1958 and 1954.

# table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

See footnotes at end of table.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power
 fore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors
 "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. (Z) Less than 500 horsepower
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to their degree of specializa tion in products primary to their indstry. The measures of plant specialization shown are (1) industry specialization-the ratio of prigary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | Valueadded bymanufacture,adjusted$(\$ 1,000)$ | Cost of materials$(\$ 1,000)$ | Value of shipments$(\$ 1,000)$ | $\begin{gathered} \text { Capital } \\ \text { expend- } \\ \text { itures, } \\ \text { new } \\ (\$ 1,000) \end{gathered}$ |

# TABLE 9. Establishments, Production Workers, and Man-Hours for Selected Metalworking Operations: 1963-Continued 

Footnotes on next page.

## table 9. Establishments, Production Workers, and Man-Hours for Selected Metalworking Operations: 1963-Continued

## Footnotes for table 9-36D

Note: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item | Industry |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | 3651 | 3661 | 3662 | 3671 | 3672 | 3673 | 3674 | 3679 |
| Total number of establishments in the industry...... | 348 | 90 | 1,132 | 42 | 151 | 57 | 107 | 1,934 |
| Number of establishments which reported one or more of the specified operations. | 167 | 54 | 634 | 23 | 20 | 41 | 87 | 779 |
| Percent of industry production workers in these establishments $\qquad$ | 85-90 | 95-100 | 80-85 | 95-100 | 85-90 | 90-95 | 95-100 | 80-85 |
| Number of establishments which reported "none" of the operations apply. | 15 | 2 | 68 | 19 | 16 | 4 | 20 | 157 |
| Percent of industry production workers in these establishments. $\qquad$ | 0-5 | 0-5 | 0-5 | 0-5 | 0-5 | 0-5 | 0-5 | 0-5 |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry. | 85-90 | 95-100 | 85-90 | 95-100 | 90-95 | 90-95 | 95-100 | 85-90 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

# MISCELLANEOUS ELECTRICAL MACHINERY, EQUIPMENT, AND SUPPLIES 

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3691-Storage Batteries<br>3692-Primary Batteries, Dry and Wet<br>3693-X-Ray and Therapeutic Apparatus and Tubes<br>3694-Electrical Equipment for Internal Combustion Engines<br>3699-Electrical Machinery, Equipment, and Supplies, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activites of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3691-STORAGE BATTERIES

This industry comprises establishments primarily engaged in the manufacture of storage batteries for automobiles, trucks, farm tractors, and busses as well as storage batteries for farm uses, communications systems, and railroad equipment. Parts for storage batteries are also included in this industry. For a detailed list of products of industry 3691 , refer to table 6A-1, product codes 3691112 to 3691298.
The code number as well as the definition of this industry was unchanged between 1958 and 1963.
Value of shipments and other receipts of the Storage Batteries Industry totaled $\$ 516$ million. This amount included shipments of storage batteries (primary products) valued at $\$ 500$ million, shipments of other products (secondary products) valued at $\$ 8$ million, and miscellaneous receipts (mainly resales) at $\$ 8$ million.
This industry's shipments of storage batteries represented 98 percent of its total product shipments. The industry specialization ratio in 1958 was 99 percent.
Shipments of storage batteries by this industry in 1963 represented 99 percent of all shipments of these products ( $\$ 504$ million) by all industries. In 1958 the coverage ratio was 100 percent.

The production index for the primary products of the industry increased to 153 in 1963 from the 1958 level of 112. The unit value index for 1963 was 92 compared to 96 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3692-PRIMARY BATTERIES, DRY AND WET

This industry comprises establishments primarily engaged in the manufacture of dry and wet cell primary batteries for flashlights, railroad lanterns, hearing aids, portable radios, farm radios, and general purposes as well as parts and supplies for primary batteries. For a detailed list of products of industry 3692 , refer to table $6 \mathrm{~A}-1$, product codes 3692012 to 3692095.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Primary Batteries, Dryand Wet, Industry totaled $\$ 195$ million. This amount included shipments of dry and wet primary batteries (primary products) valued at $\$ 173$ million, shipments of other products (secondary products) valued at $\$ 8$ million, and miscellaneous receipts (mainly resales) at $\$ 14$ million.

This industry's shipments of dry and wet primary batteries represented 96 percent of its total product shipments. The industry specialization ratio in 1958 was 99 percent.

Shipments of dry and wet primary batteries by this industry represented 91 percent of all shipments of these products ( $\$ 192$ million) by all industries. ln 1958 the coverage ratio was 98 percent.

The production index for the primary products of the industry increased to 120 in 1963 from the 1958 level of 93 . The unit value index for 1963 was 135 compared to 123 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3693-X-RAY AND THERAPEUTIC APPARATUS AND TUBES

This industry comprises establishments primarily engaged in manufacturing radiographic X-ray, fluoroscopic X-ray, and therapeutic X-ray apparatus and tubes for medical, industrial, research and control applications. Establishments primarily engaged in manufacturing radio receiving type tubes are classified in industry 3671 ; television receiving cathode ray tubes in industry 3672; transmitting tubes in industry 3673; and electrotherapeutic lamp units for ultra-violet and infra-red radiation in industry 3641. For a detailed list of products of industry 3693, refer to table 6A-1, product codes 3693019 to 3693096.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the X-Ray Apparatus and Tubes lndustry totaled $\$ 144$ million. This amount included shipments of X-ray apparatus and tubes (primary products) valued at $\$ 87$ million, shipments of other products (secondary products) valued at $\$ 18$ million, and miscellaneous receipts (mainly resales) at $\$ 39$ million.

This industry's shipments of X-ray apparatus and tubes represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent.

Shipments of X-ray apparatus and tubes by this industry represented 80 percent of all shipments of these products ( $\$ 109$ million) by all industries. ln 1958 the coverage ratio was 82 percent.

## 3694-ELECTR1CAL EQU1PMENT FOR INTERNAL COMBUSTION ENGINES

This industry comprises establishments primarily engaged in manufacturing electrical equipment for internal combustion engines. lmportant products of this industry include starting motors and generators for automobiles and aircraft; and ignition apparatus for
internal combustion engines including spark plugs, magnetos, coils, and distributors. For a detailed list of products of industry 3694, refer to table 6A-1, product codes 3694111 to 3694698.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The change in composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due to a revision made in the 1963 supplement to the 1957 edition of the Standard Industrial Classification, reclassifying establishments primarily manufacturing automotive wiring harness sets other than ignition from industry 3694 to industry 3714 (census industry 3717) "Automobiles and Parts."

Value of shipments and other receipts of the Engine Electrical Equipment Industry totaled $\$ 901$ million. This amount included shipments of electrical equipment for internal combustion engines (primary products) valued at $\$ 706$ million, shipmenis of other products (secondary products) valued at $\$ 128$ million, and miscellaneous receipts (mainly resales) at $\$ 67$ million.

This industry's shipments of engine electrical equipment represented 93 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 consisted mainly of parts and accessories for passenger cars, trucks, and busses shipped to motor vehicle manufacturers ( $\$ 81$ million).

Shipments of electrical equipment for internal combustion engines by this industry represented 81 percent of all shipments of these products ( $\$ 874$ million) by all industries. In 1958 the coverage ratio was 83 percent.

The coverage ratio for individual product classes varies significantly from that for the 4-digit industry for the following product classes of industry 3694, e.g., Cranking motors (36943), 98 percent; Components and parts for engine electrical equipment (36946), 92 percent; and Ignition harness and cable sets and spark plugs ( 36941 and 36944 combined), 54 percent.

The higher specialization ratio in 1963 compared with the 1958 figure primarily results from changes in the Standard Industrial Classification system as described above.

The production index for the primary products of the industry increased to 129 in 1963 from the 1958 level of 100 . The unit value index for 1963 was 123 compared to 107 in 1958. Both indexes were computed on a basis of $1954=100$.

3699-ELECTRICAL MACHINERY, EQUIPMENT, AND SUPPLIES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing electrical machinery, equipment, and supplies, n.e.c. For a detailed list of products of industry 3699 , refer to table $6 \mathrm{~A}-1$, product codes 3699211 to 3699629.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Electrical Products, N.E.C., Industry totaled $\$ 190$ million. This amount included shipments of electrical machinery, equipment, and supplies, n.e.c. (primary products) valued at $\$ 163$ million, shipments of other products (secondary products) valued at $\$ 19$ million, and miscellaneous receipts (mainly resales) at $\$ 8$ million.

This industry's shipments of electrical machinery, equipment, and supplies, n.e.c., represented 90 percent of its total product shipments. The industry specialization ratio in 1958 was 91 percent. Secondary products shipped by this industry in 1963 included miscellaneous electronic components and accessories ( $\$ 3$ million).

Shipments of electrical machinery, equipment, and supplies, n.e.c., by this industry represented 49 percent of all shipments of these products ( $\$ 336$ million) by all industries. In 1958 the coverage ratio was 54 percent. Other industries shipping electrical machinery, equipment, and supplies, n.e.c., consisted mainly of industry 3357 , Nonferrous Wire Drawing, etc., \$102 million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3699 , e.g., Lamp bulb components (36992), 65 percent; and Appliance wire and cord and flexible cord sets (36996), 30 percent.

NOTE: See Introduction for an explanation of terms used. The following variations in definition of terms should be considered in the use of this table: All employees: For 1949-1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March, May, August, and November; for 1947 an average of 12 monthly figures for all employees; and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period (usually in October). Production workers: For 1947 and prior years figures represent an average of 12 monthly figures. Value added: Value added prior to 1954 is unadjusted value added which is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy, and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. Cost of materials: Cost of materials prior to 1958 (except 1954) excludes cost of products bought for resale without further manufacture, processing or assembly. In addition, figures prior to 1935 exclude cost of contract work. Value of shipments: Value of shipments for years prior to 1958 (except 1954) excludes value of products bought for resale without further manufacture, processing or assembly. For 1939 and prior years, except 1929, the figures represent value of production ather than shipments.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable. n.e.c. Not e.lsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishrnents. The standard errors associated with these estinates are published in the annual survey of manufactures volumes for this period.
${ }_{3}^{2}$ Data for Alaska and Hawaii are not included.
${ }^{3}$ A revision in the definition of this industry was made in the 1963 supplement to the 1957 edition of the Standard Industrial Classification, reclassifying establishments primarily manufacturing automotive wiring harness sets other than ignition from industry 3694 to industry 3714 (Census industry 3717) "Motor Vehicles and Parts." The statistics for 1958 to 1962 have been revised to take this reclassification into account. However, comparable data for this industry are not available for earlier years.
${ }^{4}$ A revision of the definition of this industry was introduced in the 1957 Standard Industrial Classification so that earlier figures on a comparable basis are unavailable.

TABLE 2. General Statistics, by Geographic Areas: 1963 and 1958

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3691, Storage Batteries: New England--Massachusetts, 10 (558); Phode Island, 1 (20-99); Connecticut, 5 (500-999); East North Central--Indiana, 8 (1, 771); Wisconsin, 4 (191); West North Central-Minnesota, 5 (558); Iowa, 2 (20-99); Missouri, 8 (702); Nebraska, 1 (20-99); Kansas, 5 ( 689 ); South Atlantic--Delaware, 1 (100-249); Maryland, 3 (1-19); District of Columbia, 1 (1-19); Virginia, 4 (20-99); North Carolina, 5 (234); Georgia, 8 (504); Florida, 15 (390); East South Central--Kentucky, 4 (100-249); Mississippi, 2 (20-99); West South Central--Louisiana, 4 (20-99); Oklahoma, l (100-249); Texas, 19 (686); Mountain--Colorado, 4 (129); New Mexico, l (1-19); Arizona, 2 (1-19); Utah, 2 (20-99); Pacific-Washington, 4 (20-99); Oregon, 10 (179); Alaska, l (1-19).
SIC 3692, Primary Batteries, Dry and Wet: New England--Vermont, 1 (250-499); Connecticut, 2 (20-99); Middle Atlantic--New York, 6 (674); New Jersey, 3 (250-499); Pennsylvania, 3 (100-249); East North Central--0hio, 3 (1,000-2, 499); Illínois, 3 (1,000-2, 499); Wisconsin, 6 ( $1,000-2,499$ ); West North Central--Iowa, 1 (250-499); Missouri, 1 (20-99); South Atlantic--Maryland, 2 (100-249); North Carolina, 6 ( 2 , 128 ); East South Central--Tennessee, 1 (100-249); Mountain--Colorado, 1 (20-99); Pacific--Washington, 1 (1-19); Oregon, 1 (1-19); California, 5 (1-19).
SIC 3693, X-Ray Apparatus and Tubes: New England--Massachusetts, 4 (20-99); Connecticut, 3 (230); Middle Atlantic--New York, 12 (761); New Jersey, 3 (250-499); Pennsylvania, 2 (100-249); East North Central--Ohio, 2 (1,000-2,499): Wisconsin, 2 (1,000-2, 499); West North Central--Minnesota, 2 (20-99) ; Missouri, l (20-99); South Atlantic--Maryland, 1 (500-999); Florida, l (20-99); East South Central--Kentucky, l (l-19); West South Central--Texas, 1 (1-19); Pacific--Washington, 1 (1-19); Oregon, 1 (100-249); California, 10 (150.
SIC 3694, Engine Electrical Equipment: New England--New Hampshire, 1 (1-19); Massachusetts, 9 (1509); Connecticut, 6 (500-999); East North Central-Indiana, 5 (15, 879); Michigan, 15(5,000-9, 999); West North Central--Minnesota, 2 (1-19); Iowa, 1 (250-499); Missouri, 3 (20-99); Nebraska, 1 (1-19); Kansas, 2 (1-19); South Atlantic--Delaware, 1 (20-99); Maryland, 1 (1-19); North Carolina, 3 (20-99); South Carolina, 1 (20-99); Georgia, 1 (1-19); Florída, 6 (20-99); East South Central--Kentucky, 4 (249); Tennessee, 3 (20-99); Alabama, 1 (500-999); Mississippi, 1 (20-99); West South Central-Arkansas, l (1-19); Louisiana, 2 (20-99); Oklahoma, l (1-19); Texas, 4 (20-99); Mountain--New Mexico, l (1-19); Nevada, l (1-19); Pacific-Washington, 1 (1-19).
SIC 3699, Electrical Products, n.e.c.: New England--Maine, l (100-249); New Hampshire, 2 (20-99); Rhode Island, 3 (250-499); Middle Atlantic--New Jersey, 34 (639); Pennsylvania, 20 (294); East North Central--Illinois, 26 (500-999); Michigan, 18 (500-999); West North Central--Minnesota, 5 (124); Iowa, 1 (1-19); Nebraska, 2 (20-99); Kansas, 1 (1-19); South Atlantic--Maryland, 2 (1-19); Virginia, 2 (20-99); North Carolina, 3 (1-19); Georgia, 4 (20-99); Florida, 12 (1,419); East South Central--Tennessee, 3 (20-99); Alabama, 2 (1-19); West South Central--Arkansas, 1 (1-19); Oklahoma, 5 (1-19); Texas, 10 (350); Mountain--Colorado, 3 (1-19); Arizona, 3 (1-19); Pacific--Washington, 4 (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

[^258]
## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

Note: See Introduction for an explanation of terms used.
${ }^{1}$ Included in this industry are appliance wire and cord and flexible cord sets which are also primary to industry 3357 , Nonferrous Wire Drawing, Etc. For 1963, a coverage ratio computed on the basis of including both industries to which appliance wire and cord and flexible cord sets are primary would total 79 percent; 49 percent by industry 3699 , and 30 percent by industry 3357 . The remaining 21 percent was shipped by establishments in other industries. For 1958, a coverage ratio computed on the basis of including both industries to which appliance wire and cord and flexible cord sets are primary would total 81 percent; 54 percent by industry 3699 , and 17 percent by industry 3357 . The remaining 19 percent was shipped by establishments in other industries.

## TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

## table 6A-1. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

[^260]
## table 6A-1. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Stendard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ For 1958 , includes both wet and dry charge.
${ }^{2}$ For 1958 , includes $\$ 180$ thousand for which no quantity was reported.
${ }^{3}$ For 1963, product codes 3691241 and 3691271 are included with product code 3691298.
${ }_{5}$ For 1958, product codes 3691241 and 3691261 are included with product code 3691298.
${ }^{5}$ For 1963, a large portion of this value represents work on fuel cells.
${ }^{6}$ Codes 3692012 and 3692014 include data for codes 3692016 and 3692018 in 1958.
${ }^{7}$ Codes 3692089 and 3692091 include data for codes 3692028, 3692029, 3692051, 3692053, and 3692072 through 3692088 in 1958.
${ }^{8}$ Codes 3692072 through 3692081 include data for codes 3692041 through 3692053 in 1963.
${ }^{9}$ Codes 3692041 and 3692043 include data for codes 3692045 and 3692047 in 1958.
${ }^{10}$ Codes 3692069 and 3692071 include data for codes 3692061 and 3692063 in 1963.
${ }^{11}$ Codes 3692089 and 3692091 include data for codes 3692083 through 3692088 in 1963.
${ }^{12}$ Code 3693094 combined with code 3693096 to avoid disclosing figures of individual companies.
${ }^{13}$ Product code 3694111 has been revised to exclude nonignition automotive wiring harness sets. Accordingly, the total for product class 36941 is not comparable with estimates published for 1959 to 1962 in the annual survey of manufactures. Also, see footnote 3 of table 1.
${ }^{14}$ In 1958, automotive type ignition harness sets were included with "all other" (Census product code 3694119) to avoid disclosing operations of individual companies.
${ }^{15}$ Other types of electric comfort heating equipment are included in industry 3634, Electric Housewares and Fans.
${ }^{16}$ In 1958, product codes 3357613 and 3357615 were combined.
${ }^{17}$ In 1958, product codes 3699613 and 3699615 were combined.

# TABLE 6A-2. Automotive Type Storage Batteries-Quantity and Value Shipped, by Class of Customer: 1963 and 1958 

(Product codes 3691112 to 3691128 )

| Class of customer | Total shipments including interplant transfers |  |  |  |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

Source: Current Industrial Reports Series M36N, "Selected Electronics and Associated Productst'. in
${ }^{3}$ Includes the total for product class 33576 , appliance wire and cord and flexible cord sets, which is primary to industry 3357 .

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

[^262]
## TABLE 7A. Materials by Kind: 1963 and 1958

[^263]
## table 7A. Materials by Kind: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Represents (a) total cost of materials for small establishments reporting on "short forms" where separate figures for individual materials consumed were not requested and (b) total cost of materials reported for those establishments which failed to report costs of individual materials on "standard forms."
${ }^{2}$ Does not include quantities produced and consumed in the same establishment.

## table 7B. Fuels and Electric Energy Consumed and Horsepower Rating of Power Equipment: 1962

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available.
(Z) Iess than 500 horsepower.
applicable.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated
with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

# TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963 

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the estabishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## table 9. Establishments and Production Workers for Selected Metalworking Operations: 1963

Note: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item |
| :---: |
|  |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.
ni nalad Lo

## Transportation Equipment

37A Motor vehicles and equipment<br>37B Aircraft and parts<br>37C Ship and boat building, railroad and miscellaneous transportation equipment

This major group covers establishments primarily engaged in manufacturing equipment for transportation of passengers and cargo by land, air, and water. Important products produced by establishments classified in this major group include motor vehicles, aircraft, ships, boats, railroad equipment, and miscellaneous transportation equipment such as motorcycles, bicycles, etc.

The Standard Industrial Classification System (1957 edition) includes, in Industry Group 372, guided missile components, not elsewhere classified, and receipts from research and development on aircraft parts, guided missile components, not elsewhere classified, and airplane and missile engines.

Certain products which are sometimes associated with or considered a part of transportation
equipment are classified in other major groups in the Standard Industrial Classification System. For example, wheeltype tractors, track-laying tractors, mining cars, and industrial trucks, tractors, trailers, and stackers are in Major Group 35; and ignition systems and storage batteries, in Major Group 36.

Railroad shops are not classified as manufacturing by the Standard Industrial Classification System and, therefore, such activities are not included in employment and other establishment totals for Major Group 37 or Industry Group 374. However, such shops were requested to report the quantity and value of locomotives and railroad cars built or rebuilt. Data on railroad cars built or rebuilt in railroad shops are included only in table 6A-2 for Industry 3742.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

The figures for 1939 through 1963 include data for employees of manufacturing estabishments who are engaged in distribution and construction work. The extent to which
ata for such employees are included in the figures for earlier years is not known.
${ }^{2}$ For the period 1954 to 1963 , figures represent adjusted value added by manufactu
${ }^{2}$ For the period 1954 to 1963, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. See Introduction, "Value Added by Manufacture."
${ }^{3}$ The total value of shipments and cost of materials for industry groups (2- and 3digit) includes extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction. The figures for 1958 to 1963 include expenditures for plants under construction and not ${ }_{5}$ yet in operation.
for manufacturing centa for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the
years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, or prior to 1949.

Figures for 1958 to 1963 for operating manufacturing establishments are not strictiy comparable with prior years due to revisions of the Standard Industrial Classification System. Prior to 1958 , establishments primarily engaged in the manufacture of truck and bus bearings, convertible tops for automobiles, rebuilt automotive parts, and aircraft ments primarily engaged in the manufacture of parachutes are included in data prior to 1958.
${ }^{7}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with the ${ }^{8}$ The figures for 1939 , but not for 1937 , have been revised for comparability with
${ }^{8}$ The figures for 1939, but not for 1937, have been revised for comparability with road repair shops reclassified as nonmanufacturing establishments. Value added by manufacture for 1939 on a basis strictly comparable with 1937 was $\$ 1,794$ million.
${ }^{9}$ The figures for 1935 and earlier years are not sufficiently comparable with those for later years to be shown in this table because the earlier figures exclude data for establishments primarily engaged in the manufacture of aircraft engines and for a number
of large establishments classified prior to 1937 in other industry groups.

## MOTOR VEHICLES AND EQUIPMENT

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

3713-Truck and Bus Bodies<br>3715-Truck Trailers<br>3717-Motor Vehicles and Parts

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3713-TRUCK AND BUS BODIES

This industry comprises establishments primarily engaged in the manufacture of truck and bus bodies for sale separately, or for assembly on purchased chassis. Establishments primarily engaged in manufacturing complete trucks and busses are classified in Census Industry 3717, and stamped body parts for truck and busses in industry 3461.

The code number as well as the definition of this industry was unchanged between 1958 and 1963. For a detailed list of products of industry 3713 , refer to table 6A, product codes 3713012 to 3713099 .

Value of shipments and other receipts of the Truck and Bus Bodies Industry in 1963 totaled $\$ 477$ million. This amount included shipments of truck and bus bodies (primary products) valued at $\$ 362$ million, shipments of other products (secondary products) valued at $\$ 56$ million, and miscellaneous receipts (mainly resales) at $\$ 58$ million.

This industry's shipments of truck and bus bodies in 1963 represented 88 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 included motor vehicle manufacturers ( $\$ 11$ million), parts and accessories for passenger cars, trucks, and busses shipped to; other than motor vehicle manufacturers ( $\$ 17$ million).

Shipments of truck and bus bodies by this industry in 1963 represented 86 percent of all shipments of these products ( $\$ 420$ million) by all industries. In 1958 the coverage ratio
was 87 percent. Other industries shipping truck and bus bodies consisted mainly of industry 3717, Motor Vehicles and Parts, $\$ 18$ million; and industry 3715, Truck Trailers, $\$ 13$ million.

## 3715-TRUCK TRAILERS

This industry comprises establishments primarily engaged in the manufacture of truck trailers and truck trailer chassis for sale separately, but not engaged in manufacturing complete trucks and busses.

The code number as well as the definition of this industry were unchanged between 1958 and 1963. For a detailed list of products of industry 3715 , refer to table 6 A , product codes 3715011 to 3715055 .

Value of shipments and other receipts of the Truck Trailers Industry in 1963 totaled $\$ 516$ million. This amount included shipments of truck trailers (primary products) valued at $\$ 450$ million, shipments of other products (secondary products) valued at $\$ 39$ million, and miscellaneous receipts (mainly resales), at $\$ 27$ million.

This industry's shipments of truck trailers in 1963 represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent. Secondary products shipped by this industry in 1963 consisted mainly of truck and bus bodies ( $\$ 13$ million), and automotive parts and accessories shipped to motor vehicle manufacturers (\$10 million).

Shipments of truck trailers by this industry in 1963 represented 93 percent of all shipments of these products ( $\$ 485$ million) by all industries. In 1958 the coverage ratio was also 93 percent. Other industries shipping truck trailers consisted mainly of industry 3443 , Boiler Shop Products, $\$ 2$ million; and industry 3717, Motor Vehicles, and Parts, $\$ 6$ million.

## 3717-MOTOR VEHICLES AND PARTS

The Motor Vehicles and Parts Industry includes establishments engaged primarily in the manufacture or assembly of complete passenger automobiles, car bodies, trucks, commercial cars and busses (except trackless trolleys-Industry 3742), special purpose motor vehicles and motor vehicle parts and accessories. Establishments primarily engaged in manufacturing truck and bus bodies and assembling them on purchased chassis are classified in industry 3713; motorcycles in industry 3751; wheel type tractors, except contractors' off-highway types in industry 3522 ; track laying tractors in industry 3531 ; and combat tanks in industry 1931.

In this report, based on the 1963 Census of Manufactures, as in 1958, the three Standard Industrial Classification industries (3711, 3712, and 3714) have been combined because of a major problem of defining the reporting unit in terms of these industries. This difficulty arises from the fact that many large establishments have integrated operations which include the production of parts or bodies and the assembly of complete vehicles at the same location.

Included in industry 3717 are such parts as passenger-car bodies, motor vehicle engines (except Diesel), brakes, clutches, axles, radiators, differentials, transmissions, wheels and frames, windshield wipers, automotive bumpers, camshafts, connecting rods, crankshaft assemblies, cylinder heads, drive shafts, exhaust systems, fuel systems, heaters, hoods, horns, instrument board assemblies, lubrication systems, mufflers, powertransmission equipment, rear-axle housings, shock absorbers, steering mechanisms, tops (except stamped metal), universal joints, wheel rims, windshield frames, and automobile accessories, not elswhere classified.

A considerable number of components, parts and accessories for motor vehicles are not classified in industry 3717 but are classified in other Standard Industrial Classification industries based on the characteristic of the product itself rather than the Specific Application. Among the more important of these are automotive hardware, industry 3429, Hardware, N.E.C.; automotive stampings, industry 3461, Metal Stampings; Diesel and semi-Diesel engines, industry 3519, Internal Combustion Engines; sealed beam and other electric lamps, industry 3641, Electric Lamps; motor vehicle lighting fixtures, industry 3642, Lighting Fixtures; bearings, industry 3566, Power-Transmission Equipment; tires and inner tubes, industry 3011 , Tires and lnner Tubes; automobile glass, industry 3211, Flat Glass; ignition equipment such as spark plugs, distributors, switches, ignition coils, generators, cranking motors, etc., industry 3694, Engine Electrical Equipment; storage batteries, industry 3691, Storage Batteries; automobile radios, industry 3651, radio and Television Receiving Sets; and carburetors and pistons, industry 3599 , Miscellaneous Machinery.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1958. The change in the composition of the industry as now constituted, compared with that under the classification system followed in the 1958 census, is due principally to revision in the definition of this industry made in the 1963 Supplement to the 1957 edition of the Standard Industrial Classification, reclassifying establishments primarily manufacturing automotive wiring harness sets other than ignition, from industry 3694, "Engine Electrical Equipment" to industry 3714 (Census Industry 3717). For a detailed list of products of industry 3717, refer to table 6A, product codes 3717111 to 3717711 .

Motor vehicle and equipment companies frequently operate separate establishments manufacturing such components, parts and accessories for automotive use. These establishments are not classified in industry 3717 . Therefore, to obtain an overall picture of automotive components, parts and accessories associated with the manufacture or assembly of complete motor vehicles and equipment, reference must also be made to many of the industries outside of industry 3717. This situation occurs, of course, not only in connection with the Motor Vehicles and Parts Industry but for many other industries (aircraft, locomotives, etc.).

Another factor to be considered in dealing with the statistics for this group of industries relates to the varied degree of establishment integration in respect to such metalworking operations as stamping, foundry, and tool and die production associated with the output of motor vehicles and equipment. ln some establishments many of these activities are conducted as an integral part of the same establishment which produces or assembles motor vehicles and equipment. In these cases, their employment, wages, materials, etc., are included in the statistics for the establishment. The extent of such integrated captive operations is shown in Table 9 for the motor vehicle industry.

On the other hand, the foundry, and tool and die activities may be set up as separate establishments of motor vehicle and equipment companies or such activities may be performed by establishments which are not part of motor vehicle or parts companies. In either of these cases, data for such separate establishments would not be included in industry 3717, but rather in their respective industries, e.g., Industry Group 332, lron and Steel Foundries; Industry Group 336, Nonferrous Foundries; and lndustry 3544, Special Dies and Tools.

## Value of Shipments

Data on cost of materials and value of shipments of the Motor Vehicle and Parts lndustry include extensive duplication resulting from the transfer of motor vehicle parts to establishments producing complete motor vehicles. The value of such shipments are
duplicated in the total value of shipments. A corresponding duplication enters into the total cost of materials. The data shown for value added by manufacture (value of shipments less cost of materials, etc.) avoid this duplication.

## Replacement Parts

Manufacturers' shipments of replacement parts for passenger cars, trucks, busses, and trailers during 1963 amounted to $\$ 2,318$ million. The comparable 1958 figure was $\$ 1,639$ million. These figures include parts made by establishments classified in the Motor Vehicles and Parts lndustry as well as parts classified as primary products of other industries. They include the value of motor vehicle replacement parts such as spark plugs, ignition coils, storage batteries, carburetors, pistons and piston rings, headlights, fan belts, springs, hardware, mufflers, radiators and cores, water and fuel pumps, wheels, universal joints, cylinder heads, hub and drum assemblies, transmissions, shock absorbers, rear axle shafts, and clutch disc and facing assemblies.

These figures represent the shipments of these parts by parts manufacturers to other than motor vehicle manufacturers and shipments of replacement parts by motor vehicle manufacturers including parts which they purchased and resold in the same condition. No duplication is involved since parts manufacturers reported separately parts shipped to motor vehicle manufacturers and the latter figure is not included in this total. Value of shipments of tires and tubes and motor vehicle accessories such as radios, heaters, etc., are not included in this figure.

In order to arrive at an aggregate value for replacement parts without duplication, establishments producing replacement parts but not engaged in manufacturing complete vehicles were requested to exclude from their shipments data on replacement parts all shipments to motor vehicle producers. Motor vehicle producers that reshipped such replacement parts were requested to report the value of these shipments, even though the parts were not made by such companies. The value of replacement parts in 1963 totaled the $\$ 2,318$ million referred to above.

Table 6E shows data for 1963 and 1958 on the total production of selected motor vehicle parts and the use of such parts in the assembly of new vehicles as well as the use of these parts for replacement, export, and other uses. These data are not a precise measure of the sale of replacement parts in the United States since they include shipments of parts for export and are affected by inventory changes of parts during the year by both producers of parts and assemblers of vehicles. Also, see general Note of table 6 E for discussion of other limitations of these data.

Value of shipments and other receipts of the Motor Vehicles and Parts Industry in 1963 totaled $\$ 36,181$ million. This amount included shipments of motor vehicles and parts (primary products) valued at $\$ 34,837$ million, shipments of other products (secondary products) valued at $\$ 985$ million, and miscellaneous receipts (mainly resales), at $\$ 359$ million.

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent to this specialization is indicated in table 8. Approximately 47 percent of the total industry shipments are represented by plants specializing in product class; 37171, Passenger cars, knocked down or assembled and; chassis for sale separately and 36 percent in 37175 , Parts and accessories shipped to motor vehicle manufactures.

As shown in table 5B, except for motor vehicle parts and accessories, only a very small amount of primary products of this industry was shipped by establishments classified in other industries.

NOTE：See Introduction for an explanation of terms used．The following variations in definition of terms should be considered in the use of this table：All employees：For 1949－1954 figures represent the average of all employees for the payroll period ended nearest the 15 th of March，May， August，and November；for 1947 an average of 12 monthly figures for all employees；and for 1939 and prior years the average number of production workers based on 12 monthly figures plus the number of nonproduction workers for one payroll period（usually in october）．Production workers：For 1947 and prior years figures represent an average of 12 monthly figures．Value added：Value added prior to 1954 is unadjusted value added which is equal to value of products（excluding resales of finished products）less cost of materials，supplies，fuel，electric energy，and contract work；no adjustment is made for changes in inventories of finished products and work－in－process during the year．Cost of materials：Cost of materials prior to 1954 excludes cost of products bought for resale without further manufacture，processing or assembly．In addition，figures prior to 1935 exclude cost of contract work．Value of shipments：Value of shipments for years prior to 1954 excludes value of products bought for resale without further manufacture，processing or assembly．For 1939 and prior years，except 1929，the figures represent value of production rather than shipments．
Standard Notes
－Represents zero．
（D）Withheld to avoid disclosing figures for individual companies．
（NA）Not available．
（x）Not
applicable．
（S）Withheld because the estimate did not meet publication standards，either on the basis of the associated standard error of estimate or on the basis of a consistency review．
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in tne annual survey of manu－ factures．These estimates，therefore，may differ from the results that would have been obtained from a complete canvass of all manufacturing estab－ lishnents．The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period．For 1959－1962 the figures shown in parenthesis either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data．
${ }^{2}$ No comparable figures are available for earlier years．
${ }^{3}$ Includes extensive duplication arising from shipments between establishments in the same industry classification．
 reclassifying establishments primarily manufacturing automotive wiring harness sets other than ingition，from Industry 3694，＂Engine Electrical Equipment＂to Industry 3714 （Census Industry 3717）．The statistics for 1958－1962 have been revised to take this reclassification into account． The data for 1947－1957 could not be revised to conform with this reclassification．Further，the 1947－1957 data are not strictly comparable with 1958－1963 because of changes introduced in the 1957 Standard Industrial Classification．

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
${ }^{1}$ General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below with the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State. SIC 3713, Truck and bus bodies: New England-Maine, 3 (20-99); Massachusetts, 17 (250-499); Rhode Island, 2 (20-99); Conmecticut, 11 (20-99); East North Central-Ohio, 35 (4,132); Indiana, 20 ( 2,028 ); Wisconsin, 14 (1,697); West North Central-South Dakota, 3 (1-19); Kansas, 7
(20-99); South Atlantic-District of Columbia, 1 (100-249); West Virginia, 1 (1-19); North Carolina, 14 (500-999); South Carolina, 4 (20-99); Florida, 15 (229); East South Central-Kentucky, 7 (20-99); Tennessee, 13 (235); Mississippi, 6 (500-999); West South Central-Arkansas, 9 (250-499); Louisiana, 5 (100-249); Oklahoma, 6 (20-99); Mountain-Idaho, 3 (20-99); Colorado, 2 (20-99); Arizona, 2 (1-19); Utah, 4 (20-99); Nevada, 2 (1-19).
SIC 3715, Truck Trailers: New England-Massachusetts, 4 (20-99); Connecticut, 1 (1-19); East North Central-Ohio, 8 ( 3,125 ); Indiana, 7 (1,236); Illinois, 10 (456); Wisconsin, 4 (976); West North Central-Minnesota, 1 (250-499); Missouri, 8 (718); South Dakota, 1 (1-19); Nebraska, 3 (502); Kansas, 2 (100-249); South Atlantic-Maryland, 3 (1-19); Virginia, 2 (20-99); West Virginia, 1 (20-99); North Carolina, 1 (1-19); South Carolina, 1 (20-99); Georgia, 1 (500-999); Florida, 4 (240); East South Central-Kentucky, 2 (250-499); Tennessee, 3 (475); Alabama, 5 (742); Mississippi,
(1-19); West South Central-Arkansas, 2 (1-19); Lovisiana, 2 (250-499); Oklahoma, 2 (250-499); Texas, 20 (1,452); Mountain-Montana, 2 (20-99); Idaho, 1 (1-19); Colorado, 2 (250-499); New Mexico, 3 (20-99); Utah, 1 (20-99); Pacific-Washington, 6 (250-499); Hawaii, 1 (20-99).
SIC 3717, Motor Vehicles and Parts: New England-Maine, 2 (1-19); New Hampshire, 2 (1-19); Massachusetts, 38 (2,939); Rhode Island, 8 (500-999); Midale Atlantic-New Jersey, 53 (12,156); Pennsylvania, 67 (13,603); East North Central-Illinois, 143 (20,973); Wisconsin, 35 (35, 048); West
North Central-Minnesota, 29 ( $2,500-4,999$ ); Missouri, 47 ( 21,621 ); South Dakota, 3 (1-19); Nebraska, 6 ( 1,008 ); Kansas, 13 ( 3,650 ); South
Atlantic-Delaware, 3 ( 5,816 ); Maryland, 15 ( 6,851 ); Virginia, 11 ( 1,860 ); West Virginia, 4 (500-999); South Carolina, 1 (100-249); Georgia, 44 ( 8,806 ); East South Central-Kentucky, 17 ( 4,164 ); Tennessee, 25 ( 3,397 ); West South Central—Arkansas, 12 (335); Louisiana, 9 (107); Texas, 105 (5,990); Mountain-Montana, 1 (1-19); Idaho, 6 (20-99); New Mexico, 4 (20-99); Arizona, 19 (100-249); Utah, 7 (20-99); Nevada, (1-19); Pacific-Washington, 16 (1,000-2,499); Oregon, 20 (500-999); Hawaii, 1 (1-19).
${ }^{2}$ This State or division was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

(X) Not

## applicable.

${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.
${ }^{3}$ Differs from the production worker figure appearing in tables 1, 2, and 8 because the figures in those tables are based on employment for the payroll periods ended nearest the 15 th of March, May, August and November. In this table they represent the average of 12 monthly figures.

(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left.
${ }^{1}$ Value of shipments for Industry 3717 include extension duplication. See text for more complete discussion.
${ }^{2}$ Includes capital expenditures for plants under construction but not in operation which constitute a small proportion of the total for the size class.

## TABLE 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I .

| Ind. code | Industry and census year | Value of shipments |  |  |  |  | Value of primary product shipments |  |  |  |

Note: See Introduction for an explanation of terms used.
${ }^{1}$ The percentages show, although correct to the extent that they are mathematical calculations, are not meaningful because of duplication in the value of shipments. See introductory text for this industry.

## table 5B. Industry-Product Analysis-Shipments by Product Class and Industry: 1963

In thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" columin shows the total value of shipments of the nrimary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary nroducts) (b) products classified in other industries (secondary products). and (c) miscellaneous
receıpts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

(X) Not applicable.
n.s.k. Not specified by kind.
${ }_{1}$ Truck and bus bodies built by garages, service stations and other establishments primarily engaged in nonmanufacturing activities are excluded.
${ }^{2}$ For these products, figures were also collected in the Bureau of the Census conmodity survey program. In lieu of asking for detailed statistics on these products in the census of manufactures, respondents were asked to report only value of shipments for specified groups of products for which separate figures had previously been collected in the commodity survey. In most cases, the value figures reported in the census of manufactures for each group of products agreed closely with the corresponding figures reported in the conmodity survey. However, there were differences between the census figures and the commodity survey figures. These variations were due primarily to the following reasons:
a. Better coverage in the census of manufactures program. This includes many small establishments excluded from the monthly survey.
b. Use of different reporting periods (calendar year vs. fiscal year).
c. Use of estimates in reporting figures on the comodity survey, whereas census of manufactures figures generally represent more exact shipment figures.
${ }^{3}$ Includes small capacity trailers of special construction for the Defense Department, as well as auto transport, public utility trailers, converter dollies, and hoppers.
${ }^{4}$ The total value of shipments of products classified in industry 3717 includes extensive duplication arising from shipments between establishments in the same industry classification.
${ }^{5}$ Includes station wagons, ambulances, hearses, and taxicabs if produced on passenger car chassis. Velue includes extra equipment billed with vehicles.
${ }^{6}$ Includes trucks such as pick-up, sedan delivery, panel, or other commercial cars made on passenger car chassis if these chassis were of own manufacture. Includes station wagons, hearses, and taxicabs if produced on truek chassis. Includes all truck chassis whether or not to be used for transportation of property, such as fire apparatus, street sprinklers, school busses, ambulances, etc. Excludes specialized road construction machinery and off-the-highway trucks.
${ }^{7}$ The sum of values reported for basic chassis and bodies (codes 3717201 through 3717218 ) and bodies and other equipment billed with basic chassis (codes 3717233 , 3717236, and 3717239 ) represents the total value received from the sale of trucks, truck tractors, and truck chassis. Amounts reported for basic chassis values are based on average wholesale prices realized during 1963 and 1958. The amount reported for bodies and other equipment billed with basic chassis represents (1) the value received for bodies and other equipment shipped with the basic chassis; and (2) any plus or minus differences not included in the amounts reported for basic chassis due to the use of average wholesale prices for computing the values of the basic chassis.
${ }^{8}$ Separate figures are shown for fire department vehicles produced on purchased chassis (code 3713077 ) and for fire department vehicles produced on chassis of own manufacture (code 3717321). A small number of fire department vehicles, however, are produced on chassis furnished by customers.
${ }^{9}$ Product code 3717411 combined with 3717000 for security reasons, on advice from the Bureau of the Budget.
${ }^{10}$ Data are limited to establishments of companies producing motor vehicles or bodies.
${ }_{12}$ Data are limited to establishments of companies which do not produce motor vehicles or bodies.
${ }^{12}$ This figure is limited to shipments of products classified in industry 371.7. There were additional shipments of motor vehicle parts by parts producers to other than motor vehicle manufacturers. This includes spark plugs, ignition coils, storage batteries, carburetors, pistons and piston rings, headlights, springs, and hardware which are classified outside the 3717 grouping and which approximated $\$ 564$ million in 1963 and $\$ 498$ million in 1958. Therefore, the total for 1963 was $\$ 2,318$ million. The comparable 1958 total was $\$ 1,639$ million.
${ }^{13}$ For 1958, product code 3717615 is combined with product code 3717600.

# TABLE 6B. Product Classes-Indexes of Production and Unit Value for Primary Products Shipped by All Producers: 1963 and 1958 

(Indexes of production and unit value are not shown for this area pending further review of the quantity data and associated values pertaining to these products.)

(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(X) Not applicable.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
n.s.k. Not specified by kind.
${ }^{1}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.
${ }^{2}$ Product class 37174 combined with 37170 for security reasons, on advice from the Bureau of the Budget.

# TABLE 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958 

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in tootnote 1

[^266](NA) Not available.
(x) Not
${ }^{1}$ For the specified product classes shipments of $\$ 1$ million or more were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 37130, Kentucky, Mississippi, Arkansas, Oklahoma; 37171, Massachusetts, New York, New Jersey, Ohio, Indiana, Illinois, Wisconsin, Minnesota, Missouri, Kansas, Delaware, Maryland, Virginia, Georgia, Kentucky, Texas; 37172, Connecticut, New York, New Jersey, Pennsylvania, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Missouri, Maryland, Virginia, Georgia, Kentucky, Texas, Washington, Oregon, Califormia; 37173, Massachusetts, New York, Pennsylvania, Ohio, Indiana, Michigan, Wisconsin, Georgia; 37174, Connecticut, Pennsylvania, Ohio, Indiana; 37175, Maine, Massachusetts, Rhode Island, Connecticut, Minnesota, Iowa, Missouri, Nebraska, Delaware, Maryland, West Virginia, Georgia, Mississippi, Arkansas, Colorado, California; 37176, Rhode Island, Minnesota, Nebraska, Maryland, Virginia, North Carolina, Kentucky, Alabama, Washington; 37177, Massachusetts, New York, Kansas, South Carolina, Florida, Tennessee, Washington, Oregon.
${ }^{2}$ Shipments of $\$ 1$ million or more were reported but exact figures are withheld to avoid disclosure of individual company figures.
${ }^{3}$ For 1958, figures for product class 37175 are combined with those for product class 37776.

| Driven by energy generated at establishment.......................................do.... | - | - | 90 |
| Aggregate horsepo er per 100 production workers.................................................. . | - | - | 1,144 |

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for l962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishrents. The standard errors associated with these estimates are published in the reports "Fuels and Electric Fnergy Consumed in Manufacturing Industries in l962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962, "MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual companies.
(NA) Not available.
(x) Not applicable
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistencey review.

## TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See Introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

## table 9. Establishments and Production Workers for Selected Metalworking Operations: 1963

| Metalworking operations | Number of establishments |  |  |  | Employment in the specified operation |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| Shipping department, including packing and crating... | 612 | 291 | 165 | 156 | 16,236 | 586 | 1,643 | 14,007 |

Note: Very small establishnents were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not
applicable.
establishment.

## AIRCRAFT AND PARTS

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SlC Code and Title<br>3721-Aircraft<br>3722-Aircraft Engines and Engine Parts<br>3723-Aircraft Propellers and Propeller Parts<br>3729-Aircraft Parts and Auxiliary Equipment, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables lo 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5 A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3721 - AIRCRAFT

This industry comprises establishments primarily engaged in manufacturing or assembling complete aircraft. This industry includes establishments primarily engaged in factory type aircraft modification on a contract or fee basis. Establishments primarily engaged in manufacturing engines, propellers, and other aircraft parts and auxiliary equipment are classified in industries 3722,3723 , and 3729 . For a detailed list of products of industry 3721 , refer to table 6 A , product codes 3721111 to 3721655 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

In industry 3721 there is usually a significant difference between value of actual physical shipments and value of work done during a specified period. This is primarily due to lead time between the input of materials and labor and the shipments of completed aircraft. In evaluating the internal relationships of the Aircraft lndustry, such as the ratio of cost of materials or payrolls to output, the value of aircraft shipments for the year is generally not meaningful and value of work done is therefore substituted. For the 1963 Census of Manufactures, establishments producing military, personal, utility, and commercial aircraft were requested to report both the value of shipments of aircraft and value of work done during the year. This latter statistic included total costs (materials, labor, overhead, etc.) and reflected the value of work done during 1963, including work done on aircraft not accepted during the year, but excluding the value of work done in prior years.

Value of work done and other receipts of the Aircraft lndustry totaled $\$ 6,317$ million. This amount included work done on aircraft (primary products) valued at $\$ 4,164$ million, shipments of other products (secondary products) valued at $\$ 1,898$ million, and miscellaneous receipts (mainly resales) at $\$ 254$ million.

This industry's work done on aircraft represented 69 percent of its total product shipments. The industry specialization ratio in 1958 was 81 percent. Secondary products shipped by this industry in 1963 consisted mainly of aircraft parts and auxiliary equipment ( $\$ 714$ million), and guided missiles and space vehicles, complete ( $\$ 372$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 54 percent of the total industry shipments are represented by plants specializing in product class 37211, Complete military aircraft.

Work done on aircraft by this industry in 1963 represented 96 percent of all work done on these products ( $\$ 4,331$ million) by all industries. In 1958 the coverage ratio was 99 percent.

## 3722-AlRCRAFT ENGINES AND ENGINE PARTS

This industry comprises establishments primarily engaged in the manufacture of aircraft engines, complete missile or space vehicle engines and/or propulsion units, and their parts. For a detailed list of products of industry 3722, refer to table 6A, product codes 3722110 to 3722813.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Aircraft Engines and Parts Industry totaled $\$ 4,101$ million. This amount included shipments of aircraft engines and engine parts (primary products) valued at $\$ 3,367$ million, shipments of other products (secondary products) valued at $\$ 495$ million, and miscellaneous receipts (mainly resales) at $\$ 238$ million.

This industry's shipments of aircraft engines and engine parts represented 87 percent of its total product shipments. The industry specialization ratio in 1958 was 94 percent. Secondary products shipped by this industry in 1963 included guided missile components and subassemblies, n.e.c. ( $\$ 128$ million), and aircraft parts and auxiliary equipment, n.e.c. ( $\$ 35$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 40 percent of the total industry shipments are represented by plants specializing in product class 37221, Aircraft engines for military customers; 25 percent in product class 37226 , Receipts for research and development on complete missile or space vehicle engines and/or propulsion units; and 18 percent in product class 37224, Aircraft engine parts and accessories.

Shipments of aircraft engines and engine parts by this industry represented 93 percent of all shipments of these products ( $\$ 3,610$ million) by all industries. In 1958 the coverage ratio was also 93 percent. Other industries shipping aircraft engines and engine parts included industry 3729, Aircraft Equipment, N.E.C., $\$ 18$ million; and industry 3494, Valves and Pipe Fittings, $\$ 13$ million.

This industry comprises establishments primarily engaged in manufacturing aircraft propellers and propeller parts. For a detailed list of products of industry 3723, refer to table 6A, product codes 3723010 to 3723051 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Aircraft Propellers and Parts Industry totaled $\$ 191$ million. This amount included shipments of aircraft propellers and propeller parts (primary products) valued at $\$ 88$ million, shipments of other products (secondary products) valued at $\$ 95$ million, and miscellaneous receipts at $\$ 8$ million.

This industry's shipments of aircraft propellers and parts represented 48 percent of its total product shipments. The industry specialization ratio in 1958 was 75 percent.

Shipments of aircraft propellers and parts by this industry represented 81 percent of all shipments of these products ( $\$ 109$ million) by all industries. In 1958 the coverage ratio was 95 percent.

## 3729-AIRCRAFT PARTS AND AUXILIARY EQUIPMENT,NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing aircraft parts and auxiliary equipment, n.e.c., including nose cones for guided missiles. Establishments primarily engaged in manufacturing or assembling complete aircraft are classified in industry 3721, aircraft engines and parts in industry 3722, propellers and propeller parts in industry 3723 , aeronautical instruments in industry 3811 , and aeronautical electrical equipment in industry 3694. For a detailed list of products of industry 3729, refer to table 6A, product codes 3729113 to 3729439 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Aircraft Equipment, N.E.C., Industry totaled $\$ 3,169$ million. This amount included shipments of aircraft equipment, n.e.c. (primary products) valued at $\$ 2,254$ million, shipments of other products (secondary products) valued at $\$ 761$ million, and miscellaneous receipts at $\$ 153$ million.

This industry's shipments of aircraft equipment, n.e.c., represented 75 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent. Secondary products shipped by this industry in 1963 included research and development on guided missiles (complete) ( $\$ 108$ million), and aircraft engine parts ( $\$ 18$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into "subindustries" represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 59 percent of the total industry shipments are represented by plants specializing in product class 37291 , Aircraft parts and auxiliary equipment, n.e.c.; and 25 percent in product class 37292 , Guided missile components and subassemblies, n.e.c.

Shipments of aircraft equipment, n.e.c., by this industry represented 59 percent of all shipments of these products ( $\$ 3,792$ million) by all industries. In 1958 the coverage ratio was 63 percent.

table 1. General Statistics: 1963 and Earlier Years

## table 1. General Statistics: 1963 and Earlier Years-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual corrpanies. (NA) Not available. (X) Not
Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual cormpanies. (NA) Not available. (X) Not
Footnotes for Table 1-37B-Continued applicable. n.e.c. Not elsewhere classified.
(S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.
${ }^{1}$ For the period 1954-1963, the adjusted value added figure for the Aircraft Industry has not been adjusted for the change in inventory between the beginning and end of the year, since the figures reported by establishments in this industry are value of work done rather than value of shipments. It does include the value added by resales. For prior years this figure is unad.justed value added.
${ }^{2}$ For industry 3721 , represents value of work done rather than value of shipments.
${ }^{3}$ These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a cormplete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures show in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.
${ }^{4}$ Total cost of materials and total value of shipments are not shown since these figures are not comparable to those of later years.
${ }^{5}$ No comparable figures are available for previous years.
$6_{\text {A revision }}$ in the definition of this industry was introduced in the 1957 Standard Industrial Classification. Accordingly, the data for 19581963 are not comparable with those for earlier years.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not

General statistics for some producing States have been withheld to avoid disclosing figures for individual companies. Such States are shown below wi th the number of establishments in each State and, in parentheses, the number of employees or the employment-size range for that State.
SIC 3721, Aircraft: New England -Massachusetts, $1(20-99)$; Connecticut, 4 (10,000 and over); Middle Atlantic-New York, 7 (37,790); Pennsylvania, 6 (10,000 and over); East North Central-Ohio, 3 (12,071); Michigan, 2 (20-99); Wisconsin, l (20-99); West North Central-Missouri, l (10,000 and over); Kansas, 5 (9,348); South Atlantic-Delaware, l (100-249); North Carolina, l (500-999); Georgia, 2 (10,000 and over); Florida, 7 (1,000-2,499); East South Central-Alabama, 3 (5,000-9,999); West South Central-Oklahoma, 5 (2,500-4,999); Mountain-Wyoming, 2 (100-249); Colorado, 1 (1-19); Pacific-Washington, 7 (61,044); Oregon, 1 (1-19); California, 23 (71, 250); A1aska, l (1-19).
SIC 3722, Aircraft Engines and Parts: New England-Maine, 3 (1,000-2,499); Vermont, 2 (500-999); Massachusetts, 8 (6, 745); Rhode Island, 2 ( $250-499$ ); Connecticut, 36 ( 41,119 ); Middle Atlantic-New York, 17 ( $5,000-9,999$ ); New Jersey, 10 ( 10,000 and over); East North CentralIndiana, 12 (13,882); Michigan, 7 (2,500-4,999); Wisconsin, 2 (200-249); West North Central-Minnesota, 2 (250-499); Iowa, 1 (250-499); Missouri, 3 (1,000-2,499); South Atlantic-Maryland, l (500-999); Virginia, l (500-999); North Carolina, 2 (250-499); Ceorgia, l (20-99); Floride, 5 ( $5,000-9,000$ ); East South Central-Alabama, 1(1,000-2,499); West South Central-Louisiana, 1 (2,500-4,999); Oklahoma, 1 (1-19); Texas, 4 (1,000-2,499); Mountain-Arizona, 3 (2,500-4,999); Utah, 3 (12,072); Pacific-Washington, 2 (20-99).
SIC 3723, Aircraft Propellers and Parts: New England-Connecticut, 2 ( $5,000-9,999$ ); Middle Atlantic-New York, 1 (20-99); New Jersey, 2 (1,0002,499); Pennsylvania, 1 (100-249); East North Central-Ohio, 2 (100-249); Michigan, 1 (250-499); South Atlantic-Florida, l (1-19); MountainColorado, l (1-19); Pacific-California, 3 (20-99).
SIC 3729, Aircraft Equipment, N. E.C.: New England-Maine, 2 (20-99); Vermont, 2 (1,000-2,499); Massachusetts, 17 (2,500-4,999); East North CentralOhio, 56 (10,000 and over); Indiana, 16 ( 6,637 ); Wisconsin, l (20-99); West North Central-Minnesota, 8 (2,500-4, 999); Nebraska, 1 (1-19); Kansas, 35 (19,290); South Atlantic-Delaware, l (250-499); Maryland, 8 (10,000 and over); Virginia, 3 (500-999); West Virginia, l (1-19); North Carolina, 2 (250-499); Georgia, 7 (233); East South Central-Kentucky, 1 (20-99); Tennessee, 3 (2,500-4, 999); Alabama, 2 (100-249); Mississippi, 2 (500-999); West South Central-Arkansas, 1 (20-99); Texas, 36 (2,500-4, 999 ); Mountain-Idaho, 1 (100-249); Colorado, 6 (10, 000 and over); New Mexico, 1 (1-19); Arizona, 18 (1,000-2,499); Nevada, 1 (1-19); Pacific-Washington, 22 (1,000-2,499); Oregon, 2 (500-999).
${ }^{2}$ For industry 3721 , represents value of work done rather than the value of shipments.
${ }^{3}$ This State or region was not shown as a separate line in table 2 in the 1958 report for this industry. A footnote to table 2 in the 1958 report
showed the number of establishments and total erployment (either actual or in size ranges) for such States.

## TABLE 3. Detailed Statistics: 1963

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations. See Introduction for an explanation of terms used.

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.
${ }^{1}$ The proportion of product shipments (both primary and secondary) of the industry represented by primary products.
${ }^{2}$ The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufac-
turing establishments.
${ }^{3}$ For industry 3721, represents value of work done rather than value of shípments.
${ }^{4}$ See table 1, footnote 1.

-Represents zero.
(D) Withheld to avoid disclosure. Data for this item are included in the underscored figures at the left. n.e.c. Not elsewhere classified. ${ }^{1}$ For industry 3721 , represents value of work done rather than value of shipments.

## table 5A. Industry-Product Analysis-Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1963 and 1958

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such
as merchandising or contract work. This product pattern for an industry is shown in columns $A$ through D and the primary product specialization ratio in column E . The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns $F$ through $H$ and shown as a ratio in column $I$.

| Ind. code | Industry and census year | Value of shipments ${ }^{1}$ |  |  |  |  | Value of primary product shipments |  |  |  |

${ }_{1}{ }^{2}$ For industry 3721 , represents value of work done rather than value of shipments.

## TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1963

thousands of dollars except for ranges (shown in parentheses) which are expressed in millions of dollars. The "All industries" column shows the total value of shipments of the primary products of the industry by all manufacturing industries. The next column(s) shows the total value of shipments of the specified industry divided among (a) products classified in the industry (primary products). (b) products classified in other industries (secondary products), and (c) miscellaneous
receipts. The value of shipments of the primary products of the specified industry reported by establishments not classified in that industry is shown under the caption "Other industries." Industries accounting for significant amounts of the primary products listed are shown in separate columns provided that the figures for individual companies are not thereby disclosed.

See footnotes at end of table.

## table 6A. Products and Product Classes-Quantity and Value Shipped by All Manufacturing Establishments: 1963 and 1958-Continued

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind.
${ }^{1}$ Total value of shipments figure for aircraft differs from value of work done. See text for explanation of differences.
${ }^{2}$ Data for value of work done, including modifications, conversions, and overhaul of previously accepted aircraft, and other aeronautical services (including research and development on aircraft), represent receipts, billings, or value of work done.
${ }^{3}$ Statistics on shipments of complete civilian aircraft were collected monthly and published in Current Industrial Reports Series M37G. The figures reported in that survey for 1963 were as follows: quantity, 8,155 units; value, $\$ 685,936$ thousand.
${ }^{4}$ For 1958, data on complete missile or space vehicle engines and/or propulsion units were included with aircraft engines.
${ }^{5}$ Statistics on shipments of aircraft engines for other than United States military customers were collected monthly and published in Current Industrial Reports Series M37G. The total value reported in that survey for 1963 was $\$ 144,254$ thousand.
${ }^{6}$ For 1958, data on missile and space vehicle engine and/or propulsion unit parts or accessories were included with aircraft engine parts and accessories.
${ }^{7}$ For 1958, data on receipts for research and development on complete missile or space vehicle engines and/or propulsion units for United States military customers and all other services on aircraft, missile or space vehicle engines and/or propulsion units for United States military customers were included with receipts for research and development on aircraft engines for United States military customers.
${ }^{8}$ For 1958, data on receipts for research and development on complete missile or space vehicle engines and/or propulsion units for other than United States military customers and all other services on aircraft, missile or space vehicle engines and/or propulsion units for other than United States military customers were included with receipts for research and development on aircraft engines for other than United States military customers. ${ }^{9}$ For 1963, data on research and development on aircraft engines for other than United States military customers are included with all other aeronautical services on aircraft engines for other than United States military customers to avoid disclosing figures of individual companies.
${ }^{10}$ Statistics on complete propellers are also shown on Current Industrial Reports Series M37E, "Aircraft Propellers."
${ }^{11}$ Since much less detail was collected for these products in 1958, "Not specified by kind" was included within the specified products.
${ }^{12}$ Represents receipts or billings.
table 6B. Product Classes-Indexes of Production and Unit Value for Primary Products, Shipped by All Producers: 1963 and 1958

## table 6D. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1963 and 1958

In thousands of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. For each product class, States are
listed only if the value of shipments is more than $\$ 1$ million and the figure does not disclose individual company information. Additional States which had shipments of more than $\$ 1$ million of the individual product classes are listed in footnote 1.

[^274]applicable. (Z) Less than \$1 million reported.
${ }^{1}{ }^{1}$ For the specified product classes shipments of $\$ 1$ million or more were reported for the States listed but the exact figures are withheld to avoid disclosure of individual company figures: 37212, New York, Pennsylvania, Kansas, Georgia, Florida, Oklahoma, and Texas; 37213, Connecticut, New York, Pennsylvania, Maryland, Georgia, Texas, Washington, and California; 37214, Connecticut, Ohio, Indiana, Missouri, Kansas, North Carolina, Georgia, Florida, Alabama, Oklahoma, Texas, Wyoming, Arizona, and Washington; 37216, Connecticut, Pennsylvania, Ohio, Indiana, Missouri, Kansas, Georgia, Alabama, Texas, Arizona, Washington, and California; 37223, Massachusetts, Connecticut, New York, New Jersey, Pennsylvania, Ohio, Indiana, Michigan, Florida, and Califormia; 37224, Maine, Vermont, Massachusetts, New Jersey, Pennsylvania, Illinois, Wisconsin, Iowa, Florida, Arizona, Utah, and Califormia; 37291, Rhode Island, Minnesota, Delaware, Virginia, Georgia, Tennessee, Oklahoma, Idaho, Arizona, Washington, and Oregon; 37293 , Massachusetts, Connecticut, New York, Ohio, and Kansas.

${ }^{2}$ Does not include materials produced and consumed at the same establishment.
${ }^{2}$ Represents estimates published in MC58(1)-7 (Supplement), "Selected Materials Consumed," from data collected in a supplemental survey on Form MA-131, "Consumption of Materials, Parts, Containers and Supplies During 1958." This survey was limited to large establishments in selected chemical, machinery and equipment industries and resulted in estimates which are subject to greater error than are the figures on materials consumption collected as a regular part of the census of manufactures. This material was described as pumps and compressors, including hydraulic motors.

Note: Detail may not add to totals because of independent rounding. Figures for fuels and electric energy for 1962 and horsepower of power equipment as of December 31, 1962 represent estimates derived from a representative sample of manufacturing establishments. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the reports "Fuels and Electric Energy Consumed in Manufacturing Industries in 1962," MC63(1)-7, and "Power Equipment in Manufacturing Industries, as of December 31, 1962," MC63(1)-6.
Standard Notes: - Represents zero.
(D) Withheld to avoid disclosing figures for individual campanies.
(NA) Not available.
(X) Not (Z) Less than 500 horsepower. n.e.c. Not elsewhere classified. applicable.
(S) Withheld because the estimate did not meet publication standards for one or more of the following reasons: The standard error associated with the figure was too high (generally in excess of 25 percent); to avoid disclosing figures of individual companies; or on the basis of a general consistency review.

## table 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1963

This table presents selected statistics for establishments according to the ir degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization-the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization-the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for
the establishment. See introduction for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as a separate class. In addition, data may not be shown for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

| Industry or product class code | Industry or product class by percent of specialization | Estab-lishments (number) | All employees |  | Production workers |  |  | ```Value added by manufacture, adjusted ($1,000)``` | Cost of materials <br> $(\$ 1,000)$ | Value of shipments <br> (\$1,000) | Capital expenditures, new $(\$ 1,000)$ |

Note: Very small establishments were not requested to report their metalworking operations and, in some instances, a few larger establishments failed to report. The significance of this undercoverage is shown in terms of production-worker employment on the last line of the table below:

| Item | Industry |  |  |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 3721 | 3722 | 3723 | 3729 |
| Total number of establishments in the industry | 100 | 232 | 14 | 1,000 |
| Number of establishments which reported one or more of the specified operations Percent of industry production workers in these establishments................. | 65 $90-95$ | 195 $95-100$ | 9 ${ }^{9}$ | 542 $90-95$ |
| Number of establishments which reported "none" of the operations apply.......... Percent of industry production workers in these establishnents.................. | 16 $0-5$ | 18 $0-5$ | - | 32 $0-5$ |
| Percent of industry production workers in establishments which completed the metalworking operations inquiry. | 90-95 | 95-100 | 95-100 | 90-95 |

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. n.e.c. Not elsewhere classified.
${ }^{1}$ These size groups are based on the number of employees engaged in each specific operation. They are not based on total employment in the establishment.

# SHIP AND BOAT BUILDING, RAILROAD AND MISCELLANEOUS TRANSPORTATION EQUIPMENT 

This report shows 1963 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title<br>3731 -Ship Building and Repairing<br>3732-Boat Building and Repairing<br>3741-Locomotives and Parts<br>3742-Railroad and Street Cars<br>3751 -Motorcycles, Bicycles, and Parts<br>3791-Trailer Coaches<br>3799-Transportation Equipment, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4 ) with productstatistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

## 3731-SHIP BUILDING AND REPAIRING

This industry comprises establishments primarily engaged in building and repairing all types of ships, barges, canal boats, and lighters, whether propelled by sail or motor power or towed by other craft. This industry also includes the conversion and reconversion of ships. Establishments primarily engaged in fabricating structural assemblies or components for ships, or subcontractors engaged in ship painting, joinery, carpentry work, electrical wiring installation, etc., are not classified in this industry. For a detailed list of products of industry 3731, refer to table 6A, product codes 3731110 to 3731659 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

The total value of work done and other receipts of the Ship Building and Repairing Industry totaled $\$ 1,680$ million. This amount included receipts from primary activities (ship building and repairing) valued at $\$ 1,508$ million, shipments of products primary to other industries (secondary products) valued at $\$ 118$ million, and miscellaneous receipts at $\$ 54$ million.

The value of ship building and repairing represents value of work done during the year. This provides a more adequate measure of the activity in this industry than value of vessels completed and delivered, primarily because of length of the production cycle, which
may be several years for some vessels. Value of shipments (deliveries) would result in a distortion for establishments working on a vessel all year, but not completing it during the year or, conversely, for establishments completing and delivering a vessel during a year when most of the work was performed in previous years. Respondents were requested to compute the value of work done by including the cost of labor, the cost of purchased materials and parts received during 1963, overhead and profits by one of the following methods: (1) estimating the percentage of completion during 1963, (2) reporting net billings for work done during 1963, or (3) reporting payments received for work done during 1963.

This industry's receipts for ship building and repairing represented 92 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 include fabricated structural iron and steel ( $\$ 36$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8 . Approximately 51 percent of the total value of work done is represented by plants specializing in self-propelled U.S. military ships, and 16 percent in self-propelled nonmilitary ships.

Shipments of ship building and repairing by this industry represented 99 percent of all shipments of these products ( $\$ 1,518$ million) by all industries. In 1958 the coverage ratio was also 99 percent.

## 3732-BOAT BUILDING AND REPAIRING

This industry comprises establishments primarily engaged in building and repairing all types of boats, except rubber boats (industry 3069). Establishments primarily engaged in cleaning and storing boats and in the rental of dock space, and yacht clubs are classified in nonmanufacturing industries. For a detailed list of products of industry 3732, refer to table 6A, product codes 3732111 to 3732421 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Boat Building and Repairing Industry totaled $\$ 360$ million. This amount included shipments of newly constructed boats and receipts for boat repairs (primary products) valued at $\$ 322$ million, shipments of other products (secondary products) valued at $\$ 12$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 27$ million.

This industry's shipments of newly constructed boats and receipts for repair of boats represented 97 percent of its total product shipments. The industry specialization ratio in 1958 was 93 percent. Secondary products shipped by this industry in 1963 include repair of nonmilitary ships ( $\$ 3$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8 . Approximately 33 percent of the total industry shipments are represented by plants specializing in inboard motor boats; and 28 percent in outboard motor boats.

Shipments of newly constructed boats and receipts for repair of boats by this industry represented 95 percent of all shipments of these products ( $\$ 338$ million) by all industries. In 1958 the coverage ratio was also 95 percent. Another industry shipping newly constructed boats and repairing boats was industry 3731, Ship Building and Repairing, over \$2 million.

The coverage ratio for individual product classes varies significantly from that for the 4 -digit industry for the following product classes of industry 3732 , e.g., boat repair, 83 percent, and all other boats, 90 percent.

The production index for the primary products of the industry increased to 185 in 1963 from the 1958 level of 146 . The unit value index for 1963 was 114 compared to 126 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3741-LOCOMOTIVES AND PARTS

This industry comprises establishments primarily engaged in building and rebuilding locomotives (including frames and parts, n.e.c.) of any type or gauge. Railroad shops rebuilding and repairing locomotives or building new locomotives are classified in Major Group 40. For a detailed list of products of industry 3741, refer to table 6A, product codes 3741141 to 3741351 .

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Locomotives and Parts Industry totaled $\$ 438$ million. This amount included shipments of locomotives and parts (primary products) valued at $\$ 342$ million, shipments of other products (secondary products) valued at $\$ 70$ million, and miscellaneous receipts at $\$ 25$ million.

This industry's shipments of locomotives and parts represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was 85 percent. Secondary products shipped by this industry in 1963 include land transportation motors, generators, and control equipment and parts (over $\$ 20$ million), and diesel and semidiesel engines (over $\$ 2$ million).

Shipments of locomotives and parts by this industry represented 90 percent of all shipments of these products ( $\$ 378$ million) by all industries. In 1958 the coverage ratio was 90 percent. Other industries shipping locomotives and parts include industry 3742, Railroad and Street Cars, over $\$ 5$ million; and industry 3323, Steel Foundries, over \$2 million.

The production index for the primary products of the industry decreased to 86 in 1963 from the 1958 level of 89 . The unit value index for 1963 was 119 compared to 109 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3742-RAILROAD AND STREET CARS

This industry comprises establishments primarily engaged in building and rebuilding railroad, street, and rapid transit cars and car equipment for operation on rails for freight and passenger service. This industry also includes establishments primarily engaged in manufacturing trackless trolley busses. Establishments primarily engaged in manufacturing mining cars are classified in industry 3532. Repair shops, owned and operated by railroads or local transit companies, rebuilding or repairing cars, or building new cars for their own account, are classified in Major Groups 40 and 41. For a detailed list of products of industry 3742 , refer to table 6A, product codes 3742111 to 3742351.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Railroad and Street Cars Industry totaled \$927 million. This amount included shipments of railroad and street cars (primary products) valued at $\$ 813$ million, shipments of other products (secondary products) valued at $\$ 83$ million, and miscellaneous receipts (including products bought and resold) at $\$ 30$ million.

This industry's shipments of railroad and street cars represented 91 percent of its total product shipments. The industry specialization ratio in 1958 was 87 percent. Secondary products shipped by this industry in 1963 include fabricated metal products, n.e.c. (over $\$ 5$ million), and other construction machinery and equipment including construction machinery parts, n.e.c. (over $\$ 5$ million).

While the primary products of the industry represent more than one class of product, the establishments tend to group themselves into subindustries represented by each of the different product classes. The extent of this specialization is indicated in table 8. Approximately 64 percent of the total industry shipments are represented by plants specializing in freight train cars, new; and 31 percent in street cars and parts and accessories for railroad and street cars, and rebuilt passenger and freight train cars.

Shipments of railroad and street cars by this industry represented 93 percent of all shipments of these products ( $\$ 871$ million) by all industries. In 1958 the coverage ratio was 90 percent. Other industries shipping railroad and street cars and parts include industry 3323, Steel Foundries, $\$ 17$ million; and industry 3717, Motor Vehicles and Parts, \$7 million.

The production index for the primary products of the industry increased to 125 in 1963 from the 1958 level of 87 . The unit value index for 1963 was 149 compared to 129 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3751-MOTORCYCLES, BICYCLES, AND PARTS

This industry comprises establishments primarily engaged in manufacturing motorcycles, bicycles, and similar equipment and parts. Establishments primarily engaged in assembling motorcycles or bicycles from purchased parts are also included in this industry. Establishments primarily engaged in manufacturing children's vehicles, except bicycles, are classified in industry 3943. For a detailed list of products of industry 3751, refer to table 6A, product codes 3751013 to 3751081 .
The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Motorcycles, Bicycles, and Parts Industry totaled $\$ 193$ million. This amount included shipments of motorcycles, bicycles, and parts (primary products) valued at $\$ 152$ million, shipments of other products (secondary products) valued at $\$ 32$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 9$ million.

This industry's shipments of motorcycles, bicycles, and parts represented 83 percent of its total product shipments. The industry specialization ratio in 1958 was 84 percent. Secondary products shipped by this industry in 1963 include baby carriages and children's vehicles, except bicycles (over $\$ 10$ million), and lawn mowers and parts (over $\$ 2$ million).

Shipments of motorcycles, bicycles, and parts by this industry represented 93 percent of all shipments of these products ( $\$ 163$ million) by all industries. In 1958 the coverage ratio was also 93 percent. Other industries shipping motorcycles, bicycles, and parts include industry 3717, Motor Vehicles and Parts, over $\$ 2$ million; and industry 3943, Children's Vehicles, over $\$ 2$ million.

The production index for the primary products of the industry increased to 226 in 1963 from the 1958 level of 130 . The unit value index for 1963 was 81 compared to 92 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3791-TRAILER COACHES

This industry comprises establishments primarily engaged in manufacturing trailer coaches (mobile dwellings) for attachment to passenger cars. For a detailed list of products of industry 3791 , refer to table 6A, product codes 3791021 to 3791041.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Trailer Coaches Industry totaled $\$ 713$ million. This amount included shipments of trailer coaches, housing types (primary products), valued at $\$ 686$ million, shipments of other products (secondary products) valued at $\$ 15$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 12$ million.

This industry's shipments of trailer coaches, housing types, represented 98 percent of its total product shipments. The industry specialization ratio in 1958 was 99 percent.

Shipments of trailer coaches, housing types, by this industry represented 99 percent of all shipments of these products ( $\$ 690$ million) by all industries. In 1958 the coverage ratio was also 99 percent.

The production index for the primary products of the industry increased to 279 in 1963 from the 1958 level of 195 . The unit value index for 1963 was 110 compared to 105 in 1958. Both indexes were computed on a basis of $1954=100$.

## 3799-TRANSPORTATION EQUIPMENT, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing transportation equipment, n.e.c. Establishments primarily engaged in manufacturing industrial trucks, tractors, trailers, and stackers are classified in industry 3537, and children's vehicles, except bicycles, in industry 3943. For a detailed list of products of industry 3799, refer to table 6A, product codes 3799115 to 3799298.

The code number as well as the definition of this industry was unchanged between 1958 and 1963.

Value of shipments and other receipts of the Transportation Equipment, N.E.C., Industry totaled $\$ 167$ million. This amount included shipments of transportation equipment, n.e.c. (primary products) valued at $\$ 142$ million, shipments of other products (secondary products) valued at $\$ 17$ million, and miscellaneous receipts (mainly products bought and resold) at $\$ 9$ million.
