"It has been a good thing, though, to introduce the fish into Lake George. Lake trout now are of great financial importance to the people along these shores, and if the landlocked chap does well, as he seems to be doing, he will be a great addition."

If other fishermen would submit their views, no doubt the symposium would be mighty interesting. Personally, I believe fish change many of their habits to conform to their surroundings and fishermen must study them to be successful.

JOHN D. WHISH.

Newfoundland Fishing.

ST. JOHNS, N. F., Aug. 8.—*Editor Forest and Stream:* That "the world is a small place after all" is an old saying, the truth of which was impressed on me yesterday, when I received a note from an old member of the FOREST AND STREAM family at present touring the Bavarian Tyrol. C. Du Bois Wagstaff, of New York, the writer of the note, informs me that a friend of his at present with him at Garmisch, Bavaria, received a present of a ten-pound salmon from Scotland. It was a cause of great rejoicing and Mr. Wagstaff, who is an enthusiastic angler, interviewed the chef and inspected the fish. For many years he has been fishing in Newfoundland and the sight of the salmon reminded him of his camp on Harry's Brook. He says:

"You can appreciate with what pleasure I had on looking upon the face of an 'old friend.' Then in the morning mail came FOREST AND STREAM with your article on Newfoundland fishing. I have been looking for something of what the fishermen are doing and what they have done during June and July. How I wish I could have been with all my fishing folks in Newfoundland."

The fishing this season beat the record. Parties who have returned from the rivers report the fish numerous, and the official figures credit some anglers with 68, 50, 48, 43, 30, and hundreds of anglers with catches less than those figures show, but large enough to prove that the fishing all around the island has been exceptionally good.

W. J. CARROLL.

A Giant Tarpon.

POMPANO, Fla., Aug. 10.—*Editor Forest and Stream:* On Tuesday, the 6th inst., some natives captured a tarpon in the surf just north of Hillsboro River Inlet, which I think is the record for size. No one knew of the catch who knew of the importance of preserving it, until after the natives had butchered it. They state, however, that it was eight feet two inches long and must have weighed more than 350 pounds. I also learn from them that on numerous other occasions, tarpon of immense size have been taken at this point, and that the water was fairly alive with them at the time of this catch.

The inlet is open now to a width of about forty yards and to a depth of ten to twelve feet, and there is splendid anchorage just inside in thoroughly protected water. Furthermore, the State canal leading from this inlet to Lake Okechobee will be completed by next July, and this canal is to be the main transportation from the lake to tide water at Deerfield.

These things should at least encourage sportsmen to stop and try out this new tarpon territory. Just off this inlet and between the shore and the Gulf stream, which lies about six or seven miles offshore at this point, is the best bluefish, Spanish mackerel and pompano fishing to be found on the coast. If you would like to have some of the scales of the tarpon above referred to, think I can procure some to send to you from which you could have some idea of the size of the fish.

W. F. McFLOY.

Do Dry-Flies Resemble "Dead Bait?"

NEW YORK CITY, Aug. 21.—*Editor Forest and Stream:* There are probably few of your readers who are not glad when they see the name of Dr. Edward Breck signed to an article in your columns, and who do not read with interest and attention anything that he may write. Fly-fishermen especially will be interested in what he has to say about the dry-fly in the issue of Aug. 17, and will agree with him when he says: "I am also of the opinion that some maker must first come who has the enterprise to tie flies after our own insects before we can pretend to an American dry-fly science."

Science and fun are two different things, though closely interwoven in dry-fly fishing on the other side of the water. The fun, or rather pleasure, of dry-fly fishing we can all have, but I doubt very much if this art can become a real science in America until some angler-entomologist, or a combination of anglers and entomologists, makes a thorough and scientific study of the insects upon which our trout feed, then classifies them, illustrates them accurately in colors and finally has exact imitations made by expert fly-tiers. The ways and means of bringing these things about are all explained by Mr. Halford in his various works, and he has devoted a life time to the study of the subject. Dr. Breck mentions the writer as one of those who have tried to make the art of dry-fly fishing popular in this country. When, somewhat against my will, I began to write upon the subject of the dry-fly, I had two motives: First, as suggested by Dr. Breck to do my little toward making the dry-fly better known and more popular; and secondly, hoping that after it had become more popular enthusiasts would appear who would recognize the necessity of an American fly-fishers' entomology and eventually give it to us. I still believe that this will surely come about, though possibly not in the immediate future.

But is the dry-fly ever presented to a trout as "dead bait"? I quote from Dr. Breck's article: "I believe the wild trout in our waters do not like dead or immovable bait." Immovable? Not as generally used on running water.

Again in his "The Way of the Woods" Dr. Breck says: "In northern waters, and using English flies, I have always found dry-fly fishing a failure compared with the wet, lively fly method, undoubtedly for the already mentioned reason that our brook trout ignores most dead baits; at least on the surface."

Whenever this quotation comes to my mind it is always accompanied by another quotation found in "The Book of the Dry-Fly," by George A. B. Dewar: "The theory—a plausible one—is that the wet or sunk fly is taken by the fish because they suppose it a dead or dying insect. But it may be asked, does a dead or dying insect of the order of, say, the fragile Ephemeridæ, become immersed beneath the water, and so be carried down or across the stream with a series of little jerks? Is there any fly-fisherman and close observer of the life and habits of the water insects who can say that this is, in his experience, a common event in nature? * * * I believe that a drowned and sodden dun is the sort of carrion which a good trout would usually decline entirely." (Italics are the writer's.)

In so far as Mr. Dewar attempts to show that the floating fly is taken by the trout for a

live insect and not a dead one, the writer could not, by any possible stretch of the imagination, disagree with him. Has Dr. Breck seen many Ephemeridæ floating on the surface down stream dead, and at the same time with wings "cocked" or upright in the air? The author, who can speak only for himself and not for others, has never seen such a resemblance to life in an artificial fly as when it lights on the water, dry-fly style, and floats with wings nicely cocked.

The "accuracy contest," inaugurated in your columns a few weeks ago by Ralph Bisbee, has undoubtedly added to the gaiety of summer existence among some of your readers. I strongly suspect that your correspondent, G. A., whose communication appeared in the issue of Aug. 10, is another wag. If not, I would strongly advise him to spend a half hour in a tackle store before indulging in too minute criticism of fly-fishing outfits "in the interest of accuracy."

EMLYN M. GILL.

Newark Bait- and Fly-Casting Club.

EAST NEWARK, N. J., Aug. 17.—Editor Forest and Stream: On Sept. 12 the fifth interstate tournament will be held at Weequahic Park Lake under the auspices of the Newark Bait- and Fly-Casting Club. It is our aim to make this the biggest tournament ever held in the Eastern States, and we extend a hearty invitation to all interested in casting to join us on this occasion. Suitable prizes will be awarded to the successful contestants in all events which will be as follows:

Half-ounce distance bait 9 A. M.; distance fly, unlimited rod, 10 A. M.; accuracy trout fly, 11 A. M.; accuracy half-ounce bait, 1 P. M.; distance trout fly, 3 P. M.; accuracy dry fly, 4 P. M.

All events will be open to amateurs and professionals alike. LOU L. SANDS, Sec'y.

NEWARK, N. J., Aug. 18.—Editor Forest and Stream: On Saturday afternoon, Aug. 17, the following scores were recorded at the club contest, held at the club platforms, Weequahic Lake:

Table with columns: Dry Fly (Acc'y, De-merits, Dist.), 1/4oz. Bait (Acc'y, Longest Cast, Avege.), and names of participants like Mercer, Muldoon, etc.

LOU L. SANDS, Sec'y.

Illinois Casting Club.

CHICAGO, Ill., Aug. 12.—Editor Forest and Stream: Owing to unfavorable weather on Aug. 10, it was impossible to run off the events scheduled for that date. Below are the scores made on the day following. Wind, southwest, about eight miles per hour:

Table with columns: Quarter-ounce accuracy, bait; Re-entry; L. T. distance, fly; and names of participants like Swisher, Huntley, etc.

A. F. SWISHER, Sec'y.

The Anglers' Casting Club of Chicago.

THE scores of the Anglers' Casting Club of Chicago, held on Aug. 4, follow:

Table with columns: Half-ounce bait, accuracy; Re-entry; Accuracy fly; and names of participants like Ames, Burke, Fay, etc.

Scores made on Aug. 11, are as follows:

Table with columns: Quarter-ounce; Acc. Dist. and names of participants like Gray, Kleinfeldt, etc.

The result of our contest on Aug. 25 is as follows:

Table with columns: Half ounce accuracy; Half-ounce distance; and names of participants like G. L. Ames, Geo. G. Chatt, etc.

E. S. GRAY, Acting Secretary.

San Francisco Fly-Casting Club.

THE San Francisco Fly-Casting Club held its medal contest series of 1912 at Stow Lake on Aug. 17 and 18. Wind variable, weather fair. Scores:

Table with columns: Event No. 2, accuracy; Re-entries; Event No. 3, delicacy, per cent.; SATURDAY; Event No. 2, accuracy; Re-entries; Event No. 3, delicacy, per cent.; and names of participants like T. C. Kierulff, James Watt, etc.

Judges, Geo. C. Edwards, James Watt, T. C. Kierulff; Clerk, E. O. Ritter.

SUNDAY.

Table with columns: Event No. 1, distance; Event No. 2, accuracy; Re-entries; Event No. 3, delicacy, per cent.; and names of participants like H. B. Sperry, J. F. Burgin, etc.

Event No. 4, lure casting, per cent.: C. H. Kewell, James Watt, Dr. W. E. Brooks, C. G. Young, H. B. Sperry, A. Sperry.

Re-entries: C. G. Young, Dr. W. E. Brooks, Dr. W. E. Brooks, J. F. Burgin, J. F. Burgin, James Watt.

Event No. 5, lure casting, average feet: C. H. Kewell, J. F. Burgin, Dr. W. E. Brooks, F. J. Cooper, H. B. Sperry, A. Sperry, James Watt.

Re-entries: Dr. W. E. Brooks, C. H. Kewell, J. F. Burgin.

Judges, H. B. Sperry, C. G. Young, F. J. Cooper; Clerk, E. O. Ritter.

Complimentary Comment.

HENDERSONVILLE, N. C., Aug. 24.—Editor Forest and Stream: The letters on the dry-fly that have appeared in FOREST AND STREAM are very interesting to me.

Fly-fishing is an art and all true anglers must read with pleasure anything that contributes to their knowledge of that art. Certainly FOREST AND STREAM is aiding us very greatly in bringing to our attention letters from anglers who know.

The letters on buried cities in Mexico are also of very great interest. Years ago I read with interest Stevens' letters on parts of Central America, and its buried cities, and the immense timber growth over those old ruins. These last copies of FOREST AND STREAM carry me back to when I read Stevens.

ERNEST L. EWBANK.

A New Kind of Turtle.

NEW YORK CITY, Aug. 24.—Editor Forest and Stream: A friend of mine who has a cottage in Massachusetts was recently gazing upon the carcass of a large sea turtle that had been washed upon the shore, and which was on exhibition and viewed by many people on account of its large size. A farmer approached the turtle, and after looking at it, remarked how large it was, and said: "I think this must be one of those mock turtles I hear so much about."

All the fish laws of the United States and Canada, revised to date and now in force, are given in the Game Laws in Brief. See adv.

National Archery Association

Thirty-fourth Annual Meeting, Boston, Aug. 13-16

THE National Archery Association of the United States held its thirty-fourth annual tournament on Aug. 13, 14, 15 and 16 on Soldiers' Field, Boston, Mass.

The weather was hot and clear except for a couple of showers, and the wind was mostly light from the southwest, so that almost ideal conditions prevailed and all considered the meeting was a great success.

The general arrangement of the program was a great relief from former years in that the shorter schedule each day was less exhausting.

One of the noteworthy incidents of the meet was the presence of three of the veterans who shot in the first national tournament in 1879, Dr. Edward B. Weston, of Chicago; W. H. Clark, of Wyoming, Ohio, and the Rev. W. B. D. Gray, of Cheyenne, Wyo. Another noteworthy incident was the showing of the newcomers who had never shot in any tournament before, Miss Mary A. Brownell, of Wellesley College, winning the 40-yard range medal and the wand shoot, Mrs. G. P. Bryant, winning the flight, and Ellis Spear winning the Duff Arrow.

On Tuesday, the first day, the shooting began with thirteen ladies and twenty gentlemen facing the targets.

The ladies shot in the morning a single Columbia round of twenty-four arrows at 50 yards, twenty-four arrows at 40 yards and twenty-four arrows at 30 yards, the champion Mrs. Witwer Taylor leading with a small margin.

In the American round for men, thirty arrows at 60 yards, thirty arrows at 50 yards and thirty arrows at 40 yards, G. P. Bryant led with 90 hits, 618 score.

At noon a luncheon was served to the archers and their friends in the gallery of the stadium overlooking the valley of the Charles. The elevation insured a breeze and the cool concrete shaded and protected so as to make this a delightful innovation.

In the afternoon the second Columbia and second American resulted in no change in the leaders, but Mr. Bryant did not maintain his pace of the morning.

The championships are figured by points as follows: One point for hits at each range, one point for score at each range, two points for greatest total hits and two points for greatest total score. The result was that Mrs. Witwer Taylor won the Columbia or short range championship with 5½ points, Miss J. V. Sullivan 4 points and Miss M. A. Brownell ½ point. The remarkable thing about this will be seen on examining the scores, as it appears that if Miss Sullivan had made one more hit, she would have won the championship with 5 points against Mrs. Taylor's 4½ points.

The American round score of 1,153 breaks the former record made by G. P. Bryant in 1909 of 1,118. Mr. Bryant won the championship with 7¼ points, Robert P. Elmer 2¼ points, H. B. Richardson ¼ point, Homer S. Taylor ¼ point.

Wednesday the first single York was shot by the men and was divided by shooting the 100 yards in the morning and the 80 yards and 60

yards in the afternoon, this being one of the most vital changes in the program and putting the shooting on the same basis as in England, where in the grand national meeting no more than a single York is ever shot in one day.

The ladies shot the first national of forty-eight arrows at 60 yards and twenty-four arrows at 50 yards in the forenoon, and again Mrs. Witwer Taylor, of Chicago, who was also national round champion, steadily drew ahead and won with all of the 8 points.

In the York, seventy-two arrows at 100 yards, forty-eight arrows at 80 yards and twenty-four arrows at 60 yards, the contest was keen between the champion of 1911, Homer S. Taylor, of Chicago; Henry B. Richardson, of Boston, several time champion and present record holder; Dr. Robert P. Elmer, of Wayne, Pa., 1911 short range champion; W. H. Wills, of New York, and G. P. Bryant, of Boston. The intense heat considerably affected the cast of the bows and was also punishing on the archers, so that some who had not had opportunity to get hardened were a good deal handicapped.

Thursday morning the ladies shot the team round of ninety-six arrows at 50 yards and the men the 100 yards of the second York. A lively thunder storm and squall drove all to cover before the rounds were completed, and so luncheon was eaten and the sun again shining, the afternoon program was started slightly ahead, and no inconvenience or disarrangement suffered.

The Boston ladies' team won against Chicago, taking the silver cup given last year by C. D. Peacock, Inc., of Chicago.

Three of the Boston ladies were shooting in their first tournament.

The ladies' handicap Columbia could not be completed, and a portion went over until Friday.

Thursday afternoon also saw the completion of the York round and the determination of the championship, George Phillip Bryant gaining 9 points, and Henry B. Richardson getting 1 point for hits at 80 yards.

Mr. Bryant's score of 230 hits, 1,094 score, stands next to the American record of Mr. Richardson made in 1,910 of 231 hits 1,111 score, and is third in rank of championship meeting, scores being beaten as above by Mr. Richardson in 1910 and in 1857 by the late Horace A. Ford, of England, with the world record score of 245 hits, 1,251 score.

Friday was slightly cooler and the ladies completed their handicap Columbia round, Miss Florence M. Patrick winning with a score of 424.

Gentleman's team shoot for the Pearsall bugle was won by the Boston team with a score of 324 hits, 1,618, against a score of 307 hits, 1,419, by the Chicago team, G. P. Bryant getting the Potomac medal for the highest individual score of 92 hits, 556.

After luncheon the business meeting of the association was held in the balcony of the stadium and resulted in the election of officers for the year as follows: President, Burton Payne Gray, Boston, Mass.; First Vice-President, Cyrus E. Dallin, Arlington Heights, Mass.;

Second Vice-President, Wallace Bryant, Boston, Mass.; Third Vice-President, Dr. O. L. Hertig, Pittsburgh, Pa.; Secretary-Treasurer, Ellis Spear, Jr., Boston, Mass.; Executive Committee, Dr. E. B. Weston, Chicago, Ill.; Dr. R. P. Elmer, Wayne, Pa.; H. B. Richardson, Boston, Mass.; W. H. Wills, New York city.

It was voted unanimously to hold the thirty-fifth annual meeting in Boston. Votes of thanks were passed to the Harvard Corporation and Mr. William F. Garcelon, director of athletics, for the use of the field and buildings and the privileges so kindly granted.

The flight shooting immediately after the meeting adjourned resulted in Mrs. G. P. Bryant, winning with 215 1/3 yards. This was within four yards of the ladies' record and was remarkable as being the first arrow ever shot by Mrs. Bryant for distance. Miss Mary A. Brownell was second with 212 yards.

C. P. Bryant won the men's flight with 229 2/3 yards. Dr. Robert P. Elmer was second with 229 yards.

Wand shooting for ladies for the Jessop bow was won by Miss Mary A. Brownell. This contest consisted of shooting at a peeled stick one inch in diameter and four feet high, stuck in the ground at thirty yards' distance. Mrs. Frenz also hit the wand.

Ladies' handicap national for a teak wood arrow box, presented by E. W. Frenz, resulted in a victory for Mrs. G. P. Bryant with a score of 310.

The gentlemen's handicap American for a painting of "Robin Hood," painted and presented by Vesper L. George, was won by Wallace Bryant with a score of 672.

The A. G. Spalding medal for most golds (bullseyes) at the National Round was won by Miss Florence M. Patrick, of Wellesley College, with 11 golds.

The A. G. Spalding medal for most golds at the York round was won by G. P. Bryant with 22 golds.

The range medals, champions barred and prior range winners barred, resulted as follows:

Ladies.		
60yds. Miss F. M. Patrick.....	57	263
50yds. Miss J. V. Sullivan.....	42	226
40yds. Miss M. A. Brownell.....	46	242
30yds. Mrs. E. W. Frenz.....	45	229
Men.		
100yds. W. H. Wills.....	81	333
80yds. H. B. Richardson.....	80	354
60yds. R. P. Elmer.....	43	227
50yds. H. S. Taylor.....	57	333
46yds. H. L. Walker.....	57	345

The Christian Science Monitor Silver Shield for most hits in combined double Columbia and National rounds, was won by Mrs. Witwer Taylor with 243 hits. This trophy is to be shot for four years more, and the highest score at any year's meeting is to win it permanently.

Havens' special prizes on American round for archers not shooting the York, were won by Dr. Edward B. Weston, of Chicago, and H. I. Cole, of New Hampshire, the only archers so qualifying.

Havens' specials for the three leading total scores among the ladies were won by Mrs. Witwer Taylor, Miss J. V. Sullivan and Miss Mary A. Brownell.

The Chicago Archery Club silver cup, shot for for the first time, and to go to the man making most hits at the combined double American, double York and team rounds, was won by

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

GAME FARMING.

GAME farming is a comparatively new occupation in the United States. It should be remembered, however, that until a short time ago scientific forestry was practically unknown. Both are destined to play a large part in our economic life, and the former is especially important in its bearing on the cost of living.

The energies of those of our citizens who take an interest in wild things have mostly been expended in exterminating them. In this they have been so successful that during the last twenty years many States have found themselves practically barren of the wild life that once furnished food and a means of healthful recreation to their inhabitants. Obviously something had to be done to remedy this state of affairs. Sportsmen were paying out good money every year for hunting licenses, and it seemed incumbent on the game commissioners to furnish them with something to hunt. Otherwise the office of game commissioner would soon have become a superfluous one.

Accordingly they took a leaf out of Europe's book of experience and started in to raise game. As pheasants had been successfully propagated in the old country for centuries, and had already gained a foothold in Washington and Oregon, they not unnaturally turned to these birds to lead them out of their difficulties. They wanted results, and they had to have them quickly. There was no time for experimenting with our native birds, which might, or might not, thrive in confinement.

The different State farms have had good success with pheasants. In some parts of the country there is now very fair pheasant shooting, but people began to ask why so much money was being expended on foreign birds when we have in our native quail, ruffed grouse and wild turkeys some of the best game birds in the world.

In response to this query, scattered attempts were made at rearing indigenous species, but from the outset they have been beset by serious difficulties. That as yet little understood malady, the quail disease, has killed hundreds of birds hatched in captivity. Ruffed grouse and turkeys have also proved delicate when removed from their natural environment. However, a few people have been notably successful in raising these birds. They have realized that the problem is one which must be approached in the scientific spirit and studied carefully. They remembered that the gamekeepers of Europe belong to a race of gamekeepers, and that the secrets of success in rearing European game birds have been handed down from father to son for hundreds of years. They were not dismayed then because they failed at the beginning, and each year sees more people attacking the problem, a solution of which will make it possible to restock the suitable land, which can be found in every State of the Union to-day, with the birds which were once so plentiful.

FUR SEALS PROTECTED.

SOME years ago Ralph D. Paine, a prominent author, living in Massachusetts, wrote the writer of this for advice as to where he could buy a donkey for his "kids." He said, among other things: "There are no donkeys in Massachusetts; we send them *all* to the Legislature."

Mr. Paine perhaps exaggerated when he said "all," but the handling of game and fish legislation at Washington leads to the conclusion that most States send some donkeys to Congress. Even when useful game legislation is put through it is done by "compromise," as attested in the following news item:

"By a compromise in the Senate and House Committee conferring on the fur seal convention, a close season of five years has been declared. To the committee's agreement Congress has assented. The treaty provides for the suspension, if necessary, to preserve the herd."

It took much labor and explanation on the part of Henry W. Elliott, a well known authority on the fur seal, to convince legislators that a close season is necessary to preserve the herd of which "yearlings," "small pups" and "extra small pups" have become the Government's stock in trade in a herd that once numbered millions of adults.

EXPENSIVE TROPHIES.

THE danger of having too valuable trophies in yacht races was shown in the contention over the Wrigley trophy for speed boats at the recent Chicago carnival. The trophy is said to be worth many thousand dollars, in addition to which a cash prize of \$1,500 was a further inducement. The race was between Baby Reliance II. and Disturber III. The regatta committee awarded the prize and trophy to Baby Reliance II., whereupon her competitor lived up to her name and created a disturbance in the form of an injunction, restraining the yacht committee from awarding the race to Baby Reliance II. Too much prize and too little sportsmanship is the result of Mr. Wrigley's misguided effort to advance speed boat racing. Just wherein lies the fault, and to whom the cup rightfully belonged, has no part in our argument. Every regatta

brings a protest or disqualification, but they generally are amicably settled because the average trophy has no great intrinsic value, and the loser always has a chance to try again against the victor. In this case, however, the inducement was so large as to cause sportsmanship to give way to hard feeling. There should be a limited value placed on cups offered. It is not the amount of silver or gold in the trophy that brings competition from true sportsmen. They will make the same effort for a fifty dollar cup as for a trophy worth \$5,000, for in each case they will go in to win, and the losers will give in gracefully, with an eye for the next opportunity to beat the fellow who beat them. Let us eliminate all cash prizes and offer substantial but not expensive cups and keep the sport of yacht racing the wholesome thing it always has been.

WILD DUCK DISEASE.

DR. JOHN S. BUCKLEY, of the pathological division of the Bureau of Animal Industry of the Department of Agriculture, has been directed to go to Salt Lake City, Utah, to investigate a mysterious disease in the flock of wild ducks which breed in the marshes surrounding Great Salt Lake. Dr. Buckley, who is in Nebraska, will proceed at once to Utah and begin an investigation of the malady. The attention of the division of pathology was called to the epidemic among the wild ducks by the American Game Protective Association, which has headquarters in New York city. The association called on the Biological Survey for aid in combatting the disease, the Survey enlisting the aid and cooperation of the division of pathology. Dr. A. K. Fisher, of the Biological Survey, estimates that more than two million of wild ducks died in the marshes surrounding the lake during the past year. The disease that almost exterminated the ducks has been diagnosed as coccidiosis, a disease common among domestic fowls of all kinds. An outbreak of the same fatal disease occurred among certain sorts of wild birds in the District of Columbia during last summer, blackbirds or purple grackles apparently being the worst affected.

It was decided by the Biological Survey that the birds contracted the disease by feeding in poultry yards where hens were suffering with coccidiosis. This, however, cannot be assigned as the cause of the epidemic among the wild ducks of Salt Lake. It is reported that the disease is making even greater havoc among the wild ducks this year than in former years, and fears are felt that the breeding flocks may become exterminated if some method of ending the epidemic is not speedily found.

MORE than 50,000 exhibits from the Copper Mine River section and adjacent islands in the arctic ocean will be added to the American Museum of Natural History this winter as the fruit of the Stefansen expedition, now in the North. Mr. Stefansen, who is at Point Barrow, Alaska, telegraphs this week a report of the remarkable success of his quest for natural history specimens which are being packed for shipment via San Francisco where they are expected to arrive early in November.

THURSDAY, AUG. 22.

Atlantic Y. C. Race Week.

AUG. 20 opened the race week at the popular yacht club on the lower bay. Great interest was manifested alike by skipper and piazza squad. The week offers a considerable and varied program of social events and entertainment such as have previously gained an enviable reputation for Commodore Blackton and his committee, Carlos de Zafra, Chairman, Alvan Nickerson and J. Lewis Luckenbach.

Interest to-day centered principally among the larger boats. Joyant and Windward, Class P racers, made up the first division. Windward was the first to turn the mark, closely followed by Joyant. Joyant cut down the lead of Windward. She could not pass her and lost by 1m. 11s. Okee, having no class competitor, raced against two of the new Long Island Sound schooners. Okee was the first home. The Q division had eight entries to race for the \$2,500 Thompson cup. Grayjacket had no great difficulty in scoring the greatest number of points on the leg. On corrected time the Long Island Sound handicap class was taken by Mist, and Blue Hill scored in a similar manner on the Gravesend Bay handicap prize.

Virginia won in Class R and Jade led home the Jewel Class boats. Dodo was the first of the Bayside Birds to finish, and Cyric scored in the S class. The last three divisions are racing for the Lipton cup, and the greatest number of points was scored by Dodo. The Star Class was won by Little Dipper, and Mouse scored its usual victory in the X Class. The scores:

Sloops, Class P—Start, 1:15—Course, 11½ Miles.

	Finish.	Elapsed.
Windward, R. A. Monks.....	3 43 06	2 28 06
Joyant, W. H. Childs.....	3 44 17	2 29 17

N. Y. Y. C. 30-footers—Start, 1:25—Course, 11½ Miles.

Okee, J. A. Mahlstedt.....	3 52 42	2 27 42
----------------------------	---------	---------

Schoonerettes—Start, 1:25—Course, 11½ Miles.

Moire, C. Cowl.....	4 00 41	2 35 41
Alicia, W. M. Baldwin.....	4 01 54	2 36 54

Skylark, M. A. Howard.....	3 54 59	1 59 59

WEDNESDAY, AUG. 21.

Long Island sailors took the majority of cups on the second day of the regatta. The wind was very light. A south-southwest breeze prevailed during most of the day, ending in a thunder squall. As on the opening day only one New York Y. C. thirty showed up, while several other classes were light. The Windward took her second race. Other winners in their classes were: Okee, Alicia, Grayjacket, Alert, Little Dipper, Mouse, Hamburg, Joy, Jade, Blue Bill, M. and F. II. and Curlew. The summary:

Sloops, Class P—Start, 1:15—Course, 11½ Miles.

	Finish.	Elapsed.
Windward, R. A. Monks.....	3 41 57	2 26 57
Joyant, W. H. Childs.....	3 45 10	2 30 10

N. Y. Y. C. Thirties—Start, 1:25—Course, 11½ Miles.

Okee, J. H. Mahlstedt.....	4 04 16	2 39 16
----------------------------	---------	---------

L. I. Sound Schooners—Start, 1:25—Course, 11½ Miles.

Alicia, W. M. Baldwin.....	4 15 23	2 50 23
Moire, C. Cowl.....	4 17 53	2 52 53

Special Class, Schooners and Sloops—Start, 1:25—Course, 11½ Miles.

Okee, J. H. Mahlstedt.....	4 04 16	2 39 16
Alicia, W. M. Baldwin.....	4 15 23	2 50 23
Moire, C. Cowl.....	4 17 53	2 52 53

Boats racing subject to measurement.

Sloops, Class Q—Start, 1:30—Course, 11½ Miles.

Cyric, Dr. C. L. Atkinson.....	5 16 09	3 31 09
Catseye, J. F. Adams.....	5 24 00	3 39 00
Dodo, A. C. Andrews.....	Did not finish.	

The third day brought the wind-up on serial prize events. Grayjacket, F. C. Noble's wonderful little sloop, won the Thompson cup, Commodore Luckenbach's Suelew being second.

For the Lipton cup there is a slight mix-up. The Bayside Birds may not be eligible, because of their rating. John R. Brophy is to measure the boats. If they are eligible, the cup has been won by Camp's M. and F. II., but if they are ruled out because they exceed the limitations, Dr. C. L. Atkinson takes a second leg with Cyric, which won to-day's race handily with M. and F. II. second, and by finishing first Cyric secures a leg on the Marine and Field cup.

Little Dipper lost to Star Faraway in the Star class, but wins the Vice-Commodore Taylor cup for having scored most points in the series. The summary:

Sloops, Class F—Start, 1:20—Course, 11½ Miles.

	Finish.	Elapsed.
Joyant, W. H. Childs.....	3 20 47	2 00 47
Windward, R. A. Monks.....	3 23 28	2 03 28

N. Y. Y. C. 30-footers—Start, 1:25—Course, 11½ Miles.

Mouse, R. A. Ding		

Bayside Birds—Curlew, 9; Loon and Dodo, 8 each; Skylark, 5.
 Vice-Commodore Taylor's cup for Star Class—Little Dipper, 20; Star Faraway, 16; Gemini, 14; Twinkle, 11; Snake, 9; Mercury, 6; Cynosure, 5.
 Class X—Mouse, 14; Merry Widow, 13; Skylark, 8; Slow Poke, 5; Suffragette, 2.
 Lipton cup—M. & F. II., 19; Jade and Cyric, 18 each; Dodo, 14; Curlew, 13; Loon, 11; Catseye, 10; Skylark, 7.

FRIDAY, AUG. 23.

To-day was one to warm the cockles of the racing sailors' heart. A piping wind rattled everything unbattered and kept taut to the breaking point all windward stays. The star event of the day was the race for the Childs trophy, which was won by Grayjacket in Class Q after a tight race with the Camp flyer, M. and F. II., Windward from Larchmont, the defender, finishing last of the six entrants. The Sea and Sound trophy raced for by three Bayside birds and three Bensonhurst dories was won by a bird, Skylark. There was too much weather for the motor speed boats, so they did not race. The day ended, as days should, at 11:59 P. M. after an old-time minstrel show, much appreciated. The summary:

Sea and Sound Race—Start, 2:30—Course, eight Miles.
 Elapsed. Corrected.

Skylark, M. A. Howard.....	1 23 50	1 15 50
Mouse, R. A. Dingman.....	1 26 35	1 18 35
Merry Widow, Bailey and Bailey.....	1 28 49	1 20 49
Curlew, C. L. Willard.....	1 24 02	1 24 02
Loon, A. W. Knapp.....	1 25 59	1 25 59
Dodo, A. C. Andrews.....	1 26 02	1 26 02

Childs Perpetual Challenge Trophy Start, 1:55—Course, 15 Miles.

Joyant, W. H. Childs.....	3 46 59	1 51 59
Windward, R. A. Monks.....	3 47 21	1 52 21
Grayjacket, F. C. Noble.....	3 53 08	1 58 08
Alice, G. Davis.....	3 36 01	2 01 01
M. & F. II., Camp and Marchant ...	4 16 55	2 21 55
Okeo, J. H. Mahlstedt.....	Disabled.	

Corrected times—Grayjacket, 1.47.51; M. & F. II., 1.50.12; Alice, 1.50.44; Joyant, 1.51.59; Windward, 1.52.21.

SATURDAY, AUG. 24.

Edith II., owned by A. C. Smith, won the Atlantic trophy, emblematic of the motor boat championship of Gravesend Bay. Other winners on Saturday were:

Displacement Boats Under 32ft.—Start, 10:00—15 Miles.
 Finish. Elapsed.

Gunfire, Jr., W. J. Brainard.....	10 36 11	0 36 11
Edith II., A. C. Smith.....	10 36 28	0 36 28
Empire, L. J. Luckenbach.....	11 20 58	1 20 58
Gray Hare, A. Haas.....	11 27 17	1 27 17
Vita, Mrs. Paula Blackton.....	Disabled.	

Displacement Boats More than 32ft.—Start, 10:00—15 Miles.
 Esolaine II., John H. Flagler.....11 41 03 0 41 03

Hydroplanes—Start, 11:00—15 Miles.

Gunfire, Jr., W. J. Brainard.....	11 33 38	0 33 38
Edith II., A. C. Smith.....	11 36 41	0 36 41
Muir Maid, P. A. Proal.....	11 38 18	0 38 18
Bug, A. E. Smith.....	Disabled.	

Free-for-all—Start, 12:00—30 Miles.

Gunfire, Jr., W. J. Brainard.....	1 09 00	1 09 00
Bug, A. E. Smith.....	Disabled.	
Edith II., A. E. Smith.....	Disabled.	
Muir Maid, P. A. Proal.....	Disabled.	

Corrected times on Displacement Class under 32ft.: Edith II., 0.36.07; Gunfire, Jr., 0.36.11; Gray Hare, 1.01.58; Empire, 1.02.08.

SUNDAY, AUG. 25.

The best race week thus far credited in the annals of the Atlantic Y. C. is due greatly to Commodore J. Stewart Blackton, which ended to-day with a club run to Prince's Bay for the trophies offered by Commodore G. R. Le Sauvage, Bensonhurst Y. C.; Dr. C. L. Atkinson, Rear Commodore McIntosh, Crescent Athletic Club; Captain Hendon Chubb, Atlantic Y. C.; Captain Sever, Marine and Field Club, and the Atlantic Y. C. The start was made from Prince's Bay at 4:20 o'clock in the afternoon.

Spider was the first of the Q class to finish, but was disqualified for fouling Alice. Cyric had a sail-over in the S division, and Mouse won a similar prize in the X class. On corrected time, the Bensonhurst handicap class was won by La Cubana. Gunda took the second division of the regular Gravesend Bay handicap class. The summary:

Sloops, Class Q—Start, 4:25—Course, 10 Miles.

Suelew, E. F. Luckenbach.....	6 04 27	1 39 27
Alice, G. Davis.....	6 03 48	1 39 58
Spider, Hendon Chubb.....	6 04 20	Disq.

Sloops, Class S—Start, 4:20—Course, 10 Miles.

Cyric, Dr. C. L. Atkinson.....	6 17 00	1 57 00
--------------------------------	---------	---------

Sloops, Class X—Start, 4:20—Course, 10 Miles.

Mouse, R. E. Dingman.....	6 13 20	1 53 20
---------------------------	---------	---------

Bensonhurst Handicap Class—Start, 4:20—Course, 10 Miles.

Dixie, R. Rummell.....	8 01 52	1 41 52
------------------------	---------	---------

Joy, Le Sauvage and Geer.....	6 01 59	1 41 59
La Cubana, J. H. Ives.....	6 06 14	1 46 14
Mouse, R. E. Dingman.....	6 13 20	1 53 20
Cyric, Dr. C. L. Atkinson.....	6 17 00	1 57 00
Wahkan II., Robbins and Bassler ...	6 18 21	1 58 21
Corrected time—La Cubana, 1.37.04; Jay, 1.37.55; Mouse, 1.38.03; Wahkan II., 1.41.02; Dixie, 1.41.52; Cyric, 1.43.46.		

Handicap Class, 2d Div.—Start, 4:20—Course, 10 Miles.

Gunda, W. H. Hall.....	6 14 43	1 54 43
Loafer, H. M. Bullock.....	6 18 23	1 53 23
M. & F., C. M. Camp.....	6 27 17	2 03 17

Corrected time—Gunda, 1.54.09; Loafer, 1.57.14; M. & F., 2.03.17.

Gloucester Y. C.

GLOUCESTER, Mass., Aug. 24.—In the second class Osprey got the best of the start, but on going out of the harbor on a beat to the breakwater, Elizabeth overtook and passed her. On the second leg to windward Osprey rounded the second or westerly mark three minutes ahead and increased this steadily on the run home. In the third class Weasel got the advantage of the start, with Amoral and Sumaki following closely. At the southeast mark Weasel led, with Sumaki a close companion, and so on until the run home, when she was overtaken at the Barrel Buoy in the harbor by Sumaki. Arrow got the best start in the 18-foot class, Jane, Tid, Petrel and Privateer following in order. Privateer passed the breakwater in the lead, with Tid a half minute behind. The second leg was a beat to the western buoy. Petrel, Jane and Tid stood offshore to starboard, while Privateer and Arrow stood inshore on the port tack. At this juncture the wind shifted to the west, giving the offshore boats a big lift, Petrel being the best placed. She more than held her own on the run in and finished with a good margin, Jane slipping into second place. Tid protested Jane for alleged fouling near Tenpound Island. In the 15-foot class Oleta led the procession. The summary:

First Class.

Onda, John Greenough.....	1 25 00	1 27 00
Neread, C. S. Lunt.....	1 37 22	1 34 21

Second Class.

Osprey, C. R. Hanson.....	1 47 35	1 46 27
Elizabeth, W. A. Rowe.....	1 56 00	1 56 00

Third Class.

Sumaki, W. K. Harcourt.....	1 58 40	1 58 40
Weasel, E. W. Flyle.....	1 58 50	1 58 50
Amoral, Paul Week.....	2 03 00	1 59 05

18-Footers.

Petrel, R. J. Clelland.....	1 53 30	1 53 30
Jane, T. E. Fassett.....	1 56 00	1 56 00
Tid II., A. G. Leonard.....	1 57 40	1 57 40
Arrow, S. E. Raymond.....	2 09 45	2 09 45
Privateer II., F. W. Pollard.....	Did not finish.	

15-Footers.

Oleta, Jack Raymond.....	1 45 35	1 45 35
Meane, F. G. Hall.....	2 04 57	2 04 57
Lew Lom, Nai Choate.....	2 05 04	2 05 04

Jamaica Bay Y. C.

THE weekly regatta here on Aug. 17 brought out a goodly entry list. The winners were: Cabin class, Elvira; open cat, Siren; open cats, Class D, Joe; open power, Class F, Bill Morrison; open power, Class G, Thistle; semi-speed, So Long.

Cabin Catboats—Start, 11:35—10 Miles.
 Elapsed. Corrected.

Elvira, J. A. Anderson, Jr.....	1 55 00	1 55 00
Virginia, R. Rudolph.....	2 00 00	1 53 33

Open Catboats—Start, 11:40—10 Miles.

Siren, C. Merritt.....	1 44 50	1 42 41
Selfish, W. Smith.....	1 45 15	1 45 15

Open Catboats—Class D—Start, 11:40—10 Miles.

Joe, G. Lafonde.....	1 56 30	1 48 25
Girlie, E. Datzler.....	1 56 00	1 50 24
Alert, E. Esqurol.....	1 55 00	1 55 00

Open Power Boats—Class F—Start, 1:50—16 Miles.

Bill Morrison, H. Hamm.....	1 21 30	1 21 30
Margaret F., C. Faulkner.....	1 28 00	1 26 15
Smarty, L. Golly.....	1 27 45	1 26 43
Ella & Elsie, C. McDonald.....	Did not finish.

Beverly Y. C.

BUZZARDS BAY, Aug. 24.—A strong north-west wind, shifting to west and to southwest, gave the Beverly Y. C. plenty of sport to-day. In the 21-foot class, Skate scored her fifth win of the year. Commodore Eustis' boat beat Saracen, her nearest competitor, by over 3½m. D. L. Whittemore's Foraminifer, the 21-foot class leader, broke her gaff and finished third. Phantom protested Foraminifer for fouling at one of the club buoys, and Saracen protested the Whittemore boat, claiming that her sails were over size. A mixup transpired in the Crane and Herreshoff classes. Course 19, which was assigned to these two classes, had to be changed because of the shifting of buoys by the Cape Cod Canal Company. Before the race notices were posted in the club house, calling attention to the changes made necessary by the work of the canal company, and Judge David Rice also announced them from the judges' stand.

The Crane boats and two of the Herreshoff 15-footers went wrong, however. As all of the Crane boats made the same mistake, the race in that class was allowed to stand, and Lestris, owned by Miss Priscilla Crane, won again. This was the most evenly contested race of the day, there being only about two minutes difference in the time of the first and last boat in the class. The two boats first home in the 15-foot class were Uarda and Tinker, which were right behind the Crane boats. It developed that these two had followed the Crane class over the wrong course, while the rest of the Herreshoffs had gone where the judges had sent them. As a result both Uarda and Tinker were disqualified and the race was given to Pronto, with Endeavor second and Vim third. The summary:

21-Foot Class.

*Sailed wrong course.

Lynn Y. C.

LYNN, Mass., Aug. 24.—The annual open regatta of the Lynn Y. C. drew a big entry list and proved eminently successful. There was a breeze of fifteen miles an hour from west-southwest. In the Class P 31-raters for the Lipton cup of Massachusetts Bay, Amoret, owned by Commodore Wheelock, of the Corinthian Y. C., got a better start, but Italia, George Lee, owner, now leading the class in percentage, was close on her stern, with Vernon F. West's Sayonara overlapping. As the boats came to the line, there was not a length difference between the first and last boat. Amoret crossed the line first and Italia and Sayonara crossing exactly together, so far as the judges could see. The summary:

Class P, 31-Raters.

	Elapsed.
Amoret, H. S. Wheelock	1 40 55
*Italia, George Lee	1 40 56
*Sayonara, V. F. West	1 40 56

W. G. BEECROFT.

Rochester Gun Club.

ROCHESTER, N. Y., Aug. 20.—For a first-timer the tournament held here to-day was remarkably successful. We had a good attendance, with many prominent shooters among those present. R. C. Kershner took high gun honors with 105 out of 115. There were three ties for place. A. C. Skutt, Jay D. Green and J. De Bee, each cracking 104. Mrs. Belknap took part and made 68 out of 115. Sim Glover and Harry Stevens each got 110 out of 115. The officers of the club who so successfully handled the shoot are: R. C. Kershner, President; Thos. F. Adkin, Vice-President; M. E. Wile, Secretary and Treasurer; Dr. J. L. Weller, Field Captain; Harry F. Gibson, Field Secretary. Scores:

Canandaigua Sportsmen's Association.

SYRACUSE, N. Y., Aug. 27.—The usual old guard was on hand to-day to carry out the scheduled shoot of the Canandaigua Sportsmen's Club. Kibbe was high gun on actual targets broken, and Stoddard second. Stoddard, Kibbe and Van Wormer were tied with perfect scores, including their handicaps, and shot off at 10 targets, resulting in Stoddard 9, silver spoon; Kibbe 8, cut-glass dish, and Van Wormer 7, Nyoil. Stoddard also won the Stevens gold watch fob trophy with 177 out of 200; Van Wormer scored 176.

Mason defended his championship successfully against Kibbe, 44 to 39. Two more shooting days, Sept. 6 and 20, will finish the season, comprising 600 targets. The first prize, a china vase, is conceded to Stoddard, who maintains an 80 per cent. pace, but the competition for the four other china prizes is close. Mason stands 73 per cent., Soule 69, Kibbe 68, and Eiseline 65.

The scores made yesterday follow:

	H. T.		H. T.
Stoddard..... 11	50	Eiseline..... 0	37
Kibbe..... 10	50	Stoddard..... 0	32
Van Wormer..... 15	50	Eiseline..... 0	14
Mason..... 11	47	Van Wormer..... 0	13
Eiseline..... 13	41		

Norfolk-Portsmouth Gun Club

THE following scores were made at our regular weekly shoot on Aug. 15. The attendance was small owing to a number of the members being out of town. Gallagher and Davis tied for first place with 45 out of 50 in the club shoot of 50 targets per man. Dr. Byrd made the best score with 87 out of 100:

	Shot at, Broke		Shot at, Broke
Dr Byrd..... 100	87	Talbot..... 100	73
Davis..... 100	83	Edmonds..... 50	41
Borrowdale..... 100	82	Gallagher..... 50	45
Capt Thompson..... 75	62		

PORTSMOUTH, Va., Aug. 23.—There was an awfully strong wind blowing yesterday afternoon, and the targets did some queer stunts. Good scores were at a premium. Dr. Corbell was high man in the club shoot with 46 out of 50, which was the best of the afternoon. The scores: Dr. Corbell 46, Dr. Byrd 42, Richardson 42, Talbot 41, Gallagher 41, Davis 39, Borrowdale 38, Edmonds 36, Winchester 35, Thompson 32, Wiggins 31.

W. T. E., Sec'y.

Chicago Interurban League.

CHICAGO, Ill., Aug. 19.—The fifth shoot of the Chicago Interurban League of Gun Clubs took place on the grounds of the South Chicago Gun Club, Aug. 18. The day being very sultry cut the attendance down, without a doubt, as it was fully expected there would be one hundred shooters in attendance; but then seventy-nine shooters is not so bad—that has been about the average attendance at the league shoots.

The fight for first place promised to be interesting, and no one present was disappointed. The Chicago Gun Club and Long Lake Club were tied with 24 points each, and the finish of this shoot found the two clubs tied with 232 each. On the shoot-off Chicago got 115 and Long Lake 112, giving Chicago first place for the day. South Chicago landed third place with 230, only 2 targets behind. The National scored 227, South Shore 217, Hammond 208, Arlington Heights 205.

The high individual score was made by C. E. Shaw, E. Silver, G. Hausler, Dr. Carson, C. Hoix, each breaking 48.

The shoot was well run off, the South Chicago Club having all arrangements in perfect running order.

The standing of the league to date is as follows:

	Points.		Points.
Chicago..... 31		South Shore..... 15	
Long Lake..... 30		Hammond..... 11	
National..... 24		Arlington Heights..... 4	
South Chicago..... 24			

The next league shoot will be held on the grounds of the Long Lake Gun Club, and the date has been changed from the scheduled date of Sept. 15 to Sept. 29. Full announcement will be made later. Scores follow:

North Side Gun Club.

MILWAUKEE, Wis., Aug. 19.—In spite of the threatening weather, quite a number of the boys turned out for the monthly handicap tournament at the North Side Gun Club. The schedule called for 100 targets, but before running off half of the events a continued heavy rain set in, making it impossible to complete the balance of the schedule.

From Sept. 1 until Dec. 1 the club will shut down, so as to give the boys ample opportunity to take advantage of the open season for game. Chas. Groffy and Otto Imse tied for high honors in the tournament, both breaking 40 out of a possible 50. Frank Heiden was a close second with 39. Ernst Reichel tied A. Piepenhagen with 38 out of 50, the former trying out a new \$150 trap gun, with which he expects to clean up everything in sight, after becoming accustomed to the gun.

In a sweepstake before the tournament at the 16yd. line, Chas. Groffy, A. Piepenhagen and Geo. Obenberger tied with 24 out of 25. Scores follow:

In the 25-target sweepstake, all at 16yds., the scores were: C. Groffy 24, A. Piepenhagen 24, G. Himmelstein 22, G. Funnekus 23, G. Obenberger 24, E. A. Gies 23, O. Imse 22, M. Pretzel 21, B. Thien 20, H. Bierhmann 13, F. Heiden 22, G. Sell 19, E. Reichel 21, W. Radue 18, R. Hohnbach 16, E. Bruhy 19.

The scores in the regular events follow:

	Shot at, Broke		Shot at, Broke

E. C. Cup Match.

THE match for the E. C. cup between J. S. Day, of Cincinnati, O., and H. D. Freeman, of Atlanta, Ga., was held on the Cincinnati Gun Club grounds on Aug. 24. The arrangements were perfect, and barring a slight delay, caused by the breaking of the pulling lever of the trap, not a hitch occurred during the afternoon. The match was witnessed by a large crowd, which included many ladies. Many of the old-timers were on hand, among them Jay Bee, whose name used to appear regularly in all shoots of the club, but who has not indulged in the sport for several years. The weather was ideal, not a breath of wind, and good light. C. O. Le Compte was referee and H. R. Irwin, of Fort Thomas, Ky., and Capt. George Dameron, of Bellevue, Ky., looked out for the interests of Day and Freeman respectively. R. Davies, the club secretary, worked the trap indicator and pulled the traps, in the round at expert rules. Before the match began there was considerable practice shooting indulged in by those who had come over to see the big event. At 2:55 the two contestants took their places for the round at 100 targets, unknown angles. Both men were in fine form, and the race was a close one, hotly contested to the finish. Freeman started the ball rolling, and after missing his sixth target made a run of 63 straight, missing his 75th target, and then his 82d, going out with 97. Day was never in better form than in this leg of the match. His first 80 targets were pulverized, and everyone looked for a straight score from him, but he let the 81st get away, and then dropped his 92d target, going out with 98, one target to the good.

In the round at 50 targets, expert rules, Day did wonderful work, his score being a record at this style of shooting, which will not soon be equalled. His first 10 were accounted for, then after missing the 11th target, he ran 35 straight, missing his 47th target, and going out with 48. Freeman did not put up the score in this leg that his friends expected, and was several short of that made in his match with C. A. Young. He lost 3 in each round of 25, getting a total of 44. This gave Day a lead of 5 targets, with the double still to be shot.

Freeman was a slight favorite for the doubles, but again he did not seem to be in his usual form, and after the first pair or two, the tide turned in favor of Day. The latter broke straight in his first 8 pairs, but then seemed unable to find his second target quickly enough, and went out with 42, a score which he seldom puts up in doubles. Freeman was not in his right form at the start, his best work being done in the last 15 pairs, when he dropped but 3 targets, and went out in a tie with Day, losing the match by 5 targets in the total. The winner was given a pleasant surprise by being presented with a ten years' paid-up membership in the Sarasota Fishing and Hunting Club, located on Long Boat Key, Florida, through the generosity of Dr. N. G. Long, of Atlanta, Ga., president of the club.

	100 Targets.	50 Expert Rules.	25 Pairs.	Total.

Twelve pairs: Day 21, Holaday 13.

Akron Gun Club.

THE Akron Steel Bird Gun Club's shoot, held at the club's grounds, on North Howard street, Akron, O., on Wednesday, Aug. 14, and Wednesday, Aug. 21, created considerable rivalry among the participants. On each occasion there were visitors from other places to investigate this new bird, and judging from their enthusiasm, they must have been more than well pleased with the new sport.

Some of the birds flew with great speed, estimated by some of the old-time shooters who were present but not shooting to be more than twice as fast as ordinary live birds would fly. Nevertheless, there were some wonderful kills made, even if the scores are low. The scores follow, 25 birds per man: Gammeter 8, Metzger 6, Wagoner 8, Gammeter 6, Metzger 16, Wagoner 7, Thresher 15, Bittner 13, Hoefstetler 13, Sichley 9, Manning 9, Hamlin 4, Bittner 17, Wagner 10, Hoefstetler 14, Manning 10, Thresher, 8 out of 10.

Out of 25 doubles, Bittner scored 33.
Mr. Hoefstetler came all the way from Orrville to shoot artificial steel birds. He is a good shot. Come again, brother.
E. E. THRESHER.

Fulton Gun Club.

FULTON, Mo., Aug. 23.—Following are scores of Thursday's shoot:

Cleveland Gun Club.

CLEVELAND, O., Aug. 18.—Regular weekly club contest of the Cleveland Gun Club was held Saturday afternoon, Aug. 17, at Shooting Park, Mayfield Road, and was all that could be asked for, twenty shooters turning out to honor F. D. Telling, one of the willing workers of the club. Frank was on hand and showed the boys that his many friends who had turned out had nothing to do with his nerve, as he handed in a card of 90 out of 100—not bad for a man in love. The next thing to Frank's score was the shooting of Geo. W. Radcliffe, who turned in a score of 99 out of 100—a remarkable score under the conditions. Shooting over two sets of traps, he made a run of 74 without a miss, a score that will take the wise men to beat.

The Labor Day shoot is what they are all looking for. They know that there is something good in store, and they want some of it, and so they think they must be good. But some of the other boys are looking for something, by the way the letters are coming in for programs, but there are some left, and if you want one, write the manager, F. H. Wallace, South Euclid, O., and you will have one sent you.

The next event will be held Saturday, Aug. 24. This shoot will be Doolittle Day, in honor of C. E. Doolittle, who will have full charge, so be on hand, boys, Charlie will meet you and give you a good time.

Event No. 1, monthly trophy, 50 targets, 16yds.: Radcliffe 50, Wallace 40, Judd 49, Hopkins 39, Williams 49, Thorp 36, Jones 48, Morman 35, Brown 47, Wm Telling 35, Doolittle 46, Walt Telling 33, Stepp 45, Cline 33, F O Telling 45, J Smith 32, Dibble 43, West 33

Event No. 2, annual trophy, 50 targets, 16yds.: Radcliffe 49, Wallace 40, Doolittle 47, Thorp 39, Williams 47, Hopkins 39, Brown 45, Beckley 38, F D Telling 45, Wm Telling 37, Judd 44, Wilt Telling 35, Stepp 44, Smith 34, Jones 43, Morman 32, Allin 43, West 29, Paine 43, Cline 27

Event No. 3, Blue Ribbon shoot, 25 targets, handicap: Judd 2 25, Hopkins 3 23, Stepp 1 25, Morman 2 23, Williams 0 25, Telling 4 22, Brown 0 25, Comfort 6 20, Doolittle 0 24, Wm Telling 6 20, Jones 0 23

Event No. 4, same as No. 3: Doolittle 0 24, Williams 0 24, Jones 0 25, Morman 4 22, Hopkins 3 25, Brown 0 21, Stepp 1 24, Allin 2 21, Comfort 6 22, Wm Telling 6 20, Judd 0 22

J. R. GRAHAM.

Gouverneur Rod and Gun Club.

GOVERNEUR, N. Y., Aug. 23.—H. H. Stevens, that irrepressible professional, has been doing this part of the State to a turn, and to-day topped his week's scores with 148 out of 150. Sim Glover smashed 144. Among the amateur aercauser stoppers, R. G. Wheeler was high with 140. H. W. Smith seconded the motion with 139, one more than C. W. Hobbie, J. C. Howland and Jerome de Bec, each of whom split 138.

R G Wheeler 140, A P Curtis 132, H W Smith 139, G R O'Connor 131, C W Hobbie 138, B J O'Grady 130, J C Howland 138, J E Thompson 127, J de Bee 138, F O Chapman 125, C C Snook 137, W E Hookway 125, J N Cunningham 137, W E Lytle 125, W R Patrick 137, H D Holmes 124, C L Frantz 136, J J Hamm 121, J Frateschi 136, D M Bacon 121, H V Fellows 135, W H Corbin 105, E P Wright 134, H Fuller 104, Fred Weiss 133, R W Bush 94, W E Corfield 133

Professionals: H H Stevens 148, Neaf Apgar 142, Sun Glover 144, Geo H Chapin 137

Independent Gun Club.

EASTON, Pa., Aug. 10.—Following are the scores made to-day at the semi-monthly shoot of the Independent Gun Club. With the older members of the club taking a renewed interest, and the new members taking an active part in the shooting, the club bids fair to again take its place as one of the leading clubs of the Lehigh Valley. The shots are being well attended with on-lookers, which shows that they are interested in the art of smashing clay targets:

Shot at, Broke: Maurer 50 44, Stocker 75 55, Heil 50 42, Warner 75 46, Ivey 50 34, Elliott 30 17, Cross 50 36, Miller 25 15

W. R. IVEY, Sec'y.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Aug. 20.—Lewis cracked 145 at the tournament here to-day, missing one in each of the first three events and two in the ninth. Kite shot second, although he needed only 137 to get the place.

Ahmann ran one behind for third. Spencer pinnacled the pro. gentry with some score—just 2 misses being charged to him out of 150 opportunities. He missed one in seventh and ninth events. Barre, Clark and Freeman divided place with 146 each. The special events were mighty interesting. On ten pair doubles Fred Gilbert cracked 19, Spencer and Clark 18 each.

The scores in the regular program events follow: Lewis 145, Johannaber 115, Kite 137, Freeze 111, Ahmann 136, Luttmann 110, J Mutert 134, Koelling 109, Lichtenberg 131, Mutert 101, Langford 131, Fortmann 101, Harbaum 130, Howard 98, Bollman 128, Gardyne 95, Yocum 127, Wyatt 92, Wilson 125, F Mutert 82, Berg 120, Meyer 81, Underwood 117

Professionals: Spencer 148, Freeman 146, Barre 146, Gilbert 142, Clark 146, Killam 141

The scores in the special events were: Events: 1 2 3, Gilbert 15 15 19, F Paul 9 12, Spencer 15 15 18, Joerling 12 12, Clark 15 15 18, G Paul 9 12, Wilson 15 15 16, Harbaum 13 14, Ahmann 14 12 15, Luttmann 12 7, Kite 13 14 14, Langford 14 15, Lichtenberg 10 15 12, E Suhre 9 12, Bollman 12 14 12, Berg 10 10, Meyer 9 9 11, F W Suhre 8 6, Lewis 15 14 11, Howard 5 12, Underwood 11 14 10, R Gardyne 8, Freese 10 11 9, H Wyatt 6 8, Mutert 13 12 7, Johannaber 10, Wyatt 11 9 7, F Koelling 13, Fortmann 10 11 6, W Koelling 11, Yocum 14 13, Wm Koelling 13

Nos. 1 and 2 were at 15 singles each; No. 3, at 10 pairs doubles.

Smith Gun Club.

NEWARK, N. J., Aug. 24.—Perfect scores were numerous to-day at Smith Gun Club traps. L. Colquit managed to break 25 straight twice during the afternoon. J. Baldwin and H. Higgs each made a perfect score. High gun honors for the day were captured by L. Colquitt and J. Baldwin, whose total scores were 143 out of 150 each. M. Apgar was second with 139 out of 150.

In a 25-bird match H. Higgs beat out Wm. Hassinger by breaking 22 against 20 by Hassinger. As the day was a prime one for shooting, a good turnout was on hand, and more than 1,500 clay birds were thrown from the traps during the afternoon. The following scores were made:

L Colquit 24 25 23 25 24 22, J Baldwin 23 25 25 24 23 23, F Apgar 29 19 21 18 23 21, M Apgar 23 22 24 24 23 23, E Sickley 20 21 22 24 24 24, P Keller 13 20 20 17 21 20, R L Shepherd 22 24 18 22, H Higgs 25 21 23 24 22 22, L Tompkins 10 13 16 20 19, W Hassinger 19 20 22 22 22 20

Garrison-Highland Gun Club.

GARRISON, N. Y., Aug. 22.—A wide range of visiting experts turned in scores here to-day, including Mrs. L. G. Vogel, who shot among the top five, tying that Bergen Beach artist Paul Von Boeckmann, at 133. John Martin looped the lucre, cracking rocks to the number of 143 out of 150. W. E. Cornfield slid under the wire second with 141, while Dr. Griffith made place on 138. Neaf Apgar and H. H. Stevens topped the pink sheet, for targets only, educators' bunch with 141.

Shot at, Broke: J Martin 150 143, W E Skidmore 150 116, W E Corfield 150 141, R Nevins 150 116, Dr A C Griffith 150 138, G C Hudson 150 120, Mrs L G Vogel 150 133, F Lundebjerg 150 109, P von Boeckman 150 133, P H Mason 75 65, R L Shepard 150 132, C E Chilton 75 54, A E Bason 150 131, C T Scott 75 40, H B Tuthill 150 128, J F Martin 75 28, S Strong 150 126, W C Gibb 30 8, F C Hall 150 123

Professionals: N Apgar 150 141, J S Fanning 150 136, H H Stevens 150 141, Tom Davis 150 127

Oakwood Gun Club.

LYNCHBURG, Va., Aug. 20.—Fox and Daniels tied in the club event with 46 out of 50. In the added 50, Fisher shot beautifully, going his string without a miss. On the day's average, Daniels and Fisher broke even at 94 out of 100, while Fox fell back to 92.

No. 1 was the club event; No. 2, extra. Events: 1 2, Anderson 44 43, Edmunds 37 37, De Witt 34 37, Stockley 40 48, Lee 35 15, Schultze 32 41, Carter 31 35, Fox 46 46, Gannaway 37 28, Daniels 46 48, Terry 38 43, O Fisher 44 50, R A Owen 44 44, W R Winfree 44 46, Moorman 42 42, H L Winfree 40 42, Scott 43 43

Grand Afro-American Handicap.

THE big event of Missouri will be the ninth annual grand Afro-American handicap, scheduled for Sept. 2 and 3 at Fayette, Mo. Shooting begins 9 o'clock each morning. Money divided, in regular program events, Rose system, ratio points, 5, 3, 2, 1.

By competing in the ten regular program 15-target events each day you become eligible for the Squier money-back system. The \$100 donated by Interstate Association, the \$1 extra from each shooter, and one cent for every target shot at, creates a fund which goes to pay shooters, who, for these regular program events, have not as much as their entrance coming to them, less 2 cents for targets. White flyer targets thrown about 50yds. from Western automatic traps.

A committee will be selected from shooters present to allot handicaps from 16 to 22yds. in Grand Afro-American handicap event. Sliding handicap used in all prize events. All ties for prizes must be shot off. Plenty of all standard loads of shells for sale on the grounds.

A cordial invitation is extended to all white shooting friends, professional and amateur, to come and take note of work done.

Annual meeting of league at office of J. A. Tolbert, Sept. 2, at 8 o'clock P. M.

Sioux Falls Gun Club.

SIoux FALLS, S. D., Aug. 21.—Harvesting kept down the attendance at our two-day shoot just ended. Everything else, including weather, was ideal and pulled successfully. S. A. Huntley got the coin, his average being 288 out of 300. W. A. Brown took second with 279. There was a gala list of pink sheet entries. Lester German took high targets-only gun with 294, Snuff Taylor being next down with 2 less.

1st 2d, W A Brown 145 134, Ed Anderson 133 129, C E Ellis 127 136, J J Burns 130 135, S A Huntley 142 146, J E James 127 126, G L Taylor 136 134, J Berger 120 135, Al Wallace 146 142, G S Maxwell 127 126, E T Myers 130 135, J C Buzzell 128 140, F Hall 110 110, Walt Neil 138 144, N J Thompson 113 96, D Bragstad 86, F R Patch 124 120, H Piepgrass 104, H J Brown 128 125, Chas Look 76

Professionals: L S German 148 146, G A Olson 139 143, H G Taylor 147 145, R R Barber 142 139, Geo Kreger 144 146

Birmingham Gun Club.

Six shooters were at the weekly shoot of the Birmingham Gun Club. Most of our regulars were at the tournament at Montgomery, which accounts for the small attendance. A special car will leave Birmingham on Sept. 7 for the Denver shoot and handicap. All of the shooters throughout the Southern States will go on this car. In honor of these shooters the Birmingham Gun Club will give a special shoot on Friday afternoon, Sept. 6; program of six 20-target events and 15 pairs will be shot. Scores follow:

Shot at, Broke: J Fletcher 100 91, R H Baugh 100 66, Lee Moody 100 83, L M Norwood 75 61, Dick Leland 100 73, Carl 50 46

Charleston Gun Club.

CHARLESTON, W. Va., Aug. 24.—De Gruyter shot like a Trojan to-day, getting 94 out of 100. Secretary Nicholson tied for second with Shepard on 89. Scores:

Shot at, Broke: De Gruyter 100 94, Moore 60 40, Nicholson 100 89, Crider 50 47, Shepard 100 89, Goshorn 50 44, Davis 100 83, Nottshcard 50 34, Counts 100 84, Briggs 40 26, Beardslee 100 63, Payne 25 8, Summerville 80 54

DR. G. NICHOLSON, Sec'y.

Guernsey Gun Club.

GUERNSEY, Ia., Aug. 17.—The Guernsey Gun Club's practice shoot this afternoon was limited to 56 targets, our supply of targets having been delayed somewhere on the road in transit. Three of us went to the grounds and shot the following scores, Mrs. J. W. Dobbins taking a hand at target shooting:

Shot at, Broke: A Dalezal 25 21, Mrs J Dobbins 20 14, J W Dobbins 15 9

J. W. DOBBINS, Pres.

Capital City Club.

SACRAMENTO.—A trap shoot for three days for about \$4,000 worth of prizes will be held under auspices of Pacific Coast Blue Rock Association at the State Fair grounds, on Sept. 15, 16, and 17. In addition to the events on the daily program, there will be a final shoot in which the ten highest shots will compete for the ten extra trophies.

The official program includes fifty-eight 25-target events and one at 12 pairs double. Money divided Rose system.

Graham Graces Pro. Rank.

The following item will be read with interest: J. R. Graham, the well-known amateur from Long Lake, Ill., who is perhaps better known to the trapshooting fraternity as "Jay" Graham, has retired from the amateur ranks and become a full-fledged professional, as a representative of the Du Pont Company. "Jay" has made many wonderful records during the past few years, but none has rounded to his credit more than his recent win of the Olympic individual world's championship at Stockholm, Sweden, which was competed for under a style of shooting entirely different to anything we have in this country, and with which Mr. Graham was barely acquainted when the time came for the contest to start. It was at Chicago, in 1910, on Aug. 30-Sept. 1, inclusive,

that Mr. Graham made his wonderful record of 432 straight (417 in "registered" events and 15 straight in practice). The same year at the Westy Hogan tournament at Atlantic City, N. J., Sept. 8-12, he won high average for the entire tournament, breaking 489 out of 500 targets, 97.8, also winning the Shaner trophy with 100 straight, and the Westy Hogan event with 96 out of 100, and 58 out of 60 in the ties. His records in 1910 and 1911 were uniformly remarkable for an amateur, but it is worth noting that in 1910 he made ten runs of 100 or better, and five such runs in the year of 1911. "Jay" is the second of the Graham family to join the professional ranks, his brother Ed., having for some years represented the interests of an ammunition company in Chicago and vicinity.

Northern Kentucky Gun Club.

THE attendance at the monthly money-back shoot on Aug. 25, was not up to expectations, the local shooters have had their fill of the sport lately, and several of them started to-day for the Indian tournament at Cedar Point. Among the out-of-town shooters present were: B. F. Bunn, of Boston, Mass.; J. A. Penn, I. Brandenburg and H. L. Monbeck, of Dayton, O.

The weather conditions were fairly good, a rather brisk wind at times affecting the flight of the targets and causing some of the misses. Capt. George Dameron was high amateur, and tied with J. S. Day, professional, on 143. Day shot in good form, breaking straight in the first four events. H. L. Monbeck put up a good race after a rather poor start in the first event, breaking 87 out of the last 90 targets, and going out in second place with 142. Ertel did better work in an event at 12 pairs of doubles than he did at his singles, breaking 22. Lord got 15, and Sears 13 out of 12 pairs.

The next money-back tournament will be held on Sept. 29.

Riverside Gun Club.

RED BANK, N. J., Aug. 24.—The fall shoot at clay birds at the Riverside Gun Club for the John Frank James gold and diamond trophy, was decided this afternoon. It was a handicap event, the total number of birds being 200 per man. Albert D. Ivins, scratch man, was winner. Summaries: Ivins 192, G. Gallo 184, C. E. Throckmorton 183, J. Dietz 182, G. Candler 180, A. D. Cooper 179, C. R. D. Foxwell 178, C. R. James 177, A. D. Cooper 176, G. R. Bray 174.

A handicap shoot, 50 targets for the weekly trophy, with a dozen entries, was won by A. D. Cooper and W. M. Clayton, who tied on 50 each. On the shoot-off at 25 targets, Cooper made a clean score.

In the final events at 25 targets, the handicap was won by A. B. Dalby with 24, A. Bryant 21, T. F. James 18, Foxwell 13, Clayton 13.

**A NEW
WORLD'S
RECORD**

**MADE AT
WAKEFIELD**

with

WINCHESTER
Rifles, Telescopes and Cartridges

Preliminary advices from the field of contest of the New England Military Rifle Association's Eighth Annual Meeting indicate that George W. Chesley, Conn., has again distinguished himself by hanging up a New World's Record, as shown by the following:

WINCHESTER MATCH: Individual. Open to all. 15 shots at 1,000 yards. Winner Geo. W. Chesley, making a possible score of 75 plus 8 bull's eyes, a total of 23 consecutive bulls, which constitute a **New World's Record** for such a match. The merit of Mr. Chesley's performance and the excellent shooting qualities of Winchester goods, become all the more apparent when it is stated that there were 190 entrants in this match.

INDIVIDUAL SMALL BORE RIFLE MATCH: Also won by Mr. Chesley. 20 shots at 25 yards. Position offhand. Winning score, 177. Number of entrants 39. In winning this match Mr. Chesley shot a Winchester .22 caliber Single Shot Musket and Winchester Factory Loaded Cartridges.

THEY MAKE NO STRAGGLERS

Wildwood Rod and Gun Club.

WILDWOOD, Aug. 24.—Eugene Springer, of Cape May Courthouse, took high honors in the tournament here to-day. H. Johnson was second with 89, while H. Voorhees with 83 was third. A high wind interfered greatly with the scores of the contestants.

Springer also got first place in the special event, breaking 25 straight, Johnson and Voorhees tying for second place with 22 each. After the shoot, Johnson and Springer signed articles of agreement for a match with side bets, at 100 targets each, to be held next Saturday afternoon. The scores:

Targets:	20	20	20	20	20	Total.
G Springer	17	19	17	20	20	93

Greenwich Gun Club.

GREENWICH, Conn., Aug. 24.—Following are the results of shoot held at Island Beach. Event No. 2, for leg on Du Pont trophy, was won by J. H. Finch. (The Du Pont trophy has now been shot for five times, and no one has won more than one leg.) Quite a number are expected to shoot here Labor Day, and from reports so far, there will be as many at the fall tournament, Sept. 14, as shot here July 4. Programs will be shot both days, rain or shine.

J. H. FINCH, Capt.

Du Pont Gun Club.

WILMINGTON, Del., Aug. 18.—J. H. Minnick, with a straight score of 25, won the Du Pont spoon event in Class A, at the Du Pont Gun Club's grounds yesterday. H. W. Bush and Stanley Tughton tied at 23 in Class B. J. W. Anderson, Jr., won Class C by breaking 24 out of 25 targets, and J. A. MacMullen was the victor in Class D, with a score of 20. Minnick was also high man for the day, making the remarkable score of 99 out of 100. Other high men were: W. M. Hammond 95, J. B. McHugh 93, W. A. Joslyn 93, W. Edmanson 92.

The results in the challenge matches were: Class A—E. A. W. Everitt (holder), 41; J. H. Minnick (challenger), 49. Class B—Clyde Leedom (holder), 36; Stanley Tughton (challenger), 45. Class D—J. A. MacMullen (holder), 36; Albert Bird (challenger), 27. Other scores were: W. Edmanson 21, N. K. Smith 16, H. W. Bush 23, Thorpe Martin 20, Clyde Leedom 22, W. G. Wood 23, H. P. Carlon 20, J. A. MacMullen 20, T. E. Doremus 18, J. H. Minnick 23, J. B. McHugh 22, W. A. Joslyn 23, W. M. Hammond 24, F. P. Ewing 19, E. A. W. Everitt 23, J. W. Mathews 11, L. L. Jarrell 19, Dr. H. Aug. 24.—Twenty marksmen took part in the weekly shoot of the Du Pont Gun Club to-day. The principal event was the shoot for the F. L. Connable trophy. H. W. Bush, shooting from 20yds., was the winner with 22 out of 25.

In a shoot for the Class B challenge cup, Mr. Bush also defeated the holder, Stanley Tughton, by a score of 42 to 40. J. A. MacMullen, the holder of Class D challenge cup, was challenged by Albert Bird. MacMullen won, the score being 36 to 34. H. L. Worthington, of Rising Sun, Md., was a visitor. He shot in several events.

The scores in the Connable cup contest, out of a possible 25, were:

	Hdcp.	Brk.		Hdcp.	Brk.

Rifle and Revolver

Dayton (Ohio) Sharpshooters.

THE club, one of the oldest, if not the oldest, organizations of riflemen in the country, will hold its fiftieth annual king medal shoot on Sept. 11 and 12. The range is located four miles south of the city on the Ohio Electric Line, and is probably the best equipped range in the State, barring that at Camp Perry. The shooting is all at 200yds., on seven targets, installed in a large cement pit, with telephone connections with the firing points. There will be \$100 in gold added in the percentage events, and several special trophies have also been donated. On the first day there will be six matches, with ten moneys in each—17, 13, 10, 8, 7, 6, 5, 4, 3 and 2 per cent. of entrance money, respectively, with \$5 added to first money in each match, and \$5 added for best total of three tickets in each match. The first three matches begin at 9 A. M., and close at 12:30 P. M. No. 1, on targets 1, 2 and 3, off-hand, 200yds., German ring, 12in. black bullseye, 3/4in. rings, three shots, possible 75. No. 2, on targets 4 and 5, bench rest, 12in. black and 12in. white bullseye, 1/2in. rings, three shots, possible 72. No. 3, targets 6 and 7, muzzle rest, 12in. white bullseye, 1/2in. ring, three shots, possible 72. The last three matches begin at 1 P. M. and close at 5:30. No. 4, targets 1, 2 and 3, off-hand, conditions and prizes same as in No. 1. No. 5, targets, 4 and 5, bench rest, conditions same as in No. 2. Match No. 6, targets 6 and 7, muzzle rest, same conditions as in No. 3.

On the second day there will be four matches, in addition to the regular monthly cup and annual king events. These latter will be shot on targets 6 and 7, and are open to members only. Prizes, a \$20 king medal and merchandise. There will be no bench rest matches

on this day. Match No. 7, on targets 1, 2 and 3, off-hand, conditions and moneys same as in Match No. 1. Match No. 8, targets 4 and 5, muzzle rest, same conditions as in match No. 2, except that both targets will have the 12in. white bullseye. Matches Nos. 9 and 10 will begin at 1 P. M. and close at 5:30, and are under same conditions as Nos. 7 and 8 respectively.

High-power ammunition and palm rest are barred. Any sight except telescopic allowed, and any trigger pull. All ties must be shot off, one shot to decide. If again tied, then another until settled. Contestants can win but one prize in each match, except added money.

The president's special, a silver cup donated by D. D. Bergk, for two highest scores on record in the muzzle and bench rest percentage matches both days. Secretary's special, silver cup, donated by Chas. W. Sander, for two highest scores on record in offhand matches both days. These are open to all. Silver cups donated by the Schwind Realty Company and Frank G. Meyer, open only to club members. Hand-painted loving cup, donated by W. R. Wallaston, for most 24s recorded in the muzzle, bench and membership matches on both days.

The committee on arrangements consists of D. D. Bergk, J. C. Hahne, Gustav H. Sander, C. W. Sander and A. Schwind.

All riflemen are cordially invited to be present and participate, and help make this Golden Jubilee a success.

Colonial Revolver Club.

LITTLE TRAILS AND WATERS.

Continued from page 262.

again continued upon our way, gathering new pleasures with the hour. There is something divinely appealing in these little jaunts into the realm of nature, to one who has an eye for more than the sordidly practical in the world. To that man, imbued with the love of nature, in her manifold charms, who is able to gather truth from her teachings, there is much awaiting him. He may combine his passion for angling with the study of nature; he may gain from life a variety of emotions that the average soul passes by as sentimental, and hence unworthy. Danny, dear fellow, is woefully in love with nature. Even I have the passion in its highest form, but Danny rises to the pinnacle of earthly joy. Be it in the light of the golden morning, in the silence of the summer noon day, or the ethereal tranquillity and glory of the twilight hour, it is all the same to him; he is in love with every moment of the day. A peaceful angler, one learned in the exquisiteness of the pastime, a man combining the beautiful with the practical in a very ingenious way—this is the make-up of Danny.

As we passed along the stream northward as it bent in its course, we found a wealth of beauty awaiting us. Clear, dusk-enveloped pools, where the fly was a welcome visitor and where success in its most appealing form rose to do us duty. Danny was fishing a placid stretch, quite hidden from view, letting his Coaxer fly drift with the barely noticeable flow of the water. The shadows were very deep there; a perfect nook, carrying to the mind the presentation of sylvan perfection, with the wind and the sunshine collaborating to make the scene sublime. There was a place where the shadows came to an end out in the water. You could plainly see the jagged rim, here the shadows dark and there the light prominent. The fly drifted by there with its feathers upright. Was it a quiver I noted? Yes, Danny had stirred it by the movement of the bamboo tip. We watched with breathless anticipation, when suddenly the water broke, and a trout had it in his lip.

Hoping to catch more in that identical pool, Danny, with a determined forethought, led the fish down to another pool, and there played him finally bringing him to net and exulting over his capture as only a poet can. I saw the light in his black eyes; the dreaminess has partially fled, the glint was there, and the fight had brought his soul into the present.

"A beautiful fish, truly the king of the deep," said Danny, as we stood looking upon it with kindred feelings. "Note the form and contour of him; there is poetry in the very make-up of this fish, the poetry of the wild in perfect life. It is a shame to bring death upon him, but it is the law of nature and the all-wise Creator who gave them to us."

Deftly he cut the head and with a sort of sigh put the fish away among the moss and leaves of his basket. The afternoon was wearing itself away, and the first hints of the approaching twilight were becoming evident. There was a gradual film of gloom lowering, the stillness had resolved itself into a matured shape; not one murmur seemed to break in upon the peacefulness of the day. Under the trees the shadows were stretching themselves lazily about. A bird now and then piped in some covert, but

for that there was no breaking of the day's abandonment that seemed to be wrapped up around every feature of the scene. The sinking sun was on the direct downward slant; the waters that murmured further on our way over the rocks were touched to silver by the limpid sun rays. We paused, side by side, admiring it, finding time to put to word our ideas. Lower and lower sank the sun, and we knew that it was time to make our camp for the night. There was a graceful bend in the stream at a certain point, banked in by trees and bushes in back, with the stream before us, and a scene that could not have been more perfect.

The camp-fire was soon blazing and we were

content. The regulation bacon in the frying-pan, crisp and appetizing, and the old coffee pot on the coals made a delightful meal and prepared for the evening hour of reverie. Between the last hint of the dying light and darkness there is a moment of holiness, which the lover of nature finds much to his fancy. And we wandered together, smoking much, and taking note of what was constantly taking place on the stage of the wild. Thus had fled the first day in paradise; simple and sweet, with the burdens of life fled, and an awakened sense of the lofty taking its place. And we could only dream as we fell asleep of those coming days and the sweetness they would bring. It was a dream come true.

NEW
12 GAUGE **Marlin**

Hammerless Repeating Shotgun

This Model 28, 12 gauge *Marlin* shotgun is the finest repeating gun in the world. It has every up-to-date feature, perfected far beyond all previous standards, and it has exclusive advantages not obtainable in other guns.

Note these features: **Hammerless—Solid Steel Breech** (inside as well as out)—**Solid Top—Side Ejection—Matted Barrel** (as on our highest grade hammer guns)—**Press-Button Cartridge Release** (to remove loaded cartridges quickly from magazine without working through action)—**Double Extractors—Take-Down Feature—Trigger and Hammer Safety.** Price, \$22.60.

The Model 28 is a fine appearing, beautifully balanced gun, without any objectionable humps or bumps; its **Solid Steel Breech** (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; **it is the safest breech-loading shotgun ever built.**

Our free circular gives large illustration of gun and full description. Our complete 122-page catalog of all other *Marlin* repeating rifles and shotguns mailed for three stamps postage.

Our 160-page **Ideal Hand Book** tells about re-loading all cartridges; mailed for 6c. stamps.

The Marlin Firearms Co.
27 Willow Street, New Haven, Conn.

KING'S SPORTSMEN'S GLASSES

are far superior to the old style ambers because they have lenses of **Akopos Crystal**—a double shade of amber and veridian. The **Akopos Crystal** eliminates not only all the violet but also all the violet and blue rays. Amber glasses are only 50 per cent. efficient in this particular and therefore are only worth 50 per cent. of what is charged for them. King's Sportsmen's Glasses are used and endorsed by such well known sportsmen as E. C. Crossman, Lieut. Townsend Whelan and Stewart Edward White.

The Ohio State Amateur Championship was won by F. W. King, wearing shooting glasses of his own design and patent. Write for catalog.

THE F. W. KING OPTICAL CO. 450 Ellastone Building, Cleveland, Ohio

(Patented, Feb. 20, 1912.)

NATIONAL ARCHERY ASSOCIATION.

Continued from page 271.

G. P. Bryant with 499 hits. This cup is to be competed for until won three times by the same man.

The Weston trophy, a gold loving cup, for most golds at any one end of any range and to be shot for till won three successive times by the same archer, resulted in a tie of four golds by several archers at different ranges and was won by C. P. Bryant with four golds at 40 yards, which were 9/16 of an inch closer in total measurement than Mrs. Witwer Taylor's four at thirty yards.

The Gillette water color of a trout went to Miss Lida Pendry and the Elmer carved wooden spoon was awarded to L. C. Smith, of Newton, for lowest scores. The winners being most fortunate in prize if not in scores. Following are the official scores in all events shot:

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

PARKER BROS. :- Meriden, Conn.
New York Salesrooms, 32 Warren Street

Concentration of Purpose

—Not Spasmodic Improvements

NOT occasional, spasmodic change or improvement made the L. C. Smith gun what it is today—the gun with no shortcomings.

The Concentration of Purpose of six men for 22 years did it.

The six Hunter Brothers keenly foresaw and held fast to one vital truth, i.e.: that any little shortcoming—seemingly but a trifle—in field or blind, will offset all your skill, wipe out all your well laid plans, and spoil a whole trip.

Concentration produced for the L. C. Smith gun

a firing pin of vanadium steel—unbreakable—gas proof.

Concentration produced a rotary, *clawing* type of bolt, which takes up all wear, in all directions, by the double wedging of its double claws. The limit of breech bolting strength is reached by these claws entering frame after passing through extension rib.

And so on through the list, Concentration of Purpose has solved long-standing gun troubles.

Write for catalog, showing grades from \$25 net to \$1500 list.

 Established 1853

THE CAMPER'S OWN BOOK

A Handy Book for Devotees of Tent and Trail

This is that BIG little book of the open—America's new outdoor annual. It comes to you bound as you see here. It is "woody" from cover to cover—stirred by lake-breezes and redolent of pine.

Authors of country-wide repute have, with their enthusiasm and familiar knowledge, aided its making. Stewart Edward White, Edward Breck, Frank A. Bates, Charles Bradford, F. C. Selous—these and others join this camp-fire council. They say their say about a hundred little practical details that hold close interest for you; and they spin a yarn or two by the way.

"The Camper's Own Book" measures 8x5 3/4 inches over all. It is a goodly generous volume, with 194 pages handsomely set in Scotch-Roman type, and 13 of the finest illustrations you've ever seen. Everybody should have a copy who believes that a day under the free sky makes the pomp of emperors ridiculous. And you're one—you know you are.

PRICES PER VOLUME (In the appropriate green T-cloth\$1.00
 In the paper (as shown in cut)50)

If your dealer cannot supply you we will send postpaid on receipt of price.

THE LOG CABIN PRESS 144 Worth Street NEW YORK CITY

Flight Shoot.
 George P. Bryant won with 229 2-3 yards.
 Mrs. C. P. Bryant won with 215 1-3 yards.

Junior medal, for best score in the double Columbia round, made by young woman under eighteen years of age, not competed for in 1912.

HOW HUMMINGBIRDS BATHE.

Nor being acquainted with the bathing habits of hummingbirds, I put out an abalone shell as the most artistic bathing dish for her, but never to my knowledge did she pay the least attention to it, says a writer.

One morning, in a shower, however, she crouched down on the wet blade of a dogwood leaf, and with head outstretched and rapidly fluttering wings, spattered the raindrops in every direction.

She went from leaf to leaf until she had succeeded in getting her feathers wet. Then she perched on a twig, shook off the drops and carefully preened her feathers. It is not improbable that in the absence of rain, hummingbirds use the dewdrops in early morning.

THE Bulldog Club of Western Pennsylvania, of which E. M. Joel, 23 Chapman street, Ingram, Pa., is secretary, offers a silver medal for the best local bulldog, a silver medal for the best local bull bitch owned by a member of the Bulldog Club of Western Pennsylvania. Anyone becoming a member prior to Sept. 19 will be eligible to compete. CHAS. W. GARDINER, Supt.

BEAR HUNTING IN PENNSYLVANIA.

BEAR hunting will be good in Pennsylvania this fall, as judging from reports made to the State Game Commission's men bruin is not only abundant, but in some of the northern counties comes pretty near to being a nuisance. The appearance of specimens is reported from many camps this summer, including those on State forest reserves.

The bear season will not open until Oct. 1, and the law permits the killing of an unlimited number of the animals by hunters, and farmers and woodsmen probably will bag many through traps, although the use of steel traps is now prohibited.

Bears have been reported in many of the Central Pennsylvania counties the last few years, some being seen within a short distance of Harrisburg, and in mountain communities the farmers have been bothered by the depredations of bears close to barnyards and in gardens.—Harrisburg Correspondence Philadelphia Press.

PERILS OF PEACE.

"You have been in military service?"
"Yes."
"And where have you found the bullets fly thickest?"
"In the Maine woods, where I was recently acting as guide."—From the Washington Star.

Don't Wear a Truss!

Brooks' Appliance is a new scientific discovery with automatic air cushions that draws the broken parts together and binds them as you would a broken limb. It absolutely holds firmly and comfortably and never slips, always light and cool and conforms to every movement of the body without chafing or hurting. I make it to your measure and send it to you on a strict guarantee of satisfaction or money refunded and I have put my price so low that anybody, rich or poor, can buy it. Remember, I make it to your order—send it to you—
—you wear it—and if it doesn't satisfy you, you send it back to me and I will refund your money. The banks or any responsible citizen in Marshall will tell you that is the way I do business—always absolutely on the square and I have sold to thousands of people this way for the past 30 years. Remember, I use no salves, no harness, no lies, no fakes. I just give you a straight business deal at a reasonable price.
U. E. BROOKS, 1280 State St., Marshall, Michigan

Resorts for Sportsmen.

Maine.

RIPOGENUS LAKE CAMPS

HUNTING. FISHING. RECREATION

A **Big Country** is here opened up for Sportsmen just half way down the "West Branch" Canoe Trip; 40 miles by steamer from Greenville to Northeast Carry; twenty miles to Chesuncook by canoe, twenty miles more to camps by motor boat or canoe. Another route by canoe from Norcross, Maine. Another overland by team from Lilly Bay (Moosehead Lake) to Caribou Lake, thence by canoe or motor boat 12 miles to camps. **Home Camps** comfortable with spring beds, etc. **Back Camps and Lean-tos** cover a great tract of Wilderness, for Sportsmen desiring to go far back in the woods. **Good living everywhere, Grouse, Ducks and Black Bear.** We guarantee to give you **Trout Fishing** that is **unequaled** and **Moose and Deer Hunting** that is **unsurpassed.** Choice of the sportiest quick water in Maine, for the stream fisherman, or the most placid of pond and lake fishing for those who prefer it, where brook trout rise to the fly all summer.

FOREST AND STREAM reaches many fishermen and gunners in small towns, people with money to spend and who are influenced by advertisements.

Property For Sale.

TIMBERLAND ON LAKE AND RIVER.

Eight thousand acres of timberland, with several miles of lake and river front, situated on a large lake in the center of the game and fishing country of Northern and Central Maine. This tract of land would make an ideal reservation for a club, or for anyone desiring an investment in timberlands. For information, address Lock Box No. 11, Auburndale, Mass.

A RARE INVESTMENT

Safer than Bonds and Mortgages

Four hundred and eighty acres of beautiful level land in Keith County, Nebraska. Rich black loam, six feet deep, which produces all kinds of big agricultural crops. Forty bushels of wheat to the acre, and all other crops in proportion. These lands are located eight miles from the county seat, and six miles from the thriving, bustling town of Brule, on the main line of the Union Pacific Railroad. The town has church, high school, hotels, all kinds of stores, grain elevator, etc., etc. I will also sell 160 acres adjoining Brule, fronting on the Union Pacific Railroad, under cultivation, with all improvements. The climate is unsurpassed for all lung or throat difficulties. Elevation, 3,200 feet.

For terms and particulars address

E. H. BARTON, 32 Bank St., Batavia, N. Y.

For Lease—Nov. 1 to 15—Deer Season—FURNISHED COTTAGE.

500 acres perfectly protected deer preserve adjoining 12,000 acre preserve of the most exclusive hunting club in New York State. Lease includes service, table, guides. Property has private lake, excellent fishing. Price, \$599. Write DEERPARK, care Forest and Stream Pub. Co.

YACHTING NOTES.

Harlem Y. C.

EIGHTEEN sail and three power boats crossed the starting line in the 61-mile race here on Aug. 17. The event was won by R. B. Budd's Alert in the sailing class with Melrah, owned by H. Merz, finishing first in the power boat squad.

New Rochelle Y. C.

THE annual cruise of the New Rochelle Y. C., which left New Rochelle on Aug. 10, arrived home as per schedule. The cruise being discontinued at New London on Aug. 16.

On the first day the cruise covered a course between the New Rochelle Y. C. and Lloyd's Harbor. On Sunday the finishing point was New Haven, on Monday they continued to Stonington, Conn., and on Tuesday to Newport. On Wednesday and Thursday the yachts remained at Newport during the King's cup races. On Friday the cruise was continued to New London. The schedule called for a sail to Lloyd's Harbor on Saturday, but the fleet disbanded at New London on Friday. Okee, a New York Y. C. 30-footer, owned by Rear Commodore Mahlstedt, won the flag officers' cup.

Following are the boats which figured in the cruise, the owners and the number of points won by each: Okee, Rear Commodore J. A. Mahlstedt, 25; Amada, B. R. Stoddard, 22; Twilight, J. F. London, 18; Lady M., Commodore E. C. Myrick, 18; Surprise II., M. Kattenhorn, 2; Olwyn, A. B. Seymour, Jr., 2; Guardia, C. A. Marsland, 1.

NEW ROCHELLE, Aug. 24.—There were fifty-nine starters in the New Rochelle Y. C.'s special regatta to-day on Long Island Sound, and that which at first looked like a day of idle drifting eventually developed into a first class contest, with a brisk west by south breeze that caused the more tender craft to heel. The winners were Cara Mia, Nepsi, Moira, Sally IX., Kenmuir, Circe, Dolly, Lady M., Edmee, Aratheusa, Whiff, Turquoise, Drcna, Pixy, Vega and Echo.

Dorchen's Appeal Granted.

THE executive committee of the Yacht Racing Association of Massachusetts gave a hearing on Aug. 19 on the appeal of Dorchen II. and others from the decision of the judges of the regatta of July 4 in Class I and voted that the race should not count for percentage owing to the misunderstanding of the buoys off the east end of Thompsons Island.

They also voted that the Manchester Y. C. race of July 26 should not count for percentage for Classes P and I.

These two decisions are of great importance to the racing boats of both classes affected. In the case of Class P it puts George Lee's 31-rater Italia far ahead in standing for the Lipton cup of Massachusetts Bay. In the case of Class I, the 18-footer Cheroot, R. S. Hendrie, is brought down from its commanding position in the race for the championship, so that now the boat is a small fraction of 1 per cent. ahead of Harry Bloomfield's Moslem II.

It was the contention of Italia's owner that

the deed of gift of the Lipton cup distinctly stated that only open races should be counted for percentage. The Manchester Y. C. race was an invitation affair, so nothing was left but to throw out the race.

Cheroot was singularly unfortunate in the decisions and Moslem II. exactly the reverse. The former won the Manchester Y. C. event and was second on July 4. In both these races Moslem II. finished far down the list. Cheroot's owner has been loafing the last few races in the belief that the championship was his without any more racing this season, but from now on there will be one of the hottest scraps in the history of that scrappy Class I.

The judges of the July 4 regatta decided against the contentions of Dorchen II., which protested at the time on account of the fact that one of the buoys of the course had been cut off on a level with the water, giving some of the boats a chance to cut the course, while others sailed around the place where the mark should have been.

Anchored Boats to Carry Riding Lights.

OWNERS of motor boats along the Illinois River think that a new order from the Federal inspector requiring all motor boats not lying at a dock to display lights after nightfall is extremely oppressive. It is argued that boats lying at anchor are outside the course of all steamboat or other travel, and also outside the channel. The order, therefore, is characterized as foolish and unnecessary. So far as known there has been no accident on the Illinois River as the result of absence of lights on boats which have been moored close to the river bank, despite the fact that at some ports there are several hundred of these boats. It is asserted that the War Department officials responsible for the order are seeking to apply the rules of ocean navigation to the rivers and streams of Illinois. The new ruling is claimed to be a great hardship and calculated to drive many boats out of commission. Many boat owners cannot afford to employ a man to attend to the lighting of the lamps each night, a fine being threatened for omission, and the result, it is feared, will be a decision upon the part of many to dispose of their craft and retire from the sport.

GAME-HUNTING CONCESSION.

THE contract of the Kamchatka Trading & Industrial Co., covering hunting rights on Commander Islands, will terminate on Sept. 1, 1912, and the rights will again be put up to public tender on a four-year contract. The contract is to cover the right to hunt polar fox and beaver only, as catching of seals is prohibited for five years in accordance with the convention of 1911.

A Russian hydrographic expedition to the North Polar Sea, composed of the vessels Taimir and Voigatch, left Vladivostok in June to proceed round the north of Asia to St. Petersburg. This expedition will endeavor to make correct maps and charts of much of northern and north-eastern Asia which contains considerable unexplored areas and great rivers, mountains and coasts which are not charted.—From Consul General John H. Snodgrass, of Moscow.

Always fresh and sweet

When you have an out-of-door hunger and a real thirst, there's nothing more delicious, nothing better for the "inner man" than a good drink of

CARNATION MILK

From Contented Cows

—and when it comes to coffee, the "best ever" is made over a camp-fire and poured upon a little Carnation Milk. Hunting, fishing, camping, traveling, Carnation Milk is drink and food, always delicious.

Carnation Milk is just the pure, rich milk of contented cows, with part of the water extracted by evaporation. Nothing has been added. It is handled and prepared with such care and skill that it is sent to the farthest corners of the earth and enjoyed, everywhere, in all the sweetness and freshness with which it left the condensery.

Any man can make these—try it yourself:

Carnation Camping Biscuit

Take 2 cups of flour; 4 even teaspoons baking powder; ½ teaspoon salt. Sift all together (this could be measured and sifted before leaving home.) Put above flour mixture into a large bowl or pan, add ½ cup (¼ can) Carnation Milk, stirring it in slowly, and using a knife. When well mixed, add scant cup of cold water. Sprinkle a little flour upon a sheet of tin or a flat hot stone. Dip up as much dough as can be taken up on a teaspoon, and drop it on the baking sheet. Pat each biscuit a little, on top, to flatten into shape. Turn the pan down over them, to hold in the heat. When well risen, in about 15 minutes, turn them, to brown on other side. Eat them with Carnation coffee and a little jam—and your fresh fish, or a bit of bacon.

You will be proud of your achievement and everyone will be delighted with the smacking goodness of the satisfying meal.

Figure it out—you can't afford to be without Carnation Milk on your trip.

FREE BOOK—containing recipes for using Carnation Milk to make more delicious all dishes in which milk is used. Your address on a postal brings it.

Through Unexplored Guerrero

By PROF. WILLIAM NIVEN

Chapter V.—Among the Cave Dwellers

FOR the next year I devoted myself to mining with scattered hunting trips through Guerrero, until one night, seated under a brush ramada in a little Indian village some hours back in the mountains from Oatlan, one of the Indians turned the subject to the prehistoric races of the country. He was what is known as a "mixed"; that is, of mixed blood, Spanish, Indian and possibly a trace of white from the mesalliance of his mother with some wandering American. In him was no trace of the superstition of the pure Indian, and he cared no more for his dead ancestors than he did for a dead dog. He had been with me at the buried town of Yerbabuena, and again had gone into the country of the mound builders. He had wearied of mining and wanted to loaf for awhile on the pretext of opening more ruins.

"Did you know, Patron," he said, "that people thousands of moons ago dwelt in caves in this country also?"

I had seen the cave dwellings of Colorado and Arizona and New Mexico, but for all my years in Mexico I had never heard of the Troglydytes of Mexico's Egypt, and we talked far into the night over this third mysterious race which had gone the way of the city makers and the mound builders.

The result was that the end of February, 1902, found me, accompanied by this Indian, by my own mozo and by another tribesman of the south, striking out on horseback from Puente de Ixtla for the caves of Cacahuamilpa. These holes in the ground or rather, the many chambers and ramifications of one entrance, are larger than Mammoth Cave, Kentucky, and probably will be found to be the largest caves in the world.

Riding four hours through the mountains, passing over a country sadly dry and in need of the summer rains, we came at length to a gaping hole 300 feet in circumference, driven into the mountain side, and later cut and chiseled to a noticeable extent by the hand of man. Establishing a permanent camp in the shade of a sheer cliff more than 500 feet high, at whose base a small spring broke from the mountain, we plunged at once into the cave.

The entrance, large, and with a domed roof leading up probably 100 feet; further than the fitful light of our mesquite torches, would throw its reflection, led us into a labyrinth of chambers of gigantic dimensions, thousands of feet in extent and with roofs of unknown height. The passages were filled with stalagmitic furniture

and stalactitic draperies, while the walls were decorated with sparkling gems of arragmite and with other stalactites hundreds of feet in length.

In one chamber, which seemed only an ante-room to greater caverns beyond, the cathedral of Mexico City, with its two enormous towers, could be placed and still its spires would not touch the roof. Penetrating still further, walking from room to room for probably half a mile, we began to regret that we had not ridden, instead of walked into the monster underground world. There we seated ourselves on a long ledge running on one side the room, and were surprised to find that the bench was not natural, but had been carved and ornamented by the hand

of some Indian architect or stone mason. This set us exploring, and the further we got into the mountain, the more we became convinced that here, completely within the cave, had dwelt an entire tribe. Traces of fire-places, broken bits of pottery, spear and arrowheads, idols carved on the face of the living rock, seats hewn from the stalactites and stalagmites were found, and finally plain traces of stairways, now broken and impassable, but apparently leading to upper caves where the people of the lost tribe evidently had their separate and private homes.

By this time we seemed to have penetrated more than a mile, as I had unwound ten balls of string, each containing two hundred yards,

INCENSE BURNER—NOTE GENUINE JADE AMULET LYING AT BASE OF BURNER.

TOMB OF GUERRERO IN TOWN OF TIXTLA.

one end of which was attached to a shrub at the mouth of the cave. Our torches were burning low, and so we decided to eat our lunch and then retrace our steps, feeling convinced that with so small a force and such short supplies, we could not hope to get into the real depths of the cave. While we were eating I noticed a dull roar, the source of which seemed distant, yet the sound of which was quite clear. I turned to the guide for explanation, and he replied: "The rivers, Patron, which flow beneath the cave. When we return to the outer world we shall see them."

True to his word, as we stepped out into the sunlight two hours later, he led the way down and around the corner of the mountain, and there, out of two other gigantic natural tunnels in the face of the cliff, gushed two good-sized rivers, neither of which could have been flowing less than 12000 inches of water, and this the dry season at that.

The Indians have named these streams the San Geronimo and the Coatepec Harinas, and they flow together to form one stream, the Amacusac, which in turn flows into the Balsas. The place where these streams leave the mountain is about 500 feet below the entrance to the great cave, and some 300 yards around the curve in the great hill. No one, not even the Indians, has ventured to explore the caverns whence flow the twin rivers, notwithstanding the fact that there are fairly good trails, apparently carved by man from the solid rock, following the streams back into the mountain.

There is a legend among the Indians that back on the subterranean course of the San Geronimo River there is a great lake on whose shores stands an ancient city of the cave or cliff dwellers, once peopled by a large band of aborigines, but in whose ruins no modern man has ever stood. There is probably some truth in this legend, as bits of water-worn carved wood come floating down both these streams at seasons of flood, and along their banks are occasionally found fragments of carved stone unlike any of the carvings found in the ruined cities of the surrounding country.

Determined that the real ruins of these lost tribes were along the underground course of the

river, and believing that there must be communication with the rivers below and the great caves of Cacahuamilpa above, I determined to attempt to reach the fabled lake by following the course of the San Geronimo, which we ascertained was about twelve feet deep at its point of exit from the cave, and which was running like a mill race when it broke from the mountain side, showing that its course underneath the mountain must be at a considerable down grade.

That afternoon we rested and explored the mountain, finding several small caves which showed evidences of having been walled up in ancient times, and in which I found shards of comparatively modern pottery, but nothing which I considered of any value. Probably these caves had been used as shelters by goat herds of days since the Spanish occupation.

Next morning, provided with a number of torches, our balls of string and food for two days, we struck out up the narrow stone trail beside the river. It was a silent procession, the roar of the water drowning our voices, and its spray so drenching the path that walking was precarious in the extreme. The cavern widened for a space after we entered, and the stream became correspondingly shallower. So far as we could see from the light of our combined torches cast on the shallow water, there were no fish, but caught in the riffles of the stone bed of the stream we found several rounded pellets of jade and a number of beads, both of diorite and of jade, giving some foundation for our hopes that further above we should find a city of the dead just as it was abandoned by its builders.

On and on we pressed for fully five miles, finding the trail perfect, though worn, and discovering carved hand-holds in the rock wall in places where the ledge narrowed. Bats fluttered about our heads, while an occasional owl, frightened from its day time roost by the glare of our torches, flew wildly down stream, almost fanning our faces with its downy wings. Again the roar of the waters increased, but the cave did not narrow. Gradually the roof raised until it was lost in the darkness beyond the arch of the glow of our torches. The roar became thunderous, bats and owls alike disappeared, I kicked

what appeared to be a small half-round boulder out of the path, and my foot went through it as though it was paper. It was a fragment of a skull, of which nothing but a thin shell of lime was left. Here was hope indeed and then the guide, who was perhaps a hundred yards ahead, shouted: "El salto del agua! El salto del agua!" ("The leap of waters! The leap of waters!") and we stood in the presence of a waterfall whose summit we could not see, but whose spray drenched us to the skin, even through our heavy khaki clothing, and whose torrent plunged into a pool worn deep by the ages of ceaseless wear of the waters; churning the great pot into foam, and finally coming out headlong through a crevice in the wall of the pool—the San Geronimo River which flowed past our feet.

From the light of our torches we could see up, up, perhaps 150 feet along the face of the sheet of water, but still there was no end, no sight of the beginning of the fall. Far up in the dome of the vast cavern, somewhere beyond the ken of man, the river started on its plunge over a buried cliff which is, at least, more than a hundred and fifty feet high. Nothing less than an electric searchlight of considerable power would reveal the top of the fall, but after half an hour's rest we determined to try to follow the worn trail around the fall, but the guide, going ahead, returned to report that while there had been a carved stairway, evidently leading on up the cavern, it had been broken, and it was impossible to go further.

I followed him on to the end of the ledge, about a hundred feet further, and right at the edge of the falling sheet of water. There I could see, across a gap of about twenty-five feet, a well-defined stairway, leading up, up, also in the very spray of the cataract, but there was no way of crossing the gap broken out of the trail,

VIEW SHOWING THE MOUNTAIN WALL ON THE SPURS OF WHICH ARE LOCATED THE RUINS OF QUECHOMICTLIPAN.

beneath which boiled and surged the cauldron of waters into which the cataract fell.

Convinced that here the journey ended, so far as we were concerned, I followed the ruined stairway upward with my eyes, and there, perched alongside the falling flood, stood a round tower, built of carved stones laid in cement. The tower, probably one hundred feet from where I stood, could be seen only dimly in the fitful glare of the torches, but from it I could see a great idol head, its features fixed in a fiendish stare, gazing directly at me. Evidently this was the guardian spirit of the cavern, and the tower into which the hideous head was built was the watch tower guarding something more valuable beyond, possibly the ruined city of which the Indians of the outside world have legends.

Better far than the protection of the idol or the watch tower, however, is the broken trail, beyond which no human being can pass without the aid of wings. In fact, I do not see, without changing the course of the river, how any expedition, no matter how well equipped, could reach the tower, though I am planning to try again to read the riddle of the city buried by nature in the great cavern, if such a city there be, and I fully believe it exists.

After returning to the camp my guide told me of still other caves situated some four days' further ride into the mountains, and which white man had never seen. To these I determined to go, and breaking camp early next morning we struck out, following a trail in some places scarcely visible, in others so overgrown with jungle that we had to cut our way, often requiring two or three hours to cover a mile.

We passed the cuadrilla of Otatlan, then turned up the Teotepec to the Barranca de Chila, encountering several bad crossings, due not so much to the quantity of water in the river, as to the enormous boulders which everywhere filled its bed. We camped one night near the head of the barranca, at an elevation of 7,500 feet, and, rolled in our blankets around the fire, we could hear the pigs grunting in the jungle and the calls of jaguars roaming the hillsides far above us. Great owls, bent on their nightly hunting, flew over us, while we could hear all manner of animals drinking and fighting along the banks of the river both above and below the camp.

From this time on we had a constant battle with the jungle, often cutting with axes and machetes for hours before we could gain a single mile. In places where sheer dirt cliffs confronted us, we had to cut new trails with pick and shovel before we could even lead our horses up a few feet to catch the broken trail on the mountain side. Sometimes we had to unpack, the Indians carrying the mules' loads for long distances, while the animals were brought along slowly one at a time. Almost incessant rain began to fall in this section, greatly impeding our progress and increasing the danger from fevers and other diseases.

On the third night, however, we encamped in a forest of tall pines, most of them more than one hundred feet to the first limb and three to five feet in diameter. On consulting the instruments I found that our camp was 9,500 feet above the sea, and we noted with surprise that even at this elevation the jungle did not cease, but became even thicker among the giant pines.

We found countless tracks of wild animals—tiger, mountain lion, wild hogs, bear, deer and the little spotted, long-tailed ocelots—but weeds from six to ten feet in height, interlaced with vines and cane, made hunting an impossibility, though one of the guides did succeed in shooting a brace of wild turkeys from the branches of one of the pine trees.

We found no springs or pools, but the thick moss which everywhere coated the ground was so soaked with water that one practically stepped into a pool every time he put down his foot. We saw no evidences in the way of blazed trees or recent tracks in the trail that anyone had visited the place recently, and huge dead trees, fallen across the dim trail, added to our difficul-

DIORITE BEADS AND ORNAMENT, GREEN IN COLOR, SOMETIMES CALLED JADE, TAKEN FROM RUINS AT ZUMPANGO DEL RIO.

ties. Above our camp rose the peak of Cerro del Baul, companion mountain to Cerro de Teotepec, and so far innocent of the foot of white man on its ancient crest. When the guides told me this fact I made up my mind to digress from the trip to the caves long enough to stand on the summit of the mountain.

Accordingly we turned upward from the camp, reaching the top of the peak, 10,750 feet above the sea, shortly after noon. The jungle became clearer as we approached the top, until we found a comparatively clear space on the apex of the cone. It had been raining all forenoon, but just as we came out of the forest and stood on the summit, the sun burst from the clouds in unusual splendor, the curtain of the mists lifted from the lower levels, and I gazed on the most beautiful landscape it has ever been my lot to behold. It was a transformation scene of grand and incomparable beauty, exceeding even the views said to be obtainable from the summit of the neighboring peak—Teotepec.

Lying to the west was a labyrinth of moun-

tain peaks and barrancas, lying so far below as to seem to have been modeled in clay by a giant's hand on a giant scale. To the south was a wild, unbroken panorama of timber-covered firs. Beyond this flashed up an immense break in the divide, through which could be seen the blue waters of the Pacific Ocean, stretching out to the horizon in fascinating, level contrast to the wildly broken mass of earth lying below and nearer the base of the mountain. On the southeast, the great peak of Teotepec, rising 11,000 feet into the air, completed the picture, at which we gazed, spell-bound with admiration.

Here I secured a magnificent collection of large, vari-colored orchids, taken from the highest trees, and on the open spaces which we found on our descent of the other side, we could have killed scores of deer, chacalacas (a species of pheasant), wild turkeys and wild hogs. As it was, we feasted on their meat three times a day for two or three days, and then changed to ducks, which we killed along the water courses.

Although this mountain may not have been visited at all by modern men, its slopes were peopled heavily by the cave dwellers of prehistoric days. Hundreds of enormous masses of rock had fallen from the cliffs which scar one side of the mountain, and lay in all manner of positions down the slope. Beneath these the members of the dead race had scooped out commodious caves, walling the front, and in a few instances erecting stone buildings outside. Their civilization, however, apparently was low, and I found little aside from a few broken pieces of pottery to reward my short search. The best artifact found was an olla of terra cotta, thirty inches long by fourteen inches in diameter, with three handles, and roughly made.

From here we continued two days more to Tecomaxochitl, a small Indian village, in all respects like those I have described previously. Straight beyond this village for a mile or more the guide led the way, skirting the little town with the excuse that if we entered and made known the object of our visit, undoubtedly we would be forbidden to enter the caves. On the top of this hill I found a number of ruined buildings, all small, averaging only nine by twenty-four feet, and while digging into the floor of one of the ancient buildings, my pick went on through and into the entrance to what appeared to be a sealed cave.

Further investigation developed an opening, seven feet in length by three feet in height, its mouth closed with a thin wall of cut rock, bound together with a white cement of a hardness as great, if not greater, than that of the rock itself. Carving my way into this I found it to be a great tomb, some thirty feet long, the roof very little higher than the entrance, and the bottom covered with a thin layer of dust, evidently volcanic, which must have been in the cave before its use by the dead tribe which sealed up the entrance.

On top of this dust a ghostly sight met my eyes. Skulls covered the bottom of the cave so thickly that I could not put down a finger without finding a skull. There must have been hundreds of them with no other bones, and all were in a fine state of preservation. I lifted out a number of the skulls, and was surprised to see that they did not crumble to dust, though they must have been laid in their last resting

(Continued on page 316).

Days Off and Off Days

By F. G.

THE heat and humidity of Boston were oppressive on the afternoon of July 1, when we boarded the Dominion Atlantic steamer Prince Arthur, at Long Wharf. On the forward deck there was a breath of cool air, which grew into a delicious breeze as the voyage began. Down the bay a warship, a whaleback and a six-masted schooner were lying at anchor; an ocean steamer was just starting out—these were every day occurrences. A less familiar sight, however, was two aeroplanes off to the southward hovering over the water. Shortly afterward only one was visible, but it was several days later when we read in a Halifax paper how the other had fallen 500 feet, carrying two aeronauts down to their death.

The morning came cool and clear, so that there was no need of the foghorn on Cape Forchu to

Although in other years we have taken many fine trout from the two main branches of the Tusket and have heard more recently that there is good salmon fishing in their junction pool, with comfortable accommodations at a nearby farm house, we did not leave the train when it stopped at Tusket station, not even to enjoy once more the well-remembered hospitality of Mrs. Gilman of the American House. Neither did we get off at Port Clyde to cast a fly over the falls two miles above the railroad bridge where, coincidentally with the shutting down of the sawmills, the salmon and grilse are said to be coming back again. Nor at Shelburne, the gateway to the Upper Clyde district, sixteen miles away, where the streams abound with large trout. No, we did not stop at any of those good fishing places, but we went further and fared worse.

in its delivery. In the town there are many people of the same family name. Once upon a time one of them, a man of scanty locks, entertained an itinerant temperance lecturer so hospitably that at the close of his address the lecturer said: "We will now have a few words from Mr. Freeman, the one whose hair is thin." Whereupon, so our guide averred, seven bald-headed men arose in different parts of the hall.

The river itself is a small one. It has the name of being one of the very few streams in Nova Scotia where sea trout may be taken with the fly. Late in May or early in June, as the spirit moves them, they are found near the head of tidewater and are said to be attracted by any fly suitable for grilse, but in July one has to go up country in order to get them. On the afternoon of our arrival we took a few brook trout, enough for breakfast, from the east branch of the river, called Tom Tidney's brook. Late the next morning, with fishing tackle, cameras, blankets and provisions for three days, we set out on foot for an old lumber camp at Bethune's (pronounced Beeton's) meadow deadwater, eight miles from the hotel. The walk was a warm one, relieved by a cool breeze whenever the trail crossed a hilltop in the open, but oppressive in the brush and along low ground. Only a night or two before, however, there had been a frost which had nipped the tops of the ferns. Six miles from the start there was a halt for luncheon under an old yellow pine where water from a cold spring trickled across the wood road. The river broadened out there into a wide pond or deadwater, in which we fished for an hour or more without getting a rise. Then we went on to the camp.

Bethune's meadow deadwater is nearly a mile long, varying in width from fifty to two hundred feet, and in depth from two and one-half to fifteen or more. It has a gravel bottom, overlaid with mud along the edges where the meadow comes down to the shore. It is supposed to be the favorite spawning ground of the sea trout which ascend the river, but we saw no signs of them during the three days we were there. Before sunrise and late in the afternoon brook trout rose freely to natural flies and not so frequently to ours, although enough were landed to satisfy our needs. Dressed with a little butter and eaten from the plank on which they had been cooked before the live coals of the camp-fire, they were perfectly delicious.

Two miles further up the river there is a smaller deadwater called Coopertrap, after a Micmac trapper of earlier years, which Freeman was very anxious to have us try. But the extreme heat and the prospect of the walk back to town deterred us. Possibly this was a lost opportunity. At all events another angler, only two days earlier, when the weather was a little cooler, took nineteen sea trout, two of them weighing four pounds each, from one or both of the deadwaters.

In the middle of the forenoon of the third day we started down the other side of the river, taking enough brook trout from Oak Hill Pond, two miles below the deadwater, for a late din-

TOM TIDNEY'S BROOK.

guide the Prince Arthur to the entrance to Yarmouth Harbor and up the winding channel to the new pier. The custom house inspection was brief. The Halifax and Southwestern train was waiting, and soon we were speeding along the ocean shore of Nova Scotia.

To eyes wearied with a year of skyscrapers and narrow streets, the change to broad views grateful. It was pleasant to look out from the car windows on a panorama of farming and fishing villages of unpainted houses weathered to a silvery gray or painted white and with green blinds. At times the background was a white-capped bay, with fishing schooners tugging at their anchors, or a fragrant evergreen forest of spruce, hemlock and fir; and where the road bed skirted the shore there were broad, level beaches of firm white sand, or of pebbles, sometimes with a three-foot rampart thrown up by the surf a short distance back from the water's edge.

At Shelburne the Provincial Guides' Association had just held an annual meeting lasting two days. They had listened to addresses on conservation of fish and game and on kindred topics. They had amused themselves with contests of skill—moose calling, rifle shooting, log rolling and log chopping. Some of the guides came aboard the train at Shelburne, among others Spencer G. Freeman, whose home is at Sable River, which was our first destination. We esteemed ourselves fortunate in being able to secure his services.

Sable River is a town of few inhabitants, people in moderate circumstances, who wrest a living from the farm, the forest and the sea. Its hotel, kept by Mrs. Ida Harlow, has very comfortable accommodations for a limited number of guests and at a reasonable charge. Mail for anyone staying there should be addressed to West Sable River postoffice; if addressed to Sable River, there may be a delay of forty-eight hours

PLANKED TROUT.

ner in the woods, and arriving at the hotel in time for supper. During our absence a party of Sable River anglers had driven over to Port L'Herbert, five miles to the eastward, and had brought back forty trout from Timber Island Brook.

The next day we went by train to Liverpool and drove three miles up the Mersey to Milton, a quiet, attractive village extending for a mile along either bank of the river. On every one of six earlier visits, the first in 1892, the river and its affluents supplied an abundance of trout, grilse and salmon, but this year not a fish even rose to our flies during the five days

we were there. Even if there had been no rain for several weeks and the temperature varied from 98 to 101½ in the shade, and a steam dredge was at work in Liverpool Harbor, there ought to have been a few fish interested in the bright yellow fly which Forrest & Sons, of Kelso, tied last winter, copying our most successful fly in 1911.

Out of our eleven days in Nova Scotia only one was a good day for fishing—cool, cloudy, with gentle west wind and occasional showers—and that was the last day of all, when we were on the train coming home. Truly, those were "off days," which we hope will never be repeated.

In the Haunt of the Solomon Oaks

By ROBERT PAGE LINCOLN

THE evening before we had been sitting up sort of late by the fire discussing our plans for the coming day. It was October and the leaves were changing to gold and crimson upon the trees, beckoning to a change that would completely efface from the map of the earth this wondrous beauty, which truly seemed the supreme effort of nature, her fondest thought found life, to glow in the very expression of her mood. The time had now arrived on the calendar of sport for an annual hunt for those illusive little creatures of the Solomon oaks, the red and the gray squirrel, twin brothers of the wild. The silent woods were beckoning us, and true to the call we were now considering with very serious mien the forthcoming day, and the wealth it would bring to our store of experience. The hunting coats were hanging on their respective hooks, and our guns were down and had been oiled. The cartridges were there in their unopened boxes, ready for the moment when the cover of each would be slit open and the contents rustled out to do duty. What is a more

perfect manner of hunting for the squirrel than with the .22-caliber rifle? Truly, this is the gun for this especial pastime. One derives from its use in such a case vastly more of the true and genuine sportsmanship than with a gun of larger caliber, with the shotgun relegated to the oblivion where it belongs as far as being fit for use in squirrel hunting. This phase of the national pastime calls for much caution and much stalking, for a squirrel is a very wizard in hiding away among the leaves where, if one will remain concealed for a space of time and will be on the alert to all that goes on around him, he is sure to eventually locate his game.

Squirrel hunting is a sport that is annually resorted to by thousands of the sporting element who desire to use a little gun with a deadly effect, and who wish to sharpen up their shooting capacity by being given a long distance shot at a very small mark, as is only too often provided for in this branch of hunting. The satisfaction of scoring a kill nine out of ten shots under more or less unfavorable conditions is in-

deed a height worthy of attainment to, and those who have hunted the red and the gray squirrel in season will only too gladly vouchsafe the fact that it is pre-eminently one of the leaders of fall sport. Afield in the stubble, you hunt over your setters. This calls for the keenness to score a double with the shotgun, but there is no need of such a fine degree of care as that demanded in the shooting of squirrels with a long distance between the trigger finger and the quarry. You have your duck shooting from the blinds, which does not necessarily call for keen shooting, the matter being the correctness of the blind you have made, and how well you have hidden yourself. Then it is to up and blaze away as the leaders of the morning flight cleave whistling through the gray of the fog banks. You have your snipe hunting, and though there are often enough times when you are kept on the alert from the beginning to the end, still the present writer deems that of squirrel hunting much superior, as far as keen shooting is concerned. And so we might go on through all the various manners of game and game shooting, but lastly you will rest your thoughts upon a hunt among the oak thickets and remain there.

"When I want to go for squirrels, give me the .22." This was what Fred told me as he caressed his gun with one hand and took his pipe from his teeth with the other. "The .22 has the balance, the lightness, the perfect feel, and when I just get it leveled upon the head of a squirrel a-squatting there upon a branch, I believe I feel just correct. This gun I have had for years, and it has never failed me and it has been in not too careful hands at that. But to-day it is as good, if not better, than the day I purchased it."

Everything was made ready for the coming morning. The coffee pot with the right measure of grounds in it was set on the kerosene stove and the food placed where we could reach it best without any inconvenience. Then the alarm clock was set to the required hour, which happened to be four, and then we turned in to snatch a few hours in the arms of Morpheus. It seemed that I had hardly turned over, and the quilts had settled over my form, when far off in the distance I heard a voice bidding me awake. Then the alarm clock unwound its unmusical strain, and I arose, rubbing my eyes and wondering what had happened. Thus in the gray of the dawn I crawled out of a comfortable bed and slid into my garments, after which I gingerly made my way downstairs, being cautious enough not to awake the folks. A five minute session with the wash bowl soon cleared the nets off sleep from my befuddled brain, and I was ready for the breakfast Fred had made during my process of sleep elimination. With the hot coffee and a liberal supply of sandwiches we made a hearty meal, and then putting up our lunch and putting into the pack our coffee can and pail, we were ready to start.

The light of morning was just paling the east, and all was clear and gave promise of a beautiful day. The silence was intense, for the birds we had known in the summer had fled from the woods, save those few that stay till the very end of the season. Walking briskly down the road we drank deeply of the invigorating west wind, appreciating the glow of a new life springing through the body and feeling the sense of a great anticipation born in us. Soon we

would be cautiously treading the aisles of the woodland, moving along lightly, alertly, and then would follow a quick aim and a sharp report to split the quietude of the morning. It is not all of hunting to bring down so many birds or so many animals. It is much of the pastime to absorb all of the beauties around you and witness the various processes nature undergoes in bringing perfection to the heart of things. The billowing wind across the meadows, the stir in the leaves, and that sense of rejuvenation that spells its tale in your every effort toward a primitive upbuilding. Once again to feel the rifle in your hands after a long time. It seems like an eternity when you are in love with the royal pastime of hunting in whatsoever manner, and how once more the interest of it will awaken a new and more glorious appeal, when after long

out the heaviest thicket, and glancing up and standing still for a moment, I was glad that once more I was back to my beloved nature to drink of her sparkling elixir, truly the vitality of life.

An unconfined joy was beating in my breast. You will know it, who have trod the secluded ways and have stolen through the wild coverts with the gun held at ready. Enough! The woods are waiting, and somewhere in there the squirrels are up and sporting their red and gray coats in the morning dawn. Carefully making my way forward I peered into the branches and listened for that betraying signal that would mean the downfall of the squirrel. Cautiously drawing deeper in among the trees I paused and listened again, but could hear nothing. A moment later a shot rang out sharp and clear

missed. Again, and more careful this time, for I had located the creature's head, and the little fellow plumped out of his retreat as dead as a door nail. I had put an end to his thieving career. No more bird nests would he rob, no more lives would he pester and no more inconceivable cruelties would he perpetrate upon his brother, the gray squirrel, in making him unfit to propagate his kind, the kind which are truly the kings of this family. There I stood for a long time with the quietudes of nature around me to bear me witness. I held them up and admired them, the making of a dish fit for the nobility, if one would consider them foremost in the ranks of man. Note the beautiful tail and the sleekness of the gray. He has fed long and to repletion upon the wealth of the woodland, and he is rotund and prosperous appearing.

"THE SUREST PLAN TO PLEASE A MAN."

"FRED GOT HIS."

months you again start out to try your skill among the illusive folks of the woodland!

"We will try out the pasture woods first," suggested Fred as we neared our destination, "and after we have tried it there, we will take in the woods over at the big swamp."

Since I was perfectly in keeping with his plan we took our course toward the pasture woods. There it lay, as it had in the past, with not one seeming change marring its singular array of trees that skirted the hill on either side; great Solomon oaks, whose gnarled sides gave evidence of a respectable age. They stood there silent and immovable, the very personification of lordliness, in which nature is so prolific. As we made our way down the decline to the first trees, we heard deep in among the stands of ancient timber the barking of a hidden gray squirrel. The time had arrived.

On entering the woods I slipped a cartridge into the chamber of the gun and was ready for number one. Selecting my manner of procedure along the more unobstructed ways, I stealthily made my way into the shadows of the woods. The morning sun was gilding the tops of the trees with a dash of golden light that I have never seen so wonderfully clear and bright. The rays of that risen ball of fire seemed to search

across the hill, and I knew that my comrade was busy. Perhaps like as not he had recorded a clean kill. While I was standing there peering into the thick-leaved coverts, suddenly and without warning there was a swaying in the branches ahead of me, and before I knew it out popped a handsome gray squirrel closely pursued by a red. It is a well known fact that the red squirrel pesters the life out of his brother, the gray, and of the two my sympathy was wholly with the gray. As the larger squirrel ran out on the branch, I let out a shrill whistle and the two stopped in their tracks.

A bunch of fur on that bough! See! there is his head clearly shown by the rays of the down-pouring sunlight. The gun swung into position, the eye ran along the barrel and following the report the animal tumbled unceremoniously out of the tree. A clean shot; hit at the right mark, the head. The red squirrel wildly ran back into the tree and quickly retrieving the dead gray I made my way hastily forward, spotting the place where he had made his hasty exit. And I was on time, for a moment later I noticed a branch sway slightly, and there hidden in the thickest of the branches was my quarry.

Crack! The rifle spoke again, but I

I put them away into the pocket of the hunting coat with a contented smile on my face. I wondered what Fred was doing.

As if in reply to my question came the crack of that rifle again. A moment of silence and then another report that broke the tranquil calm of the morningtide. Two shots and I knew there was something taken into account, for Fred holds the rifle steady, so steady that the eye may not see it falter.

Slipping in a new cartridge I moved on ahead with my senses on the *qui vive*, and my eyes now taking on an acquired keenness, alert to every move and stir about me. Presently I arrived at a giant oak whose branches extended far out over me, as though to shield from mishaps its offsprings around it. Giant oak, and how I respect it! I would stand long and admire its iron strength and try to bring into my system some of its ruggedness and power. If I could but reach out so with my arms and shield those about me; if I could only stand so and watch the coming of the seasons and witness their going in fine weather and bad, in spring, summer, autumn and winter, when the hard winds are tearing through those mighty limbs. As I stood there running my eyes up and down that great length, suddenly I heard the dropping of

acorn shells near me. Instantly my reveries came to an end, and glancing up I searched my neighboring surroundings with a penetrating eye that took in all within my sight.

What a hidden creature, indeed! But not long would he go unseen, for sharp eyes were watching and waiting for the tell-tale movement. And soon it came. There he is in that tree next to me, a tinge of gray in between the leaves. He is sitting up, with a well selected nut in his two paws, turning it around the while he nibbles at it, presenting a humorous appearance of well-groomed body and well-fed complacency, thoroughly content with the world and all that is in it. The rifle slowly fell into position, the hammer dropped back, the fore finger curled around the trigger, and the shot rang out. Releasing his hold upon the branch he toppled down—down until he struck ground with a distinct thud. Got him clean through the head. Here, then, is the lord of them all; the very picture of luck—luck at its height and joyousness. I tucked him into the coat pocket and once more crept forward through the undergrowth.

Cobwebs tangled their networks over my face with that uncomfortable feeling that we all know. I was kept busy brushing them away and in keeping my eyes on duty. The morning sun was now creeping high up on the eastern slant of the heavens, and into the woods those downpouring rays marked my path. I paused to take in the intrinsic beauty of the scene before me, and to revel at the glorious picture that it presented. Here was the true wonder of creation; here was nature in her sublime magnificence, touched not by the tainted hands of man. Gone was the incessant rumble of the passing cars, the surging throngs of people on the city street, and I was given this in its place. The gentle murmur of the wind-stirred leaves and the cozy quietude that admitted of not the least disturbance. October was in her prime. My soliloquy was jarred.

I noticed him when I came down the path, strolling along leisurely with the gun in the crook of my arm. I had been too wrapt up in my reveries to think of the present, but now as I glanced up I saw him run across my path ahead, a good sprinting squirrel clad in the regulation coat of gray, and with his tail arched over his back. Up he scurried into the supposed safety of the tree, and commenced a harangue of excited scolding that told me only too well I was not desired in that locality. I paused under the tree and looked up. He was badly frightened, that was certain. He shook with rage and was quivering all over.

"Now, look here, Mr. Squirrel," I had occasion to remark as I planted the gun butt in the ground and stood there looking up at him. "I could drop you like a bolt of lightning from the sky from where you now sit, but being a dead game sport I am going to give you a chance. Can you sprint across the limbs as well as across the ground?"

The only remark he made to this was a continuation of his past performance of barking. Holding the gun in my hand ready, I threw a stick at him to get him started. With an excited jump he was off, and I was following. Up to the top of the tree he ran, and then paused for a moment ere he leaped to the next tree.

Crack! uttered the rifle spitefully, but the only result I got was a few leaves that eddied

slowly down, just as the squirrel frantically leaped, and was soon darting up the other tree and across to another before I was well prepared to give chase. Stooping low I ran along with my eyes concentrated upon the fleeing animal. Up, up, to the very tiptop branch of the tree, and there he rested. Crack! Again the rifle spit fire, but there was no evident wound. Hastily I slid in another cartridge. He leaped out into the air to cross a span of some ten feet. But he missed in his calculations and came crashing down through the tips of the outstretched branches. Thereafter followed a bustle of excitement, but I got him on a running shot by holding just a trifle before him as he fled out on a limb. Down he tumbled and I put him hastily out of commission.

Now, there, I had four squirrels, as nice a bunch as has ever happened into the big pocket in a hunter's coat. And there had been just enough excitement to make the bringing of them to earth exhilarating, and of such a nature as to warrant of the occasion being put down on the books of memory for a resurrection when the winter winds are howling over the gables and one is sitting before the fire. Truly a remembrance that I would treasure. I skirted the hill leisurely, taking my time, and looking over every inch of my way, listening to hear if there was any member of the tribe that I had left behind me whose bark would tell the tale. But there was no murmur in that direction, and before me I noticed the end of the woods, the open azure sky peeping through.

Without any further kill I made my way to the hill which overlooked the other side of the woods, and the surrounding country, and giving the agreed whistle, I got an answer from Fred, who was just rounding the edge of the woods. I saw the smile of elation upon his face and had a slinking notion his luck had been amply provided for. And there was a bulge in his pocket that told a story, mute evidence of a kill.

"What luck?" I propounded, tapping the bulge with the rifle, the while I searched his face. "That swell on your coat must be caused by something vastly larger than a squirrel. I should judge it were a rabbit."

"Wrong," said Fred, diving his hand into the oblivion of the outer pocket, and presently withdrew it and a partridge. And after the partridge followed three squirrels, all grays of about the size I had stowed away in my garment.

"I got that fellow down there this side of the fence where the bushes are so thick. He rose and dived down into the brush over here and I got him just ten minutes ago. Not so bad."

After comparing notes and sampling each other's tobacco, we lit up and started across the fields for the next woods, which was one that reached over a territory covering a half mile. The woods reached, we decided to follow former tactics, agreeing to meet on a path that ran through the woods, and then follow on together for a space. The woods at this point was not so thick but that it would make easy walking, and parting from each other, we started in. Barely had I parted the brush to make my initial step forward than a rabbit hopped out and made away along the edge of the woods. Despairing of a kill I swung the rifle up and took a snapshot and was plentifully surprised to see the animal topple over, get up and make away again. Putting speed to my legs I darted after, but try

as I would I could not find him. I muttered something unpleasant under my breath and vowed that from now on everything should fall beneath my aim, or I would know the reason why. This determination, however, did not carry as much fruit as I had expected, for I covered my end of the woods with the result that I only dropped three squirrels in a place where we had expected to eclipse all former efforts. I stood in the path waiting for Fred, when all of a sudden I heard "his whistle, and thereafter his call that I come over to him.

Wondering what was up, I hurried down the path to see him standing there before a giant oak at the bottom of which yawned a hole that seemed to be the entrance of one that ran the whole length of the tree.

"They are in here, Bob," he told me, with a smile on his face and a lifting of his eyebrows. "I chased three of the cusses into a hole above up there where the limbs meet. We will smoke them out and get the entire bunch."

I grasped the import of it at once. "We sure will," I slangily made remark, and suiting action to word, we began to accumulate leaves and small sticks for the purpose in view. When we had a sufficient store we filled the cavity and touched the match to it. Everything favored us, for the tree stood all alone so that a jump from one to another was quite impossible. A roll of heavy smoke descended and I pushed the leaves and sticks in further. When I was sure that everything was ready for the show, I ran out, grasped my gun, and took my position.

"Lord, here they come!" gurgled Fred gleefully, way down in his throat somewhere, and directly out of the upper hole appeared a squirrel. Bang! Fred's gun spat fire and the first squirrel dropped down from his perch. The next moment I was busy. As the smoke mounted higher, others began to come out, scurrying here and there, and one by one we got them, striving always to get them on the run, which at the best is a very hard and difficult shot, one that even an expert is sometimes fooled on. We dropped nine reds out of that tree, much to our amazement. Yet there was our kill as evidence, and there was the tree still smoking. We had caught the whole family at home.

"This," said Fred, after we had gathered them in, "amounts to a good morning sport, but there is yet time to add a few more to our bag before we cross to the creek."

"We will leave the rest of this woods, then, and take in the trees down there by the pasture," I suggested. "You remember we saw a bunch of them there just a while back."

Number one in the pasture trees we struck as soon as we got busy. Fred saw the animal run up a bare, dead oak, and telling me to run in and get him, he followed with the camera. There he sat on the end of a branch, with his tail nodding over his back. I crept up and caught him just as he was about to take flight across the limbs. He dropped to the ground and I retrieved him. All unawares, Fred had shot me with the camera.

The luck of the morning had been fifteen squirrels and one partridge for Fred and twelve squirrels on my part. This was sufficient, for the man who is not a game hog stops when he has killed the limit for his own use. And then the fire and the noonday. Thus ended a good day's sport.

Bird Preservation in Florida.

It does not take long for the birds to learn when they are safe from molestation. One of the most interesting sights I saw at Ft. Myers during a recent visit to that town was a flock of about 200 lesser scaup ducks that spent most of the time about the steamboat dock, and it required but a few moments at any time of the day to get them together by throwing food into the water. They would come within a few feet of you and seemed almost devoid of fear.

These ducks as well as the pelicans and gulls are protected and are an attractive feature of this beautiful town.

One photographer, whose studio is close to the river, sells pictures of the ducks feeding, and invests the proceeds in corn for them, a good thing for the birds as well as himself. The little blackheads are very numerous, both up and down the Caloosahatchie from Ft. Myers; in fact, they were the only kind of ducks I saw during my stay in that vicinity.

Crossing Tampa Bay immense numbers of this species were seen running up into the thousands, fairly blackening the water in large patches. Pelicans and gulls also appreciate that they are safe from harm and were seen in large numbers, the former being especially numerous at St. Petersburg where they frequent the docks and eagerly take any fish that happens to come their way, sometimes seizing the fish before they can be landed and occasionally swallowing hook and all. It is an interesting sight to watch these big awkward fellows fishing, but notwithstanding their unwieldy bulk and clumsy actions they manage to get all the fish they need and some to spare for the gulls at Pass-a-Grille. I noticed that the Florida cormorants were especially numerous, long lines of them flying toward "Bird Island" across the bay, where there is a Government reservation on which no one is allowed to trespass. This flight occurred late in the afternoon and probably contained several thousand birds. Herring gulls, laughing gulls and royal terns were very numerous here, while loons and grebes were always in sight.

The evident increase of all these birds in Florida waters is due largely to the untiring efforts of the Audubon Society, and is very gratifying to all who are fond of wild life, but the need of the hour is to save the remnant that remains of the once countless flocks of egrets that formerly adorned this State. Unless something is done, and that promptly, these beautiful birds will become a memory only. I noticed quite a good many of the large egrets around Ft. Myers. One bunch containing upwards of 200 were seen about ten miles up the river associated with large numbers of the little blue and Louisiana herons, but none of the little snowy herons was seen.

These beautiful birds are almost gone, one little bunch on an island on Orange Lake being about all that I know of. This breeding place now belongs to, and is guarded by, the National Audubon Society. It contains less than fifty acres of low-lying swampy ground, covered with a dense growth of willows and low shrubbery, but thousands of white ibis, glossy ibis and water turkeys, with some eight or ten species of herons, gallinules, rail, etc., make it their breeding ground, and under the careful protection of a warden it is hoped they will rapidly increase.

The fate of the parakeet, the ivory-billed woodpecker and, we might almost say, of the limpkin, will soon overtake the egrets, unless speedy protection is afforded the few that remain.

THOMAS H. JACKSON.

Wild Animals From Africa.

BY RALEIGH RAINES.

WIDE discussion of the plan to import into this country wild animals from Africa has been revived by the reintroduction of a bill in the House of Representatives by Representative Broussard, of Louisiana, which appropriates the sum of \$250,000 with which the Department of Agriculture is directed to import, domesticate and breed various species of deer, hippopotami and camels in the waste places of this country. The chief exponent of this policy was the late Dr. W. N. Irwin, of the Department of Agriculture, who really was the originator and foremost supporter of the idea. The scheme has met with considerable opposition, especially among the animal husbandry experts of the Department who have freely expressed their reasons in opposition to the idea.

Representative Broussard introduced his measure for the importation of these animals during the session before last Congress, but owing to the tariff and reciprocity measures occupying the energies and attention of the members, he failed to secure consideration of the bill, which condition of affairs generally prevailed during the recent session. Although the advocates of the proposition have been seeking to obtain an appropriation for more than two years, so far no steps have been taken to import any of the animals. Neither the Federal Government nor the individual States have brought in any foreign species to use for commercial purposes, and until the experts of the Department of Agriculture can be satisfied of the feasibility of the scheme, it is probable that the plan of Dr. Irwin and Representative Broussard will remain in abeyance. The objections to the plan as enumerated by the animal husbandry experts of the Department are threefold: First, that imported animals are a menace in spreading their own diseases among the cattle of this country; second, that hippopotami, one of the favorite species named, are too large and strong to admit of being kept properly in fenced inclosures; third, that the importation of wild animals will mean the extermination of the native game of this country.

The Department declares that we have in the United States at this time a number of valuable game animals, and no imported animal could add to the value of any of these. For example we have in the Rocky Mountains the Rocky Mountain sheep, which thrive there and are excellent food, and there is no other form of goat or sheep that would or could thrive more readily. In many instances similar to this we find native animals of value in the districts where wild animals would be placed. In addition to this fact the objection to the hippopotami is that it would be next to impossible to fence them economically, for they would break down an ordinary fence and do great damage to the surrounding country.

The possibility of infection was pointed out by one of the experts of the bureau of animal

industry who declared that many of the African animals are infected with the tsetse fly, and in addition have other ailments peculiar to their own country, and to bring these animals into this country might mean the exposure of domestic animals to similar dangers. "Of course there is a law preventing the importation of diseased animals, or those that have been exposed to disease," he added, "and although the Department of Agriculture would attempt to prevent the entry of any animal afflicted with disease, nevertheless the danger of infection would be great." It is pointed out that the future of the South and West lay in the development of the beef industry, rather than in the introduction of new animals. "A perusal of the series of papers published by Colonel Roosevelt," declared another official of the Department, "shows conclusively that it would be next to impossible to import hippopotami economically. Colonel Roosevelt then, too, tells how in Africa the animals pass over the farmers' land and thus inflict tremendous damage in a single night. It has been demonstrated by the Department of Agriculture that cattle can be cheaply raised in any part of this country, and especially so in the South and West where beef is being raised for three cents per pound. Of course these cattle have not yet been developed as highly as they can be developed if corn were fed, but considering their grade they compare favorably with any cattle in the country." The advocates of the plan including Representative Broussard, point out that if the hippopotami were introduced into this country, especially into the swamp lands of the South, they would live on the acres of aquatic plants which now serve to dam up the smaller streams, and which have at times seriously impeded navigation. The hippopotami would furnish a staple of meat food for surrounding districts, it is asserted, and would open up all of the smaller streams. Camels could be economically raised on the Southwestern plains, it is declared, and yaks and other mountain animals throughout the Allegheny range in the East and through the Rockies and Sierras in the West.

The chief claim of the advocates of the plan appears to be that through the importation and raising of the animals mentioned, the price of meat in this country would be reduced. In furthering this scheme for the introduction of wild game from Africa for the purpose of raising cheap meat, the advocates lose sight of the possibilities that might be secured through raising our own native game animals such as the deer, bison, caribou, elk and moose. These are acclimated to the various sections of the country, and in many cases could be raised cheaply with some of the inconveniences incident to the introduction of the African game mentioned. Of the animals just enumerated the deer are probably the easiest raised, the venison bringing from twenty-five to fifty cents per pound. A prominent game breeder quotes to-day red deer at \$60 each; axis deer, \$100 each; fallow deer, \$60 each, and Virginia deer, \$35 each. Buffaloes or American bison are quoted at \$250 each and elk \$75 each. The latter animals are of course not only expensive, but are not as easily domesticated as are the deer. Representative Broussard purposes bringing his measure before the House during the next session and should he fail to have it favorably considered there, he will try it in the Senate, to which body he has been elected.

SEA AND RIVER FISHING

A Sawmill River Trout.

ON July 26 last I could not resist a rush of the old feeling, and stole away from my work at midday. At 2 P. M. I was adjusting my rod on the bank of the Sawmill, about eight miles beyond the New York city limits.

Often I had gazed upon a short stretch of this stream and wondered if some of the old scarred veterans were not still standing sentry under its boulders and beneath its heavily fringed banks.

I waded out into a beautifully clear stream, running swiftly but quietly between banks brilliant with huge masses of Joepye weed.

My line was fatted and a No. 12 iron blue dun just touched with a mite of paraffin was affixed to a very fine six-foot leader.

I threw out above me close to the weeds, but the dainty little tempter brought no response. All through this stretch of clear, smooth water I would not gain a rise though I tried many flies. The stream then changed and became rocky and boisterous with swift runs and bubbling riffles. Between two rips, about thirty feet ahead, the current swirled under the right bank in a deep, quick flow.

I dropped the fly below the upper rip, a foot from the bank. It came rapidly toward me, when like a shot came the boil of a rise. I struck like mad, for I will confess that I was taken entirely by surprise. Just for one second the line was taut and the rod bowed, then back came the fly. Well, from that moment I fished with every sense alert. That was a trout; there could be no doubt about it from the way he struck and the character of the water where he was lying.

A little further on the water rushed between two large boulders, one of them shelving from the edge of the run high and dry above the stream.

Right plumb in the middle of this run my fly drew a fine rise. This time I struck better and hooked him. The strain of the line was toward the shelving rock, and clear out of the water, well up on the rock, splashed the surprised fish. Then again my stupidity worked havoc, for I should have instantly slackened the line. I did not do so, and the mad flops of the trout tore the hook out and back he jumped into his element.

It was a trout, a beautiful trout, eight or nine inches long, but whether brown or native I cannot say. Well, I had four other rises in a quarter of a mile stretch and lost every one. Wretched, miserable fishing, you will say, and so it was, for I ought to have landed two or three. But wait a bit, here comes the point of my story. I was thoroughly disgusted with my inability to properly handle the dry-fly cast and left the stream. As I walked along the bank toward the station another fisherman made his appearance up stream. From his left hand hung a huge fish which nearly touched the ground. A sucker it must be, I said to myself. When he came close to me I was so startled that I nearly dropped my rod, for there before me was a magnificent brown trout, eighteen inches long.

I could not weigh him, having no scales, but my tape showed a full eighteen inches. He had caught him about 200 feet further up stream in a deep rocky pool with a small bass spoon, tied with a fly, which looked like a cross between a red ibis and a parmacheene belle. This was

ON THE ROAD TO SAWMILL RIVER.
Photo by Todd Russell.

rather a startling exhibit for the old Sawmill just outside of New York city.

Are there more? Can they be tempted with a fly? Or was that the last leviathan in that once famous old stream?

Well, I don't know, but I'm going to try again, anyway. TYRO.

Rod and Reel Chat.

ATLANTA, Ga., Aug. 29.—*Editor Forest and Stream:* One of the charming features of fly-fishing is the accompanying good fellowship which spreads a good taste over the whole thing. The willingness with which one goes into his extra supply of tackle when a companion is in distress, to aid with helpful suggestions, to cuss in sympathetic unison, when the big one gets away, are attractions distinctive of the sport which increase in value as the years pass, and we get the matter of good fellowship into clearer perspective.

Let me state some results of personal experience in furtherance of this spirit and the rule to "tell all you know that will enhance the good of the order." It has probably been worked out by all of the boys, but I've never seen the particular matter in print.

Frequently you see suggestions from various authors as to whether it is best to put the reel on with the handle to the right or left. Somewhat in this connection Mr. Wells advocated, many years ago, an independent handle which permits the rod to be turned and used in casting with the guides alternately below and above. He concludes with the assertion that this is the only way to preserve the rod and avoid a "set." He further doubted the theory that the set would be prevented by casting with the rings below and playing the fish with the rings above.

He was entirely correct in both respects. With reference to the last, casting with the rings down and playing the fish with them up, it will be obvious to any one who will examine a set rod that this course simply aggravates the injury. All rods set away from the rings; that is, the forward cast imposes a heavier burden upon the rod than the back cast, and therefore the cane yields in the direction of the greater strain and invariably sets back from the guides. As a fish stays in the water where it belongs and does no air ship stunts, the strain imposed with the rings down is directly opposed to this set of the rod and tends to counteract it and straighten the rod. If the rod is cast in the usual way and then turned over when the fish is on, the set is simply increased and the funeral of that rod accelerated.

With reference to his first suggestion, an independent handle, and the kindred discussion as to which is the best way to attach the reel, there is an efficient substitute for the whole. This being merely not to use a reel on the rod at all for any fish this side of whales, which isn't a fish, anyhow.

If an independent handle is used and the rings turned up, the line wraps around the rod, and if wet causes some annoyance, while the additional metallic joint affects the action of the rod. If the reel is taken off, the line held in the left hand, the rod used a few minutes in casting with the rings down and then the rod is turned, the strain is applied to both sides and thereby equalized. The same course should be pursued in playing the fish.

If this policy is continuously followed, the rod will not deteriorate in action nor assume a set. I own several excellent rods which have seen hard, rough service, and there is no trace of a set in any of them. Some of these have been in use for fifteen years, and their condition furnishes ample evidence in support of this fact.

But about the reel. If you are to fish from a boat, place the reel flat on the boat seat and mark on both sides where the barrel of the reel is attached to the base plate. At these points drive two long wire nails into the seat far enough to hold securely. Then slip the flange of the reel over the nails and you have a fastening which will hold the reel in place and permit the line to render freely. If it is not desirable to drive the nails into the seat, then use a small square of wood which, with the reel attached, can be placed in a convenient part of the boat where it will be out of the way.

When the reel is in place put on the click or a light drag to prevent overrunning. Pull out all the line needed for casting and let it fall on the bottom of the boat. A good line will not kink or tangle provided you do not step on or disturb the coils. See that the bottom of the boat is clean and free from small projections.

With a fish on, regulate the strain with the left hand, and when the rush is over, pull in the line, clamping it to the rod with the first finger of the right hand when reaching for another grasp with the left. The line can be drawn in far more rapidly in this manner than with even a multiplying reel, and fewer fish will be lost. It is merely tournament casting applied to fishing.

If the fish makes a long hard dash, retard the line with the left hand until the coils are out and the line is then drawn directly from the reel. The nails will hold it in place.

If you are wading, only a few yards of free line as a rule are necessary. On the left breast of your shirt, coat or sweater (all this assumes you are casting with the right hand) sew a small pocket large and deep enough to hold closely the lower flange of the reel. Over this sew a bit of elastic. Put the reel you intend to use in this pocket and mark where a loop of elastic is to be attached on the upper flange close enough to the barrel of the reel to hold it firmly and yet loose enough to let the reel be put in place. Your manly bosom will furnish an ample reel plate which will be movable in the sense that it will move whenever you move. Corpulent brethren with progressive "bay windows" can attach the reel to a different part of the anatomy for purely decorative purposes.

Or a strip of whalebone, light wood or metal five or six inches long and an inch wide can be sewed in at the bottom, and then at the top after slipping it through a ring of metal or elastic, and the reel seat is then adjustable to any ordinary reel.

When the reel is thus put in place, it is perpendicular, with the handle to the right and easy to get at. If the handle is within the outer rim of the reel so much the better, and in casting or playing the fish the line is drawn off and either allowed to drop into the water or held in coils in the left hand. When it is desired to put the line back upon the reel, the rod is held in the left hand, the reel steadied with the fore finger and thumb of the same hand, while the right winds the windlass.

If you wish to impart immortality to some staunch, beloved rod, don't put the reel on it. And turn it every few minutes both in casting and scrapping with your fish.

CHAS. T. HOPKINS.

From Olive to Biffed.

HOBOKUS, N. J., Aug. 26.—*Editor Forest and Stream*: I intended to be truly what my name indicates, ephemeral; that is, "lasting but a day," as one of the dictionaries defines it. But I cannot resist the temptation to ask why you headed the last letter from Mr. Ralph Bisbee "Biffed Bisbee." Why not "Bisbee, the Biffer"? Would not that be more appropriate? When it comes to hurling the English language in large lumps and with the utmost precision all "South Paw" artists might as well back off the stage when the "biffed" one, as you call him, or the "biffer," as I call him, makes his bow before the footlights. The words that he hurls at the "buggy" one now writing are so overpowering—I might say so overwhelming in their potentiality—that I can only say, in a weak voice: "That's good."

But seriously, I would like to say a few words to Mr. Bisbee, "bilious" and "buggy"

though I may be. If he really thinks that I was attempting to "shy any bricks" in his direction when I recently mentioned "fish hogs," or spoke of "teaching a young man to be a fish hog in one lesson," I am bound to believe that the strong intellectual force that makes possible Mr. Bisbee's trenchant sentences must have gone back on him temporarily. To tell the exact truth, I thought I recognized in Mr. Bisbee, after reading his first letter, something of a humorist. Surely, there could be no sting in his wildly absurd characterizations of some of our angling lights. A writer for the public press usually puts himself in a position where he is liable to receive more or less good-natured ridicule. That is one of the penalties of being in the spotlight. So, too, does the critic in turn lay himself open to retort.

Mr. Bisbee, it seemed to me at the time, was in a mood to criticize the fact that certain outdoor journals have opened their columns to the dry-fly scribbler. Being much interested in the dry-fly I was impelled to ask why in the world dry-fly fishing should not prove fully as interesting to the angling reader as the constant stream of wet-fly stories that we have been accustomed to reading for so many years. Nor did I intend to convey the impression that our angling writers are "fish hogs." But I do think that angling literature, which conveys the impression that the main idea of angling for trout is to catch fish in quantities by any means whatever that is within the law, is liable to start the young angler on an undesirable path. All may not agree, but I have always been grateful during an angling career of at least several years that the one who taught me to fish for trout also taught me that the only sportsmanlike way to take these fish was by means of the fly. When referring to certain kinds of angling stories containing teachings of another kind, I had no individuals in mind, but only certain types. Mr. Bisbee's type was not among them. Probably I was wrong in imputing Mr. Bisbee's "attack" on certain dry-fly literature to a bad stomach, similar to my own—not a bilious one, by the way. I still think that many anglers have a habit of carrying a chip on their shoulder, notwithstanding the fact that they are tolerant. Is it not a fact that if one advocates the use of the dry-fly, many wet-fly fishermen "put up their dukes," as they say in sporting parlance, in an uncalled for defense of something that has not been attacked at all—namely, the wet-fly. Who in the world has tried to shove down Mr. Bisbee's throat "a ten-foot rod" and told him he really must use it? As a man who has used the floating lure several years, and the wet-fly many years, I cannot remember once having had a member of any school try to "shove anything down my throat" like that, though arguments we shall always have; and what whiles away the time better around the evening camp-fire? As a matter of fact, is the intolerance sometimes shown about lures usually exhibited by the advocate of the dry-fly?

And I have also been accused of hinting at "plagiarism," merely because in an unfortunate moment I referred to the terms "bulging" and "tailing" as copyrighted English expressions? Of course I should not have used the word "copyrighted" in this connection, as this could mean nothing. The meaning that I intended to convey was that up to the present time, so far as

my somewhat limited experience has taught me, these words are peculiarly English. I cannot imagine how anyone could think for a moment that the use of such common terms could constitute literary theft. Surely, if one is not a great word artist, he should be very careful in his choice of terms when mixing up in an angling "controversy."

Having made amends to Mr. Bisbee (whom I still regard as a humorist), not for what I intended to say, but because of Mr. Bisbee's apparent interpretation of what I said, I now trust that I may be allowed to become a true ephemera, "lasting for a day only," and not be forced to become a perpetual dispenser of words.

OLIVE DUN.

Illinois Casting Club.

CHICAGO, Ill., Aug. 27.—*Editor Forest and Stream*: The following scores were cast on Saturday and Sunday, Aug. 24 and 25. Weather on Saturday was clear, wind southwest, velocity about twenty miles per hour. On Sunday wind was south, about seven miles per hour. The light tackle dry-fly accuracy was deferred until the evening and was cast in a very light south wind. Scores:

Half-ounce accuracy, bait:			
Amman	98.5	Kerr	99.3
Stanley	99.3	Swisher	99.0
Spencer	97.8	Nicholson	99.1
Baucr	98.0	Kernaghan	98.7
Cook	97.5	Huntley	98.8
Heston	98.8	*Amman	98.7
De Garmo	99.3	*Spencer	97.3
C W Grant	97.7	*Stanley	99.1
McFarlin	96.3	*Bauer	99.0
McCandless	98.8	*Cook	98.2
Kirk	97.7	*C W Grant	97.3
Wehle	97.9	*Pierson	98.9
Whitby	99.1	*Hartstall	98.0
Asper	98.0	*Kerr	99.4
Pierson	99.2	*Nicholson	99.2
Hartstall	99.0		

Salmon fly:			
	Feet.		Feet.
C W Grant	114	Stanley	123
W T Grant	112	*C W Grant	105
Swisher	102	*W T Grant	104
Amman	116	*Stanley	125
De Garmo	125		

L. T. dry fly, accuracy:			
Linder	98.12	*Linder	99.2
Whitby	98.13	*Whitby	98.9
De Garmo	99.5	*De Garmo	99.7
Heston	99.3	*Heston	99.2
Stanley	99.10	*Stanley	99.
Pierson	98.8	*Pierson	98.
Swisher	99.	*Swisher	98.11
W T Grant	97.7	W T Grant	97.14

Distance bait, one-half ounce:			
De Garmo	202 $\frac{1}{2}$	McFarlin	95 $\frac{1}{2}$
Amman	102 $\frac{1}{2}$	*Amman	146 $\frac{1}{2}$
Heston	172 $\frac{1}{2}$	*Stanley	200 $\frac{1}{2}$
Stanley	117		

*Re-entries.

While it is impossible to give an entire résumé of the scores, we will note a few of the honors won for our club. Mr. DeGarmo won the all around championship cup and also tied for first place in the salmon fly. Mr. Linder (whose honors we share with the Chicago Fly-Casting Club) was first in the quarter-ounce accuracy bait. Mr. Nicholson won first in the half-ounce accuracy bait. The championship pennant is a matter of a tie between our club and the Chicago Fly-Casting Club. This will make an interesting cast-off for some future date.

Two of our club records have been broken during the last few days. Brother Stanley, in casting the half-ounce distance on Aug. 24 made a single cast of 226 feet, the best previous record in our club being 221 feet. Again in the light tackle dry-fly accuracy on Aug. 25, Brother Stanley made a score of 99.10, our best previous record being 99.9. A. F. SWISHER, Sec'y.

GAME BAG AND GUN

A Canadian Outing.

CLEMENT L. WEBSTER.

MR. JOHN LAURIE, a relative of the writer, spent several months last season with the game in Canada, an account of which is here given as related to me.

I reached Regina, Saskatchewan, about the 15th of August last. In this region are many little lakes and ponds, generally partially filled with coarse grass and rushes. Several species of ducks breed and rear their young, stopping here each season instead of going further north and northwest as do a majority of their companions. In these little lakes and ponds I saw thousands of ducks, many of them too young to fly even at this late season of the year. This was the close season, and as is usual with ducks with young they were all very tame. Teal, mallards, spike-tail, blue-wing and other species were here and remained until ice formed on the water in November, when they left for the south.

I saw only a small number of cranes, and wild geese, none of which appeared to breed here. Prairie chickens in large numbers were present all over the country, especially in the stubble fields, and afforded splendid shooting during the open season. The Sunday hunting law is strictly enforced in this country, and the inhabitants generally appear to take an earnest interest in the protection of game and in the observance of the game law.

On the wild lands grows a gray bushy grass six to eight inches tall, generally called "wool grass," which cures on the ground and is exceedingly nutritious. Many of the settlers allow their stock to run during the winter and obtain their living from this grass, and they always come out looking sleek and fat in the spring.

Sixty to sixty-five miles north from Regina is a group of drift or moranic hills, called Last Mountains and Touchwood Mountains. These mountains are partially clothed with the northern poplar, to the exclusion apparently of all other species of trees. Here a few elk, white-tail deer and an occasional moose are reported.

As the open season here is short, the game is pretty well protected.

During the short open season, however, the hunting privileges are pretty well taken advantage of, especially by the people of the region. The big game keeps almost wholly to the hills and appear quite well able to maintain themselves here.

Prairie wolves are quite numerous and are of a different breed from the little coyote of the States. Toward evening one day as a friend of mine was driving home across the yellow prairies he saw a wolf not far from the trail and started after him with his team on the dead run. For a time the chase was exciting, but on coming within shooting distance my friend brought him down, and loading him into his wagon, drove home.

In this northern country as elsewhere the wild game is being driven back before the advance of civilization, and within a few years,

in spite of the excellent game laws, the wild life here will have become a thing of the past.

Closed Territory Increasing.

ALBANY, N. Y., Aug. 27.—*Editor Forest and Stream:* In looking over up-State newspapers I cannot help noticing the steadily increasing tendency to post lands against hunters and fishermen. This is particularly noticeable in the Adirondack section where luckily, however, the State owns so much territory that there always will be room for those who are so fortunate as to be able to reach this public paradise.

And right here it may be well to say that the Adirondack region is not for the poor man, unless the poor man already resides there. It costs a lot of real money to reach the Adirondack country. It costs a whole lot more to stay there (because prices for the simplest necessities are far higher than in the cities), and it would be very hard indeed for any but the ablest men to get any sort of work. So it should be well understood that if ever the policy of renting camp sites in the Adirondacks is adopted, these sites can only be for the well-to-do, and that such a course will not result in any benefit to the sick and the needy.

Returning to the subject of closed lands, let me call attention to the last edition of the Elizabethtown Post, which is the newspaper which I see oftenest from Essex county. This carries no less than sixteen notices forbidding trespassing on as many different pieces of property. Some of these notices forbid hunting, some fishing, some both, and some add trapping and berry picking. But all shut out the men who are seeking trout and deer from places which, in many cases, have been free to the hunter and fisherman for generations. Occasionally a notice states that permission to fish can be had by paying fifty cents for each individual, not a prohibitive sum by any means, but sufficiently indicative of the thrift of the landowners. All the notices state positively that trespassers will be prosecuted to the full extent of the law, and some of them obligingly state in addition that the punishment of the trespasser is \$25 fine. In a couple of instances where the notice declares that the property posted "dedicated as a private park for the propagation and protection of fish, birds and game," the information is added that in addition to the penalty for the trespass, the hunter or fisherman is liable to be sued for damage to property.

If my recollection serves me, Essex county streams have been liberally stocked by the State in the past. If any stream is so stocked at the request of the owner of the land through which it flows, he is barred by that fact from excluding the public, for he must sign an application for the fish which could be set up as a defense in any suit brought for trespass on such property.

Possibly, however, the Conservation Commission is keeping track of such matters, since they seriously affect the rights of many people.

JOHN D. WHISH.

Reduced Price Improved Quality.

HAVERHILL, Mass., Aug. 18.—*Editor Forest and Stream:* In reply to yours of recent date inquiring in what form I sent money will say it was a \$1 bill. If it is lost in transit, the only thing for me to do is send you another. I will send money order next time.

You naturally ask why I wish to discontinue. For no reason, except I am not so enthusiastic as I was some years ago regarding everything that pertains to hunting; in fact, my guns are for sale, as game is so scarce near settlements that it is useless to chase the muzzle of a gun around, so much so that I have lost interest in the whole business. I have been a subscriber for five years as you say, but you will be some surprised when I inform you I have not been without FOREST AND STREAM for twenty-five years. I took it from news stands for years, but I surely could have saved some coin if it had been by subscription. In the halcyon days FOREST AND STREAM was \$4 per annum, but you have kept pace with the times and improved the paper and lowered the price.

The majority of your best writers to my fancy have crossed the bar, peace to them, as they were valued friends of mine through their writings. My favorites in order were Roland Robinson, Fred Mather, Cabia Blanco, Nesmuk Sears, Hermit Walton and a few lesser ones. Oh! and Schultz, whose Indian tales are classics. He is writing some for the Youth's Companion of late, I am pleased to note. I did not intend to try to preach a sermon when I started in, so will close.

CHAS. F. ORNE.

Illinois Shooting.

BLOOMINGTON, Ill., Aug. 16.—*Editor Forest and Stream:* Quail hunting is to be excellent next winter, according to the farmers of Central Illinois. They say that the coveys seen this summer have been large and much more numerous than in former years. The weather conditions have been propitious and the birds have thrived. Rabbits are also numerous, and the supply will be unlimited by the time the season opens. Farmers say that the young rabbits now seen are almost large enough to eat. Prairie chickens are scarce and the efforts to protect them by four years of closed season appear to be without success. Young squirrels are numerous where the timber has extensive growth. The outlook for fall shooting promises to be satisfying to the nimrods of all classes.

E. E. PIERSON.

New Publications.

THE PURPLE SAGE, by Zane Grey, Harper Bros., price \$1.25.

Zane Grey hadn't lived many years at the time of his story, but he has nevertheless given an "among those present" touch to his latest book, "The Purple Sage." It tells graphically and interestingly the life on the Utah frontier in the early seventies. It relates the history of the Mormon plots against the too few Gentiles, weaving a charming story of love and romance throughout the narrative. It abounds with Zane Greyism and action. You will make a mistake if you don't read it.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

THE WEEKS BILL.

ENLIGHTENED sportsmen throughout the country agree that such a bill as that presented by Representative Weeks, of Massachusetts, is necessary to prevent the speedy and total extinction of certain migrants. They point to at least two cases—that of the wild pigeon and the Eskimo curlew—in which shooting during the breeding season has resulted in annihilation. The woodcock and woodduck are in immediate danger of a like fate as a result of unrestricted shooting.

It is significant that of the twenty-four varieties of ducks, geese and swans breeding within our borders, the woodduck is the one most distinctly a resident of the United States. Protection for this bird would be sure to result in its increase, for it seldom leaves the confines of the Union. Many other species, which have been driven from their former breeding grounds, would stop with us again, if on their arrival in the spring they were not greeted with deadly fusillades which compel them to continue northward.

Since many of the individual States refuse adequately to protect migratory birds, the only way their extermination can be prevented is for the National Government to do so. It is held in some quarters that this would be unconstitutional, as interfering with the police powers of the States. But there is precedent for Federal control of matters which concern the nation as a whole when the States refuse, or are unable to control them.

The action of Representative Mondell, of Wyoming, in having the Weeks bill stricken from the calendar of the House a few days before adjournment was uncalled for, inasmuch as it was recommended by the American Game Protection and Propagation Association and all others who are qualified to pass judgment on such a measure. During the recess of Congress

every sportsman and bird lover should work in the interest of the Weeks bill, so that when it is presented at the next session of Congress, sentiment will be too strong to be upset by the gentleman from Wyoming.

PARCELS POST.

NEWS that the Parcels Post service goes into effect Jan. 1 gladly will be received by those who go South this winter to shoot quail, duck and other game birds. It will enable them to ship an eleven-pound package of birds, properly labeled, of course, to their home, and at about one-quarter the expense and half the time required to send by express. Then, too, every hamlet has its postoffice, while express offices sometimes are far apart.

The law admits to the mails practically all kinds of merchandise that can be safely transported, including products of the farm and garden, provided such articles do not weigh over eleven pounds, nor exceed seventy-two inches in combined length and girth. Above four ounces rates are by the pound or fraction thereof, and varying with distance as follows:

	First Pound.	Each Additional Pound.	Even Pounds.

MOUNTAIN CLIMBING.

THE man or woman who never has enjoyed the delights of mountain climbing has yet another joy to live for. Few are the sports requiring such combined physical and mental resources as seeking altitude afoot. Strength and physical fitness are most useful to the climber, but while the former may be dispensed with to some extent, the latter is absolutely essential. The perfect mountaineer may be impossible at other sports, but he can beat James Thorpe, of Olympia, when it comes to climbing. Steady nerve, coolness in times of danger, ready resource, agility, perfect self-control, discipline, patience and long endurance are called for, if the sportsman would write his name in the history of mountaineering. Foolhardiness has no place in the climber's book, for that way danger lies. Difficult ascents are a tonic to the mountaineer of many seasons. There is nothing quite like the enjoyment of pitting your skill against the forces of nature, the skillful choice of route, the careful working round a precipice, the surmounting of a pinnacle that allows little foothold, the avoidance of an avalanche-swept slope, and then the final ascent of the summit. What is there in life that can equal it? No wonder climbing attracts so many of the most intellectual men of the day, for it exercises the mind as well as the muscles, and only those who appreciate the more subtle beauties of nature can empty

the glass of its joys. Climbing, too, teaches self-reliance and dependence upon one another. The members of a climbing party know that each is working for all and all for each. A failure to notice what the man ahead is doing, a momentary lapse of attention to the matter in hand, may bring disaster to all. It is indeed a sport par excellence.

GOOD SPORTSMANSHIP.

COMMODORE J. STUART BLACKTON, of the Atlantic Y. C., has discovered that not to be a citizen of these United States denies him another privilege than that of helping to slay the Bull Moose on Election day. It took from him what he, so ardent a yachtsman, considers the yet more glorious opportunity to steer his marvelous little speed boat in the race for the Harmsworth trophy in the international races at Huntington Harbor.

According to the deed of gift of the trophy, presented by Lord Northcliffe, "helmsman and crew must be citizens of the country the boat represents." It turns out that, although Commodore Blackton, an Englishman, has resided in America for twenty-six years, he never has become naturalized.

This should have ended the matter, instead of which the Motor Boat Club of America cabled the donor asking him to waive the rule for these particular races. This, to our way of thinking, was most unsportsmanlike. It might be said to be looking a gift cup in the mouth. We believe Mr. Blackton, who has been tireless in his effort to improve the sport of motor boat racing in this country, would have been too much of a sportsman to have accepted the waiver had Lord Northcliffe been foolish enough to grant it.

ERRATA.

THROUGH error in the secretary's report in our issue of last week we gave the date of the fifth interstate tournament under the auspices of the Newark Bait- and Fly-Casting Club as Sept. 12. It should read Sept. 7.

The Ballade of the Seekers.

BY R. M. CLEVELAND.

FAR in the past when the world was small,
 Hemming the Mediterranean Sea,
 There sounded for men an elfin call
 To rise and search unceasingly,
 Beyond the farthest mountain cone,
 For the lands that uttered endlessly,
 The whispered call of the wide unknown.
 Men listened then and were held in thrall
 By that distant summons of mystery,
 Till they rose and obeyed, and leaving all,
 Went forth to find what they knew must be,
 In the South, where the happy birds had flown;
 In the North, which breathed so icily,
 The whispered call of the wide unknown.
 They followed their voices, some to fall
 In the burning desert in agony,
 And some to be lost in the spruces tall,
 Where the gray wolves hunted hungrily.
 But they marked their paths with a guiding stone,
 That men might follow more easily
 The whispered call of the wide unknown.

L'ENVOI.

Princes, hark to the wind in the tree,
 How through its branches there is blown
 To your hearts, Lords, and the heart of me,
 The whispered call of the wide unknown.

YACHTING

Larchmont Y. C.

IN spite of the vicious weather, thirty-six yachts started in the fall regatta of the Larchmont Y. C. last Saturday. The committee—Horace E. Boucher, Lawrence C. Dalley and Frederick D. Sperry—postponed the start, thinking the wind would moderate, but as it did not, they arranged new courses. The 65-footers were sent away at 2 o'clock and made a very pretty start. Istalena took the lead on the wind and held it to the end, beating Winsome 1m. 7s. and Aurora 1m. 56s., winning the Wilson Marshall prize offered for the race week series when the three yachts were tied. The 31-rater Windward defeated Joyant by 2m. 27s. In the race for the 30-footers, in which there were six starters, Rowdy, sailed by H. S. Duell, was the winner by 35s. Helen II., owned by E. Randolph, won the schoonerette class by 20s. E. F. Luckenbach's Suelew won in the Q class and won the sail-off of another time of the race week series. The Larchmont Interclub class was won by Whiff by 44s. from Hamburg II. Mlle. Boss sailed a match race with Virginia and won. Amethyst won the Jewel class and Cynosure won in the star class. The summaries:

Handicap Class, 1st Div.—Start, 2:35—Course, 9/4 Miles.		
Alert, R. B. Budd	4 07 58	1 32 58
Amanda, B. R. Stoddard	4 14 07	1 39 07
Dorinda, L. H. Dyer	4 20 42	1 45 42
Corrected time—Alert, 1.32.02; Amada, 1.36.48; Dorinda, 1.45.42.		

Handicap Class, 2d Div.—Start, 2:35—Course, 9/4 Miles.		
Mist, H. T. Hornidge	4 25 48	1 50 48
Corrected time—Mist, 4.45.49.		

Handicap Class, 4th Div.—Start, 2:40—Course, 9/4 Miles.		
Grace II., J. F. Lambden	4 01 40	1 21 40
Corrected time—Grace II., 1.17.35.

N. Y. Y. C. 30-footers—Start, 2:15—Course, 9 3/4 Miles.		
Rowdy, H. S. Duell	3 43 17	1 28 17
Nepsi, J. De Forest	3 43 52	1 28 52
Okee, J. A. Mahlstedt	3 47 25	1 32 25
Ibis, W. K. Busk	3 55 14	1 40 14
Caprice, R. N. Ellis	4 00 33	1 45 33
Carlita, G. B. Kulenkampff	Did not finish.	

Sound Schooners—Start, 2:20—Course, 9 3/4 Miles.		
Helen II., E. Randolph	3 57 16	1 37 16
Vandalia, W. B. Duncan, Jr.	3 57 36	1 37 36
Alicia, W. M. Baldwin	4 00 19	1 40 19
Moira, C. Cowl	4 01 04	1 41 04

Sloops, Class Q—Start, 2:25—Course, 9 3/4 Miles.		
Suelew, E. Luckenbach	4 01 55	1 36 55
Alice, G. Davis	4 02 40	1 37 40
Essex, J. L. Mitchell	4 03 47	1 38 47
Edinee, R. J. Schaefer	4 04 08	1 39 08

Seawanhaka-Corinthian Y. C.

COLD SPRING HARBOR, Aug. 20.—Eighteen yachts sailed in to-day's races to try out for the regular fall regatta. Istalena won the race for 65-footers, beating Aurora 1m. 35s. In the race for 31-raters, Windward finished 2m. 2s. ahead of Corinthian. Okee was the winner of the race for the 30-footers. Vandalia won the schoonerette race, and in the class for 15-footers Grilse, Flicker and Thelema were so close that the committee made Thelema a winner by 1s. with a dead heat for second place. The summary:

Sloops, Class K—Start, 12:40—Course, 20 1/2 Miles.		
Istalena, G. M. Pynchon	4 21 59	3 41 59
Aurora, C. Vanderbilt	4 23 34	3 43 34
Winsome, E. T. Hall	Did not finish.	

Sloops, Class P—Start, 1:00—Course, 15 1/4 Miles.		
Windward, R. A. Monks	3 19 28	2 18 28
Corinthian, H. C. Smith	3 21 30	2 21 30
Joyant, W. H. Childs	Disabled.	

N. Y. Y. C. 30-footers—Start, 12:55—Course, 15 1/4 Miles.		
Okee, J. A. Mahlstedt	3 20 37	2 25 37
Juanita, S. C. Hunter	3 21 07	2 26 07
Phryne, J. P. Morgan, Jr.	3 21 45	2 26 45

Sound Schooners—Start, 1:05—Course, 15 1/4 Miles.		
Vandalia, W. B. Duncan	3 43 02	2 38 02
Moira, C. Cowl	3 44 32	2 39 32
Rival, W. H. Judson	3 44 51	2 39 51
Alicia, W. M. Baldwin	3 48 09	2 43 09
Helen II., E. Randolph	3 48 33	2 43 33
Alys, F. R. Coudert	3 50 57	2 45 57

Seawanhaka 15-footers—Start, 1:10—Course, 6 1/2 Miles.		
Flicker, E. C. Henderson	2 25 24	1 15 24
Grilse, E. P. Roosevelt	2 25 25	1 15 25
Thelema, C. Mackenzie	2 25 25	1 15 25

Weather conditions last Saturday were far from satisfactory for the annual autumn regatta of the Seawanhaka Corinthian Y. C. at Oyster Bay. Everything considered, however, the regatta was quite a successful one. Chief interest as usual centered in the event for the big 65-foot racers—Istalena, Aurora and Winsome. Only the day before in the invitation regatta this trio of sailing craft had fought out a sharp struggle in a twenty-mile breeze, Istalena winning finally by a matter of nearly 2m. from Aurora. But the tables were turned yesterday. With W. Butler Duncan acting as skipper, Aurora took the lead at the start and was never headed. From third position in the Friday event for New York 30-footers, Phryne, owned by J. P. Morgan, Jr., moved into the winning sphere in Saturday's race over a shorter course. In the schoonerette class, Moira and Alicia left the other boats far in the rear. There was scarcely any daylight between the two as they passed the committee boat with Moira a winner by 6s. The summary:

Sloops, Class K—Start, 1:25—Course, 15 Miles.		
Aurora, C. Vanderbilt	4 32 52	3 07 52
Istalena, G. M. Pynchon	4 37 47	3 12 47
Winsome, E. T. Hall	5 02 02	3 37 02

Sloops, Class P—Start, 1:40—Course, 6 1/2 Miles.		
Corinthian, H. Smith	2 59 17	1 19 17

New York Thirties—Start, 1:45—Course, 6 1/2 Miles.		
Phryne, J. P. Morgan, Jr.	3 04 21	1 19 21
Caprice, R. N. Ellis	3 05 23	1 20 23
Okee, J. H. Mahlstedt	3 08 26	1 23 26
Alera, J. W. and E. P. Alker	3 09 44	1 24 44
Carlita, G. B. Kulenkampff	3 10 05	1 25 05
Nepsi, J. De Forest	3 10 40	1 25 05
Juanita, S. C. Hunter	3 11 12	1 26 12
Rowdy, H. S. Duell	3 11 20	1 26 20

Sloops, Class Q—Start, 1:50—Course, 6 1/2 Miles.		
Edmee, S. J. Schaefer	3 12 58	1 22 58
Alice, G. Davis	3 19 28	1 28 29
Essex, J. R. Mitchell	3 20 04	1 30 04

Schoonerettes—Start, 1:55—Course, 6 1/4 Miles.		
Moira, C. Cowl	3 23 22	1 28 22
Alicia, W. M. Baldwin	3 23 28	1 28 28
Helen, E. H. Randolph	3 32 23	1 37 23
Rival, W. H. Judson	3 33 04	1 38 04
Vandalia, W. B. Duncan	3 35 55	1 40 55
Alys, F. Coudert	3 43 21	1 48 21

Seawanhaka Fifteens—Start, 2:25—Course, 6 1/2 Miles.		
Flicker, E. C. Henderson	4 24 05	1 59 05
Thelema, T. MacKenzie	4 27 40	2 02 40
Imp, S. L. Landon	4 39 40	2 14 40

Nahant Dory Club.

NAHANT, Mass., Aug. 31.—By winning to-day's race, Francis Gray's Grayling won the pennant and the season's championship for bugs. J. S. Lovering's Bambino, which has been consistent in her work and admirably handled by her owner, gets second place. The summary:

Elapsed.	
Grayling, F. Gray	1 23 20
Stinger, W. O. Gay	1 23 35
Bambino, J. S. Lovering	1 23 45
Midge, A. S. Johnson	1 24 25
Humbug, J. H. Foster	1 24 28
Spider, T. Motley	1 24 30
Bugaboo, Nelson Whitney	1 25 52
Brownie III., S. E. Guild	1 27 30

Marine and Field Club.

THE annual regatta of the Marine and Field Club was held last Saturday under bad weather conditions, but was eminently successful nevertheless. In the first division of the handicap class, Claire had a long lead rounding the Fort Hamilton mark and was well up with the Q boats in the reach down the channel. The air was so light that the regatta committee ended the race for the majority of the classes at the end of the first round. At that hour Suelew and Claire had decided leads in their respective classes. Starting almost five minutes late, Blue Bill won the second division of the handicap class: The summary:

Finish.		Elapsed.	
Suelew, E. F. Luckenbach	4 32 40	1 32 40	
Spider, H. Chubb	4 34 30	1 34 30	
Grayjacket, F. C. Noble	4 36 48	1 36 48	
Soya, W. A. Barstow	4 37 27	1 37 27	

Handicap Class, 1st Div.—Start, 3:05—Course, 6.15 Miles.		
Claire, W. C. Van Clief	4 45 12	1 40 12
Joy, Le Sauvage and Geer	4 48 58	1 43 58
La Cubana, J. H. Ives	4 59 12	1 54 12
Corrected time on Claire, 1.39.54; Joy, 1.43.58; La Cubana, 1.48.23.		

Handicap Class, 2d Div.—Start, 3:05—Course, 6 Miles.		
Blue Bill, Zeb Mayhew	4 49 50	1 44 50
Gunda, W. H. Hall	4 55 12	1 50 12
Corrected time—Blue Bill, 1.38.35; Gunda, 1.44.45.		

Sloops, Class S—Start, 3:10—Course, 6 Miles.		
M. and F. H., Camp and Marchant	4 46 45	1 36 45
Cyrie, Dr. C. L. Atkinson	4 51 52	1 41 52

Gravesend Bay Knockabouts—Start, 3:15—Course, 8 Miles.		
Mouse, R. E. Dingman	5 24 50	2 09 50
Skylark, M. A. Howard	5 28 18	2 13 18
Slow Poke, F. L. Durland	5 29 07	2 14 07
Merry Widow, Bailey and Bailey	5 33 38	2 18 38

Beechhurst Y. C.

THE second annual regatta of the Beechhurst Y. C. was held on Aug. 25 at Whitestone Landing. The course was a triangular one, sailed twice over, ten and a quarter miles. On the run home in the star class, Commander Fry seemed assured of victory, until Star Faraway parted her headstays, leaving Corey's Little Dipper to carry off the honors. In the S class, Drena once more made an easy killing. In the Manhasset Bay class, Tixy turned the trick. The summary:

Class R—Start, 2:15.		Finish.		Elapsed.	
Virginia, C. Shields	Did not finish.				
Hamburg, W. H. Voth	4 29 17	2 14 17			

Bayside Bird Class—Start, 2:20.		Finish.		Elapsed.	
Teaser, A. Nesbitt	5 18 25	1 58 25			
Loon, A. G. Knapp	4 14 15	1 54 14			
Dedo, A. G. Andrews	4 15 18	1 55 18			

Class S—Start, 2:20.		Finish.		Elapsed.	
Nereid, J. R. Shephar	4 13 23	1 53 23			
Drena, Sam Shephar	4 07 10	1 47 10			

Manhasset Bay Old Class—Start, 2:25.		Finish.		Elapsed.	
Tixy, L. F. Eggers	4 42 27	2 17 27			
Avis, H. Gerber	4 45 00	2 20 00

Red Bank Y. C.

RED BANK, N. J., Aug. 31.—Five yachts sailed a ten-mile handicap race this afternoon. On the last round Clinton R. James' No Name gained the lead and held it to the finish, winning the cup offered by the fleet captain, John F. James. The summary:

No Name, C. R. James		2 12 35
Widow, O. Wagner		2 12 45
May Win		2 15 14
Dolphine		2 16 56
J. G. Gillig's Papoose finished 12m. later than Dolphine.		

Annisquam Y. C.

GLOUCESTER, Mass., Aug. 31.—To-day's winner was R. Hammond's Swallow. The summary:

Squam 15-Footers.		Elapsed.	
Swallow, R. Hammond	1 39 40		
Tabasco Jr., H. H. Wiggin	1 44 50		
Snipe, Wiggin Bros.	1 57 40		
Princess, J. P. Prince	2 10 03		
Nisan, D. H. Woodbury	2 11 00		

Bayside Y. C.

IN a drizzle that hovered over Little Neck Bay last Saturday, the Bayside Y. C. regatta was held. The winners were Arthur W. Knapp's Loon and William H. Johns' Betty. The summary:

Bayside Bird Class—Start, 3:45.

	Finish.	Elapsed.
Loon, A. W. Knapp	5 43 45	1 58 45
Skylark, J. W. Dayton	5 50 05	2 05 05
Dodo, A. C. Andrew	5 50 05	2 05 05
Teaser, A. Nesbitt	5 51 30	2 06 30
Curlew, C. L. Willard	5 54 40	2 09 40

Bayside One-Design Class—Start, 3:45.

	Finish.	Elapsed.
Betty, W. H. Johns	5 50 10	2 05 10
Mary Jane, W. E. Banks	5 57 22	2 12 22
Edna J., A. Nesbitt	6 08 18	2 23 18
Rowdy, C. Medicus	Did not finish.	

The annual Labor Day regatta of the Bayside Y. C. was sailed under "wet" conditions. In the Bayside Bird Class the six yachts sailed the closest race of the season. Arthur W. Knapp's Loon won from Arthur C. Andrew's Do Do by 44s. William H. Johns's Bettie established a record for the course in the one-design class, making a triangular course in 1h. 30m. 10s. In the morning there was a race in which no owner was allowed to sail his own craft. Walter Dayton, at the helm of Charles G. Meyer's Plover, beat Loon, which was piloted by Arthur C. Andrews. The summary:

Skippers' Race—Start, 11:25.

	Finish.	Elapsed.
Plover, Walter Dayton	12 41 10	1 14 10
Loon, A. C. Andrews	12 43 03	1 18 03

Yachts Change Hands.

THE Hollis Burgess yacht agency has sold the following:

The 45-foot waterline yawl Siesta, owned by the Edward Hatch estate of Boston, to Maitland Alexander, of Pittsburgh, Pa.

The 45-foot motor boat Tern, owned by Edward Motley, of Nahant, Mass., to Frederic R. Kellogg, of New York.

The 25-foot waterline sloop yacht Multnomah, owned by Frank Drake, of Chicago, to Frederick Higginson, of Cohasset, Mass.

The 21-foot knockabout Pawnee, owned by George H. Collyer, of Boston, to Phillip L. Smith, of New York.

The 21-foot raceabout Lethe, to J. Justin Dyer, of the Hingham Y. C.

The 21-foot sloop Bohemia, to a prominent member of the Mosquito Fleet Y. C.

The 18-foot knockabout Anne, owned by C. Barton Pratt, of Manchester, N. H., to W. H. Canterbury, of the Boston Y. C.

Motor Boating

The Harmsworth Cup.

WHILE the matter of postponement of last Monday's race at Huntington was under discussion by the committee, there was a lot of talk about the sportsmanship of several of the competitors, says the New York Times. It was freely charged that two fins had been added to Baby Reliance III. after the race on Saturday, and that this addition was contrary to the deed of gift controlling the cup contests. It was also said that Commodore Blackton is the technical owner only of Baby Reliance II. and not the real owner, as the conditions require. These critics held that the fleet of Baby Reliance boats had been built on speculation and that Blackton held them on a contingency clause. James Simpson, owner of Peter Pan V., the boat that made the fastest time in the trials, but which was not selected by the committee as one of the three American defenders for the cup, said he would bet \$500 that his boat could defeat any of the Baby Reliance fleet.

An Englishman who came over here in the interest of the challengers said:

"Since the Americans were not anxious to race to-day, we agreed to a postponement. We English in the motor boat game are sportsmen. We could have had a walkover to-day, and can protest on a dozen different grounds if we desire to do so. But we are not desirous to win out on a technicality. We want to show the efficiency of our boats in comparison with the American craft.

"Since last night we have seen and heard at least a dozen things, each one of which, if true, would have enabled the British to file a protest. There is no need for that, however. The English boats are ready to race in rough or smooth water. I was present yesterday at the overhauling of Baby Reliance III., and saw the fins attached to the boat. Under the deed of gift we could protest, as this change constitutes a violation of it."

Tales were told which would tend to show that there has been more or less juggling with the names of the boats and the Roman numerals attached to some of them. It was said that in order to hide the identity of one, it had been repainted. These changes, it was alleged, had been made in the West. There is no registry of motor boats in this country and the identification of a boat cannot be made officially.

"I'm willing to go before a notary and swear that the Baby Reliance III. was known as the Reliance X.," said James Simpson. "I saw a picture of Reliance X. in the show window of a store in Chicago, and that picture corresponds in every detail with the present Baby Reliance III."

The fact that Commodore Blackton says he is the owner of Baby Reliance II. and his wife the owner of Baby Reliance III. is in spirit a violation of the rule which says that the owner or owners of one entrant in the race must have no interest in another contestant.

Delaware Championship.

THE speed boat championship of the Delaware was won by Al Par Nel, Jr., owned by Commodore Robert Smith, of the Keystone Y. C. J. C. Canderslice's XQOME was second. The Class B race for displacement boats went to Commodore Krusen's Rocallanna. The summary:

Class A.

Canoeing

Lakanoo Boat Club.

THE annual regatta of the Lakanoo Boat Club was held at Burlington, N. J., on Saturday afternoon, Aug. 24. The club house and grounds were profusely decorated with flags and lanterns which, with about 300 guests and fine weather, made it a great success from a spectacular point of view as well as an aquatic one.

The events of the afternoon were as follows:

Club Fours, Double Blades, Quarter-Mile.—Won by Lakanoo B. C.: Page, Sleeper, Gauntt, Sholl. Time, 1m. 13s. Second, Algonquin C. C.: Tidd, C. Gregory, Rose, M. Gregory. Third, Mohawk C. C.: Jordy, Lloyd, Hendrickson, Waite.

One Man, Single Blade, Quarter-Mile.—Won by B. A. Sleeper, Lakanoo B. C. Time, 2m. 7s. Second, L. Fine, Chippewa C. C. Third, J. Reeder, Yapewi A. C.

Tandem, Double Blades, Quarter-Mile.—Won by Gauntt and Sholl, Lakanoo B. C. Time, 1m. 35s. Second, Reeder and Reeder, Yapewi A. C. Third, Sleeper and Page, Lakanoo B. C.

Tandem, Single Blades, Quarter-Mile.—Won by Sleeper and Page, Lakanoo B. C. Time, 1m. 25s. Second, Gauntt and Sholl, Lakanoo B. C. Third, Reeder and Reeder, Yapewi A. C.

One Man, Double Blades, Quarter-Mile.—Won by Muschert, Chippewa C. C. Time, 1m. 22s. Second, Koenig, Yapewi A. C. Third, M. Gregory, Algonquin C. C.

Club Fours, Single Blades, Quarter-Mile.—Won by Lakanoo B. C.: Sleeper, Gauntt, Page and Sholl. Time, 1m. 23s. Second, Chippewa C. C.: Margerum, Black, Kemble and Fine. Third, Mohawk C. C.: Jordy, Lloyd, Hendrickson, Waite.

Tandem Overboard, One-Eighth Mile.—Won by Sleeper and Page, Lakanoo B. C. Second, Gauntt and Sholl, Lakanoo B. C. Third, Kemble and Fine, Chippewa C. C.

All events were open to members of clubs belonging to the Associated Canoe Clubs of the Delaware, and being the last regatta held by any of the clubs this season, the Lakanoo Boat Club clinched their claim to the holding of the association trophy for this year with a total of 100 points. The number of points scored by the other clubs in the season's regattas are as follows. Algonquin C. C., 8; Chippewa C. C., 28; Mohawk C. C., 9; Yapewi A. C., 44.

Following the races, lunch was served to guests and members, and in the evening a very enjoyable dance was held in the canoe room on the first floor of the club house.

HENRY B. FORT.

Storing Canoes.

NEW YORK CITY, Aug. 23.—*Editor Forest and Stream:* Can you enlighten me in regard to the following matter?

I am a member of the Manhattan Canoe Club. We are about to change into new quarters, and considerable discussion has arisen over the best way to store canoes.

Some hold that a canoe is in the best position when supported upside down on the gunwales, while a few, myself included, think it best to set a boat on its keel. What do you think? Have you ever had occasion to look into this matter? If so, will you give us the benefit of your findings?

D. W. THORN.

A. C. A. Officers.

Frederick W. Cramphorn, 26 Winter street, Woburn, Mass., was elected Commodore, and B. L. Goodwin, 304 Atlantic avenue, Boston, Mass., Secretary of the American Canoe Association for 1913.

DRIVERS AND TWISTERS.

Secretary Schortemeier writes that the Bergen Beach Gun Club's next regular monthly shoot will take place on Tuesday, Sept. 10., at 1 P. M.; and, beginning Sept. 7, there will be shooting every Saturday at 1 P. M. The Cosmopolitan Championship, at 16yds., will be the main event on Saturday, Oct. 12, at 9 A. M. Added money as usual.

The annual registered tournament of the Cincinnati Gun Club, will be held Sept. 12 and 13, but the grounds will be open on Sept. 11 for practice. Shooting on Sept. 12, the first day, will begin at 9:30 A. M.; on the second day, 9 A. M. The Interstate Association Trapshooting Rules, as revised in 1909, will govern. Targets, 2 cents each, included in all entrances. A good dinner will be served each day. Manufacturers' representatives will shoot for targets only. Grounds are located at Latonia, Ky. Take Rosedale car at Fountain Square, Cincinnati. A limited assortment of loaded shells will be on sale at the shooting grounds. Shells forwarded by express or freight must be prepaid and marked with the owner's name. They will be delivered to the grounds if sent in care of the following firms: The Powell & Clement Co., 410 Main street; Bumiller-Remelin Co., 432 Main street; Brendamour Sporting Goods Co., 17 E. Fifth avenue, Cincinnati, O. Further information relative to the tournament will be cheerfully furnished by R. F. Davies, Secretary, 2414 Copeland street, Cincinnati, O.

W. G. BEECROFT.

Indians' Tournament.

THE thirteenth annual tournament and pow-wow of the Okoboiji Tribe of Indians was held on the shores of Lake Erie, at Cedar Point, O., Aug. 27, 28 and 29. The Point is a beautiful summer resort, ten minutes' ride across the bay from Sandusky, and a more ideal spot for an outing would be hard to find. At this tournament social features take precedence, most of the participants bring their wives with them, and the squaws and papposes of the Indians are present to welcome and entertain them. It is the one shoot of the year at which all meet as one large family, the main point being to have a good time yourself and see that others enjoy themselves.

The arrangements for the shoot were in charge of R. O. Heikes and J. R. Taylor. Every detail was perfectly seen to, and during the tournament not a hitch occurred. The weather was not such as would have been selected, but as no committee can regulate this, no complaint can be made on this score. During the week the wind "boxed the compass" with varying degrees of violence, and created a greater variety of conditions affecting the targets than is usually seen at a shoot. There were frequent showers, but except on Wednesday, none severe enough to stop the sport. On this day it was impossible to begin the program until after dinner, and it was necessary to cut out the special event by the Indians in costume. J. N. Lindsey was ground manager. He served in this capacity when the tournament was held here four years ago, and is strictly "on the job" all the time. He got together a good field force, which is largely responsible for the smooth running of the affair. Three Ideal-Leggetts were installed on the beach, not far from the hotel. Targets were thrown toward the lake, the shooters facing almost due north. The office was in a room of a nearby cottage hired for the occasion.

At trap No. 1, Jake Horn was referee and scorer; Geo. Seigel puller. At trap 2, Lee Mciriam, referee and scorer; Frank Link, puller. Trap 3, Jesse Green, referee and scorer; C. J. Nesselhorf, puller.

The program consisted of ten 15-target events each day, entrance \$1.40 in each, money divided Rose system, 5, 3, 2, 1. The Indians added \$600 to the purse, \$500 to the money back, and \$100 to the twenty low guns. On the last day the Mallory cup match was shot, being the only extra event during the week.

This tournament was the last one at which the professionals will be allowed to annex any of the simoleons; hereafter it is "targets only" for them. This step was initiated by the Indians themselves, and was done purely in the interests of the amateurs, and to advance the game. At the meeting of the Indians, the organization was handed over to the amateurs, no office to be filled by a professional. The professionals have by no means given up their interest in the tribe in taking this step, but will continue to work for its success and growth, and believe that both will be enhanced by their action.

The attendance this year was disappointing, as at least one hundred shooters had been expected. With the radical change made by the tribe this year, future tournaments should show a constantly increasing entry list.

In resigning as High Chief, an office he has ably filled for fifteen years, Mr. Marshall stated that after careful deliberation it had been thought best to eliminate every vestige of professionalism from the organization, but that every professional now an Indian would help cut in every way possible. He predicted a great future for the tribe, and thanked the Braves for their loyal support since the tribe was formed. The thanks of the Indians and their friends were extended to the Cedar Point management, for its courtesy during the tournament, and they anticipate with great pleasure being here next year.

Practice Day.

Twenty-nine of the big chiefs and their paleface friends assembled on Monday, and lacking better game, spent the afternoon in endeavors to kill the elusive clay bird, having more than average success. The day was some hot—a trip down the line emphasized that fact—and shady places were at a premium when the journey was finished. A high sand ridge back of the traps cut off the strong west wind and prevented it from having any noticeable effect on the flight of the clays. The program for practice day consisted of six 15-target events, entrance \$1.50 in each, divided Rose system, 5, 3, 2, 1. Shooting began about one o'clock, and was finished before five, when most of the contestants made a quick change from shooting to bathing costumes and cooled off in the lake.

Geo. Maxwell (Chief Right Wing) bagged the most game during the afternoon, letting only 4 of the 90 birds get away. Roundy Chamberlain started off at a pace which put him in the lead for the first two events, but got lonesome and slowed down, finishing in a tie for second on 85. Wm. Ridley (Chief Silent) didn't get off right, but soon hit his gait, got 'em all in the last four events, and went out in company with Roundy and Painter. The latter (Chief Quick Paddle), shot a nice race, and but for a little error of pointing in the fourth event, would have been in Maxwell's company. Moore seemed to have a liking for the hoodoo number, 13; first, he'd break a straight, and then 13, alternating throughout the program, and scoring three of each. He was tied for third place on 84, with Dickey, who slipped up in the last two events and lost his chance for a higher position. J. R. Taylor (Chief Buckeye) got a bad start in the race, and could not catch up. He would

like to know how those four targets in the first event got away. T. A. Marshall (Chief Long Talk) came to grief in the fifth event. Up to that time he was tied with the leader, and it was certainly hard luck to lose four birds, and his chances for high honors.

The unexpected always happens; anything more unusual than to see Chief Bald Eagle (R. O. Heikes) drop 5 birds in an event is hard to imagine, but that's what he did in the second event, and all because his mind was working on the details of the management of the shoot. Jas. W. Bell (Chief Ding Dong) did not ring true, and only after the second event did he get properly toned up. H. D. Smart met with the usual fate of one struggling with the gun problem, but after the first event seemed to have solved it for a while, only to fall down again at the finish. Old guns, like old friends, are the best, and it pays to stick to them.

The scores of practice day follow:

Culver	75	Speer	73
Painter	85	Bell	81
Chamberlain	85	Dickey	84
Taylor	80	Hassam	77
Moore	84	Krupp	70
Ridley	85	Ebberts	76
Smart	76	Harts	48
Maxwell	86	Markham	72
D A Edwards	78	Doolittle	58
Loving	68	Donnelly	52
T A Marshall	82	Zinn	44
Kuebler	72	Hoffman	2
Johnson	74	Young	54
Spangler	79	Kellar	35
R O Heikes	81		

First Day.

The weather on Tuesday morning, the opening day of the tournament, was not exactly ideal. Heavy clouds obscured the sun, and the wind blew a gale from the north. Toward noon, however, the sky cleared and the wind moderated. The attendance was a great disappointment to the chiefs of the tribe, who have borne the brunt of preparation, and a surprise as well, that the very liberal added money should not have proven attractive to the many crackerjack amateurs residing within a radius of a few hundred miles of this place. In hopes that some might come on belated trains, the program was not started until 10 o'clock, and was held open until noon for late entries. Forty-three shooters visited the cashier, and faced the traps in all of the ten 15-target events. Everything worked smoothly, 6,450 targets being thrown without a hitch. The first squad finished in the tenth event at about 12:45, and three-quarters of an hour later the last squad sheet was passed in to the compiler of scores.

The scores made were not up to the average, only twelve shooters out of the forty-three broke 90 per cent. of better, and that is not a good showing for the men behind the guns. But the conditions were strange and somewhat hard. The strong wind had its effect, and the sound of the breakers, with the line of surf and white-capped rollers confronting the shooter, may have caused some of the goose eggs in the score sheets. However, a few of the contestants put up some good work. L. S. German led the bunch with 144 and a run of 77 straight. Then came J. R. Taylor, C. A. Young and R. W. Clancy with 142 each. An amateur, Horace Heikes, crowded the professionals out of third place with 141, defeating Rolla O. Heikes by one target. The next places were filled by amateurs, G. E. Painter scoring 139, C. M. Moore and J. W. Bell 138 each, and Wm. Ridley 137.

Long runs were made by C. F. Moore and Wm. Ridley, 52 and 56 each. A few of the boys wanted a little more shooting, but a majority had had enough, and the afternoon was spent in visiting the various amusements at the Point and in the surf.

J. R. Taylor and wife and W. R. Chamberlain and wife were comfortably located in a cottage close to the shooting grounds, and enjoyed home luxuries. F. W. Markham said the wind had the boys scared, and they couldn't call the bluff. Andy Meaders can hold his own with the young 'uns. Only once did he drop out of the money. Mrs. Johnston is an enthusiastic lover of trapshooting, and acquitted herself creditably at the score to-day. A crowd always assembled back of the firing line when her squad was up. Ira Krupp, of Sandusky, was too busy to shoot his best clip; he covered the shoot for the local papers, and did a little boosting for Ye Oak Meadow Gun Club, of which he is manager. Scores of first day:

D L Culver	131	A Meaders	130

MEETING.

A business meeting of the tribe was held on Tuesday evening, High Chief Tom A. Marshall presiding. D. H. Eaton was appointed secretary pro tem, with the approval of the Indians present. The minutes of the last meeting were read and approved. High Chief Marshall

then addressed the meeting, regretting that the tournament was not the success (in point of attendance) that had been expected. He said, in part, that there was considerable dissatisfaction with the custom prevailing of allowing the professionals to compete for the purses, and suggested that at future tournaments only amateurs should shoot for the money, and also that all officers in the tribe should be held by amateurs, thus practically making the tribe a purely amateur organization. In making these suggestions he wished it understood that not only he, but all other professional Indians would help push the interests of the tribe to the utmost of their ability. His suggestions were adopted, and at the next tournament it will be "professionals shoot for targets only."

Nominations for officers were next in order. S. S. Johnston, of Minneapolis, Minn., was nominated for High Chief. It was voted to close the nominations, and Mr. Johnston was elected. Nominations for secretary were called for. The question of separating the office of secretary and treasurer was advocated, and J. R. Taylor (Chief Buckeye) advocated keeping the two distinct, and nominated D. H. Eaton, Cincinnati, O., as secretary. It was moved by R. O. Heikes (Chief Bald Eagle) that Mr. Eaton be adopted into the tribe, which was done, and he was then elected secretary for the ensuing year. Jas. W. Bell (Chief Ding Dong), St. Louis, Mo., was nominated for keeper of wampum, and was duly elected. Geo. E. Painter (Chief Quick Paddle), Pittsburg, Pa., was nominated for vice-chief by J. R. Taylor, and was elected. J. R. Taylor moved that L. W. Cumberland, Columbus, O., be taken into the tribe, and the motion was carried. The following tournament committee was elected: J. S. Speer (Chief Black Stick), St. Marys, Pa.; Dr. D. L. Culver (Chief Long Smoke), Jersey City, N. J., and Ray Loring (Chief Shoot the Line), Marshall, Ill.

Then the question of a location for the 1913 tournament was brought up. R. O. Heikes and J. R. Taylor favored Cedar Point. High Chief Marshall explained that the custom had been to hold the tournaments two successive years in the West, and then for two years in the East. As the last two shoots had been in the West, it was up to the Indians to select a place in the East, and he knew of no better place than the spot where they were this year. Dr. Culver jokingly said that where he came from Ohio was considered to be a part of the "wild and woolly West," and thought the tournament might be held nearer the Atlantic. He was assured by the High Chief that Ohio was only on the very fringe of the real West, and thousands of shooters looked on the Buckeye State as very near the place where the sun rises. It was decided in favor of Cedar Point for the 1913 tournament and pow-wow.

R. O. Heikes and J. R. Taylor were added to the tournament committee by the High Chief, and were instructed to confer with the authorities at Cedar Point, arrange terms for 1913, and report at the regular meeting on Thursday. High Chief Marshall suggested that membership in the tribe should be limited to 100, and applications received after that number had been reached should be placed on the waiting list. He stated that the Indians was the only organization combining the social and shooting features, and attributed its success to this fact. On motion of Dr. D. A. Edwards it was voted that the membership be limited to 100.

The report of Keeper of Wampum C. W. Budd was read and accepted. The report showed the tribe to be in good financial condition, and the High Chief turned over a check for a substantial amount to the new Keeper of Wampum.

It was suggested by R. W. Clancy (Chief High Point) that a special event of 25 targets be shot by the Indians clothed in their tribal costumes on Wednesday, after the close of the regular program, only members of the tribe to participate. This was seconded by Dr. D. A. Edwards and carried. The members to meet at the hotel, array themselves in war paint and feathers, proceed to the dining hall in a body for dinner, and then march to the grounds for the shoot. The meeting then adjourned.

Second Day.

The real early risers on Wednesday enjoyed the only pleasant weather of the day. All the carefully laid plans of the High Chief and his lieutenants were spoiled by rain, which began falling about 7 o'clock and continued up to noon. It was a downpour, which precluded all possibility of a flight of clay birds, and the Indians stayed in the hotel, making weather predictions.

The afternoon was better, though it continued cloudy and there were two or three sharp showers. The wind was strong from the west, blowing toward the traps, causing the targets to duck badly and keeping the flight low.

At 1 o'clock the events were started, and at 4:30 the grounds were deserted by all except the cashier. The attendance was a little better than on Wednesday, forty-eight shooters going through the program. Among the new arrivals were C. D. Manahan, G. F. Round, E. O. Lothamer, J. K. Douglass and John M. Sperry.

The scores averaged lower than on the first day, though some exceedingly good ones were recorded. Pop Heikes led the field with 147, getting the last 62 straight. Next in order came Lester German with 145, breaking the last 63 straight. C. A. Young got third place among the professionals on 142. The amateurs were well up with the professionals, C. F. Moore being high man with 143, the third high score of the day. Wm. Ridley was second with 139. Five of the contestants, D. L. Culver, Ray Loring, John Deist, C. D. Manahan and J. D. Park tied for third on 139, and C. E. Doolittle and C. E. Mowrey were fourth on 137 each. Squad 1—Culver, Painter, Chamberlain, Taylor and Moore, made the squad record as a fitting wind up of the day, breaking straight in the last event. Geo. Maxwell made the day's record long run, 70.

The special event, to be shot by the braves in their tribal costumes, was declared off, a great disappointment to many who wished to see this annual feature.

There were 7,200 targets trapped, at the rate of 2,056 per hour.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO.

299-301 Broadway New York, N. Y.

At 6 o'clock in the evening the members of the tribe gathered in their council tepee, arrayed themselves in full war paint and feathers, and led by Chief Long Talk Marshall, paraded through the hotel lobbies to the dining hall, marching to the music of the tom-tom, manipulated by Chief Bald Eable Heikes. After enjoying the "Dog feast" and listening to words of wisdom and good cheer from High Chief Long Talk, the braves returned to the lobby of the hotel, followed by the squaws and papooses. Here they seated themselves in a circle around the High Chief and his squaw, and were introduced individually to the assembled palefaces. Each brave was called upon to rise by High Chief Long Talk, and his name, title and a condensed history of his life given. It was a test of Indian impassiveness to stand up while all one's good qualities, physical, mental, moral and financial were recited, and if there was any point omitted by the High Chief it was an oversight. The ordeal successfully passed, the tribe took the trail and visited the various places of interest, finally locating in the dancing pavilion, where they created much excitement among the young palefaces. The braves taking part in the demonstration and at the feast were: Chief Long Talk, T. A. Marshall; Chief Black Stick, J. S. Speer; Chief Quick Paddle, G. E. Painter; Chief Bean

Eater, O. R. Dickey; Chief Shoot the Line, Ray Loring; Chief Right Wing, George W. Maxwell; Chief Long Smoke, D. L. Culver; Chief All Aboard, S. S. Johnston; Chief Bald Eagle, R. O. Heikes; Chief Reel Foot, Andy Meaders; Chief Sparrow, C. A. Young; Chief Hoochee Coochee, Horace W. Heikes; Chief High Point, R. W. Clancy; Chief Tennessee, D. A. Edwards; Chief Ding Dong, J. W. Bell, and the two newly adopted braves. At the table High Chief became reminiscent and told of the days when he was a papoose and used to see Chiefs Bald Eagle and Reel Foot hunting the buffalo on the vast "pre-aires," and killing them with bow and arrow.

Third Day.

Thursday, getaway day, was cloudy and cool. A northerly gale prevailed, and certainly had the boys guessing on the targets—first a towerer, then a duck—so that it was impossible to catch them all. It seemed to be Ridley's own particular brand of weather, as he broke the first 88 without a miss, and went out with a total of 143, the second high for the day.

The shooting was started at 9:30, and the regular events finished at 1:20. The scores did not average quite so high as on previous days. Heikes and German tied for first place on 145, with Maxwell third high professional on 140. Young and Clancy next with 138 and Taylor 137. The amateurs were well bunched, Ridley being first, followed by C. T. Stevens with 142, W. I. Spangler 141, and Ray Loring 140.

As quickly as the handicap committee, consisting of D. L. Culver, I. Krupp and Ray Loring, could assign the distances, the squads were made up and the Mallory cup race started. This was at 50 targets, handicaps 16 to 23yds. The race was over at 3 o'clock. After a hard-fought battle, O. R. Dickey proved the winner on 48. C. F. Moore, W. I. Spangler and H. Heikes finished in second place with 47 each. W. R. Chamberlain, H. D. Smart, B. S. Donnelly, L. German, J. Deist and R. W. Clancy, 46 each. High men for the three days were: L. S. German 434; R. O. Heikes 432, C. A. Young 422. The next three places were shared by the professionals and amateurs. R. W. Clancy and W. Ridley 419 each; J. R. Taylor and C. F. Moore, 417 each; G. W. Maxwell and G. E. Painter, 416 each.

In the division of high average money thirty-six participated. Sixteen of these also got low average money and several were in the money-back. This is the last of the Indian shoots in which the professionals will shoot for money. Hereafter it will be purely an amateur event, and the professionals will do their best to help make it the largest shoot of the season, next to the G. A. H.

The scores in the regular program were:

D L Culver	134	E Beckwith	116
G E Painter	137	P M Keller	120
*W R Chamberlain ..	131	S S Johnston	96
*J R Taylor	137	Mrs. Johnston	110
C F Moore	136	C E Mowrey	133
Wm Ridley	143	*L German	145
H D Smart	129	A B Jones	131
*G W Maxwell	140	C T Stevens	142
*D A Edwards	118	Otto Heyman	126

MONEY-BACK PURSE.

Added by Indians	\$50.00
Targets, first day at 1c. each	64.50
Targets, second day, at 1c. each	72.00
Targets third day, at 1c. each	72.30
Extra entrance first day at \$1 each	40.00
Extra entrance second day at \$1 each	45.00
Extra entrance third day, at \$1 each	43.00

Total	\$336.80
Total losses	259.70

Surplus to be divided among high guns.....\$577.10

The purse was divided into thirty-six moneys, as follows: L. S. German, first, \$51.90; second, R. O. Heikes, \$46.15; third, C. A. Young, \$40.40; fourth and fifth, R. W. Clancy and W. Ridley, \$31.75 each; sixth and seventh, divided by J. R. Taylor and C. F. Moore, \$26.45 each; eighth and ninth, G. W. Maxwell and G. E. Painter, \$23.10 each; 10th, John Deist, \$23.10; 11th, 12th, and 13th, Ray Loring, H. Heikes and J. W. Bell, \$17.30 each; 14th and 15th, T. A. Marshall and D. L. Culver,

Du Pont Long Run Trophies.

No one other inducement has been so attractive as the long run trophy offered by the Du Ponts, as may be attested by the following records made during 1912:

LONG RUN TROPHIES.

*Indicates unfinished runs.

\$14.40 each; 16th, 17th and 18th, O. R. Dickey, W. R. Chamberlain and W. I. Spangler, \$11.55 each; 19th to 24th, C. E. Mowrey, C. E. Doolittle, B. S. Donnelly, C. T. Stevens, H. D. Smart and A. B. Jones, \$11.55 each; 25th to 36th, C. W. Sadler, L. J. Squier, A. Meaders, F. W. Markman, M. H. Johnson, Otto Heyman, G. H. Hassam, P. M. Keller, E. Beckwith, A. Kuebler, D. A. Edwards and Ira Krupp, \$5.75 each. There were twenty-four losers, who were reimbursed in sums ranging from 45 cents to \$30.40.

MEETING.

A business meeting was held at the hotel in the evening, High Chief Long Talk (T. A. Marshall) in the chair.

The names of a number of candidates for admission to the tribe were presented, and as there were no objections, all were elected.

The following resolution was introduced by the High Chief and adopted:

Whereas, Chief One Wing (John A. Flick) is unable to be present at the annual pow-wow of the Okoboji Indians, on account of ill-health, we, the tribe in council assembled, extend to our brother chief our sympathy, and ask the Great Father to send him speedy recovery.

With a hope that Chief One Wing may be seated with us in the council tepec at our next conclave, we send our best wishes by the fastest runner of the tribe by the nearest trail to Chief One Wing.

A proposition was received from the Cedar Point Association, which being acceptable to the tribe, it was voted to hold the 1913 tournament at Cedar Point, and that July 8, 9 and 10 be at once claimed for the next annual meet.

It was voted that \$750 be added to the purse, a portion of which should be invested in suitable trophies, and High Chief Marshall and Chief High Point (R. W. Clancy) were made a committee to purchase these trophies.

It was voted to add two local shooters to the tournament committee, and Ira Krupp and A. Kuebler, Jr., were named. The tournament committee was also made a committee on entertainment.

Chief All Aboard (S. S. Johnston), Chief Buckeye (J. R. Taylor), and Chief Shoot the Line (Ray Loring) were appointed a committee to select suitable names for the new members, and the result of their efforts is given below.

Before the meeting broke up, S. S. Johnston, on behalf of all the Indians, presented a memorial of esteem

to the retiring High Chief, T. A. Marshall, eulogizing his services in that position for the past fifteen years, expressing the regret of the tribe that it was to lose him as its honored head, and trusting that he would be with them for many years as an active member. Mr. Marshall responded fittingly, but the surprise and expression of good will deeply affected him, and his remarks were short.

The new braves were rounded up Thursday night, and their tribal appellations were given as follows: B. S. Donnelly, "Wealthy Water"; C. F. Moore, "Have 'Em Brought Up"; Everett Beckwith, "Road Builder"; Ira Krupp, "Ye Oak"; A. Kuebler, Jr., "Cedar Point"; W. R. Chamberlain, "Round Head"; C. T. Stevens, "Muskingum"; H. D. Smart, "Happy Day"; O. E. Lothamer, "No Pain"; W. I. Spangler, "Buzz Wagon"; F. W. Markman, "Hammock Ducker"; C. E. Doolittle, "Late Father"; F. H. Zinn, "Fusser"; C. W. Sadler, "Skipper"; A. B. Jones, "Much Rest"; Lee Parrish, "No Gun"; J. D. Parker, "Cure 'Em All"; L. W. Cumberland, "Grizzly"; D. H. Eaton, "Write 'Em Up"; J. M. Sperry, "Marietta"; J. B. Barto, "Welcome Joe"; C. J. Mowry, "Shoot Finger."

Portland Gun Club.

PORTLAND, Me., Aug. 14.—Yesterday and to-day celebrated our midsummer tournament, and it was some shoot. They came from all points of the compass, and they shot like they knew how. Day one went to S. W. Putnam, from the Palefaces, round Boston town. He toppled 187 out of 200. A. L. Dow and E. A. Randall tied for place on 183, while little Brother Charley Randall took the even dimension with one less. On Day two the inimitable Charley Newcomb from Quakerville, did most remarkable breaking, losing only 8 of his 200. Brother Newcomb got one of those fine Du Pont medals for running 108 straight. E. A. Randall got second with 188, with R. L. Spotts, of N. Y. A. C., and Olympia, third with 185. High pro. on day one was Neaf Apgar with 182. On Day two, Darnton and Hill tied at 184, with "Blue Hen" Banks two behind for place.

The two days' high gun average went to Newcomb with 372 out of 400, with E. A. Randall second with 371, and Ralph Spotts third with 365. High pink sheeter was Hill, with 364.

Portland three-man team trophy went to Portland Gun Club with 272 out of 300.

New England trophy was taken by E. A. Randall with 97 out of 100. W. W. Mumford and C. A. Randall tied for second with 88. Scores:

First Day.

Table with 2 columns of names and scores for the first day of the tournament.

Second Day.

Table with 2 columns of names and scores for the second day of the tournament.

The general averages for the two days, 400 targets, are as follows:

Table showing general averages for 400 targets across various categories.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

WINCHESTER

Red W Goods Make a Clean Sweep

at the

Pacific Coast Handicap

A good man will always rise to the top. Likewise the best guns and shells will carry off most of the winnings. Winchester Guns and Shells are doing this all the time, and have again done so in decisive fashion at the Pacific Coast Handicap. Just read the following:

Pacific Coast Handicap: Won by Dr. M. M. Bull, shooting a Winchester Repeating Shotgun. Score, 93 x 100, and 19 straight on shoot-off.

High Amateur Average: Won by F. M. Troch. Score, 379 x 400. Walter McCormack, second. Score, 374. Both gentlemen shot Winchester Guns and Shells. M. Abrams and P. P. Nelson, third. Score, 373, both shooting Winchester Shells.

High General Average: Won by Lee R. Barkley, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 383 x 400.

High on Dougle Targets: Won by Lee R. Barkley, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 85 x 100.

High on all Targets Trapped: Won by Lee R. Barkley, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 561 x 600.

So runs the record of this important Interstate tournament, and if this alone were consulted, little knowledge of any other make of guns or shells would be acquired. It proves conclusively that

Winchester Guns and Shells Make a Superior Equipment

North Side Gun Club.

MILWAUKEE, Wis., Aug. 25.—It seems that most of the boys were in need of a little practice for the hunting season, which opens next Sunday; hence the attendance for the wind up. The extreme heat and humidity figured materially in the scores, being somewhat below the standard, nevertheless the boys made the best of it, and everybody had a good time. C. Groffy carried off high honors with 94 out of 100; E. Bruhy was second with 85. Scores:

Table with 2 columns: Shot at. Broke and names/scores for the North Side Gun Club.

Oakwood Gun Club.

LYNCHBURG, Va., Aug. 27.—Some shooting was done in our weekly shoot here to-day. Daniel busted 97 out of 100. H. L. Winfield cut down 95, while Fox and Dunn each did 91. Scores:

Table with 2 columns: Events and names/scores for the Oakwood Gun Club.

Marshall Gun Club.

MARSHALL, Ia., Aug. 26.—It was only a practice shoot, but they all turned in pretty good scores. Tucker made 47 out of 50, E. Brown and A. Brown each tucked away 46. Scores: E. Page 43, F. Brown 40, A. Brown 46, Tucker 47, Tillery 39, O. Page 42, E. Brown 46, Radford 37, Bryant 36.

Great Scores Made With Peters SHELLS

"steel where steel belongs"

In Challenge Match for E. C. Cup

at the Cincinnati Gun Club, August 24, 1912, H. D. FREEMAN, holder, and J. S. DAY, challenger, contested for this trophy, emblematic of the **WORLD'S CHAMPIONSHIP**, with the following result:

	Singles	Expert Rules	Doubles	TOTAL
Day - - -	98	48	42	188 out of 200
Freeman -	97	44	42	183 " " 200

Both shot Peters P Shells, and both scores exceeded any ever made with other makes of ammunition in the history of this cup, which has been in competition since 1896.

Peters Shells will outshoot all others under any conditions

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

Massachusetts State Trapshooting Association.

The second annual tournament of the Massachusetts State Trapshooting Association will be held on the U. S. M. A. A. grounds, Beverly, Mass., Sept. 12-14. There will be \$400 in prizes. Targets 2 cents each. Shooting begins at 9:30 A. M., rain or shine. Practice before and after program if time permits. All shooting, 16yds., unknown angles. Popular brands of ammunition for sale on grounds. Interstate rules to govern. Referee's decision final in all cases. Contestants are requested to make entry for the day. Money will be returned for events not shot in. Trade experts are cordially invited to attend and to shoot for targets only. Dinner served at the United Shoe Machinery Co.'s restaurant, or at the new club house. All guns and shells shipped to the United Shoe Machinery Co., Beverly, Mass., in care of W. R. Hurd, 2d, express prepaid, and arriving not later than Sept. 11, will be delivered at the grounds free of charge.

The program for practice day will include five 20-target events. For Day one, ten 15-target events; five-man team event for State championship. Second day, same program, with individual State championship.

Money will be divided Rose system in regular program, ratio of points, 5, 3, 2, 1. Optional sweepstakes, percentage system, 40, 30, 20 and 10 per cent., class shooting. Ten entries and under, three moneys, 50, 30 and 20 per cent. To be eligible for the Squier money-back system a contestant must compete in all regular program events.

The optional sweeps are separate from the regular program, and it is optional with the contestant whether or not he makes entry for them. The Squier money-back system does not apply to the optional sweeps.

Du Pont Gun Club.

It was "spoon" day at the Du Pont Gun Club, Sept. 2, and the Coleman du Pont trophy spoons were well won with exceptional scores. W. M. Hammond was the winner in Class A, breaking 24 out of 25. Clyde Leedom won in Class B with 25 straight. S. J. Newman with a score of 24 out of 25, carried off the Class C trophy spoon, and J. A. MacMullen with 21 out of 25, won in Class D.

The most interesting match of the afternoon was that between J. A. MacMullen (holder) and D. E. O. Bullock, (challenger) for the 1912 Class D cup. The race was exciting from start to finish. The Doctor, who has been shooting remarkably well, won by a score of 36 to 32.

Another event of interest was the struggle between W. G. Wood, of Guyencourt, and the local "shooting star," J. H. Minnick, for the 1912 Class A cup. In the first string of 25 targets, Minnick went straight, while Wood dropped one, a difficult right-quartering bird. The second left no room for doubt as to the real class champion, and Minnick retains his hold on the cup. He made the splendid score of 49 out of 50, to Wood's 45.

Among the visitors who took part in the shooting were W. J. Arrants, champion of the Chesapeake City Gun Club, and C. A. Stevens, of the same organization, who lost out in their recent club race by one

target. Mr. Arrant's score in the championship match was 97 out of 100. Messrs. Corman and W. M. Armistead, of Philadelphia, with Major T. K. McIlroy, of Ohio, motored from Philadelphia and shot during the afternoon. Mr. Armistead made several good scores, being one shooter to make a straight. The other fortunate contestants making perfect scores of 25 were: J. H. Minnick, W. Edmanson, of Newport, and Clyde Leedom.

Several good scores on 100 targets were made, J. H. Minnick leading the field with a 95 on his second 100 and 93 in his first. W. Edmanson made 92, Dr. Steele and W. M. Hammond 89, H. P. Carlon 86, R. F. Willis 84. This was Mr. Willis' first shooting over the Du Pont Gun Club traps.

The Du Pont Gun Club is planning for a "fall opening" on Sept. 14. A new classification of shooters will be made effective on that date. Special features will be introduced, including several merchandise prize events. This shoot, coming just prior to the Westy Hogan event at Atlantic City, will give those who contemplate taking in the "city by the sea" tournament a chance for some good practice.

A number of shooters from the South will stop off on their way to the Hogan shoot and take part in the different matches.

Following are the scores: W. Edmanson 23, R. F. Willis 20, Dr. S. Steele 22, T. E. Doremus 20, J. A. MacMullen 21, S. J. Newman 24, W. F. Jensen 18, Clyde Leedom 25, J. H. Minnick 24, Harry Reed 17, T. W. Mathewson 17, H. P. Carlon 23, Dr. E. O. Bullock 19, J. W. Anderson, Jr., 23, Thorpe Martin 20, S. Tuchten 21, D. Lindsay 20, Albert Bird 14, W. B. Smith, Jr., 15, C. A. Stephens 19, W. J. Arrants 18, Z. H. Lofland 19, W. M. Armistead 22, T. K. McIlroy 11.

Akron A. S. B. Gun Club.

AKRON, O., Aug. 24.—The regular shoot of the Akron Artificial Steel Bird Gun Club was held at Mr. Thresher's private shooting park, Wednesday afternoon, and although it rained all the afternoon, the following took part in this exceedingly interesting game of field shooting at actual birds on the wing, although they are made of steel. Their great speed and unsurpassed killing qualities create intense excitement and develop the highest degree of skill among those who practice sufficiently to get on to the erratic flights, such as outgoers, incomers, right and left ascending and descending angles, and yellow hammer flights. No wonder the scores are low.

Shot at. Broke		Shot at. Broke	
Bittner	50 40	Shafter	50 9
Thresher	50 30	Smoke	25 6
Hermon	50 19	Novice	25 5
Bonfey	50 11	Bittner	25 17
Keiser	50 10	Thresher	25 16

The continued downpour of rain broke up the game at this time, and everybody hastened to cover. Our club is contemplating opening up a shooting parlor for winter evening practice. If we do this, we will use .44-caliber shotguns with brass shells loaded with less than a dram of smokeless powder and 5/8oz. of No. 8 shot at 26yds. rise, for "indoor wing shooting."

Tracy City Gun Club.

TRACY CITY, Tenn., Aug. 14.—'Twas a big event and most enjoyable. W. M. Griffith and W. K. Bowling tied for top with 151 out of 160, with W. P. Lea in place with 144. Scores:

Columbia Gun Club.

COLUMBIA, Mo., Aug. 29.—The following is the score made by members of the Columbia Gun Club to-day:

Trophy shoot, 50 targets: E. F. Heidman 41, winner of trophy; I. C. Adams 39, Dr. E. H. Smith 37, L. B. Stevenson and George Reeder 35 each, M. J. Dorsey 34, J. L. Stephens 31, S. R. Barnett 30, J. M. Long and Jack Daily 29 each, J. C. Holloway 28, W. E. Dailey 25, J. S. Rollins 24, J. E. Gillespie 22, Dr. H. I. Bragg 20, Eugene Gauss 18, W. W. Garth, Jr., 15. Twenty-five targets: W. J. Perry 20, Ben Elley 15, M. L. Young 14, A. Pickett 10, O. G. Heidman and B. G. Clark 9 each, H. H. Banks 7, L. Kreutz 3. Doubles, 24 pairs: Dr. R. L. Lockridge 34, I. C. Adams 28, W. J. Perry 26, J. C. Holloway 22, George Reeder 16.

Doubles, 12 pairs: E. T. Heidman 15, M. J. Dorsey 14, Dr. E. H. Smith and W. E. Daily 9.

Dr. R. Lockridge, captain, did not shoot for trophy, but broke 43 out of 50.

DR. R. L. LOCKRIDGE, Sec'y.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., Aug. 31.—Charles H. Newcomb visited the Meadow Springs Gun Club yesterday to the tune of 99 out of 100 aerosaucers, shooting a wonderful race. His miss was due to an unusually gyratic target. H. H. Sloan, with 90, was second, and was credited with one point in the yearly prize point test.

Turner and Wylie, aided by their handicaps, tied for the club dipper with straight scores, but on the shoot-off Wylie won with 25 straight. Wylie also got a win on the Harvey trophy along with Renner. In the yearly prize point shoot, Turner and Wylie were each awarded five points, Letford got four, Pierce three, Renner two and Gerber and Sloan one apiece.

LEFEVER ARMS COMPANY Syracuse, N. Y

to C. Moore and W. Ridley on 143. The regular events were started promptly at 9 o'clock, and were finished at 3:30. Soon after four the winners had been paid by Cashier Chamberlain, and the grounds were deserted. The grounds were in charge of John Lindsey. Not a hitch occurred during the day, the squad hustlers—F. H. Zinn, R. H. Parker and C. W. Sadler—keeping things moving and bringing the shooters to the score promptly. The club officers are: Aug. Kuebler, Jr., President; E. Lea Marsh, Vice-President; Dr. J. K. Douglass, Treasurer; Ira C. Krupp, Secretary and Manager; Dr. J. D. Parker, Field Captain. All are deserving of credit for their efforts in making the tournament a success.

The Marlin Pump Action REPEATING RIFLE

Model 20, \$11.50
 Model 29, 8.50

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The 136 page Marlin catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

KING'S SPORTSMEN'S GLASSES

(Patented, Feb. 20, 1912.)

are far superior to the old style ambers because they have lenses of Akopos Crystal—a double shade of amber and veridian. The Akopos Crystal eliminates not only all the violet but also all the violet and blue rays. Amber glasses are only 50 per cent. efficient in this particular and therefore are only worth 50 per cent. of what is charged for them. King's Sportsmen's Glasses are used and endorsed by such well known sportsmen as E. C. Crossman, Lieut. Townsend Whelan and Stewart Edward White.

The Ohio State Amateur Championship was won by F. W. King, wearing shooting glasses of his own design and patent. Write for catalog.
THE F. W. KING OPTICAL CO. 450 Ellastone Building, Cleveland, Ohio

Ye Oak Meadow Gun Club.

The second annual registered tournament was held at Cedar Point, Sandusky, Ohio, on Aug. 30, immediately following the Indian shoot. The same traps were used and many of those attending that shoot remained for this. The club was favored with fine weather in the morning, but it clouded up and a little rain fell in the afternoon, though not enough to interfere with the shooting. The wind was still in evidence, and blew a gale from the north, with the usual effect of making the targets duck and soar in a puzzling manner. R. W. Chamberlain had charge in the office, a position that "Roundy" is well qualified to fill. All winnings were promptly paid.

The program was the usual one of ten 15-target events, and the club added two 25-target specials, \$2.50 entrance, in each, making a total of 200 targets for the day. The club also gave ten bronze medals (miniature blue rocks) for the winner in each of the ten events, and four silver medals of the same design, one each for high professional and high amateur average, professional

long run and amateur long run. Ties for the event medals were decided by scores in the following event.

There was a good attendance, twenty-eight shooters taking part in the program. The club expected a few more shooters, but should not feel disappointed, as the tournament was one of the best club affairs from all points of view which has been held this season. Ira C. Krupp, the secretary, is a hustler, and was at the grounds early and late. He received the help and backing of the other officers, and their efforts resulted in success.

The specials were shot first, and were started at 8:30 with thirty entries. W. Ridley was high in both with straight scores. Geo. Valk, D. L. Culver and C. Moore had a total of 49. In the regular events the amateurs put it over the professionals in all but first place. Geo. Valk tied with O. K. Dickey on 147, a fine score at any time, and doubly so here with the hard weather conditions. J. R. Taylor was second high professional with 142. T. A. Marshall and L. German tied for third on 140. Second high amateur place honors were divided by J. Deist and B. S. Donnelly on 144. Third went

Frontier Rod and Gun Club.

BUFFALO, N. Y., Aug. 24.—Ideal weather favored the Frontier shooters and good scores were numerous. Dewald was high with 85 per cent. Messrs. Harry Harrison and Woolsey motored from Rochester to attend competition in the point events. Hewitt and Eichberg tied for Class A with 21 points; Hewitt won out in the shoot-off with the same score.

In the handicap race, Dewald, H. Utz and G. McKenna tied, and in the shoot off Utz and McKenna again tied with 23. McKenna won final shoot-off with a straight score.

Spoons were won by Dewald, G. McKenna and H. Utz. Dewald also won a \$5 cash prize for 25 straight. Scores:

Events:	1	2	3	4	5
Targets:	10	15	25	25	25
Harrison	2	9	20	23	24
Wakefield	5	10	19	19	..
Tompkins	9	16	20	..
G McKenna	8	15	20	25	20
H Utz	8	13	17	25	23
Lawson	7	13	21	22	20
Woolsey	9	9	20	20	12
Rappich	8	12	19	16	15
Dewald	6	13	19	25	23
Eichberg	7	11	21	22	21
W Uz	3	11	7
E Ketter	8	7	15
Hewitt	21	23	21

Event 3, cup race, was won in Class A by W. O. Hewitt, 21; Class B, by H. C. Utz, 17; Class C, George McKenna, 20.

Event No. 4 was the handicap, and was won by George McKenna, with 25.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Glad this isn't the business end!

Next time you carry your gun, chuck your belt full of R. H. You'll find it easy on your shoulder, but hard on the game.

ROBIN HOOD
NOT MADE BY A TRUST
AMMUNITION

drives faster, shoots straighter and kills further because R. H. smokeless powders eliminate the "kick" and wasted force. Instead of a big explosion at the breech of the gun, R. H. burns progressively all along the barrel, producing greatest velocity as the load leaves the gun.

Buy from your local dealer, but write us for free booklet, "Facts About Our Shell Game."

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

Right Clothes Add to the Sport

PROPER garb for outdoor wear gives comfort, freedom and a sense of fitness. Sportsmen realize this more and more every day. They are equipping with suits made of these two splendid sporting fabrics produced by the American Woolen Company:—

FORESTRY CLOTH

for fishing, hunting and camping suits. Pure wool, rugged quality that withstands strenuous wear. Soft gray-green in color, harmonizing with rocks and foliage. Turns wind and showers; protects from chill.

Samples of FORESTRY CLOTH and OLIVAUTO CLOTH sent upon request. If you are unable to procure these fabrics from your tailor, we will see that you are supplied upon receipt of price, through regular channels, as we do not sell at retail. When ordering specify fabric and number of yards desired. Forestry Cloth, \$2.75 for medium weight; Olivauto Cloth, \$3.50. (3½ yds. to a man's suit.)

OLIVAUTO CLOTH

for motoring coats and suits, riding-habits and breeches, golf-suits, etc. A beautiful and fashionable olive-brown serge, closely woven; doesn't show dust, dirt or grease spots readily.

Maryland State Sportsmen's Association.

THE second annual tournament of the Maryland State Sportsmen's Association, held in Baltimore, Aug. 27-29, under the management of Mr. H. L. Worthington, has passed into history, and it was a complete success. The weather was all that could be desired, and the attendance was fair. The season of the year at which the shoot was held does not suit a great many of the State shooters, and it is planned to hold the shoot later next year. Sixty-five shooters took part in the shoot, and there wasn't a hitch from start to finish. On Tuesday (practice day), thirty shooters tried themselves out, and on the opening day, Wednesday, the 28th, the real sport began. Mr. J. W. Ewing, of Rising Sun, Md., was the star of the shoot. He won the average for the tournament (amateur), was high man in team race, and won the State championship with 48 out of 50. He broke 277 out of 300 for the two days, and was followed by Huseman, of Washington, D. C., with 273. Third place went to Ford, of Washington, with 270, with Rose, of Rising Sun, and Hoover, of Luke, next, 269 each. The State team race went to the Anolostan Club, of Washington, with 139 to 150 (three men to a team), while

Rising Sun Gun Club's teams Nos. 3 and 2 captured second and third prizes.

In the State championship, O. D. Williams, of Luke, Md., went out early with 47, and it looked good too, but they forgot Ewing, who on his first score slammed out a bang-up 25 straight, and made a 23 on his second total 48. Shabb, of Baltimore, and Steubener, of Bladensburg, Md., went 24 and 25 respectively in their first strings, the latter going to pieces in his second, while Shabb went out with 47. G. Diffendal, of Hagerstown, also broke 47, and in the shoot-off for second place between he, Shabb and Williams, Shabb was placed first, Diffendal second.

The annual meeting of the Association was held at the Hotel Emerson (headquarters for the shoot) on Wednesday night, and Mr. H. D. Billmeyer, of Cumberland, Md., was re-elected President; Jos. S. Gifford, of Rising Sun, Md., Vice-President, and Basil Wagner, of Baltimore, Secretary and Treasurer, vice Geo. P. Mordecai, resigned.

All reports showed the Association in good shape. Mr. H. A. Farnham, of the American Game Protective and Propagation Association, was present, and delivered an address on game conditions, which was very in-

structive and enjoyable.

J. M. Hawkins was high professional with 289. E. H. Storr second with 285.

place long before Cortez set foot in America's Egypt. The eyes of each and every skull were fixed on the entrance, and a momentary feeling of something akin to superstition came over me as I met the gaze of those hundreds of sightless sockets when I first thrust my torch and my head into the opening we had made in the stone wall across the mouth.

The mozos refused to enter the cave, because in effecting an opening they found a large black scorpion, and immediately declared there must be a nest of the deadly insects in some one of the skulls inside the cave. A peculiar feature

of the cave was the fact that not a single artifact of any kind was with the skulls, which would indicate that the Indians, who buried these heads, knew nothing of any metal worker's art. There was some pottery of a rude sort of manufacture, and pieces of dry wood, which may have been intended as torches with which the dead were to light their way in the other world. It is well known that the prehistoric tribes, which peopled this region at the time of the conquest, had knowledge of silver and gold and copper, but as none of these metals was found with the dead, it is reasonable to suppose that their race knew nothing of these metals, and therefore must have existed and perished before the coming of Cortez and his white conquerors.

A curious feature about these skulls is that they appear to belong to several different types. More than this, not one of them is of the type which now persists in the heads of the present dwellers in this part of Mexico. One of the skulls, in particular, has a curious conformation, dissimilar to any skull I have ever seen, not only among Mexican Indians, but in museums in various parts of the world. Both the frontal and occipital bones are so flattened as to give the skull a pyramidal appearance when viewed in profile. The nearest approach I have ever seen to this is in the skulls of some of the head-binding Indians of lower South America. The two parietals on the same skull bulge out and form a noble arch up to the bump of Venus. The rest of the skulls show a more than average intellectuality, and the general formation would seem to indicate the square-headed Teutonic type.

Many more of these caves were in sight along the slope of the hill, and undoubtedly there were others still retaining the sealed front, and therefore invisible without the aid of pick and shovel. The caves were new to science, however, and I do not believe the race that made them has been described, at least not from Mexico, though it may have been a branch of some South or Central American tribe which came up into Mexico during one of the numberless migrations which have swept this country.

My time at these caves was limited, however, and I soon set out on the return journey, stopping at the mine at Otatlan, and doing some geological work on the way. One of the curious things I noted, both going and coming on that trip, and that was that the Indians of this part of Mexico have no idea of protection for these mysterious graves and ruins, such as have the people who dwell near the ruins of the mound builders. It does not appear that any of the present day tribes, which people these sections, are descendants of either the cave dwellers or the mound builders, yet the Indians who live near the great mounds protect them in every possible manner, while those who have their villages near the cave dwellings take little or no interest in the mystery of the strange Troglodytes who preceded them.

[TO BE CONCLUDED.]

FREIGHT RATE ON IVORY FROM ADEN.

CONSUL WALTER H. SCHULZ reports that the freight rate on ivory from Aden, Arabia, to London via the British India Steam Navigation Co. has been reduced from five-eighths of 1 per cent. to one-half of 1 per cent. of the value of the ivory shipped. The rate between Aden and the United States, however, remains 1 per cent.

PITCH SPRINGS.

On the island of Zante, Greece, there are to be found what are locally called pitch springs. They are at the southern end of the island in a broad swampy basin, shut in on three sides by mountains and open on the fourth side to the sea. They are really springs of crude petroleum which, according to analysis, is of a very high degree of purity.

The petroleum issues from the earth in water basins, oozing up through the mud in drops which break and spread upon the surface of the water. The flow is very slow in the several springs, not amounting to more than a few gallons a day. The springs were mentioned by a Greek historian some four centuries before Christ. They seem to have been considered merely as a curiosity until about fifty years ago.—Consular and Trade Reports.

THE CATS OF ENGLAND.

HUXLEY once stated that the prestige of England on sea and land depended on the old maids of England, and for why? Because the maiden sisterhood cared for innumerable cats. The cats destroyed the field mice and so the mice could not destroy the bumblebees and without the bees no clover could be grown.

And no clover, no good English beef and therefore no English yeomen to man the ships or fight on land and sea for the great nation on whose possessions the sun never sets and whose war drums are heard around the world.—Our Dumb Animals.

VALUE OF BIRDS ON THE FARM.

BY CALIFORNIA FISH AND GAME COMMISSION.

PROBABLY no class of birds has been more often misjudged or misunderstood than the birds of prey; in fact, the time is not long past when the name hawk or owl was enough to convict any bird. In these days, however, we are beginning to realize that, with a few exceptions they are "among the most valuable, if not the most valuable birds, that wage war against the foes of the agriculturist." While the smaller birds destroy the insect foes of the farmer, the hawks and owls help to hold in check the small animal life, which, when uncontrolled, works such havoc in the crops.

It has been estimated that every hawk and owl in the course of a year, kills at least a thousand mice or their equivalent in insects. If each mouse, or its equivalent in insects caused the farmer a loss of only two cents per annum, this would make each hawk and owl worth at least twenty dollars a year to the farmer.

For convenience we may divide the birds of prey into the general classes: (1) Those almost wholly harmful, and (2) those almost wholly beneficial.

In the first class, among the hawks, are the Cooper's sharp-shinned and duck hawks. The Cooper's and sharp-shinned are very similar in appearance, the sharp-shinned being simply a "smaller edition" of its larger cousin. These are the two species commonly known as "hen and chicken hawks," being especially destructive in the poultry yard. Aside from the direct loss which they cause the farmer in this way, they also add to this loss by killing great numbers of the useful insect and seed-eating birds. The decrease of certain game birds in some localities can also be laid at the door of "these desperados in feathers." The duck hawk being found chiefly about large bodies of water, confines its depredations almost entirely to waterfowl, so it is of little interest to the farmer.

One practical farmer has suggested that shelters which will enable chickens to escape from hawks can be easily made by putting forked sticks in the ground and over all a layer of brush a foot or eighteen inches from the ground.

Among the most common of the beneficial hawks may be placed the marsh hawk, the Western red-tailed hawk and the sparrow hawk. While these birds may occasionally invade the poultry yard or destroy birds, the harm done in this way is very little compared with the good which they do in the destruction of injurious rodents and insects.

The following quoted from Dr. A. K. Fisher of the U. S. Biological Survey serves to show the economic value of the marsh hawk. "It is probably the most active and determined foe of meadow mice and ground squirrels, destroying greater numbers of these pests than any other species. * * * It preserves an immense quantity of grain, thousands of fruit trees and innumerable nests of song birds by destroying the vermin which eat the grain, girdle the trees and devour the eggs and young of the birds." The distinguishing mark of this hawk is the large white patch at the base of the tail above, which shows very plainly when the bird flies.

The western red-tailed hawk is probably one of the best known of all the hawks. Un-

122 South Fourth Street, Philadelphia

fortunately it is often killed under the misleading name of "hen hawk." Only about 7 per cent. of the food of this hawk is chicken, while 66 per cent. of it consists of ground squirrels, mice and other injurious rodents, which places the bird decidedly among the farmer's friends. The ground squirrel not only preys on the crops, but is a chicken thief as well, and is so sly that it often carries on its work entirely unnoticed.

While most of the hawks are especially useful as rodent destroyers, some of them feed largely on insects. One of these is the little sparrow hawk, its food being chiefly such insects as grasshoppers and crickets. At certain seasons it also feeds largely on mice and other small animals. The sparrow hawk is often confused with the sharp-shinned hawk. It may be distinguished by the lighter color and black markings on head, by its habit of hovering in the air, and also by the fact that it is found out in the open, often on telephone poles, while the sharp-shinned usually remains hidden until ready to dart out after its prey.

Another bird very similar to the sparrow hawk in its food habits is the California shrike or "butcher bird" as it is commonly called. Although this bird is placed on the black list because of its habit of destroying birds, in an examination of 124 stomachs only two birds were found. On the other hand the injurious animals eaten far outnumber the birds, while about 83 per cent. of its food for the year is insects. According to Mr. Grinnell, of the University of California, "as it is such a persistent destroyer of the Jerusalem cricket and other injurious insects, it is undoubtedly one of the most beneficial birds from the agriculturists' standpoint."

Space prevents the discussion of the food habits of other hawks to be found in the State, but suffice it to say that the farmer who protects all members of this family, with the exception of the harmful species named, will get more than "value received," by seeing a marked decrease in the rodent pests on his farm.

CUCKOO FED BY HEDGE SPARROW AND WREN.

ONE day in July I went to watch some hedge sparrows feed a young cuckoo seventeen days old. As I was watching I noticed that there was a wren's nest some six yards away in the same fence, and that the young were getting feathers by their cries. After some twenty minutes it dawned on me that only one wren was going to the wren's nest, and that the other was helping the hedge sparrows to feed the cuckoo. I had my glasses with me, and believe that the cock wren was feeding the cuckoo. Shortly afterward I was joined by three of the boys, and together we made certain that only two wrens were present. We made an opening round the nest containing the cuckoo, and put a screen to protect the bird from the sun, and took it in turns to watch it being fed, using the glasses, about ten yards away. The wren came on an average between from two and a half to three minutes. The hedge sparrows were more shy and refused to come while the boys were there, but remained hopping about a cross fence some thirty yards away. My interpretation of the strange affair is this: The wrens always entered the hedge to get to their nest about a yard to the left of where the cuckoo is situated. They then passed along the fence to their own nest. As one of them passed, the cuckoo heard it and clamored for food and got it from the compassionate wren, who afterward kept on feeding it.—J. H. Owen, in London Field.

A PROBLEM'S SOLUTION

Log Cabins and Cottages

How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth, profusely illustrated, \$1.50 postpaid.

A FAMILY OF WILD DUCKS

“LIKE AN EEL IN A KETTLE OF GREASE”

That is the way Mr. George J. Treloar, of Mobridge, S. Dak., writes when he is telling us about the wonderful work done with the Stevens No. 520 Repeating Shot-gun.

He says that “It is the smoothest working gun that I ever brought to my shoulder and works easy, just like an eel in a kettle of grease. Nothing but a Stevens for me when it comes to the case of get a good gun.”

The non-balking and non-clogging feature of this gun is marvelous. The receiver works back and forth like lightning—just like an eel in a kettle of grease.

For speed, accuracy and balance there is nothing that can touch it.

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

ALFRED P. LANE, CHAMPION.

FROM practice shooting in the cellar of his father's house up through a string of lesser triumphs to champion pistol shot of the world, within less than two and one-half years, is the phenomenal career, in tabloid, of twenty-year-old Alfred P. Lane, of New York, who brought home to his admiring parents three gold medals representing as many pistol championships won against all the world at the Olympic games.

For several days last month the cables were weighted with the achievements of young Lane, who successively won the world's individual pistol championship, the world's individual duelling championship, took high place in the team pistol competition at thirty meters, and made a new world's record, 509 x 600, in the team competition at fifty meters.

In conferring a gold medal for each of the three winnings, the King of Sweden congratulated the youthful marksman on the fact that he only, of all the American team, had won more than two gold medals. Lane had not only made himself indoor pistol champion of the United States Revolver Association, but had earned three world's records previous to his clean-up at Stockholm.

The new world's record maker is not apt to do much of his own advertising. Reporters who interviewed him at the dock on his arrival found a quiet, modest lad, with the steady, light blue eye and cool manner of the born marksman, but who spoke only when directly questioned and then very briefly.

"No, there is no marked evidence of shooting ability in my ancestry—any more than there was in my own life up to within a couple of years ago," said Lane. "True, my mother's line extends back to Miles Standish, but it's a long way back. In more recent days it is related that one of my grandparents, finding it necessary to shoot a calf, had a negro hold the animal while the execution took place. When chided for his poor marksmanship, my ancestor retorted that he had positive proof of a reputation as a sharpshooter in the fact that the negro had dared to hold the calf.

"My first shooting was done with a .22 caliber rifle in the cellar of my New York city home where my father fixed up a gallery for me. One day he found me firing a .38 pistol and it was then he decided that I would have to find another place to practice. The Manhattan Revolver Club was nearby and I took up there the systematic practice which enabled me later to make my way to world's records.

"I shoot because I love the sport—I know of nothing more certain to produce steadiness of hand and eye, poise and 'steel' nerves. It is also a comparatively inexpensive recreation. Anyone in city or country who is interested in shooting can readily arrange for practice, and usually for membership in an association of shooters.

"Did I enjoy my trip? Well, I certainly did enjoy every moment of it. The comradeship of the athletes of our team was a continual pleasure and our relations with the teams of other nations were almost invariably of the most friendly character. We were treated royally everywhere. It was an inspiration to see our boys get away with so much of the program and I'm happy to be able to bring back part of the medals and to have added a few points to the American teams' total."

MOTORIST POISONS FISH BY CARBIDE.

AN American tourist had a peculiar experience recently in Southern Bavaria. Passing by a small stream, after a long trip, he stopped his car to empty the old carbide from his acetylene generator and refill it. A few days later he received a note from the supervisor of the county, notifying him of a suit for damages entered against him for poisoning the fish in the river with carbide. It seems that the part of the river had just been stocked with bass, and many had been killed by the gases developed by the carbide residue.—Scientific American.

THE OUTDOOR LIBRARY

Seasonable books dealing with every phase of life in the Open. Handbooks of sport. Books that make "roughing it easy." Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. Price, \$2.00

This collection of papers on different themes contributed to FOREST AND STREAM and other publications and now for the first time brought together.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portraits and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club: Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Cloth, 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose; Mountain Sheep; Game Refuges, and other big-game topics.

My Friend the Partridge.

By S. T. Hammond. Cloth, 150 pages. Postpaid, \$1.00.

An inimitable study of the noblest of our game birds, following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, and throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game.

Inter-Ocean Hunting Tales.

By Edgar F. Randolph. Cloth, 200 pages. Postpaid, \$1.00.

A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint, and dealing with every kind of game that falls to the rifle of the American sportsman.

The Spaniel and Its Training.

By F. H. F. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.00.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Cloth, 281 pages. Price, \$1.50.

This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks. Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Price, \$3.50.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 233 pages. Price, \$1.50.

Manual of Taxidermy for Amateurs.

A complete guide in collecting and preserving birds and animals. By C. J. Maynard. Illustrated. New edition. Price, \$1.00.

"The Long Shooters" and the Origin of 300 Yards Revolver Shooting. (New.)

By Wm. Brent Altsheeler. Price 75 cents. Postage 4 cents extra.

Interesting alike to civilian and soldier, amateur and professional. A neatly bound volume; illustrated from photographs of shooters and shooting scenes.

Woodcraft.

By Nessmuk. Cloth, 200 pages. Illustrated. Postpaid, \$1.00.

No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known house-boats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

Some Native Birds for Little Folks.

By Dr. W. Van Fleet. Illustrated by Howard H. Darnell. Cloth. 146 pages, with 14 photogravure plates. Price, \$1.00.

Describes the wood duck, the great horned owl, ruffed grouse, killdeer, plover, bobolink, bluejay, chickadee, cedar bird, meadow lark, robin, woodcock, kingfisher, crossbill, and nuthatches.

The Anglers' Workshop. Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A Second Series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price \$1.50.

Through Unexplored Guerrero

By PROF. WILLIAM NIVEN

Chapter VI.—The Tablets of Life and Death

I COME now to the strangest of all my discoveries in the mystery-laden land of Guerrero—a find which may prove to be the Rosetta Stone of all Mexican archæology, yet which has been deciphered only to a limited degree, though many archæologists and ethnolo-

gists in extent, which is literally covered with ruined dwellings, temples, pyramids and other remains of a vast race, whose capital this city was, the inhabitants of which could not have been less than half a million in number.

I went to Placeres del Oro—"The Places of

spot where these pyramids have been built, until at the present time, about one-fourth of each one of the pyramids has been worn away. This has exposed to view the foundation of the pyramids, which is a flat, thick platform of laid stone extending up and down the river for 500 yards.

Having pitched my camp in the midst of these ruins, I set out one brilliant day of summer to study the work of the primitive masons as exposed by the river along the base of the pyramids. On the north side of the center pyramid, about twenty feet above the river and fifteen feet from the surface of the ground, I saw the corner of a large cut stone, projecting about six inches from the perpendicular bank. This proved to be an unornamented slab of diorite, forty-two inches long, twenty-four inches wide and three inches thick, lying directly on top of another slab of similar material and dimensions.

These tablets, which appeared to have been set up at one time to form the walls of a movable box or tomb, excited my curiosity, and clinging precariously to the bank of the river, I began to dig with my small geological hammer, until I uncovered a third tablet, this time made of clay, which had metamorphosed into stone. It was thirty inches long, eighteen inches wide, and three inches in thickness, the lower side being covered with strange figures or hieroglyphics similar to those found on some of the clay tablets of the Old World, but unlike anything I have ever seen in other ruins of Mexico. This has since been found through thorough investigation to be a tablet of life, and a better idea of it can be gained from a glance at the accompanying photo than from any words I might be able to write.

Beneath this tablet in turn was another, also a sculptured tablet, lying face down and carved with different figures, which I have since found to represent death. In the intervening space between the two tablets were the following objects closely and carefully packed together:

A gray diorite incense burner, seven inches by four inches and about two inches thick, representing the profiles of two animals' heads, with their mouths open. Possibly these heads are of snakes, but it is impossible to state with accuracy just what they are intended to represent.

A smaller incense burner three and one-half by two and one-half by one inches, of the same material, the lower portion being filled with human teeth. On one corner of this burner was a flat green jade amulet, on which was rudely

TABLET OF LIFE, FOUND IN RUINED CITY OF PATAMBO, NEAR MODERN TOWN OF PLACERES DEL ORO.

gists of note, both from the United States and Europe, have devoted much time to it.

This find consists of two tablets, found in the grave of one who was once evidently an emperor or cacique among the strange tribe which constructed the city in which they were found. Their discovery, made no later than 1910, came about in this manner:

The country in which they were found is a section of Guerrero seldom visited by white men, even miners, and still less often by those who have any knowledge of archæology or ethnology. It lies about 300 miles southwest of Mexico City, in the district of Mina, and comprises the greater portion of the municipality of Coyuca de Catalan. Here, along the shores of the Balsas River, lies a section fifty square miles

Gold"—from which Montezuma received the vast quantities of gold with which he presented Cortez, on the strength of a story which I heard from an old Indian in Cuernavaca. This Indian told me of these ruins, but so large did he make the place that I could scarcely believe him, yet when I arrived I found that he had not told the half of the extent or size of the structure which had once constituted a great and civilized municipality.

One mile north of the town of Placeres del Oro, at which I arrived without adventure worth recording, I found three great pyramids, averaging, respectively, thirty, thirty-five and forty feet in height, built in a row along the river shore. The yearly floods of the Balsas have been for ages encroaching on the western shore near the

TABLET OF DEATH, FOUND IN THE RUINS OF PATAMBO, NEAR MODERN TOWN OF PLACERES DEL ORO.

carved a human face, with perforations for a string at top of forehead and tip of chin. On the center of the lower tablet was a small metate of diorite, nine inches by five inches with a turtle-shaped head. A slight depression in the center shows that it had been used for grinding paints or herbs, and undoubtedly was the paint-mixing dish of the chieftain whose remains had been buried there.

A diorite cylinder, finely carved, was also found, and may have been used either as an amulet across the breast, or may contain some hidden message for the spirit world, as do some of the clay cylinders of Babylon and the Nile

Valley. I have found it impossible so far to decipher the hieroglyphics on this cylinder.

Most elaborately had this tomb been prepared by its primitive builders. Twelve shells, each almost exactly three inches in diameter, were found in two rows, close to the metate, each shell containing fifty flat, circular shell beads, making a total of 600 beads. These probably were used for money, as they are of the same type as the shell "wampum" of the Indian tribes of the United States. The twelve large shells fell to pieces on being removed from their resting place, but the wampum held in perfect condition, and is, I imagine, about as good as

INCENSE BURNER, MADE OF DIORITE, OR MEXICAN JADE, FOUND IN TOMB AT PATAMBO.

when first made. Quite evidently the idea of the chieftain's friends was to provide him with plenty of funds for his journey into the shadow world which they believed to lie beyond the confines of Guerrero.

Fourteen small perforated shells, three-quarters of an inch long, and four shell beads, or amulets, three inches long, with holes drilled through the entire length, and thirty-one shell beads or amulets with holes at each end, were also discovered. Among other things found in the tomb were one oval shell amulet, two inches long; two perforators or stone drills, eight greenish diorite amulets, three inches long, perforated at each end; twenty-six square shell buttons, perforated through ridges on the back side, showing that these people knew the principle of the button and the buttonhole, a knowledge probably possessed by no other Indian tribe on the North American continent; two conch shells, one eight inches and the other five inches in length (one of these contained the small bones of a very young child, and the other was filled with tiny beads); an irregular fragment of black obsidian, from which arrow and spear heads were made. This was to provide the dead man with the means for making his weapons on the other shore.

By far the most interesting objects found on the tablet, however, were two shell bracelets or armlets, one of which is shown in the photo reproduced herewith. These shells, only one of which is perfect, were five inches in diameter and are covered with carefully made engravings, mostly of monkeys and other animals. Different savants who have studied these artifacts believe that these carved bracelets will be of the greatest aid in deciphering the age and meaning of the other hieroglyphics.

After careful investigation, comparison and study, I have arrived at the conclusion that the two large, carved tablets are meant to tell some story, that what they tell may be grouped under two heads, both being stela or mortuary tablets as follows:

Tablet of Life.—The straight lines at the top were made to represent the hair of a living figure. The eye sockets contain the residue of a sulphur-like pitch, which, if it had been used as a fire offering at the time of the death of the man whose tomb this was, would account for the destruction of the upper part of the face. The open mouth, showing two rows of teeth and the seven rays depicted below the chin, would indicate the living being, the rays coming from the mouth showing speech. Two snakes darting out from just below the eyes, probably also indicate life, though possibly life leaving the body, as the snakes appear to be very much alive. The four key-like characters on this figure probably represent arms and legs, and the holes in the upper key characters may be meant for eyes, with the sunlike circles above for eyebrows.

Tablet of Death.—This tablet has the same carving at the top as the first, but lacks the hair, and want of hair was one of the indications of death in the carvings of all the prehistoric tribes of Mexico. Two double-fanged snakes are approaching the eyes of this figure, evidently preparing to strike. The snake figures strongly in all the carvings of the Indians of Mexico, and has many meanings, so that its combination in this may mean any one of several ideas. The mouth of the figure is closed, another indication

PORTIONS OF SKULL, TEETH AND BODY ORNAMENTS FOUND IN GRAVE AT PATAMBO, ALONG WITH TABLETS OF LIFE AND DEATH, ILLUSTRATED ON PREVIOUS PAGES.

of death, and there are no speech rays emanating from the face. Just under the neck and at the bottom of the tablet, may be seen two double faces each with mouth closed. Two ornamental borders on the lower portion of this slab are as puzzling as they are interesting. The left hand border appears to be entwined snakes, often seen in codices in the ruins of Mexico, and that of the right border appears to be a pattern often found in blankets made by the Navajo Indians of the United States.

I may be asked here why I am so confident that this was a tomb? First of all I found fragments of a skull of an adult male human being; then there were the bones of the child, and in addition the general form of the structure, which while torn and practically wrecked by the slipping of the earth under the action of the water during past centuries was still the same as that of other tombs into which I looked in the same ruined city. This, however, was by far the richest of all the tombs found, and evidently belonged to a man of the rank of a Montezuma of the Aztecs, though it must be remembered that these people far antedated the Aztecs and were in no way kindred to the tribe of Montezuma.

The stone incense burner filled with human bones, and the general condition of the bones found would indicate that the body had been first cremated and then the fragments of the skeleton unconsumed had been placed in the tomb. If so, it would seem that these tribesmen were fully conversant with one of the most modern of practices—cremation.

From the depth of the sepulchre and the depth of the channel of the Rio del Oro below the foundation of the mounds, more than twenty feet in solid formation, and the extent of the region over which the ruins are scattered, the race which inhabited them must have been of great antiquity and of considerable size. It could be only a conjecture to say who these mighty people were, when they lived, and when they passed away, leaving these silent witnesses of their knowledge and culture to puzzle us of the present day.

My explorations in this ruin would fill a volume were they written down in detail, and though I was the first white man ever to gaze on this great ruined city, and the first of all scientists to bring to light any of its treasures, I barely scratched the surface. To-day it lies a ruin greater than ever was Palenque, or Mitla,

ARMLET MADE FROM HUGE SEA-SNAIL SHELL AND FINELY CARVED, FOUND IN TOMB, EVIDENTLY OF CHIEFTAIN IN RUINS OF PATAMBO, DESCRIBED ON PAGE PRECEDING.

or Chichen-Itzla; a city that was, in its day, more magnificent than was Tenochtitlan when Cortez demanded admittance to its portals.

[THE END.]

THE TOP RAIL.

Down on the plains of Texas, north of Big Springs, is a Soash Ranch, owned by the C. C. Slaughter Company. R. L. (Bob) Slaughter, a merchant, clubman and all-around good fellow, of Dallas, Tex., is president and general manager of the ranch, and incidentally is interested in the automobile trade. His favorite sport, it seems, is hunting animals.

Now, as a matter of fact, it is against the law to shoot antelope in Texas. Slaughter is a law-abiding citizen, so he wouldn't shoot one for anything. He simply gets out his trusty motor, loads it with gasoline, and a lariat, and goes out after the game. He ties one end of the lariat to the steering post of the auto. He handles the rope with one hand and the steering wheel with the other. When he sights a bunch of antelope he simply throws the throttle wide open, goes down among them and deftly plants his noose over the best one in the herd. To prove that this isn't a fish story, Bob has plenty of trophies and witnesses.

In a recent letter to his brother, telling of a trip made in the early part of the month when he took his father out to Soash, he says: "My tires are giving wonderful satisfaction. I got two more antelope last week. This makes six we have caught without even a puncture, and you can imagine what a hardship that turf is on tires at the speed antelope generally force you to use. Anyway, I do not want any better tires than the 'New Republic Staggard Tread.'"

If skeptics think this is a Wild West story, drop in on Slaughter any time you are in Dallas. He is used to meeting people from Missouri.

* * *

THEY are laughing yet, in Houston, over a story told by William Breen, an enthusiastic hunter—even for a Texan. Bill was strolling over Big Thicket one day with his Winchester repeater over his shoulder, every now and then adding to his bag. Coming over the clump of a hill, he met a fellow huntsman packing an old single shot rifle.

"What yo' all huntin,'" queried Bill.

"Might pot a deer," answered the other laconically.

"Seen any?" said Bill.

"Only three, so far," returned the stranger.

"Get a shot?" persisted the Houstonite.

"Yas, they was two got pretty nigh—but I ain't got but one load for my gun, and I want-a hunt all day," was the startling explanation that still amuses Bill and his friends.

GRIZZLY KING.

Committee Report on Uniform Game Legislation

AT the sixth biennial convention of the National Association of Game and Fish Commissioners, held in Denver, Aug. 31, 1910, a motion was made by Commissioner H. C. Davis, of Delaware, that a standing committee of five be appointed to promote greater uniformity of the game laws of the several States. This motion, after general discussion, was unanimously adopted, and the president appointed as members of the committee the commissioner of Tennessee as Chairman; the commissioners of Delaware, Georgia and South Dakota, and the president of the American Game Protective and Propagation Association.

The committee, after careful consideration of existing provisions in the several States, and after consultation with members of the National Association of Audubon Societies, and the United States Biological Survey, concluded that it would be impractical, on account of constitutional limitations and diversity in the form of State laws to attempt to draw up a game law suitable for adoption in all of the forty-eight States. The committee does not feel that with the limited time at its disposal for the preparation of a preliminary report that it can do more than make a few recommendations, regarding certain important principles, and must leave to the officers in each State the formulation of amendments covering such points as may meet with their approval in such manner as will best conform with the statutes of that State.

Commissioners are urged to consider these recommendations in connection with their annual reports, to suggest to the committee other subjects in which greater uniformity is most needed, and to send a copy of such suggestions to the U. S. Biological Survey.

RECOMMENDATIONS—GENERAL.

(a) That in drafting game laws, the plan of a permissive law, as originated in Colorado and recently incorporated in the conservation law of New York and other States, be adopted so far as possible. This plan simplifies the law, directs attention to proposed amendments and avoids special legislation to meet new methods of hunting, or changes in the condition of game.

(b) That local legislation be reduced to a minimum, and in order to meet the demand for such legislation, broader powers be conferred upon State authorities to provide when necessary, after due notice and public hearing, special protection for certain kinds of game or for closing the seasons in certain sections of the State.

(c) That the game laws be made as simple and as few in number as possible, except in special cases, single propositions should not be made the subject of separate bills, but bills for the protection of fish should ordinarily be kept separate from those providing protection for game.

(d) That modern comprehensive, general game laws are greatly needed in a few States, notably in Arkansas, Florida, Maryland, Mississippi, Nevada, North Carolina and Virginia.

ADMINISTRATION.

(a) That provision be made for the en-

forcement of the game laws by State officials or commissioners in Arkansas, Florida, Mississippi, Nevada and Virginia.

(b) That the term of office of commissioners should be not less than four years in the States of Arizona, Connecticut, Georgia, Idaho, Maine, Utah, New Mexico, Pennsylvania, Rhode Island, South Dakota, Vermont and Wisconsin. No man, however active, can accomplish effective work within two years, one of which is necessarily spent in becoming familiar with the duties of the office. Frequent changes in the head of the department are not conducive either to efficiency or economy of administration.

(c) That the only satisfactory enforcement of fish and game laws can be secured through the game warden system. Merit and efficiency only should be considered in the appointment of wardens or their retention in service.

(d) That the warden service should be divorced as far as possible from politics. In making this recommendation, the committee invites attention to the merit system as now applied to the appointment and promotion of regular salaried wardens in the States of Massachusetts, New York, New Jersey and Wisconsin.

SEASONS.

(a) That shooting in the breeding season in summer, or during spring migration, be universally prohibited, especially in the case of ducks, woodcock and other migratory birds.

(b) That so far as possible the opening dates of the hunting season in neighboring States be made identical.

(c) That in order to secure uniformity in the legislation of the Northern States and to insure the permanent preservation of migratory birds on their former breeding grounds, spring shooting in the States north of latitude 37 degrees be absolutely prohibited, notably in the States of New Jersey, Delaware, Pennsylvania, Maryland, Virginia, West Virginia, Michigan, Ohio, Kentucky, Illinois, Indiana, South Dakota, Missouri, Nebraska, Iowa, Kansas, Colorado and Wyoming.

(d) Prairie Chickens.—That the open season for hunting prairie chickens should not in any case exceed thirty days. These birds have now become so generally reduced in numbers, and their range so restricted that hunting should be so limited as to enable them to increase in the States where they still remain.

(e) Doves.—That in the States which now provide no close seasons for doves, namely, Virginia, Florida, Kansas, Oklahoma and Nevada, adequate protection should be given these birds. That in the States north of latitude 38 degrees doves should be protected throughout the year, namely in Pennsylvania, Ohio, Illinois, Missouri, Nebraska, Colorado and Oregon, in order that they may have the same protection which they enjoy in other States in this zone. That in the Southern States where seasons are so varied in point of time, the open season should be restricted to three months or less, the dates to be determined by the respective States.

(f) Shore Birds.—That the upland plover and the smaller shore birds, including the killdeer and other small plover and sandpipers, be

removed from the game list and given protection at all seasons.

(g) Woodduck.—That on account of the rapid decrease in numbers and danger of extermination in some States, the woodduck should be treated separately from other ducks and waterfowl in the game law, and whenever possible should be protected throughout the year, particularly in the New England, Middle and Lake States. Summer shooting should be prohibited, and the bag limit should not exceed fifteen birds per day.

(h) Ducks and Geese.—That reasonable seasons should be provided for ducks and other waterfowl in the States of Arkansas and Texas, which hitherto have provided no close seasons for these birds.

(i) Swans.—That on account of its increasing rarity, swans and sandhill cranes should be removed from the game list and protected throughout the year.

BIG GAME.

(a) That female and young of all big game should be protected at all seasons in every State. Twenty States have already enacted the so-called doe law, with eminently satisfactory results.

(b) That due provision should be made for the propagation and transfer of big game in each State.

(c) Elk.—That a definite and comprehensive policy should be adopted by the several States and the general government looking to the permanent preservation of elk now remaining in the Rocky Mountain and Pacific States; that due provision should be made for propagation and for adequate winter range, but in transferring animals from one State to another, elk of one species should never be liberated in a region inhabited by a distinct species.

(d) That seasons for antelope should be kept closed for the present in all the States.

SALE.

That sale of any game where permitted should be carefully regulated under some comprehensive tagging system similar to that recently adopted in New York and Massachusetts in order to prevent illegal traffic in game, and to simplify the enforcement of laws relating to sale of game.

LICENSES.

That a mandatory dollar resident hunting license be provided in the States of Maine, Pennsylvania, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Florida, Tennessee, Mississippi, Arkansas and Ohio, as the best and most satisfactory method of raising revenue for the protection of game, or establishing a salaried warden system and for properly regulating hunting.

(a) That a seasonal limit on deer be established in every State where deer hunting is permitted, and that this limit should not exceed two deer a season, particularly in the States of Virginia, South Carolina, Georgia, Florida, Mississippi, Louisiana, Texas, Missouri and Oregon.

(b) That reasonable bag limits be provided for game birds in the States of Arkansas, Kentucky, Rhode Island and Virginia, which now

have no restriction on the amount of game which may be killed or captured in a day or a season.

(c) That the daily limit should not exceed twenty-five birds a day, and that in the case of waterfowl a weekly bag limit should be provided in addition to the daily limit.

NON-GAME BIRDS.

(a) That the model law recommended by the National Association of Audubon Societies for the protection of non-game birds be enacted in the States of Maryland, Kansas, Nebraska, Idaho, Montana, Utah, Nevada, Arizona and New Mexico, in order to make legislation of this character uniform throughout the Union.

(b) That legislation regulating the traffic in egret or heron plumage be enacted in Pennsylvania, Maryland, Georgia, Illinois and such other States as have not yet extended proper protection to these birds now nearly extinct.

PROPAGATION.

It is recommended that encouragement be given for the propagation of fish and game animals and game birds in the various States under the provision of the State game authorities.

GAME REFUGES.

Inasmuch as game refuges afford the most effective means of protecting the scattered remnants of our native game, it is strongly recommended that every State should have one or more State refuges. Commissioners and wardens should be given adequate authority to arrange for refuges on private or State lands, and to co-operate with the proper officers of the Federal Government in the establishment of such refuges on public lands not now utilized for other purposes.

FEDERAL LEGISLATION.

Attention is called to certain bills now pending in Congress providing for Federal jurisdiction of migratory birds, and the establishment of National game preserves. The Weeks bill (H. R. 36) and the McLean bill (S. 647) relating to migratory birds are now on the calendars of the House and Senate. The Catron bill (S. 6942) establishing a game preserve at the headwaters of the Pecos River in New Mexico has already passed the Senate, and the Kent bill (H. R.) and the Perkins bill (S. 6109) providing for Federal game refuges, are in the House Committee on Agriculture, and on the Senate calendar respectively. Commissioners should carefully consider these measures and give them such support as they can through their senators and representatives.

J. H. ACKLEN, Chairman,
Commissioner of Tennessee.

H. C. DAVIS,
Commissioner of Delaware.

JOHN B. BURNHAM,
President American Game Protective
and Propagation Association.

JESSE E. MERCER,
Commissioner of Georgia.

JAMES HENRY RICE, JR.,
Commissioner of South Dakota.

The general sentiment of the convention was against the sale of native game and also against the spring shooting of wildfowl.

Sport in Florida

By J. A. L. WADDELL

IT is such a long time since I last wrote for your paper that I fear you are beginning to feel like cancelling my name from your list of regular correspondents. The main reason for my long silence is that my professional work of late years has been so exacting that I have been able to take but little time for outings—far less than I deem I am entitled to or than is advisable from the point of view of health maintenance.

YOUNG PARTRIDGE, RAISED ON GAME FARM OF AMERICAN GAME PROTECTIVE AND PROPAGATION ASSOCIATION.

In my opinion, every hard-working professional man should take at least two vacations per annum, and the longer he makes them, the better for both his physical and his mental welfare. It is my ambition in my old age to devote nine months of the year to work and three months to fishing and shooting, but I greatly fear that adverse conditions will prevent the materialization of this desire.

Business calling me to Jacksonville about the middle of January, I invited my son, Leonard, to join me on the trip and try both the fishing and the shooting of Florida after the completion of my work there. For many years I had been desirous of investigating for myself the sport possibilities of that State, having read so much about it in *FOREST AND STREAM* and in the standard books of Holder and others, but until this year no opportunity to do so had offered.

Before leaving home my arrangements were made to go from Jacksonville to Bartow, join a small party of sportsmen there, and proceed by automobiles or wagons eastward to Kissimmee Lake for shooting quail, ducks and jacksnipe, and for black bass fishing, but before our arrival at Jacksonville the whole Florida peninsula had

received a heavy fall of rain, which made the roads very bad, hence we concluded to go first to Long Key for the sea fishing and then return north to Bartow.

We were well prepared for all kinds of sport, having with us four shotguns, one rifle and an abundance of all kinds of tackle for both fresh and salt water fishing. It has been my experience in times past that it never pays to go on a long shooting trip with less than two shotguns per man, as something nearly always happens to one gun, which puts it out of condition; in fact, I once returned from a trip in Mexico and Texas with only one barrel out of four in shape for business.

As for tackle, one cannot well have too much of it or too many kinds, because the big-game fishes break roads, reels and lines; different localities require different kinds of baits, and one often has unexpectedly to provide an outfit for another sportsman.

Being an old traveler, I took the precaution, when leaving Jacksonville, not only to locate our five pieces of baggage and see that the checks were properly attached thereto, but also to tip liberally the baggageman as an inducement for him to see that all the said pieces were shipped on our train, but alas! I should have gone still further by seeing it put on the car myself, for upon our arrival in the morning at Long Key the trunk containing all the rods was missing. It was necessary either to wait for the trunk or to rent tackle at four dollars per day per man. The boy who acted as station agent and telegraph operator was requested to locate the missing piece and insure its being forwarded at once, but neither persuasion, tips, nor threats produced any information concerning it. Thinking that it might come by the afternoon train, which was eight hours late, I gave my check to the hotel porter with a liberal tip and instructions to look out for it. Sure enough, it arrived at midnight, but as the station agent was not there, the baggageman on the train refused to put it off on the plea that there was nobody to receipt for it, consequently it was carried to the end of the line and did not get back till next afternoon. In this way two days of good fishing weather were lost.

Launches were scarce and expensive. Those that are safe for going outside where the fishing is, rent for \$12 to \$20 or more per day. After waiting some time for more launches to come to the camp, we succeeded in securing one belonging to a fisherman, but it was really too small for comfort, although probably safe enough. At any rate we used it four days, then after it was laid up for repairs to the machinery, we took another and larger one for our last day.

Although the weather conditions were fairly good, the fishing was not. We took with our two rods on the average not more than a dozen fish a day, but they were small. A few of them averaged between thirty and forty pounds, and the smallest down to about three pounds, the average certainly not exceeding fifteen pounds and possibly as low as twelve. We caught kingfish, Spanish mackerel, barracouda, jackfish,

PELICANS IN TAMPA BAY.
Photo by Thos. H. Jackson.

amberjack, three kinds of grouper and muttonfish. One kingfish must have weighed thirty-five pounds, and an eighteen-pounder that I hooked in the back put up a most wearying fight before coming to gaff. There were some large barracouda also, but as usual the biggest one hooked got away. Leonard had it on and brought it near the launch, which had an unfortunate habit of going slowly backward, when it was not moving ahead. The fish ran under the boat and tangled the line and snell in the revolving screw, escaping of course. It took a full hour for our boatman to clear the mess, and as he had to go overboard to do it, and as he swallowed considerable salt water during the operation, his temper—a disagreeable one by nature—was by no means improved.

How much the pleasure of an outing depends upon the disposition of one's guide or boatman! A disagreeable fellow can almost entirely spoil one's sport by his surliness. No man who is not blessed with a cheerful disposition and a pleasant address should ever aspire to guide or handle a boat for sportsmen, because he will surely fail to make a success of his calling.

In the five days that we fished at Long Key we worked faithfully and tried every fishing ground within reach, going as far as the lighthouse on Alligator Reef, some fourteen miles distant from camp, but no place was very good, and the other sportsmen had similar luck, excepting that one day one of the boat brought in twenty-two fish, mostly kingfish, and good ones. The kingfish are generally found from one to three or four miles from shore, the jackfish close to land, and the other fishes out on the reefs, which are five or six miles from the island.

We caught but one amberjack, and this I took on light tackle, as the tarpon reel that I had been using failed me. This fish weighed between thirty and thirty-five pounds, and put up a tremendous fight for its size. I believe it is a harder fighter than the yellowtail of the Pacific. What it would have done on the tarpon outfit I cannot say, but it gave me all I could do to bring it to gaff with light rod and line, especially as

the reel was not fitted with a drag of any kind, but merely a simple click.

I was specially glad to take this amberjack—my first—as it settled in my mind a question of seven years' standing, for that long ago I had caught in the Panuco Ricer at the mouth of the Pumisi, some four miles above the city of Tampico, both within an hour, two jackfish which were so much larger than any that I had ever seen that I imagined them to be amberjacks, but they were not. I now know that they were only overgrown jackfish. They were both of the same size, an even four feet long, and very chunky. I estimated their weight at fifty pounds each, and I am prone to underestimate a little the weights of fishes instead of overestimating as many do.

The muttonfish I caught at Long Key was a beautiful fish—yellow body, pink fins and tail, and bright red eyes. It is one of the choicest table fishes in those waters, being considered quite as good eating as the red snapper. We caught also two Nassau groupers, a mottled variety of the pargo having a pinkish tinge.

After five days of this fishing, Leonard and I concluded that we could get better sport elsewhere for twenty dollars per day, but before seeking it, we decided to go to Havana, where I have a number of old college friends, and see what we could of the island of Cuba in a week's visit. We were pleased to have had the experience at Long Key, although the sport there is nothing like as good as I have had at Aransas Pass, Texas; Tampico, Mexico, or La Jolla, Cal. Moreover, it is by no means as good as certain writers in the sporting papers of late have claimed. The camp is prettily located among cocconut palms, and is comfortable enough, although the table leaves much to be desired—possibly because all the food except fish is brought from a long distance and has a chance to become stale before being served. The rooms are all that any sportsman could ask for, and each camp house is provided with a salt water shower bath that is simply a delight. The hotel rates for room and board run from \$3.50 to \$5 per day. Nevertheless, the resort is a place best

suitable to millionaires, as boats, bait, tackle, etc., are very expensive. Later in the season—April and May—the fishing is better, and there are some tarpon to be had, but it is hot there in the summer, and I imagine the mosquitoes must get pretty active then. We saw but few of them. The whole place is kept scrupulously clean and very attractive.

As our doings in Cuba did not involve any sport, there is no need to say much about them here, except that Leonard and I had the time of our lives there, seeing my old friends, making new ones, entertaining and being entertained, taking long automobile rides into the country, inspecting the wreck of the *Maine*, seeing the sights of the city and steaming around Havana Harbor on a Government vessel. After a week of it we tore ourselves away, took steamer to Key West, another from there to Tampa, and train to Bartow, where, after a day spent in clearing up accumulated business correspondence, purchasing supplies, hiring vehicles, securing dogs and making other preparations, we started on our trip to Lake Kissimmee.

There were four of us in the party besides the negro teamster, viz., my old friend, Mr. W., to whom we are indebted for having planned and organized the trip; Mr. R., the proprietor of the livery stable, who is a good sportsman, an excellent shot and a first-class fellow, and ourselves. Mr. R. contributed three excellent hunting dogs—two pointers, Lass and Di, mother and daughter, that were great fielders, and a setter called Max. Mr. W. took his old setter Joe, a good retriever and a fine worker on single birds or scattered coveys, but rather old for ranging. Max had an excellent nose, but was inclined to come to a stand on birds too far distant. However, he found us a number of fine coveys by means of his supersensitive power of smell. Di was a good dog, but being young was not quite so staunch as the others, requiring an occasional correction from her master.

Lass was our main standby, for she ranged afar, and when she found a bunch she held it until we hunted her up, which sometimes was no easy matter in the high palmettos.

Our teamster left town about seven in the morning with instructions to camp at some convenient spot in the sandhills near water and have a fire to guide us and a meal prepared for our arrival after dark. We did not leave town till after ten, and drove some fifteen miles in about three hours before stopping for lunch, passing over territory that had been shot out and not seeing a single quail on the way. However, we kept the dogs in the buggies all the time, which may account for our failure to see birds, because during the entire ten days spent on this trip we found only one bevy of quail without the aid of the dogs.

Soon after lunch we left the well traveled road and took a more unfrequented one, letting the dogs run; and in the course of three hours we put up seven bunches, some of which, though, were mere remnants. Our friends very kindly left practically all the shooting to Leonard and me, with the result that we bagged twenty-four—not a very good record for so many bunches. As I had not put gun to shoulder for two and a half years, I anticipated doing some bad shooting, but I found that although I missed some easy shots, I had not forgotten how to shoot, and that I could hold my own with Leonard and his

automatic gun. The reasons why we did not make a better record were—first, the broken coveys, and second, the fact that being unused to the country, we did not mark the flights well.

The ground was ideal for quail shooting, consisting of pine forest with trees from twenty-five to fifty feet or more apart, the space between being generally covered with scrub palmetto, but sometimes with clumpy grass. Owing to the recent rains the walking was wet, but that cut little figure; in fact, in one sense it was an advantage in that the dampness enabled the dogs to find without difficulty. With one exception the conditions were perfect, but that was an important one, for we were in a rattlesnake country where both the little sand rattlers and the big diamond backs abound, and it is certainly unpleasant to have to watch continually for snakes, knowing that a bite from one of them almost certainly means death. They say that one can recover sometimes from the bite of a sand rattler, but that when a diamond back hits one, he is doomed. We had provided ourselves with canvas leggings, but we knew that they were likely to prove ineffective, because we were informed at Bartow that the only material which can be relied upon for turning a rattler's fangs is tin, and as there was no armor for sale in that district, we had to content ourselves with canvas. Fortunately for us (at least as far as snakes were concerned) the weather just preceding and during the larger part of our trip was such that no self-respecting rattler would during its continuance be found away from home, consequently we were not troubled much with them during the trip. A few of them were encountered, but of those more anon.

One feature of this shooting was most satisfactory. We did not have to walk from one covey to another, because the dogs were so trained that we could drive till they found game, then we got out and shot till the covey was either bagged or too scattered to warrant further hunting. Occasionally when the dogs winded old scent, we got out, hitched the horses and helped the dogs locate the bunch, but this was necessary only once in a while. Ordinarily a good bird dog knows better how to find birds than its master does, but Mr. R. had had such a wide experience in Florida quail shooting that sometimes he knew better than the dogs.

At 5 o'clock we had to cease shooting and make for camp. We struck the sandhills about dark, but as there was a full moon, the drive was a pleasant one, although a trifle cool. Owing to our wheels sinking into the soft sand, we had to travel at a walk, the load per buggy of two men and two dogs being somewhat heavy for the horse. In respect to horses we were very fortunate, for they were absolutely unafraid of the shooting and would stand when left, although we generally took the precaution to tie up at the nearest tree, but the mules were an "ornery" pair, requiring two men to hitch them to the wagon. Our mule, a big, powerful beast, had a habit of standing on end for a few moments each morning when starting out, but she soon settled down to business and took us over the ground in good shape.

We passed several watering places and must have traveled seven miles in the sandhills before we found our teamster, and even then we nearly missed him. He had turned off the road and we did not discover his camp-fire until after

we had passed it, having mistaken the camp of another party for his. The fire was welcomed, as we were a trifle chilled, and we soon had a good supper, consisting of boiled gritz—termed hominy in the North—potatoes baked in the ashes, bread, butter, coffee and a dozen fried quail which our thoughtful friend, Mr. W., had plucked while Leonard and I were shooting.

As a camp cook John, the teamster, proved himself second to none. He knew exactly how to season things, how much to cook game to suit the taste of each member of the party, and how to make everything taste good, but it was not advisable to watch too closely his methods of manipulating the utensils and food, unless one were blessed with a strong stomach. John was certainly the best working negro that I have ever run across. It seemed to me that on this trip John was working constantly from daylight till bed time. Not only did he cook for the party, which after our arrival at the ranch generally numbered nine or ten, but he groomed, watered and fed the horses and mules, gave the dogs their meals, cut and hauled firewood, plucked—not skinned—some fifty or more birds per day, mended harness, and made himself generally useful in various little ways to all members of the party. In spite of all this work, no one from start to finish heard him make a single complaint or say an unpleasant word. Moreover, he looked after our belongings with the same care as he would have employed had they been his own. In short, he was an ideal servant—barring the sole item of cleanliness in cooking—and I fear that I shall never look upon his like again.

After supper we were visited and serenaded by several young men and women from the neighboring camp. We enjoyed listening to their music and talking to them for a half hour, then we turned in for the night, W. and I as the elders of the party being given the two cots, and the others sleeping on the ground. As the supply of bed clothing was ample, and as fortunately for us it did not rain, we all passed a very comfortable night, arising shortly after day-break to take a wash at the shore of the little

lake and to enjoy a bountiful breakfast of oatmeal, porridge, gritz, coffee and the remainder of the two dozen quail, which we all had joined in plucking before we retired.

The day promised to be fine, hence we made haste to pack our belongings and get across the remaining three miles of sandhills to reach the shooting ground. We had no sooner turned the dogs loose than they found a broken covey of four, but as there was a house nearby, the owner of which objected to our shooting, we flushed the birds and passed on without firing a shot. In order to comply with the Florida laws, which permit of the shooting of only forty quail per day per party, we divided that day into two parties, Mr. W. and Leonard composing one and Mr. R. and I the other. And what a day's shoot we had! The dogs worked to perfection, the weather was clear and cool, the timber was open, the underbrush was seldom dense, the walking was good though quite wet, the birds were fairly plentiful and lay well to the dogs, we shot creditably, and—thanks to R.'s experience and trained eyes—we were able to mark down the birds, not only after the first flush, but often once or twice more, enabling us to bag occasionally as many as ten birds out of a covey and on the average about seven. The dogs retrieved the dead birds and the cripples in fine style, and everything tended to as perfect a day's sport as I have ever enjoyed. Mr. W., who is an ardent fisherman, but not so keen on shooting, left most of the sport to Leonard, and as between us we put up all told a dozen coveys, we succeeded in bagging the limit.

Mr. R., who was using my full-choke double gun, proved himself to be a good shot, and notwithstanding the handicap of the choke, he could easily have outshot me, but he was courteous enough to give me the best of the shooting and generally contented himself with taking the long shots; in truth, he had to do so or else blow the birds to atoms. I was using my little open gun with its 26-inch barrels that I had had made to order some sixteen years previously, and with which I have done most of my shooting ever since.

GAME BAG AND GUN

A Morning With the Sage Chicken

By R. W. RATHBORNE, Jr.

THE snow-capped peaks of the Medicine Bow Range look down on my humble little cabin in the Laramie River valley. One side of my fence is in Colorado, the other in Wyoming. My neighbors are few and far between. Two men and a boy make a crowd, and one woman makes a multitude. The late Mr. Bill Nye remarked that the only things raised here were heifers, hay and a place "which they say is paved with good intentions." Nevertheless, the late William had a reputation, in this his adopted country, of having been a mighty good old

but remembering the old adage, "Rain before seven, clear before eleven," I was not disheartened, as I had no intention of starting out much before nine.

It is about at that hour that the chicken come down to water, and at most of the springs up the different draws one or more old hens and their broods of youngsters may be surprised. It was the young ones that I wanted for my bag.

About half after eight I left the river and started up through the sage brush. It had cleared up and was quite cool. The brush still

vanced a few yards for better range and got two in quick succession that started to the hillside on my left. I made a clear miss of another young one that flew to my right, but succeeded in bagging two retreating birds, one a rather long shot. Four out of the five were young ones—two good feeds for even a healthy man. As five is about all I can keep without spoiling, and I had no one to share them with, I retracted my steps toward my cabin. I was home in half an hour dressing them. It is best to draw sage chicken as soon after they are killed as possible, or they will have the sage taste a trifle too strongly, particularly for some people. They are easy to dress. You pull the feathers off with the skin as readily as one would skin an eel. They are about the size of a small fowl, and one can easily get his hands inside. Who cooks them, do you say?

Every ranchman is a good cook. If he were not he would soon starve, and when it comes to cooking game, well come out here and try some of it; we not only cook it to suit the most fastidious tastes, but also furnish the appetite.

They were the first sage chicken I had eaten this season, and the amount I did away with would have made a vegetarian hold up his hands in holy horror.

Our National Parks.

BY RALEIGH RAINES.

THE policy of setting aside tracts of land in various sections of the United States to be used as pleasure grounds for the people was inaugurated by Congress on March 1, 1872, the date of the act creating and establishing the Yellowstone National Park in Wyoming, and thereafter from time to time other lands in various sections of the country were set aside for such purpose, as well as a practical means of preserving the natural wonders from desecration. These national parks now aggregate twelve in number, embracing over 4,500,000 acres, to which should be added the Grand Cañon of the Colorado River, with its awe-inspiring gorges, which will probably be set aside as a national park by executive order. The areas of these parks, with locations and dates of establishment, are as follows:

	Acres.
Yellowstone, in Wyoming, Montana and Idaho, March 1, 1872.....	2,142,720.00
Yosemite, in California, Oct. 1, 1890.	719,622.00
Sequoia, in California, Sept. 25, 1890.	161,597.00
Gen'l Grant, in California, Oct. 1, 1890..	2,536.00
Mt. Rainier, in Washington, Mar. 2, 1899	207,360.00
Crater Lake, in Oregon, May 22, 1902	159,360.00
Wind Cave, in South Dakota, Jan. 9 1903	10,522.00
Sullys Hill, in North Dakota, April 27, 1904	780.00
Platt, in Oklahoma, July 1, 1902, and April 21, 1904	848.22
Mesa Verde, in Colorado, June 29, 1906	42,376.00
Five-mile strip for protection of ruins, June 29, 1906	175,360.00
Hot Springs, in Arkansas, June 16, 1880.	911.63
Glacier, in Montana, May 11, 1910....	981 681.00
Total	4,606,153.85

Public interest in these national reservations, not only in this country, but abroad as well, is increasing constantly, as is indicated by the num-

THE AUTHOR IN HIS CABIN.

wagon, and the above burst of eloquence referred to when two or three were gathered together, while I, at the time of which I write, was as solitary and alone as an Indian Mahatma in the Himalayas.

For the time being I was as free as air. I had read all the literature of which my cabin boasts, Congress had at last adjourned, and I sat that evening debating as to what should be my program for the morrow. I was tired of fish and fishing. The brackish bacon and the bountiful bean did not satisfy. I longed for a change of sport and something more palatable for the inner man.

Should it be grouse or sage chicken? Grouse necessitated a ride up to the timber, and as I have plenty of riding to do without doing it for pleasure, I decided to spend the morning among the chickens. Besides, I prefer them to grouse. After looking to my gun and shells I turned in.

I awoke to the patter of rain upon the roof,

wet gave out that pungent, though delicious odor so familiar to the cow-puncher and so exhilarating to the alien. My trail led up a small cañon where the stream bed was dry, and the prairie dogs chatted to each other from their separate mounds, disappearing as if by magic at my approach. I was familiar with the country, and knew that at my next turn in the trail the little valley broadened out into a green flat, irrigated by a cool spring that spread out underneath a large clump of willows. Proceeding as noiselessly as possible I made the turn and was rewarded by the sight of a covey of about ten young birds and a couple of old hens.

One of the old birds rose first and I let her go unmolested. Unlike most birds, sage chicken seldom if ever rise together, generally five or ten seconds intervening between birds, so that one can bag a good many out of one covey.

The second bird, a young one, came toward me, and I dropped him without difficulty. I ad-

ber of visitors annually. During the past year the total number of visitors to all these parks aggregated 224,000, compared to 198,606 during 1910. There is every reason to believe that the number will be greatly increased during the present season, and in each coming season, especially during 1915, when the Panama-Pacific International Exposition will be held in San Francisco. The various transcontinental roads will doubtless provide a rate calculated to induce visitors to include a visit to the various national parks as well the exposition. These great national play and recreation grounds are the property of the people to be used for pleasure and play, but it has been felt that the great majority of the traveling public on pleasure bent have not known of the beauty and attractive features of the national parks and monuments. It was to supply descriptive information relative to them that the Secretary of Interior caused illustrated pamphlets of the various parks to be published for distribution to those interested. "See America first" is a growing belief among our traveling public, a doctrine that the Government is encouraging by every means within its power.

In addition to the national parks there are twenty-eight national monuments, which embrace historic landmarks, historic and prehistoric structures, and other objects of historic and scientific interest that have been set aside for the use and enjoyment of the public by executive proclamation. These tracts embrace several million acres and include such natural landmarks as the Petrified Forest in Arizona, Lewis and Clark Cavern in Montana, Devil's Tower in Wyoming, the Natural Bridges in Utah, and numerous other scientific and historic structures.

The main distinction between a national park and a national forest is that while the latter is created primarily for the conservation of economic resources, the first is created for esthetic purposes and recreation uses. There are many notable natural wonders and scenic attractions in the national forests which might be segregated in national parks, care being taken to discriminate between lands valuable primarily for economic uses and those on which such use would be secondary. Where the need exists, however, for merely local recreation grounds, the forest service provides public camping grounds and issues special permits for summer camps, cabins, cottages and boat houses. Great care has been taken to see that adequate recreation facilities are provided for the public, and to prevent monopoly of the best places by a few persons who may endeavor to shut out many or levy tolls by holding exclusive privileges. The use of these pleasure grounds is free to the public, the Government being the guardian and caretaker for the people.

It is estimated that half a million people enter the national forests annually for recreation purposes, which includes hunting, fishing and boating. Probably owing to the attraction furnished by Pike's Peak, the Colorado forests take the lead in popularity with 150,000 visitors. California has over 100,000, of whom half are credited to the Angeles, covering the San Bernardino Mountains, which rise so attractively above the low lying and densely peopled Los Angeles plains. The Tahoe, Sierra and Sequoia national forests are also popular resorts for Californians as well as others. Arizona, Oregon, Idaho and Montana are other States in which

recreation use of the forests are heavy. At present the national forests number 165 and embrace approximately 160,000,000 acres, the total acreage having been diminished 20 per cent. during the present administration.

It is not only for recreation purposes that the national forests and parks are valuable to the people, but to the sportsman and lover of wild life it is the opportunity offered to preserve and propagate the native game animals such as deer, elk, moose, antelope and all other kinds of wild life in the national reservations that adds to the attractive features offered by the Government. With a liberal support from the public, and an inclination on the part of the people to meet the Government half way, the millions of acres of public reservations may be made to serve the purpose of added pleasure and profit to the present and future generations.

Woodducks in Missouri.

DONIPHAN, Mo., Sept. 2.—*Editor Forest and Stream:* Will make after my return this week a long trip in the Upper Current River country of the Ozarks and will try and get many good pictures. The fishing up there is exceptionally good, and the scenery wild and attractive. Later I will be in the Sunken lands, where I will get plenty of interesting matter. Have already material from that country, but my pictures were not good. I want to get you several flocks of wild woodducks and also scenes of the greatest mallard country.

There has been a splendid woodduck hatching this year. They came through their nesting period during the big flood, and during a trip there through the overflow country I saw at least 500 flocks of young woodducks and many young mergansers.

J. B. THOMPSON.

Wyoming Sage Grouse.

JELM, Wyoming, Sept. 2.—*Editor Forest and Stream:* Sage chicken are very plentiful this year, but it was not till the other day that I had time to go after any. I can always fish, as the river is within twenty feet of my cabin door. Some time next week I intend going after some grouse. They are coming down now and are good eating. As you probably know, in this country when the grouse feed on the pine cones exclusively, they taste as if they had been cooked in turpentine. I suppose a sage chicken is a species of grouse. They differ from the prairie chicken in that they are larger and have a distinct taste of sage.

R. W. RATHBORNE, JR.

Archery Contests.

G. PHILLIPS BRYANT was high man in the national championship in the archery contest held at Newton Centre on Sept. 7 with 94 hits for a total of 506. Henry B. Richardson, ex-national champion, was second with 83 hits for a total of 405. Burton P. Gray, of Newton Centre, president of the National Archery Association, was third. There were ninety-six arrows shot at 60 yards. The scores:

	Hits.	Total.
G. P. Bryant	94	506
H. B. Richardson.....	83	405
B. P. Gray.....	85	389
Wallace Bryant	76	352
F. W. Wilder.....	77	351
E. W. Frenz.....	68	310
Mrs. E. W. Frenz.....	71	297
Miss F. M. Patrick.....	61	281
Miss M. A. Brownell.....	74	276
Mrs. B. P. Gray.....	46	178
Mrs. R. M. Clark.....	43	169

Song of the Wild Geese.

Written by Harry R. Peterson for the Old Farmer's 1912 Almanac.

We love the whirl of the bitter gale, and the northern sleet and snow,
Our flight can pierce the thickest fog, or the strongest winds that blow,
For we are the masters of sea and sand, the lords of the land and sky,
And we fear no bird nor beast nor man with our flying wedge on high.

You can hear us call in the April dawn, or the chill of an autumn night,
As we rest in the lee of a lonely dune, or swing in our rushing flight,
Or see us pass like specks in the blue, while we circle a breakered shore,
To light in a creek by the Southern Seas, or a bog in Labrador.

No foe can live in our endless swamps, where we dwell by the Polar shed,
Where the low-hung sun winds round and round, and the Bear is overhead,
Where a quicksand waits for the fool who dares to enter our mis-hid fen,
And we're safe by a good three hundred leagues from the tiny cities of men.

No land can keep us as its own, no climate's bonds we feel;
When the Northern sedges fade and chill, on wings as strong as steel,
Past forests, coasts and bays we fly, to the South, we know not why,
But we fear no bird nor beast nor man with our flying wedge on high.

Coyotes and Watermelons.

LAS ANIMAS, Colo., Aug. 29.—*Editor Forest and Stream:* Joe came in the other day and remarked that the coyotes were eating the watermelons in the upper field. Now, Joe often makes statements seriously, the result of his conclusions that appeal to the humorous side of the rest of us. To our shouts of laughter he only replied with a smile and entered the discussion with us as to what animal was committing the havoc among our melons that we had all remarked for some time.

I thought it might be a badger, for although carnivorous they are very destructive, and one I had in captivity had really eaten grain. Sam thought it was a hawk or an eagle, and for the reason that a chicken will eat anything, we finally laid the depredations to some kind of a bird, although it was plain that the melons had been crushed instead of pecked. As we followed Joe outdoors to take up with him the afternoon's work, we stumbled over a dead coyote on the doorstep. This was the thief. Joe had shot him with a .22 while he was devouring a melon. His chops and head up to his eyes were wet with melon juice. He was a self-confessed culprit.

I have trapped and poisoned coyotes for thirty-five years, and in all that time no one lacking the proof and veracity which Joe furnished and embodied could have convinced me that a coyote would eat melons.

A hard winter destroyed one-half our quail and meadow larks, but a favorable season has replenished the ranks, and quail are daily seen from the size of those just off the nest to almost full grown birds.

The curlew that used to nest here in numbers is seen no more until its return from the North late in the season. Game fowl of all kinds are decreasing in numbers, while each season brings us new song birds.

F. T. WEBBER.

SEA AND RIVER FISHING

Salmon Fishing in California.

CAPITOLA, Cal., Aug. 21.—*Editor Forest and Stream:* During the past week there has been a great run of those royal fish, the quinnat salmon, in the waters of Monterey Bay, off Santa Cruz and Capitola, and in consequence the local, as well as visiting sportsmen and summer visitors, have been enjoying the "sport of kings," and salmon, the finest of food and game fish, have been caught by hundreds on hook and line during the past few days. A catch of one hundred of these beautiful fish is an ordinary one and many of the catches are very much greater.

Yesterday Mr. and Mrs. B. F. Cowell, Mr. and Mrs. P. A. Athern and Mr. and Mrs. Peter Linn caught fifty-four salmon, Wm. Kirk and E. West, 54; A. Googins and party, 127; Geo. Ripp and party, 60; H. Uhdin and party, 65; Louis Benerino, 54; Wm. Johnson, 83; Samuel Scott, 181; James Strang and party, 100; Geo. Mitchell and party, 157; C. W. Stewart, 46; R. Menzel, 27; L. H. Hill, 17; Joseph Lorenzo, 24; Arthur Develin, 60; E. A. Mocked, 17.

The above are the catches of salmon made by a few of the fifty odd boats that were out on the bay after salmon yesterday. Many of the anglers used very light tackle and took their fish on rod and reel. It is very pleasing to watch the little fleet of salmon fishing boats as they move back and forth over the fishing grounds and to hear the shouts of the amateur angler which are caused by the excitement of landing a large and fighting salmon.

Many of the salmon caught during the past few days weighed thirty pounds and over, and many inexperienced anglers were "cleaned out" of their tackle.

Steelhead trout have begun to appear in the waters of the bay off the mouths of the streams and no doubt but what within the next ten days great sport will be had angling for these gamy fish.

WALTER R. WELCH.

Dry Flies and Dead Bait.

ANNAPOLIS ROYAL, N. S., Sept. 3.—*Editor Forest and Stream:* It is delightful to see a man champion his favorite thing, be it a dog, a virtue or an art, with the enthusiasm displayed by my friend, Mr. Gill, my very good and respected friend, I may say, when his cocked ear catches the echo of aught against his beloved method of angling with the dry-fly. In his last letter in FOREST AND STREAM he asks me the following conundrum: "Has Dr. Breck seen many *Ephemera* floating on the surface down stream dead, and at the same time with wings 'cocked' or upright in the air?"

Probably not in great numbers, Brother Gill, and for that very reason the trout were gorging themselves on them during nearly every hatch of May flies I can remember. For example, this spring a friend and myself took occasion to watch the trout feed on May flies, and we especially noticed that the flies that wriggled most were most promptly taken. In the midst floated

our dry-flies, which, except once in a great while, no doubt half by mistake, remained immobile.

Now, why was this? Because those artificial dry-flies (May flies and others) were practically motionless compared with the real May flies, which were by no means quiescent, but wriggling in a more or less lively manner. In just what degree our Northern trout like dead, sunken flies cannot be told. Surely, the point seems quite clear, and the inference just that non-moving, or to all purposes dead, food or bait is neglected by the trout I know, the fish preferring something that appears alive. A proof is that I have repeatedly caught trout with a dry-fly used wet

after trying in vain the method of allowing it to float down over a rising fish. When I said above that the flies preferred by our trout wriggled, I do not exactly mean squirming about, but making quite visible motions with wings, feelers or legs. That a trout can distinguish this wriggling insect from a quiescent one is clear.

Come again, Brother Gill, and more power to your pen. By the way, if he, or the editor of FOREST AND STREAM, or somebody else of authority in angling matters, will receive them, I will send him specimens of as many of our local spring flies as I can capture next season. Possibly others will do the same. The flies will be tabulated and in a short period of years we shall have the nucleus of an American angling etymology. I made this proposition some years ago in your journal, and no slightest notice was ever taken of it, except very lately by my genial inquisitor, Mr. Gill, who I am sure is "a very par-

fait gentle knight," as the ancient border poets would have said.

EDWARD BRECK.

[Mr. Breck's suggestion is accepted with alacrity. FOREST AND STREAM will accept and preserve specimens of flies. Such a collection should be of great value to the fly tier.—EDITOR.]

North Shore Casting Club.

CHICAGO, Ill., Sept. 1.—*Editor Forest and Stream:* Saturday, Sept. 21, has been designated as the day we entertain all of the city casting clubs at our grounds for the finish of the inter-city casting tournament. The games to be played are: Half-ounce accuracy bait and the accuracy fly. You are especially asked to participate. After the tournament those wishing to do so will take dinner at the refectory. Bring your ladies with you, as we intend to have a jolly evening.

The usual one dollar a plate will be charged. I am especially anxious that you attend, as the North Shore Casting Club must win this contest. Our one pennant is so lonesome for company, that we must give it the city pennant for an associate. The secretary has a card open to inspection at any time, showing just how you stand as regards your score. The scores cast Aug. 24 follow:

	¼-ounce Accuracy.	¼-oz. Dist.	Distance L. T. Fly.
Dorchester	97.5	128	113
Goodwin	...	104	91
Adams	98.5	123	102
Lambert	98.9
Church	97.3	115	98
Keppler	97.1	130	100
Hess	97.6	120	110
Hinterleitner	99.2
Paulson	98.0	120	101
Ercanbrock	97.9	103	95
Forsyth	98.1	...	105
Hall	98.1	140	123
Hall	...	145	113
Adams	99.0	140	98
Paulson	97.9	140	119

C. O. DORCHESTER, Sec'y-Treas.

New Publications.

STORIES OF SOME SHOOTS. Arms and the Man Publishing Company, Washington, D. C. Price, \$1.25 net.

Stories of Some Shoots, the breezily-narrated experience of an American sportsman in the Scottish Highlands, where he stalked the Scotch stag in its native heath and shot the Scotch pheasant in real Scotch heather, told in a graphic, agreeable style, bring the atmosphere and environment of the story clearly before one.

The foundation for the story is furnished primarily by an invitation from a landed Scotchman to the author to shoot ducks on his vast game preserves. The incredulity and reluctance of the American at the idea of shooting "tame ducks" and the subsequent opportunities afforded him for the stalking of stags and the long days of perfect sport with various native game birds make a story which every American, in fact, any sportsmen in the whole world would wish to read.

A PARTY of young men were out camping. As none of them liked to cook, they made the rule that anyone asking a question he could not answer would have to cook for a week. One night a fellow asked: "Why isn't there any dirt around a fox's hole?" As none could answer, he said: "Because it starts at the other end." One of the party laughed and said: "How does he get to the other end?" "That's your question," answered the wise one.—From The Babbler, West Newton, Mass.

Interstate Fly-Casting Tournament.

NEWARK, N. J., Sept. 7.—*Editor Forest and Stream:* Fly-casters were in attendance at the fifth annual interstate tournament, held to-day at Weequahic Park Lake under the auspices of the Newark Bait and Fly-Casting Club. The program consisted of six events, which were held throughout the day.

The silver trophy cup, presented to the winner having the largest number of points, was captured by Charles T. Champion, of Bloomfield, a member of the local club. Champion was credited with 555 points, which topped Fred T. Mapes by four credits, the second man having a score of 551. John Dougherty, of Plainfield, was third with 532 points. The fight between Champion and Mapes for the trophy was exceedingly close, and the final standing of the two nearest contenders was not certain until the last event, the half-ounce distance bait-casting, the accuracy dry-fly casting competition. Champion had the edge and was credited with only twelve demerits. Mapes fell behind and was marked with thirty-five demerits, which cost the trophy.

Mapes set a high mark in the first event, the half-ounce distance bait-casting. He was credited with 174 feet for his longest cast and totaled 806, with an average cast of 161 feet. In this event the casters were divided into two classes, those who had set a mark of 175 feet in previous competitions composing the first division.

In the first of the afternoon events accuracy half-ounce casting, Champion made a record score, having only twenty-six demerits. Contestants made one cast each consecutively at 60, 70, 80, 90 and 100 feet, then reversed the order, from 100 feet back to 60 feet, and again same as first five casts, from 60 feet out to 100 feet, making fifteen casts in all. The next best score to that of Champion was made by R. E. Eichlin, with thirty-eight demerits.

During the running of the fifth number a stiff wind blew across the lake, which made accurate casting impossible, and for a time the tournament committee considered postponing these events. After thirty minutes' delay, the conditions became feasible to resume the sport.

Mapes bested Champion in distance trout fly-casting, having a cast of 87 feet, which surpassed Champion's throw by four feet. The summary:

Class 1.			
	Average.	Total.	Longest Cast.
F. T. Mapes.....	161	806	174
A. J. Neu.....	141	707	154
J. Dougherty.....	127	638	144
P. J. Muldoon.....	117	585	132
P. D. Frazer.....	61	306	127

Champion and Dougherty tied for third place, and on the cast-off, Champion won.

Class 2.			
	Average.	Total.	Longest Cast.
G. A. Endersby.....	126	625	140
L. L. Sands.....	113	567	135
Smith.....	116	583	146

Distance fly-casting, unlimited rod: Frazer, 102 feet 6 inches; Champion, 101; Mapes, 89; Dougherty, 88; Muldoon, 84; Smith, 73; Eichlin, 69.

Accuracy trout fly-casting, at 50 feet, 55 feet and 60 feet, five casts at each target: First, J. Dougherty, 15 demerits; second, Smith, 17; third, F. J. Mapes, 20; fourth, P. J. Muldoon, 29; fifth, C. T. Champion, 33; sixth, P. D. Frazer, 45.

Accuracy half-ounce bait-casting: First, C. T. Champion, 26 demerits; second, R. R. Eichlin, 38; third, P. J. Muldoon, 40; fourth, John Dougherty, 44; fifth, A. J. Neu, 44; sixth, Gano,

44; seventh, F. T. Mapes, 46; eighth, G. A. Endersby, 70; ninth, A. J. Neu, 44; tenth, J. Jacobus, 87.

Distance trout fly-casting, five-ounce rod: First class, Mapes, 87 feet; Champion, 83 feet; Frazer, 80 feet; Doughty, 78 feet. Second class, Mercer, 80 feet; Gano, 73 feet; Eichlin, 72 feet; Muldoon, 71 feet; J. Dougherty, Jr., 77 feet.

Accuracy dry-fly casting, five-ounce rod: Won by Mercer, 9 demerits; second, Champion, 12; third, Doughty, 14; fourth, Frazer, 35; fifth, Mapes, 35; sixth, Muldoon, 42.

Northwestern Fall Fishing.

BY AMOS BURHANS.

WATERVILLE, Minn., Aug. 29.—*Editor Forest and Stream:* In nearly all the Northwestern lakes that are fed by creeks and rivers, there appears during the months of May and June a tiny green bit of weed seed or castoff portion of a stream water weed which, as it gains age, floats to the surface and clouds the water. Before it rises it hangs in the water close to the top. This, with the other marine growth along the shores of most of these lakes, make the fishing very nasty during July and August.

On a lake close by one end of it contains about twenty acres of this nauseating mass during the warmest weather. I have seen fish fight to get out of this mess and shift their feeding grounds as the weeds and floating muck was shifted about the lake. This weed was carried in this particular valley from one lake to another by the outlets or thoroughfares. Nearly every small lake empties into another. There is no bait-casting along the shore of our best bass grounds until this weed growth is nipped a few times by the frost and the water gets cold enough to kill it out.

During the early portion of the season, while these weeds are gaining density in our waters, bass often work about in them and lay where the morning sun can strike them. At such times I have taken two to four bass from one spot in this moss. This is before the weed gives off its seed and stanches the water. It is no trick to approach stealthily and cast beyond the spot to be fished, dragging the weedless surface lure directly over the spot.

Later in the season, say the fore part of September, the moss begins to die and settle or be thrown upon the beaches, this according to the storms and direction of the wind. It rolls in the water like the western sage brush on the prairie and piles up where there is an obstruction. Then we begin again with the surface lure on the rather shallow shore waters in the best feeding grounds near mouths of creeks or along patches of rushes and coarse water grasses.

Frogs are good bait at this time if they are scarce. If they are plentiful, the fish can get a quantity of them from about the stones along shore, under which the frogs ensconce themselves for the night, taking advantage of the heat the rocks draw and store during the day. Flies are good at this season, too. Anything with white and red on it seems to be good.

If the fall rains have been copious and the rivers and creeks are full-banked yet clear, casting is good in them. Two to the boat is the ideal number, one to hold it in midstream and advancing gently while the other wields the rod.

Last fall I did some bass fishing on a lake

that I had never been able to do any good upon during the best days of the season. One round point covered with water grass and rushes shoved itself out into the lake with a deal of prominence. The water was probably three feet deep outside the line of dense weeds and grass. Back in the closely growing weeds it was not more than half this deep, and among the jungle was a deal of this moss or water weed, which was growing still, this owing to its protection by the taller grass from the frosts. It was the first of October.

During the whole day I had been working about the shores of the lake among the lily-pads and pickerel weed with only meager success. At 4 to 5 o'clock in the afternoon we started to try the waters about the point again. Into the edge of the grasses we cast our frogs. They were big, live greenbacks that kicked and splashed about in fine style. Back among the weeds we could hear the bigger bass jumping for the frogs that were taking shelter in the tangles.

"Throw a frog over into the water where that big one made the splash," softly suggested my companion.

"I think too much of my tackle for that," I said, knowing that a fair sized fish could not be led through the weeds and grass for forty feet or even half that. However, my friend would try it.

The frog lighted on top of a bunch of weeds two feet above the water. By gently working the line he managed to cause the frog to drop slowly into the water, where he worked it about cautiously, just enough to make the frog kick and swing about a little. Getting no strike, he raised the frog up out of the water (for the line was still resting in the top of the grasses) and slid it down again. This time there was a rush for the bait and a series of splashes that indicated a good one on the hook.

By careful working of the line and taking advantage of the rushes of the fish in the small space he had to disgorge the torturing hook he finally worked the fish out of perhaps twenty feet of tall weeds and grass into the open water where he came to net easily, being exhausted. Three times more did the same thing happen in the same or nearly the same spot. The splashing of the frogs as they dropped from the weeds to the water attracted the fish, it seemed, and he landed four after some mighty exciting moments. The fifth broke the hook and we quit.

We tried the same idea three or four more times during the fall and failed to duplicate the trick. This summer we worked the same lake again and failed at it. The fish seemed to have taken up their headquarters on the opposite side of the lake in a bit of pickerel weed and lily-pads, where during the early morning we had very fair sport.

The coming spring our local organization is going to buy crushed rock salt and distribute it about the bottom of the lake where the weeds I have mentioned begin to grow. The pickerel weed does not multiply as fast as this finer weed and along the shores protects the fish to make trolling good. It is said that rock salt will dissolve slowly and kill out water weed of all kinds as it sinks to the bottom and does its work, and though we have never tried it, we want to use a carload next spring. I would be glad to hear through these columns from those who have tried it.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

OUR LETTERS.

To err is human, to forgive—well, we have forgiven, but—one of our office boys has erred with the result that many letters sent us and sent by us have been destroyed or otherwise deprived of the purpose for which they were intended. If you have written us or have expected to hear from us via Uncle Sam's route and have not had satisfaction, please write us again.

HERRESHOFF—CRANE.

THIS country has developed only one sail yacht designer whose product may be depended upon to return the win almost invariably. Gardiner was tried on Michigan and was badly beaten by Patricia from Canada. We have also produced only one designer of power boats upon whom Clinton H. Crane, designer of the Dixies, which we might be moderately dependent. That man is invariably have "brought back the bacon." The recent races at Huntington showed that the Ryan boats may not be depended upon. They lack stability, seaworthiness and consistent speed. A rough sea puts them out of the running, while on the turns great care must be taken to prevent their turtling. To be sure, the Ankle Deep was a Crane boat, but she was a tiny model and not built for the international races. She was not a Dixie by any means and was not constructed along cup defender lines. Had Crane been given an order for a cup defender, it is pretty certain we still would have had the trophy in this country. Maple Leaf was a remarkably dependable boat. She won her first race in a heavy sea and her second in the kind of weather prayed for by those behind the Reliances. She had no engine trouble and won with a broken rudder. Her owner showed real sportsmanship, refusing to take advantage of the Labor Day storm, when he could have planed home an easy winner.

Crane has an order for a challenger for next year, which makes the return of the cup to this country probable. So we reiterate: There are only two real race yacht designers in this country—Herreshoff and Crane.

RECOMMENDATIONS OF GAME AND FISH COMMISSIONERS.

IN the report of the National Game and Fish Commissioners, appearing exclusively in FOREST AND STREAM this week, are many suggestions worthy the attention and consideration of all sportsmen. The suggestion that laws be few, simple and enforced is admirable. That the term of commissioners be in all States four years instead of two, as at present in twelve States; that politics and game wardens be kept beyond reaching distance; that spring shooting north of latitude 37 degrees be absolutely prohibited; that a close season be provided for ducks and geese in Arkansas and Texas, where at present there is no protected time on waterfowl; that sale of game in all States be regulated; that the daily bag be limited to twenty-five birds in Arkansas, Kentucky, Rhode Island and Virginia where at present no limit is placed on number of birds that may be killed; that Audubon recommendations be adopted; that egret and heron laws regulating traffic in plumage be enacted in certain States—all are remarkably sensible suggestions and deserve your support. In closing the most successful meeting of its kind thus far held, suggestion was made that all sportsmen and bird lovers join in support of the Weeks bill (H. R. 36), McLean bill (S. 647), Catron bill (S. 6942), Kent bill (H. R.) and the Perkins bill (S. 6109). In the last suggestion in particular and all others in general we heartily concur.

ANTI-REVOLVER LAW.

It begins to look as though Massachusetts would frame a law along lines of the Sullivan law for presentation to the Legislature this winter. In his annual report, Secretary William C. Adams, of the Massachusetts Gunners' Association, starts the idea in incubation through his hope that a law be passed prohibiting all unnaturalized persons carrying firearms in the Commonwealth. It is hoped each of these unorganized movements may be brought into unison toward the formation of a Federal bill, embodying many good points to be found in the Sullivan law, the Sisson bill and the law at present in force in Pennsylvania. We then will have a firearms law that will work the greatest benefit to the greatest number.

THE POWER OF SUGGESTION.

IN another column appear scores made at the September meet of the National Archery Association. Indications, though due only to the power of suggestion, seem to say, archery is "coming back." Burton Payne Gray, President of the National Archery Association, sends us the following evidence:

"Ellis Spear, Jr., the new secretary advised me that he received a letter from a gun club in Missouri asking information regarding archery and what books to read on the subject, stating that they had seen an account of the tournament in a recent copy of your magazine. Two or three have written me on similar lines referring to your paper."

AMMUNITION BY PARCELS POST.

IN Germany, where everything that could possibly harm anyone is not allowed, both loaded cartridges and powder may be sent by parcels post like anything else, except that the wooden boxes they are packed in are somewhat stouter and have a green label stating that the contents are loaded cartridges. Powder is packed in a cloth bag in a tin can and embedded in wood straw. Only the old-fashioned pin-fire cartridges are held to be too dangerous to send by parcels post.

It is quite certain that this has not proved to be dangerous in Germany, and it would be a convenience to almost everyone who has to do with ammunition in America to be allowed to send it by parcels post, and so we suggest that the readers of FOREST AND STREAM write to this effect to their senator, or to Senator Bourne, who is in charge of the committee now making the rules for the coming parcels post in America.

OVER THE BAG LIMIT.

THE following news item appeared in the Portland Oregonian on Aug. 29:

"Dr. Francis E. Ferrill, accompanied by Mrs. Ferrill, returned yesterday to Portland after a seven days' hunting and fishing trip in the Nehalem country.

"Dr. Ferrill killed seven deer and Mrs. Ferrill killed two."

This would seem to be a case upon which the game warden should sit. The Oregon game law allows only five deer to one person in a season.

WARNING.

THE early season shooter should look up the law in his State before going out this year. There are important changes in many States, especially New York State, wherein the deer season opens and closes fifteen days later than last season. It now is Oct. 1 to Nov. 15. The grouse or partridge season in New York State is Oct. 1 to Nov. 30, while cottontail rabbits may be shot from Oct. 1 to Dec. 31, though snowshoe hares, or varying hares, may be taken from Nov. 1 to Jan. 31. It will be worth your while to paste these dates in your gun cabinet.

The Angler's Appeal.

BY WARD W. ADAIR.

WILDEST salmon of the school,
 Lordly, gamy, silvery, cool,
 Hear my plea down in the pool
 Where you lie.

Over you my cast I fling—
 Hackle, gnat and grizzly king.
 Rise, and with a mighty spring,
 Swat the fly!

Watchful trout, beneath the shade,
 Just ahead of where I wade,
 Let me start you on a raid,
 Leaping high.

Over your devoted head
 Now my dainty cast is spread,
 Willow, hackle, ibis red—
 Swat the fly!

Silent bass 'neath rushes green,
 I will visit you, I ween,
 And I hope to find you keen
 For a try.
 With my cast of silken down,
 Henshall, dun and fairy brown,
 Up, thou warrior of renown,
 Swat the fly!

YACHTING

Beverly Y. C.

BOSTON, Mass., Aug. 27.—*Editor Forest and Stream:* I send you with this report of our races Nos. 477, 478 and 479, also report of two special races held by the Beverly Y. C.

It is pleasing to note that the races continue to be well attended, and that the sport has been excellent. The special race on Aug. 3 was held off the property recently bought by the club on Ruggles Point in order to give the members an opportunity to judge of the merits of the property as a site for a new club house, and to compare the courses starting from Ruggles Point, with the courses starting from the present club house. The race among the larger boats was for a Memorial cup, offered by Mrs. G. Griswold Van Rensselaer. In this race all yachts competing sailed in the same class, and the cup was awarded to the yacht making the best corrected time. The measurement was the water line length, except that all yachts in regular classes sailed at the upper limit of their respective classes. Time allowance was computed according to the tables formerly used by the Beverly Y. C. In our ordinary races we have no time allowance, the races being governed by the actual time of each yacht. For a number of years past Mrs. Van Rensselaer has offered a memorial cup, and the races have been sailed as in the present case, on time allowance basis, all yachts under 30 feet competing in one class. The event being different in this particular from our ordinary races has always proved an attractive feature of the season. This year's race had the added advantage of being sailed over the new courses, which were almost unanimously approved by the competing yachtsmen. Since this race the club has held an informal meeting to consider the advisability of moving the club house to the new location at Ruggles Point, and has appointed a committee to canvas the club and find out fully the views of members in regard to the proposed move. The probability of the early completion of the Cape Cod Canal, with the resulting increase of traffic in the bay, is one of the reasons that has led the club to consider the question of moving its headquarters, but it is also believed by many members that the location at Ruggles Point will be more central and afford more open and better courses for racing.

F. A. EUSTIS, Sec'y.

Four hundred and seventy-seventh regatta; eighth club race; club house, July 27, 1912. Judge: David Rice. Wind southwest, light.

21-Footers—Course No. 9, 133½ Miles.	
Phantom, F. W. Sargent	2 17 43
Foraminifer, D. L. Wittemore	2 21 07
Terrapin, F. L. and G. B. Dabney	2 21 17
Skate, W. E. C. Eustis	2 21 32
Saracen, Robert Winsor, Jr.	2 23 14
Polliwog, Frederic C. Hood	2 25 02

Sonder Class—Course No. 11, 11¼ Miles.	
Peg, Galen L. Stone	1 54 30
Seacoon, J. L. Stackpole	2 07 17
Fin, Howard Stockton, Jr.	2 10 03
Joyette, J. C. Edwards	2 10 15
Sally VIII., C. E. Hellier	2 10 39

Crane 15-Footers—Course No. 13, 8½ Miles.	
Lestris, Joshua Crane	2 03 33
Charmion, Joshua Crane, Jr.	2 04 09
Pioneer, Francis B. Austin	2 04 47
Water Witch, C. A. Coolidge	2 05 28
Nabob, E. H. Bright	2 06 20
Gifted, George U. Crocker	2 06 31
Niobe, Moseley Taylor	2 09 25
No Name, Ann Shepley Lionberger ..	2 09 30

Herreshoff 15-Footers—Course No. 15, 8½ Miles.	
Vim, W. O. Taylor	1 42 45
Pronto, Sidney Hosmer	1 42 58
Endeavor, Gardiner H. Fiske	1 44 00
Fly, W. H. Slocum	1 45 40

Van Rensselaer cup race; Ruggles Point, Aug. 3, 1912. Judge: David Rice. Wind, W.S.W., 1 reef.

Van Rensselaer Class—Course No. 3, 13 Knots.	
Skate, W. E. C. Eustis	1 49 01
Peg, Galen L. Stone	1 53 20
Seacoon, J. L. Stackpole	1 53 40

Polliwog, Frederic C. Hood	1 53 45
Foraminifer, D. L. Wittemore	1 53 58
Gifted, George U. Crocker	1 57 26
Fin, Howard Stockton, Jr.	1 57 58
Lestris, Josua Crane	1 58 46
Joyette, J. C. Edwards	2 00 56
Selwonk, L. J. Knowles	2 01 49
Makabaro, Galen L. Stone	2 02 13
Saracen, Robert Winsor, Jr.	d. n. f.
Phantom, F. W. Sargent	d. n. f.

Allowance: Peg, Seacoon, Fin and Joyette, 1m. 42s; Gifted and Lestris, 10m. 5s.	
Crane 15-Footers—Course G, 10 Knots.	
Pioneer, Francis B. Austin	1 30 10
No Name, Miss Ann Shepley Lionberger ..	1 31 40
Charmion, Joshua Crane	1 33 05
Nabob, E. H. Bright	1 34 09
Water Witch, C. A. Coolidge	1 34 25

This class did not sail Course G as laid out, but rounded another bush buoy some three-quarters of a knot to the westward of their correct mark, making a much shorter course.

Herreshoff 15-Footers—Course G, 10 Knots.	
Polly, Donald T. Hood	2 08 02
Endeavor, Gardiner H. Fiske	2 13 58
Vim, W. O. Taylor	2 14 45
Yalu, Miss Margaret Codman	Dismasted.
Fly, W. H. Slocum	Withdraw.
Pronto, Sidney Hosmer	Withdraw.

Vim protests Polly for fouling No. 15 on first round. Pronto protests race; claims judge did not hoist proper course number, and they did not know the course. Judge refused to sustain, as proper notice had been given. Pronto appeals to Regatta Committee.

Four hundred and seventy-eighth regatta; ninth club race; club house, Aug. 10, 1912. Judge: Chas. Whittemore. Wind, S.S.W.

21-Footers—Course No. 10—12½ Miles.	
Skate, W. E. C. Eustis	1 39 34
Foraminifer, D. L. Whittemore	1 41 07
Saracen, Robert Winsor, Jr.	1 41 33
Terrapin, F. L. and G. B. Dabney	1 44 04
Selwonk, L. J. Knowles	1 44 31
Polliwog, Frederic C. Hood	1 44 43

Saracen was disqualified for crossing the line too soon.

Sonder Class—Course No. 10, 12½ Miles.	
Peg, Galen L. Stone	1 47 28
Seacoon, J. L. Stackpole	1 42 57
Sally VIII., C. E. Hellier	1 43 20
Fin, Howard Stockton, Jr.	1 44 55
Joyette, J. C. Edwards	1 48 33

Crane 15-Footers—Course No. 14, 8½ Miles.

Uarda, John Parkinson, Jr.	Sailed wrong course.

Bayside Y. C.

For the first time the birds sailed over the new triangular course in the annual fall regatta of the Bayside Y. C. Starting at the same time, five of the Bayside birds and two of the Manhasset Club's specially designed boats competed, and at the finish three of the modern design boats of the Bayside Club were in the lead. The summary:

Bayside Bird Class—Start, 3:15.		
	Finish.	Elapsed.
Skylark, J. Dayton	4 58 57	1 43 57
Curlew, C. L. Willard	4 59 36	1 44 36
Dodo, A. C. Andrews	5 00 00	1 45 00
Loon, A. W. Knapp	5 02 08	1 47 18
Teaser, A. Nesbitt, Jr.	5 04 10	1 49 10

Manhasset Bay One-Design—Start, 3:15		
Scylla, E. A. Sierck	5 00 26	1 45 26
Mlle. Bess, W. H. Lindeman	5 01 40	1 46 40

Manhasset Bay Raceabouts—Start, 3:20.		
Avis, H. Gerber	4 30 42	1 10 42
Pixy, L. A. Egger	4 30 51	1 10 51
Edith, Smith and Volking	4 31 24	1 11 24

Manhasset Bay Bug Class—Start, 3:30.		
Scarab, H. Christie	4 51 02	1 21 02
Skeeter, R. H. Rodman	4 53 03	1 23 03
Hornet, George Paxton	4 51 07	1 28 07
Grasshopper, R. A. Freeman	4 59 30	1 29 30

Handicap Class—Start, 3:30.		
Dart, Thomas Bell	4 47 31	1 17 31
Sport, George Hopewell	4 52 20	1 22 20

Manhasset Bay Stars—Start, 3:25.		
Evening Star, A. Newman	4 37 32	1 12 32
Little Dipper, G. A. Corry	4 33 40	1 08 40

Old Bay One-Design—Start, 3:30.		
Mary Jane, W. E. Banks	4 42 12	1 12 12
Edna J., A. Nesbitt, Jr.	4 45 37	1 15 37
Rowdy, Charles Medicens	4 46 09	1 16 09
Betty, W. H. Johns	Disqualified.	

Stamford Y. C.

STAMFORD, Conn., Sept. 7.—The annual race between the one-design class of the Stamford Y. C. and the one-designs of the Seawanhaka-Corinthian Y. C. was sailed this afternoon off Stamford Harbor in a fresh southerly breeze. A Stamford boat finished first, but the Seawanhaka fleet won the race on points, 41 to 37. Inasmuch as the cup, offered by the Stamford Y. C., was won by the Seawanhaka Club a year ago, that club retains possession of it. The summary:

Start, 3:25—Course, 6 Miles.		
	Elapsed.	
Osprey, Douglas Elliman, Stamford Y. C.	2 18 50	
Imp, Mr. Langdon, Seawanhaka Y. C.	2 21 32	
Hen, Mr. Nichols, Seawanhaka Y. C.	2 22 48	
Killie, B. Jacob, Stamford Y. C.	2 23 32	
Grilse, Mr. Roosevelt, Seawanhaka Y. C.	2 24 49	
Iris, Mr. Tuckerman, Seawanhaka Y. C.	2 25 22	
Curlew, Gayer Dominick, Stamford Y. C.	2 25 24	
Thelma, Mr. MacKenzie, Seawanhaka Y. C.	2 26 09	
Kittawake, Mr. Trowbridge, Stamford Y. C.	2 26 18	
Snapper, Edward Corning, Stamford Y. C.	2 26 28	
Kelpie, Harold Buck, Stamford Y. C.	2 26 46	
Fiddler, Weber and Weed, Stamford Y. C.	2 26 59	

New York Y. C.

It is generally conceded that W. Butler Duncan, Jr., is a chip of the old block. He proved beyond conjecture that as a sailor he differs from father only in that he is younger. On Sept. 5 he sailed his father's schooner yacht Vandalia across the line a winner in the sixty-fifth annual regatta of the New York Y. C. There were five other entrants, with the usual number of high class skippers in charge. Master Duncan is only nine years old.

Quincy Y. C.

QUINCY, Mass., Sept. 7.—The open regatta held to-day by the Quincy Y. C. off the club house at Hough's Neck brought out forty-three entries and exciting sport. The absence of Nutmeg took considerable competition out of the Class A contest, but in Class B the rivalry twice brought contestants into tight places. One of these was a near shipwreck, while the second brought out some very clever seamanship and ocean craft on the part of Hollis Burgess whose Olivia was a winner. The winners in the other classes were: Meemer, Class A; Lindsay, Class C; Thordis, Class H; Iris, Class D; Maritza II., Class S, and Why and Gertrude in the open and cabin power boat classes respectively. The summary:

Class A.		
	Elapsed.	Corrected.
Meemer, J. T. Cavanagh	1 35 13	1 10 59
Virginia, Joy and Patterson	1 42 04	1 15 32
Chewink II., Frizzell and Swenson	1 46 23	1 19 34
Mignon, A. E. Coupal	1 51 52	1 23 18
Marie L., A. W. Finlay	1 56 46	1 28 12
Areyto, E. F. Drew	Did not finish.	
Flirt, J. A. Dykman	Disqualified.	
Class C.		
Lindsay, Power & McCarthy	1 43 22	1 22 36
Eleanor, W. L. Jefferson	1 52 35	1 24 11
Violet, H. J. McKee	1 47 28	1 26 15
Class H.		
Thordis, F. R. Bussler	1 51 19	1 46 19
Sinbad, Ralph Packard	1 58 15	1 47 05
Iralit, D. M. Wisley	1 55 30	1 48 50
Tiger, G. E. Carroll	1 51 31	1 50 41
Dorsyl, S. L. Gookin	1 57 34	1 51 44
Sentinel, Munroe Bros.	2 01 42	1 55 02
Millie, G. McDonald	2 00 52	1 55 02
Newshoy, A. C. MacLean	2 18 07	2 01 27
Marion III., R. C. Goudy	2 08 08	2 05 38
Class B.		
Olivia, H. Burgess	1 52 32	1 20 34
Chevy Chase, W. Kelley	1 54 10	1 22 54
Quakeress, J. W. Dammerall	1 54 48	1 23 43
Sintran, O. L. Brambach	1 56 52	1 24 37
Pirate, R. S. Landers	1 58 26	1 26 11
Winona, Murphy Bros.	Disqualified.	
Class G.		
Iris, F. F. Crane	1 54 08	1 54 08
Dartwell, I. M. Wittemore	1 54 16	1 54 11
Clara, H. W. Robbins	1 56 00	1 55 25
Mudjekewis, E. W. Emery	1 57 56	1 57 35
Dolly, W. W. Arnold	Disabled.	
Busy Bee, Tupper and Hardwick	Disabled.	
Class S.		
Maritza II., C. H. Porter	1 40 20	1 20 04
Zoc, F. J. Stewart	2 02 13	1 30 26
Wawenock, G. W. Sargent	2 05 40	1 38 35
Winniahdin, James Spratt	Did not finish.	
Open Power Boats.		
Why, A. A. Martin	0 41 06	0 41 06
Pegasus II., L. R. Cogswell	0 46 00	0 43 30
Gerard, J. W. Dearton	1 41 53	0 49 08
Anabel, J. E. Farrell	2 06 28	1 02 03
Spark, Walter Kelley	1 53 40	1 03 50
Cabin Power Boats.		
Gertrude, J. J. Tobin	1 36 58	1 21 58
Lillian M., F. Maliff	1 39 25	1 24 25
C. U. Later, M. A. Schafuer	1 51 25	1 33 15

Indian Harbor Y. C.

FIFTY-TWO yachts raced in the Indian Harbor Y. C.'s autumn regatta off Greenwich, Conn., last Saturday, the winners being Aurora, Corinthian, Rowdy, Vandalia, Edmee, Alert, Ogeemah, Natoma, Arathusa, Hamburg II., Brilliant, Twinkle and Tautog.

A light east-southeasterly breeze shifted to the southward, as the yachts finished a windward leg to the first marks of the respective courses and were thus given second windward legs, with broad reaches to the finish, and despite the large amount of weather work, the finishes were indicative of excellent speed over the respective courses.

The victory of Cornelius Vanderbilt's Class K sloop Aurora over Istalena by 2m. 17s. and over Winsome by an even five minutes again places this trio on even terms at the end of the season of racing.

The regatta committee, consisting of Messrs. E. Burton Hart, Chairman; Henry C. Pelton and Abbott P. Brush, conducted the races from the tug W. H. Childs, without missing a start or finish, and the racing season of the Indian Harbor Y. C. ended successfully. The summary:

Sloops, Class K—Start, 1:00—Course, 20 Miles.		
	Finish.	Elapsed.
Aurora, C. Vanderbilt	4 37 24	3 37 24
Istalena, G. M. Pynchon	4 39 41	3 39 41
Winsome, E. T. Hall	4 42 24	3 42 24

Sloops, Class P—Start, 1:10—Course, 15 Miles.		
Corinthian, H. C. Smith	4 09 43	2 59 43
Joyant, W. H. Childs	4 17 15	3 07 15
Windward, R. A. Monks	4 13 42	3 03 42

N. Y. Y. C. 30-footers—Start, 1:15—Course, 15 Miles.		
Alera, J. W. and E. P. Alker	4 21 46	3 06 46
Rowdy, H. S. Duell	4 21 32	3 06 32
Nepsi, Johnston de Forest	4 22 54	3 07 54

Crescent A. C.

UNDER the auspices of the Crescent Athletic Club, the eleventh race to count on the yacht racing championship of the Lower Bay was decided off the Atlantic Y. C. last Saturday. The winners were Spider, Joy, M. & F., M. & F. II. and Metcor. The summary:

Sloops, Class Q—Start, 3:00—Course, 12 Miles.		
	Finish.	Elapsed.
Spider, Hendon Chubb	5 06 38	2 06 38
Suelew, E. T. Luckenbach	5 07 31	2 07 31
Grayjacket, F. C. Noble	5 07 45	2 07 45
Dixie, R. Rummell	5 09 13	2 09 13
Soga, W. A. Baistro	5 10 55	2 10 55
Alice Gherardi Davis	5 10 28	...
Alice fouled Sea Gate mark.		

Handicap Class, 1st Div.—Start, 3:05—Course, 8 Miles.		
Joy, Le Sauvage and Geer	4 33 52	1 28 52
Claire, W. C. Van Clief	4 37 23	1 32 23

Handicap Class, 2d Div.—Start, 3:05—Course, 8 Miles.		
M. and F., C. M. Camp	4 50 55	1 45 55
Blue Bill, Zeb Mayhew	4 51 17	1 46 17
Careless, C. V. Bryan	4 53 58	1 48 58
Gunda, W. H. Hall	4 56 02	1 51 02
Corrected time—M. and F., 1.41.41; Blue Bill, 1.41.41; Gunda, 1.45.45; Careless, 1.48.58.		

Sloops, Class X—Start, 3:10—Course, 8 Miles.		
M. and F. II., Camp and Marchant	4 49 07	1 39 07
Cyric, Dr. C. L. Atkinson	4 51 21	1 41 21

Sloops, Class X—Start, 3:15—Course, 8 Miles.		
Mouse, R. E. Dingman	4 55 23	1 40 23
Skyark, M. A. Howard	4 56 00	1 41 00

Merry Widow, Bailey and Bailey	4 59 48	1 44 48

Sailing Dinghies—Start, 3:45—Course, 4 Miles.		
Meteor, J. C. Erskine	4 42 52	0 57 52
North Star, Maurel and O'Riff	Withdrew.	

Pastorel's Rubber Boat.

In one of our earlier issues we published an article describing the non-sinkable rubber boat invented by Joseph Pastorel, at that time of Asbury Park, N. J., now of New York city. This boat has since that time created considerable comment, and bids fair to become part of the equipment of ocean liners. Mr. Pastorel's invention will be exhibited at the Rubber Show, to be held in the Grand Central Palace, Sept. 23.

Motor Boating

Maple Leaf Unable to Race.

SOME of the members of the New York Produce Exchange are of opinion that the committee of the Motor Boat Club of America erred in passing over the Peter Pan V. when the American team to race against the British motor boats was selected, says the New York Sun. Peter Pan V. is owned by James Simpson, a member of the Produce Exchange. W. J. Brainerd, also a member of that Exchange, at once offered to put up a prize worth \$500 for a race between Maple Leaf IV. and Peter Pan V. and he sent a telegram to E. Mackay Edgar, telling him of his offer and suggesting that the race be at Huntington, Larchmont or on the Hudson River or anywhere Mr. Edgar might suggest.

Mr. Edgar replied, thanking Mr. Brainerd for his offer. He regretted, he said, that he must decline a race, as Maple Leaf has engagements at home and must be shipped at once by steamer. He hopes to meet Peter Pan V. next season when the American team visits England.

Peter Pan V. will be raced against the Baby Reliances during the carnival of the Motor Boat Club on the Hudson River off Yonkers during the week beginning Sept. 16. Commodore Blackton has promised to race his boat, and in a measure this meeting will settle the differences of opinion about the speeds of Peter Pan and Baby Reliance.

New York-Poughkeepsie Record.

A NEW record was established for motor boats of the cruising type over the New York-Poughkeepsie course last Saturday when Squaw, owned by P. Duffy, of the Columbia Y. C., made the round trip in 8h. 4m. Squaw is a cabin cruiser.

Bunk III., owned by C. Firch, of the Hudson River Motor Boat Club, won the open boat race in 13h. Cutting this by two hours' handicap, Bunk remained the winner both on the corrected time and the actual sailing time. Greyhare was second. No Name, owned by Capt. A. Simpson, of the Hudson River Motor Boat Club, was far behind the running time of the other two in this class. The finish:

Cabin Cruisers.—Squaw, P. Duffy, Columbia Y. C., actual time, 8.04.00; Excelsior, J. Torsen, Hudson River Motor Boat Club, 12.58.00; Idle Time, M. P. Behrman, Colonial Y. C., 13.02.00; Spindrift, C. R. Butler, 13.21.00; Lady Betty, H. J. Russell, 13.27.10.

Open Boats.—Bunk III., C. Firch, Hudson River Motor Boat Club, 13.00.00, corrected time, 12.00.00; Greyhare, A. Haas, Hudson River Motor Boat Club, 13.03.00.

International Motor Boat Race.

THE great International Motor Boat race for the trophy offered by Lord Northcliffe has come and gone, and with it the trophy emblematic of the motor boat championship of the world.

To say that the event was unsatisfactory is not to exaggerate one iota. First of all there was grumbling and dissatisfaction over the selection of the boats, the question arising as to whether the two Baby Reliances, built by the same concern, should have been selected in preference to Peter Pan V. as one of the defenders. Then it was discovered that J. Stuart Blackton, owner of one of the possible winners, was not a citizen of the United States, therefore was ineligible under the rules laid down by the donor of the cup and instead of accepting this as final, the Motor Boat Club of America cabled the donor for permission to waive this rule, which request naturally was turned down. Then on the morning of the first race the defenders had not been selected, and after unsatisfactory trials and within a few moments of the time when the race should have been started, Baby Reliance III., Ankle Deep and Baby Reliance II. were selected to defend the cup. This race was won by Baby Reliance II., owned by J. Stuart Blackton, driven by Bernard Smith with W. Bugh as mechanic. The challenger and final winner, Maple Leaf IV., made no great effort to win this race. The order of finish and time were as follows:

with at the wheel and A. Stapleton at the engine. The summary:

Third Race for British International Trophy—Start, 2:00—Course, 30 Nautical Miles.

	Finish.	Elapsed.
Maple Leaf IV., E. Mackay Edgar...	2 48 16	0 48 16
Baby Reliance III., Mrs. Blackton	2 51 46	0 51 46
Ankle Deep, Count C. S. Mankowski	Disabled.	
Baby Reliance II., J. S. Blackton ...	Disabled.	
Mona, Marquess of Anglesey	Disabled.	

The elapsed times over each leg of the course, figured from the actual start of each boat, is as follows:

	1st Leg.	2d Leg.	3d Leg.	4th Leg.	Full Course.
Maple Leaf IV..	0 11 51	0 12 00	0 11 55	0 12 00	0 47 46
Baby Reliance III..	0 12 13	0 12 14	0 12 16	0 12 08	0 48 51
Ankle Deep	0 11 34	0 11 40	0 11 22	Broke shaft.	
Baby Reliance II....	0 11 17	0 12 12	Broke clutch.		
Mona	0 14 47	0 19 21	Broke oil pipe.		

Maple Leaf averaged 37.90 nautical, or 43.63 statute miles an hour. Her fastest lap was the first, when she averaged 38.28 nautical, or 44.10 statute miles an hour. Baby Reliance III. averaged 37.11 nautical, or 42.68 statute miles over the course and her performance was a very consistent one. Ankle Deep in her best lap as long as she lasted averaged 38.71 nautical, or 44.51 statute miles an hour. For the three laps of 22.5 nautical miles her average speed was 38.71 nautical, or 44.57 statute miles an hour. Baby Reliance II. made the fastest lap. It was her first and she raced her head off. Then she averaged 40 nautical, or 46.06 statute miles an hour.

The win by Maple Leaf appears to have

Boat, Owner, Length, Horsepower, Driver and Mechanician.	3d Round.		2d Round.		3d Round.		4th Round.		Total Elapsed	
	Finish.	Elapsed.	Finish.	Elapsed.	Finish.	Elapsed.	Finish.	Elapsed.	h. m. s.	Finish.
Baby Reliance II.; J. S. Blackton; Bernard Smith; W. Bugh; 20ft.; 90 h. p.....	2 41 43	0 11 43	2 53 44	0 12 01	3 06 10	0 12 26	3 18 39	0 12 29		0 48 39
Mona; Marquess of Anglesey; M. Batting; F. Murtagh; 26ft.; 150 h. p.....	2 44 10	0 14 10	2 58 22	0 14 12	3 12 29	0 14 07	3 26 38	0 14 09		0 56 38
Maple Leaf IV.; E. M. Edgar; Tom Sopwith; A. Simpleton; 39ft. 11in.; 700 h. p. }	3 03 56	0 33 56	3 16 18	0 13 38	3 28 37	0 12 19	3 41 01	0 12 24		1 11 01
Baby Reliance III.; Mrs. P. Blackton; J. Smith; W. Van Nostrand; 26ft. 150 h. p. }	2 43 16	0 13 16	3 17 56	0 34 40	3 36 53	0 18 07	3 59 58	0 23 05		1 29 58
Ankle Deep; E. N. Mankowski; Owner F. Grenon; 32ft. 150 h. p.....	2 44 17	0 14 17	3 38 26	0 54 09	4 19 10	0 30 34	4 58 38	0 39 28		2 28 38

Baby Reliance II., average speed, 37.113 knots; Reliance III., 20; Ankle Deep, 12.121 knots.

The second race, scheduled for Labor Day, Sept. 2, was postponed because the sea was too heavy for the American boats, but was run on Sept. 3. This was won handily by Maple Leaf IV. with 3m. 4s. to spare over her team mate, Mona, Ankle Deep finishing 3s. behind Mona. The summary:

Second Race for British International Trophy—Start, 2:00—Course, 30 Nautical Miles.

	Finish.	Elapsed.
Maple Leaf IV., E. Mackay Edgar..	3 06 50	1 05 50
Mona, Marquess of Anglesey.....	3 09 54	1 09 54
Ankle Deep, Count C. S. Mankowski	3 11 29	1 11 29
Baby Reliance III., Mrs. J. S. Blackton	3 12 10	1 12 10
Baby Reliance II., J. S. Blackton...	3 14 16	1 14 16

The elapsed times over each leg of the course and the actual time for the full distance, figuring from the actual time of starting, are:

	1st Leg.	2d Leg.	3d Leg.	4th Leg.	Full Course.
Maple Leaf IV..	0 15 42	0 15 36	0 15 46	0 14 43	1 01 47
Mona	0 17 10	0 14 59	0 16 48	0 17 28	1 06 25
Ankle Deep	0 21 34	0 17 51	0 15 02	0 16 43	1 11 10
Baby Reliance III..	0 20 25	0 17 42	0 17 21	0 16 20	1 11 48
Baby Reliance II..	0 15 46	0 18 29	0 17 45	0 19 13	1 11 13

Maple Leaf averaged 27.06 nautical or 31.16 statute miles an hour. Mona averaged 28.34 nautical, or 32.64 statute miles an hour. Ankle Deep averaged 25.17 nautical, or 28.98 statute miles an hour, and the Baby Reliances were just a fraction slower. Mona led the first round of the triangle. This was her best, and then she averaged 30.76 nautical, or 35.43 statute miles an hour. Maple Leaf on her best round averaged exactly 30 nautical, or 34.54 statute miles an hour.

The final race, on Sept. 4, was also won by Maple Leaf IV., thus giving the cup to her owner E. Mackay Edgar, representing the Royal Motor Y. C. of England. In the last race Maple Leaf won through consistent performance, and was handicapped by a broken rudder. There was no luck about it—simply due to reliability of the engines in the winner and to the stability and lines of construction of the hull, together with careful and competent handling by Tom Sop-

been a popular one throughout the country, as her owner showed great sportsmanship and made weather concessions in favor of American boats, when he was not compelled to do so.

A challenger has been ordered from Tams, Lemoine & Crane, designers of Dixie IV., which won so easily last year, which will be ready in time to make the trip abroad in the hope of returning to this country with the cup.

National Carnival Program.

THE program for the National Carnival to be held on the Hudson River, off Yonkers, during the week of Sept. 16, is extensive and interesting. The program follows:

Monday, Sept. 16, 10 A. M.—Series races. Classes D, E, F and G (cruisers and open launches). 2 P. M., series race. Class C (speed boats). 2:30 P. M., series race. Class B (speed boats). 3 P. M., series race. Class B (speed boats). 3 P. M., series race. Class A (speed boats).

Tuesday, Sept. 17, 10 A. M.—Second series races. Class D, E, F and G (cruisers and open launches). 2 P. M., second series race. Class C (speed boats). 2:30 P. M., second series race. Class B (speed boats). 3 P. M., second series. Class A (speed boats).

Wednesday, Sept. 18, 10 A. M.—Third series races. Classes D, E, F and G (cruisers and open launches). 2 P. M., Class L (speed boats 20 feet and under). 3 P. M., Class M (speed boats over 20 feet and not over 26 feet). 4 P. M., Class O (speed boats over 26 feet and not over 32 feet).

Thursday, Sept. 19, 10 A. M.—Long distance race for high-speed boats, New York to Poughkeepsie and return. 10:10 A. M., long distance race for cruisers, New York to Peekskill and return.

Friday, Sept. 20, 10 A. M.—Races for all classes of speed boats, 60 miles. Open only to boats that have started and finished in one or

both of the series races of Monday, Sept. 16 and Tuesday, Sept. 17, with handicaps based on the speed made in those races.

Saturday, Sept. 21, 10 A. M.—Mile time trials (all speed boats). 2 P. M., final series race. Class C (speed boats). 2:30 P. M., final series race. Class B (speed boats). 3:30 P. M., final series race. Class A (speed boats).

Tech Jr. Makes Mile Record.

IN the race over a measured mile, six trials, three with the tide, three against it, for a trophy offered by Otto H. Hein, manufacturer of the Bosch Magneto, and held at Huntington Harbor on the 5th, Col. T. Coleman DuPont's 150 horsepower hydroplane Tech, Jr., made the phenomenal speed on her first trial of a mile in 1:11 1/5, or at the rate of 50.7 nautical or 58.3 statute miles an hour. This is at about 85 feet in a second. Weather conditions were not absolutely perfect. Tech was built from designs by Adolph A. Apel, of Vantor, N. J. For the average on the six trips Tech made 35.45 nautical or 44.4 statute miles an hour. The time in each trial was as follows: 1:11 1-5, 2:08, 1:40 1-5, 1:35 4-5, 1:41 3-5, 2:38 1-5.

STRATEGY OF A WASP.

A MUD wasp was seen to alight within an inch or two of a spider's nest on the side opposite the opening. Creeping around toward the entrance to the nest the wasp stopped a little short of it, and for a moment remained perfectly quiet. Then reaching out one of his antennæ, he wriggled it before the opening. A moment later he withdrew the "feeler." This overture had the desired effect, inasmuch as the head of the household, a big spider, came out to see what was wrong and to set it to rights.

No sooner had the spider emerged to that point at which it was at the worst disadvantage than the wasp with a quick movement thrust its sting into the body of its foe, killing it easily and almost instantly.

The experiment was repeated by the wasp, and when there was no response from the inside, he evidently became satisfied that he held the fort. At all events he proceeded to enter the nest and slaughter the young spiders, which were lugged off one at a time.—From Harper's Weekly.

NEW EMERALD MINE.

THERE is a report current that two Austrians have discovered a mine of emeralds in the Department of Cuzco in Peru. The best known emerald mines to-day are those in Colombia, and it is not unreasonable to admit the possibility of these stones being found in Peru.

In an interview with J. M. Colmenares, the mining and patent agent, the news is confirmed. Mr. Colmenares has denounced the property under P. A. from Mateo Kalafatovich and Dusan L. Ylich. The sample shown is very beautiful stone, though its value has yet to be determined.—From Peru To-Day.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Michigan State Tournament.

BAY CITY, Mich., Sept. 3.—Largest and best shoot ever held in Michigan. The grounds where the shooting took place was ideal, fronting on Saginaw Bay and clear sky background. Verona Beach is a beautiful place to hold a shoot of this kind, and was voted by all visiting shooters to be the best ever. The shooters were pleased with the trophy, as when once won they belong to the winners. No strings attached. Twelve beautiful cups constituted the trophies.

Squad No. 3, composed of Ridley, Day, Heikes, Galbraith and Volk, was the banner squad. Twice they broke 74 out of 75.

Monday was a nice day, but Tuesday a high wind prevailed, and the targets did all kinds of stunts. The harder the wind blew the better the shooting—at least, it seemed that way by the records made in the championship events. Next year 150 shooters for Michigan State shoot.

The five-man team championship of Michigan was won by Bay City No. 2; prize, five silver cups; each man shot at 25 targets:

Bay City No. 2.....	112	Cadillac	104
Bay City No. 1.....	110	Saginaw	104
Munising	106	Owosso	102
Caro	104		

Wm. Ridley, of What Cheer, Ia., won high amateur average cup. G. W. Fortledge, of Cadillac, won high Michigan amateur cup for high average on all regular events. H. Maxon won Bay City cup. C. A. Galbraith won class championship cup, and Owosso two-man team won two silver cups.

Two-man team championship of Michigan.

Owosso.		Saginaw.	
Wesner	49	Helfrecht	42
Burt	47-96	Krogman	43-85
Bay City.		Saginaw.	
Maxon	48	McAvoy	44
Galbraith	46-94	Carpenter	42-56
Munising.		Cairo.	
Acker	45	Vermilvea	42
Schell	46-91	Atwood	41-83
Owosso.		Munising.	
Rosevear	44	McCann	42
Gaylord	45-89	Broughton	38-80
Cadillac.		Caro.	
Sawyer	46	Stuart	43
Fortledge	41-87	Bowles	35-78

Amateur championship of Michigan, 50 targets, 16yds.:

A W Wesner.....	47	Benson	43
G W Fortledge.....	47	Bradfield	42

Galbraith	46	Burt	42
Braddock	46	Schell	41
Sawyer	45	Johnson	39
Atwood	45	Broughton	39
Krogmann	44	Allen	34
Maxon	44	Helfrecht	35
Peltier	44	Ballard	32
McAvoy	44	Gonyean	28
Gaylord	43	Wright	23

Fortledge was called away before the event was finished. Tie will be shot off at 50 targets, next Sunday afternoon, Sept. 8.

Class championship of Michigan; Class C at 16yds., Class B at 18yds., Class A at 20yds., 50 targets:

C A Galbraith.....	47	Krogmann	38
C H Burt.....	47	Acker	38
Fortledge	46	Rosevear	39
Braddock	44	Benson	37
McCann	44	Peltier	36
Stuart	44	Reame	35
Maxon	43	Sparr	35
Broughton	43	Mohr	35
Wesner	42	Swartout	35
Helfrecht	42	Ballard	34
Gaylord	41	Patterson	34
Maxon	41	Parker	33
Sawyer	40	Wilson	31
Schell	39	Wright	28
McAvoy	38		

C. A. Galbraith won with 47 at 20yds. Bust tied but lost in the shoot-off.

The average money paid under the money-back system was a surprise to most of the shooters of Michigan, as this was only the second tournament ever held in Michigan under the Squier money-back system. Everybody went away satisfied and voted the money-back purse a dandy. The following received average money:

Total money left in purse, \$292.15, divided into 18 moneys: Wm. Ridley, \$46.80; J. W. Fortledge, \$40.95; A. M. Wesner, \$32.15; H. Maxon, \$26.30; C. A. Galbraith, \$21.90; F. D. Peltier, \$21.90; Geo. Volk, \$17.55; J. McAvoy, \$14.60; B. S. Gaylord, \$14.60; E. Carpenter, \$11.70; H. Benson, \$8.75; G. Schell, \$8.75; G. McCann, \$8.75; M. Broughton, \$5.85; R. Stevens, \$2.90; C. Vermilvea, \$2.90; C. H. Burt, \$2.90; F. Helfrecht, \$2.90.

The slogan for Michigan trapshooters is, "Now altogether for 1913."

The scores made in the regular program of 150 targets, each day, follow:

BOOSTER.

Western Connecticut Trapshooters' League.

BRIDGEPORT, Conn., Sept. 2.—Under auspices of Sea Side Gun Club a mighty successful tournament was held by the Connecticut Trapshooters League to-day. There were exactly 100 gunners present in active participation, of whom 95 were from among the best amateurs in New England. Five of the most popular for-targets-only shooters were among those present.

The general score average was low, the winner, E. G. Southey getting 141 out of 150. Second went to C. G. Holmes on 140, while third was shared on 139 by C. W. Van Stone, R. McPetridge, W. W. Rice and E. W. Mumford.

The pink-sheet targets-only educators, in two instances outcracked their amateur brothers. H. S. Welles won top honors with 144, with Ed. Banks runner-up with 142, trailed slightly "in arrears" by Neaf Apgar and E. M. Funk, each of whom chalked up 137 aerosaucers.

Birmingham Gun Club.

ELEVEN shooters were at the weekly shoot of the Birmingham Gun Club on Friday. John Warren shot high with 119 out of 125, some from 20yds. He was also high on doubles. Ten shooters went out on Saturday for practice, mostly new shooters.

The Birmingham Gun Club will be opened for practice on Saturday afternoon for the benefit of those who cannot get out to our regular Friday afternoon shoot for the balance of this season. Scores made on Friday were as follows:

Shot at.		Brk.		Shot at.		Brk.	
L M Norwood.....	200	179	Stollenwerk.....	150	78

Marshall Gun Club.

THE Marshall Gun Club held their weekly practice shoot on Monday afternoon, Sept. 2. But few of the members came out. As the weather was fine, some good scores were made. The scores, 50 targets per man: F. Brown 43, E. W. Brown 45, Bagnell 45, Page 35, Tillery 45, Tucker 45, Radford 42.

E. W. BROWN, Sec'y.

Virginia Trapshooters' Association.

LYNCHBURG, Va., Sept. 3.—Two days of tournament were well attended and highly interesting. On the first day the regular program of 150 targets returned a triple tie, Dr. Watson, Clark and Storr, each getting 141. Gibbs was ace high on second day with 146 out of 150. High gun for the tournament was Dr. Gibbs with 287. The scores:

Sedalia Gun Club.

SEDALIA, Mo., Aug. 30.—The two days' tournament here was eminently successful. C. B. Eaton, that steady dependable amateur, took high gun boquets with 287 out of 300, his nearest follower being Alex. McLaughlan with 282, while third place went to Winzenreid with 279. C. G. Spencer shot like he knows how to bust 'em, getting 295 out of 300. Eaton also went home with the high on pairs, getting 40 out of 24 doubles, while Brother McGrath missed just one more and tied with high pro. on team stuff. Scores:

The Pacific Coast Handicap

Special Report

PORTLAND, Ore., Aug. 30.—In the Interstate Association's record of 1912 tournaments, the seventh Pacific Coast Handicap will be written as a most notable success.

The dates chosen, Aug. 27-29, were not the most favorable to a large attendance because of the nearness of the approaching game season, and of other big shooting events shortly following at Denver and Sacramento; but nevertheless this proved a record in the list of events on the seaside slope of the Great Divide.

There was one other disappointment in the lack of the usual delegation of sportsmen from the Middle West and Eastern States. Always they have been welcome with us, and their absence this trip was regretted by many. However, we were more than glad to have with us the genial president of the Association, Mr. J. T. Skelly, and of course, without our one and only Elmer Shaner, we could not have gotten along.

To those who did not come, we can but say that, boys, you missed one of the finest, most enjoyable gatherings that the noble sport of trapshooting has ever brought about, here or anywhere else. To begin with, it is a pleasure to be able to come to Portland, to the point of confluence of the Columbia and Willamette—two of the finest rivers on earth—in this midsummer season. Although envy hath written that it rains more or less in the Northwest, the ever growing army of visitors who have heeded the advice of those who came before, know that there is not in all the wide reaches of this fair land of ours a climate more congenial, harvests more bountiful, or welcome more cordial and genuine to be found than greets and cheers the comers to Portland's gates from the fragrant month of June to harvest-crowned September.

The gun club is decidedly new in its present organization, having only within the past year acquired most excellent grounds at Kenton, through the courtesy of the Union Stockyards people, and cleared out of the naturally rank woodland growth there one of the most pleasant and adaptable ranges to be found in the West. There was much to be done in preparation for this big event; but the officers of the club, the grounds superintendent, Mr. Wagner—and we must not fail to give due credit to the resident trade representatives—went at it with the determination to leave nothing undone that would conduce to the success of the meet; and how well they succeeded, the favorable comment of all who attended amply testified. This is of course no news to the old-timers in the Oregon-Washington country; but even our California friends were, in a measure, surprised to find what they did, and more than one was heard to remark, "I never saw clearer, and I feel so good that I have to pinch myself to know it's me," or words to that effect.

Practice Day, Aug. 26.

Preliminary shooting began on the grounds three days ahead, and when on the 25th, sixty men faced the traps, even before they were entirely ready for the week's work, it became evident that there would be no disappointment in point of attendance.

Monday morning every train brought its quota of shooters, representing every State on the west coast from Mexico to the Canadian border. When the first squad was called at 1 o'clock for the regular 100 targets official practice, there was assembled the biggest and best bunch of amateurs that ever came together for a Western Interstate handicap, while a broad and happy smile spread itself all over Elmer Shaner's genial countenance.

The trade was also generously represented in behalf of the interests behind the Association, as follows:

Du Pont Powder Co.—J. T. Skelly, C. A. Haight, P. J. Holohan, W. A. Robertson and G. E. Holohan.

Peters Cartridge Co.—J. S. French, L. H. Reid, F. V. Berger, H. W. Veatch and M. O. Feudner.

Selby Smelting & Lead Co.—W. F. Willett, I. M. Fischer, E. I. Mitchell and Chas. Stadfeld.

Winchester Repeating Arms Co.—L. R. Barkley and E. B. Morris.

Remington-U. M. C. Co.—H. E. Poston, W. A. Hillis and Abner Blair.

Marlin Fire Arms Co.—C. A. Porter.

Parker Bros.—Capt. A. W. du Bray.

The office work was ably handled by Mr. R. A. Tyler and Mr. Chas. Stadfeld, assisted, as always, by Mr. Shaner and Mr. Charlie North.

Ninety-one shooters faced the score at trap No. 1 for the day's events of five 20-target events, optional sweeps for amateurs, and it became evident from the start that an unusual number of good scores would result. The race was finished before 4 P. M., with honors to be credited as follows:

Amateurs: V. H. Francis, of La Conner, Wash., high with 96; R. P. Knight, D. Holohan, Fred Moellen, E. Staunton, Hugh McElroy and F. A. Dryden, tied for second with 95; W. W. Caldwell and Frank Howe third with 94.

Professionals: Fred Willett 96; Lee Barkley, Peter Holohan, Lester Reid, Ike Fischer and Frank Riehl 95; Hugh Poston 94.

Following the regular events came a diversion that is worthy of mention here. The Chingren challenge trophy, which has the distinction of having been more contested for than any other challenge trophy in the history of the game, was again brought into the limelight in a record contest. Fred Moellen, who won it in the last Pacific Indian shoot, was challenged by twenty men, and all contests were merged into one, each man shooting at 100 targets from 18yds. rise. The rules gov-

erning this permit no distinction as between professionals and amateurs, and in this race the classes were about balanced as to numbers. It was, as a bystander expressed it, "A shootin' match from beginning to end." But it soon became evident that that the plucky young shooter from Eugene would look well to his laurels, and when the last shot was scored, it was found that he had led and defeated the entire field, finishing with a score of 96. Next to him was Lee Barkley with 95, while J. T. Skelly ably accounted for Eastern talent with 94.

First Day, Aug. 27.

Weather fine and still in forenoon, but varying to occasional light showers and stiff gusts of wind that injected the spice of uncertainty into the game and kept down the averages, which would otherwise have been exceptionally high.

On the regular program Barkley proved the professional champion with a total of 145; Peter Holohan and Lester Reid tied for second, 143; while Willett accounted for 142, and Skelly bagged 141.

The amateur race was of particular interest, and at the half-way point looked like a walkaway for Fred Moellen, still fresh from his laurels of the previous day. Continuing his unfinished run of the day before, he passed the century mark and earned one of those coveted Du Pont long-run medals; but when the strain of working for this prize was over, he relaxed a little, losing his 98th target on the day's program. Meanwhile Mr. E. Staunton was grinding them out with wonderful regularity, and came down off the firing line one target to the good over the bunch with 144. Right after him was E. M. Sweely with 143, while five men shared third honor, but another mark behind with 142—Harry Ellis, F. M. Troeh, F. C. Moellen, J. W. Seavey and W. McCormack.

The singles disposed of early in the afternoon, the boards were cleared for action in the race at 50 doubles, shot in strings of 10 and 15 pairs. This again proved a fine race in both classes, with several weather changes mixed in to give spice to the game. Herein Poston and Barkley took first professional honors with 44; Riehl second with 39, and Willett, Robertson, Fischer and Veatch third at the 38 mile post. In the amateur class 42 to 39 took the four moneys, as follows: Bungay 42, D. Holohan, Nelson, Fuller 41; McElroy, Thornton, Sears and D. Reid 40; Chingren, Moellen, Bull and Dague, 39.

The usual optional sweep was also carried along, with about 30 entries, the places paying fairly well and adding zest to the day's work for those participating therein.

This day set a record of first day attendance at Pacific Handicap tournaments, with a total of 113 entries. This result was very pleasing to the Portland Gun Club and its friends, and everyone, from Shaner to the smallest trap boy, wore a gratified smile, promising to do yet a little better before the last day.

Second Day, Aug. 28.

Much the same weather conditions prevailed as on the opening day, but it rained harder during the afternoon, and at times it was necessary for squads to retire to shelter.

On the regular 150 targets, the Holohans (father and son) led the experts with 142, Reid and Poston tied for second at 141, while Barkley accounted for 140, Riehl falling one below place with 139.

The amateurs came up strong again from the first, and F. M. Troeh put up a total of 144, which was the best of the day. Abraham and McCormack tied with 142, while Caldwell and A. Troeh locked horns at 139.

In the double events Bob Bungay dropped one below his first day's work with 41, which gave him the double honors in that class with 83. Fred Moellen today captured the double honors with 43 and thus totaled 82 on a tie with Hugh McElroy. The latter, with J. A. Troeh and B. Kompp scored 42, while J. A. Dague got third with 40 to-day, and a total of 79.

The experts were likewise bested in this work for the day, the honors going to Barkley, 41, and Poston and Veatch 40, and Riehl 39. For the two days Barkley led his class with 85; Poston took second at 84; Riehl and Veatch third with 78.

The Pacific Indians' challenge medal was again brought forward as a special event with 36 shooters in the competition. This contest following the big day's program, was finished rather late under adverse conditions, and average scores were low. Fred Moellen, the holder, again gave a splendid account of himself and put up a score of 95 for the boys to go against. This was a mark that none succeeded in topping, though Walt McCormack and Lester Reid equalled it, and in the three-cornered shoot-off Reid proved the winner. The money places under winning score went to E. D. Farmin 94, P. Holohan 92, Fischer, Hillis and Riehl 91.

Attendance for the day totaled 111, but there were four new names, thus bringing total attendance above the record mark. The scores of the second day follow:

Third Day, Aug. 29.

Almost perfect weather conditions prevailed for the final and record-breaking day of this big meet. Sky generally cloudy, but clearing in late afternoon, gave the marksmen every encouragement to do their best work, and some of them surely took advantage of the opportunity.

The fondest hopes of friend Shaner and the management were surpassed, when 126 men qualified for the crowning event of the week.

Promptly at 9 the first squad was called for the third installment of 16yd. shooting, and this was finished shortly after noon. Herein Lee Barkley led the field with a flying start that promised a century run; but in the finals, Guy Holohan came up strong and the two tied with 98, Reid breaking 97 and P. Holohan and J. T. Skelly 95 each, for the professional honors. In the amateur class Earl Farmin came in first with 96, Harry Ellis and J. Sears, M. Abraham, Maurice Smith and Walt McCormack accounting for 95, while Dr. Bull, Moellen, Geo. Miller and Archie Bishop tied for third place with 94.

The decks were cleared for action in the premier event, the Seventh Pacific Coast Handicap, at just about noon, and though there was never a hitch anywhere, the last round was not fired until late evening. Intense interest marked the progress of this race, the attendance of visitors was unusually large, and hundreds followed the favorite or specially strong competitors up and down the field from trap to trap.

Early in the race R. M. Bungay, the popular southern California sportsman, developed great promise as a winner, and he led the field right up to the final event. Then came Dr. M. M. Bull, a new enthusiast and relatively new shooter, belonging to the notable Eugene, Ore., squad, who shot a consistent race throughout, and in the finish these men tied on a score of 93, which proved to be high over all others. Other likely men were Con. Hilgers, of Portland; Earl Farmin, of Sand Point, Idaho; and Everett Sweeley, of Twin Falls, who tied on 92, while Percy Knight, W. E. Staunton and J. Sears each made the 91 mark. When it became apparent that 92 would be high, Messrs. Bungay and Bull agreed to divide the purse and shoot off for the trophy, which this year took the form of a fine solid gold watch. The issue was decided on one string of 20, Bull scoring 19 and Bungay 18. It was a popular win, and Doc. Bull was literally "taken up in the arms of his friends."

On the week's totals the honors were worthily won as follows:

Professionals—Barkley, 385 out of 400, Reid 381, Peter Holohan 380.

Amateurs—F. M. Troeh 379, W. McCormack 374, P. P. Nelson and M. Abraham 373.

The average moneys paid in this tournament under the money-back system paid out splendidly and won much praise from the shooters of the West, who, here for the first time, came to thoroughly understand it. There was left over in the fund a total of \$650.20, which was paid in thirty average places to thirty men in amounts ranging from \$71.50 for first, to \$4.35, on total scores of from 379 down to 357. The extra added money donated by the club also helped the general purses out materially, and made it altogether one of the best paying as well as biggest of the year's events, here or anywhere. The boys were all greatly pleased and went away happy, promising themselves and us to come again.

In their exuberance over the week's accomplishments, the boys again shot for the Indian challenge trophy, with twenty-seven entries, and this kept the guns popping literally until dark. Lieut. Fred Berger repeated himself in this event and lifted the honor of possession from his colleague, Lester Reid, with the beautiful score of 99. And so endeth the story. May there be more like it. The scores of the third day follow:

WINCHESTER

Red W Goods

Make a Clean Sweep

at the

Pacific Coast Handicap

A good man will always rise to the top. Likewise the best guns and shells will carry off most of the winnings. Winchester Guns and Shells are doing this all the time, and have again done so in decisive fashion at the Pacific Coast Handicap. Just read the following:

Pacific Coast Handicap: Won by Dr. M. M. Bull, shooting a Winchester Repeating Shotgun. Score, 93 x 100, and 19 straight on shoot-off.

High Amateur Average: Won by F. M. Troeh. Score, 379 x 400. Walter McCormack, second. Score, 374. Both gentlemen shot Winchester Guns and Shells. M. Abrams and P. P. Nelson, third. Score, 373, both shooting Winchester Shells.

High General Average: Won by Lee R. Barkley, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 383 x 400.

High on Dougle Targets: Won by Lee R. Barkley, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 85 x 100.

High on all Targets Trapped: Won by Lee R. Barkley, shooting a Winchester Repeating Shotgun and Winchester Loaded Shells. Score, 561 x 600.

So runs the record of this important Interstate tournament, and if this alone were consulted, little knowledge of any other make of guns or shells would be acquired. It proves conclusively that

Independent Gun Club.

EASTON, Pa., Sept. 7.—The Independent Gun Club held its sixth regular shoot for the Forest and Stream Trophy this afternoon, on its grounds at Cedarville. J. Maurer was high with 46 out of 50, Neil being second with 42.

J. Maurer has been doing the most consistent shoot-

FOREST AND STREAM TROPHY.

ing for the trophy, and leads to date with a total of 266 breaks out of 300. The next shoot for the cup will be held on Sept. 21. Below are the scores made to-day. Events Nos. 1 and 2 were for the trophy:

Targets: 25 25 25 25	Targets: 25 25 25 25
Maurer 23 23 .. .	Ivey 18 16 .. 11
Heil 21 21 .. .	Stocker 21 19 21 12
Wenner 18 21 .. 20	E Warner 9 10
Cross 19 19 15 ..	

W. R. IVEY, Sec'y.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Aug. 8.—Thirteen of the braves faced the traps of the Indianapolis Gun Club in spite of the disabling heat and made all kinds of scores. Parry got 95 of the first 100, but thereafter was not so strong, and finished with 93 and a fraction per cent. Edmonson, Barr and Alig did 90. The scores:

Shot at. Brk.	Shot at. Brk.
Barr 140 126	Britton 100 89
Dixon 140 124	Foland 100 81
Parry 120 112	Neighbors 100 60
Edmonson 120 109	Wilson 60 46
Smoke 120 107	Bell 80 66
Alig 100 90	Appel 60 43
Lewis 100 89	

R. R.

The Labor Day tournament of the Indianapolis Gun Club was well attended, considering the many attractions offered elsewhere. Edmonson led with 94 per cent. Hillis and Britton tied for second with 93. Others to beat 90 were Parry and Nickle. Blessing made a run of 59. Scores:

Shot at. Broke	Shot at. Broke
Edmonson 200 188	Parry 175 161
Hillis 200 186	Britton 150 139
Dixon 200 179	Golden 150 105
Arvine 200 179	Moller 110 94
Howard 175 145	Gephart 85 73
Lewis 200 170	Blessing 80 69
Nickle 175 162	Teegarden 60 48

Shooting at sparrows, resulted as follows, Dixon leading: Edmonson (shot at 76) killed 54, Hillis (55) 40, Parry (45) 33, Nickle (45) 38, Dixon (40) 34, Moller (40) 27, Arvine (40) 31, Blessing (40) 23, Gephart (30) 20, Golden (25) 19, Alig (15) 12, Lewis (30) 16.

Rain, wind and a murky sky were combined against the target breakers of the Indianapolis Gun Club, Sept. 7. Britton led and made a run of 56. Lewis brought up in second place.

Hudson Gun Club.

JERSEY CITY, N. J., Sept. 8.—Appended are scores of our regular bi-monthly shoot, held this morning. There were eighteen shooters in attendance, and Carl von Lengerke was high gun with 81 per cent. The day was bright and cool, with a good stiff wind blowing across the traps, which made the targets cut up all kind of antics, making it necessary to shoot very quickly to get a fair percentage of them. W. Hutchings in the fourth frame broke 24, which was the best individual score of the day, getting his targets right in the center and making a cloud of smoke out of them.

Billy Emmons, one of our old members, blew in from Hartford, Conn., where he now makes his home, to take a try at the game again. Billy had a chip on his shoulder and was looking for blood. He shot several matches with G. Emmons and A. Emmons, and won out by a small margin. The boys say that they were stalling, so as to make Billy feel good and go back to Hartford and tell his friends what a remarkable shot he is. Come soon again, Billy, and we will trim you to the Queen's taste.

Kelley tried to get a match with Joe Whitley, but I guess "Whit" knows that Kelley is too strong for

him, as he refused to take a chance of another defeat.

Our next shoot will be held on Sept. 22, and we would like to have a good attendance on this date. Everybody is welcome, so come out and look us over.

LEFEVER ARMS COMPANY Syracuse, N. Y

The *Marlin* Pump Action REPEATING RIFLE

Model 20, \$11.50
Model 29, 8.50

The 136 page *Marlin* catalog will help you decide what rifle best suits your individual desires. Send 3 stamps for it today.

You can buy no better gun for target work and all small game up to 200 yards. Without change of mechanism it handles .22 short, long or long-rifle cartridges, perfectly. The deep Ballard rifling develops maximum power and accuracy and adds years to the life of rifles.

The solid top is protection from defective cartridges—prevents powder and gases from being blown back. The side ejection never lets ejected shells spoil your bead and allows quick, accurate repeat shots. With simple take-down construction, removable action parts—least parts of any .22—it is the quickest and easiest to clean. A great vacation rifle. Ask any gun dealer.

The Marlin Firearms Co.

27 WILLOW STREET, NEW HAVEN, CONN.

Cumberland Shooting Club.

CUMBERLAND, Md., Sept. 7.—The Cumberland Gun Club held their registered tournament on Sept. 5 and 6, with twenty-two shooters facing the trap, fifteen shooting the entire program through, the Squier money-back system was used. By courtesy of the Du Pont Powder Co., Mr. Ed. H. Taylor, of Fairmont, W. Va., handled the office, assisted by Mr. John M. Hawkins, representing the Winchester Repeating Arms Co.

Lester German, of Aberdeen, Md., representing the Du Pont Powder Company, on the first day broke the entire program of 150 targets, adding another bar to his Du Pont medal. H. D. Gibbs, from Tennessee, representing the U. M. C. and Remington Arms Co., shot the entire program both days. This was Mr. Gibbs' first visit to our city and made many friends among the shooters by his genial and friendly ways, and the boys all want him to be with us again next year.

In the professional class Mr. Lester German broke 297 out of 300; H. D. Gibbs, second, with 294; J. M. Hawkins, third, 292. R. Gerstel, of Grafton, W. Va., was high amateur with 290 out of 300; O. D. Williams, Luke, Md., second, with 283; R. S. Denniker, Ruffsdale, Pa., third, with 277. The club members shooting the entire program were Frank Billmeyer, with 272; W. Rockwood, 264; Wm. Hubbs, 256.

In the first day's merchandise of 25 targets, O. D. Williams carried off first prize by breaking 25 straight; R. Gerstell and Clay Shaw, second, with 24 each. On the second day the merchandise event of 25 targets was won by A. K. Moreland, the popular young shot from our home club on 25 straight; J. M. Hawkins, R. Gerstell and W. Rockwood, 24 each.

On the first day squad No. 3, composed of Denniker, Holderbaum, Hubbs, Rockwood and Hawkins, made a perfect score of 75 targets. Squad No. 1, composed of Gerstell, German, Taylor, Gibbs and Gaylor, made a perfect score of 75. Col. N. W. Russler, of our home club, certainly worked hard to make this shoot a success, but was unable to shoot on account of a severe cold and being on the Home Coming Committee. The weather was perfect, except the sun being a little hot during the middle of the day.

H. C. Beck, formerly a Cumberland boy, now located in Richmond, Va., made his first attempt at the trap, breaking 12 out of 25. This is the first time Mr. Beck ever handled a gun, and with a little practice would make all the boys stand up and take notice.

J. M. Hawkins, the popular representative of the Winchester Repeating Arms Co., got busy and succeeded in getting a few members for the American Game Protective and Propagation Association.

The scores of the tournament are as follows:

	First Day.		Second Day.	
	Shot at.	Broke.	Shot at.	Broke.
R Gerstell	150	143	150	147
H C Shaw	150	136	150	135
G M Hoover	150	140
C D Williams	150	143	150	140
F Billmeyer	150	135	150	137

Ed H Taylor	150	145

Cincinnati Gun Club.

THERE was a little doing at the grounds on Sept. 8, though the weather was too hot for much activity. Lou Ahlers, one of the old regulars, was out and showed that he hasn't forgotten how to point, even if he has not done any shooting for a long time. Sampson showed some of his old form, and in the last 50 dropped but 2 targets. Schreck was the only one to go straight in any of the events. Secretary Davies went in with the boys, but has not yet got to going at his right pace.

The club officers are looking for a big crowd at the tournament this week. Luther J. Squier will have charge. On Oct. 5, a match will be shot between T. H. Clay, Paris, Ky., and E. Hammerschmidt, Covington, Ky., for the State championship cup, now held by Clay. This match is the result of a challenge issued by Hammerschmidt, but any Kentucky shooters can take part, and win the trophy and title, if they break enough targets. The scores follow: L. Ahlers (50) 43, Schreck (75) 68, Sampson (100) 90, Davies (75) 54, McArdle (50) 38.

Northern Kentucky Gun Club.

A FEW shooters gathered at the grounds on Sept. 8 and braved the heat for the sake of their favorite sport. Not a breath of wind was stirring, and conditions were good. Richards was high man with 93. His last 50 targets were shot from 16, 17 and 18 yds., and he missed but 2. His score included runs of 25 and 32. Supt. Taggart is improving in his work at the traps, and only needs a little consistent practice to hold his own with most of the frequenters of the grounds.

The scores were: Ward (shot at 50) broke 43, Simpson (50) 40, Kussion (50) 42, Williams (100) 80, Rhode (100) 74, Haskins (100) 83, Taggart (50) 39, Richards (100) 93.

(Patented, Feb. 20, 1912.)

CLEAR VISION means a sure shot. The bright rays of the sun, or the haze of a dark day can't affect your vision if you wear KING'S SHOOTING GLASSES. I Want Some of

THE BLACK SHELLS

Our free book on shells contains much practical and useful information about modern improvements in ammunition. Write for it.

Here are some things it will tell you about:

Modern Construction—THE BLACK SHELLS have a solid brass head, no battery cup, no crevices through which the gases of explosion are wasted through leaking backward.

Waterproofing—THE BLACK SHELLS are better waterproofed even than our famous old CLIMAX shells. You know how strong a claim that is.

Modern Crimping—THE BLACK SHELLS are crimped with exceeding firmness and smoothness. They work through an automatic or pump gun as though they were greased.

The finest new thing in 20 years of ammunition history is our Non-Mercuric Primer. It sets new standards of uniformity and speed. Don't fail to read the paragraphs upon this subject in the book.

Our Flash Passage is double the ordinary size—allowing twice as much of the primer flame to rush directly into the main charge.

Any one of these modernisms is enough to make the reputation of a shell. Think of getting all five combined together. Try the shells. Send for book. There are three classes of THE BLACK SHELLS:

ROMAX, a black powder shell with 5/16-in. brass.

CLIMAX, the most popular smokeless (both dense and buik) shell made (5/8-in. brass).

AJAX, is the highest grade smokeless (both bulk and dense) shell made. Has a long one-inch brass.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

Atlantic City Gun Club.

ATLANTIC CITY, N. J., Sept. 6.—On the new grounds of the Atlantic City Gun Club a special match was shot this afternoon, which resulted in a victory for Springer, only after a great piece of shooting. Up to the 50th target Johnson led with 2 targets. On the third frame both men broke 24, leaving Johnson still in the lead by 2. In the fourth frame, Johnson missed his 7th and 13th targets, while Springer with a great spurt broke his string straight, making a tie on the 100 of 93 each.

On the shoot-off at 25 targets, Johnson dropped his third bird, while Springer again broke the 25 straight, which won for him the purse of \$1,000 by the narrow margin of 1 target. The shoot was the most beautiful race witnessed in South Jersey in many years and drew a large gallery.

The men, before leaving the grounds signed articles of agreement to shoot another race of 100 targets for a purse of \$1000, on Sept. 14, on the grounds of the Atlantic City Gun Club, and there is no doubt but that this race will be witnessed by several hundred people. The shoot will be run off in the afternoon, starting at 2 o'clock sharp.

The Atlantic City Gun Club have also arranged to

Smith Gun Club.

NEWARK, N. J., Sept. 7.—First prize went to Louis Colquit to-day at the regular monthly merchandise prize shoot of the Smith Gun Club. His score was 49 out of 50 from 19yds. William Hassinger was second with 48 from 18yds. W. Compton, B. M. Shanley, Jr., and J. G. Geiger tied for third place with 46. Compton got the place "on draught."

Twenty-six shooters faced the traps. Those making straight during the practice shoot were: J. Baldwin, 3; C. J. Corbitt, 2; F. Hall, 1; C. W. Billings, 1, and F. Sickley, 1.

The following scores were made: B. M. Shanley, Jr., 22, 23, 46; G. J. Corbitt, 24, 25, 47; P. Keller, 15, 17, 16, 37; F. Compton, 20, 23, 46; J. Baldwin, 25, 25, 23, 25, 44; Dr. Moeller, 21, 21, 41; F. Hall, 25, 23, 23, 24, 43; A. L. Collins, 17, 17 38; L. Trowbridge, 19, 41; L. Young, 21, 21, 48; F. Apgar, 20, 44; M. Apgar, 18, 42; T. Fryor, 15, 33; J. Erb, 23, 21, 36; Sam Thornton, 13, 22, 43; E. Gardiner, 22, 21, 43; P. Kling, 18, 24, 24, 47; William Hassinger, 18, 20, 48; H. Hassinger, 24, 23, 39; J. Geiger, 23, 22, 46; C. W. Billings, 22, 22, 26, 42; L. Colquit, 24, 23, 49; C. T. Day, Jr., 23, 21, 44; H. S. Sind e, 24, 23, 44; J. Murphy, 21, 20, 40; E. Sickley, 25.

Get This New Point of View:

LIFE is too short for any shot gun shortcomings. Why should your pleasure or your game bag suffer because of some oversight or omission of the gun maker—no matter how slight?

Smith Guns have no shortcomings. The six Hunter Brothers' 22 years of invention, precision workmanship, purpose and experience have freed the Smith Gun of all the shortcomings which other guns—each to a greater or lesser degree—have.

Inaccessibility is eliminated by the Smith "One-Screw Access" to all working parts.

Shooting loose is eliminated by the Smith Rotary Bolt, taking up wear in all direc-

Our No. 2 grade, price \$63.75 net. With Automatic Ejector \$75 net; with Automatic Ejector and Hunter One-Trigger \$100 net.

tions by the double-wedging of its double claws, which enter the frame after passing through extension rib.

And the Hunter One-Trigger is the only invention that has ever successfully eliminated *loss of aim* in fumbling for second trigger, as well as injury to the shooter's fingers.

So on, through the list of *gun problems solved*, the Smith becomes truly the gun with "no shortcomings."

If you really want to be up-to-date on gun improvements, send for our catalog, showing colored plates of grades from \$25 net to \$1500 list. Send today, and you'll be mighty glad you did not put off sending.

Portland Gun Club.

PORTLAND, Me., Sept. 2.—For the second time within one week Edgar Thurston, of the Portland Gun Club, was high man at the shoot held at the Nonesuch Gun Club to-day. His score was 90 out of 100. A. Reed was runner-up with 87. The weather conditions were unfavorable, rain coming down while the men were in the middle of their strings. Thurston started in with three strings of 22 and finished with a score of 24, while Reed killed 20, then two strings of 21, and wound up with a perfect score. Tapper, Noyes, Stanworth, Ross, H. O. Dyer, Brackett and Cash all showed much improvement in their work on the traps.

The one feature of the afternoon's shooting was the killing of 19 consecutive birds for the William N. Taylor cup. Mr. Taylor is a member of the Nonesuch Gun Club, and has put up a cup to be awarded to the member of the Nonesuch Club making the highest number of successive killings. Up to yesterday, Mr. Ward held the high score with 16, but E. H. Dyer made 19 pigeons bite the dust yesterday and seems in a fair way to win the cup. The men have until November to shoot for it.

New Hanover Gun Club.

WILMINGTON, N. C., Sept. 3.—At the regular weekly meet of the New Hanover Gun Club, held Friday, Aug. 30, the following scores were made:

Targets:	25	25	25	25	Total.
Grant	24	24	24	23	95
Penny	24	22	46
Pierce	22	24	24	..	70
Taylor	24	19	43
Dreher	21	20	19	19	79
Miller	17	24	21	..	62
Boylan	18	22	40
Christian	17	19	36
Underwood	16	17	14	13	60
Cooper	14	13	27
Robbins	15	15

An extra event of 10 pairs doubles was shot with the following result: Pierce 16, Grant 14, Dreher 12, Taylor 10. J. H. DREHER, Sec'y.

Lima Gun Club.

SOUTH LIMA, O., Sept. 2.—To-day's tournament was the biggest and most successful held in Ohio this year, excepting, of course, the State tournament. Celina sent over the winner in George Kistler, who cracked aerosancers tunelessly up to 130, which was all but five of his allotment. C. A. Young trotted close up with 127, tied by K. P. Johnson.

Les. German pinnacled the pro-cession with 128. The scores of those who shot at 135 targets were:

W A Miller	89	B Keesaer	115
D L Sherwood	99	W H Sherer	96
J H Mason	115	Jas Frazee	105
A E Marshall	111	C A Young	127

A B Shobe	121	R R Pugh	107
F Joloff	101	J I Brandenburg	107
M Witz	124	J R Dennison	107

The scores of those who shot at 120 targets were:
Wm Webster 112 F Schindewolf 88
J R Taylor 103 W D Wagner 107
W T Johnson 79

Siwanoy Country Club.

Mt. VERNON, N. Y., Sept. 3.—The cut-glass handicap shoot of the Siwanoy Country Club at Mt. Vernon, N. Y., on Labor Day, Sept. 2, developed the keenest kind of competition. Four men tied for first prize and two tied for fifth prize. The standings shown below were only ascertained after three shoot-offs, first prize being won by G. L. Yates; second, J. G. Wintjen; third, T. W. Fine; fourth, J. S. Congdon, and fifth, C. G. Stone. The scores:

	Practice.		Competition.	
	Shot at.	Broke.	Hdep.	Total.
G L Yates	125	107	6	50
J G Wintjen	100	78	8	50
T W G Fine	175	112	15	50

Dr J Metzmler	150	133

L. D. HILL, Sec'y.

London Gun Club.

LONDON, O., Sept. 5.—High scores predominated here to-day. H. E. Smith won with 147 out of 150, while two amateurs, J. A. Smith and Lon Fisher, with pro. J. R. Taylor tied for place on 146. Sixteen shooters made 140 or better. The day was fine, and the management's attention to detail and visitors perfect.

Daniel Boone Gun Club.

MARTHASVILLE, Mo.—The weekly practice shoot of our club for Aug. 31 was postponed because many of the members were too busy to turn out, and a few who had time wished to go out into the country to attend a shooting match for mutton. Those who went to the match were: Ahmann, Lichtenberg, Gardyne, Berg and Wilson, and they brought home five hindquarters and one forequarter of mutton. There were twenty shooters who took part. Two sheep were put up at a time, and were divided into twelve parts. There were really two matches, for there were four sheep put up. Wilson was high man with only 1 bird down in the afternoon, including practice. Ahmann was next with only two birds down. The high gun system was used.

J. O. WILSON, Sec'y.

Du Pont Gun Club.

WILMINGTON, Del., Sept. 7.—The reed bird season and the extremely sultry conditions on Saturday afternoon had a good deal to do with cutting down the attendance at the weekly shoot of the Du Pont Gun Club. Many of the Club's members were in the marshes, so that only twenty-one faced the traps in the eighth contest for the F. L. Connable silver cup. Dr. Stanley Steele scored his second win for the cup, and since H. P. Carlon has also scored two wins, there are only six possible contestants so far in the final competition, although eight contests have been held. The conditions of the competition call for twelve monthly contests, the winners in those twelve contests shooting off for final ownership of the handsome cup. In addition to Dr. Steele and Mr. Carlon, the following have a chance in the final shoot: W. M. Foord, W. Edmunson, A. B. Richardson and H. W. Bush. Dr. Steele did not score his win without a fight for it, as he and W. Edmunson tied on 21, Steele winning in the shoot-off by 20 to 18.

In the match between J. H. Minnick, holder of the Class A cup, and Edward Banks, challenger for the trophy, Banks came out ahead by one target with 46 to 45. On the first half of the match the scores were 24 to 23 in Banks' favor, and both men broke 22 in the second half.

H. W. Bush, the holder of the Class B cup, was challenged by J. W. Anderson, Jr., and successfully defended the cup by breaking 43 to 36.

The 1911 Class D cup was also up for open competition, and was won by H. P. Reed, who now has the right to have his name engraved on the cup and to shoot off for final ownership of the trophy. Mr. Reed and the nine other members of the gun club who have at different times won and held the Class D trophy, will shoot off for final ownership of the cup some date in the near future, to be fixed by the management of the club.

Several of these present shot at 100 or more targets, H. P. Carlon being high with 94, J. B. McHugh being next to him with 93.

The scores in the F. L. Connable cup event were as follows: *Edward Banks (22yds.) 22, Dr. St. Steels (19) 21, W. Edmunson (20) 21, *R. P. Willis (16) 21, J. H. Minnick (22) 20, H. W. Bush (21) 20, J. W. Matthews (18) 20, Clyde Leedom (20) 19, H. P. Carlon (22) 18, W. G. Wood (22) 18, T. W. Matthewson (20) 18, Stanley Tuchton (20) 18, H. P. Reed (16) 18, *E. M. Ross (16) 18, J. A. McMullen (18) 17, W. B. Smith, Jr. (18) 17, J. W. Anderson, Jr. (20) 17, S. J. Newman (18) 17, L. L. Jarrell (18) 17, O. V. Ort (16) 17, J. B. McHugh (22) 16.

*Not eligible for the trophy.

Fort Collins Gun Club.

FORT COLLINS, Colo., Sept. 3.—The second annual registered shoot at Fort Collins on Labor Day was a great success. More than thirty shooters were in attendance. C. G. Spencer was high professional with 198 out of 200. Capt. Hardy was second with 191. J. H. McDuffee and Burt Moritz tied for high amateur average with 187 out of 200. Scores:

Analoatan Gun Club.

WASHINGTON, D. C., Sept. 7.—Many good scores resulted this afternoon in the weekly shoot of the Analoatan Gun Club, held on the club grounds, on the eastern branch of the Potomac. Singles, doubles and the monthly spoon shot made up the program, fourteen members being on the firing line.

Frank Huseman, one of the best shots in the club, and who is looked upon as a winner at the Westy Hogan's tournament, to be held in Atlantic City, Sept. 17, carried off high honors this afternoon and won first prize in Class A of the spoon shoot, as he missed only one target out of his first 50. At the single he killed 97 out of 100, which is a splendid record. He also did well at the doubles, getting 19 out of 24 shots. A. B. Stine and James A. Brown tied for first place in Class B of the spoon shoot, each breaking 38 out of 50. On the shoot-off at 15 targets, each brought down 11, and

finally Stine won out on the second trial at 10 birds, when he missed only one. Brown got 8 out of 10. A. V. Parsons was the winner in Class C, as he smashed 33 bluerocks out of 50, while Arthur C. Moses was best in Class D, getting 25 out of the same number. Each winner received a handsome silver spoon suitably engraved commemorative of the event. George W. Peck, Jr., was second at the singles with 92 out of 100, while E. W. Ford got 89. A. B. Stine, who shot at 110, managed to break 89, which is a percentage of .809. A. M. Rivero, a visitor from the Cuban Legation, broke 36 out of 65.

The scores follow: Frank Huseman (shot at 100) broke 97, Geo. W. Peck, Jr. (100) 92, E. W. Ford (100) 89, A. B. Stine (110) 89, James A. Brown (100) 77, W. W. Barnes (75) 66, Sam Luttrell (75) 53, A. V. Parsons (85) 55, W. D. Dulauey (75) 63, Fenton Bradford (50) 36, Arthur C. Moses (50) 25, A. M. Rivero, visitor (65) 36, Miles Taylor (30) 27, A. Hind (25) 12.

The scores at 12 pairs doubles follow: W. D. Dulauey 21, A. V. Parsons 19, Frank Huseman 19, Miles Taylor 18, Sam Luttrell 16, E. W. Ford 16, Jas. A. Brown 15.

Spoon shoot, 50 targets: Class A—Frank Huseman 49. Class B—A. B. Stine 38, Jas. A. Brown 38. Class C—A. V. Parsons 33, Arthur C. Moses 25.

RALEIGH RAINES.

Mt. Kisco Gun Club.

MT. KISCO, N. Y., Sept. 7.—Our second annual registered tournament will take place on Sept. 25. The program will be finished by Sept. 13. The merchandise prizes are very valuable, and at present we have over \$250 worth in hand.

Inclose report of our last club shoot on Labor Day. Lester C. Remsen was high, score 230 out of 250 for the Du Pont trophy. Scores:

Meadow Springs Gun Club.

MEADOW SPRINGS, Pa., Sept. 7.—Al. Renner was the star of the weekly shoot of the Meadow Springs Gun Club to-day, scoring his third win on the pump gun offered for the member getting three wins on it. His straight for the Thompson prize was the third consecutive time he had been high for the trophy, although Keenan also got a leg on it. Renner showed remarkable speed, which was not to be wondered at, as the birds were slow and tended to high scores. Renner also tied Keenan for the club spoon, but in the shoot-off Keenan broke 24. Henry, who came late, let up Keenan by getting a straight. The two tossed for the prize and Henry won. Scores: Lindley (0) 73, Stevens (0) 75, Turner (16) 95, Clegg (0) 88, Keenan (16) 100, Renner (8) 100, Letford (8) 100, Fish (5) 45, MacAlonan (25) 68, Ocheltree (0) 83, Hinkson (28) 95, Lynch (0) 41, Lester (4) 97, Henry (7) 69.

READ THIS NEW BOOK

"The Trail of the 'Bull Dog'"

By Charles G. Percival, M. D.

DID YOU KNOW THAT THERE ARE PLACES IN THE UNITED STATES THAT ARE SO OLD THAT EUROPE IS A CHILD BESIDE THEM?

Are You Aware That America Is Richer In Ruins By a 1000 Fold Than All of Europe Combined?

Did You Ever Hear That These Ruins Belong To a Civilization Compared To Which The Oldest of Europe's Monuments Belong To But Yesterday?

Have You Ever Visited the Innumerable Castles All Through The Great Southwest Where The Most Enlightened Race in the World Have Lived, Departed and Left No History Within The Knowledge of To-day?

This book, which is new and original, is by the Editor of "Health" Magazine, and contains the incidents of his two years' automobile trip into all parts of the North American Continent. 1500 miles in Mexico during the late insurrection, of being chased by bandits, being lost on the desert and rescued from death by thirst by Troop K of the 4th U. S. Cavalry. It is replete with 300 interesting original photographs, taken by the author on his trip. Read how he penetrated a thousand miles further north than has ever been made by automobile before, driving over the dreaded White Pass Trail from Skagway, Alaska tidewater to the headwaters of the mighty Yukon River in the Klondyke and north of 62 degrees.

Look at the pictures of crossing the highest point of the Sierra Nevada and Rocky Mountains and crossing the continent from San Francisco to Portland, Me., in the middle of winter in three feet of snow in an automobile.

The most interesting and instructive book on America for Americans that has ever been printed. Get it and learn about the country you live in.

Price 50 cents Prepaid, or with One Year's Subscription to HEALTH \$1.00 HEALTH MAGAZINE CO. 27 Vandewater St., New York

RIPOGENUS LAKE CAMPS

HUNTING, FISHING, RECREATION

A Big Country is here opened up for Sportsmen just half way down the "West Branch" Canoe Trip; 40 miles by steamer from Greenville to Northeast Carry; twenty miles to Chesuncook by canoe, twenty miles more to camps by motor boat or canoe. Another route by canoe from Norcross, Maine. Another overland by team from Lilly Bay (Moosehead Lake) to Caribou Lake, thence by canoe or motor boat 12 miles to camps. Home Camps comfortable with spring beds, etc. Back Camps and Lean-tos cover a great tract of Wilderness, for Sportsmen desiring to go far back in the woods. Good living everywhere, Grouse, Ducks and Black Bear. We guarantee to give you Trout Fishing that is unequalled and Moose and Deer Hunting that is unsurpassed. Choice of the sportiest quick water in Maine, for the stream fisherman, or the most placid of pond and lake fishing for those who prefer it, where brook trout rise to the fly all summer.

Holland Gun Club.

BATAVIA, N. Y., Sept. 3.—At our Labor Day merchandise shoot yesterday we had fourteen shooters, including several from Elba, Byron and Bergen, whom we were glad to welcome, and hope they will come again. Gardiner was high gun with 138 out of 150 and high run of 38, with Tomlinson and Walls tied with 136 for Class A. In Class B, Brumber was first with 117, and Warboys second with 115. In Class C Feary was first with 98, a good margin over Leonard with 66. Leonard was shooting a new gun, and only found one target in event 1, which hurt. There were two cut-glass prizes in the three classes. Scores:

A PROBLEM'S SOLUTION

Log Cabins and Cottages

How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth, profusely illustrated, \$1.50 postpaid.

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

FOREST AND STREAM PUB. CO. :: 127 Franklin Street, NEW YORK

PLANNING A HOUSEBOAT

Houseboating has come among us to stay, and promises to be even more popular than in England itself. Every one who is interested in houseboats or who contemplates taking up this feature of outdoor life, should read Mr. Albert Bradley Hunt's practical, and, at the same time, beautiful work on the houseboat and its adaptation to American waters.

Houseboats and Houseboating

Covers the entire range of its title, considers the use and opportunities of the houseboat; their relation to city and suburban life; construction, furnishing, motive power, and all the thousand and one details, the knowledge of which spells the difference between success and failure in houseboat building and houseboat life.

Details, plans, drawings and specifications illuminate the text, while life on houseboats is interestingly described. Some of the more noted English and American houseboats and the life thereon are also described at length, with illustrations. Buckram, heavy paper, sumptuously illustrated.

Postpaid, \$3.34.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK

FATTER BLUEBERRIES.

WHILE the New England blueberry is justly famous, its systematic cultivation until recently has been neglected, largely through the belief that it was impossible.

The large bushes in the grounds of the Smithsonian Institution at Washington are probably more than fifty years old, and many such bushes in the Arnold Arboretum near Boston demonstrate the fallacy of the idea that the blueberry cannot be transplanted and cultivated.

Some years ago Dr. Frederick D. Coville, a Government botanist, started upon a series of investigations of the culture of the berries, which, according to the Scientific American, has continued to the present time with somewhat remarkable results.

Proceeding with the idea that previous failures along the same line had been due to a misunderstanding of the soil requirements of the blueberry, which are radically different from those of our common cultivated plants, the doctor, whose interest in the subject was attracted as far back as 1906, has made a careful study of the soil requirements with important results.

The doctor found it necessary to devise a gauge. This huckleberrymeter, or blueberry gauge, as it is more prosaically known in the Department, is used for measuring the berries and in noting the progress of the cultivation. The possibility of culture has not only been demonstrated, but the size development as well. Starting with a normal size of the opening No. 11 of the gauge, the berries have been developed to size No. 15, and doubtless a further cultivation will result in a much larger size, the flavor and fruitiness of the berry being improved rather than impaired by the cultivation.

BUSHMASTER AND LANCEHEAD SNAKES.

FROM R. R. Mole, who sends us many interesting South American reptiles and insects, we have just received a fine example of the fer-de-lance and a large specimen of the South American bushmaster. These two serpents represent the deadliest species of reptiles of the new world. The lance-head snake is about six feet long and the bushmaster is about eight feet in length. The latter is of a beautiful salmon hue, the body crossed by sooty-black bands. The scales are so rough as to suggest the surface of a pineapple. In his letter relating to these serpents, both of which were captured on the Island of Trinidad, Mr. Mole explains that the great pit vipers of that island are now becoming very rare, owing to the activity among their numbers of the Indian mongoose, which was imported to Trinidad some years ago. Despite its habit of killing poisonous snakes, the mongoose is not rated as a very valuable mammal in Trinidad, owing to its habit of frequently killing poultry.—New York Zoological Society Bulletin.

A LONG-LIVED BEETLE.

ALTHOUGH the small insects are supposed to live for comparatively short periods, we have an interesting record of a beetle that was captured on the borders of the Sahara Desert by a lady visiting the Pyramids. This lady picked up the beetle and placed it in what she believed to be an air-tight tin box, her intention being to have the insect mounted upon arriving in America as a souvenir of her trip to the desert. She believed that the insect would die immediately after being placed in the box. Arriving in America three months later she discovered the box in her trunk, and upon opening it, was astonished to find the beetle, which had been all this time without food and water, in a lively condition. She presented the insect to the society, asking that it be installed in one of the cages of the insect collection. This creature died on April 10 of the present year, after having been in our possession for seventeen months. Curiously enough it was seldom noted to partake of food during the period it was exhibited here, although it remained uniformly lively up to the time that it died.—New York Zoological Society Bulletin.

THE OUTDOOR LIBRARY

Seasonable books dealing with every phase of life in the Open. Handbooks of sport. Books that make "roughing it easy." Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth. 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. Price, \$2.00

This collection of papers on different themes contributed to FOREST AND STREAM and other publications and now for the first time brought together.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With art-type portraits and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club: Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Cloth, 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose; Mountain Sheep; Game Refuges, and other big-game topics.

My Friend the Partridge.

By S. T. Hammond. Cloth, 150 pages. Postpaid, \$1.00.

An inimitable study of the noblest of our game birds, following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, and throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game.

Inter-Ocean Hunting Tales.

By Edgar F. Randolph. Cloth, 200 pages. Postpaid, \$1.00.

A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint, and dealing with every kind of game that falls to the rifle of the American sportsman.

The Spaniel and Its Training.

By F. H. F. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.00.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Cloth, 281 pages. Price, \$1.50.

This is the latest and best manual on the subject. An owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks. Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Price, \$3.50.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 233 pages. Price, \$1.50.

Manual of Taxidermy for Amateurs.

A complete guide in collecting and preserving birds and animals. By C. J. Maynard. Illustrated. New edition. Price, \$1.00.

"The Long Shooters" and the Origin of 300 Yards Revolver Shooting. (New.)

By Wm. Brent Altscheler. Price 75 cents. Postage 4 cents extra.

Interesting alike to civilian and soldier, amateur and professional. A neatly bound volume; illustrated from photographs of shooters and shooting scenes.

Woodcraft.

By Nessmuk. Cloth, 200 pages. Illustrated. Postpaid, \$1.00.

No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known house-boats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

Some Native Birds for Little Folks.

By Dr. W. Van Fleet. Illustrated by Howard H. Darnell. Cloth. 146 pages, with 14 photogravure plates. Price, \$1.00.

Describes the wood duck, the great horned owl, ruffed grouse, killdeer, plover, bobolink, bluejay, chickadee, cedar bird, meadow lark, robin, woodcock, kingfisher, crossbill, and nuthatches.

The Anglers' Workshop. Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A Second Series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price \$1.50.

Our Daily Bread

A "Bakers' Dozen" of Some of the Representative Characteristic Breads and Crackers of the Globe Used by Campers, Travelers, Fisher-Folk, Motoring Tourists, Trappers, Etc.—Pointers for the American Camping Supply Trades

By L. LODIAN

In Two Parts—Part One

ABOUT a couple of years ago the writer suggested to a recreation periodical an article on the above subject, to be profusely illustrated. The reply was negative: that they limited the articles inserted to American topics. A rather insular view, it was thought, because manifestly we Americans don't "know it all." Other nations' campers inevitably have kinks and wrinkles and notions which are worth looking into. Moreover, almost all the exhibits illustrated in this article on camping hard-tack breads and biscuits and crackers are made by bakers in this country, and are in daily use among our millions of foreigners on the farm, in the forests, among lumbering parties, pot-shooters, fishing smack folk, fur hunters, etc.

OF INTEREST TO THE CAMPING SUPPLY TRADES.

Our camping-out supply houses are ever on the alert for articles and provisions which offer superior advantages to the outdoor lifer. It is the life of their business. The present paper on

different types of camping breads and hard-tacks of the nations, limits itself to the useful and the scant-known in camp and army breadstuffs. Thus, the sliced pumpernickel in cans—a splendid standby of the Teutonic outdoor lifedom—is not illustrated, because too well known. Nor the acorn bread of the Pacific Indians, because not obtainable in commerce. Nor the bark-powder-compounded bread of the Norge people, or their fish roe bread, for the same reason. Nor any patented breadstuffs or semi-breadstuffs. Of course I recognize our own high-grade pilot hard-tacks—some retailing at fifteen cents a pound—are unsurpassed as a camp food, although they are very liable to break and make a litter and some loss, unless ordered in small "fit-the-mouth" squares. The small plain fare "nigger crackers" exported by some Manhattan concerns to plantations in the South for negro use, are much more handy as to size and far less crumbable, than the bigger and brittle pilot ware, and they only cost a nickel a pound. While

somewhat coarse, it is doubtful if they compare unfavorably, nutritively, with their "white bruders'" crackery costing three times the price.

Fancy breadstuffs, like rusks and zwiebacks, are not worth carrying, as they occupy bulk and are unsatisfactory, leaving one with a peculiar, disappointed, inflated, unsatisfied, "blown-out" feeling. On and off I have had years of experience with them, both in Europe and here. But there is a Boston-produced canned brown bread, keepable for years, which is eminently satisfactory, obtainable at most campers' stores, although the makers might advantageously copy the idea of the sliced canned pumpernickel imported from Germany (mentioned above), and give us a ready sliced, canned brown bread. (If they do, there's one idea prompted by or copied via this journal—to start!) The advantages of machine-sliced bread are uniformity and convenience for handing round in a party, dispensing with the not always available knife.

It is noteworthy that the only two ready sliced camping breads sold in this country are both imported products—the aforementioned sliced pumpernickel and the Niponese sliced bamboo bread, as photographed.

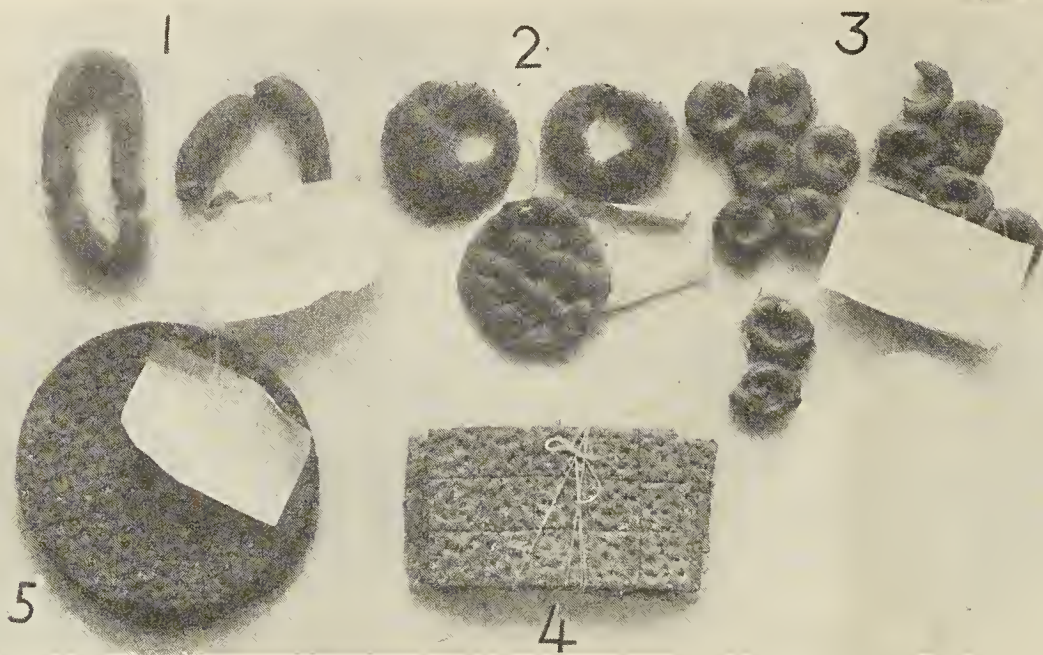

The paper-thin big oat crackers or biscuit disks of Copenhagen (Denmark), are not described or illustrated, because no longer imported, nor the tallow-impregnated rye bread of Siberia; same with the superb potato flour pilot crackers of the Scandinavia shipping world. But methinks all the same, despite these omissions, the writer's specialist knowledge of the army and travel and camping hard-tack breads, biscuits and crackers of the globe will be sufficiently attested by the present illustrated paper.

THE ORIGINAL CRACKER BREAD OF THE AMERICAN CONTINENT.

The kasava bread of millions of Latin Americans is made from the root called kasabi (Indian name). The bread is eaten dry as it is, but swells considerably on liquid contact, so that a hungry person fancying he can "polish off" impromptu one of those large disks of kasava, finds he can only get through half a one. It is of pleasant, slightly potato-like taste, and the tuber from which it is made ranges from thirty centi-

1—Chain cracker-breads (Duorkin). Balkan States, south and west Russia, Kabkaz region. 2—Kasava huge disk-crackers of Latin-America and short specimen root from which made. This is the original cracker and bread of the American continent and is still to-day the chief breadstuff of millions throughout the tropics. 3—Japanese bamboo-shaped, ready-sliced bread-biscuitry. 4—The at-once bread-and-hard-tack crackery of the Holy Land and all Arabic-speaking countries.

1—Oat-bread in sausage form (Celtic countries), containing some fat-seasoning. Is the most sustaining of all breads, and probably the earliest known form extant of the so-styled "meat biscuit." 2—The peculiar sesame-seed-covered cracker-breads of Palestine, Turkey and Egypt, affecting the crescent form and many other odd shapes. 3—"Lattice-work" army hard-tack crackers of Sicilia, Tripoli, Syria, and central Asia; made in a great variety of bread-biscuit forms and sizes. 4 and 5—The pulped-rye army and travel biscuits of Scandinavian countries. They are among the crudest-looking and toughest-appearing crackers of the globe, yet very nutritious.

meters to a meter in length. This is also boiled and eaten as is a sweet potato. Kasava is also imported in four-inch diameter disks.

A peculiarity of the kasava bread hard-tack is that a use can be made of it of which no other breadstuffs of the globe is capable. Thus, the vaquero (herder) of the Sierras and Andes can make a fairly passable dessert out of kasava bits, leavings or other broken fragments, or lacking those, he will deliberately crumple up one of the disks and use the pieces. These he drops into a two-quart sized seamless leather bag, pours in enough cold water to swell the débris to a paste, and a few squeezes of the bag in his hand completely homogenizes it. In his pocket dish—made of non-rusting thin black iron and of universal use—the vaquero has about half an inch of water bubbling atop the embers, already sweetened with a few pieces of raspadura (the small cone of pot-boiled crude sugar obtainable at the village bazars). Into this goes the kasava mush—enough for one human—and he slowly stirs as it quickly thickens and puffs up and flops down with the escaping steam bubbles. Now its color visibly changes to the milky bluish-white semi-transparency of our own cornstarch, and it is done. Then it is placed anywhere to cool off, and can be either turned out on to a wood plate (or a maize tortilla serving as one) as a molded blanc-mange, or eaten from the same vessel in which cooked. The latter is the more usual course, and the two fingers used (the cloying stuff being cold) much as a Chinaman uses his chop-sticks. Those vaqueros have an expressive saying that "Dios hecho dedos antes tenedores" (God made fingers before forks).

* * * * *

The chain bread (Duorkin) of the Balkans, South Russia and Polonia is sold from the neck and arms of itinerant bread peddlers in the bazars (market places). In tent life in Balkania, the isolated rings, but thicker, are often used for fun as quoits, or as temporary awning or curtain rings, or for suspending a portière to serve a semblance of privacy for the harem part

of the natural-black, Angora-worsted tents (often as big as one of our houseboats). Then, when they get hungry, the ladies of the harem, if pushed, chew up their curtain rings!

This chain bread is useful about camp in that it is always cleanly to handle, can be hung up anywhere out of the way, dispensing with the stuffy bread bag. I have a melancholy recollection of camp breads impregnated with the nauseating odor of foul stale bread air in an impermeable bag. Once on the Trans-Baikal, on the borders of Eastern and Central Siberia, I jettisoned into the lake near Chita a whole bag of engineers' bread because thus fouled. As the bread tumbled out and spread upon the water, it was a sight to see within five minutes the nibbling and bubbling from seething fish life!

QUEER JAPANESE BISCUITRY.

In Japan I came across the singular so styled bamboo bread, so named from its shape. It is already sliced for convenience in detaching and eating. It is always sold in strings. These are suspended from or carried on the arms of the bread peddlers. The bread is very light, and is sold by Nipon groceries in Manhattan at twenty cents per. It is not made anywhere in America, but imported via Yokohama, thus being the longest distance imported bread on our market.

Niponese campers carry this along for two reasons: as a light cracker with their amber-colored delicate tea, or for the soup. It is one of the most singular combination cracker and bread foodstuffs on this mundane sphere. The statement which has been published that Japan is changing from a rice-eating nation to a bread-eating nation is—well, not so. But in another half century things may be different.

THE BREADS AND BISCUITS OF THE CARAVAN AND HAREM (TURKEY).

The bread of the Holy Land and all Arabic-speaking countries is ever made in thin disk form, and has not varied since the days of Pontius

Pilate the just. Experienced travelers consider this among the best of the breads of the globe. Made fresh daily just before noon, it has dried to a hard-tack by evening, and becomes the Turkish cracker, and is keepable for years. It is quite brittle, however, and very hard, and requires—like much sailors' hard-tack—slight softening when eaten with the coffee or soup. It makes an excellent soup stock.

There are some Turkish bakeries in Manhatta for their own tribes, and they bake the bread while you wait near the oven door. Fresh, with sweet butter, and a couple of glasses of milk, these form an ideal lunch which the hungry Yankee dropper-in at nomadic tents in the lands of the Faithful will preserve as a mental souvenir through life. All these breads and hard-tacks are of course used in common from harem to hovel in the land of the piping hot Turkey-trot.

Some types of Turkish small breads—current from Stamboul, on the Bosphorus, to Cairo and Mecca—are also shown. These are sesame-seed-covered, affect the crescent and various fantastic forms, and are the fresh daily "hot rolls" of the Levant countries. Dried out by evening, they form a permanent hard-tack or cracker for domestic and army use.

It is a pointer for the camping outer in the historic Tigris-Euphrates regions, to always remember that the local breads are at once the fresh breads and travel breads of the caravan parties. And, though plain fare, there's more good plain solid stock and staying power in them than in the whole gamut of our fancy crackers.

HARD-TACK PLATE-LIKE BREADS USED AS EXTEMPORARY DISHES (SCANDINAVIA).

The unmilled or just pulped rye hard-tack breads of Scandinavian countries are met with by all observant tourists to the midnight sun land, on the coastwise steamers, among the fisher folk, at the isolated inns in the fjord regions, and scattering. It is the only bread of the Norse timber parties, surveyors, railroad workers, and in fact all outdoor life. Note the hole in the middle of the biscuit. This was not intended for the purpose to which the forester and camper utilizes it—as to be mentioned now—but for convenience in racking away on poles in farm houses and suspending near the roof. The camp worker or camp sporter, however, uses it as a makeshift plate for his bits of hot stewed meat or steak or broiled fish, finding the center hole useful for holding the plate more steadily, per stretched-out digit, much as an artist handles his color palette.

These pulped rye hard-tacks are very satisfying and nutritious, and at the same time useful "interiorly" (due to the coarseness of the grain) as a slight aperitive. Hence their use by old and young alike.

A wheat flour macaroni hard-tack "knacker-brod" is also made, and can be used eaten dry as it is, or put into soups. It retains well the macaroni-like flavor in either use. (Note: The word macaroni is not of Italian origin, as dictionaryally supposed, but is Asiatic. Both Nipon and the present Republic of China have had macaroni, since time lost in antiquity, in many forms, as rice macaroni, bean macaroni, buck-wheat macaroni, etc., and they themselves call it macaroni, spelling the word with a k, or at least their symbols give the power of k. All these

(Continued on page 378.)

Sport in Florida

By J. A. L. WADDELL

(Continued from last week.)

WE still had the same dread of stepping on a rattlesnake, excepting that as soon as the dogs pointed, we forgot all about the danger and pushed on just as we would have done in perfectly safe country. We did not see a single rattler all day, the ground probably being too wet, but about noon I almost stepped on a big cottonmouth moccasin. I will give the creature credit, though, for trying to get out of my way, as most snakes will, if they are permitted, but as on general principles I kill all poisonous reptiles, I fired quickly at a yard's distance and missed, whereupon it stopped crawling away and raised its head, which I blew off at the muzzle of my gun.

About the time that we found our third covey, John and I parted company, he taking the direct road to the Lightsee ranch, and I following an old road through the forest so as to reach shooting ground which had not been hunted that season, and we found it, for all the coveys which we flushed were large ones. Our last covey for the day we raised near the place where we had decided to quit shooting, because it was getting late, and we did not know exactly how far we were from our destination. It was a splendid lot of birds, and after we had taken toll out of it we marked it well, scattered close to a dense thicket that they term "bay" in Florida or "mott" in Texas. The temptation to follow was too great, and Leonard having joined us, all three pushed on a quarter of a mile, finding the birds one or two at a time and bagging a goodly number in spite of the increasing darkness and the proximity of the thicket, to which of course each bird flew as it rose. After we got back to our buggies from this round-up, it was decidedly late, far too late for the distance ahead of us and the condition of the roads, hence we pushed on as rapidly as possible, trotting the horses wherever the road permitted. After a while we passed a farm house where we were told that the Lightsee ranch was about six miles ahead, and after we had gone a mile and a half or two miles further, we were informed at another farm house that our destination was still eight miles off—and it was!

By this time it had become quite dark, and the moon had not risen; in fact, it was clouding up in the East for rain. We pushed on as fast as possible, but the road was either too rough or too wet for trotting, and we could scarcely see it at times. Generally we could trust to the mare's keeping in it, but occasionally she would wander off, then R. would have to get out and

find it by lighting matches. At one place the trail followed a barbed wire fence, and we kept in proper place by traveling close thereto, but presently we struck a small pond or lake with a heavy forest beyond, and in crossing it the mare turned to the left and got out of the road. Just as we reached the timber we brought up suddenly with a crash. Something had broken, and it proved to be the whiffle-tree, of which the end had been snapped off. R., however, was equal to the emergency, for by means of baling wire, some of which he invariably made a practice of carrying in each of his luggies, and using torches prepared from paper that we had in our pockets, he managed to repair the damage and get the buggy back into the road, which meanwhile W. had located by means of matches and burning paper. Had the latter not been a smoker and consequently well supplied with matches, we might have had to stay in the swamp all night. That would have been decidedly unpleasant, because when we were making the repairs, the rain, that for some time had been threatening, struck us. Fortunately we were provided with waterproof coats and consequently escaped a soaking.

The rest of that drive seemed interminable, but there were no more mishaps, and after passing through a mile or two of forest we struck a somewhat smoother road where we made better time, although in our crippled condition it was not good policy to trot much. Occasionally we would see a light and think that the ranch house was near, but it proved to be either a burning stump on some ground that was being cleared or else a jack-o'-lantern. Our fireflies in the North produce quick, bright flashes, and in Mexico I have seen a kind that gives a continuous shine from its eyes, but I had never seen fireflies like these, for their glow was not only continuous, but it appeared like a ball as big as one's fist or even bigger. These lights generally moved along slowly a dozen feet or more above the ground, but once there was one on a fence post, and for a while I felt sure that it was a lantern placed on a gateway to guide us to the ranch.

It must have been 9 o'clock when we reached our journey's end. John, who had gotten there in good time, soon prepared a fine and a hot supper, the principal feature of which was a fry of some of the birds that he had taken from us in the morning. He had found the ranch deserted and the door locked, but had crawled through a window and started a fire in the

kitchen stove. John Lightsee, who was across the lake at the other ranch house where the famous Lightsee orange orchard is located, saw the smoke and surmised that some sportsmen had arrived, consequently he plucked half a gunny sack full of oranges and came across in the motor boat, a distance of one mile by land and two by water. From that time on he stayed with us at the West ranch house, and others dropped in both by land and water, as the natives there like company and our food was good. In purchasing the provisions at Bartow, Mr. W. had ordered enough for eight men for ten days, and I had added a lot of articles to the list after he got through, although at the time I did not see why he wanted such a lot of provisions. It seemed that he had been there before and knew the customs of the country. It was a great pleasure and satisfaction to us all to keep open house and to provide a good, square meal for each comer. Had it not been for the abundance of game that we secured, our provisions would have run short; in fact, they did toward the last, but I managed to buy some from the captain of the steamer on its way up to Kissimmee at the head of the lake.

We had expected to catch plenty of fish, as the lake is a good one for black bass and two or three other kinds, but the weather was unpropitious and we did not take a single fish during the six days we were there, although we tried on two or three occasions. During our entire stay we were supplied with all the oranges that everybody cared to eat, and were told to gather what we wanted from the orchard—and what excellent oranges they were! I have eaten fine ones in Japan, China, California, Louisiana and Mexico, but I have never tasted any that could compare with those of the Lightsee orchard. They were very juicy, unusually sweet, and just acid enough. We used to eat from four to six apiece several times a day. I sent a box of them to Iowa, where it arrived in good shape, and each season in the future I shall leave a standing order to have one box per week sent to my home during the entire orange season. Anyone who likes fine oranges and who does not mind paying high express charges can do the same.

The sleeping accommodations at the ranch were comfortable, though limited. Leonard and I were given a bed in the granary and W. one in John Lightsee's room, and the others slept in cots on the covered porch, which ran around three sides of the house.

During the night the weather turned much colder and the rain continued, but in the forenoon next day it quit at intervals. We all tried for jacksnipe and managed to bag fifty and a brace of ducks, but the walking was bad and the birds wild, besides which the rain made shooting uncomfortable.

We sent some of our game across the lake to the other ranch house and had no difficulty in getting rid of the rest, as we had numerous visitors at meal time. Quail were so plentiful in the larder that John, under my directions, prepared a thick soup or stew of some of them. Poured over well buttered toast (made of the last of our loaves of bread) it was a dish fit for a king. John cooked some more quail in a Southern style, which I believe he called "puldoo"—the chopped-up birds were boiled with rice and highly seasoned. They made a tasty dish which all appreciated.

The next day was stormy and I did not go out, but Leonard did, and in spite of the rain and the bad walking, managed to pick up a fair bag of jacksnipe. I amused myself by shooting from the porch enough blackbirds to make a fine stew. They were plentiful and comparatively tame, and I fear I took an unfair advantage of them by baiting with oats.

That evening the weekly boat came down, bringing from Bartow Captain G., his young son, and Mr. W.'s son, a welcome addition to our party, especially as we were able to get up a fair game of bridge each evening. Captain G. brought his dog with him, but she had gotten a front foot hurt en route; moreover, Lass had been suffering from a festered toe since our trip in, consequently next day we left the three pointers at home, took the two setters, and went across the lake, Captain G. and I, to try for

snipe and quail with old Joe's aid and Leonard and the boatman to look for larger game with their rifles. The weather turned warm, the walking was bad, and the snipe were very scarce and wild, besides Joe disgraced himself by leaving us to run rabbits, hence after two or three hours' walking, the captain and I gave it up and went to the ranch, taking in a small bag of snipe and quail. After resting a little we tried again to the south and east with no better luck. We got a few birds apiece, and Captain G. bagged a fine, fat 'possum.

The country on the east side of the lake is quite different from that on the west side, the land being more sandy and partially covered with high, thick palmetto infested with rattlesnakes. There were occasionally grass swales and once in a while a live oak mott, but there was no pine forest. The snakes are so troublesome that it is found impracticable to keep dogs at the ranch.

About 2 o'clock Leonard and his companion returned without any game. They had seen two or three deer, but no turkeys. However, each of them had killed a rattlesnake, Leonard's being five and a half feet long with thirteen rattles, and the other one somewhat smaller. The boatman discovered his between his feet just as he was putting one leg over a barbed wire fence. It was a close call for him, because the reptile was coiled all ready to strike. Leonard, who was close at hand vows that the man jumped ten feet when he heard the warning note. One cannot hunt in country like that without taking his life in his hand, and it is too dangerous for employing dogs. There are quail, but the palmettos are too high and dense for sport.

After eating all the oranges we wanted, we

filled a gunnysack with them and made our way back across the lake, having spent the day very pleasantly, although not profitably as far as game was concerned. The two boys had a good time shooting blackbirds and crows, the latter being exceedingly destructive to the orange crop.

Next day Leonard, Captain G. and the latter's boy took the two setters in one buggy and went southwest, while R. and I took his two pointers in the other buggy and went northwest. Both parties found plenty of coveys and easily bagged the limit, returning home before dark. The boy shot two or three quail (his first) and was much elated thereby. One of the party killed a kingrail, a rather rare bird in that part of the country. Once during the day the two parties met, and as one of them was following a scattered covey, we lost the best part of an hour in separating the dogs who were insistent on hunting together. The weather was cool, but comparatively clear, the wind continuing to blow from the north.

That night John served us for supper among other good dishes the 'possum roasted with sweet potatoes in true darkey style, and we voted unanimously that we had never eaten anything more toothsome.

Next day we went for quail again, Leonard and R. going to the southwest and Captain G. and I making a long drive northwest before turning west, then south so as to reach some undisturbed shooting ground. Again both parties had no difficulty in bagging the limit, and I picked up another kingrail.

That evening the steamer came up-river, tying for the night at the wharf across the lake, and early the next morning Mr. W., Captain G. and the two boys left us for home, taking a good bag of birds with them.

The dogs being tired, we decided to retain the launch and go up the lake for wildfowl. Just as we started it began to rain, and when we reached the island I concluded that I had not lost any ducks that day, consequently L. and R. stepped out into the water and waded ashore while I went back to the ranch, where I spent most of the day in bed keeping warm and amusing myself by reading magazines. L. and R., to whom I had sent back the launch, stuck it out and succeeded in securing a dozen ducks—mostly mallards—as many jacksnipe, and a 'coon, which John skinned, but failed to cook for the reason that we broke camp too soon. Our young men truly earned all the birds they got that day, for they were soaked to the skin, and the temperature was pretty nearly down to the freezing point.

[TO BE CONTINUED.]

Woodpeckers Destroying Ohio Church.

THE Oak Hill Church in Belmont county, about fifteen miles north of St. Clairsville, is threatened with destruction by a vandalistic horde that has already rent great holes in its sides, and the board of trustees has been called to meet to devise ways and means of checking the onslaught and saving the edifice.

The attacking army is composed of woodpeckers, and so extensive have been its ravages that some action by the church board is regarded as imperative. Holes large enough for a man to crawl through have been made in several places and the birds are literally destroying the church.—Philadelphia Record.

STEALING UP ON A FLOCK.

Number One—New York.

WANTED: Thousands of fishermen who can keep a secret. Assuming that you are among this number, I am going to invite you to membership in the esoteric affinity and tell you and the several hundred who have written to know, "Where is the best fishing near New York city?" When a fisherman finds a real fishing place he keeps it dark. He will tell you about all sorts of good places—excepting the one he fishes.

Accidentally I got an admission from an old and ardent piscatorial artist, one Job Sherman, that he "went to a place near Troy," so I went on a hunt for it. I took the boat to Troy, train to Greenwich, thence by automobile to Cassayuna Lake, about a half hour's ride from Greenwich. The illustration will show how good the catches are when the "lake is not a-workin'." Izaak Walton wasn't born in any of the houses in that section, but he has an enthusiastic colony of disciples who gather there year after year to revere his memory. It was with this "gang" that I "landed" and by whom I was shown the "good places" after being treated to the following verse—the password of the clan—written by one of founders of the order of "The Cassayuna Fish Line":

THE SAME OLD LIE.

BY DR. F. J. TOMPKINS.

The Old Sport sat in the stern of the boat,
And the sweat ran down till the seat was afloat,
And he wiped his brow on the tail of his coat,
And says he, "This lake is a-working."

His face was red and his neck was a sight,
And he longed for the cooling shades of night,
And says he, "The reason the fish don't bite,
Is because this lake is a-working."

Then he got a strike and his line ran out,
And he upset his bait as he galloped about,
And he split the air with a gladsome shout,
"Who says this lake is a-working?"

He played that fish for an hour or more,
And he tangled his line and he lost an oar,
Then his leader parted, and Lord! how he swore,
At the blamed old lake and its working.

Then back to his home went the fisherman bold,
And his h'ide was the color of rich red gold,
And he told the same lie that we all have told,
For says he, "The lake is a-working."

There may come a time in the bye-and-bye,
And hope we will see it—you and I—
Where a man will invent an original lie,
And let up on the lake that is "working."

One day's fishing convinced me that I had located the best large- and small-mouth black bass fishing within a day's trip of New York city. The next day I wanted a try with the dry-fly, although most of the Cassayuna ardents ran to bass.

There only are two guides on the lake; they represent two of the ages of man—youth and three score. Both are good and reliable, and strange as it may seem—are deferential. They work for your pleasure and work all the time you are with them.

Roy started me at daylight on a trip along the streams. At the end of the day, with a full creel, we motored back to the Oaks at Cassayuna, where by the log fire the accompanying map was born. It shows only places, general locations and their direction one from another, with their relative position. There is no accompanying scale of miles—a fisherman knows no miles. When you get to Salem, Greenwich or East Salem, ask at the livery stable and you will have no difficulty in locating a guide. The natives all are anglers and work only when the lake enjoys the same process.

To the hunter there comes a call from this section. From Tefft Flats to Salem he will find ruffed grouse, woodcock, rabbit and an occasional deer, but from Tinkey's Pond, around the upper end of Cassayuna to Hebron Pond and down to Carter's Lake the sportsman fond of bird shooting will find the bag limit every day. The deer hunter here will get a chance at a buck most likely.

Most of the territory is unposted, while some of the forbidden territory may be shot over on payment of fifty cents a day to the owner. Here then, is—near New York city—a great game and fish country, very little known to sportsmen. Don't tell my secret to those outside the fraternity.

THE HOODOO.

BY DR. F. J. TOMPKINS.

Where the waving arms of the forest
Tossed wildly to and fro,
And nod to themselves in the limpid lake,
In the time of long ago;
Where the white man's foot had never trod,
And Dame Nature held her sway,
An Indian sat on the grassy sod,
And his eyes looked far away.

A wise old man was this Indian chief—
A medicine man, they say—
And his gaze pierced the veil of the centuries
Forever and a day;

And the future rolled back before him
Like mist from the morning sun,
And his heart grew bold and his face was sad,
For he saw that his race was run.

And what do I see before me?
And where is the forest gone?
And where is the bounding roebuck?
And the scream of the panther's song?
And where are my people's wigwams?
And where can the Nessmuk lay?
Alas! for the things that mine eyes have seen
In the centuries far away!

For he saw the white man toiling
And he heard the crash of the oak.
And the air was filled with the furnace dust
In place of the wigwam smoke—
The canoes on the shining water
Bore wings like a wondrous gull,
And some breathed fire till the water boiled
Like a torrent, beneath the hull.

Then, suddenly, close beside him
He saw a wigwam grand,
It had pressed the forest before it,
Away down to the shining strand;
And now, like a dream from the distance,
Came a palface, who calmly spoke:
"I like this spot, I'll be hanged if I don't;
I'll call this place 'The Oaks.'"

Now the heart of this wise old chieftain
Was furrowed and seared with woe,

Massachusetts Gunners Association

Secretary's Annual Report, 1911-1912

THIS association has been in active existence since June 15, 1910, and was incorporated under the laws of the Commonwealth on Dec. 21, 1910. It was formed, as set forth in the agreement of association, "for the purpose of preserving recreative gunning in this Commonwealth, protecting and propagating game and game birds, promoting equal opportunities for all gunners and representing their interests in legislation."

The original membership of two score has so increased that every district of the Commonwealth is fully represented. Conditions demand that a State-wide organization exist which will be alert and aggressive in matters beneficial to sportsmen. There must be a working force of picked men to represent such an organization, who in turn will voice the sentiment of the sportsmen as expressed at meetings of local clubs and sessions of the State association. Our record of the past two years shows the possibilities of this plan. Increased recreative gunning is our aim, and this demands positive action in at least two directions.

First.—Gunners must practice self-control and be willing to observe short seasons, with small bag limits until the supply of game birds and animals shall begin to increase in numbers above the yearly quota which is taken by the gun, vermin and other causes.

Second.—The existing stock must be increased by placing in the covers and upon the waters birds and animals raised on preserves, and by providing means to satisfy the large non-shooting but game-eating public.

To support the first proposition, the following changes have been made in the laws:

The sale of all wild birds and game quadrupeds, protected by law in any part of the United States is prohibited. The only exceptions being rabbits, together with deer, moose, caribou and elk, legally killed outside the Commonwealth. Chap. 567, Acts of 1912. This law goes into effect Jan. 1, 1913. The secretary on his own initiative introduced a bill at the last session to stop the sale of game, and this bill was later approved of by the executive board. The law as it now stands is a consolidation of this bill with two others introduced for the same purpose.

By the bag limit law each hunter may kill five gray squirrels in any one day and fifteen in any one year; three ruffed grouse in any one day and fifteen in any one year; four woodcock, or quail in any one day and twenty in any one year.

The deer law remains the same as last year, except that deer may be shot in the additional counties of Bristol, Essex and Middlesex.

The restriction on hunting wildfowl at night, Chapter 187, Acts of 1911, has been entirely removed.

Changes in the seasons as follows are very important:

The season on partridge, quail and woodcock opens three days earlier and closes three days earlier this year, namely Oct. 12 to Nov. 12, both dates inclusive. This does not apply to rabbits and squirrels.

Additional game wardens may be provided upon application of a city or town, providing said city or town will pay the salary, fifty dollars a year, to the warden.

Some greatly needed legislation was not enacted.

The substance of a bill presented personally by the secretary of the association to permit the shooting of cock pheasants, subject to a day and season bag limit, was provided by the Committee on Fisheries and Game, but was defeated in the Legislature. The opposition was along purely sentimental lines by legislators who know nothing about gunning and who overlooked two very important facts—these birds are being raised and liberated for this very purpose and a restricted open season would direct attention away from the native birds, particularly partridges.

The bill to keep self-hunting dogs out of the covers during the mating and breeding season was defeated on a technicality and not on the merits.

The bill to license all cats was made the butt of some mirth in the Committee on Agriculture, whereas if the same legislators would seriously consider the loss of bird life each year by the hordes of unowned, neglected and uncontrolled cats of the Commonwealth, such a bill would quickly become law.

Repeal of the law prohibiting the use of live decoys on the waters of and adjacent to Nantucket.

A law should be passed similar to the one in Pennsylvania prohibiting all unnaturalized persons from carrying firearms in this Commonwealth. This would make it easier to control the camps of foreigners, who lay waste the

country around them, for no guns would then be allowed in and around such camps.

There should be a reasonable bag limit on shore birds and wildfowl.

The appropriation of the hunter's license fee to the use of the Board of Commissioners on Fisheries and Game, in addition to the annual appropriation.

The creation of a single-head commission with two deputy commissioners. This last should be insisted upon by every sportsman. It is not the object of this report to make any unfair criticism, for considering the present form of organization, the Commission on Fisheries and Game has done good work. But granting this, its results have not been so large as could have been obtained, considering the exceptional opportunities of this commission during the past two years at least, under a more direct form of organization. The control is now equally divided among three men, and it is impossible to obtain decisive action as quickly or to lay positively on any one man the responsibility for failure to obtain results which should be realized.

In support of the second proposition advanced above, the following action has been taken:

Last year, \$10,000 was appropriated to establish and maintain one or more game farms. Five game farms are now in operation at Foxboro, Sharon, Sutton, Wilbraham and on the Vineyard, respectively. These farms embrace, all told, over 4,000 acres of leased or posted land on which all varieties of game birds and wildfowl are being raised. The reservation on the Vineyard, which heretofore has harbored only the heath hen, is being made a breeding ground for quail and wildfowl. It is estimated that the other farms will collectively produce this year about 2,800 pheasants, 1,000 quail and a hundred or more ducks, including wood, mallard and black ducks. The commissioners point with pride to a flock of forty-two young Virginia wild turkeys which were raised from one pair of

MALLARD RAISING BY AMERICAN GAME PROTECTIVE AND PROPAGATION ASSOCIATION.

birds at the Wilbraham farm. At Palmer, where a fish hatchery has been established, attention will be given to raising ducks, and quite likely quail and grouse. In these places the commissioners have planted considerable quantities of the western sunflower, buckwheat and other food.

The American Game Protective and Propagation Association, the national association which every sportsman should join and assist, has acquired an extensive preserve near South Carver, Mass. While large numbers of ducks and pheasants will be raised, the problem of rearing quail and especially ruffed grouse will be studied. At present a number of grouse that have been hatched out under hens are thriving nicely.

The greatest work of the national association has been to arouse the country to action on the Federal bills to protect migratory birds. The bills were introduced in the House by Congressman Weeks and the Senate by Senator McLean. These bills were argued before the House and Senate committees in Washington last March, and the Secretary was present on behalf of the association and urged the passage of such a law. Most of the States were fully represented and practically all of those not represented have since approved of the measure. The bills have been favorably reported by both committees, and each member is urged to write to his congressman and senator asking their active support when the bills come up to be voted on in the House and Senate.

For years thoughtful sportsmen have been lamenting not only the cutting of the timber, but also the vastness of destructive forest fires in this Commonwealth. These fires come at the time of year when thousands of young game birds are helpless. State Forester Rane, during the past five years, has converted several thousand acres of barren land into flourishing plantations of white pine. The lover of the grouse knows what this means. This work is being rapidly carried on.

The forest fire protective system now in charge of a State fire warden is made up of town forest wardens and deputies numbering more than fifteen hundred men well informed as to their duties. Observation stations on high ground manned day and night, and with telephone connections, are now arranged so as to cover the entire forest region of the State. No one but the man who has seen the ravages of the axe thoughtlessly or ignorantly laid to our forests, and the terrible waste of a forest fire, can appreciate the far-reaching benefit of this work.

The secretary of the association was present at all the hearings held at the State House during the year, and was present at many important conferences with representatives of other associations. As legislative counsel for the association he opposed various bills which the executive committee believed were against the interest of the sportsmen.

Notably among these matters was the bill (which comes up every year and is strongly supported) to give to all city and town clerks a sum ranging from 15 to 25 per cent. of the hunters' license fee as compensation for their work in issuing licenses.

He opposed a consolidation of the departments of State Forester and Fisheries and Game. Also a law to lengthen the present season on quail, woodcock and partridges. Also a law to

open the black duck season on Oct. 15. Also a law to increase the license to hunt deer. Also a law to prevent minors from shooting deer. Also a law to put a close season and bounty on foxes.

Each year, since the shooting of wildfowl after Jan. 1 was prohibited, great efforts have been made to extend the season on certain birds, particularly coot, whistlers and shelldrake. The executive committee has always favored these bills subject to sharp limitations. But the beneficial results of this regulation are now so apparent that it is strongly urged that this matter be allowed to remain in *statu quo* for a few seasons to give a full opportunity to test the value of this law.

The experience gained by being constantly on the ground during the past years has convinced your secretary that if the sportsmen of this Commonwealth would really get together and proceed in concerted action, they could absolutely control the situation as to game, and could make laws such as only their understanding of the real conditions can dictate. This matter should never be considered as a political question, but in some cases it amounts to just that, and the best legislation is therefore lost.

For instance, men in last year's committee in the Legislature frankly admitted to me that they never packed a gun and knew nothing of game conditions in this State. There were others who, if the sportsmen had insisted on a statement of views as to gunning before election, never would have been elected. This is what 45,000 gunners (most of them voters) sat by and tolerated last year. There is just one fact—the sportsmen must organize; they must support a State association that will fight for their rights, be vigilant as to proposed wrongs and truly represent their interests without fear or favor.

After this it is up to every man to be honest with himself in the sport, to give the game a square deal and to obey the law. Sober reflection will show him these are for his benefit, and ultimately will give him larger opportunities to gun. It is a hackneyed expression, but every year it becomes truer that every man must be a game warden—certainly unto himself, if not unto the other fellow.

Finally every one of us should read at least the first volume of Frank Forrester's "Field Sports of America" and try to develop within us some of the old-time etiquette and courtesy of a day afield and thus idealize the sport to make it just what we have pledged ourselves to make it—recreative gunning of a high and noble sort.

WILLIAM C. ADAMS, Sec'y.

Disappearance of the Wild Pigeon.

FLORAL PARK, N. Y., Sept. 4.—*Editor Forest and Stream:* Replying to the article of Herman L. Collins in your issue of Aug. 24, regarding the disappearance of the wild pigeon, I would say that there is no doubt in my mind as to the cause of its extinction. The habit of this bird nesting in vast colonies was the secret of its wonderful abundance, for a pigeon and its nestlings and eggs are the prey for many birds and animals, and if they had nested singly, scattered about all over the country, their natural enemies would have kept their number down to a very small limit, but by collecting in such vast quantities

to raise their young, their natural enemies of the vicinity were not abundant enough to do them any perceptible damage. It was different, however, when man appeared upon the scene and visited these nesting colonies, killing the birds and shipping them to the market by the carload, diminishing their numbers at a fearful rate and preventing them from breeding. Under these conditions this noble and beautiful bird, like the buffalo of the plains, diminished so rapidly that before anyone realized it, it was practically extinct.

During the later years of the wild pigeon's apparent abundance, it is probable that all there were in the country were assembled in one flock, and all there were left probably made up the last two or three large nesting colonies of which we have record.

When this colony was reduced to a few hundred pairs, the bird no longer had a chance to increase, for its natural enemies would easily prevent it.

The last nesting in Vermont was in 1898. A dozen pairs were found building nests in a piece of woods near Lunenburg, but within two days an enterprising local hotel keeper had them all served up to his guests.

JOHN LEWIS CHILDS.

MADelia, Minn., Sept. 1.—*Editor Forest and Stream:* In your paper of Aug. 24, the article by H. L. Collins, on the disappearance of the wild pigeon, reminds me that five or six years ago, while up in Northern Minnesota, a lumber jack came to our camp, staying over night. In talking over the disappearance of the wild pigeon, he said: "Some years ago I was a sailor on Lake Michigan. One spring (I forget the year) it thawed early and we had several weeks of nice warm weather. Then it got cold and foggy. So dense was the storm that we had almost to lie still, and during that time clouds and clouds of wild pigeons flew all around. A few days later, when it cleared up, the surface of the lake was covered with dead wild pigeons."

He said he never saw such a sight and had intended to write to some game paper about this, but never did, and I told him I would.

I shot many wild pigeons years ago and know them well. One day, going through the woods near here by the Watouwan River, I saw two wild pigeons flying along the river. After that I went there a dozen times, but did not see them again.

I thought I would send you this, as it may lead to someone remembering the incident.

HENRY JOERG.

Giant Spiders.

THE collection of giant spiders of the tropics is of marked interest. Some of our examples have been exhibited considerably over a year, and all of them have spun intensely white silk tubes in their cages. These spiders regularly shed their skins. When the old skin is about to be cast, it splits up the back, the spider withdraws its legs from the original casing, leaving the former covering so intact as to appear like another spider. The keepers have several times been deceived in cleaning the cages by cautiously poking aside the shed skin of one of these creatures, while the living inmate of the cage was actually hiding in its silk tunnel.—New York Zoological Society Bulletin.

An Amateur's Experience.

Fishing for Trout in the Adirondacks.

BY CHAS. D. DAVIS.

ON reading an interesting magazine story in which the catching of a six-pound trout was the principal feature, I became imbued with the notion that trout fishing with the "seductive fly" must be a very fascinating and exciting sport.

I had never handled a rod nor heard the music of a running reel in my life. I at once sought the best authorities on this particular sport and began reading with eagerness FOREST AND STREAM. The more I learned the theory of the "gentle art," the more enthusiastic I became to put it into practice. My next move was to visit a sporting goods establishment and modestly express my ambition to catch trout, and to possess an inexpensive, but serviceable outfit for that purpose. My actual possession of the slender rod, dainty reel, line, leaders, split shot, and beautiful flies, aroused visions altogether new to my imagination. From that moment I had great expectations. Knowing a few friends who talked fishing I thought it wise to ask them a few leading questions concerning fly-fishing, of which I knew absolutely nothing in a practical way. To my surprise not one of ten who prided themselves on being fishers could give me the least information on how to "cast" and when to "strike" when a trout took a fly. Oh, yes, they knew all about the kind of bait and everything else to be used for catching many other kind of fish, and even reptiles like alligators, eels and frogs, but of how to lure the "monarch of the brook" they reluctantly admitted their ignorance. It seemed to me that fly-fishing for trout must be a rare accomplishment. This, however, did not discourage me, and so on the advice of a friend, I packed my grip and made off for Cranberry Lake in the heart of the Adirondacks.

On my arrival there, July 27, I was cheered with the promise of some good trout fishing. This promise was qualified by the statement of others that my coming a month or six weeks earlier would have been better. I was surprised to find many guest at the "inn" interested in fishing. Whether these people recognized in me a tyro I cannot say, but they certainly entertained me with some remarkable fish stories hard to believe. One was that a large lake trout had been caught with a speckled trout inside him. I failed to verify this story. From the start I was warned not to waste time fishing in the lake because the water was warm and the trout were seeking the cooler spring-fed brooks and streams. With no intention of ignoring this good advice, I sought a secluded and advantageous spot on the lake bank, free from impediments, where I could practice the art of casting.

It was early in the morning, July 28. The sky was overcast. The mountains in their silent majesty almost surrounded the lake. All

nature seemed to linger in her awakening. There was not a sound except the ripple of the water as it lapped the shore at my feet. The air was fragrant with the breath of the forest. The grandeur of the scenery and the quiet solitude beguiled me.

At each cast of the fly I drew a foot or more of the line from the reel. The little success that attended my interested efforts in this practice engaged all my thought and attention. The hope of catching a trout at this time did not suggest itself. Suddenly my rod tip bent to the water. There was a trembling at the end of the line and a tremor shot through me like a mild electric shock. The clicking of the reel as the line ran out got me so excited that I came perilously near falling off the bank into the lake. Whatever it was at the end of my line, it kept me busy. My rod was a rainbow. I kept letting out and reeling in, remembering that I must keep a taut line, until, perhaps, more by luck than judgment, I landed a fish twelve inches long. Oh, joy! it was my first catch—a speckled trout. I need not say I was very much elated. Fifteen minutes after I hooked another beauty not so large. Thus was I initiated into the brotherhood of fishers. While at the lake I had the good fortune to fall in with Mr. Le Grange, of Bainbridge, N. Y. A genial fellow and expert in fly-fishing. He taught me much from his long experience.

Before leaving Cranberry Lake I heard there was good fishing in Grass River. To reach this river one could either take the open road for ten miles or the forest trail of five miles. I decided to take the trail, remembering the words of Byron, that, "there is a pleasure in the pathless woods." I was cautioned, however, not to leave the trail or lose sight of it. I plunged into the forest at 2 o'clock in the afternoon. I entered also upon a new experience. The trail was well defined, but rough and narrow, in places. The great trees on both sides interlocked their branches over the trail, almost shutting out the light of day. The dense undergrowth restricted my vision to a few feet. In the more open places beautiful flowers were blooming which, though new to me, I dared not gather for fear of missing the trail. On emerging from the wood I came out on a broad plateau that commanded a glorious view of vast reaches of the Adirondacks. Close by I found the camp of "Bill" McIlise, a noted guide of that section. To me, a tenderfoot, he was very considerate, and drew from me my unconcealed admiration of his ability as a guide, a fisher and a canoeist. The following morning, by arrangement, he took me four miles down the Grass River in his canoe. Within this short distance we passed through three rapids. In shooting these "Bill" took the narrow passages between rocks with the unerring skill of an Indian scout. It was a lively experience. On our way "Bill" pointed out the likely places to cast the fly. From the still waters under the shade of overhanging trees, and at the base of a rock where the stream ran swiftly, I brought to our basket six beauties. I lost three large

trout through my inexperience in "striking" and bringing in.

A perfect treat was the lunch that Bill prepared on the bank of the river. Coffee, bread and butter, broiled trout, fruit, and then a pipe and some thrilling hunting stories from Bill's experience.

I never returned from a vacation so much rested and strengthened in body, and with such delightful memories of both forest and stream.

Illinois Casting Club.

CHICAGO, Ill., Sept. 10.—*Editor Forest and Stream:* The following scores resulted from the contests of the 7th and 8th insts. Weather clear, wind northeast, about twelve miles per hour:

Quarter-ounce accuracy bait:		
	Score.	Re-entries.
Hartley	98.4	98.5
Tournier	98.2	98.2
Stanley	99.2	99.6
Bauer	97.8	98.4
Linder	99.3	99.4
Whitby	98.9	99.0
Heston	98.3	98.7
Jamison	99.1	98.4
McCandless	98.0	97.2
Asper	97.8	98.8
Spencer	96.8	96.5
Tice	97.6	97.6
Kirk	96.8
De Garmo	98.6	99.4
Humphreys	98.8	98.5
Huntley	97.3
Kernaghan	98.5	99.3
Nicholson	90.6	99.3
Kerr	98.9	99.5
Pierson	99.3
Accuracy Fly:

Linder	99.3	99.8
C W Grant.....	98.2	98.12
Swisher	98.7	98.8
Pierson	99.6	99.2
Huntley	98.12	98.9
Quarter-ounce distance bait:		
De Garmo	140 1/2	131 3/4
Stanley	133 3/4	114 3/4
Jamison	125 1/2	114 3/4
Whitby	71 3/4	91 3/4

Only two more days remain before the close of the season, viz.: re-entry day, Sept. 28. There is no prearranged rotation of events for these days. All the games will be played in order that every member who wishes to may complete his score, provided that his re-entires do not exceed the legal limit. In order that this may be done, it will be necessary that contests be started promptly at 2:15 P. M. Saturdays and at 9:15 on the day following.

As soon as possible after last re-entry day—probably the first or second week in October—will be held our annual fall club tournament. Details concerning this important event will be given in a later communication.

Minnesota Bass.

PELICAN RAPIDS, Minn., Sept. 8.—*Editor Forest and Stream:* On the 5th of this month at Lake Lizzie, Otter Tail county, Minnesota, I caught a small-mouthed bass 20 1/2 inches in length, 16 1/2 inches in circumference and weighing 6 pounds 2 ounces.

Have you record of any large one of that kind being caught this year?

SCOTT MONTEITH.

[This is the largest catch reported to us this year.—EDITOR.]

HAVE you observed the improvement in FOREST AND STREAM?

Open Seasons for Game in the United States and Canada, 1912

COMPILED BY T. S. PALMER, C. E. BREWSTER AND FRANK L. EARNSHAW, U. S. DEPARTMENT OF AGRICULTURE, BIOLOGICAL SURVEY.

The following table shows the open seasons for game in the United States and Canada arranged on a uniform plan. The first date of the open season and the first date of the close season are given, so that close seasons may be found by reversing the dates. When the season is closed for several years, the first date on which shooting is permitted, as Oct. 1, 1913, appears in the table. A few unimportant species and the numerous local exceptions in Maine, Wisconsin, Wyoming, Maryland, North Carolina, Florida, Arkansas, California, Washington, Oregon and the numerous local exceptions in Maryland and the most general of the county laws of North Carolina have been followed. "Game Laws for 1912," except the county seasons of Maryland No. 510, "Game Laws for 1912," except the county seasons of Maryland and North Carolina, which are published in Posters Nos. 28 and 29 of the Biological Survey. These publications may be had free on application to the Secretary of Agriculture, Washington, D. C. The term rabbit includes "hare" of the Canadian laws; quail, the bird known

as "partridge" in the South; grouse, includes Canada grouse, sharp-tailed grouse, ruffed grouse (known as "partridge" in the North, and "phasant" in the South), and all other members of the family except prairie chickens, ptarmigan, and sage hens; introduced pheasant is restricted to the Old World pheasants; and goose includes "brant." States are arranged geographically and grouped according to the Hallock Code.

STATE.	BIG GAME.				UPLAND GAME.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

UP WE GO.

ABOUT a month ago we made a short statement showing that, according to the records compiled by Printers' Ink, FOREST AND STREAM carried 2,215 agate lines more advertising in June, 1912, than any other sportsman's publication, and that in July it did better, having 2,920 more lines than its nearest competitor. For August we are pleased to report, as per following table, a still further gain. This month we are up 4,057 lines more, indicated by—

5. Outer's Book	8,736

WANTED—MORE MONEY.

THE United States Fish Commission is acknowledged to be one of the most valuable adjuncts of the country, bearing as it does an economic relation to the food of the people, yet Congress appropriates only the modest sum of \$564,000 for its maintenance and support. With this sum the commission supports and maintains thirty-nine fish hatcheries and fishcultural stations in thirty States. In addition to these stations there are six fishing steamers in commission engaged in surveying, studying and propagating fish life. The commission gave away over a million dollars worth of fish last year, distributing almost four billion fish and eggs. For many years the scientists of the commission have been prosecuting inquiries and investigations into the causes of the decrease of food fishes in the waters of the United States, and they have also been engaged in experimenting with aquatic animals, plants and waters in the interest of fish

culture, all with the idea and purpose of propagating and increasing the supply of food fishes. Along this line of investigation experiments have begun to create new races of food and game fishes of large and better quality than any now in existence. Such work cannot be done without considerable expense, and as it is a valuable work, Congress should curtail elsewhere rather than stint the fish commission. Elsewhere in this issue an article by Raleigh Raines describes minutely the work of the commission. It is well worth reading.

REPRESENTING THE INTERESTS.

NEW YORK, September 11, 1912.

Publisher Forest and Stream, New York City:

DEAR SIR—Has FOREST AND STREAM a new editor, or has the old editorial staff gone to seed? Your editorial on the "Sullivan Revolver Law" in the August 24 issue, indicates one or the other.

Just how you can afford to champion a law so absurd and so dangerous as this law, is beyond my comprehension. The only people it has benefited are the thugs. Has FOREST AND STREAM been subsidized by "Monk Eastman" or "Gyp the Blood"?

Perhaps you think a law which encourages degenerates to shoot, and stab, and kill, and outrage young girls, is no concern of sportsmen. Has it occurred to you that we sportsmen who support your paper and pay your salary are also citizens; that we are the very ones who are compelled by this law which you so beautifully uphold, to calmly fold our arms while we are batted over the head or stabbed in the ribs by any one of the multitude of crooks which your law has drawn to New York, and which you tell us are so harmless?

No, we need no weapons in our homes. The millennium is here. Angels walk the streets of New York at night, chanting hymns and guarding the lives of her sleeping citizens.

AN OLD READER.

It having been a law for years among publishers to pay no attention to anonymous communications, we feel the necessity of an apology for printing the above, for of course we know it does not emanate with a FOREST AND STREAM subscriber. We deny that any such condition exists as mentioned in the accompanying letter, and further reiterate that those who need revolvers and are entitled to them will have no difficulty in obtaining them. In the mean time those of us sportsmen who have always gone without a revolver in our homes will continue to do so regardless of any suggestion from the interests. In the mean time we would refer "An Old Reader" to an editorial in our issue of Sept. 14, entitled "Anti-Revolver Law."

THE CHANGING SEASON.

WHEN we were boys, summer meant vacation and baseball, fall led to opening of school and football, then skating, and so on through the line of youthful pleasures, through vacations and school, into college with its older, though somewhat similar recreations and ambitions, with four years' preparation for business and bigger sports. And so with the boy after he reaches man's estate. His pleasure becomes secondary to his business, but in these days of prosperity more time is devoted to recreation, so that the man who years ago was proud to bequeath to his heirs the statement that "he hadn't had a vacation in thirty years," now delights in not allowing one year in thirty to pass without making time and money enough to enable him to take, not only one, but several vacations. Many, perhaps most men of satisfactory income, turn to yachting or to motor boating in the summer. Here he finds pleasure and competition. When fall comes, the grown boy, like

his younger self, rotates with the season, and in the case of yachtsmen, almost invariably it is rifle or shotgun that he substitutes for the tiller. The rifle and the big-game hunt attracts the attention of the big boat sailor, for in these days big game is synonymous with distance and expense. The yachtsman who has kept his boat in tune for at least one regatta a week and his club's cruise, has drawn heavily on his purse and time, perhaps too heavily on the latter. To this man field and trap shooting offer opportunity for greatest and most certain pleasure. A week or two at birds in a place, of which there are many at no very remote distance from almost any city, and then the balance of the winter with the clay bird. Here is a man's sport second to live bird shooting only in the fact that you miss the joy that comes through studying the working of your dog.

Clay bird shooting offers all the exhilaration and compels all the accuracy of the live bird game, knows no bag limit, and causes legislators no new worry in an endeavor to avoid protecting the animated targets. Here is a sport wherein great skill doesn't mean diminution of the feathered folk. It is an evolution of one of our earliest pleasures, shooting clays. Now, instead of calling "knuckle down," "fen everys" and the like, when the other fellow shoots, we call "pull" in order that we ourselves may get a shot. It's a great rejuvenator, is clay target shooting.

ALABAMA GAME REFUGES.

STATE GAME AND FISH COMMISSIONER JOHN H. WALLACE, JR., of Alabama, will ask the Legislature, when next in session, to pass a bill declaring all lands owned by the State, whether held in fee or in trust, State Game Refuges and Forest Preserves.

Alabama holds in trust swamp and overflowed lands, school lands and tax redemption lands, amounting to thousands of acres. State game refuges and forest preserves would cease to be such the moment the State disposed of any part of the lands declared therein.

Under Mr. Wallace's plan these refuges and forest preserves, if established, would be patrolled by wardens to see that the State's property was not vandalized and the birds and game were given ample opportunity to rear undisturbed their young.

This proposition has been submitted to Gov. O'Neal, Superintendent of Education Willingham, State Land Agent Martin and Col. Samuel Will John, of the Board of Trustees of the Brice Insane Hospital, and has received their endorsement.

Commissioner Wallace is so sincere in pushing his policies and is so tireless in formulating them that he deserves support of voter, hunter and legislator.

COCK OF THE ROCK.

WE all know "duck on the rock" and each of us has met a "cock of the walk," but Leon E. Miller has gone us all one better by securing a number of specimens of cock of the rock.

This bird is a sort of crow of many colors that has a home construction habit not unlike the swallow, though the nest is a trifle more ornate in that it has a dangling fringe of roots. Mr. Miller's cock of the rock addition to the American Museum of Natural History will make the collection there very complete.

YACHTING

Atlantic Y. C.

THE racing season of Gravesend Bay ended last Saturday with the fall regatta of the Atlantic Y. C. Eighteen yachts started. Joy defeated Claire in the first division of the handicap class by 16s., and the Q division went to Spider; M. and F. II. won in the Class S, and Mouse won the knockabout event. The dinghy class was won by Viva and the second division of the handicap class was taken by Gunda. The Atlantic Y. C. went out of commission last Sunday after the most successful year in its history. The summary:

Sloops—Class Q—Start, 3:00—12 Miles.		
	Finish.	Elapsed.
Spider, H. Chubb	5 14 21	2 14 21
Grayjacket, F. S. Noble	5 17 20	2 17 20
Suelew, E. F. Luckenbach	5 18 58	2 18 58
Dixie, R. Rummell	Did not finish.	
Alice, G. Davis	5 22 42	2 22 42
Handicap Class—First Division—Start, 3:05—12 Miles.		
Joy, Le Sauvage & Geer	5 39 50	2 34 50
Claire, W. C. Van Clief	5 40 06	2 35 06
Handicap Class—Second Div.—Start, 3:05—12.6 Miles.		
M. and F., C. M. Camp	5 40 39	2 35 39
Gunda, W. H. Hall	5 41 40	2 36 40
Careless, C. B. Byram	5 45 29	2 40 29
Blue Bill, Zeb Mayhew	5 50 43	2 45 43
Corrected times: Gunda, 2.29.40; M. and F., 2.30.59; Careless, 2.40.29; Blue Bill, 2.40.35.		
Sloops—Class S—Start, 3:10—12.6 Miles.		
M. and F. II., Camp & Marchant	5 42 10	2 32 10
Cyrc, Dr. C. L. Atkinson	Did not finish.	
Gravesend Bay Knockabouts—Start, 3:15—8 Miles.		
Mouse, R. E. Dingman	4 48 23	1 33 23
Merry Widow, Bailey & Bailey	4 51 59	1 36 59
Skylark, M. A. Howard	5 01 13	1 46 13
New York C. C. Dinghies—Start, 3:55—4 Miles.		
Viva, D. D. Allerton	4 51 05	0 56 05
Meteor, J. E. Erskine	4 53 36	0 58 36

Manhasset Bay Y. C.

THE big fall regatta of the Manhasset Bay Y. C. was held last Saturday with fifty-two yachts crossing the starting line. Two of the big sloops, Istalena and Aurora, took part, the latter winning by only 13s. over the 21¾-mile course. Joyant won in Class P. Seven of the New York Y. C. thirties finished within 4m. 5s. and Okee won. Five of the schoonerettes finished with but 3m. 3s. between the first, Helen II., and the last. Winners in the others classes were Edmee, Alert, Malolo, Cliphora, Arethusa, Brilliant, Kanaka, Mlle. Boss, Dodo, Little Dipper, Echo, Tautog, and Gemini.

The race committee was James W. Alker, A. W. Wilson and William Gardner, who used Vice-Commodore Walbridge's steamer Walucia as the committee boat. The summary:

Sloops—Class K—Start, 12:10—21¾ Miles		
	Finish.	Elapsed.
Istalena, G. M. Pynchon	2 52 10	2 42 10
Aurora, C. Vanderbilt	2 51 57	2 41 57
Sloops—Class P—Start, 12:20—Course 15¾ Miles.		
Windward, R. A. Monks	2 27 20	2 07 20
Corinthian, H. C. Smith	2 27 21	2 07 21
Joyant, W. H. Childs	2 25 38	2 05 38
N. Y. Y. C. 30-Foot Class—Start, 12:25—15¾ Miles.		
Alera, J. W. and E. P. Alker	3 39 46	2 14 46
Caprice, R. N. Ellis	2 37 17	2 12 17
Ibis, W. K. Busk	2 41 02	2 16 02
Rowdy, H. S. Duel	2 37 28	2 12 28
Okee, J. A. Mahlstedt	2 36 22	2 11 22
Juanita, J. T. Pratt	2 37 43	2 12 43
Carlita, G. B. Kulenkampff	2 41 27	2 16 27
Sound Schooners—Start, 12:30—9 Miles.		
Helen II., E. Randolph	2 03 00	1 33 00
Vandalia, D. Duncan	2 04 30	1 34 30
Moirra, C. Cowl	2 05 28	1 35 28
Alicia, W. M. Baldwin	2 05 45	1 35 45
Daffodil, A. H. Morris	2 06 03	1 36 03
Sloops—Class Q—Start, 12:35—9 Miles.		
Edmee, Emil Schaefer	2 11 41	1 36 41
Essex, J. L. Mitchell	2 13 37	1 38 37
Handicap Class—First Division—Start, 12:40—9 Miles.		
Sally IX., A. E. Black	2 20 58	1 40 58
Amada, B. R. Stoddard	2 12 16	1 32 16
Alert, R. B. Budd	2 09 46	1 29 46
Corrected times: Alert, 1.28.52; Amada, 1.29.07; Sally IX., 1.37.13.		
Handicap Class—Second Division—Start, 12:40—9 Miles.		
Mist, H. T. Hornidge	2 21 29	1 41 29
Red Wing, Grace and Loewy	2 19 14	1 39 14
Kenmuir, V. P. Krauss	2 22 31	1 42 31
Malolo, C. A. Stoltze	2 21 18	1 41 18

Corrected times: Red Wing, 1.38.14; Kenmuir 1.41.02; Malolo, 1.36.20; Mist, 1.37.01.

American Raceabouts—Start, 12:40—9 Miles.		
Cliphora, C. D. Mallory	2 21 31	1 41 31
Maryola, A. F. Bradley	2 24 00	1 44 00
Handicap Class—Third Division—Start, 12:50—9 Miles.		
Sierce, J. S. & E. S. Appleby	Did not finish.	
Amanita IV., A. E. Fountain	2 36 19	1 46 19
Arethusa, A. G. Hanan	2 30 06	1 40 06
Glen Cove Jewel Class—Start, 12:55—9 Miles.		
Jade, E. S. Willard	2 48 45	1 53 45
Sapphire, H. F. Whitney	2 49 33	1 54 33
Brilliant, W. W. T. Buchnall	2 45 55	1 50 55
Sloops—Special Class—Start, 12:55—9 Miles.

Sloops—Special Class—Start, 1:15—6 Miles.		
Trix, R. B. Hultz	2 56 30	1 41 30
Gemini, W. S. MacIntosh	2 45 33	1 30 33

Lynn Y. C.

LYNN, Mass., Sept. 14.—The Lynn Y. C. held its closing races this afternoon and went out of commission to-night, when cups were awarded by ex-Commodore "Billy" Russell, oratorical dean of yachtsmen. Commodore Joseph D. Houghton's cup was won by the auxiliary La Villa, sailed by ex-Commodore Robert A. Strong. Allowances placed the scratch boat Aeolis fourth. The boats went over an eight-mile triangular course with a beat, reach and a run home. The bang-and-gobang race of power boats for the vice-commodore's cup provided some close finishes. It was the first trial of this novelty in Lynn Harbor. No one appeared to challenge Maritza II. for the cup presented by the crew of the flagship Trixie for the special sailing race, and the interclub champion sailed the course in a walkover. The summary:

Auxiliaries—Commodore's Cup.		
	Elapsed.	Corrected.
La Villa, R. A. Strong	1 18 06	1 00 45
Strideaway, W. A. Tillotson	1 13 53	1 03 59
Truant, Frank Jones	1 23 34	1 05 38
Aeolis, Thomas P. Gard	1 07 48	1 07 48
Ruth, F. E. Thornton	Withdraw.	
Success, W. Thurlow	Withdraw.	
Power Boats—Vice-Commodore's Cup.		
Nellie M., William Murphy	0 48 41	
Salome, Bert Herbert	0 48 58	
Igo, Hall & McCabe	0 49 37	
Dream, A. D. Grover	0 49 43	
Lucky John, John Daigle	0 50 34	
Helena, John Walton	0 50 43	
Rube, Wylie and Dunbar	0 50 52	
C U Later, M. A. Schaffner	1 10 40	
Special Sailing Race—Trixie Cup.		
Maritza II., Chester H. Porter	1 02 37	

Bensonhurst Y. C.

THE final cruising race of the Bensonhurst Y. C. was decided. Dixie, of R. W. Rummell, was the first to cross the finish line. On corrected time, however, Joy won. Dixie captured the season's sailing prize, presented by Commodore Le Sauvage. The summary:

Cruising Race—Start, 11:30—Course 10 Miles.		
	Elapsed.	Corrected.
Dixie, R. W. Rummell	4 42 10	4 42 10
Joy, Le Sauvage & Geer	4 42 15	4 26 44
Careless, C. V. Byram	5 12 12	4 32 43
Mouse, R. E. Dingman	5 25 07	4 35 46
Cyrc, Dr. C. L. Atkinson	Did not finish.	
Hike, R. W. Rummell, Jr.	Did not finish.	
Wahkan II., Robins & Bassier	Disqualified.	

South Shore Y. C.

THE members of the South Shore Y. C. have elected the following officers and committees for next season: Commodore, Charles H. Stoddard; Vice-Commodore, D. S. Mackay; Rear-Commodore, Thomas Forbes; Recording Secretary, Henry L. Maxson; Treasurer, James Dean; Financial Secretary, Clarence E. Jones; Measurer, A. Sidney Malcomson; Directors, Nicholas Cunningham, Louis J. Hall, Fred C. Southard, J. Wesley Miller, William G. Schumacher, George P. Patterson, Arthur Nosworthy, F. A. Myrick, William P. Miller and David A. Kennedy; Regatta Committee, Louis J. Hall, David A. Kennedy, Charles G. Hill, Paul Halpin and Franklin P. Alcorn.

Stamford Y. C.

LAST Saturday was the closing day for the Stamford Y. C. after a mighty interesting season's series. The one-design class cup was won by Dart, owned and cleverly sailed by Schuyler Gillespie. Yesterday's results were:

	Elapsed.
Dart, Schuyler Gillespie	2 18 30
Snapper, Edwards Corning	2 18 40
Killie, Bartholomew Jacobs	2 20 10
Kittaway, E. C. Trowbridge	2 20 10
Osprey, Mr. Elliman	2 21 21
Kelpie, Harold Buck	2 25 04

Larchmont Y. C.

THE Larchmont Y. C. went out of commission last Saturday after a most successful season. As a closing incident the Larchmont one-design class, so popular this year, held a parting race over the 9¾-mile course. A. B. Alley's Festina won handily. The summary:

Larchmont Interclub Class—Start, 2:10—9¾ Miles.		
	Finish.	Elapsed.
Festina, A. B. Alley	3 46 56	1 36 56
Yukan, W. D. Weir	3 48 14	1 38 14
Bella, C. S. Runk, Jr.	3 48 58	1 38 58
Whiff, W. F. Manney	3 49 46	1 39 46
Lewanna, L. G. Spence	3 56 05	1 46 05
Hamburgh II., M. M. Goldschmidt	3 51 17	1 41 17

Motor Boating

Motor Boat Club of Buffalo.

J. STEWART BLACKTON's Baby Reliance II. redeemed herself after her dismal showing at Huntington Harbor by taking everything of importance at the third annual power boat regatta of the Motor Boat Club of Buffalo, held Sept. 12, 13 and 14. She won the 30-mile event of the first day in record time of 39m. 35s., an average speed of 46.15 miles an hour. Baby Reliance III. was second and P. D. Q. third—all three from New York city.

Gretchen III., owned by John W. Hubbard, of Pittsburgh, broke down within a quarter of a mile of the finish. The Toronto entry, Heloise, finished fourth. Eight boats started, Question, U. U. V. and Reliance IV. all broke down on the first leg.

In the speed mile trials, in an attempt to lower the world's record, Baby Reliance II. and P. D. Q. failed by a considerable margin.

Baby Reliance III. averaged 44.44 statute miles an hour; P. D. Q. averaged 36.73 and Heloise averaged 33.07.

The second day was marred by two serious accidents, not however to be unexpected in the race between these shells. The unfortunates were Reliance IV., owned by C. Crawford, of Lakewood, N. Y., and Question, owned by H. L. Trebert, of Rochester, N. Y. When the nine speeders started across the line at the opening of the race, Reliance IV. was swamped. Her crew, Lautenslager and Ham, were thrown into the river, and the former suffered a punctured kidney, while the latter's face struck the gasoline tank and his nose was badly gashed and broken. While the two injured men were being rescued, Question struck a submerged log and went to the bottom. Her crew were rescued.

Baby Reliance II. covered the thirty-mile course in 43.39, a rate of forty-two miles per hour. Baby Reliance III., owned by Mrs. Paul A. Blackton, of Brooklyn, came in second, and covered the course in 45.38, a rate of forty miles per hour.

The third day was another Blackton triumph. Baby Reliance lowered world's power boat racing record by over a minute when she won the 35-mile international inter-lake championship race for the E. R. Thomas trophy at the rate of 46.15 miles per hour. This gives her first place in all of the races held during the regatta. Baby Reliance III. and Neptune, owned by Lawrence Buell, of Detroit, for second place, was the center of interest. Neptune won the coveted position. Heloise and P. D. Q. fought hard for fourth place. The latter won. Baby Reliance II. made wonderful time. In her last lap she covered the five miles in 6:20, which was at the rate of 47.37 miles per hour. The fastest lap made by Neptune IV. was on the second leg, when she went nearly 45 miles per hour. The racers finished as follows: Baby Reliance II., of Brooklyn, first* in 45.20; Neptune, of Detroit, second, in 48.30; Baby Reliance III., of Brooklyn, third in 50.09; P. D. Q., of New York, fourth in 56.09, and Heloise, of Toronto, fifth in 56.54.

Colonial Y. C.

THIRTEEN power boats started last Saturday in a final race for the trophy offered by E. L. Mahnken, of the Colonial Y. C. The course was from 140th street to Rockland Light and return. W. Lindeman's Snapshot, the scratch boat, made the fastest time over the course, covering it in 4h. 27m. 50s. A. Robinson's Abby May, which took 18m. 12s. longer to cover the course, had a time allowance of 2h. 18m. 9s. and probably will be declared the winner unless a protest which is threatened is lodged. The summary:

	Finish.	Corrected.
Abby May, A. Robinson.....	3 46 02	3 27 53
Au Revoir, F. Ellsworth.....	3 38 16	3 59 11
Irena, J. Peterson.....	3 41 27	4 05 37
Scotland, Charles Stone.....	3 49 08	4 06 40
Alma II., F. P. Pratt.....	3 35 32	4 06 42
Annart, A. J. Bendix.....	4 23 18	4 09 48
Virginia, Harry Betts.....	2 54 16	4 17 26
Canisteo, Dr. H. Baker.....	3 23 22	4 24 44
Snapshot, W. Lindeman.....	2 27 50	4 27 50
Lady Betty, H. J. Russell.....	2 36 23	4 27 57
Allowances: Abby May, 2.18.09; Au Revoir, 1.39.05; Irena, 1.35.50; Scotland, 1.42.28; Alma II., 0.28.50; Annart, 2.13.30; Virginia, 0.36.50; Canisteo, 0.58.38; Snapshot, scratch; Lady Betty, 0.08.26.

HOUSEBOAT TO LET for October shooting and fishing on Barnegat Bay. Week or month. Full equipment—3 cabins, 2 toilets, 7 spring beds. Rate very reasonable to responsible party. Also 30-foot auxiliary. Address "Drawer H," Belmar, N. J.

Through Algonquin National Park by Canoe

By C. F. STRATFORD

HOW persistent is the call of those North Woods. It is a challenge to the soul to free itself from the bondage of routine and enjoy nature's best in the atmosphere of liberty. And who, having heard it, could but obey that call. And obedience is a guarantee of joy and happiness. To follow track and trail in the mystic charm of uncertainty; to trek over rough portages, developing courage, grit, endurance and to see in the forest growth and lake expanse the evidence of a Divine Power; to hear the plaintive call of the loon and the long drawn howl of the wolf; then when the last story has been told the final song has died away among the pines, and the camp fire extinguished; then to rest upon a spring bed of boughs—this is the joy of the North Woods and the reward of him who obeys its call.

It was on the evening of the 30th day of July, 1911, that our party of twelve young business and professional men met at the railroad station in Buffalo. We made the trip to Joe Lake without incident, arriving there late the following morning. After having our last civilized meal at the supply station, we set to work getting canoes, provisions, tents, etc., ready for the start. The little wharf was a busy and exciting spot for about an hour.

Down Joe Lake and through beautiful Joe Creek we paddled, getting our first glimpse of the magnificent forest kingdom in which we were to live for two weeks. About an hour after Joe Lake station was left behind, we were in the bosom of an unbroken forest, Algonquin National Park, a glorious area of pine lands set aside by the far-sighted Canadian Government as a timber reserve. It was along Joe Creek that one of our canoes caught sight of a deer.

"Oh, portaging does not amount to much," was the general sentiment expressed at the first "lift-over" around a beautiful waterfall in the creek, but little did the men realize how quickly their sentiments were to change. Another short paddle over the sinuous course of the creek brought us to the second portage, which our leader, who had traveled the country before, guessed to be three-eighths of a mile in length.

The five minute trip over the last section of Joe Creek landed us at the third portage. The last portage of the day was over and we were convinced that the joys of portaging were only outrivaled by the joy of Atlas when he bore the earth on his back. Hardly had we begun to move along the small expanse of water leading from this third portage when we passed through the narrows and beheld stretched out before us Island Lake. Moving noiselessly over the quiet waters, with the afternoon sun still beating down upon us, we passed by the slopes of pine, balsam and fir, almost losing ourselves among the many islands, inlets and coves which stretched to the right and to the left for a long distance. Sundown brought us to the island furthest north, where we found an ideal camp site. Here we landed and established our first camp, named by our boarding house squad "Camp Feed-'Em-Up." It was about 6 o'clock and the call from our leader "All in, fellows, the water's fine" was received with general approval, and we all went to

work with a will when the various crews were announced—four cooks, four tent erectors and four bough and wood cutters. That supper of bacon and eggs, potatoes, bread and butter and coffee disappeared like magic. It was about 9 o'clock when we got our camp in ship shape order. Then we all gathered around the campfire for a few songs and stories, but one by one the fellows stole away to their tents. Every one felt the effects of that first day's hard travel. That first night in the woods was a peculiar experience for many of the fellows who had never slept under canvas in the woods before. Our leader was kept busy answering many questions regarding the various calls and noises familiar to those who have lived in the woods.

We were all up with the birds next morning. Our first night on balsam boughs had been a very restful one. A few complained of stiff backs, but upon examining their beds we found they had been lazy the evening before and had not cut enough boughs to keep them off the hard ground, nevertheless they soon got the kinks out and all ate a hearty breakfast of coffee, bread, flapjacks and syrup.

Early in the afternoon two of our men made a trip over a three-quarter mile portage to explore the lake beyond. They discovered a deserted logging camp, and while rummaging around in one of the cabins found a big fat porcupine. He showed no inclination to notice their arrival on the scene, so they got him cornered and photographed him. They found so many other interesting things that they lost track of the time and did not get started on their return trip until after sundown. They arrived at the portage at dusk. Shouldering their canoe they started back over the trail. When nearing the end they were startled at the sight of a big black bear. They hardly knew just what to do, but finally decided their best course was to make a retreat and wait for Mr. Bear to disappear.

Several fellows had been fishing during the afternoon, but had not been successful in landing any. "Cheer up, fellows," someone said, "you know the old song, 'There's lots of fish down in the brook; all you need is a rod, a line and a hook.'" Then the answer came back in sad tones. "But all I get is sympathy." About this time the dinner gong was sounded and we all partook of a sumptuous meal of potatoes, beans, cheese, coffee, bread and butter.

On Wednesday morning it rained. Poncho blankets were hauled out and breakfast cooked under difficulties. The camp optimist saw possible good fishing in the showers, and this helped create good spirit. Cornmeal mush, bread and coffee, with a liberal sprinkling of rain drops in our tin plates helped to drown out that blue Monday feeling.

"I wonder what fish live on when no one is fishing," asked one of our innocent, unsophisticated city chaps. Suddenly, while the joking was going on something tugged at one of the lines and swept off into deep water. Unfortunately the trout had chosen a tenderfoot's line, and he had no trouble in making his escape, but the blue Monday spell was broken. Ambition ran high. Everybody got out their trolling lines and in

less than twenty minutes there were several canoes moving back and forth on the lake. The fishing was great. One bad feature about going such a distance from home to fish is that you can't show them to your neighbors. The lake fishermen brought back with them five whoppers ranging from four to eight pounds apiece. It proved to be just enough for the party. My, how those fish tasted. Great big salmon steaks coated with a layer of corn meal; it was a feed fit for a king.

Thursday morning saw us up bright and early, as plans for breaking camp had been made the night before. The sad news that one of our number was seriously ill and had to be sent back to Joe Lake for medical treatment changed our plans. The stay on the island was prolonged. Our two huskiest members volunteered to take

the lake. We arrived in due time at the portage where the trail led through a beautiful woods quite swampy in some sections and high and rocky in others. It was somewhat harder and longer than the other portages, but the fellows were beginning to harden up and were anxious for this portage to test their improved physical condition. About an hour later we were ready to start our trip over the beautiful little Otter Slide Lake. Through Otter Creek we went, then past the beautiful beaver dam and into Otter Slide Lake. On all sides were enchanting little islands which almost tempted us to select a camp site on this lake, but our destination was White Trout Lake by Saturday.

At sundown we arrived at the shelter huts at the head of the lake. While the cooking crew were preparing supper, some of the fellows

head the fragments of cloud broke, rejoicing into bits and sailed off into the horizon. Flecks of living flame rose against stratum after stratum of vivid cloud gradually fading in an infinity of distance. Overhead every shred of vapor burned with intense coloring. Just above the spot where the sun disappeared was gold fire only a few shades less bright than the sun itself, and it lingered after the rest had faded. Then the purple cloud banks broke into smouldering shades of red and crimson. Suddenly every color faded and the purple hills grew darker against a faint, nondescript brightness still lingering. Then there came into view the clear majestic outlines of the great pines and balsam shading into the less stalwart birch, hemlock and cedar. Shadows grew longer and longer, the voices grew quiet, then all was still. Twilight had come and after

THE RIGHT WAY.

THE WRONG WAY.

the sick man back to a camp on Joe Lake where a physician was in attendance. It was the first trip back to civilization, and the mail sack was part of the luggage. With good-byes and good luck the canoe started southward.

Algonquin National Park is full of numerous species of birds, but of all of them the loons were most interesting to us. All of our water trips had been paddling trips, but a tantalizing breeze tempted two of the men to try sailing. They improvised a poncho sail and started southward to meet the ambulance crew. In about half an hour all returned to the island, and we heard the disappointing news that our sick friend would have to stay at the Hotel Algonquin under the doctor's care for a few days.

Friday morning the weather conditions did not permit moving. We had rain and thunder and lightning all morning. No difficulty was experienced, however, in cooking the morning meal because our foresighted leader had stored away some dry wood the night before. It cleared up about noon, and there was great bustle and excitement on the island, for orders had been given to break camp and move to the head of the lake to the dreaded big portage. At 1:30 we said good-bye to "Camp Feed-'Em-Up" and soon were in the middle of the big northern bay of

erected the tents and prepared balsam beds. For some reason I had not slept very heavily during the night, and about 4 o'clock in the morning I heard something stirring near the fireplace. I crawled carefully to the front of the tent, which was about ten feet from the fireplace, and there beheld a beautiful buck that had been attracted by some salt which had been spilled the night before. His instinct soon told him that he was being observed. He looked up, his gaze met mine, and we stared for a full minute at each other, then he bolted into the underbrush.

That day was an ideal one and soon after breakfast we were on our way over the creek. Arriving at the second portage we struck over a path that led through a beautiful dense woods, up hill and down hill, through swampy ground and over rocky outcrops, over trees and around stumps, a distance of one-half mile. The third portage began to have its telling effects. The spirit was willing, but the flesh was weak. Nevertheless we finally entered White Trout Lake, none the worse for our strenuous exercise. It had rained during the morning and most of the afternoon. At about 6 o'clock a hopeful brightening of the gray roof suggested a clearing. About seven a glorious newly created sunset streamed out under a straight rift, and over-

a few minutes around the camp-fire we crawled into our blankets for the night. Together with the cry of the loon, the call of the deer, and the howl of the wolf, we fell into that delightful sleep only known to the lover of the wild.

Next day being Sunday we did nothing but eat, rest and read and write letters. During the afternoon the cook prepared a treat in the form of a batter of candy which "panned" out all right. That evening, after I had retired, I was awakened by a scraping noise on the beach. An investigation proved that it was one of the fellows taking a midnight paddle. It was an impressive sight, that canoe moving noiselessly among the moon's silvery water and then vanishing in the darkness. The report from a very reliable source stated that it was 3 A. M. when he took off his shoes and sneaked into his tent, a child of habit. Camp awoke earlier than usual and breakfast was all over at 6:30. The last lap of the trip north was called off on account of a lumber jam in the Pitewawa River. It was just as well, for most of the fellows were inclined to stay at the beach camp a few days. About nine in the morning five of the fellows started out in two canoes for McLaughlin's Depot, some five or six miles up the lake. They

DRIVERS AND TWISTERS.

P. B. Plummer advises us that there will be an unregistered tournament at Rhea Springs, Tenn., Oct. 10 and 100. Programs may be had from J. Hardie Johnson, President.

E. Reed Shaner, manager Department of Records writes: "In accordance with a resolution adopted by the Interstate Association at its annual meeting in 1910, I beg to advise you that Mr. M. M. Bull, of Eugene, Ore., was the winner of the seventh Pacific Coast Handicap, shot at Portland, Ore., Aug. 29. Mr. Bull used a Winchester gun and Du Pont powder."

West Forest Park Country Club registered tournament will be held Sept. 26-27 at West Forest Park, Baltimore, Md.; \$100 added money. Lunch will be served on the grounds. Shells forwarded by express or freight, in care of the Alford Sporting Goods Co., 212 East Baltimore street, Baltimore, Md., will be delivered to the grounds. For further information, address R. T. Collings, 4207 Maine avenue, West Forest Park.

The second annual county shoot of the Hercules Gun Club will be held on its grounds, Temple, Pa., Oct. 12, under the management of Lloyd R. Lewis. The program calls for ten events of 15 targets each and an extra event of 10 pairs of doubles. Numerous prizes will be awarded to high and low guns. This is a registered tournament, and the scores will figure in the yearly average. Programs are on the press, and will soon be ready for distribution. Address Secretary A. K. Ludwig, 936 Second street, Reading, Pa. W. G. BEECROFT.

Guernsey Gun Club.

GUERNSEY, Ia., Sept. 7.—The following scores were made on the grounds of the Guernsey Gun Club Saturday, Sept. 7. Our next shoot is Sept. 25.

		J. W. DOBBINS, Pres.	

Cincinnati Gun Club.

THE registered tournament held on Sept. 12 and 13 was pulled off successfully, although the small attendance of local shooters was a great disappointment to the club's officers, who had looked to them for a far more generous support. During the two days there were almost forty shooters present, twenty-eight shooting through the entire program. Of these, six were professionals. The program was the regular one of ten 15-target events, and there was an extra event at 10 singles and 5 pairs each day. Optional 75-cent sweeps were provided in each event, and a \$2.50 sweep in each day's regular program, but none of the contestants seemed to care for this opportunity to annex a little wealth. The weather, barring a trifle too much wind on Thursday, was fine, a delightful change from the heat of the previous few days. Len Shepard and R. Ward acted as referees and scorers. The office was in charge of L. J. Squier. Supt. Arthur Gambell watched the progress of the shoot from a wheel-chair on the house veranda. It will be several weeks yet before he will be able to get around.

The dinners served by Mrs. Gambell were pleasant reminder of the old St. Bernard days, and were enjoyed by all.

The grounds were open for practice on Wednesday, but only half a dozen shooters availed themselves of the opportunity, and they only shot at a few targets. The grounds have been put in fine condition, new traps installed and everything in readiness for the Post-Season tournament next month.

First Day.

Thursday, the opening day, was pleasant. Thirty-three shooters registered, and twenty-nine shot through the program. An unsteady, incoming wind made the targets exceedingly difficult, and scores fell below the average of most of the contestants. High gun honors for the day went to F. C. Koch, an amateur from Phillipsburg, O., who broke 144. J. A. Smith, South Solon, O., was second with 142, and F. M. Edwards, Columbus, and Lon Fisher, Huntsville, O., divided third on 137.

J. R. Taylor led the professionals with 143, C. O. Le Compte 138 and W. Henderson 137.

At the close of the fifth event, J. A. Smith was the favorite with only 2 down in 75. He kept up his good work until the ninth event, when he struck a snag and lost his chance for high average.

The special event had twenty entries, Cain winning first money on 24, his lost target being in one of the pairs. His score was tied by Henderson, a professional, Smith, Hill, Edwards and Fisher divided second on 22 each. Shattuck and Lallance took third new shooters and gives promise of making good. His score of nearly 85 per cent, on the hard targets trapped to-day being an excellent showing. The program was started at 10:20 and was finished at 4:15. A recess was taken at noon for dinner. The scores in the regular program follow:

C D Coburn..... 131	M J Welsh..... 131
J A Smith..... 142	A S La Follette..... 121
A H Hill..... 131	H S Connelly..... 110

Special event, 15 singles and 5 pairs, \$2 entrance, divided 40, 30, 20 and 10 per cent.: Coburn 18, Smith 22, Hill 22, Shattuck 21, Culbertson 19, Schreck 19, Medico 15, Hammerschmidt 19, *Le Compte 20, *Ward 18, *Henderson 24, Carter 18, La Follette 19, *Taylor 23, Edwards 22, Lallance 21, *Heikes 19, Fisher 22, Brandenburg 18, Cain 24.

*Professionals.

Second Day.

Friday was partly cloudy, and the return of the heat wave made it uncomfortable. Two or three new men replaced those who left Thursday night, so that the number of entrants remained the same. Shooting began at 9:30, the events being finished at 4 o'clock. At noon a recess was taken for dinner, and in the afternoon two traps were used, Len Shepard and R. Ward refereeing and scoring at Nos. 1 and 2 respectively. John R. Taylor was the star performer, a role often filled by him. He went out with a total of 149. His first 77 targets were broken straight, and this, with the last 60 of the first day, gave him a continuous run of 137, and entitled him to a Du Pont professional long run trophy. After missing his third target in the sixth event, he ran 87 more, including the 15 singles in the special event. R. O. Heikes was second high professional with 144, and Guy Ward third with 141. High amateur average was again captured by F. C. Koch with 145. His first 54 targets were broken, and with the last 48 of the first day, gave him a run of 102 and won him a Du Pont amateur long run medal. Lon Fisher was second with 142, and F. M. Edwards third with 140. The latter was tied with Koch at the end of the fifth event, getting his first 71 straight, and scoring 73 out of 75, but failed to keep up his gait

in the last half. High professional average for the two days went to J. R. Taylor with 292. R. O. Heikes 278, C. O. Le Compte 276. With the exception of first place, the amateurs had it over the pros, F. C. Koch being first with 289. J. A. Smith 281, and Lon Fisher 279.

Several of the shooters left early to get the boat for Louisville on their way to the Indiana State shoot at Evansville. Among them were R. O. Heikes, J. R. Taylor, Guy Ward, Lon Fisher and C. D. Coburn. That interest in trapshooting is not quite extinct here was proven by the good attendance of spectators, the fair sex being well represented.

The money-back system worked out satisfactorily for both the topnotchers and the poorer shots. Losses were paid in sums ranging from 80 cents to \$15.45, and the high average moneys were worth contesting for.

The special event had sixteen entries. First money was divided by Hill, Cain, Edwards and Fisher on 23; Schreck got second on 22; Coburn, Smith and Culbertson third on 20; Welch fourth on 18.

Coburn..... 133	*L J Squier..... 127
J A Smith..... 139	F C Dial..... 129
Alf Hill..... 136	M J Welsh..... 128

Chicago Gun Club.

CHICAGO, Ill., Sept. 7.—The pleasant weather to-day was quite a relief from the blistering heat of the past few weeks, and fifteen marksmen came out to the park for practice. Doc. May took them all by surprise when he cleaned up the bunch in the first program event of 50, in which he broke 49. He also did well in the practice event by scoring 21 out of 25, and made the same score in the handicap from the 20yd. mark.

Goode was high amateur for the day, scoring 22 out of 25 in practice, 95 out of 100 in the two 50-target events, and finished up with 23 out of 25 from 20yds. in the handicap. Barto did unusually splendid work in the double event, when he broke his 24 straight.

Although McDougal has done very little trapshooting, he put up very creditable scores. Fred Bills managed to lose 3 targets out of the 125 singles he shot at, Ed Graham being close on his heels in the first two events.

Events:	1	2	3	4	5
Targets:	25	50	50	25	12p
O P Goode, 20	22	49	48	23	18

E S Graham, 16	24	47

Event No. 4 was the distance handicap.

Sept. 8.—Although the weather was very hot to-day most of the marksmen who came out put up very excellent scores. Dave Thomas topped the field by breaking 99 out of 100 in the two 50-target club events, and then broke 47 out of 50 from 20yds. in the handicaps, after which he broke 21 out of 12 pairs in the doubles.

Fred G. Bills broke 49 out of 50 in the first 50, and then went straight in the two handicaps. Silver was also going along at a fast clip, taking second place in the practice event with 23, scored 48 and 45 in the two 50-target events, and again made 48 in a match race with Taggart, the latter breaking 45. Taggart scored two straight frames of 25 each, one 23 and a 21 for a total of 91 out of 100, with a strange gun, which he had never shot. Seelig, Jr., was right up close with the leaders in the first 50-target race, breaking 45.

Roanoke Gun Club.

THE regular weekly shoot of the Roanoke Gun Club was held Sept. 7, with eighteen participants facing the traps. The weekly medals were won by the following members:

Scratch—First, P. T. Jamison; second, A. M. Shepherd.

Class A—First, W. S. Jones; second, E. W. Poindexter.

Class B—First, C. H. Ferguson; second, D. W. Richards.

Class C—First, H. Holland; second, B. Berkeley.

The scores at 50 targets, per man, were:

	Per		Per
	Broke.		Broke.
	Cent.		Cent.
Jamison	46	Hooper	37
Jones	46	MacFerrin	35

World Beating Arms and Ammunition

Again Victorious

In Michigan and Virginia State Shoots

Remington-UMC Guns and Steel Lined Speed Shells make decisive clean-ups in two more important tournaments. :-:

Majority of Michigan Shooters Choose *Remington-UMC* and Sweep Field. 81 shooters—51 shoot Steel Lined Shells, 49 shoot *Remington-UMC* Guns,

Michigan State Championship: Tied for by D. Fortledge and A. M. Messner, 47 ex 50, both using *Remington-UMC* Guns and Steel Lined Shells.

High Professional Average: Second and third places won by shooters of *Remington-UMC* Guns and Shells.

High Amateur Average: Won by Wm. Ridley, 292 ex 300, shooting *Remington-UMC* Steel Lined Shells. All successful amateurs—from second to seventh place—shot *Remington-UMC* Guns and Steel Lined Shells.

High (Michigan) Amateur Average: Winners of first and second places shot *Remington-UMC* Guns and Steel Lined Shells.

Five and Two Man Team Championships and Class Handicap: All won with *Remington-UMC* Arms and Ammunition.

Virginia Laurels Easy For Handicap Winning Guns and Shells

Virginia State Championship: Won by Dr. L. G. Richards, 95 ex 100, shooting *Remington-UMC* Pump Gun.

High Professional Average: Won by H. D. Gibbs, 288 ex 300, shooting *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.

High Amateur Average: Tied for by T. H. Fox, 284 ex 300, shooting *Remington-UMC* Arrow Steel Lined Shells.

Remington-UMC—a century's experience to back up your aim.

Winners at Olympic Games, Winners at Grand American Handicap, Winners at Western Handicap, Winners at 16 ex 20 Interstate Handicaps. STILL WINNING!

Holbrook Gun Club.

HOLBROOK, Ariz., Sept. 8.—Disagreeable weather cut down the attendance terribly at the annual shoot of the Holbrook Gun Club to-day, and the boys who did venture out contended with the most difficult conditions ever experienced at the local range, a high wind from the left rear made shooting extremely difficult.

M. R. Smith took first place in both sweepstake events, with Hulet second. Hulet and Rencher tied in the medal events, Hulet winning in the shoot-off. Rencher was high in the double event. The scores:

	Sweeps.		Medals.		Ten Pairs
Targets:	20	20	20	20	20
Smith	20	20	14	18	9
Rencher	15	16	18	16	12
Hulet	16	19	14	20	11
Meyerhoff	13	15	10	11	8
McCleve	12	15	13	15	8
Scorse	15	15	15	17	..
Blum	5	9	9	9	..

Shoot-off in medal event, 10 birds: Hulet 9, Rencher 7.

Carlville Gun Club.

NILWOOD, Ill., Sept. 12.—On Friday, Sept. 6, the Carlville Gun Club held their annual shoot, at which the following clubs were represented: Shelbyville, Bunker Hill, Carrollton, White Hall and Nilwood. Although the thermometer reached 101 in the shade, the weather otherwise was ideal, and the scores made, while not up to the mark in some cases, were as good as could have been expected.

The Carlville Gun Club is made up of a bunch of the finest, and their entertainment of the visiting enthusiasts is seldom equaled and never excelled. The regular program consisted of ten events of 15 targets each, in which the high guns were Daley and Hamlin, each scoring 138 out of 150. J. B. Warren, representing the Remington Arms Co., scored 138 out of 150, and A. H. Ammann, for the Winchester Arms Co., broke 142. In the handicap, which followed the regular event, Robley, shooting from the 18yd. mark, and Bates, from the 17yd. mark, each broke 24 out of 25 and divided first money.

The following scores were made at 150 targets each:

Warren	138	Bates	116
Wolfe	117	Grovo	116
Derrington	134	Costley	113
Herrick	119	Daley	138
Hamlin	138	Dufner (60 tgts.)	35
Amman	142	Wilson	92
R. M. Anderson.....	109	Smith	130
Weiss	135	Robley	130
Fahrenkrog	134	Simpson	132
Pettingill	136	Edwards	134
P. B. Anderson.....	124	Watts	134
Foster	112	Snell (30tgts.)	28
Roberts	129	Woods (30 tgts.)	26
King (75 tgts.)	42		

Following are the scores in the handicap shoot, 25 targets each man:

Yds.	T'l.	Yds.	T'l.
Wolfe	16 20	Roberts	18 20
Derrington	19 20	Bates	17 24
Herrick	17 19	Grovo	17 22
Hamlin	20 22	Costley	16 19
Ammann	20 19	Daley	20 19
R. M. Anderson..	16 17	Wilson	16 21
Weiss	19 22	Smith	19 22
Fahrenkrog	19 23	Robley	18 24
Pettingill	16 20	Simpson	19 22
P. B. Anderson..	17 23	Edwards	20 22
Foster	16 21	Watts	19 21

Du Pont Gun Club.

FIFTY marksmen took part in the fall opening shoot of the Du Pont Gun Club, Sept. 14. One of the principal events was an exhibition match between Homer Clark, of Upper Alton, Ill., and W. S. Colfax, Jr., of the Du Pont Club. It was won by Mr. Clark, who was in excellent form. He broke 49 out of 50, while Mr. Colfax made a score of 45.

E. S. Richards, H. H. Sloan and L. C. Willis were among the visiting shooters who made good scores, as did also O. Groff, of Avondale, Pa.

W. A. Joslyn, who has been shooting at a great clip lately, distinguished himself by breaking 49 out of 50.

The Coleman du Pont spoon contest was the first event on the program. It had a large entry list, interest having increased since the addition of Class E for novices.

The second event was for merchandise prizes, and created considerable enthusiasm, especially in the manner in which the prizes were drawn. Thirty-one contested in this event, and there were nine prizes. The nine high men each made (with added targets) perfect scores of 25.

The final contest for the 1911 Class D challenge cup brought out nine of the ten men eligible for this event. It was a handicap affair from 18 to 16yds., and was won by I. A. MacMullen, who scored 41 out of 50, shooting from the 18yd. mark. The cup now becomes his property.

Ten teams contested in the Eugene E. du Pont team trophy shoot. Four teams with added targets made perfect scores, thereby gaining four points each. The scores of the four teams follow:

W. H. Hitchcock and N. K. Smith 50; Clyde Leedom and Eugene du Pont 50; W. M. Hammond and L. L. Jarrell 50; R. F. Willis and L. H. Hoopes 50; W. Edmanson and J. H. Minnick 49; H. P. Carlon and Dr. E. O. Bullock 47; J. B. McHugh and Stanley Tughton 47; Dr. H. Betts and L. C. Lyon 40.

The scores in a novice race, the men shooting at the traps for the first time, were: W. D. Sillitoe 4 out of 10; W. S. Matchett 1 out of 10. The scores in detail were: O. Groff 21, H. W. Bush 21, L. H. Hoopes, Jr., 20, W. M. Hammond 22, Eugene du Pont 24, R. F. Willis 22,

H. H. Sloan 24, N. K. Smith 18, John E. Miller 10, P. H. Iddings 19, G. F. Lord 19, J. A. MacMullen 17, L. L. Jarrell 23, W. Edmanson 22, J. B. McHugh 23, Stanley Tughton 20, Clyde Leedom 20, W. A. Joslyn 25, W. S. Colfax, Jr., 24, J. H. Minnick 23, S. G. David 18, L. C. Willis 23, Homer Clark 24, L. C. Lyon 23, Charles Holliday 18, J. W. Mathews 18, John Grier 21, Dr. H. Betts 14, H. T. Reed 18, William Coyne 20, W. J. Highfield 17, E. S. Richards 19, D. A. Grier 19, W. H. Hitchcock 22, J. G. Highfield, Jr., 22, Dr. E. O. Bullock 16, D. J. Dougherty 21, H. P. Carlon 19, W. B. Smith, Jr., 12, W. G. Wood 20, D. Lindsay 17, S. J. Newman 14.

Du Pont Doings.

OCTOBER promises to be a busy month at the Du Pont Gun Club. In addition to the regular contests for the Connable cup, the Eugene E. du Pont team trophies, the different class cups, etc., as well as a match between A. B. Richardson and J. H. Minnick for the championship of the State of Delaware, a team of at least ten men will visit Boston for the return match between All-Delaware and All-New England on Oct. 5.

Oct. 12 is in the nature of a double bill. Being the last day of Old Home Week, the management of the club will offer a special trophy, Old Home Week Cup, to be competed for at 50 targets per man, open to all amateurs, and with a handicap allowance of misses as breaks, and an entrance fee of the price of the targets, 50 cents. The same day a delegation from the home club will visit the grounds of the Highland Gun Club at Edgehill, Pa., to take part in the opening shoot of the Philadelphia Trapshooters' League, all the clubs in the league having agreed to meet on the grounds on that date to open the season in a fitting manner.

On the trip to Boston for the match on Oct. 5, ten or more of the best shots in the club will be the guests of the Boston Athletic Association. Among those who will go are W. M. Foord, J. H. Minnick, J. B. McHugh, A. B. Richardson, H. P. Carlon, Eugene du Pont and enough of the other good amateur shots of the club to make things interesting for the New Englanders. It will be remembered that when the New England team visited Wilmington on June 29 last, the two teams made a tie race of it, both teams breaking 919 out of 1000 targets. This fact of itself promises a good race, and the management of the club will do its best together to get the best team possible to make the trip to Boston on the night of Oct. 4.

Last week a delegation from the Plug Hat Association, of Elizabeth, N. J., an organization composed of prominent (Elizabethans called upon T. E. Doremus, secretary of the Du Pont Gun Club, for the loan of the gun club's shooting grounds and rifle range for Oct. 31, when the members of the Plug Hat Association propose visiting this city in force. The committee was composed of Messrs. Fred Bender, Fred Grummart, Patrick McGurn and Frederick Krauss. The members of the Association will compete for prizes on the rifle ranges, and the Du Pont Gun Club will put up a special prize to be shot for by such of the visitors as care to try their hands at the flying clay targets. The association visited Wilmington a year ago, and were so well pleased with the day's outing that they have decided to give it another try this year.

Chicago Interurban League.

CHICAGO, Ill., Sept. 16.—The scheduled shoot of the Chicago Interurban League of Gun Clubs, which was to be held on the grounds of the Long Lake Gun Club on Sept. 29, has been changed, and said shoot will be held instead on the grounds of the Chicago Gun Club.

The next League shoot will be held at Arlington Heights on Oct. 13, and there will be no shoot on Nov. 3.

The Chicago Gun Club championship is open to members only, and will be held on Sunday, Oct. 6. This event will be conducted on the lines of last year's event. Several nice trophies have been secured for the winner of the championship, as well as the consolation event.

The Chicago Gun Club will hold its second annual Middle West amateur championship on the grounds of the Chicago Gun Club, on Oct. 20. This event is open to any amateur in the United States. Programs are now being prepared, and will be mailed to any one on application to Mr. E. B. Shogren, Secretary, 840 First National Bank Building. This event will be conducted on practically the same lines as the last year's event, and a qualifying round will be shot by all, after which the high guns will be paired. A silver trophy will be given to the winner, as well as all of the surplus target money at one cent, will be placed in the event and divided among the winners of the championship and consolation

events. This event is something unusual in trapshooting. The program will be conducted more on the lines of golf and tennis championships. Everyone taking part in this event last year declared it was one of the most interesting events in trapshooting. We expect to make this a very big day.

Every arrangement will be perfect, and all of the traps will be in readiness. There will be plenty of practice shooting for all, and special events will be arranged for those who do not qualify. Every trapshooter within a short radius of Chicago should make it an object to attend this shoot.

The officers of the Chicago Interurban League of Gun Clubs, are now making preparations to hold an informal banquet on Saturday evening, Oct. 19. Further announcement of this banquet will follow. The object of this banquet is to bring trapshooters in closer touch with one another. Invitations will be extended to any trapshooter in the United States desiring to attend. Thomas A. Marshall has been selected as toastmaster. The trophies of the League will be presented to the winners at this banquet. The price of tickets will be \$2, and same will be ready in a few days. Any trapshooter desiring to attend this banquet should address E. B. Shogren, 840 National Bank Building, Secretary of the League.

Worcester Sportsmen's Club.

WORCESTER, Mass., Sept. 11.—S. W. Putnam shot a great string to-day, breaking 147 out of 150, falling down on two in third frame and one in the fifth. E. W. Mumford seconded the motion with 143, while H. S. Searles came into place with 138. Steele and Doten tied on 47 out of 50 in the extra event, Emory getting third on 45. High pro. was H. D. Gibbs with 142.

*Professional.

Indianapolis Gun Club.

THE practice shooting of the Indianapolis Gun Club on Sept. 14 showed a marked improvement over recent scores. Moller broke 60 and Lewis 47 straight, both runs being unfinished. Parry had a clear lead in percentage of targets broken. Edmonson and Lewis tied for second place.

An attractive program for the two-day tournament, Oct. 9 and 10, is now ready for mailing.

The scores made on Sept. 14 follow:

	Shot at.	Broke.	Per C't.
Parry	120	115	96
Edmonson	140	131	94
Lewis	140	131	94
Foland	100	93	93

Stille	120	90	75

R. R.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Sept. 9.—On account of the hot weather and the busy season on the farm in this section only five members of our club got out to the regular practice, Saturday, and they did not feel like shooting.

Events:	1	2	Events:	1	2
J. O. Wilson.....	20	12	G. Lichtenberg	19	17
H. W. Meyer.....	16	11	L. Struebbe	17	..
A. F. Ahmann.....	23	15			

No. 1 was at 25 singles; No. 2 at 10 pairs doubles.

Sept. 14.—Inclosed find the scores a few of the boys made at our traps to-day. Busy work on the farm and a neighboring county fair kept our shooters away. We cannot expect much shooting here until after the farmers get wheat sowed, as the most of our members are farmers.

Event No. 1, 10 pairs: G. Lichtenberg 15, A. F. Ahmann 11, H. W. Meyer 8, J. Mutert 10.

Event No. 2, 15 singles: Wilson 14, Mutert 14, Ahmann 10, Lichtenberg 12, Meyer 11.

Event No. 3, 15 singles: Wilson 11, Mutert 13, Ahmann 11, Lichtenberg 15, Meyer 10.

TOURNAMENT OF DANIEL BOONE GUN CLUB, MARTHASVILLE, MO.

W. R. CROSBY

Another Clean Sweep

And

A New World's Record

Made with

WINCHESTER

Red W Goods

At the

GREAT BIG DENVER HANDICAP

\$5,000 ADDED

W. R. Crosby, the dean of trap shooters, and acknowledged Champion of the World, nailed up another World's Record at the Denver Handicap, by breaking 98 x 100 clay targets from the maximum handicap distance, 23 yards, in the Preliminary Handicap. He shot the usual accompaniment of all World's Records—Winchester "Leader" Loaded Shells. Every event on the program was won with the ever-winning Winchester goods, making a wide, clean sweep for the dependable Red **W** Brand, as shown by the following:

PRELIMINARY HANDICAP: Won by Harry Whitney. Score 98 x 100 from 19 yards. He shot "Leader" Loaded Shells. W. R. Crosby broke 98 x 100 from 23 yards in this event, establishing a new World's Record.

HIGH FOR ALL TARGETS: Won by Chas. G. Spencer. Score 769 x 800. He shot "Leader" Loaded Shells and a Winchester Repeating Shotgun.

DENVER HANDICAP: Won by C. B. Eaton. Score 97 x 100 from 23 yards, 20 straight and 19 x 20 in the shoot-off. This was phenomenal shooting. He shot "Leader" Loaded Shells.

HIGH AMATEUR FOR ALL TARGETS: Won by S. H. Huntley. Score 760 x 800. He shot a Winchester Repeating Shotgun.

The straight out and out winning of all the events of this big and widely published tournament with Winchester Red **W** Goods and the altogether remarkable shooting of C. B. Eaton and W. R. Crosby, who suffered the greatest handicap allowed, are proofs that need no further support of the absolutely dependable shooting qualities of Winchester Loaded Shells.

WORLD'S RECORDS AND WINCHESTER GOODS GO TOGETHER

Peters Shells

WIN A GREAT VICTORY AT THE GRAND AMERICAN HANDICAP AT SPRINGFIELD, ILL., JUNE 18-21

PRELIMINARY HANDICAP—Won by Wm. S. Hoon, 94 x 100 and 18 x 20 in shoot off.
 AMATEUR CHAMPIONSHIP—Wm. S. Hoon tied for 1st place, 192 x 200.
 GRAND AMERICAN HANDICAP—C. A. Young made High Professional Score, 95 x 100 from 22 yards.
 PROFESSIONAL DOUBLES CHAMPIONSHIP—J. S. Day and Walter Huff tied for 1st—84 x 50 pairs.
 AMATEUR DOUBLES CHAMPIONSHIP—Harry W. Kahler 2d—88 x 50 pairs.

There were no 16-yard targets at the Grand American, and therefore, no targets that will figure in the season's average. It must be apparent, however, that in figuring the average at Springfield, the scores made on practice day, the double target event, and the Consolation Handicap should be eliminated—the Consolation because it was not open to all. The real Amateur Average was therefore won by Mr. Hoon, on his score of 380 x 400.

HIGH AMATEUR AVERAGE—All single targets, W. S. Hoon—380 x 400.

Practice Day: 2d Professional Average, H. D. Freeman, 192 x 200. 2d Amateur Average, Bart Lewis, 191 x 200.

All the above used the Red P Ammunition. A fitting climax to a wonderful succession of winnings. The superior quality of "steel where steel belongs" shells absolutely proven.

For Field or Trap, there is no shot-gun ammunition that gives the unalloyed satisfaction that can be gotten with the Red P Brand.

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

Birmingham Gun Club.

THERE was shooting at the Birmingham Gun Club Friday and Saturday afternoon of last week. Several professionals were in town seeing the special car of shooters going to the Denver handicap. Walter Huff shot high in Friday's shoot, breaking 98 out of his 100. Mr. Overbaugh was shooting his 20-gauge, so did not make a good score. Several of our regular shooters are at Denver handicap, and consequently our attendance was less than usual. The Saturday shoot was well attended, twenty shooters being present. The feature of the day was the shooting of P. B. Plummer, who broke all of the program without a miss, in addition to helping the secretary. The shooting is held on Saturday for the instruction and practice of beginners, consequently these scores will not be published. Ed. Cornwell, P. B. Plummer and O. L. Garl will look after the comforts, etc., of these new shooters. Every one who wishes to learn trapshooting is invited to attend these Saturday afternoon practice shoots. Scores of Sept. 6 follow:

Shot at. Broke		Shot at. Broke	
W Hiff	100 98	E M Cornwell.....	100 67
P B Plummer..	100 93	J Lester	100 67
E R Holt.....	100 93	M Overbaugh... 100	58
L L Sellman..	100 82	M Grant	50 46
R L Kennon... 100	79	John Dresher .	50 44
M Jourdan	100 72		

Bergen Beach Gun Club.

BROOKLYN, N. Y., Sept. 14.—The trapshooting season started at Bergen Beach Gun Club to-day. The opening event was at 100 targets, with added handicaps, for merchandise prizes. The best actual score was made by John H. Hendrickson with a handicap of 2, which gave him a total of 96. Fourth prize was the best that the figures took. W. L. Groll, with a handicap of 7, took first with 98. Second prize went to M. Wynne with 97. H. Voorhees took third prize with the same total. The scores:

W L Groll.....	7 98	H Allyn	7 89

L Schorty	2 89	L Whorton	20 72

Massachusetts State Tournament.

BEVERLY, Mass., Sept. 13.—The Paleface team No. 1 captured the team championship to-day at the opening day of the tournament of the Massachusetts Trapshooting Association, held under auspices of the United Shoe Machinery Gun Club. The Paleface team broke 457 out of 500 against 438 for Worcester, 430 for the Paleface second team, and 393 for the Beverly Gun Club. Each of

the men on the winning team received a silver trophy. The team comprised S. W. Putnam, of Fitchburg; J. L. Snow, of Boston; E. A. Staples, of Franklin; W. Steele, of Newburyport, and R. N. Burnes, of Cambridge.

At a meeting of the Trapshooting Association, S. W. Winslow, Jr., of this city, was elected president, and W. F. Clarke, of Roxbury, vice-president. W. R. Hurd, of Worcester, and F. E. H. Sheldon were respectively re-elected treasurer and secretary.

High amateur gun to-day was won by Putnam with 143. J. L. Snow was second with 141; G. M. Proctor third, 137. Gibbs took top pink sheet gun with 144.

The program consisted of 150 targets, and resulted as follows:

*Gibbs	144	*Banks	133

Portland Gun Club.

THE Portland Gun Club's regular weekly shoot was held on the 14th inst. Among the shooters was C. S. Randall, who tied W. N. Taylor for high with 95 out of 100. Don Webster took place with 94. Five men tied for the Spotts badge—Don Webster, Al Dow, Blanchard, Weymouth and W. N. Taylor.

Following are the scores: C. S. Randall 95, Osborne 92, Webster 94, Blanchard 93, Weymouth 88, Hayden 75, N. Taylor 74, A. Dow 93, Gilman 76, Hunt 90, W. Taylor 95.

Smith Gun Club.

IN the last of the ten shoots for the cup presented by Frank Hall, of Ridgefield, N. J., Louis Colquitt, of the Smith Gun Club, retained his lead and won the cup. The five highest scores out of the ten 100-bird shoots decided the winner. From the first shoot, held at Jersey City last March, to the last one, held at the Smith Club Sept. 14, the race has been a close one between Colquitt and A. L. Ivins, of Red Bank. The latter was defeated by only two birds out of 500. The score, made by the winner, Colquitt, was 476 against 474 by Ivins.

The cup, which is of sterling silver, stands 16in. high and is valued at \$150. It is engraved with the following inscription: "New Jersey State Sportsman's Association, Amateur Championship of New Jersey. Clay Pigeon, 1912. Presented by Frank Hall."

More than forty shooters started, but the race became so hot that several dropped out. In spite of this, fifteen shooters faced the traps in the final shoot on Sept. 14. The five high men and their scores are as follows:

L Colquitt	94 96 95 96 95	476
A L Ivins.....	92 98 93 94 97	474
Chas T Day, Jr.....	91 97 94 90 96	468
W H Trowbridge.....	91 92 94 91 89	457
A B Brickner.....	95 95 88 86 88	452

Previous to the final shoot, the matches were held at Jersey City, Freehold, North Caldwell, Orange, Hudson, Newton, Riverside, Phillipsburg and Mt. Holly. Aside from the Hall event, some interesting sweepstakes were shot off, which resulted as follows:

C W Billings	24 24 22
F Hall	22 22 24
B M Shanley, Jr.....	22 21 21
A B Brickner.....	22 21 21
E Gardner	18 19

J. H. FINCH, Capt.

Rifle and Revolver

Palma Trophy Comes Back.

OTTAWA, Ont., Sept. 14.—The United States rifle team to-day defeated the Canadian team for the Palma trophy, emblematic of the international championship, by 8 points. Their total was 1720, and that of the Canadians, 1712 out of a possible 1800. This score breaks the previous record, 1695. The United States had voluntarily surrendered the trophy and sent a team to Canada to compete for it, with the understanding that, whatever the result, a Canadian team shoot at Sea Girt next year.

The match was at 800, 900 and 1000 yards. Canadians led by 3 points at the first range, lost by 10 on the second, and one on the final. The highest individual score was Sergt. Russell, of Ottawa, with 222, making a world's individual record.

The total scores of the United States team were:
 Lieut. W A Tewes, New Jersey..... 214
 Capt Casey, Pennsylvania..... 216
 Maj J W Hessian, Connecticut..... 216
 Maj. W B Martin, New Jersey..... 213
 Musician G W Chesley, Connecticut..... 212
 Capt E W Rody, Ohio..... 216
 Sergt. Keough, Massachusetts..... 217
 Sergt Kean, Massachusetts..... 216—1720

The Canadians scored as follows: O. M. S. McInnes 214, Capt. N. Smith 218, Sergt. Russell 222, Lieut. Morris 216, Sergt. Freeborn 211, Sergt. Kelly 205, Lieut. Steck 215, Sergt. W. A. Smith 211; total 1712.

At the first range the Canadians made bullseyes in every one of their first fifteen shots, while the Americans made one less.

The Palma trophy was established in 1876, being won by the United States in that year at Creedmoor, L. I. Since then the trophy has been held by Canada and Great Britain. The trophy, which the United States surrendered and then won back to-day, was captured at the competition in 1907 at the Rockliffe range, where to-day's match was held.

PRAIRIE FISH HATCHERIES.

By the first of next month the new State fish hatcheries at Pratt, which it is claimed will be the largest plant of its kind in the world, will be completed.

"The fish hatcheries will contain eighty-three ponds in addition to eleven ponds that existed before. Its building includes the construction of a concrete dam 500 feet long across the Ninnescah River, which will furnish a supply lake of ten acres," said Prof. L. L. Dyche, State Fish and Game Warden, who has charge of the plant.

"Water from the supply point will be carried to the hatchery ponds through a twenty-one-inch clay pipe 6,875 feet long. The building of the hatchery will necessitate the moving of 150,000 cubic yards of dirt. Twenty thousand feet of eight- and ten-inch pipe has been laid for the drainage and water supply system. The system also includes 190 sluice gates, ninety-four concrete structures, 300 wire mesh screens and other appurtenances for controlling the water supply.

"Around the ponds and between them are automobile drives. The place is being made a beauty spot and will be visited by thousands of persons each year.

WHAT POWDER DO YOU SHOOT?

"Fish will be selling in Kansas markets three pounds for a quarter before we are through. Fish now is regarded as a luxury, but we will soon change all that. The 'fins' will be within the pocketbooks of all.

"We are stocking the hatcheries with bass, croppie, catfish, sunfish and the other varieties common to the Missouri River basin. Anybody can produce these kinds of fish with proper care, and they are might fine eating. There is nothing better than catfish fried brown, I can tell you that. Even German carp, much despised, is mighty good to eat when a person cooks it properly. I would like to conduct a tour of education on the art of cooking German carp. I would redeem that fish from the stigma sportsmen have cast upon it.

"When our hatcheries are completed, we will

furnish fish to any person who cares to attempt to produce them for his own table or for the market. We already have on hand enough two-year-old catfish in our old hatcheries to stock the new. And any farmer enterprising enough to go into the business will be given these.

"Our hatcheries cover 100 acres of water and we can produce enough fish for every person in the State. When we have succeeded in spreading our idea, which we can easily do by showing a farmer without a lake another farmer's pond alive with fine fish, we will have dealt the death blow to the high price of meats.

"Catfish in place of high priced steak. Croppie in place of pork chops. Sunfish in place of veal and mutton chops—and the people of Kansas will be healthier, richer and happier."—Hutchinson News.

OUR DAILY BREAD.

Continued from page 358.

Oriental macaronis are obtainable any time in Manhattan. From the cleanly-to-handle speckled buckwheat macaroni, the chicness of bona fide buckwheat cakes can be had any day in tentdom by briefly soaking and making into a paste the little sticks, about twenty centimeters long or eight inches.) The buckwheat cakes in our restaurants are mostly a cheap grade of common wheat flour.

The macaroni hard-tack is also used by campers as a makeshift plate. In timbering parties in the Norge semi-Republic—and timber-

men are not over-particular—the débris often remains after a repast of miscellaneous fragments of these impromptu bread plates. These are gathered up by the thrifty cook of the party, and appear resurrected in the next meal's soup—of course, a nutritious relash, undoubtedly. Our own restaurants do the same thing with bread leavings, it appearing as the "bread pudding" of mystery. In frequenting restaurants I have ever taken care to avoid these bread pudding resurrections.

WHEAT EVER SUPERIOR TO RYE.

As between wheat and rye hard-tack breads, be it known that wheat is ever the superior cereal for the outdoor life toiler. For a score of years I have personally experimented and tested the two. Just try a few times to row a boat up-stream hour on hour on a "fuel" of rye as against wheat bread. In all rye countries wheat is looked up to as the superior bread, but rye is cheapest, hence its predominance in certain lands. A solid wheat flour pumpnickel is also made. Try it against the rye!

THE OAT BREAD IN SAUSAGE FORM IN CELTIC COUNTRIES.

There is no compounded bread in the world to compare in sustaining power to the oat bread sausage of the Scotch. It has already been described at length in a previous issue of this journal. Now a picture is given of it. The thing of compressed powdered salt with some pea meal added, called the Deutsche erbswurst, is a thing of poverty compared to this Celtic production. This last can be eaten any time as it is, having been thoroughly steam-cooked before entering trade, whereas the Teutonic counterfeit requires fire and water and time to make it edible. And how about arriving in camp, jaded out with fatigue at night, in a drenching rain, with every stick of fire wood around sodden through! Your sausage of mainly powdered salt (yclept erbswurst) is inedible *per se*, and if you attempted it, you would probably be tortured anon in the night with the horror of unsatiated thirst. But now with the kindly oat sausage from Dundee-side (originally), that you can munch in your sleeping bag even, and slumber through the night in peaceful repose. True, I will admit that warming up the oat sausage, or slight steaming, enormously improves its flavor and tastiness. I never met with anything in the universe which was more improved, gastronomically, by slight heating than this oat sausage.

The oat bread sausage can be obtained anywhere in America where the Scotch oat bread disks, or tri-cornered flat cakes, are obtainable. All our larger cities have their Scotch bakeries turning out good goods, and even some Irish bakeries make and sell them if the baker hails from Northern Erin, where the oat breadstuffs are common enough from farm hovel to city. Nobody who has ever tried the cleanly oat sausage (sometimes nick-named by Glasgow people "oat pudding"—just as some pig's blood compounded sausages are dubbed "black pudding") as a life-sustaining article of camping diet will have much faith in the powdered salt Teutonic excuse thereafter.

* * * * *

Any reader requiring more detailed information about any of these camping foods of the nations is requested to drop a line direct to the

editor, even if only a postal. Don't imagine the editor is a telepathist capable of gauging the thoughts and desires of thousands of readers. Too many subscribers are prone to think: "I would like more information on a couple of those subjects," but dismiss the idea of writing to say so, with the thought: "Oh, somebody else may be writing," but that "somebody else" may never write! Then—maybe after the appearance of a writer's three-line post obit in the paper—a belated request for more information is received!

As it is, the details given are necessarily fragmentary, so as to condense the subject, and yet have it complete as possible within the dimensions of the usual magazine article (although the present paper appears in two parts).

[TO BE CONCLUDED.]

OPEN SEASON FOR GAME.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

The Marlin Repeating Shotgun

12 or 16 GAUGE

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action.

The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hangfires harmless.

All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. 12-ga. hammer and hammerless, 16-ga. light-weight repeaters; regular, trap and field models; \$19.50 up.

Send three stamps postage today for our 122 page catalog, describing the full Marlin line.

Manitoba: July 1-Jan. 1. Separate season for killdeer. Nebraska: Sept. 1-May 2.

CURLEW, RAIL.—Curlew protected under term "shore birds." Virginia: Law does not apply to sora.

DUCK.—Separate seasons for teal in Tennessee, Aug 1-April 15; mallard and black duck,

Nov. 1-March 16, and shelldrake, Nov. 1-April 11, in New Jersey; blue-winged teal in Louisiana, Sept. 15-April 1; black mallard in Louisiana, Aug. 1-March 1; and woodduck as follows: Maine, to 1915, except Oxford county, Sept. 1-Jan. 1; New Hampshire, Oct. 7, 1917; Vermont, Sept. 15, 1916; Massachusetts, Sept. 1, 1916; Connecticut, Sept. 1, 1919; New York, no open season; New Jersey, April 1, 1915; Delaware, Sept. 1-Nov. 1. Virginia, Aug. 1-Jan. 1; West Virginia, no open season; Tennessee, Aug. 1-April 15; South Carolina, Sept. 1-March 1; Louisiana, Sept. 1-March 1.

GOOSE.—North Dakota: Goose and brant may be shot more than one-half mile from permanent waters. Separate seasons for brant as

follows: California, Nov. 1-March 15 (except first district, Oct. 1-April 1; see foot note *c*); Prince Edward Island, April 20-Jan. 1.

BEAR.—Alaska: Large brown bears, Oct. 1-July 2.

THROUGH ALGONQUIN NATIONAL PARK BY CANOE.

Continued from page 371.

had a very interesting experience at the French lumber camp, being given a hearty welcome and an invitation to partake of a lumber camp dinner. Just before we retired there were signs in the sky of an approaching storm. Hardly were we under cover when the storm broke and what a storm it was. Anyone who has never laid awake in a frail tent and heard a heavy storm can realize what it is.

The following day was set aside for our regatta. All of the men were entered in one or more of the various events. The jousting contest proved to be the most exciting. Two canoes were matched, each canoe had one man paddling and the other man holding a long pole. The best two tips out of three won the joust. It was great sport to see the fellows scramble in the water after having been tipped over. I think perhaps it was more amusing to the spectators than to the participants. The following morning was one of those damp mornings when fellows rather stay under dry blankets than stand under dripping trees, so most of us slept until 9 o'clock.

The largest camp-fire of the week had been built on the eastern shore of our camp ground, and here we spent one of the most enjoyable evenings of the trip in song, recital and jest. Orders were given to break camp early, and by 7:30 we were off on our trip homeward. White Trout Lake was quite rough, and it was a stiff breeze that we had to buck, but after a few hours heavy paddling, our line of canoes filed up the picturesque creek inlet. The homeward journey over the five portages was like play for the fellows who had now become hardened to the sport. They shouldered their canoes as though they were gas bags.

By 6 o'clock we reached our camp site at the head of Island Lake. Tents were soon pitched and supper under way. Our supper that night was one of the best of the whole trip. The fishermen had been fortunate during the day and we were plentifully supplied with salmon trout.

We all retired early because the following day was to be a strenuous one. This day was our last in the woods. Next morning, after packing up, we started down beautiful Island Lake past our old camp site on the island through the narrows, over those memorable first portages, through the Joe Lakes and reached our starting point late in the afternoon, the trip having been accomplished without incident. That evening we took the train for Scotia Junction where we were to meet the through train which would carry us to Toronto.

That night, as I lay on my pillow at home, the first pillow in over two weeks, it all came back to me as in a dream—the eternal vastness of the forest, the beauty of the wildwood and the silence of the wilderness. I heard the dip, dip, of the paddles and saw the somber-coated islands and felt the magic spell of the water. Somehow I seemed to carry a canoe from one

dream to another and dream of the evening meal. The meal was over, and I was lying under the trees on a soft bed of pine needles, gazing up into the infinite meadows of the heaven and saw the stars come out one by one and finally the moon. I turned on my pillow and there on the sands was a camp-fire. Its embers were still glowing; every now and then it sent up a flickering light. One more spark and it had gone out. The trip was done.

PHEASANT NURSERIES IN FRANCE.

To Louis XIV., France is said to be indebted for the importation of its pheasants. On that side of the forest of Compiègne nearest to Compiègne itself is a faisanderie covering many hundreds of acres in which the breeding of these birds, begun under his protection and further encouraged by Charles X. and Louis Philippe, is now carried on by a private person, who rents his right to do so from the State. I have never seen a place so shut in and protected by wire fences and locked gates, stone walls and more gates, special guards in special houses, police dogs, guns and traps. There is even a thick kind of double mattress made to cover the guards, who in winter must sleep out of doors in watching for poachers. I have never seen institutions for human beings better planned in the way of nurseries and attendants, hygienic laws and systems of feeding. The pheasants when finally shot must have a wonderful flavor, and in a single day as many as a thousand are often shot within those walls, each one of the thousand having cost its owner the sum of forty francs to raise.—From the Century Magazine.

LEGENDS ABOUT DEW.

In many places dew is looked upon as tears of the angels and of the souls in purgatory shed on account of the sins of human beings upon earth; and dew is collected to be used to cure certain diseases, especially those of the eyes, etc., freckles, baldness, cramps, open wounds and cuts, rheumatism, skin diseases, burns, etc.

The virtues of dew as a beauty wash are also well known. One legend tells how by licking the dew off the plants on a certain morning when all the birds drink it one can learn their language.

Another folk belief is that "naked, or with only their shirts on, the witches, at the time of the new moon, collect the dew from the grass with bark sieves; by this means they deprive of their milk the cows that have been pastured on the grass, and as soon as their sieves are full of dew they know that their pots at home are full of milk. The Polish people of Wongrowitz call the dew on which the birds are supposed to feed ptasie mleko, i. e., "birds' milk."—From Journal of Religious Psychology.

CANARIES ATTACKED BY ANTS IN CHINA.

I HAVE just received from friends in Hong Kong an account of what to me appears to be a tragic example of the destruction caused by ants, says W. Radcliffe-Saunders (Torquay) in the London Field. A cage containing a pair of full grown canaries and four fully fledged young birds was hanging in the verandah. It was dark and my friend on returning home noticed a disturbance in the cage. Turning up the light he found only one bird (the cock) remaining, and at the bottom of the cage were the remains of the other five, almost entirely eaten. He took out the cock bird, and on examining it found it to be infested with very small red ants. The remains of the other birds were also so covered. The cage was hanging on a wire some distance from the ground, and everything was quite in order when the lady of the house retired and turned off the light about two hours previously.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

From Fluff to Rough.

REGINS KENNELS, owned by Miss Ruth A. Beardsworth, has moved from Ashland, Ohio, to Pasadena, Cal. Miss Beardsworth, although having made a great success as a breeder of Pomeranians, has decided to give up the fluffy toy pet

DOBERMAN DORUSSIA.

Sold by Dobberman Kennels to Dr. W. H. Potter, Kootenai, Idaho.

for something more substantial—the Airedale, a companion for man or woman. Miss Beardsworth offers a pert opinion. Says she: "Most men will pay a high price for good dogs for their own use, but get economical when it comes to buying dogs for their women folk." We wonder.

ALBINO ALLIGATORS.

THROUGH the interest and courtesy of Geo. L. McVey, the Reptile House possesses five albino alligators. So much of the coloring pigment is lacking in the skin of these reptiles that they are of a pinkish white hue, while the eyes are very pale, though apparently as sharp and alert as those of any normal saurian. These little alligators were captured near Miami, Fla. They are now about nine inches long, lively and healthy, and indicate a disposition to rapidly develop.—New York Zoological Society Bulletin.

A BUTTERFLY FARM.

In a recent issue of the Yorkshire Evening Post appeared the following:

One of the best known entomologists in Yorkshire is H. W. Head, who now lives on his butterfly farm at Burniston, near Scarborough, but who did all his pioneer work while residing in Dandler street, Scarborough.

Mr. Head was the first to breed the butterfly in captivity, and to-day he owns the largest butterfly farm in the British Isles, covering between three and four acres, mainly devoted to the breeding of butterflies and moths. * * *

Able and keen entomologist as he is, Mr. Head confesses that the pleasures of collecting are lost when one has to make a business of it, and he probably knows better than anyone else the pleasures and the pains of an entomologist. His successes have been striking. * * *

After five years' hard work he has got the haven into very good order, and now only waits favorable summers to reap the reward of his labors. For a matter of twenty-eight years he has made a business of butterfly breeding, and he has now a wonderful collection of between 300 and 400 varieties of British and foreign butterflies and moths, and a set-up stock of 400,000 all produced on his farms at Scarborough and Burniston, respectively.

The farm is stocked with all kinds of trees and weeds—indeed one part is a veritable jungle—for the purpose of providing caterpillars and butterflies with the particular food they require. One species of caterpillar thrives upon one kind of plant and another species upon another, and Mr. Head has taken infinite trouble to provide himself with the rarest plants in order to produce the rarest of moths and butterflies.

In the rearing of hybrids, Mr. Head has been remarkably successful. He has raised altogether well on to a dozen, and he showed our representative specimens of a yellow form of the green-veined white butterfly, the sale price of which is about 30s. (\$7.30) each. But what he is always on the lookout for are "sports," i. e., butterflies or moths of well-known types, but differently marked than the ordinary. There is a good demand for these, and a single specimen will fetch pounds. It is all a matter of luck. Since he has been in the business, Mr. Head has tried to breed a black variety of the tiger moth, but he has not succeeded.

At the haven live butterflies are not supplied. The live stock does not go beyond the caterpillar, or the fertile eggs of any particular kind of butterfly or moth in stock, but his clientele is cosmopolitan and world-wide in extent.—From Consul Benjamin F. Chase, of Leeds, Eng., Aug. 8, 1912.

BRANDED YOUNG HALIBUT.

A REMARKABLE incident happened during the recent trip of the schooner Avalon, which arrived in Gloucester, Mass., the other day from halibuting, there being included in the craft's catch a small halibut which bore a distinction very much out of the ordinary. Two years ago one of the crew of the Avalon brought up a baby halibut on his trawl while fishing on Green Bank. The fish weighed about fifteen pounds and was thrown overboard. Before releasing the fish, however, the fisherman cut the initials "L. R." plainly upon its back, and nothing more was thought of the incident. A few weeks ago, while fishing on Western Bank, some of the crew were surprised when a halibut was hoisted on board bearing the familiar initials "L. R." Instantly some of the crew recalled the incident of two years ago, which nearly had been forgotten, and singularly enough the fish had been caught again by the crew of the same craft. To give an idea how fast a halibut will grow, the baby fifteen-pounder of two years ago had grown to four times his former size, tipping the scales at sixty pounds.—Lewiston Journal.

LET your growing boys read FOREST AND STREAM. It's a good habit to form early in life.

ANTI-CHIGGERINE

An Outing Without Chiggers (Red Bugs) A Real Pleasure
Why suffer on your outing from chiggers, when for 25c. you can procure an effective remedy and preventive sufficient for a month's trip.

Anti-Chiggerine prevents chiggers from getting on one, also allays the irritation of the bite. It is non-poisonous, will not injure the most delicate skin, not offensive to use, not sticky, no smell. Outdoor life in beautiful September and October is marred only by chiggers. If you use Anti-Chiggerine as directed, you can sit on old logs or stumps, have your lunch on the grass, and roam the woods without discomfort from chiggers.

Send 25c., coin or stamps, for a box by mail prepaid.

ANTI-CHIGGERINE COMPANY

1800 S. Broadway - - - - - St. Louis, Mo.

THE HOODED SEAL OF THE NORTH ATLANTIC.

EXCLUSIVE of the walrus, there are five distinct species of seals inhabiting the Atlantic waters contiguous to Northeastern America—the harbor or rafter seal (*Callocephalus vitulinus*, Linnæus), a small coastal breeding seal which frequently ascends fresh water streams; the ringed seal (*Phoca hispida*, Sehr.), also a small coastal breeding seal; the harp seal (*Phoca guenlandica*, Fabr.), somewhat larger than the two preceding seals, and unlike them, breeding upon the north Atlantic ice floes; the bearded or square-flipper, sometimes called the big seal (*Phoca barbata*, Fabricius), a very large seal, breeding along the northern coasts; and the hooded or bladder-nose seal (*Cystophora cristata*, Erxleben), which, like the harp seal, gives birth to its young upon the winter-formed ice floes of the North Atlantic.

The five young seal pups which I brought from the north in May, 1912, and which are now in the New York Zoological Park, belong to this last species, and a brief description of the species, its habits and its economic value, may be of interest.

In size, the hooded seal ranks second to, and sometimes rivals, the bearded seal, which is classed as the largest of the Atlantic seals. A full grown hood "dog" will not infrequently measure from eight to nine feet in length, and tip the scale at one thousand pounds, while an old female hood will often weigh between eight hundred and nine hundred pounds.

In color, the adult is bluish-black on the back, with a belly usually of lighter shade, varied with paler spots, though sometimes the belly is of a light grayish tinge, with darker spots.

The male has a muscular sac or bag extending from the nose backward to the center of the head. This bag may be inflated at will, forming a hood-like covering to the head. It is this hood which gives the species its name.

The hooded seal has one other distinctive feature. While each of the other four species mentioned has six front teeth or incisors in the upper jaw and four in the lower jaw, the hooded seal has but four above and two below.

Both males and females will attack their enemies with boldness and savage ferocity, and in all my experience I have never encountered a more determined or dangerous antagonist among wild beasts than an angry hooded seal brought to bay. I have seen an old dog hood seize a gaff between his teeth and chew it into splinters. They travel upon the ice with remarkable speed, and the hunter must always be alert, prepared to meet their vicious charge.

Hood pups are nursed by their mothers until about two weeks old, when they are left to forage for themselves. After capturing the five little pups now in the Bronx Zoological Park, and taking them aboard our ship, the Neptune, I was confronted with the difficulty of securing proper food for them, and it occurred to me to examine the stomachs of the carcasses of several of the old ones which had been killed. To my surprise I found that all I examined contained perfectly fresh herring, and in nearly every instance the fish were whole and entirely free from injury without a tooth mark or scratch. From a single one of the old dogs I secured in this way six large fish. It is claimed that the seal herds off the Newfoundland and Labrador coasts destroy more codfish and herring each year than are taken by the entire fishing fleet.

The hooded seal is migratory in its habits. During the summer the greater herds are found along the southeast coast of Greenland. In February and March they appear in countless numbers on the winter-formed ice floes off the Labrador and Newfoundland coasts, both in the open Atlantic and in the Gulf of St. Lawrence.—Harry Whitney, in New York Zoological Society Bulletin.

FOREST AND STREAM covers many homes of well-to-do people, who read and have confidence in it on account of its cleanness and independence.

F. K. CURTIS, 30 Broad Street, New York.

"MULLERITE"

Powder Has Won by Sheer Merit

Thousands of dollars are spent yearly in advertising and hundreds of demonstrators are continually extolling the virtues of other Smokeless Powders, but the sale of **MULLERITE** with practically no publicity, steadily increases.

Once a **MULLERITE** Shooter Always a **MULLERITE** Shooter

Such satisfactory results could not be accomplished if Mullerite was not a truly remarkable powder. No inducements are offered to use this powder and no paid professionals say a good word for it because their bread and butter does not come through Mullerite channels, but the amateur who once uses it gets results and that counts more than smooth talk.

Don't take our word for it—just try a box of Mullerite in the field or at the traps.

TRAPPERS' CABIN AT CRYSTAL CREEK, WYOMING

THIS PICTURE GRATIS

JOHN PEEL.

The above picture of the immortal John Peel, framed and glazed, will be presented free to all new subscribers to "The County Gentleman & Land & Water," England's leading weekly illustrated sporting paper.

The picture measures 11 in. x 7½ in. (frame 17 in. x 12 in.). The original was painted by Mr. Joseph Simpson, R. B. A., from old photographs and prints of the famous huntsman. It is said to be the finest representation of John Peel ever published, and is worthy of a place in every sportsman's home.

The subscription to "The County Gentleman & Land & Water" is \$9.50 per annum, payable in advance, for which the paper will be sent, postage free. Checks should be made payable to the County Gentleman Publishing Co. and crossed the London County & Westminster Bank, Hanover Sq. Branch.

WORK OF FOREST RANGERS.

It begins to look as if the forest rangers in this part of the State had at last gone about the settlement of the forest fire question in the right way. A force of men is now engaged in building a telephone line through a great area of the State wild lands for the purpose of affording a means of communication between point and point on the reserves, so that a fire-fighting force can be assembled in a short time.

This means of communication has been badly needed a long while. The central station of this unique telephone system is in the top of a tall tree on the very top of the highest mountain in the Pine Creek region. This is at a point a half mile out of Waterville. In that tree a platform

has been built, and from it a range of survey of a dozen miles in every direction can be had. This "crowsnest," or lookout, is State Forester Evans's headquarters almost steadily during the seasons when fires are liable to break out, and the "crowsnest" will be equipped with a telephone connecting with the rangers' homes, and by this means the alarm can be sounded quickly when the first whiff of smoke is seen over the range.

The forest rangers who spent the time during the summer chopping out fire lines report that more snakes of all kinds were killed by them this summer than ever before. Copperheads appear to be on the increase. The men are really more afraid of copperheads than they are of rattlers, for the latter give a warning. Both bear and deer on the State preserves are reported unusually plentiful.

Last week, while a force of fire lane cut-

ters was working along above Cammal, one of the men ran across an old beer keg. Its position under a tree and in so remote a part of the country interested him, and he made an examination. He found that somebody some time had rigged the keg out as a bear trap. He had driven log spikes through the entering end of the keg, which was without the top, the spikes being bent in such position as to permit a bear's head passing inward all right, but when the animal started to back out, the ruffled flesh of the shaggy neck would come in contact with the protruding spikes and make the creature a prisoner with his head inside the keg.

This is an old way of capturing bear, the tempting bait of honey being placed at the bottom of the keg, so that bruin would push his head greedily to the bottom. This means of taking bear, however, is no longer allowed by law.—Williamsport Correspondence North American.

DOWN the artery of a continent!

There was no mistaking our senses. After years of planning we were on the way and chugging along the waterfront of St. Paul, supplies aboard, gas enough to carry us to St. Louis, and good spirits to accompany the weakest body on the 2,000-mile journey.

We were amateur navigators. If we had not been amateurs, we would have left undone some of the things we did. But we meant well and generally this got us through. Before we left St. Paul a Government official told us we would not need a license for the craft which was 30 x 9 by an average of three feet draft. This gave us an eight-ton boat, but when we got to Rock Island, Ill., we had to take out a license for her, as she was over five tons.

The first license a navigator can get is an operator's license for boats under five tons. The good character of the operator and two witnesses to that effect got this one. The second one is for vessels of fifteen gross tons or less, and one takes a license through examination; I refer to an engineer's license. The skipper secured these before he started the trip.

Down the swift current past the noted Mounds Park, through the savory or unsavory odors of South St. Paul and her porcine traffic we headed. All along the route friends waved us farewells. Though there are hundreds of craft at the head of navigation of the Father of Waters, it is curious that but one to three each year make the trip southward from this point. Generally the fall rains begin in September and swell the river until it is easily navigable.

But we were anxious to get down where the fishing and hunting commenced, and before we knew it, were at the palisades of the upper Mississippi, known as Robinson Rocks, where we swung about bow up-stream and entered between

two wing dams, out of the main channel and current. Fishing was the first thing we all demanded. Something to make the skillet smell in good form was the desideratum.

Across the river from where we were moored opened a little bayou at the further end of which was a dam to prevent the current changing the channel during high water. It looked deep, was deep, had plenty of reedy places for big-mouth bass, and a lot of mud turtles among the lily-pads. Coaxers and flies and other baits, however, refused to dislodge a fish, though late that evening we saw many jumping and playing on the surface.

A set line from the stern of the boat with a couple of hooks on it got a five-pound catfish that was relished for breakfast. The September morning was beautiful. We knew a big steamer was due along near us that morning and made ready to drop down to Prescott, Wis., the seat of the best small-mouth bass fishing on the St. Croix or the upper river. Casting off we soon passed a shanty-boater we had seen sail through St. Paul a week before, but who could get no further on account of the wind, and came upon the Government work just above the town of Hastings, Minn. At Hastings we halted a while, then followed the little gasoline ferry-boat across and down the river to Prescott as we did not know the channel.

Prescott lies at the foot of Lac St. Croix, named after Father St. Croix, one of the earliest missionaries in the Northwest, a remnant, some say, of the Catholic missionaries who paddled up the river from New Orleans. Very little can be seen of the pretty town from the river. As you swing down the Big Wet across the mouth of Lac St. Croix, you get a wonderful glimpse of the lake that makes you port the helm and circle and take a turn up the lake, going under the Burlington bridge and through the great brails of logs that are being made ready to float down the Mississippi to the mills south. The sight, for the first time one beholds it, is beautiful and sublime. We could not get enough of it.

Friends at Prescott were watching for us. Hardly had we arrived until they were aboard. Charley Stapf, with his motor-equipped fishing boats, insisted that we try the evening fishing. Up the lake we struck, making for the sun-kissed rocky shores where the warmer waters beckoned

ALONG THE UPPER MISSISSIPPI.

to the small-mouthed bass as he fed. The latter part of September it was. The waters were getting cool at night, and the fish seemingly favored the more temperate water along the shores where the sun heated it during the afternoons.

Most of the fishing along the upper Mississippi is with the fly. The greatest numbers of fish caught are small-mouths. Occasionally some big-mouths are taken from the wing dams and the mud banks. From Prescott to Read's Landing we found excellent sport with the rod. Fisher flies were taken best by the bass. The type of fly liked best is that with one or two small spinners just ahead of the feathering. Striped bass, white bass, big- and small-mouths all took it avidly. I remember taking three from one point on a projecting wing dam.

The following day we again went up the lake after supper. A point at the mouth of a creek, said point being of mud and reeds, rushes and pads, gave us the excellent big-mouths shown in the illustration. We wanted to tarry along the lake and river until the quail season should open in a couple of days, trying all the fishing points, and cruising up to Hudson and Stillwater. Afton and other villages that were crowded with summer folks from the Twin Cities.

Of all the river and lake fishing, the best is just below Prescott among the wing dams and along the ripraps that border the river. If the weather is hot, you will find the small-mouths and the big-mouths as well making for the deeper

holes. It is no use to fly-fish for them on the surface then, as they are deep down in cool water. Moon-eyed minnows, shining like so much beaten silver, their eyes large, dark spots that make them particularly attractive, may be put on gutted bass hooks, and your boat anchored above the deeper holes in the channel of the river. The water is generally clear, or just clear enough to make the fishing good. Drop the minnow down current and let a heavy sinker carry the minnow to the bottom or nearly to it. Working the minnow back and forth will soon get you a strike if there is anything in the holes. Small boys can guide you to the best fishing if you are not acquainted with the river.

And our ice-box stocked with fish we rested, watching the snorting little steamers at the head of the great rafts of pine and fir and spruce swing them at their heads, while the larger stern-wheelers backed and came ahead, and came ahead and backed, to prevent the raft from going to pieces at the various points along the river's channel. A few cruisers from further south, open-boats, closed-boats, trunk-cabins, cabin-boats, raised-deckers and crosses between house-boats and steamers, they all came and went and passed the time of day with us.

Every morning the whistle of the quail across the river reminded us that in another day or so the season would be open. A slight frost set us to gathering walnuts and butternuts and trying to dry them out on the sandy shores.

Pike fishing was good at any time along the bar that had built up at the mouth of Lac St. Croix, and odd hours were spent after them and gathering mooneyes that we might keep the ice-box stocked. Strangers came and went to and from this mecca of the fly-fisherman, we doing our share in return to entertain them.

The day before the season opened for quail the writer made a trip with a pearl buyer through twenty miles of sloughs and spots of backwater along which lived an army of clambers and pearl traders. It was a trip that cannot be forgotten. Down a chute between two cornfields and into a clump of willows brought us face to face with a gang dipping their catch in hot water preparatory to opening the shells. Then around a bend we came upon a town of floating shanties. One labeled Groceries would always be in their midst. Other legends were also flaunted upon the traveler. Hope, eternal hope, hope for a thousand dollar pearl or one that would even bring a hundred, was the main nourishment of each and every mortal we found. Clammers with almost worthless slugs implored the buyer to purchase. Others with fine pearls of from fifty to a hundred dollars value refused to sell until they got their prices. Farming, stock-raising, pearl-trading, clamming and mixtures of these and a dozen other occupations employed the nomadic people along the upper Mississippi.

[TO BE CONTINUED.]

Our Daily Bread

A "Bakers' Dozen" of Some of the Representative Characteristic Breads and Crackers of the Globe Used by Campers, Travelers, Fisher-Folk, Motoring Tourists, Trappers, Etc.—Pointers for the American Camping Supply Trades

By L. LODIAN

In Two Parts—Part Two

THE pretzel family of breads—fresh and as hard-tacks—is a large one. There are about 100 known varieties of pretzels in the world, nearly all of which have been collected and illustrated in a learned German work on pretzels, or bretzels (derived from the Italian word *braceletto*, or bracelet, as they originally had somewhat the form of a bracelet when the Ligurians of centuries ago originated them). In America we have some two-score kinds of pretzels. One of them is known as the solid pretzel and is saucer-shaped—for a reason. It is much used by Russians with their glass of tea. If the tea is too hot, the pretzel is used as an extempore saucer. After a couple of "pours," it softens somewhat, and is all the more edible. It is well to know of these makeshift devices of the nations, as they may all come in handy some time or other in camping life. For example, a form of Italian trellis work or lattice work hard-tack is often used in camp as an improvised shelf for holding light articles.

centuries ago, and to this day they make the same biskots in a dozen different forms. We illustrate various of them, with one of the fresh-daily little

round breads from which, on staling, the biskots are made—just sliced atwain, and lightly rebaked to a nicely browned crisp. It is an eco-

1 and 2—What the original biscuits of centuries ago looked like. They are still made thus by the Italians—the originators of the biskot—in various forms. (Specimen marked 1 is the fresh bread, which, on staling, is halved and re-ovened to a slight crisp, as shown at Fig. 2—left.) These biskots, of course, are the original travel hard-tacks of the world. 3—Saucer-shaped solid pretzels, often used with the Russian glass of tea as a temporary saucer, for cooling. (There are about 100 pretzel forms in Europe.) 4—The "battered toast" stick biscuitry (Koda) of the Italian lakes region—Novara, Como, Milan, and much carried by Alpinists.

THE ORIGIN OF THE BISCUIT.

The Ligurian Mediterraneans originated the biscuit, which they termed biskot ("twice-baked"),

nomical way for the Italian baker to utilize his stale bread returns and left-overs. For sustaining qualities, these biskots are any time the equal of our high-grade pilot hard-tack crackers, and superior as plain fare to any fancy biscuit. (Let us call these stale bread hard-tacks by the Italian name of biskot.)

And to this day this original biskot has successfully endured among the Italian soldiery and navy and Alpinists. Biscuits as we know them are scarcely known in the boot-shaped peninsula.

The biskot is an all-purpose or multi-usable biscuit—serviceable alone, or for the soup, or with wine or coffee or milk or tea or water.

HOW ANY CAMPER CAN MAKE HIS OWN STALE BREAD BISKOTS.

Every camper should have a "speaking acquaintance" with these biskots, since they are so easily obtainable of Italian bakeries throughout our land. Further, any camper can get an idea from them to make his own stale bread biscuits if necessary. Thus, if having any farmhouse or city fresh bread on hand, or that once was fresh, which is in danger of molding, or has acquired the repulsive confined-air taint, just slice it and nicely brown it by toasting, or lightly Dutch-oven it to a gentle crisp. This kills any fungus growth, or the heat dissipates any foul-air suspicion, and your camp-made biskots, properly dried out and packed in transparent impermeable tissue paper, will stand you in good stead for months for use as they are, or as a fine soup stock. Most every store sells some wrapped bread. Save those wrappers for your biskots, if making any.

* * * * *

Good reader, did you ever, when camping and returning to camp jaded out of an afternoon, get a whiff of the fragrance of buttered toast? Didn't it smell good? Well, our friends the mountaineers and campers of the Italian lakes region, carry their own buttered toast along in impermeable transparent paper packages. It is in the form of little bread sticks, about the thickness of those long and brittle fresh bread sticks you see in some restaurants. But these buttered toast breads are more convenient to handle, being only twenty centimeters long (about eight inches). In the making, the pure unsalted butter is compounded with the dough, and the whole baked in big batches of sticks to a nicely browned crisp. This butter content causes the cracker or biscuit to be somewhat staining if packed away in ordinary paper bags or cartons, so wax paper coverings must be used, which can be placed in anything—leather wallet, paste board case, or paper bag even.

Conveniences over ordinary buttered toast: No waiting, no slicing, no toasting, no knife; no butter-can to have to dig out from the duffle bag; and freedom from the greasy hands as after munching the ordinary buttered toast slices. Our hosts of Italian-speaking citizens do not know of our American buttered toast slices, but use these buttered toast sticklets. All our cities of import without exception contain Italian bakeries, and all sell biskots—these among them. Due to their shape, they are ideal with eggs spooned or eaten from the shell, to steep into the yolk. In our boyhood days on a Connecticut farm we used finger-length cuts of bread for this purpose, and called the pieces "fingers."

THE WORLD'S ONLY SUN-BAKED BREADSTUFFS (CENTRAL ASIA).

The sun-dried bread-sheets of Central Asia, looking like so much chamois leather, has already been noted in this journal, and a fragment of it illustrated. Now we can show a regular commercial size specimen of it, for this raisin-syrup-compounded sheeting is made in pieces up to bed sheet sizes, and is often used in the bazars of the caliphates at the stalls, as temporary awnings to defeat the caloric-energies of old Sol.

At the caravansaries of the inland Asiatic marts it is much esteemed by the coffee drinkers; and if a layer of the apricot-fruit-sheeting is sandwiched between, this constitutes the chic "fruit-cracker" of the feminines of the caravan-sary harem.

One of the most puzzling forms of hard-tack outing and recreation biscuits is the singular pulley-wheel-shaped cracker represented by the group of three specimens depicted in the cut. It is known that the hole through the center is for convenience in stringing and carrying, but why the pronounced pulley-wheel-like groove on the periphery or rim is a mystery. Briefly, the origin is not known. I never found an Italian baker who could explain, either here or on the Mediterranean. But there, they are usually literally the submerged tenth in ignorance. Most bread forms have some *raison d'être* or significance. Thus, in works on phallic-worship we read of the origin of the shell-shaped morning rolls which are brought to the guest at continental hotels and restaurants. In remote ages, when bread was made in nunneries, the nuns molded the bread shell-shaped as an offering to the gods, as exemplifying what they regarded as all that was most sacred to themselves physiologically.

RUSSIAN BISCUITRY.

The huge Russian dominions, extending from the Baltic to the Pacific—some 8000 miles right across—still see to-day a vast amount of posting travel. By this is meant per horse conveyances from stancia to stancia. To meet the requirements of commissariat travel, all the travel food

conveniences of Europe and Asia have been drawn upon; and for small-arms and tools, almost every American idea has been appropriated that was worth while: the goods made wholesale in Moscow and St. Petersburg, but labeled with American lettering as if made here, and of course the United States makers never find it out. No sooner is our bulky weekly official Patent Office Gazette published, than copies are dispatched to regular pirating firms in the chief manufacturing cities of Russia, and often the counterfeit goods are selling on the Russian markets months before they are here! I saw evidence enough of this during a couple of years' meanderings over the Russian domain.

So if Americans appropriate a few Russian ideas in travel-bread conveniences, it will be but a "mutual exchange."

TINY RING BISCUITS USED AS WEDDING RINGS.

There is a class of Russian small hard-tack ware known as the fit-the-mouth begl. It is always circular, like a ring. The center bore is for stringing. Indeed, instances have occurred where this bread ring—although clumsy for the purpose—has been actually utilized as an extempore ring for marrying poor peasants with whom the gold ring was lacking (just as door keys have been utilized occasionally for marrying poor couples). I never saw the ceremony performed, but my friend Franzi Taormina, who knows all about these biscuits, has thus repeatedly informed me.

This begl is cleanly to handle, and there is never any waste due to breakage. It is much appreciated by the Russians with their tea drinking. In the bazars it is often used by the petty merchants ignorant of the three r's as a make-do abakus, or counter—a lower string of one unit (10) serving for kopeks and an upper row of the same number representing rubles.

CHESTNUT FLOUR BISCUITRY (ITALY).

The chestnut flour bread of the Italian peninsula is a great standby of campers, mountaineers, fisher folk, campaigners and smugglers. It is the only breadstuff in the universe which is

1—Macaroni hard-tack cracker, available as biscuit or as a soup stock. 2—Oat-bread (fragment), famed in Celtic pastoral communities. 3—Fit-the-mouth begl crackers of Slav regions (sometimes dubbed in the vernacular "wedding rings," because marriages have actually been performed among the indigent peasants with these small biscuit rings). A great standby of Slav excursionists as a clearly portable, loose-in-pocket travel cracker. 4—Pulley-shaped crude appearing hard-tack biscuits of South Europe—a standby of the Sicilian smugglers and fisher folk. Origin unknown.

1—The most curious cracker of the universe: A tree pith biscuit (Republic of China), which is laundered out, or ironed (but never baked), just as a collar is ironed. In vogue among oriental travelers as a biscuit de luxe. 2—Chestnut flour self-caking chunks, used as both a breadstuff and a naturally sweet flour patty in lieu of sweetened biscuits or cakes. The daily fare of millions in Italy. Is the only cracker or biscuit stuff of the globe thus eaten in its uncooked, flour form. 3—Sweet almonds in the husk from the valley of the Jordan. The almond meal hard biscuits of the Levant are made from the oil-pressed debris of these. 4—The singular fantastic syrugged cracker of the harems of Arabic-speaking countries (many sizes).

regularly eaten in its dry flour form. Due to its saccharin content, chestnut flour is very liable to "cake," the natural sugar of the nut (about 7 per cent.) attracting moisture; just as, in fact, all crude sugars draw humidity. The flour is found in commerce in the chief Italian-importing groceries throughout Uncle Samdom in about twenty-pound nearly square boxes, and retails at a dime per pound. Break the sides away from the box, and you have a caked block of chestnut flour of a slight yellowish-white, and the pronounced odor and taste characteristic of the chestnut. It is of surprisingly sweetish taste when mouthed thus in its desiccated form, freed of the natural water present in the fresh nut.

This natural "caking" of the flour is advantageous in that it can be easily broken up per finger and eaten piecemeal without need of a spoon. In country inns in Italy of a morning the maid brings in a bowl of milk with the little chestnut chunks floating atop the *latte*. Due to their lightness, caused by air particles, they do not sink, unless left in the milk about a quarter of an hour, when they gradually subside. As a light repast—but nothing else—this chestnut-and-milk porridge is an agreeable occasional change and surprise to the tourist, but it is a mistake to have it too often, for fear of a surfeit. The necessity of change in provisions is keenly realized by the hardened globe circler and camper.

Chestnut flour is principally useful as an adjunct to the camper's commissary bag, because it can be eaten without cooking, and for the reason that, due to its sweetness, it almost takes the place of a sort of after meal dessert or semicandy. But milk is always necessary with it—just plain milk. Cream makes it too rich-tasting, and not refreshing enough as does simply milk. No other beverage seems to go with it satisfactorily, as tea, coffee, wine or water. The latter makes the whole thing too "disinteresting."

The writer has had many years of experience with chestnut flour as an occasional camping food, both in Italy and out of it, and while

the native Italian outdoor-lifers and sunk-in-poverty farm peasants use it as a regular daily fare, its constant use to one not accustomed to it cannot be suggested. In other words, it would be a mistake to carry a bag of it on a trip in lieu of wheat flour. Wheat flour contains the life-sustaining gluten, lacking in chestnut flour.

In Leghorn, Milan, Florence, Naples, Como, Turin and other regions of Cavour-land, chestnut bread is often found for sale in the bazars as a pan-baked article, of a dingy brown. This bread-form is termed *castagnacio*. It is less palatable thus than in the flour-form. But an acceptable biskot or cracker is also made from the flour, and is esteemed at the afternoon halt for and with tea. This biscuit is made without a particle of sugar, yet it has a sweet enough taste. This saccharinity may remind one somewhat of the peculiar and not unpleasant sweet-bitter taste of Spanish licorice.

A chestnut macaroni is also come across in some Ligurian cities, and is served as a delicacy boiled in milk. But it is not an all-chestnut product, since some wheat flour has been necessarily added in the making.

ALMOND MEAL BISCUITS (ASIA MINOR).

The almond meal bread of Central Asia is not shown in the photograph, because unobtainable in Manhattan. The writer purchased specimens some years ago, but they were too good to last long. It should be said that this hard-tack almond bread is made from the residue cake left in the oil presses. The oil is valued for export; the refuse meal is relished by hogs and—humans! It is nutritious and satisfying. But unable to show the actual almond bread which the motorist and tourist will happen across throughout the caliphates of the Faithful, to make up, we will show a small heap of the actual husk-covered almonds which are the base of the plain almond hard-tack bread. The sweet almond is protected by nature with a downy, semi-plushy olive-green husk. When fresh, the Arab immerses these husks in vinegar for a few weeks,

and they constitute the acceptable almond salad appearing at the cold viand table.

CRACKERS FROM TREE-PITH (REPUBLIC OF CHINA).

Truly, the most singular bread and cracker of the Lord's footstool is the peculiar pith bread of China. It is made from the pith of the tree *fatsia*. The misnamed "rice-paper" is made from this pith also. There is an illustration of the *fatsia* preparation in the Standard dictionary (see that word). This curious cracker bread, or whatever it may be termed, is of a creamy whiteness, has a pithy taste, and is much esteemed by the citizens of the flowery Republic with their little cups of watery unsweetened tea, or as a soup stock. It is of scant nutritive value, yet retails in Manhattan at sixty cents a pound. I have often used it and made little gifts of it as a novelty to appreciative acquaintances.

Its use cannot be recommended to the camper, because it contains scant more nutrition than dried cucumber slices or evaporated celery, but it is noted here as a "luxury" (?) of the most hardened campers of the globe—the camel caravan parties plying for centuries of time between the marts of vast inland China.

* * * * *

The following breads were unobtainable for illustration in Manhattan. Doubtless somebody retails them, but on repeated inquiry the writer failed to ascertain whom. An effort was made to round up a collection of the whole lot, so as to have this article more fully representative of the camping-out breads of the globe. The missing breads, then, are: Barley bread, much used in various North European countries; the *palt-brod* of the Laplander, made originally of reindeer blood and rye, and forming the darkest of the breads of the universe; the tortilla, the national maize bread disk of Iberic-America, and the polenta or corn bread of the Italian lakes region. The mundane tourist comes across all these breads in due course; that is, if sufficiently interested in foreign peoples to note how they live among themselves. But if he makes the fatal mistake of finding out and associating only with Americans wherever he goes, and loafing around clubs (another evil), he will find he will learn precious little!

In conclusion, be it stated that every one of the biscuit and hard-tack bread exhibits illustrated in this brief discourse on the camping crackers, etc., of the nations (or some of the countries of the globe), have all been photographed direct from the actual goods rounded up and purchased at retail among the foreign colony bakers of Manhattan and turned over to the office of this journal. Anybody is free to inspect the collection in the liner's "den", as they make a capital souvenir collection, and can be preserved for years in a dust-proof glass wall case. Being almost all the hard-tack variety of travel-bread and biscuit stuffs (necessarily), they will naturally keep almost indefinitely. And what the writer has accomplished any other would-be collector can accomplish in any of our greater cities, or instruct his city representative or agent to do so.

FOREST AND STREAM has for years been a factor of importance in promoting the cause of good sportsmanship and the conservation of natural resources.

Still-Hunting Mountain Lions

An Interesting Tale of a Day's Sport Hunting Big Game in the Rocky Mountains Near Yellowstone Park

By WALTER C. DALLAS

JIM WILLIAMS, my partner, and I were camped at the Crystal Creek cabins in January, 1912, for the winter, trapping coyotes, lynx and marten, with wolf hunting as a side issue. We had brought our grub and outfit up from Jackson in the latter part of December and got out our wood, fixed up the cabin, and after a trip down with the team, we snowshoed thirty miles back to the ranch and started to string out our traps. We had thirty traps of sufficient size for coyote, lynx and wolf, a few fox traps, size

meadow below the house, with our webs creaking in the cold and our breaths leaving clouds of steam as of miniature engines, it seemed, as I remarked to Jim, "Good to be alive." The day was perfect and we felt as if we could go several hundred miles without a stop.

"I've got a hunch, Jim," I said, "that we're going to have some tales to talk about when we get back to-night." "I hope so," replied Jim, who is not much given to any very great flights of fancy.

where a long ridge ran up to the top of the main "rim," where we expected to find lions, if there were any in the country. After striking the foot of the ridge, we removed our snowshoes, the snow having been blown off, leaving the ground bare, slung them on our backs and started climbing. Resting at intervals, for it was a long climb and steep, we finally came to where a spur ridge joined into the main cliffs. Here we stopped, ate our lunch, filled our pipes and looked out over the country. Across the Gro-

EL LEON AT BAY.

THE AUTHOR AND LIONS.

2, and a string of jump traps Nos. 1 and 2 for marten.

We put in the first week setting coyote and wolf traps, after which we scoured the hills for a few days looking for wolves, but without success, as they, for a time it seemed, had all gone down below around the settlement. So, rolling out one cold morning, with the logs of the house snapping with the frost, we cooked a meal of elk steak and "sour dough" pancakes, and during our post-breakfast smoke our talk drifted to the subject of mountain lions. "I'll bet you my plug hat, Jim," said I, "that we can scare up a lion or two in the Slate Creek cliffs." "We might find some," he replied, as he refilled his pipe; "let's try 'em a whirl." "All right, and we'd better be making tracks, too," said I. So, after stowing away some lunch in our pack-sacks, we buckled on our snowshoes, took our rifles and started.

The day was one of those still, sunny ones of the cold, sparkling variety which in Jackson Hole are rather scarce in winter time. As we swung down across the smooth expanse of

As we rounded a bend of the creek we "jumped" a bunch of about a hundred elk out of the willows, who ran up the hill a few hundred yards, stopped and stared at us, one old cow "barking" at us as if angry for disturbing them at their morning meal.

The shoeing was perfect that morning and we swung across the big flat toward Grovont at a fast clip. Crossing the ice at the old ford we climbed the low hills on the north side of the river and soon stood on the low divide between Grovont and Slate Creek, where we stopped to adjust our shoes and get some more "steam." As I bent over, tugging at a refractory knot, Jim asked: "What's that standing up there?" Looking up, I took the glasses and made it out to be an old sheep standing outlined against the sky at the topmost point of a high cliff, probably two and a half miles away, and looking down at us. As I watched, around the point came four others, one of them a small ram three or four years old. They watched us a few minutes, then bounded away over the rocks.

We then continued on our way across to

vont, far below, we could see bunches of elk scattered here and there over the country, pawing out a precarious living. At our backs rose the straight walls of a long cliff some 200 feet high. "This sure looks like a good lion country, Jim," said I, as I readjusted my pack. "You're right; let's go," said he, and we started climbing again. We soon neared the top, and as I stepped out of a narrow "notch" between the rocks I exclaimed: "Here's what we're looking for," for there at my feet was the print of a large lion, made probably two days before. "That's him," said Jim, and slid a cartridge into his rifle.

Taking the trail I soon found his direction and said to Jim: "Which do you want; above or below?" for we had a sort of system for lions which I had learned from an old hunter on Grovont. "Makes no difference," said Jim, and he climbed down through the rocks, while I, waiting until he stood in a small game trail at the foot of the cliff, started on the trail of the big lion, which led straight up the rim. Jim meanwhile was making his way along the foot of the cliffs.

The Impulse to Fish

By COLEMAN RANDOLPH

The trail topped the raise beyond a small "saddle," and I saw where the lion had stretched out on the sunny side of a large boulder and taken a nap. Going a few feet further I came on to the fresh tracks of two lions following up the rim. Following the trail I noticed at times blood in the footprints of the big one. After trailing about 300 yards the tracks turned and went down through the rocks under the cliff. Motioning to Jim to come up close underneath, I stepped out to a small point and stood looking down toward the lower edge of the cliff. As I stood watching I heard the report of Jim's rifle, and whirling around I caught full view of a large lion as he sprang out of the rocks some thirty yards away and throwing up my rifle, a .25-35 repeater, I fired just as he cleared the ridge toward the timber—a snapshot at his flank. Running hastily to the top I was gratified to find him down, clawing and biting. As I drew on his neck he gave an enormous bound, and clearing the edge of the cliff, fell tumbling and clawing to the foot, almost on top of Jim, who was looking for his lion among the rocks. The lion continued down the side of the hill, which was very steep at this point, and as he was making pretty fair time, although unable to use his hind legs, I fired again at about 200 yards, striking him in the back, when he rolled down the hill into a steep gulch, finally bringing up under a large sage brush.

Knowing that he was about "all in," I helped Jim search for his lion, which we found in the course of a few minutes at the foot of a large rock. It was a female, probably about three years old, with a beautiful skin. Dragging her, we went down to where the big lion had stopped. He was unable to go far, but still was very much alive, snarling wickedly as I adjusted my camera and snapped him as he growled at me. Then a well-planted shot under the chin finished him and his record of deer killing.

On examining him we found that my first shot had struck him in the right flank and ranging forward had entered the backbone near the shoulders, paralyzing his hind parts. The second bullet had struck him fair in the back and gone into the lungs. Jim had shot his through the heart as it was slinking around a rock about fifty yards away, killing it almost instantly, after which it had rolled down behind the rock.

After skinning them out, leaving the feet and head intact, we packed them up and struck the trail for home, well satisfied with our day's hunt.

After arriving at the cabin, eating supper and having a smoke, we stretched them out and made the necessary measurements. We found the smaller one—the female—stretched seven feet seven inches, while the male, an old-timer, measured exactly nine and a half feet. Another thing we noticed was that he had lately been having a fierce battle, as his head and forearms were badly bitten, the holes left by the teeth of his adversary being almost entirely fresh, not yet having started to heal, and one fore claw was completely gone. Judging from the fact that he had been fighting led us to believe that there must be another large one around, but we will reserve him for another hunt.

FOREST AND STREAM has for nearly forty years been a weekly messenger of sporting news in hundreds of homes.

NO one has been able to discover the fountain of perpetual youth. The quest is not altogether so vain, however, as some imagine. The idea of attaining perpetual youth is a dream of a by-gone age which the hard practical sense of the present knows cannot be realized. It is possible, however, for one to renew his youth repeatedly by getting close to nature and living the care-free, outdoor life. This is the only elixir that rejuvenates and makes over the man, giving back to him the health and spirits of his

BEAVER DAM.

earlier years. A return to the haunts of woodland and stream in a wilderness where the patience of the sportsman is rewarded, where the camera enthusiast can likewise achieve a bloodless success, will furnish diversion that rarely becomes stale with repetition.

I was actuated by no philosophy such as I have just given when I yielded to an inclination to visit again the preserves of the Tourilli Club. I simply yielded to an impulse, just like a duck that takes to the water; he doesn't reason about it, he goes in because he likes it. The philosophy will do for those who have drifted away from their natural tastes and feel that an artificial life is the only kind worth living. When the love for outdoor recreation asserts itself, the natural tendency seeks the right course without having it prescribed like a sugar-coated pill.

I left the great metropolis with feelings that could in no sense be likened to that of a two-

year-old colt just exuberating in excess of animal spirits. In fact, it was a question in my mind whether I would not reach a log cabin in a state fit for a hospital.

The first day's tramp of ten miles over mountain trails made me fit to enjoy a good square meal of whatever might come off the griddle.

As I surveyed the placid waters of Lake Long in the twilight gradually merging in the shadows thrown by the wooded promontory that overlooked the lake, I saw the surface disturbed by the jumping trout. I hungered so for these speckled beauties that I almost believed that I could have eaten one of them raw. After two weeks' experience, having them three times a day, I was convinced that I would not change the petition, "Give us this day our daily bread," by substituting trout in the place of bread.

The first day, Aug. 18, I arrived at my destination, Lake Long, in a condition that enabled me to enjoy a night's repose on a spring mattress of balsam bows hastily gathered and strewn over one of the bunks constructed on either side of the log cabin. My slumber was finally disturbed by a flapping of wings, and I became conscious that a bat had flown in and was sharing the cabin with me. I opened the door and without harming him bade him go forth.

Perhaps the reader recalls the classical quotation from Lawrence Stern, when Uncle Toby, catching a fly that had distressed him, permitted it to escape from the window, "Go, poor devil, get thee gone; why should I hurt thee? This world surely is wide enough to hold both thee and me." Before leaving home a bat entered my room one night and I thoughtlessly captured him in my fishing net. When I had killed the bat, he had torn the bottom out of the net which I fixed by tying it up with a string. What motive induced me to give the second bat his freedom I have not stated. I have presented the facts; the reader can draw his own inference.

It was still too early for the largest fish in the lake to rise to the fly. They could not be tempted with the dry-fly nor the other kind. I had to be satisfied with trout that weighed from one to two pounds and a half. When the weather gets colder the larger trout come more frequently to the surface and take the fly. During the warm spell the large trout no doubt prefer deeper water because it is cooler.

When the weather is favorable, which is generally the case, this lake presents a most picturesque and attractive appearance located among well-wooded hills that descend rather sharply into its waters. No modern improvements have disturbed its primeval slumber. The dip of the paddle as one is silently conveyed from place to place is in harmony with the natural surroundings. The constructions around the lake similar to those in other localities in the club preserve are of the simplest kind, consisting of a couple of log cabins for the members, their guides and the guides. No naphtha launch has yet broken the primeval calm with its exhaust while furrowing the waters of the lake.

When the sun had ushered in another day crisp with the freshness of early dawn, I lost

LAKE LONG.

no time, after fully satisfying the gnawings of hunger with several flapjacks, in testing my light fishing rod in a contest with the trout. The canoe was soon gliding along the wooded shore, occasionally delaying its progress to accept the invitation of a jumping trout. The angler knows too well the sensation when the line is pulled away with a determined jerk, while impatient at the tardy concession from the reel the pole is bent and the fight is on. My fighting blood was up, and many an exciting battle took place before ambition was sated and an ample supply secured to appease hunger.

A plunge in the lake served as a tonic to stimulate the blood and as an appetizer in place of a cocktail. This is the best substitute for a cocktail I can suggest. When the weather is real frosty, it is like a cocktail well frappé. This prescription is apt to be rated lightly by some because it costs nothing, by others as a kill or cure remedy, and by the wise and experienced as a panacea for all human maladies.

It might be advisable to briefly describe my guides whose personality might interest the reader. One was of French extraction, but like most people of his race in Canada had so many ancestors born on this continent that he felt almost as much of an American as a redskin. Bebe Liret was perfectly at home in the wilderness and constantly pointed to tracks of various kinds of animals both great and small. He knew whether fresh or old, whether made to-day, yesterday or earlier. His trained eye could pick out the partridge in spite of its protective coloration, resting upon a limb, the duck seeking refuge amid the tall rank grass or the diving loon ever baffling the aim of the sportsman by diving just as the bead is drawn, and always reappearing half a mile away from the spot where he ought to be.

The other guide was a tireless man and powerful, by the name of Cornelius Shannahan. Not all of the French-Canadian guides are particularly well acquainted with English, and some one expressed surprise that Shannahan seemed to understand it so well. Perhaps he knew English before he did French; this might help to clear up the mystery.

For a few days I diverted myself around Lake Long, occasionally taking the trail to keep in condition and try my .22 rifle on partridge. These birds are not as tame as the fool hen of the West, but they are not nearly so wild as the partridge or grouse of the Eastern States. The fool hen I used to consider about the same as a target. I would step off a number of paces and shoot at the head. The bird would often give me three shots. I laid down a rule very similar to one suggested by a slim Irishman to a stout man with whom he was about to fight a duel with pistols, the latter complaining of the advantage possessed by his smaller opponent. "Now, I will make two chalk lines on your body about the width of one arm," observed the Celt. "But suppose you hit me outside of that?" objected the other. "Oh, well, that won't count." If I shot the body to pieces instead of decapitating the bird, I considered it the same as missing.

Having become surfeited with the fishing at Lake Long, which was almost too abundant, I took my departure to Lake Seymour, but this was like jumping from the frying-pan into the fire. I am almost tempted to say that it would be more like sport for one to cast the line into the water and see if it was possible to keep the fly from being caught by a fish. Fishing with a stout rod and strong line, discarding all idea of exercising the angler's skill, fishing the same way as Paddy played the fiddle, by main strength, and I would be afraid to say how many speckled beauties could be caught.

Lake Long has been raised five or six feet by the construction of a dam at its outlet. This piece of engineering work resulted from the industry of a colony of beavers. A log cabin built on the border of the lake before the dam was constructed is now in the lake and useless for habitation. The law protects the beaver. For a number of years it has been unlawful to destroy them. On the other hand, the beaver exercises his right, utterly regardless of his neighbors. He disregards the legal principle—*Sic utere tuo ut alienum non laedas* (So use your own that you may not injure another's).

To vary the monotony of too much good luck I made excursions over the mountain trails. Hunting ducks with a .22 rifle certainly did vary the monotony of too much good luck. I soon began to long for the monotony of good luck in place of bad luck. Change of monotony is in itself a kind of variety.

One of my tramps took me by a small lake where I saw a red doe disporting herself unconscious of our presence. A brief survey of her graceful movements and the guide and myself pursued our way to a favorite haunt of some blackhead ducks. We discovered them quite a distance off. They discovered us about as soon and made good use of their discovery. I was too far to secure accurate aim and was, therefore, unable to vary our substantial but limited menu. Resuming our journey on the trail, we observed the fresh tracks of three moose which had evidently become alarmed at

the shooting. I was disappointed in not being able to get a closer view of these members of the progressive party. Upon retracing our steps we came somewhat abruptly within close quarters to a fawn standing with stern toward us and lifting its nose and sharp-pointed ears high in the air, evidently trying to catch the scent of something, may be ours. We stopped for a space barely eighty yards distant. Its head had turned to one side, bringing us in plain view. Having satisfied its curiosity, it disappeared in the forest.

The charm of an outing in this club preserve consists chiefly in the simple and natural surroundings. The rough mountain trails offer no serious obstacles to one who is fond of a little strenuous effort, just enough to tone up the physique. No effort has been made to cater to pampered tastes by introducing luxuries that are not in keeping with the life of the backwoods. The balsam bows have not been supplanted with the spring mattress, log cabins have not given way to more artificial constructions. The canoe is the only means of conveyance upon the lakes; naphtha launches have not been introduced. The beaver constructs his dwelling upon the shore or dams up the exit of a lake, as if he thought he shared with man a proprietary right to alter the course of nature.

This condition of things might not suit people who flatter their imagination that they enjoy rustic surroundings by borrowing terms suited to primitive life; who erect a hundred thousand dollar mansion fitted out with every modern luxury and call it a camp.

MAKING acquaintances is a trade; holding friends is an art.—Munsey.

BEBE LIRET, GUIDE.

NATURAL HISTORY

The Native Sweet Gum.

(*Liquidambar styraciflua*.)

BY E. L. DUPUY.

A PLEA for native trees does not often have to be made. Their desirability for beautifying purposes is too well established.

From a standpoint of sentiment alone they are generally chosen, while from an educational point of view they are certainly to be preferred to those from other countries. The foregoing is leaving out entirely their ease of growth and freedom from disease, two advantages themselves of no little value. Among the native trees of this country that are put to ornamental use, none deserves a higher place than the forest sweet gum. Its glossy, star-shaped leaves, graceful lay of foliage and rich autumn coloring give it an attractiveness that places it above many of its rivals, while rapid growth and hardiness add other good points in its favor. Aside from all of these, however, this tree possesses another charm which, if the specimen be selected with this in view, will add more than all the rest put together toward making the tree a thing of interest and unique value. I refer to the ornamental and peculiar bark growth on twigs and branches of certain specimens of this tree that makes it, to those who are acquainted with its full beauty, a much-prized member of the tree circle on the lawn or yard.

All of the sweet gum family show tendencies to this peculiar "fin bark," but only about one in ten, or ten per cent. of the species, possess it to a great degree. When a young specimen is found, it should be marked or transplanted at once.

This bark increases as the tree grows and stands out like great fins or blades upon all of the smaller branches and twig growth. This remains of course after the foliage has gone and in winter presents a spectacle that is both unusual and interesting, especially after a rain or snow, when the bark growth, turning much darker with the moistening, and viewed against a wintry sky background, is a model rare indeed for the decorative artist. Some of the best twigs when cut and lightly varnished make drawing room curios that are very ornamental, and few of the observing friends are ever able to name the subject unless pretty well schooled in wood lore. The "hang" or lay of the foliage on a sweet gum in full leaf is especially beautiful, the leaves all taking a broadside outward position instead of hanging edgewise, presenting their five-point star form to the very best advantage, while a little later when the frosts give them a touch, the bronze, yellow and red fires that are kindled and that gradually spread over the tree, are among the finest that nature produces.

Food Habits of Birds in Relation to Man.

CALIFORNIA FISH AND GAME COMMISSION.

WHILE the great majority of birds are of decided economic value, on the other hand a few are destructive throughout the year, and still others are injurious at certain seasons.

These are the ones concerning which more definite knowledge is needed.

The study of the food habits of birds, carried on by the Biological Survey of the United States Department of Agriculture, has been of inestimable value in determining those birds which are useful and those which are harmful. To be of greatest value, however, this work must be supplemented by special work in the

NATIVE SWEET GUM.

different States, and this is what is now being done in California. In January of last year, H. C. Bryant, of the University of California, was appointed by the State Fish and Game Commission to carry on this special work. Careful study will be made during two years of the food habits of certain birds which are now on the protected list, but whose economic value has been questioned in certain sections of the State. The birds, which will receive special study, are the meadowlark, blackbird and robin, while the horned lark, roadrunner and mourning dove will also receive some attention. This investigation will be carried on in a thorough manner, by stomach analysis of birds taken throughout the year, by careful field study, and by consultation with farmers, so that the results should mean much to the agricultural interests of the State.

The harm done by birds can usually be traced to one of the following reasons: (1) To an overabundance of some particular species of

bird in a certain locality; (2) to the establishment of artificial conditions, as results when waste lands are placed under cultivation, thus removing the natural food supply of birds when they turn to the new supply furnished by man; (3) to a failure of the natural food supply of the birds, when they feed largely on food not taken to any great extent under normal conditions; (4) to the location of crops in relation to the nesting sites of birds, as shown in the damage done by red-winged blackbirds in grain fields located near marshy lands where these birds nest.

In a State like California, where natural conditions are continually changing, as immense tracts of land are being opened up for cultivation, it is especially important that the agriculturists have a definite knowledge of the relation which birds bear to both agriculture and horticulture in the State. In the series of articles which are to follow this one, it will be the purpose to point out some of the ways in which the bird life of California is of value on the farm and in the orchard.

More About Wild Pigeons.

HENDERSONVILLE, N. C., Sept. 11.—*Editor Forest and Stream:* In a recent issue of FOREST AND STREAM was an interesting article on the wild pigeon. One thing in this correspondent's article that particularly struck me was this: All the millions of pigeons that he saw in those days, now so long past, were going northward—never a flock flying in a southerly direction.

During those thirty and more years ago, I, too, saw millions of wild pigeons migrating. They were always flying south, and always in the very early morning and late afternoon—never, as I can remember, after 8 A. M. and after this hour before 4 or 5 P. M. None passed over during what I may call the heat of the day. Occasionally a small flock of several hundred would stop and feed for some days on the mast nearby.

This was in Western North Carolina and upper South Carolina, and might further say in Greenville county, S. C., and Henderson, Buncombe and Transylvania counties, N. C. October was the month they came south, and possibly into November. It seems these birds had a different line of travel going north and going south, and quite a different time of the year. But where were they "between times?"

It is or rather was an interesting bird, or both is and was, and largely so because of its rather sudden disappearance. At times they struck me, too, as being decidedly a stupid bird. I well remember while out one afternoon in what is now nearly the heart of Asheville, with my gun, coming upon a flock. They were in an old dead tree. I shot a number of them, and they circled around and came back to the same old tree till I had shot quite enough for family use, some fifteen or twenty, and took them home, when, to my surprise, I found that a brother of mine with a friend had preceded me with some thirty or forty more—all shot from that same old tree. They were sent to friends in the neighborhood.

This was in the fall of 1867 or 1868. I have not seen a flock in twenty-five or thirty years, and I have never had a satisfactory explanation for their utter extinction, because they discon-

tinued their flight south not by degrees, but apparently all at once.

The cuts given in the article mentioned give the wild pigeon just as I remember it, and I cannot understand how anyone but a novice could mistake a dove for one of these handsome birds.

ERNEST L. EWBANK.

Adirondack League Club Forestry.

ALBANY, N. Y., Sept. 10.—*Editor Forest and Stream:* According to a statement made to the newspaper men by Gov. Dix to-day, he has induced the Adirondack League Club to try an experiment in practical forestry on its great preserve in Herkimer county. The Governor said that the club's property contains many ripe trees on its 140,000 acres, which adjoin some of his own holdings, and that it was proposed to have the lumbermen plant two trees for every one cut down and removed. This experiment will be of very great interest not only to practical foresters who wish to introduce the selective method of cutting on private preserves, but also to lumbermen who hope it will result in the application of this kind of forestry to the Adirondack wilderness. The Governor in his announcement said that the members of the club were for the most part men who have all along fought against lumbering the Adirondacks.

In reply to the question: How will this affect the wild animals? the Governor said that it would not affect them at all. He asserted that since the Conservation Commission has adopted the plan of cutting marsh hay and feeding the deer in the winter, the food question is no longer involved. He also insisted that deer are not afraid of the lumbermen and often come about their cabins to seek for food. Besides this, he said that the cutting of the trees will of itself provide a greater food supply, and that he did not believe the preserve would be injured in any way as a hunting ground by the proposed lumbering operations.

It would be interesting to have the opinions of experienced sportsmen on these points of general importance. JOHN D. WHISH.

Protect the Fox.

BLOOMINGTON, Ill., Sept. 26.—*Editor Forest and Stream:* A meeting will be called shortly at some central point in the State to organize the Illinois 'Coon and Fox Hunters' Association. Dr. J. A. Wheeler, State Game Commissioner, and Fred O'Flynn, of Decatur, are the leading spirits in the movement. There are 10,000 'coon and fox hunters in Illinois, and it is hoped to induce all of them to join. The association will favor legislation for the preservation of the fox, 'coon, 'possum and other small game in this State, while the breeding of fox hounds will be encouraged. It is asserted that experts in the Department of Agriculture, who have studied the habits of the fox, have reached the surprising conclusion that reynard is a benefit rather than an injury to the farmers. These animals, according to the reports of the investigators, eat mice, snakes, bugs or rabbits in preference to chicken, lambs or pigs. A series of tests developed the remarkable fact that while there are a few foxes that are chicken eaters, the great majority will kill the enemies of the farmers' crop instead. James Walker, a wealthy landowner of near

Taylorville, has always prohibited the killing of foxes upon his land and has made it a rule never to destroy their dens. At the present time there are probably one hundred foxes upon his farm, and he finds that they never disturb his chicken coops. The foxes inhabit a haystack, and Dr. Walker states that there has never been a chicken taken to the den.

E. E. PIERSON.

Bird Reservations.

BY RALEIGH RAINES.

IT is good to have a home whether it belongs to man or animal, and once you have that home it becomes "Home Sweet Home," which is a doctrine that the Federal Government has indelibly stamped in its laws. Homesteads are furnished to its citizens, homes are provided for its soldiers, refuges are created for the native game animals, and last, but not the least, reservations and homes have been set aside and created for the birds of the country by generous Uncle Sam. These reservations were created in response to the demand of ornithologists, naturalists and the various Audubon Societies for better protection of birds during their nesting season. As a result of the agitation, the first bird reservation was created by executive order of President Roosevelt, March 14, 1903, and consisted of five and a half acres on Pelican Island, Florida. This small area has since been extended and enlarged to include all contiguous territory of the island. These reservations now number fifty-three and are being administered under the direction of the Biological Survey of the Department of Agriculture. Except where stated, the area in acres is unknown. The reservations were created and are located as follows:

Name.	Date created.	Location.
Pelican Island	March 14, 1903	East Florida Coast
Breton Island	Oct. 4, 1904	S. E. Coast of La.
Stump Lake	March 9, 1905	North Dakota
		(Area, 27.39 acres)
Huron Islands	Oct. 10, 1905	Lake Superior, Mich.
Siskiwit Islands	Oct. 10, 1905	Lake Superior, Mich.
Passage Key	Oct. 10, 1905	Tampa Bay, Fla.
		(Area, 36.37 acres)
Indian Key	Feb. 10, 1906	Tampa Bay, Fla.
		(Area, 90 acres)
Tern Islands	Aug. 8, 1907	Mouth of Miss. Rv., La.
Shell Keys	Aug. 17, 1907	South La. Coast
Three Arch Rocks	Oct. 14, 1907	West Oregon Coast
Flattery Rocks	Oct. 23, 1907	West Wash. Coast
Ouillayute Needles	Oct. 23, 1907	West Wash. Coast
Copalis Rock	Oct. 23, 1907	West Wash. Coast

A number of these reservations lie within

tracts which have been reserved or set aside for purposes other than the protection of birds, such as reclamation withdrawals and naval reserves, but in all such cases the administration of the bird reservation is made subject to the use of the reservation under the primary and more important segregation. All of these bird reserves have been created through reference from the General Land Office of the Interior Department to the President of forms of executive orders providing and locating such reservations. When petitions and recommendations for the creation of bird reservations are sent in by local Audubon societies or other organizations or persons, these recommendations go to Frank Bond, chief clerk of the General Land Office, who is really the architect of the future bird homes, for it is he who locates and recommends action on all bird reservations, finally preparing the executive order for the signature of the President. Mr. Bond is a quiet, modest man, but to him more than to any other is due the actual locations of the bird homes provided by Uncle Sam. He has been a bird lover all of his life, a member of his local Audubon Society, the American Ornithologists' Union, and a naturalist of national reputation. Dr. T. S. Palmer, assistant chief of the U. S. Biological Survey, has also ably assisted in the creation of these national bird homes, and in these two gentlemen all bird life have the staunchest, most zealous and enthusiastic friends. These bird reservations are regarded as in all essential particulars reservations of public lands for public use or other purposes, for which there are numerous precedents. The first specific act of Congress providing for the protection of birds on reservations created by executive order was introduced by Hon. John F. Lacey, then a representative from the State of Iowa, and became a law on June 28, 1906. This act made it unlawful to kill birds, to take their eggs, or to willfully disturb birds upon the reservations, and it provides a fine not exceeding \$500, or imprisonment not exceeding six months, or both fine and imprisonment for each conviction secured. This law was substantially re-enacted in the new penal code approved March 4, 1909. Occasionally arrests are made for violations of the law, but generally when it becomes known that the Federal law protects the birds on the reservations, most hunters resist. Only one assault has been made so far on a warden of the reservations which occurred in Florida last winter, when one of the hunters took a shot at the Federal warden, inflicting little harm. Closely allied to these bird reservations is the question of Federal protection of migratory birds, as primarily the reservations are created in order that the birds may nest and raise their young unmolested. Now comes the question of protecting them while en route to these nesting and resting places. One cannot be complete without the other, and sooner or later the Federal Congress must realize that full protection cannot be given the birds by protecting them solely while on the reservations, but that the protection to be complete and perfect must extend to cover birds while en route to and from the breeding grounds on the national bird reservations. When this is done, then the protection of national bird life will be almost complete. To make it complete will necessitate each State setting aside one or more bird reservations and enacting laws for the protection of migratory birds.

Reel Chat.

I WAS glad to see Mr. Charles T. Hopkins' name signed to an article in the FOREST AND STREAM of Sept. 7.

In old times, in Scotland, the wood reel or pirn was sometimes attached to a belt around the waist of the angler, and I fancy that this might work fairly well. If one is killing heavy fish, he may have to follow them, or precede them, down stream, over rocks, through shallow water or where the footing is anything but safe. With the great majority the reel will probably remain on the rod and it seems to me that there are very substantial reasons why this should be so. Yet I wish that I could see Mr. Hopkins using the method he prefers. There is nothing so satisfactory as a practical demonstration. One likes the reel placed just far enough from the end of the butt on fly-rods, so that the handle may be manipulated when said butt is pressed against the body, in playing a big fish. The conditions present in different regions vary considerably, as well as the size of the fish that are taken, and anglers have their own ways and methods of making the best of the situation, as they find it. Yet all are interested in anything that may improve sport.

If you have been stripping in line, even if the coils are held in the fingers of the left hand and are not on the ground, and discover that you have hooked an immense trout, I fancy that it is best to get him on the reel as soon as it is convenient. You may have to go down stream with him several hundred yards. I have had a good many experiences of that sort, and a young friend hooked a four-pounder by the tail that carried him down a long distance. If the fish had taken the left side of an island, a smash would have been inevitable, on account of drift logs, but it chose the clear channel to the right. I wish that we had a moving picture of the whole performance. I have one of Mr. Hopkins' flies for fishing in Florida, but have not had a chance to use it. Old salmon flies seemed to please the fish when I was there, but I could try something quite different now. Speaking of flies, the ants would have been on every day for two weeks, if the weather had been warm. Whenever they appeared in great numbers, a sudden fall in the temperature would cause their disappearance for several days.

A few olives (ephemeridæ) were out to-day. This interested me, as the small olive is not common on these waters. I thought that I had a very large specimen of the Stone fly, but yesterday a female came in at my window that outclassed it in size. They are very irregular here, a few appearing whenever the temperature of air and water suits them.

THEODORE GORDON.

It is time that we should have the option in buying American reels for fly-fishing of a silent or noisy check. The "click" mechanism on many reels is often annoying, as it is so strong that it screeches and advertises us over all the country side.

Per contra; a cheap reel that I like very much has a spring made of common wire that is constantly breaking at the most inopportune times.

After having new springs put in twice, a favorite reel gave out when I was twenty miles from a railroad, and I have been obliged to use a fine old Abbey & Imbrie with a horrible harsh and noisy click. I brought two reels, but one was given to a friend and the other carries a finer line for softer rods. The tournament rod requires a heavy line, but is a very perfect weapon.

THEODORE GORDON.

Luring the Hungerless Bass.

ATLANTA, Ga., Sept. 12.—*Editor Forest and Stream:* The question whether a black bass cannot be sometimes provoked into striking a lure, even though not hungry, was forever settled in my own mind by the following experience.

Our usual party was taking its annual outing on the Homosassa River in Florida. We met each noon at an appointed place for a fish fry, coffee and a short rest. At this point, the river curved against a shore of lime rock and, just beyond the edge of the channel, left a small pool of cool, well-shaded water about six feet deep. In approaching the point one day I saw in this pool a bass of some six or seven pounds in weight lying at rest. As it was mid-day and the bass were not feeding, I knew the pool was the private property of the old chap, who had evidently posted signs to keep off his grass. We saw him about the same hour several successive days, and then it occurred to me to find out what he would do if we worried him.

Along the water's edge ran a thick fringe of cabbage palmetto. Retreating a short distance, I carefully crawled back to the spot and selected an opening through which I could see the fish in the blue, clear water. He was some four feet distant and about three feet below the water's surface. He was lying perfectly motionless with his head pointed somewhat downward.

My guide cast the fly over and about two feet beyond him, and when it was drawn back it passed some two feet above him. He watched the fly intently from the moment it struck the water until it passed outside the range of vision, but evidently had no fear of it, for he did not turn to see what became of it. Two more casts were made with similar results—never a fin stirred. When the third cast struck beyond and in direct line over him, I called to Bob not to retrieve until I signalled. The fly slowly sank until it was slightly below and would probably touch him on the upward and backward movement. Then the call was given and the bass watched the approaching fly with an intentness so great that it was communicated to me. Just before it reached him he shifted his position a few inches to the left, sinking slightly deeper.

Again Bob cast and allowed the fly to sink. This time the cast was to the side and the fly

would not have touched him, but as it neared him the old devil literally gathered himself for a spring and then struck the fly with a ferocity that would have made a rattlesnake look like an embalmed angel.

It was not hunger. He let the fly pass him several times without the slightest indication of interest and finally struck it for the purpose of killing the impudent invader of his domain and to restore a ruffled dignity.

The experience gained equalled his life in value, and we put him back unharmed, but saw him no more.

CHAS. T. HOPKINS.

San Francisco Fly-Casting Club.

THE medal contests of the San Francisco Fly-Casting Club were held at Stow Lake on Saturday and Sunday, Sept. 14 and 15. Wind was variable, weather cloudy.

The Anglers' Club of New York.

THE annual club tournament of the Anglers' Club of New York was held on Sept. 7 and 14 as scheduled. On the 7th the wind bothered the contestants, especially in the salmon event, preventing high scores, and a smart shower, which obligingly held off till the conclusion of the day's program, sent the members and spectators hurrying to shelter, but on the 14th the conditions during the fly event were most favorable, as shown by the scores, all of which were made with five-ounce rods, although not technically counting as records in that weight. The gold medal for the club championship for 1912 which was figured on a demerit basis, was won by W. C. Metcalfe, who finished fourth in the first event, first in the second, second in the third and fourth in the last, or a total of eleven demerits, with C. H. Higby and A. B. Hubbell tied for second place with twelve demerits each. The lure in the bait event was a commercial one furnished by the committee and weighed five-eighths of an ounce. The events and scores were as follows:

SEPTEMBER 7.

2 P. M.—Dry-fly accuracy:	Demerits.	Per Cent.
A. R. Hanners	15	99
C. H. Higby	16	98 14-15

Illinois Casting Club.

CHICAGO, Ill., Sept. 17.—*Editor Forest and Stream:* The following scores were cast on re-entry days, Sept. 14 and 15. Owing to the high wind on Sept. 15 the accuracy fly events were postponed until Sept. 22.

Quarter-ounce accuracy bait:

Amman	98.4	Whitby	99.
Wehle	98.1	C. W. Grant	97.1
Jamison	99.1	Hartstall	94.
Stanley	99.4	Swisher	98.5
McFarlin	97.7	Kernaghan	99.1
McCandless	98.6	Nicholson	98.4
Kirk	98.3		

Re-entry:

Amman	98.6	Hartstall	98.8
Wehle	98.9	Swisher	98.1
C. W. Grant	96.9		

Quarter-ounce distance bait:

Amman	108%	McFarlin	77
Wehle	44%	Heston	63½
De Garmo	97%	Jamison	126%
Whitby	110%	Chatt (guest)	182%
Stanley	95		

Re-entry:

Amman	69%	Stanley	85
Wehle	61%	McFarlin	52½
De Garmo	76	Heston	104½
Whitby	131%	Jamison	71

Half-ounce distance bait:			
Amman	136%	McFarlin	81%
Heston	166%	Jamison	137%
Stanley	141%		
Re-entry:			
Amman	90%	Stanley	140%
Half-ounce accuracy bait:			
Stanley	98.9	Kirk	98.3
Jamison	99.5	C W Grant	96.9
Tournier	93.4	W T Grant	97.5
Bauer	98.2	Kerr	97.8
Re-entry:			
Jamison	98.5	W T Grant	97.1
Tournier	92.2

Stanley	95	C W Grant	90
Re-entry:			
Stanley	92	W T Grant	84
Distance fly:			
Amman	111	C W Grant	93
Stanley	95	W T Grant	92
Re-entry:			
C W Grant	93		

Weather conditions, Sept. 14: Wind east, velocity eight miles. Sept. 15: Wind northeast, velocity twenty miles.

Our annual fall club tournament will occur on Oct. 6. The program will consist of the quarter-ounce and half-ounce accuracy bait and light tackle dry-fly accuracy. Members will be classified for these events as previously. In the bait events there will be three classes:

Class A—Average scores of 98.75 and over.

Class B—Average scores of 98 to 98.74, inclusive.

Class C—All scores below 98.

In the light tackle dry-fly there will be two classes:

Class A—Average scores of 99 and over.

Class B—Average scores below 99.

There will be awards given for first, second, third and fourth places.

Notes from New Zealand.

BY DRUMMOND SHARPE.

As it is interesting to most sportsmen to hear of the experiences of their fellows in far-off lands, I venture to suggest that some notes from New Zealand may prove interesting or useful to readers of FOREST AND STREAM, and should the editor approve, I propose to continue them from time to time. "For what is New Zealand chiefly famed?" asked a village schoolmaster. "For its fishin', sir," answered an eager, small boy, and though the reply may not have been that expected by the master, unquestionably it contained a certain amount of truth. Visitors from across the sea come to us each year in greater numbers, and chiefly they seem bent on catching trout, so it may be useful if I begin with prospects of the fishing season, which in the South Island opens on Oct. 1, and in the northern lake district about a month later. This difference is of course due to the warmer climate of the North Island, and its effect upon the habits of the rainbow trout, with which our lakes are stocked. Plain facts are generally of greatest importance, so I will say, "Getting overstocked." At a conference of Acclimatization Societies in Wellington, it was stated "If a clever fisherman gave his mind to it, he could catch nearly a ton in a day." This referred to Lake Taupo, where a man living in the district boasted that during a single month he had landed five tons of trout. Whether such wholesale slaughter will appeal to sportsmen, perhaps is more than a little questionable, but the fact is evident that the fish are much too thick in the water, and smoke houses are to be erected for their disposal, which will

put an end to the waste of previous years. As a natural consequence of overstocking, some of the Taupo trout are infested with a strange parasite, for which the weird worm is a fitting name. Report has it that cormorants have brought this parasite into the water, and a scientist in Government employment has gone to investigate the matter, but that he will make out a case against the cormorants is not at all clear. These birds have inhabited the lake for ages, and had they been the cause of the disease, it would probably have appeared long ago. Lake Rotoua is recovering some of its former fame. Two rods on Nov. 17 killed forty fish weighing 141 pounds; on Dec. 11 a party made a bag of fifty-two, 150 pounds.

The great snow rivers, Rangitata, Waitaki and Rakaia were very disappointing in the season of 1911-12, though a week after its close the Rangitata was full of migratory trout. In this river and still more in the Waitaki the quinnat salmon has become acclimatized, and runs up regularly in each autumn. My own experience leads me to believe that from a sporting point of view this was a most useless fish to introduce. I think very few of them survive their trip to fresh water, and when once they have run up-stream, I doubt very much if they will ever take a bait of any kind. Lethargic brutes, lying alongside the bank in a quiet eddy, they are merely a temptation to an unlucky angler to do wrong.

Prospects of sport on the southern fly streams are exceedingly good, and here the fisherman has a wide choice. If he desires to angle in comfort and without much exertion he will go to a river like the Upper Opihi near Pleasant Point, where there is beautiful water, and a bag of trout weighing up to two pounds—perhaps a three-pounder—is fairly certain. For myself I prefer the mountain gorges, where though it will be made under much rougher conditions, and by much care the bag of an average day will consist of half a dozen fish weighing from four to six pounds, which will have been caught by the most scientific exercise of the dry-fly art. Wet-fly is the ordinary method on most of our streams, and here perhaps I might mention a few killing flies. The best half dozen are the March brown, greenwell, red spinner, coch-y-bondu, coachman and the red governor, which is the best of all.

Unfortunately, the shooting to be obtained in New Zealand is not nearly equal to the fishing. To speak plainly, it is very poor, and the season just ended—May 1 to July 31—proved no exception to this rule. Native game—gray duck, paradise duck, pukaki, black swan, etc.—is getting scarce, and a limit of twenty-five has been placed upon the number which may be shot in a day. Pheasants are fairly numerous in certain parts of the North Island, where they are strictly preserved by the landowners. Many efforts to acclimatize the Californian quail have had little result, but it is hoped they may still prove successful. Hares and rabbits as a matter of course are very evident all over the country and on the hill "runs" (ranches) a big hare drive is an annual event. At one such there were forty-eight guns, who altogether contrived to shoot about 150 hares, and four men. Luckily not any of the latter were too much shot to be worth keeping, but it was a day of incident and words to that effect.

 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

NOVEL EXPEDITION FOR WILD DUCKS.

THE Storrs Agricultural Experiment Station of Connecticut, under the Federal Department of Agriculture, as part of its new work of investigations in economic ornithology, including game bird problems, has been enabled this season, through funds generously provided by prominent sportsmen, to send out a scientific expedition to the Canadian Northwest to study methods of increasing wild ducks and to secure proper breeding stock for experimental purposes.

The expedition was in charge of Herbert K. Job, State Ornithologist of Connecticut and ornithologist of the Experiment Station. With him as assistant went his son, George Curtiss Job, of the present junior class of Yale University, and other local help was employed. Most species of wild ducks have not been made to breed under restraint, but it has been believed that they would do so if stock could be secured that was hand-reared from the egg and had never learned wild ways.

Mr. Job, who is familiar with the northwestern wilds and with the breeding habits of wild ducks, chose a location on the shore of Lake Manitoba, and established a camp. Wild ducks' eggs were hunted out in the surrounding wilderness and were hatched out in incubators which had been shipped out there. Twelve species of wild ducks nested in the region, and eggs or young of all of these were secured.

The hatching was remarkable. In the majority of cases every egg of the set hatched. The average for the season was 92 per cent., which is high even for domestic fowl. Most of the young, except of two peculiar maritime species—the white-winged scoter and the ruddy duck—were successfully raised, with little loss. Even the redhead, canvasback and bluebill proved perfectly docile, and thrived in confinement. On the 2,000-mile journey back, Mr. Job personally at-

tended and cared for the consignment. Eleven species were safely landed, and are now thriving on one of the large preserves affiliated with the Experiment Station, where further experiments with them will be conducted. Despite the arduous trip, but one duckling that was three weeks old or over at the start succumbed. The achievement is unique in the annals of game bird researches, and may prove the beginning of an important movement to save and restore the wild-fowl.

DO UNTO OTHERS.

HAS it ever occurred to you how much benefit the convalescent and crippled in hospitals derive from reading of the big, wide wholesome outdoors and the healthful doings of those so fortunate as to be out in it? The thought comes to us that some of our subscribers interested in charity and the uplift of those less fortunate than themselves might find pleasure in sending FOREST AND STREAM to hospitals, homes or institutions where its teachings would be appreciated. We give away dozens of such copies during the year and it has given us so much pleasure that we felt our readers, if they knew the demand for reading matter among those not in a position to secure it for themselves, would willingly join us in disseminating sunshine to those on the inside looking out. Consider this suggestion and the next time you want to do a big thing at small cost send to some institution a subscription to FOREST AND STREAM. It will be lasting and satisfying not only to one, but to many.

PEMMICAN.

THIS sustaining, though unpalatable, food long has been the larder staple of the arctic explorer. Though unpalatable to those within lurching distance of a Café de Childs, the traveler who must pack light, relishes it as an Eskimo does the by-product of the Standard Oil Co., so popular on Hallowe'en Eve. The news from Dr. Vilhjalmar Stefansson that he lived for thirteen and one-half months wholly without pemmican will come as a shock to the amateur explorer, the blow only being made more severe when it is known that the exploring doctor substituted fresh caribou meat for the compressed edible. How cheering and unusual is the statement from an explorer that he "was at no time in danger of starvation," and that hardships were no more than he had expected. In addition to doing a great work for science, the doctor has done all of us a kindness in bringing back no harrowing stories of privation and suffering, either real or imaginary.

WHISTLE AS YOU GO ALONG.

DID you ever notice how much is expressed in a whistle? The sharp crescendo of surprise, the long upper register whistle of discovery, the nervous, tremulous note of the boy calling courage in the dark, the sighing wind-like diminuendo of the tired, the monotone of the farm boy immortalized by Denman Thompson in the "Old Homestead," whistling because he can think of nothing else to do; the quick, shrill call of attention to the dog, and the doleful imitation of the owl—each and every one denotes a mood. The whistle we want to talk of is the "whistle as you go along" sort; that which indicates pleasure, satisfaction, rumination, retrospection. The

shooter coming home after a successful day, tired but happy; the fisherman with a full creel, the carpenter at his bench, work well in hand, and a disposition as full of cheer as the Bank of England of gold. The man on the street going to and from a work he likes—some perhaps out of tune musically, but mentally harmonious, but all whistling as they go along. A disposition to whistle means a disposition to happiness. It is the exuberance of sunshine, the exhaust of satisfaction, the radiance of pleasure. Join the cheerful ones and whistle as you go along.

MONKEYS.

IT has long been custom among the medical fraternity to charge the fly and mosquito with being germ purveyors and disease transmitters. This caused us no pang of regret, because no one likes flies and mosquitoes, anyhow. Now, however, we are touched in a tender spot. The children's delight, the menageries' sunshine, the frolicsome monkey, is charged with being a carrier of disease—an ailment so popular among children—measles.

The allegation is made by no less a body than the fifteenth International Congress on Hygiene and Demography, now assembled in Washington, D. C.

Here is a quandary: A zoo cannot get along without children, and children won't go to the menagerie unless there are monkeys, and yet, say hygienists, the two must not be brought into contact. Shall we put the Simians behind glass as we do lepers? Shall we keep the kids away from their palace in zoological parks, or shall we exonerate the fun-making organ grinders' collector from the charge of the hygienists and let him amuse the kids as he did their fathers before them? Ask the kids.

ARCHERY.

FULTON, N. Y., Sept. 10.—*Editor Forest and Stream:* The writer was much pleased to read the splendid report of the National Archery meet in the issue of Aug. 31. Often are the volumes of FOREST AND STREAM of the early 80's pulled out of the case and the archery notes, written by Maurice and Will Thompson, E. B. Weston, J. W. Sutton, Joe Hussey and others, read. The scores compared with those made by the writer and a mental decision made to make a better score "next time."

Your notice of the last meeting, coupled with an invitation to the lone archer to join, was the means of my joining the National this year. I do not know of any sport so beneficial physically as archery. To the fellow who really tries to excel the mental discipline is truly good for him also.

H. L. LAKE.

The Picture-Postal Card.

BY JOHN PRESTON TRUE.

A CARD has come to me this gloomy day,
 When all the heavens seem on verge a-weep;
 A voiceless message from the realms of play
 To us who stay at post and charges keep
 At battle with grim business' turbid stream.
 It tells—the world is never all at work!
 It tells—some joys in shadows love to lurk
 Like violets or arbutus in May.
 It gives one joy to know there are such places,
 That one dear friend at least such beauty faces
 And on my desk the sunlight falls a-gleam.

YACHTING

Beverly Y. C.

BOSTON, Mass., Sept. 18.—*Editor Forest and Stream:* Inclosed please find summary of the 480th, 481st, 482d and 483d regattas of the Beverly Y. C., the events being the open sweepstakes, special classes for auxiliary and sailing cats, open race, special classes for auxiliary and sailing cats and the eleventh and twelfth club races, sailed from the club house, Aug. 31, Sept. 2, 7 and 14.

F. A. EUSTIS, Sec'y.

Four hundred and eightieth regatta; open sweepstakes, special classes for auxiliary cats, sailing cats; off club house, Aug. 31, 1912. Judge, David Rice. Wind east, whole sail.

21-Footers—Course No. 11, 11¼ Miles.

Saracen, Robert Windsor, Jr.	3 30 23
Foraminifer, D. L. Whittemore	3 33 27
Polliwog, Frederic C. Hood	3 34 32
Phantom, F. W. Sargent	3 42 28
Skate, W. E. C. Eustis	3 48 45

Sonder Class—Course No. 11, 11¼ Miles.

Peg, Galen L. Stone	3 37 04
Joyette, J. C. Edwards	3 37 47
Sally VIII., C. E. Hellier	3 38 53
Fin, Howard Stockton, Jr.	3 42 57

Crane 15-footers—Course No. 15, 8¾ Miles.

Pioneer, Francis B. Austin	3 10 31
Nahma, Henry E. Warner	3 11 19
Charmion, Joshua Crane	3 14 11
Water Witch, C. A. Coolidge	3 16 07
Lestris, Joshua Crane	3 16 17
Pam, Ann Shepley Lionberger	3 17 00
T. D., Philip Y. De Normandie	3 19 20
Nabob, E. H. Bright	3 21 15
Gifted, George U. Crocker	d. n. f.

Auxiliary Cats—Course No. 9, 13¾ Miles.

Jennie, Merton Long	1 49 16
Seavey, Harold Perry	1 51 08
Fanita, E. H. Stevens	1 51 59
Helena, W. W. Phinney	1 52 13
Hunner, Paul Gibbs	1 52 50

Herreshoff 15-footers—Course No. 15, 8¾ Miles.

Vim, W. O. Taylor	3 07 36
Yalu, Miss Margaret Codman	3 08 43
Pronto, Sidney Hosmer	3 09 33
Fly, W. H. Slocum	3 11 03
Endeavor, Gardiner H. Fiske	3 12 02
Tinker, Mrs. R. W. Emmons, 2d.	3 19 20
Pheasant, Alex. Winsor	d. n. f.

Sailing Cats—Course No. 15, 8¾ Miles.

Spray, L. H. Fitch	3 37 27
--------------------	---------

Four hundred and eighty-first regatta; open race, special classes for auxiliary cats and sailing cats; off club house, Sept. 2, 1912. Judge, Henry E. Warner. Wind east, moderate to whole sail.

Auxiliary Cats—Course No. 9, 13¾ Miles.

Jennie, Merton Long	1 51 12
Seavey, Harold Perry	1 35 56
Helena, W. W. Phinney	1 53 19
Fordyce, H. Bailey	1 57 19
Hunner, Paul Gibbs	1 58 29
Quissetta, W. J. Perry	1 59 03
Fanita, E. H. Stephens	1 59 29
Luna, George E. Phinney	2 02 11
Mollie, J. H. Perry	2 03 56

Narragansett Bay Y. R. A. Awards.

DOROTHY, W. D. Wood's knockabout, won the honors in Class I for the yachting season which closed last week. Her consistent performances throughout the season, based upon the number of starts, earned her the percentage. Wanderer VI. is second and Hugi third. The table of championship percentages just completed by W. Louis Frost, Secretary of the Narragansett Bay Yacht Racing Association, shows that Evelyn led Class N; Nomo, Class P; Columbia, Class Q; Silver Fiz, Class R; P. D. Q., Class S; Mist, Class F; Mblem. Class D; Gilt Edge, Class E; Scud, Class X, and Rube, Class Z. The championship percentages follow. There were seventeen scheduled championship races:

Championship won by Evelyn.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Evelyn	6	1	0	7	650.0	92.8
Wasaka	1	0	0	1	100.0*	20.0

Class P—Sloops.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Momo	10	3	0	14	1150.0	82.1
Iseulo	2	0	0	2	200.0*	20.0
Priscilla	1	1	1	3	183.3*	18.3
Evelyn	0	1	0	1	66.7*	6.6

Championship won by Momo.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Columbia	4	1	0	5	475.0*	79.1
Nimbus III.	2	0	1	6	365.0	60.8
Idler	2	2	0	6	350.0	58.3
Molly	4	3	2	9	516.7	57.4
Quakeress	1	3	0	5	300.0*	50.0
Rambler	0	2	2	6	288.3	48.0
Paloma	1	1	2	4	268.3*	44.7
Gazelle	1	1	1	5	241.7*	40.2
Little Rhody	2	0	0	2	200.0*	33.3
Nada	0	1	0	1	66.7*	11.1
Helen	0	1	0	1	50.0*	8.3
Moslem	0	0	1	1	33.3*	5.5

Championship won by Columbia.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Evelyn	5	0	0	5	500.0	100.0

Class R—Sloops.

Silver Fiz	4	1	0	5	450.0	90.0
Swan	3	0	0	3	300.0	100.0
P. D. Q.	0	2	0	3	100.0	33.3

Under Rule XIX., 10, no championship can be awarded to any yacht which has competed in less than five races.

Championship won by Silver Fiz.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
P. D. Q.	3	1	0	4	350.0	87.5
Margaret	2	0	0	2	200.0*	66.6
Princess	0	0	0	1	0.0*	0.0

Class S—Sloops.

P. D. Q.	3	1	0	4	350.0	87.5
Margaret	2	0	0	2	200.0*	66.6
Princess	0	0	0	1	0.0*	0.0

No championship awarded, as no yacht competed in five races as required by Rule XIX., 10.

Class F—Catboats.

Mist	1	0	0	1	100.0*	100.0
------	---	---	---	---	--------	-------

No championship awarded, as no yacht competed in five races, as required by Rule XIX., 10.

Class E—Catboats.

Mblem	6	1	0	7	650.0	92.8
Omeme	1	1	0	2	150.0*	30.0
Alice W.	0	0	0	1	0.0*	0.0

Championship won by Mblem.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Gilt Edge	4	0	2	6	493.3	82.2
Bother	1	3	0	5	355.0	71.0
Netor	1	0	4	5	293.3	58.6
Omeme	1	2	0	5	281.7	56.3
Venture	0	2	1	4	196.7*	49.1
Trouble	0	0	0	2	70.0*	17.5
Curlew	0	0	0	1	0.0*	0.0
Mist	0	0	0	1	0.0*	0.0

Championship won by Gilt Edge.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Scud	2	0	0	2	200.0	100.0
Scout	0	0	0	0	0.0*	0.0

Class X—Dories.

Scud	2	0	0	2	200.0	100.0
Scout	0	0	0	0	0.0*	0.0

No championship awarded, as no yacht competed in five races, as required by Rule XIX., 10.

Class Z—Skiffs.

Rube	5	1	1	7	600.0	85.7
Puzzle	2	0	0	4	200.0*	40.0
Little Mother	0	1	1	3	100.0*	20.0
Me Too	0	1	0	1	50.0*	19.0

Championship won by Rube.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Dorothy	8	6	3	17	1486.8	87.4
Wanderer VI.	3	4	0	11	779.4*	64.9
Hugi	3	3	3	10	728.1*	60.6
Arrow II.	2	1	0	8	533.3*	44.4
Bat	0	0	5	14	597.4	42.6
Mouse	0	0	1	10	349.4*	29.1
Question	0	0	1	7	307.9*	25.6
Anore	0	1	3	6	306.7*	25.5
Bonito	0	1	0	3	100.0*	8.3
Nada	0	0	0	2	45.0*	3.7
Mystery	0	0	0	2	34.3*	2.8

Championship won by Dorothy.

	1st.	2d.	3d.	Starts.	Total P. C.	Season P. C.
Evelyn	5	0	0	5	500.0	100.0

Class I—Sloops.

Dorothy	8	6	3	17	1486.8	87.4
Wanderer VI.	3	4	0	11	779.4*	64.9
Hugi	3	3	3	10	728.1*	60.6
Arrow II.	2	1	0	8	533.3*	44.4
Bat	0	0	5	14	597.4	42.6
Mouse	0	0	1	10	349.4*	29.1
Question	0	0	1	7	307.9*	25.6
Anore	0	1	3	6	306.7*	25.5
Bonito	0	1	0	3	100.0*	8.3
Nada	0	0	0	2	45.0*	3.7
Mystery	0	0	0	2	34.3*	2.8

* Indicates that the total amount of percentage is divided by two-thirds as many races as the yacht having the largest number of starts in the class, in accordance with Rule XIX., 6.

RACE WEEK PLAQUES, 1912.

The Narragansett Bay Yacht Racing Association plaques offered for the yacht in each class making the best showing during the race week were won by the following: Class N, Evelyn; Class P, Momo; Class Q, Columbia; Class D, Mblem; Class I, Dorothy. The summary includes only those yachts starting in five races during the race week as required to win one of these plaques.

Class N—Sloops.

	1st.	2d.	3d.	Starts.	Total P. C.	August P. C.
Evelyn	5	0	0	5	500.0	100.0

Class P—Sloops.

Momo	4	1	0	5	450.0	90.0
------	---	---	---	---	-------	------

Class Q—Sloops.

Columbia	4	1	0	5	475.0	97.0
----------	---	---	---	---	-------	------

Class D—Catboats.

Mblem	5	0	0	5	500.0	100.0
-------	---	---	---	---	-------	-------

Class I—Sloops.

Dorothy	3	3	0	6	545.7	90.0
Wanderer VI.	1	1	0	5	416.1	80.3
Bat	0	0	3	6	246.7	41.1
Mouse	0	0	1	6	246.5	41.0

Class E—Power Boats.

Yvonne	5	0	0	5	500.0	100.0
--------	---	---	---	---	-------	-------

No other yachts started in five races during the race week, as required to win one of these plaques.

Stamford Y. C.

FIVE of the Stamford Y. C. one-design boats sailed a sweepstakes race last Saturday afternoon over Course No. 1. Snapper won by about 1½m. The elapsed time of the boats was: Snapper, Edward Corning, 1.29.38; Dart, R. H. Gillespie, 1.31.05; Osprey, Douglas Ellman, 1.32.06; Killee, Bartholomew Jacobs, 1.43.34; Kelpie, Harold Buck, 1.44.30.

Long Island Y. R. A.

THE last of the season's events of the association came to an end yesterday with a regatta at New Rochelle. It was one of the best events of the year, there being eighteen starters and many close finishes. On board M. W. Houch's Triune, the regatta committee consisted of Theodore Granbery, Alfred Stoddard and R. M. Haddock. The winners were Alert, with an easy victory in her class of six starters; Mist, which trimmed Victory by nearly 2m.; Amorita IV., beating Circe by only a few seconds, and Ada, a winner by 4m. over John Lambden's Grace II. The summary:

Handicap Class, 1st Div.—Start, 2:00—Course, 11½ Miles.

	Finish	Elapsed.
Alert, R. B. Budd	3 59 40	1 59 40
Amada, B. R. Stoddard	4 04 21	2 04 21
Okee, J. A. Mahlstadt	4 05 44	2 05 44
Senora, G. P. Granberry	4 04 35	2 04 35
More Joy, P. V. Griffin	4 13 38	2 13 38
Sally IX., A. E. Black	4 12 48	2 12 48

Corrected times—Alert, 1.59.40; Amada, 2.01.21; Okee, 2.04.32; Senora, 2.04.35; More Joy, 2.08.15; Sally IX., 2.08.39.

Handicap Class, 2d Div.—Start, 2:05—Course, 11½ Miles.

	Finish	Elapsed.
Mist, H. T. Hornidge	4 18 57	2 13 57
Red Wing, Grace & Loewy	4 17 08	2 12 08
Victory, H. A. Jackson, Jr.	4 18 55	2 13 55
Malolo, C. A. Stoltze	4 25 34	2 20 34
Betty, H. L. Stone	4 30 25	2 25 25
Kenmuir, V. P. Krauss	4 35 39	2 30 39

Corrected times—Mist, 2.09.59; Red Wing, 2.12.08; Victory, 2.18.15; Malolo, 2.15.57; Betty, 2.17.29; Kenmuir, 2.29.59.

Handicap Class, 3d Div.—Start, 2:10—Course, 11½ Miles.

	Finish	Elapsed.
Amonita IV., A. E. Fountain	4 31 16	2 21 16
Circe, J. S. and E. S. Appleby	4 31 53	2 21 53

Corrected times—Amonita IV., 2.16.29; Circe, 2.17.39.

Handicap Class, 4th Div.—Start, 2:15—Course, 11½ Miles.

	Finish	Elapsed.
Ada, L. Price	4 47 52	2 32 52
Grace II., J. F. Lambden	4 51 10	2 36 10
Insurgent, U. D. Cutting	4 55 48	2 40 48
Dolly, T. Price	4 57 38	2 42 38

Corrected times—Ada, 2.27.31; Grace II., 2.28.31; Insurgent, 2.33.09; Dolly, 2.38.39.

Columbia Y. C.

WHILE the Hudson River regatta went on up at Yonkers, the Columbia Y. C. held its fall regatta down the river. The winners were:

	Finish	Elapsed.
Squaw, Peter Duffy	3 31 50	0 41 55
Respite, V. C. Pedersen	4 04 30	1 14 30

No. 8, Miss Nellie Showell		3 51 50	1 09 50

Michigan Comes Back.

MICHIGANO, recent defender in the international races, won handily last Saturday. The closing race of the season she defeated the best on the lake front in the 15-mile Sir Thomas Lip-ton trophy event. Michigan was sent over the line alone in the 40-foot class, along with the

Morgan schooner Natant. She soon passed the big craft, for the first leg of the race was a close reach. The second leg was a spinnaker run and Michigan made good time. The last leg was a beat and Michigan again showed her speed. Her time was 2.45.04. L. J. Lambin's 21-foot Invader gave Michigan a hard run for the trophy, as she was only a minute and fifty seconds behind when the time allowances had been figured. Roy M. Barcal's sloop Illinois captured the heat from George B. Currier's Leda, E. M. Mills' Mavourneen and Seboomook. William Haedtler's Cherry won the McCormick trophy from a fleet of ten boats. The summary:

Schooners—Start, 2:25.

	Time not taken.
Natant	

Forty-foot Sloops—Start, 2:25.

	Finish	Elapsed.
Michigan	5 17 43	2 45 05

Thirty-five Foot Class—Start, 2:30.

	Finish	Elapsed.

Ogecmah, A. B. Clements		Withdrew.

Corrected times—Grayjacket, 2.22.01; Joyant, 2.22.07; Windward, 2.24.16; Corinthian, 2.26.46; Carlita, 2.30.45; Lena, 2.34.39; Wild Thyme, 2.58.57.

Red Bank Y. C. Election.

At a meeting of the members of the Red Bank Y. C., held on the 21st, the following officers were elected: Commodore, John S. Dickerson, New York; Vice-Commodore, J. Frederick Betz, Philadelphia; Secretary, W. L. Heddenberg, Fair Haven; Treasurer, Chris G. Hupfel, New York.

Manhasset Bay Y. C.

LAST Saturday brought the final closed regatta at the Manhasset Bay Y. C. There were only seven starters, the class winners being Rival in the schoonerette class, and Scylla in the small sloop division. The championship race was taken by J. W. and E. P. Alker's Alera, her time for the fourteen miles being 2.28.37. The summary:

Championship Race—Start, 2:40—Course, 14 Miles.

	Finish	Elapsed.
Alera, J. W. and E. P. Alker	5 18 37	2 28 37
Moira, C. Cowl	5 33 57	2 43 57
Alicia, W. M. Baldwin	5 33 40	2 43 40
Rival, W. H. Judson	5 33 12	2 42 12
Scylla, E. A. Sierck	5 48 26	3 08 26
Pagan, C. Fuller		Not timed.
Little Dipper, G. A. Corry		Not timed.

Corrected times—Alera, 2.28.37; Moira, 2.36.29; Alicia, 2.36.26; Rival, 3.34.44; Scylla, 2.41.15.

Bay Side Y. C.

THE Bayside Y. C. had a little regatta last Saturday off Sands Point outside course. Loon, owned by Arthur W. Knapp, won by 1s. In the one-design class, Mary Jane, owned by W. E. Banks, beat Bettie, owned by William H. Johns, by about 3m. The summary:

Bayside Birds—Start, 3:30 P. M.

	Finish.	Elapsed.
Skylark, John Dayton	5 09 45	1 39 45
Loon, A. W. Knapp	5 08 13	1 38 13
Dodo, A. C. Andrews	5 08 14	1 38 14
Curlew, C. L. Willard	5 08 20	1 38 20
Teaser, A. Nesbett	5 12 29	1 42 29

One-Design Class—Start, 3:35 P. M.

	Finish.	Elapsed.

Atlantic Division.—Walter Fairchild, 378 Central Park West, New York city, N. Y., by Louis Reichert; Levi Hindley, Millville, N. J., by W. H. Logan, Jr.; Frank S. Bunnell, P. O. Box 62, Hastings-on-Hudson, N. Y., by A. D. Berning. Atlantic Division.—6526, H. C. Daniels, 336 Singer Building, New York city.

GAVIAL FROM THE GANGES.

FOR the second time in the history of the park, we have a gavial. This time the specimen is of good size. The gavial is interesting because of its habitat—the Ganges and Jumna Rivers in India, and its striking form. The very long, thin snout is like the handle of a frying-pan. The time was when the gavial sometimes played a part in some of the religious rites of the Hindus. It is recorded that in times past the Hindu mothers did not hesitate to throw their tiny babies into the Ganges, as an offering to the God of the river. It is a fact, however, that the inhabitants of the Ganges-Jumna region do not hold the gavial as sacred, for it is a matter of record that in 1877 Director Hornaday collected twenty-five specimens, great and small, without precipitating any trouble with the natives.—New York Zoological Society Bulletin.

 July 8-13.—Cedar Point, O.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

The Keene Gun Club will hold a trap shoot on Friday, Sept. 27, with \$40 in high gun money. Merchandise prizes and five-man team race for five individual bronze cups. F. E. Britton is Secretary.

The Royal Center, Ind., Gun Club will give an open shoot on Oct. 4, commencing at 10 o'clock. Grounds near ball park. Money divided 40, 30, 20 and 10 per cent. E. A. Marx is President; J. E. Swisher, Secretary.

W. G. BEECROFT.

The Westy Hogans Tournament.

ATLANTIC CITY, N. J., Sept. 21.—It takes a pier to make a pier in Atlantic City—so say the Westy Hogans. Last year's shoot was second to none (excepting of course the G. A. H.). This year they couldn't shoot on Young's pier, and so—well, the crowd wasn't as big as last year's. At that, it was no kindergarten, for 136,000 clays were trapped, and every one liked Venice Park, where the shoot was held, and if it could be figured in amperes it would still be the strongest shoot in the country. Brother Newcomb came away with high average, with 431 out of 450, while Les. German, having watched the ball scores, possibly figured on getting a chance to shoot off the championship with Johnny McGraw and the Red Sox, took high pink sheet, for targets only average with 429 out of 450. Mr. German is from Aberdeen, and du Pont. Allen Heil took home a reminder in the way of Westy Hogan championship at doubles with 91 out of 100, also annexing the Atlantic City cup with 144 out of 150. Incidentally C. H. Newcomb won Westy Hogan championship at singles with 99 out of 100 after shooting off with H. E. Buckwalter. Newcomb broke 19 to 18 for Bucky. J. S. Young, being strong on the "bull," again won the Bull Durham trophy. He smoked out the same trophy last year. The Westy Hogan special was awarded to C. R. Seelig, from the Windy City with 92 out of 100. Fred Plum, from board walk town, couldn't see a "foreigner" take the Venice Park special, so cracked 188 out of 200 and took home that cup.

Charles H. Newcomb, with a run of 103 straight, won a Du Pont medal. He broke 72 straight the first day and had an unfinished run of 31 on first day.

Next year all hands hope the shoot will be held on the pier. Scores:

There were five events at 20 single targets each, and one event at 20 pairs doubles on practice day, and scores were made as follows:

Table of names and scores for the first section, including names like Geo Eck, G T Seelig, C R Seelig, etc.

Table of names and scores for the second section, including names like G V Derring, Ed Graham, W H Matthews, etc.

Table of names and scores for the Chicago Gun Club, including names like J S Young, J R Graham, J B Barto, etc.

Linn County Gun Club.

BROOKFIELD, Mo., Sept. 18.—To-day finished a mighty successful two-days' tournament here, with crackling good scores generally.

Table of names and scores for the Linn County Gun Club, including names like J M Barrett, V Cate, C B Eaton, etc.

Sept. 21.

Table of names and scores for the Westy Hogan Special and Venice Park Special, including names like Chas Foster, W R Dawes, etc.

Table of names and scores for the Charleston Gun Club, including names like H D Freeman, C G Spencer, etc.

Charleston Gun Club.

CHARLESTON, W. Va., Sept. 21.—The following scores were made to-day, at 100 targets: De Gruyter 95, Davis 91, Crider 86.

Fred Bills turned in a score of 99 out of 100 on singles, while Joe Barto landed first amateur honors on the singles. MacLachlan, who had taken a "lay-off" from target shooting for several months, was up to his old trick of landing the top score on doubles, breaking 42 out of 24 pairs.

Table of names and scores for the Fred Bills event, including names like Fred Bills, J B Barto, O P Goode, etc.

Sept. 15.—Events Nos. 4 and 5 were distance handicaps. Although the weather appeared rather threatening, with heavy, dark clouds overhead and a strong north-east wind blowing all day, nineteen marksmen came out to our park for the afternoon's sport at the traps.

D. Battle, one of the "old guard," who has not shot targets for years, turned in a total of 89 out of 100 and 17 out of 12 pairs in the first double he had ever tried.

Stemmer is another one of the former standbys, who should come out oftener and keep in practice. All members who can possibly do so should come out next Saturday and Sunday and get in some practice for the Interurban League shoot at our park on Sept. 29.

Table of names and scores for the Fred Bills event, including names like D E Thomas, E Silver, D Battle, etc.

The Pinehurst Midwinter Handicap.

AMONG the innovations which have done much to popularize the classic midwinter handicap at Pinehurst, N. C., is the selection of the handicap committee from "shooters in attendance and covering as wide a range of territory as possible." As a result, the participants have the important subject of handicapping in their own hands, and the end attained is the solution of a difficult problem, which other big shoots have found a hard nut to crack. Thus, the entrant is assured not only fair play, but intelligent consideration, the voice and vote of some one whose statements are fact, not surmise, for "reputation" is frequently a fickle thing, invariably over-generous in estimate of skill.

Equally successful promise to be the new feature scheduled for this year's shoot, Jan. 22-25, which divides the field into three classes, with division trophies in each in addition to the regular trophies. The aim is to provide for the average shot, who is usually outclassed.

Representing as it does all sections, the event has become a leader in its comprehensive scope, embracing the best ideas of North, South, East and West. In a word, the resort element so conspicuous in golf here, is showing itself in trapshooting.

H. L. JILLSON, Sec'y.

Grand Forks Gun Club.

GRAND FORKS, N. D., Sept. 16.—The Grand Forks Gun Club, reorganized last spring, have just closed a very successful season, and will start next year with better prospects than ever before. We have leased the grounds, built a new club house, and will install another trap in preparation for the annual shoot of the North Dakota State Sportsmen's Association, which will be held here next year. Following are the scores of our last shoot for the gun club trophies:

Shot at. Broke		Shot at. Broke	
Hale	300 279	Duis	150 131
Fletcher	300 269	Plins	150 108
Woods	300 246	McKinnon	150 121
Budge	300 218	Ludvigson	100 89
Eckman	300 211	O'Reilly	100 91
Anderson	225 160	Colborn	100 73

P. U. ECKMAN, Sec'y.

Smith Gun Club.

NEWARK, N. J., Sept. 21.—Few shooters turned out this afternoon at Smith Gun Club. Sweepstake shooting was popular. High gun went to E. H. Taylor, who managed to smash 141 out of 150. Scores:

D D Engle.....	22 22 21 22
I P Lawton.....	18 15 21 19 12

Mammoth Denver Handicap

A Harvest of Victory

For Shooters of World-Beating Guns and Shells

Most sensational shooting of great "Mile High" event another sterling tribute to record-breaking *Remington-UMC* Arms and Ammunition.

R. H. Bruns, shooting Speed Shells, makes Brilliant String of Scores

Among this 21-year-old marksman's star achievements were:

- Broke 200 straight first day
- Won High Amateur Average of whole shoot, 494 x 500
- Made longest run of Handicap, 283 straight
- Broke 683 x 700, including Handicap Targets

Denver Handicap Event: Four shooters of *Remington-UMC* shells tied with the winner.

Championship on Doubles: Wm. Ridley, shooting *Remington-UMC* Arrow Steel Lined Shells, scored 96 on 50 pairs of doubles, making a world's record for this event.

Preliminary Handicap: Won by H. E. Whitney, 98 x 100, shooting *Remington-UMC* Pump Gun.

Second: R. H. Bruns, 97 x 100, shooting same ammunition.

Post Trophy, Handicap Championship of Colorado, Wyoming and New Mexico: Won by C. F. Nelson, 97 x 100, shooting *Remington-UMC* Pump Gun and Arrow Steel Lined Shells.

STEEL LINED FAVORITES WIN WESTY HOGAN SHOOT

Shooters of *Remington-UMC* — "the perfect shooting combination" — predominate at famous Atlantic City meet.

Westy Hogan Championship: Won by C. H. Newcomb, 99 x 100 and 19 x 20 in shoot-off, shooting *Remington-UMC* Arrow Steel Lined Shells.

Bull Durham Trophy: Won by J. S. Young, 146 x 150, shooting *Remington-UMC* Nitro Club Steel Lined Shells.

Remington-UMC—a century's experience to back up your aim. **Winners at Olympic Games, Winners at Grand American Handicap, Winners at Western Handicap. STILL WINNING!**

Baltimore Rod and Gun Club.

BALTIMORE, Md., Sept. 18.—The above-named club is now arranging for a great live-bird shoot on Thanksgiving Day, at which time we anticipate shooters from Philadelphia, Pa.; Washington, D. C., and Virginia. Our practice shoot on Sept. 12 had the following scores:

Shot at. Broke		Shot at. Broke	
H N Williams..	48 42	J Dolman	35 32
Dr R G Barker	50 36	WM MURRAY, Sec'y.	

Holdrege Gun Club.

HOLDREGE, Neb., Sept. 14.—Appended are the scores made at the registered tournament held at this place by the Holdrege Gun Club, on Sept. 5 and 6. High gun for the two days was H. J. Rebhausen, who shattered 283 out of 300. Second went to E. W. Varner with 275. Our gun club wishes to thank Mr Bert Manning, of Hastings, Neb., and the company he represents, for his services as cashier. Sept. 5 scores:

Tournaments have been promoted in years past largely for mercenary gain. The management of the Denver handicap has been against this policy for years, and not only established a precedent in large tournaments held here, but has preached the prohibition of unsportsmanlike encroachment upon the loyalty of trap shooting. Were it not for the loyalty of the enterprising business men in their contributions to the deficiency fund, supporting this undertaking, it would be impossible to offer the inducements set forth in the Denver Handicap.

With this object in view, the shooters left their homes in almost every State of the Union, and with gun in hand, started for Denver. We may say that all railroads lead to Denver, and this brought the Southern shooters in larger number than any previous tournament. Mr. R. R. Skinner, of Birmingham, brought a special car of the best of the good ones from several of the Southern States. As will appear later on, it is the consensus of opinion of the shooters present, including the winner himself, that Mr. Skinner should have the trophy in his car now speeding southward.

The Denver Handicap

Special Report

DENVER, Sept. 9.—This was practice day at Overland Park, where the biggest event of the year was held. A few shooters were on the firing line during the forenoon. They had it shown them that the master tournament promoter and manager, R. E. McKenzie, had planned correctly, and was in "apple pie" order. The layout could not be improved. If one takes into consideration the grounds, the buildings, the background and the usual weather conditions in this Denver climate, the scribe feels warranted in making the statement that there is no other place in the United States can surpass the conditions here found at Overland Park.

The traps were set in a line just outside the race-track, facing east, shooters standing on the track, the land in front being smooth and level.

When the advance guard of "good shots" arrived they were compelled to remain indoors for an hour, as a hard shower came up. The large room under the grand stand was comfortable. The boys had time to look over the shells, and surely there were enough of them—a whole carload of Winchester, Remington-U. M. C., Peters and Black shells.

Then the office was found to be ready and fitted up with wire screens, tables, desks, etc., nothing to do but sweep off the dust and open up the books and take the entries. Here again the management had not "overlooked a bit," as the old-timer, the man who has handled all the money at the Grand American Handicap, Fred Whitney, was behind the pigeon hole, smiling at all as he passed out the receipt slip. Occupying the adjoining booth was Marshall Sharp, who with plenty of young men assistants, was eager to compile the scores.

Mr. McKenzie had not overlooked any of the details. The rain ceased by 2 P. M., and the 100-target race was started. One hundred and fifty-eight men tried out the speed, flight and general working of the ten traps. W. R. Crosby showed up in his 1912 form and missed only his 95th target.

First Day, Sept. 10.

The first day had ten 20-target events, divided Rose system, 5, 3, 2, 1. While the entries were being made the shooters were called before the amphitheater for the purpose of being welcomed by the Mayor of the city. Mr. Ambrose E. McKenzie, the presiding genius on all such gatherings, called the shooters' attention to the welcome that was to be extended to them by the Mayor, and regretted to state that the Mayor, who is a thorough sportsman and believed in the true principles of sportsmanship, was called away on business, but that we had with us Judge Gavin, a man who had trailed the buffalo in the early days.

Judge Gavin proved the man for the place, and was delighted with the large attendance of scattergun artists. He said with much emphasis that in all his life he never met a man fond of the chase with the dog and gun that was not the perfection of honor. "Denver is yours," he

CAPT. A. H. HARDY AND A BEVY OF ENTHUSIASTS.

said. "We welcome you to our city and our homes. If any of you are out a little late or should digress a bit, just remember that I am judge; call me up day or night."

Now, Mr. McKenzie spotted Chief Heap Talk, and called him to respond for the shooters. So our Tom thanked the Judge and the good people of Colorado for their hospitality, knowing of no place he would sooner be at the present moment than in Denver upon the great shooting ground at Overland Park. Our Tom could not refrain from a little diversion as to Shaner's bald head. So he was called out to greet the boys.

Mr. Shaner said he was passing through on his way home from the Pacific Coast Handicap, and could not pass without a "look in." He referred to the big shoot he conducted here six years ago, when there were 311 men entered, and thought most of the men here were in at the Berkeley shoot, and with the hope that the best man would win, he bid us all goodspeed.

Mr. McKenzie explained the rules and told the trappers, pullers, referees and scorers to get busy, and Mr. Gannon opened the ball with the first gun, and Bill Crosby followed, and soon it was bang, bang, heap bang, from fifty odd guns, and the great Denver shoot of 1912 was on.

As the popping kept up, it was seen that some great scores would be the result, and so it proved. The old-timer from O'Fallon was at the top, as usual, with 199. He was in "hot" company, as E. W. Varner ran 184 straight and wound up with 197, having as a partner, H. C. Kirkwood, of Chicago. Those with 195 were J. S. Day, C. G. Spencer, B. J. Stark, H. G. Taylor, J. C. Norris, W. A. Waddington and R. H. Bruns.

Second Day, Sept. 11.

The attendance was increased somewhat, while but few dropped out with sore shoulders. When the time came for the sun to appear in the east Old Sol did not show through the hazy fog, and it looked unfavorable for trapshooting. The oldest inhabitant came to our rescue and told the facts in the case that the haze was the forerunner of a fine day; and he was right, the day was perfect, nothing to prevent making 200 straight only failure to pull the trigger at the right time. This was proven by the scores made.

In the amateurs we find they did the professionals quite for like numbers. So here we have it: R. H. Bruns 200, R. A. King 197, S. A. Huntley 197, A. Hill 196, C. B. Plank 195, H. Dixon, W. A. Waddington, Nick Arie and W. A. Brown 194. Many more were above the 95 class.

Chas. G. Spencer led the gang of representatives with 197, with John W. Garrett as his running mate. T. Bill and "Happy Ed." came on strong with 196; George Maxwell and Kirkwood 195; Clancy 194, J. S. Day 193.

Did you see that 200 made by young Bruns? He is a young fellow from Brookville, Ind. He says he is twenty-one and has been shooting for two years. He closed the day with an unfinished run of 241. C. B. Eaton, the steady shot from Missouri, let only two little saucers reach the ground in the form they left the trap. R. A. King had a bad half hour in last 20 and finished with 197.

Third Day, Sept. 12.

The program called for 100 targets, in five strings of 20 targets each, with a separate event money divided per cent. system, 40, 30, 20 and 10, not high guns. Something novel for handicaps, eh? The other 100 consisted of 50 pairs of doubles, each 20 to constitute a race, with the money divided 40, 30, 20 and 10 per cent.

Much interest was centered in both events and both turned up winners that broke all records. Where one Bill Crosby stood at 23yds, and made 98, there was record-smashing. The way the little saucers go to dust show that T. Bill has caught on, as he used the same three-dram load that he does at 16yds. Mr. Whitney, from Anthony, Kans., came on in great form, and tied the high man with 98 from the 19 peg, and Bruns from 21yds. showed some "busting" ability, and lined out 97. There were so many other good scores that you must study the table.

The double shooting brought to the shooting world another great performer, making a world's record. Wm. Ridley, one of Iowa's best, lost but 4 out of the 100—a great total of 96. There is another Iowa "feeler" that will bear watching, being no other than S. A. Huntley from the corn State of Iowa. He surprised all with 95. H. Kahler seemed to catch on with his borrowed gun, and was not far behind with 92. Fred Gilbert kept his record good by leading all the men in his class with 91, while J. S. Day came on with 90.

There were some good pots won in the sweeps, some of them being as much as \$33.50. Look the scores over and see what your friends did.

1st Day. 2d Day. 3d Day. Total.

Table with 4 columns: Name, 1st Day, 2d Day, 3d Day, Total. Lists names like R. R. Skinner, J. H. Hillman, W. T. Tashe, etc.

Another Clean Sweep and A New World's Record MADE WITH WINCHESTER Red W Goods At The Great Big Denver Handicap At the Westy Hogan Shoot Winchester Shells and Guns Are Continuous In Winning

Another Clean Sweep and A New World's Record

MADE WITH

WINCHESTER

Red W Goods At The

Great Big Denver Handicap

As shown below, every event on the program of this big shoot was won with Winchester goods, and in addition W. R. Crosby hung up a new World's Record by breaking 98 x 100 targets from the 23 yard mark in the Preliminary Handicap.

Preliminary Handicap: Won by Harry Whitney with "Leader" Loaded Shells.

Denver Handicap: Won by C. B. Eaton with "Leader" Loaded Shells.

High for All Targets: Won by Chas. G. Spencer with "Leader" Loaded Shells and a Winchester Repeating Shotgun.

High Amateur for All Targets: Won by S. H. Huntley with a Winchester Repeating Shotgun.

At the Westy Hogan Shoot

High Amateur for the Three Days: W. H. Buckwalter and Mr. Bowen shooting Winchester Guns and Winchester Shells tied with another shooter on 431 targets.

Double Championship: Won by Al Heil with Winchester Shells. Score 91 x 100.

Atlantic City Cup: Won by Al Heil with Winchester Shells. Score 144 x 150.

Longest Run of the Tournament: Made by J. M. Hawkins. Score 125 straight. Mr. Hawkins shot Winchester Shells and Winchester Repeating Shotgun.

Winchester Shells and Guns Are Continuous In Winning

Table with 4 columns: Name, 1st Day, 2d Day, 3d Day, Total. Lists names like P. Bergerson, W. J. Coats, J. A. Blount, etc.

Peters Shells

WIN A GREAT VICTORY AT THE GRAND AMERICAN HANDICAP AT SPRINGFIELD, ILL., JUNE 18-21

PRELIMINARY HANDICAP—Won by Wm. S. Hoon, 94 x 100 and 18 x 20 in shoot off.

AMATEUR CHAMPIONSHIP—Wm. S. Hoon tied for 1st place, 192 x 200.

GRAND AMERICAN HANDICAP—C. A. Young made High Professional Score, 95 x 100 from 22 yards.

PROFESSIONAL DOUBLES CHAMPIONSHIP—J. S. Day and Walter Huff tied for 1st—84 x 50 pairs.

AMATEUR DOUBLES CHAMPIONSHIP—Harry W. Kahler 2d—88 x 50 pairs.

There were no 16-yard targets at the Grand American, and therefore, no targets that will figure in the season's average. It must be apparent, however, that in figuring the average at Springfield, the scores made on practice day, the double target event, and the Consolation Handicap should be eliminated—the Consolation because it was not open to all. The real Amateur Average was therefore won by Mr. Hoon, on his score of 380 x 400.

HIGH AMATEUR AVERAGE—All single targets, W. S. Hoon—380 x 400.

Practice Day: 2d Professional Average, H. D. Freeman, 192 x 200. 2d Amateur Average, Bart Lewis, 191 x 200.

All the above used the Red P Ammunition. A fitting climax to a wonderful succession of winnings. The superior quality of "steel where steel belongs" shells absolutely proven.

For Field or Trap, there is no shot-gun ammunition that gives the unalloyed satisfaction that can be gotten with the Red P Brand.

Last Day, Sept. 13.

First came the 100 targets—five events of 20 targets each, at 10yds. for all. The scores will show that the "pick-ups" on this day were not much, and would not enrich the club. Why? John W. Garrett, Heil and Rebhauser made 100 even, while Hoon, Sharp, Bruns, Spencer and Grubbs lost but one each. Besides this, see how the 98s and 97s loom up.

When this part of the program was completed, then came the summary of the four days for the 500 targets. When the cashier and compiler had done some heap "quick figure," it was found that the money-back surplus amounted to \$377.75, which was proportioned among the high guns as follows: Bruns, \$49 for high gun with 494; Varner, \$45.25 with 491; Easton, \$37.70 with 490; Huntley, \$33.95 with 489; Sharp, \$30.15 with 488; Heil, \$26.40, with 487; H. Dixon, \$20.70 with \$4.86; King, \$20.70, with 486; Yowell, \$14.95 with 485; Campbell, \$14.95 with 485; Keen, \$11.30, with 484; Waddington, \$11.30 with 484; Norris, \$5.65 with 483; J. Rohrer, \$5.65 with 483; Hoon, \$4.30 with 482; Plank, \$4.30 with 482.

And such is the shooting game of to-day in the Far West. Not enough lost targets to put any "spice" into the game—too monotonous.

We have here Spencer 492, Crosby 491, Kirkwood 488, O'Brien 488, John Garrett 487, Geo. Maxwell 487.

Now, we come to the closing event, the Denver Handicap, with a goodly sum of money for the winner and twelve moneys, class shooting, for the others; per cent. system, not high guns, thus, 14, 13, 12, 11, 10, 9, 8, 7, 6, 5, 3, 2.

The handicap committee made some changes in their first attempt and set back the winners of Thursday so they did not show so well. For some reason, they all steadied down, and such scores were never made before upon any occasion. The scores were all so good that a perusal of them, with the money slips they passed in to the cashier, will interest the reader. It will be of concern to mention that Riley Thompson lost his last target and got in the tie with six others. This one particular target would have brought him the neat little sum of \$466—quite an addition to the bank roll. Be it remembered that this is the second time that Riley has tied on 97 in this golden city, and lost out on both occasions. Here is the story of the finish.

Pot, \$2,078.80, divided as follows: Each of the following good ones got \$77.70 for their score of 97: C. B. Eaton, A. Martin, V. Cate, R. Thompson, J. Vincent, R. R. Skinner and R. E. Brown.

There were not so many 96s, and H. S. Mills, Dan Bray, T. C. Ford and W. H. Shelton got \$58.30.

Five divided \$30.70—F. McNair, France, J. H. Warren, F. Slocum and T. Ehler—for their 95.

THE RECORD LONG RUNS FOR 1912

At the Brookfield, Mo., Registered Tournament, September 17-18, C. B. Eaton, an amateur of Fayette, Mo., made the 1912 Long Run Record*
332 Straight.

C. G. Spencer, of St. Louis, Mo., made the High Professional 1912 Long Run
309 Straight.

Mr. Eaton used DU PONT

Mr. Spencer used SCHULTZE

*Mr. Eaton had an unfinished run of 39 in Practice events on September 16, but as the events were not scheduled in the Program, his official "Long Run" for a Du Pont Trophy is only 293 made in program events on September 17 and 18.

What Powder Do You Use?

Those with 94 were in excess of the others, and they were awarded each \$21.90; they were R. A. King, F. Campbell, E. W. Arnold, J. McClain, Rebhauser, H. Anderson, W. Coche, L. Schofield and E. W. Boering.

As for the others, 93 paid \$10.50; 92, \$8.00; 91, \$9.55; 90, \$10.45; 89, \$11.95; 88, \$6.90; 87, \$6.70; 86, \$5.30.

Did you ever read of seven men tying in a handicap target race? Well, here they are: At 20 targets. Being called to the score with sky overcast, which brought quite a sprinkle of rain ere the finish, resulted: Eaton 20, Thompson 18, Cate 18, Skinner 20, Vincent 18, Martin 19, Brown 18.

On the second tie Eaton won with 19 to Skinner's 18. And yet, to the minds of many or most all who saw the shoot, there is a question as to the winner. Mr. Eaton lost a target in the first round, and if he was not balked then according to equity in the matter, Skinner with his 20 is the winner, regardless of the last 20. The trouble arose like this: Brown, shooting ahead of Eaton, shot, broke, and was scored dead; then Eaton in his turn, and with nothing said or done to balk him, took deliberate aim, called "pull," shot and missed. The referee was Mr. Nelson Franklin, a sporting goods dealer, and it is understood had asked Mr. McKenzie to assist him. Soon after Mr. Eaton shot, Mr. McKenzie

called out that the target Brown had shot just previous to Eaton, was a broken and thus "no target," and he should shoot at another. Brown shot another, and as was claimed, that Eaton had shot out of turn, he was asked to shoot another target, which he did and broke, and was scored dead in place of one previously missed. Mr. Skinner will ask the Interstate Association to give a ruling on this. Meantime, what do you say? The facts above are as stated to me by eye witnesses, as I did not see the shoot-off.

A pleasant feature not on the program was that of a surprise sprung by one Tom Marshall, who came on to the grounds sporting a new suit of light-colored "homespun." Looked kind of foxy. He passed among the shooters and asked them to meander out in front of the grand stand, as something was on tap. Presently Tom came upon the platform with something under his arm that looked like a flour barrel. Meantime, some one had suggested to McKenzie that he had better get the boys to shooting, as they were losing time. So he was caught unaware, while Tom made one of his best speeches, and wound up by presenting the manager with a silver cup as a token from all the contestants present, as they were from every State in the Union. What was needed then was a stenographer to take McKenzie's

LEFEVER GUN

WINS HIGH AVERAGE OVER ALL

LEFEVER ARMS COMPANY Syracuse, N. Y

Never Shakes Your Confidence

DON'T let your long planned hunting trip be spoiled—spoiled by your gun not rising to the occasion at some critical moment. And you know how the shortcomings of your gun always show up at the critical moment.

After that your confidence is gone. The six Hunter brothers have kept on the trail of shotgun shortcomings with invention, workmanship and Purpose, for 22 years.

The result is the Smith Gun, the gun without a single shortcoming to mar the pleasure of the

hunting trip or cheat the game bag of a single bird.

Purpose got rid of "shooting loose" by producing the Smith bolt, which double-wedges through extension rib and grips tight with a double rotary grip.

Purpose eliminated *inaccessibility*—which causes a gun owner to leave his lock uncleaned until it causes trouble—with the Smith "one-screw access." And so on through the list.

Have your dealer show you the new Smith 20 gauge—20 gauge from butt to muzzle. Write for catalog, showing grades from \$25 net to \$1500 list.

\$102.50 grade. Net price, with ejector, only \$75; with Hunter One-Trigger, \$100 net.

L. C. SMITH GUNS

"6 Times 22 Years' Experience"

HUNTER ARMS COMPANY, 76 Hubbard Street, FULTON, NEW YORK

(Patented, Feb. 20, 1912.)

CLEAR VISION means a sure shot. The bright rays of the sun, or the haze of a dark day can't affect your vision if you wear **KING'S SHOOTING GLASSES**. Made of **Akopus Crystal**, our exclusive product and infinitely superior to amber. Non-magnifying. Postpaid, \$1.50 to \$7.00. Prescriptions ground to order.

The **KING** and the **KING-BUSCH-STELLUX** Binoculars have wonderful magnifying power, are handsomely finished, durable and scientifically correct. Endorsed by the leading sportsmen of America. You save \$10 to \$25 buying direct from us.

JOSEPH DIXON/CRUCIBLE CO.

JERSEY CITY, N. J.

reply while thanking the donors. It would furnish food for reflection, as it contained his opinion and appreciation of the character of such sportsmen as were before him. If Marshall cannot get such high scores as others he has them all beaten a mile and more when it comes to looking after the social part of these gatherings. Come to think of it, Tom should not be required to face the traps. While shooting he loses too much time which he could better spend making the shooters' lady friends feel that their presence is very much appreciated on all such occasions. The writer calls to mind the time when this same kindly disposed spirit presented him with a valuable prize on the eve of his team crossing the water, where he defeated all comers, both in the shooting game as well as the entertainment.

The Marlin Repeating Shotgun

12 or 16 GAUGE

Made famous by its dependability. The solid top and side ejection keep gases and powder away from your eyes; help quick, effective repeat shots. Rain, sleet, snow and foreign matter can't get into the action.

The mechanism is strong, simple, wear-resisting. The double extractors pull any shell instantly; two special safety devices prevent accidental discharge while action is unlocked, and an automatic recoil block makes hangfires harmless.

All Marlins are strongly made, finely balanced, accurate, hard hitting guns, and are the quickest and easiest to take down and clean. 12-ga. hammer and hammerless, 16-ga. light-weight repeaters; regular, trap and field models; \$19.50 up.

Send three stamps postage today for our 122 page catalog, describing the full Marlin line.

The Marlin Firearms Co.
27 Willow Street, NEW HAVEN, CONN.

Davis Guns

Send for our large Catalog and see what a high grade gun you can buy for a low price.

"The Gun that Blocks the Sears"

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sears (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that "Blocks the Sears". It is a *Safe* "Safety".

Independent Gun Club.

EASTON, Pa., Sept. 21.—The Independent Gun Club held its seventh shoot for the FOREST AND STREAM cup to-day. As there is only one more shoot for the cup and some of the scores are close, the next shoot on Oct. 5 promises to be an exciting race, as all the shooters are anxious to win this handsome trophy. The scores to date are, handicaps included:

Shot at, Broke		Shot at, Broke	
J Maurer.....	350 311	G Cross.....	350 307
J Heil.....	300 250	B Winner.....	350 294
W Ivey.....	350 286	C Stocker.....	300 260

J. Maurer has been doing the best shooting, as he and J. Heil are the only ones that have not had a handicap through the shoot. The club's new trap is working good, and with the grounds in good shape and a clear sky background, we now have one of the most up-to-date clubs in this section, and invite all shooters to come on Oct. 5 and have a good time with us.

Below are the scores made to-day:

Shot at, Broke		Shot at, Broke	
J Maurer.....	50 45	Schniepp.....	50 40
J Heil.....	50 42	E Warner.....	75 19
G Cross.....	75 59	W Maurer.....	100 67
W Ivey.....	50 18	J Gunning.....	50 18
B Wenner.....	100 61		

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

Connecticut Field Trial Club.

HARTFORD, Conn., Sept. 5.—*Editor Forest and Stream:* The fourteenth annual trials of the Connecticut Field Trial Club will be held at Hampton, Conn., commencing Tuesday morning, Oct. 22, 1912. The annual meeting of the club will be held on Monday evening, Oct. 21, at 8 o'clock at the Chelsea Inn and the drawing for starting order will take place at this meeting.

At the trials last year more birds were found than for a good many years past. At the present time it looks as if every brace down this year should be able to find birds.

The judge of the trials this year will be Mr. W. W. Titus, of West Point, Miss.

During the meet a bench show will be held to which every dog entered in the trials will be eligible. The entry list will include the very cream of setter and pointer breeding, and the awards in the bench show will mean that the winners are not only good in performance but also in looks and conformation.

The entry list promises to be bigger and better this year than ever before. A large entry is already assured in all the stakes, and, aside from the good time which every one will enjoy at the trials, there will be "class" and interest enough in the trials to furnish entertainment and education for every one present.

The entries close Oct. 12, 1912. Address entries, with forfeit money, to

C. H. GILLETTE, Sec'y-Treas.

Dogs for Food.

AN inquiry leads to a little known fact which is the derivation of the name "Chow Chow." This dog hailed originally from the celestial Empire, where he is used for food; hence the name Chow Chow, which is pigeon English for an edible. In China the chow is not fed on meat, but is sustained and fattened on rice and other grain. He is butchered in the same manner as sheep and other small food animals. In front of Chinese meat shops, dressed chow and cat's paws may be seen hanging in the same way as sheep, etc., are "hooked" in front of our shops, and a dainty, tasty appearance has the luscious chow as it hangs as a tempter to the Oriental housekeeper. The Chinese restaurants offer most delectable dog dishes such as soup, ragout, broil, roast and stew. Cat's paws hold a position in China relative to that of pig's knuckles among Americans.

TRUE BLACK OPALS SCARCE.

BLACK opals are commonly the result of artificial coloring, but true black opals have been mined in a small district at the head of the River Darling in northern New South Wales during the last nine years.

The output was at first very small, but for a few years amounted to 30,000 to 40,000 per annum. At present they have become extremely rare, hardly any having been found during the last nine months.—From the Scientific American.

ANTI-CHIGGERINE

An Outing Without Chiggers (Red Bugs) A Real Pleasure. Why suffer on your outing from chiggers, when for 25c. you can procure an effective remedy and preventive sufficient for a month's trip.

Anti-Chiggerine prevents chiggers from getting on one, also allays the irritation of the bite. It is non-poisonous, will not injure the most delicate skin, not offensive to use, not sticky, no smell. Outdoor life in beautiful September and October is marred only by chiggers. If you use Anti-Chiggerine as directed, you can sit on old logs or stumps, have your lunch on the grass, and roam the woods without discomfort from chiggers.

Send 25c., coin or stamps, for a box by mail prepaid.

Canandaigua Sportsmen's Club.

THE Canandaigua Sportsmen's Club held their last shoot of the season on Sept. 21, at Lakeside Park, the date having been set ahead of the regular Friday on account of the county fair. The five shooters in the squad were separated by one target each in the final score, but the added target handicap tied Kibbe, Stoddard and Van Wormer, who shot off, resulting in first for Kibbe, silver spoon; second for Stonnard, cut-glass dish, and third, Van Wormer, Nyoil.

The prize winners for the season's average were also decided, the standing being: Stoddard first, Mason second, Kibbe third, Eiseline fourth, Soule fifth, Van Wormer sixth. All received handsome hand-painted china vases or plates.

As a wind-up Mason defended his title of club champion against four contestants, the score being close, as follows: Mason 40, Van Wormer 39, Stoddard 37, Soule 35, and Eiseline 33.

The scores in the regular event, 50 targets, were as follows:

Kibbe	12	50	Eiseline	9	45
Stoddard	11	50	Mason	2	42
Van Wormer	13	50			

Roanoke Gun Club.

ROANOKE, Va., Sept. 21.—With the season on the wane, the members of the Roanoke Gun Club seem to be losing interest in the sport, only fifteen participating in the regular shoot Saturday afternoon. A turkey shoot will be held again this season on Oct. 26, the last day of the shooting season, and all members are invited to participate. The weekly medals were won by the following members:

Scratch—First, P. L. Price; second, E. C. Watson.
 Class A—First, H. C. Elliott; second, H. F. Wilkinson.
 Class B—First, C. H. Ferguson; second, A. H. Boyd.
 Class C—First, E. C. Kinnier; second, C. T. Jennings.

H. F. WILKINSON, Sec'y.

Du Pont Gun Club.

HOMER CLARK defeated W. S. Colfax here last Saturday. The Illinois champion broke 49 out of his 50, while Colfax bagged 45.

E. S. Richards, H. H. Sloan and L. C. Willis were among the visiting shooters, who made good scores, as did also O. Groff, of Avondale, Pa. W. A. Joslyn, who has been shooting at a great clip lately, broke 49 out of 50. The Coleman du Pont spoon contest had a large entry list, interest having increased since the addition of Class E for novices.

Thirty-one contested in the merchandise event, and there were nine prizes. The nine high men each made (with added targets) perfect scores of 25.

The final contest for the 1911 Class D challenge cup brought out nine of the ten men eligible for this event. It was won by J. A. MacMullen, with 41 out of 50 from the 18yd. mark. The cup now becomes his property.

Eight teams contested in the Eugene E. du Pont team trophy shoot, four teams (with added targets) making perfect scores, thereby gaining four points each. The team scores follow:

W. H. Hitchcock and N. K. Smith 50. Clyde Leedom and Eugene du Pont 50. W. M. Hammond and

L. L. Jarrell 50. R. F. Willis and L. H. Hoopes 50. W. Edmanson and J. H. Minnick 49. H. P. Carlon and Dr. E. Q. Bullock 47. J. B. McHugh and Stanley Tuchten 47. Dr. H. Betts and L. C. Lyon 46.

The scores in a novice race, the men shooting at the traps for the first time, were: W. D. Sillitoe 4 out of 10, W. S. Matchett 1 out of 10, J. B. Owens 6, Z. H. Lofland 19, T. W. Mathewson 18, R. S. Wood 19.

The du Pont spoon event resulted as follows:

- Class A—Eugene du Pont 25.
- Class B—L. C. Lyon 23.
- Class C—L. L. Jarrell 23.
- Class D—J. G. Highfield, Jr., 22.
- Class E—John E. Miller 10.

Event No. 2, merchandise shoot for nine prizes: The prize winners were: S. G. David, D. J. Dougherty, J. W. Mathews, Stanley Tuchten, W. Edmanson, W. G. Wood, H. P. Carlon, L. H. Hoopes, Jr., T. W. Mathewson.

Exhibition shooting match: H. Clark 49, W. S. Colfax, Jr., 45.

Final shoot for Class D 1911 challenge cup: H. T. Reed 34, W. B. Smith, Jr., 28, L. L. Jarrell 40, R. S. Wood 38, S. J. Newman 33, Dr. E. Q. Bullock 34, D. A. Grier 31, R. S. Robison 38, J. A. MacMullen 41.

The WALTHAM Riverside

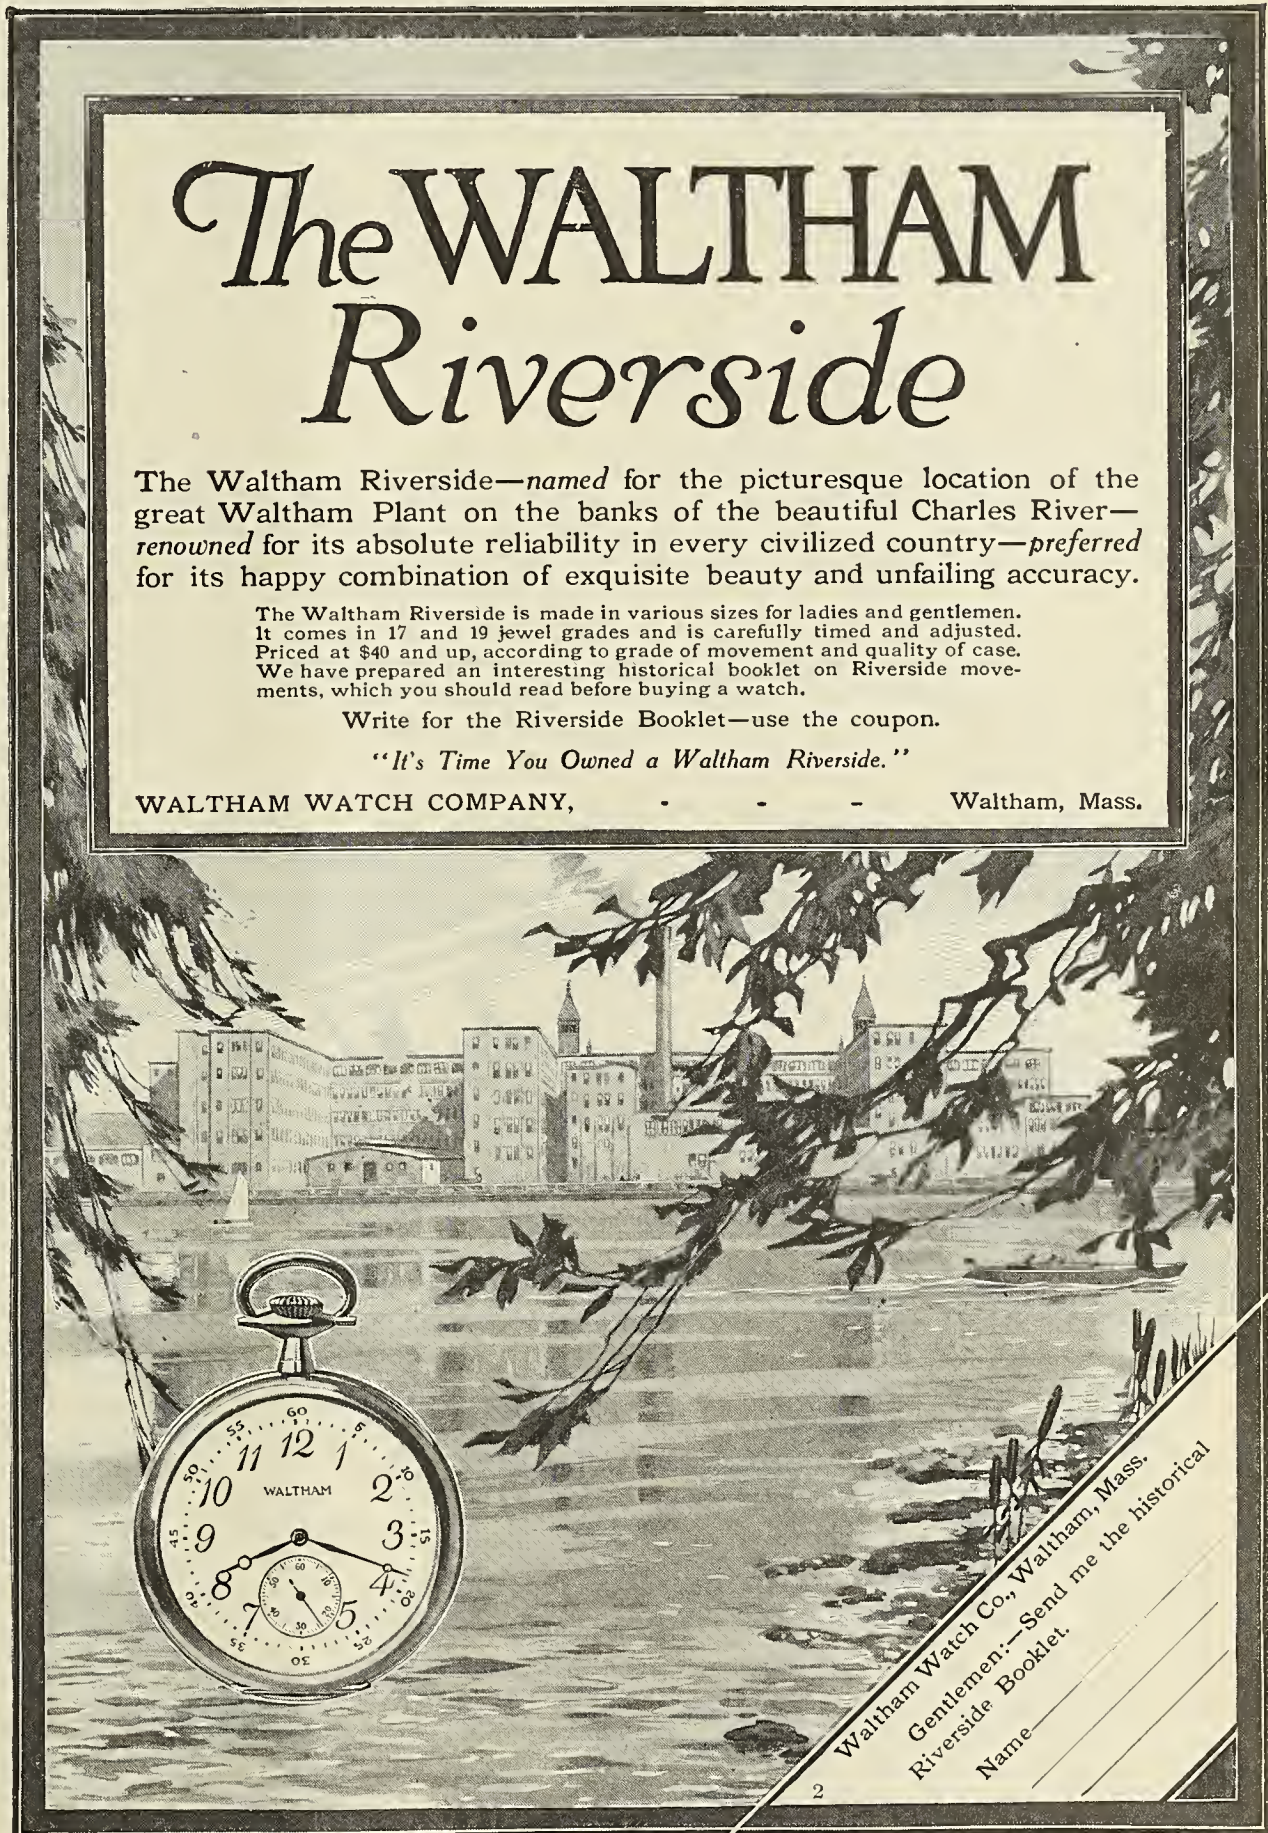

The Waltham Riverside—named for the picturesque location of the great Waltham Plant on the banks of the beautiful Charles River—renowned for its absolute reliability in every civilized country—preferred for its happy combination of exquisite beauty and unflinching accuracy.

The Waltham Riverside is made in various sizes for ladies and gentlemen. It comes in 17 and 19 jewel grades and is carefully timed and adjusted. Priced at \$40 and up, according to grade of movement and quality of case. We have prepared an interesting historical booklet on Riverside movements, which you should read before buying a watch.

Write for the Riverside Booklet—use the coupon.

Rifle and Revolver

Dayton (Ohio) Sharpshooters.

THE Dayton Sharpshooters is one of the oldest rifle clubs in the country. It was organized in July, 1863, at a period when fear of Morgan's raiders was in the hearts of the dwellers in Southern Ohio, under the name of "Die Schuetzen Gesellschaft." There were twenty-four charter members, and the sons and grandsons of many of them still keep the family name on the records. The first king shoot was held in October, 1863, and the golden anniversary of this event has just been celebrated by the club members and friends in a series of contests lasting two days. The first range was at Oakwood Park, and the dedication in October was made a picnic affair, the families of the members being invited, headed by a band of music, all paraded to the grounds and joined the festivities. The old-time, long-barreled, muzzleloading squirrel rifle was used, each man being equipped with powder horn, bullet pouch and cap box, and wearing the uniform soft hat with feather. The targets were of wood, 2½ feet in diameter, and were named from the pictures painted upon them—The Stag, The Hunter, Gambrinus and Winged Victory with Flambeau of Fame. In the center was a one-inch circle; five shots were fired from 100yds. and the one placing the most bullets in or nearest the center was declared "King." The first king shoot was won by Wm. F. Sander. Twenty-five years later the silver anniversary contest was won by his son, Gustav Sander, still an active member at this time. The golden jubilee contest was won by Charles W. Sander, a younger brother of Gustav.

For the first seven years the scores were computed by string measure. In 1870 a target with one-inch center and ½-inch rings was adopted and used until 1901, when the German ring target with 1½-inch center and ¾-inch rings was substituted. This was used through 1904, and then it was decided to go back to the 1870 target.

The second range was at Dayton View, and the 1864 king shoot was held here. In 1865 several acres was purchased on Wayne avenue, and this range was used until 1872. In 1866 the club was incorporated under the laws of Ohio, and in 1870 the name was changed to Dayton Sharpshooters' Society, the present title.

Another change of range was made in 1873, the club buying land at Oakwood Park, and remaining there until 1897. In 1880 the distance for the king shoot was increased to 200yds, and has remained so up to the present time. A new range at Kramer's, southwest of Oakwood, was first used in 1899. The first shoot on the present range was held in May, 1905, with a large attendance of members, and many riflemen from other towns in the valley. John F. Beaver, the veteran member of the society, fired the first shot and scored a center. The range is finely equipped with modern paraphernalia. A large concrete target pit, with seven targets, commodious firing and club house with every convenience for the members; telephone connection with the target pit from each firing point.

The shoot this year was very successful from every point of view. Over thirty riflemen from neighboring towns attended, and the local members turned out in force, bringing the numbers of contestants above the half-century mark. The committee on arrangements consisted of D. D. Bergk, J. C. Hahne, Gustav H. Sander, C. W. Sander and A. Schwind, and these gentlemen deserve credit for the perfect carrying out of the program, and for the courtesies extended to visitors. The first six events on the program, two each, offhand, muzzle and bench rest, were shot on the first day. On the second day two offhand (Nos. 7 and 9) and two muzzle rest (Nos. 8 and 10) matches were scheduled, in addition to the monthly cup and king events. There was also a special match for the silver cup donated by the Schwind Realty Co. A silver cup donated by Frank G. Meyer, was shot for in the monthly cup event, as there was not time to pull this off separately. In the percentage matches, the entrance was fifty cents, the prizes being 17, 13, 10, 8, 7, 6, 5, 4, 3 and 2 per cent. of the entrance money, with \$5 added to first money and \$5 for the best total of three tickets. Three matches were shot in the morning, one each offhand, muzzle and bench rest, beginning at 9 o'clock and closing at 12:30. The same number were shot in the afternoon, beginning at 1 o'clock and closing at 5:30.

On the second day an offhand and muzzle rest match (Nos. 7, 8, 9 and 10) were shot morning and afternoon. There was no bench rest shooting, as the targets were used for the membership and special cup events. High power ammunition and palm rests were barred. Any sights, except telescope, allowed, and any trigger pull.

The weather during the two days was not ideal. On the first day a strong cross wind was blowing, but did not prove much of a handicap, as it was steady. The wind on the second day came in gusts, and was very puzzling, upsetting the most careful calculations.

The president's special, a silver cup given by D. D. Bergk, for the contestant making the two highest scores recorded in the muzzle and bench rest matches during the shoot, was won by the donor.

The secretary's special, a silver cup given by C. W. Sander for the contestant making the two highest scores in the offhand matches, was won by Jos. S. Lesner.

The silver cup donated by Frank G. Meyer was won by A. Schwind. This was decided in the monthly cup match.

The Schwind Realty Co's silver cup was won by D. D. Bergk, and he also won a hand-painted loving cup donated by W. R. Wollaston for the contestant making the most 24s in the muzzle, bench, cup and membership matches during the shoot, finding the center thirteen times.

For Sale.

GAME BIRDS

Hungarian Partridges, Quail, Ring-neck Pheasants, Wild Turkeys, Capercaillie, Black Game, Wild Ducks, Decoys. Beautiful Swans, Fancy Pheasants, Peafowl, Cranes, Storks, Ornamental Ducks and Geese.

THE very starting point of the large popularity which has come to FOREST AND STREAM as a prolific result producer to advertisers is found in the fact that it is everywhere to-day recognized as a sportsmen's magazine of exceptional merit and influence. FOREST AND STREAM is, as a matter of fact, what may be termed a great weekly.

Property For Sale.

A RARE INVESTMENT Safer than Bonds and Mortgages.

Four hundred and eighty acres of beautiful level land in Keith County, Nebraska. Rich black loam, six feet deep, which produces all kinds of big agricultural crops. Forty bushels of wheat to the acre, and all other crops in proportion. These lands are located eight miles from the county seat, and six miles from the thriving, bustling town of Brule, on the main line of the Union Pacific Railroad. The town has church, high school, hotels, all kinds of stores, grain elevator, etc., etc. I will also sell 160 acres adjoining Brule, fronting on the Union Pacific Railroad, under cultivation, with all improvements. The climate is unsurpassed for all lung or throat difficulties. Elevation, 3,200 feet.

For terms and particulars address

E. H. BARTON, 32 Bank St., Batavia, N. Y.

OATLAND ISLAND

Ideal Winter or Summer Home
Or Private Club Location :: ::

Fine Stock and General Farm

4,000-acre Oatland Island, located in sight of the city of Savannah, Georgia, just across Wilmington River (salt water) from Thunderbolt, the city's most popular resort, and reached by trolley cars, automobiles, motor boats and railroad, within 500 yards of millionaire estate, and very near Savannah Yacht Club's beautiful grounds and golf links; two good dwellings; two flowing artesian wells; ideal winter or summer home or private club location, as well as a very fine stock and general farm; dark loam soil with clay subsoil that will produce 1½ bales cotton, 65 bushels corn, 45 bushels oats, 200 bushels potatoes per acre, and all other general or truck crops, such as alfalfa, beans, cabbage, lettuce, celery, etc.; also especially adapted to fruit and pecan culture; property will readily keep fat the year round 500 to 1,000 thoroughbred cattle and like number fine hogs; fine fishing, hunting, yachting, etc.; superb Southern climate, with invigorating salt air; no more healthful locality in the South; land in this section with water front is bringing \$300 to \$3,000 per lot for building purposes, and \$150 to \$500 per acre for trucking and dairy purposes; this property is well worth \$100,000 and will sell for this amount in a year or two. Price, for quick turn, only \$10 per acre, with 40 head fine, good breed fat cattle and 200 hogs included in sale. No such snap on the market to-day. Write for fuller description, name and address of owner from whom property can be bought direct, and traveling directions.

A PROBLEM'S SOLUTION

Log Cabins and Cottages

How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth, profusely illustrated, \$1.50 postpaid.

THIRTY-FIVE GENTLEMEN WANTED

To form an exclusive Hunting Club to purchase

CAMP BRYAN

The Finest Natural Game Preserve in the South.

Protected for over
50 years,

and comprising

35,000 ACRES IN NORTH CAROLINA

(Five large lakes and the famed Mallard Marsh)

Estimated over 3,000 Deer on this Property.

A well known sportsman has written:—"It is no uncommon sight to see 5,000 geese and 10,000 duck over Mallard Marsh. I've hunted a hundred times here and the dogs will raise a deer in fifteen minutes any time."

A GREAT BEAR COUNTRY

On this property are the Wild Animals for 100 Miles Around
Winter Quarters of the

AN IMMENSE VIRGIN FOREST

LAND HIGH AND DRY

Over 115,000,000 feet of the finest heavy timber. (Worth more than the price of the property.)

This property, known as "Camp Bryan," near New Berne, N. C., has been in one family ever since the original grants. Before the war 1,000 acres were worked as a plantation. The timber on this property has never been cut except on the plantation. The lakes lie 35 feet higher than the surrounding territory and all are very large, one being three miles across and four miles long, and in time will be worth double the value of the land to-day for irrigation purposes. There are no other lakes near this property.

As an ideal natural game preserve it has no equal east of the Mississippi. If a club would inclose certain portions of this great game preserve and sell the timber rights (stumpage) to the big lumber companies whose mills are near the property, all standing timber above 12 inches could be cut off in one section one year, another the next, etc., and in ten years the timber cut

off would more than return the original cost. This would not interfere or detract from the value of the place as a hunting preserve.

It is desired to sell this property either to some gentleman as a PRIVATE GAME PRESERVE—the price being \$300,000—or to form a club of 35 members at \$10,000 each, purchasing one share myself, the additional \$50,000 going into the treasury of the club to erect a club house, wire fencing, etc.

A railroad runs through the eastern end of this great tract of land for several miles, connecting with the Norfolk Southern and Seaboard Air Line roads for transportation.

As a money-making proposition it would pay an investor, for the timber, water rights and land should return in ten years double the cost, besides the privilege of owning this valuable game preserve during that time.

Application for membership, information, etc., address—

THIS PICTURE GRATIS

The above picture of the immortal John Peel, framed and glazed, will be presented free to all new subscribers to "The County Gentleman & Land & Water," England's leading weekly illustrated sporting paper.

The picture measures 11 in. x 7 1/2 in. (frame 17 in. x 12 in.). The original was painted by Mr. Joseph Simpson, R. B. A., from old photographs and prints of the famous huntsman. It is said to be the finest representation of John Peel ever published, and is worthy of a place in every sportsman's home.

The subscription to "The County Gentleman & Land & Water" is \$9.50 per annum, payable in advance, for which the paper will be sent, postage free. Checks should be made payable to the County Gentleman Publishing Co. and crossed the London County & Westminster Bank, Hanover Sq. Branch.

Address the Publisher

Hunting and Camping Days!

DAYS of good sport and good fellowship in the deep woods! The man who knows prepares himself with suitable clothing. For this purpose we have produced **FORESTRY CLOTH**, Shade 65, a fabric peculiarly adapted to the hard usage of camp-life in the woods. It is soft gray-green in color, closely woven and firm, defying wear, wind and cold. Made in light, medium and heavy weights—every ounce pure wool.

FORESTRY CLOTH

is stamped on back of cloth

FORESTRY CLOTH makes ideal clothing for outdoor Winter sports—skating, snowshoeing, tobogganning.

Another special cloth for sportsmen's wear is **OLIVAUTO CLOTH**, a beautiful olive-brown, closely woven serge for riding and motoring clothes, golf-suits, etc.

Samples of **FORESTRY CLOTH** and **OLIVAUTO CLOTH** sent upon request. If you are unable to procure these fabrics from your tailor, we will see that you are supplied upon receipt of price, through regular channels, as we do not sell at retail. When ordering specify fabric and number of yards desired. Forestry Cloth, \$2.75 for medium weight; Olivauto Cloth, \$3.50. (3 1/2 yds. to a man's suit.)

CRABS GETTING SCARCE.

If protective measures are not adopted and enforced, the hard and soft shell crabs, which have been abundant in the Chesapeake Bay and its tributaries, will meet the fate which has overtaken the terrapin, which awaits canvasback ducks and which at times has threatened the oyster.

This declaration was made by Swepson Earle, topographical engineer of the shellfish commission, who has made a study of the crabbing industry, and who was delegated by the late Governor Crothers to suggest remedial legislation. A bill was prepared meeting Mr. Earle's views, and was submitted to the last Maryland Legislature, but it got tangled up with the opposing oyster bills and never emerged from the pigeon hole of the committee on Chesapeake Bay and tributaries.

"The best evidence of the scarcity of crabs

is afforded by prices at Crisfield, the main shipping point," continued Mr. Earle. "Prices for soft shell crabs have been as high as \$1.25 a dozen at Crisfield during the season, though there was a decline during the last few days. Only a few years ago soft shell crabs at Crisfield sold as low as twenty-five and fifty cents a dozen. In the waters of Anne Arundel county only a few years ago a man could easily catch four barrels of hard crabs in one day. He is fortunate now if he can catch one barrel in a day."

Crisfield as a shipping point (the most extensive in the world for crabs) shipped in 1910, estimated, 120,000,000 soft crabs.

It is believed by most watermen that the crab, like the diamondback terrapin, which was once so numerous in this State that the slaves objected to being fed on them more often than once a week, is not beyond extermination.—From the Washington Star.

On Your Camping Trip

With a stock of Carnation Milk in the camp kit, you will always have pure, rich, sweet, fresh milk for your coffee or for drinking.

You can carry a can of Carnation Milk as far as you like on the hottest or coldest day and jounce and jostle it over the roughest road. Yet when you open it, it is always sweet and fresh—far better than the ordinary milk you get at home.

CARNATION MILK

From Contented Cows

is richest cow's milk—nothing else evaporated until of the consistency of cream. Nothing is added; nothing but water is taken away.

Carnation Milk is superior to raw milk for all uses—in coffee—for cooking and drinking—and far more convenient. When you next open a can note the smoothness, richness and creaminess of Carnation Milk.

Keep a case of Carnation Milk in the pantry of your home—on your yacht or in your summer or winter camp—and you'll always have pure, sweet, creamy milk—rich in butter fat—instantly available.

Seal Stalking

By W. R. GILBERT

IT is curious that of all the forms of sport that can be enjoyed in the British Isles, that of seal shooting is least known and least appreciated. Yet to approach a seal during the autumn months as it lies on Atlantic-washed rocks off West Scotland is a task that will tax the skill of the most cunning stalker. To shoot a seal through the head requires a steady hand and a good eye, while if perchance you have slain your seal on the edge of the incoming tide, there will be no time for self-congratulation or view admiring, but all your energies will be needed to save your trophy.

If the quarry is not so noble as the stag, or the spirit of the sport so romantic from age, nevertheless the seal stalker has advantages that compensate, and is faced by difficulties which the deer stalker has not got to surmount. I maintain that the mysteries of the cloud-wreathed tops and splashing burn cascades are no whit more fascinating than the gray hurricane on the Atlantic coast, when the great curling billows riot in lustful violence and re-echoing crash, lifting the seaweed locks of the black crags, and then grumbling, sweep backward, a broken eddy of silver foam. Nature in the hills and forests is mysterious, weird and subdued, but on the rocky sea coasts she is free to splash and foam and roar overwhelmingly. That is the haunt of the seal as I love it—foaming, heaving, splashing, wild, though when the sun is hot and the lazy sea just caresses the golden sands; when life seems simple and careless, then, too, it is good to visit the herds of Proteus. But to visit the Odysseus-like to see unseen is not so easy when Aphrodite is absent, and of this I would talk.

The two essentials in seal stalking are: (1) Despise not the quarry; (2) never shoot at a seal in the water. Follow these two maxims, and the secrets of seal shooting are yours. Stalk a seal as you would a royal; never shoot till you think you can kill. The powers of smell of a seal are far-reaching and very danger warning. His ears are so sharp that the grate of an iron-shod boot or the rattle of a loosened stone will put him into the water with lightning rapidity, but if he only sees you and is unable to distinguish you, his curiosity will conquer and the stalk will not be spoilt. Frequently when creeping up to some seal out on a promontory of rock one has swum to within ten yards of me, unable to make me out, until suddenly his suspicions are aroused. At once he dives and does not reappear until 100 yards of ocean separate us. Not invariably, however, will he disturb the others on

HERD OF SEALS READY FOR STALKER.

the rock, unless he is really frightened and grunts an all too well heeded warning.

As in deer stalking, I first spy my quarry from some high ground or cliffs, test the wind, reconnoiter the ground, fix the position of the seal by prominent rocks, etc., remove all objects from my pockets that are likely to be spoiled by sea water, load the rifle, place it under cover, and am then ready to commence. One of the greatest attractions of seal stalking, to me at least, is that there is no one whose duty it is to "lead you up to your quarry." You are alone, and it is just your cunning against the seal's. Probably I will start by carefully climbing down some cleft in the cliff above the seaweed-draped rocks that the boisterous tide is gradually uncovering. It is always advisable to stalk with the ebbing tide. I will have taken off my heavy boots and either put on rubber-soled sand shoes or else trust to the thickness of my stockings to defy the sharp rocks, as I will have to crouch low and commence crawling. If the west coast rain has not already soaked me, it will not be long after passing high-water mark before the wet seaweed begins to make its presence known.

What from above appeared a dry, inviting channel in the rock by which to progress now, I find to be a ditch with a couple of feet of water in it, and yet I dare not raise my head above its edge for fear of detection. It comes to an abrupt end. Cautiously I peer over the top—yes, there they are, like five great sleepy slugs, and it is that great fellow on the right I am after. Of course, he is in the most inaccessible place, but only another hundred yards to that little black rock whence I have decided to take the shot. Carefully I raise myself to the edge of the ditch. There is ten yards of open, flat rock; I must cross this in full sight of the seals. Then there appears to be a depression which will bring me almost to the desired spot. Soon I am congratulating myself on a most successful stomach wriggle over those ten yards, when to my surprise the inviting depression (of which I had not just now been able to see the bottom) has been transformed into an inlet of water, apparently deep, twenty yards across, and with steep sides. *Quoi faire?* I turn half around to better examine my position, and in doing so dislodge a lump of rock, which rattles horribly, but just does not splash

into the water. Up go the heads of the two seals still in view. I lie like a log, with a sharp rocky lump sticking into my chest. Luckily my clothes are dark and so is the seaweed.

All's well at length. The two inquisitive heads sink into apparently Lethean slumber, but still I know in reality all too watchful. Inch by inch I turn myself back and finally, after fully five minutes on the top of that sharp rock, I resume my former position without having made any progress or plan for the next move. True, I mentally invented several choice epithets which should have withered that rock. Obviously I could not go round the top of the inlet, crawling fifty yards in the open, and so the only alternative is to cross it, but where I am at present the bank goes down sheer for five feet or so to the water's edge, and may go down for ten feet under for all I can tell. To my left the bank seems to be lower and the inlet broader, probably shallower also, as growing seaweed is floating on the surface in places. Cautiously I turn to my left, avoid the rock I had dislodged, and after a few yards' crawling find myself out of sight of the seals for the present. I put up a cormorant and some gulls in this operation, but feel pretty sure the seals will not mind them. One hears a lot about "not caring how wet you are once you are wet," but personally I think there are several clearly defined degrees of wetness, each one more uncomfortable than the last.

On this occasion, as I gingerly enter the water, I am relieved to find that nowhere does it go much above my knees, so I get across with at least a dry body. On occasions I have found potholes in these inlets that take the water over one's waist, and once I had to swim, almost ruining my rifle, but that is another story. On reaching the far side of this water I was greeted by a new form of wetness—spray—which, however, in no way damped my ardor. Being now quite near the edge of the ocean, what before was but a more or less distant booming now became a roar of many waters that made themselves felt as above stated. I dared not keep any closer to the breakers, as I had wished, because it is fatal to play tricks with the wind in any form of shooting, so now I set about worming myself to that little black stone, beyond which I hoped to see the quarry within shot. Sure enough, when I had only twenty yards between me and my goal, coming to the edge of a miniature ridge I saw the whole herd, about twenty, sporting themselves in the calmness of a small natural harbor that appeared shallow but was in reality quite ten feet deep. On the rocks I could see but three seals, all within 100 yards of me, but the big fellow I was anxious to get had gone.

It is an extremely interesting and pretty sight to watch these curious creatures. How gracefully they swim, and how ungrainly they wriggle on the rocks and lie like shining logs! Occasionally two will have a kind of a fight, but as a rule they are the picture of restful contentment, reminding one forcibly of the conclusion of a civic banquet. This wild day, however, I had come for a scalp, and not nature observations, so selecting what appeared to be the best of the three on the rocks, I pushed back my safety catch, aimed steadily at the center of the back of his head and fired. Almost before the rifle's crack had rung out, there was nothing to be seen but the dead body of the seal I had shot and some swirls in the water. I walked trium-

phant to the motionless body. He had not moved an inch or given a wriggle after being hit. His head had just fallen and his spirit flown to his happy hunting grounds. A fine seal he was, too, about five feet from whiskers to tail, with a splendid coat. My bullet had gone in just behind his ear, whence more elation on my part, for I consider there are few more satisfying things than a perfect shot—in the head, neck or behind the shoulder—after an exciting stalk. The rapidity with which his erstwhile companions on the rocks had skeddaddled into the sea was truly wonderful, and a right and left, even had I wished it, would have been quite out of the question.

The whole herd swam out about 150 yards, then all together reared their inquisitive heads, seeking to understand this rude disturbance of their peace. I pointed my rifle at them. Down they all went, coming up again after thirty seconds. Finally, after much diving, splashing and grunting they decided their favorite haunt was untenable, and took their departure to the "gray unharvested ocean." Meanwhile I had produced my knife, thrown off my coat, and was soon hard at work skinning the quarry. This is the operation that is so unpleasant on a hot day, and after once trying it I swore thenceforth to shoot seal only on gray days, for on hot days a camera is the most pleasant weapon. I might of course have walked three miles to the nearest craft and hired the service of a brawny son of the soil, but their methods are apt to be rather rough on the skin in a too great keenness for blubber. Half an hour's hard work completes this opera-

tion, and the satisfaction therefrom is enormous. Once indeed I found I had only a pen knife with me, but managed to just secure the pelt in the two hours before the tide came up.

Few places are more grandly splendid than these rocks when the tide goes out, and working alone on the seal's skin you have ample time for contemplative admiration. The sea gulls have already begun to circle overhead anticipating a meal, a flock of eider duck have splashed down near at hand, a lanky heron wings its way slowly aloft, peewits whistle plaintively, and the oyster catcher's sharp squeak mingles into the booming surf, the whistling wind and splashing rain. Finally I cover the carcass with seaweed to protect it from the birds, light the pipe of contentment, and start my trudge homeward to the farm where I have left the trap—no light task with a heavy wet seal skin, but a task is rendered pleasant by success and the anticipation of a hot bath. Arriving at the farm I inform the inhabitants of the blubber on the rocks that awaits them, and a long-legged Highlander is soon off to the scene of the kill. Seal flesh is considered edible by some, but personally I never have ventured. I put my hard won trophy in the trap and wrapped up in a warm rug, am soon pleasantly jolted over the six miles of so-called road to my host's hospitable lodge.

I recommend a small-bore rifle, .256 or thereabouts, a very watertight rifle case, and would advise any prospective seal stalker to have the knees of his knickerbockers doubled. I have never regretted a day spent after seal with rifle or kodak.

Welcome to our Farm.

HERE is a real friend to sportsmen. Elmer E. Shaner not only refuses to post his farm, but erects a notice of welcome so large as to be seen more than one hundred yards away. More than this—there are plenty of birds on the place, conserved and winter-fed by Mr. Shaner's men.

Crestview is in Butler county, Pa., sixty-seven miles from Pittsburgh. Here, then, is practically a good big whole-hearted bid to shoot on a private preserve. Wouldn't sportsmen be in feathered clover if one of these signs took the place of each of the little cloth signs bearing in black type the word "Posted"? To Mr. Shaner, thanks.

Adirondacks of 1858 and 1859

By ALBERT BIGELOW

IT is very interesting to recall the old Adirondacks of more than fifty years ago, when they were a veritable wilderness; when the wolves frequently, in fact nearly always, howled at night, and the panther and loup cerviers, or "lucyvees," as the guides used to call them, ranged the woods (and the guides' exciting stories of adventures with them ranged the camps).

I remember distinctly a canoe trip from a camp on Constable Point on Raquette Lake through Marion River to Blue Mountain Lake and lying on the shore under my turned-up canoe and hearing a panther's or a mountain lion's cries above me on the mountain side for a long time before I could sleep. At that time there was a man living alone in a small cabin on a hill not very far from the lake, but no other in that whole region. This was before the region of the Adirondacks was published or known to any extent as a resort for tubercular disorders, and when Mitchell Sabattis and Dick Birch and others of their age were boys, and Paul Smith was a young guide in his camp on Loon Lake, and long before the days of any "hotels" or summer homes in that wilderness.

In those days there were no game law prohibitions that prevented deer hunting at any time with or without dogs, and for several years we had one or two hounds with us to bring the deer to the lake where we were in camp. At our camp there were always five or six hungry appetites to be supplied (beside the dogs) and game was needed. That was before my days of fishing for trout only with the fly, but the trout, both lake and *Fontinalis*, were so abundant and so eager for the bait that the camp was profusely supplied with fish. Venison and trout were always plentiful in our larder, which was supplemented with wild ducks, sometimes abundantly.

The guides had no moral or professional scruples against the use, which would now be regarded as "antique and horrible," of the sunken-set-night-line, with one end attached to a "sinker," the other end to a "float." Nor had I any such scruples under the conditions of the big appetites in our camp, and then it seemed some fun to pull up a long line of 90 or 100 feet with twenty-five or thirty short lines attached at various distances, each one having a large hook baited with a minnow at the end, and to find a big trout or a broken piece of stringer and a missing hook and end of the streamer.

A visitor at any of the same regions (hills, lakes or rivers) of to-day would find it almost impossible to realize the wildness of the old days. That wildness was so beautiful!

I remember on a morning of the day when I was to start on my return to the streets of New York, my going out to the shore of the lake before the camp had awakened and looking up off at the hills and valleys and lake, and the beautiful colors of the dawn on the whole transporting scene and actually crying, as a young lad cries at parting with his love.

I recall one trip in 1859, I think it was, when we started in at the camp which subse-

quently became "Martin's" on Lower Saranac, and I rowed one of the two boats of our party through to Bartlett's, then a small unpainted house and then to where we camped for the night in our tent on Round Lake. I don't know about the trout fishing of to-day at Round Lake, but after our night there two of us pushed our boat out on the pond, and at the mouth of a stream there took trout for an hour or more as fast as we could land them, one or two at a time, ranging in weight from one-third of a

pound to one and a half pounds each, until the bottom of our boat was well covered. Then we continued on down to the little Johnson camp, where after a little fishing in the rapids we continued on our way over the carry to Raquette River, thence up the river to Long Lake. After the whole length of Long Lake (on which I do not remember the sign of any habitation; I think Mitchell Sabattis had not then built his camp there) and a considerable paddle in a narrow stream, we came to what was generally

ALL IN THE DAY'S WORK.

called "Leg Lake," or by a more exacting refinement "Forked Lake." A persistent pouring rain kept us confined to our tents on a rather steep hillside there for several days. The deep ligneous soil was converted into a soft and slippery consistency which suggested the appropriate name of "Camp Cow-Yard" to our environment there.

When at last the sun came out bright and clear and a warm, dry breeze greeted us, "life in the woods" seemed beautiful, and we worked along the lake to the stream connecting with Raquette Lake. As we intended staying on the lake a week or perhaps two, and the elderly member of our party had camped there twenty-five years before, he wanted to go to the same place. He said that since his former visit Mr. Constable, of New York city, had bought the point on which he camped, and my elderly friend pointed us to the place.

While we were on the way he told us that at this first visit there a fish hawk had its nest near the camping place and a grand bald eagle also had one, and that every day of his stay there, the fish hawk would come out to get his fish for himself and probably his family, but that Mr. (or Mrs.) Bald Eagle was there always soaring in a lofty circle waiting for him. When the hawk, having seen his fish, made his fierce and sudden drop for him, the eagle made his circuit smaller so as to keep well over the fish hawk's drop. Then the hawk would come struggling out of the water with a good trout or other fish, wriggling in his talons. The

hawk, while trying to get off the water and a hold on the air with his wings, and seeing the old "Wall street" eagle with his eyes on the fish which he had marked for himself, screamed and whistled louder and louder and aimed for his nest in the woods, although he knew it to be useless with Mr. Eagle right over him lower and lower until the hawk, just as the eagle was almost on his head, dropped his fish, while the eagle, continuing his rapid drop, seized the fish before it struck the water. He said this play continued every day while he camped there. The eagle every day took his toll of one fish, and the hawk paid it, screaming, and after a little rest in his tree, went on with his family marketing without any further interference from the eagle. He told us just where the old eagle had his nest.

Just as he had finished his story we rounded the point and a big bald-headed eagle sailed off from the very tree. The old gentleman, quoting what he had heard and read about the age attained by bald eagles, said that that, and the looks of the eagle, made him readily believe it to be the same old eagle of twenty-five years before.

We made our camp where his camp had been and stayed there about ten days, and every day, either the same old fish hawk or one of his descendants, and perhaps the same old bald eagle went through the same performance. It was interesting to see the daily repetition.

I have never been there since that year and have no idea what a fish hawk could do there now, but then there was a plentiful supply of lake trout as well as *fontinalis* to provide for

the bounteous sustenance of both hawks and eagles.

Before we came out on that year we rowed across the lake and went through what was then called Marion River to Blue Mt. Lake. At that time the whole region of the lake was a wilderness. We crossed the lake and landed at the foot of the Blue Mountain. After cooking our supper over a fire on the beach and enjoying what one of the party called "a very gratifying satiety," we turned up our canoes and curled up under them for a night's sleep. Our "smudges" were effective as to the mosquitoes, but had no effect on the howlings of what the guide called the "painters" on the hillside above our heads. The fatigue of our day's work was the only soporific we had to meet the shriekings and howlings of those tiger-like beasts, and that soporific did not operate until it seemed as if the night were nearly gone.

In all the distance, from the start on the lower Saranac to our camping place on Blue Mountain Lake, we saw only Bartlett at his house, Mrs. Johnson at her little camp, the man that drew our canoes over the carry, a guide who had a camp on Raquette Lake, and a young man who had built a camp somewhere near Blue Mountain Lake, who told us he had cured his tendency to consumption he thought by his stay there, and thought he evidenced it by the fact of his "backing" in through the woods sixty pounds of provisions a few days before.

This is rather different from the experience one could meet in the present Adirondacks over the same route.

Sport in Florida

By J. A. L. WADDELL

(Concluded from page 360.)

ABOUT four in the afternoon the weather cleared, the wind veered to the south, the temperature rose, and the sun tried to shine through breaks in the clouds, consequently I rigged up a bait-casting outfit and had John row me around an hour and a half, trying to catch some bass, but not a rise did I get. As I had done no bait-casting for many years, I was not very skillful at first, but ere long the bait began to fall where I wanted it to at the edge of the lily pads. The place looked to be ideal for bass fishing, and they say that in fine weather an experienced fisherman can take in a few hours more bass than he can carry.

Next day we packed our belongings into the wagon, took the four dogs (Mr. W. having left Joe with us), and started homeward. John was instructed to stop at our old camping ground, and the three of us in the two buggies pushed northward some nine miles and began shooting near the place where we had quit the evening of our arrival at the ranch. After locating the remnants of two of our old coveys, we took an abandoned road running north, so as to strike some undisturbed territory. It was really only half a day's shoot that we got, as we did not reach the ground till about noon, but we bagged some fifty birds, including a brace of jacksnipe.

The ground was very wet, but the walking was not bad. We shot till nearly sunset, then headed for the main road, which we reached after dark, arriving about 7:30 at camp, where we found John awaiting us with a good dinner of fried duck, gritz and some of our few remaining canned provisions.

Once more we were in luck at that camp, because it did not rain during the night, consequently after a good, sound sleep we packed up and started for Bartow. On the way in we raised a few coveys and bagged seventeen birds. The smallness of the number was due to the ground having been shot over, all the bunches but one being small remnants. About sunset we reached town, where I found it necessary to spend all of next day attending to business correspondence. It had been our intention to go to Dade City to try the black bass fishing at some of the numerous small lakes in that neighborhood, but learning that there was good duck shooting and some salt water fishing to be had at Fort Myers, we took the evening train for that place, arriving about midnight.

The next day was stormy with a heavy rain in the forenoon, hence we had plenty of time to find a lodging (which we did at the Sea View Annex), secure a launch and boatman, buy fish-

ing tackle and ammunition and explore the town. We engaged a young fellow and his launch, but the next morning he refused to go out because of the weather. It was blowing a little, but not enough to have prevented me from going out in a Canadian canoe, had our sport demanded it. However, the young man was right, because it soon began to breeze up, and I afterward found that their swift little launches ship more water over the bow than would a canoe under the same conditions. We consequently wasted another day waiting for the weather to break, which it did during the night.

We noticed a good many wild ducks (all blue-bills, or as they are sometimes termed, black-jacks) in the harbor, where it was illegal to disturb them. They were so tame that they would come within a few feet of anyone who offered them food.

In the morning we found that our boatman had sent a substitute, a middle-aged man by the name of John A. Meredith, who proved to be skillful, experienced, agreeable, and everything that could be desired in a guide. He soon showed that he knew how to hunt ducks from a launch, because as soon as we got outside of the protected area, he steered spirally for the flocks and often brought us within very short

range, although as the birds had generally been shot at before, most of them rose out of reach. Part of the day I occupied a seat in the bow with my two guns and Leonard sat in the stern on the swivel chair that was used for fishing from. Then later on we changed places and I shot from the chair with my long-barreled choke gun. The sport was excellent, but the low little craft, traveling seven and a half miles per hour, threw up a great deal of spray whenever there was any sea on, which drenched the man in the bow in spite of all he could do to protect himself by means of a rain coat. The one in the bow of course had the cream of the shooting, because the one in the stern did not dare to fire toward the others for fear of deafening them. But we soon learned that it paid for the bow sportsman to let pass on the water as many birds as possible and take the others ahead in order to give his companion in the stern a good share of the shooting. In this way Leonard with his automatic often got in two or three shots after I had fired. Most of the shooting was done close to the water, but once in a while some bird that had risen far ahead of the launch would climb and swing in a little too close to us for his own good, although truth to tell, we missed a great many shots of that kind.

When one considers the continual jiggle-jiggle of the boat from the machinery, the constant rolling and pitching due to the sea, the high velocity of the craft, the varying speeds of the ducks, and the different directions of their flight, it is readily understandable that misses were in order. Again, the bluebills are great divers, and unless killed outright they go down as soon as they strike the water, often traveling far under it before reappearing on the surface. We failed to retrieve a great many birds that we knocked down, but after a while I became quite expert in picking up cripples. The way I did it was by standing up with my chokebore gun and snapping at the projecting head of the duck as it emerged from the water, firing just as quickly as I make a practice of doing on a rising jacksnipe. We found that if we waited to take good aim, the duck would be beneath the water by the time the shot reached its vicinity. After some experience I became so expert on killing the cripples in this way that a much smaller percentage of the wounded birds escaped. Some of them, though, never let us get within range, and others made their way to water too shallow for our launch.

Often in chasing a bunch we ran into a mud bank and had to lose much valuable time in backing out.

During the middle of the day we tried trolling for a while, but the weather was unpropitious, and we succeeded in taking only one small sea trout.

Toward evening the wind subsided, and we were able to shoot for a time without getting splashed from head to foot. We returned to town about sunset with a fine bag of ducks which we distributed to everybody at the wharf who desired them and divided the remainder between two or three restaurants.

For our meals at Fort Myers we browsed around, trying the various places and finally settling upon a little fish-and-oyster house built on piles over the water alongside a wharf. The food there was absolutely fresh, and the cook-

(Continued on page 441.)

Chapter II.

A CLOSE study of the many sheeted map we bought from the Mississippi River Commission told us that as we worked southward along the river, its confining bluffs on either side grew wider and wider apart. Just below Prescott we first noted this. On the left, descending, towered the great bluffs for a few miles below the town. On the right, beyond the little bayous and sloughs, stretched acres upon acres, thousands of them, more or less tilled and sown to crops. Tangles and undergrowth, fields gone to waste and plots of once tilled land abandoned because of high water or a wet season made the finest quail cover I ever saw. The bluffs were from three to ten miles apart, and with the exception of the comparatively tiny stream threading its way crookedly southward, nothing between but what beckoned to the game little bird of brown and ashy gray.

And his whistle was everywhere.

Generally speaking the dweller along the banks of the Mississippi does not shoot quail until the tracks in the snow allow him to make pot-hunting profitable. The early season shooting is mostly done by sportsmen who hunt to dog. I am not saying out-of-season shooting does not take place. It does, though is very small. And I am not sure that pot-hunting is as profitable as trapping. The festive muskrat seems to be everywhere in the bottoms and his pelt is worth good money.

Making the cruiser fast to a lone tree on the Minnesota side, we gained permission of a clammer-farmer-stockman to see what we could find in his oat stubble, hay meadows and corn fields. He was a generous soul, bewhiskered of face and white of heart. He kept a 'coon dog. Once in the corn field about his shanty we saw the dogs roading a bevy of birds. Finally taking lodgment in a piece of uncut hay, they laid to dogs in fine shape. Approaching, we made ready to shoot, but when putting the dogs into the bunch they began getting up so close to us that we could see they were hardly of a size to kill, save the old hen of the brood, which we refused to slaughter. One of the dogs was a puppy, and he thought when the birds began raising before him that he had broken all the rules he had been yard taught, for he shivered as if he had been thrown into ice water on a blustery day.

Working over further into the tall weeds, waist high, we found a covey of seven big birds, all of spring hatch and claimed five of them. The rest of the morning was devoted to getting five more from a scattered covey that dropped, spread-eagle fashion, among the tall alders and weeds, willows and brambles that seemed at first impenetrable.

The perfect cover along the river bottoms will provide good shooting along them for many years to come. The birds cannot be butchered, as they have been butchered on the prairie country of Kansas and Nebraska. Nothing can affect the crop except nasty winters and overflows during the nesting time. The spring of 1912 saw no overflow on these upper river bottoms. What high water there was came with the approach of spring, and birds that might have nested in the low places were forced to adopt other locations before mating.

The following day we went over to the western bluffs, taking a wagon trail through the jungles. The shooting was not as good as it had been the day before, owing to the scarcity of water during the hot weather of early summer. Quail would rather stay about flowing water or the shores of a lake than anywhere else if the cover is sufficient for them. During the day we heard the booming of a number of gunning

DUCKS APLENTY.

parties. That night we met three of the parties, and all reported many birds seen, but only an average of eight per party were killed. This supplements what I have said about quail having a safe cover for years hence.

A series of cool rains and a bit of muddy water in the river forced us to forego hunting for a few days. We journeyed, nevertheless, by easy stages and made a landing at the bluff-protected town of Alma, Wis., after putting in at many other little ports and watching the Government steam dredges helping to keep the channel open to navigation.

We had salted and pickled a great number of the moon-eyed minnows. Now we were to know how good they were for bait. The first couple of days' fishing with flies was abominable. The next day with salted mooneyes and pickled moon-

Winona and near the postoffice of La Moille, Minn., the skipper saw a "hull inspector" or dead head, a log that swung in midstream. By all the rules of navigation he should have stayed inside of the log, as that would have been on the outside of the bend where the deepest water is supposed to be. He stayed there and was running full head down stream, when with a bump that sent the crew out of their seats he hit a wing dam that was but twelve to eighteen inches under water. It was the same dam on which the steamer Quincy sank but a couple of years before. The log was a black buoy beckoning one to stay on the left of it instead of the right, yet it lacked the white cap usually seen on these, it probably having been knocked off by a raft of logs at some time recently.

Up we went on to the rocky dam and hung

that gave the wind a chance to fairly annihilate the water, we stopped for the night. It was the first open landing we had made since starting on the trip. Generally we could find a safe harbor for the night in some creek's mouth or a pocket of the river near shore. The river charts always show some snug harbor back of an island or between an island and a piece of mainland. We worked to make these ports and lay behind them if we were going to stop any length of time. On the particular night that we stopped below Dubuque, the wind began to rise, and we had no protection except a small point around which the up-river swells driven by the wind pounded the cruiser upon the rocky shore.

Steadily the wind increased and steadily our pounding grew worse. We were in for a night of it. The anchor would not hold on the hard bottom, hence it was useless to try to go out into the river and be upended and cat-hauled by wind and wave. The wind was up-stream and the current down into the eye of the wind, and between the two we wallowed in the trough of a dirty sea for that portion of the river. There was nothing to do but try to back off shore, so that we could turn and head down stream and into the leeward of Nine Mile Island. The island was three miles away, and to gain it in the middle of the night was no easy thing, the wind blowing so strong that it turned the cruiser out of her course twice on the way.

Before we had turned in for the night we had noted two Government river lights, one directly across the river, and one down river opposite the head of the island. We got these firmly fixed in mind, and then with great difficulty backed off shore and swung into the eye of the wind for the trip. The skipper lost part of the clothing he had on and never missed it till morning. The women folks were thrown from their berths, the kids rolled on the floor, and yet in all the scramble and tumble the engine turned steadily and brought us in an hour behind the island head where the water was peaceful enough to plant the anchor.

And we had no sooner thrown it into the mud than a covey of Government steamers and barges blew around the point of the island head and dropped alongside us to spend the night. This was the first bad night we had on the Mississippi.

A MISSISSIPPI RIVER STEAM BOAT.

eyes was worse. And we promptly dumped the whole lot overboard, containers and all. By diligent search we found a number of nice sized frogs for bait-casting. These were used to good advantage back among the lily pads between the wing dams for big-mouth bass. I cannot say the fishing was excellent, though by diligence we replenished the larder.

Up the river again on the next day we sought mooneyes in the pot-holes connected with the river and found them. Then things began to look up. With one bass in the creel and a nipigon bait made of the white streak in his belly, we soon had others. The nipigon seemed to do more effective work than the mooneyes, and you may be sure we made a number of them and pickled them to use with spinners for fishing to come.

Now for more cruising. Dirty weather set us going again. We could travel in comfort in the worst of rainy weather, while lying idle gave us the fidgets. The boat was tight-roofed, a canopy covered the cockpit, and with our charts beside us we navigated right along until we came upon the one big bump of the trip. Below

there on the strut of the under part, rocking this way and that in the swift water. By getting the dink on to the fore deck and filled with water, and other of the load carried ahead, we managed to get the stern moving forward, and off the rocks a few inches at a time by jumping into the cold water and using the gang plank as a pry. Then came along a hydroplane. It was useless in aiding us. Soon came a fantail with a ten-horse bit of power in her, which coupled to our own managed to shift us off the rocks without damage after two hours of hanging on them.

The next place we stopped in saw the purchase of a pair of field glasses which henceforth were at the left hand of the skipper at the wheel, and with which he picked many a safe channel and landing before the end of the journey.

At Bad Axe, Wis., we took to the prairies beyond the bluffs for a two days' shoot. There was plenty of shooting, but the amount of game did not pay for the powder. Chickens were found on hill and catstep, the latter a shelf-covered hill. They were wild, having been shot at a deal before the season.

Just below Dubuque, in a reach of the river

"It costs more to keep clean on the Yukon than it does in the States," writes W. A. Hillis, of the Remington-UMC Co., who is on a shooting trip in Alaska. "Up here in Alaska," continues Mr. Hillis, "my laundry bill averages about three times American prices—just an ordinary bundle this week cost \$2.75. It would be almost as cheap to buy clothing for every "change" provided the purchases could be made at home prices. One dollar of my bill this week was for washing a light, linen coat. They charge a quarter for washing soft shirts, ten cents for collars, forty cents for union suits and everything else in proportion.

"My old back-home washerwoman, with her tub and scrubbing board, could make \$25 a day at these prices.

"Of course, average wages are high here so that prices aren't really so unreasonable as they look, but it's naturally hard for newcomers to adjust themselves to conditions."

GAME BAG AND GUN

The "Fool Hen"—Biographical

By CHARLES STUART MOODY

I WAS first introduced to Franklin's grouse, more commonly known as "fool hen," when on an extended trip into the interior of the Bitter Root Mountains, in Idaho, with the Nez Percé Indians. It was late in the season, and the birds, after we reached the higher elevations where the forestation was almost exclusively lodge pole pine, were numerous. They would hardly leave the trail, and then only to fly a few feet and perch on some convenient low-hanging limb where they sat with head drawn down, eyes half closed as though asleep. The Indians carry a riding whip consisting of a heavy wooden handle two feet in length, through which run two broad leather thongs. Without this instrument of torture no cayuse horse can be made to travel. An Indian would spy a grouse sitting on a limb, ride out of the line, tap the bird on the head with his riding whip, stow it away in his bag and return. The birds were so numerous that by nightfall there would be enough so collected to supply food for the entire party. The Indians were armed, but never presumed to waste ammunition on the game.

This apparent lack of the instinct of self preservation interested me, and I made a rather close study of the birds during the years that followed. Franklin's grouse (*Dendragapus franklinii*) is the southern representative of the Canada grouse (*Dendragapus canadensis*) and differs from that bird in such slight degree that only ornithologists can distinguish them. They inhabit the higher and unsettled portions of the western mountain ranges, choosing by preference the lodge pole and spruce forests, occupying a zone between the ruffed grouse below and the white-tailed ptarmigan above, though isolated specimens may be found as low as 2,000 feet above sea level. That the grouse are never found in the vicinage of human habitations is probably accounted for by the fact that their unsuspecting nature causes them to fall easy victims to man. When the town of Pierce, Idaho, was first built, old settlers tell me that the fool hen was plenty, but in a few years not one could be found. After leaving Pierce and the region embraced in the Pierce placers, the grouse reappeared. The conclusion is obvious.

The almost impenetrable region inhabited by Franklin's grouse has protected them from the ravages of hunters, and has at the same time prevented any detailed study of their habits by ornithologists. Of the strictly game birds this is the least known to sportsmen. Indeed, many hunters encounter these birds and are unaware that they may be made to form an agreeable addition to the menu. At one time I chanced to be one of a hunting party in the Bitter Roots of which another member was a recent importation from Great Britain. The Britisher was a true sportsman, as I have found all his people to be, and scorned to shoot a sitting bird or a

standing deer. He possessed a beautiful three-barrel gun, of which he was justly proud. Being more familiar with the country than my companions, it fell to my lot to escort our British cousin around. The fall was exceedingly dry and game scarce. We had spent a week in the hills without finding large game. One day I suggested to him that we separate and follow up either side of a cañon, which headed in a thicket of pine toward the mountain. We separated, with the understanding that we were to meet at the head of the cañon. As I reached the neighborhood of the point agreed upon, I heard a voice.

"Why don't you fly, you bloomin' beggar?"

I peered through the trees and saw my companion frantically waving his gun at something in a tree. I drew near and saw a cock Franklin's grouse sitting about ten feet from the ground fast asleep. My friend looked around and saw me.

"What's the matter with this bally bird?" he asked. "Don't you know I have tried for the last five minutes to flush him, but the bloomin' beggar sits there as though half asleep."

"Oh, that's a fool hen," I replied.

"Ah! really, and what is a fool hen, may I ask?"

"A fool hen is a bird of the grouse family that hasn't sense enough to get out of the way of an Englishman with a gun."

He looked at me for a moment before the thought found lodgment, then he laughed. "Haw, haw, pretty good. And has he sense enough to fly from a Yankee with a gun?"

"No; same thing, English or Yankee, it's all the same."

"I want to shoot the creature, but I cawn't, don't you know, unless he will flush."

"Get your gun ready, and I will flush him for you."

I took up a small stick and shied it at the

GEORGE H. GRAHAM

Commissioner of Fisheries and Game, Massachusetts.

sitting bird. The stick struck the limb upon which he perched. He turned and snapped at it like an angry dog, but did not fly. Another failed to dislodge him. I then procured a pole and poked him off the limb. My British friend was so engrossed in my efforts that Mr. Dendragapus went whirling away through the timber unscathed by a single shot.

"Well, I'm blowed," was the disgusted remark of my companion.

I am persuaded that the seeming unwariness of these birds does not extend to their natural enemies. Two incidents will serve to furnish the reasons for my belief. I had occasion to make a professional visit to a remote mining camp beyond Elk, Idaho, a country without roads and only indifferent pack trails. Joe, my setter, was my traveling companion and interested himself in his canine way by inspecting everything along the trail. He brought consternation to the hearts of hundreds of chipmunks and ground squirrels, scared the young snowshoe rabbits until several of them turned prematurely white, brought down upon his devoted head storms of vituperation from innumerable long-crested jays, and otherwise enjoyed his outing as only a setter dog can that has been basking in the sunshine on a board walk for several months. We left Elk behind and began climbing the higher range. The timber grew smaller, then merged into the black pine and spruce growth, above which no timber grew. I saw a cock grouse on a log a few feet from the trail. Joe was some distance behind. I rode on a few yards and halted. The dog came trotting along, his head down, probably planning another chipmunk campaign, when he caught the scent from the grouse and "froze" into an image. Slowly he turned his head until he saw the bird, which was sitting with its head drawn back, eyes half closed, the picture of indolence and stupidity. Joe turned, crouched and began worming himself toward the bird. Inch by inch he slipped up until he was within three feet of his victim, when he crouched for a spring. Just as his muscles grew tense, right at the psychological moment as it were, the grouse launched full into his face. There was probably never a more surprised setter dog lived. He turned a back somersault, snapped blindly at the fleeing bird, then picked himself up, and trotted sheepishly along after my horse.

I thought possibly that might have been an exceptional case, but kept the matter in mind, watching for additional evidence. I got the evidence on another trip into the same mountains. In company with my Indians I was encamped on the Wet-as meadows one spring, salmon fishing. It is not a difficult matter to get a surfeit of salmon steak when one has nothing else, so when we discovered that a bear used a muddy spring near the border of a small meadow some two miles from the camp, I determined to add some bear steak to our bill of fare. The signs showed that bruin used the spring every day, and I climbed a small leafy-topped fir tree which commanded a view of the spring, and sat watching for his arrival. I had not been in my position more than half an hour before a female Franklin's grouse came creeping through the brush and settled on her nest in plain sight of where I sat. I had not seen the nest before, but that was not surprising, for one might step on the eggs and not see them, so perfectly do they blend with the surroundings. I fell to

watching the nesting bird and wondered at the wisdom of nature in harmonizing her colors with the earth so perfectly that but for her black eyes she had been indistinguishable. In perhaps half an hour a coyote came sneaking through the brush on track of the bird. He had evidently cut her trail before the scent laid, and had proceeded to hunt a grouse dinner. Carefully, his nose to earth like a dog, the coyote slipped along until he was quite near the grouse, which sat perfectly still. The only thing betraying her presence was the glint in her black eyes, which were wide open and apprehensive. The coyote saw her and crouched for the spring. As he did so, the grouse exploded right into his face with a noise like thunder. The coyote was taken by surprise. He snapped at the fluttering bird, got a mouthful of feathers and whirled in time to see the bird making off into the timber. He dashed after her, but it was a hopeless chase. I had fully intended making a "good" coyote out of him, but was so interested in watching the little drama that I forgot to shoot.

P. S.—I did not get the bear—that time.

The female Franklin's grouse, like all the grouse family, is a devoted and intelligent mother. As soon as the young are hatched (they run as soon as they leave the shell) the mother leads them to an open hillside where food is plenty, and there protects them until they are able to shift for themselves. I have frequently surprised coveys of these youngsters and watched the celerity with which they got under cover upon warning from the mother. One cluck and the little brown furry balls vanish, not a birdling to be seen. You may rest assured, however, that numerous bead-like black eyes are fastened upon you. The mother dashes at your feet in great distress, every bone in her body broken into numerous fragments, then trails off dragging her body and moaning in mortal agony. Follow her for a few yards and she suddenly recovers, springs into the air and goes whizzing away, cackling her delight at her adroitness in luring you away. Return to the spot and search diligently, and you will fail to locate a chick. They have taken advantage of your pursuit of their mother to leave that dangerous neighborhood.

Persons unfamiliar with the mating birds of these grouse have been mystified by a peculiar ventriloquial sound coming from some dense thicket of black pine in the spring and early summer. The sound puzzled me for several years. The "drum" of the ruffed grouse and the "hoot" of the big sooty grouse were both familiar to me, but this sound was different, more like the steady rolling of distant thunder. An old mountaineer told me it was the love song of the fool hen, and I laid my plans to surprise him at his amours. It was no easy task; the sound was so baffling that it was next to impossible to locate it. By exercising unlimited patience and considerable time I finally found the trysting place and watched the performance. It was in a deep lodge pole thicket where there was an open space of some three yards in extent. A small tree leaned out over this cleared space, and as I approached a cock grouse was deliberately walking up this incline. He paused when some ten feet from the ground and sat for several minutes, straightened up, vaulted into the air, hung suspended for an instant, dropped his legs, held his body upright and began to descend beating his wings against his breast. He

alighted on the ground, sat for some time, then climbed the tree again to repeat the maneuver. The sound differed from that produced by the ruffed grouse in that the cadence was regular instead of a crescendo.

Late in the fall these birds become strictly arboreal, retiring to the tops of the spruce trees, where they spend the winter. I do not recall having seen one on the ground after the winter set in. They feed off the spruce leaves, and in a short time become pretty strongly impregnated with turpentine.

In summer and fall the Franklin's grouse is quite palatable and forms a welcome addition to the hunter's pot, but after they begin feeding on the spruce, they become so strong that only a very hungry man can eat them. If it becomes necessary, on account of lack of other food, to eat one of the birds at such time, the flesh may be rendered less disagreeable by skinning the bird, removing the intestines as soon as it is killed, then wrapping it in a towel that has been dipped in boiling water. It should be allowed to remain in this over night. Late fall and winter-killed birds should be stewed, the water skimmed frequently to remove the turpentine.

What is a Game Bird in this Country?

CAPE MAY, N. J., Sept. 25.—*Editor Forest and Stream:* An extremely interesting question was asked me yesterday by a layman after a discussion on our game laws, i. e., "What is a game bird in this country?"

I have spent some time in figuring it out and have come to the conclusion that there is no definite definition that one can hold up to one that does not know what the term means.

Here in both Pennsylvania and New Jersey one cannot call any one bird a game bird, because such birds as the bobolink (or reed bird) and purple grackle are shot for eating, and have an open season for shooting them.

In the South the robin is shot, and there is an open season for killing them. Take Virginia, for instance. The season for shooting robin is from Feb. 15 to April 1, the time when the robins are on their way North to breed. They are not a game bird in the accepted sense, being not only insectivorous, but also (in the North) a song bird, and should be one of our most valued birds here and in the South for these two reasons. Yet south of here they are classed as "game birds."

It seems to me that one way of qualifying what should be called a game bird in this country could be done by judicious laws drawn between the different species.

For instance: The so-called "shore birds," i. e., yellowleg, plover, rail, etc., should be put in a class by themselves. Woodcock and quail should be protected in the same way. After these the question eliminates itself to a difference of weight among the birds that live inland.

Any bird over six ounces dressed should be classified as a game bird, and a season for that bird should be made. Any being under that weight should be absolutely protected for the good of the communities in general.

I should like to hear from the men who write to you so often on this subject and get their ideas on this, to me, new phase of the modern bird life.

MARK HOPKINS, JR.

Hunting in California.

BY GOLDEN GATE.

DEER hunting in this State is now at an end, except in the northern and northeastern mountainous sections where hunting is permitted until the 1st of November. Taken as a whole the season now closing has proved to be a very satisfactory one from the point of the number of deer killed, but it has been demonstrated more clearly than ever that some marked changes in the law are necessary. The early season shooting in the coast counties demonstrated the fact that nowhere are bucks in shape to be hunted as early as July 1, and it is believed that the season will be changed to open a month later with more uniform seasons for all the game districts of the State. Protective organizations are being formed in all sections of the State, and it is expected that the demand for a change in the law will come from the people themselves. R. H. Duke, legal adviser for the California Fish and Game Commission, has been spending considerable time assisting in the organization of these associations, the membership of which is now well above the 10,000 mark.

Another change in the game laws that will be considered by the Legislature next year will be that of imposing a heavier penalty on a person for killing a doe. This will not only be for the purpose of conserving the game, but for the protection of human life. If a hunter realizes that he is liable to be called upon to pay a heavy fine or to languish in jail for a good stiff term, he will be more careful to wait until he is absolutely certain that he is shooting at a buck, and that he is not drawing a bead on a fellow man or a doe.

During the month of August, seventeen mountain lions were killed in eleven counties of California, upon which the State bounty of \$20 was paid.

Violators of the game laws have been taken by surprise in Plumas county of late, and five convictions have been made there within a short time. Fred Wilson, of Southern California, was fined \$50 for killing a doe. "Bob," an Indian, was fined \$25 for hunting without a license and three others were arrested by J. E. Nail, of Cromberg, and made to pay \$25 each for their offenses.

Ontario Moose and Deer.

THE following letter was received last fall by our information department after the close of the Ontario season. It mentions a locality worth hunting:

My thanks are due your department for information received some months ago. I have just returned home from a very successful three weeks' hunt in the Wahnapiatae Lake country, where I found moose, and the most remarkable section for deer and partridge. I hunted twelve full days and in that time saw twenty-one deer, and it would be easy for a shotgun to get fifteen to twenty birds daily. Kindly register a new guide for that section, Robert Brady, whose address is Wahnapiatae, Ontario. He is in every respect a first class young woodsman, fine in a canoe and an excellent all around guide.

J. A. MELSHEIMER.

THE matter in FOREST AND STREAM is proof and guarantee of its class of readers.

NOTE THE SEVERAL "BREEDS" OF DOG USED IN A BEAR HUNT.

A Bear Story.

THE following narrative is an extract from a letter written to one of our subscribers and forwarded to us:

I was out on a good hunt last spring and we were fortunate enough to bag three of the furry brutes, all of them black. Saw innumerable elk and could have gotten some sheep or goat had we been so disposed, as there was quite a few of them where we went. They were plentiful enough, so that we could watch them at play on the mountain with a pair of strong binoculars. One of the bears we captured in a trap, and the other two we caught fair with dogs, and talk about a grand fight! We certainly had one with the largest of the bear. By the way, when I had left and came home I received a letter from one of the boys from where I was hunting. He said that a fellow who had been trapping grizzlies had got severely chewed up by one of the brutes. This fellow it appears had a set gun for bear, and during the night he heard the report of the gun, and going out to see what had happened, encountered a large grizzly and her cubs, one of which had been wounded when the gun went off, and the old mother being very mad about it, gave chase to him and ran him into the cabin. She not being able to get through the door or windows, went up on to the roof and tore a hole through it and let herself down and killed this man and ate him. His skull and shin bones were all that was found when his partner returned home the following day. The boys said that they could not cover the footprint of the bear with a pair of a number nine shoes. Some bear, eh? How would you like to have been there with your .35? I am planning to take a good hunt this fall after the big fellows.

FOREST AND STREAM is a magazine for sportsmen. If you feel that you are getting more than \$3 a year in value out of it, please square accounts with us by recommending some of your friends to subscribe.

Old Friends.

SOMERVILLE, Mass., Sept. 10.—*Editor Forest and Stream:* Sorry to have read of the inclination of the Haverhill correspondent, who has been for so long a time a member of the FOREST AND STREAM family, to drop out. I trust that he has been persuaded to alter his intentions. Must he lessen the rank of old friends? We need them all and many more.

Should think his feeling the necessity of laying aside the gun all the more reason for holding on to FOREST AND STREAM. Most of my best outing trips are spent in its columns. Nor is there the muzzle of a gun to be chased around in every instance. Trust that I misunderstood his impression of a real present time outing. And are conditions really so bad in his locality? His letter recalls to me what was perhaps the most productive few hours' shooting I ever experienced only last fall not far from Haverhill, a bag which I could have doubled had I taken full advantage of the opportunity. What I saw and heard of that country convinced me that I should like to revisit it some time. It looked very inviting to me.

I believe that there is yet enough game to furnish an incentive to be out in the open which after all is the real thing.

C. H. S.

You fellows all have heard of the Irishman, newly arrived, who when shown a giraffe in the Bronx Zoo and told its name, said: "There ain't no such animal." Well, read what Randy Hearst's American says:

"Venice, Cal., Sept. 18.—One of the queerest deep-sea creatures ever seen here was brought in to-day by a fisherman. It is five feet in length, black and green mottled, with a tail like that of a shark.

"It has a dorsal fin and four feet shaped like those of a parrot. Its mouth resembles that of a Gila monster, while its head is a replica on a large scale of that of a California horned toad."

The next time you go fishing, leave home the "hip disease" or you may see one "av thim things."

Fishing in Central Oregon.

LAMAR, COLO., Sept. 10.—*Editor Forest and Stream:* My dear brothers of the rod and reel: I have been sitting around your camp-fire now for two years listening to your many interesting stories and have said not a word. It is time that I, too, gave you an account of one of my fishing trips. This time it is to a new and but little known territory in Central Oregon. It was the De Chutes River and its confluents that I visited the first week in July. I had been told of the marvelous beauty of the region and of the great Dolly Varden trout to be found there by a friend who was born and reared in Oregon, and I decided to try it.

The De Chutes is rightly named in French and it flows as through a mill-race, there being but very few pools, and the stream very dry and too swift for canoe fishing and too deep to wade, consequently one cannot reach the middle of the stream with a fly, and I was so disappointed in it that I fished it but one day with indifferent results. Then a party of three of us hired a machine and went to Crooked River, which is a confluent of the De Chutes. We were riding along a smooth prairie road and viewing the many snow peaks in the distance when our friend, the driver, said, "Here we are." I descended from the machine, but could see no sign of a river, but after walking a short distance we came to a great chasm 600 feet deep, so narrow that one's voice could be heard from the other side, but if you wished to reach him by wagon, you must go forty miles. There are but few trails down into the cañon and our guide was soon leading us down one of them. I became so leg weary that I was glad when the bottom was reached. I noticed many large springs knee deep flowing into the river; in fact, the river has its source from a multitude of these springs, and they are fine indeed for the trout.

I soon found that my old friend the gray hackle was but little use in these waters, and for the first time while fishing west of the Alleghanies, I used the professor and yellow May. The royal coachman I used for a dropper. In this stream there are many pools, and in these I expected to find some large ones, but caught only the small fish there. Here again the fishing differed from our Colorado waters, and to get the larger ones I must whip the swiftest water. This seemed very strange to me. I caught some rainbows weighing two pounds and better, and the way those rascals fought was a joy forever to the fisherman. I lost many, as I could not accustom myself to the difference in fishing from our clean pools of Colorado, but later in the day I was as enthusiastic as any.

One of our party, a college professor, had never fished with fly before but caught nineteen of as fine trout as I ever saw. They outweighed my catch of twenty-one, and a prouder man I never saw. I will take off my hat to that boy any day. His fishing certainly exploded the theory in my bonnet that a man must fish for years before becoming skilled with the fly. They

told me that about May 15 there appears along the streams a fly gray in color and about one and a half inches in length and are very plentiful, and that the fishermen bait their snell hooks with these and float them upon the water as they would the artificial fly. During the time that this fly exists they tell me that fishing upon the Crooked River is a veritable slaughter, and that to catch ninety per day is not uncommon and all large ones, one to three pounds.

Central Oregon, speaking geologically, is the newest territory in the United States. It is volcanic and there are places that the soil is but 150 years old. It was very interesting to study the different stratas of the cañon wall and reminded me very much of the Grand Cañon. The Cascades are the western boundry of this territory and catch the Pacific winter rainfall, converting it into snow, and the soil being of a porous nature and in some places going to a depth of 700 or more feet, it makes of the entire territory an immense percolator, and in this manner the immense springs are formed. Another confluent of the De Chutes is the Mitolius that bursts out of the mountain in one immense mass of springs so deep that 500 feet from their source it is too deep to wade. Huge pools are formed fifteen feet or more in depth and so clear that a coin dropped in one of them can be seen upon the bottom. In these pools can be seen the mammoth Dolly Varden trout lying upon the bottom and immune from all form of bait, except in August, when they run the riffles and can then be taken with fly. Some weighing as high as seventy-five pounds have been taken from this stream. The water is so cold that a ranchman living near the head of the stream in using one of the springs in his milk room cannot set the milk cans in the water, but to get the cream to raise hangs them above the water. The temperature of this water is 34 degrees throughout the entire year.

In going to a new territory one has many things to learn, and if I ever visit the De Chutes country again, it will be in the month of August, that I may get a specimen of the king of all the trout family, the Dolly Varden.

J. H. KELLOGG, M.D.

Some Fishing.

WILLIAMSPORT, Pa., Sept. 11.—*Editor Forest and Stream:* I am inclosing a copy of part of a letter sent to me by my son whose home is at Wellsboro, Pa. I thought it might be of interest to some readers of FOREST AND STREAM.

CHAS. LOSE.

You know Pine Creek well enough, I think, to be able to locate what they call the "Pine Creek Gorge." Roughly speaking it begins at Ansonia and ends at Blackwells, and this creek is almost a succession of rapids for the whole distance.

Several times I left here at six in the evening and returned at nine and have had a fine basket of fish, but on Saturday I made my big "killing".

Cathryn and I left on the noon train and went to Stone Station. I had minnows and my fly-book full of flies, so we were prepared for anything. The creek was high and we potted around and did nothing until five o'clock. I used bait and fly equally unsuccessfully until at last I tried a new wrinkle. I had purchased a tiny silver spinner, not half as big as a dime and I had three flies to go with it: a royal-coachman, a coachman and a Cahill. I looked them over and strung on the coachman. Then on my second loop I put a Reuben-Wood fly tied on a No. 2 hook. I was fishing with my old rod with a new reel and a good line and with an extra heavy single gut leader. I rigged up along the railroad track and then waded out and began casting. I was in a little pool of still water and I worked down to where the ripples all smoothed out as the water began to pull for the riffle. I cast my spinner and fly to the other bank and began to pull it across when something hit it with a bang. I hooked him, of course, for bass don't fool, and finally got him out. It was a bass about thirteen inches long caught with the spinner. Well, from then on until dark I had a hold of one all the time. I just waded down stream and caught bass after bass. I don't know the number, but I culled them well, keeping only big ones, and when I attempted to put the last one in my basket he slipped over the side and swam away. So I quit and started cleaning, and I had a basket full of dressed fish when I was through.

I have fished for trout in Loyalsock, and I have caught big bass in the river, but never in all my life have I found any fishing that could even compare with this fly-fishing for bass in Pine Creek Gorge. Sometimes they take a spinner, sometimes a fly, and sometimes both, but they are there and they come and they fight. You cast a fly way out behind some rock, and it sinks a little and begins to drag, when there is a swirl and you are fast to a fish that fights every inch of the way until he is in your basket. They are not little bass nor thin bass; they are good big fat fellows, and it takes skill to get them out.

Cathryn is getting to be quite a fisherman. She caught one on a spoon Saturday and made the record at landing it. It was about thirteen inches long and she got it out in two jerks. The first jerk hooked it. She set her feet and jerked again, and Mr. Bass was a-flopping in the bushes. She had a little split bamboo rod, and that test proves it a world beater, for I saw her do it on the tip of the rod. It was easily six inches past the butt when she heaved.

TOD.

Dry vs. Wet Fly.

CAVENDISH SQUARE, London, Eng., Sept. 10.—*Editor Forest and Stream:* I have been very much interested in following the discussions in your paper on dry versus wet-fly fishing. To start fair, we dry-fly men cheerfully give the wet-fly men due credit for being able, especially on small streams, to locate the likely spots where a fish may lie, and to nip him out where you would hardly expect one to be, but on the other hands we maintain to be able to rise and land good fish under conditions impossible to wet-fly fishers. Let me give my experience of last

Saturday to show exactly what I mean. I, with three others, fished a mile of a Hampshire chalk stream, which was fished by the monks of Rudwell Priory in 1270, so for 650 years my trout have been educated against the wiles of man. I had fair sport until I came to the mill pond, where the rises were few and far between, and languid as well. Not a ruffle stirred the surface, and the water was gin clear. I tried six kinds of flies and fished as carefully as I knew how, but to no use. Finally I did what I should have done at first. I wet my handkerchief, put it over the landing net and "swatted that fly" which was hovering over the water. It was a very small dun. The nearest to it in my book was a pale watery dun oo hook. I inclose one for your inspection.

I wet, stretched and dried a nine-foot four cast and put the fly on with an eight-inch "point" of the finest gut procurable, laid the fly in the center of the ring made by a rising fish, and after three or four essays, got my fish. Now, given the conditions I have endeavored to describe, will one of your wet-fly enthusiasts tell me how he would have got that fish?

The fact that we succeed under such conditions does not prevent us from fishing "wet" where necessary. May I explain. It often happens that one gets to the side of the water to find fish apparently rising all over the place, and yet never be able to do any good. What is really happening is this: Certain forms of fly are being hatched in the mud at the bottom of the stream, and are rising to the surface where their envelop will finally burst and the fly emerge. The fish are "bulging"; that is, darting to and fro about half way from the surface and securing the half-formed fly on their way up. The movements of their tails from time to time simulate a rise in a way to deceive the very elect.

One of our best writers and cleverest of dry-fly fishermen, E. M. Skues, some years ago pointed out that to fish a fly resembling this one before it has quite emerged from its chrysalis state, and fish it wet and about a foot under the surface, would do the trick. Needless to say, it does, and there you have an instance of a dry-fly man fishing "wet" on clear, smooth water.

In England we say, "In dry weather take your umbrella; in wet weather do as you — well, please." May I paraphrase that saying thus: On clear, smooth, glassy water under a bright sun, fish very small flies, the best imitation you can get, of those flying about, and fish them dry on very fine gut; in rough water, do as you please, or as a dry-fly purist would say, "Chuck and chance it."

A CHAUTAUQUA COUNTY EMIGRE.

Inter-City Tournament.

CHICAGO, Ill., Sept. 21.—*Editor Forest and Stream:* The scores made in the final half of the Inter-City Casting Clubs tournament are as under:

The day was an exceedingly disagreeable one, rain delaying the contest and keeping a large number of club men away who otherwise would have entered. During the tournament rain fell in such quantities that only dyed in the wool fishermen would have continued. These weather conditions, viz.: rain and semi-darkness, were the chief causative factors in the low bait

scores, but as the splendid fly scores show, it had no detergent effect on the knights of the "long rod." Messrs. Forsyth and DeGarmo made splendid scores, while Leonard Goodwin made a record which has never been equaled in an open tournament.

Half-ounce accuracy bait:

C. W. Hess..... 97.4	A. A. Barrett..... 97.8
H. F. Keppler..... 97.2	Wehle 97.3
D. H. Ellsworth..... 97.5	G. Swatek 96.9
F. E. Adams..... 98.6	L. Goodwin 98.1
F. E. Church..... 97.3	F. W. Perce 98.3
Smouse 96.1	L. E. De Garmo..... 98.3

Accuracy fly:

L. Goodwin 99 14-15	T. A. Forsyth..... 99 10-15
F. W. Perce..... 98 14-15	C. O. Dorchester. 99 6-15
L. E. De Garmo.. 99 11-15	

Quarter-ounce bait, distance, feet:

C. O. DORCHESTER, M.D., Sec'y-Treas.

St. Louis Bait- and Fly-Casting Club.

St. LOUIS, Mo., Sept. 25.—*Editor Forest and Stream:* The results of the St. Louis Fly- and Bait-Casting tournament, held in Forest Park, Sunday, Sept. 22:

Quarter-ounce bait, distance:

Fred Werner 110%	I. H. Hellman..... 46 1/2
Ed. Werner 107	H. J. Steinmesch... 41 1/2
Aug. Cyran 52%	

Longest cast, 122 feet, Fred Werner.

Quarter-ounce bait, accuracy:

Fred Werner 98.6	Ed. W. Schloeman ... 93.2
Ed. Werner 98.3	H. J. Steinmesch.... 90.6
Aug. Cyran 96.8	

Half-ounce bait, accuracy:

Fred. Werner 98.5	Ed. Werner 95.4
I. H. Hellman..... 98.4	H. J. Steinmesch.... 94.0
Geo. Ashton 97.2	L. I. Heyman..... 91.6
Walter Wimmer 96.6	Ed. W. Schloeman... 90.9
Aug. Cyran 96.2	

Fly, accuracy:

S. S. Pingree..... 99 1-15	I. H. Hellman.... 97 7-15
M. J. Brennan..... 98 9-15	Aug. Cyran 96 12-15
R. L. Smith..... 97 12-15	H. J. Steinmesch.. 95 1-15

Fly, distance:

M. J. Brennan 84	Geo. Ashton 70
S. S. Pingree..... 80	Aug. Cyran 67
H. Steinmesch..... 73	I. H. Hellmann 66
R. L. Smith..... 70	W. F. Koken..... 56

Half-ounce bait, distance:

I. H. Hellman 137	H. J. Steinmesch... 82 1/2
Aug. Cyran 113 1/2	Geo. Ashton 70 3/4
Ed. Werner 103 1/2	Fred Werner 56 1/2
Walter Wimmer ... 100%	Ed. W. Schloeman.. 21 3/4

Longest cast, 158 feet, I. H. Hellman and Ed. Werner, tied.

GEO. ASHTON, Sec'y.

California Game and Fish Protective Association.

THE twelfth annual convention of the California Game and Fish Protective Association was held at Hanford on Sept. 20 and was especially well attended when it is considered that the meeting place was held about half way between Los Angeles and San Francisco, the great centers of population of the State. The present fish and game laws were thoroughly gone over at the convention and a large number of recommendations for changes were adopted, these to be presented to the State Legislature for approval next January. These recommendations, many of which will doubtless be carried out, are as follows:

That the sale of wild ducks, black sea brant and wild pigeons be prohibited.

That the limit for deer be fixed at one male deer a season and that a deer tag system be instituted.

That the violation of fish and game laws shall result in cancellation of license for the balance of a year.

That a law be enacted making it manslaughter to shoot and kill a human being by mistake for game.

That the open season for deer be September and October in districts No. 3 and No. 4,

and as near the same as practicable in all other districts.

That whenever a county in this State sells more than \$1,000 worth of hunting licenses and is employing a game warden at \$1,000 or more a year, said county shall receive the sum of \$1,000 to be used in the work of fish and game patrol.

That the present State game farm be abolished as soon as possible.

That no person shall take or have in his possession any trout less than six inches in length.

That existing laws in regard to the sale of trout of one pound in weight be changed to trout of twelve inches in length over all.

That more efficient laws be enacted for preventing the use of snag hooks, grab hooks or similar devices in the fresh waters of the State.

That the open season for trout be made from May 1 to Jan. 1.

That a law be enacted forbidding the taking of trout of any variety by use of seines or nets, also a law providing for a closed season for trout from Feb. 1 to April 1 in tide waters.

That the use of any and all spawn in streams and tide waters of the State be prohibited.

That no croaker and no California whiting be taken at any time by any other means than hook and line, and the possession of these fish, except when taken by hook and line, be illegal.

That no seining be done within one mile of the main shore line of district No. 6 (Southern California), and that all the waters within two miles of the island of Santa Catalina be set aside as a breeding preserve for fishes, and that no fish may be taken within that limit, except by hook and line.

That the size limit for the Pismo or Cohang clam be fixed at eight and one-half inches around the outer edge of the shell; that a limit of 200 clams a day be fixed, and that a closed season be established from May 1 to Oct. 1.

That the use of dogs in hunting deer be prohibited.

That the bag limit for taking wild pigeons be limited to twenty per day, and for tree squirrels four per day.

That changes be made in the dates of opening and closing seasons to the end that doves and tree squirrels may not be taken during the season, that it is unlawful to take quail, and that snipe, curlew, plover and all other shore birds may not be taken during the season in which it is unlawful to take wild ducks.

In his annual report President A. M. Barker deplored the fact that the California Fish and Game Commission had taken the initiative in organizing an association of sportsmen, stating that in his opinion this should be left to the sportsmen themselves, and that there should be but one organization. However, he pledged the co-operation of the protective association with the State commission.

At the election of officers the following were chosen to serve for the ensuing year: A. M. Barker, San Jose, President; Henry W. Keller, Los Angeles, First Vice-President; Harry Greene, Monterey, Second Vice-President; H. C. Hall, San Francisco, Third Vice-President; W. S. Foster, Hanford, Fourth Vice-President; E. A. Mocker, Capitola, Secretary-Treasurer. Los Angeles was selected as the next meeting place.

GOLDEN GATE.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

A NATIONAL PARK CONFERENCE.

It is most gratifying to know that the present Secretary of the Interior is not only deeply interested in the country's national parks, but is effectively working to increase the public's interest in them.

In September, 1911, at the Yellowstone Park there was held a conference of park superintendents, Federal officials, concessioners in the parks and representatives of railways interested in the transportation of tourists to the parks. The object of this conference was to exchange ideas for the betterment of these parks and for making them more accessible to the public. No one visits any of these parks without feeling an interest in the subject, and most visitors wish to repeat their visit.

On Oct. 14 a second conference of this nature will be held, this time in the Yosemite National Park, in California. This meeting should be largely attended not only by those Government officials actively interested in the work of preserving the parks and persons representing corporations interested in caring for the public who visit them, but also by all nature lovers and those devoted to the protection of the parks as great national playgrounds. The hotel and transportation companies have made a special rate for this conference, and information on this point can no doubt be had from the Southern Pacific and Santa Fe railroads, or from the chief clerk of the Department of the Interior. During the past generation secretaries of the Interior have often expressed great interest in the national parks, but Mr. Fisher is, we believe, the first to take active steps to make the way into these parks easy for the average man. The representatives of the transportation companies are heartily co-operating with him, and the result of this united action will be of great benefit to the average citizen.

FOREST AND STREAM especially rejoices in the movement. Its files back for thirty years show a steady fight for the protection of such parks as we had and for the establishment of new ones. Its fight against the first attempt to exploit the Yellowstone Park began in 1881 or thereabouts, and it exercised an important influence in the setting apart of the Glacier National Park.

These great pleasure grounds belong to the people. They should be preserved first of all, and then the way into them should be made so easy and so inexpensive that most people may visit them.

THE COUNTY FAIR.

With how much pleasure we anticipate the county fair. Young and old alike have come to regard the "day at the fair" as they do Christmas, New Years and other after summer vacation days indicated in red upon the calendar. In most towns schools close one day during the fair to allow the children to attend. Business men find a day open on which to take the family to the county seat where county fairs always are held. Months before the first day of the big event children are "making something" to exhibit or are getting their ponies, chickens, ducks or rabbits "groomed" for the blue ribbon. Housewives plan cakes, pies, breadstuffs or fancy work, while the head of the house looks over his garden truck or has the groom take his "black beauty" up and down for inspection, seeing in his mind's eye a blue ribbon hanging from the bridle rosette.

It seems to us county fairs have been of unusual interest this year—more instructive. We have noted the results of up-to-date, intensive farming, where aid is given to nature in proper application of chemicals, fertilizers, soil preparation, spraying, cultivation and care of fruit trees—making the soil produce not only greater quantity, but higher quality. Farming has become a science; old-time methods no longer affording a livelihood to the farmer. Obsolete methods have been banished to the scrap heap, having been superseded by modern machinery and theory scientifically applied. The county fair has come to be an institution supported and furthered by both State and individual, and in its homely way is one of the greatest instructors of young and old.

CONDITIONS IN SUMTER COUNTY, ALA.

The increase in game and song birds has been marvelous in Sumter county, Ala. Conditions, before Alabama's game law went into effect, had become such that a man would have to cover miles and miles of territory to find enough quail for a mess. These birds were trapped, shot at out of season and killed in any manner whatsoever that negroes could think of. Now a fair shot can leave town after dinner and kill the limit prescribed by law before dark, and not ride a step.

Doves were like hawks—seen frequently, but never close enough to get a shot at. Now in the fields where cat-tail millet grows wild, the finest sport in the world can be had shooting doves.

There are still some deer in Sumter county, but owing to the continual cutting of timber it

is believed that whatever increase there has been, has moved into Mississippi.

Squirrels and wild turkey have increased wonderfully. For several years practically nobody cared to hunt either squirrels or turkeys, because they had become so scarce, but now it is a favorite pastime in season.

Birds of all kinds are more plentiful than formerly. Sentiment has been so far developed in their favor that even boys no longer hunt their nests and destroy their young. People realize how beneficial they are in destroying insects. Now every man is a game warden, so to speak. Quite a number of private individuals have stocked their ponds with fish secured from the United States Government, but there has been no concerted effort toward stocking the streams.

To the present game law system and Commissioner Wallace is due entirely the credit for the increase of game, the increased manliness of the sportsmen and the knowledge that has been disseminated in regard to the benefits derived from birds.

CRAWLING TO AID DIGESTION.

It is becoming clear to us how it is that a snake can digest easily a rabbit, frog or bird that he has eaten at a gulp, while some of us suffer indescribable fullness from a dish of lobster salad or a rabbit of Welch extraction. His snakeship crawls on his belly, thereby eliminating the "gastric pocket" observable in the human in an upright posture. Dr. Leon Meunier, a French food specialist, is responsible for the "crawl to digestion" theory. He says:

"The stooping position eliminates the 'gastric pocket,' observable under the X-rays in the human being in an upright posture, and thus prevents the stagnation of food in this pocket.

"Exercise of the abdominal muscles by walking on all fours is also an excellent means of stimulating digestion."

Dr. Meunier has obtained highly satisfactory results from a test made with his treatment. On three consecutive days he made one of his patients have the same menu and made him walk upright after the first meal, rest in a horizontal position after the second, and crawl on all fours after the third. On each day it was found that digestion was most active after the third meal when the patient had indulged in a promenade on his hands and feet.

We hope the good French doctor's theory may be correct, but just make a mental picture, if you can, of Tremont, Market, Broad streets, Broadway or Michigan avenue each day after lunch if the theory were practiced in this country. It wouldn't be an elevating sight.

WATERTOWN, MASS.

Forest and Stream Pub. Co.,
 127 Franklin St., New York.

DEAR SIRS—Inclosed is check for \$3.00, renewal for my subscription to FOREST AND STREAM.

Congratulations on the birthday of FOREST AND STREAM; also its improved condition in every way. My only regret is that of my inability to contribute anything worthy of its pages after so many years of enjoyment I have received from it.

R. T. GREENE.

YACHTING

Some of the Most Important Regattas of the Season.

THIS has been a remarkable season as a developer of speed in the motor boat and a demonstrator that small power boats are seaworthy. The latter fact was shown in the Bermuda race, Detroit's trans-Atlantic voyage, and the several long distance and ocean races in nearby waters. Speed records were broken at Huntington, notably by Teck, Jr., and later by the Ryan boats on both fresh and salt water. These contests developed also the fact that most of the new type speed boats are absolutely useless for anything but racing, are uncertain for that and require bath-tub conditions to enable them to cover a course at all. In practically every event this year one or more of the little speed crafts have been sunk by the wash of a passing vessel, the wave of a contestant or through striking a floating obstacle.

The big event of the season was the Chicago water carnival, held Aug. 10-17. This brought out a solid week of racing and a tremendous crowd from home and abroad. The William Wrigley Jr. (you've seen those eyes) trophy was the big prize of the show. This designated the championship power boat, all classes, and was run over a 25-mile course. It resulted in a fiasco and almost a law suit. Jas. A. Pugh's Disturber III. won the first race in 1:16.54—very slow for the distance. Second race had no other entrant, so was a spinover for Disturber. The slow time was seductive to J. Stewart Blackton, who slipped Baby Reliance II. into the third race and trimmed the Pugh boat handily. Mr. Pugh immediately claimed the race on the ground that the Blackton boat had not been properly entered. Baby Reliance II. thereupon sailed over the course and took the cup with the wriggly ways and was sustained by the judges, some say not rightfully, but then "some" may or may not know. It is pretty certain, however, that Baby Reliance II. is a faster boat than Disturber III.

The remaining power boat events are scheduled below:

TWENTY-SIX-FOOT CLASS—15 MILES.

First Heat, Aug. 12—Two Laps, 7½ Miles Each.

	1st Lap.	2d Lap.	Finish.
Kitty Hawk II.	0 13 57	0 26 43	
Debutante	0 20 34	0 41 17	
Crusader III.	0 13 58		

Second Heat, Aug. 13—Three Laps, 5 Miles Each.

	1st Lap.	2d Lap.	Finish.
Baby Reliance II.	0 06 56	0 13 51	0 20 46
Crusader III.	0 07 06	0 14 49	0 24 29
Debutante	0 11 01	0 21 51	0 34 12

Third Heat, Aug. 18—Three Laps, 5 Miles Each.

	1st Lap.	2d Lap.	Finish.
Baby Reliance II.	0 07 24	0 16 26	0 24 32
Debutante	0 11 45	0 23 10	0 35 24
Crusader III.	0 07 46	0 16 33	Sunk.

Debutante winner; Baby Reliance II. disqualified.

Fourth Heat, Aug. 19—Three Laps, 5 Miles Each.

	1st Lap.	2d Lap.	Finish.
Baby Reliance II.	0 11 37	0 23 24	0 35 10
Debutante	0 11 50	0 23 51	0 35 35

THIRTY-TWO-FOOT CLASS—15 MILES.

First Heat, Aug. 12—Two Laps, 7½ Miles Each.

	1st Lap.	Finish.
Chicago	0 20 11	0 40 30
Debutante	0 20 57	0 41 14
Beat It	0 22 08	0 43 53

Second Heat, Aug. 13—Three Laps, 5 Miles Each.*

	1st Lap.	2d Lap.	Finish.
Chicago	0 08 16	0 16 01	0 24 14
Debutante	0 11 33	0 23 52	0 34 10
Beat It	0 13 01	0 26 55	0 38 43
Kitty Hawk II.	0 08 12	0 16 11	Sunk.

FORTY-FOOT CLASS—20 MILES.

First Heat, Aug. 14—Four Laps, 5 Miles Each *

	1st Lap.	2d Lap.	3d Lap.	Finish.
Baby Reliance II.	0 06 44	0 13 17	0 19 58	0 26 50
Chicago	0 08 00	0 15 52	0 23 46	0 31 42
Eph	0 09 07	0 18 12	0 27 14	0 36 15
Disturber III.	0 06 57	0 13 43	0 20 28	
Debutante	0 10 30			

Second Heat, Aug. 18—Four Laps, 5 Miles Each.

	1st Lap.	2d Lap.	3d Lap.	Finish.
Baby Reliance II.	0 07 05	0 14 05	0 21 01	0 27 54
Disturber III.	0 07 14	0 17 55	0 27 43	0 36 24
Chicago	0 11 30	0 20 52	0 29 45	0 38 36

Disturber III. winner; Baby Reliance II. disqualified.

Third Heat, Aug. 19—Four Laps, 5 Miles Each.

	1st Lap.	2d Lap.	3d Lap.	Finish.
Baby Reliance II.	0 06 50	0 14 05	0 21 33	0 28 34
Disturber III.	0 07 39	0 15 14	0 22 33	0 29 53
Chicago	0 08 50	0 17 50	0 26 45	0 35 28

FREE FOR ALL FOR THE WRIGLEY TROPHY—25 MILES.

First Heat, Aug. 16—Five Laps, 5 Miles Each.

	1st Lap.	2d Lap.	3d Lap.	4th Lap.	Fin.
Disturber III.	15 04	29 50	44 38	60 26	76 54
Chicago	16 01	30 51			

Second Heat, Aug. 17—Five Laps, 5 Miles Each.

Disturber III.—Unofficial time, 61.06.

Third Heat, Aug. 18—Five Laps, 5 Miles Each.

	1st Lap.	2d Lap.	3d Lap.	4th Lap.	Fin.
Baby Reliance II.	7 02	14 02	21 09	28 22	35 49
Disturber III.	7 18	14 50	27 13	40 01	51 45
Chicago	8 52	17 43			

Fourth Heat, Aug. 19—Five Laps, 5 Miles Each.

	1st Lap.	2d Lap.	3d Lap.	4th Lap.	Fin.
Baby Reliance II.	7 51	15 58	23 51	31 49	39 55

Fifth Heat, Aug. 20—Five Laps, 5 Miles Each.

Baby Reliance II., unofficial time, 46.35.
*During this heat the actual length of the course was 25,380 feet per lap.

Of course, the great attraction was the International sloop race between Michigan, designed by William Gardiner, representing United States, and Patricia, designed by Owen, representing Canada. Michigan won the first race by 20 seconds. Patricia took the balance.

It is not generally conceded that Patricia is the faster boat, although it is the unanimous opinion she was handled much better.

The Gold challenge cup was won on the St. Lawrence by P. D. Q., owned by A. G. Miles, of Thousand Island Y. C., and built by Tams, Lemoine & Crane, of New York. Engine troubles and the usual sinking of contestants marked this event.

The week's power boat carnival held on the Hudson River Sept. 16 to 21, under the auspices of Motor Boat Club of America, proved eminently successful. The results of each day follow, allowing for the sinking episodes so much expected at such events:

FIRST DAY.

Class D—Cruisers.

	Start.	Finish.	Elapsed.
Avis, F. C. Havens	1 04 24	3 01 25	1 57 01
Caroline, M. F. Dennis	12 30 00	3 01 38	1 57 14

Handicaps: Avis, scratch; Caroline, 0.34.24.

Class E—Cruisers—Start, 12:35.

	Handicap.	Finish.	Elapsed.
Peter Pan, Sr., J. Simpson	Scratch	2 21 41	1 46 41
Spindrift, C. R. Butler	0 47 38	4 05 07	2 42 29
A. Mietz, A. Mietz	0 25 23	3 25 12	2 24 49

Class F—Open Boats—Start, 2:00.

	Start.	Finish.	Elapsed.
Alfred S., H. Soeldner	1 21 40	5 16 00	1 55 20
Canadice, S. A. Servatius	0 17 30	4 51 02	2 33 32

Canoeing

Hudson River Canoe Regatta.

CANOE races of the Hudson River are over for the season, the Fort Washington regatta run off on Sunday, Sept. 22, being the last of club events, although there are still many small scores to settle, and not until the leaves have gone and ice formed, will the frail canoc cease to dart in and out of the shallow waters along-shore or be seen sailing more gracefully than any of the birds now sought by the game hunter.

Inwood C. C. has won the best percentage of all the clubs racing, and E. C. Kelley, of Fort Washington, has proven himself the best of those entered for all-around work. He has won race after race and medal after medal till his fellow members are filled with admiration for his skill.

Of all the regattas the last was the best. It was held at the club house at Edgewater, N. J., and they did things up royally by serving ice cream and cake and filling up the punch bowl many times. The big oil lamps of this club are to be replaced with electric lights for the wid-winter meetings, unless Commodore King's expectations go far astray. They had the only ladies' event of the season; that of the mixed doubles and the one-lady, double blades, the winners of which paddled with surprising ability, bringing cheers from everybody.

In the tilting matches Esselborn and Baldwin won after spilling a number of crews into the river. The following clubs were represented: Fort Washington, Inwood, Knickerbocker, Manhattan, Undercliff, Shattamuck of Ossining, Wenonah of Bayonne, Uhigh of Cranford, N. J., Seneca of Newark, and Red Dragon of Philadelphia. Summary:

Fort Washington Trophy, Half-Mile.—Won by Zuck; Kelley, second; Vandohlen, third.

One Man, Double Blades, Novice.—Won by Ahrens, Knickerbocker; Finn, Knickerbocker, second; Clark, Knickerbocker, third.

One Lady, Double Blades.—Won by Miss Marshall; Mrs. Perkins, second; Miss Parker, third.

Club Fours.—Won by Fort Washington; Inwood, second; Wenonah, third.

Mixed Tandem, Doubles.—Won by Miss Zuck and Marshall; Miss Gibbons and Kelley, second; Miss Marshall and Zuck, third.

Tail End Race.—Won by Bartholomew, Inwood; Marshall, Inwood, second.

Single Tandem.—Won by Smith and Ahrens; Kelley and Molnar, second.

Overboard Race.—Won by Zuck; Kelley, second.

An Overland Canoe Trip.

BY R. H. NASH.

WE left New York on the 7:15 on a Friday night, a party of four bound for Old Forge by train, and a canoe trip in the Adirondacks. It was hot that night, one of the hottest of August, and the thoughts of mountain breezes and plunges into cool lakes put some life in us as we sweltered in the New York Central tunnel. The car trip up was uneventful, and at about 6:30 our sleeper duly arrived at Old Forge, the conductor awakening us on the way to collect an additional fare for the Fulton Chain Railway, an extensive system that operates between Fulton Chain and Old Forge, a distance of two miles. We had breakfast in the hotel, and a good one it was, especially appreciated as the crisp air had sharpened our appetites, and it was cool, a delightful contrast to the night before, so much so in fact that they had a log fire burning in the hall of the hotel. After breakfast we bought "grub" and saw about boats. Two of us, Charley and I, had shipped one up, a canvas Peterboro that we had picked up in Canada the year before, and which had already seen hard service, while George and Harry hired one at the boat house, a nice little Old Town about 15½ feet long and very light, though cranky.

By 10:30 we had changed our clothes, packed our duffle and were ready for "La long traverse," a longer one than we then anticipated, and started off with some good wishes from a few idlers on the dock, paddling up the Fulton Chain. Twenty-five years ago the Fulton Chain of eight lakes was no doubt ideal canoeing, it is now to some, but we wanted the wilderness and found this too civilized. The scenery is nice, but numbers of cottages are to be found on the lake shores, and motor boats are constantly chugging to and fro. We paddled on steadily through First, Second, Third and Fourth lakes, up the inlet between the last and Fifth, then made a half-mile carry to Sixth. On this lake we had lunch and then paddled to the end of Seventh through some flooded lands to the carry to Eighth. We had made a good many carries in the past, and as it turned out, had a number ahead on that trip, but never had we such an audience as then. Three launches loaded with summer boarders had discharged their passengers there just before we arrived, and they were scattered all the way along the trail. Most of them seemed to think that we had escaped from Matteawan or some such place, and no doubt the sight of four men each carrying 90 to 100 pounds for a mile does seem the height of lunacy to some. Eighth Lake is a nice one, free from launches and only inhabited by a few campers, so as it was getting late, we decided to spend the night there, making camp on an island about one mile from the end of the carry. On the nearest shore to the island and about a hundred yards before you get to it is a fine spring of cold water located about fifty yards from the lake, a blaze on a tree indicating the landing.

We had supper and talked things over, deciding that so far we had seen too many people, and that it was up to us to get away from them; the main canoe route through to Saranac Lake, though more picturesque, was still pretty well settled and we determined to leave the beaten track. Our maps—Government ones—showed

a small stream, the Rock River, with its source about one mile from Blue Mountain Lake, and this flowed into the Cedar and the Cedar into the Hudson; once there we could work up a considerable distance according to the map. This settled satisfactorily, we turned in without going to the trouble of putting up a tent, as a result of which we had the pleasure of sleeping in a heavy dew as thick as a November fog in New York—however, as we all had sleeping bags, this did not matter. The next morning we were up bright and early and had finished breakfast, washed dishes and packed up by 9 A. M. A short paddle brought us to the carry to Brown's Tract Inlet, one and a half miles long, and we made this in good shape. The inlet is quite wild and very winding, something like the upper part of Rancocas Creek in South Jersey, and we enjoyed the paddled to Raquette Lake. Here we bought more grub, and crossing the lower end, entered the Marion River, a pretty stretch of water that extends almost to Utowanna Lake, a quarter of a mile carry only being necessary to reach it. On the further side of this we had lunch and then paddled through Utowanna and Eagle lakes to Blue Mountain, a beautiful lake above which Blue Mountain towers majestically. Stopping at the village, we made inquiries about the Rock River, and a clerk in the grocery store told us that there was plenty of water in it, and that we ought to be able to reach the Hudson with one carry. We afterward wondered what sinister motive he had in view in telling us that.

Highly elated, we started off making a mile carry to Rock Creek that winds through a marsh, called Thirty-four Swamp on the map. That swamp in a direct line is about five miles long, but by creek it is several times that, and it was nearly dark when we reached the end. Here we found a dam and beyond that flowed the Rock River—that is, in spring time; but we found it a bed of dry boulders. We gazed dismally at it for a time and then started to look for a camping spot, which was not very easy to find, as most of the ground was swampy. However, we finally located, and I, the assistant cook, prepared supper while the cook, George, went on an exploring trip, and the dishwashers, Charlie and Harry, took a swim. Supper was nearly over when George returned tired from a five-mile walk and discouraged. He had gone for two and a half miles down and found no water in the creek, so we decided that we would return to Blue Mountain Lake in the morning.

The next morning we awoke refreshed and determined. We knew if we made a carry back through Blue Mountain village those who had seen us start would laugh at us, and then we did not like to give up, so with canoes and outfit we started to look for water. The carry was not bad along the main road for a time, and

BELOW THE FALLS.

then over an old lumber road, but it was a long one, and we had to make several stops. However, after three miles of it we found some more swampy country and a creek one could float a boat in. A paddle of about one mile brought us to Rock Lake, a fair sized sheet of water and quite wild, no signs of houses being visible. We crossed the upper end of this only, as the outlet is very close to the inlet, and, in fact, we almost doubled on our tracks for a time at the mouth of the outlet (still the Rock River). We found a dam, and then after carrying over that, we came to a small pool and then the dry bed of the river once more. As there were no trails here along the shore, we decided to carry over the boulders, not as easy an undertaking as it might appear at first glance, as when one has a heavy load a slip would very likely mean a broken leg or sprained ankle. The rest of the day was spent in short paddles across pools and carries over dry rapids—that is, they had been rapids at high water. We lost track of the number we made, and about 5:30 pitched camp on some fairly high ground at the foot of one of them.

The tent was up and supper being cooked, when some one discovered six sticks of dynamite lying on the ground at the foot of a tree, and a further search disclosed the same number hanging from another tree; two of those on the ground had been partly eaten by some animal. We speculated a good deal on how they got there, and what they were for, but could arrive at no conclusion, though afterward we learned they were left by lumbermen, who used them to blow out the log jams.

After supper George tried his luck at fishing, but without success, though a deep pool at the foot of the rocks looked a good place for bass. All hands turned in early, but before we got to sleep we heard sounds of some animal moving through the woods quite close to camp and very close to the dynamite. We all lay quiet, hoping to get a sight of it, though personally I was wondering if it was going to eat some more of the explosive, and if so, hoping it would not chew it very hard. After a short

ANCIENT SCORTON ARROW, SEPT. 10.

The 239th annual meeting. This is an unusual contest. The shooting is at 100 yards, two arrows at an end. The competition lasts two hours in the forenoon and two hours in the afternoon, no fixed number of arrows being shot, though the average is usually about 160.

C. E. Cadman made 64 hits, 250 score. Spencer Madan was second with 61 hits, score

225. The highest score made in recent years was by T. H. Langford-Sainsbury in 1910 when he scored 78 hits, score 302, having shot 142 arrows.

In reporting the competition for the Ancient Scorton Arrow for 1908, Colonel Walrond, in the Archer's Register says: "For the first time, as far as can be gathered from the minutes, an American joined in the shooting, in the person of H. B. Richardson, the U. S. A. champion. Mr. Richardson shot in great form and made the highest hits and score that has ever been recorded at this meeting. The day was a most delightful one for the sport. Mr. Richardson made 102 hits, 452 score."

Chicago Archery Club.

As a result of a challenge issued by the Chicago Archery Club to the Newton (Mass.) Club—each club to shoot on its own range—the scores of the highest four members being selected as the score of the team, the Newton Club shot its event Saturday, Sept. 21, 1912, on the range on the Newton Centre playground. The weather was cold, damp with a strong northeast wind and unfavorable to making large scores. The Chicago team shot on Sunday, making 132 points less, and scores follow. The round consisted of 96 arrows at 60 yards.

G. P. Bryant scored a clean slate with 96 hits, and a total of 546 points; H. B. Richardson, 95 hits, 513 points; Ellis Spear, Jr., 77 hits, 369 points; B. P. Gray, 77 hits, 347 points. The score of the quartette was 345 hits for 1,775 points.

	Newton.	Hits.	Score.

- July 8-13.—Cedar Point, O.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

A tournament will be held at Seidler's Beach, Morgan Station, N. J., Oct. 23, commencing at 10 o'clock. A good dinner will be served at a reasonable price on the grounds. Maltby W. Conover will have charge of the office. Trolley to grounds from Matawan or South Amboy.

The Kankakee Rifle and Revolver Club was organized last week with fifty charter members. Officers were elected as follows: President, J. F. Labell; Vice-President, H. H. Davis; Secretary, Roy Duesenberry; Treasurer, V. C. Nickerson. The Association will affiliate with the National Association, and will be the second State organization, the first being located at Alton. The first tournament will be given during the second week of October. The object of the club is to perfect members in marksmanship, and also for social purposes.

Under date of Sept. 30, Secretary Ludwig writes: "The registered county shoot of the Hercules Gun Club, of Temple, Pa., to be held on Oct. 12, under the management of Lloyd R. Lewis, promises to be a banner tournament. The program calls for 150 targets, with an extra event of 10 pairs of doubles. Hoff & Bros., of Reading, offer a gold medal trophy to the winner of the county championship of 50 targets. Handsome trophies will be awarded to the high and low guns on the regular program." Programs may be had by addressing the secretary at 936 North Second street, Reading, Pa.

The sixth annual Cosmopolitan Amateur Championship will be held on Columbus Day, (Saturday, Oct. 12), under auspices of Bergen Beach Gun Club, of Brooklyn. The shoot is open to all amateurs and there will be \$100 added. Three sets of traps will be used, and shoot will begin at 9:30 A. M. Take Subway to Flatbush and Atlantic avenues, Brooklyn, then Flatbush avenue trolley car; or from New York, City Hall—Brooklyn Bridge—direct, or will transfer to shooting grounds, Avenue N and East Seventy-first street, Bergen Beach, Brooklyn. All at 16yds., high guns win; 100 targets per man; entrance \$2.50, including targets. Two additional events will be shot if time and attendance allow, of 25 targets each, entrance \$2.50 each event; price of targets deducted at 2 cents each. Class shooting, four moneys, divided 40, 30, 20 and 10 per cent. Total entrance, \$12.50. The regular monthly shoot will take place on Oct. 8 at 1 P. M. L. H. Schortemeier, 201 Pearl street, New York, Secretary.

When Fred Gilbert said to Lester German the other day that the two of them would shoot any other two men in the world a race at 50 pairs (100 targets), and when Lester said to Fred, "Table's set," they probably had but little idea that their remarks would soon receive serious attention, or attention that meant business. Such, however, was the case, because just as soon as they heard of Fred's remark and Lester's reply, Harry Freeman said to Jimmy Day, "How about you and I?" What Jimmy Day said is not recorded, but it must have been satisfactory, because the two of them are booked to shoot Gilbert and German a race under the above conditions on Monday, Oct. 14 next, on the grounds of the Cincinnati Gun Club. The date set, being the day before the opening of the Post Season tournament on those grounds, makes it most convenient, as unquestionably many of the intending contestants at the Post Season tournament will want to be on hand that day to get some practice ahead of time, and also see the match between the four crack "double-target" shots. The match will of course be shot in the afternoon. "Table's set." Who'll do the carving and the eating?

W. G. BEECROFT.

Du Pont Gun Club.

WILMINGTON, Del., Sept. 28.—The interclub team race set for to-day between the members of the West Chester Gun Club, of West Chester, Pa., and the Du Pont Gun Club, of this city, was unfortunately too one-sided to be all that it had been the wish of the management of both clubs that it should be. The West Chester men were unable to get together a full team to visit the local men, and for that reason were at a decided disadvantage. In addition, their captain, F. M. Eachus, one of the best of the old-time shots in this section of the country, had to stand on the side lines and do his part refereeing, owing to a broken left arm.

Only nine visitors all told showed up, and as no less than forty-two of the local gunners were on hand, the handicap was too much, as the rules called for "best ten scores to count." Since only nine men came from West Chester, only "nine best scores of the Wilmingtonians counted, but that "nine best" totaled 406 out of 450 to 327 for the West Chester men, or an advantage for the home team of 79 targets.

Eugene du Pont kept up his recent good work, and was high man for the Du Pont Gun Club, scoring 49 out of 50. Tied for second place were J. B. McHugh and H. P. Carlon, while H. W. Bush and J. H. Minnick both scored 45. W. Edmunson, H. T. Reed and W. M. Armistead made the team with 44 apiece, while Henry Winchester was the ninth man on the team with 43. There were many other members of the Du Pont Gun Club below him, but his score just made the team total one target better than an even 90 per cent.

C. J. Happerset was high man on the West Chester team, and won the silver souvenir spoon donated by the local club to the high man on the visiting team. C. Barnes was next to him with 42. The scores of team race follow:

West Chester Gun Club.	Du Pont Gun Club.
C W Martin..... 36	W Edmunson 45
C Barnes 42	E du Pont 49
P W Eagan..... 32	H W Bush 45
R Temple 28	J H Minnick..... 45
C J Happerset.... 43	J B McHugh..... 46
D Grooms 38	H P Carlon..... 46
E Farr 36	H T Reed..... 44
H Martin 32	H Winchester... 43
W Torpey 40-327	W M Armistead... 44-406

Other shooters who shot with the Du Pont team, but who shot less than 43 were: W. M. Hammond 39, C. Leedom 42, C. H. Simon 32, *H. L. Worthington 48, *L. S. German 48, S. J. Newman 41, E. H. Ford 20, S. G. David 34, T. W. Mathewson 39, Stanley Tuchten 42, *Ed. Banks 48, J. J. Magahern 40, Dr. S. Steele 41, L. L. Jarrell 36, J. W. Anderson, Jr., 39, *J. T. Skelly 49, P. A. Iddings 41, C. D. Prickett 38, I. Turner 37, L. W. Crawford 31, Alexis du Pont 40, W. B. Smith, Jr., 33, W. H. Hitchcock 39, W. G. Wood 22, A. J. Curley 18, J. S. Grant 11, W. Sillitoe 12, G. R. Golderman 5, J. M. Turner 13, T. E. Doremus 20, T. K. McElroy 14.

*Not eligible to count in the team race. The last seven shooters shot at 25 targets only. In connection with the first 25 targets shot at in the team race, the weekly contests for the Coleman du Pont spoons was decided. Eugene du Pont, not being eligible under the club rules for a spoon, J. H. Minnick and J. B. McHugh tied for the Class A spoon on 23 out of 25. McHugh won on the shoot-off, which was held when the light was very poor, with the score of 21 to 20. H. W. Bush and Clyde Leedom tied for the Class B spoon with scores of 24 apiece, and decided the tie by the toss of a coin, Bush being the lucky man and winning the spoon. In Class C Dr. A. C. Patterson and S. J. Newman are tied with 21 each, the tie having to be shot off at some future date. H. T. Reed with 21 won the Class D spoon, J. M. Turner in Class E winning with 13.

The challenge contest between Ed. Banks, holder of the Class A cup, and W. M. Hammond, challenger, was decided in favor of Hammond, after a tie of 43 out of

50. Hammond won on the shoot-off, with 23 to 22. Eugene E. du Pont has challenged Mr. Hammond, and the match will be shot off shortly.

Many good scores were made during the afternoon, weather conditions being about perfect. J. T. Skelly led the classy bunch with 98 out of 100 shot at.

Several of the gun club members present signified their intention of going to Boston next Friday night for the purpose of taking part in the All-Delaware and All-New England team race, to be shot the following day, on the grounds of the Paleface Gun Club, at Welling-ton, Mass. From present appearances the team will be able to render a good account of itself, although one or two of the best shots in the club cannot make the trip.

Mt. Kisco Gun Club.

Mr. Kisco, N. Y., Sept. 28.—The second registered tournament of the Mt. Kisco Gun Club was held here to-day, and was most successful. The weather conditions in the morning were disagreeable, rain delaying the shooting, and keeping many shooters home. Sixty-three shooters faced the traps bravely. Five professionals were present, assisting the cashier's office and outside work. The attendance in the afternoon was very good, many ladies from town and out of town coming to the grounds to see Mrs. L. G. Vogel, Miss Jessie Thorpe and Miss L. Boles shoot. Amateur high gun for the day was won by J. Martin; M. W. Wynne second; T. H. Lawrence third. H. H. Stevens was high professional. Scores:

Birmingham Gun Club.

TWENTY shooters were at the Birmingham Gun Club Friday and Saturday, Sept. 20 and 21. Mrs. Garl shot high on Friday, and John Warren was high percentage on Saturday, dropping but 2 out of his 50 shot at. Some of the beginners are shooting good, considering the amount of practice they have had.

Mr. Ragsdale, of Bessemer, paid us a visit. Mr. Skelly has given a Du Pont fob for the Saturday afternoon shooters, and the beginners are very enthusiastic about winning it. The first 45 targets each Saturday to count on the fob, with sliding added bird handicap.

On Saturday, Oct. 26, the Birmingham Gun Club will give their annual class shoot, which will be followed by a distance handicap match at 100 targets, with \$1 or more added for each entrance. Trophy to winner. Sweepstakes optional:

Hudson Gun Club.

JERSEY CITY, N. J., Sept. 25.—Appended are the scores of the regular bi-monthly shoot of the Hudson Gun Club, held on Sept. 22. There were eighteen shooters in attendance, and Billy O'Brien, with an average of 84 per cent., was high man.

The morning was bright and cool, with just enough wind blowing from behind to put a little extra speed on the targets, and making the boys shoot quick to get a fair percentage of them. We had the pleasure of meeting one of our old club members, Mr. Craft, who has been on the Pacific Coast for the past two years, and who could not resist the opportunity while in New York to pay us a visit. He showed us that he still knows how to handle the tools to break targets with by keeping very close to the leaders. We were all pleased to have him with us again, and wish him the best of good luck in his new field of business.

The Du Pont trophy contest will start next shoot, Oct. 6, and we would like to see a good gathering on hand to compete for it. Joe Whitley says that the corn is ready to pick, and promises to have several barrels on hand for shooters and their friends to dispose of, so come out and help us eat it. Everybody welcome. Don't forget the date, Oct. 6. Take the Turnpike car to the west side of the Hackensack River Bridge and follow the crowd. Scores:

Saginaw Canoe Club.

SAGINAW, Mich., Sept. 28.—We herewith inclose scores of our registered tournament of Sept. 27. Owing to unsatisfactory weather the attendance was very small, but a very enthusiastic tournament was held. Including the regular program events, there were several cup events, so that a total of 4,200 targets were thrown.

C. A. Galbraith won high amateur average. Fred. Helfrecht won long run. Ed. Carpenter, won high Saginaw average. Each was presented with a handsome cup.

Mammoth Denver Handicap

A Harvest of Victory

For Shooters of World-Beating Guns and Shells

Most sensational shooting of great "Mile High" event another sterling tribute to record-breaking Remington-UMC Arms and Ammunition.

R. H. Bruns, shooting Speed Shells, makes Brilliant String of Scores

Among this 21-year-old marksman's star achievements were:

- Broke 200 straight first day
- Won High Amateur Average of whole shoot, 494 x 500
- Made longest run of Handicap, 283 straight
- Broke 683 x 700, including Handicap Targets

Denver Handicap Event: Four shooters of Remington-UMC shells tied with the winner.

Championship on Doubles: Wm. Ridley shooting Remington-UMC Arrow Steel Lined Shells, scored 96 on 50 pairs of doubles, making a world's record for this event.

Preliminary Handicap: Won by H. E. Whitney, 98 x 100, shooting Remington-UMC Pump Gun. Second: R. H. Bruns, 97 x 100, shooting same ammunition.

Post Trophy, Handicap Championship of Colorado, Wyoming and New Mexico: Won by C. F. Nelson, 97 x 100, shooting Remington-UMC Pump Gun and Arrow Steel Lined Shells.

STEEL LINED FAVORITES WIN WESTY HOGAN SHOOT

Shooters of Remington-UMC — "the perfect shooting combination" — predominate at famous Atlantic City meet.

Westy Hogan Championship: Won by C. H. Newcomb, 99 x 100 and 19 x 20 in shoot-off, shooting Remington-UMC Arrow Steel Lined Shells.

Bull Durham Trophy: Won by J. S. Young, 146 x 150, shooting Remington-UMC Nitro Club Steel Lined Shells.

High Amateur Average: Won by C. H. Newcomb, 431 x 450, 24 x 25 in shoot-off, shooting Remington-UMC Arrow Steel Lined Shells.

Longest Run of Tournament: Made by C. H. Newcomb, 103 straight, shooting Remington-UMC Arrow Steel Lined Shells.

Remington-UMC—a century's experience to back up your aim.

Winners at Olympic Games, Winners at Grand American Handicap, Winners at Western Handicap. STILL WINNING!

FOR 50c. (less than actual cost) we will send a "A NEW CHAPTER IN AN OLD STORY" copy of our beautiful and valuable book
 This book contains the most remarkable hunting photographs ever taken. "I have been reading your book with pleasure and profit. Such a work is bound to do good."—*Elbert Hubbard.* "It is a contribution to national history and letters."—*Francis Trevelyan Miller.* "The last word in design, illustration, text and execution."—*Herbert L. Bridgeman.* "Very interesting."—*Francis Bannerman.*

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO.
299-301 Broadway New York, N. Y.

New Hanover Gun Club.

WILMINGTON, N. C., Sept. 28.—The reason you haven't received the reports for the last three weeks, is that several of us attended the Denver handicap, to our sorrow. But we had a fine trip. Owing to bad weather the scores to-day were not so good.

J. H. DREHER, Sec'y.

Prepare for Exposition Tournaments.

ONE of the attractions of the Panama-Pacific International Exposition, to be held in San Francisco in 1915, will be a series of target tournaments of interstate, national and international importance. The leading shooting societies of California have formed a corporation known as the International Shooting Festival Association of 1915, to promote target shooting in all its

branches, establish a federation of shooting clubs and to arrange and supervise the contests that will be held. Trophies and cash prizes of such value will be offered that marksmen will be justified in coming to take part. Suitable ranges will be provided for all contests, and sufficient targets will be provided to accommodate any number of competitors.

GOLDEN GATE.

Plattsville Gun Club.

PLATTSVILLE, Wis., Sept. 22.—Ben Dorscher was high in both events to-day. First event was a handicap. Louis Bartling was second in both events. Scores:

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Northern Kentucky Gun Club.

THE regular monthly money-back tournament held on Sept. 29 was the best of this season's series, twenty-nine shooters facing the traps, and with two exceptions, shooting the entire program of ten 15-target events. The shoot started at 11 o'clock, and was finished at 4:30; over 6,000 targets were trapped without a hitch. Owing to the near approach of dusk, the special event was called off.

Dayton, O., was represented by seven shooters—J. I. Brandenburg, J. E. Cain, R. E. Mumma, J. A. Penn, H. A. Furness, H. Mombeck, and V. Huber; from Harrison there were A. M. Turrell, J. G. Francis and Dr. O. J. Maddux; Circleville, O., E. M. Stout and C. L. Moeller. The Okoboji Indians had a full squad on the firing line and carried off high honors for the day. Chief Right Wing (G. W. Maxwell, of Hastings, Neb.) and Chief Night Rider (Guy Ward, of Birmingham, Ala.) tying for first on 145; Chief Heap Talk (Fred Gilbert, of Spirit Lake, Ia.) second with 140. Chief Round Head (W. R. Chamberlain, of Columbus, O.) third with 139.

The race for high average among the amateurs was a close one between A. H. Sunderbruch, of Williamsburg, O., and M. J. Welch, of Cincinnati. At the half-way point the former was one target in the lead with 6 down to Welch's 7. In the last 75 the latter picked up a little, losing 6 to the former's 8, and winning by one target, 137 to 136. Third high average money went to Dr. Maddux, of Harrison, on 134. E. M. Stout, of Circleville, and J. H. Schreck, of Covington, Ky., tied for fourth on 133.

The money-back purse amounted to \$60.50; the losses amounted to \$53.68, leaving a surplus of \$6.82, which was divided among the three high men, 50, 30 and 20 per cent. Ten of the shooters were refunded their losses in sums ranging from 38 cents to \$10.

Capt. G. W. Dameron was not in good form for the first five events, but picked up after that and shot about his usual good gait in the last half. R. H. Bruns, of Brookville, Ind., who did such phenomenal work at the recent Denver shoot, missing but 6 targets out of 500, and who also made a fine showing at the Westy Hogan tournament at Atlantic City, was not in form here, his continuous shooting of the past three weeks making him a little stale. He will be in shape for the Post Season tournament on Oct. 15, and will finish near the top.

Elmer E. Shaner, of Pittsburg, Pa., secretary-manager of the Interstate Association, was among the spectators. He has been inspecting the grounds of the Cincinnati Gun Club, where the Post Season will be shot, and expressed himself as much pleased with the arrangements made by Supt. Gambell. Other spectators well known in the trapshooting world were L. J. Squier, of Pittsburgh, Pa., and R. Davies, Cincinnati, secretary of the Cincinnati Gun Club.

The office was in charge of E. C. Lamb, who has filled this position very acceptably at all the club's tournaments.

The weather was not favorable for high scores; heavy clouds in the morning threatened rain, and although it cleared in the afternoon, a cold wind made it uncomfortable on the firing line, and affected the flight of the targets in a puzzling manner.

The last money-back tournament of the season will be held in October. Capt. Dameron and several members of the club will enter the contest for the Kentucky State challenge cup on Oct. 5, on which date T. H. Clay, Jr., of Paris, Ky., will defend his title against E. Hammerschmidt, of Latonia, Ky., challenger, and any other members of the Kentucky State Trapshooters' League who may care to come in. The match will be held under the auspices of the Latonia Gun Club.

Smith Gun Club.

FOURTEEN shooters put 2,000 clays out of commission at the Smith Gun Club last Saturday. Although a strong wind was blowing across the grounds, remarkable scores were made. State Amateur Champion B. M. Shanley, Jr., was high gun for the afternoon. He managed to shatter 297 out of a possible 325. J. Baldwin and W. W. Hassinger also put up good scores. Although sweepstake shooting took up the most of the time, three interesting

WINCHESTER

THE
W
BRAND

Rifles, Shotguns
and Cartridges

There are many makes of guns and cartridges, but Winchester, the Red W Brand, have first call among sportsmen of experience. It is not sentiment, but quality and dependability that give them preference over all other makes. The quality and dependability of Winchester guns and cartridges are maintained by the exercise of great care and experience in the selection of the materials used in making them and by thoroughly modern methods of manufacture. Winchester goods have to pass innumerable tests before they are ready for market, which means that the man who uses them is sure of getting a full measure of shooting satisfaction. If you, like thousands of sportsmen, use Winchester guns and cartridges, you are familiar with their superiority. If you haven't used them, a trial will convince you that you should.

WINCHESTER GUNS AND AMMUNITION ARE MADE FOR EACH OTHER AND SOLD EVERYWHERE

Peters Shells

WIN A GREAT VICTORY AT THE GRAND AMERICAN HANDICAP AT SPRINGFIELD, ILL., JUNE 18-21

PRELIMINARY HANDICAP—Won by Wm. S. Hoon, 94 x 100 and 18 x 20 in shoot off.

AMATEUR CHAMPIONSHIP—Wm. S. Hoon tied for 1st place, 192 x 200.

GRAND AMERICAN HANDICAP—C. A. Young made High Professional Score, 95 x 100 from 22 yards.

PROFESSIONAL DOUBLES CHAMPIONSHIP—J. S. Day and Walter Huff tied for 1st—84 x 50 pairs.

AMATEUR DOUBLES CHAMPIONSHIP—Harry W. Kahler 2d—88 x 50 pairs.

There were no 16-yard targets at the Grand American, and therefore, no targets that will figure in the season's average. It must be apparent, however, that in figuring the average at Springfield, the scores made on practice day, the double target event, and the Consolation Handicap should be eliminated—the Consolation because it was not open to all. The real Amateur Average was therefore won by Mr. Hoon, on his score of 380 x 400.

HIGH AMATEUR AVERAGE—All single targets, W. S. Hoon—380 x 400.

Practice Day: 2d Professional Average, H. D. Freeman, 192 x 200. 2d Amateur Average, Bart Lewis, 191 x 200.

All the above used the Red P Ammunition. A fitting climax to a wonderful succession of winnings. The superior quality of "steel where steel belongs" shells absolutely proven.

For Field or Trap, there is no shot-gun ammunition that gives the unalloyed satisfaction that can be gotten with the Red P Brand.

Charleston Gun Club.

CHARLESTON, W. Va., Sept. 28.—Ninety-two and ninety-one out of one hundred is not so bad in a practice shoot. Davis made the former and Fritz the latter in our shoot to-day, at which seven turned out. Scores: Davis 92, Fritz 91, Shepherd 88, Nicholson 66, Beardsley 52, Mettsheard (50 targets) 18, Goshorn (50 targets) 41.
DR. G. NICHOLSON.

Rifle and Revolver

Du Pont Gun Club, Rifle Dept.

WILMINGTON, Del., Sept. 28.—The following scores were made on the rifle range of the Du Pont Gun Club, Miss Hickman being a beginner, but showing what a lady can do with a weapon when it is pointed right: J. B. Hickman 104, 102, 73; Miss E. Hickman 112, 152, 139; T. C. S. Dorsey 222; E. R. Golterman 165, 104.

A team race that created some interest was as follows: W. F. Silitoe and W. F. Jensen 368; T. C. S. Dorsey and E. R. Golterman 357; A. J. Curley and J. G. S. Grant 314.

THE NEGATIVE ANGLE SYSTEM.

MILITARY authorities and big game hunters are much interested in a new rifle sighting system that is designed to eliminate the necessity for estimating distances and adjusting sights in long-range shooting.

Of the Remington negative angle system, as the invention is called, Sir George Greenhill, a noted English ballistical expert, said in a recent lecture: "The new system proves that since the origin of firearms our method of sighting in active service rifle firing has been wrong. The invention is likely to bring about a revolution in the art of shooting."

In brief, the system utilizes the well-known fact that the apparent size of an object decreases as the distance increases. The user of the negative angle sight is instructed to sight at a point the height of the object under it. If the arm were the army rifle and the target a man, the point of aiming would be about 5 feet 6 inches below the man's feet. With the regu-

lation ammunition, as furnished for the army rifle, the negative angle system will insure hits on the man target, at all ranges from 100 to 825 yards, which is an increase of about 300 yards over the range of the present battle sight.

At first it would appear that some trouble might be met in sighting. However, no difficulty whatever is found in aiming at a point 5 feet 6 inches below a man's feet, particularly as the man is conveniently on the spot to afford a gauge, very much like a foot rule photographed with another object to indicate comparative heights.

The new system is the invention of H. Ommundsen, an Englishman, who won the King's prize at a recent English national shoot, and who has been high up in the same contest on several other occasions.

That the system is applicable to all kinds of game shooting with a rifle is evident, as to do away with guessing at distances must inevitably help the hunter to increase his field averages.

ALBINOS IN ANIMAL LIFE.

ONE of the most curious freaks of nature is the albino. Albinism occurs not only among human beings, but includes everything that has life. While it is most noticeable among human beings and has been studied by scientists with particular reference to the human family, yet it also occurs among other animals and birds of all kinds. Most unusual of all, however, and perhaps the most striking example outside of the human family, is the occurrence of albinism in the vegetable kingdom. In fact, there is nothing that grows in the ground, nothing that swims in the waters underneath among which this curious freak of nature does not exist.

For many years scientists all over the world have made a study of this curious freak. In Germany and on the continent generally science has been trying to discover nature's secret since the days of Pharaoh, but it is only in recent years that interest has developed in the new world. For the last ten years many scientists of America have delved deep into the subject. Among these are numbered the best scientists

in the service of Uncle Sam, and while there has been no continuous investigation, the searches of Americans have shown remarkable results.

The scientists of the Smithsonian Institution in Washington have been working along this line for years, gathering specimens from all over the world, and the result of their labor is now shown in a unique exhibition just completed. This unusual collection shows curious examples of albinos in all phases of life, among birds, fowls and animals, and it is probably the only collection of the kind in the world.—From the San Francisco Call.

SKIN SUPPLY FROM INDIA'S WILD PIGS.

WE have repeatedly referred to the damage done to crops by wild pigs in India, and to the importance of taking advantage of the strong demand for pig skins and so making profitable a systematic extermination of these animals by hunting, or preferably by trapping. In this connection it is interesting to quote the following from a recent report of the Canadian Trade Commissioner in Leeds, England:

"Much difficulty is being experienced by local firms in obtaining pig skins, and inquiries have been made as to the prospect of procuring supplies from Canada. At present, supplies of tanned pig skins come almost entirely from Ayrshire in Scotland, although in the past small quantities have been received occasionally from the United States. The latter, however, are considered to be at a disadvantage, as the skins from that country were as a rule found to be badly flayed. Pig skins could be sent here either tanned or simply salted. Various uses are found for them, such as for instance the making of purses, bags, cases and leggings. They are also used for bookbinding, for covering furniture, and also for use in the saddlery trade. The present scarcity is attributed to the increasing uses to which these skins are now being put, and some idea as to the demand is shown by the fact that prices have risen over 50 per cent. in the last five years. To compete successfully on this market it is very important that the skins be carefully flayed."—From the official Indian Trade Journal, Calcutta.

SPORT IN FLORIDA.

Continued from page 425.

ing was good; moreover, the prices were most reasonable, which is something unusual in Florida. As the young couple who ran the establishment had been married only two weeks, it is probable that by this time they are more sophisticated and are charging higher rates. The oysters they served were as fine as any that can be found in the United States, being fairly large and about as well flavored as the little Cuban oysters which we appreciated so much when we were in Havana.

Next day we made an early start, and as before went down the river or more strictly speaking the estuary, for it is from one to two or more miles wide, and after a good morning's sport we landed on the north shore and tried for jacksnipe. I walked over some very rough ground for nearly a mile, seeing only two or three birds which Leonard drove my way, then concluding that the game was not worth the candle, I returned to the launch, stretched out on some dry sand, and took a snooze. In an hour or more Leonard returned with thirteen snipe, then we took lunch and went out again for ducks, of which we secured all we wanted, returning as before to town about sunset.

The next day being Sunday, and it being against the law in Florida to shoot on that day in places where you are likely to get caught, we took a larger launch belonging to Mr. Meredith and fished down toward the Gulf, intending to spend the night in the hotel at Punta Rassa. We had a quiet day, catching a few small skip-jacks (or ladyfish), trout and jackfish. It is a puzzle to me why so many people go in the winter to Fort Myers for fishing, as the fish are almost invariably small—not over two or three pounds each—and the catches are never large. Later in the season there are a few tarpon, and there is said to be good sport obtainable out on the Gulf some six or eight miles from Punta Rassa, but the latter is about eighteen miles from Fort Myers. If one is looking for climate or shooting, it is all right, but for fishing—no.

We reached Punta Rassa at sunset and found the hotel was full, consequently we went to a supply station nearby and found comfortable quarters and a fair table.

Next morning we started back early, and after going some seven miles against a strong ebb tide, we reached our old shooting ground and hunted ducks. The launch was not convenient for retrieving, consequently in the afternoon we transferred our impedimenta to the smaller launch which we picked up near Mr. Meredith's residence, some four miles below the town. As before, we bagged all the birds we wanted and got home at sunset, where I found awaiting me a telegram from an old client asking me to meet him in Kansas City for a conference and then to proceed to Washington, D. C. By doing some careful figuring with time tables I decided that we could have one more day's shooting, and Leonard and I thereupon determined that it should be our record day, consequently we bought a few extra cartridges and arranged for an extra early start. Hitherto we had been using shells loaded with twenty-four grains of Lafin and Rand's Infallible powder and an ounce and an eighth of No. 6 shot, but this time we had to take (at a higher cost) shells loaded with twenty-six grains and No. 5 shot. These cartridges I

? WHAT POWDER DO YOU USE ?

knew would be too powerful for my light gun and might not fit Leonard's automatic, but would be all right for my heavy gun, and I found them so much more effective than the others that I regretted I had not used them on the previous days.

As nobody but ourselves had been shooting ducks near Fort Myers since our arrival, and as those below the city had become too well acquainted with us, we decided to go up river, there being some three or four miles of good shooting ground before reaching the railroad bridge. It was a fortunate decision, because the birds were plentiful and not nearly so wild as those which we had hunted previously. During the forenoon

we had excellent sport, but failed to retrieve a number of dead birds that floated into shoal water. Up near the head of the estuary we ran into some large flocks of coots or mudhens and took toll out of them, but we preferred the blue-bill shooting. After reaching the birds we found too many weeds and too shoal water for traveling, hence turned back and crossed to the south side. It had been windy in the morning, and being in the bow that day I had gotten soaked, but we found it more sheltered and comfortable on the south shore. The ducks were certainly plentiful, and we both shot unusually well.

About noon we spiraled on a fine bunch and got quite close to them, consequently I picked

immediately, shoved an oar down into the mud, took a back sight over our wake, marked a point on the shore, went back a little, put down another oar about where we thought the gun ought to be, and proceeded to pick up the birds. The little gun had gone down with colors flying, as there were six dead ducks and two cripples on the water, one of which escaped. All this had occurred just opposite a famous grape fruit grove, to which we proceeded for the purpose of borrowing rakes to search for the lost gun. After spending an hour raking ineffectually, we gave it up and went ashore to return the rakes and eat luncheon. At this grove they raise seedless grape fruit, and it is said to be the finest and best kept orchard in Florida. After luncheon we tried again for the gun, inducing the rancher's son to dive for it, but it was all to no effect, consequently we put down two poles, took up the oars, offered a reward of \$20 for the gun and resumed our shooting.

Meredith promised that he would not fail to write me concerning the result of the attempts to find the gun which we expected the offer would induce, but as I have heard nothing from him, I am forced to the sad conclusion that I shall never again have the pleasure of handling my pretty little fowling piece.

Notwithstanding all the time we had lost in our useless search, we bagged a big lot of birds, more than we should have been willing to shoot had it not been our last day. I shall not give the number of ducks that we took, for fear that some of your readers will call us bad names. This much I will say, though—we had already determined to quit on Tuesday before I received the telegram, as we felt that four days of such shooting ought to be enough to satisfy reasonable sportsmen. It had been our intention to put in a week on the bass fishing near Dade City, and I suggested to Leonard that he go there without me, but he preferred not, consequently we departed the next morning for the North.

During the entire trip Leonard had been taking numerous photographs with a camera that he had borrowed from his brother before leaving home, and in consequence I had counted upon illustrating this paper with some interesting pictures, but much to our disgust there was something wrong with the apparatus, and every exposure was a total failure.

On the whole, in spite of the cold and stormy weather and the mishaps herein recorded, our trip in Florida and Cuba was most enjoyable, and we both expect to look back to it with great pleasure and satisfaction for many years to come.

[THE END.]

Maxim Silencer

For Fall Shooting

Enjoy the advantage and novelty of noiseless shooting this fall. Double the pleasure of your trip by fitting your rifle with a Maxim Silencer. It will enable you to shoot small game and hold target practice around camp without frightening off big game. Made in all calibers to fit any rifle. up the little gun and gave them two barrels as they rose, dropped it, seized the heavy gun and fired two more shots, dropping a long ranger with the last barrel, Leonard at the same time getting in some good work with his automatic. Unfortunately the butt of the little gun fell on the seat and slipped back, and after firing my fourth barrel I turned around just in time to see my pet firearm plunging muzzle foremost over the bow, the butt having been caught in the flywheel of the engine. We stopped the craft

A MOVING FOREST IN WALES.

A STRANGE story of a moving wood near Llandaff was told at a meeting of the district council by one of the members (William Hopkins)

The wood, he said, was situated on a steep slope and was gradually moving toward the road at the foot. The wood is quite 400 yards long and consists of stately elm trees. It had "left its moorings," he said, and was moving bodily toward the Llanvithyn road. A cut had been left at the top, which was full of water.

Some of the trees were coming down bodily, while others were leaning in all directions. The wood had been moving now eight or nine days and it was some little distance from the road, but was in danger of coming on to it.—From the London Chronicle.

AN OVERLAND CANOE TRIP.

Continued from page 435.

time it came close to us, scrambling on top of a canoe we had laid on the bank, and then being right over the foot of my sleeping bag (we were not using the tent) in the dim light, I could just make out a porcupine, and not wishing to have my blankets made into a pin cushion, I spoke gently to it, causing it to leave in a hurry, much to George's annoyance, as he was anxious to stab it with his hunting knife.

The rest of the night passed quietly, though we were somewhat troubled by a small gnat that was a wonder for its size. At daybreak I was awakened by the sound of some animal splashing in the water, and concluded it was a deer, but it had gone before we saw it. We made an early start that morning, as indications were that the trip would take longer than we anticipated. The open water we were camped near did not extend very far, and we soon struck another lot of boulders, which we carried over to a short stretch of water. This we kept up all morning, some of the carries being three-quarters of a mile in length. It was really a repetition of the previous afternoon's work with the slight variation of pushing over sand shallows in the open water stretches. About noon we reached the Cedar River, amid great rejoicings, as the water was deep and the river much larger than the rock. Our happiness was short lived, however, as a mile paddle brought us to a lumber jam which extended as far as we could see, something which had never entered into our calculations. We found an old lumber trail on the right bank and started to carry around it, hoping with all our hearts it was not very long. After a short mile this trail ended in nothing, and as the woods were thick, we could go no further, so George crossed the river on the logs and found an old lumber road on the left bank.

We had lunch and talked it over, deciding the only thing to do was to carry over the logs, a hard thing if one has had no previous experience. We divided the packs into four and managed to get them over, though Harry got caught between two logs and was rescued by George. Then came the canoes; they were even harder, but we put two men to each one and lifted and dragged them across in some way. The old tote road was fairly good going, and after about a mile and a half of it we struck open water once more. It commenced to rain then, and as a very short paddle brought us to some rapids too low to run, we began to say pleasant things about that clerk in the Blue Mountain who had told us it was an easy trip. By dint of lifting and pulling we got through the rapids, leaving plenty of paint on them as a souvenir, but right below we came to a fall jammed full of logs. Once more we landed and after some search found a trail on the left bank. It was a very poor one and the going was bad. Everybody fell and we were all pretty tired; then after about three-quarters of a mile we saw a deserted lumber shack across the river, and as it was raining and getting late, we concluded that we would spend the night there.

Once more we divided the packs into four, and leaving the canoes on that side started across, jumping from rock to rock. Our feet were wet through and the rocks slippery, and we had barely started when Harry fell in but

managed to keep his pack dry. A minute later Charley slipped and went in with his own and my blankets and extra clothes, which he dropped in the river. We got them out promptly, however, and they did not get very wet. The shack was the dirtiest place I ever saw, but as it was that or the wet woods, we had to make the best of it. Everybody was wet, tired and hungry, and we had very little to eat, erbswurst and rice being the menu for supper. Our bread, too, had entirely given out, and we had no flour.

It was still raining in the morning, but rain or shine we had to go ahead or starve. On crossing the river to where we had left the canoes, Harry fell in again, but all hands were getting used to it. We carried for about one mile, found a little open water and then another fall full of logs of course. Found a trail on the right bank which ended after half a mile. I went exploring this time and discovered a very bad trail on the other bank which went over a ridge, and then down to the Hudson River. From the top of the ridge I could see open water, and once again I thought we might have an easier time, but on reaching the bank I found the open water extended only a quarter of a mile, and then as far as the eye could see it was dry boulders.

Pretty well discouraged, I returned and found the rest of the outfit sitting on a rock smoking. I imparted the cheerful news, but as there was nothing else to do, we started once more. This was the worst carry of any, and we had an awful time making it. Charley fell with a canoe and could not get his head from between the paddles. How he did not break his neck no one knows, as the boat turned over and he had to practically stand on his head. George caught his leg between two logs and fell on his face with a canoe on top of him, while I tripped on a root and made a soft cushion for the pack. Everything has to end, so at last we came to the Hudson and after a

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.

The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and Game. [All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. [Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

No Shortcomings

The Smith Gun has no shortcomings—not one. The 6 Hunter brothers, with inventions, precision, workmanship and experience, kept after shot gun shortcomings for 22 years, until they had wiped out the last and least important one.

"6 Times 22 Years Experience" gives the shooter of a Smith Gun the fullest possible pleasure in the field, and the maximum game in his bag.

Ask your dealer to show you the new L. C. Smith 20-gauge. Send for Catalogue.

O STREET, SWANTON, VT.

rest started up that noble stream, here about 150 feet wide. We paddled the one-quarter mile to the rocks and then carried half a mile over them to another small pool where we had lunch. While George and I were cooking it (which sounds all right, but it was only boiled rice) Harry and Charley went on an exploring trip and eventually came back with the news that the boulders extended only two miles more, and then there was open water as far as they could see, also there was a fairly good trail all the way.

Feeling stronger from the lunch, we made the two-mile portage in good time, and were rewarded by a beautiful view. Across the foot

of the open water, which is known as the Blackwell Stillwater and extends about five miles, a dam had been built, and from the top of that we could see right up the Hudson valley for about twenty miles, while in the background Mt. Marcy and McIntyre Mountains loomed in solemn splendor. Here we had a swim, and then feeling that for the time at least our troubles were over, once more got into our canoes and started up the river. About one mile further on we met two fellows in a canoe who said they were bound for Glens Falls. If the Hudson below the Cedar was as bad as the part we struck, they must have had an awful time getting there. A little further on we came to a lumber camp where we were able to buy two loaves of home-made bread and some butter, so that we were able to have a feast that night, which we had after making another carry of one mile at the end of the stillwater, and then paddling about the same distance to some rapids. At the foot of these on an island some considerable person had put up a lean-to, and we spent the night in this, though before morning we regretted it, as it rained heavily and the roof leaked.

We were up at 5:30 and had an early breakfast. This unusual start was made because we were out of tobacco, and therefore had to reach the nearest town, Newcomb, early. A half mile carry was the first thing on the program followed by a paddle of about the same distance, then a mile and a half carry, and a paddle through a swamp which was very shallow. We got stuck in the mud and Charley got out on a log to look things over, then slipped off and went into black mud over both knees and came out a pretty sight. We got through somehow and found open water, and then a small rapid which we managed to pole up. Above this the road bridge crossed the river and we knew we were near civilization once more. This knowledge was emphasized by the sight of a pretty girl in a bathing suit who, however, never even looked at us. From here a half mile of easy paddling brought us to Harris Lake, which is about two miles long, and on the extreme end of which Newcomb is located. Here we landed, and going into town got our mail and a good supply of food. We certainly enjoyed our lunch that day, for we had been able to get some fresh eggs, which we had to eat that meal, as we could not negotiate the carries with them, and after beans and rice, fried eggs and bacon with bread, butter and honey seemed a meal fit for the gods. It was about 4 P. M. when we finished and we retraced our way through Harris Lake to the Hudson and continued up it. Here our troubles again commenced with renewed force. A short paddle brought us to a dam and we carried around this to some flooded land through which we were able to paddle for about one mile when we came to another bed of boulders. On the right hand shore there was an old trail, but after about five-eighths of a mile this ended in thick woods, and we had an awful time getting through them to the river bed. George fell with a canoe, and Harry and I did the same with our packs. We continued on the boulders until everybody was tired out, and then made camp with open water in sight.

It rained a good part of that night and the next morning, so we did not get started until late on account of it. A two-mile paddle brought

Birds of Eastern North America

BY

Chester A. Reed, B. S.

THIS is a most interesting and thorough book. The opening and closing chapters take up bird-lore and make it understandable and entertaining to those who want to learn more about birds. Most valuable of all is the chapter on how to study birds.

☞ Good and accurate illustrations give the key to identifying birds in the field and the general appearance of the species.

us to another bed of boulders, and after a heart-breaking carry of half a mile or so with no end in sight, we decided to work back to the road about the same distance away. This was no easy matter, as there was no trail, but after pushing through bushes for some distance we came to a cow pasture which was easier going, though the inhabitants did not approve of us and followed close behind, making very hostile demonstrations. We discovered that carrying a canoe with a long-horned wiry cow about twenty feet from one's back was not the most pleasant mode of travel, and so made record time across that field. The road safely reached at length, we went up for three miles, then took the wrong turn, going a quarter of a mile out of our way,

came back, got to the open water and found a log jam which extended for another mile, got over that somehow and had an awful time making the river, as the woods were very thick between there and the road.

We were nearly all in by now, but we wanted to make Sanford Lake before nightfall, so still pushed up the river. The "Mighty" Hudson has furnished a theme for many writers, but I'll guarantee that none who describe it in that way had ever seen it a few miles below Sanford Lake. It is about 75 feet wide and so shallow that a canoe can hardly float in it. We gave up trying to pole and went overboard pushing and pulling, but this was hard, as the bed is mostly quicksand and several times we went in above our knees, and would no doubt have gone further but for the fact that numbers of logs were buried in the sand, and in each case we were lucky enough to strike one. Then, too, it wound around like a snake, and though the map showed we were near Sanford Lake, it seemed an endless journey there. At last it got nearly dark, so we camped again on the river tired out, as usual. It was getting very cold and commenced to rain as we finished supper, keeping it up all night. In the morning our clothes were still wet, and it was very damp and cold, the wind coming from the north. The woods were wet through, too, and we had no easy time lighting a fire.

It took two hours to make Sanford Lake, our work being a repetition of the previous afternoon. This lake is four miles long and was the wildest we had struck on the trip, the shores being densely wooded, while the mountains form a magnificent background to them. We were glad when the paddle was over and we could carry again, for though we had all our extra clothes on, we were chilled through. This was along a good road for about two miles, and then we came to the Tahawus Club, which is beautifully situated in almost the heart of the mountains. Our object right along had been to make Henderson Lake, the source of the Hudson, and leave our canoes there, while we climbed Mt. Marcy and went through Indian Pass. However, at the Tahawus we were informed that Henderson Lake was private property, and that we could not camp on it, so we left the canoes there and divided the packs between us and started for Camp Colden, seven miles away. This is an open shack five miles from the summit of Mt. Marcy put up for the convenience of tourists; the trail to it from the club is in very good condition, and through splendid country. It rained during most of that afternoon, however, and we got on the wrong trail, reaching some private camps of the Tahawus Club, and it was after dark when we eventually came to the open shack. Here we found three fellows who had been up Marcy that day. It was a tight fit to get seven in the lean-to, but we somehow managed it.

On the following morning we walked around Colden Lake and then over to Avalanche. I cannot do justice to either one, for the scenery is really grand, and when we looked at Avalanche we felt well repaid for all our hard work. Then we went back to the shack and from there took the trail up Marcy, making the five miles in two and one-quarter

Batavia Dog Show.

BATAVIA, N. Y., Sept. 22.—*Editor Forest and Stream:* Our eighth annual show closed yesterday. It rained Wednesday, the first day of the fair, but during the three days of the dog show we had favorable weather. One hundred and twenty-five dogs were benched. We advertised to begin the judging at 10 o'clock, and Judge Mortimer and the management were ready to begin on time, but the express companies were slow in producing the dogs. A large shipment from Buffalo started at 7 A. M. and were not delivered till about 2 P. M. So we delayed in the morning and only judged in spots. At 2 P. M. we began at the beginning and finished Bostons, taking the balance of the breeds and general specials Friday morning. There was no competition till pointers were reached, Watland's Commissioner getting winners dogs and Sunshine winners bitches. The latter is by Beppo G. and received the special for best of the breed. The English setters were not filled as well as in former years. Cockers, however, were well represented, Lackawanna Duplicate getting winners dogs, other than black and special, for best of the breed. Airedale classes were well filled and showed much quality, Clonmel Isonomy securing winners dogs, and Clonmel Command winners bitches. Command was given the best in the breed and eventually the best terrier special and also the best in the show. Isonomy received reserve to best in show, and together they were awarded both the Batavia special and the Spratt's special.

The Boston classes were well filled, having the most of any breed, with cockers second. Rexonian was the winning dog, and Lady Verna the winning bitch, and Mr. Dietschler is to be congratulated on securing both winners, with as many good Bostons as there were competing. Champion Micky Flynn won the special for best local dog (Irish setter), and the French bull Brunette won best of opposite sex. Boston Obbie won the President's cup for best in the county; the cocker Dinah Belle May the best of opposite sex, having won in her classes and was the winning black bitch. The Richmond cup for best sporting dog went to English setter Flint II., and the best non-sporting special to the collie Southport Aristatype.

The cut-glass prizes were distributed Saturday noon, there being a prize for the best of all the principal breeds, as well as the unclassified list. This is all Batavia made and was much appreciated by the recipients as being useful as well as ornamental.

CHAS. W. GARDINER, Supt.

Southern Ohio Field Trial Association.

THE second annual trials will be held on Oct. 28. Grounds comprising 1,850 acres have been secured between Bethel and Felicity, O. The trials are open to members and amateurs. There will be derby and all-age stakes, with \$100 purse in each, divided 50, 30 and 20 per cent., the winners having the option of taking cash or silver cups of equal value. Entrance, \$5; \$2 to nominate and \$3 to start. George C. Walker, of Fort Thomas, Ky., will judge. Ed. Harvey and Ray Bartlow, both familiar with the grounds, will act as marshals. Entries will positively close on Oct. 19. George R. Harris, Cincinnati, O., the secretary, will forward entry blanks on request.

The locality in which the trials are to be run is well stocked with birds, and there should be no trouble in getting every dog on game. The ladies of the Bethel M. E. Church will provide dinners for the participants in the trials, and there are good accommodations for men and dogs in the town. The prospects seem favorable for one of the best field trials ever run in southern Ohio.

AN OVERLAND CANOE TRIP.

Continued from page 445.

hours—that is, George did—but I blew in some fifteen minutes later, getting winded on the last few hundred feet. It was a clear day and the view was all that could be desired, Lake Champlain thirty miles away seeming almost at our feet, and on its further side the Green Mountains of Vermont looked within an easy day's walk.

About an hour and a half on the summit was all we could stand, owing to the cold, and we retraced our steps, reaching Camp Colden at 4 P. M. somewhat tired, having walked sixteen miles over rough trails and climbed 3,000 feet. A good night's sleep on pine boughs made us fairly rested in the morning, and after breakfast we packed back to Tahawus, where we hired a wagon to haul us to Harris Lake. It was a blot on our clean record, but we did not feel much like going back through the quicksands and making that five-mile carry. The distance by road was seventeen miles, taking us the entire day to cover it, and it must be confessed we all enjoyed that drive, the first rest we had since leaving Old Forge.

That night we camped on Harris Lake, and the next day after replenishing our supplies at Newcomb, started for Long Lake. This is a fairly easy trip and seemed child's play after the work we had been doing. It consisted of a few lifts over shallow places in the narrows between Harris and Rib Lakes, through the latter and a mile carry to Lily Pad Pond, through that and two other small lakes, and then a mile and a quarter carry to Round Pond, where we spent the night. From there it is a two-mile carry to Long Lake over a good trail; in fact, all the trails were good after leaving Harris Lake.

At Long Lake we paddled nine miles down to the village for more provisions, and then started along the regular canoe route for Saranac Lake.

That trip is so well known I will not attempt to describe it; sufficient to say that we made it without exertion or mishap and reached Saranac Lake village on Saturday afternoon, feeling that we had put in a fairly strenuous two weeks.

JUMPING FISH.

THE mode of locomotion known as jumping is shared by a variety of animals of widely different classes. Kangaroos and jerboas among the mammals, thrushes and robins among birds, as well as such familiar forms as frogs, cockles, crickets and fleas—all illustrate this proneness to leap, mostly as a means of getting quickly over the ground, and even lions and tigers, which never spring under ordinary circumstances, readily adopt this method of attacking their victims.

A considerable number of fishes are remarkable for their leaping powers, and several of these performers are on that account specially favored by anglers, since by jumping clear of the water, in some cases many times in succession, they tax the fisherman's skill more severely than fish less active and thereby give added zest to their capture.

Members of the salmon family are universally famous for their high jumps. The sea trout, which gladden Devon rivers under the seasonable name of "harvest peal," are untiring acrobats, say the London Globe, and a fish of a pound weight will more than once jump several times its own length out of water when hooked before coming to the net.

Unless the fisherman responds promptly by lowering the top of his rod, the fragile gut is liable to part, and as it is part of every sports-

man's creed to appreciate his pastime in proportion to the difficulties it presents, the sea trout stands high in the angler's estimation. This readiness to jump when hooked distinguishes the lively spring salmon from the more sluggish run of autumn fish, which rarely clear the water in their efforts to throw out the maddening hook.

Precisely why these October fish should be less nimble than those of March has never been satisfactorily explained, but the higher temperature of our rivers in the fall of the year may perhaps have something to do with their conspicuous indolence. At their best salmon can jump at least ten feet above the surface, a feat achieved by slapping the water with the powerful tail and flexing the body until the head and tail all but meet.

The association of the maximum of vigor and activity in fish with a low temperature enjoys wide acceptance, but should be received with caution in view of the fact that nowhere perhaps in the world's seas are jumping fish more continually in evidence than in the Gulf of Mexico, the average temperature of which must be considerably in excess of anything known in maritime Europe.

The grandest of all these leapers is the tarpon, otherwise "silver king" or "grand écaille," a monster herring which may measure six or seven feet and weigh a couple of hundred pounds. It has of late years been the fashion to catch this splendid sea fish with rod and line, and those who have enjoyed the experience of handling a tarpon in the air insist that it is the most thrilling sensation in the whole gamut of fishing in river, lake or sea.

The tarpon is not, however, the only sea fish of that region which jumps when hooked, for the little ladyfish, a miniature replica though of very different family connections, behaves in precisely similar fashion, and is accordingly welcomed on trout tackle among its quiet haunts in the backwaters of the Florida Keys when stormy weather precludes tarpon fishing in the open passes. As the tarpon, at any rate, is rarely seen to jump unless hooked, it is not unreasonable to attribute its activity to a shrewd instinct that it may increase at once the fisherman's difficulties and its own chance of regaining its liberty.

Nor is there any difficulty in assigning a motive to the extraordinary aerial feats performed by a neighbor of the tarpon, the gigantic whiplay, which, though it has never been known to take a hook, and is captured only with the aid of a harpoon, daily flings itself high in the air, the suddenness of the apparition frequently causing alarm among strangers unaccustomed to such visitations, which are particularly terrifying at night, since the thud of a whiplay falling back on the surface is like the crack of a pistol.

There is, however, no mystery in its frequent flight out of its native element, for any one who takes the trouble to watch one closely in bright sunshine will plainly see it throw off several small objects in mid air, and these are, in fact, the sucking fish or remoras, which attach themselves to its body, as they do to that of its cousin, the shark, doubtless causing intolerable irritation.

These uninvited guests seek the hospitality of other fishes, no doubt, besides the whiplays, chiefly for the benefit afforded of free travel and protection from their enemies, but only the rays, which, owing to their depressed shape cannot rush through the water fast enough to rid themselves of these encumbrances, are forced to jump in the air so as to throw them off when their sucking disks are temporarily ineffectual.

PRIZE DELAWARE SUNFLOWER.

EZEKIEL BOULDEN, of Kirkwood street, has grown a sunflower, the stalk of which is in a fair way to eclipse the beanstalk upon which Jack performed some famous stunts. The stalk is 13 feet 6 inches in height. The bloom is over 16 inches in diameter and 5 1/2 inches in circumference. It contains 2,175 seeds. It is estimated that the seeds in the flower will plant five rows 200 feet long with the seed placed six inches apart. It is also estimated that twelve such plants would furnish enough seed to plant an acre.—From the Wilmington News.

(Owner having built larger house)

Gentleman's Country Home or Farm

Fully furnished and ready for immediate occupancy. House and shade trees over 100 years old. About 100 acres in Litchfield County hills, between Waterbury and Litchfield, Conn., 1/2 tillable, 1/2 pasture and 1/2 woods. Three hours from New York, 1 1/2 miles from railroad and trolley. Parlor, library, dining-room, 6 master's bedrooms, 3 bathrooms, kitchen, laundry, butler's pantry, kitchen pantry, 3 piazzas, 5 servants' bedrooms, 6 open fire places, hanging cranes, brick oven, etc., two hot air furnaces; never-failing, gravity, spring-fed water supply, genuine antique furniture, telephone, etc. Large concrete floored stable-garage; barn and outbuildings, carriages, etc.; extensive piazza view; delightful location; house thoroughly rebuilt and repaired; every modern improvement. For price and terms, address owner

F. K. CURTIS, 30 Broad Street, New York.

FOR SALE—Membership share in Adirondack League Club, of New York. Preserve of about 90,000 acres timber land in the heart of the Adirondack Mountains. Fine fishing, hunting, boating and mountain sports. Three club houses, with all conveniences for members. Each membership entitles member to five acres of land fronting lake, suitable for building cottage. Par value of membership, \$1,000. If sold at once, will sacrifice for \$700. For particulars apply owner, T. H. CLARKE, care H. K. Wick & Co., Youngstown, Ohio.

FOR RENT

During the hunting season, home and hunting privileges on 4,500 acres of land. Game plentiful. For particulars address B. P. THORP, JR., Oxford, N. C. Route 4.

Everything The Hunter Needs

These are the pleasantest days in the North Woods, and if you are correctly outfitted, no discomfort will be experienced. We sell every requisite for the Fall hunter at prices that are consistently low. Tents that are waterproof; sleeping bags, blankets, light but warm; folding stoves and cooking outfits; natural wool stockings, mackinaw coats, flannel shirts and jackets; moccasins and hunting boots; in fact, everything you can think of to add to your comfort.

The Season For Big Game

In Maine, New Brunswick, Nova Scotia or Newfoundland, this is the ideal time for big-game hunting. The weather is not uncomfortably cold, and if a light snow should fall, your chances for a big head are much better than in the early season. Ask us where to go or what to take without cost or obligation.

WE cleaned up a notable victory at the Olympic Games in Sweden on July 12th. The Stevens Armory Model Rifle No. 414 in the 50 meter Individual Match was first. Capt. Fred S. Hird, 55th Infantry, Des Moines, Ia., made the score.

At the Irish Open Meeting in Belfast, Ireland, on August 3d, H. W. Curchin won the "Daily Mail" Challenge Cup, gold medal and cash prize, using Stevens No. 44 1/2 Ideal at 25, 50 and 100 yards deliberate.

At the Field Day of the Somerset County Guides Association at Brighton, Maine, on August 14th, the Stevens No. 520 Repeating Shotgun was first, second and fourth in the Trap Shooting event.

In the 200 and 100 yard off-hand rifle shooting events, the Stevens No. 425 High Power Rifle was second and third respectively. In the 20 yard Pistol event the Stevens No. 35 Off-Hand Target Pistol was first.

At the Sunset Hill Country Club, St. Louis, Mo., on Aug. 17th, Mr. Guy Ward broke 99 out of 100 singles and 23 out of 24 doubles with a Stevens No. 525 Repeating Shotgun.

A MASTERLY WORK ABOUT DOGS
By A. F. HOCHWALT,
Kennel Editor THE SPORTSMEN'S REVIEW.

"DOGCRAFT"

NEW REVISED 2nd EDITION IS NOW READY Bound in Cloth \$1.50, Prepaid

Volumes of information concerning dogs are crowded into this one remarkable treatise, written by *a man who knows*. Contains 308 pages, beautifully illustrated with fine halftone pictures of the well-known dogs of all breeds.

Mr. Hubbard's Comments on "Dogcraft."

Atlantic, Iowa.

Sportsmen's Review, Cincinnati, O.:

Gentlemen—I have just received a copy of Mr. Hochwalt's new book, "Dogcraft," recently ordered, and I wish to tell you how much I like it.

Of course I knew from reading the chapters as published in the Review that the work was complete, exhaustive and satisfying, but I was not prepared for the neat book that made its appearance, so tastefully bound, on such good, heavy paper, with such clear, clean type, the evidence of fine workmanship.

Every breed is handled in a masterly manner and the treatment of dogs in disease is alone in itself worth the price of the book.
C. P. HUBBARD.

MAIL THIS COUPON TODAY

Gentlemen: I am interested in Dogs, and without expense you may forward me more literature about your book "Dogcraft."

Name

City

Street

State

Particular attention is paid by the author to the history of famous sporting dogs, their origin, breaking for field work, care, management, etc.

Every breed is carefully treated and the standards of each given in full.

The work is as valuable to the bench show patron as to the lover of field dogs.

Every dog lover will appreciate this work because of the interesting, concise and comprehensive way in which the various subjects are handled.

NAMES OF ANIMALS.

THE kangaroo came by his name rather strangely. When first Australia was discovered, a sailor pointed to a kangaroo and asked a native what they called that animal.

The poor black man having never met an Englishman before, had no idea what the sailor was talking about, and replied in his own language, kangaroo, that is, "I do not understand." The sailor foolishly supposed this was the name of the animal in the Australian tongue, and ever since we have called the animal kangaroo, "I do not understand."

A curious mistake occurs also in the word crayfish. The name was borrowed from the French, who call this lobster-like animal *ecrevisse*. The English thought that because it lived in the water it must be a fish, says the Raja Yoga Messenger, and so we always call it the crayfish. Of course the little creature is no more a fish than a seal is a fish, or a sponge or an oyster, although they also live in the water.

The large American cat known as the puma is very rich in names, which fact leads to no little confusion in the minds of young students of natural history. The early Puritan settlers in New England named the animal the painter, meaning of course panther, because in shape and size it strongly resembles this fierce carnivore of the Old World.

He also received the name catamount, which was shortened down from cat of the mountain. The reddish color of the fur of some of the specimens suggested the name red tiger, while in certain places it was given the more majestic name of mountain lion. In South America one of the native names was *cuguacuara*, but we have very sensibly knocked off four of the six syllables and shortened it to cougar.

The puma has such a wide range, being found from Canada to Patagonia, that naturally enough it receives a different name in the various countries and localities which it inhabits. Six names for one animal. No wonder readers of books of travel get confused.

When an animal becomes known for the first time to English-speaking people, they usually adopt the name it goes by in its native country. Thus our word camel is evidently the Hebrew name for that animal, *gamel*, which has become slightly changed in the course of time.

Sometimes we use a purely English compound word in place of the native name of the animal, which often seems a great pity. The Red Indians speak of the wish-ton-wish when they mean that pretty little marmot of the plains which we refer to as the prairie dog. It is not of the dog family, being far more nearly related to the guinea pig than to the mastiff or the wolf.

The name guinea pig was bestowed by a most unfortunate mistake. This little household pet is a cavy and not a pig, and does not come from the Guinea coast of Africa, but from Guiana on the other side of the Atlantic Ocean.

Every one at Point Loma knows the troublesome burrowing pocket gopher who makes his holes in our gardens and throws up the earth in unsightly heaps. When the French first settled on the eastern coast, they thought the numerous burrows made the ground like honeycomb, and so they called him *gaufre*; that is, honeycomb, which later on became corrupted to gopher.—New York Sun.

FEW WALNUTS THIS YEAR.

ALTHOUGH last year's walnut and hickory nut crop on the Genesee flats was a mammoth one, the trees bear witness this year that there will be hardly a hundred bushels of these favorite nuts the whole length and breadth of the Genesee Valley. The hickory trees on the flats are fairly numerous, but they are few indeed compared with the giant walnut trees that greet the eye everywhere there.

The forests of chestnut trees in and about Portage are white with chestnut burrs, and that there will be plenty of chestnuts there is no question; the walnut trees, however, are apparently exhausted from last year's heavy bearing and a good crop is not looked for.—Genesee Correspondence Rochester Union and Advertiser.

THE OUTDOOR LIBRARY

Seasonable books dealing with every phase of life in the Open. Handbooks of sport. Books that make "roughing it easy." Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. Price, \$2.00

This collection of papers on different themes contributed to FOREST AND STREAM and other publications and now for the first time brought together.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portraits and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club; Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Cloth, 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose; Mountain Sheep; Game Refuges, and other big-game topics.

My Friend the Partridge.

By S. T. Hammond. Cloth, 150 pages. Postpaid, \$1.00.

An inimitable study of the noblest of our game birds, following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, and throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game.

Inter-Ocean Hunting Tales.

By Edgar F. Randolph. Cloth, 200 pages. Postpaid, \$1.00.

A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint, and dealing with every kind of game that falls to the rifle of the American sportsman.

The Spaniel and Its Training.

By F. H. F. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.00.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Cloth, 281 pages. Price, \$1.50.

This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Price, \$3.50.

Price, \$3.50.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 233 pages. Price, \$1.50.

Manual of Taxidermy for Amateurs.

A complete guide in collecting and preserving birds and animals. By C. J. Maynard. Illustrated. New edition. Price, \$1.00.

"The Long Shooters" and the Origin of 300 Yards Revolver Shooting. (New.)

By Wm. Brent Altsheier. Price 75 cents. Postage 4 cents extra.

Interesting alike to civilian and soldier, amateur and professional. A neatly bound volume; illustrated from photographs of shooters and shooting scenes.

Woodcraft.

By Nessmuk. Cloth, 200 pages. Illustrated. Postpaid, \$1.00.

No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known house-boats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

Some Native Birds for Little Folks.

By Dr. W. Van Fleet. Illustrated by Howard H. Darnell. Cloth, 146 pages, with 14 photogravure plates. Price, \$1.00.

Describes the wood duck, the great horned owl, ruffed grouse, killdeer, plover, bobolink, bluejay, chickadee, cedar bird, meadow lark, robin, woodcock, kingfisher, crossbill, and nuthatches.

The Anglers' Workshop. Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A Second Series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price \$1.50.

MALLARDS ALIGHTING.

From a photograph by Edward Avery McIlhenny.

A Vast Wildfowl Refuge

Mrs. Russell Sage Buys Marsh Island, La., for a Bird Refuge

THE sportsmen and naturalists of this country owe to Mrs. Russell Sage a debt of gratitude they can never repay. She has purchased Marsh Island in Louisiana, a detached tract containing 75,000 acres, which she will protect from gunners, and make a permanent refuge for wildfowl and other birds.

The marsh lands of the States of Louisiana and Texas have always been the chief winter homes and feeding grounds of wildfowl and water birds in America. To these marsh lands gunners have resorted in great numbers and here millions of birds are killed each year—more, probably, than are killed in the whole Mississippi valley during the migrations of the birds North and South.

The establishment of this great winter

refuge in this favored region, will protect a vast number of wildfowl during their stay in the South, and will permit them to return to their breeding grounds in the North, again to propagate their young. Some idea of the slaughter which takes place in Louisiana may be had from the figures given by the Game Commission of that State which declare that during the open season from Sept. 1, 1910, to the spring of 1911, the enormous number of 8836,876 head of game were killed in Louisiana.

It was high time that such a refuge should be established. The marsh prairies of the Louisiana and Texas coast are now being drained and used for agricultural purposes and this operation is going on at a constantly increas-

ing rate, so that such land is rapidly appreciating in value. By the draining of these marshes, the natural winter resorts of the wildfowl and other birds are becoming constantly more contracted. As their feeding and resting grounds diminish in area, the birds that winter in the South must resort in greater numbers to the marshes still available for feeding purposes, and such congestion results in a constantly greater destruction by sportsmen and market hunters.

The idea of setting aside large refuges for water birds in the marsh lands of Louisiana and Texas originated, we believe, with Edward A. McIlhenny, president of the McIlhenny Company, of Avery Island, Louisiana. A few years ago he interested Charles Willis Ward,

of Michigan, in the project, and since then these two men have done much for winter wildfowl protection in this region. They purchased 13,000 acres of marsh land, which they presented to the State of Louisiana for a game preserve, and 50,000 or 60,000 acres, which they are holding themselves. Then, when it became evident that Marsh Island might be purchased, Messrs. Ward & McIlhenny secured an option on it and advanced the money for the first payment.

Mr. McIlhenny's experience had convinced him that the establishment of refuges here would mean not only temporary protection, but, in some cases, a great increase in the numbers of birds. As early as 1895 he began experiments in bird protection, and with most gratifying results. That year he took from the nests six young snowy herons, and reared them at his home in a large cage placed at the edge of a small pond. These birds did well, became tame, and were finally set free at the edge of the pond. They went south in December, but the next spring two pairs returned to the pond and bred there, rearing six young. Since then these snowy herons have greatly increased in numbers, and other species of herons and waders have come to the pond to breed. The pond has been increased in area, so that it now includes about thirty-five acres, largely overgrown with small trees and water shrubs, in which many thousands of herons and egrets bred during the summer of 1911. In the late fall and early winter these herons go to South America, and the pond is filled with ducks of various species, which have come down from the North and here find a safe refuge, for no gun is ever fired on or near the pond.

The game refuge given to the State by Messrs. Ward and McIlhenny has been efficiently policed and is reported in winter fairly to swarm with ducks, geese and other birds.

After the option on Marsh Island had been secured, Mr. McIlhenny set out to raise the whole purchase price—\$150,000—among the sportsmen of the United States in order that the refuge might be established. His efforts

YOUNG LEAVING THE NEST.

aroused widespread interest, but he did not succeed in raising the money among the sportsmen. The matter at length came to the knowledge of Hon. Robert W. De Forest, of New York, who represents the Sage Foundation. He brought it to Mrs. Sage's attention, and Mrs. Sage, who has long been interested in bird protection and has contributed large sums to the work of the Audubon Society, received it favorably.

Mr. De Forest wishing to know something about the island from an independent expert source, asked George Bird Grinnell to go to

Marsh Island and examine it. The chief questions to be determined were whether the tract promised to make an ideal and important bird refuge, whether a good title could be obtained to it, and whether the tract could be permanently protected and at what probable cost. Mr. Grinnell spent some days at Marsh Island last March.

His visit took place at a season very unfavorable for the observation of birds. The winter wildfowl had already gone North, while the spring birds from the South had not yet arrived. In order to learn what the natural conditions were—conditions on undisturbed territory—the investigator went through the State game preserve, which had been protected during the winter, in order to see what birds were there. Here only a few laggard ducks and one or two small flocks of blue geese were found, which made it clear that the migration of the winter residents had already taken place.

Marsh Island is about eighteen miles long and in some places nine miles wide, and is believed to include 75,000 acres of land or about 117 square miles. It is said to have a shore line of sixty-five miles. It lies on the coast line of Louisiana, between Vermilion Bay and the Gulf of Mexico, and is separated from the State wildfowl refuge and the Ward-McIlhenny wildfowl refuge by a swift narrow channel, known as Southwest Pass. The greatest length of the island is approximately east and west—the land being higher on the Gulf or southern side.

Outside the island, on the Gulf side, is shoal water with a multitude of oyster reefs, said to extend out into the Gulf for four or five miles, and almost from end to end of the island. These reefs prevent approach from the open

EGRET.

Gulf and also tend to protect the island from overflow in times of high water, or southern storms.

The south side of the island is a high sand ridge, unbroken except at one point toward its easterly ends, but on the north side, the marsh is cut by a multitude of bayous, leads and waterways, many of which, some miles above their mouths, expand into large ponds, most of them quite shallow and reported to abound in certain favorite duck foods, such as wild potatoes, wild celery, duck grass and other foods.

If one crosses the island on foot from south to north, he will pass over several belts of differing marsh—marsh suited for different kinds of birds. To the south, on the Gulf side, is a smooth shelving sand beach, and north of this a sand ridge, from ten to fifteen feet high, timbered toward the westerly end of the island with a few great live oaks. This sand ridge is highest to the west, and less conspicuous toward the east. North of this is a belt of dry marsh, the chief feeding ground of the cattle ranging on the island at that time, of which there were 1,800 or 2,000. North of this dry marsh is a belt of wet, oozy fresh marsh on which the water gradually deepens toward the south, until finally one comes to a series of fresh water pools, very shallow, where the water stands only a few inches deep. These shallow

IN THE DUCK MARSH.

fresh pools drain into a series of brackish lakes, still to the north, from which a number of bayous lead out to Vermilion Bay. North of these brackish lakes is again dry marsh, cut in all directions by salt water leads and bayous, which in their winding courses often enlarge into wide shallow ponds or lakes.

It is evident that such a series of marshes with their interlacing waters, should—so long as food is abundant—furnish ideal feeding and resting grounds for many sorts of waterfowl.

Different species of shore birds feed along the outer beach, Wilson snipe and rail of different kinds are abundant in the fresh marsh. Many mallards, black mallards, and Florida ducks live in the wet marsh, and most of those seen were already paired. A few small flocks of blue geese were seen on the marsh and some snow geese.

The wet fresh marsh—the third belt back from the mouth—showed every sign of being

GULF OF MEXICO

the feeding ground for large numbers of "English snipe," and during the migrations is unquestionably occupied by a great multitude of shore birds. The wet marsh, the sweet water pools and the brackish lakes are resorts at the proper seasons of multitudes of fresh water ducks and geese. The deep bayous on the north side of the island and their brackish enlargements are said to abound in wild potato, the roots of which are a favorite food of the canvasback.

Thus, the land and the water seem in all respects admirably adapted to the stay of many kinds of water birds which are of especial interest to sportsmen.

There are deer on the island, and many were reported killed there during the winter of 1911 and 1912.

Mr. Grinnell's report on the island was alto-

The protection of the Island is of fundamental importance. Steps have been taken to protect it. It is probable that two or three good men would be enough to guard the property efficiently. A man on horseback for the south side, and one with a gasoline launch on the north side could patrol the length of the island and return, each day. They could closely watch the mouths of the bayous, and keep gunners from penetrating to the waters frequented by the wildfowl. Perhaps a third man might be needed; but it is certain that the whole work can be done at an expense which will be trifling, compared with the importance of the matter. The land has already been posted as private property, in accordance with the new Louisiana game law.

The details of the island's administration have not yet been determined. The matter is

SNOWY EGRET.

gether favorable, and in due time, after the question of title and various other legal details had been settled, Mrs. Sage purchased the property.

Aside from its fitness for a game preserve, Marsh Island possesses unusual ornithological interest. It is a stopping and resting place—perhaps the first for a long distance—for birds migrating from the South or the Southwest; and many of these migrants reach the island quite exhausted by their long flight. Since the island has now been purchased as a refuge, it may be well to consider the advisability of establishing an ornithological station near its west point—Chenier La Croix. It is possible, also, that a study of the deep waters of the Southwest Pass might be of much interest.

It seems possible, too, that here is an opportunity to establish heronries, where the vanishing snowy herons might be preserved forever, and be re-established on a large scale. Mr. McIlhenny's success at Avery Island encourages the belief that similar colonies might flourish here. At present there are no trees in the middle of the island, but it is quite likely that if planted there, they will grow.

at present in the hand of Mr. McIlhenny, whose long experience in such matters especially qualifies him to handle it.

While sportsmen generally are to be congratulated on Mrs. Sage's noble public spirit in giving this great sum of money for the preservation of our wildfowl, it is after all the naturalists who should and will be the most grateful to her.

And if the thanks of sportsmen and naturalists are due to Mrs. Sage, scarcely less is the debt of gratitude due to Messrs. McIlhenny and Ward, who originated the project, and to Mr. De Forest, who, though not himself a shooter, instantly recognized the importance of the matter, and brought it to Mrs. Sage's attention.

We regard this as the most important movement in wildfowl protection that has ever been made in this country.

FOREST AND STREAM endeavors to "make good" to its readers by giving timely news stories, and features written by some of the best writers of their kind.

Virginia Notes.

NORTH, Va., Sept. 25.—*Editor Forest and Stream:* Yesterday as I sat on my front porch watching some men fishing for gray sea trout (weakfish), and they were having fine sport, recollections of the past came drifting by. It is strange how much pleasure we can get out of thoughts if we only will. Some eighteen years ago I was in the mercantile business in a small country town and had to retire on account of health, as I could not stand the confinement. I used to steal off occasionally to take a few hours with gun and dog or rod and reel. I am going to tell you of one of my three and a half hours' fishing trips. I was on the pond three and one-half hours and away from my business about four and one-half hours. There was a mill pond about one and a half miles long, which had been stocked with chub (big-mouth bass) and was literally alive with them. I used a silk phantom minnow and light bait-casting rod with very fine cuttyhunk linen line and ordinary guard reel.

I have always had trouble to find a good paddler on the inland waters of this section. While on the salt water every boy is a seaman, so I generally handle the boat myself on these ponds. I would of course prefer a good man, but I can scull and cast at the same time moderately well. There are many old logs, trees and windfalls about the edges of all these millponds, and as they are landlocked, there is never any seaway to speak of.

Now for the fishing. I started by pulling a four and a half-pounder from under the first log I cast over, and in a few moments had his mate from under the next log, and so it went. Literally as fast as the bait touched the water there was a rush. The fish seemed frantic. Never before or since have I seen fish bite as they did that morning, and in three hours and thirty minutes I had caught fifty-eight, throwing back everything under thirteen inches as fast as I caught them, and when I went home had forty very pretty fish, an appetite and a soul full of joy. I gave away to my friends nearly all of the catch and enjoyed what I kept immensely. This was my red letter fishing day and will always remain green in my mind.

I am extremely fond of all outdoor sports and take a great interest in them; only the lack of means keeps me from following them more closely.

The crop of partridges (quail) is very heavy this season and the coveys extremely full. Have a fair dog and am anxious to put him to work. Can hardly wait, but will. Bow Wow.

A SUIT, which will attract much interest among those who deal in sporting goods, was filed recently in the Sangamon county, Illinois, circuit court by Edward De Crastos against M. V. Troy. It is asserted that Troy sold a gun to Smith Hawkins, a youth, who accidentally shot and killed Fred De Crastos, son of the complainant. It is claimed that Troy violated the law, which prohibits the sale of firearms to minors. Damages in the sum of \$10,000 are asked. It is said that this is the first suit of the kind ever filed in Central Illinois.

FOREST AND STREAM is the gentleman sportsman's weekly.

Chapter III.

THE day following that awful night was nearly as blustery.

A close study of the map showed that there were no long reaches (a straight bit of river) for some miles, and we decided to travel along, as it was every whit as convenient as lying idle with nothing to do. The water was roiled and no game fish were killed for the time being. Weighing anchor we started and no sooner pointed the little ship's head south than we saw a clammer-trapper swinging along the bank with a string of ducks. This stopped us again. If he could find them such a morning, we should be able to.

Again the map. Beside the river's main channel are numerous little sloughs and pot-holes which are more or less full of water, according to the rains and the stage of the river during spring. These were all on the right of us according to the map. At the foot of the island we found a camping party of men and women from Dubuque and anchored near them, while the gunner of our party got into his waders and essayed forth with his double barrel scatter-stick and fox terrier dog, the latter said to be the peer of any duck retriever ever whelped.

At noon the nimrod returned with a lucky bag of seven birds, a mixed bag of red-heads, ruddy ducks, mallards and shovelers. But they would furnish a lot of steam on which we could delve into the past hunting trips and cruising jaunts of yore, so we accepted them and pulled southward.

Other than the great numbers of young ducks we saw from hour to hour during our southward progress, nothing happened until we arrived at Le Claire, Ia., the sleepest town we ever saw for the amount of important business done there. This place is the head of the celebrated Rock Island Rapids, the most treacherous piece of water on the upper river. We landed and looked about for a pilot, and did not have far to look, as they swarmed down in droves, and each wanted the job of taking us through.

A kindly pair of old-time blue-eyes, set in a face that looked honest and the whole capped with a good Irish name—these were our guide marks, and they proved good. Captain Dorrance, who took us through eighteen miles of rocks and swift water, pointed out everything of interest

and gave us the history of the rapids and the boats that had gone to pieces in them. He has been piloting Government vessels and other craft through the waters for thirty years and has each ugly boulder named. When we shot under the bridge that joins Davenport and Rock Island, we were glad enough to be through the rapids. At some points the water boiled up so ferociously underneath the boat that it tried to shove it out of the water. Other places the water would swing the boat so swiftly that it seemed as if the rudder would not bring it back on a true course or even counteract the effect of the mad water.

From Rock Island it was but a run of a day or even less to make Burlington. We had already seen the effects of the high water in the Black River. Fishing was disturbed except for catfish in the muddy water, and any night one wanted to throw a couple of hooks over the side, we could count on fish for breakfast. Channel cat are finely grained and very palatable. One night we set the usual cat line, and when morning came, the fish had succeeded in getting the line wound about the propellor, and then Mr. Skipper swore and got into his bathing suit and overside he went into the grime to dive under the boat and cut the twine that had been wrapped about his precious wheel and rudder irons. But he saved the fish, a seven-pound cat, and when dinner came, he sat at the head of the gravity table and smiled as the choicest cut on the baked catfish smothered his plate.

Fishing at Burlington was confined to bass casting in the Henderson River, four miles above the city. This was fairly good, though none of the larger fish would come up to strike. When bass work up-stream the whole summer, it seems unreasonable to find them much below Lake Pepin and Lac St. Croix, both these excellent wintering points for them and providential of cool waters during the heated tail-end of summer.

Before we arrived in Burlington we began to notice the increasing number of ducks. It seemed as if they worked down the feeders of the great artery, and then took its pathway south. Mudhens by the thousand we encountered between Muscatine and Burlington. The weather was very windy and they preferred floating rather than winging their passage southward.

Down the river past Fort Madison and into the head of the Des Moines Rapids at Nashville we shot. The water was high, and when we took the bit in our teeth and started down the first chain of rocks, buoyed here and there with red and black buoys, great mounds of rock, painted first red and then black, each painted thing a beacon calling us to it or from it, we were slightly atremble. The canal around the rapids is eight miles long, but one cannot get into it until you pass the first chain, as it is called, and then drop into the dry dock yards of the Government and the basin at the head of the first locks that let you in.

Game was seen on every hand. Myriads of red-heads, mallards, blue-wing and green-wing teal, canvasbacks and bluebills were most noticed. Once in a while we would descry on the distant horizon a flock of honkers that made the mouth water for a slice off a breast that had taken on juciness while foraging in the corn or stubble fields.

Keokuk is at the foot of the locks of the Des Moines Rapids Canal. Below Keokuk we met a contracting fleet of barges and steamers doing work for the Government and halted to get the guns out and shake pecan and hickory nut trees. We were in the shadows of three States. The Government inspectors kindly suggested that after their day's work was done, they would take their power skiffs and chase ducks. One day lengthened into three and three to a week. We hunted from the skiffs every night with varying success. Into out-of-the-way sloughs we traveled, sometimes potting a bird almost in the barnyard of some island clammer-farmer. The kills were usually small, though with plenty of gravy to float about in, they managed to give all of us at the inspector's table a goodly bite.

The river was rising steadily. Fall rains had boosted everything that drained into the Mississippi. One great sand-bar called Polly Bar, was alive, or said to be, with rabbits, and as no one had shot on it during the fall, we planned a hunt down that way. It was a couple of miles below the fleet of working boats. On the island were a group of brush-cutters who were getting out matting for the building of dams to maintain the channel. On our arrival we made out their location, so we would not shoot their way, and then began thrashing brush. The bar was in reality nothing but a small island about a half mile long and 300 yards wide, and before the raise had been joined to the mainland and another island, both pieces of ground having been overflowed and forcing the rabbits to come on to the island we had picked for the hunt.

With the exception of a rabbit shoot in Kansas years before, we had never seen so many cottontails. The dogs would start one from the brush, and before they had pursued it a dozen yards, another would flop out of the brush and call them after it. And the shooting was all snap shooting. One could not get gun to shoulder in the dense brush. After a couple of hours' hunting, we had an even two dozen, which would make happy the hearts of the fleet gang, itinerant workmen who flocked north in summer and south in winter. These fellows built a bonfire every night and roasted what game they could get, it being a great addition to their fare.

But we had to hurry along. Already we

(Continued on page 473.)

In Camp with the Alpine Club of Canada

By MARGARET STOVEL McWILLIAMS

SEARCHING for something novel for our summer vacation, we heard of the Alpine Club of Canada. We had heard of Alpine clubs before; we had read of the wonderful exploits of their members; we had even gazed enviously at other peoples' invitations to their exclusive dinners; but never had we thought of belonging to such a club till fate threw across our path a year book of the Canadian club.

Then we found that the veriest tenderfoot in the art of mountaineering, if he had a desire to climb, was welcomed to the probationary rank of "graduating member." Once in that rank, he might attend two camps, and there with the assistance of the club, qualify himself for active membership. To us dwellers on the prairies that qualification sounded exacting—the ascent of a glacier-hung peak reaching at least 2,500 feet above the timber line which in the Rockies means over 10,000 feet. But the searcher after novelty must be ready for a venture, so we took the plunge.

When word came that we were accepted as probationers, there was a feverish search for clothes, for one does not go Alpinism in even ordinary camp costume. Knickerbockers—no bloomers allowed—flannel shirts, sweaters, heavy tweed coats, the whole capped at one end by rakish wide-brimmed felt hats and completed at the other by numerous pairs of socks covered by puttees and boots which, though they were of the heaviest winter variety and shod with two score nails, were scarcely heavy enough for the strain they had to endure, made up costumes which differed for men and women chiefly in size. When actually in camp, the women of the party wore over their knickerbockers short serviceable tweed skirts. To the costumes had to be added blankets and all the clothing and equipment necessary for ten days at an altitude where midsummer frosts are frequent—the whole to be crammed into a dunnage bag which must not,

when filled, weigh more than forty pounds. It required some ingenuity as well as a careful following of the club's instructions to get what seemed absolute necessities down to that weight imposed by the club for the advancement of the simple life.

Thus equipped, we landed at Castle station on the last day of July. Castle is a small way station on the Canadian Pacific railway just half way between the well-known resorts of Banff and Laggan. Near the station the old Indian trail from the plains crosses the railway line, and winds its way up the valley of the Little Vermillion Creek, over Palliser's Vermillion Pass and down the Vermillion River to the ochre beds whence came the war paint. Eight miles to the south on that trail, just over the summit of the pass, was the site of the camp. That eight-mile mountain trail was the introduction to what our friends—now we are safely home—call the hardships of our holidays. For, according to camp tradition, almost everybody—and certainly all tenderfeet—must tramp it. With stout hearts we set out—scores of us—for in all 168 people were in camp this year, and between four and five hours later we arrived safely, our hearts still stout, but our bodies very weary, for a mile on a rocky, stumpy mountain trail bears not the slightest resemblance to a mile on city pavements, and even on those pavements we took few eight-mile tramps.

The selection of a ground for these annual camps is not a simple matter. Each year some little known region of the Rockies or the Selkirks is visited. The camp must not only be on new ground where exploration is possible, but there must also be within reach some peaks which afford first ascents, or at least, difficult and interesting climbs for the experienced members as well as a not too terrifying peak of the required height for the qualifying climb of the tenderfeet. For quite obvious reasons the camp

CAMP AT FOOT OF STONE MOUNTAIN.

must also be where there is fairly level ground and good water, and where the packing in of baggage and provisions is not too costly or too difficult. All this, however, A. O. Wheeler, the noted Canadian mountaineer and topographer and the club's director, has been able to find for seven successive seasons. The members have implicit faith that, with the country being opened up by the new transcontinental railways to choose from, he will continue to find spots where no prying tourist can violate their seclusion. Without the experience and generalship of Mr. Wheeler, these camps would be almost impossible. One can hardly imagine the Alpine Club without its genial autocrat. As he was one of the chief influences in bringing the club into existence, so he is also the genius of its organization and the inspiration of all its undertakings.

A little later and this site would have been beneath the dignity of an Alpine club, for by the end of next year the new mountain motor road, which the Provinces of Alberta and British Columbia are building right across the Rockies, will run through this very valley in which we were encamped. So near to the dividing of the waters were we that the river was still at the stage of small glacial streams, one of which ran down either side of the thickly wooded bit of country which had been partially cleared to make room for the tents. With the men's quarters on one stream, the women's quarters on the

RESTING AT THE SPRING.

other, and the main camp in the center, we found ourselves hidden in the heart of the mountains well surrounded by evergreen forests which protected us from the wind and the cold.

No time was lost in setting about the business of the next ten days—that of climbing mountains. Storm Mountain, a ridge of which overlooked the camp to the east, was the one selected for the graduating parties, and a large number set out to make it the first day. It proved to be a strenuous climb, taking from fourteen to sixteen hours. There was nothing very interesting about it to the skilled climber, but almost any mountain is a rather thrilling experience to the tenderfoot who has never used an Alpenstock before and likes to have room to put down his whole foot and not merely his heel or his toe. The sensations of one's first high climb are, like those of the first view from a mountaintop, not to be entered into by the simple process of reading the printed page. You must undergo the almost heart-breaking fatigue which vanishes, as if by magic, after a ten-minute rest; you must have watched cannily for steady footholds and become accustomed to the feeling of shale slipping from under your feet and falling with what seems hideous noise; you must have experienced the sheer terror which comes as you first crawl from one narrow ledge to another with nothing except your own nerve and steady head to save you from a fall down a steep, rocky mountainside, stretching hundreds of feet below. Not until you have entered into all these—which our friends also catalogue among our hardships, but which we know to have been pleasures—can you understand at all the sheer joy of achievement which comes with the knowledge that you have actually climbed a mile into the air. Those who have gone comfortably in an elevator to the top of the Singer tower feel that they have been up into space quite a distance, but a mile in the air is seven times as high, and it was from that height that we finally gazed down from the peak of Storm Mountain at the camp in the valley below.

Attired and booted for a long day on the

mountains we had answered the roll call at 6:30 that morning, and four people following each guide—this constituting a rope in mountaineering language—we had set out with many a merry quip on the conquest of Storm. Five minutes later found us climbing through timber, guiltless of any trail up the side of a mountain, growing steeper every minute. The merry quips ceased; we had better use for all the breath we could find. Slowly and steadily we climbed over 1,500 feet, stopping once in a while to catch a breath, till we finally came out on the mountain side above the timber line. Then came a drop of 500 feet, really easy, but to us terrifying, it looked so steep. Once we had mastered the trick of putting the Alpenstock in behind and digging our heels in, the seemingly dangerous descent became interesting and exciting, and we soon were resting on a beautiful Alpine meadow at the outlet of the lakes. Then on the strength of a sandwich we started on the real climb. Crossing a field of giant boulders for half a mile we struck the moraine, and then worked our way up 3,000 feet of shale and scree, till we struck the difficult and dangerous ascent which meets the climber at the last stage of every peak. Winding up narrow ledges, clambering up a chimney, crossing a sheet of ice on a steep slope, and learning to make use of every little foothold, we came after an hour's stiff climb on the ridge, which led to the summit. A long steady pull as easy and tiresome as climbing stairs brought us to the cairn and to the dignity of active membership in the club. Then we had the reward of our labors, for over 150 peaks were in view, and the wonders of the scene were beyond description. The day was too far advanced to permit any lingering, so we started on the downward journey, gaining confidence as one after another of the difficult places were passed. We raced with the dark through the woods till happy in heart, but almost exhausted, we saw the flames of the camp-fire and knew our first adventure safely over. Despite the strenuousness of the trip, both men and women were full of ambition, and in all fifty-eight names were during the camp added to the

roll of active members, bringing the club membership up almost to 900.

To the west of camp were Boom Mountain, and Mt. Whymper, neither quite 10,000 feet. The only party which climbed the first mountain reported it as being so easy that no further interest was taken in it. Mt. Whymper proved more interesting, two ascents being necessary before the true peak was made. Until this camp it had been supposed that Edward Whymper, the great English Alpinist, who was the first to conquer the Matterhorn, and who died just last year, had never climbed this mountain which is named in his honor. There was great interest in camp, therefore, when the first party ascending it brought back word that in a cairn at the top they had found a square of white cotton bearing the names of Whymper and the two guides with whom he had made the climb in the summer of 1902.

For the experienced members the climb of the year was Mt. Ball, five miles to the southeast of camp. It was almost 11,000 feet high and had only once been climbed—by J. D. Patterson, a veteran Canadian climber and vice-president of the club. None but experienced members went on this trip, and none of those even who were not in good condition, for the expedition entailed sleeping in the open for two nights, and consequently the carrying of blankets and of provisions sufficient for three days. Even with these precautions it was not until the third attempt that a successful ascent was achieved.

Second only in interest to the Mt. Ball expeditions were the trips made to the Ten Peaks. In order to make these possible, a small camp was established twelve miles away in Prospector's Valley. The trip to that camp required most of one day; the second day was devoted to climbs on some one of the peaks, and the third day the parties returned to the main camp either by way of the easy twelve-mile trail or by a much more picturesque route which took them through Boom Lake Pass and around that beautiful little mountain lake into the Vermillion Valley. In this way three of that wonderful

BEGINNING ASCENT OF THE ICE FIELD.

GAME BAG AND GUN

California Notes.

PASADENA, Cal., Sept. 29.—*Editor Forest and Stream:* The open season for deer closed here in district No. 6, California, the 15th, and was a most unsatisfactory one, as deer with most other kinds of our native bred game is fast becoming a thing of the past. It is not a hard thing to trace the cause of this state of affairs, for it comes from over-shooting both in and out of season with little or no attempt made to enforce the laws made to protect our native game during the close season. The game coverts are over-run with automobile parties who shoot at everything in the shape of game at all seasons, and then the small boy with his single barrel gun or .22 caliber rifle helps on the extermination by peppering away at the young dove and quail, etc. As the buffalo went out with the coming of the magazine rifle, so will our game go out before the come-to-stay automobile which brings within easy distance all grounds within a radius of thirty or forty miles of our larger towns and cities.

We recently accepted an invitation to join a fishing and hunting party which was going to the headwaters of the Mojave River where we were assured that we would be away from the crowd, be quite by ourselves, and have sport galore. Joe Welch, Pasadena's expert fly-fisher, made me a selection of flies to use on those waters. They were tied on No. 10 hooks. My companions who "knew it all" selected much larger flies and also took along a large can of "wombs" for bait.

Our destination was Hook Creek, about eighty-five miles from Pasadena, with good county and lumber roads to the camping ground. After we passed "Arrow Head Springs" and began to ascend the mountain we began to meet hunting parties coming out, mostly in automobiles, a few in the more primitive and old-fashioned rigs, drawn by a team of horses or mules. While they had no game, they all seemed to be well loaded with the vinous products of the vineyards.

When we arrived at the camping ground at the end of the wagon road, we found it occupied by no less than four different hunting parties. They had no game, but were in a hilarious mood and the number of tin cans fastened to the trees and the broken glass around the rocks showed the kind of shooting that they had been indulging in; the kind that helps the sale of ammunition. As there is always room for "one more," we found a place for our tent and soon had things in shape for the night.

The next morning we made an early start for a three-mile tramp down to Deep Creek where we were to fish. This stream is one of the largest branches of the Mojave River. A large portion of its bed is choked with large granite boulders worn and polished smooth, too smooth we learned to our cost—a slip, a slide, a scramble, and, but that water was cold! Every one hundred yards or so would be deep, clear pools fifty or one hundred feet in length where

the trout lay. It was agreed that when one of us had caught twenty fish that we would stop. The writer reached that number, and when we counted up and exhibited our catch, we had twenty-one beautiful rainbow trout, ranging from six to about fourteen inches in length and the combined catch of my three companions numbered fifteen, none over ten inches in length, a decided victory for the small dry-fly over a large fly re-enforced with a worm. They, however, had the pleasure of seeing at close range a large black fox. It would be interesting to know the southern limit or range of the black fox and also to know how those rainbows came in those waters, as they are landlocked. The waters of the Mojave River lose themselves in the sands of the Mojave desert, or the sunken bed of Soda Lake.

We had trout for supper and trout for breakfast the next morning, and a few left over. We then started out for deer. The country hunted over was what may be called an open country, sparsely covered with tall sugar pine and oaks, with occasional thickets of buck thorn and wild rose bushes. We neither saw a deer or even the sign of a deer, and spent the remainder of our stay there shooting the large tree squirrel and mountain quail. It took just what we had along with us—strong shooting guns to bring down with No. 7 shot a squirrel from the top of one of those pines. We found the quail fairly numerous in the thickets. As sprinters they can give their cousins, the valley quail, points and then beat them, and they are, when flushed, rapid fliers. When scattered, they lay close, and with setters or pointers they would give good sport. We used my smooth-haired Irish terrier as a flusher. He did his work fairly well and would often flush a bird from under our feet after we had passed it. Taking it altogether our trip of four days was an enjoyable one. The weather was clear and delightfully cool, the scenery grand, though in places somewhat marred by recent forest fires. Our camp was at an altitude of over 5,000 feet, and where we crossed the divide, it was 6,150 feet. There we had a fine view of the country to the west and southwest, San Bernardino, Riverside, Redlands, etc.

Duck shooting opens here in this district—No. 6—on Oct. 1. So far but few flight birds have come down from the far North. Just enough with the few native bred birds to give fair shooting the first day. The open season for valley quail begins Oct. 15, though by that time the coveys will be well shot out by the rabbit and dove hunters. There is one thing that the pot-hunter cannot steal away from us; that is the delightful tramp around in the cool atmosphere under the sunny sky with gun and dog, and if we do not have a big well-filled bag, the few birds that we do get will be shot as the Christian sportsman ever shoots—on the wing—and we will have a renewed lease on life and return home with a good appetite. Ha! this is after all a pleasant world to live in.

STANSTEAD.

Shooting in Blue Ridge Mountains.

LINVILLE FALLS, N. C., Oct. 4.—*Editor Forest and Stream:* The most glorious season in the mountains is now just beginning. It is the season for the sportsman and the nature lover, the time when all the mountainsides take on such splendor of color as defies the painter's skill. Br'er 'Coon is taking on fat as the leaves take on color, and by the time the chestnuts are yellow, which means they are ripe, he will be in prime condition. The mountaineers are getting their dogs in training for the many night races after 'coons and 'possums. Just now they are pursuing ground-hogs, or "whistle-tails," as they call them. Those who have tried it say groundhog meat is about as good as 'coon, so it must be mighty good. Of these three animals an abundance may be found hereabouts.

An old hunter, one who is not given to telling wild stories, told me the other day that he knew where there are thirty-six wild turkeys, and has promised to lead me that way at the proper time. A few are still to be found in the Blue Ridge if one knows where to go, and several good safe resorts of these very wild birds are within three to ten miles of this place.

What about bears, do I hear? It all depends upon the mast, that is, the chestnut crop. Plenty of black bears are still roaming over the Blue Ridge, hunting for chestnuts, acorns, black gum berries—and fat young pigs. Because of their fondness for pork, the mountaineer is a relentless enemy of the bear, so he is doomed to extinction soon. The owners of the property hereabouts are trying to protect the black bear in a boundary including about 40,000 acres, allowing only a short open season, two weeks. But the best hunting this year will be outside this boundary, for the reason that comparatively few chestnuts are on the property this year. It is reported that the bear are thick in the Unaka Mountains, not far from here, and that plenty may also be found about ten or twelve miles from here, on Ripshin Ridge. The Burlesons are sure, they tell me, that there is plenty of bear hunting not far from here, and they mean to keep it for their friends.

The season for 'coon and 'possum is now open, and the bear season is open all the time, but it does not really begin before the middle of October. Turkey, quail and pheasants are protected till Nov. 1 in some counties, and Nov. 15 in others in this vicinity. The trout fishing holds good till the last of October, and on some warm days till the last of November.

FRANK W. BICKNELL.

PENNSYLVANIA'S game preserves, which have within the last year been stocked with deer, wild turkey, pheasants, quail and other game, through the efforts of the State Game Commission, are to receive a large consignment of elk within three months.

The last elk was killed in Pennsylvania in 1874, and there is now no law governing the killing of the animal. It is possible that the next Legislature will be asked to amend laws providing for an open season. Meanwhile the elk will be kept closely within preserves.—From the Philadelphia Record.

SEA AND RIVER FISHING

Channel Bass Fishing

By HARTIE I. PHILLIPS

A PECULIAR feature associated with channel bass fishing is their reappearance at a given locality annually upon almost the same day. As an instance in 1911, at Barnegat City and vicinity and Seaside Park, the first one was taken on Sept. 13 and this year on Sept. 12. The length of time that they remain depends to a great extent upon weather conditions. In 1911 the last recorded in that section was on Oct. 3. This year, the equinoctial storm which arrived on Sept. 22, proved to be of unusual length and severity, and as only one has been taken since then, on Sept. 27, it is generally conceded by the numerous fishermen who have tried for them that they have departed for more southerly waters, which is borne out by the statement that it was rumored that fifteen had been taken at Corson's Inlet last week.

This season's fishing as compared with that of 1911 has proved very unsatisfactory. Records from Sunset Inn, Barnegat City, for 1911, show that in the few weeks the season lasted there were 109 channel bass taken averaging twenty-nine pounds apiece, besides which numbers were taken in immediate vicinity and about fifty at Seaside Park, which would probably create a total of about 175 fish. This year there have been only forty-one recorded to date, and it looks very much as if they have already left those waters. Twenty-nine were taken at Barnegat City and vicinity and twelve at Seaside Park. The following is the list of catches for this year up to date:

In answer to numerous inquiries on the subject, we repeat our article of July 1, 1911, on "Channel Bass," by Hartie I. Phillips:

There are many species of game fish captured in beach fishing, but channel bass are considered by those who have captured them the gamest of all, and odd to say, but nevertheless it is a fact, that when a lover of the fishing has captured his first channel bass, he becomes an enthusiast on the subject, and can sit with fellow enthusiasts and talk on their favorite subject,

channel bass, for hours, as it is considered, and justly so, the par excellence of the sport.

There must be a reason for it, and there is; more than one. As a comparison take a striped bass of equal weight, and, although his first rush after being hooked is swifter and longer, he gives in sooner, and after a few rushes is ready to give up. Not so the bulldog fighter, the channel bass. After being hooked he will probably take 250 to 300 feet of line in his first rush, and, if checked too quickly, snap goes the line, as many novices have experienced. After the fish comes to a standstill the real sport commences; the fisherman by persistent but still delicate efforts must bring his head toward him, from which point the bass will start to swim up or down, and many a fisherman is pretty well exhausted after trudging nearly a mile in order to keep his fish in front of him. One of the prettiest sights that delights the fisherman is that if there happens to be much curve to the surface waves, to see your fish outlined in the advancing comber 200 to 250 feet off shore.

After a time by a gradual and persistent series of maneuvers you manage to get him close to the undertow when he has the habit of sticking his head in the sand and his tail out of water and invariably makes a half-dozen plunges of this character, before being landed on the beach. Great skill is required at this stage, inasmuch as if too much strain is put on the line as the surf recedes, something has to give, sometimes the line, but in nine cases out of ten the fish manages to get away, unless the right amount of leeway is allowed for wave action.

The favorite feeding places for channel bass are on the edges of a flat or bar, which can be best located at low water. The best fishing tides are generally from half flood back to half ebb. The fish range from 25 to 60 pounds, and generally take from half an hour to an hour and a half from time of being hooked until beached, and lucky is the fisherman that can land over one-half of those he hooks. One of the greatest means of losing them is through sharks, which often attack them, and many a head of a channel bass has been pulled ashore while the shark is feasting gleefully on the rest of him.

The record channel bass taken up to date was captured by Joe Cawthorn, the actor, at Corson's Inlet, N. J., in 1909, and weighed 63 pounds.

The vitality of the channel bass is remarkable, and authentic tales are told, when after lying on the beach in the sun for an hour after capture, they have been given an opportunity to go free, and although apparently with very little life left, have, when put back in the surf for a few minutes, recovered and dashed off

Scene at Barnegat. Victor de Wysocki and 30-pound Channel Bass. Mr. Wilder Catches 700-pound "Pound" Pole. On the Firing Line. Wind Shield on Beach. On a Sand Dune. Beach Gossip.

to the sea as if nothing were the matter with them.

The favorite bait used is shedder crab, but when this cannot be obtained, mossbunker and mullet will attract them. The tackle consists of a strong greenheart or bamboo surf rod; a 21-thread 900-foot line, and 7/0 forged hook, with twisted 2-foot leader and 4-ounce lead. A rod belt with bait box attached is necessary. A cast of 150 to 200 feet is sufficiently long, as the bass swim close to the undertow, lying in wait for the small fish and crustacea that move from bar toward the beach.

Channel bass afford very good eating, tasting somewhat like bonita, but one great difficulty in cleaning them is to get off their scales, which are very closely interlocked. A great many fishermen skin them, which is not very difficult to accomplish.

The fish when first caught present a beautiful appearance, being a bright reddish gold on top and white underneath, with one or more round black spots on body and tail, but the colors soon fade. An erroneous impression that the channel bass and red drum are the same fish is emphatically denied by Capt. George W. Fenimore, president of the Asbury Park Fishing Club, who having captured both species, is expert in describing the difference between the two and is thoroughly qualified to prove to the scientific authorities that they are not the same fish, although possibly belonging to the same family.

The best fishing resorts are Corson's Inlet, near Ocean Beach, N. J., and vicinity in the month of July, and Barnegat City and northward to Seaside Park, N. J., from September to November, when they generally depart for warmer waters and are subsequently caught in Florida. All told, to those who have experienced all kinds of beach fishing, the channel bass, for genuine sport and gameness, excels any fish that swims along the Atlantic coast.

Fishing in California.

THE salmon trolling season came to an end on Sept. 17 and will be closed in and above tide waters until Oct. 23. The season has been a highly successful one, the fish taken having been numerous in number and large in size. Splendid sport was enjoyed just before the closing of the season, and at times as many as seventy-five launches were outside the Heads, to say nothing of the small fleet off the Sausalito shore. Very heavy catches have been made this year on the Bay of Monterey, and some large fish have been taken there also. Quite recently W. W. Richards landed a 41-pound salmon on light tackle.

Early in September a very heavy rain storm occurred in Northern California, and for a time trout fishing was spoiled, but the waters have cleared again and better sport is now being enjoyed than was the case before the storm. The Eel River at Weymouth's is about three feet higher than it was, and many steelhead trout have gone up-stream, but others have come in from the ocean, and these put up a lively fight when hooked. Fly-fishing is just commencing to be good, but most anglers are still using trolling spoons.

Striped bass are now running well in the sloughs about the bay, and many good catches

are being reported, although no very large fish have been taken, this being a characteristic of the fall run bass which average fish weighing in the neighborhood of four or five pounds. The spring run which occurs in April or May brings in fish that will average twelve pounds, and fish have been taken weighing as much as eighty pounds, this being the largest ever taken in this State. Members of the Striped Bass Club are out in full force these days, and on Sept. 29 the annual ladies' outing of this organization was held at Princeton.

The supervisors of Shasta county are taking steps to enact an ordinance making the McCloud River a public highway for the benefit of anglers from its junction with the Pitt River to the Siskiyou county line, a distance of fifty miles. This action is being taken on account of the attitude of certain property owners toward anglers.

GOLDEN GATE.

Illinois Casting Club.

CHICAGO, Ill., Oct. 2.—*Editor Forest and Stream:* The following scores were cast on re-entry day, Sept. 22:

Accuracy fly:			
Amman	98.12	Swisher	99.1
Jamison	98.4	*Amman	99.6
Linder	98.11	*Jamison	98.6
Salmon fly:			
	Feet		Feet
C. W. Grant.....	105	*Jamison	109
W. T. Grant.....	110	Linder	112
Jamison	109		
Light tackle, dry fly:			
Jamison	98.9	De Garmo	99.4
Linder	99.5	*Jamison	99.6
Swisher	99.5	*Linder	99.4
Pierson	99.7	*Swisher	98.13
W. T. Grant.....	98.6	*W. T. Grant.....	98.11
Amman	98.9	*Aminan	99.1
Heston	99.2		
Delicacy fly:			
Amman	95.27	Swisher	95.10
De Garmo	98.22	Jamison	97.00

During the casting of the above scores, a high southwest wind prevailed, lessening somewhat toward the close of the day.

Scores of re-entry day, Sept. 29, were as follows:

Quarter-ounce, accuracy bait:			
Tice	97.6	McFarlin	96.2
C. W. Grant.....	97.5	*Tice	97.5
Heston	98.3	*C. W. Grant.....	97.2
Half-ounce accuracy bait:			
Tice	97.00	Humphreys	95.9
Linder	98.8	*Tice	97.8
Hartstall	98.5	*Humphreys	97.6
Light tackle dry fly:			
Whitby	98.12	Amman	98.11
Jamison	99.2	Whitby	98.8
Swisher	98.12	Heston	95.5
Linder	98.11	*Whitby	98.13
Stanley	98.4		
Salmon fly:			
Jamison	104	Linder	109
Accuracy fly:			
Stanley	99.00	Heston	99.5
Whitby	98.11	Stanley	99.6
Delicacy fly:			
Pierson	98.3	Stanley	97.26
Swisher	98.2	*Pierson	97.26
Linder	96.11	*Linder	97.00
W. T. Grant.....	97.10	*W. T. Grant.....	97.19
Whitby	97.9	*Whitby	97.27
Heston	98.14	*Heston	98.1
*Re-entries.			

On Sept. 29, the weather conditions were as bad as they were on the preceding re-entry day, a high northwest wind prevailing most of the day.

A. F. SWISHER, Sec'y.

How Long will a Fish Live out of Water?

PORT WASHINGTON, L. I., Oct. 3.—*Editor Forest and Stream:* I wonder if any of your subscribers have any data on the length of time a fish will live out of water? Here is my experience:

I had a pail of spearing for bait. In the lot my small daughter saw a couple she wanted. She scooped them out and put them into a table tumbler, putting a pinch of salt into the water. Next morning one of the killies was dead, while the other one appeared strong and lively. Two days later, upon coming into the dining room where the "aquarium" was, I found the killie upon the floor dry and stiff. I picked it up and put it upon the table beside the glass, as it apparently was dead. One hour later my little girl came down stairs, saw the "poor little fellow" and held a mourning party. She put it back into the glass, refusing to throw it out. About half an hour later I found the killie swimming around in the glass, and today, one week later, that spearing—generally considered only too perishable—still is alive. I reckon in elapsed time the little fish was out of water two hours, which to me is most remarkable.

Can you give me any data as to how long fish are supposed to live out of water?

ELIZABETH BETTI.

Archery

Archery in England.

THE last public meeting for the year, in England, the southern counties, was held near Malden, Surrey, on Sept. 17, 18 and 19. The weather was favorable for good shooting.

The meeting will be a memorable one on account of the fine shooting of Mr. H. P. Nesham. His double York round score came within 7 hits, 27 score, of equaling the score with which Mr. G. P. Bryant won the championship of the United States in August.

It was the best shooting done at any public meeting in England since Major Hawkins Fisher's 1,060 at the Grand Western in 1872; and beating his late father's record for the Crystal Palace and southern meetings of 1,027. Mr. N. P. Nesham's score:

H. P. Nesham's score:			
100yds.	80yds.	60yds.	Total.
53 247	42 178	22 126	117 551
44 200	33 186	24 130	106 516
97 447	80 364	46 256	223 1067

Miss Q. Newall made the good double national round score of 138 hits, 752 score.

Archery Coming Back.

CHICAGO, Ill., Oct. 3.—*Editor Forest and Stream:* The letter of Dr. H. L. Lake, of Fulton, N. Y., in your issue of Sept. 28, brought to mind pleasant memories of the golden days of archery, thirty years ago, and the great part of FOREST AND STREAM took in promoting the sport.

I shall never forget the delight with which we read the following announcement, published in your issue for July 31, 1879:

"Our Archery Department: We take great pleasure in announcing that the Archery Department of the FOREST AND STREAM is under the supervision of Mr. Will H. Thompson, whose eminent fitness for the position is sufficient promise of its excellence and high standard.

"The columns devoted to this popular sport will from week to week contain articles similar in character to that in the present issue.

"No archer can well afford to be without the paper. Our readers who are followers of the sport will confer a favor upon their friends by directing their attention to the FOREST AND STREAM."

Archery is coming again, and we are pleased to see that the FOREST AND STREAM is giving some of its valuable space to this best of all athletic recreation.

EDWARD B. WESTON.

Pittsburgh Archers Shoot Well.

REPRESENTATIVES of the Pittsburgh Athletic Association, Beechview and Bon Air Archery clubs held a shoot on the Bon Air range, Saturday, Oct. 5.

In the morning a match round of 96 arrows at 60 yards was shot between Dr. Hertig and Mr. Wolfe on one side and Mr. Jiles and Mr. Holmes on the other. Scores follow:

	Hits.	Score		Hits.	Score
Dr O L Hertig.	90	446	W H Holmes...	81	382
D A Wolfe.....	68	268	Jas S Jiles.....	74	306
Total.....	158	714	Total.....	155	688

In the afternoon an American round was the program. Thirty arrows at 60, 50 and 40 yards range, 90 in all. Scores:

	Hits.	Score		Hits.	Score
Dr Hertig	87	503	J S Jiles.....	78	350
W H Holmes...	78	430	D A Wolfe.....	76	333

These four gentlemen have been shooting less than a year. Mr. Holmes, having shot his first arrow on July 6 has had less than three months' experience. Mr. Wolf has faced the target less than ten times since he began to shoot, while Mr. Jiles has only been shooting since May.

O. L. HERTIG.

Archery Notes.

THE Scottish-Americans at Jersey City, N. J., have organized an archery club with twenty-five charter members, and are holding regular shoots on the grounds provided by the Park Commissioners of the city. Jersey City is the third municipality to provide ranges for archery on its public grounds. A second club composed of professional and business men has been organized at Jersey City. These clubs have arranged a competition team shoot with the archers of Pittsburgh, Pa., to be held later in the month.

Miss Mary A. Brownell, member of the Newton Club, has assumed her duties as instructor in archery and fencing at Smith College. One hundred and ten girls have been enrolled in the classes in archery.

The archers of Boston, Jersey City and Pittsburgh have been invited by the committee on arrangements for the July 4th, 1913, celebration at Wayne, Pa., to compete in the archery events on that occasion.

Ellis Spear, Jr., secretary of the National Archery Association of the United States, has sent notices to all the members of the association, inviting them to participate in a team shoot on Columbus Day, Oct. 12, sending in their scores for tabulation.

The Last Arrow.

Founded on an incident of the French and Indian War of 1696.

BY HENRY D. ATWOOD.

As the Indian lay in his peaceful glade,
At rest on his couch of the deer skin made,
He saw in a vision his tribe dispersed,
And the warriors slain by a race accursed;
Whom ages before, wise prophets foretold,
Would come to their land for conquest and gold;
Who would seem like the angels, so white and so fair,
So blue were their eyes, so golden their hair.
And he tossed in his slumbers, and murmured low:
"Alas, for my people, they will melt like the snow;
They will vanish from earth, like the mist from the sun;
Their time is soon over, their race will be run,
Concealed in their coverts, existing in pain;
Sought out by the foeman, discovered and slain,"
And his hand rested lightly, where lay by his side
The young Indian princess, his early won bride.
And she woke with a shudder that chilled her heart's
blood,
As frost chills the fountain and chains up the flood.
And she raised her lithe figure, and bending her ear,
She listened and looked for the sound drawing near.
'Twas a tread like the cougar's, displacing the leaves,
That even when wakeful, the watcher deceives;
And she strained her fair vision o'er the landscape in
sight
Where the dark bending willow and hemlock unite,
At the edge of the clearing, lifting branches on high;
Weaving figures fantastic, towering up to the sky.
And she saw for an instant, 'neath the moon's pallid
glow,
A figure half standing, half crouching below;
And her heart stilled its beating; the features proclaim
A renegade white, lost to honor and shame;
Who long had pursued her, had fought with her sire,
Had tortured her tribesmen with gauntlet and fire;
Had plundered their village and captured their game,
And given their wigwams to ravage and flame.
'Twas he, and no other; she well knew the face
Peering out from the branches he thrust from their place.
And over his features a baleful gleam passed,
As a glance from his covert he rapidly cast.
Then beneath the dark shadows again he withdrew,
And hastened away to his murderous crew.
And Neoskaleeta a moment in prayer,
Besought of great Manitou her people to spare;
Then she spoke to her warrior, who slumbering lay:
"Arouse, Kiodago, arouse, thee, I say!
De Graas is upon us, he follows us still,
In hopes to surprise us, and so wreak his will;
Let the braves be assembled. Let the warriors all know
They must fight to the death with their bitterest foe."
Aroused in an instant by the warning she gave,
Every sense was alert of her valorous brave;
He sprung from his couch, he seized on his bow,
And his quiver of arrows about him doth throw.
Then bounded away to the fast waning fires,
And roused from their slumbers the warriors and sires.
And soon they were stationed in ambush around,
Each man like a statue, in silence profound.
E'er the light of the dawning gave token of day,
And the shades in the forest had dispersed at its ray,
There was heard from the distance a murmurous sound—
'Twas the bands of the foeman encircling the ground.
Soon the whites, ne'er suspecting their presence was
known,
Rushed with shouts on the wigwams, whose inmates had
flown;
But they rushed to destruction, midway in career
They were smote from each quarter with arrow and spear.
The contest long doubtful, at last had an end;
The bright rays of morning the leaguers befriended.
And betrayed in each recess the warriors concealed,
And, deprived of their shelter, it forced them to yield.
They retreat fighting bravely, they sell their lives dear,
For the heart of the Mohawk is callous to fear.
When at last 'tis all over, and each rocky steep,
Drenched with blood, showeth plainly the pathway they
keep;
Then the renegade, casting fierce glances around,
Cries, "Seek out Kiodago! The chief must be found!"
'Mid the shot and the shout of the foe, as they fell,
The prize that he sought for had vanished as well.
And afar up the mountain to a grotto unknown,
Ne'er heard of by white men, Kiodago has flown.
And Neoskaleeta, with terror distraught,
At last to this refuge in safety was brought.

But as swift on their trail as the sleuth hound can fly,
Doth the renegade white with his followers hie,
For oft had he seen, as he shared the same fire,
And appeared as the friend of the princess' brave sire,
The chief take him way to the far mountain's head,
To gaze on the scene in its beauty outspread,
Where the silvery waters lay curling below,
That were fed by the springs of the pure mountain snow.
And he cried in his joy as he looked on his prize,
"She is mine, she is mine! And who thwarteth me dies!"
As he bounded aloft, how exultant the shout
That echoed and pealed through the wild wood about;
And quickened the flight of the fast fleeing twain,
Till the dizziest height of the mountain they gain,
Where crevice and chasm, alike yawning wide,
Spread a path of destruction upon either side.
And here, 'neath the shelter of a storm-riven tree,
They turn them at bay and their fell foeman see.
He hath followed them far with a hatred dire,
And a heart that was fed with a lustful fire.
Now he pauses a moment, for the trail is lost;
But that moment proves fatal, his life is its cost;
For the chief bends his bow, the string draweth tight;
And the arrow has flown with the speed of the light.
It has cleft through his corslet to the vile traitor's heart.
With a terrible cry, as he feels the fierce dart,
He reels once about, with his arms wildly thrown,
With a grasp at the air and a life ebbing groan,
E'er a hand could give aid, in convulsion's last throes,
He shot from the height to the dark gulf below.
At the sight all his followers drew backward in fear;
And swiftly then fled, though the prize was so near.
Now joy to the chieftain, whose danger is past,
Whose quiver was empty, that arrow his last.

'Tis a tale of the past that my muse has told;
Methinks with the ages it cannot grow old.
While the human heart has its hopes and its fears,
Its days of joy, as of grief and tears,
The human heart is a mystery still.
Will it listen at last to its Maker's will?
Will it learn that to love is better than hate;
That the crimes of the past we must expiate;
That the Ruler of all, in the Ark divine,
Will teach us the word and countersign?
Will open His arms, when we fall asleep,
As the shepherd would welcome his wandering sheep;
Will open his arms, and receive us all,
If we will but list to His loving call;
And an equal care will on each bestow,
With a look benign that we all shall know?
Ah! Blessed be the day, and joyous the hour,
When human passion no longer has power
To kindle to hatred the hearts that in peace
Forever shall dwell in a happy release
From war, through the ages, in welfare and weal,
Till the future of time should its purpose reveal;
Till the waves that have smote us, the tempests that
tore,
Shall be silenced and calmed on eternity's shore.

When the time shall come in the passing years,
That the foe of to-day as our friend appears;
When the hand that holds the glittering sword
Is stayed at the sound of a peaceful word;
When the echo of bells is borne on the air,
As they tell of the peace that rules everywhere;
When dissensions shall die, as die they must,
When the guns are spiked, and the swords are rust;
When the plow shall run in its furrows wide,
And the peaceful arts shall our progress guide;
Let the land of Columbia, where dwell the free,
Be proudly the first with its kin to agree;
And the hand in her friendship that England extends,
Let us grasp it as heartily, and ever be friends.

Chicago Archery Club.

BOSTON, Mass., Oct. 2.—*Editor Forest and Stream:* Scores made by the Chicago team on Sept. 28 follow:

96 arrows at 90 yards:	Hits.	Score.
George L. Nichols.....	88	432
H. W. Bishop.....	75	365
Dr. Edward B. Weston.....	80	348
J. H. Pendry.....	70	300
	313	1445

Owing to weather conditions, the Boston archers were unable to shoot.

BURTON PAYNE GRAY.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

MRS. SAGE'S GREAT GIFT.

By her generous purchase of Marsh Island, Mrs. Russell Sage has performed a great public service. Here is an area of more than a hundred square miles, on which each winter collect many thousands of wildfowl—among them the blue goose, now growing scarce and threatened with extinction. Not only do wildfowl gather here in great numbers, but also rails, herons, shore birds and many of the smaller migrants—song birds and warblers. Under Mrs. Sage's gift all these birds will henceforth be protected on this great tract of land.

Edward A. McIlhenny is understood to have originated the idea of establishing at different points in the Mississippi Valley, from the Gulf of Mexico north to Canada, a series of bird refuges of which Marsh Island and the Louisiana State Game Preserve was to form the first. Mrs. Sage's purchase of Marsh Island completes the initial step toward establishing this north and south line of wildfowl refuges, and Messrs. McIlhenny and Ward will now continue with renewed zeal their efforts to have the other refuges set apart.

Mrs. Sage's love for birds, and interest in their protection, has many times been demonstrated in material ways, but this, her greatest contribution to the work, is of peculiar interest because the number of men interested in wildfowl protection is so great. American sportsmen, naturalists and game protectors may take fresh courage, and with renewed energy work for the cause of game protection so dear to their hearts. They have found a powerful ally—one who in a slightly different way has done for their cause what David W. Wilcox did when he made his generous bequest to the Audubon Society.

THE SULLIVAN LAW.

It has been pretty conclusively proven that crooks cannot buy revolvers in New York city. They go across into New Jersey to "get a gun" with which to commit murder. The Sullivan law has made it practically impossible to secure arms illicitly in New York, thereby proving that although it is a law in which are many faults, it still drives the crook into another State before he can commit a felony in his own State. It now is up to New Jersey as well as all other States to enact a law prohibiting the purchase of revolvers by those not entitled to the privilege of possessing such weapons. New York State legislators owe to their State and to themselves an effort to encourage reciprocal action on the part of other States in order that the good work started in this State may be consummated and a drastic anti-revolver law passed in every State in the Union. Such unanimous action would discourage gang fighting, thugism and burglary. The Sullivan law should be amended so that any citizen of the United States, or any well recommended foreigner, could, upon presentation of proper credentials, secure a license to purchase a revolver for home protection or sportsmen's use.

ADIRONDACK DEER SEASON OPEN.

The deer season opened in the Adirondacks on Oct. 1 and will close on Nov. 15. The Adirondack region comprises the counties of Clinton, Essex, Franklin, Fulton, Hamilton, Herkimer, Saratoga, St. Lawrence, Warren and Washington and that part of Jefferson, Lewis and Oneida counties lying east of the Utica and Black River Railroad from Utica to Ogdensburg.

The rest of the Empire State is closed for sportsmen, with this exception: In Ulster county and towns of Neversink, Cohecton, Tusten, Highland, Lumberland, Forestburg, Bethel and all of towns of Namakating and Thompson south of Newburgh and Cohecton turnpike in Sullivan county and Deer Park in Orange county, Nov. 1 to Nov. 15.

All deer must have horns not less than three inches long. Each sportsman is limited to two deer. In order to hunt deer in this State a non-resident or alien must pay a fee of \$20.50. A non-resident taxpayer is assessed \$10.50. The fee the resident pays is \$1.10. A hunting license may be obtained from any county, city or town clerk.

WORK OF A. G. P. P. A.

A DESPERATE violator of the game laws of Massachusetts has just been brought to justice by agents of the American Game Protective and Propagation Association. At the request of the Massachusetts authorities, D. C. Speenburgh, of the association, has been at work on the case of Chauncy A. Burdick, of North Adams, for nearly a year and has succeeded in getting evidence which resulted in convictions on nineteen counts for violations of the game and excise laws. A prison sentence of three months and fines amounting to \$290 were imposed.

The association stands ready to send its experts to the aid of game officials in any part of the United States, whether to assist in legal

work or in securing evidence in baffling cases. It has been found in many instance that a man from outside is successful where the local warden fails on account of being too well known. Through its special agents the association is accomplishing much in this line.

SHOOTING NUMBER.

We have gathered together a remarkably interesting and varied amount of material for our shooting number to be issued Oct. 26. First of all there will be a cover in colors from an original painting made for us by that famous animal depicter, Carl Rungius. A special feature never before produced in any other magazine will be a report from the game warden in each State, telling briefly the game conditions there this year. This will give sportsmen a chance to plan their shooting trip for a section where they know game will be found. As these reports will come in after the season opens, they will give existing conditions, not prospects. Other articles will include: "Out in the Chicken Country," a story of pinnated grouse shooting in the Dakotas, Minnesota, Nebraska and Michigan, told in the "written from experience" style of Amos Burhans; "Reminiscences of Ragged Island," a duck shooting story; "Cooting on Cape Cod," by George Almy; "Caribou Hunting, Newfoundland vs. New Brunswick," by that well-known big-game hunter, George B. Clark, and other special features. The issue will be profusely illustrated and will, we hope, be the best number we ever have issued. Of course the regular departments will appear as usual. If you are not a regular subscriber, order early from your newsdealer. The Oct. 26 issue will be in great demand and we do not want you to miss it.

EVERY SPORTSMAN SHOULD READ YOUR MAGAZINE.

SPRINGFIELD, Mass., Sept. 26.—*Editor Forest and Stream:* I hope that you will be able to secure a good picture of Col. Acklen, that your readers may see the man who was made president of the National Association of Game and Fish Commissioners.

I believe there is a great future for this association, and that it will be the means of uniting all parts of our country to work in harmony for better game protection and increased propagation.

You, as editor of FOREST AND STREAM, can have a great influence in bringing about the results that are needed. Every sportsman should read your magazine.

Here in Massachusetts we have nearly 50,000 licensed gunners besides three times as many persons who go fishing, and this army is rapidly increasing. Conditions are changing rapidly and the sportsmen must be educated to meet present conditions.

The next time I am in New York, I will try and see you and talk over this matter with you. I am very much interested in it.

GEO. H. GRAHAM,

Commissioner of Fisheries and Game of Massachusetts.

OCTOBER: The sunshine of July without its oppressiveness; the clearness of December without its piercing cold.

YACHTING

Diving and Sport.

Or the Seven Stages of a Speed-Boat Race.

BY JOHN D. SCHMIDT.

It was not a great while ago that a launch which could go twelve or fifteen miles per hour was a fast boat indeed. In those days the purely racing type of boat had not come into its own and launches were built to stand wear and tear as well as for fast running. In recent years, however, great strides have been made in speed, and as the speed has increased, the boats have been built lighter and lighter in order to carry greater power with the least possible addition of weight. When one of these forty-mile-an-hour racers strikes a log or a heavy swell, it not infrequently happens that the cockle-shell goes to the bottom. At this point the diver enters the game.

A Reliance, a Dixie or a Bug, as the case may be, strikes a log and sinks. The owner immediately telegraphs to one of the big wrecking companies, while his men are out locating the sunken craft. Presently appears a lighter bearing the necessary gear for raising the boat. The deck hands place an iron side-ladder over the gunwales and take soundings to determine the depth of water and condition of the tide, while willing hands help the diver into his dress.

Over a heavy suit of woollens and socks of the same material he draws on the baggy rubber-processed canvas diving dress. They clap a bronze collarplate over his head, onto which a rubber flange of the dress is securely clamped. His overalls are pulled on and made fast to the collarplate and the life-line is passed around his waist and similarly fastened. Lastly, upon being informed that the racer has been located and that all is ready for him, he steps into a pair of iron shoes weighing about twenty-five pounds and gets down on the ladder. Here his tender adds to his already weighty outfit a belt carrying seventy-five pounds of pig lead. The human turtle, for that is perhaps, what he most resembles, takes a last puff at his pipe; the tender calls out, "Go ahead with the pump," puts the helmet on and screws it tight with a quarter turn, passes the hose under the diver's left arm and makes it fast to the collarplate, and with a parting clap on the helmet, the queer monstrosity clambers slowly down the ladder and disappears under water.

Once on bottom, the diver investigates the position of the hull and reports his findings by signals on the life-line. Presently the lighter's boom is swinging out and the tackle lowered away. The diver passes a sling around the motor boat and makes it fast to the hook of the hoisting tackle. All this must be done by feeling, since at depths greater than ten or fifteen feet one can see nothing. In heavy tide and deep water this operation of passing a line around the hull is not as simple as it may seem and is not unmixed with danger. However, this part over with, nothing remains but for the engineer to haul away and the craft

is lifted up and set in a cradle on the lighter's deck.

This proceeding is becoming quite a common one. In fact, scarcely a regatta has been held of late without at least one boat being sunk. At the international carnival at Huntington, Tech Junior and Ace III. were sunk. At the last regatta at Buffalo Baby Reliance II. went under, and during the carnival on the Hudson, Tech Junior again met with misfortune and was salvaged by Merritt & Chapman's lighter Champion. Thus a new field, and a profitable one, has been opened for the diver.

They are a hardy, cool-headed lot, these explorers of the submarine world. I have seen a man who had been pulled up nearly unconscious, after having his air supply cut off for about three minutes, go down again within half an hour. When asked whether his experience had made him nervous about going down again, he smiled and said, "Oh, well, that might happen only once in a lifetime. I got up all right, so what's the use of worrying."

On another occasion a staging, carrying the pumps and gear, broke while the diver was down in forty feet of water, throwing the pumps into the river. The tender immediately started to haul up his man, while all hands stood by ready to render any aid that could be given. If you have never been around in such a case you cannot imagine how heart-breaking is the suspense while someone else is doing all that can be done to save the man's life, and all you can do is to stand around and curse, pray, or hope, according to your character. In this case the diver's coolness saved him. When he felt himself hauled up without any preliminary signal being given, he surmised that something was wrong with the pump. Reaching around to the exhaust valve on the back of the helmet (not as easy as it sounds, when the suit is puffed out with air), he screwed it down tight, shutting in what air there was in the helmet and suit. This little proved sufficient to keep him from suffocation till they could pull him to the surface and get the helmet off. On the way up the tide swept him under some bracing, so that he came up on the wrong side of it and had to retrace his course to get on the right side, losing several precious seconds. Picture to yourself what a strain it must be for a man to keep a cool head under such circumstances!

Together with this coolness and nerve goes a very varied ability. They are "Jacks of all trades," these divers, and, moreover, they belie the rest of the saying by being masters of more than one. One chap, a Norwegian, of my acquaintance holds his master's papers from the old country and has sailed as mate on more than one good ship and yacht. The diver is called upon for everything from laying pipes and cables, to raising motor boats or salvaging valuable cargoes from sunken freighters. And as I have remarked before, all their work is done by touch alone. Inventors have rigged up lights to be carried down and

used on bottom, and telephones, etc., but the diver knows that the fewer wires and paraphernalia his tender has to handle, the better his chances of getting out in case of accident.

So, taking it altogether, the diver does not lead a very easy life. He works hard and takes big risks, and motor boat owners may be thankful for the services of a capable set of men. If his boat sinks, far from giving her up as hopelessly lost, he may see her afloat and as good as new in two or three days.

Sales and Charters.

THE following yacht sales and charters are reported through the office of Stanley M. Seaman, New York city:

Steam yacht *Cassandra*, sold for Roy A. Rainey, New York Y. C., to Geo. J. Whelan, Larchmont Y. C. *Cassandra* is the largest steam yacht in the American fleet. Dimensions are: 287 feet over all, 33 feet beam, 16 feet draft; was built in 1908 by Scott & Company, Greenock, Scotland, from design of A. S. Chesebrough, Bristol, R. I. She offers 10 staterooms, 6 baths. Her appurtenances are all very handsome, saloons and staterooms being of carved Circassian walnut with walls of heavy tapestry. Bath tubs and basins solid porcelain, and plumbing fixtures and electroliers silver plated. Engines are twin-screw, triple-expansion, cylinders, 16, 26 and 42 by 27, give speed of 15 knots. Coal capacity 325 tons, a cruising radius of 7,000 miles on bunker coal. Mr. Rainey has cruised in the Mediterranean, also to the North Cape, besides making three trips across the Atlantic in her. Her westward passage in 1909 of eight days and eleven hours is the Atlantic record for a steam yacht. She is now out of commission at New London, Conn., but her new owner will refit early in January for a trip through the Mediterranean and a cruise later to the North Cape. The following winter he expects to visit all places of interest in South American waters and possibly the Pacific to Alaska.

Seventy-foot cruiser *Parthenia*, sold for A. A. Augustus, Cleveland, O., to L. H. Ross, of Jersey City, N. J., for use in New York waters.

Gasolene cruiser *Mareta III.*, sold for Mrs. Miriam P. Smith to Frank A. Eagan. Extensive alterations and repairs have been undergone at Stephenson's Yacht Yard, New Rochelle, N. Y.

Yacht *Picaroon II.*, sold for L. H. Ross, of Jersey City, to Julius Brenzinger, of Mount Vernon, N. Y., for use in New York waters.

Auxiliary yawl *Dawn II.*, sold for H. E. Converse, of Boston, to C. E. Elder, New York city.

Launch *Topaz II.*, sold for C. W. Clifford, Jr., of Bath, Me., to Herman Bauer, New York city, for use on Maine coast.

Launch *Wannie*, sold for Dr. W. D. Woodward, of Stony Creek, L. I., to Wm. Harrison Bradley, Montreal, Can.

Auxiliary yawl *Isuelo*, sold for E. L. Arnold, of Providence to Ernest F. Lloyd, of Detroit, Mich. Yacht has been delivered. Now used on Lake Erie.

Yacht *Roamer*, sold for A. J. Vreeland to Miss Gertrude Flower.

Launch *Sherar*, sold by J. W. Sherrard, of Brooklyn, to F. A. Ward, of National Y. C.

Sloop *Martha*, sold by H. L. Coe, of Brooklyn, N. Y., to S. G. Etherington, of Riverside, Conn.

Launch *Ganet*, sold for John W. Bird, New York Y. C., to Geo. E. Suter, same club, for use in Shelter Island.

Auxiliary yawl *Yebis*, sold for C. W. Hall to T. S. Dolan.

Twin-screw seagoing cruiser *Scantic*, sold for Raymond G. Keeney, of Hartford, Conn., to S. A. French, New York city.

Cruising launch *Queen Mab*, sold for Dr. E. C. Rivers, of Denver, Colo., to V. M. Tyler, of New Haven, Conn. She has just finished a cruise through New York State waterways and the St. Lawrence.

Auxiliary sloop *Cindrella*, sold for F. E. Woodworth, of Rochester, N. Y., to Capt. T. W. Collins, Keansburg, N. J.

Steam yacht *Admiral*, chartered for the summer for Irving T. Bush, New York city, to Geo. J. Whelan.

Launch *Bertha*, sold by J. E. Floyd to Mrs. Mary Woehler.

Launch *Ruth II.*, sold by C. Linkroum to R. S. Mills.

Sloop *Marcia*, sold by H. P. Geib, Stamford, Conn., to E. E. Hallock, New Haven, Conn.

Launch *Mink*, sold for W. M. Lovering, Taunton, Mass., to John Dunlop, New York city. She has been fitted with two new Lamb engines. Now cruising in New York waters.

Yacht *Patricia*, chartered for H. M. Hirschberg to J. Fred Pierson, Jr., New York city.

Launch *Audwin*, chartered for G. C. Audie, New York, to Robert Bage Kerr, of Larchmont.

Sloop *Ida*, sold for E. P. Buckner to Charles Christiansen.

Lunch *Don*, sold for F. W. Wells to Andrew Berger.

One hundred foot gasolene yacht *Itasca*, chartered for E. B. Hawkins, Detroit, Mich., to R. T. Heitemeyer, of Stamford, Conn.

Launch *Trump*, sold for Conrad Stein, Rhinebeck, N. Y., to N. E. Hucke, of Baltimore, Md., for use on Chesapeake Bay.

Auxiliary schooner *Elsana*, chartered for Henry C. Pearson to Hunter Wykes, New York Y. C. Has since been chartered to Wm. S. McGuire.

Auxiliary yawl *Savalo*, chartered for G. H. Miller to S. H. Groser for use at Shelter Island.

Yawl *Kacy*, sold for John T. Herne, South Hampton, L. I., to W. B. Lawrence.

Seagoing cruiser *Ariel*, sold by W. H. N. Bostelmann, Brooklyn, to Daniel G. Whitlock, of Staten Island.

Launch *Omoo*, sold for Daniel G. Whitlock to a Brooklyn party.

Sixty-foot gasolene yacht *Mohican*, sold for Clarence B. Kugler, Jr., Philadelphia, to A. C. Pearson & Co., New York city, for use in Central American waters; shipped via Panama S. S. Co. this week.

Launch *Alzada III.*, sold for F. W. Bartels, of Providence, R. I., to Cuban parties. Has been shipped to Havana.

Launch *Zorayda*, sold by Anthony Schneider, New York city, to C. E. McLeod, South Carolina. Yacht has been delivered to new owner.

Canoeing

Knickerbocker C. C.

SATURDAY, Sept. 14, was devoted to making the annual ladies' day one of the most successful in the history of the club. There was quite a large gathering, which included former members of the club, and also many men prominent in the American Canoe Association.

An interesting program was arranged by E. H. Stockwell, chairman of the Regatta Committee, which resulted in the finishes being very close and exciting, especially the open sailing, which was won by a nose. The most laughable incident of the afternoon was a supposed accidental capsizing of an amorous couple and their rough rescue.

While refreshments were being served, the orchestra rendered selections, and the following events took place:

Decked Sailing.—First, J. R. Magers; second W. G. Harrison.

Open Sailing.—First, E. H. Stockwell; second, J. F. Ahrens, Jr.

One Man, Single Blade.—First, E. Anderson; second, F. H. Smith.

Tandem, Double Blades.—First, F. E. Ahrens and F. H. Smith; second, P. H. McBride and Douglass Cummings.

Single Blade Fours; on Gunwale.—First, B. F. Cromwell, Jr., F. E. Ahrens, H. Brooks, F. H. Smith; second, H. Sandstrom, C. Sandstrom, W. Clausen and J. Flynn.

Relay, Four Men.—First, G. F. Henshaw, P. H. McBride, J. R. Magers and W. Clausen; second, F. H. Smith, F. E. Ahrens, H. Brooks and B. F. Cromwell, Jr.

Double Blade, Fours.—First, J. R. Magers, P. H. McBride, G. F. Henshaw and W. Clausen; second, H. Sandstrom, J. F. Ahrens, Jr., E. H. Stockwell and D. Cummings.

One Man, Double Blade.—First, J. F. Ahrens, Jr.; second, J. R. Magers.

Tandem, Overboard.—First F. E. Ahrens and F. H. Smith; other crews capsized.

Tilting.—First, F. E. Ahrens and F. H. Smith; second, P. H. McBride and D. Cummings.

After the races there was a luncheon and then a dance, at which every one had a most enjoyable time. This brought to a fitting close a season of unusual activity. CHET.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Charles S. Edgcumbe, 74 Brinkerhoff street, Jersey City, N. J.; Arthur F. Edgcumbe, 74 Brinkerhoff street, Jersey City, N. J.; Eugene J. Cole, 323 West Jersey street, Elizabeth, N. J., and Harold C. Chapman, 39 Belmont avenue, Jersey City, N. J., all by Edmund vom Steeg, Jr.; H. R. Richards, 500 West 122d street, New York, N. Y., and J. F. Lockard, 1 St. Nicholas Terrace, New York city, both by F. C. Buchenberger.

Western Division.—Guy Weaver, 199 Galena street, Aurora, Ill., by John N. Denean; Frederick Barker, 414 North Court street, Rockford, Ill., and S. M. Woodruff, 725 Chestnut street, Rockford, Ill., both by J. U. Barker; R. F. Stockdale, Jr., 839 Wilson avenue, Chicago, Ill., and Charles A. Harring, 2011 Geddings avenue, Chicago, Ill., both by A. M. Callmann.

NEW MEMBERS ELECTED.

Atlantic Division.—6528, Walter Fairchild, 378 Central Park West, New York city; 6529, Levi Hindley, Millville, N. J.; 6530, Frank S. Bunnell, Hastings-on-Hudson, N. Y.

PROPOSED FOR ASSOCIATE MEMBERSHIP.

Mrs. Oscar J. West, Chicago, Ill.; Mrs. Carl F. Martin, Ellamore, W. Va.; Mrs. John McKay, Kingston, Ont., Can.; Miss Charlotte Friese and Miss Elizabeth Friese, Chicago, Ill., and Miss Charlotte Mount, La Grange, Ky., by A. W. Friese and Henry C. Morse.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

- Oct. 12.—Temple, Pa.—Hercules G. C. A. K. Ludwig, Sec'y.
- Oct. 13.—Arlington Heights, Ill.—League shoot of the Chicago Interurban League of Gun Clubs. E. B. Shogren, Sec'y-Treas.
- Oct. 15-18.—Cincinnati, O.—The Interstate Association's Post-Season tournament, on the grounds of the Cincinnati G. C.; \$1,000 added money. Elmer E. Shaner, Sec'y-Treas., Pittsburgh, Pa.
- Oct. 16.—Rising Sun (Md.) G. C. H. L. Worthington, Vice-Pres.
- Oct. 18.—Adams (Neb.) G. C. H. K. Mitton, Sec'y.
- Oct. 29-30.—Demopolis (Ala.) G. C. W. C. Du Fue, Sec.
- Oct. 30.—Medford (Okla.) G. C. Dr. I. V. Hardy, Sec'y.
- Nov. 7.—Adams (Neb.) G. C. H. K. Mitton, Sec'y.
- Nov. 21-22.—Clinton (Ont.) G. C. J. E. Cantelon, Sec'y.
- Dec. 2-6.—St. Thomas, (Ont.) G. C. W. J. McCance, Asst. Mgr.

1913.

- Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, O.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

J. O. Wilson, Secretary Daniel Boone Gun Club, of Marthasville, Mo., under date of Sept. 30, writes: "The regular practice of our gun club was postponed Saturday because the greater number of our regular men were at St. Louis attending the Sportsmen's show, and taking part in the shoot down there. One of our men, Mr. A. F. Ahmann, shot well there, tying for second place, with a score of 92 out of 100. Our team did not do so well. It broke only 91 out of 125. The busy season will soon be over now, so we can send you a longer list of scores."

W. G. BEECROFT.

Post Season Tournament.

PITTSBURGH, Pa., Oct. 2.—Herewith inclosed is a list of the names and addresses of 180 amateurs and 28 professionals who are eligible to take part in the coming Post Season tournament at Cincinnati, O., Oct. 15 to 18, inclusive:

ELMER E. SHANER, Sec'y-Treas.

PROFESSIONALS.

Bills, Fred G., Chicago, Ill.

Clark, Homer, Alton, Ill.
Clancy, R. W., Chicago, Ill.
Crosby, W. R., O'Fallon, Ill.

Day, J. S., Cincinnati, O.
Dickey, Orrin R., Boston, Mass.

Freeman, H. D., College Park, Ga.

Goodrich, C. E., Chicago, Ill.
Gilbert, Fred, Spirit Lake, Ia.
German, L. S., Aberdeen, Md.
Gross, D. D., Kansas City, Mo.

Huff, Walter, Macon, Ga.
Henderson, Woolfolk, Lexington, Ky.
Hawkins, J. M., Baltimore, Md.
Heer, Wm. H., Guthrie, Okla.

Killam, Arthur, St. Louis, Mo.
Kirkwood, H. C., La Grange, Ill.

Le Compte, C. O., Eminence, Ky.

Maxwell, Geo. W., Hastings, Neb.
Marshall, T. A., Chicago, Ill.

O'Brien, Ed., Florence, Kans.

Riehl, F. C., Tacoma, Wash.

Spencer, C. G., St. Louis, Mo.
Skelly, J. T., Wilmington, Del.

Taylor, J. R., Columbus, O.
Topperwein, Mrs. Ad., San Antonio, Tex.

Ward, Guy, Birmingham, Ala.

AMATEURS.

The following named amateurs are eligible to compete in the Post Season Tournament, at Cincinnati, Ohio, Oct. 15, 16, 17 and 18, 1912:

Alexander, E. R., Tuskegee, Ala.
Arnold, E. W., Larned, Kansas.
Arie, Nick, Houston, Texas.

Appleman, J. W., Perry, Oklahoma.
Adams, E. H., Reading, Pa.

Billings, C. W., Glen Ridge, N. J.
Barto, Joc, Chicago, Ill.
Bishop, Archie W., Nelson, B. C., Can.
Brown, W. A., Sioux City, Ia.
Bray, D. D., Columbus, Neb.
Blunt, J. A., Greensboro, Ala.
Burns, Roy H., Brookville, Ind.
Buckwalter, H. E., Royersford, Pa.
Budd, R. J., Lykens, Pa.
Behm, W. S., Esterly, Pa.
Barrett, J. M., Augusta, Ga.
Billmeyer, Frank, Cumberland, Md.
Burns, George E., Cleveland, Ohio.

Culver, D. L., Port Jarvis, N. Y.
Corfield, W. E., Utica, N. Y.
Crothers, E. K., Bloomington, Ill.
Cate, Vassa, Brunswick, Ga.
Caldwell, J. F., Concordia, Kans.
Clay, Jr., T. H., Austerlitz, Ky.
Campbell, Frank, Wauke, Iowa.
Connor, A. C., Springfield, Ill.
Cocke, W. W., New Orleans, La.
Cooper, Guy, Kansas City, Mo.
Converse, H. W., Fulda, Minn.
Caldwell, W. W., Portland, Ore.
Cooper, B. S., Thornville, Ohio.
Coburn, C. D., Mechanicsburg, Ohio.
Coleman, Fred, Philadelphia, Pa.
Calhoun, J. F., McKeesport, Pa.
Cooper, E. W., Tacoma, Wash.
Chingren, E. J., Spokane, Wash.
Cook, H. B., Atlantic City, N. J.
Chamberlin, A. L., New Haven, Conn.

Davidson, I. C., Springfield, Ill.
Dixon, Harvey, Oronogo, Missouri.
Dixon, B. A., Omaha, Neb.
Donald, T. J., Felicity, Ohio.
Donald, T. E., Felicity, Ohio.
Dague, J., South Tacoma, Wash.
Duckham, H. D., Kenton, Ohio.
Doolittle, C. E., Cleveland, Ohio.
Deist, John, Sandusky, Ohio.
Daub, W. E., Muir P. O., Pa.
Dryden, F. A., Walla Walla, Wash.
Doten, Chester W., Worcester, Mass.
Dering, Guy V., Columbus, Wis.
Daniels, Edw. W., Lynchburg, Va.
De Bee, Jerome, Chadwick, N. Y.
Dickerman, H. E., Chicago, Ill.

Edwards, F. M., Columbus, O.
Eaton, C. B., Fayette, Mo.

Birmingham Gun Club.

TWELVE shooters were at the weekly shoot Friday, Sept. 27, of the Birmingham Gun Club. E. R. Hold shot high percentage for the day, followed by R. R. Skinner. Warren was not shooting up to his usual good form. There were nineteen shooters at the Friday afternoon shoot, three of whom were ladies. Miss Van Hoose made her first attempt at targets. Miss Rohinette did well for a beginner. Several of the other beginners are shooting well. Darby Brown is leading in the Du Pont handicap trophy. P. B. Plummer was present, but was shooting below his average, as was also Mr. Cornwell. The Birmingham Gun Club will give their annual class shoot on Friday, Oct. 25. This will be followed by a distance handicap for a trophy and purse.

Friday's scores:

Shot at. Broke		Shot at. Broke	
G Hillman	175 137	C Abbott	100 69
E R Holt	125 116	R Baugh	75 51
R R Skinner	125 113	D Brown	75 41
John Warren	125 112	Edmunson	25 8
E M Cornwell	100 83	G Ferry	50 4
Randolph	100 70		

Saturday's scores:

D Brown	60 43	Cosby, Jr.	25 4

TOURNAMENT AT YOUGHIOGHENY COUNTRY CLUB.

Youghioghenny Country Club.

AFTER one learns to pronounce its name, there is no club in this country with a trapshooting predilection that can improve on the Youghioghenny Country Club, of McKeesport, Pa. Its location is ideal. Its energy and ambition are irrepresible, and its interest in trapshooting speaks for itself—out of a membership of 250—20 per cent. are trap devotees, and the club is only about one year old. On Sept. 10 the tournament of the Western Pennsylvania Trapshooters' League was held on the grounds and was handled in an absolutely satisfactory way. For a baby club to take care of four score and ten trapshooters is no mean project, and to do it to the satisfaction of all of the fastidious clay bird crackers present is, or was, impossible. The club with the unpronounceable name made it possible. The program was at 120 clays, out of which N. F. Johnston, from the Smoky City, despoiled 116. J. F. Calhoun, of the home club, trotted close up with 114, while Dr. A. H. Aber, of Drawsburg, and Mr. J. Irwin, of Monongahela, divided third on 112. High average for the season in the league went to Brownsville, represented by Carl F. Moore. He has 564 to his credit out of 600 shot at—94 per cent. George E. Painter snuffed 422 out of 455, or 93.6 per cent., for second season's average. High pink sheet for targets only entrants were J. F. Taylor and Woolfolk Henderson on a tie at 118. Les. German lost one too many, and took third.

Latonia (Ky.) Gun Club.

W. H. HALL placed Maysville, Ky., on the trapshooters' map when he won the fourth contest for the Kentucky State challenge cup on Oct. 5, defeating T. H. Clay, Jr., of Paris, Ky., the holder; E. Hammerschmidt, of Latonia, challenger, and H. R. Irwin, Fort Thomas; H. T. Strother, Winchester, and Capt. G. W. Dameron, Bellevue, who had entered for the race. The race was between Dameron and Hall from the start. In the first round the former got a lead of one target, but Hall went straight in the second round, and secured a lead of two targets. The next two rounds made no difference in the standing of the leaders, each missing two targets. In the last event Hall went straight, while Dameron dropped two targets, thus giving the match and cup to Hall with a score of 95 to 91. The cup was first shot for at the State shoot last spring, when T. H. Clay and J. D.

Gay tied on 96, the former winning the shoot-off, 23 to 21. He was challenged by F. C. Bell, and the match was shot on the Fayette Gun Club's grounds, Lexington, resulting in a tie on 95, Clay again proving the winner in the shoot-off, breaking 24 to 22. Clay was challenged by Charles B. Strother, the match being shot on the Winchester Gun Club's grounds, and Clay winning on a score of 97 to 96. The next contest for the cup will be held at the State shoot in Winchester, next spring. The cup must be won at two State shoots in succession to become the property of the individual. Besides the contestants for the cup, there were several shooters in the events. W. Henderson, of Lexington, was high man with 96; Guy Ward, of Birmingham, Ala., was next with 95, and M. I. Johnson, of Cincinnati, came third with 94. Clay, the former holder of the cup, was not in his usual trim, shooting to form in only two events.

Hammerschmidt has let up in practice for several months, and showed the lack in this match, finishing at least 15 to 18 targets below his average.

Weather conditions were about perfect. Arthur Gambell acted as referee, and Len Shepard as scorer.

The boys were mighty well pleased to welcome Uncle John Dea, who used to be one of the regulars at our shoots, but was obliged to give up the sport on account of ill health. He came down from Maysville to root for Hall, and surely proved a mascot worth having.

C. P. T. S. League.

HUNTINGDON, Pa., Oct. 3.—Darkness sent fifteen birds to roost before the entire 150 could be shot at, so the high gun is figured on 135, of which A. M. Bennet missed only 10, thereby becoming honor man for the tournament. Ed. Hellyer, Jr., and Chas. Steinbach gave the topper a run for his glory, and only lost by one rock a piece, tying at 124.

Upper pro. was L. W. Cumberland with 130, seconded by J. Lewis, 129, trailed by L. Lewis, 126.

It was some shoot, with seventy-five entrants, and joy from start to finish.

Du Pont Gun Club.

WILMINGTON, Del., Oct. 3.—To-day the Class A challenge cup was competed for. The holder, ward Hammond, who won the cup from Edward Banks last Saturday, was challenged by Eugene E du Pont. The result was rather unexpected, as a close race had been looked for, but Mr. Hammond was way off and never came back, Mr. Du Pont breaking 24 to his 18 out of the first 25 shot at. In the last 25 both broke 21, so that the final result was 45 to 39 in favor of Eugene E. du Pont, who will now have to defend his title to the cup against J. T. Skelly, who had filed a challenge.

For the sake of practice, No. 1 trap was speeded up a bit, and threw targets from 55 to 60yds., but some good scores were made, as all conditions were favorable so far as the weather was concerned. Thirteen shooters in all were present, and six strings of 25 targets were shot with the following result:

Events:	1	2	3	4	5	6
Targets:	25	25	25	25	25	25
Eugene du Pont	19	20
Clyde Leedom	18	19
Edward Banks	25	25	23	23
E E du Pont	19	22	23	19
J B McHugh	23	24	22	22
A B Richardson	25	23
L H Hoopes, Jr.....	12	16	19	18
W M Hammond	23	22	19	24
H P Carlon	22	20	21	23	22	18
C Voshell	20	12
W S Colfax, Jr	19	19	22	23	22	24
Victor du Pont	21	21	21	21

THE absence of the more prominent marksmen of the Du Pont Gun Club, they being in Boston on a return match with the All-New England team, depleted the ranks of the local shooters Saturday. There were twenty-two marksmen full of Du Pont enthusiasm. The scores:

A. J. Curley 14, W. Edmanson 23, W. B. Sturgis 18, W. G. Robelen 8, Harry Robelen 5, N. K. Smith 18, C. T. Martin 18, T. W. Mathewson 17, Victor du Pont 24, J. J. Magahern 22, E. H. Anderson 15, J. W. Mathews 20, S. G. David 22, J. T. Roberson 21, Stanley Tuchten 19, Dr. A. Patterson 20, Dr. E. O. Bullock 20, S. J. Newman 15, W. B. Smith, Jr., 11, L. Mathewson 20, William G. Wood 19, W. F. Jensen 16.

The rifle scores follow: Miss E. Hickman 121, 136, 95; S. R. Golterman, 213; L. C. S. Dorsey, 229; W. F. Jensen, 169 (20 seconds); A. Curley, 153 (20 seconds); S. R. Golterman, 100 (20 seconds); W. D. Sillitoe, 145 (20 seconds).

The team races resulted as follows: Team No. 1, 358; team No. 2, 309; team No. 3 (L. Dorsey and S. R. Golterman, 442; team No. 4 (A. J. Curley and W. D. Sillitoe), 356.

Roanoke Gun Club.

ROANOKE, Va., Sept. 29.—Some good scores were made at the traps of the Roanoke Gun Club on Saturday afternoon, Sept. 28, eleven of the nineteen members present shooting 80 per cent. or better, with Jamison leading the field. The weekly medals were won as follows:

Scratch—First, P. T. Jamison; second, P. L. Price. Class A—First, H. C. Elliott; second, H. F. Wilkinson. Class B—First, A. H. Boyd; second, D. W. Richards. Class C—First, H. E. Dyer; second, E. O. Kinnier.

The scores, at 50 targets per man, follow:

	Per		Per		
	Broke.		Broke.		
	Cent.		Cent.		
Jamison	48	96	Dyer	40	80
Price	47	94	Jones	37	74
Wilkinson	46	92	D W Richards.	35	70
Elliott	45	90	Heins	34	68
Shepherd	44	88	Bringman	34	68
Hooper	43	86	Fishburne	34	68
Boyd	41	82	Jennings	34	68
McLain	40	80	Kinnier	27	54
Holland	40	80	Ferguson	25	50
Battle	40	80			

H. F. WILKINSON, Sec'y.

Lewiston Gun Club.

LEWISTON, Idaho, Sept. 24.—Wind and bad light were a handicap to the shooters at the second registered tournament which ended here to-day.

The regular program of ten 15-bird events for amateurs was the first called and the three high men of the amateur class were Troeh, of Vancouver; Lee Matlock, of Pomeroy, and D. Holohan, of Portland, all of whom had a credit of 113 targets.

The professionals also participated in these events for scores and the standings of these shooters were: Barclay 139, Riehl 137, Randlett 134, P. Holohan 135, G. Holohan 126, Berger 134, Woodworth 118.

The Beach gold medal trophy was won by D. Holohan, of Portland, with 23 targets out of a possible 25, while Guy Chiesman, of Lewiston, won the Langan trophy with 23 targets out of a possible 25. The Chingren diamond medal for professionals was won by Riehl with 92 out of a possible 100, while Barclay and D. Holohan tied for second place with 90 targets. The following were the results of the regular program:

Records for the Beach, Langan and Chingren trophies, event No. 1 being for the Beach trophy, No. 2 for the Langan trophy, No. 3, for the Chingren trophy:

Table with 2 columns of events and targets for Lewiston Gun Club. Includes names like Riehl, Berger, P. J. Holohan, Barclay, Randlett, Dryden, G. Holohan, Chingren, Woodworth, D. Holohan, Troeh, Ulrich, Hahn, Beckman, Drumm, McCormack.

Second Day.

Riehl was high man for the day with 238 targets out of a possible 250, while the second honors were won by Troeh, amateur, of Vancouver, who secured 237 out of 250. Other high amateurs were Dryden, Walla Walla, 230; D. Holohan, Portland, 225; Chingren, Spokane, 218. Guy Holohan was next to Riehl in the professional class with 228 targets, while Barclay was in third professional class with 224.

The Chingren diamond medal was up for the third time and again captured by Riehl. The Chingren trophy was first up Sunday at the practice shoot and was then captured by Riehl. He accepted a challenge for Monday's shooting and was again victorious, and yesterday an agreement was reached by which the trophy should again be put up on a 50-bird event and Dryden, amateur, of Walla Walla; Chingren, amateur, of Spokane, and Riehl, professional, of Tacoma, tied with 47 targets. On the shoot-off the trophy was again won by Riehl.

The Elks' trophy was won by Chingren, of Spokane, with 25 straight targets, while Troeh captured the Butler medal with 24 out of 25 targets. The Jack Blair watch fob, consisting of a mounted \$10 gold piece for the high average during the tournament, was won by Troeh.

In the regular program events, the high amateurs were Troeh 144, D. Holohan 139, Dryden 138. The high professional in this event was Riehl with 146 targets.

The following are the results in the Elks, Butler and Chingren trophy events. Event No. 1 is the Elks; No. 2, Butler; No. 3, Chingren:

Table with 2 columns of events and targets for Lewiston Gun Club. Includes names like Dryden, Woodworth, Troeh, Randlett, G. Holohan, Riehl, McCormack, D. Holohan, Chingren, Berger, Ulrich, Hahn, Beckman.

General Averages.

Following are the totals of each day and general averages for the two days in the regular events:

Table with 3 columns: First Day, Second Day, Total. Includes names like F. Riehl, Troeh, T. Barclay, D. Holohan, P. J. Holohan, Dryden, Fred Berger, L. Matlock, G. Holohan, G. Chiesman, C. D. Randlett, Chingren, L. Drumm, B. Woodworth, P. Lomax, Dr. McCormack, J. Wade, G. Ulrich, C. Hahn, G. Rowland, C. Day.

Two More Big Tournaments Added to Season's Victories

— WITH —

World Beating Guns and Shells

Successful shooters again "took the right road" in their choice of Remington-UMC — the perfect shooting combination

New California-Nevada Trapshooters' Association Starts Right, with 9 out of 11 Trophies for Remington-UMC in First Tournament

State Championship: Won by Wm. H. Varien, 48 ex 50, shooting Remington-UMC Arrow Steel Lined Shells.

Individual Championship: Won by Wm. H. Varien, 95 ex 100, shooting Arrow Shells.

Buffalo Three Man Team Trophy: Won by Modesto Team, all shooting Remington-UMC Guns and Arrow Shells.

Championship at Doubles: Won by Dr. A. M. Barker—only straight score, 24 ex 24—shooting Arrow Shells.

Indiana State Shoot a Remington-UMC Harvest

State Championship: Tied for by R. H. Bruns and C. A. Edmonson, 286 ex 300. Mr. Bruns won in shoot-off, 40 straight—both shooting Remington-UMC Nitro Club Steel Lined Shells.

High Amateur Average: Won by F. M. Edwards, 289 ex 300, shooting Arrow Shells.

Two-Man Team Championship: Both winning teams, scoring 563 and 555 ex 600, respectively, shot Remington-UMC Steel Lined Shells, and high men on both teams shot Remington-UMC Pump Guns.

High Professional Average: Won by C. E. Goodrich, 291 ex 300, shooting Remington-UMC Pump Gun.

Post Season Shooters: Follow the example of these winners and the winners at the Olympic Games, at the Grand American Handicap, Southern, Western and 16 out of 20 Great Interstate Handicaps

Shoot Remington-UMC—a century's experience to back up your aim

FOR 50c. (less than actual cost) we will send a "A NEW CHAPTER IN AN OLD STORY" copy of our beautiful and valuable book

This book contains the most remarkable hunting photographs ever taken. "I have been reading your book with pleasure and profit. Such a work is bound to do good."—Elbert Hubbard. "It is a contribution to national history and letters."—Francis Trevelyan Miller. "The last word in design, illustration, text and execution."—Herbert L. Bridgeman. "Very interesting."—Francis Bannerman.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. 299-301 Broadway New York, N. Y.

Table with 2 columns of names and scores for New Hanover Gun Club. Includes names like F. Held, Ed Beckman, C. Greene, J. Turner, S. Calison, L. Pennell, G. Larson, J. Blair, C. E. Butler, D. Wallace, D. D. Stair, Winterstien.

New Hanover Gun Club.

WILMINGTON, N. C., Oct. 4.—The following scores at our regular weekly shoot on the above date: Targets: 25 25 25 25. Grant: 20 21 16 19. Richards: 14 18 18 17. Dreher: 24 20 20. Miller: 23 20 19.

J. H. DREHER, Sec'y.

Bergen Beach Gun Club.

BROOKLYN, Oct. 5.—To-day there was an excellent attendance at Bergen Beach Gun Club. The event was a shoot at 100 targets in customary strings of 20. The winner was S. Isaacs, who had a total of 97. P. Von Boeckman finished second. The scores:

Table with 2 columns of names and scores for Bergen Beach Gun Club. Includes names like S. Isaacs, P. Von Boeckman, A. V. Suydam, J. Martin, J. Finch, H. Allyn, H. Hewens, C. R. James, Dr. Sauer, J. H. Vanderveer, C. Ferguson, K. Nathaway, W. Keppler, R. Morgan, T. Rhode, Dr. Welzmilller, C. S. Medler, H. Tracy, H. W. Dreyer, T. Voorhees, L. Freeman, A. De Nyse, T. Davis, D. Marvin.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Chicago Interurban League.

CHICAGO, Ill., Sept. 30.—The sixth shoot of the Chicago Interurban League of Gun Clubs took place on the grounds of the Chicago Gun Club. This was scheduled to be held at Long Lake, but was held on the grounds of the Chicago Gun Club instead. Seventy-five shooters made their appearance. The day was very raw and chilly; otherwise the attendance no doubt would have been a great deal larger.

The fight for first place between the Chicago and Long Lake gun clubs was very interesting, although when the scores were counted it was a surprise to all to find that the South Shore Country Club, with only seven members present, carried off the high score, and the Chicago Gun Club had to be satisfied with second place with 228. The National Gun Club just nosed out the Long Lake Club for third place with 227.

The individual high scores were made by Ernest Heath and J. A. Taggart, with 49 each.

The standing of the clubs to date is as follows: Chicago Gun Club... 31, South Shore G C.... 22, Long Lake G C..... 34, Hammond G C..... 12, National G C 29, Arlington H'ts G C.. 6, South Chicago G C.. 27

The standing of the individual shooters to date, showing the four highest scores of the leading shooters, follow; also some of the shooters' fifth highest score, as there is now one more shoot to be held in the League. The next contest will decide the winners of the individual trophies. Each shooter counts his five highest scores of the season:

Table with 4 columns: Name, Four Highest, Fifth Highest, Total. Includes names like Chas. Emery, C G Hausler, Frank Stanton, E W Heath, J L Humpier, D E Thomas, Wm Jackson, Dr B B Cronk, Geo McDermott, Pat Graham, C W May, Tom Graham, G P Goode, W B Fenstermaker, L M Fetherston, Chas Antoine, C E Shaw, W A Davis, C F Scelig, B L Kammerer, J C Becker, Ray Loring, J H Amberg, Hardy Wolf, W E Einfeldt, J W Stanton, Jesse Young.

The next League shoot will be held on the grounds of the Arlington Heights Gun Club, Oct. 13. Full announcement of this shoot will be made later.

Team scores follow: South Shore G. C., Chicago G. C., National G. C., Long Lake G. C., South Chicago G. C., Arlington H'ts G. C., Hammond G. C., Professionals.

Middle West Amateur Championship.

The second annual Middle West Amateur Championship at targets will be held on the grounds of the Chicago Gun Club, 123d street and Michigan avenue, Oct. 20. Shooting will begin at 10:30 A. M. and close at 12 noon. Any shooter arriving after that time will not be eligible to shoot. All shooters desiring to enter will shoot in what is known as the qualifying round. This event will be at 25 targets per man. All 16yds. There will be no entrance fee, all shooters shooting in the championship and consolation events will pay 2 cents for each target shot. All practice events targets 1 cent. As an example, if there are one hundred shooters competing, the 64 high guns will qualify. If 50 to 75 shooters compete, then the 32 high guns will qualify. The shooters who have qualified will then draw a number and the name is entered on the bulletin board opposite said number. The shooters having drawn No. 1 and No. 2 are then paired, No. 3 and No. 4 are paired, and so on down the list. The next round is at 25 targets: No. 1 will shoot No. 2, the winner of this match is still in the running, the defeated one is out; for instance, 64 shooters have qualified; after the first round 32 will have won; the next round will have 16, the next 8, the next 4, and the final round will have 2. Those two will then shoot at 25 targets, the winner to be the champion. All ties in matches will be shot off at 10 targets. All shooters

who did not qualify will be paired same as in the championship event and will contest for the consolation prizes, as an example; say there are 100 shooters, 64 will qualify, the next 32 high guns will shoot in the consolation event, and the four low guns will be dropped, as either the figures 16, 32 or 64 must be used to make the pairings work out even down to the last two men. One cent per target shot at will be set aside as prize money for the winners; \$25 will be deducted from this fund to purchase a suitable trophy for the winner of the championship. Prize money will be divided as follows: 60 per cent. for the qualifying round, and 40 per cent. for the consolation event. This will go to the winners, as follows: 50 per cent. to first, 25 to second, 12½ to third and 12½ to fourth. There will be an optional sweep on the first 25 targets shot at (the qualifying round), entrance \$2; percentage division; four moneys, 40, 30, 20 and 10 per cent.

Arcade Gun Club.

ARCADE, N. Y., Sept. 27.—The first annual shoot of the Arcade Gun Club took place yesterday and was a success from start to finish. Forty shooters faced the traps and some good scores were made. S. Glover was high with 140 out of 150. Wright won high amateur with 138. McCutcheon, Vernon and Kelsey with 129 tied for second. Wright was high in the merchandise event with 24, shooting from the 20yd. line. Below are the scores of the day:

Table with 4 columns: Name, Shot at, Broke, Total. Includes names like F Wright, O M Warner, Eberts, McCutcheon, Blackmer, Vernon, Farnum, Henline, Evans, Kelsey, Marsh, Bartlett, Armour, Fuller, Simpson, White, Davis, Sayles, Smith, Comstock, Glead, McKellips, Geib, Bray, *Glover, Harrison, Weller, Patterson, Robinson, Taylor, Broderick, Jaerauld, Morgan, Wilson, Beebe, Pickens, Zinck, Morgan, Foot, Cottrill.

*Professionals. DR. G. D. PICKENS, Sec'y.

Guernsey Gun Club.

GUERNSEY, Ia., Sept. 25.—As advertised, we had a one-day shoot to-day. Well, it was the worst day we ever experienced to try and shoot targets. Setting in a marsh in a bunch of bulrushes and the water freezing on your boots and getting a shot at mallards once in two hours would be play compared with the day here—a cold northwest wind blowing at a 50-mile clip, a little rain mixed in and cold enough to make a fellow's teeth crack; hence the poor scores.

Considering the weather, we had a very good bunch of shooters. Mr. N. Muncy, of Iowa City, was high gun with 176 out of 206. The good-natured Fitzsimmons, from Chicago, was second high with 173; A. Grabin, of Guernsey, was third with 169. R. T. Jeffrey, of Ames, was with us, but owing to sickness this summer he has done very little target shooting. R. L. Border, of Victor, was a close fourth with 166.

We will give a local shoot Thanksgiving Day. Everybody invited.

Scores attached: Shot at, Broke. Includes names like F Fitzsimmons, H W Veitmeyer, N Muncy, F C Whitney, R T Jeffrey, J W Dobbins, A Dalezal, A Crabin, L Johnson, R L Border, W Sherlock, C F Foster, W L Reick, H N Miner, F W Cordes, O Sherlock, M E Dobbins, H Glenn, S W Glenn.

J. W. DOBBINS, Pres.

New England—Delaware.

BOSTON, Mass., Oct. 5.—Delaware went down to Boston and defeat to-day, when they shot a return engagement with the pride of New England; score, 935 to 901. This is the second meeting of the teams. On a previous occasion, at the Du Pont Gun Club, they tied at 919.

Alden B. Richardson, of Dover, Del., was high man on the Delaware team with 97 out of 100 targets. Eugene du Pont was the runner-up with a score of 95. The aggregate of the ten highest men on each team decided the match. Scores:

Table with 2 columns: Name, Score. Includes names like A B Richardson, Eugene du Pont, J H Minnick, W S Colfax, Jr., W A Joslyn, H P Carlon, E E du Pont, W M Hammond, J B McHugh, Dr S Steele, Proctor, Newton, Wilder, Snow, Griffith, Wilson, Edwards, Burns, Steel, Gleason.

The other Delaware shooters were: Alexis I. du Pont, T. E. Doremus, H. W. Bush, L. L. Jarrell and J. W. Anderson, Jr.

The New England marksmen shot more consistently, only one of their ten highest men making less than 90.

Indianapolis Gun Club.

SHOOTING under favorable conditions, the faithful averaged well on Sept. 29. Parry broke his first 51 targets, getting 97 out of 100, and 96 per cent. for the day. Edmonson got 94. Scores:

Table with 4 columns: Name, Shot at, Broke, Total. Includes names like Parry, Edmonson, Britton, Lewis, *Hymer, Dixon, Alig, Wilson, Hymer, Jr.

Of the many who tried for the Field cup but six met the requirements of the handicap, which called for 600 targets in strings of 50, with at least 500 to qualify. The six finished in a bunch in the order given below. In the beginning, the allowance to each entrant was based upon his average for the four months just passed, each being given enough to make 50, which was the limit to be reached, regardless of the number broken. Thereafter the allowance changed every four weeks, and in changing, only the scores made in that time were considered. The vagaries of the system would be amusing but for the unfairness of it all, and the invitation it offers to one who will accept it.

Table with 4 columns: Name, Shot at, Broke, Added, Total, Average. Includes names like Lewis, Edmonson, Dixon, Alig, Parry, Britton.

Oct. 5.—Edmonson was best at the traps of the club to-day. In practice at 16yds. he broke a little better than 96 per cent., while Britton got 94, Hofer 92, Alig and Wilson 90 each. Shooting for spoons, Edmonson at 21yds. scored again with 48 out of 50—no one in sight. The scores follow:

Table with 4 columns: Name, Practice Shot at, Broke, Spoon Hdcp. Yards, Total. Includes names like Edmonson, Britton, Moller, Dixon, Parry, Wilson, Hofer, Smith, Folland, Hawn, Alig, Neighbors, Golden.

Omaha Gun Club.

OMAHA, Neb., Oct. 2.—E. W. Varner worked both days here, and showed up at the end of the second with high average tucked away in his shell bag; 375 out of 400 was what he made his win on. Albert Olsen missed just two more than Varner, so had to be happy one rung lower on the shooting ladder. W. D. Townsend and Charley Gammon split up third place with 368. Ed. O'Brien showed 'em how high a pro. could go and still not get 'em all. He broke 383 out of 500.

Table with 4 columns: Name, First Day Shot at, Broke, Second Day Shot at, Broke. Includes names like E W Varner, Gus Schroeder, J Maland, J Oram, W D Townsend, W Thompson, F Copsy, W Puck, Montgomery, M Armogost, E Armogost, A Olsen, Hutchinson, C Gammon, F Danokas, C Thorpe, G McPhuen, Chas Thurston, B Dixon, M R Smith, A Buck, Thiedeman, V Dixon.

Professionals: D D Gross, Ed O'Brien, Geo L Carter, C L Baker.

Bennett Gun Club.

GLOUCESTER CITY, N. J., Oct. 5.—The Bennett Gun Club resumed its weekly shooting matches to-day. There were twenty participants, and each shot at fifteen blue rocks, and at the close of the last round Benjamin Martel and Frank Bennett were tie, each having hit 15 straight, and they decided to shoot it off to-day. The scores:

Benjamin Martel 15, Frank Kennett 15, William Murray 14, Frank Butler 14, Alonzo Cheesman 14, Thomas Cogan 14, Stokes Prickett 13, Gus Crater 13, John Hulings 13, John Sampson 13, Charles Wilson 13, Edward Thomas 13, Albert Dasch 13, Charles Dikes 13, William Lee 12, Edward Banker 12, John Owens 12, Frank Berkstresser 11, Charles Hess 11, Samuel Hansen 10.

Meadow Springs Gun Club.

PHILADELPHIA, Pa., Oct. 5.—H. H. Sloan was topper here to-day with 144. Second position was cracked up between Harry Buckwalter and Plum with one less.

Lester German was saving his eye for the team championship, so set it on only 143, which slipped it over on Apgar and Stevens by a couple of aerosaucers.

The scores in the program events follow:

N Apgar.....	150 141		

The Meadow Springs prize handicap at 50 targets, from 16 to 21yds., was shot off; it was keenly fought. Prizes were offered on each 25, the first being captured by Noah Clark, who broke straight, and the second going to William Torpey, also with a straight. In the latter it looked as though W. H. Adams, of Reading, who also cracked every one of his 25, would be the successful one, but on the last squad, and shooting in light that was almost impossible for the gunner to see the flying target, Torpey surpassed himself and went straight. As Adams had left the ground, the prize naturally reverted to Torpey. Noah Clark had high total in the event, breaking 48 from the 18yd. line. Scores:

Chicago Gun Club.

CHICAGO, Ill., Sept. 28.—Although we had a dark and cloudy day, with a drizzling rain falling all afternoon, a number of good scores were made. Stanton and Featherston each broke 49 out of 50 in the club event, Stanton leading in the practice event with 24 out of 25, and also in the first event at doubles, with a total of 19 out of 12 pairs. MacLachlan was a close second in the club event with 48 out of 50, and registered the high score on doubles in his second trial, breaking 20 out of 12 pairs.

A double-target championship match was also shot, Ben S. Donnelly and R. W. Clancy defeating the challengers, J. S. Young and H. C. Kirkwood, their scores being as follows: Donnelly 82, Clancy 82; total 164. J. S. Young 77, Kirkwood 74; total 151.

At 50 pairs doubles the following scores were made: Gilbert 43, Le Compte 36, Davis 36, D. W. Goshorn 34, Fultz 34.

*Professionals.

DR. G. NICHOLSON.

WINCHESTER

Factory Loaded Smokeless Powder Shells

THE HARD-HITTING, FAR-REACHING LOADS

Duck shooting is a great test of the shooting qualities of a shotgun shell. Many of the shots are at long range, and, as all shooters know, ducks generally fly mighty fast. The most successful wild fowl shooters use and endorse Winchester Factory Loaded Shells, "Leader" and "Repeater." Experience and trial have convinced them that they are the killing loads. Careful and correct loading makes them so. Try them out yourself.

LOOK FOR THE RED W ON THE BOX

Buffalo Audubon Club.

BUFFALO, N. Y., Oct. 5.—Frank Wright was high gun at to-day's shoot, with 91, closely followed by Fish with 90. Seventeen was a fair crowd, considering the fact that many of the boys are after feathered game.

Targets:	15	20	20	20	25

Elkton Gun Club.

ELKTON, Md., Oct. 3.—The first registered tournament of the Elkton Gun Club was held to-day. In the county team race Chesapeake City and Rising Sun tied for first place with a score of 126 each, Elkton scoring 119. Rising Sun team was made up of Worthington, Rose, Ewing, Gifford, Hartenstine, Martindell; Chesapeake City team was composed of Brown, Howard, Charles Stevens, Willard Stevens, Arrants and Reese; Elkton team was Jacob Reynolds, Harvey Reynolds, Alexander, Scott, Harvey, Mitchell, Stephens. Some high scores in this contest were: Brown 24, Reese 24, Worthington 24, Rose 23, Arrants 23, J. Reynolds 23, Ewing 22.

In the merchandise event for amateur shooters, Chas. Reynolds, Mennick and Arrants tied for first place.

In the professional contest Lynn Worthington led with a score of 144 out of 150; Lester German, second, with a score of 142. In the amateur event E. F. Shear was first, with a score of 142; J. E. Eyer, second, 139; J. A. McKelvey, third, 135; J. A. Minnick, fourth, 134.

The next tournament will be held the latter part of the present month on the Rising Sun Gun Club's grounds.

Thus PETERS AMMUNITION repeats its performance of 1911, when Dr. Snook, shooting at the Camp Perry Matches, won the Revolver Aggregate with 3,680 points out of a possible 4,000, and established a NEW WORLD'S RECORD on the National Revolver Match Course, 477 out of 500.

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

Gilbert and German vs. Day and Freeman.

The team race at 50 pairs per man (100 targets each, or 200 to the team), which is to be shot on Oct. 14, at the grounds of the Cincinnati Gun Club, between Fred. Gilbert and Lester S. German on the one hand and J. S. Day and H. D. Freeman as the other team, should be a great drawing card. Scheduled as it is, for the day prior to the opening of the Interstate Association's Post Season tournament, there is sure to be a gathering of the clans to watch the match, and also take part in a little preliminary practice for the tournament which commences the next day.

Shooting at "doubles" is so little indulged in, comparatively speaking, that the chances of the two teams is the subject of much discussion. The following facts and figures of "previous performances" will therefore be of more than ordinary interest:

May 14, 1912.—Lester German in his match with George Lyon (which match was won by Lyon) broke 38 out of 50 to Lyon's 40. This was during the race for the E. C. cup, which was shot on the grounds of the Du Pont Gun Club, at Wilmington, Del.

June 21, 1912.—In the Paleface championship at doubles, decided during the Grand American Handicap tournament, Springfield, Ill., Gilbert and Day tied with Walter Huff and Ed. O'Brien on 84 out of 100 (50 pairs), German being next with 83. The tie required three shoot-offs. Day and Gilbert tied on 16 each in the first, and on 18 each in the second, Gilbert finally winning out with 17 to 15 in the third.

July 4, 1912.—Freeman in his match with C. A. Young, for the E. C. cup on the grounds of the Cincinnati Gun Club, broke 45 out of 50 (25 pairs).

July 8, 1912.—Fred. Gilbert in his match with Fred. Mills for the Hazard trophy, at Bradford, Pa., the day previous to the opening of the Eastern Handicap, won the match by breaking 180 out of 200 targets (100 pairs).

Aug. 24, 1912.—On this date Messrs. Freeman and Day shot for the E. C. cup at Cincinnati, and Freeman, the holder of the trophy, lost to Day, who was in great form at both singles thrown in the usual way and at expert rules, one man up. Both, however, broke 42 out of 50 (25 pairs) in the third section of the race.

Sept. 23, 1911.—In the open competition for the E. C. cup, decided on the last day of the Westy Hogan tournament at Atlantic City, N. J., German, who finished second to George Lyon, broke 42 out of 50 (25 pairs) and 16 out of 20 in the shoot-off at 10 pairs.

July 10, 1911.—On the day prior to the commencement of the Eastern Handicap at Wilmington, Del., Fred Gilbert and Lester German shot a race for the Hazard double-target trophy at 200 targets (100 pairs) per man. Gilbert won by scoring 183 to German's 178.

June 23, 1911.—Better scores were made in the professional championship at doubles, decided at the Grand American Handicap tournament at Columbus, O., June 23, 1911, than was the case this year at Springfield. German won the championship with 89 out of 100 (50 pairs), Day breaking 88 and Gilbert 86.

June 24, 1910.—The professional and amateur championships in 1910 were decided on 200 targets, eight events at 20 single targets each, and two events at 10 pairs each. These events were Nos. 3 and 8 on the program, and in them German broke 37 out of 40; Day, who

was then an amateur, was next to him with 36. Gilbert and Freeman tied on 34 each.

After digesting all the above dope, which team will you pick to win the match on Oct. 14 next?

Capron Gun Club.

The following scores were made at the Interstate shoot of the Capron Gun Club, Sept. 26. The program consisted of 150 targets:

1st	2d	1st	2d
Day.	Day.	Day.	Day.

Winfree.....	42	40	..				

J. M. FISHER, Sec'y.

Smith Gun Club.

NEWARK, N. J., Oct. 5.—B. M. Shanley, Jr., was leading light to-day at the Smith Gun Club. His score was 230 out of 250. The afternoon was taken up by sweepstakes shooting. The scores were:

B. M. Shanley, Jr., 24, 20, 24, 23, 22, 23, 23, 24, 24;
Dr. Moeller, 19, 20, 19, 21, 17, 22, 21, 18, 13; J. Thompson, 23, 21, 21, 23, 23, 25; F. Apgar, 22, 18, 19, 16, 19, 24, 22, 22;
W. Hassinger, 22, 20, 23, 21, 23, 24; O. Keller, 16, 15, 16, 12, 17, 18; J. Geiger, 23, 23, 24, 22, 23; D. Geiger, 23, 23, 24, 22, 23; Dr. Groll, 21, 22, 23, 23, 23; H. Shan-

non, 22, 22, 21, 22; T. Higgins, 16, 11, 20, 17, 20; L. McLamore, 21, 16, 21, 22, 23; H. Higgs, 22, 20, 23, 22; J. Riley, 20, 22, 22; H. Page, 21, 20, 23.

Brewster (O.) Gun Club.

BREWSTER, O., Oct. 14.—At our regular practice shoot, which was held this afternoon, the following scores were made: W. Wilson (50) 31, B. Glick (50) 26, A. Burns (50) 23, A. Glick (25) 17.

Most of the time was spent in discussing the purchase of a new trap and arranging for a Thanksgiving Day shoot. The meeting was most enthusiastic, and it was decided to have a big event Thanksgiving Day.

Our club has not made much noise lately. The secretary has been away on a vacation trip through the West and Southwest, and though the club held some interesting events, the scores were not published.

From present indications, we will have a pretty lively time during the coming winter. A. J. BURNS.

Rifle and Revolver

Zettler Rifle Club.

THE thirty-eighth annual shoot of the Zettler Rifle Club was held at Union Hill Schuetzen Park, Sept. 24. Following are the scores:

Ring target, two best tickets to count for first, five prizes, single for the rest: H. M. Pope 145, F. C. Ross 143, A. Hubalek 143, A. F. Laudensack 142, O. Smith 141, J. Muzzio 71, J. W. Hessian 70, W. Keim 70, L. Hansen 69, W. A. Tewes 69, L. C. Buss 69, J. Kaufmann 69, F. Beard 69, Amouroux 67, J. J. Young 66, J. Johnson 65, G. L. Schlicht 65, C. A. Schrag 64, M. Dorrlor 64, P. F. Schmitt 61.

Five best tickets: A. Hubalek 356, O. Smith 350, H. M. Pope 347, A. F. Laudensack 345.

Bullseye target: A. F. Laudensack 16 degrees, J. Johnson 18, W. Keim 19, L. P. Hansen 23½, F. Zimmermann 26, F. L. Smith 32, G. L. Schlicht 34, H. M. Pope 34, A. Hubalek 36, J. Kaufmann 36, O. Boyce 47, C. Smith 48, F. Beard 52, C. A. Schrag 54, F. Busch 58, J. W. Hessian 62, F. C. Ross 63, P. Schmitt 68, A. Brower 70, J. J. Young 78.

Most bullseyes: A. Hubalek 42, F. C. Ross 30, J. Kaufmann 29, F. Bund 25, W. Keim 23.

Target of honor, open to members only: A. F. Laudensack 71, H. M. Pope 69, L. P. Hansen 68, A. Hubalek 67, F. C. Ross 67, J. Kaufmann 65, J. Muzzio 65, E. Buss 65, M. Dorrlor 65, C. A. Schrag 64, G. L. Schlicht 62, J. Johnson 62, G. Amouroux 62, B. Zettler 61, W. A. Tewes 61, F. Busch 60, A. Boyce 59, J. W. Hessian 58, A. Begerow 58, P. F. Schmitt 56, F. M. Bund 56, C. Smith 54, G. Zimmermann 54, C. Zettler 49, T. H. Keller 46, F. Hecking 20.

Zettler trophy, three shots only: J. Kaufmann 70. First flag, W. A. Tewes. Last flag, H. M. Pope.

ROD AND GUN ALONG THE MISSISSIPPI.

Continued from page 457.

were late in making the schedule. We had started the latter part of September; in fact, a month too late for the best cruising, and the weather was chill and damp. St. Louis was the next stopping point of any note, though we halted at various points in Missouri where the apple crop was being picked and being barreled for the trade. On passing landing after landing we saw thousands of apple barrels filled and waiting for the steamers to transport the crop to market. At St. Louis we saw 20,000 barrels of apples on the levee the day we spent there. This was the first port of any consequence we had made along the river. Steamers were taking on freight for points on the Illinois, Kentucky, Ohio, Cumberland, Tennessee and upper and lower Mississippi rivers. Hunting parties were going aboard every steamer making for secluded spots where the ducks were known to feed and linger on their southward flight. The turkey season was about to open in Missouri and Arkansas, and deer were said to be plentiful in the bottoms below Cairo. Water of the previous spring had not been too high to spoil the breeding of game, and hunters seemed to be aware of the fact.

Cruisers were behind us, ahead and at either side. They were crowded with gunners, cruising folks and friends, some of them going all the way down, and others only part of the way. All were eager to be off, and every hour or so some of them putting out of port or others coming in from the Illinois and the Great Lakes country.

IN CAMP WITH THE ALPINE CLUB OF CANADA.

Continued from page 459.

range of peaks, which, when seen on their western slope as they rise abruptly from Lake Moraine, make one of the most beautiful scenes in all the Rockies, were climbed—Mt. Fay, Mount Little and No. 3. The first named (10,612 feet) is a high and difficult climb, but the party which made it, not content with a good ascent to their credit, came home around by the passes the same day, making the whole trip in sixteen hours to the astonishment of the Swiss guides who had declared that twenty hours was the best time possible.

Some little portion of the discoverer's exultation enters also into the experience of this camp, for the different expeditions came on many beauties of this region hitherto unknown. It was, for example, found that Storm Mountain was really a vast rock amphitheatre in the center of which nestled two little lakes. One party found a new waterfall and a new mountain between the well-known mountains, Storm and Ball. In making the first ascent of this new mountain, a fossil bed was found from which was brought down among others one specimen which even the famous geologist, who is president of the club, could not identify. The mountain flowers which were blooming in all their wonderful luxuriance and variety offered another field which, since we had in camp Mrs. Henshaw, the authority on Canadian Alpine flora, was eagerly investigated on days of rest between strenuous climbs. One member who came all the way from North Carolina made the only floral discovery, which was at once called Rocky Mountain lily.

? ? ? ? ? ? ?

So with one interest and another, the days were filled, and we came away with the feeling that never had the quest for novelty been so successful—a novelty, too, in which the people who shared the experience with us played their part. Coming from almost every part of the English-speaking world, they made up a company of choice spirits who for the ten days of camp dwelt in ideal comradeship. It was the absolute and altogether desirable democracy of one's dreams. What one was in the city streets or what one's possessions mattered not a whit, so long as one was a good sort in camp. One of the most liked men was discovered after his departure to be the president of one of the big

universities in a western State. Moreover, camp was the only place we had ever found where money was absolutely no good. There was nothing to be purchased with it—not even a tip could be given. Nor was there ever the least trace of impatience, such as might have been expected in a company of people of all grades of skill or lack of it in mountaineering. For various as were their countries and homes, their claims on the consideration of an Alpine club were quite as varied. There were of course famous mountaineers such as Miss Mary M. Vaux, of Philadelphia; Dr. Mary Potter, Miss M. L. Jobe and Prof. Freeborn, of New York; Walter D. Wilcox, of Washington, and Dr. A. P. Coleman, of

Toronto. There was, too, a numerous group of less well known skilled climbers. But over one-third of the camp belonged like ourselves to a great company of novices whom the Alpine Club has taught to love the mountains—men and women of varying ages and pursuits, some of whom had never seen a mountain, and most of whom had never climbed one. Most of them returned to their homes active members, but more than any active membership is the new love for nature which makes them, even as they are folding away those outlandish costumes, look longingly forward to the time of the packing of dunnage bags for the camp of another year.

THE MINK.

BY ROBERT PAGE LINCOLN.

I HAVE had much pleasure in studying and trapping the mink during the time I have spent in the out-of-doors, which takes in practically all of my life. Of the two, perhaps the former has given me the most thorough enjoyment, although the actual remuneration from the sale on my part of many a mink skin mounts up to a row of figures that in itself is astonishing. There is not a boy who has had anything at all to do with the study of nature, but that has some time or another come across this animal, or has noted its presence by those tell-tale tracks in the snow in the winter, and along the muddy banks of creeks and lakes before freezing sets in. Sharp and industrious indeed must the lad be who can get within studying distance of a mink. Count it a sign of unusual powers if you are able to locate one and study it. Often enough you will have to spend hours in patient waiting and then may only get a glimpse. Belonging to the weasel family, with a long, sinuous body that is almost invariably curved to an arch, a small head with a pointed nose and eyes that are black and penetrating in their keenness, and teeth that are like needles, this is briefly the make-up of the mink. A great wanderer at night with a penchant for robbing hen houses, if such permits, and killing much for the sake of killing, he is one of the most feared among the smaller animal kindred who only too often fall prey to his murderous instinct. Yet it is nature's rule, the death of one to give life and sustenance to another.

The mink is a great fisherman and perhaps most of his time is spent in bringing out frogs from the deep and laying them to waste. How many of the boy readers of this magazine have not walked along a creek in winter, and where there is an opening in the ice, where the water glints back, there on the edge has noted frogs lying dead with a wound in the head. It is the work of a mink who, during the cold midnight hour, was diving down into those forbidding depths and hunting half stiff frogs out of their mud dens. He brought six of these to the top and bit all of them through the head. Notice the nip, some of the frogs are even moving; they have not been killed. Brother Mink killed these just for the sport of it. If you have a few traps and wish to make a little money, there is always the revenue possible in the capture of this keen, shrewd little fellow, and his glossy brown fur will bring you as high as six dollars, providing the hide is prime and you have carefully stretched, dried and cleaned off the fat adhering to it. You will catch them along the shores of

brooks. Note there where that trail runs. Here is the exact place: a stick lies across the trail, and every mink in passing leaps over it, landing with his fore feet at almost exactly the same place every time. Dig out a hollow there, so as to fit your trap in snug, so that the round pan will be where the feet touch. Simple and yet how deadly. You then connect your chain to a sunken stone so that the animal will be drowned when he leaps into the water. Notice this. Another deadly place for a trap. The mink is wont to cross this rivulet by leaping from the stone on this side, on to this chunk of mud in the center of the streamlet, and from there to the other side. Just remove that piece of mud, put your trap there, and put a little of the mud right on the pan of the trap. Very deadly. He will land in the trap with both fore feet and there is no getting away. Always take care in properly concealing the trap. Do not use foreign matter, but material found right on the spot, and preferably that which you dig away. To prevent material from getting under the pan, put a piece of cotton there, and where possible use the spring pole to lift the animal after he is captured into the air. How is it done? Very simple. Just bend a bush down, trim it slightly, connect it in some niche cut for the purpose, and then connect the trap chain to the pole. The animal in his struggles will release the pole and will be lifted into the air. You will thus prevent suffering.

The shrewdness that a wise mink will evince is quite startling. There is perhaps not a trapper who has run a line of traps for any length of time, but has had some experience or another with some cunning animal which has constantly evaded these steel engines of destruction, finally perhaps to be caught, and as like as not so through carelessness. This happened to me one time: I had come across an old mink's tracks on the creek, the same showing very plain in the mud along the shore. I stood for some time racking my brain as to what sort of an animal had made them, thinking at first it was an otter, but minute inspection showed me plainly enough that it was mink tracks, and of a dog mink, which I judged to be about thirty-eight inches when the hide was stretched on my three piece stretcher. Is there a trapper who has not planned all the stages of capture and the final results before he has spread the jaws of a trap to take his victim? With the truth borne home that it was indeed a mink, I at once set to work to detail my system of a capture. I sat down and raked my wits for the proper manner of procedure and finally decided upon a bait hole. I knew that I must use every precaution, for to give the creature an idea of what was about to take place would at once put him on the *qui vive*. So I duly smoked my traps in hemlock branches, to take away any taint adhering to the steel, and with a freshly skinned muskrat carcass in my possession I donned the boots and made for the scene of my first endeavor.

Walking along the shore in the water I finally came to a place where I had noticed that he had passed several times. The bank was rather steep at this place. If I dug my bait hole in the side of this bank I judged in passing that way he could not miss it. So I set to work and dug a hole into the bank, close enough to the water so that I could set my trap under the surface about an inch or a half inch. In the

FLYING, 420 West 13th Street, NEW YORK CITY

back of the hole I deposited my bait, and finally, when I had my trap set, with a stone hitched on the chain and its addition of bale wire, and had sunken this in the middle of the stream, I sprinkled a few drops of anise seed oil around the scene, carefully making my departure happy in the expectation of the welcome catch in the morning. But in the morning I found that although the mink had been there and had dragged out the muskrat, tasting of it a little, the trap was there and turned over, sprung, with a lot of leaves caught in the jaws. I instantly conceived of the idea that someone in human form had been there, removed the mink and departed with wealth and happiness. But this performance was repeated time and time again, in places where I knew no other man would be, and still found the identical happening recorded. I then

put two and two together, with the result that I came upon a new idea. I had noticed that the wise old cuss seemed to locate the trap first, and by all sources of conjecture sprung the trap, and then done away with the bait. Hence it was that I conceived the idea of setting more than one trap, and far enough around the one trap at the entrance, so that if he happened to circle around the trap, he would eventually get into the outer traps.

This I did, setting one lure trap at the entrance which I knew he would look for, and three others at a distance, varying from a foot to six inches from the lure trap. The water at this point was very low. Imagine my surprise in finding that the cussed fellow had gotten into one of the outer traps, but had pulled out by a miracle, escaping the other traps and had left

Victories are Proof Positive

of the

Hunter "One Trigger's" Success

THE world's shotgun record on double targets has recently been broken by a single-trigger gun.

At the Rocky Mountain Handicap, Denver, Colorado, September 10-14, the phenomenal score of

96 OUT OF 50 PAIRS OF TARGETS

was made by Wm. Ridley, an Iowa sportsman. Mr. Ridley used an L. C. Smith, equipped with the Hunter One-Trigger.

So many single-trigger inventions have failed that many shooters have grown skeptical as to the possibility of a successful single trigger. This latest victory of the Hunter One-Trigger will convince more men than ever that it is a big success, and will improve any shooter's score. The Smith gun with the Hunter One-Trigger is "two guns in one," ready to meet every requirement of field, blind or trap.

This invention represents the solution of just one shotgun problem. The Smith Gun embodies solutions of every shortcoming which has hitherto baffled gun-makers.

It represents twenty-two years of inventions, precise workmanship and experience of six gun experts—the six Hunter Brothers—whose purpose has been concentrated on the elimination of shotgun failings, on making the Smith Gun a gun with

one nail out of his foot as a souvenir for my hours of planning. But I was not to be disheartened by such work and kept right at him, following him day after day, but with no success. I tried the scheme of harnessing a live pickerel in the water, and setting traps around it, but this also failed to draw the old fellow to destruction. I tried every way, shape and manner of procedure at my command, and finally allowing myself beaten, when early one morning in making the rounds of my line, imagine my unspeakable surprise upon finding that cunning old murderer caught up to the body on a fore leg in one of my muskrat traps, which I had taken not the least care to conceal, save for a few bits of grass scattered over it. There he stood, snarling and leaping around. In a nervous excitement I got up close enough, and wasting no time, killed him with one shot from the .22, for I was taking no chances. This will just go to show that wisdom is not always a rigid stand-by, while in some cases the instinct of an animal may be sharpened to the point of human intelligence, at other times it is woefully lacking and irresponsible. I somehow hated to catch the battle-scarred fellow this way, but such is fate.

BUGS AND BIRDS AND SCHOOL CHILDREN.

"At 6 o'clock one July morning I stood on the campus of the University of Tennessee near a semi-circle of twenty-five school teachers, whose eyes were riveted on a scene of slaughter going on but a few feet from them," says a writer in the Craftsman. "For five minutes we scarcely moved. During this time thirty-two specimens of animal life had been swept out of existence.

"The perpetrator of this slaughter was a creature known to science as the *Spizella socialis*. Ordinary people call it the chipping sparrow. Its victims were small insects. The teachers were amazed that the bird could find so many of these choice morsels within so short a time and so small a space. So the instructor held the watch while the twenty-five teachers took part in a bug hunting contest. When time was called one student had a credit of fourteen, another sixteen, a third nineteen, and a tall young woman in glasses proudly exhibited a harvest of twenty-one insects.

"For years the Department of Agriculture has been employing trained naturalists to investigate the damage done to growing crops by insects. As a result the Department has stated that about one-tenth of the entire agricultural and horticultural products of the United States is annually a total loss through the ravages of insects. To combat these tremendous yearly losses a wide variety of artificial agencies have been evolved in the form of liquid sprays, and to-day laborers putting these methods into operation is a common sight.

"Insects multiply so rapidly that all natural means for their destruction should also be encouraged. A Canadian entomologist states that the progeny of a single pair of common Colorado potato beetles if allowed to increase without molestation would in one summer number over sixty millions. Facts like this render important the discoveries by another group of Government specialists who have been studying the daily life of our native wild birds. These experts have come forward with statements almost as astounding as those produced by the entomologists. They tell us that of the 1,200 kinds of birds found in North America fully three-fifths depend almost wholly upon a diet of insects, and that there are comparatively few kinds which do not turn to insects for at least a portion of their food.

"Some time ago a New England gentleman became so impressed by the frequency with

which a pair of robins visited their nest with food for the young that his curiosity was awakened to learn more of the food consuming possibilities of the four nestlings. The day the offsprings left their cradle he temporarily took possession of them. Calling to his aid some friends who kindly undertook to dig fishworms for him, he proceeded to feed these baby robins all they cared to eat between daylight and dark.

"He found to his unutterable surprise that these little birds consumed in one day food to the amount of their own weight and 56 per cent. additional. If the average size man were to eat at this rate it would require about seventy pounds of beef and eight gallons of water daily. Upon reaching the adult form the robins probably did not partake of food so greedily, but the incident serves to illustrate

THIS PICTURE GRATIS

JOHN PEEL.

The above picture of the immortal John Peel, framed and glazed, will be presented free to all new subscribers to "The County Gentleman & Land & Water," England's leading weekly illustrated sporting paper.

The picture measures 11 in. x 7½ in. (frame 17 in. x 12 in.). The original was painted by Mr. Joseph Simpson, R. B. A., from old photographs and prints of the famous huntsman. It is said to be the finest representation of John Peel ever published, and is worthy of a place in every sportsman's home.

The subscription to "The County Gentleman & Land & Water" is \$9.50 per annum, payable in advance, for which the paper will be sent, postage free. Checks should be made payable to the County Gentleman Publishing Co. and crossed the London County & Westminster Bank, Hanover Sq. Branch.

READ THIS NEW BOOK**"The Trail of the 'Bull Dog'"**

By Charles G. Percival, M. D.

DID YOU KNOW THAT THERE ARE PLACES IN THE UNITED STATES THAT ARE SO OLD THAT EUROPE IS A CHILD BESIDE THEM?

Are You Aware That America Is Richer In Ruins By a 1000 Fold Than All of Europe Combined?

Did You Ever Hear That These Ruins Belong To a Civilization Compared To Which The Oldest of Europe's Monuments Belong To But Yesterday?

Have You Ever Visited the Innumerable Castles All Through The Great Southwest Where The Most Enlightened Race In The World Have Lived, Departed and Left No History Within The Knowledge of To-day?

This book, which is new and original, is by the Editor of "Health" Magazine, and contains the incidents of his two years' automobile trip into all parts of the North American Continent. 1500 miles in Mexico during the late insurrection, of being chased by bandits, being lost on the desert and rescued from death by thirst by Troop K of the 4th U. S. Cavalry. It is replete with 300 interesting original photographs, taken by the author on his trip. Read how he penetrated a thousand miles further north than has ever been made by automobile before, driving over the dreaded White Pass Trail from Skagway, Alaska tidewater to the headwaters of the mighty Yukon River in the Klondyke and north of 62 degrees.

Look at the pictures of crossing the highest point of the Sierra Nevada and Rocky Mountains and crossing the continent from San Francisco to Portland, Me., in the middle of winter in three feet of snow in an automobile.

The most interesting and instructive book on America for Americans that has ever been printed. Get it and learn about the country you live in.

their gastronomic capacity in the days of youth.

"Vireos, warblers, woodpeckers, nuthatches and thrushes are all famous destroyers of insect life which preys upon fruit and vegetables. The nighthawk and certain of the shore birds are known to be fond of mosquitoes, which should commend them to the esteem of mankind. The writer once watched a pewee capture sixteen flying insects in a minute and on another occasion saw a yellow-billed cuckoo eat nineteen tent caterpillars in a space of five minutes. Two hundred and seventy-three eggs of the cankerworm have been found in the stomach of one chickadee, and the golden-crowned kinglet is a veritable Nemesis to the troublesome plant lice.

"The farmer seems to feel that the annual supply of grass and weeds which persists among his growing crops calls for his most strenuous exertions. Were it not, however, for the thousands of pairs of little bright eyes which in the fall and winter are seeking so industriously for the weed seed out in the dreary brown fields his labors would surely be greatly increased. One of the Government collectors shot a dove in Kentucky which was found to contain over 9,000 weed seeds. The dove probably filled its crop at least three times that day. These 27,000 seeds if left to sprout the following spring would have produced more weeds than the average farmhand could hoe down in a day.

"The writer once estimated the amount of weed seed annually destroyed by tree sparrows in Iowa. Upon the basis of a fourth of an ounce eaten daily by each bird and supposing

that the birds average ten to the square mile, there would be a total of 875 tons consumed by this one species in a single season. And even these figures certainly fall far short of the reality.

"The school teachers at Knoxville, the summer morning above mentioned, were members of a group of earnest men and women whose lives were dedicated to the training of children. For nine months they had been in the class room meeting the petty trials and annoyances incident to their life work. Now during the few brief weeks of their vacation instead of spending the time in idleness they were eagerly seeking additional knowledge.

"The subject of the systematic instruction of school children in bird study on a careful scientific basis really had its origin in May, 1910, when Mrs. Russell Sage sent to the National Association of Audubon Societies checks for \$5,500 with which to inaugurate a plan of bird study in the Southern schools. She desired that a special effort should be made to arouse interest in the protection of the robin, which in the Southern States was at that time almost universally regarded as a game bird whose most useful office was performed when served in a potpie.

"Bird study, it is true, was at that time taught in many city schools, but usually the subject was given but slight space in the curriculum and there existed generally accessible to teachers but indifferently prepared material. A working plan was at once developed whereby literature, colored pictures of birds and the Audubon button should be supplied to all the pupils in a school who enrolled themselves as members of an Audubon class. Each member was required to pay a nominal fee, which, however, in no sense covered the cost of the material received in return. During the school year which followed the matter was brought to the attention of many of the Southern teachers and over 500 Junior Audubon Societies resulted with an enrolment of more than 10,000 children.

"So successful did this experiment prove that the Audubon workers agreed that it was highly desirable to extend this same system into the schools of the Northern States. The fall of 1911 therefore saw plans well under way for a much increased scope of work. During the school year which closed the last of June, 1912, the National Association of Audubon Societies at a cost of \$13,000 enrolled 29,369 school children under the standard bearing the inscription 'Protect the Birds.' In supplying these pupils and their instructors with the necessary pictures, leaflets and outline drawings of birds for coloring over 1,000,000 pieces of printed information were distributed. Pupils have taken hold of this bird study with a zest. Many a dull or inattentive boy who had been a despair to his teacher and parents responded to this real nature teaching."

ESKIMO DOG FARM.

At Grove Park, one of the suburbs of London, Mrs. Scott conducts a very interesting dog farm. Her specialty is Eskimo dogs, which she breeds and trains for the market. The market is not very large, but it is sufficient to make it worth her while to raise and train the best possible Eskimo dogs. It is not the ordinary dog market. It is the market for Eskimo dogs which are trained for Arctic exploration.

If you decide to make a journey to one of the poles, you know that Eskimo dogs are absolutely essential. You can get good Eskimo dogs in Greenland or in Alaska. But the good dogs in Greenland may not be exported except by special permission of the Danish Government, and the dogs in Alaska are not so good. One trouble with ordinary Eskimo dogs is that they have no breeding and no discipline.

They will obey the master with whom they have been brought up, but when they start after fish or other game even their master can control them only by the exercise of brute force. For the purposes of your exploration you need dogs that will obey orders given by

a white man, dogs that are broken to the harness and are not afraid of work, dogs that have learned team work.

It is this kind of dog that Mrs. Scott raises for the market. Her kennels have only pure blooded animals of carefully selected stock, and from earliest puppyhood she trains them in how to eat and how to work. When she gets through with an Eskimo dog the animal is not nearly so ferocious as one that just "grewed up" in the surroundings of an Eskimo village.

They adapt themselves quickly to new masters and they have acquired good eating manners, so that they are not so likely to attack the cupboard or fresh game. Mrs. Scott feeds her animals no meat except pemmican and dried fish brought from Norway; a large part of the diet is a specially prepared biscuit. She has supplied trained dogs for a number of Arctic and Antarctic expeditions.—Scientific American.

MASTODON SKELETON FOUND.

THE skeleton of a mastodon has been found by Leaman Hawley, near Malahide, Ont. The bones have not all been dug out yet. The ribs measure five feet in length. The vertebræ joints are as big as a small sized frying-pan. The upright bones from the vertebræ joints measure from eight inches to sixteen inches in length. One tooth has been unearthed which weighed four pounds and is fourteen inches around. The skeleton was found on the banks of a ravine.—New York Sun.

MR. ANDREW LANG ON OTTER-HUNTING.

THERE seems to be little connection between otters and the sense of right and wrong till we think of otter-hunting. Mr. Joseph Collinson, in a tact styled "The Hunted Otter," published by the Animals' Friend Society, is bent on arousing general hatred of otter-hunting as a malpractice from beginning to end, "so utterly silly and caddish that words fail to characterize it adequately." Comparatively few people are familiar with this pastime, which, to be sure, does seem the meanest, most cowardly, and most cruel of all the forms of torture which man inflicts for his devilish amusement on the lower animals. But the interesting point for the student of human nature is that people whom no mortal could call cruel in other respects see no cruelty in otter-hunting, but have been patrons of the sport. Why is it a sport? How can it amuse, not only boys and men, but girls and women? * * * Mr. Collinson says: "That cruel old coxcomb, Izaak Walton, the apostolic patron of the sad, 'solitary vice of angling,' as Lord Byron labelled this 'contemplative recreation,' wrote a vivid account of the otter-worry * * *" His (Walton's) description of an otter-hunt would sicken a savage. The savage hunter, as far as I am aware, wishes only to secure his emu or kangaroo for the sustenance of himself and family. No doubt he enjoys his own skill in stalking his emu or wallaby, but he does not want to amuse himself by prolonging the agony of his prey. The modern otter-hunter is proud and pleased when he has prolonged the agony of the poor beast's terror for seven hours. Men and women, and hounds and terriers, are worrying the otter, driving him out of and into the water, poking him up with poles, and doing all manner of odiously cruel things, disturbing the rural peace, polluting the stream with their muddy boots. Women nowadays are as noisy and ruthless as schoolboys at an otter-hunt, while the quaint, lithe, little animal is neither injurious to mankind, like the tiger, nor good to eat. If he were either he could be shot in a moment. But the sport consists in the delighted exercise of eyes and legs, of running across difficult ground, of wading, perhaps, in dangerous pools and streams. These exercises, and success in them (the otter-hunter has many blank days), really constitute the attraction of the sport, but they are inseparably bound up with the long death agony of the otter. When tamed he is the idol of his captors, but as a wild creature of nature the sportsmen and sportswomen treat him with as much cruelty as the Iroquois inflicted on the Jesuit missionaries. Perhaps there is not one of the hunters, male or female, who knows that things cruel and dastardly are being done by them for their diversion. The moral idea does not occur to them.

In his picture of an otter-hunt, Walton reaches the height of ferocity when he makes the huntsman say:

"Look, 'tis a bitch otter, and she has lately whelped; let's go to the place where she was put down * * * hereabout it was that she kennelled; look you, here it was indeed, for her young ones, no less than five; come, let's kill them all."

Piscator replies: "God keep you all, gentlemen, and send you meet this day with another bitch otter, and kill her merrily, and all her young ones, too."

"Here is devout, tender, pious Walton, praying that a set of total strangers may merrily chase, terrify, torture, and slay among her young a newly-delivered mother. Izaak can never have reflected for a moment on the monstrous profanation of his prayer. Had he been asked to defend the sport he might have said that otters destroy both trout and grilse. I have seen an otter, in blazing sunlight, chase a grilse into shallow water, where it was cleecked by a human being. If otters did destroy many fish, which seems far from certain, there are less cruel and protracted modes of keeping down otters than by hunting them in the water and on the land till they become exhausted and

are drowned, or are torn by the pack. The hunters themselves would sympathize with a hunted man in his desperate condition. The otter-hunt is now, as in Walton's days it was not, "sport for ladies." * * * Surely we need not laws or sermons to convert otter-hunters from their hideous delights; the reflection of a moment ought to suffice.—From a review in the Morning Post.

MINNESOTA FISHING RIGHTS.

THE State of Minnesota has sold the fishing rights of a number of its lakes where buffalo and carp are known to exist, these waters being sold annually to those who want to seine them out under State supervision and put the rough fish on the market. The recent sale occurred on the 17th of August, and some of the lakes were sold as high as \$1,200, others bringing sums ranging downward from this figure. In winters past as high as fifty thousand dollars' worth of buffalo and carp have been taken from some of the smaller lakes in this State. The fish are iced here and shipped to New York and other Eastern markets where the Jewish trade takes the most of them at low figures, they netting the seiners from two, three, four, to as high as nine cents—this figure per pound.

The seines are drawn by horses and the fishing is done under the ice. Buffalo are not good to eat during warm weather, it requiring good cold water to shrink them into edible state of flesh. The layers of fat on the ribs of a buffalo will not try out in winter as they will in summer.

The money received from the sales of fishing rights goes into the funds from which the expenses of propagation of game fish fry, support of the State fish hatcheries, remuneration of wardens are paid.

GROWTH OF HALIBUT.

A REMARKABLE incident happened during the recent trip of the schooner Avalon, which arrived in Gloucester, Mass., the other day from halibuting, there being included in the craft's catch a small halibut which bore a distinction very much out of the ordinary.

Two years ago one of the crew of the Avalon brought up a baby halibut on his trawl while fishing on Green Bank. The fish weighed about fifteen pounds and was thrown overboard. Before releasing the fish, however, the fisherman cut the initials "L. R." plainly upon its back, and nothing more was thought of the incident.

A few weeks ago, while fishing on Western Bank, some of the crew were surprised when a halibut was hoisted on board bearing the familiar initials "L. R." Instantly some of the crew recalled the incident of two years ago, which nearly had been forgotten, and singularly enough the fish had been caught again by the crew of the same craft.

To give an idea how fast a halibut will grow, the baby fifteen-pounder of two years ago had grown to four times his former size, tipping the scales at sixty pounds.—From the Lewiston Journal.

CAT ATTACKED BY BIRDS.

AN incident of keen interest to lovers of natural history has occurred in the garden of Mrs. Culpin of 6 Beech avenue, Peterborough.

Tired with its first attempts at flight, a fledgling blackbird alighted on the garden walk and was unable to get up to the wall, where its parents with much concern were observing it. At this juncture the household cat appeared on the scene and began to steal stealthily toward the fledgling.

The parent birds started screaming at him, and that having no deterrent effect, one of the birds flew on to the cat's head and began to peck vigorously at it, aiming at the cat's eyes. The other parent bird joined in the fray, and alighting on the cat's back, tore beakfuls of fur out of it. The cat beat a hasty retreat.—From the London Standard.

A PROBLEM'S SOLUTION

Log Cabins and Cottages

How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work.

Cloth, profusely illustrated, \$1.50 postpaid.

THE CHALLENGE

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

A MASTERLY WORK ABOUT DOGS
By A. F. HOCHWALT,
Kennel Editor THE SPORTSMEN'S REVIEW.

"DOG CRAFT"

NEW REVISED 2nd EDITION IS NOW READY Bound in Cloth \$1.50, Prepaid

Volumes of information concerning dogs are crowded into this one remarkable treatise, written by *a man who knows*. Contains 308 pages, beautifully illustrated with fine halftone pictures of the well-known dogs of all breeds.

Mr. Hubbard's Comments on "Dogcraft."

Atlantic, Iowa.

Sportsmen's Review, Cincinnati, O.:

Gentlemen—I have just received a copy of Mr. Hochwalt's new book, "Dogcraft," recently ordered, and I wish to tell you how much I like it.

Of course I knew from reading the chapters as published in the Review that the work was complete, exhaustive and satisfying, but I was not prepared for the neat book that made its appearance, so tastefully bound, on such good, heavy paper, with such clear, clean type, the evidence of fine workmanship.

Every breed is handled in a masterly manner and the treatment of dogs in disease is alone in itself worth the price of the book.

C. P. HUBBARD.

MAIL THIS COUPON TODAY

The Sportsmen's Review
Weekly.
CINCINNATI, O.

Gentlemen: I am interested in Dogs, and without expense you may forward me more literature about your book "Dogcraft."

Name

City

Street

State

Particular attention is paid by the author to the history of famous sporting dogs, their origin, breaking for field work, care, management, etc.

Every breed is carefully treated and the standards of each given in full.

The work is as valuable to the bench show patron as to the lover of field dogs.

Every dog lover will appreciate this work because of the interesting, concise and comprehensive way in which the various subjects are handled.

CURIOUS AUSTRALIAN LAKES.

AUSTRALIA is happily free from earthquakes, but one never knows when the eruptive days of years gone by may recur. Apropos of this a strange occurrence is reported from Curdie's River, Victoria. Recently, all the water became quite white, with froth upon it, which afterward turned to green slime. Large numbers of fish in the stream died. The water gave out a peculiar odor and cattle refused to drink it.

It was supposed to be the result of a volcanic disturbance in Lake Purrumbete in the vicinity of Mount Leura. There is an extinct volcano in this neighborhood. It is said that divers were sent down into the lake on a previous occasion to investigate, but the water was so hot that they could not stay in it.

In the country immediately north of Spencer's Gulf is an extensive area which may be called the lake district of Australia. It is nearly 1,000 miles in length from southeast to northwest. First of all there is Lake Torrens, more than 100 miles long, but not very wide. Lake Erie, further north, is much larger. To the west is the extensive Lake Gairdner and to the east of Lake Eyre are lakes Bianche, Gregory and several others.

All these lakes (which by the way are salt) are subject to great fluctuations in size, grassy plains being found in some years where extensive sheets of water at other times cover the country.

Australia abounds in basins of inland water, which, however, are mostly saline and are very seldom flooded all the year round. They depend for their supplies, says the London Globe, mainly on the rainy monsoons, possess no regular influents of even surface springs, and lie mostly in the center of waterless, stony deserts.

Near the center of Australia is the Finke River, which rises on the Tropic of Capricorn in the McDonnell ranges and flowing southward, receives many small tributaries. After passing Charlotte Waters Station on the Overland Telegraph Line, it becomes lost in the desert. Further north and east are numerous other streams, which after a short course disappear in the sands.

All these watercourses are subject at intervals to sudden and violent floods. The flood times are followed by long periods of drouth, during which many streams and lakes disappear altogether and never come back to life again. Next flood time Providence invents new rivers in new localities.

On the New South Wales tableland, south of Goulburn, at an elevation of over 2,000 feet above the sea, is situated Lake George. In 1824 it was twenty miles long and eight miles wide, inclosed by steep, thickly wooded hills. It gradually diminished in size, until about 1837 it became quite dry, and was converted into a grassy plain.

After a few years it slowly filled again, till in 1865 it was seventeen feet deep. Two years later it was only two feet deep, but in 1878 it was again twenty miles long and about twenty feet deep. The old watermarks show that it has sometimes reached three feet higher than that.

Coorong Lake, in South Australia, is a most peculiar arm of the sea. It has its opening in the southeastern part of Lake Alexandrina, not far from the mouth of the Murray River, and runs parallel with the coast in a southeasterly direction for about twenty-five miles. The greatest width of this sheet of water thus caused is a little less than two miles. For the whole distance there is only a narrow strip of sandhills lying between this lake and the sea.

For some hundreds of miles to the north of the Lake District of Australia there is a limestone formation studded with what are commonly called "Mound Lakes." These mounds are usually about fifty feet high and ornamented on the summit with clumps of tall trees and bull rushes. They are natural artesian wells; the water, forced up from below, gushes out over the top to the level ground, where it forms small water channels.

THE OUTDOOR LIBRARY

Seasonable books dealing with every phase of life in the Open. Handbooks of sport. Books that make "roughing it easy." Books for Fisherman, Hunter, Yachtsman, Canoeist, Camper, Nature Lover. Books of Travel and Adventure for Young and Old.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Hunting Without a Gun.

And other papers. By Rowland E. Robinson. With illustrations from drawings by Rachael Robinson. Price, \$2.00.

This collection of papers on different themes contributed to FOREST AND STREAM and other publications and now for the first time brought together.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portraits and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club: Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Trail and Camp-Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. Cloth, 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth and by far the largest and handiest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose; Mountain Sheep; Game Refuges, and other big-game topics.

My Friend the Partridge.

By S. T. Hammond. Cloth, 150 pages. Postpaid, \$1.00.

An inimitable study of the noblest of our game birds, following the ruffed grouse deep into his haunts, detailing the experiences of more than 60 years in the field, and throwing much light on the habits, life history and habitat of the game. A most delightful reminder of happy days with upland game.

Inter-Ocean Hunting Tales.

By Edgar F. Randolph. Cloth, 200 pages. Postpaid, \$1.00.

A collection of stories such as are told about the camp-fire. Mr. Randolph offers a hunting experience bounded only by the two oceans, replete with incident, interesting from its novel viewpoint, and dealing with every kind of game that falls to the rifle of the American sportsman.

The Spaniel and Its Training.

By F. H. F. Mercer. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.00.

Men I Have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Cloth, 281 pages. Price, \$1.50.

This is the latest and best manual on the subject. As an owner and handler of field trial dogs, and one having had an exceptionally wide experience in the field and at field trials, Mr. Waters was admirably equipped to write such a work. It has already taken its place as the standard authority.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text and a chart of the topography of a duck's plumage. Price, \$3.50.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York Cloth. 233 pages. Price, \$1.50.

Manual of Taxidermy for Amateurs.

A complete guide in collecting and preserving birds and animals. By C. J. Maynard. Illustrated. New edition. Price, \$1.00.

"The Long Shooters" and the Origin of 300 Yards Revolver Shooting. (New.)

By Wm. Brent Altscheler. Price 75 cents. Postage 4 cents extra.

Interesting alike to civilian and soldier, amateur and professional. A neatly bound volume; illustrated from photographs of shooters and shooting scenes.

Woodcraft.

By Nessmuk. Cloth, 200 pages. Illustrated. Postpaid, \$1.00.

No better book was ever written for the help and guidance of those who go into the woods for sport and recreation. It is simple and practical, and withal a classic, written with a rare and quaint charm.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known house-boats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

Some Native Birds for Little Folks.

By Dr. W. Van Fleet. Illustrated by Howard H. Darnell. Cloth, 146 pages, with 14 photogravure plates. Price, \$1.00.

Describes the wood duck, the great horned owl, ruffed grouse, killdeer, plover, bobolink, bluejay, chickadee, cedar bird, meadow lark, robin, woodcock, kingfisher, crossbill, and nuthatches.

The Anglers' Workshop. Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, 60 working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevin. Illustrated. Price, \$2.00.

My Angling Friends.

A Second Series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price \$1.50.

Game in Northwestern Wyoming

By WALTER B. SHEPPARD

MY camp on Jackson Lake, at the base of the Tetons, in Northwestern Wyoming, was a delightful spot. The range rises from the very edge of the lake, and where it is not too precipitous is covered and fringed with dense masses of Douglas fir and blue spruce. The lake itself is a beautiful sheet of water, about ten miles long and three wide, and the Tetons, from the bosom of the lake, form what is one of the most impressive pieces of scenery in America.

The region is almost pristine, being remote from any railroad, difficult of access, barred to settlement by reason of its ruggedness, and from being included within the confines of a national forest. For be it understood that while the Forest Service, or rather the Agricultural Department, does not forbid the taking up of arable land which may happen to be located in national forests, as a matter of fact there is practically no such land, and the Department does properly and rightfully discourage the homesteading of non-agricultural land.

All the country south of Yellowstone Park, in which Jackson Lake is included, lies within the Wyoming Game Preserve, on which no hunting is allowed. The wild creatures appear to have gotten an inkling of the fact, for they are wonderfully tame, and most species are increasing in numbers.

Moose, which are generally regarded as about the wariest animal, not nocturnal, in America, are here much like domestic cattle for fearlessness and innocence. My first experience was the morning after my arrival. Going out from camp about sunrise to "wrangle" my horses I saw an old cow moose feeding peacefully in a bayou not a hundred yards from and in plain sight of the horses, one of which wore a cow-bell that never ceased for a moment to jangle. Occasionally the cow would desist from her work to cast a casual glance in our direction, but what she saw and heard did not at all disturb her, and not until she had finished her breakfast did she quietly withdraw.

She was feeding on moss that grew at the bottom of the little pond, and would plunge her head down into the water until nothing but the tips of her ears was visible. When she raised her head, with mouth full of moss and dripping mud and water, it made me think of the pictures that used to be printed in all natural histories, of hippopotami in Africa. As a matter of fact, cow moose resemble nothing so closely as a mule, and I have actually known hunters to refrain from shooting them, laboring under that mistaken impression.

Another day, when plowing around in the heavy spruce timber at the head of Moran Bay, I came suddenly on a cow moose and her calf. I was not over forty feet away from them, and though they must have heard me half a mile distant, they were not frightened in the least, and both eyed me calmly for a minute or two before they leisurely slipped away.

My equipment included a collapsible canvas boat, one of the most practicable and useful inventions for a lake country that I know of. They can be carried on pack-saddle, and with proper care will last for many years. With this boat

I had some rare fishing, for these waters swarm with lake trout, and with the black-spotted native brook trout. There are also a few Loch Levens.

One day, while I was across the lake from the camp, a heavy gale came up. The wind often rushes down the cañons of the Tetons with tremendous force. Staunch as is the canvas boat, its sides are relatively rather low, and in returning I had to hug the shore around the end of the lake, being finally compelled to go ashore to turn the boat over, so as to get rid of the water, which was bidding fair to swamp me. My landing place happened to be in a thick fringe of

SURPRISED MOOSE CALVES.

willows and tag alder. Just as I was putting out again, two cow moose walked out of the thicket, not over twenty-five feet away, and took to the water. They eyed me with evident misgivings, but showed no real trepidation; in fact, they stopped and inspected me carefully, long enough to permit taking a photograph, focussed at just twenty-five feet. The average range steer is much wilder.

Moose are much like blacktail deer in that if not molested they frequent the same spot for weeks at a time. This fact often leads the careless observer to false conclusions. Seeing the same little collection of moose day after day, he begins to think the whole country is full of them, when in fact they may be few and far between. This is particularly the case in and about Yellowstone Park.

I often saw these two cows, and one day when they were swimming out in the middle of the lake, I rowed out and headed them in order to watch their swimming and to take a picture or two. Being alone, it was hard to get a good focus, for while I could have run right over the beasts when I dropped the oars and snatched the camera, my boat lost headway, while they kept right on. But I could herd them like sheep, and while they did not altogether enjoy the experience anything like real trepidation, that mad headlong flight which wild animals show when they are really frightened, was wholly wanting.

Moose swim naturally with head low, close to the surface, and with an indescribable ease and grace, awkward and ungainly as they are on land. Their leg motion in the water is very deliberate, merely a very slow walk. When I pushed them harder, taking the nose of the boat to within five or six feet of them, they hastened the pace a trifle, lifting their necks clean of the water and making quite a wake. But even then vigorous rowing enabled me to run clear round them without much trouble. What impressed me most was the fact that they could and did stop stock still in the water, to reconnoiter, keeping afloat apparently with only an occasional kick or two.

Elk are almost as tame, and much more numerous than moose in that region. I occasionally saw both moose and elk at evening at the same time. While the elk do not, so far as I know, ever take to the water, they dearly love to squatter around in it. The yearlings especially delight to play tag in shallow places, where the water is about to their knees, and their antics closely resemble those of young boys under the same circumstances. While romping and chasing each other, the yearling elk utter a curious note that is never given except by them and never by them except when they are indulging in this sort of horse play. It sounds very much like the screech which an awkward, gawky, half-grown girl will emit when some urchin has poked her in the ribs or pulled her hair.

It was in the rutting season for elk, and night after night a large herd of them would drift down close to my camp and actually make so much noise that I could not sleep. To my mind the clear shrill bugling of the younger elk bulls is one of the sweetest sounds in nature, but when there are a dozen or more engaged in it, some of those old fellows have a croak like a fog-horn, and when the cows are many and have calves in plenty, the racket is tremendous. The cows, calling for their calves, and the calves

THE PACK TRAIN.

wailing for their lost mothers, are almost as noisy as the bulls, for while their individual notes are less in volume, they are more numerous and persistent.

During the rutting season I have watched the herds by the day and almost by the week, and never tire of it. It is a curious phenomenon, and about the elk and their habits one could write a small book without exhausting the subject or elucidating all the mysteries.

Deer are very scarce in that region, owing partly to the severe winters, which cover the summer range with snow to a depth of six to ten feet. But the chief factor in keeping them down is undoubtedly the coyote, before whose onslaught the whitetail disappeared many years ago. The coyote is the greatest pest any game country can have, for he kills the young of all species of both birds and mammals, and in the deep snow will even master the largest adults, especially if enfeebled by old age or hunger.

Curiously there were four coyotes in the Rockies until the advent of man. In this particular region there were none. What few blacktail have managed to survive are not so tame as the moose and elk, which is contrary to the usual rule, for where the blacktail is plentiful, and not much disturbed, he is such an innocent that it is hardly any sport to hunt him. The whitetail jumps up running and seldom stops. Often one gets no more than a glimpse of his "flag," and sometimes not even that in comparatively open country. The blacktail on hearing a noise will rise from his bed and from some nearby thicket eye the intruder until very close, when he will run a hundred yards and stop broadside as if for the very purpose of presenting the best possible mark to the hunter. And no matter how badly scared, the blacktail will not, unless repeatedly disturbed, go more than a half mile but when things are quiet again, will steal back to his old bed, where he may be found the next day or for days and even weeks thereafter. Naturally a lover of the quaking aspen, and the lush meadows, dense with weeds along some watercourse, low down in the foothills, he has of late years taken to the thick spruce, about as

high up as he can get. And this simply to avoid his enemies.

The antelope also in some localities have taken to the timber for the same reason. And we know that the Rocky Mountain goat, now given to frequenting the most remote and unscalable fastnesses, is really an antelope, whose habitat was probably on the plains. Lewis and Clarke saw them as well as many bighorn sheep along the Missouri, many miles from the mountains. And the goats have been reported by other observers far from what are now their natural haunts.

I have frequently seen elk above timber line, and that not from stress, but from choice. They like in summer and early fall to go as high as they can, partly to avoid the flies and also to get the green grass which grows luxuriantly in seepy places close to snow banks and glaciers. Of recent years I have often seen elk and blacktail deer at an elevation of 11,000 feet or more.

No one who has noticed the ready manner in which wild animals adapt their habits to changed conditions can fail to be convinced that such variations in structure (new genera and species) as are not the result of nature's unaccountable love of producing sports (i. e., freakish aberrations from type) must be not so much due to natural selection in breeding as they are the necessary sequence of compulsory changes in environment.

The wildest thing I saw about my Jackson Lake camp was a black bear. I was gently paddling along the shore one day, and engaged as he was in some foraging operation about an old log a few feet from the shore, he never saw or heard my approach. I could have shot an eye out of him, he was so close, but what I wanted most was my kodak, unfortunately left in camp. After watching his industrious grubbing awhile, I made my presence known by a slight noise. He tarried not at all upon the order of his going; his zeal to escape was almost ludicrous.

Bears are in fact about the shyest animals in the woods, even where not hunted. The black bear is not much more formidable than a big dog, and even the grizzly will very seldom per-

mit himself to be seen if he can help it. During thousands of miles of traveling and hunting in the Rockies during the past twelve or fourteen years, I have seen but four bears, and many men with even greater opportunities have seen fewer or none at all.

The Upper Snake River debouched into the lake a few hundred yards away from my tent, and for several miles above its mouth it is so tortuous and deep as to be sluggish, and is thus a favorite resort of beaver. There are not a few occupied wigwams, some of them the largest I ever saw, at least twelve feet high and fifteen feet or more in diameter. I often saw the animals, especially at dusk, for they are still fairly plentiful, notwithstanding the fact that they have suffered fearfully at the hands of poachers. They are not by nature nearly so timid as many believe, nor are their habits so strictly nocturnal as is the general impression. They often work by day, and not infrequently they would not take to the water from some log on the bank until I was only a few feet away from them. Once a big old fellow impassively swam several times around my boat, looking me over, occasionally diving with a resounding whack on the water with his tail, but always coming up to gaze again. He kept this up until I rowed away and left him.

The canvas of the boat became from much use thoroughly saturated with an ancient and fish-like smell, which had a curious result. Every night an otter would visit and search the boat as it lay on the beach, usually tumbling something out of it like an oar or rowlock. One day in the river I saw in broad daylight close at hand what I took to be the visitor. It was a female with three half grown kittens. First beneath the surface and then with head stretched high above it, she and her progeny circled my boat again and again, sniffing the "rich" odors that it exhaled. They had more curiosity than fear and did not hesitate to come within twenty feet of me. I often saw them afterward, though not so close again, and their "sign" was all about that stretch of the shore. But never once did I see any evidence that they were feeding on fish. Their exclusive diet was apparently crawfish which are in those waters exceeding plentiful. This leads me to suspect that for otter to catch fish is not easy, unless in comparatively confined water like a brook.

An odd picture the otter makes swimming. When I first saw them in the water they looked to me like dogs, despite their round bullet-like heads and short ears and jaws. They gave a curious note when close to me, something like the "spit" of an angry bobcat.

Another day I saw at some distance a family of mink, but did not try to get close to them. I frequently saw single specimens in daylight within a couple of rods' distance. They, like the marten, are fairly plentiful in that region and both animals are not very shy.

It was a surprise to me to learn that the pine squirrel could swim, for he is usually found pretty high up on the mountains, nowhere near water that is for him navigable. The Upper Snake is at its mouth perhaps 250 feet across, and one day I saw a pine squirrel in mid-stream. He paid not the slightest attention to my boat or to me and swam close past me, going strong. It was a curious figure he cut, holding his long bushy tail clear of the water. After reaching

the other side he shook himself just as a dog would do and vanished in the underbrush.

On one side of my camp was the largest and coldest spring that ever I saw. On the other side, perhaps 400 yards away, was a series of hot ones, averaging a temperature in excess of 120 degrees. These latter spread out over a boggy place of several hundred acres, and the rank, green grass, together with the alkaline deposits from the hot springs, attracted many wild creatures. Geese bred there and from my tent I could see them by the score at almost any hour of the day. So also the elk, deer and moose seldom failed to come out of the timber at dusk or in the morning, and though I did not always see them, their tracks were everywhere and I heard them often near the camp.

Plentiful as were my four-footed friends, they were as nothing in point of variety or number to the birds. At that place I saw some rather odd and rare ones, as for example gulls and kittiwakes, white pelicans, fish and bald eagles. I also saw on the Snake, though not exactly at this time, what I was sure were woodcock, but as my friends who are skilled in ornithology insist that this could not be, and as I did not procure a specimen, I can only say that it is possible I was mistaken, albeit I saw the birds repeatedly at close quarters, sometimes using a nine-power Goerz-Trider glass, and I think I know Wilson's snipe and all the other snipe that frequent the Rockies.

The fishing of the ospreys, kittiwakes and

Commissioner of Fish, Game and Forestry. Elected President of the National Association of Game and Fish Commissioners at the sixth biennial meeting held in Denver, Colo., Aug. 31 and Sept. 2, 1912.

Chapter IV.

WE had not much more than left St. Louis when we began to find the great sand-bars on the inside of every bend in the river.

At night they were peopled with the lesser children—geese, ducks by the thousands, and brant. It was now no trouble at all to pick up plenty of birds from the front door of the boat, many being killed with a small caliber rifle by firing into the black mass on the water, so thick did they sit. The writer has seen ducks and geese in the breeding grounds of Canada and the Dakotas, but never saw such a sight as filled the eyes below Chester, Ill., that October morning.

While I have said that we were a month too late in starting down the river, there have been falls galore that would have given better weather for our trip. But the game season could not have been excelled. It was propitious for plenty of meat to supply the galley larder. At the last named section of the Big Creek, ducks blackened the water. One could hardly imagine where the breeding grounds of so many thousands could be located.

The mate was cleaning a pair of ducks on the poop deck and the skipper was foolishly watching such game sights as he had never seen before. When with a dull stop all the under irons dragging in the sand caused us to become aware that the cruiser was on the sand, and that we were not in the channel at all. Fact is, we had paid no attention to the charts for some miles, and had not even noted the location of the diamonds or day marks that told the channel from the bars. An island dead ahead of us and we to the left of it rather than the right held our progress up for some minutes, while all hands and the valiant engine backed and puffed and snorted until we were clear of the bar. It is no light task to handle a 35-foot or 40-foot boat where the water is swift, and the reverse is but one turn of the wheel to three of the engine. Don't try it.

We backed off and made for the channel again and swung round the island and came up behind it, dropping anchor nearly where we had gone aground. This was below the bar, and in the chute where the water that tried to hold us on the sand concentrated and washed a nice chan-

nel. Such is the fickle river. She cuts and pieces and runs amuck where and when she likes, and the hand of man droops in obedience to her.

Getting into the flat bottom lands further along, yet above Cairo, gave us a chance to see the great wedge-shaped flocks of geese winging from one corn field to another or from bar to bar, cutting the miles by river by steering from aloft and traveling as the crow flies. We now took our time, anchoring each night in some weird looking chute or behind an island, or at the head of some sand-bar where we might get ashore and follow the bar's circle into the weeds and burs wherein the honkers seemed to prefer a night roost.

They were wary. Many times we would get within a hundred yards of an unexpected flock, and away they would go, flapping their long flights to bear them upward and away from the scatter gun. Our first shooting at geese had taught us the futility of trying to penetrate their tightly massed feathers with anything smaller than buckshot, and we had but few shells of this sort, hence hoarded them like a miser would his coppers. To bang away at the birds and waste shot was not known to us, but we failed of goose meat.

Again we came at night to a dandy landing among a Government fleet of barges and working boats and steamers. On a bar out in the river, water running on both sides of it, calmly sat a plenteous flock of the black-necks, having dropped upon it as night approached. Among 200 men on the shore was one strategist who suggested loading a boat with brush, having it hauled up the river and set adrift at a point where it would start for the bar whereon sat the preening geese. Great idea. Float down on them and murder the whole flock. It seemed easy.

And no sooner had the idea been germinated than the work was set about to accomplish its fulfillment. Brush was loaded up and two gunners, one the scribe, were hidden beneath it. A motor launch pulled us up the river and dropped us about where the current would bear us down past the bar on one side or the other of it. We began the descent, guns loaded with buckshot No. 8 chilled, and hope high in two breasts, with 198 mortals on the shore awaiting developments.

The launch went on down stream, to wait for us and pick us up. The geese sat serenely on their island and flopped here and there as

they pranked among themselves. Four hundred yards off we were. Three hundred; two hundred. The old wise gander who led the guard stretched his neck and scanned the dreadnaught floating his way. The wind was behind us, and it looked as if they smelled the danger. One hundred yards. Thirty more and we would be within long range. But they did not wait.

Mr. Wise Gander raised into the wind and started to swing over us with his gabbling flock behind. When they were in a nice twenty-yard range, we raised from the bottom of the scow and began triggering. I fired four times. Bill fired six. Three honkers dropped into the river and descended with the current. Dark and the obstructing brush probably prevented our getting at least a half dozen. But they fly swift; they are hard to kill and are never killed until dead in hand. From the shore a chorus greeted. The chugging of the two-cylinder two-cycle skiff came near, and we were picked up along with the geese and taken ashore. The officers' mess aboard a steamer the following day was graced with goose and visitors treated to the hospitality of old-time rivermen.

Ducks were everywhere. The first thing in the morning and the last thing at night we would see great strings of them, heads under their wings in inclement weather, floating southward. Below Cairo we found greater numbers of them. Also we found more cruisers and hunters and hunting parties. Turkeys were now found in the bags of the bottoms hunters whom we came across. In the Tennessee bottoms rifle shots were heard and cruisers from up the Ohio were tide to the shores, where their parties had made camp temporarily.

On the Arkansas shore I found deer tracks. A piece of venison hanging near a negro's shanty in the bottoms and a crippled wild gobbler in the pen of a bottom billy hinted that pre-season shooting had been going ahead for some weeks.

At one landing we were accosted as soon as the mud-hook caught and demanded to reveal ourselves. It must be ascertained that we were not wardens. Seldom, if ever, had a cruiser stopped in that out-of-the-way place. We found the reason to be dozens of hoop nets stretched in the swift-running water of the chute we chose for an anchorage. Literally these folks were devastating the river of fish—catfish, buffalo, carp and hundreds of bass and other fish that were coming up-river. A bass is a green trout down there. He is only respected for the slightly higher price he brings in the market. And we have our suspicions that many other temporary settlements of fishermen along the river are doing the same work.

At Memphis we saw carloads of fish and game, barrels on barrels on it, in the produce market. Ducks were decaying by the barrel. They had been packed without vent holes in the containers and overheated, were not iced, and represented no profit to anyone save the express company that had carried them.

In Louisiana we began to miss the ducks and geese, as the sand-bars were covered with water, and the birds had cut across country to the coast where the river had begun to flow generally eastward rather than south. But in the cotton fields and corn of Mississippi and Louisiana we began hearing the festive whistle of the quail and seeing them offered for sale. On a

Island Big Game of the North Pacific

NATURALISTS and big-game hunters who read Charles Sheldon's "Wilderness of the Upper Yukon" will rejoice to learn that another book from his pen has just come from the press. This he calls "The Wilderness of the North Pacific Coast Islands," and has just been published by Chas. Scribner's Sons.*

The volume is a fitting sequel to his earlier work, and gives a hunter's experiences while searching for wapiti, bears and caribou on the larger coast island of British Columbia and Alaska. It is handsomely made and beautifully illustrated.

In this book, Mr. Sheldon deals with a number of new, or very little known, species of big game—the elk of Vancouver Island, the bears of Montague Island, the bears of Admiralty Island, and the little known caribou of the Queen Charlotte Islands, so long vainly sought for by many observers, and at last found merely by accident, as noted in *FOREST AND STREAM* several years ago. As in previous years, Mr. Sheldon records trips of success and trips of failure. All of them have this in common—they are marked by tremendously hard physical work in the face of many obstacles; by keen, close observation in natural history; by the joy of wandering among some of the most beautiful and wildest scenery of the continent, and are devoted to the bringing together of many new facts of great interest.

All Mr. Sheldon's work has been done in the interest of science, for though best known to many people as a big-game hunter, he has for years devoted his hunting trips almost wholly to gathering material for the Biological Survey at Washington. His hunting trips, therefore, are much more than mere pleasure excursions, and as is well known, he has added a great store of facts to our knowledge of the bears and of the wild sheep of Alaska. Yet his observations are not confined merely to the game he hunts. He has brought home much information concerning Alaska birds, and in the present volume contributes information gathered from an old sea otter hunter concerning the habits of that valuable, but now almost extinct, fur-bearer. He transcribes from his notes the following paragraphs:

"Sea otters have young any month of the year. Swanson has seen them in all seasons with young of the same age. The female otter gives birth to only one pup, and lying on her back in the water carries it on her breast. When it is old enough to be fed, she breaks clams and shell fish with her teeth and inserts food in the young one's mouth. When she dives for food, she leaves the young one on top of the water. The pup must be six months old to feed itself, and stays with the mother for a year. Sea otters feed on clams, crabs, sea urchins, mussels, kelp and shellfish, diving from five to thirty fathoms or more to get them. They range for feeding about sixty miles. They have special feeding grounds in shallow water, on 'banks' or near the shore and feed at night. In the day they go offshore, often thirty miles or more, and

sleep. They seem to have well defined ranges over which they feed, and though they may be temporarily driven away by too much hunting, sooner or later they return to the familiar feeding ground. Swanson was uncertain as to how often they feed, but the native chief of the hunters told me it was only one day in two or three; I am inclined to think he himself is not certain.

"Sea otters always travel by swimming on top of the water, on their sides, back or belly, and sometimes seem to leap along. Formerly they went into inlets; now they always remain outside. In rough and heavy weather they come close to shore, often in the surf, where they play, lying on their backs, jumping, turning somersaults, chasing each other and racing. In calm weather they are never seen playing. When one is seen, it is usually sleeping. Natives say they have seen four or five sleeping at the same time. Often several—sometimes as many as forty—have been seen together, and when so congregated, they are never asleep. When sleeping, one of these animals looks like a black drift stick with its extremities out of water. The head and hind flippers are always a little out; the body submerged. They cannot stay under water for more than five minutes without coming up to breathe. Their vision is like that of a seal their ears and nose very keen. Being very shy, they are afraid of whales and sea lions, and always leave when those mammals are around. Swanson has several times tried to keep the young alive, but soon they refuse to eat and starve to death. The fur is equally good through the whole year. Sometimes, especially in August an old otter will have an inch of fat on it.

"Later I discussed all these points with the native chief of the hunters, who added nothing, and verified all, so far as he could understand me, except that he affirmed that the sea otter does not hear well, while Swanson insists that it does. They are steadily decreasing; males and females are killed in about even numbers.

"To hunt them successfully the weather must be calm, the sea smooth and without much swell. Under such conditions the natives can hunt them at any time of the year. Outside of Prince William Sound, June and July are the best months. At other times the weather is so uncertain

that the natives do not venture out hunting, except to make an occasional attempt during the latter part of April and May. From eight to ten bidarkas is the best number for a hunting party. If there are less than eight, the chances are proportionately less; if more than ten, two parties are usually made up. Two natives must always be in a bidarka, and it is better to have three. The reason is that speed, sustained by steady paddling is needed, and when an otter is seen, the man ahead must stop and hold his rifle ready to shoot while the others paddle. Only the head man shoots, and if he must keep paddling, his hand and aim become unsteady.

"The natives know the feeding grounds. Sometimes they paddle offshore to these and remain there all night, so as to be on the spot early, as soon as they can see. More often they camp on shore, and leave in time to reach the feeding grounds by 3 A. M., often having to paddle ten or more miles to do so. There is always a chief of the hunters, appointed by Swanson, who directs the hunt. They form the bidarkas in a wide semi-circle and advance, keeping a sharp lookout for the sleeping or swim-

ming otter. These natives have a remarkably keen vision to detect and discriminate objects in the water. As soon as one of them sees an otter, he holds up his paddle and points until it is seen by all; then the boats advance toward it, trying to close the circle. When an otter first realizes the existence of danger, it raises its head to look, and sometimes rises quite high out of water. Then it dives and swims two or three hundred yards. All paddle rapidly in the direction which they think the otter has taken, for they can usually tell its course by the way it bends as it goes down. As soon as it comes up to breathe, one or two shoot to keep it down, while the others continue paddling and closing the circle. The otter keeps coming up, each time more out of breath, nearer and nearer some of the bidarkas, more and more quickly driven down by repeated shots. The circle grows smaller and smaller, until, gasping for breath, the hunted animal must rise high out of water—sometimes two feet—and recover for a moment. Now is the chance for a favorable shot, usually delivered by the man in the bidarka which is nearest to the otter, though often two or more fire at the same time. The natives have Winchester rifles, and are excellent shots at objects in the water.

"Sometimes an otter goes under a bidarka, and once outside the circle it usually gets away. Sometimes an otter is very cunning and raises only the tip of its nose out of the water to breathe, in which case it may escape, or more likely require a large number of shots to hit it. Swanson has seen more than fifty shots fired to secure one otter. The secret of success, and the most difficult part of the hunt, is to close the circle. When a good circle is made around an otter, it seldom escapes. Occasionally it takes seven hours to kill one, but an hour is the average time. In the excitement of the hunt there is constant shooting and rivalry, but strange to say the natives seldom shoot one another. When a circle is made around more than one otter, a small proportion, perhaps one, is killed, but the operation is the same, although necessarily more irregular. A female is easily killed if she has a pup, because she will leave it only to dive, and always comes up close to it. When hit, if not killed immediately, she will grab the pup and hold it with her fore flippers until her death convulsions. The young one cannot dive, and often, after the dead mother has been picked up, it will swim up to the bidarka and bawl, when it can easily be taken alive.

"Tributary to Prince William Sound are four widely separated feeding grounds of the sea otter: one off Point Steel, on the east end of Hinchinbrook Island; one off Wooded Island, near the southeast corner of Montague Island; one about midway between that and Middleton Island, near Wessell Reef, and the last off Cape St. Elias, on the southwest end of Kayak Island. The otters killed at this last point are said to be lighter in fur than those killed at the other places."

These notes were made in 1906. Since the sea otters have become very rare near Hinchinbrook Island and are seldom seen.

It was on Montague Island that Mr. Sheldon had a most astonishing experience with a bear, which he confesses may tax the credulity of his friends. He was hunting bears on May 13 and had started to climb to a basin, well back in the mountains.

"I went up the creek hearing water ouzels on the way, and finally emerged from a deep cañon, through which the water rushed, leaping down here and there in cascades, and in some places under ice and snow. Just before reaching the foot of the basin I turned up the south ridge, keeping in the woods in order to get high on the mountain slopes, and keep my wind above any bears that might be feeding below, as it was blowing strong up the basin. I reached the top of the ridge at 1 P. M. The other side sloped down to a creek flowing from another basin, and at that point led abruptly up to the great mountain on the south side of the basin I was to enter. Coming out of the timber I was at the foot of a conical hill 200 feet high and very steep; the top was covered with thick, stunted impenetrable spruce which extended ten feet down the slope and continued around it through a depression to more open timber beyond, where the hill joined the main mountain. I climbed this hill diagonally, looking on fine, red-tipped grass for bear tracks, but saw none. On reaching the spruces I passed around the edge of the trees, holding on to the branches for assistance in walking around the incline.

"I went high up and tramped along the mountain side. The basin was beautiful, with high, rough mountains encircling it. The air was filled with the rumble and roar of numerous snow slides. Starting high up, near the crests of the surrounding mountains, and appearing like immense cataracts, the snow dashed over cliffs and fell through ravines, until it slid in great masses over the smoother ground below, piling up in huge mounds as it stopped. I noticed many marmots about, some sitting up, some running about the snow near the mountain tops. At different points high up in the snow bear tracks were visible. Reaching a good lookout I waited until five, watching carefully on all sides, but nothing appeared.

"Then I retraced my steps along the slope and reached the conical hill around which I had passed earlier in the day. I was circling near the top, holding on to the spruce branches with my right hand, while the butt of my rifle, with the barrel pointing behind me, was resting over my left elbow. I had proceeded in this way a few steps when suddenly I saw, about eight feet away, on the curving border of the spruces, running directly at me, what appeared to be a huge bear. I had just time to push forward the butt of my rifle and yell, when the bear collided with me, knocking me down. It seemed to turn slightly to the left as I pushed my rifle into it, and I clearly recall its shoulder striking my left hip, its head striking just above my left knee, while its claws struck my shin so that it is now black and blue. I had the sensation of one about to be mauled and mutilated. As I fell to the right, my rifle dropped, and in my confusion I grabbed with my left hand the animal's fur, and I remember having a quick foolish thought of the small knife in my pocket.

"The bear was, I believe, more surprised than I. I felt its fur slip through my hand as it quickly turned to its right, and swinging about ran back over the hill without any attempt to bite or strike me. Rising as the bear wheeled, I picked up my rifle and shot as the animal was disappearing. The bullet struck it, evidently high in the back. Immediately I took up its trail, followed it down into the woods and on

the flats for over an hour, and at last lost the impressions on hard ground. Its tracks showed that it had kept running for more than a mile, and then settled down to a walk on the timbered ridges, continuing to a flat country below. For the first mile I noticed at intervals considerable blood on the leaves of the brush and trunks of trees about three feet up from the ground, but afterward saw no more.

"Who will believe this remarkable incident? Certainly if another had related it to me, I might have thought it some mistake, owing to excitement.

"Twice I have had the good luck to see the action of a bear when it crossed, unexpectedly, the fresh trail of a man—once in Mexico, and again last summer, on the Mac-Millan River, when a bear crossed Selous's trail. In both cases the bear jumped in great fright and ran at full speed. In this case, when the bear met me, I was approaching the top of the hill by the simplest, in fact the only easy, route along the edge of the thick spruces. My trail, made earlier in the afternoon, came over the hill from the north side. I found that the bear had ascended from a direction diagonally opposite, and had reached my trail near the top just as I was approaching; running, it kept its course in the same direction, and took the natural route around the hill, close to the spruces, in order to enter the woods further on, where they were not so thick, or to make for the mountain. At this exact moment I happened along, but, concealed by the curve of the spruces, and with the wind blowing from the bear to me, it did not suspect my presence until I yelled at the moment of collision. The fact that it did not maul me, and ran so quickly, is positive proof of its having been completely surprised. Still, I do not care to repeat the sensations I experienced at that moment. Here is another case, where many would have reported a vicious charge. I regret having been in such haste to take up the trail that I neglected to photograph the spot."

Mr. Sheldon's account of his search for the Queen Charlotte caribou possesses a peculiar interest. He gives the history of this extraordinary animal, from the time when, in 1880, a fragment of a skull was sent out which was afterward described by Seton as a new species, *Rangifer dawsoni*, down to the present time. This elusive animal was sought for by Mr. Osgood of the Biological Survey in 1900, and the search was continued by various people, through the years until Mr. Sheldon went there in 1906, always with the same lack of success—except that tracks and other sign were found by Mr. Sheldon, as they had been found by some of his predecessors. However, he did not see caribou, and it was not until two years later that three of these animals were killed by two half-breeds, Matthew Yeomans and Henry White, and their skins reached the provincial Museum in Victoria, V. I. The first detailed description of this caribou is given as an appendix of Mr. Sheldon's book, and was written by Dr. Merriam, who inspected the specimens in 1911. They are very small in size, scarcely larger than a black-tailed deer, and the antlers are small and almost without palmation. This caribou is undoubtedly almost extinct.

In his search for bears on Admiralty

My Three-Pointer

By D. B. W.

LAST year, as an appropriate relaxation after a year in an Eastern school, my sister and myself "camped out" with my father for about five months, along the Sacramento Cañon. Needless to say we had endless experiences, but the one I am going to relate at present concerns itself with my first deer.

First, let me introduce you to my dad. "Dad" is affectionately known all over California by this title. To know him is to love him. Over forty years he has lived more or less in the woods of Michigan, Minnesota, British

"DAD'S DEER."

Columbia and California. His store of woodcraft knowledge is unlimited, and he has a fund of anecdote, humor and intimate tales of the creatures of the woods that is unrivaled. Next comes "Sis," a lover of the woods and all that pertains to them. Lastly, myself.

On a morning in September we started forth at daybreak, Dad carried a pack and his gun, a combination of rifle and shotgun, of which he is very fond, Betsy by name. My Sis and I had a pack that we were to carry in turn; she also had a sack of shells and a fishing rod folded in its case. I carried a .25-50 carbine, brand new, and to be mine in case I shot a deer. Our two dogs—Mother and Dot—both foxterriers and trained deer dogs, accompanied us; also Genevieve, familiarly known as Jinny, a member of the "Rocky Mountain canary" species. She had a heavy load, bedding, provisions, canvas to be used as a roof and all the

cooking paraphernalia. Unfortunately, we could not get a regular packsaddle and the makeshift that we contrived was to cause us much trouble.

The trail we were to follow started right back of our camp, which was on the bank of the Sacramento River. This trail, known as the McCloud trail, leads for four miles up hill, then seven down.

Fortunately Sis and I were hardened by a series of fishing trips and exploring excursions, else we never would have reached the spot for which we started. The climb up hill was terrific, extremely steep and the trail exposed to the sun which was quite far up in the heavens by the time we conquered the up-grade.

Once Jinny's pack came off, and we had a dreadful time. A fractious burro is bad enough, but imagine having two girls who are scared to death of her for aid in boosting and tying the packs in place. Dad walked ahead, leading Jinny. Sis and I took turns in walking next and prodding her with sticks, as she was very balky. I found my rifle barrel very effective!

After an hour's walking down the trail we came to a spring. It was about eleven o'clock and we were parched. Jinny's pack was nearly off again, and we were all pretty near a display of temper. Luckily, the water and rest had a cooling effect, both on tempers and throats. Also we espied a sheep camp. One of the men had an extra horse and agreed to bring most of Jinny's pack and one of ours over that afternoon, so we set forth again with lightened hearts and loads—Jinny frisking along with occasionally a sonorous "hee-haw" to express her delight.

The scenery was magnificent, on one side old Shasta was in view; on the other, Mount Lassen. Vistas of hills and valleys, gullies and ravines opened before us. Part of the way was beside Tom Neal Creek, part along hillsides covered with timber, while often we passed through barren spots where burr oak, white thorn and chaparral bush ran riot.

Of course, we did not enjoy all of the tramp—the latter part required great effort. We had to wade streams, and tired feet in stiff wet boots are not conducive to comfort. Sis and I wore middies and bloomers of a dark material, nondescript hats and high boots. And oh! the times we blessed the absence of skirts, for even short ones are a hindrance.

At last we grew so tired we had to give in for one more long rest, so threw down the pack by the side of the creek and gave ourselves up to a few moments of luxurious rest. Just as we were getting ready to start again, the sheep man—Mr. G. came riding along the trail, leading the pack horse. Sis and I were showing signs of fatigue, I guess. At any rate, Mr. G. offered us his horse to ride. Sis climbed on and we were on our way.

The trail ran around the side of a hill. We were all walking along peacefully, when suddenly Jinny discovered a hornets' nest—or, perhaps, I should say the hornets discovered her. At any rate, she gave a series of jumps that nearly proved disastrous to Dad, for she almost

butted him down the bank and into the creek. Fortunately the horses passed without molestation, and in a few moments we arrived at Tom Neal's flat, as our camping place is called. It is a beautiful little flat with the trail running along the foot of the hill on one side, and the creek curving around the other almost turning the flat into an island, for you have to ford just as you reach the flat and just as you leave.

About four hundred yards further down the trail is a famous lick called the Crossing. We were very lucky in finding the flat vacant, for it is a very desirable camping place. One wall remains of an old cabin, and camping in the lee of it, it forms a needed protection from

"DAD'S DEAR."

the wind, for at night a perfect gale blows through the little cañon.

We rolled a huge log down the hill and placed it lengthwise with one end against the wall, fastened the canvas to the log, then stretched it up to a pole placed lengthwise, fastened to the top of the wall on one side and supported by a prop on the other. This formed a little three-cornered room. We made three beds, hung the packs to form a shelter on the side opposite the wall, built a fire in front and our camp was complete. Tea and bread and butter satisfied our hunger and we rolled into bed very, very early and were soon lost to the world.

Next morning Dad awakened me about four-thirty. We ate a hasty breakfast, left Sis asleep in camp, as she does not hunt, and journeyed forth. Dad took the dogs and went

SEA AND RIVER FISHING

Interesting Experiments in Fish Breeding.

BY RALEIGH RAINES.

THE United States Fish Commission is acknowledged to be one of the most valuable adjuncts of the country, bearing as it does an economic relation to the food of the people. For many years the scientists of the United States Fish Commission have been presecuting inquiries and investigations into the causes of the decrease of food fishes in the waters of the United States, and they have also been engaged in experimenting with aquatic animals, plants and waters in the interest of fish culture, all with the idea and purpose of propagating and increasing the supply of food fishes. Along this line of investigation experiments have begun to create new races of food and game fishes of larger and better quality than any now in existence.

For the latter purpose a new experimental hatchery station is being established near Washington, D. C., the first of its kind in this or any other country. Fish breeding is not a new science, as biological investigations and experiments have demonstrated that all kinds of animal and plant life are capable of crossing, breeding, propagation, and other methods of culture for improving species. What has been accomplished in the plant world and with many species of the animal kingdom the scientists now propose to try in the fish kingdom by crossing and breeding in efforts to produce new kinds of fishes. It is simply a question of choosing for mating purposes parent fishes that possess certain characteristics which it may be desirable to accentuate and develop following Mendel's law of heredity. One of the most important objects of the work to be inaugurated in fish breeding will be to adapt desirable species to a wider range of conditions, thus extending their availability for propagation and use over a wider area.

As an illustration it may be practicable to develop a species of trout that will flourish in the warmer climates of the Southern States. It may develop that the experts will obtain a species of salmon which will be adapted to the Mississippi River and its tributaries. A number of years ago about 50,000,000 Pacific salmon were placed in the Mississippi River, but the experiment was a failure, for the reason that conditions in that great river were unsuitable to the salmon. The salmon offers a splendid opportunity for cross breeding, and experiments with crossing the dog salmon with the popular "sock-eye" will be made, in order to obtain a fish combining the delicious flavor of the latter with the size of the former; in fact, efforts will be made to increase the size of all food fishes and at the same time improve the flavor. Such has been done with sheep, fowls, and other animals, and the scientists believe that the same success will attend the experiments with fish. The sunfish, the yellow perch, and the dace are examples of small fish which could have

their size increased to the infinite delight of all fishermen.

Eels are another species which it is proposed to treat in the matter of breeding with a view of improving and developing. At present eels are not propagated to any great extent in this country, though in Germany they are a source of profit. If grown in the inland waters of this country they would offer an excellent means of utilizing the nutritive material found therein such as insect larvæ, snails, water fleas and bugs. It is supposed that the eels spawn in the depths of the ocean which would, of

THE ONE THAT GOT AWAY.

course, render their breeding difficult, to say the least, but the young might be caught in unlimited numbers, transferred to ponds, fed, and thus allowed to grow to a marketable size. Germany offers a good market for them, as at present that country imports great quantities from Italy and England. The fish is peculiarly susceptible of almost extraordinary modification through breeding, as is witnessed in the case of the gold and silver fish. We secured these fish from Japan during the visit of Commodore Perry to that flowery kingdom. In Japan goldfish are raised for market on an extensive scale—selected breeding stock being bred in ponds. These fish were developed into their present state by the Japanese from a very commonplace member of the carp tribe.

Similar experiments with these fish are be-

ing conducted in this country among fish fanciers in the larger cities. These aquarium societies support a Fish Fanciers' Club, which organization publishes a magazine called the "Aquarium." It is claimed by the fish scientists that what has been accomplished with the goldfish may be done with other fishes, and now they propose to demonstrate their theories with actual results. One of the most important phases of the proposed experiments will have to do with the discovery, treatment and prevention of fish diseases, as it is the desire and purpose to develop a hardy and disease-resistant race of fishes. Fishes are subject to many ailments and maladies, the same as with domestic animals. Serious losses have been caused by epidemics at the State and Federal fish hatcheries, and although the fish experts have learned a great deal about fish diseases, they are anxious to learn more so that such disease may be both eradicated and prevented. Fish are subject to almost as many diseases as are human beings, and among the most prominent maladies affecting fish may be mentioned boils, liver disease, heart disease, nervous disorders and cancer. The basses and trouts are particularly liable to epidemics and germ infections.

As an illustration, not long ago one of the Federal fish hatcheries had a prospective output of 1,500,000 yearling trout reduced to one-fifth within a few weeks by the ravages of an obscure bacterial disease. Cancer is also a disease which is at the same time the most serious and destructive with which fish culturists have to contend, affecting both salmon and trout. Experiments are being made to ascertain if cancer in fish have direct relation with the cancer in humans, many scientists claiming that it does, the claim being based on experiments and observations of a conclusive character.

The successful efforts of plant and animal breeders to obtain races immune to disease have suggested similar possibilities where fishes are concerned. With this idea in view an experiment in breeding a race of brook trout proof against bacterial or other infection is now being conducted at the fish hatchery located near Northville, Michigan. A large number of trout are being bred by fertilizing eggs from such specimens as survive in the presence of a large number that succumb, by which means it is believed that "immunes" will be secured, which will then be distributed to other hatcheries. Considering the great amount of good that increased numbers of fishes would be to the entire population of the country and the possibilities which might be accomplished by increasing the supply of food fishes, the wonder is to everyone, sportsmen and others alike, why Congress will persistently refuse to enlarge the scope and usefulness of the Bureau of Fisheries. With the appropriation doubled to a million dollars, more than twice the benefit would accrue to the country. Included in the appropriation for the current year is an item of \$3,000 for reporting on the aquatic resources and fisheries of the Philippine Islands, based on investigations made in those waters by the steamer Albatross five years ago. Another item provides \$90,000 for protecting the seal fisheries in Alaska; \$3,500 for protecting the sponge fisheries, and \$5,000 for investigation

of the methods of beam or otter trawling, and whether same is destructive or harmful to fish and marine life. The latter is the result of a sharp fight made by Gloucester, Mass., fishermen against the steam trawlers who the Gloucester interests allege are about to destroy the fishing industry along the Atlantic Coast.

The Disappointed Bunch.

(Written by Hartie I. Phillips, one of the unfortunates, and dedicated to those who enjoyed (?) the outing.)

As October 12th, Columbus Day, drew near—when America was found—

Some members of the *A. P. F. C. thought they'd try famous fishing ground.

They'd heard that at one Seaside Park they capture channel bass so game,

"This bulldog fighter for us," they cried; "stripers and weaks are tame."

Great preparations, accordingly, the jolly bunch did make, Oiled up their reels, tested lines, to John Seger's went for bait.

"No more shadders," said John Seger, "the fishing season's through."

"We cannot fish without bait," they cried. "Good heavens what shall we do?"

A happy thought struck one of them. "I've a friend in New York town,

If I invite him to this glorious sport, he'll bring the shadders down."

The friend arrived crab-laden; his back was nearly broke, "I'm no express," he murmured; "lugging ten dozen crabs 's no joke."

The morn it was most glorious; the boys were in great glee;

They crowded on with rods and reels, at Belmar and Asbur-ee;

And when the bunch was counted, as the train it rolled along,

'Twas found that none was missing—they numbered twenty-one strong.

At Seaside Park they disembarked, and to the beach they flew;

"We'll show the channel bass where we live," they cried, "before we're through."

The ocean's waves were like a lake; not a ripple was in sight.

Along the beach for a mile they stood, they were ready for the fight.

What a noble lot of fishermen, as they stood in bold array.

'Twas 8 A. M. when they arrived, all ready for the fray; Nine A. M., and still they stood, each man awaiting for a bite;

Ten A. M., and still they stood, not a nibble was in sight.

Eleven A. M.—great excitement—word passed along the line

That a bluefish had been captured—which proved a false alarm.

It proved to be a wicked crab, which was landed on the beach,

The only bite, just then in sight, was something good to eat.

Accordingly adjournment was taken at this time

To allow the boys some grub to take, ere they got again in line.

Discussions as to reasons why the fish they would not bite—

Some blamed the wind, some blamed the tide; some, that fish had taken flight,

When lunch time it was over, and the fight they did re-
new,

The grub revived their vigor, it gave them courage, too.

At 2 P. M.—'twas true this time—two-pound weakfish it was caught;

This woke them up, better weaks than naught; they got ready for great sport.

Three P. M., and still they stood, like statues on the sand,

Awaiting weakfish number two, this sad and luckless band.

Four P. M.—and some of them, exhausted and forlorn, Were saying, "To thunder with Seaside Park, I wish I could get home."

HARTIE I. PHILLIPS.

But, sad to say, one train each way, is all the railroad runs.

After 6 o'clock is the time it starts—will 6 o'clock never come?

Tired and exhausted, and nature's limit reached, They all laid down, but not for long, to get a little sleep.

About this time great biting was experienced by them all, Not a man among the twenty-one who cannot but recall

The bites they got, but not the kind he'd wish to me or you—

For fully ten million mosquitoes even bit them through their shoe.

At last this mosquito-bitten bunch stationward did go, And figured what that weakfish represented in real dough.

The finance committee reported, that that one weakfish represents,

Not counting mosquito remedies, fifty dollars and thirteen cents.

FINALE.

The moral of this story, friends, 'tis not very hard to see: Don't go fishing on Columbus Day, looking for a dis-
cover-ee.

When America was discovered, it was to Columbus no great lark;

And you can bet your boots and trinkets, neither is fishing at Seaside Park.

*Asbury Park Fishing Club.

Illinois Casting Club.

CHICAGO, Ill., Oct. 9.—*Editor Forest and Stream:* Fortunate were those who were able to be present at our annual fall club tournament and to participate in the good fellowship of men who were drawn together by kindred interests in one of the most difficult and yet most fascinating of sports.

The first event of the day—the quarter-ounce accuracy bait—was cast in a gusty southwest wind, and the scores of the place winners in the various classes were quite remarkable under the conditions.

However, it was reserved for the half-ounce accuracy bait to produce the great sensation of the day. In this event Brother Stanley, casting in Class A, performed the seemingly impossible and unbelievable feat of making a perfect score. Those who have times out of mind, gone the half-ounce route know what this means, and when it is added that of the ten casts eight struck the six-inch center—five on top and three on the back—and that the other two casts struck six inches on each side, respectively, it will be

appreciated what a marvelous exhibition of casting was witnessed.

Class B in this event again showed its mettle. Brother Asper led with a score of 99.5, with Brothers Amman and Humphreys, second and third, with 99.3 and 99.1.

In Class C, Brother McFarlin led, with the new members, McCandless, Grant and Buchanan following.

Notwithstanding the unfavorable wind conditions, the scores made in the light tackle dry-fly accuracy were most creditable (eleven of the twelve scores being above 99 per cent.) while the leading scores of Brothers DeGarmo and Stanley were close to the record.

Herewith are the scores of the events in detail, as are also the scores of the members who have completed their season's work as per schedule. In this connection Brother Stanley again comes into prominence, he being the first to earn a place for his name on the beautiful friendship cup, presented to our club by the Chicago Fly-Casting Club.

Completed season's scores:

Quarter and half ounce accuracy bait, combined average:			
Stanley	99.22	Wehle	98.45
Pierson	99.19	Bauer	98.42
Linder	99.18	Heston	98.38
Whitby	98.93	Asper	98.25
Jamison	98.79	Swisher	98.14
Nicholson	98.78	Hartstall	98.9
De Garmo	98.76	Tournier	97.80
Kernaghan	98.73	McCandless	97.54
Kerr	98.52	McFarlin	97.14
Amman	98.47	Huntley	97.11
Delicacy and accuracy fly, L. T. dry fly accuracy, and accuracy fly, combined average:			
De Garmo	99.21	Linder	98.68
Heston	99.14	Amman	98.53
Stanley	99.3	Swisher	98.52
Pierson	98.90	Jamison	98.44
Whitby	98.74		

In competition for place on friendship cup, presented by Chicago Fly-Casting Club.

Combined average, ¼ and ½ ounce accuracy bait, and L. T. dry fly accuracy and accuracy fly: First, Stanley, 99.25.

Half-ounce distance bait: First, Stanley, 150 feet.
Quarter-ounce distance bait: First, Jamison, 109 feet.
L. T. distance fly: First, Stanley, 89 feet.
Distance fly: First, Amman, 105 feet.
Salmon fly: First, De Garmo, 130½ feet.

A. F. SWISHER, Sec'y.

Newark Bait- and Fly-Casting Club.

EAST NEWARK, N. J., Oct. 13.—*Editor Forest and Stream:* The following scores were recorded at the club contest held Saturday afternoon at the club platform, Weequahic Lake. The day was beautiful with scarcely any wind. Chas. T. Champion made the record distance fly cast of the season with 107 feet. Scores:

	Bait		Fly	
	Per Cent. ¼oz. Accy.	Average. Distance.	Feet. Distance.	Dem'ts. Accy.
*Marsh	98 5-15	188	...	10
Mapes	97 8-15	184%	98	15
Champion	97 4-15	93	107	22
Sands	97 3-15
Doughty	97	178%	88	11
Mercer	82	14
Jacobus	96 3-15	79%

*Guest.
The season's all-round trophy cup was won by Fred T. Mapes with 1,971 points and was closely contested by John Doughty, who had 1,922 points. Doughty wins the cup for the best season's average in accuracy fly-casting. Mapes wins the cup for season's best average in distance bait-casting. Champion wins the cup for season's best average for distance fly-casting and the cup for half-ounce accuracy bait-casting. P. J. Muldoon had an excellent chance to win the cup for season's best average in accuracy bait but unfortunately was prevented from attending the last contest on account of sickness.

LOU L. SANDS, Secretary.

GAME BAG AND GUN

A Bear Story.

BY WALTER B. SIEPPARD.

He jests at bears, to paraphrase, who never felt their claws. Some years ago, out hunting with a comparatively light gun, I deliberately avoided and left unharmed a bunch of three grizzlies, and when I returned to the little mining camp, near the Swift Current in Northern Montana, where I was staying, was laughed at only by those whose knowledge of this game had been derived from books or hearsay. Those mighty hunters before the Lord, Dan D. and Jack B., hearing the facts as to my armament and environment, commended my decision heartily.

And they were right, for although nine times out of ten, a grizzly is not dangerous, the tenth time he "means killing," as the tailor-bird said to Rikki-tikki-tavi about the cobra. And when he does charge, he must be stopped, or he will get the hunter, providing the latter has no tree or rock to climb. To stop a charging bear is a job to try the stoutest nerves.

Jim B., now a prosperous ranchman and cattle breeder in Routt county, Colorado, came to the State about forty years ago when a boy of seventeen, and learned to shoot in the mining region about Breckinridge and Dillon. It was a tough neighborhood in those days, and there were frequent gun plays. One day, Jim was offered a commission as deputy sheriff, and without much thought or hesitation accepted it. He had scarcely put on his badge when a warrant was handed to him to serve upon a celebrated gun fighter, who had just killed his fifth man. The sheriff, afraid to tackle the job, had left town and pushed it on to Jim, then barely out of his 'teens. And Jim took the desperado, by sheer nerve, getting him out from a crowd of his friends, all armed and defiant, and without a shot.

Afterward Jim drifted into trapping and market hunting, and became a more deadly shot than ever, slaying like Saul his thousands. It was a pleasure to watch him with his old single shot, breechloading, black powder Maynard, for he has never had any use for the smokeless, small-caliber gun. It never made any difference whether the game was coming or going or how fast. It was all one to him. He once took on five grizzlies in a bunch, with this old single-shot gun, and bagged all but one. All this simply to show that Jim had "sand" in abundance, and as a preface to the point I want to make about bears.

One day, among heavy quaking asp and down timber, on the Williams Fork of the Bear River, in Colorado, close to Pagoda peak, Jim ran across a big sow grizzly with a half grown cub. To make sure of keeping in reach, he dropped the cub first, making the shot while standing close to a good-sized aspen, up which he purposed to climb if he was rushed. As he expected, the infuriated mother charged him. "Now," thought Jim, "I'll let her get within thirty yards, and then I'll shoot and climb the tree."

He shot for the "sticking-place" and she went end over end, coming to a stop as dead as a herring. Lucky this, for Jim, for when he

shot and then started to shin up the tree, he found that while waiting for the bear to get close enough to shot, he had in his excitement kept backing away, over fallen logs and all, so that when the bear dropped she actually lay between him and the tree.

It was all a good joke, which Jim does not mind telling on himself. But it might easily have had a decidedly different ending.

What is a Game Bird?

HENDERSONVILLE, N. C., Oct. 7.—*Editor Forest and Stream:* I am handing you herewith a very good photograph of a pair of deer's horns of whitetail deer, killed several years ago in the adjoining county of Transylvania. One good horn on one side of the head and two small

NOTE PECULIAR HORN FORMATION.

ones on the other side, this side rather swollen also—a freak, in fact.

In a recent number of *FOREST AND STREAM* is an interesting article or letter from a correspondent regarding "What is Game?"

In my boyhood we called no bird a game bird that did not grow double feathers. In this class of course comes the turkey, grouse, partridge (quail), woodcock, snipe throughout their respective families, while pigeons, doves, larks and others we regarded as non-game birds. It now seems up to the law to class what shall be game birds under the law, and so robins are called game in many places and blackbirds and others, and doves are classed as game birds under the law.

Each State (and in this State each county) makes its own game laws through the Legislature, and the most absurd laws are passed each sitting of our Legislature. ERNEST L. EWBANK.

Quail in North Carolina.

RALEIGH, N. C., Oct. 2.—*Editor Forest and Stream:* The year has been extraordinarily favorable for quail in North Carolina. To begin with, the winter was so severe and there were so many snows that relatively little hunting could be done, and as a result, a great many birds escaped the sportsmen. Then, too, the summer was continuously hot and dry. Reports to the writer from many sections show that there were more double broods than usual. The writer has seen very large numbers of birds, not only in the section around Raleigh, but in other counties.

The grouse in the mountain and upper Piedmont districts—always spoken of there as "pheasants"—are also more numerous than usual, the writer was informed while tramping through a good deal of that region in August. There are some Mongolian pheasants in the high mountain region and in the middle Piedmont section and in Johnston county, which is east of Raleigh and near it. In some of the mountain counties, like Watauga, there has been protection of birds and fish for four years, and the effect has been very happy.

Quail hunting can be enjoyed in a very large area of the State, and there are some counties into which few sportsmen from other sections go in which there is excellent quail shooting. Johnston is such a county, and it is very easy of access. FRED A. OLDS.

Zoological and Ethnological Collection.

WITHIN a few weeks the whaler *Belvidere* will arrive at San Francisco from the Arctic with a large collection of zoological and ethnological specimens made in that region during the past four years by Vilhjalmur Stefansson and Dr. R. M. Anderson for the American Museum of Natural History, New York. Stefansson has already returned from the North and Anderson will arrive with the collection. One of the features of the zoological collection made is the skins, skulls and leg bones of nineteen barren ground grizzly bears, embracing, it is believed, two distinct species. The barren ground grizzly attains a weight of 700 pounds, living on roots mainly. At the approach of winter, when it is very fat, it hibernates and apparently passes the winter without loss of energy, for in the spring, when it emerges from its winter quarters, it is still fat. During May and April, however, there are no roots to be had and the bear grows thin. Stefansson has brought down an interesting account of the discovery of a race of white Eskimos which he believes to be descended from Norsemen. GOLDEN GATE.

Telling the Bees.

THE custom of "telling the bees" is often referred to by those interested in curious happenings. In some parts of England it has always been the habit to inform the bees whenever there is a death in the family, particularly when it is that of the master or mistress.

Someone raps upon the board supporting the hives and says: "Mourn with us. Master (or mistress) of the house is dead."

It is thought that if this duty is neglected the bees will die, and many old servants are fond of telling how the bees pine away when no one thinks to give them the sad message.—From the *Ave Maria*.

The Passenger Pigeon Award.

METCALF, Mass., Sept. 8.—*Editor Forest and Stream:* I have been told that you or some of your correspondents have offered a large sum for a wild pigeon, and that many have been sent you, but have proved to be wild doves.

I do not remember the wild pigeon. My farmer says he remembers them well, and that it is a wild pigeon that is nesting in one of my trees. He is sure about it.

I have this morning tried to get a photograph of the squab in the nest, the mother being away at the time. I shall try to get the mother if I can be quick enough with the camera. There were two eggs in the nest, but only one has hatched.

Let me know please what your offer is. The squab could be secured and probably the mother also.

J. P. R.

[No reward so far as we know has ever been offered for a wild pigeon. The statement made to our correspondent is undoubtedly a misunderstanding of the plan to save the passenger pigeon originated by Dr. C. F. Hodge, of Worcester, Mass.

At a meeting of the American Ornithologists' Union several years ago, Dr. Hodge pointed out that the passenger pigeon was probably on the verge of extinction, and suggested—what was of course obvious enough—that what is desired is not killed specimens of the passenger pigeon, but protection for those still alive. He suggested that it would be well to make it an object for anyone seeing passenger pigeons to preserve rather than to kill them, and that this might be done by offering a reward for an undisturbed nest of the bird. After the suggestion had been made, it seemed odd that no one had thought of this before.

The first step toward carrying out this plan was the offer of Col. Anthony R. Kuser, of a prize of \$300 for first information of a nesting pair of wild passenger pigeons, undisturbed. Soon other men came forward, offering substantial rewards with various conditions attached. Colonel Kuser offered \$300 for the first nesting and John Lewis Childs \$700—\$1,000 for the first confirmed report of an undisturbed nesting. The total amount of the offering up to the spring of 1910 was about \$3,800.

All through that spring reports of nests of passenger pigeons kept coming in, but investigation showed that none of these nests were those of passenger pigeons and almost all were wild doves. Dr. Hodge, *FOREST AND STREAM*, the Audubon Society and many of the newspapers worked hard, trying to make the public understand the difference between the wild dove—otherwise called mourning dove or turtle dove—and the passenger pigeon. These well intentioned efforts were not very successful. Most of the nests were demonstrated to be those of mourning doves, and we presume the nest reported by our correspondent is a dove's nest.

The passenger pigeon is believed to lay only a single egg. The mourning dove usually lays two. In *FOREST AND STREAM* of April 23, 1910,

Vol. LXXIV., page 651, will be found a cut of a mourning dove's nest showing two eggs of the mourning dove and a white disk representing a passenger pigeon's egg. Both eggs are reduced one-half; in other words, the relative size of the two eggs is shown.

After two years of fruitless offer of awards, without a particle of encouragement the prizes offered by those interested in this matter were withdrawn. It is not possible to say that the passenger pigeon is actually extinct, but there seems little reason to hope that any considerable number of them are left alive.—EDITOR.]

Sparrows and Wild Pigeons.

BY THEODORE GORDON.

REPORTS of losses through the depredations of English sparrows have been numerous this year, as they have appeared in multitudes in many places. Kitchen gardens have been ruined and the birds seemed to be possessed of almost omnivorous appetites. There is no doubt that losses in the aggregate have been very considerable and that sparrows may become a great nuisance. When the birds are so numerous, shooting them seems to produce but little impression upon them. Poisoned grain or other food is a dangerous remedy and the common figure of four trap is not effective. I have had several conversations with an old-time wild pigeon trapper, one of the most successful and expert of his day, and he is confident that with his regular pigeon nets he could capture great quantities of sparrows. These nets are double; that is, spring together from opposite directions and are fourteen by forty feet each, so that when sprung they cover a piece of ground twenty-eight feet wide by eighty feet long. The bait would consist of some favorite sparrow food and each of the places selected would be strewn with this for several days before the trap was used. Suitable hiding places for the trapper would be made. In trapping wild pigeons a decoy bird was always kept and was thrown into the air to attract the attention of flocks flying past. Pigeon netters often suffered much annoyance from bullet hawks and other of the small, swift-flying birds of prey. These hawks would take up their positions in trees within easy flight of baited spots and nets, ready to pounce upon any pigeons that appeared and the birds would not come in. A first rate trapper would catch and kill many of these hawks by luring them with his decoy and springing his nets when they made their arrow-like flight for the latter. The nets lay flat upon the ground and gave no warning when properly worked. A great many hawks appeared at pigeon time in spring and fall, and no doubt followed the migrating flocks.

The trappers hated the shotgun brigades who established themselves on ridges or hills, in open spaces, in the line of flight. The gunners blazed away at each flock of pigeons as it passed, and this practice made the birds wild and difficult to decoy. The sudden complete disappearance of the wild pigeon cannot have been entirely due to man. They were killed at all

times and murdered by thousands or captured alive on the breeding grounds. The habit of nesting together in vast multitudes was an unfortunate trait of the pigeons, as hundreds of gunners and trappers were attracted to the big "roosts." Dead birds were shipped in barrels and many live ones in coops. I distrust my recollection of the exact figures, but pigeons were often forwarded to the large cities in carloads from shipping points nearest the nesting grounds. In old times the breasts were sometimes cut off and salted for consumption in winter.

In spite of all this there were many pigeons the year before they became practically extinct. Reports of hurricanes, cyclones or great storms and the finding of multitudes of pigeons on the Great Lakes and even on the Gulf of Mexico have been heard. An epidemic disease of some kind may have attacked the birds, and we all know what terrible ravages such complaints make among game birds and animals. It is a sad business, but they are gone. We will never see the blue flocks dashing northward in early spring or when wending their way to summer lands in September or early October. They did not seem to be in such a hurry in the autumn; the young birds were with them, and they loved beechnuts and acorns. It is said that birds killed in Pennsylvania sometimes had Carolina rice in their crops undigested, but my experience with pigeons—that is, shooting them—was mostly in the autumn in New York, Pennsylvania, Illinois and Wisconsin. To the youthful gunner the pigeon was great game and a few of these fine birds made quite a heavy bag. I never killed more than three at one shot and never saw more than a few thousands in one day passing over. The vast flights that were said to have obscured the sun were a thing of the past when I was a small boy.

Value of Birds on the Farm.

California Fish and Game Commission.

In his warfare against rodent pests, in orchard, garden and field, the birds of prey are of special value to the farmer in the fact that they labor both day and night. While the hawks hunt by day, the work of the owls is carried on chiefly at night, so the work of the one supplements that of the other.

The one outlawed member of the owl family is the great horned owl. The economic standing of this bird seems to depend largely on locality. In regions where rodents are plentiful, it feeds chiefly on them, but when this kind of food is not available, it then attacks birds as well as making frequent inroads on domestic fowl. It has been suggested that "if farmers would shut up their chickens at night instead of allowing them to roost in trees and other exposed places, the principal damage done by this bird would be prevented."

While the great horned owl is of doubtful utility, the barn owl, or monkey-faced owl, as it is commonly called, stands out pre-eminently as a friend of the farmer. While pigeons are sometimes driven from coops by these birds, they are seldom destroyed.

The barn owl is especially useful during the nesting season, sixteen mice, three gophers, a ground squirrel and a good-sized rat being fed to one nestful of birds in about half an hour.

This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

IMPORTANT DECISION IN CALIFORNIA.

A DECISION of the utmost importance to anglers and hunters has just been handed down in the Supreme Court of California, and according to which navigable waters of California are open to all sportsmen, no matter who owns the soil beneath them. This decision was handed down in the court after a fight that has lasted for six years, the case being that of Edwin H. Forestier vs. Frank Johnson. Forestier owns 302 acres of land on the Napa River, which at ordinary high tide is covered with water and known as Fly's Bay. He was given title by the State on a sale, Jan. 15, 1906, and a year later a patent was issued to him. Shortly after the purchase Johnson and some friends visited the bay to hunt and fish, but were driven away by Forestier. The latter tried to secure an injunction to keep Johnson away, but the Superior Court found that Forestier was not the owner of the "so-called property," although his patent to the soil under the water was conceded. The case was carried to the Supreme Court and in the decision just announced Justice Shaw said: "The defendants admit that the patent is valid and conveyed the soil underlying the bay to Forestier and complete title to the premises, except as they may be necessary to public uses. The United States has paramount right to control navigable waters within the several States so far as may be necessary for the regulation of interstate and foreign commerce. The State can make no disposition of the soil beneath that will impair this right and power of the United States. The defendants have the privilege of hunting on these waters while exercising the public right of navigation over them."

In connection with this important decision it might be stated that there is another case now pending in the courts whereby the right of California to dispose of tide lands is contested. The

stand is taken by the Federal Government that the tide lands turned over to the State must forever remain State property and cannot be sold. In case this contention is upheld, thousands of acres of private preserves held by hunting clubs will revert to the State and may be held only by lease.

A PROMISING GAME SEASON.

FROM every State we thus far have heard from come reports of "the best game season in years." The new protective laws enacted in most States and the scientific application of propagation already are showing their value. The appointment as commissioners and wardens of intelligent men having thorough knowledge of game conditions and the weeding out of game protectors whose only right to the title is political has worked great benefits. Politics, however, play too important a part in some States. For instance, word comes from no less important a State than Minnesota that Governor Eberhart's re-election assures the continuance as president of the Board of Game and Fish Commissioners of George J. Bradley.

Now we haven't any great interest as to the particular party to which Governor Eberhart owes his election; in fact, we do not know whether he is Republican, Democrat or Moose, but we do know that from a conservation viewpoint if, as seems to be the case, Mr. Bradley's reappointment depends upon Gov. Eberhart's continuance in office, Gov. Eberhart should be re-elected, for the reason that Commissioner Bradley has served three years on the commission, during which time much has been done for the good of fish and game in Minnesota, both in propagation and protection. Considerable time will be necessary to carry out the work started by Commissioner Bradley, and he should be allowed to carry his plans to a successful conclusion.

This one instance brings forcefully to mind the fact that commissioners and wardens should hold office just so long as they prove efficient and should have no fear of being superseded at the expiration of their terms should another political party be in power at that time. Honest police service by wardens and deputies to supplement intelligent effort by commissioners will do a great deal to bring back "the old days" shooting of which all of us have read with so much interest in back numbers of FOREST AND STREAM.

THE PROOF OF THE PUDDING.

PRINTER'S INK compiles a table showing the aggregate amount of advertising carried by Forest and Stream, Outing and Field and Stream for the past four Septembers. It shows as follows:

Publication.	Agate Lines of Advertising.
1. Forest and Stream.....	61,839
2. Outing	57,267
3. Field and Stream	45,024

Which proves that FOREST AND STREAM in September, 1912, 1911, 1910 and 1909 published an aggregate of 4,572 lines of advertising more than its nearest competitor and 16,815 lines more than its near namesake.

THE JOYS OF THE FIELD.

LONG occupation in business, day by day, week after week, month after month, which, passing away, make the procession of the years, becomes at last a habit, inflexible and dominant.

A man who has the business habit to the exclusion of all other habits sees largely but one side of human nature—the side which is incessantly commercial and striving for material gain. In the competition of business there is little place for diversion or the play of sentiments. Buying and selling, working and paying, with the constant under-current of care which links the responsibilities of to-day with the possibilities of to-morrow, are serious occupations and exclude most else from the mind. It is proper that it should be so in actual business. The serious problems of life deserve serious consideration and attention. The mistake is in making life all serious without relaxation. It should not be all grim and hard and laborious. Nature has her serious exactions, but she is also profuse in the beautiful and pleasing. The earth is in beautiful dress, colored in a profusion of delicate tints and shading, blending exquisitely and never out of harmony. The flowers, beautiful in themselves, have pleasing odors. The birds animating the stillness of the air have sweet songs which please the ear; in short, in nature there is everything to afford wholesome pleasure to the senses and health to body and mind. There is that in the air, in the woods, in the field, on marsh and in waters, from which man can derive new life, new inspiration and a better understanding of nature and of his fellows.

He is certainly a sordid individual who has neither taste for or knowledge of the joys of the field, who wonders whether it is sport or greed that lures so many men from the comforts of home and the fascinations of business to face all sorts of hardships and privations in slough and stream in the wildfowl season.

If the sportsman be advanced in years, the fires of youth surge back over him the night before he crawls into his blind in the golden rice of darksome tules. In his dreams he is again sailing over the old Christmas tide of his boyhood. If he be a young man, with a long vista of years before him yet to be trodden, his emotions are even keener, and more varied, and in the beatitude of the moment he would not exchange places with a king.

RAILROAD ADVERTISING.

ABUNDANT—an overflowing fullness, says Webster. How often this word is used in railroad advertising to describe game conditions in the territory reached by their different lines.

"Moose and deer abundant" is a common statement made by some railroads when as a matter of fact no such state of affairs exists in this country. Of course we realize it is not the intention of any railroad company purposely to mislead through its advertising, but only to make as alluring as possible country traversed by its service. However, the advertising does mislead, consequently should be remodeled to fit the exact conditions rather than the hallucinations of an imaginative copy writer.

FOREST AND STREAM is invariably spoken of by good authorities as one of the first sportsman's magazines of the world.

YACHTING

The Following Sea

By LIPPINCOTT FOSTER

"I'll bet that schooner is going sixteen miles an hour."

"The Vigilant could do no better." The mate's remark and my reply were apropos of the sight of one of our three schooners on her sky-hoot up the river under close-reefed foresail and reefed fore-staysail, but for my part, although pleased at the picture she made, when I regarded the blizzard-sized snow drift she was carrying in front to pillow her head on, I would wish to knock a quarter-mile off that.

But our own plunge-o'-time soon came—that wild, flying-cloud October morning, with southwest gale, after the night-before rage of the

hull and rigging every rope was in place and neatly coiled down, and the glare from her brass work was fit to burn holes in their faces when the sun would throw his fire back from it as he showed occasionally through rents in the flying clouds.

"What a little jib!" shrilly voiced the small boy that has to have his say. Everyone expects it, and no one pays any attention whatever, but one thing can be bet on as a surety—all youngsters in these river front towns know the jib from the rudder post, and why? As our tiny ship starts on the fly, the call of shore class was instantly acknowledged on our part by the salute

The river at Delaware City is somewhat sheltered from a southwest wind, but the curve of the great circular bay, swept on a four-mile radius, soon brought us, as we sailed, to where we were becoming more and more exposed to the full sweep of wind and wave from a constantly increasing distance. The further we would go, the worse it would become. I knew this coast and about what to expect from old-time strenuous experience, but this time roughness was worse than I had bargained for. Twice we anchored, for the sea ahead looked to be quite too viciously much for our size. There was no place to stay in for the night—not the thread of a creek, and the ebbing tide would leave us in the breakers, unless we anchored far out, but anyone would be far out if they thought we would lie in or about such a diabolical assortment of high-heaving curling water as that stuff off to starboard.

"Heave her out, Gus," Like when we were small boys at baseball, and one of our tribe had batted a weak one, and leaving his bat to sail through the air behind him regardless of direction or chances of busted heads, he streams away, working every muscle to reach first base

CARO AND SCHOONER AS THEY LAY UNDER THE BANK.

STARTING AN OVERLAND HAUL.

hurricane, and now the mate and skipper and little 18-foot yawl-rigged yacht Caro (alike in Carry) coming home from a cruise on the Chesapeake, are following a big schooner into the lock at Delaware City. We had room to spare astern of her when the lock closed, and after it was emptied, and we caught a glimpse of Jersey daylight as the river gates parted, we hoisted our small storm jib and the schooner her reefed fore-staysail within its walls, and as the gates were folded in it gave her a start. As soon as the fore boom cleared the lock gateway, the close-reefed foresail went up fast. Then a wave of her skipper's hand signaled that she was on her way up the wild stream toward the great city.

A gallery of the towns folk lined the edge of the pier to see these goings off and make free comments—from knowledge mostly—and our slick craft with streaming colors got its share and more, but only by reason of its size; not for her style. She looked as if she had only been launched that morning. In the freshness of her

of our caps ascending upward as at the same time our hinges allowed our backs to bend down until our noses near rubbed the coaming. The deepness of this bow simultaneously was not too much gyration for the cause that brought it forth. A high stylish, alright kind of a lady all in white was smiling and courtesying to us from the pier, and with a wave of white from her hand. At the same moment the tall well-groomed quiet self-contained-appearing man with her had raised his cap and was making us a deep bow. As we slid quickly away and jumped into the big watery chunks around the pier end, our last memory of Delaware City was most pleasant. The smile never blew away for a mile or more that day.

"Throw me up my boots," was the appeal of the stocking-footed mate standing on the pier at Newcastle after he had climbed with our line. Never was he seen by me to make the first motion toward getting his feet out while he was aboard.

ahead of the ball, and the loudest yell of all among the chorus of shrieks behind him to accelerate him on his way is, "Yer got to go."

It was just so with the Caro when that anchor came aboard; she had to make it good this time.

The end of Newcastle pier would be almost completely hidden in the thundering whiteness of the crumbling mass of water as a wave would strike, while from the granite ice piers that outlie, the spray would fly to great heights from their sloping sides, but the sea butting the long solid sides of the pier would back-wash and made the worst looking steep cross sea to go through that I could ever remember to have seen. It curled both ways and our yacht was only 14 feet load waterline by 5 by 1 with an open cockpit.

Who loveth not to meet exciting adventure when he cruiseth, it were better far for him he shippeth not aboard our craft. She was not like great ones with a fringe of three or four or

half a dozen wave tips to rest in from rudder post to stern boot top, for when such a one comes to her, it heaveh her right up with it.

What wonder I failed to notice Gus free himself from his rubber boots. I never saw him ahead of me in the cockpit any more than if he had not been there. He said afterward: "When I could see close ahead what an awful white mess we were compelled to go through off the end of that pier, I immediately pulled my boots off so as to have some show of life in swimming." I told him: "You should have remained in your boots and gone down like a gentleman, if necessary." It bore not to me the appearance of being a good place for a natorium in any kind of a suit.

The reason of my mate's sightlessness aboard the soaring Caro was that my faculties were all needed in the business of steering the boat through; in also mentally lifting her over every threatening crest by an extra power that seems to be given us for use in emergencies if we will it so. In going through, only some of the lightest of the suds lathered us. Thus was the first time proved afloat, and many an after time, what a magnificent sea boat was the Caro.

After provisioning at Newcastle, we flitted away again. It was easier going now, because of the marshy shores, and the coast trending more northerly. The edge of the "mash" sucks up the waves without breakers, and its border is navigable for a smallness of boat that the heart fails it at the thought of climbing the crested billow out in the channel. We were compelled to do that thing also to get around the end of the long railroad pier that puts out below the Christiana River. It was an open pier on piles, so the cross sea did not bother.

A photograph of the mate, taken while at the helm, and in the heave out there to satisfy the longings which we all have, to be perpetuated as one who had done things and which had for a background the following sea, showed the usual disappointing photographic result. The local wrinkles and wavelets on the slopes of the big fellows came out sharp, while the undulations we were after—and that were after us—their shadows failed of impression on the plate. The resultant picture showed the following sea appearing almost like a flat field covered with little waves, save for big bright spots here and there to the horizon where it had been combing. But our ensign in the picture stood out flat—wrinkleless—as if it had been cut from tin. The breeze did what it could.

We met nothing moving under sail on the face of the waters, and there was nothing moving much on our faces either, as they were "set" most of the time, and very little fit to eat moved into them that day, which was rough—like the sea. The mate shrunk together considerably so as to offer less surface if a sea should take a notion to eat us up, and he said to me with a hunted look in his eyes, "I hate to acknowledge it, but it is so. I don't like to look over my shoulder." I told him, "Rest easy, pull yourself together, I am in the same boat."

Behind the shelter of Edgemoor pier, a poor place because of the shallow water, our reckless hook went splashing down for the night, and when we got spread out on our heaving berths, we were all in, dog tired and cared little for anything.

By the jig the boat was doing on the Sun-

day morning gray, when we awoke it felt as if the dance was still agoing on like yesterday. Looking out from the end of the cabin shoreward, the tops of the large trees were seen to be beaten down by the wind, tossing as on the evening before. A look out on the river showed a small schooner—a smart Aleck—who imagined it really necessary to try to get somewhere against the wall of wind and wave, and over such white-topped hills as were coming down from windward, beating under bobbed jib and close-reefed mainsail. In the act of going about to the starboard tack, as he came up into the wind, a sea reared up and said good morning to him, its foam seeming to go half way up the foremast, and he shed tears as he fell off again on the same old tack shoreward. This was interesting: "Watch him try it now." He no more than by jinks just did do it, which was well for him, for a failure to pay off on the right tack this time would have meant quick work with the anchors or a go ashore.

I stood on the heaving after-deck after watching the schooner's glorious dives and plunges and the wild tide borne way out to windward. I found myself looking down in mild wonder at another interesting sight. It was a load waterline that had been drawn by a wet wave the length of our canvas cabin. The soaking wet curve cut sharp and clear along the canvas, and at its highest point amidships was within two inches of the ridge. This looked as if she must have swung out beyond the end of the pier, touched bottom in the valley, and then a wave must have taken her on the broadside. I never remarked to the dear mate, but as I regarded the card it had left, I had a justifiable suspicion, all to myself, that along in the middle of the black watering night, somewheres our entire motion picture show afloat came near enough to being introduced to Mr. Davy Jones and his locker.

What business was it of mine to remove my grasp from the handle of the coffee pot while we were reeling so for one fraction of a second even if Gus did want the salt? But to please others is all we live for, therefore I reached in its direction of a quickness, but the hot steaming pot was quicker in getting off its perch and shot its near boiling contents along the cockpit floor and some into our turned back bedding. It is well to be young and active, but none of it touched the mate doing the instantaneous cantilever bridge act, but because of the mess left by the receded brown tide, he had grounds of complaint against me. We were preparing our breakfast on the throttled down—because of the waviness of the blaze—alcohol stove that Sunday morning in a jump above Edgemoor pier.

We left Edgemoor, Del., at 9 o'clock and were back to the float in Cooper's Creek, Camden, N. J., at three with the mast out, and as these two figures of time of departure and arrival are the only ones in the yarn to remember—what good some yarns are almost nothing else—it should be easy, but they were put in because it doesn't seem right never to mention once the time of day we expectantly departed for further experiences.

There was a wild rush under the little jib all the billowy way—billowy except on one spot where we struck a smooth that was very remarkable. Below Marcus Hook a long refinery pier with a great steamship alongside its

windward side, the up-stream rushing tide against it, produced out beyond the end of the pier a wonderful flat dome of swift-flowing water sizing up to a half acre, perhaps. When we had succeeded in shaking off the last grasping rough one astern, we jumped on it, swiftly sped across, and plunged half buried into the fringe of rolling breakers that lined its upper edge. This trip across gave us a new experience in doing some sailing. We saw other—not so happy—craft which would not go at all.

As we went we saw many evidences of the storm's ravages in wrecked craft and piers. One schooner seemed to be all right and standing upright, but had been washed and blown away back in the "mash."

At the yacht club moorings at Essington a big seagoing steam yacht was ashore, lying on her bilge high and dry, and to think a little snip like us was flying gaily by.

This was not a day to choose for a yacht race, but the Delaware River web-foot breed of yachtsmen is of a toughness. Those two big cats on the wind that we rushed by and gave the merry hail off League Island had all their tucks gathered, but the area of their sails remaining was a burden to them; they dragged it. As we looked at the rows of wet blue nozzles of the crews piled out to windward, protruding at intervals through the cataracts of cold slop and storm of snowflake lathery suds coming aboard to them with irregular regularity, a fine warm rosy-hued feeling of thankfulness takes us by the hand, pokes us in the ribs and makes us feel how glad we are to be going the other way this time under the little jib.

When we rounded Greenwich Point and hauled up for the broad reach through the city harbor, I gave her the reefed mizzen. Wonderful how the wind held with this additional sail. We tore along and quickly finished the course around Cooper's Point to the creek.

Beside the smart Aleck schooner of the early morning, and the two fierce cats scratching for cups and glory, not a hull under sail had been met from the lock gate to Cooper's mouth. When we went to lower the flaming pennant, only the staff came down. The long paddle up the tide-flowing creek, with our unrigged craft, was a quiet Sunday afternoon pleasure by contrast with the shaking up we had undergone.

We gave back a final look as we swam around an upper point. At our last dinner camp at fair Red Hill, whose carefully put out fire was the last of the year, and though full—as of dinner—of regrets at the parting with outside nature, the smoky fire memories of this and countless others that have flamed around utensils or only showered sparks aloft for us into the starry dark, brightens the world a bit.

Yachtsmen in Session.

Forty representatives of yacht associations from the lake regions, Long Island Sound, Philadelphia and New York met in the Atlantic Coast Conference at the New York Y. C. last week to consider changes in the racing rules with a view to clarifying them. A permanent organization under the name of the Yacht Racing Conference was decided upon with a committee of nine on rules, to be appointed hereafter.

A committee of five, made up of W. Butler

Duncan, Chairman; Charles Lane Poor, Louis M. Clark, Henry A. Morse and C. Sherman Hoyt, were appointed with directions to report in five days the rules framed in accordance with the sentiment expressed at the conference.

Among other changes decided upon it is provided that Nov. 1 hereafter is to be the day for closing the yachting season, and that women aboard yachts are not to be counted as members of the crew.

In all changes in connection with the rules affecting the limitation on displacement only the yachts designed or contracted for up to Oct. 11, 1912, are affected. It was decided to declare as confirmed the right of appeal from the regatta committees to the Yacht Racing Conference, through the various stages up to that, the last tribunal.

William Gardner's New Partnership.

WE note with pleasure the announcement that William Gardner has formed a co-partnership with Frederick M. Hoyt and Philip Leventhal, under the firm name of William Gardner & Co., naval architects, engineers and yacht brokers, 1 Broadway, New York, and that the personnel of the designing and brokerage departments remains unchanged.

Canoeing

American Canoe Association.

PROPOSED AMENDMENTS.

AMEND Article VI., Sec. 10, of the Constitution. Add after word "Association," line 8, the words, "and have power to enforce them."

Amend Chapter IX. of By-Laws. Add after word "Camp," line 21, the words "subject to enforcement of rules by the Racing Board."

RACING REGULATIONS.

Amend Rule XIII., Sec. 2, to read as follows: Place in "Record."

To obtain a place on the "Record" a contestant must enter and finish in all three record events, subject to other clauses of this rule, and no competitor who has not started in each previous event, if any, shall be allowed to start in any subsequent event.

Only such contestants as finish in all three record events will receive a credit number, according to position relative to each other in each event, the highest number given in each event being equal only to the number of contestants that finish all three events or are permitted to remain in the "Record," the next one less and so on, except that the winner of each event shall be given a premium of three points for winning, the second man two points and the third man one point. The total numbers given added together shall give the credit number on the record.

In case of unavoidable accident, which prevents a man from finishing in any one record event, the regatta committee may, at its discretion, permit such contestant to enter the other events, and his marks to be counted for the "Record," but he shall receive zero for the event in which he did not finish. He shall also be entitled to any prizes won in individual races, but

in case of disqualification for committing breaches of the rules, he shall neither be entitled to any prizes for positions won in previous races, nor allowed to start in subsequent events.

Amend Rule XIII., Sec. 4, to read as follows:

The open canoe sailing trophy race; distance nine miles in three heats of three miles each. The first and third heats shall be on the triangle, the second shall be over a windward and leeward course of not over one mile; time limit one and one-half hours for each heat; for points counted the same as for the record.

Amend Rules XVI. and XVII. to read as follows:

Rule XVI.—Officials:

For every race there shall be a referee, starter and three judges.

DUTIES OF OFFICIALS.

Referee.—The jurisdiction of the referee extends over the race, and all matters connected with it from the start until its final termination.

Any competitor refusing to abide by the decision or to follow the directions of the referee shall be disqualified.

Judges.—The judges shall report to the referee the order in which the competing boats cross the finish line, but the decision of the race shall rest with and be declared by the referee.

Starter.—It shall be the duty of the starter, upon notice from the referee, to start the various events.

The referee may act as starter if he desires, but where he does not so act, the starter shall be subject to the control of the referee.

Rule XVII.—Paddling Races:

Starting.—Paddling races shall be started by the starter asking, "Are you ready?" On receiving no answer he shall say, "Go." If he considers the start unfair he may recall the canoes to their stations and any contestant refusing to start again shall be disqualified.

The combined sailing and paddling race shall be started in the same manner.

Canoes shall be started by their bows, and shall have completed their course when the bows reach the finish line.

Water.—A canoe's own water is the straight course, parallel with other competing canoes from the station assigned it at the start to a relative position on the finish line.

Each canoe shall keep its own water throughout the race, and any canoe departing from its own water will do so at its peril.

The referee shall be sole judge of a canoe's own water and proper course during the race.

Fouls.—It shall be considered a foul when, after the race has commenced, any competitor, by his paddle, course or person, comes in contact with the paddle, canoe or person of another competitor, unless in the opinion of the referee the contact is so slight as not to influence the race.

In case of a foul the referee shall have the power (a) to place the canoes (except the canoe committing the foul) in the order in which they finish; (b) to order the canoe engaged in the race (other than the canoe committing the foul) to paddle the race over again; (c) to restart the qualified canoes from the place they were when the foul was committed.

GEO. P. DOUGLASS,

Chairman Racing Board A. C. A.

Canadian Canoeists Challenge.

BY F. C. HOYT.

GRAVESEND BAY will be the scene of an international canoe race next year. The New York C. C., the oldest organization of its kind in the country, has been challenged for the International Challenge Cup by the Gananoque Canoe and Motor Boat Club of Gananoque, Ontario, and the races will be held on the lower bay next summer.

The Canadians have named Ralph Britton as their representative. The defender will not be known until after a series of elimination races to be sailed early in the spring. Although the New York C. C. is the holder of the trophy, the Gravesend Bay organization will welcome the members of other clubs in the trial races, and the best canoeist will be chosen to defend the cup.

As there has not been a race for the trophy since 1895, it is expected that more than 1,000 canoeists will compete in the trial races for the honor of representing this country against Canada. The boats used in the contest are about 16 feet over all, 2½ feet beam and carry a sail area of 160 feet. A long sliding seat is used to counteract the force of the wind against the sails.

There was a time when the International Challenge Cup was the most coveted trophy in the world of canoeists. It originally was offered by the New York C. C. in 1885. At that time there was considerable interest in the sailing of deck canoes. The American Canoe Association has been in existence for about thirty years and each summer there have been meets on the St. Lawrence River, Lake George and elsewhere, at which racing among deck canoes was the principal attraction.

The offer of an international trophy gave the canoeists an additional incentive for racing. The first club to challenge was the Royal C. C. of London. The race was sailed in 1886 and the challenging club was represented by Warrington-Baden-Powell, brother of Lord Baden-Powell and by Walter Stewart. The defendants were C. Bowyer Vaux and William Whitlock, who retained the cup. Two years later the Royal Club sent over Mr. Stewart, who was beaten by Reginald S. Blake.

Canada took a hand in the game in 1890 when a challenge was received from the Brockville C. C., nominating Ford Jones as its representative. Mr. Jones was beaten by H. Lansing Quick, of the Yonkers C. C. Not at all discouraged, Mr. Jones came after the cup in 1891 and again in 1892, losing the first year to T. E. H. Barrington and in 1892 to T. S. Oxholm.

The next race was held in 1895. The challenger was the Royal C. C. of Montreal and the representative was Charles E. Archibald. The New York C. C. successfully defended with Paul Butler. There has not been a race since 1895.

The New York C. C. still is uncertain regarding its plans. Commodore Bayley announces that there will be an elimination series of three races to pick the defender. The deed of gift states that the challenging club may name from one to three representatives and that the defending club is limited to the same number. As the Gananoque Club has nominated only Ralph Britton, there will be only one defender for the mug.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

Oct. 29-30.—Demopolis (Ala.) G. C. W. C. Du Fue, Sec.
 Oct. 30.—Medford (Okla.) G. C. Dr. I. V. Hardy, Sec'y.
 Nov. 7.—Adams (Neb.) G. C. H. K. Mitton, Sec'y.
 Nov. 21-22.—Clinton (Ont.) G. C. J. E. Cantelon, Sec'y.
 Dec. 2-6.—St. Thomas, (Ont.) G. C. W. J. McCance,
 Asst. Mgr.
 1913.
 Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard
 Tufts, Pres.
 July 8-13.—Cedar Point, O.—The Indians' tournament.
 D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

A. J. Burns writes us that "the North Brewster (O.) Gun Club will hold an all-day shoot at North Brewster, on Thanksgiving Day. Turkeys, ducks and geese will constitute some of the prizes to be awarded. Shooting commences at 9 o'clock. We will have our new trap installed and initiate it on that day, with new trap house and perhaps new club house. We will have a good many interesting events during the winter."

R. Young, Secretary Jersey City Gun Club, writes: "The Jersey City Gun Club to-day re-opened for the 1912-13 season, and will be open every Saturday afternoon thereafter, and extends an invitation to all shooters to pay us a visit and spend a pleasant hour or two. Targets are trapped at 1 cent each to all. Special attention will be paid to beginners, as one of our members has volunteered his services for the season, and promises to make shooters of us all."

W. G. BEECROFT.

"Bob" Elliott's "Bull Moose" Tournament.

AND now comes the pencil pusher to the point of announcing the results of the third progressive trap-shooting tournament held on the world-renowned Blue River shooting park, Kansas City, Mo. When Elmer Shaner named the park, he did not realize that it would become the most noted meeting place for a variety of events of any park in the country. Shortly after it was held here the world's largest and greatest shooting event, the G. A. H. at live birds, and from that time up to the present, more G. A. Hs and Western Handicaps, individual races, and especially a long string of strictly amateur events, such as no other promoter save Bob Elliott has inaugurated. And more, he has made a great success of every one of them. The strangest thing that comes to mind is why all other park managers do not fall in line and try Elliott's handicaps and Elliott's division of the entrance money.

Look over the scores herewith and note how few of them overreached the limit of 88 per cent. shooters. These contestants met as a body of socially good fellows, and tested their skill with those of their equals, not being compelled to withdraw before the program had been completed by attempting to compete with 95 to 100 per cent. fellows.

Those of you who were not favored with a program need a little insight as to what was carried out during this shoot. First, it was a simon-pure amateur event, the shooter being classed as an 88 per cent. man and no better; if he developed any better gun pointing during the progress of the shoot, then he was subject to a distance handicap. Only in the last 100 target event did the boys show over 90 per cent., and then the conditions were favorable.

The attendance on the opening day was good, though not up to expectations, as Bob was looking for one hundred. Those present were enthusiastic and out for a good time. Few overreached the 88 per cent. dead line, while others ranged all the way down to below 70; some even lower.

The leading men were: E. Miller, of Pittsburg, Kas., who made a total of 179 out of the 200; Joe Gray, of Moberly, was second with 177, and then came Wm. Munsterman, 175.

When the day had closed, it was noticed that a number of men who were in their prime twenty years ago and had lost their cunning, were out competing with the beginners in this great sport of smashing "mud pies." If they will pardon us for calling attention to dimness of eyesight, we mention Judge Allen Dixon, F. N. Cockerill, Ira Allen, W. B. Cosby, Baily Johnson, G. W. Jenkins, Wm. Allen, Andy Thomas, George Stockwell, E. Howe and J. W. Harlan.

The second day found a number of new shooters at the firing line while a few had sore shoulders and remained away. H. K. Mitton proved to be a little strong and ran his score up to 183. B. Pierce, of Pittsburg, Kas., came under the wire with 180, and E. Miller, while holding his own to a fraction, was third.

On the third day the sun shone out, and the wind

was fairly quiet, so that good scores were made for this class of shooters.

Mr. Pearee, who showed up on the first two days at the top, came away to-day with the very good score of 94 and walked proudly away with the \$100 diamond medal. Chet Dixon doesn't quite keep up to his brother, and yet he proved a close runner-up with 93, while third honors fell to H. K. Mitton, the Nebraska lad.

While the 100-target event was going on there was another event being pulled off that reminded one of "ye olden times." Don't mention it so loud, but then an old set of Fulford live bird traps were being filled with live pigeons, and as fast as they were emptied, they were filled again and again until some forty odd men had tried their eyes on 25 birds each.

When night closed in there was George Stockwell, a veteran wearing that fine \$100 watch as winner of the big event. Well, George had to stop 27 birds straight to accomplish the feat, as he was tied on 25 by three others, viz., R. W. King, John Chadwick and Eugene Howe. The last three were soon out of the tie, as only two birds each were necessary for the decision.

L. L. Tucker and E. E. Hairgrove accounted for all save one, and several got in the 23-hole. The scores:

	1st Day.	2d Day.	3d Day.
Judge Dixon	200	200	100
Chester Dixon	154	157	86

C Engleman	25 11		

A. J. BURNS.

Hercules Gun Club.

TEMPLE, Pa., Oct. 12.—The tournament of the Hercules Gun Club was shot to-day. The attendance was somewhat low on account of the live-bird shoot held at Spring Valley, and the target shoot held at Ephrata, Pa., while others went to the Philadelphia League shoot. Lee Wertz is sick with an attack of bronchitis, while "Tip" is moving around on crutches with rheumatism.

John J. Marberger won the high amateur average by smashing 144 out of his 150, and received the Cypher's silver cup, a trophy standing ten inches high. Mr. Marberger also won the solid gold watch fob for the county championship on 50 birds, by breaking 48. This fob was donated by Hoff & Bro., of Reading, Pa. Ed. H. Adams, one of Reading's leading shots, was a close second with 46 out of his 50, while his chum, W. S. Behm, was but one target shy of Adams.

The gale of wind which prevailed nearly all afternoon shows that Mr. Marberger made a phenomenal record by breaking 144 in the regular program. J. B. Coffroad was second high amateur with 131 out of his 150. W. Henry Van de Sande, of Lebanon, broke 126 as third amateur gun, while J. C. Bitterling, of Allentown, landed fourth with 105 breaks, the honor of receiving a pair of shoes, donated by the Common Sense shoe store.

A. J. Mengel, who broke 145 out of 150 on our grounds on August 10, could not hold his own to-day. He shot at 75 and broke 69. This was too slim for Al.

E. H. Adams reached the grounds late in the afternoon and could not leave the business on account of pay day, before 1 P. M., so shot at only 75 and broke 68, which is below his average. Ed says, "Some days must be dark and dreary."

W. L. Lesneski, of Lebanon, shot but one event, and then went to Spring Valley, where he was scheduled to shoot a live-bird contest with Jim Firing for \$25 a side. Mr. Lesneski is one of the Lebanon county wing shots, and no flies are apt to sit on his gun.

Seven amateurs and one professional entered the double-target event. J. Mowell Hawkins, the professional, broke 14 out of his 10 pairs, or 20 birds. In this event W. S. Behm proved to be an easy winner, who smashed 18 out of 20 and received the pair of F. W. King shooting glasses as high gun in this event. J. C. Bitterling, Frank Wertz, Ed. H. Adams were tied on 17 each, as second high guns in this event.

J. M. Hawkins led the professional field with 149, missing but one target, the ninetieth, which gave him a straight run of 89. Neaf Apgar was second high professional with 147 to his credit and had a run of 108 straight, which was excellent in the gale of wind.

James Hogan, of Reading, had charge of the traps, while Howard Wertz responded to the call of "pull."

The club will hold a live-bird shoot in the near future, the date not having been set—the Cotopaxi Introductory and the Hercules Handicap.

O. S. Sked, of Wilkesbarre, was scheduled to shoot with us to-day, but was then ordered to Ephrata, where another shoot was being pulled off. This cut down the Hercules attendance.

Most of the boys will attend the Spring Valley live-bird shoot on Saturday, Oct. 26, on the Spring Valley grounds. Introductory event, 10 birds, \$5, and Spring Valley Handicap, 15 birds, \$8; handicaps, 28 to 31 yds. Handicap committee chosen from shooters present. This is one of the foremost shooting grounds in the State and a good attendance is anticipated. A good stock of farm-raised birds will be on hand, and no one will make a mistake by participating in this event. Programs are now on press, and may be had by addressing E. H. Adams, 1805 Parkiomen avenue, Reading, Pa.

Many of the boys are holding back from the target shoots on account of being close to the gunning season.

Shot at. Broke		Shot at. Broke	
J B Coffroad	150 131	E H Adams	75 68

 A. K. LUDWIG, Sec'y.

Cerro Gordo Gun Club.

MASON CITY, Ia., Oct. 8.—Cerro Gordo Gun Club enthusiasts were given an opportunity of competing with J. R. Graham at the grounds of the club on Oct. 1. The presence of Mr. Graham, together with W. S. McGill, brought out a few members of the club to participate in a special shoot. The attendance was, however, seriously handicapped owing to the short notice received of their coming. Out of 100 targets shot at, the following scores were made:

Graham	90	Thompson	83
McGill	74	Monplasure	82
Konvalinka	88	Foster	80
Dutro	86	F'aherty	75
Madsen	83	*Height	30

*Height shot at 50 targets only.
 Field shooting has been exceptionally good this fall. Chickens have been plentiful, and well filled bags have been brought in by those who have taken advantage of the opportunity.

Ducks have not been so numerous, but the annual migration to the south will soon be on, and we will undoubtedly have our share. Drainage of practically all low lands in this State has sounded the death knell of early fall shooting.

H. B. MADSEN.

Philadelphia Trapshooters' League.

EDGE HILL, Pa., Oct. 12.—The pre-season meet of the Philadelphia Trapshooters' League was held here to-day. Aside from the money on each event, there were two prizes offered in each class that were distinctly worth winning, and this made the competition in the different classes unusually keen. The class system was arranged so as to give everybody a chance, and the winner and runner-up in each class who carried off the cut-glass prizes were: Class A, George S. McCarty with 94, and "Butch" Landis, 93; Class B, E. Fred. Slear, 95, and Frank Bender, of Lansdale, 89; Class C, H. P. Carlon, 85, and Harvey Wiley 93; Class D, Frank Meehan, Jr., 77, and MacAlonan and Jarrell tied for the runner-up price, each with 72.

Singularly, a Class B shooter was the big gun on the full program. Fred Slear, the Camden crack, beat out McCarty for the honor by just one target, due to two straights, a 19 and two 18s. The program called for five 20-bird events, all at 16yds., and as all four traps were in good working order, the tournament was cleaned up in record time. The attendance comprised representatives from all the local clubs, and there were several out-of-town shooters who participated. The scores:

Class A.		
Griffith	92	Swartz
McCarty	94	McHugh
Stevens	92	Sloan
Hineline.....	84	Torpey
Landis	93	Joslyu
Lansay	89	Clark
Class B.		
Westcott	75	Sidebotham
Bender	89	McGinty
Pratt	72	Slear
Metz	83	Fleming

Aliq	145 129	Kleinmeyer	75 47
Neighbors	120 88		

R. R.

Analostan Gun Club.

WASHINGTON, D. C., Oct. 13.—The Analostan Gun Club had a very windy afternoon for their shoot yesterday. The wind blew a gale, and made the shooting difficult. However, some good scores were made, and results were as follows:

Shot at. Broke		Shot at. Broke	
F. H. Huseman.....	100 91	Miles Taylor	50 44
G. W. Peck, Jr.....	100 83	J. A. Brown	50 43
Dr. A. B. Stine....	100 84	W. W. Wallace..	50 39
J. M. Green.....	100 77	Dr. F. Bradford..	50 42
G. D. Kirk	75 47	Wm. Willis	35 21
W. D. Dulaney....	50 45	J. H. Graves.....	25 12

In the Du Pont trophy contest the following scores were made:

Bradford	5 25	Stine	2 21
Dulaney	3 25	Huseman	0 21
M. Taylor	5 25	Green	0 18
Peck	1 24	Kirk	6 20
Wallace	5 24	Graves	0 12
Brown	1 23		

In the first shoot, Oct. 5, Frank Huseman won a leg on the trophy, scoring 24.

In an event at 12 pairs of doubles the following scores were made: Kirk 22, Huseman 20, Dulaney 19, Peck 16, Brown 16, Wallace 13.

MILES TAYLOR, Sec'y.

Oakwood Gun Club.

LYNCHBURG, Va., Oct. 11.—This special shoot was held in honor of the professionals Messrs. Gilbert and Le Compte. O. Fisher made his debut as a pro., but they had to take off their hats to Dawson, who led the field with 95 grassed to his credit. Weather conditions ideal:

*Le Compte	87	W. R. Winfree.....	90
Lingle	91	Dawson	95
Anderson	84	Carroll	68
Stockley	86	Moorman	85
*Coffin	77	J. Fisher	72
Fox	86	Terry	75
Daniel	92	Dennis	86
*O. Fisher	90	Lindsay	76
*Gilbert	93	S. O. Fisher.....	65

*Professionals.

The Du Pont Gun Club.

THE Du Pont Gun Club last Saturday had a "Home Week" shoot. It was in keeping with the week's celebration. Although many of the club's members attended

Two More Big Tournaments Added to Season's Victories

— WITH —

World Beating Guns and Shells

Successful shooters again "took the right road" in their choice of *Remington-UMC* — the perfect shooting combination

New California-Nevada Trapshooters' Association Starts Right, with 9 out of 11 Trophies for *Remington-UMC* in First Tournament

State Championship: Won by Wm. H. Varien, 48 ex 50, shooting Remington-UMC Arrow Steel Lined Shells.

Individual Championship: Won by Wm. H. Varien, 95 ex 100, shooting Arrow Shells.

Buffalo Three Man Team Trophy: Won by Modesto Team, all shooting Remington-UMC Guns and Arrow Shells.

Championship at Doubles: Won by Dr. A. M. Barker—only straight score, 24 ex 24 —shooting Arrow Shells.

Indiana State Shoot a *Remington-UMC* Harvest

State Championship: Tied for by R. H. Bruns and C. A. Edmonson, 286 ex 300. Mr. Bruns won in shoot-off, 40 straight—both shooting Remington-UMC Nitro Club Steel Lined Shells.

High Amateur Average: Won by F. M. Edwards, 289 ex 300, shooting Arrow Shells.

Two-Man Team Championship: Both winning teams, scoring 563 and 555 ex 600, respectively, shot Remington-UMC Steel Lined Shells, and high men on both teams shot Remington-UMC Pump Guns.

High Professional Average: Won by C. E. Goodrich, 291 ex 300, shooting Remington-UMC Pump Gun.

Post Season Shooters: Follow the example of these winners and the winners at the Olympic Games, at the Grand American Handicap, Southern, Western and 16 out of 20 Great Interstate Handicaps

Shoot *Remington-UMC*—a century's experience to back up your aim

G. F. Lord.....	8 43	H. B. Smith, Jr....	8 44
C. Leedom	4 46	S. G. David.....	12 47
Dr. A. Patterson....	4 45	L. Worthington	0 47
J. H. Minnick.....	2 49	W. S. Colfax, Jr....	0 43
W. M. Hammond... ..	2 39	Dr. E. Q. Bullock... ..	0 19
J. A. MacMullen.....	8 41	A. Bird	0 12

The rifle scores were: D. Appleby 235; J. Bredin, Jr., 193, 204; W. Rommel 199, 204; J. Nurnberg, 206, 223; C. W. Pierce, 230, 228, 224.

Pistol scores: D. Appleby, 85, 83, 93.

INDEPENDENCE GUN CLUB.

Independent Gun Club.

EASTON, Pa., Oct. 5.—The Independent Gun Club held the last of a series of eight shoots for the FOREST AND STREAM trophy on their grounds to-day. The day was an ideal one for shooting, with just enough wind blowing across the grounds to keep the boys shooting at their best to keep in the race for the cup. Mr. Sked, a member of our club, but now of Wilkesbarre, Pa., where he is representing an ammunition firm, paid us a visit, he showed us that he knows how to break rocks by being high with 95 out of 100. But he had to shoot, for J. Heil was after him with 91. Mr. Sked was very much pleased when he heard that all the shooters for the trophy were using his firm's shells, and that a good number of them pinned their faith on the pump gun. We also had with us one of our oldest members, W. H. Maurer, of Jersey City. The boys are always glad to have "Billy" around, for it seems like old times to have him call "Pull." And the way he broke his targets, it seemed as though his 270lbs. of good nature and true sportsmanship had hit them. He also brought his camera with him and took a picture of the shooters and club house, with the prizes. Also, the winner of the FOREST AND STREAM cup, and one of the three oldest members of the club, J. Heil, W. Kelechner and himself. (Of course some one else had to pull the trigger to snap the last three.)

J. Maurer won the FOREST AND STREAM cup with a total of 357 out of 400, and any one could see by the smile on his face after the race was decided that he was the happiest man on the grounds. Joe has always been one of our best shots, and always a hard worker for the best interests of the club, and I can very readily say that, with his good shooting all through the series, his winning of the trophy was a very popular one. His scores for the eight shoots of 50 targets each were: 41, 44, 45, 46, 44, 46, 45, 46.

G. Cross and C. Stocker tied for the second prize, a cut-glass celery dish, donated by W. H. Maurer, with a total of 351. They both agreed to shoot off at 25 targets per man. It certainly was a nice exhibition of shooting. Cross finally won out by 24 to 22. They both missed their third target, then Cross ran out straight, while Stocker let his twenty-third and twenty-fifth, both hard left-angle birds, get away from him.

The final scores of those who shot through the entire series of eight 50-target shoots, follow:

Maurer	0	357	G Cross	36	351
J Heil	0	341	B Wenner	76	340
W Ivey	85	327	C Stocker	37	351

The boys were very much pleased with the handsome trophy presented by the FOREST AND STREAM. Our club has been a regular subscriber for FOREST AND STREAM for the last eight years, and it is always missed when it is not delivered promptly by the mail. I am sending you the pictures taken to-day, which we hope will go to show that we have an up-to-date club, and are always glad to have visiting shooters come and have a good time with us.

Below are the scores made at to-day's shoot. Events 1 and 2 were for the prizes; event 6 was shoot-off for second prize.

Events:	1	2	3	4	5	6	
Targets:	25	25	25	25	25	25	Total.
J Maurer	24	22	21	67
J Heil	22	24	23	22	91
W Ivey	14	17	14	14	59
G Cross	23	20	21	24	85

B Wenner	16	13	15	44
C Stocker	22	18	19	23	18	22	122
*O Sked	24	25	22	24	95
*Ziegler	23	21	21	22	87
*W Kelechner	18	16	14	48
*J Gunning	4	9	13
*W Maurer	22	17	20	18	77
*J Miller	4	..	4

*Not competing for prizes. W. R. IVEY, Sec'y.

Bergen Beach Gun Club.

BROOKLYN, N. Y., Oct. 12.—We had a rattling good shoot here to-day. The high guns from a wide radius, fifty-four in number, took part in the sixth annual Cosmopolitan Amateur Championship. Competition was keen and reputation an asset. The big title went to New Jersey, carried thence by W. H. Matthews, of Trenton Gun Club, with a score of 95 out of 100. This tied Ed. Banks, of Du Pont, who was high professional. Paul Von Boeckman, of the home club, took second place with one less break than made by the winner; he tied H. S. Welles, second high pro. D. Sauer and Al. Ivins tied for third with 92. Third pink sheet entrant was H. Keller, with 84.

The early season, with its lack of practice, was apparent in the general average of scores, such shooters as C. W. Billings, Secretary Schorstemmer, Simonson, F. B. Stephenson, J. S. James and others, generally found in the upper register, breaking 85 and less. The weather was ideal, while conditions and arrangements were, as always at the Bergen Beach—excellent. Scores:

Cosmopolitan Championship, 100 targets:			
W H Mathews.....	95	J R Simonson.....	85

The team race, five men from each club, was won by Jersey City Gun Club with 456 out of 500 targets. Bergen Beach Gun Club was second with 453. The winning team was composed of W. H. Matthews, Al. Ivins, B. W. Shanley, L. S. Colquitt and W. W. Wynne.

Akron Steel Bird Gun Club.

AKRON, O., Oct. 12.—Steel bird shooting is becoming very popular with hunters and field shooters here, because they give such real live bird flights, which, combined with speed, make them rather difficult to hit; but when hit with one or two shot show a kill by dropping and remaining suspended head up until they pass out of sight, when they are instantly raised to the flying position and locked ready for a return flight in the opposite direction.

Some recent scores follow:

	Shot at.	Broke		Shot at.	Broke
Bittner	25	22	Van Cantfort ..	10	2
Bork	25	18	Mishler	10	2

Mr. Bittner used No. 6 shot at close range in one event, and put the birds out of commission. They are not designed for such heavy pounding, but stand well under No. 8 or 7½.

E. E. MISHLER, Sec'y.

Excelsior Rod and Gun Club.

THE annual target shoot of the Excelsior Rod and Gun Club at Columbia, Pa., will be held Thursday, Oct. 24. The special features: Average moneys and \$100 merchandise race. One cent for each target thrown will be set aside to form a purse, which will be divided among the high guns as follows: If the purse amounts to \$25, five moneys and two extra moneys for each \$5 over this amount. Program open to all amateurs. You can shoot for targets only at 2 cents each. Shooting starts promptly at 10:30 A. M.

Club house has just been remodeled, and is a comfortable, commodious structure overlooking the Susquehanna River. We promise you a delightful day's sport, and will do the best in our power to pull off a good shoot. The rest of it is up to you.

J. E. Maurer, Winner FOREST AND STREAM Cup. Oldest Members of the Club—J. Heil, Maurer and W. Kelechner.

Repeating Shotgun
Made*

THE NEW

WINCHESTER

MODEL 1912

Hammerless Repeating Shotgun

20 GAUGE TAKE DOWN

It weighs only 5¾ pounds, yet it is the strongest repeating shotgun on the market, all metal parts throughout being made of Nickel Steel. It exhibits a grace of outline and perfection of detail and finish unapproached by repeating guns of other makes. It is free from unsightly screws and pins to collect rust and dust and work loose; and its solid breech, closed at the rear, gives it extreme safety. In operation, it works with an ease and smoothness unknown in guns of other makes. It is simple to load and unload, and simple to take down; being separated into two parts easily and quickly without tools. In shooting qualities, it is fully up to the established Winchester Standard, which has no superior.

Ask your dealer to show you one, or send to Winchester Repeating Arms Co., New Haven, Conn., for handsome, illustrated circular describing it

Cincinnati Gun Club.

The advance guard of shooters entered for the Post Season tournament, reached Cincinnati on the 12th, and a number were at the grounds on that day and the 13th, anxious for a little practice on the grounds where they all hope to break records. Among the prominent amateur and professional experts who took part in the events on those days were Fred. G. Bills, of Chicago, who won high professional average on singles and doubles (1,000 targets) at both of the previous Post Season tournaments; C. B. Eaton, Fayette, Mo., winner of the Preliminary Handicap at the Grand American last year; R. H. Bruns, of Brookville, Ind., who cleaned up everything at the big Denver shoot this fall; Lester German, Aberdeen, Md., one of the best professional shots in the country; Mrs. Topperwein, of San Antonio, Tex., the expert with rifle and shotgun, and the only woman trapshooter who has qualified for this tournament. Mr. Topperwein is also here, and at the conclusion of this tournament will visit the N. C. R. Gun Club at Dayton, O., where he and his wife will give an exhibition of fancy shooting with rifle, revolver and shotgun. H. W. Kahler, Philadelphia, Pa., one of the top-notch amateurs of the country; E. M. Daniels, Lynchburg, Va.; J. Hightower, Americus, Ga.; J. R. Taylor, Columbus, O., high professional for 1911; S. A. Huntley, Sioux City, Ia., and Guy Ward, Birmingham, Ala., who is booked for a place near the top when the returns are all in. Fred Gilbert, Spirit Lake, Ia. (Chief Heap Talk), is here, but put in his time "seeing Cincinnati," as a day's practice, more or less, cuts no figure with him; he can deliver the goods just the same.

The events on the 13th were at 25 targets each, E. M. Daniels leading the bunch with 94. Mrs. Topperwein did nice work also, breaking 47 in the last 50 and going out with 91, second high. Bruns and German tied on 49 out of 50. Harry Kahler also shot in fine form, scoring 48 out of 50, a 96 per cent. gait. H. D. Freeman, Atlanta, Ga., took part in the events on the 12th, breaking close to 90 per cent., which is some below his average. Shooting at doubles on the same day, he tied with J. R. Taylor on 85 out of 50 pairs; Guy Ward was high with 87, and J. S. Day, Cincinnati, second, with 86. On the 13th several events at doubles were shot, Day leading with 85 out of 49 pairs; Kahler second with 80, and German third with 70 out of 37 pairs.

Rhode Island Country Club.

NAYATT, R. I., Oct. 12.—A handicap shoot was held at the Rhode Island Country Club grounds to-day. Three contestants, J. B. Lewis, James E. Sullivan and William Binney, Jr., had scores for the best average on 50 targets. There was good trapshooting besides the handicap contest, for the committee trophy. Out of a possible 50, the result was as follows: J. B. Lewis 50, J. E. Sullivan 50, William Binney, Jr., 50, C. Church 42, A. C. Blanding 42, J. F. Wood 40, R. B. McElroy 40, F. H. Elmore 41, George E. Leibrich 38, Arthur Ostby 38, George M. Parks 32, J. B. Merriman 32.

New York A. C. Gun Club.

The New York Athletic Club trapshooting season will begin on Oct. 26 at Travers Island. There will be a special handicap for members; also one for guests. This will be the first reunion of the Winged Foot marksmen since the victorious team returned from the Olympic games, three of whom are members of the New York A. C. The regular season will open Nov. 2, when the usual trophies will be competed for, including a monthly cup, club trophy and several prizes presented by members. Full information from P. R. Robinson, New York Sporting Goods Co., 17 Warren street.

New Hanover Gun Club.

WILMINGTON, N. C., Oct. 11.—The following scores were made at our regular shoot on the above date:

Wapakoneta Gun Club.

WAPAKONETA, O., Oct. 3.—Fourth annual tournament of Wapakoneta Gun Club was held here to-day with thirty entrants, including four pink sheet shooters. Lon Fisher had his "gaze of concentration" with him, getting 142 out of 150, taking high gun honors, and the more substantial substance generally associated therewith. George Kistler coaxed second gold and glory with 138, which left place for Ben Downs with just one error more. B. Call took top pro-for-targets-only satisfaction and had only to "kill" 139 to do it. "Snuff" Taylor and Bill Chamberlin divided second smoke with 137. Chas. E. Zint behaved as a properly behaved secretary should do, thereby helping materially in the success of the tournament. Scores:

Rifle and Revolver

National Trophy for Civilian Rifle Clubs.

The conditions governing the national shooting trophy for civilian rifle clubs are as follows:
To be competed for annually under the auspices of the National Rifle Association of America on gallery ranges. Open to teams from rifle clubs organized under the rules and regulations of the National Board for the Promotion of Rifle Practice and affiliated with the National Rifle Association of America. Any number of men up to ten may shoot on the team—the five highest scores to count for record. Distance, 75ft. The N. R. A. competition gallery target will be used. Official targets will be furnished free by the N. R. A. Position, prone, no part of extended arm to touch the ground except the elbow. No artificial support to any part of the rifle except the sling. Rifle, any .22cal., weighing not over 10lbs. Ammunition any. Sights, any, not containing glass, which can be placed on any part of the rifle. Trigger pull, not less than 3lbs. Time allowance, 15 minutes for the string of ten shots, taking time from the first shot. No member of the team to fire more than

five shots preliminary to firing his score in the match on the night of the contest. A judge appointed by the N. R. A. will act as executive officer of the match; he will appoint a witness, and both will certify on the back of the target that they witnessed the shooting, and that all conditions were lived up to. At the close of each match the results will be at once telegraphed to the office of the N. R. A., or manager for that district, and an official report blank filled out and mailed at once to headquarters. All entries received will be divided into leagues, containing not more than twelve clubs, so that the matches will not extend longer than three months. The winning teams of each league will shoot off for the championship. Entrance, \$10 per team; one team only allowed to a club. To the club winning first place will be awarded the National trophy, to be held for one year, or until the next competition, and ten medals, to go to the ten men shooting in the greatest number of contests. To the team winning second place will be given ten medals under the same conditions. The winning team will also receive a "certificate of victory," to be retained by the club.

Entries will close on Dec. 1, and the matches will begin as soon after that as the arrangements can be perfected. Entries should be made to Lieut. Albert S. Jones, Secretary, National Rifle Association of America, 1025 Woodward Building, Washington, D. C.

GAME IN NORTHWESTERN WYOMING.

Continued from page 487.

pelicans I was much interested in. The ospreys and pelicans often drew a blank when they dove; the kittiwakes almost never. The pelicans and kittiwakes always fished in fairly deep water; the ospreys always in shallow. Once in a while an osprey would stick his claws into a fish too large to lift, and he would then have a great struggle to get himself loose again, but no such mistakes were made by the others. I could never see that any of them got many trout. The principal prey was apparently suckers and squawfish, doubtless because easiest to catch, as they were extremely plentiful. The fish-ducks and blue herons are perhaps the worst enemies trout have, except the cannibals of their own species, and they should be destroyed remorselessly. They are, however, rather difficult to kill, owing to their wariness.

The only trout in these waters was originally the common Rocky Mountain black-spotted. In Jackson Lake these attain a size so great that I do not care to say here what it is, for it would not be readily believed. About fifteen years ago some numskull dumped a lot of Michigan lake trout into Shoshone Lake in the National Park, and thence they spread rapidly throughout all the tributaries of the Snake, and are exterminating the indigenous species. This is too bad, for the lake trout are not comparable to the natives either as regards sport or the table. They will not rise to the fly, are not gamy fighters, and are cannibals pure and simple. I have caught them weighing several pounds with stomachs stuffed with trout fry not over two inches long. Between them and the disturbance incident to the irrigation works built by the Reclamation Service at the fort of Jackson Lake, fly-fishing in the Snake, which used to be the best I ever knew or heard of, has been practically ruined. It is more pleasure to catch one good brook trout than a dozen of such logy sharks as are here pictured, in the hands of J. W. R., boss of a logging camp, operating last summer on Jackson Lake, getting out timber for the Reclamation Service. These trout are called Mackinaw in that locality, but whether they are the true species of that name I do not know. The real Lake Michigan trout reaches 100 pounds in weight; the largest specimen thus far caught in Shoshoni, or Jackson Lakes or tributaries, weighed sixteen and one-half pounds.

Close to my camp for several weeks there lurked a little cock ruffed grouse, as tame almost as a domestic chicken. One day I tried

They All Shot Either

DU PONT—*or*—SCHULTZE

Note:—When Mr. W. A. Davis won the Annual Chicago Gun Club Championship on October 6th, finishing with a run of 103 straight, and shooting out a very classy field, he shot $3\frac{1}{8}$ drams of **Schultze**.

What Powder Do You Shoot?

to get his photograph, and in the attempt learned something of a bird's innate wisdom. When I began to unlimber my kodak, he was in the clear, and while my activity did not frighten him, it made him uneasy, and though he did not attempt to fly or run away, he moved his position by a few steps. So far as my eyes could discern, the change made not the slightest difference in his visibility, but the picture appended herewith told a different story. It is surely strange that he should have known the difference; perhaps he didn't, but I suspect he did, for nearly every live creature in the wilds knows something of the protection which color in a background may give.

In the four weeks I spent here alone I took

no life except of a few trout, and left the country and its denizens as I found them. The lust for killing has small excuse; all the more in these days when so little game remains. I must confess, however, that though the trout were the finest and fattest that I ever saw anywhere, I reached a point of satiety at which I could not bear the taste or smell of them, and actually got a good deal below par from sheer lack of nitrogenous food.

It is immensely to the credit of Wyoming that a game preserve of liberal dimensions should have been created. The State has undoubtedly more game than any other, yet it was the first, I believe, to take action of this kind, and it is

Reload Your Shells

160 Pages FREE

The .32-40 High Power factory cartridges sell for \$34.20 net per thousand. By reloading the same shells with factory primers, factory bullets and the same powder charge, your expense is \$13.46;

You save \$20.74 on 1000 cartridges.

The .32-40 low power smokeless factory cartridges cost \$28.80 per thousand; when you reload, your expense is only \$11.31, making a saving of \$17.49. Factory .32-40 smokeless short range cartridges cost \$25.20 per thousand; by reloading your shells, they cost you only \$7.65 per thousand. Make your own bullets and you have **1000 short range cartridges for \$3.80.**

You wouldn't throw away your pipe after smoking it once; you waste money if you throw away your expensive high-grade shells without reloading.

"Stories of Some Shoots"

By JAMES A. DRAIN.

Hear what an English Publication says:
"Stories of Some Shoots' is a book of Shooting experiences which comes near to being the best account of Scotch conditions of sport which has ever been put into print. The American picturesque style of narrative wonderfully well suits the conveyance of ideas as to how the scenery and sporting methods of North Britain strike a traveled and observant sportsman; * * * in no book have the toils and arduous and excitements of deer-stalking and general shooting been better conveyed to the mind of the reader."
—Arms and Explosives, England.

still almost alone. The facts are rather a savage commentary upon the alleged sportsmanship of the average American, who appears to be in favor of the protection and preservation of game only that he and his friends may have the pleasure of killing it.

ROD AND GUN ALONG THE MISSISSIPPI
Continued from page 488.

Saturday in Louisiana we saw within two hours five hundred shells sold to negroes. This means something, and with the high water of the past spring means more than ever to the shooters who pursue this bird in the lower Mississippi country.

Sugar mills and their tall belching stacks now became a common sight. The banks of the river behind the high levees for a day's travel above New Orleans seemed to have been peopled and tilled for hundreds of years, as indeed it has. Schools and colleges and churches and little store centers fairly lined the banks, and game was seen no more, having made for more primitive country on the Gulf coast. And with the thickening of the settlements, the greater number of steamers hauling molasses and sugar and cotton to the southern metropolis, we began to understand that our trip down the artery of a continent was over. We had seen more game and fish than ever before, and more of it lawlessly slaughtered.

The cruiser had housed and cared for us well. Many boats that were unsuited to the big conditions and furious banging of the lower river had been put out of the running at many points from Memphis downward. Yet we, land crabs that we were, had by some grains of common sense and a bit of daring made the trip without any unseemly experiences and voted it a success.

[THE END.]

ISLAND BIG GAME OF THE NORTH PACIFIC.
Continued from page 490.

Island in 1909, the author was accompanied by Mrs. Sheldon, who faced with fine courage the hard work of mountain climbing and the extraordinary discomforts of an Alaska autumn, and proved herself an able and cheerful comrade. A number of bears were seen near the shore and near the salmon rivers, but the weather was extremely unpropitious for hunting, and while Mrs. Sheldon had more than one shot at bears, none were secured.

In this section of the book much is told about the ways of the salmon, the birds, the deer and the bears. The birds were beginning to migrate, the deer to rut, and when there was a bright fair day, it was a joy to be abroad.

Mr. Sheldon recommends Admiralty Island as offering attractions for bear hunting, more than most islands on the Alaska coast, but points out that autumn is not the time to hunt bears as is the spring. Yet autumn has its attractions.

"To be sure, it is a wonderful sight to see the huge bear suddenly appear on the bank of a creek swiftly flowing through the great forest, while the salmon fight and splash and the gulls scream in plaintive voices as they hover about the pools. To see the bear leap into the rapids, sweep out a salmon with its paw, and retire silently into the wood to make its feast

must be a stirring experience and one that would give a wonderful glimpse of wild life in the forest of the wilderness. It is, however, a field for the photographer, not the sportsman. A hunter of some experience could easily shoot several bears along the salmon creeks in September. But their pelage is light—hardly satisfactory as a trophy. There is little sport in hunting them by stealth, trusting to snap-shots in the brush, or watching silently until they come into the water, only to indulge in marksmanship and get the shot without effort. My experience on Montague Island is a description of what can be enjoyed on Admiralty Island during the month of May: for the habits of the bears on both are strictly similar, and they must then be stalked high up on the slopes above timber, while the wonderful landscape is unfolded before the vision."

The last few pages of the book are devoted to three appendices, two of them descriptions of new species and one on the habits of the Montague bear. This volume contains practically everything that is known about this great new Alaska bear, which is nearly related to the bear of the Kenai Peninsula.

If the "Wilderness of the North Pacific Coast Islands" appeals most strongly to the big-game hunter and nature lover, it is yet written with so great a charm and so graphically describes far distant regions that it should have a wide popularity among that great public that knows little of the joys of hunting or of natural history, observation, and seeks merely entertainment.

A number of the illustrations in the book are from drawings by Mr. Rungius, but most of them are from photographs made by the author or his friends.

MY THREE-POINTER.

Continued from page 491.

over the hill, while I watched the Crossing from behind a screen of brush. Never a sound or sight of a deer was mine that morning, so I returned to camp simply famished and ready for another breakfast.

About noon Dad came in with a sad tale. After several hours' climb through the brush he sighted a fine buck quite near, standing on the brink of a ravine. Dad fired, and to all appearances broke Mr. Buck's neck, for he tumbled down the gully end over end. Dad had several good chances to fire again, but did not consider it necessary. He pursued his way leisurely down the gully and found—this is sad—only a few blood stains. He had only creased the deer's neck, stunning it for a moment. It was hopeless to try and follow him, so Dad came back to camp. He finished his tale by giving me the following advice: "Little girl, if you shoot a deer and think he is dead, shoot him as long as he can wriggle." We watched the Crossing again toward sunset, but had no luck.

Next morning we started out again—this time Dad went to a lick about two miles away. He started away a little earlier than I did. I cooked my breakfast and dallied around the fire—was not very anxious to go to the lick. I had not found crouching behind some bushes, the ground soaked with dew, as wildly exciting as I had imagined. In fact, I retained a vivid

remembrance of how my teeth chattered and how cold and achy I felt.

Finally, I cheered myself with the thought, "Oh, well, I needn't stay long," and started forth. Had to cross the creek, a slippery log serving as a bridge, and getting across was rather a hazardous undertaking for me. I made quite a bit of noise and wasn't thinking of deer as I stepped down the trail.

The Crossing is where the deer trail crosses Tom Neal Creek; there is a fine lick just at the edge of the water. The McCloud trail runs in the open for about fifty yards along by the lick. As I stepped from behind the last sheltering clump of brushes, I occasionally glanced across, then stood rooted to the spot, for there looking at me stood a fine buck, the first wild deer I had ever seen, on the opposite bank of the creek. We were about fifty yards apart.

As I continued to stand motionless, he dropped his head and continued to work the lick. Very cautiously I raised my rifle to my shoulder, took aim, and then remembered, with a sickening sensation, that I had neglected to throw a load in the barrel before reaching the lick. Dad does not allow loaded guns in camp. I threw a load in suddenly, and the deer threw his head up, turned sideways and then paused, listening. As he paused I fired, aiming right back of the front shoulder-blade. He sprang in the air, then was away and up the bank in a flash. I threw the shell out of the gun, ran down the bank and jumped clear across the creek, a feat I have never equaled since.

The dogs were at camp with my sister, so I examined the blood stains. Dad had told me that if a deer was vitally wounded the blood would be almost black, and as this was very dark, I scrambled up the hill, through brush and over rocks, stopped a moment to listen, and glancing at my rifle was horrified to see

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

PARKER BROS. :: Meriden, Conn.

LARGE MOUTH BASS CUP—NORTHERN

Presented by E. F. Warner, Publisher of FIELD AND STREAM, for the Record Large Mouth Bass caught season 1912.

Have You Put in YOUR Affidavit — in — Field and Stream's Contest?

FIELD AND STREAM is offering fifteen handsome trophy cups and upwards of a hundred merchandise prizes to those anglers taking—on sportsmanlike tackle—the largest game fish in the various classes during the season of 1912.

This is absolutely an "open" contest, with no strings or contingencies

attached, and these prizes are open to you, and every other sportsman, whether readers or subscribers to FIELD AND STREAM or not.

The full conditions and list of trophies are published in each issue of FIELD AND STREAM. Stories of last year's prize winners now running.

The following is a partial list of those at present ahead in four of the classes in our contest—as published in our October number. In all there are fifteen classes, including all the fresh and salt water game fish. See whether you have taken larger fish this season than the ones shown.

Brook Trout.

Stephen H. Palmer.....	6 lbs. 5 oz.
J. H. Hugill.....	3 lbs. 12 oz.
Joe H. Lumpkin.....	2 lbs. 9 oz.
K. Chrisofferson.....	2 lbs. 9 oz.
H. V. Erben.....	2 lbs. 2 oz.
Sam Hayes, Jr.....	1 lb. 13 oz.

Muscallonge.

Nellie D. Sammis.....	37 lbs.
Dr. Fred L. Whiting...	34 lbs. 8 oz.
C. Schroeder.....	34 lbs.
H. D. Benedict.....	32 lbs. 8 oz.
J. B. Berry.....	25 lbs.
N. S. Holbrook.....	14 lbs. 8 oz.

Small Mouth Black Bass.

G. B. Sharp.....	8 lbs.
Benj. F. Robinson.....	7 lbs. 4 oz.
Oscar Fransson.....	6 lbs. 15 oz.
Ezra King.....	6 lbs. 13 oz.
Mart Murphy.....	6 lbs. 12 oz.
Chas. T. Marin.....	6 lbs. 7 oz.

Large Mouth Black Bass—Northern.

Herman A. Shatz.....	8 lbs. 1 oz.
F. E. Rosenberg.....	6 lbs. 13 oz.
Geo. Ritter.....	6 lbs. 12 oz.
Edward Mueller.....	6 lbs. 8 oz.
John Chambers.....	6 lbs. 8 oz.
Otto Holcker.....	6 lbs. 4 oz.

Stop at the nearest newsstand and secure a copy of our November issue—out to-day—and consult the list of those ahead up to date. Then read the conditions and get your affidavit in at once, as the contest is about to close.

that it was cocked. In my excitement I had noticed I snapped on the safety, and then looking straight ahead, saw my deer lying down. It saw me and tried to get on its feet and then fell back. I remembering Dad's advice, fired several times; the deer struggled up, gave me a savage look as if longing to charge, then ran a little ways and dropped again.

I walked quite close and fired some more. It did not move. I took a stick and tickled its stomach to see if it was alive or not. It continued to stay quiet, so I started for camp. For once I had a dual nature—one part of me was perfectly quiet and rather astonished at the other, which was shrilling hysterically.

"Sis, Sis, I've killed a deer!" I kept that up clear to camp, routed my sister and the dogs out and made her come to see my trophy.

Breakfast seemed very important to Sis, but I wouldn't fear of it. She had to see my deer—then go after Dad. While I proudly carried the hunting knife, I did not possess courage to cut the deer's throat. My! but those dogs were in ecstasy over the buck. They had not been near venison for some time, and are essentially hunting dogs. The buck was a three-pointer on one side; but, alas! only a forked horn on the other. However, as a fisherman always tells of his biggest fish, so do I tell of my "three-point" buck.

Sis and the dogs started after Dad, while I sat beside the deer wondering how I could prove ownership should anyone come along and claim it. Fortunately, no one showed up, and before long Dad and Sis appeared.

Dad certainly was happy. His eyes filled, and I'll never forget how he looked. We slid the deer down to the creek and I had to help dress it. For the length of time I was so engaged, I was dreadfully sorry that I had shot it; but when, after watching the lick a while longer, I returned to camp and found Dad, Sis and the dogs feasting on roast spareribs, I began to be glad after all, and after tasting a few mouthfuls, I was certain that I was mighty happy. After breakfast Dad cut a notch in "My" rifle, and with appropriate ceremonies I christened it Tom Neal.

Many have asked me how many times I shot my deer, and I always answer that I cannot remember. Only myself and the recording angel really know, and I have sworn solemnly never to divulge it. Only I will say this: That contrary to what Dad thinks, a great many of those bullet holes were not where the bullets came out!

VALUE OF BIRDS ON THE FARM.

Continued from page 495.

In fact, young barn owls will sometimes eat their own weight in food during the night. As the young birds usually number from five to ten and remain in the nest for about seven weeks, the harmful rodents destroyed during that period alone would be enormous.

In California the barn owl feeds largely on gophers and mice. It is said to be "the best gopher catcher a man can have on his place," and one farmer has gone so far as to say that he would gladly pay ten dollars for every one of them he could get to nest on his place. Boxes placed on barn or sheds will sometimes attract these birds by furnishing them with nesting sites.

Two other common owls, the burrowing and screech owls, feed extensively on insects.

The food of the screech owl consists largely of insects, as many as fifty grasshoppers having been found in the stomach of one of these birds, while crickets, beetles and cutworms are also eaten. These birds are also diligent mousers. According to Dr. A. K. Fisher, "At nightfall they begin their rounds, inspecting the vicinity of farm houses, barns and corn cribs, making trips through the orchards and nurseries, gliding silently across the meadows, or encircling the stacks of grain in search of mice and insects. Thousands upon thousands of mice of different kinds thus fall victims to their industry. Their economic relations, therefore, are of the greatest importance, particularly on account of the abundance of the species in many farming districts."

The little burrowing owl, unlike most owls, works mostly during the day. It is the greatest destroyer of insects among the owls, feeding almost entirely on them at certain seasons, while at other times small mammals are eaten.

Aside from the harm done to crops by certain small animals, their habit of girdling trees has also ruined many a valuable orchard. In an orchard in Maryland 2,000 apple trees were thus ruined by rabbits within two months. In referring to this, Prof. Beal says: "It is very signifi-

cant that the nursery was near farm buildings where the wild enemies of the rabbits did not dare to come, while a newly set orchard at a distant part of the farm and close by woods and thickets was hardly touched."

A better knowledge of the exact relation of bird life to the farmer would often help to save thousands of dollars. Not long since a plague of meadow mice in Humboldt county, Nevada, caused the loss of 15,000 acres of alfalfa, as well as hundreds of dollars before the farmers of that region finally got control of the pests.

As another case in point the writer would refer to the famous "scalp act" passed by the Pennsylvania Legislature in 1885, which provided for a bounty on certain birds and animals believed to be injurious. In less than two years the State expended nearly \$100,000, a large part of which went to kill hawks and owls. In other words, the State had actually paid for the destruction of birds of inestimable value to the farmer. The money thus expended represented but a small part of the actual loss to the State, for their natural check being removed, the small animals increased accordingly, and the destruction of crops which followed clearly demonstrated the important work which had been done by hawks and owls.

In this connection Dr. A. K. Fisher has said: "The sooner farmers, ranchers, horticulturists and nurserymen learn that the great majority of birds of prey are their friends, and deserve protection, the sooner will depredations by noxious rodents and insects diminish."

YOUNG HOOD SEALS.

HARRY WHITNEY, who has just returned from a trip into Arctic waters on a sealer, has presented to the park five hood seal pups. One end of the crocodile's summer pool has been filled with salt water and the youngsters installed there. Although but a trifle over two feet long, they possess tiny, sharp teeth, and an entire willingness to use them if any familiarity is attempted. In pulling themselves up on the rocks the front flippers are bent so that the seal really walks on the ends as they curve under. When annoyed, they express their irritation by growling very much like a dog. Only three are feeding regularly.—Zoological Society Bulletin.

FIELD TRIALS.

Oct. 28.—Southern Ohio Field Trial Association's second annual field trials. G. R. Harris, Sec'y, 15 West Sixth St., Cincinnati, O.

The National Beagle Club of America.

THE twenty-third annual field trials of the National Beagle Club of America will be held at Shadwell, Va., commencing on Nov. 7, 1912, and continuing until all the classes have been run.

Shadwell is in Albemarle county, Va., about four miles east of Charlottesville, twenty miles west of Gordonsville, Va., and 110 miles southwest of Washington, D. C., on the Chesapeake & Ohio Railroad, and is reached from Washington by through train to Gordonsville or Charlottesville, and there changing for the local train for Shadwell.

The headquarters of the club during the trials will be at "Hunter's Hall," the property of H. A. S. Hamilton, about one mile from the railroad station at Shadwell.

The rates during the trials will be two dollars per day. Good kennel accommodations and food for the beagles will be furnished by the club.

The trials will start on Thursday morning, Nov. 7, with the running of the pack stakes. It is necessary, therefore, that all dogs entered in these stakes should arrive not later than Wednesday evening, Nov. 6, 1912. Dogs entered in the other classes and entries for the bench show must be on the grounds on or before Sunday morning, Nov. 10, at 9 o'clock.

In connection with the trials a bench show will be held under A. K. C. rules, on Nov. 10.

Premium lists for the bench show and field trials may be had upon application to the secretary.

The committee would deem it a favor if you will notify the secretary as soon as possible whether you will attend the trials, make the club's headquarters your headquarters, and the number of beagles which you will enter, so that the committee may arrange accommodations for you and your dogs.

RAMSAY TURNBULL,

Secretary and Chairman Field Trial Com., 38 Wall Street, New York.

HEIGHTS OF LIONS AND TIGERS.

THREE feet or a little over is the real height of good-sized lions and tigers. And when sportsmen realize what an extra six inches or nine inches added to the stature involves in increased length and general bulk to balance the known proportions of the animals, I am equally sure they will admit that no lion ever scaled anything like four feet at the shoulder and that the height measurements of dead specimens give quite a false idea of the actual heights of the animals in life.

The following are the heights at the shoulders of some of our large *Felidæ*: Large lioness, 2 feet 11 inches; Manchuria tigress, 2 feet 9 inches; Nepal tigress, 2 feet 8 inches; Sumatran tiger, 2 feet 7 inches; large male jaguar, 2 feet 3 inches; male cheetah, 2 feet 2 inches.—From the Field.

BAYONNE, N. J., Sept. 24, 1912.

Mr. Charles Otis,
President Forest & Stream Pub. Co.,
New York City.

Dear Sir—For some time past I have intended writing you in relation to an "ad" which I placed in your publication. I advertised a very fine bird dog for sale and received eight answers to same. I had imagined that your publication did not circulate in a very large area, but from the answers received I am glad to say to you that my opinion has changed very much.

The answers came from points in Ohio, Pennsylvania, New Jersey, and New York States, and in fact, one party called me up on long distance telephone.

I can recommend your publication (and will be glad to do so at each opportunity) to those who have anything of merit to dispose of, because it is a medium enjoying a large circulation, a reputable one, and reaches the class of readers who mean business.

I disposed of my dog to my entire satisfaction, and again wish to compliment you on your excellent advertising medium.

Perhaps some "fellow" who has his doubts (as I had) will be glad to know what your columns did for a "fellow" advertiser. If you care to use this letter for that purpose, you have my permission to do so. With best regards and wishes for the future, I am,

Yours truly,
(Signed) **EDWARD E. ELY.**

GAME HOGS GETTING MINERS' MEAT.

A NUMBER of arrivals in Dawson, Alaska, from the head of White River report a ruthless slaughter of game in that district on the American side during the past summer. Big-game hunters came into the district in several parties, and spent weeks there. The Copper River & Northwestern Railway brought some of the hunters within short distance of the White River copper fields. The road and some of the coast steamer companies issued special illustrated pamphlets, telling of the abundance of sheep, caribou, moose, bears, grouse and ptarmigan in the district.

The parties attracted by the exploitation of the game feature so conducted themselves on the whole that the entire mining community is highly incensed. The men just down from the district cannot express themselves too emphatically in denunciation, they all agree, over the actions of the slaughterers. One of the miners, speaking at the Royal Alexandra, said, and the other White River people agreed with him, as follows:

"White River has been blessed with considerable large game, especially sheep. These animals have been near enough the prospectors for us to get fresh meat when we desire it without having to tramp forty to fifty miles. This summer the people who slaughtered merely for pleasure in killing game. They reduced the herds and drove back the sheep. They also killed many caribou and moose when not needed.

"One party came in after having killed four moose. Another killed four caribou. One woman in a Puget Sound millionaires' party shot down three caribou and cried, it is said, because she missed the fourth. The party had no need of the meat beyond perhaps one animal. Other hunting parties were almost as bad. They came merely to get pleasure in shooting down handsome large animals in cold blood. It is a crying shame. The meat was left to rot.

"Ptarmigan also could be shot everywhere at any time needed, but there was no excuse for anyone to slaughter the birds wantonly. However, the sated pleasure seekers shot the birds by the score, and let them become putrid. One outfit brought forty ptarmigan into the North Fork island camp. Birds slaughtered in that number could not be used by the handful of people there in days. Several caribou and moose killed nearby at one time by single parties would last such little parties weeks, could it have been preserved.

"Dr. Sugden, game warden for the Whitehorse district, was at Canyon City, on the Canadian side. Had the destroying squad come there the members would have been arrested and brought to Dawson. The game which the pampered pleasure seekers seek means life to the men prospecting in the wilds. If we take ham or bacon there, it costs forty cents a pound to lay it down at our camps, and then it is not fresh meat, and may be spoiled on the way in.

"We are planning to take up this matter with the Alaskan officials, and we hope to put a stop to the waste. I must say that one game hunter there this season was fair. He is Mr. Wheeler, of Indiana, who would not shoot an animal unless it had particularly fine horns, something he seldom found to his satisfaction. He carried a glass, and would inspect all big game carefully. When once in a long while he did kill an animal, which looked attractive, he brought in the game to the miners and saved some for himself. None was wasted.

"The big game of the district summers on the American side, but winters on the Canadian side, and may be termed Canadian game. The people of this side, as well as the Americans, have every right to enter a vigorous protest against the slaughter.

"It is time the mere pleasure hunter were barred from Yukon and Alaska, and the game reserved for the people who will need it in the district.

"Dr. Sugden, the Whitehorse game warden,

Resorts for Sportsmen.**North Carolina.****HUNTER'S LODGE!****Good Quail Shooting!**

is here from up the White, and says that had the people who slaughtered the game on the Alaskan side started such work on the Canadian side of the boundary, they surely would have been put under arrest promptly.

"The miners of the district say they want game wardens in the American White."

STARTING AN ALLIGATOR FARM IN SOUTH CAROLINA.

J. W. BLACK and T. M. Patrick of South Carolina have started an alligator farm. They did not originally intend this, but circumstances have in a way forced the new enterprise upon them. Recently they went fishing on the Edisto River and found an alligator "nest" containing twenty-six eggs. They "robbed" the nest, and placing the eggs in the foot of their buggy, started home. They had not driven very far before they heard a faint barking, and looking down into the buggy they found two or three little 'gators wriggling about their feet.

By the time the gentlemen reached home, eighteen of the alligators had hatched out, and Messrs. Black and Patrick were riding with their feet upon the dashboard, the bottom of the buggy being too crowded for comfort. The noise made by the little 'gators sounded like a puppy show. Three more of the 'gators have since hatched out, and now the family numbers twenty-one. At first Messrs. Black and Patrick were greatly concerned over the problem of feeding and caring for the orphans. In their desperation they have made several attempts to capture the mother 'gator, but so far the old woman has eluded them. However, after much experimenting they have found that the little saurians are particularly fond of bread and bananas, and that is now their daily diet.—From the Columbia State.

MUSK-OX HERD.

BECAUSE a musk-ox looks as round and sleek as a Jersey cow, it does not necessarily follow that it is just as fat. If the musk-ox is amiable and allows one to approach closely enough to stroke him, the investigator would be astonished to find under the long, silky outside hair a thick covering of the finest wool at least two inches thick. During the cold that prevails in our New York winters, this covering is at its best, but as the warmer days approach, the wool is shed out, leaving the musk-ox in the lightest of summer covering. To all appearances his pelage is just as abundant as ever, and in consequence the animal is an object of much speculation by visitors as to the extent that he is able to endure the heat. Thus far this season Keeper McEnroe has collected from five young musk-oxen about twenty pounds of wool, and there are as many pounds yet on them. It could be converted into excellent clothing, as it is as fine and delicate as the best wool of sheep.—Zoological Society Bulletin.

A KENTUCKY FISHERMAN.

ACCORDING to the sworn statement of Eli Barnes, the most noted fisherman in Providence, here is what he caught out of a hole in a creek bank several days ago: Two hundred and ninety fish, thirteen turtles, two muskrats, five large sized frogs and a snake six feet long. He says he can prove it by fifty witnesses. People who don't know Barnes will doubtless be a little sceptical about believing this story, but if they had ever been out with him fishing it wouldn't sound unreasonable a bit. Everybody wants to go fishing with Barnes. He scoffs at the way other people fish and has a peculiar way of his own about gathering in the finny tribe. He picks out a shallow stretch of water that he can wade in and grabbles for the fish around stumps and logs. When a fishing party goes out with Barnes the first thing they do is to begin building a fire. When the fire gets under good headway, Barnes is there with the fish ready for the frying pan.—From the Providence Enterprise.

GENUINE ALL-WOOL MACKINAW COATS

\$5.00 DELIVERED
FREE

Woodsmen of the north country were the first to use garments made from this warm and strong material and only within the last few years have sportsmen begun to realize what a wealth of comfort Mackinaws are in cold weather. The texture is of the nature of blanketing, being tough, soft and practically waterproof. It is the ideal material for winter sports, duck shooting, still hunting and all colleges, schools, golf and skating clubs.

The genuine 32 oz. Mackinaw, every thread from selected "live" long fleece wool. They are waterproof, elastic, light in weight but exceedingly warm. Every garment is tailored and beautifully finished.

No. 800—Storm collar, flannel faced, double breasted, 32 in. long, two pockets; colors: oxford or brown. Each \$5.00.

No. 850—Large shawl collar, self-faced, double breasted, 34 in. long, three flap pockets; colors: blue or brown, red and black plaid, gray and black, green and black (see cut). Each \$7.50.

DELIVERED FREE—West Mississippi 50 cents extra.

State breast measurement when ordering. Money back if not satisfied. Send for our 434-page book—a most complete sporting goods catalog. Ask for No. 530.

TURKISH PISTACHIO NUTS.

A COMMUNICATION in Levant Trade Review, Constantinople, from Lorenzo Y. Manachy, Aleppo, Syria, says:

"The demand for pistachio nuts from divers points as well as from the United States is steadily increasing. Prices have in consequence advanced. The batman (7.04 pounds) is now worth in Aleppo and Aintab 65 to 66 current piasters (\$2.25 to \$2.28). For the United States they are generally exported in tin boxes after having been salted and roasted. Proprietors in the producing centers, encouraged by the excellent income given by the pistachio trees, are making special efforts in planting new trees. The pistachio tree becomes as big as an ordinary olive tree or apple tree and has a very long life. It requires not less than eight years to begin to bear.

"The nuts from the pistachio tree (*Pistacia vera*) are bright green oleaginous kernels and used to flavor culinary preparations, ices, etc. Consul-General Ravndal recently stated:

"The United States takes nearly two-thirds of the total exports of pistachio nuts, mostly from Syria. The 1911 crop in Syria was relatively not as plentiful as that of Persia. The exports do not run into high figures on account of the extensive Turkish home consumption for confectionery. Invoices of pistachio nuts to the United States through the various American consulates in Turkey aggregated \$114,849 in 1910 and \$115,745 in 1911."

"The growing of the pistachio in the United States has been carried on for several years under the encouragement of the Department of Agriculture, although the trees have not yet produced commercial crops. The Bureau of Plant Industry, after experimentation, finds that the most suitable regions for pistachio culture are Western Texas, New Mexico and the interior valley of Southern California, a dry climate being better than a humid one. The demand for pistachio nuts is growing, and the American market will, it is thought, absorb large quantities when they become available."

REMARKABLE BONE CAVE.

AN extraordinary "bone cave" may be seen in the island of Teneriffe. It is situated near the summit of a lofty sea cliff near Orotava, close to the small plain of Le Paz, where peace was finally made between the conquering Spaniards and the Guanches, the original inhabitants of the island.

Here the Guanches made their last stand and this cave formed a shelter for the small remnant left of the tribesmen after the Spanish had finished with them. In former times the place had evidently been a burial ground of the Guanches, and when first discovered a number of mummies were found in it.

Now, however, only a huge pile of bones remains. Access is obtained by descending a rope through a hole dug in the roof, but the original occupants must have had a difficult and dangerous scramble down the face of the almost perpendicular cliff to the natural entrance.—From Wide World.

DIVERS OF PERSIAN GULF.

Most of our pearls come from the Persian Gulf, where the output in some years is worth as much as £2,400,000. The divers, who are chiefly Arabs, have a bad time. Their equipment is most primitive, and as they remain under the water about three minutes at every plunge, they are nearly suffocated by the time they reach the surface.

Most become deaf, and the sturdiest find it impossible to keep at the work for more than five years. Their masters exact fourteen hours a day from them, and during that time the divers take no food, but keep themselves going with coffee.—From the London Chronicle.

"A BIRD is known by its note, and a man by his talk."—Old Proverb.

MY BOOK IS FREE

I have written a book that I believe will help you realize a fuller appreciation of the possibilities of nature from the stand-point of health, pleasure and comfort. I had this in mind as well as the commercial idea; for, of course, this book is intended to sell goods.

CAMPING AND HUNTING

I have camped, canoed, hunted, fished and trapped from my childhood days—often far from the usual haunts of man. I am a baseball, tennis and golf enthusiast as well. I ought to understand this business thoroughly; at any rate, it is my pride.

Caribou Hunting

Newfoundland vs. New Brunswick

By GEORGE B. CLARK

AS there may be some readers of FOREST AND STREAM who contemplate a trip in quest of caribou, it occurs to me that it may be interesting, for those who have never as yet hunted this noble game, to know something about what they may expect to find in Newfoundland and Northern New Brunswick.

Having secured satisfactory trophies of the deer, bear and moose families, my thoughts and desires naturally turned toward caribou and a trip to Newfoundland. It is the general custom of those who make this trip to land at Port au Basque and take the Reid-Newfoundland Railroad for some point in the interior—Gaff Topsail, Grand Lake, Deer Lake, or some such place. Owing, however, to a very sad experience which I had in the beginning of my hunting career, when my side partner was mistaken for a deer and killed, I then and there made two resolves, which I have since religiously adhered to—first, not to allow my guide to carry a gun, and second, not to hunt in a section where the report of a gun from another party could be heard. Therefore, when I decided to go to Newfoundland, the regular route was not one that I cared to take, and instead of going

on the railroad, I laid out a trip up the South Shore, approximately primeval hunting country, where one could come and go at his own sweet will, without the possibility of conflict with any other hunting parties.

The south coast of Newfoundland is most peculiar. After starting inland, I had a climb of approximately two thousand feet before I reached the barrens, which were practically on top of the mountains. There is no timber growth, as a matter of fact, nothing tall enough to stretch our tent on, we having to carry our tent poles with us. The few trees that were there averaged not more than four to five feet in height, the trunks being six to eight inches in diameter, with limbs stretching out ten to fifteen feet on either side. This peculiar growth was undoubtedly caused by the freezing of the young tops, so that instead of growing high, they grew wide. The vining spruce and mossy growth covered the barrens, and underneath this was generally three to four inches of water. In this section one never had dry footing unless standing on a rock.

There were numerous small lakes on the tops of the mountains, and, very much to my

surprise, I found that they were literally alive with red-spot trout. Unbelievable as it may seem, a fish line had never been cast in them. When I took my guide to task for not suggesting that I take my fishing rod along, he looked very much surprised, and said, "They fish is no good, Sir." When I asked him if they did not eat the trout, he said, "Oh, no, Sir! We never tasted them. We likes cod. They're bigger."

I went inland approximately ten miles from the water, through a country that, for barrenness, could not be beaten in either Iceland or Norway. It seemed to be one continuous, uphill tramp all the way, both in and out, one ridge rising above the other. When, after a tramp of a couple of hours, one reached what had looked to be the sky line, lo! away beyond rose another range, a little higher than the one on which you stood. After about ten hours of very difficult traveling, we reached our camping place. Inasmuch as everything has to be packed in, I was compelled to take four men with me, each one loaded to the muzzle, as will be seen in the picture.

The general custom in this section is to find the highest point from which the best view can be obtained of the surrounding country, and then sit down with glasses and look for the game. It is quite exceptional not to have caribou within sight at any time, but good, big heads are scarce articles, and, generally speaking, large numbers of caribou must be looked over before such a head comes in sight, justifying an effort to stalk it. From these look-outs, it is easy to see over a country approximately five miles from the center of your circle, there being practically no timber growth.

The season of the year that I made my trip, namely, the latter part of October, the stag caribou were in a very pugnacious mood—so much so that the big stags were wandering about, looking for foes to conquer. I saw much evidence of terrific battles that had taken place between these monarchs of the barrens. An old stag, traveling along with twenty does in his band, sighting another band, would start the battle, and to the victor belonged the spoils.

Great care must be taken in stalking your caribou not to start a "drive," which one or two little calves will do at almost any inopportune moment. If you start a small band of caribou, they will go through a section of the country pell-mell, at full gallop, and every herd of caribou that sees the commotion will join in the chase, just like a flock of sheep. Once getting under way, such a band will not stop for twenty miles, and will, in all probability, carry with them every caribou in sight. In a section where there is more timber, this would not be likely to happen. It is absolutely useless to try to stalk a big head, if there are other caribou between you and your quarry, unless you make a roundabout circle to get to him.

It is a delightful sensation to sit on these high elevations, where you can see range after range of mountains, some of them fully fifty miles away, with game of some size or other constantly in sight—mountains, valleys, lakes and streams—everything to delight the eye of the nature lover.

One must not expect that simply by going to Newfoundland, he will be permitted to walk right up, select a head, and knock it over.

There are many caribou, but, on a general average, you will see fifty of these animals before you find a head that is worth while. A good many of the old fellows have, in probability, had previous experiences with hunters, and are wary. While I secured my three heads, I had to hunt as hard as I ever did in my life to get them. If you are willing to work for your specimens, and can kill them when you are in range, there is no doubt of your ability to get your full quota.

The four men that I had to help me had none of them ever tasted either rum or tobacco, and were as nearly children of nature as one would ever meet. In worldly affairs, they were not educated, but they were natural born hunters, and when a desirable head was seen through the glasses, a quick survey of the country was made by them, and a route to stalk laid out that, in each case, proved successful.

As a diversion from caribou hunting and shooting, the ptarmigan were good sport and very plentiful. A man must not think of doing promiscuous shooting, however, until after he has secured his big game, or intends to leave the camp for some other camping spot. The cock birds begin to crow just as the first streaks of dawn show in the east, so that they make fine alarm clocks. There is no danger of oversleeping on the barrens of Newfoundland!

Of one thing be sure—you will never regret a trip to this strange island, discovered by John Cabot. It is distinctly different from anything to be found on our own mainland.

After my return from this delightful trip, I heard stories of large bands of caribou to be found on the head waters of the Nipisiquit, in Northern New Brunswick. These caribou were of the woodland variety, while those of Newfoundland were the barren ground. Desiring

to have trophies of both species, I arranged a trip to that section of New Brunswick about Little Bald Mountain and the headwaters of the Nipisiquit. I took this trip the fall following the one to Newfoundland, and I am going to tell you just exactly what I saw. You may draw your own conclusions as to which place you would prefer to go to, were you contemplating a hunt for caribou.

After a journey of five days, I found myself at my destination. The next morning my guide and I went from camp up to the barrens. Shortly after arrival, two small caribou hove in sight, at the point we intended to watch from. Then a band of eight others appeared, and others still, until I had seen twenty-nine caribou in approximately two hours. The rain starting in then, and coming down in torrents, we left our lookout and went back to camp. The weather having cleared during the night, we went up to the barrens again. As we looked over the ridge into what looked more or less like an amphitheater, our eyes fell upon a band of seventeen caribou, all feeding in a bunch together. There were several heads that were fairly good, but nothing that came up to my standard of requirements. Inasmuch as in New Brunswick you are only allowed to take one head, and having had three Newfoundland heads, all good ones, I resolved to hold my fire until I found something so good that I would not stand much chance of seeing anything better. With this in mind, the guide and I watched this company until it disappeared over the sky line. A few moments later, five more came along; then another band of sixteen, and in this last lot there was a head on which I deliberated quite a while before deciding not to shoot. They kept coming and feeding by, down wind, in twos and threes, until

KERMIT ROOSEVELT AND THE AUTHOR IN CAMP AT HEADWATERS OF THE NIPISIQUIT.

A NEW BRUNSWICK CARIBOU.

A NORTHERN NEW BRUNSWICK MOOSE.

about 3 o'clock in the afternoon, when we had actually seen eighty caribou, but nothing large enough to take. Had I not possessed my Newfoundland trophies; however, I should certainly have selected one of them.

About 3:30, a herd of eight came into sight, led by the very prince of his fellows. This head satisfied me in every detail, and made me feel that nothing would be left to be desired if I could land it. The big fellow was in a difficult position to stalk from where we were, but, after an hour's maneuvering, I got up within range. The picture tells the rest of the story. This picture was not taken that evening, as it was too late. We left him where he fell until the next morning, when we found that he had stiffened during the night, so that we raised him to his feet, put a little spruce under his jaw and took the picture shown.

On this particular barren, from this one lookout, in two hours' hunting one day, and about six hours the next day, we saw one hundred and seventeen caribou. The friend who was with me went up the next morning to the same lookout, and before he shot, saw forty-three caribou, so that on this one barren, in three days' watching, there passed 160 different caribou, which certainly entitles this section of the country to be classed as a caribou country.

That same night about eight inches of snow fell, and the next morning we went up the valley, looking for moose. We had not gone far, when we struck a trail of four, among which was a large track, which clearly indicated a big bull. After about an hour of traveling and trailing, the guide stopped suddenly, pointing with his right hand into a clump of spruce. When I looked, I saw the big fellow lying down. He saw us about the same time and immediately sprang to his feet, but that was as far as he got.

In conclusion, I will state that we saw more caribou in three days of actual hunting for caribou in this section than I saw in Newfoundland in ten days. Again, not only is it reasonably sure that you will get a nice specimen of this game, but your chances for getting a moose are very good, so that with deer, moose and caribou, you have three possibilities in New Brunswick, two of which cannot be realized in

Newfoundland. I should not recommend going to New Brunswick for caribou until, say about the first of November. Previous to this time, the caribou are in the green woods, and do not come out on the barrens until cold weather sets in. Then they come for hundreds of miles through the big timber out to these barrens.

In Newfoundland, wherever a caribou lies down to sleep at night, he will find his breakfast awaiting him in the morning, as the moss feed practically covers the island.

In New Brunswick this is not so. This particular moss grows in a very limited area, so that the caribou, in order to get it, must centralize on these comparatively small barrens, making your chances of success practically sure. I believe the Newfoundland caribou heads run a little larger, as an average, but if you are not too anxious and will hold your fire long enough, you can secure a beautiful specimen in Northern New Brunswick, and, in addition, if you are persevering, you can get a bull moose, as well as two deer.

Aside from the question of game, I shall never forget the beautiful panorama spread out before me when I reached the top of the first mountain chain on the South Shore of Newfoundland. Off to the south was the broad, blue Atlantic, with not a sail in sight, and to the North, the barren waste—mountain chain after mountain chain outlined against the blue sky. As I stood there, looking on this beautiful picture, with no sign of man's work in sight, either on land or water, I could not help but feel that there was a lesson to be learned from that which was before me. Living, as most of us do, in the big cities, surrounded by skyscrapers, electric railways, and all the other complexities of modern city life, we are inclined to feel the sense of our own importance, and a pride in the things that we have accomplished, but the thought came to me there how really insignificant would be the efforts of all mankind, should it be asked to duplicate even that small portion of the universe outlined before me. Indeed, how absolutely insignificant are our works in comparison with those of our Creator. One needs to get back to nature to come to a proper realization of this fact.

THE TOP RAIL.

I was in Billy Townsend's gun store recently and in a talk with an old-time ducker, who yet occasionally shoulders his beloved double barrel for a day in the field, I gathered some information which should prove interesting. He was talking of the days of the market hunter, when it was no crime or disgrace to defray one's shooting expenses by selling his game.

One season—it must have been nearly a quarter of a century ago—he made a bag of over 800 mixed ducks, canvasbacks, redhead, mallard, widgeon, bluebill and teal.

He was then a fair field shot, and it required a good many forays upon the many adjacent ducking grounds to make the final count he did. So much for his dexterity as a hunter.

Say, for instance, that he had killed an even sixty-seven dozen birds, and sold them at the highest market price, and yet they would not have brought him more than \$50 or \$60. Compare this sum with his expenses; in those days manifold more than they would be to-day: Time, \$100; railroad fare, \$50; ammunition, \$50; incidentals, \$50; or a total of \$250, or \$200 more than the birds would have brought him if he had sold them all.

If the average duck hunter did not derive more sport than lucre out of the shooting, he would never go out. But no true sportsman then had any thoughts of augmenting his bank account through the instrumentality of his favorite sport; enjoyment and health were his main and only objects.

What royal fun it is, beginning with the anticipating pleasure of an expedition, continuing delightfully on through all the work of preparation, and culminating in a grand cataclysm of happiness when once the camp-fire is blazing.

GRIZZLY KING.

A Day's Hunting in the Maine Woods

By MOCCASIN MAC

ONE bright, frosty October morning the writer hit the trail about 7:30 and, full of high anticipations—and a good venison breakfast—hiked briskly along the Buckboard Road for a mile and a half, then turned to the right up the Shawmut logging road, and with eyes and ears alert for any sign or sound of game, climbed slowly and stealthily up the steep incline back of Hard Scrabble Mountain to the base of Rowell Mountain. I worked my way laboriously over the fallen trees, gradually ascending the fire-scarred side of the mountain, looking carefully and expectantly among the spruce tops and prostrate tree trunks where deer signs were abundant. For here deer found excellent feed in the luxuriant growth of weeds and tender shoots, which had sprung up on the burnt land that was fire-swept two years before. Here deer might lie unseen among the raspberry bushes, or stand quietly concealed behind the spruce logs so like them in color. Stealthily, with eye and ear alert, I climbed to the top of the mountain and silently traversed the moss-covered corridors of the green woods where fire had not wrought its desolation. It was high twelve and I had not had sight or sound of game. Reaching a commanding view I rested and contemplated the illimitable woods, dotted here and there with shining lakes and ponds, that extended in billowy mountains to the horizon round. I enjoyed the vast forest and the wild beauty of the rugged landscape. All this panoramic view seemed peaceful and quiet, and yet the stillness was broken by many sounds of life. In the distance the log cock called shrilly and hammered loudly on a dead tree. Nearby the hairy and downy woodpeckers kept up their calls and hammering on the trees. Further down the mountainside could be heard the peculiar call of the black three-toed woodpecker. Whisky Jack perched on a nearby limb, and uttered some of his various calls. A red squirrel came almost within reach and then scampered up a tree and chattered and laughed.

As I sat there, contemplating wild nature, I realized that the enjoyment of the day's hunt was not all in the game secured. Were it so, some days would be very stale. Finally, with limbs rested and eyes and ears feasted with the sights and sounds of the great wilderness, I descended slowly and as silently as possibly the north side of the mountain, passing again over the strip of burnt land that encircled the mountain, now well covered with a growth of weeds and bushes, where fresh deer signs were everywhere to be seen, gradually down to the heavy hardwood growth where the fire had not traversed. Here a good view could be had for some distance among the great trunks of the beeches and maples. Glancing to the left, as I walked quietly and cautiously along carefully scanning every object in sight, I saw, about seventy-five yards away, a reddish-brown object—the right color for a deer! My rifle came quickly to my shoulder, with the hammer at full cock, my eye ran along the barrel and drew a fine bead on the brown object. I hesitated. This object had no legs or head, and any kind of a

decent deer should have both. It might be standing behind some obstruction that concealed the legs, but a deer would certainly have a head. No, it was not a deer! It was a partially decayed stump of some huge tree that had been felled by the lumberman's ax years gone by. I lowered my rifle. I wasn't going to shoot a stump! But how easily I could plunk it if it had been a deer! I looked at the stump wistfully and more carefully and fancied I could see the black of a deer's tail hanging down. No, it was only a burnt place on the stump. I moved a little to one side and looked at a slightly different angle and was sure I could see the white hair on the side of a deer's tail. A conviction flashed through my dull brain, it is a deer! At the same instant a white flag flashed up from that stump and went waving

and tossing down the mountainside just showing about the underbrush, as its owner bounded away faster than any stump ever moved before. Oh, yes! it was a deer!

I turned back over the mountain and passed down its southern slope toward camp, lamenting that I had not fired, for it surely would have done no harm to shoot a stump, if it had been a stump. But then, I reflected, it was only a doe and it would have been difficult to drag the carcass back over the mountain anyway. Thus blaming and consoling myself by turns, I hunted slowly along, scrutinizing every object closely, determined not to be fooled similarly again or miss another opportunity, when suddenly down through the vista of trees ahead I saw two big ears above the low bushes!

STARTLED IN THE MOONLIGHT.

Cooting on Cape Cod

By GEORGE O. ALMY

"U² KUM."

That's all there was to Lon Green's postal card message, but it was sufficient. Had he written a ten-page letter, crediting him with the inclination and ability, he couldn't have conveyed more.

For weeks I had waited for that word, waited anxiously, for on it hinged an outing that I had been looking forward to for a whole year. And the word just left me by the letter-carrier was that the birds were flying down off the Kendal Harbor shore, Cape Cod, and flying good, or Lon would not have written.

Lon is one of the natives of the place and earns his living by pulling lobster pots, fishing and odd jobs ashore. He knows the coast in the vicinity of the Cape like a book. Brave, courteous and on the square with all, he is one of those princes in disguise which we run against now and then in unexpected places.

So much for Lon, good fellow. As for my chum Stuart and myself, for the next half hour after receiving that postal card, it was hustle and bustle with us. We couldn't throw our duds into our small trunk fast enough and depend with any degree of accuracy that everything was there. Rubber boots, oil skins, sweaters and gloves, along with shells, gun tools, oil and other toggery were jammed into that trunk with wonderful rapidity. Two hours later, guns under arm and precious trunk aboard, we were seemingly crawling down to our little Cape town destination on the only express train that goes over the line, off from the city for a three days' trip.

It seemed an age before we got our first whiff of the good salt sea, an odor that sets the blood of the live man tingling, while from the car windows we could see the surf rolling in on a far distant yellow beach. That first sniff and sight of old ocean banished all thoughts of dull care left behind and took a dozen years off our shoulders.

My! How that train did drag. It was more than two hours later that the little Kendal Harbor station came to sight. The brakes had not ceased grinding when we were out on the platform, and there waiting to greet us was dear old Lon. Sea clothes and hat and his old don't-care air, but the same old boy, heavy of mitt and strong with the "How be yer, boys?" Happy? Well, you can just place it that we all were. It was a pleasure to be there. That annual greeting and handshake each fall at Kendal Harbor station is something historical.

It was a two-mile drive in the vehicle termed in local politeness "the stage," to Lon's home on the ocean front and little harbor that gives the place its name, but any horse can walk the distance and we eventually arrived.

Mrs. Lon was equally as glad to see us as her husband; even the baby honored us with a squeal, and we were soon "all hunky" in the guest chamber, none of us being strong on ceremony. It was off with the store clothes and into duds, and if the latter did not look well, they felt so. There's something about old clothes that gets me every time. And best of

all, as we dressed, we could hear the call of the ocean—booming, sloshing, ker-chunking and slamming as the waves washed and tore at the breakwater and bar that nearly locks the harbor mouth.

Naturally, with such music to stir our blood, we were anxious to get out and down to the shore, but Mrs. Lon had cooked a big dinner and she would not hear of it. You know how it is with women after they have been tinkering over a stove all the morning. And then, we were a bit hungry. That salt air, you know.

But every good thing has its end and so

over in the marshes we knocked down a woodcock and a couple of partridges. And there was a big red fox that I blindly stumbled on to. This meeting was such an unexpected and decidedly unusual occurrence, I having almost stepped on Reynard as I was forcing my way through the waist-deep grass and underbrush, that I clean forgot to fire at him until he reappeared in a little opening fully 200 feet away. Then we all gave it to him and the air fairly sang with the lead, but though we ruffled him, No. 5's at that distance made no serious impression. He gave us a grin, put head down and tail up and bade us a polite but final good

TWO THAT WOULD HAVE PASSED BY.

did that dinner. Not long after we were down on the shingle beach looking over the situation. And situation is a good word, for the rollers were coming in something grand, breaking three and four times out from the shore before the final crash on the beach. Over the breakwater hung an almost continual haze of mist and foam as wave after wave tossed its shattered arms high into the air after vain effort to wrench apart the massive stonework. Truly, a spectacle for the artist or camera man, but a poor outlook for the gunner. I knew from experience that it was all off for that afternoon, and Lon confirmed my forecast.

"I hate to disappoint you, boys," he said. "but this sea is pretty nasty. We might venture it, but outside there'd be no fun and we might get more than we bargained for. You know what an upset would mean in this water and at this time of year."

Yes, with rubber boots, oil skins, heavy clothing and a pocket full of shells in a November sea, I knew what it would mean, and having some personal regard for my own carcass as well as for the feelings of those at home, was satisfied to take Lon's word for it.

So it was land for us that afternoon, but

day. That episode will never pass from my memory.

Did we sleep that night? We did, making up for a deal of nights and lost sleep. The gusts of wind that tore over the roof, rattling a loose shingle here and there, played a lullaby that locked us fast. "That fox," I always refer to him thus, caused me to dream and in my slumber I had that afternoon's hunt all over again. But this time the fox did not run. I fired and fired but could not bowl him over. Finally we came to close quarters and the brute had me by the shoulder, when Lon's hand reaching through the partly opened door nearly landed me out of bed.

"Hey, you lubbers!" he exclaimed, "are you fellows dead? I have called you twice. Are you going cooting or are you going to lie abed all day? Come, now, get up. The wind has gone down and we will have a grand day on the water." We then tackled Stuart, who was still sleeping as unconcernedly as if he were home in bed on a Sunday, and dragged him out of slumberland. Of course, it was dark. New England November mornings at 4:30 o'clock always are. Over in the East the sun was casting its searchlight along the horizon, just a

glimmer of its awakening, while up above the stars still twinkled, laughing and winking at us as we shivered in the chill morning air. But the cold helped us dress, and, despite the chill, there was that gladsome feeling that betokened the near approach of a fair day.

Breakfast, with plenty of coffee, over, we were soon down to the boat landing and a few minutes later out to Lon's big motorboat that swung at its mooring in midstream. Lon, who can cuss without repeating, tackled the engine, and to make it short, we were soon chug-chugging for the open sea. We were out for coots, and cooting at Kendal Harbor is not done from the shore, but from five to ten miles outside where enough birds can be found to make it worth while.

Once beyond the breakwater we found a lively sea still running, not too lively, you know, but with kick enough to cause the motorboat Lizzie to throw up her nose and heels like a racer after a layoff. As for our two towing dories, they jumped and skipped about in all directions, each apparently trying to start on a voyage of its own, only to be jerked back into line every few moments by the painters.

From the nor'east a breeze was blowing. Far out, close to the tops of the waves, we could see bunches of coot scudding southward, making the best of the favoring wind. Miles beyond them and high in the air, huge flocks of black duck filled the sky, all sails set and south-bound like the coot. These black fellows were perfectly safe, so far as the local gunners were concerned, flying too high and too far out to make it worth while to go after them.

An hour of riding the rollers and we were on the cooting grounds, and a few minutes later, with anchor down and dories hauled alongside were doing our best to get ourselves and our toggle into them without shipping any more water than necessary. We succeeded, but not until after much pitching, tossing and straining, with a weather eye open all the time for bumped fingers. Finally we were all aboard and off to set the block and profile decoys.

These are arranged in strings and held in place by anchors at either end, tide and wind being taken into consideration, and in rough water it is a ticklish job. There's a whole lot in knowing how when a dory is trying to stand on its nose or tail, or hop like a frog. And it is also just as well to leave the poor old ocean where it belongs and not try to take it in over the side of a boat and away from its native home.

TAKING IN DECOYS.

A GOOD DAY'S WORK.

The decoys out, there was a bit more tugging and rowing, and then we were in place in a sun field back of the strings, Lon off to the right a few hundred feet, with Stuart and I in the other dory to the left.

"Heigh-ho! Dead ahead!" Lon had spotted a bunch of white wings coming down on us from the northward, and his warning cry put us down on our knees in the dory, trusting that our yellow slickers would fool the birds into thinking that we were but a part of our yellow-hued boat. Spread out in one long line, a hundred feet or more from end to end and about 40 feet up, their wings working with a clean-cut snap that an experienced eye can detect a surprisingly long way off, the birds in a very few minutes were upon us.

Their wise old leader had spotted the boats and noted us early. Knowing the danger that lurked beneath, he gave his signal of alarm and mapped a course that would carry all higher up into safety. The bunch took the cue, but a dozen or so youngsters, over-estimating their own importance and wisdom, paid no heed to their leader. They swung in over the decoys to sort of get acquainted, wings tipped up—an excellent shot.

From both boats came flashes and four birds went into the water with a splash. Two remained on top, their days of flying over forever. But with the splash, the other two disappeared with a swirl beneath the surface, sure sign we were in for a chase.

For us it was wait and watch, for the coot were merely taking a deep dive and would soon be back. The tossing waves are most deceptive; a dozen times we thought we saw the birds and brought gun to shoulder, only to find that we had been fooled. Finally, however, up popped a coot head far off our stern, while a second was soon showing over beyond the blocks and ahead of Lon's boat. Both birds swung up into the wind and at once started for the open sea, an inch or so of head and neck being all that was visible of them.

It was now or never with us, and quick work at that, for a wounded coot in the water, if not seriously damaged, has every chance in

the world of getting away. For us, it was slip anchor ropes, toss over buoys and a stern chase, with boats jumping this way and that. Stuart watched one of the birds while I took to the oars. Once lose sight of your coot after he starts swimming and you might as well put back to the anchorage.

Now it was row, row, row, a strong pull and a pull all together. What Lon was doing we had no time to notice. If anyone could get a bird he could. A couple of barks from his gun and a yell a few minutes later told us that he had bagged his quarry. Stuart soon opened fire from our boat, and, after the coot had dived two or three times, finally nailed him. Before we could get him into the boat, though, there came another warning cry from Lon. Almost instantly another bunch of birds was on us, and, despite the commotion we were making, turned and swung in between the boats. We gave them a cross-fire, but over caution for fear of shooting into each other gave us but two birds.

It was half an hour before we were back at our anchorages. So the day drifted on with now and then a bunch of coot, gray white wings, butterballs, etc., a banging of guns, often more misses than hits, but all kinds of fun nevertheless for a couple of city chaps. As the sun began to sink, going-home time, we counted a dozen birds—not very heavy shooting, but entirely ample for us.

Taking in the decoys was fully as difficult as getting them out, a wet, nasty job at all times and something fierce in rough water. I, for one, was glad when it was over, and we were heading back to the big motor boat. Out there in the ocean, with dusking falling fast and the land a long way off, the Lizzie looked to Stuart and me as big as a liner. Mounting a wild mustang would describe the process of boarding her, for, with the small boats hopping and skipping in one direction and the Lizzie plunging in another, to get from one to the other without being smashed up or upset was just a bit exciting.

That night it was supper, a smoke and then bed, and if Stuart was not asleep when he "hit

(Continued on page 544.)

Out in the Chicken Country

By AMOS BURHANS

THERE was a time when the steady advance of the prairie farmer drove the grouse and the prairie chicken before him. The birds loved the untrampled heather of ungrazed grasses and seldom were found near the domain of the man with the shoot-stick whose peculiarly true aim, owing to the price of powder and shot, reduced their ranks when they flushed within range. To-day the major portion of old-time conditions have gone their way. The birds nest everywhere, and these nests are protected as much as possible by the owners of the land. Thousands of them are discovered every season by the farmers whose lands lie out on the prairies of the Dakotas, Minnesota, Nebraska and Wisconsin. To bother a nest means a covey less for the fall shooting. The birds are encouraged with nesting and food and courteously discouraged with the scatter gun.

If you will look over your map of Minnesota, scan the counties of the southwestern part of that State and note the fairly well watered prairies that stretch away invitingly, you will a bit better understand my following paragraphs. There are countless creeks, each flowing through the center of a rich prairie valley, and none of them are on other than the county maps. It is sometimes five and sometimes ten miles from one valley's creek over the rolling land that separates it from another. These creeks all find their way into the Minnesota River, the Des Moines River and eventually feed the Big Wet that carries them to the Gulf. Generally speaking, my remarks will fit any of the northwestern watered prairies.

On the 7th of September I began a short trip for prairie chickens in Southwestern Minnesota. The morning of the first day of the open season was cool and very damp with a heavy dew. The night before I had driven out to the home of a farmer friend, an enthusiast over hunting who lived right in the heart of the best chicken country between the Chicago & Northwestern Railway and the Minneapolis and St. Louis R. R. extension to Watertown, S. D. The county was the last one west of the range in which it lay, and from an eminence we could look across the valley and see the little town of Gary, S. D., nestling among the rolling hills.

Practically none of the fall plowing had been done in this county. The shock or stook threshing was finished, and threshing rigs were drawing up to the stacks where they laid idle until the haying season was over, and the grain had "sweat" its sweat. Hunters were few and far between. A few farmers were in the field after certain coveys that could be easily located, as all of the birds had chosen to stay close to their hatching and drumming grounds and frequent the shady corn that so well protected them from the warm winds and beating rains of summer. And the great stubble fields, with the uncut hay meadows of thousands of acres, gave the birds all the chances to escape detection. At the same time last season all the stubbles had been converted to plowed fields, the hay meadows were stripped of their crop, and much of the corn was cut and in the shock. Last season there appeared to be hundreds of large and small coveys of birds, the larger coveys meaning that

the birds had started to pack or flock for the winter.

The dogs released, we left the farmyard at daylight. The chores had been completed and breakfast of bacon, eggs, corn bread and coffee stowed away in the human bunkers. Across Quail Creek we waded. It circled through the pastures and meadows, the inviting refuge of tangle, briars, grape vines and resin weed hiding numerous coveys of quail. I would estimate a covey to the farm. Entering a stubble of oats, the dogs made long casts ahead, quartered the field and one bolted the course for a piece of wheat that laid across the road to the left of us half a mile away. The setter, John, full of fire and eager to find game, be it furred or feathered, dropped his head a bit as he went over a low knoll and came to point along the bank of the creek.

"Point, Judge," I cried, mockingly, to John's owner, thinking there was nothing ahead of the dog, whose work I was unfamiliar with.

"Before the day is done you'll change your tune," answered my friend.

And sure enough, ahead of the dog, now edging on into his game as we went up behind him, a nice covey of fully grown young quail whirred into the air. Both of us were surprised. And the dog I imagine was, too, for neither of us fired. The season on these little brown denizens did not open for three weeks, and we neither cared to be called "sooners."

John finished the field and we took to the road. A little white church amid a plain of wheat stubble and hay land was our objective

THE DANCE OF THE PRAIRIE CHICKEN.

point, for in a heavily weeded stubble nearby we were to begin the true day's hunt. That particular field was birdless, and we crossed the patch of weedy flax, forded the drainage ditch that emptied into the creek and went into a piece of oat stubble again. Not a breath of air was stirring. The stubble was damp. We were all wet to the knees from the long grass we trekked through. Jimmy had on low shoes and refused to wade the ditch, so he stood and watched us. The head of the dog went down again. His nose detected something familiar, and he began roading a covey of young birds. As the stubble was so scanty in this field, we did not expect a bird, thinking they had been feeding there, and then moved back to some other point as the morning wore on. Rather quickly John stiffened to a point and the lashing of his great tail ceased. He was immovable. Yet we could see no birds and went ahead carefully to give the dog a chance. Then from beneath our feet rose eight young birds, frightened

of cotton cord and acted as if he were thoroughly subdued by the disgrace.

The cloudy sky began to give way to the sun above, and being wet we loaded pipes and kidded Jack over his field trial dog. A good half mile to the south a large covey of birds swung over a field of corn and dropped into the long grass. There had been some shooting in the country about as we walked to the fields. This had now ceased. It was probably done by residents who looked for known coveys to supply the family dinner pot. As the dew left the grass, however, they seemed to hasten to the hay fields and leave their shooting until another time. Someone had flushed the covey we saw alight to the south, and pure luck had shunted them within our sight. All were anxious to start for them.

As we drew up to the spot where they should be, Jack suggested that he would not shoot, but would handle the dogs. John would not flush the birds, though he did chase when

either dog should have found and stood. So ended the shooting of the first morning of the season.

Sunday, the second day, was hot and windy. The dogs could not have located an abattoir, to say nothing of chickens, and outside of an exercising run morning and night, they were kept up.

Monday was a day to give credit to both dogs and men. They located every bird we had a chance at, never flushed, never ran in to break shot or wing, and the morning totaled twelve birds, which we called satisfactory shooting. This would be rotten compared with the slaughter practiced years ago by the market hunters who depleted the prairies. We found birds that day where they were least expected. For one I had thought that birds fed in the morning as much or more than they did at nightfall, but that morning's shoot gave the lie to the idea. We found birds, scattering pairs and trios and singles, in the corn's edge, in the flax, in the grasses of the roadside, by the creek and elsewhere. Brock declared they had been driven into these places and been separated from their coveys because of the many hunters of Sunday and the heat of that day driving them to water and shade. For myself I refused to formulate any theories, as all mine had been explored in the past.

Almost invariably, however, every bird rushed into the corn if he got away. In the chicken country of to-day it is their haven of refuge, and they seem to know it. Some got up before the dogs had a chance of making a point and scuttled for the corn. Beneath its heavy cover they can bask and sport without fear. When you try to get them out of it they run like Chinese or ring-neck pheasants of the Pacific coast and hide in the grass that grows after the last plowing of the fields.

With such a winter as blizzed through this country, 1911-12, it is a wonder that there was a single prairie chicken left. There is an abundance of food in the small grain fields until they are plowed. Some are not plowed until spring. The birds feed in them until the snow is so deep they cannot dig through it. The corn is largely shucked in the fields, and the nubbins never being taken in along with the ears missed, leaves plenty of corn to carry the birds along. This spring was a fairly favorable nesting season. There was no great abundance of rain after pairing time, and chicks were not drowned or eggs washed away.

Our best evening's shooting occurred on the last day of our stay. The morning had been hot, so hot that we turned for camp at 9 o'clock. We had just a half dozen birds and those killed the day before could not stay sweet even in the cool cellar, so we decided. I drove eight miles for ice, and when the birds were packed on it, we felt better. The afternoon cooled off as the sky clouded, and the bit of a shower fell. At four we went toward the little white church, one of the boys bringing up the rear in a buggy as he was off food temporarily. The excellent stubbles near the church on the hill had not given us a bird and we were going to try for them there for the last time.

Working down wind through the field, keeping the dogs well in, we had given the birds up when three old birds shot into the air straight for us and swung as usual for the corn. One paid toll and two winged away, the shot rattling

"COVEY AHEAD, GENTLEMEN," SAID THE DOG.

and anxious to be off. They made for the corn east of the field, and when they were a fair distance off, two guns began to decimate their ranks.

Only four birds fell to six shots and a cripple dropped a little way off too weak to fly further. John rushed in to chase the flying birds, and one of us sprang to catch the cord that connected with his choke collar. The other tried to mark the crippled bird and began to gather up the fallen chickens. And after order had been somewhat restored we found that neither of us had definitely located the cripple, nor could the dog. Behind us came the cry of Jimmy who waved to us from beyond the ditch. He had it marked for a surety, though neither of us could make out what he was trying to impart. I went back and carried him across the ditch and he found the cripple, now dead, just as John came up to him and made the point on his bird.

And in the fracas none of us save Jimmy had marked down the remainder of the covey. They had dropped in the corn up the long slope of the divide. It was useless to pursue them, anyway we might leave them for seed. In the distance came Jack with his bolting pointer, the latter in leash. By the time they came up to us that dog had been flushed to a hundred feet

they got up. He was a year old pup with a great nose and a woeful absence of yard breaking. He would not drop to shot or wing. Jack declared the pointer broken, but was afraid of giving the dog free rein after he had disobeyed so untowardly. Into the stubble adjoining the grass we went. The birds were holding well. John stiffened to point and the pointer backed him. Away ahead rose into the air an old wary cock. He was not to be caught napping. An automatic's first pair of shots dropped him, however. And then the balance of the covey rose stragglingly. Brock, on the left, fired on, shot at a nicely distanced bird, and stood looking at it until the birds had all flown off. He was that surprised at having missed it.

Between the other two of us who were shooting, the covey paid four birds. Beyond the corn they dropped in an unknown and posted territory. Then came the working of the dogs on the dead birds and teaching them to hold their points. This gave Jack courage, for his pointer worked nicely and had dropped as we began shooting. The choke collar he had applied expeditiously on John as that worthy setter started to chase the rising birds, much to the dog's surprise and his eventual subjugation. On the way back for dinner we sprang a single that

against their tightly feathered breasts and wings unharmed, for they were a little beyond range.

Into the field where we once got up a covey and killed but three, we started. Half way down the dogs pointed in a dense patch of weeds and oats the harvesters had failed to glean, and up went seven birds, four of which we secured easily. The rest of that end of the valley gave us nothing, though we saw some birds drop into the corn and grass and thought we had located and marked them truly. Across the road we traveled and east the dogs loose in a piece of wheat stubble. Never a bird was to be found. Coming to the end of this, another stubble of oats along a large field of corn caught our attention, and we got up a covey a hundred yards ahead. One straggler dropped to our guns. Perhaps that extra two grains of Ballistite did the trick. It was a long shot, anyway.

Across the valley we saw a large piece of stubble from which we had once seen two nice coveys get up a few hundred yards ahead of us. The stubble was high and surrounded by corn and looked good. The sick man tied his horse and rig to a haystack and accompanied us into this Eden for the prairie chicken. One lone hen rose before we advanced a hundred yards. She tumbled quickly. On the crest of a knoll John began his roading, and we were sure birds were there or had been there within the hour.

Near a bit of hay land, and yet in the stubble, John and the pointer came to a perfect stand. They were a long way ahead and the birds refused to hold. Fifteen or sixteen rose into the air before we were within range and only three stragglers that lay to the dogs' points did we get. If they had not risen against the wind, we would have lost even these. But the dogs still held their points and we could not understand it.

"More birds in here somewhere," declared one.

"Nonsense. With all that shooting?" asked another.

Then John dropped his nose, roaded a bit and advanced into the wind toward the ground we had just covered and raised his head. The pointer drew alongside and both their noses quivered as they sniffed the odor of birds. Being curious we went back the way we had come over the knoll and soon the air was thick with raising chickens. They had laid tight to the ground, and as we passed them before, they had failed to flush. The battery of four guns began their usefulness, and at last we had enough birds to start home with ten each on the following morning.

We had been in the chicken country five days, were sunburned and tanned and freckled. The dogs were gaunting up and settling to their work beautifully. We had made friends among the farmers, killed only enough for food and were fagged out from the chase over the country afoot. Invitations for another year poured in—and we shall accept.

THERE was a flight of woodcock on the new moon, in Sullivan county, N. Y., but the grounds were too hard to hold them. They dropped in and then moved elsewhere. On good feeding grounds they will usually remain until the next good frost, but birds should be dropping in every night now. The time is short, as the first hard freeze, making ice, will send them further south.

Reminiscences of "Ragged Islands"

I.

WHEN the "Governor" offered my brother and me the choice of a share in one of the Southern ducking clubs, we were in a quandary what to choose. A friend, Dr. W., who had been a member of the Ragged Islands Gunning Club Association with property in the "Back Bay" at the head of Currituck Sound, suggested that we buy a share of "Ragged Islands" if there were one for sale. We found a dry goods merchant in Norfolk who had the article in question. He agreed to take me as his guest to the club for a week, and if satisfied with the property I was to purchase his share. I went to "Ragged Islands," saw the property and the fowl, and bought the share. This happened in 1896, and during the following four years I visited the islands at least once and often twice during the shooting season. Those were my first real ducking days, and I shall remember them as long as I live. Following are a few of the incidents that recur most vividly to my mind's eye:

II.

Young Burke, son of the dry goods merchant, and I arrived at Virginia Beach shortly after noon. There we obtained a rig from the livery men and drove down the beach twenty-five miles. It was a long, cold journey, but the sight of numerous ducks and geese resting in the ocean just outside the line of breakers was enough to keep me warm. We found Waterfield, the club keeper, and one of the guides, Howard Cooper, waiting for us with the "big boat" at Barbour's Place opposite the club house. A short sail landed us at "Ragged Islands."

The old club house with its gun room, its big open fireplaces in living room and dining room, its double feather beds—two to a bedroom—the weather arrow on the dining room ceiling, connected with the vane on the roof, showing the direction of the wind, first claimed

my attention. Then Burke, taking down a glass from a hook over the door, guided me up to the lookout to investigate. As it was Sunday, a "rest day," the fowl had not been disturbed, and every cove and pond in the marshes had its quota of ducks, geese or swan. In "House Cove," a few minutes' walk back of the club house, sat a flock of fifty or sixty swans accompanied by numerous bunches of geese, while ducks of all kinds dabbled about the edges or "traded" back and forth. That night it was all I could do to sleep because of the racket of those geese and swans, augmented by their brethren who had flown in from the ocean to feed in the moonlight.

Besides Waterfield, the keeper, the club employed three men—two as guides and one as guide and game warden to keep off the poachers. The first two, Howard Cooper and "Os" Moore, were typical Southern baymen. Cooper was of medium height with good shoulders, a red face, tiny red moustache and closely cropped, dark red hair. A good-natured, lazy fellow, but a great man in a shoving skiff—one who always did his "darndest" to get you shooting, and the best shot I ever saw in a blind. "Os" was rather different. He was about Howard's height, but slim and wiry with a long drooping brown moustache and sharp cadaverous features. My impression of "Os" was that he did no more than he thought you'd put up with. He was not as good a shot in a blind as Howard, but was far his superior in a battery. Each was jealous of the other's shooting and each had his "parlor tricks." The third man, "Old Beacham," didn't come around to the club house unless he was so required. He lived in a little shack on the bay side of the marshes and guarded the property. I remember one night when he was at the club house someone was "firelighting Shed Cove" and "Old Beacham" started after them with a "shove skiff." He took along a regular arsenal of rifles and shotguns, but didn't need them, as the poachers heard him coming and got away. The

A BACK BAY MARKET HUNTER'S RIG.

old fellow must have been well over fifty, but had just been married for the third time. Whenever I met him he would reach into his pocket and draw out a wedding day photograph of himself and "his woman." It was plain to see who was the boss of that household, as his wife would make just about three of the "old man." As a young fellow, Beacham was considered the best shot on the Back Bay, and was said to have killed seventy-seven canvasbacks from a battery without a miss.

III.

At "Ragged Islands" it was the custom to shoot the outside points in the mornings, and the marsh in the late afternoon and evening. At the former you had chances at the diving ducks

THE OLD CLUB HOUSE, RAGGED ISLAND.

—canvasback, redhead, bluebill and an occasional goose or swan; in the marsh your opportunities were at teal, blackduck, mallard, widgeon, shoveler, pintail, an occasional woodduck and more geese.

My first day at the club was a "blue bird day," as Howard called it, and we set out our twenty or thirty stools off South Point, as what little wind there was came from the southwest. After sitting in the stand for some time without a shot—plenty of ducks flying, but high—Howard, who must have had eyes in the back of his head, whispered, "Keep quiet. Here comes a little bunch of canvas from over in the ocean." I turned slightly and saw seven big ducks headed our way. I didn't think they would come down, but Howard's call, "H-a-a-r, h-a-a-r, h-a-a-r," attracted their attention, and they began to circle. Around and around they flew while I squatted, not daring to move a muscle. Finally with a whistle of wings they flew right over our heads into the decoys. "Now!" said Cooper, and we stood up. We each got one as they jumped, but as the sun had risen and they flew right into its glare, a wing-tipped drake was the sole result of our second barrels.

IV.

I was at "Whitsun's" with Howard. The sun was warm. I drowsed off. A dig from Cooper's elbow brought me to. "Get down! Here comes an old swan!" I slipped one load of BB's and one of T's into my "12" and

watched the great white bird fly steadily along. He was pretty well out and high up, but as he got directly in front of the stand, I gave him one barrel after the other. To my joy he turned about three somersaults and struck the water with a tremendous splash, but his head was up. Howard grabbed his gun, and jumping into the "shove skiff" started after him, while the swan swam off with the speed of a race horse. Finally Cooper thought he was near enough and started to raise his gun, but the wise old bird was too wary. He rose and flew about 200 yards and Howard started after him. The bird rose again and this "fly" carried him out over a mile into the sound. We never saw him again.

V.

On another trip I was at Lane's. Contrary to custom we had decided to shoot this point in the afternoon and evening, as a battery which had spoiled our shooting in the morning had just taken up. A few bluebills, two canvasbacks and a goose were lying in the grass back of the stand, and it seemed as if this was to be the total of the day's bag, as the birds had stopped flying. A sailboat tacking up the bay rallied a large raft of fowl, ducks, geese and swans, many of which headed for the ocean. Their line of flight carried them in our direction, but they were very high and out of range. A bunch of about forty swans followed the ducks toward the sea. They were flying low—not over twenty feet above the surface of the water—but were well out from the shore. As they came by our point they cut in a little to pass over the bay next to us and this brought them about seventy yards from the stand. In the center of the flock some eight of the great white bodies in line caught my eye, and the heavy eight-gauge sent a couple of charges of BB's hurtling in their direction.

"Confound it, Howard, I didn't lead them enough."

"Yes, you did, sir," was his answer, "look there and there."

Fully a quarter of a mile away what looked like a white feather pillow was floating on the water, and nearly as far again another swan was down, but with her head up and paddling off. Cooper lost no time in hustling after the cripple in the skiff. He was gone till dark and I heard him shoot several times, but when he came back he brought with him both swans. They were so heavy and clumsy to carry that one apiece made a good load from the boat landing to the club house. On the scales one bird weighed sixteen and the other eighteen pounds. Mounted, with wings extended, the big one measured exactly seven feet from tip to tip.

VI.

When I first went to "Ragged Islands" the rule about taking up at sundown was strictly adhered to, and this put a stop to "duskin" ducks, so that unless the weather was blustery the shooting was pretty tame after sunset. One evening I had tied out in the west box at Murray Cove. A westerly wind had been coming up all afternoon and the ducks began to fly before I was ready for them at 4 p. m. This left me only half an hour to shoot, as the sun set at 4:30. I had hardly settled down in the stand before a single blackduck hovered over the decoys. I pulled on him twice in quick order, but

missed clean. Then a pair of shovelers—the first I had ever seen—set their wings and started to light among the stools. I gave them two barrels, but they hurried on their way. I was beginning to get exasperated, and when a huge flock of mallards came straight across the cove to me and two "guns" brought no results, I decided it was time to steady down, take my time and do something. A wisp of "bluewings" whizzed over the decoys, and this time I scored a double. An inquisitive pair of widgeon also came to stay as did a fat mallard drake. I had found myself and until I took up at 4:30 I didn't miss another shot. Twenty-two was my bag in that short half hour and a pretty variety it contained—mallard, blackduck, blue-winged teal, widgeon and pintail. I never expect to have such a shoot again.

VII.

A year or two later the sea came over the beach into the Back Bay and killed all the "wild celery" with the result that the shooting from the outside points was practically nil. Much of the "duck grass" in the coves was cleaned out, and except in very rough weather there were no ducks till after sundown. This started the members of the club shooting at night, and when I made my annual visit I followed their lead. There were a great many geese "using" in "Shed Cove" at the northern extremity of the club property, and one moonlight night Cooper took me up there. I led "Mike," the Chesapeake Bay dog, into the little old stand, while Howard improvised a dozen decoys in the shallow water from bundles of duck grass set on sticks. Far superior to blocks for night shooting and much less trouble. This accomplished, Cooper shoved off to try another small cove a quarter of a mile further on.

It was an ideal night for the sport. The bright moon, reflected in the waters, cast dark

MARSH STAND.

shadows along the edges of the cove. The roar of the sea on the beach presaged an easterly wind for the morrow. There were just enough light clouds in the sky to make the birds show up well. "Mike" began to tremble with excitement and a couple of dark bodies passed over me with whistling wings, but were gone before I could get my gun up. Again "Mike" began to shiver while his tail thumped against the rushes. A

splash, a low "Honk" and a single goose dropped into the cove. I stood up and killed her as she rose against the silvery sky. Twice more this happened, though the second time two Canadas came to bag. Then I heard the hoarse clamor of a big bunch of geese as they came in from the sea to feed. The noise grew louder and louder as the birds came into view. As they approached they came down out of the air, set their wings on the further edge, and started to sail over the water for the decoys. I was planning how many I could get with my two guns, the "eight" and the "twelve," when "Mike," who could stand the strain no longer, leaped over the front of the stand toward the approaching fowl. The noise was deafening as the frightened birds turned to escape, and all I killed was one big gander, which had come too close before my canine companion put in an appearance.

The old dog certainly deserved a whipping, but I didn't have the heart to administer it after his faithful retrieving of the other birds. He had been at the club for many years and had never before been guilty of such actions.

It was a pretty sight to see him after a wounded duck. When the bird dove he would paddle around where the duck had gone down to pounce on him the instant the tip of his bill appeared. He was a wonderful swimmer, had in his younger days swam down a wing-tipped swan in broken ice, and one day when Jesse Waterfield had sailed over to Cedar Island, leaving "Mike," as he thought, tied up, the old dog swam the three miles after his master.

After the catastrophe I had several more shots at singles, pairs and once at a bunch of five, out of which I killed three. When the flight stopped I had thirteen of the big fellows set up on stick to help out the decoys. I had heard several shots from Cooper, and as he didn't seem to be coming, I sat back in the stand and dozed off. I woke with a start. It was as dark as a pocket and the moon had disappeared. There were no heavy clouds in the sky, and for a few minutes I tried to puzzle it out. Then it occurred to me that there was an eclipse of the moon due that night. The "plash" of a paddle sounded and Howard pushed ashore. He had six geese in the skiff which, together with mine, made a pretty respectable bag. The moon came out again to view our luck before we reached the landing, and it was a tired pair that it lighted up the old plank walk to the club house.

VIII.

It was the rule to determine the choice of points, guides and dogs for the following morning by cutting the cards the evening before. Once I cut with Leroy Davis, the president of the club, and "Old Bob" Smith, the clerk of the county court. Davis tried first and got a queen. "Old Bob" caught a king and I topped them both with an ace. I also won choice of guides and took Howard, reserving choice of points till morning. Davis had choice of dogs and took "Old Mike." In the morning the wind was to the southwest, and on Howard's advice I chose South Point, as great strings of redheads had been trading through the pass between this point and Cedar Island. I made this decision rather against my will, as the day before I had killed the first "canvas" of the season at Gordon's
(Continued on page 546.)

Shooting Conditions in United States and Canada

Compiled by W. G. BEECROFT

AFTER a careful canvass of game and fish commissioners and wardens, we are able to give the following data on the actual conditions throughout the country. The object of this summary is to enable FOREST AND STREAM readers to select their shooting territory with a thorough knowledge of possibilities after the season has opened. Space in this issue compels brevity, but the complete reports from those in authority will be published in later issues as space permits.

It is mighty interesting reading, explaining as it does, reasons for game conditions as they now are found. Any reader desiring details as to town, hotels, etc., in territory herein described may obtain same by writing Information Department, FOREST AND STREAM.

Alabama.

BY JOHN H. WALLACE, JR., STATE GAME AND FISH COMMISSIONER.

Alabama has always been a great game State. Deer are found in more than fifty counties. These animals are fairly abundant along the rivers in the southern portion of the State.

Black bear occur in the counties of Baldwin, Mobile, Washington and Clarke.

Wild turkey have been seen within the last year in all of our counties.

Squirrels are to be found everywhere.

Doves are quite plentiful.

Duck shooting is fine along the rivers and in the bays.

Wild goose shooting is enjoyed in the Tennessee River that runs through the northern portion of Alabama.

A few woodcock are killed each year.

Snipe and plover, during the spring, are very abundant.

The most popular game bird of Alabama is

the quail. These birds are found in great abundance in every section of the State.

Arizona.

BY CHAS. M. BLEDSOE, MARSHAL.

The northern part of Arizona being mountainous, bear, deer and turkey are plentiful.

Mountain lion, timber wolves and bobcats are too plentiful for the stock interests of the country.

Quail, dove and white wings are very plentiful in the southern part.

Delaware.

BY EDW. G. BRADFORD, JR., BOARD OF GAME AND FISH COMMISSIONERS.

I am happy to report that game conditions are more favorable this season than for years past, there being a great abundance of quail, rabbits and other game in Kent and Sussex counties and particularly in Sussex.

Our new board of game and fish commissioners, which has only been in existence a little over a year, has done much already, and I am confident will do much more in the immediate future in the way of securing greater abundance of game and better sport for our own as well as visiting gunners.

Georgia.

BY J. E. MERCER, COMMISSIONER.

Never in the history of the State have game birds been so numerous, particularly quail. For two seasons past the hatching conditions have been ideal.

Ducks are plentiful along the coast, but they come in spasmodic flights, and the sport is often disappointing on that account.

Deer are not numerous except on the islands of the coast, although some deer may be found in almost every county in the State.

Wild turkey are plentiful in some of the swamps in South Georgia.

The wire grass section of Southern Georgia is now the greatest quail shooting field in the Union, the quantity of game and the forest conditions considered.

Indiana.

BY MABEL WHISNER, SECRETARY TO GEO. W. MILES, COMMISSIONER.

The condition of the game in our State is very good. We have quail in abundance. The

C. K. CRANSTON, FISH AND GAME COMMISSIONER, OREGON.

JOHN TITCOMB, FISH AND GAME COMMISSIONER,
VERMONT.

best hunting is in the southern part of the State, especially in the southwestern territory.

It may be of interest to know that Indiana is said to have more prairie chickens at this time than any other State in the Union. However, there is no open season on them.

Iowa.

BY GEO. A. LINCOLN, STATE FISH AND GAME
WARDEN.

Quail are abundant over our entire State, especially in the central and northern part. Prairie chicken shooting has been good in the northern part, and in the larger lakes of the State ducks are found in great numbers and many are getting the bag limit.

Kentucky.

BY ROBERT R. BURNHAM, MEMBER OF KENTUCKY
FISH AND GAME COMMISSION.

Game throughout Kentucky is very scarce indeed. We have no large game at all. This has long ago been destroyed by lack of game laws. The only sport is quail shooting. The best shooting in this State is either in Western Kentucky or in the mountains. In the latter place birds are generally plentiful, but the walking is very rough indeed.

Kansas.

BY L. L. DYCHE, WARDEN.

Kansas is essentially an agricultural State. The entire State is now in use either for agriculture, horticulture or stock-raising purposes. This is a serious drawback to nearly all kinds of game.

Prairie chickens, formerly common in the eastern half of this State, are confined to a few localities in the western third of the State, particularly to a few counties in the southwestern corner. In these localities there is still a considerable number of these birds. Quail are more or less common all over this State, except in the open prairie counties where there is little or no protection for them.

Last winter was a very severe one, and in many parts of the State the birds had a hard

time of it. Many were reported as frozen to death. One discouraging thing about this was that some of the birds reported frozen were reported to have had their crops full of food. However, the conditions were unusual. Rain that wet the earth and the birds themselves was followed by snow and very cold weather.

There are still ducks and geese that pass through the State during the migratory season.

Rabbits, both cottontails and jack rabbits, can be found in every county.

Maine.

BY J. S. P. H. WILSON, CHAIRMAN COMMISSIONERS
OF INLAND FISHERIES AND GAME.

Up to the present time I think the hunters have been more successful than for a number of years. Game is reported to be very plentiful.

For deer I would recommend the Dead River region, Rangeley section and Aroostook county; for moose, Washington county; for partridge, Somerset and Oxford counties.

Maryland.

BY TALBOTT DENMEAD, FOR STATE GAME WARDEN COX.

Good duck shooting can still be obtained on the Susquehanna Flats.

Partridge (bobwhite) shooting is not what it should be. There is shooting out of season. We have had severe winters. No respect has been paid to the bag limit and the game warden with limited means has been unable to properly attend to all reports of violations. The lower counties still have some good partridge shooting.

Rabbits are everywhere, even in the city limits of Baltimore. Squirrel shooting can be obtained in almost any county. Wild turkeys and ruffed grouse are only found in the three westernmost counties, while deer are too scarce to mention.

Maryland probably has in its thirty miles of coast the best shore bird shooting there is to be had. Ocean City, Md., is situated on a strip of sand between the ocean and Sinepuxent Bay. This narrow strip runs clear over into Virginia, and on the beach and around the ponds can be found the yellow legs, willet, curlew, robin snipe, gray backs, calico backs, black-breasted plover, dowitcher, ring-neck and other birds of like character. When the weather is just right and the ponds are filled with water, the yellowleg shooting over decoys is simply great. We also have reed bird shooting on the great wild oat marshes of the Patuxent River.

Massachusetts.

BY G. W. FIELD, CHAIRMAN COMMISSIONERS ON
FISHERIES AND GAME.

The general shooting conditions are apparently normal. There has been about the average number of partridges and woodcock, and more than an average number of quail.

The number of ducks breeding in the interior of the State has increased rapidly in the last two years. The migratory ducks and geese are practically confined to the eastern counties of the State as a result of excessive shooting in past years.

Pheasants in the eastern section of the State have increased rapidly.

Gray squirrels and rabbits are numerous. Foxes are very abundant.

The best shooting for ruffed grouse and deer is west of Middlesex county; for ducks and quail in the counties east of this; for squirrels and rabbits in the central and eastern part of the State.

Michigan.

BY WILLIAM R. OATES, WARDEN.

Game conditions in this State were never better than this season. From reports of my deputies in various parts of the State I am informed that partridge are most plentiful in every section of the Upper Peninsula of Michigan, as well as the counties of the Lower Peninsula above the north line of Montcalm and Gratiot counties.

Deer are also numerous in all that part of Michigan north of the Straits of Mackinac. If I should attempt to tell you in what part of Northern Michigan deer and partridge were most plentiful, it would be a matter of speculation, as they are plentiful in every section, except in the immediate vicinity of the larger cities and towns.

There seems also to be a great number of black bear this year north of the Straits as well as a great number of fur-bearing animals, such as beaver, fox, mink, etc. Wolves and coyotes abound in great numbers.

Owing to the severity of the winter of 1911-12 and the great abundance of snow in this State, quail are nearly exterminated.

Minnesota.

BY GEO. J. BRADLEY, PRESIDENT STATE GAME AND
FISH COMMISSION.

There is a good number of moose. The best hunting is in the vicinity of the Superior Forest Reserve in the counties of Cook, Lake, St. Louis, Itaska and Koochiching.

Virginia deer are more or less abundant in all our counties north and west of Duluth.

We had a larger crop of partridge last season than we have had before in fifteen years.

(Continued on page 531.)

HON. JESSE A. TOLERTON, MISSOURI GAME AND FISH
COMMISSIONER.

Low License for Non-Resident Sportsmen.

BY GOLDEN GATE.

THE fish and game commissions of California, Oregon and Nevada are now acting more in accord with one another than has ever been the case before, and the friendly relations that have been established are expected to result in some changes in the present license laws that will cause much rejoicing among sportsmen in these States. At the present time residents of any one of these States desiring to hunt within the confines of an adjoining State must pay a license of \$10, but a movement is on foot to reduce this to \$1. This matter will be brought up at the coming session of the different State Legislatures and will doubtlessly receive favorable attention.

Of late years the commissions in these three States have come to see that the interests of all are common, and efforts have been made to secure more uniform fish and game laws, especially along the boundary lines. Formerly fishing was allowed in Nevada before it was permissible on the California side with the result that California anglers had very poor sport in the Truckee and the fish were not allowed to get up-stream to spawn. Now the regulations are more uniform. The same is true in regard to Oregon where a number of streams rising in one State cross the boundary line into the other.

The Board of Supervisors of Marin county has passed an ordinance in effect immediately shortening the open season on deer and quail. Under the State law the quail shooting season commences Oct. 15 and lasts for four months, but the Marin officials have shortened it by one month, making Nov. 15 the opening date. The district attorney of Marin county has announced that no person will be prosecuted for having quail in possession while passing through the county, the birds having been killed in other counties.

That the new measure is badly needed this year is the general opinion among sportsmen, as the season is such a backward one that the young quail are not half grown at the present time.

Operations have been very successful this season at the State Game Farm at Hayward and more birds have been distributed throughout the State than has ever been the case before in one season. Since the middle of August over 1,200 pheasants and wild turkeys have been liberated as follows: Monterey county, 100 pheasants; Santa Cruz county, 50 pheasants; Placer county, 25 turkeys; San Benito county, 100 pheasants and fifty wild turkeys; Humboldt county, 100 pheasants and 50 turkeys; Solano county, 100 pheasants; Tulare county, 165 pheasants; Fresno county, 160 pheasants; Lassen county, 150 pheasants; Mendocino county, 50 pheasants; Napa county, 100 pheasants; Del Norte county, 100 pheasants; Nevada county, 30 turkeys; Sonoma county, 25 turkeys; Alameda county, 50 pheasants; Goat Island, San Francisco county, 25 pheasants. Most of the birds now on hand at the farm will be retained for breeding purposes.

Ruffed Grouse and Woodcock.

SULLIVAN Co., N. Y., Oct. 13.—*Editor Forest and Stream:* The outlook for ruffed grouse shooting in October and November was quite good before the season opened. I found birds myself and had many reports of full broods. These reports are usually too favorable, as they are often based on seeing a single brood of young birds with the old hen. One of the best observers in this region says that the grouse are not really plentiful. They are certainly well scattered as one flushes mostly single birds. If I had a first-rate dog I could judge better, as when the leaves are on the trees one may pass by many birds without flushing them. A few woodcock have been bagged, but these were mostly local birds. The flight birds should move in the first moon in October and one or two good frosts would bring them down. Some good ground has been spoiled by floods which covered the feeding grounds with sand or washed out the soft rich soil on the bottoms. It is a beautiful country, but not an easy one to shoot over. There is much good cover and the ruffed grouse are usually quite smart. Many rise out of shot and fly a long distance. Probably a well bred pointer of mature years that has been much shot over is the best dog for this section. Such a dog has had experience and is clever at handling these birds. He is content to point at a distance, works a running grouse carefully, until it lies for him, and he can establish a point. With a sly old pointer one will get many shots where a heedless fast dog would flush the birds out of range.

There was a good crop of gray squirrels, and rabbits seem to be plentiful. Guns were heard frequently yesterday and one man reported three ruffed grouse and five rabbits. The fact is that a dozen birds in two days, grouse and woodcock, is a good bag nowadays. One must be satisfied to work hard for modest results. I know that a brace of grouse in an afternoon would satisfy me. There is a fascination about these wary birds that causes one to persevere in spite of blank days. At any moment in the most unlikely places a bird or two may get up and give you an opportunity to retrieve the situation.

A long tramp this afternoon gave me one old cock grouse and two rabbits. I flushed but two birds, yet I know the ground well.

THEODORE GORDON.

LIBERTY, N. Y., Oct. 19.—*Editor Forest and Stream:* This seems likely to prove a fair season for shooting in this part of the country. The ruffed grouse have recovered to some extent from the loss by disease in 1907. No flight of woodcock yet, but local birds are found wherever there is good feeding ground and cover. Deer are said to have done well this year. THEODORE GORDON.

THE wild deer in Devon and Somerset, owing to the abundance of good food, have become too fat to provide the followers of the Devon and Somerset staghounds with good sport.—From the London Daily Mail.

New Cure for Rattlesnake Poison.

BY HARRY H. DUNN.

GOLONDRINA, a common weed of the southern part of California and so named by the Mexican residents, is now credited with robbing the deadly fang of the rattlesnake of its terrors. C. S. Jenkins, who has lived in this part of the country for a number of years, got the remedy from an Indian twenty years ago. He claims to have seen the weed used with success on several occasions where, without its help, the victim must have died.

At the time of his discovery, Jenkins, who is now a captain in the local fire department, was working on his father's ranch in Castaic Cañon, above Newhall. One day one of the horses came into camp with its head badly swollen from the bite of a snake. The wound was on the upper lip, and apparently had been received by the animal while grazing on the short grass of the region.

The white men at the ranch wanted to shoot the animal, but an Indian volunteered to save it by a weed that he knew. This weed, golondrina, was gathered and a strong tea brewed from it. This was poured down the throat of the horse and the leaves, left from the steeping, were bound on the nose, after the wound had been cut open. In the morning the horse was as well as ever, save for a little stiffness of the joints.

After this the weed was used frequently on the Jenkins ranch, and the local firefighter says that it is the common remedy on many of the mountain ranches of the Sierra region and of the Mexican desert.

Golondrina is a weed common to Southern California. It grows close to the ground, and has small leaves of an ashy color. The tiny blossom suggests a snake's eye, being white with black center. Captain Jenkins says that if used when green the weed should be boiled, as it is too strong in its natural state.

The weed has a white milky juice which must be boiled into a sort of tea before it can be taken. When dry it can be chewed with no bad effects. It is easily dried in the sunlight and retains its strength well, even when kept a number of seasons. It grows commonly in the vacant lots of Los Angeles and other Southern California cities.

A LIVE turkey vulture, or "buzzard," alighted on the power transmission wire of the Edison Electric Company in the San Fernando valley a few days ago, stretched himself, spread his wings until the fleshy part of one of them touched an uninsulated wire, and the buzzard went up in a puff of smoke and a flash of flame.

Sheepshearers at work in the valley below the big steel-cable tower, near which the bird alighted, saw the flash of flame against the sky, saw the burned carcass of the bird falling apparently from the heavens, and, dropping their shears, fled for their lives.

Peculiarly, no damage was done in the powerhouse. A sudden brightening of the lamps in the resistance circuit was all the workmen in any of the houses knew of what had happened. It was not until the route man reported the involuntary suicide of the buzzard that the accident became known.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

GOLFERS AND THE BIRDS.

THE annual money loss to the country through the damage inflicted by insect pests amounts to billions of dollars. Garden crops, grain crops and timber crops suffer alike.

The trees are especially liable to insect attacks. In New England the larvæ of a beetle are destroying the hickory trees in alarming numbers. There is a bark beetle which kills the hemlocks, another which has its home in the red cedar and still another that is most destructive to certain species of pine.

The enormous economic value rendered and to be rendered to the United States by the Audubon Societies—which by preserving the birds which feed on insects are reducing this annual loss—is only just beginning to be appreciated by the public. Last summer the newspapers had much to say about the damage to lawns, and especially to golf links by the white grub, the larva of the May beetles, or June bugs. These lay their eggs in the soil. The larvæ feed on the roots of the grass and the grass dies.

These larvæ before they go deeply into the ground to pupate, live close to the grass roots and are the food of a number of birds; crows, certain woodpeckers, and above all of the starling.

We recall an admirable lawn formerly in the middle of the New York city—in what was once Audubon Park—which was long the breeding place of June bugs in great numbers. All through the early summer the adult June bugs were so abundant as to cause great trouble at night by flying into the houses and annoying the occupants.

At length, not so very many years ago, a flock of starlings took possession of the spire of the old church nearby, and for years thereafter, during the summer, this lawn was their favorite feeding ground. In little companies they walked

over it, industriously probing the soil and feeding on insects, and in a year or two the plague of June bugs ceased.

While it is true that no starlings were killed and examined to see whether they actually ate the white grubs, it was the opinion of ornithologists that there was a direct connection between the arrival of the starlings and the disappearance of the beetles.

The lawns in the Botanical Garden in New York suffered greatly during the past summer and many efforts were made to reduce the damage which was being done.

In the birds we have a special set of unpaid insect killers working all the time—weekdays, Sundays and holidays and summer and winter—to reduce the number of harmful insects which prey on vegetation. It is worth the while of every good citizen to strive to impress on his neighbors and his children the value to the country of the birds.

DRUMMING OF THE RUFFED GROUSE.

FEW subjects have been so much discussed by sportsmen as the whistle of the woodcock and the drumming of the ruffed grouse. To the latter sound much mystery has always attached. The dull roll of thunder comes out of the air from a distance in the depth of the forest, and excites the wonder of the listener, but its direction and its distance seem so uncertain that he is not likely to try to find it. Few persons have seen the bird in the act of drumming, and of those few a still smaller number have been trained to observe the ways of nature or to draw just conclusions from what they may have seen. Nevertheless, many people—some observers and some more theorists—have expounded their views on the subject. It has been declared that the grouse drums by beating his wings against the object on which he stands, against his own body, or against each other above the back; but none of these have satisfied all the conditions, and all are to be rejected. The best descriptions of the drumming ever given is that by William Brewster, printed in the old American Sportsman, in 1874, and the still earlier one of Audubon in his "Birds of America."

In 1905, however, Prof. C. F. Hodge, of Clarke University, carried on a series of observations on his domesticated ruffed grouse which point to another explanation, and which, illustrated by a multitude of photographs, appear to show that the sound is made by the rapidly repeated blows of the stiff wing quills against the erected and expanded feathers of the side, which thus form a feather cushion. Professor Hodge says: "In fact, the sound, so far as quality goes, can be best imitated by striking with a wing properly stretched or even a concave fan on an extremely light eiderdown cushion." Professor Hodge conjectures, too, that the bird while drumming fills the air sac of the breast and abdomen. "In this way the contour surfaces of the strong wing supports along the sides are made to inclose a large cavity filled with air, and this acts like the resonance chamber of a drum, and yields the booming throb to the air."

Many ornithologists, judging by analogy from the habits of other grouse, have conjectured that the air sac at the sides of the neck had some—as yet entirely undetermined—relation

to the drumming of the grouse. This, of course, remains to be proved.

Certainly no one has ever had such ample opportunity for studying and recording by photography the drumming of the ruffed grouse as had Professor Hodge, who, in two days, took no less than forty photographs of the bird in action, and his account must be regarded as the most important contribution ever made to the subject.

Professor Hodge believes, as has long been agreed, that the drumming of the ruffed grouse is a mating call. The fact that the bird drums in autumn is no valid objection to this conclusion, since many birds produce in autumn sounds which we are accustomed to regard as peculiar to the breeding season, though such sounds are often or usually made by young birds.

NON-EXPORT GAME LAWS.

THERE are in this country two systems of non-export game laws. One permits the taking out of a limited amount of game, accompanied by the owner. The other prohibits exportation altogether. In the practice of those States where the first system prevails, experience has demonstrated that the modified restriction is quite sufficient to accomplish the purpose of the statute, which is to cut off the marketing of game. This being insured, the game carried home by the visiting sportsman is not in such quantity as to be a factor in the problem of protection. This is only another way of saying that absolute prohibition is not essential. Game may be and is protected without it. The deprivation it imposes upon the non-resident sportsman has no good reason. The law would accomplish the purpose without it. This is the consideration which renders the law so obnoxious. If absolute prohibition of export were essential to game preservation, the sportsman who is deprived of the satisfaction of carrying his birds home to his family could not complain.

Since this absolute prohibition of export is not necessary, and since it works hardship by the deprivation of privileges which might reasonably be accorded to the visiting sportsman, the law should be amended.

These laws as they stand now are in conflict with the interests not only of the visiting sportsman, but of the transportation companies which get revenue from the sportsmen's travel and of hotels and camps which entertain sportsmen. Their repeal would be "good business."

THE BULL MOOSE.

This week's cover was reproduced from an original drawing made especially for us by that famous animal artist, Carl Rungius. A limited number of copies done in artotype, handsomely printed on a heavy 22 by 28-inch plate board, may be purchased by those desiring them. The price is three dollars. Framed, this picture, which is 13 by 19 inches, makes an ideal decoration for den, library or gun room. The early checks get the moose.

FOREST AND STREAM's work meets with the cordial approbation of those who are in a position to judge of the efficiency of its labors in behalf of better sportsmanship.

SHOOTING CONDITIONS IN UNITED STATES AND CANADA.

Continued from page 528.

There are a number of localities in the northern part where partridge, ducks, deer and moose are found.

Montana.

BY HENRY AVARE, STATE GAME AND FISH WARDEN.

During the season of 1911 there were more than 15,000 deer killed in Montana, and over 1,000 elk. The kill this year will probably equal, if not exceed, that of last fall. Small numbers of mountain goat and sheep fell under the hunter's bullet.

There are so many different localities in Montana that present opportunities for the hunter that it is almost impossible to advise as to which is best, but for deer hunting alone, the northwestern part of the State, that is, Lincoln and Flathead counties, while counties bordering the Yellowstone National Park afford the best opportunities for elk hunting.

The headwaters of Sun River, above Augusta, however, also present alluring opportunities for the pursuit of elk, and it is not a field being overeroded by hunters as is so often the case near the Yellowstone National Park.

Nebraska.

BY H. N. MILLER, CHIEF WARDEN.

Game conditions in Nebraska are as good this year as they have been for the past five years. In the western counties, where the prairie chickens hatch, conditions were favorable during the months of April, May and June, having very little rain and fully two-thirds of the young chickens matured.

In Rock, Brown Cherry, Sheridan, Dawes and Box Butte counties, where the ducks hatch, I would judge that the crop is fully one-third greater than has been for the past five years.

Our quail has decreased fully one-half in the past year due to severe cold weather last winter. In some counties they were wiped out entirely, but where the brush was thick along streams some quail were saved.

New Hampshire.

BY F. P. BROWN, FISH AND GAME COMMISSIONER.

Game conditions are better than last year. Deer are the most abundant game and found in Coos and Grafton counties.

New Jersey.

BY J. M. STRATTON, PROTECTOR.

Last year the New Jersey Board of Fish and Game Commissioners liberated a number of quail, ring-neck pheasants and Hungarian partridges in all counties of the State, and two years ago a number of deer were liberated, chiefly in the southern counties of the State. Good reports have been heard as to an increase from the birds and deer liberated.

The best quail and rabbit shooting is to be found in the counties south of Hunterdon and Middlesex.

Deer are reported in Ocean, Burlington, Atlantic, Cumberland and Cape May counties.

Ducks are found in large numbers on Barnegat Bay, and the connecting bays and thoroughfares from Bay Head to Atlantic City.

Snipe and mudhen shooting may also be found in the above mentioned duck section. Duck may also be found on the lower Delaware River and bay.

Reed and rail bird shooting is best along the Maurice and Cohansey rivers to Cumberland county, and along the Delaware River and tributaries in Salem, Gloucester and Burlington counties.

Woodcock are found in small numbers in all parts of the State, but are more plentiful in Cape May county during the month of November.

New York.

BY LLEWELLYN LEGGE, CHIEF GAME PROTECTOR.

I can say without hesitancy that the number of deer in the Adirondack Mountains at the present time is greater than in the past twenty-five years. This information comes first-hand from the protectors of the Adirondack region.

There is no doubt from the reports received that our native ruffed grouse are again becoming more plentiful, and I thoroughly believe that the bag limit of four a day as provided in the law at the present time will be the means of increasing the supply.

The pheasants are also increasing throughout the State.

From what I can ascertain from the reports of the protectors throughout the State, the ruffed grouse is being found in their old haunts again, and in increased numbers. I do not know that this applies to any particular part of the State, but wherever the cover is good, they seem to be increasing.

Nova Scotia.

BY J. A. KNIGHT, K. C., CHIEF GAME WARDEN.

Big game in Nova Scotia consists of bear, moose, caribou and deer.

Moose are found in large numbers in almost all counties in the Province. Among the best districts are Sheet Harbor and Moser River in Halifax county and Caledonia, Liscomb and Country Harbor in Guysboro county. Many favorite localities are situated in the more western counties of Annapolis, Digby, Yarmouth, Shelburne and Queens. Some other sections of the Province are about equally good, though not so much visited by sportsmen.

Caribou in considerable numbers are found in the northern part of the Province in the counties of Victoria and Inverness. All other counties closed until 1915. The caribou of Northern Nova Scotia are among the largest known.

Rabbits, fox and wildcat are found in all sections of the Province. Among game birds are ruffed grouse, woodcock, snipe, curlew, plover and the smaller shore birds, wild geese, brant, blackduck and the various sea ducks.

Inquiries as to the best districts for shooting the different kinds of birds and other small game can be sent to the office of the chief game commissioner, Halifax, N. S.

Among the best places for woodcock and snipe are Lawrencetown and Musquodoboit in Halifax county and various places in Digby, Yarmouth and Kings counties. The best place for wild geese is Port Joli in Queens county.

Information regarding the best localities for hunting various kinds of game can always be obtained from the office of the chief game com-

missioner at Halifax, where a register of licensed guides is kept.

Ohio.

First—Conditions are better this year than last.

Second—Quail, ruffed grouse, rabbit, woodcock and wild duck are most abundant.

Third—Rabbits are most plentiful, but reports and indications point to good supply of quail.

Fourth—Southern and southeastern sections of the State offer the best prospects. Much of this territory is not cultivated and furnishes ideal cover and range. It is hilly and rugged, thus forcing the hunter to work.

BY PAUL NORTH, PRESIDENT FISH AND GAME COMMISSION.

Game conditions are better than last year. Duck, snipe, woodcock, quail, grouse, rabbit and squirrel are found in this State.

Ducks, rabbits and quail are most abundant. Shooting is best in lake section for ducks; southern part of State for other game.

Oregon.

BY C. K. CRANSTON, CHAIRMAN FISH AND GAME COMMISSION.

Game and game fish conditions generally throughout Oregon have improved since the creation of the present fish and game commission.

Game and game fish are fairly abundant throughout the whole State of Oregon. Elk, all the species and varieties of Western deer, American antelope, mountain sheep, mountain goats, gray squirrels, all the species and varieties of American grouse (except ptarmigan), Oregon mountain quail and practically all of the American aquatic game birds may be found wild within the State. To this list of native game must be added the bobwhite quail and the China ring-neck pheasant. Both of these fine birds have been introduced, and the latter particularly has thrived marvelously. The portion of the State west of the Cascade Mountains is practically all well stocked with pheasants. The Grande Ronde valley, in Eastern Oregon, has a very fair start, and we are making numerous liberations in other parts of Eastern Oregon. Deer may be found in most of the rough, sparsely inhabited sections of the State, but deer can hardly be said to be plentiful in more than a few isolated places.

Southwestern Oregon is probably the part of the State where the most quail exist. Blue and ruffed grouse are still fairly abundant in most of the parts of the State where they were originally found. The blue grouse, or sooty grouse, is perhaps most abundant in the northeast corner of the State, in Wallowa county.

Prince Edward Island.

BY E. T. CARBONELL, GAME INSPECTOR.

The game birds in Prince Edward Island are increasing in numbers. Ducks and mergansers were plentiful. Golden plover also put in their appearance after an absence of several years. Bartramian sandpipers are fairly numerous, while Hudsonian curlew and gray field plover are to be found in large flocks.

Wild geese are abundant in Hillsboro and Elliott and York rivers. They are also plentiful

at Rustico, Tracadie, Malpeque, Summerside, Bedeque, Alberton, Kildare and Tignish.

Woodcock and snipe are reported fully up to the average.

Rabbits are fairly plentiful all through the Province.

Rhode Island.

BY C. E. PEIRCE, CHAIRMAN COMMISSIONERS OF BIRDS.

We note an improvement in the condition of game in this State over that of previous years, especially bobwhite. Ruffed grouse are not so plentiful. Very few woodcock are found. Good shooting has been reported of blackduck, woodduck, peep, plover, snipe and yellowlegs. These can be found in Charlestown Pond, Point Judith and Newport county.

The best hunting for upland birds is in the South county. Rabbits, hares and gray squirrels are also very plentiful.

South Carolina.

BY JAMES HENRY RICE, JR., CHIEF GAME WARDEN.

Although impaired by long neglect, the game resources of South Carolina are still considerable. With adequate protection they would be enormous.

As it is, good hunting may be had in many parts of the State by parties who go for it and exercise a little judgment and patience.

The rivers and marshes of Georgetown, Charleston and Beaufort afford abundant duck shooting, the best being mallard and blackduck.

The counties that furnish deer and turkey shooting are: Horry, Georgetown, Charleston, Berkeley, Colleton, Hampton, Beaufort and Jasper on the eastern side. Further inland there is good deer and turkey hunting in portions of Chesterfield, Darlington, Marion, Kershaw, Orangeburg, Williamsburg and Dorchester.

In nearly all counties partridges (bobwhite) are abundant. The bag limit is twenty-five per day to each gun, and may be made whenever desired. Doves (turtle doves) furnish abundant sport.

Woodcock abound in Horry county.

Snipe are found in abundance only after Christmas when they are returning to the breeding grounds.

Shore birds are numerous anywhere on the coast line.

Canada geese are still fairly numerous on Broad, Catawba and Saluda rivers. The greater snow goose is sometimes found.

Of cottontail rabbits, opossums, gray squirrels and fox squirrels and raccoons there is no limit.

Deer suffered during last season with "black tongue," but none has been reported this year, and in some sections farmers are complaining of damage done to crops by deer being too numerous.

The river swamps on Santee, Peedee, Waccamaw, Savannah and lower Edisto contain a good many black bear, and they are apparently increasing in numbers. There are a few ruffed grouse in the mountain counties.

Tennessee.

BY V. M. GRIBBLE, SECRETARY DEPARTMENT OF GAME, FISH AND FORESTRY.

Game conditions in Tennessee are unusually

good the present season. It is reported to this department from all sections of the State that we will have an unusually large number of quail.

Our principal duck shooting is at Reelfoot Lake. There is already a large flight of teal. Reelfoot Lake will afford great sport during the months of November and December.

Almost at any point in Tennessee good quail shooting can be secured.

Non-residents contemplating visiting Tennessee to shoot should send their applications to this department, and in addition any specific information requested will be cheerfully furnished.

Texas.

BY JEFF D. COX, CHIEF DEPUTY.

The game situation in the State of Texas may be said to be better than it has been for several years past. This is especially true of deer in south and west Texas, and quail in the central western portion of the State. There is a great abundance of wild doves over the entire State. Geese and ducks are already coming in and old hunters says that the signs indicate that there will be a great flight of all kinds of waterfowl this season.

Vermont.

BY JOHN W. TITCOMB, COMMISSIONER.

There are probably as many partridges in Vermont as there were ten years ago when this State was a "great" partridge State. Woodcock are scarce.

Deer never were more abundant than now. During 1911, 2,644 deer were killed, average weight being 194 pounds. In 1910, 3,609 deer were killed, but in that year there was no close season. During 1911 no does were lawfully killed. The best deer counties are Rochester, Plymouth, Bridgewater, Chester, Stockbridge, Norwich, Bethel, Barnard, Hartford, Ludlow, Reading, Royalton, Sharon, Springfield, Weathersfield, Weston and Woodstock.

Wisconsin.

BY JOHN A. SHOLTS, STATE FISH AND GAME WARDEN

The north half of the State has an abundance of game. Plenty of deer in nearly every county of the northern half of the State, with numberless partridges and fur-bearing animals.

CHICAGO ARCHERY CLUB RANGE IN WASHINGTON PARK.

Archery

Extraordinary Archery.

CHICAGO, Ill., Oct. 12.—*Editor Forest and Stream:* After the Columbus Day country-wide archery contest had been finished, and Mrs. Witwer Taylor had completed her Columbia Round, she shot another twenty-four arrows at 30 yards. The shooting was in Washington Park.

The woman champion was at her best, and made a score which we believe has never been equalled by a woman archer. It was 24 hits, 204 score.

If she had made all golds, a "possible"—which is a thing never considered in archery, for it is never done—she would have made 216, only 12 score more than she actually made.

With the first end, or 6 arrows, she made 3 golds, 2 reds and a blue, scoring 46. With the second end, 5 golds and a red were made, scoring 52; the third end was like the second. The last six arrows all struck the gold, three of them within an inch of the pinhole, and the others not far off.

Out of the 24 shots there were 19 golds, 4 reds and 1 blue.

Only a few days before Mrs. Witwer-Taylor had made an end of 6 golds.

The shooting was done before a number of spectators, and though only a practice score, should be publicly recorded. EDWARD E. WESTON.

Archery in Pittsburgh.

SCORES of the archers of Pittsburgh for the past week are as follows:

Team round, 96 arrows, 60 yards:							
	Hits. Score.		Hits. Score.				
Hertig	87	451	86	416			
Holmes	78	378			
Jiles	55	217	67	296			
Haines	50	190			
American round, 30 arrows at 60, 50 and 40 yards:							
	60yds.		50yds.		40yds.		Total.
Hertig	29	149	30	158	28	180	87 487
Holmes	28	110	28	130	30	178	86 418
Jiles	24	80	25	127	25	129	74 336
Haines	19	83	21	111	26	114	66 308
Holmes	28	142	25	107	30	142	83 391
Haines	17	59	18	82	19	83	54 224

In one end of six arrows at 60 yards Dr. Hertig made 9 9 9 9 7 7=50.

Probably a dozen archers around and about Pittsburgh are shooting regularly, but fail to send in their scores. J. S. JILES.

CHAMPION WOMAN'S TEAM OF BOSTON ARCHERY CLUB.

Left to right: Mrs. S. P. Bryant, Mrs. B. P. Gray, Miss M. G. Brownell, Miss F. M. Pa rick.

National Archery Association.

BOSTON, Mass., Oct. 16.—*Editor Forest and Stream:* I inclose announcement of the opening of the new archery range on the Boston Fenway, which will be held this coming Saturday. The range is within a few minutes' walk of the residential section of Back Bay.

Boston is the fourth municipality to provide a range for archery. Chicago was the first, Newton, Mass., the second, Jersey City the third and Boston the fourth.

It gives me pleasure to hand you herewith an article written at my request by H. B. Richardson, of Boston.

Let me compliment you on the archery page in the last issue of FOREST AND STREAM. It will give me pleasure to send you from time to time archery notes, and I am sure the other archers will be pleased to do so.

BURTON PAYNE GRAY, Sec'y.

Fenway Archery Club.

ON Thanksgiving day it is planned to have a shoot for the Northeastern League medals at

Fenway Park, Boston. It is hoped to make this an annual event.

Archery in and around Boston has received an impetus through the opening of the archery field in the Fenway. Almost any pleasant afternoon those riding or walking in the Fenway in the vicinity of Boylston street may see the archers practicing.

The idea is that of Wallace Bryant, an enthusiastic archer, and one of the best known in the country. An artist by profession, archery is his recreation. Purely for the love of it he instructs classes at Wellesley, Vassar and Smith colleges and Cornell University. His brother, George Philip Bryant, acknowledged to be the best archer in this country, was instructed by him. Henry B. Richardson, who has won several national championships, also is a pupil of Mr. Bryant.

The club to have use of the field is not yet fully organized. It will probably be known as the Fenway Archery Club, and is to be limited in membership. All members must be residents of Boston, but there will be a large associate membership of men and women living out of the city who yet may have the privileges of the field.

Spring City Gun Club.

THAT thirty-seven shooters took part in the two-day program of the Rhea Springs, Tenn., Jack Rabbit tournament, Oct. 10-11, shows the rapidly gaining popularity of the trapshooting game in East Tennessee, and particularly in Rhea county. Not alone was there shooting on the two tournament days, but on each of the three preceding days of the fair the sport was indulged in to such an extent that on the afternoon of the last day of the tournament the program had to be cut short on account of the supply of targets having become exhausted, and the enthusiastic shooters and spectators finished up the day viewing the many other attractions furnished by the up-to-date management of the Rhea and Meigs County Fair Association.

The Spring City Gun Club, headed by those popular sportsmen, Dr. W. S. McDonald and Ross Fishesser, kept the three traps going in splendid style, but three expert traps, no matter how ably handled, furnished at best but erratic targets, and the scores made by this enthusiastic bunch of shooters, many of whom were shooting in their first tournament, while very creditable indeed under the circumstances, it would hardly be fair to some to publish, so we will only say that the following list of thorough sportsmen gave the very best there was in them on this occasion and enjoyed themselves to the limit:

W. P. Lea, W. R. Lee, and Gus Gunter, of Bridgeport, Ala.; J. R. Crawford, J. T. Crawford, H. E. Crawford, S. E. Johnson and Dr. McKenzie, Dayton, Tenn.; W. F. Hall, E. L. Moss, Frank Spence, J. W. Barnett, Knoxville, Tenn.; Geo. T. Linn, Lookout Mountain, Tenn.; Keith Webb, Wells Boyd, Frank Seifers, A. J. Tector, Johnnie Green, and P. B. Plummer, Chattanooga, Tenn.; Dr. W. S. McDonald, Ross Fishesser, R. L. Train, F. S. Ingle, Doc. Cunningham, T. B. Moore, Spring City, Tenn.; J. W. Hornsby, J. M. Hornsby, H. L. Peak, Pin Hook, Tenn.; J. W. Hughey, F. S. Leuty, Frank Day, Rhea Springs, Tenn.; W. F. Benson, J. W. Wheeler, W. L. Park, Rhea county, Tenn.

Pick-Ups.

Keith Webb, president of the Mountaineers, of Chattanooga, in those "good old days," walked away with the \$20 high average money, being high amateur for both days' shooting.

Dr. McDonald, of the Spring City Gun Club, and J. Hardie Johnson, president of the Fair Association, are certainly "a pair hard to beat," and when they announced that they would give a big added money shoot next year, it met with general approval on all sides and an assurance of a good attendance even at this distant date.

W. F. Hall and E. L. Moss, of Knoxville, Tenn., and P. B. Plummer, of Chattanooga, were the trade representatives present, and conducted themselves in a manner most creditable to their respective companies. To the latter fell the lot of looking after the cashier's office, and lending a general supervision to the details of the shoot.

Mr. J. W. Barnett, manager of the Hippodrome, found time each morning to give a good account of himself at the traps, and the part he took in furnishing attractions at the fair, met with general approval.

The Bridgeport, Ala., boys took care of themselves in a creditable manner, but, much to the regret of their many friends, were unable to remain over for the second day's shooting.

Frank Spence, that excellent field shot, showed a lack of practice at the traps, but he is game and a thorough sportsman withal.

Mr. Oswald Rothe, the "original bear winner," did some good work, and gave a good account of himself the first day, and it was a cause of general disappointment that he was compelled to return home and forego the second day's shooting.

The Dayton boys showed a lack of practice, but were general favorites with the crowd and added greatly to the pleasure of the shoot.

The shooting of Mr. Ingle, of the local club, gives promise of real high class work with a little practice. His wins of first money in several of the earlier events were very popular indeed.

Ross Fishesser was too busy looking after the handling of the ammunition and other details to give his usual good account of himself at the score, but his unselfish efforts to add to the pleasure of the shooters present was easily in the 100 per cent. class.

That "old man" Webb can take care of himself goes without saying, for in addition to winning high average at the traps, he was unanimously chosen to act as judge at the Bay Show, and he "got away with it." To our certain knowledge the "old man" has had little or no practice at targets for the past year or more, but he made a good judge, all right.

A SHOOTER.

Monument Beach Gun Club.

If the folks along the Jersey coast, between the Highlands and Long Branch, are disturbed by any unusual cannonading within the next few weeks, they need not be alarmed. It will not mean that Fort Hancock is being attacked by a hostile fleet, nor some stray 12-inch shells from the Proving Grounds. We have been requested to notify the clubs of Monmouth county of the organization of the Monmouth Beach Gun Club.

The little borough on the Shrewsbury can boast of some crack shots, who are determined to decorate their new club house with big trophies this season.

Organized with fifteen members, they will hold their first election and meet on Saturday, Oct. 26. There will be a house-warming, and visitors will receive a great big welcome.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

If you want your shoot to be announced here, send a notice like the following:

DRIVERS AND TWISTERS.

Sportsmen of McDonough county, Ill., have completed the organization of a gun club with fifty charter members. Officers elected: President, Howard Mathers;

Secretary, Albert Pennington; Treasurer, Archibald Curtis.

The Freeport, Ill., Gun Club has decided to give a shooting tournament on Nov. 7, open to marksmen of Illinois, Iowa and Wisconsin. There will be a merchandise shoot of five events of 10 targets each, and a Jack Rabbit shoot of ten events, each of 10 targets. The concluding event of the day will be the contest for the W. L. Karcher cup. Three successive winners constitute ownership.

W. G. BEECROFT.

Charleston Gun Club.

Good conditions prevailed at the shoot of the Charleston Gun Club, of Charleston, W. Va., on Oct. 19, and the following scores were made:

	Shot at	Broke		Shot at	Broke
Davis	100	92	Beardsley	50	42
Fultz	100	89	Mettsheard	50	36
Nicholson	100	81			

DR. G. NICHOLSON, Sec'y.

Post Season Tournament

Cincinnati, O., Oct. 15-18

THE third Post Season tournament of the Interstate Association was held at Cincinnati, O., under the auspices of the Cincinnati Gun Club, on Oct. 15 to 18 inclusive. The club's grounds are located at Rosedale, across the river, about thirty minutes' ride from the center of the business district of the city. The grounds include about forty acres, ample for a tournament of the largest proportions, and are equipped in a strictly up-to-date manner. A fine club house, with large verandas, affords a pleasant resting place for shooters between squads, and the dinners furnished by Mrs. Gambell have acquired a widespread reputation among the trapshooters for their excellence. The club is one of the oldest in the country, and on its grounds have been held some of the largest club tournaments ever held. The superintendent, Mr. Arthur Gambell, is thoroughly familiar with the needs of the shooters, having been connected with the club for some years in this capacity, and being a shooter himself of no mean ability. It is needless to mention that everything possible was done to make the visitors' stay a pleasant one.

Roger Davies, the club secretary, attended to the arrangements for the office work and other necessary details, and certainly did the work in first-class style. The office was the nearest to what such a place should be that the writer has ever seen at a tournament, and it would be hard to mention a detail tending to make the work go smoothly, that Davies had not provided for.

The field force, an important part of the machinery of a tournament, was well selected, and every member did the duties of his position in a manner above criticism. The events were pulled off over three traps, placed in a straight line, and were only a few yards from the club house, being reached by concrete and cinder paths.

At No. 1 R. Ward was referee, and J. Breaton scorer; No. 2, Arthur Gambell and Len Shepard alternated as referee; W. Collins, scorer; No. 3, W. J. Randall referee, J. Concannon, scorer. John Braunagle acted as squad hustler and made himself useful in various ways.

The trade was well represented, there being present at times during the week, in addition to the professional shooters, Messrs. F. B. Clark, J. M. Barr and O. S. Lawrence, U. M. C.; R. L. Trimble, Winchester; Messrs. Du Pont and Higgins, Du Pont Powder Co.; W. Keplinger, W. R. Chamberlain, L. H. Fitzsimmons, O. J. Holaday and C. A. Young, Peters Cartridge Co.

The office was in charge of Luther J. Squier, which insured the prompt and accurate payment of the moneys at the close of each day, if the winners desired to cash in. The office assistants were D. H. Eaton and A. A. Hoffman, of Cincinnati. Elmer E. Shaner, secretary-treasurer of the Interstate Association, was of course present and in general charge of the tournament. The shooters all know him, and know that with him at the head they will get absolutely a square deal, that the rules of the competition will be impartially enforced, and that there will be no favorites played. His retirement from active participation in the management of tournaments would be an irreparable loss to the interests of the trapshooters, and it is to be hoped that that time is still many years in the future.

The attendance of shooters was a disappointment to the management. No large crowd was expected, the required qualifications making this impossible; but it was thought that out of the 179 amateurs eligible, at least 75 would show up. It would almost seem that the high class shooters prefer to attend where there are fewer of their own class among the contestants. This tournament should be the crowning event of the year, and a win here ought to far outrank one at the G. A. H., or any other tournament of the season. The professionals who were eligible, twenty-seven in number, were all present with the exception of seven.

The weather was of the finest until the last day, which was rainy and disagreeable. Those present were unanimous in their praise of the arrangements made for their comfort by the Cincinnati Club, and declared that it was the most enjoyable tournament they had attended.

Practice Day, Oct. 14.

The preliminary program was started to-day under most auspicious conditions. The sky was clear, and there was just a suspicion of autumn crispness in the air, enough to make active sport a pleasure, and a seat in the sun not uncomfortable. There was not a breath of wind stirring, and none of the misses could be attributed to the erratic flight of the targets; they were the result of a plain case of not pointing right. Everything was in readiness for the opening event long before the shooters began to arrive at the grounds.

There were thrown during the afternoon 7,050 targets. The attendance was even a little beyond expectations, fifty shooters entering, and all but six going through the program of six 25-target events. The first event was started promptly at 1 o'clock, according to the accepted order of things when Elmer E. Shaner is on deck, and at 3:39 the last squad finished in the sixth event. A fine lunch was served in the club house. This was an unlooked-for feature of the day, but Mrs. Gambell took pity on the hungry shooters, and set out a most appetizing spread, to which they did full justice. The first event started at 1 o'clock, and at 3:30 the traps were clear for the team race at doubles, which was finished at 3:55. W. R. Crosby captured professional honors with 149, breaking the first 75 straight, and then missing the 76th, when everyone had him marked for a long run. He saved the 74th as a starter for Tuesday. Fred Bills gave him a close race, breaking 99 in the last 100 and going out with 147. Then came J. M. Hawkins with 146 and W. H. Heer and C. G. Spencer with 145 each. The former scored 97 and the latter 98 in the first 100. The amateurs put up some nice scores, but were not

keeping pace with the pros. Al Heil was first with 147, breaking 98 in the last 100; W. I. Spangler started off with a straight, and finished in second place with 143. Bart Lewis came next with 141, and Harvey Dixon fourth on 140. The contestants in the team race, Fred Gilbert and L. S. German vs. J. S. Day and H. D. Freeman, were lined up back of trap No. 2, as soon as the regular events were finished, and had a crowd keeping tab on every shot. The race was an exciting one, as had been predicted, and the result was not certain until the last move. At the finish of the first 25 pairs, Gilbert's team was one to the good. In the second round first one and then the other team had the advantage, but toward the last Freeman struck a streak of hard luck, and the finish showed Gilbert and German 3 targets ahead.

J. S. Day was high man in the match with 90. It was a hot race with Gilbert, who broke 89. The match was refereed by G. K. Mackie, with T. H. Clay acting as judge and Len Shepard official scorer.

O. S. Lawrence, one of the most popular trade representatives who visits this territory, was on hand to help make the strangers welcome. Hon. Tom Marshall was here, of course, and made a clean score at the lunch table, though he did not make his usual good showing on the firing line, still 90 per cent. is not so bad. It was some classy day's shoot, only ten of the forty-four men who shot through the program failing to score 90 percent. or better.

The team race at 50 pairs doubles per man resulted as follows:
Day 90 | Gilbert | 89 |

Freeman 81-171 | German | 85-174 |

First Day, Oct. 14.

Tuesday, the opening day of the tournament, was delightful fall weather—clear and bright, and even more favorable for shooting than on Monday. The targets were very even in their flight.

Before starting the shooting, Mr. Shaner gave his usual little talk, explaining the conditions of the contest, and instructing the referees and scorers as to their duties, and also cautioning the shooters to watch the score board, that no mistakes should pass undetected.

The program consisted of eight 25-target events and one at 25 pairs, a total of 250 targets. Entrance, \$2.50 in the events at singles and \$3.00 in the event at doubles. The first four events were divided Rose system, 5, 3, 2, 1, and Nos. 5 to 9 inclusive, 40, 30, 20 and 10 per cent. There was \$100 added money for high average in the single targets. Then there were \$1.00 optional sweeps in each event, and a \$3 optional on the day's singles for the shooters who wanted to take a chance and travel a short road to wealth.

The attendance was somewhat of a disappointment, several shooters who had made arrangements to be present did not show up, and only sixty-one men entered for the day, 58 shooting through the singles and 47 the entire program, including doubles. The shooting was started soon after 9 o'clock, and was finished about 3:10, not a balk occurring in the trapping of 14,350 targets. The attendance of spectators was large, and they were generous with their applause. Fred G. Bills was the star in to-day's work, leading the professionals with 196, missing two targets in each 100. Crosby and Clark were tied for second on 195. These two were tied with Bills in the first 100. W. H. Heer was in the lead at the half-way post, with one down, but struck a snag

R. H. BRUNS.

Second High Amateur at Singles—Post Season Tournament.

in the fifth event and finished third on 193. In the doubles J. S. Day did nice work, outclassing the field, and finished in first with 45. Maxwell, Gilbert and Henderson kept together, tying for second on 44. Then came R. W. Clancy with 42.

Among the amateurs, R. H. Bruns, who has been in the lime light since his phenomenal work at Denver this fall, was high with 195. He broke his first 109 targets straight, making a long run of 113, including the last 4 targets on Monday. This entitles him to the Du Pont amateur long run trophy. Wm. Ridley was second with 193; Al. Heil and George Volk were third with 192 each. Heil and J. S. Young tied for first place in the event at doubles, with 43 each; E. M. Daniels and J. H. Noel, 42 each, and W. Ridley 41.

In all the events for the 250 targets, G. W. Maxwell and F. G. Bills tied for high on 236. Then came the amateur, Heil, with 235, followed by two amateurs, Ridley and J. S. Young, and J. S. Day, professional, with 234 each; Heer, professional, was third with 233, and Geo. Volk, amateur, 230.

J. M. Hawkins started the day with a credit of 69 targets on Monday, and broke his first 31 straight, making a run of just one century. W. R. Crosby scored a run of 102, including the last 74 of practice day. Geo. Volk broke 80 without a miss. The banner squad of the day was No. 3—Ridley, F. Campbell, W. S. Hoon, Bart Lewis and C. F. Moore. In the sixth event they scored 124 out of 125; Campbell was the guilty party and had to take the guns to the house.

Mrs. Topperwein always had a good gallery when she was on the firing line, and she shot better than 90 per cent. Her record is a long one, and pretty well known to all followers of the sport; but we would like to recall the fact that she has made forty-five long runs of 100 or better, some of the best being 226, 197 and 167. Probably one of her best pieces of work was in the Pacific Coast handicap in 1910, when she broke 190 out of 200, including 20 pairs, which is traveling a 95 per cent. gait.

Second Day, Oct. 16.

The shooters were treated to another day of fine weather for their second trial at the traps. There was not a breath of wind, and the flight of the targets was very even. Fifty-eight shooters were entered for the day, three of them failing to shoot through, thus losing any chance they may have had for the high average prizes. Promptly at 9 o'clock the first squad was called to the firing line, and there was no let up in the shooting until 2:20, when the last event was finished. The event at doubles seemed to have little attraction for the amateurs, only twenty-one caring to take a chance. R. H. Bruns continued to shoot in the form he displayed at Denver, and at the close of the day was tied with W. R. Crosby, which is about all the honor a young amateur ought to want. F. M. Edwards was called home by a telegram before he had fairly gotten under way. C. A. Young shot in order to fill out a squad. E. A. W. Everitt did not reach the grounds in time to take in the first three events, and started in the fourth, but hardly shot up to his usual form; he also shot to fill out a squad. T. J. Donald was obliged to leave on Tuesday night, and did not expect to get back, but the call of clays was too much for him, and he reached the grounds in time to enter and shoot through; his score was much below his usual mark. Everything moved smoothly; 13,400 targets being trapped without a hitch; the only stop was for the purpose of setting the traps for the doubles, and Charlie North did not delay the game for that purpose. J. S. Day had them all guessing in the event at doubles, and in spite of a "dutch double," went out with 46, which shows that Jimmy is some quick with his shooting stick, as well as having a sharp eye. Clark and Spencer followed him with 44 each, and Taylor and Heer were a good third with 43 each. In the singles professionals and amateurs were close together. For the latter class, W. R. Crosby was high with 195, a repetition of his first day's work; Henderson came next with 194, and J. M. Hawkins 193. Bruns, Ridley and Hoon made a great fight for high amateur honors, the former going out with 195, tying Crosby, and the two latter getting 194 each. Heil and Roll scored 192 each; C. F. Moore and B. S. Cooper 191. These men divided the \$100 average money.

In the doubles, Volk led with 43; Heil 42, Ridley 41, Hightower and Schlichter 40 each.

The totals for the first two days showed the amateurs

For singles—trap or field—just toss in a shell, press the button and—"PULL." The side bolt makes it easy. You don't have to tug at the barrel or watch an on-and-off device. The action stays open after each single shot is fired,—It always stays open when the magazine is empty. Five shots—three to get the cripples—each under absolute control of the trigger finger. The recoil reloads for you—kicks another shell in; takes the strain off the gun—the discomfort out of the kick—all without diminishing the drive behind the shot.

And a friction brake feature found only on the *Remington-UMC* Autoloading Shotgun, slows down the rearward motion of the barrel and bolt. The greater the recoil, the more force taken up by this ring. The shooter's shoulder does not have to stand the difference in kick between a blank and a 3½—1¼ load. Simple take-down—a few turns of the readily handled magazine screw-cap makes cleaning, carrying and interchange of barrels quick and easy.

299 Broadway

Try the *Remington-UMC* Autoloading Shotgun at your dealer's. Pick out shells with badly battered crimps. Watch how readily the action will handle them. Have you any questions about the mechanism? Send to-day for a booklet completely explaining the action.

**Remington Arms-Union
Metallic Cartridge Co.**

New York City

to have the best of it. Bruns was tied with Crosby on 390; Ridley came next with 387; Heil 384; then Fred. Bills dropped into place with 382, followed by Henderson with 381, and Heil with 380.

For the two days' events at doubles, 50 pairs, Day was high with 91; Maxwell 86; then came an amateur, Heil, with 85; Spencer, Taylor, and Gilbert were in next place with 84 each, and Ridley followed with 82. So far the amateurs developed fully as much class as their professional brothers, and held their own with the veterans. The cartoons by Fred Slear, of Philadelphia, did a whole lot to keep the boys amused, and made the unfortunate ones forget, for a time at least, the lost target, that may be cost them dollars. He monopolized one side of the club house with the productions of his pencil, and no one made a kick. In the afternoon a pleasant surprise was sprung on the shooters and representatives by the reception of the following: "You are cordially invited to attend the informal dinner to be given Wednesday evening, Oct. 16, at 6:30 o'clock, at the Alt Heidelberg, 522 Vine street, second floor. Complimentary to the shooters and representatives attending the Post Season tournament." This invitation was extended by the publishers of the Sportsman's Review, and it is needless to say was generally accepted, seventy-three

guests being at the table when Mr. Elmer E. Shaner called for a rising toast to the host. The menu was as follows: Heublein cocktails, caviar slices, turtle soup, fried sea, pommes grande, peas, potatoes, head lettuce, coffee, cheese, ice cream, cigars.

When the cigars were well alight, Mr. Shaner rose and expressed for those present and the Interstate Association their appreciation of the entertainment. He then called on the Hon. Tom Marshall (Chief Long Talk), who responded as he alone can, in a short speech replete with witticisms, which kept the guests in a roar of laughter. He reviewed very briefly the sport of trap-shooting from the time of the gyro pigeon to the present days of perfection, and declared that it was the cleanest sport known, and that its devotees were the salt of the earth, or words to that effect.

Mr. Rosenthal being called upon, responded in a few words, expressing his pleasure in meeting face to face, those whom he knew so well by name and reputation.

Other speakers were: Arthur Gambell, superintendent of the Cincinnati Gun Club; R. Davis, secretary of the club; Fred E. Pond, editor of the Review, and A. F. Hochwalt, kennel editor of the same publication. After drinking a rising toast to their host, the boys adjourned.

AL HEIL,

High Amateur at Singles and Doubles—Post Season Tournament.

WOOLFOLK HENDERSON,

High Professional at Singles and Doubles—Post Season Tournament.

It was a very pleasant affair, and the entire lack of formality made it all the more enjoyable.

The members of the office force at the tournament wish to register a protest against the insinuations of one of the old-timers of the club, viz., Bob Ward. He looked through the window to-day, and dubbed the place "the monkey house." An explanation or an apology is due from him.

It was learned at this shoot, quite by accident, that Fred Gilbert's favorite outdoor sport is dove shooting. Another interesting fact was brought to light at this tournament, and that is, that Lester German never shoots out of season. He positively declared that he would not be guilty of such an action, even to ascertain the pattern of his gun.

This being the last of the season's Interstate tournaments, the boys are anxious to know what Elmer Shaner will do all winter.

A banner was displayed on the house veranda, calling attention to the coming Indian shoot on July 8, 9 and 10, 1913, to be held at beautiful Cedar Point, O.

The big chiefs surely believe in the efficacy of advertising, and are starting in early to round up a crowd. Well, a better place for a week's outing, or a better bunch of boys to have a good time with would be hard to find.

Third Day, Oct. 17.

When the shooters awoke on the morning of this day they found the sun hidden by thick clouds, and every indication that the fine weather of the previous days was at an end. Later in the morning, however, it partially cleared off, and the balance of the day was all that could be desired. Elmer Shaner was rather inclined to look on the dark side, and predicted the worst, but meeting with no encouragement, he became more cheerful and hopeful that this Post Season would hold the record for uninterrupted good weather.

There was a slight delay in starting, as Superintendent Gambell desired to line up the shooters in front of the camera before any of them got away. This ordeal over, the first squad took its place on the firing line at 9:10, and at 2:07 the last squad in the event at doubles was handed into the office, and the day's shoot was over. The attendance had dropped off a little, fifty-one shooters going through the entire program, and one man taking part in six of the eight events. As the end of the tournament approached, many of the contestants and spectators gathered at the bulletin board, watching the returns and getting a line on the high men in the endeavor to pick the winner. R. H. Bruns, who was the favorite at the close of Tuesday's events on account of his fine work here and the reputation he had made at Denver, went to pieces and did not land in the day's average money. The strain was just a little too much for him, and he could not maintain the gait at which he had started out. He was still a favorite for place in

the first flight at the finish, but his chances for capturing high average were considered lost. The amateurs did not keep quite so nearly even with the professionals as on the other days. Geo. Roll was high man with 192; then came Volk, Heil, Ridley and Barto with 191 each, followed by Dixon with 190. In the event at doubles with fifteen amateurs entered, Volk and Heil tied for first place on 42; Kahler, Huntley, H. E. Smith, Noel and Dixon were second with 41 each; Barto and Daniels 41 each.

There were some shifts in the standing of the professionals also. Crosby, while still shooting a fast pace, and putting up a better score than on the other days, was edged out of first place by C. G. Spencer, who broke 197 to the former's 196. Third place had three occupants, Freeman, Maxwell and German, with 194 each; German and Bills, third with 42 each. The amateurs were well bunched for the three days at 600 single targets, only 6 targets separating first and fourth men. Ridley was at the head with 578; Heil second with 575; Bruns, despite his poor showing for the day, was only one target behind second man and got third place on 574; Roll in fourth place with 572.

Heil had a lead of three targets for the three days' doubles, 75 pairs, with 127 to Volk's 123. Barto was next with 116, and Ridley two targets behind with 114.

Among the professionals, Crosby's lead in the singles was such as to make him a sure winner of high average. He had 586 to his credit, 8 targets ahead of his nearest competitor, Clark, who had 578; Maxwell was third with 576, and Henderson fourth with 574.

In the doubles Day had a good lead with 136; Maxwell and Henderson were tied for second on 129; Gilbert, Clark and Spencer third with 124 each.

The wise ones picked the winner of the high average trophy on all targets, singles and doubles, when the returns for the three days were in. Heil had a lead of 16 targets over Ridley, with 702 to 692; Barto was third with 683.

The race among the professionals was much closer, only 3 targets separating the first three men. Maxwell was at the head of the list with 705; Henderson with 703 and Homer Clark third with 702.

WINCHESTER

Red W Goods

WIN THE INTERSTATE ASSOCIATION'S OFFICIAL SEASON AVERAGE FOR 1912

— And Also Make —

A Great "Clean-up" at the Post Season Tournament

W. R. CROSBY

AT the Interstate Association's Post Season Tournament held in Cincinnati, October 15-18, W. R. Crosby won High Professional Average, and by so doing captured the Official Season's Average for 1912, the most coveted honor in trapshootingdom. His record for the four tournaments he participated in was 1952 x 2000, .976%. Of course, Mr. Crosby shot Winchester Factory Loaded "Leader" Shells, the same loads he used at Denver when he established a New World's Record of 98 out of 100 targets from 23 yards. Hats off again to Crosby, and also to Red W Goods, which have won

11 out of 13 Official Seasons' Averages.

Out of the first 12 professionals in the Season's Average Contest for 1912, 9 used Winchester Loaded Shells, or Winchester Shotguns, or both. Some shooting, eh?

THE POST SEASON TELLS THE STORY

In the language of the prevalent politician, "We point with pride" to the record of Red W Goods at this important tourney—Here it is:

HIGH AMATEUR AVERAGE ON SINGLE AND DOUBLE TARGETS: A. Heil, with Winchester Loaded "Leader" Shells. Score: 933 ex 1000.

HIGH PROFESSIONAL AVERAGE ON SINGLE TARGETS: W. R. Crosby, with Winchester Loaded "Leader" Shells. Score: 783 ex 800. **Second:** Homer Clark, with a Winchester Repeating Shotgun. Score: 772 ex 800.

HIGH AMATEUR AVERAGE ON DOUBLE TARGETS: A. Heil, with Winchester Loaded "Leader" Shells. Score: 170 ex 200.

HIGH PROFESSIONAL AVERAGE ON DOUBLE TARGETS: J. S. Day, with a Winchester Repeating Shotgun. Score: 179 ex 200.

LONG RUNS: C. G. Spencer, with a Winchester Repeating Shotgun and Winchester Loaded Shells, 122. W. R. Crosby, with Winchester "Leader" Loaded Shells, two of 102 each, and J. M. Hawkins, with Winchester "Leader" Loaded Shells and a Winchester Repeating Shotgun, 100.

WINCHESTER QUALITY WINS THE BIG VICTORIES

18 Winning Scores—Averaging 95.27%

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

The amateurs finished for the day in doubles and singles with Volk and Heil at the head on 233 each; Barto and Dixon 231 each; Young and Daniels 227 each. Professional scores were higher, Henderson being first with 238; Maxwell, Spencer and Freeman 237 each; German 236.

Long runs were made by C. G. Spencer, professional, 122, which included the last 21 of Wednesday. W. S. Hoon started the day with an unfinished run of 50, and added the first 40 targets of to-day's program, giving him a total of 90; Volk got a run of 80 during the day and Roll one of 87.

The dailies of the city have devoted some space to the tournament, and the result was apparent in the goodly crowds of spectators, which have been present since Monday. Among those here to-day were Horace Bonser, a former member of the club and known as the Boy Wonder from the wonderful scores he used to make at the St. Bernard grounds when he first began shooting four or five years ago. He has dropped out of the game altogether, but still retains a friendly feeling for his old-time competitors at the clay birds. Much disappointment has been expressed by the shooters at not meeting "Pop" Heikes at this tournament, and it was a great surprise to many to know that he had not qualified. His percentage was high enough and then some, but he had not got into enough of the Interstate handicaps during the year.

Fourth Day, Oct. 18.

Well, we got it for the last day without a question, and Elmer's predictions were fulfilled to the letter. It was regulation Post Season "get-away" day weather, according to the records. There was a light drizzle of rain in the early morning, but the clouds were thin, and the indications for clearing up seemed good. Instead of getting better as the day grew, it steadily be-

came worse, and the last event was finished in a heavy downpour. The weather prevented any visitors from attending, and the shooters had no gallery to urge them on. At 9 o'clock the first squad was called to the score, and at 1:15 it was all over, and another Post Season tournament was a matter of history. Only forty-eight shooters were on hand to-day, forty-four going through the program. Some of the best scores of the week were made to-day, in spite of the weather. W. H. Heer was the star performer, finishing his 200 singles without a miss, making a straight run of 240, including the last 40 of the day before. Henderson also did his best work to-day, tying with Crosby for second place on 197; German got in third place with 195, and was followed by Clark and Hawkins with 194 each.

High amateurs for the day were: Roll 194, Barto 193, Brunns (who had got back nearly to his right form) and Dixon, 192 each; F. Campbell 191, Daniels, J. S. Young and Moore, 190 each.

Long runs were made by Crosby, 102, including the last two targets of the day before; Barto, 97, and Hawkins 80, which took in 5 from Thursday.

High amateur on the day's program, singles and doubles, were: Barto 235, Daniels and Noel 234 each, Young 233, all well bunched.

The professionals also finished close together; German first with 242, Heer 241 and Henderson 240.

The Interstate Association divided \$300 among the ten high amateurs shooting at all the singles for the four days, 800. This was won by Ridley, 767; Brunns and Roll, 766 each; Heil, 763; Dixon, 761; Barto, 760; Young, 757; Hoon, 755; Volk, 752, and Moore 751.

The six high average moneys, \$100 in all, for high scores in the four days at doubles, 100 pairs, were won by Heil, 170; Noel, 167; Young and Volk, 165 each; Daniels, 162, and Barto, 158.

The trophy, a gold watch valued at \$100, for the amateur making high score at all targets, singles and doubles, 1000 in all, for the four days, was won by Al Heil, of Allentown, Pa., with a score of 933, 10 targets in the lead of Wm. Ridley, who broke 823; J. S. Young was a close third with 922.

The professional trophy went to W. Henderson, Lexington, Ky., with 943; Homer Clark was second with 940, and L. S. German third with 939.

Squad No. 5—Taylor, German, Heer, Crosby and Maxwell—made the squad record of the tournament, breaking 125 straight in the first event to-day. Squad 2, all amateurs—Volk, Koch, Huntley, Heil and Barto—came within one target of tying the pros in the same event, going out with a score of 124.

During the tournament, including practice day, 57,575 targets were trapped without a delay.

Great Shot Gun Problems Solved

READ THIS BOOK

NO shotgun has yet shown a vital failing which the maker did not know was there. But the fault was there only because the maker did not know *how to get rid of it.*

Of late years shotgun makers have been so eager for novel features to compete with each other, that they have devoted their entire efforts to perfecting and introducing such features—features whose actual value is often trivial.

The makers of the L. C. Smith Guns have worked from a different point of view. For the past 22 years they have concentrated all effort on the purpose to *eliminate shortcomings*, rather than to add merely novel features. The New Book of Smith Guns will show you how the old shortcomings have been eliminated, one by one.

It will show you how *loss of aim from fumbling for the trigger* has been eliminated by the successful Hunter One-Trigger (which recently broke the *world's record on double targets*). How *inaccessibility of working parts* has been eliminated by the Smith One-Screw Access. How *shooting loose* has been eliminated by the Smith Rotary Bolt, which takes up wear in all directions.

Don't think of buying a gun until you've read this book. It's *free*. Brim full of valuable gun information, tables, charts, etc. Colored plates of fine shotguns from \$25 net to \$1,500 list.

SEND FOR THIS BOOK TO-DAY

Just write your name and address on a post-card and mail it to us. You'll receive the Book of Smith Guns by return mail. If you care for guns and shooting, don't fail to get this book. And if you're at all apt to put things off, don't fail to write for it to-day—*now*.

L. C. SMITH GUNS

"6 Times 22 Years' Experience"

HUNTER ARMS CO.

76 Hubbard Street Fulton, N. Y.

OBJECTIONABLE advertising can find no place in FOREST AND STREAM'S columns at any price.

3inOne

is used and recommended by the largest fire-arms manufacturers in America. Experienced gun users everywhere say it is the best rust preventative on earth—on water, too.

Being a light oil it enters the pores of the metal and forms an imperceptible covering that is moisture-proof without making the gun sticky or greasy to handle. Best for oiling the fine mechanisms of the finest gun, because it does not dry out, gum, harden, turn rancid, collect dust.

Free sample.

Dusted Targets.

Supt. Gambell got his canvas target saver installed in time for the tournament. It is a money-maker all right, and the "pick-ups" will soon pay its cost.

Guy Ward was much interested in the culinary department. Likely he's considering a course in domestic science.

Jim Day set a fast gait in the match at doubles on practice day—just a little too speedy for Fritz Gilbert.

A. C. Connors, of Springfield, Ill., was with us a couple of days, but was obliged to quit shooting, as he has not fully recovered from a recent illness. The boys were glad to see him, for they have not forgotten his courtesies during the G. A. H. He is some shooter or he would not have been here.

Charlie Young has just returned from a trip in the Northwest, and stopped over here to greet the boys. He shot a few targets, going in to fill up a squad.

O. S. Lawrence, one of the most popular trade representatives on the road, made himself useful to the management, and circulated among the shooters, making friends. He is a good shot, but had no chance to get in here.

Bart Lewis came over from Auburn, Ill., to show the Buckeyes how to shoot. He's well qualified for the position of shooting master, and can make the best of them travel.

Mrs. Topperwein was the great attraction for the visitors, and a crowd followed her down the line. Her record is one to be proud of. Forty-five long runs of 100 or better, such as 226, 197 and 167. One of her best scores was made at the Pacific Coast Handicap in 1910, when she broke 190 out of 200, including 20 pairs.

Lester German, holder of the 1911 professional championship at singles and doubles, has proved his skill at the traps in many hard-fought contests. Perhaps his most creditable victory was in 1910, at the first Post Season tournament, when he won the Paul North trophy contest, open only to the ten high professionals for that season.

R. H. Bruns, Brookville, Ind., is a young shooter who has already made a name for himself. His work at the Denver Handicap was remarkable, only 4 dropped in 500, and a run of 283 to his credit. He is a cool shooter, and when in form can give the best of them a run for their money.

Harry Kahler, of Philadelphia, has as many friends in the West as in the East, and they're all glad to see him when he comes this way. He is not one of the older shooters, but can give the best of them a hot race. The \$500 Pinehurst event was won by him with 89 out of 100 at 2lyds., and at Denver he scored 92 out of 50 pairs.

J. S. Day can make them sit up and take notice when he is in his best form. As an amateur in 1910, he made the remarkable showing of .9728 per cent, on 4280 targets, and has been doing great shooting ever since.

W. I. Spangler, of Circleville, O., president of the Ohio State Trapshooters' League, is one of the highest class shooters in the State, both socially and based upon skill. His artistic manner of handling a shotgun is the envy of all contestants. He promises the shooters a great time when they attend the State shoot next June.

J. A. Blunt, of Greensboro, Ala., came further to attend the Post Season shoot than any other contestant. He is very proud of his \$1000 gun, and his consistent scores are an evidence that he made no mistake in his purchase of the same.

Jess Young, George Roll and Joe Barto. Guess when you speak of the "Big Chicago Three" you have said something. They are congenial to the limit. Based upon shooting ability, if rated by Bradstreet, they would be listed A.A.1 in the shooting world.

Fred. G. Bills, "Chicago's Giant." But one trouble with Fred, his body is not big enough for his heart. He is also some shooter, as his scores will attest. Formerly a Kansas sheriff, as handy at sticking State papers down gopher holes as the average boy is advertisements under the sidewalk.

George Mackie and Harvey Dixon, two college chums, are the owners of the largest coal mine in Kansas. It has been their policy from the opening of the mine to devote one quarter of the receipts to charity.

C. O. Le Compte, the "Kentucky Gentleman," hails from the Blue Grass State. Charlie insists that there is too much atmosphere where they have failed to place targets when he is on the firing line. The management has promised to remedy this fault at the next Post Season shoot.

Lester German, based upon the fact that he had missed a target, went over into an adjoining field to again pattern his gun. A complaint was made by the owner of the farm. It required the united efforts of Elmer Shaner, Tom Marshall and Bill Crosby to keep him out of jail.

A notable fact—that the major portion of the old-timers are qualified to shoot in the Post Season.

The Post Season seemed like an invitation party. Every contestant was able to shake hands with his neighbor and call him by name. They have all met so frequently during the season, introductions were unnecessary.

Genial Fred Clark, head of the Remington-U. M. C. representatives, was present with the glad hand and smile. Brother Clark attends most of the big shoots and is personally acquainted with shooters. This is the correct plan—mix and affiliate—no man can remain in his office at the round top desk and know the requisites of the shooting world.

Bill Crosby, the "machine shooter," was at all times in evidence. A good shot, a good fellow, a good one in all lines and at all times. He is the winner of more trophies than any other man who has ever faced the traps.

William H. Heer, "Cyclone Shooter," not talker. Constant at all times and crushes the mud pies with regularity. Witness his work on Friday, in bad weather, 200 without a miss. You must pass it along to Billy.

High Gun

AT DENVER, 1912
HANDICAP, SEPT. 10-13

Mr. R. H. Bruns, shooting his

L E F E V E R

made the marvellous run of
283 without a miss.

On the 700 single targets, including handicaps, Mr. Bruns scored **683 out of 700.**

The second day of the tournament on the day's program of 200 targets, Mr. Bruns and his Lefever gun scored **200 out of 200.** A world's record for ten traps.

On the 500 single 16-yard target for amateurs, Mr. Bruns scored **494 out of 500.**

ANOTHER WINNER AT THE PACIFIC COAST HANDICAP

Mr. L. H. Reid, shooting his Lefever gun, won second high average with **381 out of 400.**

Rising Sun Gun Club.

RISING SUN, Md., Oct. 16.—The twelfth annual shoot of the Rising Sun Gun Club, held here to-day, was a howling success. The attendance was unprecedented, there being fifty-six shooters, and the club was totally unprepared for such a crowd, and the program of 150 targets had to be cut to 105 owing to darkness. Thirty-seven shooters went through the program, and as we had but one trap, we were unable to complete the program. The team race between Elkton, Chesapeake City and Rising Sun drew a number of shooters, and the Du Pont Club, of Wilmington, sent twelve shooters. The club managers were swamped with entries, and entries were refused after 12 o'clock. Of professionals, Ed. Banks was high with 101 out of 105, and was tied by I. E. Eyer, of Baltimore, and H. H. Sloan, amateurs. Worthington and Apgar were next in the professional ranks with 100, and Clyde Leedom and Jim McKelvey tied with them. The team race resulted in a walkover for Rising Sun with 159.

Dunkirk Gun Club.

DUNKIRK, N. Y.—Following are scores of the regular monthly shoot of the Dunkirk Gun Club, made Oct. 13. A fairly good crowd was out, considering the bad day. The trade was represented by Sim Glover and George Hassam:

Match for Stevens trophy, 50 targets, handicap:

	H. B.	H. B.	Total.
Tyler	2 23	1 23	46
Parker	2 20	4 22	42
Schweda	7 24	5 25	49
Koch	7 23	6 23	46
Watch	7 19	10 24	43
Russell	2 20	4 25	45
Leyer	0 21	1 23	44
Anderson	10 17	13 25	42
Kirk	11 22	9 24	46
Loeb	6 16

Schweda won trophy for first try.

Other matches were shot as follows:

Glover	22	24	22	23
Hasson	21	24	23	21
Tyler	17	21	22	23
Schweda	18	17	20	..
Walch	17	12	14	..
Russell	17	18	23	..
Leyer	22	21	22	19
Loeb	8	6
Anderson	12	7	13	..
Martin	18	11	14	..
McLean	6	10	8	..
Newinger	9	5	7	..
Baumgartner	10	8
Tousley	14
P Baumgartner	4	6
Riley	8

At 12 pairs of doubles, the following scores were made: Schweda 10, Parker 10, Leyer 19, Tyler 8, Hassam 9.

Marine and Field Club.

THE Marine and Field Club, Bath Beach, N. Y., will open its trapshooting season on Nov. 2, at 2:30 P.M. and continue until April 30, 1913.

Monthly series prizes will be competed for on Saturdays and holidays under the same conditions as last year. Rules governing the contests and handicaps will be posted in the cottage.

Prizes for special events have been offered. Details governing competition therefor will be announced later.

For the information of those members who are not familiar with the trapshooting department of the club, the cottage is open throughout the season and members desiring to remain over night will find adequate provision for their comfort. Luncheon is served on all shooting days at 1:30 P. M.

Those members desiring to shoot on other than the regular days can make arrangements therefor by telephoning the office.

The committee earnestly desires to enlist the co-operation of the members in this branch of the club's sports, and trusts that there may be a large attendance at the opening.

A limited number of guns are available at the club for the temporary use of such members as are not already provided for.

TRAPSHOOTING COMMITTEE.

1952 x 2000, or .976 %

This score was made by the "OLD RELIABLE" PARKER GUN in the hands of Bill Crosby, again demonstrating to the shooters of the world that the PARKER GUN makes the highest scores.

The above mentioned score won for the PARKER GUN and Mr. Crosby the Professional Season's Average for the year 1912, and was completed at the Post Season Tournament, Cincinnati, O., Oct. 15-18, 1912.

The PARKER GUN also won the Amateur Average for the tournament.

Marlin Model 1892—32 Caliber Repeating Rifle

With Round Barrel

\$12.15

Shoots the powerful, accurate .32 short, long and long-rifle rim fire cartridges (65c. per 100). Has the killing power you can't get in a .22; kills anything smaller than deer up to 200 yards easily and at slight cost for cartridges.

It's light, quick handling, thoroughly accurate and reliable. Has removable side-plate and action parts; the easiest of all repeaters to keep clean. Adjustable Rocky Mountain sights. Extra firing pin (free) allows use of .32 C. F. cartridges in same rifle.

Send 3 stamps postage for new big catalog of all Marlin Repeating Rifles and Shotguns. Do it now!

Riverside Gun Club.

RED BANK, N. J., Oct. 19.—The fourth shoot for the C. R. James trophy and the seventh shoot for the Du Pont trophy was held at the Riverside Gun Club, on Shrewsbury avenue, here to-day. The fourteen participants and their scores in the first shoot for 50 birds each were:

C M Johnson..... 12	50	A D Cooper..... 14	49
T H Grant..... 18	50	R Applegate 16	49
E von Kattengell.. 6	50	A L Ivins..... 1	49
B Hance 14	50	G Allen 20	49
A Sussman 8	50	Geo Bray 28	47
A B Delby..... 20	50	C Throckmorton... 12	46
W Chandler 14	50	E H Cooper..... 6	43
G Gallo 15	50	H Simpson..... 16	41

In the shoot-off for those that were handicapped and broke 50 in the first event, the following scores were made at 25 birds each:

C M Johnson.... 3	25	A Sussman 2	21
T H Grant..... 4½	25	A Dalby 5	20
B Hance 3½	22½	W Chandler 3½	19½
E von Kattengell. 1½	23½		

As there were three ties in this shoot-off the third shoot-off resulted as follows:

Johnson 3	24	Von Kattengell . 1½	24½
Grant. 4½	23½	Hance 3½	23½

The second event was open to professionals only, and the scores were: H. H. Stevens 49 out of 50, Frederick Applegate 31, and Dr. H. B. Garrison, handicap of 11, broke 25.

Indianapolis Gun Club.

THE attendance at the gun club practice, on Oct. 19, was better than usual. Conditions were about right, but the average of scores not up to the mark. In the practice, at 16yds., Moller and Dixon tied for first place; Edmonson next. Moller won the spoon, standing at 22yds. The scores follow:

Practice:		Shot at. Broke		Shot at. Broke		
		Yds.	T'l.	Yds.	T'l.	
*Hymer	145	124		Stille	60	39

J. H. DREHER, Sec'y.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Oct. 14.—One of our gun club members, a farmer, brought in seven sheep, to be butchered and the meat shot for. Each sheep was divided into six parts—four quarters, hide and heart and liver. We made four events of them, two sheep for each of the first three events and one sheep for event 4. The shooting did not begin until late, so each event was made to consist of 10 birds.

Below are the scores. A. F. Ahmann had a "crooked neck," but it seemed to help him rather than hinder, for he made a straight in the last three events. The first event he did not shoot, on account of his neck, but the

crack of the guns made him forget his dread of the recoil.

Team pick-up match, 25 targets per team: Dr. Groll and M C Lemore 25. Huggins and Shannon 20. Dr. Dalton and Dr. Moeller 21.

SECRETARY.

Robin Hood Gun Club.

STATEN ISLAND, N. Y., Oct. 14.—W. L. Bush wins third and final leg on the Du Pont trophy. Ten shooters were on the firing line at our shoot on Oct. 12 and turned in some very good scores, the main event being the Du Pont trophy shoot at 50 birds, and was hotly contested, four men having two legs on the same. Scores: No. 1 was for Du Pont trophy; No. 2 for merchandise; both were at 50 targets:

Events:	1	2	Events:	1	2

GEO. CONELLEY, Sec'y.

The Du Pont Gun Club.

WILMINGTON, Del., Oct. 19.—The regular program at the Du Pont Gun Club to-day consisted of the Coleman du Pont spoon events and the Frank L. Connable cup. At the end of the spoon event, J. B. McHugh, J. H. Minnick, J. T. Roberson and E. E. du Pont tied at 24. In the shoot-off, McHugh and Minnick each broke 25. It was finally won by McHugh, 23 out of 25.

In Class B, W. Edmanson and J. J. Magahern tied at 23. In the shoot-off Edmanson won, 23 out of 25. In Class C, William Coyne, T. W. Mathewson and W. Hinkson all tied at 22. This contest was not settled. Dr. Horace Betts had things all his own way in Class D by making the excellent score of 21 out of 25.

J. B. McHugh was winner in the Frank L. Connable cup contest. He broke 24 out of 25 from 22yds. S. G. David, shooting from the 16yd. mark, broke 23. E. E. du Pont, the holder of Class A challenge cup, was challenged by J. T. Skelly. Mr. du Pont retains the cup because he got 45 to Mr. Skelly's 40.

Next Saturday the first match of the Philadelphia Trapshooters' League will take place on the home grounds. The Camden Club will be here. It is the desire of the management that the home club make a good showing, as the Camden team is very strong.

Wm. Armistead and R. D. Snodgrass did some fine shooting. Mr. Armistead is an enthusiastic member of the Du Pont Gun Club, and comes to Wilmington whenever possible.

W. S. Colfax, Jr., was in good form, as his score of 97 out of 100 shows. J. B. McHugh was not far behind, his score being 95. Mr. Minnick broke 96 and Mr. Edmanson made a score of 93. The scores follow:

Coleman du Pont spoon event:
Class A—J. B. McHugh 24, J. H. Minnick 24, J. T. Roberson 24, E. E. du Pont 24. Shoot-off: McHugh won, 23 out of 25.

Class B—W. Edmanson 23, J. J. Magahern 23. Shoot-off: Edmanson won, 23 out of 25.

Class C—William Coyne 22, T. W. Mathewson 22, W. Hinkson 22.

Class D—Dr. H. Betts, 21 out of 25.

Class A challenge cup match: E. E. du Pont (holder) 45, J. T. Skelly 40.

Regular event: E. M. Ross 18, A. J. Curley 15, H. W. Bush 18, J. W. Mathews 18, S. J. Newman 17, J. J. Magahern 23, J. T. Roberson 24, J. B. McHugh 24, E. E. du Pont 24, W. J. Highfield 10, S. G. David 18, W. B. Smith, Jr., 18, Wm. Armistead 19, J. G. Highfield, Jr., 19, Lee Moore 15, W. Hinkson 22, Dr. E. O. Bullock 19, W. Edmanson 23, J. H. Minnick 24, T. W. Mathewson 22, L. L. Jarrell 19, L. C. Lyon 21, H. P. Carlon 22, H. T. Reed 20, Wm. Coyne 22, Dr. H. Betts 21, Dr. H. Patterson 20, *J. T. Skelly 25, *W. S. Colfax, Jr., 25, R. D. Snodgrass 16, *L. D. Willis 24.

*Not eligible for spoon event.

F. L. Connable cup contest: J. T. Roberson (22yds.) 22, J. H. Minnick (22) 23, J. B. McHugh (22) 24, E. E. du Pont (22) 22, H. P. Carlon (22) 16, H. W. Bush (21) 16, W. Edmanson (21) 20, J. J. Magahern (20) 17, Wm. Armistead (20) 20, L. L. Jarrell (20) 18, L. C. Lyon (20) 20, Dr. H. Patterson (20) 19, E. M. Ross (18) 7, J. G. Highfield, Jr. (18) 12, T. W. Mathewson (18) 18, H. T. Reed (18) 19, W. B. Smith, Jr. (18) 20, Wm. Coyne (18) 18, W. Hinkson (18) 21, W. J. Highfield (16) 9, S. G. David (16) 23, Lec Moore (16) 18, A. J. Curley (16) 16, S. J. Newman (16) 19.

J. B. McHugh was high for Connable cup, breaking 24 out of 25 from 22yds.

Analostan Gun Club.

WASHINGTON, D. C., Oct. 20.—The Analostan Gun Club was the scene of an interesting contest on Oct. 19, when a team representing the Street Car Company of Wilmington, Del., met a team composed of the members in the employ of the Washington Railway and Electric Company of this city. The Wilmington team was captained by W. H. Hitchcock, and the Washington team was headed by J. T. Moffitt. The Wilmington team won the contest by 5 birds. Hitchcock possessed all the cunning that Muggsy McGraw is reputed to have, and put one over on Moffitt when the second 25 was shot. In the first inning he found Dolson wabbling—he had lost his batting eye—only scoring 9 out of his 25. This would not do, and when the Wilmington squad was called to the bat for the second round Hitchcock put in a pinch hitter, Al Smith, and he batted out 21 out of 25, and saved the day for his team. The team shot at 250, and the results were as follows:

Wilmington Team.	W. R. & E. Co. Team.		
W H Hitchcock.....	36	Moffitt.....	33
Geo Spear.....	42	R H Leight.....	44
G McKinney.....	42	W A Wenner.....	37
J H Thomas.....	34	S A Folsom.....	36
J Dolson.....	30—184	W A Anderson.....	28—179

Following are the scores made by the members and visitors during the afternoon:

In the shoot at 12 pairs doubles, the scores stood: Brown 17, Wallace 14, Monroe 20, Kirk 16, Parson 20, Huseman 18.

MYLES TAYLOR, Sec'y.

Chicago Interurban League.

CHICAGO, Ill., Oct. 14.—The last series of shoots of the Chicago Interurban League of Gun Clubs was held on the grounds of the Arlington Heights Club, Oct. 13. There was an attendance of sixty members of the League and five professionals. The day was ideal for trapshooting, although the scores turned in were below the average.

This shoot now settled the winners of prizes. The Chicago Gun Club is the individual winner of the League trophy. The Long Lake Gun Club won the Du Pont trophy. Among the individual winners, G. Hausler, of the South Chicago Gun Club, secured the highest total for the best five scores, score being 230. Dave Thomas won the individual trophy for high man in the winning team.

The standing of the clubs at the finish of this shoot is as follows:

Chicago Gun Club... 43	South Shore 26
Long Lake 41	Hammond 14
National 32	Arlington Heights... 7
South Chicago 32	

That the League has been a grand success is fully assured. The average attendance at each shoot has been seventy-five shooters, and the total, 175 members of the League have taken part in one or more contests. Some of the five best scores are as follows:

C G Hausler..... 230	C W May..... 216
F Staunton 225	Tom Graham 216
Wm Jackson 225	Jesse Young 215
Chas Emery 223	O P Goode..... 214
Dave Thomas 223	J W Stanton..... 212

Rifle and Revolver

Individual Rifle Championship Match.

The nineteenth grand annual individual rifle championship match for 1912 will be held under the auspices of the Zettler Rifle Club, at Union Hill Schuetzen Park, Union Hill, N. J., on Election Day, Tuesday, Nov. 5. The committee in charge is as follows: A. Begerow, Chairman; H. M. Pope, L. C. Buss, B. Zettler, C.

Zettler, C. A. Schrag, F. Hecking. All riflemen intending to participate in this match will please address Zettler Brothers, 159 West Twenty-third street, New York, or F. Hecking, same address. The N. R. A. medal will be competed for by members of the Zettler Rifle Club on the same day. American Standard target to be used.

NEARLY \$200,000 IN HUNTERS' FEES.

THE biennial report of State Fish and Game Warden George A. Lincoln, of Cedar Rapids, Iowa, filed with the Governor, shows \$182,029 collected in hunters' license tax in the past two years. Prosecutions of violators of fish and game laws have netted the State \$11,829.50. The warden has destroyed \$7,500 worth of unlawful devices for fishing and trapping. There have been 120,000 game fish placed in the waters of the State and millions of spawn planted. Fish have been seined from dead waters, such as bayous, ponds, etc., and placed in running water to the number of 723,000. Of this number 500,000 were taken from overflows of the Mississippi. The State has received from border licenses, mostly Mississippi River seine fishermen, \$3,221.41. There have been about two million buffalo and carp taken from our fresh water lake. Most of these were buffalo. About two million garfish have also been removed and destroyed. The other fish were sold.

MAINE GAME WARDENS SHOT.

ON Saturday, Oct. 12, 1912, Deputy Bird Commissioner Walter P. Medbury, assisted by John Quinn, of Maine State Commission, while attempting to arrest Rafael Sansone for shooting gray squirrels during the close season were both wounded by a revolver bullet in the hands of this Rafael Sansone. Mr. Medbury being shot twice in the breast and Mr. Quinn was shot in the knee, shattering the same. Rafael Sansone was also shot through the lung by the wardens. The three wounded men had a serious time in getting out of the woods and they were all taken to the Rhode Island Hospital for treatment. C. E. PEIRCE, Bird Com.

SUBSCRIBERS to FOREST AND STREAM pay for it because they want to read the paper—editorial, news and advertising—and they believe what they read.

FOREST AND STREAM is the sportsman's authority of the country. Has been for nearly forty years. Everyone acknowledges that.

IN point of influence, editorial excellence and quality circulation, FOREST AND STREAM stands at the top.

Davis Guns

Send for our large Catalog and see what a high grade gun you can buy for a low price.

Nine Grades

“The Gun that Blocks the Sears”

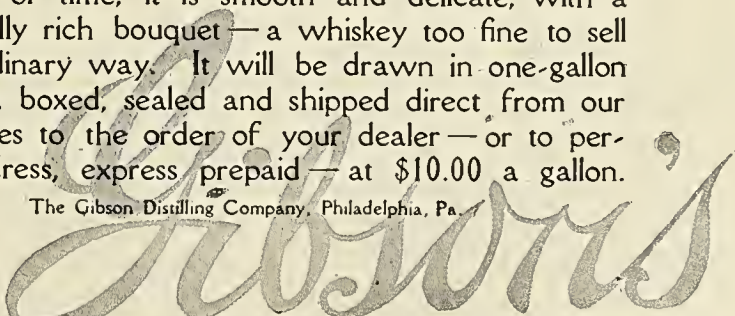

See how the Safety-bar (No. 4) when pushed back over the L-shaped ends of the Sears (No. 5) completely blocks them, making accidental discharge absolutely impossible. Every Davis Hammerless Gun has the Safety that “Blocks the Sears”. It is a *Safe* “Safety”.

THE FINEST OLD WHISKEY
IN THE WORLD

THE Gibson Rye Whiskey distilled in 1900, and held in the original wood twelve years, is today the finest old whiskey money can buy. Ripened and mellowed by the subtle processes of time, it is smooth and delicate, with a wonderfully rich bouquet—a whiskey too fine to sell in the ordinary way. It will be drawn in one-gallon demijohns, boxed, sealed and shipped direct from our warehouses to the order of your dealer—or to personal address, express prepaid—at \$10.00 a gallon.

The Gibson Distilling Company, Philadelphia, Pa.

Property For Sale.**A RARE INVESTMENT****Safer than Bonds and Mortgages**

Four hundred and eighty acres of beautiful level land in Keith County, Nebraska. Rich black loam, six feet deep, which produces all kinds of big agricultural crops. Forty bushels of wheat to the acre, and all other crops in proportion. These lands are located eight miles from the county seat, and six miles from the thriving, bustling town of Brule, on the main line of the Union Pacific Railroad. The town has church, high school, hotels, all kinds of stores, grain elevator, etc., etc. I will also sell 160 acres adjoining Brule, fronting on the Union Pacific Railroad, under cultivation, with all improvements. The climate is unsurpassed for all lung or throat difficulties. Elevation, 3,200 feet.

For terms and particulars address

E. H. BARTON, 32 Bank St., Batavia, N. Y.

A DAY'S HUNTING IN THE MAINE WOODS.

Continued from page 520.

Surely there was a deer looking directly at me. The distance was too great for a sure shot and my first impulse was to move nearer. But remembering that a friend of mine the year before had seen what he thought to be two sticks above some bushes, and when he approached nearer to make sure whether he saw sticks or deer's ears, a deer bounded away and escaped. I determined to take no chances of this kind, but to test my skill from where I stood. Taking careful aim about eight inches below, and midway between, the ears, I fired. The ears were still there. I aimed more carefully and fired again. I felt sure I saw the ears move, but they were still there. Again I aimed, holding my rifle firmly, and the instant I had the bead on what I considered to be the right spot, I pressed the trigger. The ears disappeared. I exclaimed half aloud to myself, "I've got him!" and made headlong haste to reach the spot where the ears had disappeared. There was no deer there, no blood. I looked carefully, no tracks. I examined nearby objects closely. One bullet had hit a stick on the ground, smashing it to splinters. Another had hit a spruce stump about the right height above the ground to have struck a deer; a third had also hit the stump a few inches below the other. One of these bullets I found had cut off a raspberry bush. I placed the bush carefully on its stem and viewed it from the direction of my shot and saw that its leaves covered the stump except for two spaces about the size and position of a deer's ears. One of my shots had gone so near the raspberry bush it had made the bush wave slightly and it gave the appearance of the "ears" moving. The next cut off the bush, the whole stump was in view, and the "ears" disappeared. I had shot a stump!

What did it matter that further down the forest, as I made my way toward camp, I saw a white flag float gracefully over the bushes and vanish. I made no effort to stop its flight.
