I reached camp a little after dark bringing in only a healthy weariness, a ravenous appetite and pleasant memories. As I saw through the window in the lighted log cabin the genial faces of my companions, already returned, rehearsing the day's experiences, I felt that, although a hunter might bag no game, a day's hunting in the Maine woods cannot be uneventful or without enjoyment.

COOTING ON CAPE COD.

Continued from page 522.

the straw," we both were dead to the world one minute afterward.

Ten minutes later it was morning; at least it seemed that way to us. It was a beautiful morning, but being Sunday there was consequently no gunning. But, like good churchmen, we all went fishing. We had some good luck with never a drowning despite the day. On Monday it was the guns again with a smoother sea, something we all appreciated, and plenty of good sport. There was also an incident and a laugh, though not even a smile at the time.

Along in the middle of the afternoon, having quite overlooked taking a jug of water out with us, we were all so dry that a match could

have been lighted on our tongues. "Say, boys," called Lon from his boat, "I think there is a bottle of pop under the head of the Lizzie. Row back and get it, will you." On the instant we were cast adrift, and the next were headed back for the motor boat, four oars out and pulling as if in a regatta.

We found the bottle and were on the way back with it when in a moment of selfishness Stuart and I decided that we would get in our work first. It was a case of a pint of ginger pop among three thirsty men, you know; also two votes to one in favor of opening the bottle in our boat. So you see we were confronted with great temptation. As the elder in our boat I was deputized to act as master of ceremonies. I had just succeeded in clearing the patent top and was in the act of contemplating the contents through the neck of the bottle when a bunch of coot headed directly for us. I sat down the bottle carefully and quickly as possible. We both grabbed our guns and let 'em go.

With his first barrel Lon from his boat brought down the old drake leader, throwing the whole flock into confusion. Three times the birds came across us, passing and re-passing, vainly seeking their lost chieftain, and every time we fed them lead. Once they came so low that we could almost reach them with our guns. Stuart in his excitement tried it and pulled trigger without putting the butt to his shoulder. Yes, it happened.

Two broken teeth, snapped short off, and a split lip, but curiously enough Stuart got his bird. This made him forget his damaged face for the time. The bird was only wounded, and it was out oars and after him.

Stuart, hot with excitement and pain from his hurts, jumped up into the bow of the boat and began banging away in most reckless fashion, never at any time coming within ten feet of the coot, which creature had started off as if he had business on the other side of the Atlantic. Finally, I managed to swing the boat broadside for the moment, giving me a chance to shoot, and as the coot came up on the crest of a wave and was outlined against the sky, I gave him a barrel. That particular hunt was over. During the battle, fully fifteen shots were fired from both boats, and as for that last coot, more lead was expended on him than on any other bird that fall.

And that bottle of pop! When the shooting was over and the dead collected, we found the bottle resting gently on its side on the bottom of the boat, every drop of its contents spilled. Remarks and explanations by all three were immediately in order, but our thirst, needless to say, went right on accumulating.

Tuesday found us repacking the little trunk, this time thoughtful and slow, for our holiday was at an end. How we hated to pack up, but there was no escape. You all know how it is; you've all been there.

Mrs. Lon surely did the honors that day in the little kitchen. It was a splendid feed. All too soon we found ourselves back on the platform of the little station. Then came the train, a good-bye to Lon until next season, and we were on our way back to Boston.

REMINISCENCES OF "RAGGED ISLANDS"

Continued from page 527.

Bend, pulling him down from high up in the air with the big "eight." Also the grass was all "tore up" in the deep water off the bend—a sign of canvas "using" there. However, we went to South Point, Davis to Gordon's Bend and Bob Smith to Lane's. We had hardly set out when the fog shut in so thickly we could hardly see the stool, and it did not lift till noon. This spoiled our morning redhead flight, and our bag that day was one redhead and one goose.

"I wonder what Mr. Davis got at Gordon's," Howard remarked when we started for home.

At the club house door both Davis and Smith met us, anxious to see our bag, and I glimpsed a poorly concealed grin when they saw its slimmness. They followed me into the gun room with smiling faces. Ye gods! What a sight! Twenty-six "canvas" lay in state before my eyes. Didn't I wish I'd chosen Gordon's Bend when I heard their story. Davis had had canvas falling all over his stool and had come home to lunch when the flight was thickest. Also he had done wretched shooting, though he had bagged sixteen. "Os" Moore who had been with him said that if Mr. Davis had not come home to lunch and done any decent shooting, he should have killed anywhere from fifty to seventy-five canvas. Think of it! Bob Smith at Lane's had picked up ten that had come to him from Davis's flocks. I decided after that experience that choice of points didn't always mean most birds.

IX.

At "Ragged Islands" I also had my first experience at battery shooting. An outfit was always kept ready aboard the "big boat," a large open sloop or sharpie. It was seldom used, however, except by a few of the club members on very calm days. One such day I determined to try it and had "Os" and Howard tie me out in the "flyway" between Cedar Island and South Point. There was not much moving except numerous bunches of "boobies" or ruddy ducks—"greasers" I believe they call them on the Chesapeake. None of them seemed to fly my way, however, though I kept well down according to instructions from the guides. I constantly heard the whistle of wings, but when I looked up, the birds were always out of range. Finally Moore shoved up to me and said, "What's the matter? Why don't you shoot?"

"At what? I haven't had a chance."

"Yes, you have," was his answer. "Those 'boobies' have been cutting over the stool back of your head all the time you've been in there. Would you like me to try it for a little while?"

I assented and "Os" changed with me while I swallowed some lunch aboard the "big boat." He shot a number of times and on my way back Howard picked up thirteen "boobies" that had fallen to Oscar's gun.

The flight seemed to have ceased when I got in again, but after a long wait a solitary canvasback drake circled around the outfit and lit in the stool back of my right shoulder. I was not posted on the battery man's trick of throwing his feet out of the box and spinning around on a pivot for shots of this kind, so I took a chance from my left shoulder which resulted in a cut lip and the escape of the "canvas." We took up soon afterward, and I went ashore without killing a bird.

Repeating Shotgun
Made*

THE NEW

WINCHESTER

MODEL 1912

Hammerless Repeating Shotgun

20 GAUGE TAKE DOWN

It weighs only $5\frac{3}{4}$ pounds, yet it is the strongest repeating shotgun on the market, all metal parts throughout being made of Nickel Steel. It exhibits a grace of outline and perfection of detail and finish unapproached by repeating guns of other makes. It is free from unsightly screws and pins to collect rust and dust and work loose; and its solid breech, closed at the rear, gives it extreme safety. In operation, it works with an ease and smoothness unknown in guns of other makes. It is simple to load and unload, and simple to take down; being separated into two parts easily and quickly without tools. In shooting qualities, it is fully up to the established Winchester Standard, which has no superior.

Ask your dealer to show you one, or send to Winchester Repeating Arms Co., New Haven, Conn., for handsome, illustrated circular describing it

AMERICAN DUCK SHOOTING

By George Bird Grinnell

A most complete work, dealing with every phase of the sport of duck shooting, thus forming a complete treatise on American ducks, geese and swans. It gives details of the natural history, habitat, and characteristics of every American species.

Part I contains descriptions with plates of each species.

Part II tells of every method of swan, goose and duck shooting practiced in North America—east and west, on Atlantic and Pacific and in the interior—and gives thrilling accounts of the splendid sport.

Part III deals with the art of duck shooting, including guns and loading, the Chesapeake Bay retrieving dog, decoys, blinds and boats, and finally discusses the causes of the decrease of wildfowl and tells what may be done to increase their numbers.

It is most fully illustrated with 58 portraits of North American swans, geese and ducks, by Edwin Sheppard, with 8 full page plates, and with numerous vignettes in the text by Wilmot Townsend.

Cloth, heavy laid paper, 58 illustrations, eight full-page plates, 627 pages. Postpaid, \$3.50.

A MASTERLY WORK ABOUT DOGS

By A. F. HOCHWALT,

Kennel Editor THE SPORTSMEN'S REVIEW.

“DOGCRAFT”

NEW REVISED 2nd EDITION IS NOW READY Bound in Cloth \$1.50, Prepaid

Volumes of information concerning dogs are crowded into this one remarkable treatise, written by *a man who knows*. Contains 308 pages, beautifully illustrated with fine halftone pictures of the well-known dogs of all breeds.

Particular attention is paid by the author to the history of famous sporting dogs, their origin, breaking for field work, care, management, etc.

Every breed is carefully treated and the standards of each given in full.

The work is as valuable to the bench show patron as to the lover of field dogs.

Every dog lover will appreciate this work because of the interesting, concise and comprehensive way in which the various subjects are handled.

Mr. Hubbard's Comments on "Dogcraft."

Atlantic, Iowa.

Sportsmen's Review, Cincinnati, O.:

Gentlemen—I have just received a copy of Mr. Hochwalt's new book, "Dogcraft," recently ordered, and I wish to tell you how much I like it.

Of course I knew from reading the chapters as published in the Review that the work was complete, exhaustive and satisfying, but I was not prepared for the neat book that made its appearance, so tastefully bound, on such good, heavy paper, with such clear, clean type, the evidence of fine workmanship.

Every breed is handled in a masterly manner and the treatment of dogs in disease is alone in itself worth the price of the book. C. P. HUBBARD.

MAIL THIS COUPON TODAY

Gentlemen: I am interested in Dogs, and without expense you may forward me more literature about your book "Dogcraft."

SWORD FISHING EXTRAORDINARY.

THE San Francisco Bulletin of Oct. 5 has the following account:

For about fifteen years past the Catalina Island waters have been the resort of the champion big game fish anglers of the world. Eight-foot swordfish, the swash buckler of the ocean; mighty leaping tunas, giant black sea bass and smaller but none the less game fighting varieties have tested the skill and endurance of expert anglers from all parts of the United States, from England, the Continent, and one rod enthusiast from far-away Nairobi, in Mid-Africa.

Some of these deep-water knights of the rod have made numerous annual visits and expended large sums of money in the endeavor to land a big fish and win a Tuna Club trophy or button.

Various records have been achieved for angling prowess by sportsmen of the Coast, the East and abroad, but it remained for a San Francisco angler, Colonel J. W. Dorsey, to reach the apex of deep-water fame in making a world's record catch of swordfish with a rod and line, tackle of the regulation Tuna Club requirements—a twenty-four strong cuttyhunk line and a six-foot eleven-ounce rod tip, with a flyingfish baited tuna hook.

In a week's fishing with W. B. Sharpe twelve of these big fish were taken. Colonel Dorsey landed eight, the individual world's record catch of swordfish, and also the added record of having caught the five largest of this species ever taken by one angler. His largest fish scaled 249 pounds. Mr. Sharpe caught four, a 260-pound fish, the heaviest of the take, being landed by him. Four of the fish weighed over 250 pounds each.

The club swordfish season closed Sept. 30 with a tally of ninety-six swordfish for this year. Each one of the dozen fish had affixed to its gills one or two remorras, a parasite fish that retains its position by means of suckers.

The Catalina swordfish is described as long and slender in body, rarely running over 300 pounds, the average weight being 150 pounds, making the fish available as a rod and reel consideration. It is one of the most beautiful fishes of the ocean waters, garbed in a purple coat of extraordinary brilliancy, with broad, dark lateral stripes on its back and sides.

Its sharp sword is much shorter than that of its larger cousin, the common eastern swordfish, also found in our coast waters. The weapon is more of a poniard than a sword; in fact, the fish has virtually two, as the lower jaw is also pointed, sharp and dangerous. A large black eye, silver belly and royal purple back; a wide, crescent-shaped tail; long, slender pectorals and tail, spiny dorsal fin, which rests in a sheath along its back, is the make-up of as debonair a marine lanzknecht as ever swam the seas.

The swordfish preys on fishes of all kinds, dashing into schools of mackerel or other small fry, slashing and cutting them up, then gorging on the pieces, for they are comparatively small-mouthed. Here is where the remorra fish comes in for free lunch.

The swordfish is very pugnacious, some very extraordinary battles having been witnessed between these fishes or in combat with other marine warriors. Data relating to the vicious nature of swordfishes have been compiled, showing a list of boats and ships that have been damaged, rammed or even sunk by them, including injuries inflicted upon human beings.

The first fish caught towed the trolling launch ten miles to sea, turning the big boat around as if it had been a skiff. The longest fight was three hours and forty-five minutes; the average time for gaffing the fishes was one hour.

One fish ran out nearly 1,000 feet of line, another one, supposed to be 200 feet astern, broke water 100 feet ahead and in making the turn ran through the line loop and made a knot. Another one, in fighting, turned, and the heavy wire leader cut him almost to the backbone.

Warm, Stout Cloth for Rugged Wear

FOR strenuous life in the open, whether it be hunting in the deep North woods or winter sports at home, you need a suit of FORESTRY CLOTH, (Shade 65).

Pure wool and closely woven, it defies cold and weather. Its firm surface and honest weave withstand hard wear.

FORESTRY CLOTH

stamped like this on the back

is made in all weights from 8½ to 22 ounces, which is the heaviest anyone would care to wear. It is beautiful gray-green in color.

Forestry Cloth is used for women's garments as well as men's. It has also been adopted by the U. S. Government for the Forestry Service.

Another specially made fabric for sporting wear is OLIVAUTO CLOTH, a fashionable olive brown serge for riding, motoring and golfing suits and other outdoor purposes.

Samples of FORESTRY CLOTH and OLIVAUTO CLOTH sent upon request. If you are unable to procure these fabrics from your tailor, we will see that you are supplied upon receipt of price, through regular channels, as we do not sell at retail. When ordering specify fabric and number of yards desired. Forestry Cloth, \$2.75 for medium weight; Olivauto Cloth, \$3.50. (3½ yds. to a man's suit.)

American Woolen Company

Wm. M. Wood, President.

Selling Agency: American Woolen Company of New York
American Woolen Bldg., 18th to 19th St.
on 4th Ave., New York

This fish put up the toughest fight of the bunch.

In fishing for these fish the line is let out 150 or 200 feet; the boat will travel from four and one-half to six miles an hour. The swordfish, like the tarpon, has a very hard mouth. When the flyingfish baited hook is struck the angler gives out line, giving the fish a chance to take the bait. When the "butt" is given and the fish hooked, it generally goes up into the air in a wild, clumsy leap, falling back on its side in a crash—entirely different gymnastics from that of a tarpon or a tuna.

If well hooked, the fight is on, and the swordfish will make a run calculated to give any man's nerves a test. A big one has been known to slip away with 600 feet of line, to the discomfiture of the angler. The average fish can be stopped before this bad luck happens, and then it is that the swordfish of this sea will demonstrate that he is the tiger king of all

game fishes so far as spectacular play is concerned—which is saying much, having the tarpon in view.

A live, healthy tarpon will jump ten or twelve times. One of Colonel Dorsey's fish jumped fifty times, another one caught turned the trick forty-nine times. Many of these jumps were fifteen feet out of the water. Three fish hooked broke the line and got away.

In its dying throes the swordfish, like the dolphin, shows a transition of colors, from the most gorgeous rainbow hues to finally dull gray. Even the dark stripes gradually fade away, and the silver fins become translucent.

The two largest swordfish taken off Catalina prior to the above catch weighed 392 and 339 pounds. The big catch enabled Colonel Dorsey's boatman, Captain Darrickson, to hold a tie for high-hook boat for the season on swordfish.

With Silver Plated Locomotive Reflectors and Adjustable Attachments.

UNIVERSAL LAMP,
For Sportsmen's use. Combines Head Jack (Front and Top), Boat Jack, Fishing, Camp, Belt and Dash Lamp, Hand Lantern, etc.

EXCELSIOR LAMP,
For Night Driving, Hunting, Fishing, etc. Is adjustable to any kind of dash or vehicle. Send stamp for Illustrated Catalogue and address all orders Lamp Department.

Out in the wild-wood

Whether work or pleasure calls you far from man's habitation, you need never be separated from the luxury, comfort and refreshment of a cup of *delicious* coffee, the nourishment afforded by rich, pure milk—or the good things good milk will make, if you take a good supply of

CARNATION MILK

From Contented Cows

Long journeying, even in the heat or intense cold, if need be, won't hurt Carnation Milk.

It is the best milk nature can produce. Nothing is added to the milk; part of the water is taken out by evaporation at low temperature. When sealed in the cans, it is sterilized to insure its keeping quality—that is all, but only milk of superior quality and perfect freshness will endure the severe test of the Carnation process. Carnation Condenseries are only located where ideal dairying conditions are to be found.

Try Carnation Pancakes—cooked on a flat, hot stone over the camp fire—and coffee, containing plenty of Carnation Milk. Just delicious.

Any man can make delicious dishes out in camp—just like the "home edition"—if you use Carnation Milk and follow the simple directions given in our

FREE RECIPE BOOK, telling how to make more delicious all dishes in which milk is used. Drop a postal for the book.

Order a case of **CARNATION MILK—the Modern Milkman** for the outing trip.

Travel and Colonization

Blank Days in the Arakan Hills, Burmah

By W. R. GILBERT

I THINK Sahib is a little tired," said MounG Gye with a smile in which sympathy and appeal were happily blended. "He has walked since there was light to see the veins in the hand, and certainly this place is very good to stay to-night."

MounG Gye was always anxious lest I should tire myself, or him, and for the merits of a camping place he had an eye which grew hourly keener after noon. He was lazy even for a Burman, and that is saying much; but then he was such an admirable tracker, and so good at organizing a beat that one could overlook his disinclination to over-exert himself. This place was, as he said, a good one to camp for the night, even if we had not fairly earned the right to halt by hours of scrambling along rocky water courses and game paths more or less choked. The track we had been following brought us abruptly out of the jungle gloom upon the crest of a perpendicular bank which overlooked a wide strip of sand overgrown with rank grass in the middle, and with the remains of the rain floods that had cut this road through the forest, lingering in deep, clear pools under either bank. "This place," said MounG Gye, crouching on his heels and jerking his head sideways, "is all water in the rainy season. The Illustrious One sees the water below and over there." MounG Gye had a tendency to insist upon the obvious. I did see the water, particularly the deep, black pool below which must be crossed to reach the hard, dry sand which promised so excellent a bivouac; the strip of water on the opposite side was bridged at intervals by trees whose roots had been undermined by the rushing floods, and whose crests had stuck in the now dry part of the bed. There must be similar bridges on this side, but the path struck the bank at a sharp convexity, and we could not see a dozen yards on either side for the dense undergrowth which overhung the very edge of the miniature cliff. "When the other men came up," said MounG Gye, surveying the scene with the air of a proprietor, "one shall swim across and find a place where the Illustrious One may get over." MounG Gye was always anxious to save me trouble at somebody else's expense. Having made this arrangement he laid down my express, and sought in his waistcoat for a chew of betel nut, which he mouthed contentedly till the rest of my fol-

"IT'S CURIOUS HOW GROOVY A TIGER IS."

lowing arrived, and deputed one of their number to scramble down and swim across. Half an hour afterwards we had everything safely on the sand, having crossed by a convenient tree-bridge which our pioneer pointed out, and to which the men quickly cut a path with their dahs, that useful tool which is ever in the jungle man's hand, to cut firewood, trim a toenail, carve meat or an enemy.

There was still a good hour of daylight, so marking the spot where my bed was to be made—I had no tent—MounG Gye and I started for a stroll. These flood-worn rifts—choungs—in the jungle are numerous up among the hills, and have an interest of their own; for to them to roll, drink, or bathe, comes every beast that can leave a tantalizing foot-

print on the sand, ere he retires again to the dense thickets, where he is only too safe from the rifle.

Following the water's edge, now daily shrinking back, we came on tracks of sambhur, leopard, bear and tiger pugs in plenty, some old, some new; the last were so frequent that we set to work to quarter the ground in search of that well-trodden path, which indicates a tiger's regular beat. It is curious how "groovy" the tiger is when he pursues the way of life undisturbed; he will take the same walk night after night, and if you can by luck happen upon his beat he is yours; you have only to choose your place and wait for him. We made the ground good for half a mile up the winding choung, but though tiger pugs crossed and re-

crossed and ran along it, there was nothing to show a regular path that would be worth watching, and presently my attention was distracted by a peculiar steady rustling among the bamboos on the bank a little to our left front. Mounng Gye, who always kept very close behind me when marks, old or new, of dangerous game were visible, whispered to stop and listen, pointing to the disturbance in the bamboo tops. The feathery crests were quivering, bending and jerking; now a taller crown was seized with an attack of shivers, which suddenly ended in a sharp sweep downward, in response from a pull from below, to whip up again, while a neighbor went through the same performance. Now and again I caught through the foliage a glimpse of a black something, which turned and twisted and writhed.

The first time I saw this mysterious "troubling of treetops," I supposed it was caused by monkeys, and thought to give the animals a surprise. The surprise was chiefly on my side; I had stolen very close when the rustling suddenly ceased, a dozen of smithy bellows heaved blasting sighs, and the bamboos crashed before elephants in full retreat, like dogs through grain.

Now, as we stood watching, came the sounds that betray; the thrash, thrash, thrash of an elephant bruising a trunkful of tough shoots across his knee, and that sigh like the birth of the north wind in the cave of Boreas. We moved forward cautiously, hoping to get a sight of them, but had no chance on that open sand; the rustling in the bamboo tops ceased, and we heard the beasts brushing their way along some open track.

Elephants are numerous in these hills, but it is hardly necessary to say are strictly preserved. You can get leave to shoot one from the deputy commissioner, or, if desired, any village headman will swear away the character of any elephant for 5 rupees, to the end that you may shoot him for a rogue—or vagabond rather—whose death no 500 rupees fine will avenge. I have often been urged to go and slay an elephant chance had sent in the way, the men vowing that they knew his spoor for that of a paddy-thief, who ate acres of grain in a single night in the kwins five days' march away. They would observe, parenthetically, that "elephant flesh is very good to eat."

The elephants gone, we strolled up to the choung with eyes well open; one of the prettiest sights I ever saw was in such a place as this—a narrow stream between wide sand margins winding between steep jungle-clad hill. We were walking in the face of a light evening wind, looking for jungle fowl or what the gods might send to fill an empty pot, when the man who was leading suddenly collapsed in the act of turning a corner round some great boulders and folded himself up in a hole, imploring caution with both hands. My rifle was ready, but apart from fines, it was not a case for using it. Peeping cautiously through a crack between the rocks, I saw how nearly we had disturbed a little nursery comedy. Not seventy yards away, standing out clearly against the sand, was a cow elephant with a young one at the margin of the water. The calf was the merest baby, not, at a guess, over ten hands high; his mother had apparently brought him to have a tub, and he would not get in. I made myself comfort-

able and watched them. First the mother took a step or two into the shallow, swished about her trunk and blew water over her own head; a little besprinkled her child, who shook his ears impatiently. She backed slowly out of the water, when he promptly charged under her to suckle; she pushed him away and caressed him, as it appeared, with her trunk, but he began to scream like a pig, turning his little round stern resolutely upon the water. When he did this his patient mother took sand in her trunk and blew it over herself and him; he seemed to enjoy this. I suppose the sand blast agreeably tickled his hide, and she did it again. Then, after swinging her trunk and tail idly for half a minute, she put her arm—I should say trunk—round the butcha, and blew sand against his belly, which obviously pleased him. Having thus got him into a good temper, she took a short slow step waterward, with her trunk still about him; but the moment the peevish little beast felt the gentle force, he burst out in such a pitiful scream that she gave in and stopped. I was wondering why she did not squirt water over him if he needed a bath, and was drawing some vague comparisons between the intelligence of the unlettered jungle elephant and that of the highly educated graduate of the timber yards, when something in the jungle opposite alarmed the cow. She threw out her ears, and her restless tail became still. I could hear nothing, but after standing statue-like for ten seconds, she wheeled nimbly about, and rolled swiftly up the jungle with the calf close under her flank. Query for the philosophic naturalist: Did the mother cease urging her child to bathe because his squeals might, as they probably did, attract a foe, or was it foolish maternal indulgence?

The elephant receives more praise than he deserves for his cleanly instincts. He does enjoy a bath after a long day's work, but like the other pachyderms, he is very partial to wallowing in mud. I came across a sin-low, or elephant wallow, once up in these hills; it was an oval basin about ten feet in longest diameter, which had been scraped and rubbed into the face of a steep bank. I did not try what the depth of the mud might be, for the path which led to it was wet and slippery, and my nose urged abstention from risk of personal experiment. The smell was awful, for the wallow had been so recently used that wet blots of mud nearly covered the track. It was tolerably deep, as the earth a few inches above the level of the mud was pierced and marked by tusks. The men declared that the elephant used their tusks to break soil into the wallow when the mud became unduly thin; but the character of the holes and scars suggested that wallowers were in the habit of using their tusks as alpenstocks to aid them in clambering out. An elephant is a wonderful climber as we all know, but the paths on either side of this wallow were on an angle calculated to tax the most agile of the species. This mud path obviously owed its beginning to an abrupt dip in the path which ran along the face of the slope. The mud accumulating there in rainy season had been gradually churned deeper, and in no very long time came to be used as a regular wallow.

We turned back soon after disturbing the elephants among the bamboos and turning, had a slight shock. We were walking, as I said,

along the margin of the water, which was overlooked by a low perpendicular bank, smothered with undergrowth; we had gone scarcely forty yards when we were brought up by the sight on the sand of pugs, which were not there when we passed five minutes before, and, looking closely, saw that the water was slowly percolating into the deep impression made by the ball of the tiger's foot, which alighted a few inches from the edge of the pool. The beast clearly had jumped across immediately after we had passed: the wonder was that we did not hear the rustle of the jungle as he sprang, for the gap he made in the grass was plain as the pugs at our feet. He had gone straight up the sand, and I had not the slightest difficulty in tracking him through the strip of grass to the opposite side, where two beautifully clear pugs, showing the claws this time, marked where he had jumped upon a fallen tree which spanned the water. Mounng Gye did not follow me through the grass; he looked in, saw that the place "was not good," and said he would "watch on this side," his motives being those which impelled Mark Twain to go and "see if any Bedouins were coming in the other direction," on a classic occasion. It certainly was a place in which it would have been rash to follow a wounded tiger, as the grass was merely the fringe, hiding a perfect chaos of water-worn holes, boulders, stranded trunks, and flood wreck of all kinds. You might have stumbled over a crouching tiger before you saw him. He had not dallied there for a moment, however, and the excitement was over almost before it had fairly begun.

When we returned to the spot where we left the men, "the sky had shut," as the Burmese put it; in other words, night had closed in. I never carried a tent on these short hill trips, and a camp without a tent is not deserving of the name. The stout basket which contained eatables and table equipage stood forlornly apart with the gun cases, bedding-roll and chair, while the men sat around the fires nursing their knees and watching the rice-pots boil. From the smoke curling slowly overhead fell a constant shower of insects, not too stupified to sting; but the men accepted this trifle with the calm of phlegmatic temperament under a thick skin. Most of the party were content to "laze," but two or three who, combined with energy and taste for good living, (Continued on page 576.)

HUNTING ELEPHANT'S EQUIPMENT AND CREW.

Houseless Housekeeping

By FRANK A. WAUGH

THE wisdom of the ancients" never greatly appealed to me. Their habit of "sleeping with their fathers" seems to have been peculiarly reprehensible and in most cases fatal. Yet in some of their other domestic arrangements they positively had the right idea. For example, take their practice of living in tents. That was good. In one hundred different ways it was better than living in city flats, and though no sane person could ever doubt it, we have been proving it in our own tents this summer. I don't mean that one of us had a cute little striped tent on the garden lawn in which he slept through an occasional pretty night, but the whole big family of us emigrated to the mountains, established ourselves in six khaki army tents, and there lived, cooked, read, wrote and entertained company for weeks at a stretch and were sorry only when a stupid routine of a stupider civilization called us away to live in a house with plumbing and flies and gas bills.

Now a good tent is a thoroughly proper place of residence, and suited to all the reasonable activities of housekeeping. It is cool in hot weather and warm enough in cold weather. Men and women of delicate health now practice outdoor sleeping in tents or porches all winter, which proves they are better off without the hot air furnace. And a good tent is perfectly dry in wet weather if one really cares to miss the joy of the rain. In a tent one can keep as dry as he wishes and still enjoy largely the benefits of the rain. This morning I lay abed two glorious extra hours and heard the steady pat-pat-patter of a heavy rain storm on the fly. I got up for a moment to tie back the tent curtains so that I could see the heavy mists of rain drifting through the treetops. Do any of the most luxurious millionaires in their palaces on Fifth avenue have that pleasure? Why, not even their maids and butlers can get a taste of it.

Thus in our houseless housekeeping do we find the necessities, the comforts and the luxuries of life provided. The real luxuries, native and primal, not the spurious luxuries, invented latterly to mitigate the hardships of civilization. Even the amenities of life are by no means forgotten. As I write these lines during the pleasant rain which continues steadily to pour, a cheery camp-fire blazes on a flat stone in front of my tent door, and the wreath of smoke on the slender stem of flame makes a domestic picture which the best appointed parlors cannot match. Over yonder in the city, people find this a cold, unpleasant morning, and perhaps the most fortunate of them have a gas log to light. What a substitute for a camp-fire! No slender spire of smoke, no incense of burning birchwood, no amiable crackle of coals sputtering in the rain.

At the focus of our camp on a convenient level green is the social camp-fire. All the tents look out toward it. Every evening when the fire is lighted this forms the center of the picture. The inviting blaze throws into relief the big surrounding trees which seem to advance with dignified playfulness out of the mysterious brooding gathering shadows all around. The light flickers on the tents and their denizens, unable

THE MORNING MIST ARISING.

to resist the appeal, come and gather into the social circle for the evening. Was there ever any such domestic opportunity as this in houses? Can any family anywhere find itself touching elbows round a steam radiator? An artist might delight to paint that picture—the thread of white smoke in the midst and the fire surrounded by the family on upturned sap tubs and the circle of big guardian trees. And as an artist might paint it, a saint might bless it.

Our houseless housekeeping is as convenient as it is simple. People talk about household conveniences, but all the modern inventions only complicate life, while simplification offers the greatest convenience of all. We have good beds. In this case they are not made of balsam boughs, though we could well wish they were. But they serve admirably. We have a table with benches alongside. We have napkins. They are made of paper and can be thrown away cheaper than hemstitched napkins can be laundered. We have water from the spring—fresh, cool water which tastes better than seltzer and has no germs in it. We have an extra suit of clothes apiece hanging against the tent poles, and another pair of shoes under the bed. Heart could not desire more. Of if it did we have a shelf of books, too, the

shelf having been built with our own hands, as were the table and benches, and we have a game of pinochle if we were not too much occupied with other entertainment ever to play it, and there is a flute which leads the singing around the evening camp-fire. The picture which hangs in the lady's tent is newly painted by the artist in the family. On the walls of houses in the city they have pictures cut from Sunday papers. Those people live among the comforts of civilization.

After dilating on such glorious blessings as those of our sleeping rooms and our camp-fire, it might seem like an anti-climax to mention our eating. Yet in camp we do truly eat—eat with a frequency and a fervor which bring astonishment and delight to all, even to the cook. For of all the departments of housekeeping in which tent life surpasses house life, the cooking and eating department has the surest supremacy. The simplicity of it is most engaging, as the results are satisfying. The boy scout shows us how to start a fire in the rain, the other youngsters fetch wood, and in a jiffy there is a roaring cook fire. Over this there steams a kettle of chile con carne, reminiscence of the great southwestern desert, or a kettle of pea soup,

equally reminiscent of the Canadian woods, for we get as many human points of view and literary allusions with our camp cooking as city dwellers get with their sermons. Or it may be a clam chowder from Duxbury, or a chicken stew à la Missouri, or the frying-pan may smoke with fish and bacon or a batch of home-made sausage, but whatever it is, a fragrant whiff of it is blown through the woods and presently brings to the long bench under the trees a dozen most admirable appetites.

There are those who suppose that cooking over a camp-fire is a poor makeshifty method. The Inexperienced Person in our company insisted on bringing an oil stove to the camp, but after a week's initiation she has allowed it to rust in the cook tent while she joins the rest of us round the alder wood crane. It is a fact that a fair experience in making up the camp-fire and managing the frying-pan will enable any cooking-wise person to finish his favorite dishes quite as nicely as over the gas range in a town flat. It is an error to suppose that the superiority of camp cookery is wholly in the woods appetites.

But the greatest glory of housekeeping is to provide a home where the different family units meet and fuse easily into a larger whole. The warmth of that fusion, too, should be enough to melt into the same circle the transient guest. That is genuine home life and genuine hospitality. Measured by these, the highest standards of domestic art, our houseless housekeeping still earns our praise. The free family intercourse about the cook tent or the camp-fire is rather better than can be provided for in houses. Here we have as much room as we could have in the biggest palace, and as much intimacy as though we all lived, ate and slept in the kitchen. We meet at a common point with common interests. Yet there is ample space for the expansion of each personality. Everyone can do as he pleases.

Then when company comes the household has something to offer. Awhile ago I said that the kitchen department shines to special advantage when compared with a kitchen in a house, but I might as well say that houseless hospitality also has its indisputable advantages. Into that house, which we call home, we admit guests with trepidation. There may not be room to spare for them, or the carpet on the hall is worn and unrepresentable, or the furniture is not so good as they are used to, or we have not time to spare from pressing duties to entertain them. Oh, dear! But out here in camp there is room for everybody, and the furniture is good enough for anybody. While as for entertainment we can please the stupidest soul, satisfy the most fastidious taste or call out the flashingest social wit. The place is expansive—something very different from expensive. People are natural and at their best. This describes both host and guest. If the visitor wishes to loaf, here are all the facilities. Will he be nervously doing something all the while? We can fully occupy him with mountain climbing, blueberrying, fishing, playing quoits, target shooting, botanizing, bird ogling, story telling, and if he is yet restless and unsatisfied we can put him to the wood pile and the buck-saw. To "entertain" such a guest at home, *id est* to be shut up in a house with him, is a terrible experience. We can take him one turn about the garden and then it is all shown; we can give him a look at the chickens, but he despises them;

we can play him a game of pinochle, only he probably doesn't know that game and wants to make it bridge, but what we finally do is to shut him up in the library and think of an imperative errand down town.

So we pull together the embers of the camp-fire, our guest tells his last and best story, we join in a jolly song, and we separate for the night. Each one takes a long quiet look at the deep blue star-sprinkled dome overhead and goes to bed to the faint far calls of the whippoorwill, glad in his heart that he belongs to a household without a house.

Effective Game Freezer.

WATERVILLE, Minn., Oct. 25.—*Editor Forest and Stream:* The accompanying photograph shows a home made game freezer that a friend of mine designed for himself. The capacity of those on the market was not sufficient for him. The galvanized tank in the center of the ice chest is about twenty by twenty by forty inches. The sliding partition in the center of the chest is shown raised. The center tank is for the storing of the game. It is made of the heaviest iron. The top of the game container rests on cleats at the ends of the chest, and is so ar-

ranged that it will not shake about. It lacks four inches of reaching to the bottom of the chest.

The lining of the chest is of heavy galvanized iron also. It is of the best, and in its making none of the galvanizing was broken off. This is essential owing to the salt water that keeps the game chilled. Ice and salt are packed about the side of the container, and the birds or other game put in the chest will not spoil and have been kept over a week. There is a plug at one end of the bottom of the chest from which to draw off the water if it gets too high on the sides of the container. When the ice and salt are kept in the chest in the right proportions and the cover securely kept down, the container can be placed in a baggage car and will not have to be looked at for forty-eight hours.

Note that the top is made to fit snugly. Handles are strong to prevent it falling from the hands of railroad employes. If desired, the plug can be withdrawn from the chest and unsalted ice packed about the container for a short trip. The chest may then be placed on a fish rack and drain as the ice melts.

The wood work is of oak, though lighter materials may be used to advantage. A "This Side Up" sign should be placed on the cover of the chest.

AMOS BURHANS.

AN EFFECTIVE GAME FREEZER.

THE SKIN'S FIRST OWNER.

Rearing Fur-Bearing Animals

By RALEIGH RAINES

THE increasing scarcity of many of the fur-bearing animals and the increased demand for furs has for a long time been the subject for considerable attention by the experts of the Department of Agriculture. Until the past session of Congress, however, an appropriation could never be obtained for use in experimenting in the propagation and raising of fur-bearing animals, which lack of funds has seriously retarded and impeded the work along the lines of investigating the possibilities of raising animals purely for the fur markets. Senator Heyburn, of Idaho, introduced a bill during the last session of Congress providing for the investigations and experiments in connection with rearing fur-bearing animals, including the mink and marten, which item was incorporated in the provisions of the agricultural appropriation bill for the current year. The two animals "mink and marten" are enumerated in the law, which was done to insure that the investigations and experiments would include these two very valuable fur-bearing animals. Of course the law would permit the investigations to include other animals, as no kind of fur-bearing animal is expressly prohibited, but for the present it is probable that the experiments will be limited to the two animals mentioned. There has been some question about the appropriation being available for the purpose mentioned, notwithstanding that the law specifically names the animals, therefore it was necessary for the Treasury Department to render a decision interpreting the provisions of the appropriation, which has just been done, allowing the Department of Agriculture to proceed with the experiments and investigations in raising the mink and marten. The fur farm will be imme-

diately established, and located in the State of Idaho, probably in the mountain region, where it gets good and cold, as the cold climate appears to be necessary for the production of good quality of furs. This industry of fur farming appears never to have been tried anywhere on a scientific scale, though there have been several successful private experiments in raising the rare black, blue and silver foxes for their skins. These experiments in fox farming have been especially successful in parts of Canada. The Department of Agriculture plans to begin with the raising of the mink and marten, as they are two reasonably prolific animals whose skins are not only valuable, but are becoming scarcer every year. The wholesale prices of these pelts vary with locality, because the color of the fur varies with climatic influence, the best pelts coming from the colder climates, which produces the best colors. The average prices for mink skins varies from less than a dollar each in the South, which produces thin fur, and lighter in color, while in Alaska the pelt ranges in price from \$6 to \$7, and in New England the prices range even higher. The marten skins are more expensive and are commonly known as "Hudson Bay sable" and are worth from \$8 to \$10 each wholesale, according to the thickness and color of the fur. Some of the very fine skins of the marten sell for even higher prices and have brought \$50 each, though the pelt is scarcely larger than a rabbit skin. In Europe they have the marten also, where it is usually known as the stone marten or the tree marten, the pelts being worth from \$8 to \$10 each and are used extensively for dyeing and patching. When it comes to the genuine sable, the price goes up with a rush, for

there is a wide variation in color and quality, but high class skins have been sold for as much as \$500 each. The Department of Agriculture intends to begin modestly in the fur-raising work, because breeding stock for good animals is expensive, and moreover there will necessarily be a great deal learned about the food and habits of the animals in captivity. When experiments were first begun in raising the fox in captivity, it was thought that the industry would never become successful and profitable, until it was discovered that the female must have a small inclosure by herself. When this first principle was learned, the success was insured, and now there are several valuable fox farms. Some of the breeders are rearing animals that almost always come black, and some of them have been sold for fabulous prices, bringing in many cases from \$2,000 to \$3,000 each. These experiments in fur farming by the Department of Agriculture will be watched with interest not only by the trappers, fur dealers, and buyers of raw furs, but by the public in general, especially those who wear fur garments, as the prices of manufactured furs have steadily increased for the past few years. In the case of the mink and marten it will not be very difficult for the department to secure desirable breeding stock. As the experiments and investigations progress, it is the intention and purpose to extend the work to include other fur-bearing animals until it is demonstrated which of the fur-bearing animals can be raised for profit. The publication of the experiences along these lines of investigations will be of great interest and promises to become one of the most popular as well as valuable works the department has attempted.

NATURAL HISTORY

MALE AND FEMALE ELEPHANT SEALS.

Reprinted from issue of April 29, 1911.

Mammals of the Albatross Expedition.

IN Volume XXXI, of the Bulletin of the American Museum of Natural History, Dr. Charles H. Townsend writes of the mammals brought back by the Albatross Expedition in 1911, the expedition on which the colony of elephant seals was found at Guadaloupe Islands. The finding of a considerable colony of an enormous mammal supposed to be extinct was perhaps the most spectacular result of the expedition, but from the scientific standpoint many other results were equally important. The Albatross brought back 259 specimens of mammals, representing fifty-nine species, of which ten from the islands of the Gulf of California, appeared to be undescribed. These mammals belong to many groups. Woodrats, pocket mice and deer mice were especially abundant. Deer and coyotes, lynx, foxes and raccoons were found at various points. The only locality for the elephant seals was at Guadaloupe Islands. New species were found on the islands of Tiberon, Angel de la Guardia, San Esteban and Carmen. Tiberon, the largest island in the Gulf, about thirty miles long by fifteen in width, has long been famous as the home of the Seri Indians, who have had the name of being invariably hostile, and are said to have been the most primitive people known in North America. The Angel of the Guard is near the western coast of the Gulf, and while now uninhabited, yet shows signs of former occupancy, as pointed out by Geo. H. Gould in *FOREST AND STREAM*. San Esteban is a large mountainous island, without fresh water and uninhabited, while on the island of Carmen there are important salt works.

A single mountain sheep, the sub-species known as *cremnotates*, was seen, but four pairs of horns were secured. The Lower California antelope, of which a head was brought back, is

now rare. The Lower California deer and the Tiberon Island deer were abundant, and specimens were secured, but the Cedros Island deer is probably now extinct. Most of the mammals brought back were hares, mice and rats, among which there were several new sub-species. Four species of bats are found in the collection. Elephant seals and California sea lions were noted, but no specimens of the Lower California fur seal, which has not been seen since 1894. The wolf of Tiberon Island proves to be a new species and was named for Arthur Curtiss James, of New York, through whose generosity the museum was enabled to co-operate in the expedition of the Albatross.

The paper, which is illustrated by two plates, possesses great interest.

No More Black Fly Bites.

RICHMOND, Va., Oct. 22.—*Editor Forest and Stream*: Please note the accompanying clipping from the Therapeutic Gazette, one of our most reliable medical journals. If this is all that is claimed for it, it will prove to be a boon to sportsmen, particularly those in the Southern States. Please publish it and ask for the report of experiences.

CHAS. T. McCLINTOCK, M.D.

The clipping follows:

BITES OF INSECTS.—Neal writes to the China Medical Journal for March, 1912, that he has found the following procedure very useful: Take one ounce of Epsom salt and dissolve it in one pint of water, wet a bath cloth so that it will not drip and rub the body well all over, and not wipe afterward, but dress, and flies, gnats, fleas, bedbugs, mosquitoes, etc., will never touch you. If one is exposed more than usual, being near water, or in a forest, then make a

somewhat stronger solution, wet a cloth and rub the face, neck, ears and hands well—do not wipe, but allow it to dry; it will leave a fine powder over the face that the most bloodthirsty insect will not attack. Besides, the solution is healing and cleansing; it will heal the bites, subdue the consequent inflammation, and cure many diseases of the skin.

Mutual Aid Among Wild Animals.

BY W. J. MURRAY.

THE gregarious habit is very generally in animated nature, especially among mammals and birds. Those animals of a solitary kind are decidedly in the minority; and, owing to their comparatively unprotected condition, they are constantly exposed to the attacks of their natural enemies, while the associated animals are saved by the wisdom and acuteness of their wisest members, and by the strength which results from united action.

A great many hoofed animals, such as antelopes, deer, goats and elephants, live in herds; which are not mere irregular crowds, but regular organized bands, with definite conventions, and with a power of united resistance which frequently enables them to successfully withstand the attacks of predatory carnivores. Most monkeys, as individuals, are comparatively defenseless, and, as a rule, are not disposed to come to close quarters with their enemies; yet, when in a body, they are often formidable, and are frequently able to help one another out of difficulties.

Brehm relates how he encountered a troop of baboons which were able to defy his dogs and to retreat in good order up the heights. A baby baboon being left behind called loudly for help. One of the large males courageously returned, went to the young one and carried it up the heights in triumph—the dogs being too much astonished, apparently, to make any attack.

A rabbit is generally supposed to be a stupid little animal, yet he makes an excellent sentinel in keeping watch while the others are feeding. On seeing danger, he kicks the earth in his burrow violently, by means of which the whole warren becomes alarmed and flees to safety.

Some of the most successful carnivorous animals, such as wolves, hunt in packs; and many birds of prey, such as eagles, vultures and kites act in unison for the purpose of destroying their quarry. Combination, for the purposes of defense, has its counterpart in combination for attack. In each case the united action is usually associated with the practice of posting sentinels to warn the rest, or of sending out scouts to reconnoiter.

Specially interesting are those instances in which the comparatively weak combine to attack the strong; thus, for instance, a few kites will rob an eagle, and wagtails will persecute

and harass a sparrow-hawk. Kropotkine relates how the aquatic birds, crowding on the shores of seas and lakes, frequently combine to drive off intruding birds of prey.

Brehm calls attention to the fact that many monkys act in complete concert in their plundering expeditions, sending out scouts, posting sentinels, and even forming a long chain for the transport of the spoils. When a Brazilian kite has captured a prey too large for it to carry, it summons its friends to its aid.

Pelicans fish together in large companies, forming an extended semi-circle, facing the shore, and catching the fish thus inclosed.

But, perhaps, of all cases of combined action for a common end, the migration of birds of passage is at once the most familiar and the most interesting—the mustering of the birds, the excitement leading up to the departure, the trail flights, the confidence placed in the guides and chosen leaders of the movement. Migration is usually social, and is sustained by tradition.

The social habits of the beavers are well known. The Indians have invested this rodent with immortality. Certain it is they show more sagacity than can be explained by heredity habit, for they frequently adapt their actions to new conditions with an aptitude, and in a manner that must be regarded as nothing short of intelligent, especially when we bear in mind that the beaver belongs to a rather stupid race of rodents. Perhaps being more socialized than others of its kind may account for its cleverness.

Many birds, such as rooks, starlings and swallows build their nests together, and their sociality is frequently advantageous to them. Kropotkine, quoting from Dr. Coues, refers to some cliff swallows which built their nests in a colony quite near the home of a prairie-falcon. "The little peaceful birds had no fear of their rapacious neighbor; they did not even let it approach to their colony. They immediately surrounded it and chased it, so that it had to make off at once."

In regard to cranes, the same authority notes that they are very "sociable, and live in friendly relations, not only with their congeners, but also with most aquatic birds." They post sentries, send out scouts, have numerous friends and few foes; and are very intelligent. Parrots are faithful associates; and the members of each band stick closely to each other through good or ill luck. They feed together, and fly together, and find enjoyment, as well as protection in combination, and, with the exception of man, they appear to have few enemies.

The social habits of ants and bees, and their wonderful skill and power of organization in everything connected with the well-being of their communities, are well known to all who are familiar with country life; and writers like Sir John Lubbock (now Lord Avebury) and others have greatly added to our store of knowledge on this highly interesting subject.

The foregoing natural features of animal life would seem to warrant the conclusion that, whatever may be the varying degrees of intelligence observed in the lower animals regarding general subjects, there can be no doubt, in all things appertaining to their own safety and welfare, they show, on the whole, remarkable sagacity and rare wisdom in many instances.

Again the Wild Pigeon.

NEW YORK CITY, Oct. 15.—*Editor Forest and Stream:* I read with a great deal of interest the contribution of Ernest L. Ewbank, whom I know personally to be an excellent observer and a "king" fisherman, on the subject of the wild pigeon in Western North Carolina in your issue of Sept. 28, and particularly that part of it which stated that all the great flocks that he saw were traveling south.

Some thirty odd years ago, during my early boyhood, I was always allowed to spend the period from about the 10th of May to the 20th of November of each year with my grandfather at his summer residence at Flat Rock, Henderson county, North Carolina, in the heart of what was then a really wild mountain country, and every fall I looked forward to the coming of the wild pigeons. I became very familiar with them, for from the time of their arrival until we began our return journey to the low country of South Carolina there was generally a string of them hanging in the pantry, and I never tired of admiring their iridescent neck plumage and the fiery orange eye of the male in its red setting, and incidentally of eating them. I don't remember many very large flocks, but I do remember distinctly the passage of one that must have contained many millions and strangely enough, to judge from Mr. Ewbank's experience, it was flying nearly due west. I know this because the window from which I saw it faces north, and a projection of the house cut off my view of the east, the direction from which the flock was coming and the south, so that I could not get a view of the breadth of the whole flock at any time. The darkening of the rising sun and the beating of their wings made me rush to the window and get my head out long before our old nurse came running in to tell me to "Git right up and look at de pigeons comin'," and as far as I could see to the west and north the great flock extended, a sight that I will never forget. Looking back over the years it seems to me that it was a long time in passing, but probably it did not take many minutes. At any rate, I never saw its like again.

I suppose the direction of this flight was determined by the search for food, and it seems to me that its presence in large quantities or absence, in a given region, must often have had much to do with the travels of a bird whose migrations, as I recollect them, were irregular as compared with the periodic migrations of birds flying to other continents, and whose numbers were almost incredible.

Smaller flocks were fairly frequent, as I recollect it, during the late seventies and early eighties, and occasionally my grandfather, who was a splendid wing shot, would shoot a few stragglers during some afternoon flight from the terraces with his little muzzleloading Joe Manton, afterward my most cherished possession, and which disappeared mysteriously while I was in the North at school. Still, it is "better to have loved and lost than never to have loved at all." I killed my first bird with it, but as one of the members of the family, owing possibly to certain Civil War experiences, was, as one of the servants put it, "Berry timerish 'bout gun," it was some time before I was allowed to use it alone, and during those dismal years I was forced to indulge my sporting proclivities at second hand

by trailing after such of my more fortunate companions as were allowed to carry guns, and I hoped might be unselfish enough not to want to do all the shooting. On two of these occasions I remember coming across wild pigeons. The first was one cold ashen-red afternoon in early November, when I sat as ordered with another small boy on the bank of a pond, while the proud possessor of a single-barreled muzzleloader successfully sneaked up on a small flock and raked a dead limb covered with pigeons and actually got enough to divide—not equally—but still to divide, and the second was a year or two later, much earlier in the fall, when after staying as long as I dared with a companion at a pond, waiting for ducks that never came, I saw on my way home a single pigeon and ran back nearly a mile to tell him about it. Post haste we hurried to the spot and again the pigeon, the last I ever saw in the woods, flew up and he shot it. I remember just how it looked when we picked it up, and that we could find neither ruffled feather nor trace of a wound, and I never pass the spot without thinking of it.

Shortly afterward my regular school days began and by Oct. 1 I had to be in Charleston, so I never knew of my own knowledge whether the pigeons ceased to come to the North Carolina Mountains gradually or all at once. Two years ago I asked one of the mountaineers who used to supply us with pigeons and game about it, and he said that he didn't remember, but now Mr. Ewbank has settled the point for me by saying in effect that this year they were and the next they were not. In those days there were no railroads in that part of Western North Carolina, and the Charleston gentlemen who owned places there were obliged to send their traveling carriages to Greenville on the upper edge of South Carolina, and then drive up forty miles or more over the mountains. It was a very sparsely settled region, and the people who lived there used the rifle and not the shotgun. Birds of all kinds were practically undisturbed by the natives, except the wild turkey, and with its millions of uninhabited, inaccessible acres, teeming with food, this "land of the sky," it seems to me would have been looked upon by the wild pigeons as a natural place of refuge, to which they would have continually returned had any of them survived the slaughter at their last great nesting ground. Apparently none of them did, but at any rate it is now "all up" with *Columba migratoria*. DRAYTON F. HASTIE.

Michigan Bird Life.

It was in 1893 that Prof. A. J. Cook published, as a Bulletin of the Michigan Agriculture Experiment Station, a list of the "Birds of Michigan." This paper was a list, and little more than that, though it gave some facts as to distribution. The notes on the habits of the different species were brief. It contained 149 pages.

Prof. Barrows' handsome volume, which has just come from the press at Lansing, Mich., has 822 pages, with seventy plates, besides many figures in the text. It deals with 326 species. It is a special bulletin of the Department of Zoology and Physiology of the Michigan Agricultural College.

Prof. Barrows has cut out from Mr. Cook's list about thirty species, and has introduced

twenty species that were not found in the earlier list.

As might be imagined from what we know of the geography of the State of Michigan, its bird population is large and the number of species considerable. Michigan ornithologists, and especially members of the Michigan Ornithological Club, have been cordial in their efforts to assist Prof. Barrows in preparing this volume, as have also many ornithologists throughout the United States, notably members of the Biological Survey in Washington.

The volume opens with an introduction which lays an admirable foundation for the excellent material to follow. This introduction deals with climate, distribution of plant and animal life, with bird life in Michigan and recent changes in that life, points out how to study birds, gives an example of the use of the keys and concludes with an interesting discussion of migration and then an artificial key to the larger groups.

The list of the birds follows. The bird's name comes first, followed by popular synonyms and a reference to plate or figure; then are given its distribution, a compact account of its habits and finally a technical description of the species. A key for use with specimen precedes each family and will be found very useful. There are six appendices devoted to additions and corrections; a hypothetical list, a bibliography, glossary of technical terms, outline and classification of North American birds and a list of contributors. The work concludes with a full index. The volume is one of very great usefulness to all ornithologists, and no one at all interested in the bird life of the Middle West can afford to be without it.

Sportsmen will feel a peculiar interest in Prof. Barrows' remarks on the game birds—especially the gallinaceous birds—whose story is a sad one. The wild turkey has been exterminated. The willow ptarmigan—always rare—is no longer found in Michigan. The spruce partridge, once common, has disappeared with the forests from most of the land. The prairie chicken, formerly abundant, is almost gone and only a very, very few sharptail grouse remain. Bobwhite, through over-shooting and severe winters, has grown much scarcer, though still abundant in some localities in the southern part of the State.

Prof. Barrows speaks of the enormous service of the quail in consuming immense quantities of harmful insects during the warmer half of the year, and the fact that it feeds on the seeds of weeds, which are among the worst enemies of the farmer. He adds: "If the farmer had a little more foresight he would keep his acres well stocked with these birds, feeding them about his barns and strawstacks during severe winters, and posting his land to prevent shooting without permission. Under such conditions he could get all the benefit to be derived from the presence of the birds during the summer, and might still give his friends good shooting in the fall or even rent the shooting privilege under certain restrictions, as is sometimes done in other parts of the country."

The only one of the non-migratory game birds which is in any degree holding its own is the ruffed grouse, of which two forms—the common and the northern—appear to be found.

"GET your principles right," said Napoleon, "and the rest is a matter of details."

Shooting Conditions in Different States

In Fuller Detail, as Promised Last Week

Alabama.

MONTGOMERY, Ala., Oct. 23.—*Editor Forest and Stream:* Alabama has always been a great game State, and under the operation of the game law system now in force, every species of native birds and animals have increased.

Deer are found in more than fifty counties. These animals are fairly abundant along the rivers in the southern portion of the State.

Black bear occur in the counties of Baldwin, Mobile, Washington and Clarke. They are frequently hunted by sportsmen who succeed each year in bagging quite a number of these animals.

Wild turkey have been seen within the last year in all of our counties. That provision of the law restricting the killing of this, the most aristocratic birds of the forest, to gobblers, has caused turkeys to rapidly increase.

Squirrels are to be found everywhere. These animals, however, are not generally hunted by sportsmen.

Doves are quite plentiful and are a much sought after bird during August and September of each year, when large numbers are killed.

Duck shooting is fine along the rivers and in the bays during the fall and winter. For the last few years the flights have been exceptionally heavy, and ducks have been inclined to remain in Alabama for a longer period than before.

Wild goose shooting is a fascinating sport enjoyed annually in the Tennessee River that runs through the northern portion of Alabama. Wild geese spend a great portion of the day on the mussel shoals, only leaving the river to feed in the early morning or late afternoon.

A few woodcock are killed each year.

Snipe and plover, during the spring, are very abundant.

The most popular game bird of Alabama is the quail. These birds are found in great abundance in every section of the State. Quail shooting is enjoyed by Alabama sportsmen with the keenest zest possible. Many bebies are now found within the limits of incorporated cities and towns. The practice of trapping and netting these birds, and the shipping of them out of the State to Northern markets has been absolutely stopped. For many years shippers of quail thrived in Alabama. They had agents in nearly all of the counties who collected the live birds and expressed them to the concentrating point from which they were transported alive to restock the depleted fields and to be served on the tables of the restaurants in distant States.

The pursuit of quail possesses many fascinations. It is in the enjoyment of this sport that the well-trained pointer and setter can be seen to best advantage. The thrill that pervades the being of the happy hunter when his dogs make game, the delight that is his when with two well directed shots he brings down "a double" on a bevy rise, the sport he enjoys in

seeing his dogs pick up the "singles" furnishes recreation incomparable.

Quail are most highly esteemed by our people as an elegant article of diet, and their numbers have so largely increased that they are found in practically every spot adapted to their habits.

By reason of the fact that quail are found in such great abundance, Alabama has come to be the field trial center of the American continent.

JOHN H. WALLACE, JR.,
State Game and Fish Commissioner.

Arizona.

WINSLOW, Ariz., Oct. 9.—*Editor Forest and Stream:* The northern part of Arizona being mountainous, big game is very plentiful, such as bear, deer and turkey, and very few hunters go out from this section of the country but what get the limit on deer and some turkey, and occasionally a bear. Ducks are also very plentiful and some geese during the fall and winter.

Other game such as mountain lion, timber wolves and bobcats are also too plentiful for the stock interests of the country, and there is also big game such as mentioned above in nearly all parts of the State, but more abundant in the northern part. Quail, dove and white wings are very plentiful in the southern part.

CHAS. M. BLEDSOE, Marshal.

Georgia.

ATLANTA, Ga., Oct. 8.—*Editor Forest and Stream:* Never in the history of the State have game birds been so numerous, particularly quail or bobwhite, and partridges. For two seasons past the hatching conditions have been ideal. Forest fires that have in the past destroyed more birds, nests and eggs probably than anything else have not been so numerous and destructive on account of the frequent rains. While the hatching seasons have been favorable, the weather has been unfavorable and too wet for hunting, with the result that birds have multiplied amazingly. As many as three broods have been hatched off by the same pair this season, and nearly all of them are healthy, and the first hatch is now large enough to kill.

The statement that bobwhites are more numerous now than ever before in the State might be questioned by those who will argue that they must have been more plentiful years ago before pointer and setter dogs and shotguns and good shots were so numerous, but there are two reasons why the birds then were not as numerous as now. In former years, before we had in this State what is known as the stock law, swine ranged at large in all of the State, and they found more partridge nests than any other enemy, and of course destroyed every egg, and often the very young birds. Then the forest

fires, in the wire grass section, the lower half of Georgia and the ideal quail country, burned annually over the entire area. Lands were cheap and cattle and sheep were the principal property of the residents of that section, and for the sake of the pastures in the early spring or late winter, the woods were burned and fire swept across large areas, destroying the birds as well as other property.

Doves are hardly as numerous as they were a few years ago before they were destroyed by thousands over baited fields, but they are multiplying rapidly.

The dove and quail season opens in this State on the 20th day of November.

Ducks are plentiful along the coast, but they come in spasmodic flights, and the sport is often disappointing on that account.

The deer season is from Oct. 1 to Dec. 1, and the season bag limit is three bucks; fawn and doe are protected. The deer are not numerous except on the islands of the coast, although some deer may be found in almost every county in the State.

Wild turkey are plentiful in some of the swamps in South Georgia, and gobblers may be killed from Nov. 20 to March 1; same season as partridges, doves and plovers.

Squirrels are common to every county in the State, and very numerous in the southern half and the extreme northern counties, and also along the rivers of middle Georgia.

The wire grass section of Southern Georgia is now the greatest quail shooting field in the Union, the quantity of game and the forest conditions considered.

J. E. MERCER, Commissioner.

Kansas.

TOPEKA, Kan., Oct. 14.—*Editor Forest and Stream:* Kansas is essentially an agricultural State. The entire State is now in use either for agriculture, horticulture or stock raising purposes. This is a serious drawback to nearly all kinds of game.

Prairie chickens were formerly common in the eastern half of this State. Now they are confined to a few localities in the western third of the State, and particularly to a few counties in the southwestern corner. In these localities there is still a considerable number of these birds. However, there is very little winter food for the prairie chickens, and they would soon become extinct if it were not for the fact that ranchers supply them with kaffir corn for food during the winter months.

There is only one more resident game bird—the quail—that is really worthy of mention. Quail are more or less common all over this State, except in the open prairie counties where there is little or no protection for them. They do well even in thickly settled communities. However, intensive farming, which means that the brush patches are being grubbed up, and that ravines, woody places and rough ground is being pastured, makes it more difficult each year for these birds to find suitable places to live. They usually seek the open meadows, and particularly the alfalfa fields for nesting purposes. Thousands of nests are destroyed each year, as the birds are usually on their first setting of eggs about the time the alfalfa fields are mowed for the first crop of hay.

Last winter was a very severe one, and in

PLEASE POST WARNING!

Information on Forest, Game and Fish Laws.

When, how and where you may Hunt and Fish.

OPEN SEASON GAME

DEER—(with horns over four inches long) Oct. 15th. to Dec. 1st. **SQUIRREL**--(Gray, Black, Red, Fox) Sept. 1st. to Dec. 1st. **RABBIT** and all fur bearing animals, no closed season. **SKUNK**— is protected in counties where protection has been approved by majority of voters. It is unlawful to pursue deer with dogs at any time.

BIRDS

QUAIL--(Virginia Partridge) Nov. 1st. to Dec. 1st. **RUFFED GROUSE**--(Pheasant) Wild Turkey. Oct. 15th. to Dec. 1st. **PLOVER, SAND PIPER, WOOD COCK, REED BIRD, RAIL, (Ortolan)** July 15th to Dec. 20th. **SNIPE**--Oct. 15th. to March 1st. **DUCK**--(except wood duck) **GOOSE, BRANT**, Sept. 1st. to April 20th Foreign game birds, wood duck, no open season. English Sparrows, Owls, Hawks, Eagles, Crows and King Fishers, may be killed at any time; all other non-game birds are protected at all times.

BAG LIMITS--12 quail, 6 ruffed grouse, 2 wild turkeys in a day or
96 " 25 " " 6 " " in a season.

FISH

JACK SALMON (commonly called Jack fish or white salmon) June 15th. to April 15th. **TROUT** or landlock salmon. April 1st. to Sept. 1st. Black, green, willow and rock bass, pike or pickerel, June 15th. to April 15th. In Brooke, Hancock and Ohio counties, the open season on the last named fish is from May 29th. to April 15th.

UNLAWFUL

To hunt or fish on Sunday; to hunt or fish on the enclosed or improved lands of another, without written permission; to sell or buy, or transport out of the State, or serve at hotel or restaurant--protected birds, game or fish; to maintain a dam or other thing which obstructs the easy passage of fish up or down the stream, without a suitable fish-way; to allow to enter any stream of water, saw-dust or other matter deleterious to fish; to catch fish, kill birds or game out of season; to use seines, except in the Ohio river, when properly registered; to kill or catch game fish, except with rod, hook and line, or by trot line; to set out forest fires; to catch fish under size, as prescribed by law; to catch by seine, net, bait, trap or snare, or any kind of device--wild turkey, ruffed grouse or quail; to shoot or discharge fire arms across any public road, or within 400 feet of any school house, or on the lands of another--within 600 feet of an occupied dwelling house; to hunt without a license, unless you are a citizen of West Virginia. To carelessly wound or kill any human being, or any live stock constitutes an offense punishable by a fine not to exceed one thousand dollars, and a jail sentence of one year.

FELONY

To use any dynamite, or other explosive mixtures for the purpose of killing fish.

I earnestly ask the co-operation of every citizen of West Virginia, in helping to enforce the law. Any information of violations given will be appreciated, and the name of the informer will be kept strictly confidential.

J. A. VIQUESNEY,

Belington, W. Va.

Forest, Game and Fish Warden.

 UP-ON PUBLISHING CO. CHARLESTON, W. VA.

A SUGGESTION THAT MIGHT BE CARRIED OUT IN EVERY STATE.

many parts of the State the birds had a hard time of it. Many were reported as frozen to death. One discouraging thing about this was that some of the birds reported frozen were reported to have had their crops full of food. However, the conditions were unusual. Rain that wet

the earth and the birds themselves was followed by snow and very cold weather.

The wild turkey has been extinct for many years.

There are still ducks and geese that pass through the State during the migratory season.

L. L. DYCBE, GAME WARDEN, KANSAS.

In some localities fairly good shooting can be had. However, I have noticed that the birds have been gradually decreasing in number for the past forty years.

Unless some action for the protection of these birds is brought about, something like Federal protection or uniform laws in the various States, it will not be many years until there will be practically no geese and ducks in this part of the country.

The water birds, commonly known as shore birds, including the various kinds of snipe and sandpipers, curlews and willets, are becoming scarce. The fact is that very few have been seen during the last few years.

There are a very considerable number of turtle doves, and many sportsmen would like to have these birds placed in the list with game birds, but the sentiment of the country generally is against the killing of turtle doves.

We still have spring shooting of ducks and geese in this State. I would favor a law that would allow a larger game bag in the fall and one that would cut out spring shooting altogether.

There are very few game animals in the State of Kansas. Once the State was noted for its buffalo, antelope, deer and elk. The large game animals have all disappeared except a few antelope confined to the western tier of counties.

Rabbits are still common, both cottontail and jack rabbit. They can be found in each and every county of the State and will in the future afford a certain amount of sport when all other kinds of game have practically disappeared.

There are also a good many fox squirrels in the wooded portions of the State, and in some localities good squirrel hunting can still be had.

The coyote wolf holds its own against every scheme that has been devised for its extermination. So far as I know there are coyote wolves in every county in the State. During the winter time they are chased with hounds and packs of

dogs of all descriptions. They are trapped, shot at and poisoned, and yet they seem to hold their own and really are quite common in many localities. Raccoons are also common in the wooded portions of the State. Skunks and minks hold their own in very good shape. The beaver and the otter have practically disappeared, though there may be a few stragglers left.

L. L. DYCBE, Warden.

Minnesota.

NORWOOD, Miss., Oct. 23.—*Editor Forest and Stream:* We still have a good number of moose, and most any fair big-game hunter with a little perseverance ought to be able to take home a trophy. The best hunting grounds are in the vicinity of the Superior Forest Reserve in the counties of Cook, Lake, St. Louis, Itaska and Koochiching.

Hunting on the reserve is prohibited at all seasons. Virginia deer are also to be found in more or less abundance in all our counties north and west of Duluth.

With our splendid reserve system we are satisfied that we can perpetuate a limited amount of big-game shooting for all times.

We had a larger crop of partridge last season than we have had before in fifteen years. I attribute this to the activity of our trappers and the betterment of our game warden service.

Last season I left for my annual hunting trip on Oct. 10, and camped in the northern part of Itaska county, where I have been each season for the past ten years. It was no trick to bag the legal limit of partridge; in fact, it was too easy. There are a number of localities in the northern part of the State where one can catch fish, hunt partridge, ducks, deer and moose. In order to do this it will be necessary to camp. We usually go about Oct. 10, which allows us one month to hunt ducks and partridge.

There are a number of localities in the northern part where partridge, ducks, deer and moose are found.

When your old shooting grounds prove unsatisfactory, try Minnesota. Address Hon. H. A. Rider, Executive Agent, State Capitol, St. Paul, for any information you may desire.

GEO. J. BRADLEY,

President State Game and Fish Commission.

Michigan.

LANSING, Mich., Oct. 14.—*Editor Forest and Stream:* Game conditions in this State were never better than this season. From reports of my deputies in various parts of the State I am informed that partridge are most plentiful in every section of the Upper Peninsula of Michigan, as well as the counties of the Lower Peninsula above the north line of Montcalm and Gratiot counties.

Deer are also numerous in all that part of Michigan north of the Straits of Mackinac. If I should attempt to tell you in what part of Northern Michigan deer and partridge were most plentiful, it would be a matter of speculation, as they are plentiful in every section, except in the immediate vicinity of the larger cities and towns.

There seems also to be a great number of black bear this year north of the Straits as well as a great number of fur-bearing animals, such as beaver, fox, mink, etc. Wolves and coyotes

abound in great numbers. The open season on bear and other fur-bearing animals, except beaver, begins on Nov. 1 and continues until March 30 of the year following. The season for taking beaver in this State has been closed for a number of years. The fact that this animal has been protected accounts for its great numbers at the present time in the northern peninsula of this State. These animals can be taken after January 1, 1913, under a special act which takes effect at that time, after securing a permit from the owner of lands and a license from the county clerk in one of the counties in which one proposes to trap, after the payment of a ten-dollar license fee.

Squirrels are very numerous in all sections of Lower Michigan, but these animals cannot be taken until 1914. In some sections of Eastern Michigan ducks are very numerous, especially in the vicinity of St. Clair River and flats and the Lake Erie marshes.

Nonresidents of this State are required to procure a license to hunt all protected game and birds in this State. The fee for such a license is ten dollars, which will permit the holder to take as hand baggage from the State a number equal to one day's bag of each kind of bird or animal, except deer.

Owing to the severity of the winter of 1911-12 and the great abundance of snow in this State, quail are nearly exterminated. The farmers of this State are beginning to recognize the great economic value of this bird as an insect and seed destroyer. Therefore, at the last special session of the Legislature of this State, which convened in June, these birds were protected until 1915.

Under the present restrictive laws of this State and the rigid enforcement of the same, some birds and game of all kinds seem to be on the increase in Michigan.

WILLIAM R. OATES,

State Game, Fish and Forestry Warden.

GEO. J. BRADLEY, PRESIDENT GAME AND FISH COMMISSION, MINNESOTA.

SEA AND RIVER FISHING

St. Louis Fly- and Bait-Casting Club.

ST. LOUIS, Oct. 23.—*Editor Forest and Stream:* Following are the scores of the St. Louis Fly- and Bait-Casting Club:

Accuracy fly:		R. L. Smith..... 97 4-15
S. S. Pingree..... 98 10-15		A. P. Hebard..... 97 3-15
H. J. Brennan..... 98 9-15		A. Cyran..... 96 2-15
B. A. Fleming..... 98 8-15		
I. H. Hellman..... 98 1-15		
Distance fly:		
	Feet.	Feet.
M. J. Brennan..... 81		A. Cyran..... 70
B. A. Fleming..... 74		I. H. Hellman..... 69
S. S. Pingree..... 74		
Half-ounce accuracy:		
I. H. Hellman..... 99.2		B. A. Fleming..... 96.2
S. S. Pingree..... 98.3		H. Adler..... 95.5
A. Cyran..... 97		
Quarter-ounce, distance:		
	Feet.	Feet.

	Feet.	Feet.
I. H. Hellman..... 714		H. Adler..... 398
S. S. Pingree..... 607		B. A. Fleming..... 317
Aug. Cyran..... 557		
Longest cast, I. H. Hellman, 163 feet.		

GEO. ASHTON, Secretary.

Illinois Casting Club.

CHICAGO, Ill., Oct. 17.—*Editor Forest and Stream:* Following are the corrections in the completed season's scores in the report mailed on Oct. 10:

Stanley's combined average in fly events should be 99.03 instead of 99.3. Hartsall's score in accuracy bait should be 98.09 instead of 98.9. DeGarmo instead of Stanley is the winner of light tackle distance fly with 83 1-3 feet. Stanley's score was an error. A. F. SWISHER, Sec'y.

WILLIAM STANLEY,

100 per cent. score, 1/2-ounce accuracy bait at annual fall tournament, Illinois Casting Club.

San Francisco Fly-Casting Club.

THE medal contests of the San Francisco Fly-Casting Club were held on Sept. 28, Oct. 12 and 13. The wind was variable, weather fair.

California Fishing.

SANTA MONICA, Cal., Oct. 7.—*Editor Forest and Stream:* I receive the FOREST AND STREAM just the same as when I lived in Iowa, and feel that I can hardly get along without the very valuable paper. I feel the same interest in the sportsman that I did thirty years ago when I was president of the Iowa State Sportsmen's Association. Just below where I live the Los Angeles Shooting Club have fine grounds where they shoot every week. I meet many of my old friends there. The club invites all sportsmen to join with them in breaking as many targets as possible.

I have had many pleasant visits at the Los Angeles Gun Club grounds. I spend most of my time fishing and have fished along the Pacific coast from Santa Monica to Newport. There are a great many fish in the Santa Monica Bay at the present time. Large schools of yellowtail, yellowfin, mackerel and jack smelts are around

(Continued on page 565)

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year.

This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

PAINTINGS OF ANCIENT TIMES.

A LITTLE more than a year ago FOREST AND STREAM printed an illustrated article describing some of the paintings of animals made on the walls of caverns in Southern Europe by the men who made and used tools and implements only of stone and bone. Some of these paintings then figured showed a high degree of artistic skill and are altogether wonderful.

Last summer another French cavern with paleolithic mural engravings was discovered near St. Girons, in Southern France, by Count Begouen, of Toulouse. The walls of the great cavern, which is very difficult of access, were adorned by figures of half a dozen horses, a number of bison, a single reindeer, and some other figures, as yet not identified. The drawing of the reindeer has a special interest as showing the existence of that animal in this southern region at that time.

As it happened, Prof. Henry Fairfield Osborn, of the American Museum of Natural History, and George Grant McCurdy, of the Peabody Museum of Yale University, were in France at the time, and being advised of the discovery, visited the place and were shown through the cavern by Count Begouen. On this visit other drawings and sculpture were found.

The cavern is one of great beauty and will be protected by Count Begouen, who is the Mayor of the Commune in which it is situated.

Absolutely unknown heretofore, it has yet been previously visited, for at one point during the first visit Count Begouen and his sons discovered a name with the date 1689, and at another point a name and the date 1701. They found also a small pit which seemed to have been recently dug in the search for primitive implements.

It is a matter of great interest that Prof. McCurdy, who has given us the first summary

of these ancient mural paintings, happened to be so near the spot at the time of this discovery, and was able almost at once to be on the ground.

FORESTS NEED PROTECTION.

THE Department of Agriculture has recently issued a statement declaring that for some years past forest fires in the United States have caused an average annual loss of seventy human lives, the destruction of trees worth at least \$25,000,000 and the loss of stock, crops, buildings and other improvements amounting to many millions more. It is very desirable that careful statistics on this point should be made public, for the reason that Congress seems unwilling to make adequate appropriations for the proper care of the national and other forests, and their effective protection against fire.

It is difficult to understand the mental attitude of certain Western representatives in Congress. Notwithstanding the fact that it is especially the Western country that has suffered the greatest losses from forest fires within the past few years, these representatives bitterly oppose appropriations looking toward more effective forest protection. If we recollect aright it was a Congressman from Idaho—where only two or three years ago there occurred terrible destruction of human life, private property and forests—who most bitterly opposed every movement looking toward better control of fires.

Even among the representatives chosen by the American people to enact their laws, the growth of intelligence in some matters of this kind seems deplorably slow. Nevertheless, if slow, it is, we believe, steady, and before very long it is likely to become a force strong enough to cause the enactment of laws, and their enforcement, which will save much life and much property.

FOREST AND STREAM'S PLATFORM.

OUR neighbor, FOREST AND STREAM, asks: "Have you observed the improvement in FOREST AND STREAM?" We have. It seems to be waking up. We fail, however, to observe that it is aware how rapidly the game is being made abundant in many places and how soon the markets will be filled with cheap game. Does FOREST AND STREAM still favor the prohibition of profitable propagation? Does it still stand on its old platform prohibiting the sale of desirable foods? Does it still believe that one or two shots in a week or in a season are enough to satisfy the demands of sport and the makers of arms and ammunition?

The above observations are from our neighbor, "Game Breeder." Our only rejoinder is that we are glad our editorial mite has done something toward making possible the honest statement, "How rapidly game is being made abundant in many places." Had it not been for the herculean efforts of conservationists, of whom FOREST AND STREAM has been the mouthpiece, the quotation would have been paraphrased thus: "How rapidly game is being made scarcer everywhere." Editorially, on the question of game protection, bag limit and open season, FOREST AND STREAM stands exactly where it has stood since Aug. 14, 1873—for moderation.

FOREST AND STREAM is specially edited to make it a high class publication. Its various departments are prepared with this idea in view.

"SPORTSMAN."

MORE or less fanciful distinctions have been drawn between the "sportsman" and the "sport." We venture a new one. In the woods the visiting angler or shooter is commonly called a "sport," and his guide speaks of him as "my sport." Now a good working distinction between a "sport" and a "sportsman" is this: A "sport" is one who goes into the woods in charge of a guide to show him the way, finds the game and tells him when to shoot. A "sportsman" is one who goes into the woods by himself, or with a cook, finds his way and his own game, and shoots his game when he knows that it is game and not a man. The "true sportsman" is one who goes into the woods with a guide at \$3.50 a day, and shows the guide the way around and leads him back to the trail when he gets lost. And the "true sportsman" of this type is not unknown in the Maine woods.

THE State Department has transmitted to the Japanese and British Government checks in payment of the amounts appropriated by Congress at the last session to enable the Secretary of Commerce and Labor to pay those Governments, under the fur seal treaty, the sum of \$200,000 each for the abandonment of the fur seal industry in the Bering Sea and North Pacific Ocean by the respective nations. This treaty was negotiated between the Governments of this country, Japan, England and Russia to prevent the threatened destruction of the seals. How well the work of reclaiming the seals is progressing is evidenced by the report of the Bureau of Fisheries, which states that the seal pack is the largest in approximately fifteen years with the possible exception of one year. The bureau shows that there are 90,000 more seals in the rookeries up in the Bering region than there were last year. Of this number the females have increased from 39,400 to 81,934. This large increase in numbers is attributed by the bureau to the suspension of pelagic sealing and poaching, over which such a bitter controversy has been waged in Congress during the past.

The Open Road.

BY ROBERT PAGE LINCOLN.

O, the winding road shall take me
 Out into the fields unhampered,
 And the glorious day shall make me
 Free of heart and free of mind.
 There shall be no sun-ways pampered
 By the mock illusion born us,
 And the song of birds shall ease me
 When upon the sod reclined.
 I shall hear the breezes whisper
 Tender notes among the flowers,
 Feel the soft requiem of vesper
 Fall upon the twilight hills.
 I shall wander to the sunset,
 Where the gold is hoarded lavish,
 Far into the land of dreaming
 On the quiet shores of peace.
 There no more to bend in slavish
 Toil throughout the weary hour,
 Only that which is and seeming
 Stirring with the stately trees.
 Then for me the brooks will murmur
 And the night will find me quiet,
 Where the stars look down upon me
 In between the boughs of fir,
 And the evening hour from riot
 Of pure gold make labor free.

CALIFORNIA FISHING.

Continued from page 563.

the piers almost every day. At times there are three or four hundred people fishing from the Santa Monica pier at the same time. The Santa Monica pier is built of cement and steel, and is used only as a pleasure pier. There are metal rails about four feet high along the edge of the pier and good seats, so that the fishermen can sit down and enjoy themselves while waiting for a strike. The pier is kept nice and clean, and has two bait houses, where one can buy or rent a full outfit for fishing.

The Santa Monica pier runs out 2,000 feet into the ocean and is thirty feet wide. I enjoy fishing for jack smelts more than any other fish where there is a good run of the silver fish. The jack smelts we catch are from ten to twenty inches in length and although they do not put up the fight of a pound or two-pound mackerel or many of the larger kinds of fish, yet it is very pleasant to have a sixteen-inch jack send in that he is on one of the hooks at the end of a 150-foot line all ready to be reeled in. We have about twelve No. 6 hooks on our lines and cast out from the pier from 125 to 200 feet. Sometimes we reel in three or four at the same time. Then we have business on hand. I have 300 feet of fine line on my reel. The line is warranted to stand a twenty-five-pound pull. When a large fish like the sea trout or yellowfin takes hold, the extra line is needed.

A short time ago I was catching pompano. While reeling a small pompano in, a sea trout took hold of the fish. I hooked the trout and then had to play him quite a long time before bringing him up to the pier. I landed the trout and found that I had a fish weighing six pounds.

Three weeks ago I went to the Los Angeles pier with a friend from Iowa. In one morning we landed eighty-five mackerel. Only two hooks are needed for mackerel there if there is a good run. The sportsman will have enough to do, as they fight well. The Los Angeles pier runs into the ocean 5,200 feet where the water is fifty feet deep. It is a fine pier for yellowtail, bass and the larger fish. At times sharks are very plentiful and the larger ones carry off many good hooks and lines. When a large shark takes hold, no small line will stop him. He goes out to sea.

It is about time for the pompanos to come in. They are a very beautiful fish and are considered about the best table fish on the west coast.

The climate of Santa Monica is such that one can fish every day, winter and summer. The winters and summers are much alike. In winter there is not frost enough to kill a tomato plant. I have seen them grow through two winters. Once last summer I saw the mercury at 87 degrees for a short time. Almost any day it runs up to about 75 degrees. There is hardly rain enough to interfere with fishing. Less than twelve inches fell in 1911.

The duck shooting season is now open and every morning I hear the guns on the flats below Venice. I think the shooting is good. Shall try it before long. The ducks are hardly as good for table use as the ducks of Iowa.

JOHN G. SMITH.

FOREST AND STREAM'S audience is growing for the simple reason that the magazine is getting better all the time.

The Cogitative Bass Crank.

BY JOSEPH CAWTHORN.

I'VE been thinking, sadly thinking,
As these autumn evenings pass,
Of my time and money wasted,
In pursuing striped bass.
For the cash that I have spent on bait
And tackle, I'll be bound.
I could buy a whole fish market
And put in a private pound.

Shedder crabs and bloodworms
I've purchased by the ton;
I've stood for hours on the beach,
Been parboiled by the sun.
I've tramped the sands in rubber boots
Till I was nearly dead,
Digging big holes in the ocean
With a four-ounce chunk of lead.

I've fouled and "busted" rod and reel,
And cast along the shore,
Of leaders, swivels, hooks and leads,
A million, maybe more.

JOSEPH CAWTHORN.

Although this gentleman is one of America's leading actors, he also is an authority on surf-fishing. He holds the channel bass record for the New Jersey coast with a 94-pounder.

I've neglected friends and relatives,
My business, home and wife,
I've bought tackle till John Seger
Has a mortgage on my life.

And what have I to show
For all this waste of energy,
After flirting all last summer
With this measly, stingy sea?
Toadfish, skates and robins.
(I can always yank them in),
Dog sharks by the thousand,
But of the stripers, not a fin.

At night I dream of zebras,
And convicts of all types,
American flags and barber poles—
Everything with stripes.
I dream I'm fishing for them all—
I'm a Jonah, sure, it seems—
It's pretty tough, for I can't even
Catch them in my dreams.

And then I sit and listen
For hours at a stretch,
While the old-time anglers 'round here

Tell of fish they used to catch.
One begins and tells you
How he started out at noon,
And by six o'clock had eighty-seven
Stripers on the flume.

Another says, "That's nothing,
When the wind was in the south,
I could always drop a bloodworm
In a sixty-pounder's mouth."
I listen and say nothing—
After all, they're not to blame,
When I've fished as long as they have
I suppose I'll lie the same.

The bass ran fine last summer,
No one stopped them, you can bet,
And from Seger's list I reckon
That they're running somewhere yet.
It's really quite pathetic
How we fishermen hope on
For a year of real good fishing
Like we had in seasons gone.

I have sworn by all the gods,
That I will never fish again;
But if I'm alive next summer,
It's a good bet, just the same,
You'll find me somewhere on the beach,
And perhaps you'll hear me swear,
As I stand and fish for hours
For the bass that isn't there.

And when my time has come
To shuffle off this mortal coil,
And leave behind my fishing days
And other care and toil,
When I cross the River Jordan,
If it's rough or smooth as glass,
I'll be sitting in the stern sheets
Trolling for a bass.

THE TOP RAIL.

AN Indiana game warden being at a loss to account for the suddenly increasing number of fish offered in the markets of his locality made an investigation, thinking to discover the illegal use of nets, but in this particular he was disappointed. He did, however, discover the cause of the activity in the fish market. He noticed two men, one of whom had taken up a position on a bridge used by a trolley company, and the other was in a boat just below. At frequent intervals the man on the bridge was observed to strike the trolley wire with his fishpole, and immediately after the other would gather up quantities of fish. They were fishing by electricity, and at each strike a charge of electricity passed through a wire from the pole into the water and killed the fish in the vicinity.

* * *

WHILE Seth Eaton, a rural mail carrier, was driving over his trip on Plymouth street, Middleboro, Mass., a few days ago, his horse stopped and Seth saw a flock of fifteen quail dusting themselves in the soft sand on the road ahead. He would have run over them had the horse not shied and stopped. Also on Thompson street there have been seen many flocks of this little bird, some of them numbering eighteen and twenty.

GRIZZLY KING.

Target and Hunting Archery

By H. B. RICHARDSON

EDITOR'S NOTE.—Henry B. Richardson, of Boston, has the distinction of being the only American who has competed in the English championship tournaments and defeated the English archers. In 1908, after shooting in the Olympic games at London, he entered the English tournaments and won all the events. In 1910 Richardson won the American York championship with a score of 231 hits and 1111 points. This score is second to that made in 1857 by Horace A. Ford, of England. Ford was the father of modern archery, and the method of aiming now in use was introduced by him. Ford is acknowledged to have been the best archer the world has seen.

TARGET archery differs from hunting archery as much as any two sports with the same implements can differ, as much as cricket differs from baseball. Target archery demands uniform excellence under constant and favorable conditions, whereas hunting demands occasional brilliance under varying and trying ones. Since in the former the ranges are known and fixed, it is possible to shoot the long ranges accurately. The target is at the same level as the archer. The ground is level and there are no obstacles. Under such conditions every arrow must be carefully shot, and uniform excellence is indispensable. There must be some systematic means of controlling the line, length of pull, and the location of each arrow shot. To regulate the line or direction of the arrow the archer must, when aiming, keep it in the same vertical plane as the eye. He can then see directly any deviation—to the right or left of the target. To regulate the length of pull, he must draw to some definite point every time, the best way being to touch with the second finger of the drawing hand a point under the jaw such that the bow-string will cross the corner of the mouth. For controlling the elevation the only reliable system so far discovered is the "point of aim." This means that the left arm is raised until the head of the arrow at full draw covers some point, such as a branch or a bunch of grass, above or below the target, but in line with it. This point has been found by experiment to produce the right elevation. There are many other details to attend to—standing straight, keeping the head up, not letting the left arm flinch, loosing without disturbing the line, etc., but they are, after all, details. The principles of line, length of pull, and elevation must be followed by everyone who aspires to success.

The tackle used in target archery is in keeping with the kind of shooting. The bow is comparatively light, so that it is well within the archer's control. The arrows are light for the long ranges. They must be extremely carefully made, and as carefully watched to see that they fly alike. Those that do not conform to type should be discarded.

Contrast hunting archery. The range is unknown and has to be estimated each time. Since the limit of accurate estimate of distance is about sixty yards, all shooting beyond that distance is chiefly guess work. The ground is likely to be anything but level. The target is small, of varying size, and may be up a tree or down a ravine. Obstacles are numerous and perplexing. Only the perfect shots count. The man who makes one perfect shot and five bad ones is a better archer than one who makes six merely good ones. No particular principle of shooting needs to be followed, although

pulling to the ear has been found the best. The shooting should be as instinctive and natural as possible. Concentration on the mark and practice are the chief means of improvement. It is in hunting that the "born" archer is in clover. In target archery, he may get "hipped" on his particular style of shooting, with the re-

MRS. WITWER-TAYLOR, SIX GOLDS AT THIRTY YARDS.

sult that he passes imperceptibly from a "promising young archer" to an "old duffer" if, indeed, he does not get discouraged in the process. In hunting he has no such handicap.

The tackle is much heavier and stronger than that used in target shooting. The bow can be ten pounds heavier, since it is shot intermittently. The arrows are about twice as big around and three times as heavy as target arrows. They are made of second-growth hickory, which is almost as hard and tough as iron. Blunt-heads, used for small birds and squirrels, are made of a mixture of lead and babbitt metal hard enough to resist crushing, yet soft enough to absorb some of the shock. Sharp heads, for grouse, rabbits, and such are made of unhardened tool steel, hard enough to penetrate, yet soft enough to absorb some of

the shock of hitting rocks. The head, which is in the shape of a trowel, is inserted in the end of the arrow, wired on, and fastened to the wire with solder. The feathers, about three inches in length, are glued on slightly spirally. They guide the arrow most accurately if left untrimmed, but slow it down.

An incident from a hunting trip in which I participated last summer will illustrate the difficulties of hunting archery. The party consisted of Will Thompson, of Seattle; Z. E. Jackson and J. M. Challiss, of Atchison, Kan., and myself, of Boston. We had left Vancouver in a motor boat, and had anchored off an island at the mouth of the Jarvis Inlet, one of the long arms of the sea that pierce far into the rugged coast of British Columbia. We paddled our two canoes ashore, carried them across a small neck of land on an old logging chute, and launched them in a beautiful little lake. Above the edge of the water rose high, steep, wooded banks, and below the bottom shelved off abruptly, disappearing in clear depths so far down as to make you dizzy to look. From coves on all sides came the eerie dismal chant of the loon. From the middle of the lake we could see a rugged peak of the Rockies looming up jagged and white in the distance. The place looked like game and felt like it. We strung our bows and paddled stealthily along the shore, but for Challiss and I, who were together, there was no luck. We separated from the others, and, having hunted till dusk, went home to the boat without even having drawn a bow-string. Long after dark the other two came aboard very tired and hungry, and proceeded to eat supper. They asked us what luck we had had, and denied having any better themselves, yet there was something mysterious about their manner. Finally, Jackson, having filled and lit his four-bore "Missouri meerschaum, commonly known as a corncob," said to me, "Look in our canoe, and see if you can't find something." I found a gunny sack, with something in it that was all I could lift. Taking the bag by the corners, I opened it, and out tumbled a large wildcat. When the surprise of this disclosure abated, Jackson consented to tell us how it had happened. It seems that as he was sitting in the bow of the canoe ready to shoot, he saw something moving in the bushes uphill about sixty yards off. He signaled to stop, but by the time they had done so and had worked back to the original place the thing had disappeared. Thompson was discouraged, and spoke out, "Oh, he's gone now," much to the disgust of Jackson, who at that instant spotted the animal again. He shot very deliberately and as he released could see the arrow traveling straight toward the one visible spot of the animal. The arrow disappeared in the bushes. There was a scrambling and a crackling of twigs, then a little later another crackling, and then silence. "You've got him," said Thompson. They went ashore and found a large wildcat, dead. The arrow had gone through both shoulders about an inch from the heart.

This was a remarkable shot, quite different from any target shooting. Jackson was sitting in an unsteady canoe, shooting uphill, at an unknown range, and at a mark just barely visible. He had waited in suspense for some time. Moreover, he was using a target bow, some five

pounds lighter than his hunting bow, and a light hunting arrow made of fir instead of hickory. Anyone of these conditions would entirely upset any target archery.

Hunting with the bow has a charm quite apart from the variety which it affords, and that is the contest of skill between hunter and hunted. The chances of the game are very large, discouragingly so to the beginner in hunting. To illustrate:

Earlier in the same trip we stopped at a small island that had been lumbered or burned over. Only a few of the lofty trees were standing, the rest were gone or else lying prone, bolstered up on masses of roots. The space between fallen trunks was filled with ferns five to seven feet high, interlaced with a tangle of fallen branches. Such a country made hard going. Toward sundown I started a grouse, which flew to a limb some distance off. Standing balanced on a narrow log, the only available footing, I discharged several arrows at it, very badly, without dislodging it. Having no more to shoot, I called Challiss. At first he couldn't see the bird, but finally he said, "Oh, way off there. I thought you meant somewhere near you." Approach being out of the question, he shot. His first arrow fell short, but the second flew straight as a June bug for the grouse's head. "Meat for supper," I thought, but not at all. The grouse, seeing the danger, ducked its head by a quick teetering motion, just in time to let the arrow go by. Apparently it considered the last shot too close for comfort, for it left before the next. It may seem unsatisfactory to a hunter with firearms that the game should have got away after we had made a perfect shot. In reality, it was not so. The grouse had been quick of eye and body, and had by its cleverness deserved to live. All the demands for sport were satisfied; there was no need of killing.

If killing is the hunter's ordinary object, he should not go equipped with a bow. He can buy a large amount of accuracy ready-made in the shape of a rifle. The force behind the bullet is regulated by the manufacturer. Necessity for estimating distance less than one hundred or two hundred yards is obviated by the flatness of the trajectory. Elevation beyond this distance is controlled mechanically by means of the rear sight. The butt end of the gun is held in place by the stock. The hunter has merely to aim, pull the trigger and hold firm—the manufacturer does the rest. With implements of such simplicity as the bow and arrow the hunter has to manufacture his accuracy for himself. The force behind the arrow is regulated by the amount he pulls it. Every distance shot has to be estimated. There is no mechanical device controlling the elevation. Both ends of the arrow have to be kept in line, and that most particularly when the strain on the archer's arms is suddenly reduced from sixty pounds to zero. Aiming and firing is but one department in a complex series of motions.

On the other hand, the bow has certain advantages, chief of which are silence and consequent opportunity of shooting several times at the same game. Minor advantages are the ability to shoot over obstacles, to strike parts of game below the surface of the water, or to correct shots made at flying game. All these

are, however, so over-balanced that it is no wonder that the bow could not compete in war even with very primitive firearms. The comparison is not fair, however. In war the supply of enemy is practically unlimited. In hunting, the game is easily killed off. It is quite conceivable that had the firearm never been invented there would have been as much game killed as there is now. There is an analogy in the fishing industry. In bays and limited bodies of water the use of nets instead of hand lines causes at first a large increase in the number of fish caught. Later fish become so scarce that fewer are taken with nets than were in the old days with hand lines. So with game; it is more than likely that the primitive weapon, with its insidious silent attack, might now be killing the same amount of game as is the rifle. There would be more game, more shooting, more sport, and probably as much killed.

These last considerations, are, of course, useless from a practical point of view, unless some archer goes into game preserving on a large scale. They are worth remembering, however, in case an archer should have the misfortune to go hunting in company with a gunner. The latter will invariably grant him one shot, and if he misses, scare all of the game out of the neighborhood, and then laugh at the archer for using an inefficient weapon.

The man who has done target archery does not need to be told the fascination of using a primitive weapon and manufacturing his accuracy for himself. He knows that it is the very simplicity of his implements that makes the use of them such a difficult and fascinating study. He might like to know, however, whether he could not get still more pleasure out of hunting, also whether it is possible to do both target and hunting archery.

In my opinion, by far the best of the two sports for a standby is target archery. The necessity of relentless accuracy demands intelligence, study and practice. There are more archers who won't learn how to shoot than who can't. Anyone who is determined to learn the game will sooner or later be rewarded; yet no one is so experienced that he has nothing more to learn. In hunting he is likely to reach a level that he can do nothing to improve. On the other hand, there is a certain artificiality about shooting fixed distances at fixed targets, and it is a relief to get off into the woods, where no two shots are alike. It is quite possible for a target archer to do so without hurting his target shooting. One rule, however, is absolute. He must not change his form from target style to hunting style, and vice versa. The penalty for doing so is mastery of neither. By sticking to his target form he can do much better at hunting than the hunter can at the targets. Even in hunting he can give the hunter a good run for his money, at the short ranges, and perhaps beat him at the long. If the target archer is careful not to let his form deteriorate he will not be harmed by hunting, but gain in concentration and in sensitiveness to adverse conditions, as well as adding variety to the other charms of archery.

H. L. Walker.....	20	92	21	109	18	80	19	91	78	372
Dr. E. B. Weston...	20	92	20	106	18	74	21	99	79	371
Jas. H. Pendry.....	80	346

We recently had a pleasant visit from C. W. Nichols, of Batavia, Ill. Mr. Nichols is the father of our George W. Nichols, and took part in the first national tournament, which was held in Chicago in 1879. Though Mr. Nichols is seventy-nine years old, he shot both forenoon and afternoon, and made creditable scores.

Mr. Tac Hussey, of Des Moines, who also shot in the first tournament, is another young-old archer, who has not yet quit the game. Mr. Hussey is over eighty, and recently made an American round score of 84—464, a fine score for any archer.

I am sending to you a few scores recently made by Mrs. Burton Payne Gray. When it is known that Mrs. Gray shot but a few arrows before the national meeting, held in Boston last August, it will be seen that her work is remarkable. It should greatly encourage young archers when they see what can be done in a short time. Mrs. Gray's double Columbia round score, here given, was higher than the one which Mrs. Witwer-Taylor made in the tournament when she won the Columbia round championship.

Double National round:							
60yds.		50yds.		Total.			
Hits.	Score.	Hits.	Score.	Hits.	Score.		
36	137	16	82	51	219

							74
							340

Mr. Gray writes in part facetiously: "These scores were made by a woman who took up the sport in the summer of 1912 to please her husband, and in doing it has become so in love with archery that everything else is of minor consequence—even her husband."

This whole subject interests me in two ways: First, from the standpoint of an archer; then because of my friendship for the Gray family.

We first met and lived in Highland Park, Ill., more than thirty years ago. Mr. Gray's father, the Rev. W. B. D. Gray, and I together shot in the first national tournament in 1879 and again in 1912.

In 1880 the Gray family moved to South Dakota, which was then a hunter's paradise. It was my good fortune to visit them annually for ten years, when it was time to harvest the prairie chickens, or the ducks and geese, and the memories of those days are among the pleasantest of my life.

The four Gray boys went to college. After graduating, Burton the eldest went to Boston and its law school. When he had completed his

(Continued on page 579.)

YACHTING

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the 46-foot waterline cutter *Alga*, owned by W. Starling Burgess, of Marblehead, Mass., to W. L. Stinson, of the Portland Y. C.; the 25-foot waterline auxiliary sloop *Rembha* owned by W. J. Norcross, of the Corinthian Y. C., to a member of the Boston Y. C.; the 21-foot sloop yacht *Little Haste* to G. W. Sargent, of Quincy, who will race her in Class A of the Massachusetts Inter-Club Y. R. A.; the 23-foot waterline auxiliary sloop *Sue* owned by T. W. Powers, of the Boston Y. C., to Professor W. H. Howell, of Johns Hopkins University of Baltimore, Md.; and the 21-foot knockabout *Tern* owned by Miss Hilda Cunningham, of Milton, Mass., to Maurice Briggs, of Lynn, Mass.

The same agency has sold the 25-foot waterline sloop yacht *Oleander* to A. B. Corthell, of Winchester, Mass., who will race her in Class A for the Massachusetts Inter-Club Y. R. A. next season. Also the 25-foot waterline yawl *Tantrum*, owned by Mrs. Chester T. Jones, of Milton, Mass., to a well known Winthrop yachtsman.

Newport Yacht Officers Chosen.

THE Newport Yacht Racing Association at its annual meeting elected the following officers: President, George L. Rives; Vice-President, Francis K. Sturges; Secretary-Treasurer, Charles L. F. Robinson; Governors, Maximilian Agassiz, John R. Drexel, Royal Phelps Carroll, Henry F. Eldridge, Elbridge T. Gerry, H. O. Havemeyer, Jr., C. Oliver Iselin, Edwin D. Morgan, George L. Rives, Charles L. F. Robinson, United States Senator George Peabody Wetmore, Francis K. Sturges and Pembroke Jones; Regatta Committee, Royal Phelps Carroll, Pembroke Jones and the officers.

Canoeing

Labor Day Cruise of Delaware C. C.

SWINGING our duffle bags on our shoulders we caught the car for Newport, Saturday, Aug. 31, arriving there at 12 noon. Some of us evidently remembered that old rhyme:

"If bloomin' duty doth with pleasure clash,
Let bloomin' duty go to smash,"

for we went regardless of how much work we let go unfinished. The cruise was to last till Labor Day, and to be to Smalley's Dam on the Christiana, a two hours' paddle from Newport.

About thirty members and guests of the Delaware C. C. left the club house at 1:15 Saturday afternoon, and arrived at Smalley's about 3:15. After a short portage over the dam, we paddled up the lake about a quarter of a mile to a grove which some of the party had picked out. As the grove was about thirty feet above water level, the drainage and view were all that were to be desired.

Camp was soon made, and as supper was fast approaching, fires were quickly built while the men went out to visit the various farm houses to purchase milk, corn, etc., and to see if they could get an armful of straw, with which to ease our weary bones. That night everyone was genuinely tired and camp was soon quiet.

Camp was astir at 7 o'clock Sunday morning, and breakfast over, we put our respective tents to rights in short order, for there were many places to be explored—the stream itself and its branches. Most of the day was spent in fishing and exploring, and when night came, we were well pleased with the day. That night being the last, a roaring camp-fire was built and many of the songs that never die were sung around its cheerful glow.

During the night a heavy thunderstorm came up, but as we were sheltered by the woods, we came through all right. The next day was spent in further explorations, dinner and breaking camp. Four o'clock saw us over the dam on our way home. Some of the party stopped about two thirds of the way home for supper which caused them to get to the club house about 8 o'clock, some two hours after the others.

We all regretted that the season proper had come to a close, but many of us will refuse to consider it closed until falling snow shall declare that winter, the close of the year, is at hand.

S. C. SINGLETON, JR.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Angus S. Macdonald, 612 West 115th street, New York city, by Louis Reichert; Jessie L. Austin, 227 Rodney street, Brooklyn, N. Y., Harry Henemier, 125 Manhattan street, New York city, and David W. Thorn, 1851 Carter avenue, Bronx, New York city, all by Paul J. Kuhn; Frederick

Grant, 306 East 142d street, New York city; Carl T. Hatch, 746 St. Nicholas avenue, New York city; Alfred N. Rea, Jr., 65 East Tremont avenue, New York city, and Charles W. Rea, 65 East Tremont avenue, New York city, all by Betram M. Henemier; N. Wright Crowder, 3939 Frisby street, Baltimore, Md., by W. P. Stephens; Henry C. Webendorfer, 544 West 147th street, New York city, by Harry J. Dietrich; Waldemar Van B. Clausen, 235 West 100th street, New York city, by H. C. Calahan.

Western Division.—Roland S. Brand, 505 Belle avenue, Highland Park, Ill., by Jos. E. Zdankiewicz; Hon. William Hector Maclean, Wilmette, Ill., by John W. McConnell.

NEW MEMBERS ELECTED.

Atlantic Division.—6540, Charles S. Edgumbe, 74 Brinkerhoff street, Jersey city, N. J.; 6541, Arthur F. Edgumbe, 74 Brinkerhoff street, Jersey City, N. J.; 6542, Eugene J. Cole, 323 West Jersey street, Elizabeth, N. J.; 6543, Harold C. Chapman, 39 Belmont avenue, Jersey City, N. J.; 6544, H. R. Richards, 500 West 122d street, New York city; 6545, J. F. Lockard, 1 St. Nicholas Terrace, New York city.

Western Division.—6531, S. W. Prime, 1705 Fisher Building, Chicago, Ill.; 6532, F. C. Brown, 233 Hinckley avenue, Rockford, Ill.; 6533, W. A. Maynard, 1009 Chestnut avenue, Wilmette, Ill.; 6534, Carl Wm. Rudelius, 822 Second avenue, Rockford, Ill.; 6535, Guy Weaver, 199 Galena street, Aurora, Ill.; 6536, Frederick Barker, 414 North Court street, Rockford, Ill.; 6537, S. M. Woodruff, 725 Chestnut street, Rockford, Ill.; 6538, R. F. Stockdale, Jr., 839 Wilson avenue, Chicago, Ill.; 6539, Charles A. Haring, 2011 Geddings avenue, Chicago, Ill.

MEMBER DECEASED.

Eastern Division.—1941, Edward T. Brigham, East Pepperell, Mass. Mr. Brigham was one of the old members of Innitou Canoe Club, of Woburn, Mass., and was highly esteemed by all who knew him.

ASSOCIATE MEMBERS.

Mrs. Oscar J. West, Mrs. Carl Martin, Mrs. John McKay, Mrs. F. B. Coggin, Miss Charlotte Friese, Miss Elizabeth Friese, Miss Charlotte Mount.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

Nov. 7.—Adams (Neb.) G. C. H. K. Mitton, Sec'y.
Nov. 21-22.—Clinton (Ont.) G. C. J. E. Cantelon, Sec'y.
Dec. 2-6.—St. Thomas, (Ont.) G. C. W. J. McCance, Asst. Mgr.

1913.

Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.

Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.

July 8-13.—Cedar Point, O.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

Next fall, when the final figures are in and the Philadelphia Trapshooters' League is telling the winner, just see if the name doesn't sound like du Pont.

Five-man team from Orange Gun Club has challenged team from Freehold Gun Club to a match for State five-man team championship. Title now is held by Freehold. Orange holds individual championship, as well as two-man and three-man honors.

Mr. Elmer E. Shaner announces that "the places for holding the several handicap tournaments, the Grand American Handicap included, that will be directly given by the Interstate Association next year, will be decided upon at the annual meeting of the Association, scheduled for Dec. 5-6. Gun clubs desiring any of said tournaments to be held on their grounds, should make application on or before Dec. 1. Each trapshooting season numerous gun clubs signify their intention of applying for these tournaments, to be held under their auspices the following year, but they fail to send in their application, or wait until it is too late for the Association to take action on them. Why not do it now?"

W. G. BEECROFT.

Du Pont vs. Camdem.

WILMINGTON, Del., Oct. 26.—Du Pont got away with the gun to-day in the first shoot in the Philadelphia Trapshooters' League. The Wilmington aggregation put the ball on the huskies from Camden by a score of 460 to 424. Camden had twenty-one scores to draw from, while Du Pont lifted from forty-three, the rules of the game allowing selection of top ten shooters. Camden was well off form, based on last season's scores. Du Pont shooters were in fine fettle, the lowest ten qualifying being 45, while McHugh, topper for both teams, reduced to infinitesimal atoms 48 of the whirling der-vishes of clay. High cracker from Jersey was H. Greene with a bag of 45. Low Jersey man punctured on 40 of his allotment. During the shoot of the big guns, Linn Worthington worked a 20-gauge gun for 38 out of 50, while Ed. Banks, who because of his attachment to the pink sheet brigade, was ineligible to crack rocks in the match event, busted up 49 out of 50 and 98 out of 100, much to the annoyance of Les. German, who came along one behind.

Table with 2 columns: Du Pont Gun Club and Camden Shooting Assn. listing names and scores.

*W. L. Cross, H. L. Borden and Edward Holloway broke 40 each, but were counted out for the team on the tie.

Other Camden Shooting Association members scored as follows: W. Lippincott 38, H. G. Eisenhardt and J. B. Duncan 37, F. J. McConnell 36, Charles Good-fellow 27, L. Lichenstein 25, G. R. E. Dawson 24, and W. J. Moore, who retired at the end of his first string of 25, 9.

Du Pont Gun Club members who took part in the match, but did not qualify for the team were: H. W. Bush, W. M. Hammond, J. T. Roberson and J. H. Minnick 44; W. M. Armistead, C. H. Simon and A. J. Curley 43; Clyde Leedom, W. B. Smith, Jr., J. B. Grier, Stanley Tughton and R. S. Wood 42, E. A. W. Everitt, Thorpe Martin, L. L. Jarrell, N. K. Smith, Dr. A. Patterson and Dr. Horace Beets 41; R. F. Willis and W. A. Joslyn 40; Ike Turner, Dr. Steele, Walter Tomlinson and W. G. Wood 39; J. W. Anderson, Jr., H. T. Reed and P. K. McElroy 37; C. Mammele and Z. H. Lofland 36; W. G. Robelen and C. R. Kenworthy 31; T. E. Doremus 30; W. J. Highfield 23; Edward Banks 49; Lester German 48; Walter Huff 47; J. T. Skelly 43.

New York A. C.

COLD weather having driven the piazza fleet behind battened hatches and left empty porch rockers to be rocked by the November winds, the trappers at Travers Island timidly over-tured last Saturday to shoot up a few clays, as is apt to be the case when two or three trapshooters are gathered together under the left hind foot of Mercury. A take-home trophy event at 100 targets was decided upon for an opener. Handicaps were based on averages of the shooting last year. George Corbett was allowed four, but he didn't need 'em, as he turned in a net score of 94, the same being four better than his nearest neighbor. Tom McMahon and Doc. Culver, each of whom proved partners on 90. J. Stuart Blackton tried his hand at steering No. 8 shot at high speeding aerosaucers. He did pretty well for a tyro, netting 31 out of his 100, with 6 to his credit out of ten pairs.

In doubles, C. W. Billings came back to his form, cracking 16 out of 20, H. H. Shannon and Dr. Culver trotting a dead heat at 13. T. H. Keller, Jack Fanning and J. H. Hessian took care of the professional interests with their usual consideration.

Table with 2 columns: H. T. listing names and scores.

Ten pairs of doubles; scratch: C W Billings 16 T J McMahon 12 *H Keller 14 Dr De Wolf 12 *Jack Fanning 13 *J H Hessian 10 H H Shannon 13 J. S. Blackton 6 Dr Culver 13 *Professionals.

Ossining Gun Club.

OSSINING, N. Y., Oct. 26.—There was a practice shoot held on the grounds of the Ossining Gun Club to-day which drew a small attendance. Scores were low, Blanford being the only one in form. On Thanksgiving Day a Westchester county championship shoot will be held on these grounds during the afternoon. A team match between Peekskill, White Plains, Mt. Kisco, Ossining and possibly Mt. Vernon will be one of the features of the shoot. Two merchandise events will be included in the program of 100 targets.

Scores to-day at 50 targets each: C. G. Blandford 45, A. R. R. Wood 29, Wm. Holden 35, A. Bedell 37. Wood and Bedell shot with strange guns, which, in a measure accounts for their poor showing. C. G. B., Capt.

Orange Gun Club.

ALBERT IVINS, of Red Bank, essayed, last Saturday, to take from Ernest von Lengerke, of Orange Gun Club, the title of New Jersey State champion, and his essay came within two of being successful, when, after a match that was everybody's to the finish, von Lengerke kept the title with one aerosaucer to the good. His final score was 48 out of 50. The match was as interesting as the post season baseball game, and had to go the limit before a winner could be picked.

Four sweepstake events were shot, at 25 targets each. Ivins shot in two of these and got place in each. Event one went to Dukes, Colquitt and Von Lengerke on 23 each. Second to Dukes and Ivins on 25 each. Third event to Hopper on 25 straight, and fourth to Colquitt on 25 straight. Scores in sweepstakes:

Princeton Trims Dartmouth.

PRINCETON, N. J., Oct. 26.—While the Tiger eleven was putting the Dartmouth football squad in Hanovarian, the trap five of old Nassau was shooting the heads off the New Hampshire five over back of the green. The final score was 198 to 192, which, considering the advantage of home grounds, was not so appalling as might have been. High gun of the ten wore the green, being H. A. Stiles, who cracked 44 out of 50. Comstock, of Dartmouth; E. R. Simpson and H. R. Green, from Wilson's burg, tied on 43. Had L. C. Martin shot up to standard, the answer would have been different. He broke only 29. Scores:

Table with 2 columns: Princeton. Dartmouth. listing names and scores.

Independent Tournament.

SPRINGFIELD, Ill., Oct. 24.—The four-day tournament ended here to-day. Scores follow:

The preliminary event at 100 targets, shot on Oct. 21, had scores as follows:

Brown	82	Lewis	100
Ball	90	Eaton	94
Clegg	90	Hicks	89

GEORGE ROLL,

Third High Amateur at Singles—Post Season Tournament.

WINCHESTER

Red **W** Goods

WIN THE

**High Amateur Average For Single And Double Targets;
High Amateur Average For Double Targets, And High
Professional Averages For Single And For Double
Targets, For The Season Of 1912**

THE official returns for the trap shooting season of 1912 are now all in. The result was as the canvass indicated it would be. Winchester Red **W** Goods, by the run they made again proved, as they have many a time before, that they are the winning campaigners. There was no split or defection in the ranks of the vast army of intelligent shooters who used Winchester Loaded Shells and Shotguns. They supported them straight. There was no falling off in Winchester quality or popularity. The mid-season claims of some brands would make a political aerocyst green with envy. But the result—and the result is the thing that counts—shows another landslide for the old reliable Winchester Red **W** Brand. The self-proclaimed “world-beating”, “speed” candidate was snowed under by the world-beatingest, speediest combination extant, while of the contender of the ebon name naught was left save a cavernous flash-passage into which to withdraw.

And now for the official returns to which, in the language of the prevalent politician, “we point with pride.”

11 out of 13 Official Seasons' Averages

Out of the first 12 professionals in the Season's Average Contest for 1912, 9 used Winchester Loaded Shells, or Winchester Shotguns, or both. Some shooting, eh?

Season's High Amateur Average on Single and Double Targets: Won by Allen Heil of Allentown, Pa., with Winchester Loaded “Leader” Shells. Score, 933 x 1000.

Season's High Amateur Average on Double Targets: Won by Allen Heil of Allentown, Pa., with Winchester Loaded “Leader” Shells. Score, 260 x 300.

Season's High Professional Average on Single Targets: Won by W. R. Crosby of O'Fallon, Ill., with Winchester Loaded “Leader” Shells. Score, 1952 x 2000.

Season's High Professional Average on Double Targets: Won by Fred Gilbert of Spirit Lake, Ia., with Winchester Loaded “Leader” Shells. Score, 522 x 600.

WINCHESTER QUALITY WINS THE BIG VICTORIES

The 1912 Averages.

PHILADELPHIA, Pa.—Following herewith is the official Association list of amateur and professional averages for 1912, with names of contestants, total number of targets shot at, total number of targets scored and percentages.

The averages for amateurs in the single targets are based on the 800 single targets shot at from the 16yd. mark at the Post Season tournament, as per the Interstate Association ruling to that effect.

The averages for professionals in the single targets are based on a minimum of 2000 targets shot at from the 16yd. mark at the Interstate Association's Southern, Grand American, Eastern, Western and Pacific Coast handicaps, and the Post Season tournament.

The averages for double targets, both amateurs and professionals, are computed on the Interstate Association tournaments only, and they are based on taking part in two tournaments as a minimum, as per the Interstate Association ruling to that effect.

ELMER E. SHANER, Sec'y-Treas.

What Powder Will You Use In The Field?

When circulation increase is accompanied consistently with increased advertising patronage, when increases are constant instead of spasmodic, when contract advertisers renew as they do in FOREST AND STREAM, and individual advertisers increase their space, then, in truth, the publication looks right.

Full Speed Ahead

No "kick" to R. H. All the impelling force of the powder is where it ought to be—forward. Ordinary powders spend their force in a big explosion at the breech of the gun. R. H. burns progressively from breech to muzzle, giving tremendous velocity as the load leaves the gun.

is the only line of shot shells and metallic cartridges loaded with R. H. smokeless powders.

Prove for yourself that R. H. shoots further, gets there quicker and hits harder; buy some from your dealer and test it.

Send for our free booklet, "Facts About Our Shell Game," full of interesting information.

Maxim's Book—Free

Every Sportsman will be intensely interested in the new book I have just written. Ever since I invented the Maxim Silencer, my daily mail has brought me a shooting story. Hunters have told me of astonishing experiences shooting game with the Silencer. Marksmen have told me of surprising targets they have made. Military officers have related actual experiences on the field of battle. All these stories are in my book.

Write Me Today to Send You a Free Copy

You will enjoy every word and your eyes will be opened to the value of the Maxim Silencer in preventing report noise and reducing recoil.

Oct. 20.—There were twenty-three shooters who took part in the regular bi-monthly shoot of the Hudson Gun Club, on the above date. Event No. 2 was for the Du Pont trophy, with twenty shooters competing, and shows scores with added handicap. The best shot of the day was the old reliable Dave Engle, who managed to break 114 out of 125 shot at, with Carl von Lengerke a good second, falling short 2 targets of Engle's score, and which is going some at our traps. Jack Fanning was on the job this morning with a new gun which he was trying out, and his scores suffered accordingly.

Birmingham Gun Club.

THE class shoot and Alabama handicap of the Birmingham Gun Club was a most successful affair. The attendance was not up to expectations. The class shoot was won by John Fletcher in Class A. J. C. Broyles won Class B, Lucien Brown, Class C, and Wm. Dunn Class D. E. R. Holt was high professional.

The weather was windy and dark, consequently the scores are below the average. In the 100-bird handicap C. J. Broyles, the old veteran shooter and gunsmith, won out and received the sterling silver trophy, shooting from 19yds. He was closely followed by E. M. Cornwell and O. L. Garl. E. R. Holt was again high professional, he shooting from 23yds. J. K. Warren, for some reason, was shooting below his average. Mrs. Garl was also shooting badly, owing to her recent illness.

Class shoot, 100 targets:			
J Fletcher	92	Wm Walker	72
E R Holt	92	J De Jarnette.....	72
J K Warren	91	P B Plummer.....	72

High Gun

AT DENVER, 1912
HANDICAP, SEPT. 10-13

Mr. R. H. Bruns, shooting his
LEFEVER

made the marvellous run of
283 without a miss.

On the 700 single targets, including handicaps, Mr. Bruns scored **683 out of 700.**

The second day of the tournament on the day's program of 200 targets, Mr. Bruns and his Lefever gun scored **200 out of 200.** A world's record for ten traps.

On the 500 single 16-yard target for amateurs, Mr. Bruns scored **494 out of 500.**

ANOTHER WINNER AT THE PACIFIC COAST HANDICAP

Mr. L. H. Reid, shooting his Lefever gun, won second high average with **381 out of 400.**

Why don't you shoot a LEFEVER?

The
Autoglas

The BEST Eye Protector for Shooters

WITHOUT rims, hinged at the center, it is neat and inconspicuous. Conforms to the contour of the face; excludes wind as well as dust, and at the same time affords *absolutely unobstructed vision.* Temples covered with composition of silk and cotton makes them easy on the ears. Lenses either amber color or white. Price, \$5.00, or with wearer's corrections, \$9.00.

Any Optician, Sporting Goods, or Motor Supply House can equip you. If they haven't them, write to us. We'll see that you get them.

Over 12,000 now in use.

F. A. HARDY & CO.
750 Silversmith Bldg., CHICAGO, ILL.

Indianapolis Gun Club.

EIGHTEEN men faced the traps of the Indianapolis Gun Club on Oct. 26 under sunny, autumn skies and conditions which generally promise or warrant class performance. But with one or two exceptions the results were otherwise. Parry led in the practice event with 92 per cent., and Wilson, at 16yds. won in the spoon contest at 50 targets. The scores:

	Practice.		Spoon Handicap.	
	Shot at.	Broke.	Yds.	Total.

Jersey City Gun Club.

JERSEY CITY, N. J., Oct. 26.—Fifteen shooters were out at the regular Saturday afternoon shoot of the Jersey City Gun Club to-day, and while competition was keen, a strong wind blowing across the meadows kept the scores unusually low. Dave Engle was high again to-day with an average of 81 per cent., and North and Dixon tied for second honors with 80 per cent. each. The scores follow, strings of 25:

Engle	18	19	23	21
Lawton	11	17	12	12	18
North	19	19	24	20	19	18	22
Summerfield	4	7	9	4	3	7	..

Blow	16	17	10

SECRETARY.

Smith Gun Club.

NEWARK, N. J., Oct. 26.—The first of five shoots to decide the winner of a handsome gun, donated by a member of the Smith Gun Club, was shot off this afternoon. On the second Saturday after the monthly prize shoot the gun is to be shot for five successive months. Each shoot is to be at 50 targets, and the man with the three highest scores wins the gun. To-day B. M. Shanley, Jr., led the field with 41 breaks to his credit. S. Thornton came in second with 39.

In addition to the gun event, sweepstakes were indulged. The following scores were made:

Events:	1	2	3	4	5	6	7
B. M. Shanley, Jr.	21	22	23	22	24	24	41
J. T. Pryor	16	14	18	20	36

Plattsville Gun Club.

PLATTSVILLE, Wis., Oct. 20.—A hard rain cut down our attendance at the trap to-day. The following scores were made at 50 targets per man: B. H. Doescher 47, A. E. Gilmore 35, Pete Karrmann 35, Bridges 36, B. Karrmann 28. T. A. BRIDGES, Sec'y.

1952 x 2000, or .976 %

This score was made by the "OLD RELIABLE" PARKER GUN in the hands of Bill Crosby, again demonstrating to the shooters of the world that the PARKER GUN makes the highest scores.

The above mentioned score won for the PARKER GUN and Mr. Crosby the Professional Season's Average for the year 1912, and was completed at the Post Season Tournament, Cincinnati, O., Oct. 15-18, 1912.

The PARKER GUN also won the Amateur Average for the tournament.

Buy an "OLD RELIABLE" PARKER GUN, and improve your scores.

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips.

The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and Game. All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

Consider who the people are who naturally care for FOREST AND STREAM, and then consider whether your advertisement should be in it.

No Shortcomings

The Smith Gun has no shortcomings—not one. The 6 Hunter brothers, with inventions, precision, workmanship and experience, kept after shot gun shortcomings for 22 years, until they had wiped out the last and least important one.

"6 Times 22 Years Experience" gives the shooter of a Smith Gun the fullest possible pleasure in the field, and the maximum game in his bag.

Ask your dealer to show you the new L. C. Smith 20-gauge. Send for Catalog.

"DEAD SHOT"

A powder that is the fraction of a second slow often makes you miss your bird. America's best wing shot uses "DEAD SHOT" because it gets to the object with great velocity. The Great American Handicap Trap Shooting Event, which required quick shooting and a quick powder, was won by W. E. Phillips, of Chicago, with DEAD SHOT exclusively

Bear this in mind, you amateur sportsmen who only take the field occasionally. Maximize your chances by telling your dealer that you want shells that are loaded with "DEAD SHOT". Remember also that DEAD SHOT has the lightest recoil and you won't come home with your shoulder hammered to pieces. All the leading shell makers in the world load with DEAD SHOT, and you have only to ask your dealer for "shells loaded with DEAD SHOT".

Amateur sportsmen unaccustomed to the swift flight of grouse, prairie chickens, partridge, quail and duck, need a swift, smokeless powder like DEAD SHOT to make a fair average on a day's hunt. Your dealer won't argue with you. He knows the merits of DEAD SHOT. So does every successful hunter in America.

TRAVEL AND COLONIZATION.

Continued from page 554.

disregard for the Bhuddist law, which forbids the taking of life, were spearing fish. They were rather clever at this; in one hand the poacher carried a burning brand, while with the other he wielded a six-foot bamboo, whose "business end" was split into a dozen sharpened points, splayed out with a twist or two of creeper. The shallows were populated with shoals of fish resembling lythe, which ran about a quarter of a pound. The men waded deep and then advanced in line, holding their torches low; the fish upon which the primitive leister descended was either impaled or wedged safely between the points. The men made a basket of ten or a dozen, which their more orthodox companions helped them to eat. Burmese cookery is an infant science; the men did not trouble to clean the fish, they ate them half roasted among the embers, and made no complaints about the adhering sand and ashes. The Burman is not discriminating in gastronomical matters, and will eat most things. He recognizes no difference between the meat of an animal which has been killed and that of one which has succumbed to old age, accident, or disease; and he cherishes an unlovely affection for items of the interior of a dead cow (mule or pony), which civilization in its prejudice discards. Some years ago the sanitary authorities of a certain station in the Lower Province were much disturbed by the discovery that the guileless villagers were obtaining supplies of meat from the place of burial set apart for defunct transport bullocks and mules. Parties used to visit the ground at night with mamootes and dahs, disintomb any recently buried carcass and cut it up on the spot. The Burman has no opinion of any sanitary precautions, and

Central States Field Trial Association.

THE annual trials were held on Oct. 23 and 24, on grounds near Hamilton, Ohio. There were two stakes, derby and all-age, with \$100 purse guaranteed in each, divided 40, 30, 20 and 10 per cent. The derby stake had eighteen entries and 15 starters. The all-age, fourteen entries and ten starters. Mr. Willard Smith of Petersburg, Ind., acted as judge, handling the derby stake alone, and having the assistance of Mr. Nick Daniels, of Dayton, Ohio, in the all-age. Weather conditions were good during the two days of the trials. The country was quite a birdy one, and nearly every dog in the two stakes had an opportunity to show his quality on game. Babblebrook Joe, the all-age winner was the winner at Carmichaels, Pa., trials. He showed good field trial class, and the ability to handle game. Babblebrook Bob, the derby winner, is a promising youngster, with good speed and range, and plenty of bird sense. Both dogs are by Mohawk II., and are owned by Louis McGrew, of Pittsburgh, Pa.

SORGHUM CAKES PRAISED ABOVE BUCKWHEATS.

PEOPLE who are fond of buckwheat cakes are reminded that something at least equal, if not superior, to buckwheat is a flour made from sorghum seed. The editor of this paper has tried the battercakes made from cane seed flour and knows whereof he speaks. Indeed, a gentleman who was considered a connoisseur on matters culinary tried the cakes at the same time, and he said it was superior to buckwheat any time. Now that cane seed is a plentiful product we should like for some of our people who are fond of good things to take a bushel or two of the seed to his miller, have some of the flour made and then have his wife make some battercakes.—Hazel Green Herald.

TRAVEL AND COLONIZATION.

Continued from page 576.

the closing of what the people no doubt regarded as an excellent and cheap source of meat supply caused much unpleasantness.

My lamp had come to grief that morning, so there was nothing to stay up for after the digestive cheroot which follows dinner, and which may as well be smoked in bed as out of it. I have often slept on the ground, but the practice is not to be recommended; and as an ordinary low camp bed does not raise one above the influence of miasma, that piece of furniture was left behind, and the men constructed for me a bamboo framework to which my waterproof sheet was laced, forming a roomy hammock, fully five feet from the ground. Mounq Gye once volunteered to make me a bed, and, receiving encouragement, spent a day over the task, detaining three beaters to help him. The result reflected credit upon his ingenuity and capacity for taking pains, but scarcely accorded with European ideas. He took a coffin for his model and with infinite labor, built of split bamboos a long box which he left open at the end, so that I could wriggle in. It was so carefully made that the air was practically excluded, and I might enjoy to the fullest the not very exhilarating odor of fresh cut bamboos. I slept on the top of the box by way of compromise; and can recommend a bamboo mattress as much superior to any known device to stimulate early rising.

There is no hardship in sleeping under the stars in the jungle when the weather is fine, but one does feel the want of a tent when it is time to get up. It is dark, but the owls are silent, the cricket's shrill song has died away, and the world is very still. Dawn is at hand, and you lie fighting against the sleep that drags at the eyelids, for you have arranged to start very early for that valley a mile away, where the gaur comes before daybreak to feed on the juicy khine grass, whence he retires to the hills when the sun first touches the highest treetops. A chilly wreath of mist is eddying ghost-like along the choung as you throw back the blankets, and, shivering in pajamas, swing yourself down on the sand in search of the clothes you stowed on the camp chair under the bed last night. My guns always sleep with me, to avoid risk of damp. They are not the bed-fellows one would choose to share a slack hammock, or even their flannel-lined canvas cases, they seem to be all hammers, which dig into one's back, knees, shins—any spot upon which they may press themselves on your attention. Once on the sand, the sooner you dress the better, for, if you don't, the one solitary advantage in getting up in the dark is lost. Rise after daylight, when the men are waking up, and if you are a modest man you will learn what it feels like to blush on a really large scale. The Burman is polite and amiable, but his code of etiquette omits deprecation of personal remarks; he has also a very fine eye for points, and by the time you get your coat on you know what a horse may be supposed to feel when the judges have done with him in the show ring.

The man who sends his shikari out to look for spoor, and waits in camp till it is found, loses half the fun of the game, to my thinking. It may be the natural perversity which has so

often led me astray in this vale of sunshine and occasional tears, but I confess to a preference for sharing the tracker's work from the very beginning; whence this painful early rising. Down in the deep, often precipitous, valleys among these hills the bison—to give him his popularly inaccurate name—seeks his breakfast in the tall fleshy grasses which clothe the bottoms. He bites it off a foot or two above the ground, and eats the juicy stems as he wanders along. As daylight approaches he turns his head to the hills and moves off, picking a stem here and another there. The severed stem quickly oxidizes, and you soon learn to tell by the degree of moistness and discoloration how many minutes have passed since it was bitten, and that is the beauty of this kind of tracking. When you find a stem still oozing and without a shade of brown to rust its whiteness, look out, and keep your ears open. When the gaur has breakfasted he makes his way by the shortest path—a well-trodden track it is, usually—to some favorite resting place high up, in cover more or less dense, where he spends the heat of the day in meditation. He is too wary to be said to sleep, so far as my experience goes, though a Karen tracker did on one occasion take me fairly up to a big bull lying down. That I had two shots and had to leave him wounded is a circumstance which pertaineth not to this discursive tale.

PRACTICE ARCHERY SCORES.

Continued from page 567.

course in law, he decided that the East was good enough for him, and he did not return to the wild West. Alone, he opened an office in the Hub, and has become a successful attorney. He has a beautiful home in Newton Centre, and is president of the Board of Aldermen of the city of Newton.

Mr. Gray's rise in archery has also been rapid. He became a member of the National Association in 1910, when he knew nothing about the sport. At the next annual meeting he was chosen secretary-treasurer, and so satisfactorily did he perform the duties of the office that this year he was unanimously elected president of the association. He has also become a good shot, and we believe that he and Mrs. Gray will be strong contenders for the championships next year.

Burton P. Gray, Jr., has an archery outfit, and is shooting well for a lad of ten.

Property For Sale.

A RARE INVESTMENT Safer than Bonds and Mortgages

Four hundred and eighty acres of beautiful level land in Keith County, Nebraska. Rich black loam, six feet deep, which produces all kinds of big agricultural crops. Forty bushels of wheat to the acre, and all other crops in proportion. These lands are located eight miles from the county seat, and six miles from the thriving, bustling town of Brule, on the main line of the Union Pacific Railroad. The town has church, high school, hotels, all kinds of stores, grain elevator, etc., etc. I will also sell 160 acres adjoining Brule, fronting on the Union Pacific Railroad, under cultivation, with all improvements. The climate is unsurpassed for all lung or throat difficulties. Elevation, 3,200 feet.

For terms and particulars address

E. H. BARTON, 32 Bank St., Batavia, N. Y.

ATTENTION SPORTSMEN!

For Sale—About 400 acres of fine open land that has not been in cultivation for several years, and well stocked with partridge and other game. Situated four (4) miles from Ridgeway, S. C.; three (3) miles from Blythewood, S. C., on Southern Railway, and twenty (20) miles north of Columbia, S. C., in a beautiful rolling country and an ideal hunting section. This place has seven cottages, fine drinking water, together with several streams running through the place, and would rent for sufficient to pay interest on the investment. Privilege could be secured on 1000 or more acres at a very reasonable price for hunting purposes. Price, \$20.00 per acre. For further information address

R. T. FEWELL, Rock Hill, S. C.

FOR SALE—Four thousand acre farm; 500 acres cleared; balance has good growth of pine and gum timber. Fifteen-room dwelling, with out-houses. Located in eastern North Carolina, just half-way from Newbern to Morehead City, on Norfolk Southern Railroad, and on National Highway, in heart of the trucking section. Good fishing and hunting, especially quail shooting. Price, \$7.50 per acre, with terms.

Wadesboro Loan & Insurance Co., Wadesboro, N. C.

DUCK SHOOTING.

Chicopee Falls, Mass.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By **GEORGE BIRD GRINNELL**

(New—Just Published)

This companion volume to “American Duck Shooting” treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter “Aids to Shooting” describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK CITY

PORPOISE FISHING.

A FRIEND of mine, says Dr. H. A. Lawton in the New York Sun, who has done much fishing told me once never to go after porpoise, because, he added, porpoises when wounded cry like human beings, and until my dying day I would feel as if I had slain one of my own kind. But I was out with a man from Cleveland, who, when he gets after fish, has no mercy.

Well, we were off Key Largo, when we started into a blind creek to get loggerhead turtles. Ketchel, the guide, who was on the lookout, suddenly turned and said, "If you want some sport I can give it to you. There goes a bunch of porpoises up that blind creek. It is shallow water, and there is no way for them to get out except by passing us." Well, I didn't want to hunt porpoises, but my friend was cager for it, so I gave way.

When the school of porpoises realized that our boat was between them and deep water they started back. There were probably twelve in the lot, and as they rushed by Ketchel sank his harpoon into a little calf. It towed us along like fury. But the bull and the mother of that calf put up the most pitiful fight I ever saw. I begged Ketchel to cut the rope and let the calf go, but my friend wouldn't have it. You know the porpoise is a mammal, but I did not know it could be so attached to its young. They fairly flung themselves out of the water. The bull stayed by the calf, but the mother jumped over and dived under it, bit at the rope to which the harpoon was fastened, and as her head came out of the water she made noises that were like awful human groans. Once the mother turned at the boat and jumped clean over the bow, narrowly missing Ketchel. If she had hit him he would have gone overboard sure, and the things were enraged to such a point they would have undoubtedly attacked him. The mother tried to tip our little boat over, and Ketchel had to beat her over the head with an oar to keep her away. Well, that battle lasted half an hour, the other porpoises trying to release the calf. Then the poor calf gave up the ghost with a real groan and the mother kept sobbing pitifully. Finally Ketchel took a machete and sunk it into the calf. There will be no more porpoise hunting for me. It's too near cruelty.

BIG PACK GIVES CHASE TO DEER.

BARRE, Mass., Oct. 16.—The Brunswick Foxhound Club opened its all-age field trials to-day at the Kneland farm with sixty-five dogs in the pack. This beats all previous records as to number. To-day's sport could not be properly called a fox hunt, but rather a deer chase which was fast and exciting.

There was nothing spectacular about the getaway, but it was a pretty picture, as the dogs started out in search of a fox. There were foxes a-plenty, as several hunters reported seeing them, but the stronger scent of the deer attracted the hounds when they had reached a place known as The Steps, which is a ridge just outside of Barre.

Nearly the whole pack took up the trail at this point and drove the deer for eight miles toward Hardwick at a fast clip which changed from a drive to a race.

Those on foot were soon out of the running and the mounted hunters were obliged to use the spurs to keep up with the pack.

There was a fine race through brush, over rocky plains, up and down valleys and then up and down hills again. The hunters who used automobiles to follow the hunt covered from thirty to fifty miles and some more in following the hounds.

About three-quarters of an hour after the getaway Dr. A. C. Heffenger sighted a big fox in a meadow about 150 yards off the Hardwick road. About six stray dogs came across the trail and gave a fine drive toward the west and were soon out of sight and hearing.

An hour afterward a pack of dogs got track of a doe and gave chase toward Poverty Hill, where they were joined by the big pack of

about fifty hounds. The chase was up the side of the nearby hill, which is the highest point in the town of Barre, and then down the Hardwick side. The deer succeeded in escaping by plunging into a pond formed by Muddy Brook.

After the deer trail was lost the hounds circled around the hill, worked hard to get back on the scent. An hour later a pack of about forty dogs was seen racing a doe and a buck in the hill region to the west. The animals were in plain sight of several hunters and gave some fine exhibitions of high jumping.

The hounds pressed the deer hard which headed for another pond about three miles from Hardwick. Both the doe and the buck jumped

a wall and plunged into the pond. The doe circled the pond two or three times. One of the hunters threw a stone at the animal to frighten her out and she came ashore and hid in the bushes, the hounds being unable to find her, she did not move until their baying could be heard in the other direction.

It costs lots of money to build a business. Every dollar applied to expense account must do its duty. Manufacturers of sportsmen's goods must attract the people to their goods. To do this, they use FOREST AND STREAM because it is "the one magazine for every sportsman."

For The Convenience of FOREST AND STREAM Readers

“My Guide Ephraim”

By ALBERT M. BIGELOW

Photographs by W. S. Bellis.

SOME years ago on reaching one of the well-known Maine fishing resorts a little after the early arrivals in September, I found the house nearly full and all the available guides engaged. As the fishing there was all to be done from the bow of a canoe, I agreed with the house manager, Barnes (his name was not that, but we will call him Barnes), when he said: “Wall, you got ter hev a guide,” and I was pleased to have him, “and ef you’ll git inter the waggon ’th me, we’ll go and hustle one up down t’ the village.” Arriving there he said: “There; see that big feller standin’ over there in the tavern door? He’s a good guide. He’s a pretty good bragger and he’s fond o’ whiskey, but he don’t git drunk, and he’s a good willin’ feller and a good fisherman. His name is Eph Barker.” I said: “He’s just the man we’re looking for. If he’s a good fisherman I’d like to hear him brag sometimes, but I’ve only a smallish flask of whiskey, and I suppose I can’t get any more in this State of ‘no license.’” I looked at Barnes. He didn’t say anything, but looked off at the distant sky. An experience which I will mention later, in the matter of getting whiskey there, recalled that look to my memory.

We called Ephraim. His name was not really Ephraim or Barker, and so we put the misnomer fiction on Mr. Barnes as aforesaid. “Ephraim” was a red-faced, stout-bodied “spirit of good humor.” He was soon engaged, and before morning he was up at Barnes’ getting things ready to meet me after breakfast. Some of the guests whom I had met elsewhere told me that I had come to the poorest fishing “ever,” and that there hadn’t been a fish on the table for more than a week. When I mentioned this to Eph, he said: “Oh, I’ll git you fish all right. I c’n alwers git ’em. I c’n put you right on top of ’em.” So we pushed off on the lake. Surely enough, he did put me on the fish, and we had taken fifteen or sixteen when he said in a reflecting way: “Mr. ———, I think you’re a putty lucky man.” I had been flattering myself that it was more skill than luck, so I said: “Why so, Eph?” “Wall, haow you happen to git me for a guide?” This was his first specimen of brag, and not a bad one. “Do you always bring luck, Eph?” “You bet. The boys all think tain’t no use to go for moose unless Eph Barker goes along. They’ve learned that. Now, I know all the places for fish, and I’m gonter tell you somethin’. I don’t like all the other guides to know what I know about the places to get trout; big

ones, too. The other fellers are always a-watchin’ me tryin’ to find out. I’m goneter take you to a place that I don’t want you to talk about.” So he took me to a fine looking pool and said: “Now, I’m goneter leave you here on this rock, and I’m going up on the side hill to keep a kind-a-watch-out for these other guides who’re always tryin’ to get on ter my pools.”

I thought him very suspicious, but as at my first cast I hooked a fine fish that afterward proved to weigh four and a half pounds, I didn’t find any fault, especially as soon after that I took another weighing four and three-quarters.

Eph suddenly appeared with the canoe and said: “We’d better be gettin’ along back now; I know another good place. You’d better kind o’ put your rod down so’s not to let any ’f the guides we’re likely to meet think we’re fishin’; only kinder lunchin’ or suthin’.”

After getting a little distance away from where we had been fishing, we began fishing along back. The fishing proved very good, but the weather was pretty bad. A September fog and rain. I pulled out my flask of whiskey. It

acted on Eph’s eyes like a magnet. They were glued to the flask for a second. With a strong effort he closed them and then opened them on the distant landscape and waited. “Eph, will you have a drop?” “No sir No whiskey for me. I tell the boys here that they’d be a good deal better off if they’d let whiskey alone. I don’t believe in it.”

About a minute’s silence (surprise caused it on my part). He was waiting for me to say something. I didn’t speak, so he did, rather hesitatingly. “Sometimes—waal, *sometimes*, it ain’t bad as a medicine, when a man’s cold or wet; it kind o’ prevents trouble in bad, rainy weather—say, waal, something like to-day.” And his eyes had got around to the flask again with a very interested expression. I handed the flask to him. He turned out and hastily swallowed a good big drink. “That ain’t bad whiskey. Didn’t git it around here, I guess.” That was the last temperance lecture I ever had from Ephraim.

When we got to the camp that afternoon our catch, which was sixty-four fish, including two weighing over four pounds each, there was much

ROCK RIVER CAMP IN THE ADIRONDACKS.

surprise, as it was the first good catch of the season. But I found out by accident that the pool where I got the large fish and where Eph watched from the woods, because as he said he was afraid some other guide would learn of his good places, was forbidden fishing, and was illegal. I was very angry and expressed myself very decidedly to Ephraim, who said: "The' ain't no sense closing the fishin' there, anyway," but I told him that any other such guiding on his part would end our relations, etc. When he really appreciated the fact that I would not have any illicit fishing and was really on what seemed to him such a low level of technical morality, he yielded to it, and was, so far as fishing was concerned, a very satisfactory guide, and he was full of entertaining woods companionship.

His interest in the whiskey, as to which his prescription was very liberal, and which he found so very beneficial as a medicine, rather developed as we went on. It rather "devil-upped" on the night after the first day's fishing, and this is the story of it:

I had a room over the "office," which was the sitting room of the guides and others, and the stove pipe from the stove there came up through my floor and made audible every sound in the room below. The guides were laughing and talking down there after I was in bed, and I was amused to hear Ephraim say to the others: "Say, fellers, my old man's got some of the best whiskey you ever smelt. His flask's in his coat pocket, and he hung it right up here 'n the office. Won't you hev some?" And I heard him get my flask and they had their drinks. It was all I had, and I laughed as I thought Ephraim would have to ride on the "water wagon" for the rest of the way.

In the morning, after breakfast, as he and I went down to the canoe to start off on our morning's fishing, I waited for him to bring my

overcoat and—perhaps, say something. As he came down toward the canoe he appeared to suddenly think of something, and said in a kind of reflective way: "Why, what ju do 'th your coat last night? You didn't leave it 'n the office, did ye?" "Did I, Eph?" "Why, you did; but you didn't leave your whiskey in it, did ye?" Pulling out the flask, he said: "Waal, you did sure, and it's all gone. Now, I tell yer what 'tis, you can trust us guides with money or anythin' like that, jes' as well as you kin any bank, 'n better, too, 'n some of 'em, but if you kin o' leave whiskey around or a few flies, why we sort of think you mean for us to help ourselves. We wouldn't do nothing bad, anyway." I said: "Well, Eph, of course we can't get any more in this State, can we? So we are in for 'total abstinence' after this. His face lighted up a little as he said: "Waal, no, of course it's hard to git it—but I'll tell ye, if you go down to Barnes's and say you ain't very well and need some whiskey." "Oh, I'm well enough, Eph. I don't need any." "Waal, you say somethin' kin' o' like that, anyway, 'n then he'll look 'round a little 'n say it's again' the law 'n he can't sell none to nobody, 'n then 's he's lookin' around he'll see suthin' up'n the cubberd 'n say, 'What's this! I d'know! Why, here's a couple o' bottles! Must be on the way up to Si Smith's camp, but I guess they ain't in any hurry for it. You can take this, and I can kin' o' fix it up with 'em some way when they come down.'"

So I went to Barnes and the scene worked out exactly as rehearsed, and I recalled Barnes' look at the distant sky when he took me down to the village to get Ephraim as guide and something was said about the difficulty of getting more whiskey in the "Prohibition State" of Maine.

Ephraim didn't ride on any "water wagon" that season. There was always a package of something in that "cubberd" which proved to be bottles of "suthin' or 'nother" on the way in to Si Smith's camp, which they weren't in any hurry to have sent in to them.

Well, Ephraim was a good guide, a keen-eyed fisherman, and he took a natural pride in his judgment as to places where a trout would be and where he would not be, and he always watched with interest to see how and just where the fly dropped on the water.

I remember once his paddling me through a fine winding stream and my seeing an inviting deep and dark looking pool by a big rock and my saying: "Slow up a bit, Ephraim, there's a place for a big one." He did slow up slightly, but said: "'Tain't no use o' tryin' there. No fish in it this time o' year." As he spoke a fine big fish came up with a splash and took the fly, and Eph finished his remark by adding, "Unless 'tis now and then a scatterin' one." I had much enjoyment in getting a "now and then scatterin' one" in the pools he didn't believe in. He used to let himself down by saying: "Waal, this weather 's darn queer that the trout git into places where gen'ally you can't get 'em in September, but you kin get 'em in May well enough." "All right, Eph. I like the scatterin' ones best. I don't care so much to fish in schools. I am willing to get the only one. The scatterin' ones are often the largest ones."

Eph was a good guide for the fishing. There is a great difference between having a guide who has a "natural" love of fishing and enjoys it

UNCLE TOM SOLOMON,

The "Grand Old Man" of Dun Brook, Eagle River, Rock River and Beaver River. Famous as an Adirondack guide in late forties and up to 1895. Born 1825; died 1911.

and appreciates any skill in the angler, and one who works only for his pay, and is always willing to get away from the midst of a good fishing to dinner or supper. He was eager as to the fishing and an excellent canoe paddler and poler, and knew with a fisherman's instinct all the waters of the region. I was very glad to have him for several seasons, and liked him better the longer I had him. He was a good cook, and when we found it necessary to have our meals off in the woods, his coffee, his fried trout and his potatoes roasted in the ground under the fire, and his cakes (or flapjacks) were all fine and memorable. He always displayed also a fine zest in partaking of all the repasts.

I remember when once he was coming to the end of an eager and industrious performance in breakfast eating, he said in a sort of self-excusing way: "Waal, breakfast is my principal meal." Feeling my eyes upon him, he added after a second or so: "Waal, unless it is dinner, sometimes when I've done a good deal." He still felt my eyes fixed on him and so he further added: "Waal, supper tastes kind er good, and don't seem to do me no harm." Then he felt that my eyes were being taken off, and he laughed and said as he patted the neighborhood of his stomach: "Waal, there is suthin' real kin' o' ree-storin' about vittles, anyway, ain't there?"

Eph was a good guide and a good woods companion, as I have said. When I go down there again, expecting to have Eph join me there, I shall take with me a liberal prescription of his medicine dose, and I shall go prepared also to hear some more of his interesting accounts of his experiences and to stretch my mind to the extent of his narrations.

I think Ephraim's stories did not all task credulity to the limit more than others I have

DICK BIRCH NOW AT INDIAN LAKE,

A famous Adirondack guide in late forties and up to ten years ago. Still does a little trapping. Born about 1828.

listened to, but when some of the extremest of them ended up with the proof that "Old Bill Sampson was right there with me all the time. He uster like to tell about it, allers. He died two or three years ago," he knew by my looks and my silence that I was inwardly relegating his story to fiction, but he smiled, as he knew that I could not convict him in the absence of a witness. This was the case on one occasion when he showed me his big silver (or pewter) watch and said: "She's a putty good ticker, ain't she?" I didn't disagree with him, and he proceeded with his story. "Four years ago last November I lost her off in the woods when I was after moose. There was considerable snow that winter, and the next summer I couldn't go back there, though I knew putty well about where I lost her. The next winter the snows was heavy and stayed all winter, and no lumberin' was done there, and I couldn't get in there till 'long in November that year—two years ago now, almost, when I was in with a feller after moose, and by gum, I found her right where I must ha' dropped her, but I never would have found her if I hadn't heard her tickin'."

He looked off at the mountain with a set expression which seemed to say, "If you think I'm goneter believe them stories of yourn about houses forty stories high in New York, you got ter believe about my watch."

All I could say to him was: "Well, Eph, you are just as good a ticker as your watch is. I may not be here for a year or two, but I certainly expect to hear you ticking when I do come." And I would be sorry to miss his kind of "ticking" in the woods.

HIS INITIAL BAG.

The Hunters.

A HUNTER popped a partridge on a hill;
It made a great to-do, and then was still.
It seems (when later on his bag he spied)
It was the guide.

One shot a squirrel in a nearby wood—
A pretty shot, offhand, from where he stood.
(It wore, they said, a shooting hat of brown,
And lived in town.)

And one dispatched a rabbit for his haul
That later proved to measure six feet tall;
And, lest you think I'm handing you a myth—
Its name was Smith.

Another Nimrod slew the champion fox,
He glimpsed him lurking in among the rocks.
One rapid shot. It never spoke nor moved,
The inquest proved.

A "cautious" man espied a gleam of brown;
Was it a deer—or Jones, a friend from town?
But while he pondered by the river's rim
Jones potted him.

The Old Guard

By GEORGE WESLEY BEATTY

Editor Forest and Stream:

IT is so many years now that I have read FOREST AND STREAM that I am rather timid about looking backward and counting up for fear of knowing just how much the years are holding against me.

More and more am I impressed with the writings of the Old Guard—men who have moved up—men whose writings enlivened your pages and carried the scent of brine, the dank odors of the forest and the fragrance of the camp-fire into thousands of homes. Those men of sterling worth, who lived at a time when this country was in its glorious infancy—its childhood, its spring time, when the antelope, the pigeon and buffalo were still among us, part of us—have left behind a pleasant savor, a lasting memory; unconsciously molded us and now are their silent hands pointing the dim forest aisles and presiding at our camp-fires.

As I see the names conspicuous by their absence I am moved to dedicate this little verse to them—your friends, my friends, our friends, humanity's friends.

They told through FOREST AND STREAM of a time in this country which can never be repeated in the history of the world—the antelope, pigeon, buffalo and red man have passed away to be seen no more forever. Let us, therefore, keep their memory green as they did, the days of long ago.

G. W. BEATTY.

The Old Guard.

BY GEORGE WESLEY BEATTY.

OUTSIDE, the sleet is driving,
And the night is cold and drear,
And the wee sma' hours are gliding
Toward the closing of the year;
And the fire snaps and crackles
Up the chimney in the dark,
While the window casing rattles,
And the flying of the sparks
Work a secret spell about me
As I sit here in their glow,
Showing faces I no longer see—
The friends of long ago.

* * * * *

Coming faintly in my vision
From their home in the beyond—
Faintly, dimly from the region
Of the Happy Hunting Ground—
While their hands outspread in greeting
To their friend of years ago—
Brings to memory, so fleeting,
Forms and faces that I know.
There is Nanit and Recapper,
And Du Bois and Mont Clare, too,
Neddie Buntline, trim and dapper,
And Will Wildwood, good and true,

And Vaux (Dot) and Kephart sailing
Close by Ike McClelland's side
With his rhythmic pages telling
Tales of old Long Island's tide.
In the distance, shining brightly,
Shows a star of wondrous grace;
Who can that be, formed so lightly?
Ah, I know the smiling face,
'Tis the form of fair Na-tah-ki,
Waiting for her chief to come.
You have won our hearts, Na-tah-ki;
Keep them with "The Old Man," "Sun."

* * * * *

In ten thousand hearts your home is,
At their hearthstones you preside;
There, unconsciously you teach us

Love, devotion, side by side,
Moving in the distance dimly,
There I see another form,
Moving in the haze that thinly
Cloaks the lake at early dawn,
With his duffle stowed in tightly
In the dainty Sairy Gamp,
And as ever "going lightly,"
Nessmuk making up his camp.

Then I see another member,
Who had once a tale to tell,
And my heart will e'er remember
What he told, and, ah! how well!
Scented with the prairie grasses,
Mesquite, palo verde and sage,
Buffalo and Indian passes,
Till the very living page
Trembled in our eager fingers,
Trembled in our hearts, and so
There the memory still lingers
Of dear Cabia Blanco.

* * * * *

Major Mather stands among them,
With his fly-rod lightly poised;
Jacobstaff and Hallock, men
Whose sentiments are voiced
By the thousands that come after,
And in tales of yesterday,
Brimming o'er with joy and laughter,
Speeding us upon our way.
Harris with his mighty tarpon,
And his tales of fishing lore,
Hand in hand with old Ike Walton,
Heart of youth and head of hoar.

Ahwahsoose and Yo and Henshall,
Some of them are with us now,
Ready to report and marshal
In the land beyond the snow.
Soon the "call to arms" will send us
Clear across the Great Divide,
Where with waiting arms to greet—thus
Stand the "Old Guard" side by side.
Deal thou gently, Time, in passing,
Let your hoar-frosts fall like snow,
May our pleasures be long lasting,
Till we hear the call to go.

* * * * *

Then in that great Land of Glory,
May we cut the "Old Guard's" trail,
Drain our brimming cups of story,
Tell again the wondrous tale;
There the antelope and bison
Live, as once we saw them here,
And the glowing red horizon
Shows the stately standing deer.
There we find rejuvenation,
There our arms will never fail,
In that Land of jubilation,
Hail, dear Old Guard! Hail, thrice hail!

Wyoming Notes.

JELM, Wyo., Oct. 25.—*Editor Forest and Stream:* I have been in the timber of late and got a good many grouse, but am anxious to get pictures to accompany an article. One has no difficulty in getting the birds, but photo supplies take a long time to get to this neck of the woods.

The last few days have been unusually severe for this time of year, and at the present writing the snow is waist deep to a tall Swede. It looks very pretty in pictures, but we get a trifle too much of its fluffy purity out here to suit me. It's good for the hay crop, but I don't eat hay if I can possibly avoid it.

R. W. RATHBORNE, JR.

A Vacation in the Adirondacks

By ELSIE SCHNEIDER

Photographs by the Author.

WE left home on the evening of the second of August, and after a journey of more than a day, reached the Mecca of the East, Lake Placid.

The next morning we were refreshed and eager to begin our preliminary practice for mountain climbing. After breakfast we drove sixteen miles through the most beautiful valley past the Cascade Lakes to the Owl's Head, at

we could see Marcy, the Big and Little Elephants, and many other mountains in the Sentinel Range.

Tuesday we arose at five-thirty, jumped into our middies and bloomers, put on stout high-topped shoes, and after a hasty breakfast, started toward formidable Mount Marcy.

Three guides—Hull, Hail and Martin—carried all our duffel, except a few steamer rugs

We were caught in several light showers, which gave us a few bits of rest under the overhanging rocks. Our longest rest came at noon when we fell wearily upon a large rock in the brook, and there ate our cold lunch.

We moved on for a few rods and came upon beautiful nameless falls, about one hundred feet high, made when nature heaved up two immense rocks, stood them strata on end

"MOOSETTES."

AN UNLUCKY NUMBER AT THE TOP OF MT. MARCY.

Keene, famous for its maple sugar and griddle cakes, which are made fourteen inches in diameter, stacked seven or eight deep.

We spent the first afternoon on the side of a little hill from which we could get a comprehensive view of the surrounding mountains.

Monday afternoon we went to Hurricane Lodge, which looks like a pocket edition of Lake Placid Club, without the watermarks. The lodge is about half way up the mountain, with a good wagon road all the way.

We came down Jackson Hill, from which

and tin cups. The John's Brook trail, which we followed, leads over an old lumber trail with bits of corduroy road. When the roads became impassable for horses, we got out and walked. Our guides, with well-filled pack-baskets, started up the woody trail, which is much like that on the lower half of Whiteface Mountain. Mr. Martin, who owns the camp on Marcy, shortened the regular and longer trail by leading us right through the bed of John's Brook for two miles, over stones, into puddles, often through the shallow cold water,

and lavished her laughing waters over them.

The next few miles led us through a forest of pines, balsams, impressive hemlock and spruce, with their black trunks and sighing branches. Here and there a silver birch stood in bold relief against the dark evergreens. The maple and the sturdy oak are missing on the higher trails and there even the graceful willow forsakes the banks of the brook. Ferns of every kind nod gracefully in the pine-laden breeze, and with the little pale white flower that

Stalking Wild Swans

By W. R. GILBERT

SOME years ago L. was back in England after a sojourn in India. Feeling the effects of the climate, I jumped at the chance of some real rough shooting in Scotland, where I hoped to regain some of my lost energy.

Danna Island, about as wild and bleak a place as a sportsman can well find, is situated at the mouth of Loch Swin, Argyllshire and forms an almost ideal station for the wildfowler. On one side of it are the sheltered waters of the various branches of Loch Swin, which extend for eight miles inland in five various directions. On the other side lie the McCormaig and Cais-aig islands and Loch Kiels. I know of no other waters so well suited for wildfowling, or where there are more geese, widgeon and other ducks. I may have seen perhaps more in some parts of India and even in Egypt, but it seems to me that wildfowl shooting is far more enjoyable in such a climate as Scotland or Ireland than under the blazing sun of the before-mentioned countries.

On my first day out I found that a pair of wild swans frequented this district, and I made up my mind to devote what little energy I had left to the securing of them, and for several days I made fruitless endeavors to get within range of them. As the eagle is king among the birds of the air, so is the wild swan the king among the water birds, and I often observed these swans driving the ducks off Knap Point, as well as in the sound of Danna Island, and in a branch of Loch Swin, called Linnhe Vurich. On one occasion I stalked to within fair range of them as they rested on a small fresh water loch, having a twelve-bore and only No. 4 cartridges with me. When they rose, I fired both barrels at the head and neck of the largest bird. Twice he fell head over heels in the air, but recovered and both then flew right out of sight toward the island of Jura.

One morning I found them feeding in the shallow waters at the head of Loch Kiels, opposite Port-na, Gollan and succeeded in stalking within thirty yards of them. I had my twelve-bore and some cartridges loaded for the purpose with No. 2 shot. The first one I killed and severely wounded the other, which made off across Loch Kiels. As the wind was off the land, and I had neither dog nor boat, I had to swim for the swan and succeeded in bringing him safely to shore. He was an immense bird and I could scarcely carry him up the rocks from low water mark. The cold was intense, and being as I have said all "run down" from the heat of India, this January bath chilled me to the bone. Still I pursued the wounded swan, having to walk five miles round the head of Loch Kiels before I could approach him. The shore whereon he had alighted was so flat that I could not get near enough to finish him off, although I fired both barrels without effect.

Darkness then came on and I took refuge in Ulva school house on the other side of Loch Kiels, having another three miles to walk there. What a difference to shooting in India, where I should have been carried this distance! The water had frozen on my clothes and I could hardly speak from the cold. At the school house

I found my dead swan, which a man had carried there. He looked enormous and measured five feet nine inches from beak to tail. I was so prostrated with the cold that I could not follow the wounded swan any further that night, although he had taken refuge on the side of Loch Kiels on which Ulva school house is situated. Having procured a change of clothes, food and a stiff glass—come to think of it, it might have been filled again—of hot whiskey and water, I walked to a farm house on Danna and slept the sleep of the just.

Next morning I was up before daybreak. The weather was very stormy and a heavy gale was blowing. From the hill upon which the farm house was built I saw at dawn the wounded swan swim out of Loch Kiels in the direction of Knap Point and followed him along the

Point, where the water is very deep, to an inlet on the northern side of the loch, where the water is shallow, and where he was able to feed. I knew he could not stop long out in the deep water. Unfortunately I was on the southern shore of the loch, and had to stalk five miles round before I could get to where he was resting. I had previously carefully marked the spot where he had gone ashore, and among the high rocks of Kiels Point stalked within thirty-five yards of where he was standing on a small islet. The first barrel floored him and I fired the second at his feet and breast as he kicked spasmodically upside down. I was suffering so severely from the wetting of the day before—developing "cold feet"—I simply dared not go out after him for fear of cramps. The wind was off the land and the tide setting out, and to my sorrow

POINT BLIND, BOWLEY'S QUARTERS, MARYLAND.

Photo by Talbott Denmead.

rocky shores of Danna, out to Danna Point. The ground was very favorable for a stalk, but the great bird never came within shot of the shore. The rough water and the tidal race at the entrance of Loch Swin turned him back. I could see the waves breaking right over him, and he then swam back along Danna past the mouth of Loch Kiels almost out to the islet of Carraig nan Damph, a mile northwest of the entrance to Loch Kiels. The snow squalls were so heavy that I often lost sight of him, and to add to my troubles a thunder storm came on. Its effects on the ducks which frequent the Jura side of Danna was most remarkable. I think they mistook Heaven's Artillery for the heavy gunshots of man, their mortal foe. I might have had a splendid morning's duck shooting as I lay among the rocks watching the course of the swan. I had determined, however, to fire at nothing except the wounded swan. The lightning struck the rocks several times close to me, and the force of the tempest was such that during the worst squalls I could hardly raise my head above the rocks, so violently did the hail patter in my face. My eyes were so sore that I could not follow the white speck in the distance which was my wounded swan. Being unable to stem the strong tide, which runs in the sound of Jura, the swan at last turned back, re-entered Loch Kiels, and swam along Kiels

I saw him drift out to sea into the rough waters of the Sound of Jura.

The gulls kept stooping at him as he floated upside down, and I feared they would spoil his skin. I fired several times to scare them, but they took not the slightest notice of the shots. The dead swan vanished in the snow squalls. Fortunately I had heard that there was a strong current outside the mouth of Loch Kiels, which would set him on the Danna shore, and "done brown" as I was, I had to go another five miles round Loch Kiels in search of him. The farmers on Danna confidently assured me that he would have drifted out through Islay Sound, but this was not so. I found him floating along the shore just where I expected, and he was washed up in a small bay almost at the extreme point of Danna. It was no easy task to carry him and my gun up the steep hills to the farm, but I accomplished it at last. I hung him over my back and even then his body nearly trailed on the ground behind me. It took me—with the aid of the farmer—nearly all the next day to skin the two birds. The second one was nearly as large as the first, and they were both old cobs (males), which accounts perhaps for their savageness to the other wildfowl. They were rather strong food when washed, and I was content with eggs and bacon and the satisfaction of having secured the skins.

Hunting in Civil War Time

By FRED A. OLDS

THE writer has never seen a story about how hunting was done in the South during the trying period of the Civil War; a time when people's minds in most cases ran to slaughter in quite another fashion, the game being man. But amid all the horrors of that four years, in the small boy there still abode the love of the pursuit of game, and this, if the reader pleases, will be a little story of the life of a Confederate boy; the place, Piedmont, North Carolina, and the time between the winter of 1862-63 and the close of hostilities.

In the first place, it must be remembered that everything was subordinate to war, and yet schools had to go on, the children had to be looked after in many ways, amusements of some sort provided for them, and upon the plantation life must flow as regularly as possible, since it was the plantation which after all was the backbone of the Confederacy. The little boy grew very used to tithes; for a tithes—that is, a tenth—of everything produced on the farm had to be turned over to the Confederate States and go into the storehouses. So went some of all the grain grown, the leather made, the tobacco, the cotton, etc., not to speak of the meat. The slaves had to be fed and clothed and looked after, and to the little boy, whose associates must needs be oftentimes the little slave boys, there was the idea of proprietorship, for one of the little slaves had been given to him for his own, and in his child mind there was the idea, not so much of proprietorship, for that was indeed dim, but comradeship, and this is the keynote of the regard which the whites and the blacks of the war-time yet have for each other. It may seem like an anomaly, but this regard is very keen and there is a lot of human nature in it.

Cold weather had come, the leaves were beginning to fall, the slaves and their owners had changed their home-made cotton clothes of the warm season for woolen ones, also home-made, and to the mind of the little boy there came the human instinct for hunting. During the hot months he had been many a time in the nearby "swimming-hole" with his little companions, white and black, and he had seen the young game in all directions, for during the war, when hunting was done on so limited a scale, game and fish of all kinds increased immensely in the South, certainly in North Carolina, and deer, foxes, rabbits, pheasant or grouse, quail, squirrels, etc., were on every hand. So when cold weather came, the little boy went to a negro cabin and there found "Uncle Esek," whose snowy hair looked amazingly like wool, and who, though incapacitated for any particular farm work, was always strong enough to "git erbout wid little Marster," who, to be surc, he always called by his first name. "Black Mammy," the wife of this veteran, whose hair was carefully wrapped in a home-made handkerchief, dyed with some product of the woods or fields, was equally glad to see the little boy, who had come to "put out de rabbit gums," as Uncle Esek put it; that is, to set about here and there in the rabbit runways little boxes made of four narrow planks, but very often a hollow log, which, with a trigger, a

slide and a bait made of some green thing (preferably a bit of cabbage leaf), was and is the boy's favorite as a catcher of rabbits. These "gums" were set all about and were visited every morning by the black man or the little boy, oftentimes by both. The rabbit was food, and his skin was in demand, because it would go to the hatter, for in nearly every town there was a man who made hats out of wool and rabbit fur, for everything was in request, the rags going to the paper mills or being converted into home-made carpets; cloth was used and re-used, dyed and re-dyed; every bit of leather was

A MISS IS AS GOOD AS HER SMILE.

precious, and the soles of many shoes were made of wood, leather being only used for the uppers.

The little boy was barely big enough to use a shotgun, and his father's double barrel, a 14-gauge, with the muzzles worn quite thin by long use, was to the little fellow by far the most valuable object on the plantation. Sometimes he cut wads out of paper, with the old wad-cutter, but very often he used what Uncle Esek told him was "de bes' kin' of waddin' dat whar you gits fum wasses nesses." By this the old darkey meant that the sort of paper which the wasp uses in building a nest was an excellent thing for wadding. There were no manufactured shot to be had, so the boy had to make them himself. He did this in a very simple way. The farm blacksmith took a small bar of iron and through this drilled a hole, and then reamed this out, so that it was shaped like a V. The boy took a plank and with a plane cut trenches in this about two feet long, into which he poured molten lead, so as to make long and square pieces. These he rubbed with tallow, and taking

them and the bar of iron to the blacksmith shop, he and Uncle Esek heated the iron and placed it across the tub of water into which the blacksmith dipped his tools, etc. Taking one of the little bars of led in the hand, one end was placed in the opening in the bar, pressed down, the heat melting it and the molten lead dropped in little pellets, sometimes not exactly round, into the water. The bar was heated and re-heated until the lead was worked up.

Now then, the boy had his shot. He must get the powder. This had to come from one of the powder-mills, where rude, yet efficient, powder was made from willow-wood charcoal, nitre and saltpeter, the latter laboriously gathered, the nitre coming from certain caves in Virginia. The boy bought the precious powder, paying for it with a dingy Confederate dollar note, which carried on its face a promise of payment "two years after the ratification of a treaty of peace between the Confederate States of America and the United States of America," a promise which was never realized, however. Having thus obtained the powder, the last thing to be done was to get the caps for the gun, and these the merchant had, they having been made in the cap factory at Raleigh. They were rough affairs, of copper and fulminate of mercury, but they were more or less effective.

Carrying the precious powder and caps home, the boy prepared for a hunt, and with him went his uncle, who had but lately lost an arm in battle, and who was convalescing. In the hickory trees the squirrels were busy and unafraid, as they were but seldom molested, and the boy had good sport. Uncle Esek was on hand, of course, and the boy carried his father's gun and also the game bag with knitted exterior and within a pouch in which was a large piece of the wasp nest. On the other side hung the powder flask with the gauge which measured the amount, though, to be sure, the little boy used a little more, making allowance for the poor quality of the powder. There was the shot pouch, with its gauge, containing the home-made shot, some of the latter being almost pear-shaped. But with this outfit the boy killed squirrels and contrived to knock over a rabbit or two. The great joy was to come on the return home, for as the trio approached a little thicket of sassafras bushes, rich with the color of their leaves, a great bird burst out and took wing, and the boy, as nervous as a pointer dog on a frosty morning, yet pulled himself together enough to fire and brought down a young turkey gobbler. He had gone his limit, and as the bird fell, he actually dropped his gun and ran for that turkey, which was threshing about in the weeds. Uncle Esek was at his heels, and as the boy grabbed the struggling bird, which with quick wings was beating him on arms and body, Uncle Esek came up and helped him with his big prize. He was boy enough to insist on carrying the gun and other game home, letting Uncle Esek carry the turkey until the "front gate" was reached, but when he must needs take that bird, and so with half a dozen squirrels, a couple of rabbits and the gobbler, he walked into the house, a bigger

man by far, in his own mind and that of Uncle Esek, too, than his big uncle, who strolled along, tall and gaunt and pale, with an empty sleeve pinned upon the breast of his rough jacket. Mother was delighted to see her young huntsman and heard again and again his story of how he killed his first wild turkey.

In the afternoon he went to the village on a mule, actually wearing his uncle's spurs, and there got a letter from father, who was with Lee up in Virginia, which to the little boy seemed as far away as the very border of the world. Uncle said to the little fellow when he came back and brought the letter, "Well, Jimmie, you've won your spurs." In all the Confederacy there was not a prouder or happier boy, and mother had to smile at him through her tears, as she read, half aloud and half to herself, that letter from father, written on paper, one side of which had been already used for some other purpose, and contained in an envelope which had also been used and had been turned and regummed. And Uncle Esek was there, too, to pay his tribute, for he said, "I sholy knows dat Marse Henry will be proud of dis boy when he hears what kine uv er hunter he is. He's er gwin ter be a man, pint blank like Marse Henry hisself." To Uncle Esek this was the crowning compliment, and the little boy so took it.

DANA'S FIRST THIS YEAR IN TIOGA COUNTY, PA.

The Brilliant Autumn Time.

Written from memory by E. Platt Robinson from Frank Forester's "Field Sports in America."

It is brilliant autumn time, the most brilliant time of all,
When the gorgeous woods are gleaming ere the leaves
begin to fall;

When the maple leaves are crimson, and the hickories
shine like gold,

When the noons are sultry hot and the nights are frosty
cold.

When the country has no green, but the sword-grass by
the rill,

The willow in the valley and the pine upon the hill;

When the pippin leaves its bough and the sumac's fruit
is red,

And the quail are piping loudly from the buckwheat
where they fed.

When the sky is blue as steel, and the river clear as glass,
When the mists are on the mountains and the network
on the grass;

When the harvests all are housed and the farmer's work
is done,

And the woodlands are resounding with the spaniels and
the gun.

I doubt not, thousands of your readers have never seen these lines, and they are good enough to be printed every year at this season in every sportsmen's journal in the country.

I have known your paper many years, but never when it was better or even as good as at present.

E. P. ROBINSON.

PACKER, Conn., Oct. 16.

Blue Foxes on St. Paul and Otter Island, Alaska.

IN past years much has been printed in *FOREST AND STREAM* with regard to the breeding of the blue foxes in semi-domestication in Alaska. This appears to have been carried on more successfully in the Pribilof Islands than anywhere else, for on a number of islands it has hopelessly failed, the foxes mysteriously disappearing or becoming so few that their owners became discouraged and gave up the business.

Three years ago James Judge, of Washington, D. C., gave a detailed report of the blue fox industry on St. George Island, and now in Volume VIII., of the Annual Reports of the American Breeders' Association, he gives some notes on the blue foxes of St. Paul, Otter Island and other islands of the Pribilof group.

On St. George Island, where the foxes are fed during the winter, it is the practice to trap the animals, the finest being branded and turned out for breeding purposes, while the poorest individuals are killed for fur. During the winter of 1907-08, 985 foxes were caught there, of which 446 were killed for fur and 539 released. During the winter of 1909-10, the number caught was 778, of which 421 were set free and 357 killed. Food is abundant on St. George Island, and the foxes there are well fed and flourishing. In earlier years when the killing of seals and sea lions was carried on to a greater extent, they were somewhat more numerous than now, and at that time more than 1,000 a year were killed.

On St. Paul and Otter Island the conditions are quite different. On St. Paul the foxes were first fed in 1897, and this feeding has been continued in the winter up to the present, although for many years the foxes scarcely ate the food. They seemed to care nothing for the seal meat and salmon that was relished by the St. George foxes, and it was only in 1907 that they began to eat the food offered with any regularity. During the fall of that year a quantity of whale blubber came ashore and the foxes fed on it. They were given salted salmon that had been freshened, and the carcasses of a couple of mules shot the previous autumn. In the winter of 1908-09 they seemed to go more regularly to their food, much of which, however, was eaten by the gulls. Foxes of course follow the beach, feeding on the wash, so long as the beach is open, but when the ice comes down in January, the beach is closed to them, and this is their season of scarcity.

Because the foxes on St. Paul will not go regularly to their food, while the skins are prime, the natives were permitted to use steel traps for a period of six days, beginning Nov. 28. This resulted in a catch of 130 blue and 35 white fox skins. At Otter Island, from Dec. 6 to 14, one white and nineteen blue foxes were taken. It will be noticed that the proportion of white skins is unusually large, but in former years the percentage of white skins in the catches of St. Paul varied between 1 and 10 per cent. The percentage of white foxes in the catches on St. George

Island down to 1901 tallied closely with that on St. Paul, but efforts have been put forth to exterminate the white foxes on St. George Island, and apparently with some success.

Of the foxes taken on St. Paul Island, about 51 per cent. were males. Immediately after death ninety-three males and seventy-six females were weighed as they were caught. The weights on St. Paul varied between 8½ and 15 pounds for males, and 7 and 13 pounds for females. On Otter Island the weights varied between 7 and 10½ pounds for males and 6½ and 9 pounds for females. This would seem to show that the St. Paul foxes were well fed and in good condition, while those on Otter Island were ill nourished. From May until January, the St. Paul foxes have comparative abundance of food from the bird rookeries, seal rookeries and the killing fields. On the other hand, as there are no seals on Otter Island, the foxes there have food in plenty only from May until September.

Of the numbers examined, thirty-nine were yearlings and fifty-five males, and thirty-five females were of breeding age. As litters of newborn foxes are known to number from five to twelve, the mortality among the young foxes must be very great, and here is opened a great field for study.

The skins taken on St. Paul Island were of unusual high quality, the fur long, dark and lustrous, while those from Otter Island were poor in quality, with short fur and many of them streaked with gray.

It seems altogether conceivable that the observations made on blue fox breeding on islands of the Pribilof group may result in discoveries which will once more set the blue fox industry of Alaska on its feet. The young foxes have a thousand enemies, of which we know little or nothing, but that eagles, ravens, gulls and numbers of predatory birds are perpetually on the watch for them is quite certain. Mr. Judge's papers on this subject are of very great interest.

Should Muskrats be Protected?

THE St. Bernard (La.) Hunters' Association held a meeting last week and discussed the various hunting laws, especially those in reference to trapping. President Grinyer said the Legislature should not have passed a law protecting muskrats, and on the contrary there should be a law paying a bonus for each muskrat slain. He said the muskrat destroys the levees and also kills the alligators. It was stated that several of the hunting laws should be amended relating to those who are making a living trapping and hunting. St. Bernard parish joins Orleans parish and is only a short distance from New Orleans. The general hunting laws and the new amendments are meeting with considerable opposition, especially the restriction which confines the trapping season from November to January in each year.

The make-up, the text, the illustrations and the typography of *FOREST AND STREAM* are designed to appeal to sportsmen.

The White Egrets.

BY T. GILBERT PEARSON, SECRETARY THE NATIONAL ASSOCIATION OF AUDUBON SOCIETIES.

THE most beautiful, and one of the most popular millinery decorations with civilized women, is that dainty and exquisitely formed feather known as the "aigrette" in America, and the "osprey" in Europe.

It is a sad fact that this personal decoration, so much esteemed by our modishly dressed women, is procurable only by inflicting unspeakable agonies on some of the most beautiful creatures which inhabit the earth.

In the early days of the Audubon movement, its leaders raised their hands in protest against the traffic in these feathers. Their cry has been

ing colonies located. Wardens have been employed to remain in the fever-infested swamps to guard the localities which the birds had chosen for their rookeries. Frequently, these men have had to contend with unscrupulous feather-gatherers. Three Audubon wardens have been killed, and at least two others probably saved their lives only by promptly returning the rifle fire of their would-be assassins.

Yet, despite all our efforts, the birds have continually become scarcer, and, in fact, so depleted are their numbers to-day that we did not know of over fifteen colonies in the United States in the summer of 1911.

In these ancestral nesting-places still gather a few thousand birds, the pitiful remnant of the great flocks which inhabited our Southern States

same territory and under very similar conditions. They formerly bred from Oregon and New York on the north, south through Mexico and the northern Central America to Patagonia and Chile. Their range, however, in the United States has been greatly restricted. One small colony is reported to be still in existence in Eastern Oregon, and it is just possible that there are one or more groups of birds in Southern California. The most northern nesting-place on the Atlantic Coast is in North Carolina, down close to the southern boundary line. Large areas in Florida, where, in years gone by, the birds were more abundant than in any other place in the United States, are now devoid of either species, except now and then a rare straggler. After the nesting season, a few egrets wander northward. Thus, in the summer of 1911, several were seen in Massachusetts, some of them being photographed by Dr. Geo. W. Field, of Boston. If the colonies along the south Atlantic Coast can be guarded and the traffic in plumes suppressed, there seems every reason to believe that the birds will again extend their natural breeding range northward, until they once more inhabit suitable regions in the neighborhood of New York.

Egrets feed chiefly in the rice fields, and about the marshy borders of ponds, lakes and streams. When the period of nidification arrives, they usually retire to the depths of more or less inaccessible swamps, and there, in company with other herons, assemble to build their nests on the horizontal limbs of the cypress or willow trees.

The eggs range from three to five in number. These are blue in color, and are laid on a frail platform of sticks and twigs which the birds gather in the neighborhood. For food, frogs, snakes, fish and other aquatic forms of life, are ready at hand.

Egrets are not regarded as of very great economic value as destroyers of obnoxious insects. This, however, is no reason why they do not deserve our protection. The pure, glossy whiteness of their plumage and the elegance of their form and movement are sufficient reasons for preserving these living objects of statuary of the southern marshes, even as civilized man preserves in the home and in the forum the marble statues, carved by the hands of inspired artists.

The Audubon workers, by constant agitation and an immense amount of labor, have succeeded in securing the passage of laws which prohibit the sale of these birds in the States of New York, New Jersey, Louisiana, Ohio, Missouri, Massachusetts, Oregon and California. This is only a beginning in the line of legislation for suppressing the traffic in their feathers, for the sale still goes on in every city of any size in the other States of the Union.

Even where the trade in aigrettes is now declared to be illegal, there are frequent evidences of violation of the law; for so valuable and so alluring are the profits, that many annually run the risk of prosecution in order to deal in the feathers. The price of aigrettes has gone up and up, until to-day prime feathers are actually worth more than twice their weight in gold.

As the birds have become exterminated in the United States, the millinery feather agents have turned their attention to the *tierra caliente* of Mexico, and the rivers of South America. Here, in the swamps of the hot countries, the feather-gatherers are to be found every year. It

SNOWY EGRETS.

Three ages of a popular millinery decoration.

taken up by many other organizations and societies interested in various phases of humane work. To-day it seems incredible that there should be any well-read person in the United States who is not aware of the fact that the "aigrette" is the nuptial plume worn by the white egret at the nesting-time of the year, to procure which it is necessary to shoot the birds, which means that the young, in turn, are left to slowly die of starvation.

In fighting the traffic in these feathers, the Audubon Societies have published and distributed millions of pages of literature bearing on the subject; have contributed thousands of columns of matter to the public press, and their speakers have addressed audiences aggregating hundreds of thousands of hearers, in all of which there have been set forth the unanswerable facts relative to the methods of procuring the material for this heartless trade.

In their efforts to safeguard the interests of these birds, agents have been sent to those regions still inhabited by the white egrets, and their nest-

a few decades ago. These, this association is exerting every possible effort to protect.

In the summer of 1906, the writer spent five weeks on the Gulf Coast of Florida, covering the territory between Tampa and Key West. About twenty-five colonies of water-birds were examined, and innumerable feeding-grounds of herons were visited. In all this stretch of territory—two hundred miles in length—less than a dozen white egrets were found; whereas, in the same region eleven years before, the writer had found the birds plentiful, and in places very abundant.

There are two species of plume-bearing white egrets in America. The large one (*Herodias egretta*) is a beautiful long-legged, long-necked bird, standing between three and four feet in height, and the snowy heron (*Egretta candidissima*), of much shorter stature. From the back of the former are obtained the long, straight plumes, and from the latter are taken the short, curved ones, known to the trade as the "cross aigrette." Both species are normally found in the

is such a profitable industry that the fortunate hunter who gets possession of one of the big colonies, or *garzeros*, usually guards it with jealous care, and his gun is turned against all comers. It is customary to wait until the eggs are hatched, for then the old birds, responding to the cries of their young, are loth to leave the neighborhood, and readily fall a prey to the gunners. The millinery dealers, in their efforts to defend this nefarious traffic, seek to mislead the public by the statements to the effect that aigrettes are gathered from the ground underneath the nests. Every ornithologist, or other person, who has had experience with heron rookeries, knows the falsity of this statement. At least twenty well-known naturalists have filed affidavits to this effect with the officers of the National Association of Audubon Societies.

How Long Will a Fish Live Out of Water?

EAST HOLLISTER, Mass., Oct. 20.—*Editor Forest and Stream:* In your issue of Oct. 12 I saw one of your correspondents asked for data in regard to the length of time fishes would live out of water. When I have been fishing I frequently have had perch that had been out of water between two and three hours and were all dried and stiff and "come to" on being thrown into a bucket of water and allowed to remain there fifteen or twenty minutes.

Out of a pailful of hornpout, caught at night, I have found one or two alive in the morning. Eels also will live for several hours if kept in a damp, dark place, like a bucket of damp moss, but they die quickly if exposed to sun or heat.

The fish that I have found most tenacious of life are the small ones living in the brackish pools of salt marshes. I used to catch them when I was a boy to keep alive. We called them "mummychugs" (I spell phonetically). These fish would live for several hours out of water and once when a "cold snap" came a panful of these fishes that I had in the yard froze solid. I took the piece of ice into the house, thawed it and put the fish into their native element where they seemed none the worse, though they must have been frozen up for eight or ten hours.

BRYANT STRONG.

Wild Woodcock in New York City.

NEW YORK CITY, Oct. 17.—*Editor Forest and Stream:* This morning my neighbor, Mr. Jennings, of 27 West Fiftieth street, this city, informed me that he had seen a woodcock in his yard, which had flown into my yard at 29 West Fiftieth street. On looking out of my window I saw a woodcock sitting on the grass plot, but evidently ready to fly at once and uninjured. I secured the bird and think it quite remarkable to find a woodcock in the middle of a crowded city.

SPENCER ALDRICH.

An Appreciation.

BOSTON, Mass., Oct. 14.—*Forest and Stream Publishing Co.:* GENTLEMEN—Enclosed please find check for the next four years.

I have been reading FOREST AND STREAM for a great many years. I have enjoyed reading it, and it is very seldom that I miss it, unless I am away from home. I wish it every success.

A. T. CLARK.

Hunting in California.

BY GOLDEN GATE.

THE open season for ducks, ibis and most shore birds commenced in Central California on Oct. 15, and hunting is now general throughout the State, having commenced in Northern and Southern California two weeks before this date. The need of a change in the date of the opening season was never more apparent than it was this year when more than one-half of the birds bagged spoiled before they could be used. Very warm weather was experienced during the first three weeks of October, and hunters visiting the interior, where the best shooting was to be enjoyed, found that their heavy hunting togs were entirely out of place. Many sportsmen realized that it would be impossible to bring birds home with them in good condition, and refrained from shooting even after reaching the grounds.

From the number of birds now on hand it would seem that some splendid sport would be enjoyed this season, but there are many favorite feeding grounds where ducks are scarce, owing to unfavorable conditions. But little rain has fallen to date, and many streams that usually have a large flow of water are practically dry, causing the birds to gather on the salt marshes and at other favored localities. At Los Banos and Gustine there is plenty of water, and some splendid shooting is being enjoyed there. On the Suisun marsh, ducks are quite plentiful, but baiting seems to be necessary to insure a good shoot at any of the ponds. On the marshes of San Francisco Bay a few birds are to be found, but because of the hot spell they have been keeping out in the open.

The ducks now being bagged are mostly home-bred birds, and are in splendid shape. Sprig, teal and mallards are the birds now being secured, but canvasbacks are commencing to appear on Tomales Bay and will probably be plentiful soon. Immense numbers of home-bred birds are to be found on Tulare Lake, and these are reported to be very fat. Shipments of birds from this section made following the opening day, spoiled in transit, so warm was the weather.

The season just closed has been a good one for sportsmen, deer having been plentiful in almost every game district. From all sections of the State opinions are being received to the effect that the opening season is entirely too early and a shorter season is favored by many. Resolutions to this effect are being prepared by many game protective associations, and it is believed that a marked change in the law will be made at the next session of the State Legislature. At a meeting of Tulare county sportsmen, held in October, a county game and fish protective association was formed, and recommendations will be made soon by this organization for a shorter and later deer season. In addition the establishment of a game reserve will be strongly recommended, it being suggested that a portion of the forest reserve be set aside as districts in which shooting will not be allowed.

Some of the duck hunters out for the opening day sport could not resist the temptation to

bag plover, curlew and snipe, which are protected for another month, with the result that several found themselves in trouble. A. P. Kammermeyer, of San Francisco, bagged two fine curlew near Petaluma, but was arrested by Deputy Fish and Game Commissioner William Wagner and was fined \$25.

William H. Metson, president of the Board of Golden Gate Park Commissioners, has presented to the Park Museum a magnificent collection of mounted wild ducks killed in California, comprising all of the varieties found here.

Bear seem to be very plentiful in the mountains this year, and some very large ones have been killed. Joe Elgoriogo recently killed a very large one on Poplar Creek, in Plumas county, and has also killed several smaller ones. At Shady Rest, further down the Feather River, a dozen have been killed this season by hunters from San Francisco. A plan is now on foot to establish a closed season for bear during the summer months when the hide is worthless.

Annual Meeting Maryland G. & F. P. A.

A PLEA for State-wide game law was the feature of the address delivered before the annual meeting of the Maryland State Game and Fish Protective Association. T. S. Palmer, acting chief of the Biological Survey, United States Department of Agriculture, pointed out that Maryland and North Carolina only have conflicting county laws that prevented the preservation of game and worked an injury to neighboring States. He asked the association to make a concerted effort to get the Legislature to adopt a uniform law that would prevent the misunderstandings that now exist.

Franklin Cox, State game warden, told of his efforts to co-operate with members of the association and stated that he was ready to join in any movement for the betterment of the laws regulating hunting in the State. D. C. Spenburgh, of the American Game Protective and Propagation Association, told of the work of the national organization. Dr. Joseph Kalbfus, State warden of Pennsylvania, told of the benefits of a uniform law in that State.

Resolutions of regret at the death of the president of the State association, J. Olney Norris, were passed. The following were elected to serve for the ensuing year: President, Talbott Denmead; Vice-Presidents, L. M. Levering and Felix Sullivan; Treasurer, H. N. Abercrombie; Secretary, Henry P. Bridges.

The Herons of Andalusia.

OF all the birds he had studied, said W. Farren in a lecture at the Royal Photographic Society's exhibition, none showed conjugal affection in quite the same way as the brown-backed herons of Andalusia in Spain. Whenever the husband relieved his wife at the nest he invariably laid his neck over hers in a momentary embrace and then took up his position while the other bird flew away. The herons never omitted this affectionate salutation.—London Standard.

Poor Shooting So Far.

MILFORD, Conn., Oct. 25.—*Editor Forest and Stream:* Although the shooting season began nearly a month ago, I have heard of very few birds having been killed in this town. A good deal of shooting is heard in the fields and woods, and a number of ducks and two Canada geese have been killed on the Housatonic River, but most of the shooting seems to have been at squirrels, rabbits and blackbirds.

Partridges (ruffed grouse) seem extraordinarily scarce, but that is not remarkable when we consider that during the month of October they are usually wandering about and are never found twice in the same place. It is their running—their crazy—season.

I have seen no quail this year, but a day or two since a gunner reported finding a single brood, the members of which seemed only half grown. Very likely this was a second brood.

Deer are increasing. They nibble the soft cobs of the farmers' corn, and their fresh tracks are frequently seen about clover and alfalfa patches. The harm they do to the crops is negligible. The reported injury to young fruit trees might be serious.

G. B. G.

Alternate Open Seasons.

FULLERTON, Cal., Oct. 21.—*Editor Forest and Stream:* Just a few words toward the protection of wild birds.

Having hunted on this coast for thirty years I notice the great difference in the quantity of ducks and quail. I have given their protection much thought for the last few years. I really believe it is possible to keep them with us always if the following law could be passed in each State; if it is impossible, to make a Federal law. Every other year the killing of all ducks and water birds should be prohibited, and every other year the killing of all land birds prohibited. The idea would be to give the young birds a chance to breed. If the first year they were protected, they would have chance to more than double.

No hunter should object to this. One year he could hunt ducks, the next year quail.

Let me know what you think of it?

EDW. K. BENCHLEY.

Hunting Licenses.

GLOVERSVILLE, N. Y., Oct. 28.—*Editor Forest and Stream:* I like your article of low license for non-residents. I spend part of each winter in Florida and have to pay \$10 for each county I hunt in. With the trespass signs and hunting up the boundary lines of each county you hunt in keeps you quite busy. If each hunter paid \$1 it would place the resident and non-resident on the same footing, and I think would net the States more money. In going back and forth from Florida I would like to stop off at favorable places and hunt a few days, but the license prohibits. To size the thing up, a license keeps people from traveling to new hunting grounds. It is the straw that breaks the camel's back.

J. H. DRAKE.

A magazine that has held the sportsmen's favor for forty years must have something to it, and the fact is you know it has, but we wish your friend, who doesn't know it, did.

Shooting Conditions in Different States

(Continued from last week.)

Pennsylvania.

PITTSBURGH, Pa., Oct. 19.—*Editor Forest and Stream:* Owing to the fact that our sportsmen and general public are taking an interest in matters pertaining to the outdoors and are backing up the efforts of the game commission, game conditions in Pennsylvania are becoming better every year. However, as Pennsylvania is one of the few States not operating under a \$1 resident hunter's license law, we are rather handicapped for want of sufficient funds for the propagation and protection of game. You will understand this when I tell you that last year we received only \$20,000 for game protection and \$7,500 for establishing game preserves, stocking and maintaining them.

Our legislators claim that it is unfair to tax 100 per cent. of the people for the benefit of the 3 per cent. that hunts. Our sportsmen have taken the matter up and will likely ask for the passage of the resident hunter's license law at the next session of the Legislature this winter.

Owing to the enforcement of the law prohibiting the running of deer with dogs, the law prohibiting the killing of does and fawns, and the establishment of game preserves or sanctuaries, our deer are increasing very rapidly. Ruffed grouse are also more plentiful this year than for some time. Quail, which five or six

years ago were almost extinct in the State, are now getting plentiful. We imported about six years ago some from Alabama, and many farmers are now protecting them from the sportsmen and feeding and caring for them during our severe winters.

Wild turkeys in our central and southern mountain counties are on the increase. Black bear are also increasing, and we estimate that there were about 300 killed last year in Pennsylvania between Oct. 1 and Jan. 1. Bear are found in greatest numbers in our central and northern counties in our mountainous regions. They are also spreading to country where the timber has been cut off and which is now covered with thick brush.

JOHN M. PHILLIPS.

West Virginia.

BELINGTON, W. Va., Oct. 19.—*Editor Forest and Stream:* Game conditions are better in West Virginia than for years past. We have had a very stringent law for four years and same has been well enforced. The prohibition of the sale of game, shipping from State and serving at hotels and restaurants has had a good effect in checking the pot and market hunter. Only deer with horns four inches long may now be killed, which is causing our deer to increase. Squirrels

(Continued on page 598.)

J. A. VIQUESNEY, PRESIDENT OF WEST VIRGINIA FISH AND GAME PROTECTIVE ASSOCIATION.

SEA AND RIVER FISHING

Fishing in California.

BY GOLDEN GATE.

TROUT fishing in the Sierra Nevadas is now at an end. Snow has fallen in many places and rain is being experienced at others, bringing to a close one of the best seasons on record. Low water has been the rule, permitting early fishing, and it is likely that more trout have been taken with hook and line this year than ever before, even when larger limits were allowed.

Exceptionally heavy catches of striped bass have been made during the past few weeks, the Carquinez Straits section having been the ground where the best run was experienced. Big catches have been made from the Port Costa wharves and from the South Vallejo breakwater, some of the fish weighing as much as twenty-five pounds, a good weight for fall run fish. Fly-fishing for striped bass has been tried by several experts with good results, a red fly having been the most successful lure. More bass and other fish are now to be found in the upper stretches of the bay than has been the case in several years, but it is feared that good line fishing will soon be at an end, as net fishing for salmon and bass in tide water will be in order after Oct. 23. Anglers believe that the increased number of fish to be found is the result of the setting aside of an adequate breeding place in Cache Slough, and in enforcing a close season on shrimps. The Chinese shrimp fishermen caught tons of young fish yearly, operating near the breeding grounds.

Striped bass fishing is good in the Russian River, several fish having been taken there of late tipping the scales at from twenty to twenty-five pounds. The bar of the river is now closed and good sport is expected until the heavy rains wash this out.

Splendid steelhead fishing has been enjoyed this month on the Eel River, but fishing ended above tide water on Nov. 1.

Dr. B. F. Alden, of San Francisco, is an enthusiastic angler who takes great delight in fishing off the Catalina Islands. He has just returned from a trip there during which he hooked and brought to gaff a swordfish weighing 165 pounds, this making the third fish of this kind taken by him this year.

Michigan Fishing.

MECHANISBURG, O., Oct. 25.—*Editor Forest and Stream:* In September I visited quite a bit of the lakes in Michigan, and Takis, Mullet, Burt, Crooked and Walloon can still be relied on, and good times had there at reasonable expense, although a little later would have been better. There is a little lake called Round Lake that is passed up by many on account of its size that will give a good account of itself if used right. All these are easily reached from Petosky by railroad or boat. I failed to find a single lake that did not furnish good sport.

W. S. GUY.

Fishing in North Carolina.

LINVILLE FALLS, N. C., Oct. 26.—*Editor Forest and Stream:* Rainbow trout continue to be active and full of sport in Linville River till the last of November. This was proved the past week by the taking of the largest fish of the season, 21¼ inches long, 11 inches in circumference and weighing 3¼ pounds. This fish was caught on very ordinary tackle, with angle-worms as bait, by Mrs. Eliza Franklin, an old

A MOUNTAIN ANGLER AND HER BIG ONE.

veteran fisherwoman of this place, who often scores the best catch of the season. Last season she took a fish thirty-one inches long, weighing over four pounds. The fishing this season has been good.

F. W. BICKNELL.

"TOMMY," said the visitor, "have you read the books in your Sunday school library?" "Some of them," he replied, rather doubtfully. "Can you tell me what happened to the boy who went fishing on Sunday?" "Yes, he caught three catfish and an eel." "How do you know that?" "Cos I was him."—Exchange.

EVERY Saturday most all the best sportsmen in the country await the coming of FOREST AND STREAM.

"Just Up the Beach."

NEW YORK CITY, Oct. 26.—*Editor Forest and Stream:* Most anglers when they get a big fish hesitate about disclosing the spot where the fish was caught, this being only natural, as they anticipate further sport if they can keep the place to themselves.

A good number of big striped bass were taken this year by anglers of the Asbury Park Fishing Club, and when they were asked where the fish were caught, the answer was invariably, "Up the beach." This got to be a standing joke among the members, and when John Seger displayed a 47-pound bass in front of his little tackle store on the pier it bore the inscription that it was caught, "Just up the beach."

The entertaining article, put to verse, contributed by Mr. Hartie Phillips, of a trip to Seaside Park, which appeared in a recent number of your interesting paper, prompted the writer to try his hand in composing rhyme, which you will find herewith. It is sent to you to dispose of as you see fit, either in your fishing column or the scrap basket.

D. W. MITCHELL.

The night was cold and dreary,

As I tread my way to the pier,
And entered the club house cheerfully,
To meet those who stay all the year.

The fire in the stove burned brightly,
Sending forth a most cheerful glow,
While outside the breakers rose mightily
As they pounded the old spilings below.

The talk naturally turned to fishing,
How that bass was fought and won;
Each around that stove was wishing
That he had caught the big one.

Each had his tale to relate;
Of the big fish that got away,
To be taunted and giped by his club mate,
Who had a gold button to display.

The next subject discussed was bait—
Whether to use shedder, squid or worms;
But a bait that all considered great
Is one calculated to kill germs.

To know where the big strippers hove,
On the flats, in the holes or slues,
Is what each angler around that stove,
Has traveled many miles for clues.

They all have plugged lead and lost rigs,
From early morn till dawn of next day,
But shout with joy and dance jigs,
Should they hook one that don't get away.

He trudges through soft sand with that striper,
That weighs close to a half hundred weight;
He may be a tired, hungry side swiper,
But nothing shows this in his gait.

If seeking lessons on fishing,
In hopes that he is willing to teach,
To know where he caught it you are wishing,
You are told, "It was just up the beach."

He willingly tells how he played him,
How often it was just out of reach;
Every detail he relates with much vim,
But the place, "It was just up the beach."

DAVE.

THE influence of FOREST AND STREAM among the leading sportsmen of the country is a splendid indication of its popularity.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

SHOOTING WITHOUT A GUN.

DOUBTLESS the highest test of sportsmanship is the woodcraft which gives one that knowledge of the habits of game that enables him to find it under the various conditions of weather and seasons, and the ability to make the stealthy approach which shall bring him within range, without alarming the object of his pursuit.

Without these qualities, partly inborn and partly acquired, there cannot be completely successful sportsmanship, however skilled one may be in the use of the gun, a skill that may be acquired in great measure by practice at the fixed and flying target.

All the skill of woodcraft that goes to the making of the successful hunter with the gun must be possessed by him who hunts his game with the camera.

His must be the stealthy, panther-like tread that breaks no twig nor rustles the fallen leaves. His the eye that reads at a glance the signs that to the ordinary sight are a blank or at most are an untranslatable enigma. His a patience that counts time as nothing when measured with the object sought.

When by the use and practice of these he has drawn within a closer range of his timid game than his brother of the gun need attain, he pulls trigger of a weapon that destroys not, but preserves its unharmed quarry in the very counterfeit of life and motion.

The wild world is not made the poorer by one life for his shot, nor nature's peace disturbed, nor her nicely adjusted balance jarred.

He bears home his game, wearing still its pretty ways of life in the midst of its loved surroundings, the swaying hemlock bough where the grouse perched, the bending ferns about the deer's couch, the dew-beaded sedges where the woodcock hops in the shadows of the alders, the lichened trunks and dim vistas of primeval

woods, the sheen of voiceless waterfalls, the flash of sunlit waves that never break.

His trophies the moth may not assail. His game touches a finer sense than the palate possesses, satisfies a nobler appetite than the stomach's craving, and furnishes forth a feast that, ever spread, ever invites, and never palls upon the taste.

Moreover, this gentlest of sportsmen is hampered by no restriction of close time, nor confronted by penalties of trespass. All seasons are open for his bloodless forays, all woods and waters free to his harmless weapon.

Neither is he trammelled by any nice distinctions as to what may or may not be considered game.

Everything counts in his score. The eagle on his craggy perch, the high hole on his hollow tree are as legitimate game for him as the deer and grouse.

All things beautiful and wild and picturesque are his, yet he kills them not, but makes them a living and enduring joy, to himself and all who behold them.

OUR VERY GOOD FRIENDS.

THE annual meeting of the National Association of Audubon Societies, held last week, may remind us again of the growing interest in bird protection.

This interest, which for a time was founded on humanitarian sentiment, has of recent years come to have a far more substantial—an economic—basis. The Audubon Society, and all those that have made a special study of birds, know that they should be protected, not for sentimental reasons, but because they are a most valuable asset of the country. They aid the farmer by destroying his worst enemies. They save him time, labor and expense, and besides this they increase his crops.

The Agricultural Department is reported recently to have issued a statement that the annual injury to farmers of the United States by insect destruction to their crops is \$420,000,000, and it may well enough be that this is an underestimate. Readers who recall the interesting paper on the "Food of Bobwhite," abstracted in FOREST AND STREAM two or three years ago from the observations of Mrs. M. M. Nice, will remember that a single bobwhite in one day may eat thousands of harmful insects.

Because many people are careless observers, the work done by the birds is as wholly unnoticed as if it were done in secret. It is done nevertheless, and done continuously day after day throughout the year, and if it should stop, only for a brief time, this country would witness a panic greater than it has ever seen.

These things are worth pondering.

WAITING FOR COLD WEATHER.

ALL through the month of October, field shooters along the Atlantic coast have had to struggle with difficulties. The weather has been so mild that he who set out faithfully to tramp the lots and hills after his dog suffered much from the heat. The leaves clung to the trees, green through much of the month, and only changed color toward its end as they matured; for there was little or no frost to paint them

with the brilliant hues that we expect in early autumn.

Reports from gunning resorts along the coast declare that as yet the wildfowl are few, and the great migration which follows the first touch of sharp cold weather in the North has hardly begun. Reports as to the numbers of upland birds tell of few prairie chickens and ruffed grouse, and of broods of quail that are still too small to shoot. So far, in the field, or on the water, there has been little to cheer the gunner.

In certain portions of the East, November opened with a steady rain, which wrenched from the trees the leaves that still clung to them, and will make the shooting more open for the month, when brown woodcock are to be expected from the North, and after a short stay will pass on southward.

In certain States, which have but a short open season—as for example Connecticut—the warm weather and the thick leaves have served to protect the few birds still found there.

It will not be until after a few sharp frosts that any judgment can be made on the quality and quantity of the field shooting in these thickly populated States, where the gunners far outnumber the birds.

CHANGING BOUNDARIES OF NATIONAL FORESTS.

PRESIDENT TAFT has issued proclamations changing the boundaries of the Missoula and Madison National Forests, Montana. From the former 4,960 acres are eliminated, and from the latter 68,140 acres. These eliminations are the result of field examinations which the Department of Agriculture has been making in pursuance of a general plan to correct the National Forest boundary lines.

The areas eliminated from the Missoula National Forest are along the borders of the Flint Creek and Rock Creek exclusion of the Southern Division. They consist of small areas along the foothills chiefly valuable for grazing purposes.

The greater part of the Madison elimination embraces what is locally known as the Lower Madison Basin and lies in two main bodies, one in Townships 9 and 10 S., R. 1 W., and the other in Townships 11, 12 and 13 S., Rgs. 1 and 2 E. Another rather large exclusion occurs in Townships 9 and 10 S., R. 4 W. The remaining areas are small tracts at various points along the borders of the forest. Most of the lands excluded are grazing lands, although some areas in the Lower Madison Valley are susceptible of cultivation.

The public lands within the areas were by the same proclamation withdrawn for classification under the Act of June 25, 1910, to be restored to settlement and entry at the discretion of the Secretary of the Interior.

THE most ancient known work on fishing is said to be the "Haleutics of Oppian," the work of a Greek poet A. D. 198, from which it is learned that many articles on fishing, thought to be modern, were known then; while from Atheneus it is learned that several writers wrote treatises or poems on fishing centuries before the Christian era.

Archery

Scores of Thirty-fourth Meeting.

A LIMITED number of copies may be had of July 31 issue of FOREST AND STREAM in which appeared the story and complete scores of the thirty-fourth annual tournament of the National Archery Association, held in Boston.

Fine Archery.

BY EDWARD B. WESTON.

CHICAGO, Ill., Oct. 30.—*Editor Forest and Stream:* E. J. Rendtorff is a teacher of science in Lake Forest (Ill.) Academy.

After receiving a report of his wonderful team round score of 95 hits, 631 score, which as far as I know has only been surpassed in this country by Homer S. Taylor's score of 96 hits, 638 score, made thirty years ago, I wrote him asking numerous questions. His answers follow:

"It was with considerable reluctance that I let Mr. Wheeler, the captain of our Lake Forest Academy Association, report my recent team round of 24 hits, 170 score; 23 hits, 151 score; 24 hits, 152 score; 24 hits, 158 score; total, 95 hits, 631 score. Had he not shot with me, and counted every arrow, I would have kept the score a secret. At present I could not hope to duplicate my better scores on a strange course. I will, however, give you a history of my archery experience.

"Before entering the University of Wisconsin I spent considerable time training for baseball and boxing. During my Sophomore year I took up football and played right tackle on the university team of 1893. Before the season closed I dislocated my right knee, and was not able to do much playing after that.

"Prof. Thomas, of Lake Forest College, is responsible for my taking up archery. I knew for years that he shot, but considered it child's sport. In the fall of 1910 I saw him shoot for the first time, and at once realized that it was a game of skill and worthy of a man's attention.

"Next spring I purchased an outfit and shot for the first time in my life early in March of 1911. After two days' practice at 20 yards, under his supervision, I shot 96 arrows at 40 yards, making a score of 66 hits, 286 score, 3 golds. The weather then became quite bad, and I could not shoot again until the 17th of April. On May 3 I shot above 500 for the first time, the score being 93 hits, 517 score, 20 golds. My best score at 40 yards was made on May 29, 1912, 96 hits, 712 score, 34 golds.

"My first attempt at the team round, 96 arrows at 60 yards, was on May 11, 1911, when I made 58 hits, 213 score, 4 golds. On Oct. 13 of that year I shot my first team round of over 500, making 96 hits, score 544. This year I have passed 600 twice; first on Aug. 26, making 96 hits, 612 score, 30 golds, and then the 95 hits, 631 score, 32 golds, which has caused all this stir.

"At first my shooting at 50 yards was not good, but on May 25 I shot 96 hits, score 620. Since then I have shot at 50 yards only in connection with the American round.

"In the American round I have shot above 600 twice, first on May 30, making:

60yds.		50yds.		40yds.		Totals.		Golds.
H.	S.	H.	S.	H.	S.	H.	S.	
29	193	30	208	30	236	89	637	33

On July 16, the second best score was made:

60yds.		50yds.		40yds.		Totals.		Golds.
H.	S.	H.	S.	H.	S.	H.	S.	
30	170	30	212	30	234	90	616	..

Best double American round:

60yds.		50yds.		40yds.		Totals.		Golds.	
H.	S.	H.	S.	H.	S.	H.	S.		
29	193	30	208	30	236	89	637	50	
29	177	30	184	30	222	89	583	..	
							178	1220	

"The 30 hits, 236 score is my best score at 40 yards; 30 hits, 212 score the best at 50 yards and 30 hits, 208 score (13 golds) at 60 yards. It is needless to say that these were not made in the same round.

"I never shot at 80 yards, with the exception of a few occasional arrows, until last Wednesday afternoon, when Wheeler and I shot 96 arrows, I making 84 hits, 204 score, with 11 golds. Next day we repeated, and made 89 hits, 204 score, with 12 golds. The first 48 arrows scored 45 hits, 259 score. On Oct. 28 I shot for the third time at 80 yards, making with the first 48 arrows, 47 hits, 287 score, and with second 48, 46 hits, 234 score.

"I have never shot a York round, and have had a very limited experience at 100 yards. Last spring I occasionally shot a few arrows at that distance. On Oct. 29 I shot my first 72 arrows at 100 yards. It was very windy so that the best results were not possible, but I made 49 hits, 197 score.

"About the middle of September I got a 55-pound lemon wood bow from Duff. At first it shot the arrows a little to the left of the target. Some ten days ago I discovered a slight skew on the back of the bow, which I at once removed with a file. My score of 95 hits, 631 score at 60 yards I made the day after making the change in the bow.

"I shoot a Whitman arrow, 29 inches long, of 435 grains weight. When I first got them I adjusted their weights until they were the same within about one-seventh of a grain.

"I do not release from underneath the chin, as I believe most archers do, but from the hollow between mouth and chin. At 60 yards my point of aim is on the ground about 25 yards from the target; at 50 yards, 27 yards, and at 40 yards about 23 yards. At the 80-yard range my point of aim is on the target itself; on the top for arrows No. 1 and 5, on the gold for No. 3, and on the upper blue for the remaining three arrows. It was the discovery of this variable point of aim that helped me to raise my 80-yard score from 84 hits, 404 score, to 89 hits, score 481, in one day. The arrows seem to be about the same weight, but the feathers produce a somewhat different flight.

"The score of which I feel most proud was made this last summer, Aug. 26, when at 60 yards I hit the gold with the six arrows of an end and got another gold with the first arrow of the following end.

"I aim on the full draw, with the direct vision on the center of the target, and the secondary vision on the point of aim for the 40, 50 and 60 yards. At 80 yards the two coincide as my aim is on the target. I do my best shooting when not conscious of the fact. I have my bad as well as my good days, but always try to

shoot each arrow to the best of my ability. When I find that my best efforts are poor, I quit shooting until another time, so as not to get into careless habits.

"Whatever success I have had, I attribute to constant practice at the short ranges during the time I have been an archer—great care in shooting each and every arrow, keeping the tackle in the best of order, and to a fair knowledge of the physics and mathematics of the sport. I also believe that selecting a heavy arrow (435 grains) instead of the customary lighter one, has had something to do with my success. I also believe in using a heavy bow, and one somewhat shorter than the customary 6-foot length. I have very radical ideas concerning arrows, and now have in mind slight alterations that I will try to incorporate in arrows that I intend to make this winter.

"There is one more thing I failed to state before, and that is the effect of my previous training. At college I took an engineering course for four years, and then specialized three years in physics. Before that I graduated from the Chicago Manual Training School. My training in accuracy in the shop, the drafting room and the physical laboratory is greatly responsible for a consequent accuracy in archery.

"I believe I have now answered all of your questions. Permit me to add, however, that in the Lake Forest Academy we now have a regular archery club, of some dozen members. None of them have become experts, but the enthusiasm is there. I believe ours is the first boy's school to start a club of that nature."

Archers will be interested in comparing these private practice scores of a comparative novice, with the practice scores made by Col. Williams, Phil Bryant, Wallace Bryant, L. W. Maxson, W. A. Clark, C. C. Beach, H. B. Richardson, W. H. Thompson, H. S. Taylor, Dr. R. P. Elmer, W. H. Wills and other old masters of the art of archery.

Pittsburgh Archery Scores.

THE shooting of Mr. Holmes, of the Bon Air Club is remarkable, as he has been engaged at the sport just fourteen weeks. A tally of 90 hits, score 452, would be a creditable performance for anyone. His tutor, Dr. Hertig, had to bestir himself to escape defeat, and, no doubt, if he continues to improve, Mr. Holmes will make a top-notch.

AT THE BON AIR RANGE.

Oct. 26.—Team round, 96 arrows, 60yds.:

Hits.		Score		Hits.		Score	
Dr. Haines	45	180	Dr. Hertig	91	495		
W. J. Holmes	90	452					

AT THE BEECHVIEW RANGE.

Oct. 27.—American round:

Jas. S. Jiles	25	99	28	115	30	156	83 370
	18	61	24	108	30	142	72 311
O. L. Hertig	27	145	28	162	30	188	85 495

Team round:

Hits.		Score		Hits.		Score	
O. L. Hertig	94	506	W. J. Gray	32	120		
J. S. Jiles	71	295					

On Saturday, Nov. 2, a new archery club opened its range on the golf grounds of the Oakmount Country Club. This is one of the most important steps forward that the cause of archery has yet taken, and it is to be hoped that all the golf clubs in the country may soon install archery ranges as adjuncts to their links.

The bowmen of the Pittsburgh Athletic Club hold shoots every Monday and Friday evening;

but the time for shooting is so short that no stated round can be finished. Mr. James Patch, Mr. T. R. Hartly, Drs. Haimes, Howard and Holroyd are promising well.

On Thanksgiving Day a team round will be shot on the club range. All the archers in the vicinity are invited to take part.

The scores of this meet will be sent to national headquarters at Boston for comparison.

O. L. HERTIG.

Fenway Archery Club.

FOLLOWING are the scores of the Fenway Archery Club which were held on Oct. 26:

Columbia round:			
	Score.	Handicap.	Total.
Miss Kinnon	284	111	395
Mrs. B. P. Gray.....	375	Scratch	375
Miss Mathes	266	100	366
Miss Anderson	198	155	353
Miss Guiot	166	176	342
Miss Wesson	292	33	325
Miss Norma Pierce	265	56	321
Mrs. L. C. Smith.....	293	9	302
Miss Dorothy Smith	61	182	243
American round:			
L. C. Smith.....	378	135	513
H. B. Richardson.....	494	Scratch	494
B. P. Gray	363	124	487
S. W. Wilder.....	333	115	448

Handicaps were reckoned on scores made on Oct. 19.

SHOOTING CONDITIONS IN DIFFERENT STATES.

Continued from page 594.

are plentiful in all wooded sections of the State. Black bear are to be found in all the mountains of our State. Randolph, Pendleton, Pocahontas, Greenbrier, Webster and Hardy counties are good for deer, bear, turkey, grouse and squirrel.

I am sending you under separate cover copy of law, biennial report, copy of annual of West Virginia Fish and Game Protective Association and cloth poster, the latter having been of great advantage in checking violations, being more easily understood than the game laws themselves. I post about 10,000 of these each year. We are establishing a game and fish preserve in our State at the present time and have already stocked same with elk, deer and other game.

J. A. VIQUESNEY,
Forest, Game and Fish Warden.

Quebec.

QUEBEC, Canada, Oct. 28.—*Editor Forest and Stream:* Game conditions are much better than last year, and moose, caribou and deer are found in this province. Deer and moose are most abundant. Ottawa, Pontiac, Chicoutimi, Lake St. John, Rimouski and Matone counties offer the best shooting.

J. A. BELLISLE,
Inspector General Fish and Game.

New Brunswick.

FREDERICTON, N. B., Oct. 21.—*Editor Forest and Stream:* The game conditions in New Brunswick are perhaps better this year than ever before. This might be said more particularly as regards big game, which is increasing year by year. So far this season sportsmen have been most successful in getting their quota of game. One record moose head having a spread of sixty-four inches has been reported.

It is somewhat difficult to say where the best hunting conditions prevail, as some of the best shooting has been found adjacent to settlements and railway lines. To give an instance of this,

only a few days ago seven moose were called up on the line of the Canadian Pacific Railway some three miles from McAdam Junction, where there is a town of considerable size, and where the shops of the Atlantic Division of the Canadian Pacific Railway are located. The great game country is in the interior of the Province remote from railway lines and settlement. Moose are found in every county of the Province, but caribou, a more timid animal, generally makes its home in the least accessible localities, such as the headwaters of the Nepisiguit River in the counties of Restigouche, Gloucester and Northumberland and some fifty miles from railway lines.

The big-game season ends the 30th of November. Sportsmen coming into the Province will have no trouble in securing licenses, as vendors are appointed in nearly every small town and village. A non-resident big-game license costs \$50, bird licenses, which includes wildfowl, \$10. Splendid arrangements for greatest convenience of visiting sportsmen have been made with the custom officials regarding guns brought into the Province. Splendid guides can be secured, though it is well to arrange ahead so that the guides and teams will be on hand at the train. Many of the guides have hunting camps fully equipped, so practically all the sportsman has to bring with him is his rifle and personal luggage.

Special permits are granted to ship big game whole or in part on a non-resident license. Partridge, however, may not be transported.

Telegraph or phone directly to the deputy surveyor general at Fredericton and every courtesy and attention will be given you.

Wildfowl shooting, including geese, brant, ducks, etc., is to be had in abundance. The best grounds are along the Gulf of St. Lawrence at such points as Miscou, Tracadie, Tabusintac and Richibucto. Come to New Brunswick for the best big-game shooting in America.

T. G. LOGGIE,
Deputy Surveyor General

Quebec.

QUEBEC, Canada, Oct. 23.—*Editor Forest and Stream:* Game conditions are somewhat better than last year. Moose, caribou and deer are found in this Province. Deer are found in the south and moose in the north of this State. In the Lake St. John region are found moose and deer in Bruce and Dorchester counties; caribou are found in the National Park.

HECTOR CARON,
General Superintendent of Fisheries and Game.

South Dakota.

WATERTOWN, S. D., Oct. 28.—*Editor Forest and Stream:* Am very sorry that I was not home when your letter of the 18th inst. was received, as I would have been glad to have given you the information desired relative to game matters in this State this season.

However, I will now answer your questions, whether or not the replies will be of any use to you: First—Game conditions in this State are much better than last year, particularly as to waterfowl. Plenty of prairie chickens, but very few hunters bagged the limit at any time. Second—In this State we have ducks, geese, prairie chickens, grouse, quail and deer. Third—Ducks are most abundant this year. Fourth—The north-

eastern part of the State is the best waterfowl hunting, as well as for prairie chickens. Along the Missouri River and also the Jim River may be found many quail. The grouse are mostly in the Black Hills as also the deer.

W. F. BANCROFT,
State Game Warden.

Vancouver.

VANCOUVER, B. C., Oct. 23.—*Editor Forest and Stream:* Game conditions are infinitely better than last year. With the exception of antelope and musk ox, every species of game that exists or ever did exist in the continent of North America is still to be found in British Columbia; most species in good numbers. There are even a few buffalo still to be found. It is hard to state which species of game is most abundant, but probably moose and caribou in the north and goats and deer in the south are especially plentiful. In the Lillooet district sheep are also quite numerous.

The Cassiar district is by far the best big-game country; moose, caribou, goats, stone sheep and both black and grizzly bear are all still very numerous.

For bird shooting, the southern part of Vancouver Island abounds in grouse, pheasants and quail. There are also any number of Columbia deer.

A. BRYAN WILLIAMS,
Provincial Game Warden.

New York.

ALBANY, N. Y., Oct. 14.—*Editor Forest and Stream:* I can say without hesitancy that the number of deer in the Adirondack Mountains at the present time is greater than in the past twenty-five years. This information comes first hand from the protectors of the Adirondack region. This is partly due to the fact that last winter was very mild, and very few of the deer winter-killed, and also that this commission has been experimenting with cutting hay in the beaver meadows for the deer to feed on during the more severe weather. This hay is salted and stacked in small cocks on a crib above the snow level in places where the deer are liable to yard. At every meadow where the deer hay was cut the fall of 1911, it looked like a sheep pasture from the congregating of the deer around the stacks of hay. Every morsel was eaten up. This year the commission has gone into the proposition of cutting hay throughout the Adirondacks for feeding deer very extensively, and there has been cut about \$600 worth of hay scattered throughout the Adirondacks.

There is no doubt from the reports received that our native ruffed grouse are again becoming more plentiful, and I thoroughly believe that the bag limit of four a day as provided in the law at the present time will be the means of increasing the supply.

The pheasants are also increasing throughout the State. This year the department had applications for about 125,000 pheasant eggs and 28,000 pheasants. Of course the one game farm owned by the State was unable to furnish that amount, but the department did furnish about 4,000 pheasants and 20,000 eggs. I am in hopes to see the time come when we will have in the State at least five game farms, as in my opinion it is coming to the proposition of placing the

pheasants in the covers of the State and allowing them to be killed off in the fall, which is the English and French method. With the sportsmen of the State paying into the State Treasury approximately \$160,000 for hunting licenses annually, there is no reason why the State should not own at least five game farms given over to the raising of different species of game birds to be distributed throughout the State, under the same conditions in vogue at the present time in distributing pheasants.

From what I can ascertain from the reports of the protectors throughout the State, the ruffed grouse is being found in their old haunts again, and in increased numbers. I do not know that this applies to any particular part of the State, but wherever the cover is good, they seem to be increasing.

LEWELLYN LEGGE, Chief Game Protector.

Maryland.

BALTIMORE, Md., Oct. 14.—*Editor Forest and Stream:* Good duck shooting can still be obtained on the Susquehanna Flats, and non-residents of the State can arrange with the gunners holding sink box licenses to give them pretty good sport when the weather is right. Shooting days are on Monday, Wednesday and Friday. During the spring shooting, Saturday is added.

The ducking shores from Miller's Island to the flats are owned by private parties, and an invitation from owners is necessary.

Partridge (bobwhite) shooting is not what it should be. There is shooting out of season. We have had severe winters. No respect has been paid to the bag limit and the game warden with limited means has been unable to properly attend to all reports of violations of the closed seasons. Some sections of the State, notably the lower counties, still have some good partridge shooting. Local licenses are required in each county. Some permit non-residents to hunt without license, provided they have the permission of the landowner. It will be necessary for the sportsman to inform himself of the laws covering the special point in which he is interested.

Wild turkeys and ruffed grouse are only found in the three westernmost counties, while deer are too scarce to mention. Several clubs in Western Maryland have especially fine turkey shooting, notably the Woodmont Rod and Gun Club, in Washington county, where every member or guest obtains the club limit most every time they hunt.

Maryland probably has in its thirty miles of coast the best shore bird shooting there is to be had. Ocean City, Md., is situated on a strip of sand between the ocean and Sinepuxent Bay. This narrow strip runs clear over into Virginia, and on the beach and around the ponds can be found the yellowlegs, willet, curlew, robin, snipe, gray backs, calico backs, black-breasted plover, dowitcher, ring-neck and other birds of like character.

The non-resident need have no fear of the law to hunt these birds at this place. No license is required of the non-resident to hunt them, and there is no closed season for shore birds. Numerous hotels will accommodate the sportsmen, and Captain Quillan will take them far enough down the beach in his launch to get away from the city and find birds. Good ducking can be had here also, but non-residents must have license.

The season for wildfowl is from Nov. 1 to April 10, State law.

Last but not least we have the rail and reed bird shooting on the great wild oat marshes of the Patuxent River. There the reed birds and rail are found in great quantities, and the sportsmen from Washington, Philadelphia, as well as from Baltimore, will be found on these marshes when the season opens on Sept. 13 every year, being pushed over the marshes by experienced pushers after the fat rail or sora. This is an easy bird to hit on the wing, but the sport is fascinating, and the pushers know their business. I have seen them accurately mark five and six dead birds down at one time and find every one. The bag limit of seventy-five rail birds per day can easily be reached during the first part of the season if the tide is moderately high. Of course when the tide is low, the marsh is too high to push the boats over and "bounce" the rail. License for non-residents of the State is \$11.

TALBOTT DENMEAD,
For State Game Warden Cox.

New Mexico.

SANTA FE, N. M., Oct. 21.—*Editor Forest and Stream:* Game conditions are better than last year. Bear, deer, turkey, grouse and quail are found in this State. There is an abundance of turkey, quail, grouse and doves in the northern and southern parts of this State.

TRINIDAD C. DE BACA, Warden.

Prince Edward Island.

CHARLOTTETOWN, P. E. Island, Oct. 12.—*Editor Forest and Stream:* The game birds in Prince Edward Island are increasing in numbers, each year finding them more abundant than in the previous year. This season the black ducks and mergansers were very plentiful and were about equally distributed throughout the Province. Golden plover also put in their appearance after an absence of several years. Bartramian sandpipers are fairly numerous, while Hudsonian curlew and gray field plover are to be found in large flocks.

At the time of writing wild geese are very abundant; it is by no means a rare sight to behold pods of from 400 to 500 of these beautiful birds leisurely swimming in the rivers or bays and sometimes even resting on the shores. Yesterday a reliable sportsman who had just returned from Flat River informed me that game birds were very abundant there, and that he had never before seen so many wild geese or such quantities of gray land plover.

Wild geese are abundant in Hillsboro and Elliott and York rivers. They are also plentiful

at Rustico, Tracadie, Malpeque, Summerside, Bedeque, Alberton, Kildare and Tignish.

Brant were exceedingly abundant last spring, but owing to the curtailing of the open season comparatively few were killed, and as a natural consequence, a much larger showing is expected this fall than in other years. They frequent the same waters as the wild geese.

Woodcock and snipe are reported fully up to the average and are in prime condition.

Partridges, under judicious protection, are rapidly increasing in numbers. This year is a close season for these birds, so next year, in the natural course of events, will doubtless be a banner year for partridge shooting.

Rabbits are fairly plentiful all through the Province.

E. T. CARBONELL, Game Inspector.

North Carolina.

RALEIGH, N. C., Oct. 20.—*Editor Forest and Stream:* Game conditions are better than last year. Quail, pheasant, turkey and deer are found in this State. Quail is most abundant in Piedmont or central section.

P. D. GOLD, JR.,
Secretary Audubon Society of North Carolina.

Oklahoma.

OKLAHOMA CITY, Okla., Oct. 21.—*Editor Forest and Stream:* Game conditions are better than last year. Deer, turkey, bear and prairie chicken are found in this State. Quail is abundant. Good shooting is found in all sections of this State.

JOHN B. DOOLIN, Warden.

Wyoming.

LANDER, Wyo., Oct. 22.—*Editor Forest and Stream:* Game conditions are better than last year. Elk, deer, moose, mountain sheep and game birds are found in this State. Elk and deer are most abundant. The best shooting is found in Uinta, Fremont and Park counties.

D. F. HUDSON, State Game Warden.

CHEYENNE, Wyo., Oct. 21.—*Editor Forest and Stream:* The game conditions this year are about the same as they were a year ago. Elk, deer, bear, mountain sheep, sage chicken, grouse, ducks, geese, etc., are the leading game animals and birds of Wyoming. Of the big game, elk are the most abundant. Big-game hunting is best in the counties of Uinta, Park and Fremont. Birds are plentiful everywhere.

JAMES D. LECRON,
Executive Secretary.

Cruising in the Caribbean.

BY J. HOBART EGBERT.

ONE might readily be excused for not recognizing the old aspirant for international yachting honors as she lay off the wharf at Bluff, the entrance to Bluefields lagoon on the Caribbean

coast of Nicaragua, in schooner rig, down almost to her gunwales with a cargo of coconuts, the bare timbers of her hull showing here and there through her white paint, her deck littered with sacks of coconuts, barrels, tarpaulin, etc., and with an ununiformed (almost undressed) colored crew. And yet there was some-

thing in her visible lines, her sheer, her low bulwarks, her narrow, graceful stern and general set of spars and rigging that at once engaged the attention of the deep water yachtsman. But failure to recognize her superior plan and build as she plowed under full spread of canvas the tumultuous waters of the Caribbean almost into the teeth of a strong northeast wind that at times freshened into little less than a gale, would certainly have been quite impossible in one not truly a "land lubber."

We sailed from Bluff a few minutes after 9 o'clock, the night of Saturday, Aug. 24. Had expected to put out during the daylight, but

fresh from the northeast—many seas broke over her port bow and washed over her flush deck, sail was not shortened, except when the wind blew out the jib topsail, and ample opportunity was given to admire her fine sea qualities.

It was not until well toward mid day Monday that the weather cleared and the wind abated, but even then the heavy sea, now more abeam, caused the vessel to roll heavily. Land was sighted shortly after noon, and before 3 P. M. we were anchored in the bight fronting the sea wall which extends from Colon to Cristobal. The port physician and Customs inspector were soon on board, and before 3:30 we were ashore. The

MRS. R. C. BLACK'S YACHT NIAD.

owing to the disturbed conditions in Nicaragua, and evident friction between the Governor of Bluefields and the representative of the American bankers (who are trying to control Nicaragua) in charge of the Custom House at Bluff, clearance of this, an American, vessel was not obtained until this late hour. Fortunately an almost full moon was shining from a fairly clear sky, so anchor was weighed, head sails set, and as she swung off and headed for the bar, foresail and mainsail were run up. By the time we were outside, topsails were added, and after passing the U. S. S. Tacoma, which lay outside the bar, the course E. S. E. was laid for Colon, Republic of Panama. A heavy swell was running, and by midnight the moderate breeze had increased to a strong wind, and a heavy sea was rolling in from across the reaches of the Gulf.

The vessel was heavily loaded, and though during the night and throughout the following day—during which the weather remained unsettled with occasional rain and the wind blew

Atlantic, heavily loaded, had made the run, in bad weather and under sail alone from Bluff, Nicaragua, to Colon, Panama, in forty-two hours.

The auxiliary schooner Atlantic is known along the Caribbean coast as one of the smartest and ablest crafts in that trade, and why not? She was formerly the racing sloop Atlantic, built at Brooklyn, N. Y., in 1887, as an aspirant to international cup honors. She is 96 feet long and of eighty-six tons register, though now in schooner rig she still spreads a large area of canvas. Her big lead fin was removed and she was rebuilt to her present rig in 1904 for Mr. Rector, the New York restaurateur, as a deep sea cruiser and a 80 horsepower Richmond motor installed. She is now owned and managed by Capt. A. Sandberg and engaged in the Caribbean and Gulf trade, principally in live turtle traffic, though occasionally carrying cocoanuts for New York to Colon from the Nicaragua and Honduras coasts. She still flies the United States flag, her home port being Key West.

A talk with representatives in prominent cartridge companies brings forth information that never before has the demand for shells for field shooting been as great as in the present season.

Harvard University Gun Club matches are as follows: Nov. 2—Harvard vs. Princeton at Cambridge. Nov. 9—Intercollegiate shoot at New Haven. Nov. 23—Harvard vs. Yale at Cambridge.

Thanksgiving Day will bring joy to Ossining trapists. A merchandise shoot will be held. Start will be made at 1 o'clock sharp. Further particulars from Chas. G. Blandford, Captain, Ossining, N. Y.

When Charley Hyde gets the rest of the ducks along the Sound the trap season will open at the Port Washington Y. C. Everything else is ready but Charley; at least, that is what one of the peevish aerosaucer experts writes us.

The newly organized Monmouth Beach Gun Club, designated in our trap columns last week by a generally unerring compositor, as Monument Beach, held its first clection of officers last Saturday. The club already has nineteen members and barrels of enthusiasm.

Geo. W. Wakeley, president, writes that the regular shoots of the Orange Gun Club will be held on the second and fourth Saturdays, and that on Thanksgiving Day the club will hold the annual club championship event at 100 targets with suitable trophy to the winner.

With the Lloyds' Harbor freezeout race uncorked, New Rochelle Y. C. will get after the scalers next Saturday. So much envy over Joe Donovan's Du Pont medal has been suppressed all summer, to about the same extent as a man's size yawn under a lady's hand, that there will be a case of by and large in the way of effort for "one of those" this season. Who knows but what Ed Locke may bag one with his single-trigger Lefever.

W. G. BEECROFT.

Buffalo Audubon Club.

BUFFALO, N. Y., Nov. 2.—Buffalo Audubon Club members, nineteen strong, turned out for to-day's sport. Covert was the bright shining star with a good 90, which is going some, the last two events being distance handicaps, and he at 20yds. A strong 50yd. target was thrown, which was affected by the wind. Scores:

Targets:	15	20	20	20	25
Fish	14	16	18	17	19

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

- Nov. 21-22.—Clinton (Ont.) G. C. J. E. Cantelon, Sec'y.
- Dec. 2-6.—St. Thomas, (Ont.) G. C. W. J. McCance, Asst. Mgr.
- 1913.
- Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
- Jan. 22-25.—Pinchurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, O.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

The lure of the open was too strong to go unheeded by trappers at Smith Gun Club last Saturday, so there was no shoot. The regular shoot will be held to-day.

Louis Colquitt lost the New Jersey State championship so quietly that one hardly knew it had changed hands. There is being more noise than success, however, in taking it away from the present holder, Ernest Von Lengerke, of Orange Gun Club. Looks as though it preferred class Orange to cosmopolitan Newark.

New York A. C.

PELHAM MANOR, N. Y., Nov. 2.—Regular trapshooting was carded to-day, for the first time this season, at Travers Island. With the exception of Capt. Billings, most of the "great guns" were at the scores. R. L. Spotts was on deck with his usual enthusiasm and eye. He took scratch trophy with 90 out of 100, and distance handicap from 2lyds. mark, with 22 out of 25. Olympic style event went to D. F. McMahon, whose total was 22, handicap one; the Day trophy, on 100 rocks, also fell into his maw with 92 from a handicap of four. Dr. L. Culver tacked one on the Ogden mug, after shooting off a tie with O. Muller and E. M. Higginson. W. B. Ogden shot a leg on the November cup, after tying with Dan McMahon. McMahon cup will have J. M. Higgins' name engraved upon its front, though W. J. Simpson made a serious effort for the first lines on the cup, being denied the honor only after shooting off a tie. J. M. Jones, with a liberal handicap, took premier honors for the Travers Island trophy.

"When We Were Twenty-one" would be an apt title for the day, as twenty-one gunners lent their support to the ammunition companies, so ably represented by "Gentleman Georgie" Lyon from the place in North Carolina where the bull was made famous. Considerable interest was added to the day's joys in the appearance of several promising tyros, who were given the glad hand and encouraged in every way possible. The scores:

Morrell, with 8 hand-outs, scored 85 for high gun. J. F. Simonson, with 2 less handicap, scored four less fliers, while Bill Hyland needed 8 give aways to take third joy place with 77. Tyros are gladly received and cheerfully instructed down at Queens, so if you "live

The Du Pont Gun Club.

WILMINGTON, Del., Nov. 2.—Alden B. Richardson, of Dover kept the title of State champion in a match to-day, beating J. H. Minnick to a frazzle.

Each man shot at 100 targets, the score being 97 to 91. Minnick lost in the first half, over-shooting his third, ninth and fourteenth targets in the first string. Richardson dropped only his twenty-second target.

In the second string the title holder broke twenty-five, scoring 49 out of his first 50. In his second twenty-five, Minnick lost his thirteenth, sixteenth and twenty-second birds. Score, 49 to 44 at the half.

In the third twenty-five Minnick gained two, breaking them straight. Richardson lost his first and twentieth. Score, 72 to 69.

In the last quarter both men broke straight until the eighteenth, when Minnick dropped one, and then dropped his twentieth and twenty-fourth. Richardson broke his straight, winning by six targets.

The score follows:

Events:	1	2	3	4	Total.
Targets:	25	25	25	25	97
Richardson	24	25	23	25	97
Minnick	22	22	25	22	91

Another feature of the day was between J. B. McHugh, challenger for the 1912 Class A trophy, and Eugene E. du Pont, holder, at 50 targets per man. Neither man shot to his form. The final score was 42 to 34 in favor of McHugh.

Mr. McHugh's victory in this race, and Mr. Richardson's success in defending his title to the State championship, brought about an interesting condition of affairs. Mr. McHugh had previously challenged the winner of the Richardson-Minnick match, while Mr. Richardson had challenged the winner of the E. E. du Pont-McHugh race. As a result the two are matched to shoot two separate and distinct races. The first match will be for the 1912 Class A trophy at 50 targets, the second for the Delaware State championship at 100 targets.

The special club program included the E. E. du Pont team trophy contests. Thirteen teams entered, but only one team managed to secure the full maximum of 50 breaks. handicap allowance included. This team was H. P. Carlon (Class A) and S. G. David (Class C), who broke 24 and 21 respectively, and with their respective allowances of 1 and 5, managed to score the highest possible. Eugene du Pont and Dr. A. Patterson as one team, S. C. Newman and W. G. Wood as another, and W. Edmanson and J. T. Roberson as a third team all scored 48 targets and took second place. Dr. Horace Beets, and Victor du Pont, Jr., took third honors.

The several team scores were as follows:

H P Carlon.....	1	24	J J Magahern...	3	19
S G David.....	5	21-50	J J Curzon.....	7	14-43
E du Pont.....	1	22	W Smith, Jr....	5	17
Dr Patterson...	3	22-48	S Tuchton.....	2	18-42

Marine and Field Club.

GRAVESEND BAY, N. Y., Nov. 2.—The opening day of the trapshooting of the Marine and Field Club was very successful, everything going along nicely, the weather condition was perfect for shooting, and the attendance was fair, as a few of the shooting members were out of town.

The opening event of the day was a trial shoot of 25 targets from scratch, as follows: S. P. Hopkins, D.D., 21, E. H. Lott 21, C. M. Camp 16, C. B. Ludwig 16, P. R. Towne 14, H. D. Lott II. Tie was not shot off.

The following handicaps were given out by Chairman C. M. Camp for the November cup, 300 targets with handicaps, the best 100 targets from the regular shooting days, Saturday and holidays. The handicaps for the month of November, on 100 targets, are: E. H. Lott, scratch; P. R. Towne 10, C. B. Ludwig 12, J. M. Knox 18, C. D. Sayre 18, S. P. Hopkins 8, J. H. Emanuel, Jr 12, C. M. Camp 12, H. B. Smith 18, E. D. Church 18.

Handicap, 100 targets:

	H. T.	H. T.
E H Lott	0	93
P R Towne.....	10	89
Dr S P Hopkins...	8	87
H D Lott.....	13	84
J M Knox	18	82
C B Ludwig.....	12	76
C M Camp.....	12	66

Mr. John M. Knox offered a very pretty silver pencil for this event, which was won by E. H. Lott, shooting from scratch. These scores also go on the monthly cup if the gentlemen care to select from this hundred at the end of the month; but as there are two holidays and four more Saturdays, the gentlemen with low scores have a good chance to overcome the high scores.

Mr. W. H. Davol, who has been away from the city shooting in the Catskill Mountains, came back this afternoon, but came too late, as the gunners stop shooting after they finish the 100 targets, but he went out and tried 25 targets and got 18. He is one of our old gunners, and will be shooting here the entire season.

LEO H. BENDER, Supt.

Demopolis Gun Club.

DEMOPOLIS, Ala., Oct. 29.—The registered tournament held here to-day was pretty successful. Scores follow:

L. M. OTTS, Cashier.

Bourbon Gun Club.

BOURBON, Md., Oct. 30.—Twenty-four scale bird devotees set forth their arguments in a merchandise controversy here to-day. Most every one took home something in the way of a souvenir, a few remembrances being in the shape of shoulder portraits in black and blue. Several new men were welcomed and encouraged to try again. Brother Hymen, from the pink sheet squad of Remington, cheered the weak and jeered the strong, metaphorically of course, in the latter instance.

	Shot at. Broke		Shot at. Broke

INMAN D. RUSSELL, Pres.

Birmingham Gun Club.

FIFTEEN shooters were at the weekly shoot of the Birmingham Gun Club on Oct. 26. Good scores were made. The weather was very nice for shooting, a light wind caused the targets to jump some. Major Winters, of Montgomery, paid us a visit, as did also Mr. Boardman, of Louisville, Ky. Professionals, Tom Cassity, H. Hamilton and Dick Leland were present. Some of the beginners are shooting very well. J. De Jarnette, Jr., is still leading on the Du Pont trophy.

Shooting will continue every Saturday afternoon during the winter. Visitors are always welcome to the Birmingham Gun Club. Professionals and trade representatives are specially invited to come to Birmingham and get their winter's practice.

	Shot at. Broke		Shot at. Broke

J. O. WILSON, Sec'y.

Rifle and Revolver

P. S. A. L. Championships.

PEEKSKILL, N. Y., Oct. 21.—The rifle shooting championship of the Public Schools Athletic League were decided here on Saturday last. The shoot was held under the supervision of representatives of the War Department and the State National Guard, who were agreeably surprised by the fine performances of the boys. All the records made in the last Public Schools Athletic League outdoor rifle tourney, at Creedmoor, L. I., in 1907, were eclipsed.

Manhattan schools led the van. The individual championship was won by J. Pullman, of the High School of Commerce, with the excellent score of 96 out of 100.

The competition among first teams for the Du Pont trophy also resulted in a victory for Commerce with 192 out of 250. The second teams contest, for the Ullman trophy, was won by Morris High School with 183. De Witt Clinton carried off the plaque for the greatest number of qualifications of junior marksmen.

The individual title was decided in the junior marksman qualification shoot, in which the War Department presented silver medals to those who succeeded in scoring at least 35 standing and 40 prone, for the minimum total of 75 out of 100, at the 200yd. range.

One hundred and thirty lads competed in the morning and fifty-nine qualified. The boys used the regulation army service Springfield rifle, which was quite a change from the sub-target machines.

The marksman qualification scores were:

	200yds.	200yds.	Total.
	Standing.	Prone.	
J Pullman, Commerce.....	47	49	96

WINCHESTER

Red **W** Goods

WIN THE

**High Amateur Average For Single And Double Targets;
High Amateur Average for Double Targets, and High Professional
Averages for Single and for Double Targets, for the Season of 1912**

THE official returns for the trap shooting season of 1912 are now all in. The result was as the canvass indicated it would be. Winchester Red **W** Goods, by the run they made again proved, as they have many a time before, that they are the winning campaigners. There was no split or defection in the ranks of the vast army of intelligent shooters who used Winchester Loaded Shells and Shotguns. They supported them straight. There was no falling off in Winchester quality or popularity. The mid-season claims of some brands would make a political aerocyst green with envy. But the result—and the result is the thing that counts—shows another landslide for the old reliable Winchester Red **W** Brand. The self-proclaimed “world-beating”, “speed” candidate was snowed under by the world-beatingest, speediest combination extant, while of the contender of the ebon name naught was left save a cavernous flash-passage into which to withdraw.

And now for the official returns to which, in the language of the prevalent politician, “we point with pride.”

11 out of 13 Official Seasons' Averages

Out of the first 12 professionals in the Season's Average Contest for 1912, 9 used Winchester Loaded Shells, or Winchester Shotguns, or both. Some shooting, eh?

Season's High Amateur Average on Single and Double Targets: Won by Allen Heil of Allentown, Pa., with Winchester Loaded “Leader” Shells. Score, 1023 x 1100.

Season's High Professional Average on Single Targets: Won by W. R. Crosby of O'Fallon, Ill., with Winchester Loaded “Leader” Shells. Score, 1952 x 2000.

Season's High Amateur Average on Double Targets: Won by Allen Heil of Allentown, Pa., with Winchester Loaded “Leader” Shells. Score, 260 x 300.

Season's High Professional Average on Double Targets: Won by Fred Gilbert of Spirit Lake, Ia., with Winchester Loaded “Leader” Shells. Score, 522 x 600.

.98% FOR 4895 TARGETS — THE REAL UNBEATEN RECORD

This epoch-making record, which well-posted shooters all remember, was made in 1910 at REGISTERED TOURNAMENTS on *regulation targets*, by E. F. Forsgard with Winchester Loaded “Leader” and “Repeater” Shells and a Winchester Repeating Shotgun. The figures are susceptible of proof by the Interstate Association records. They stand unbeaten. Don't be misguided. Shoot Winchester Red **W** goods—they make good every claim.

WINCHESTER QUALITY WINS THE BIG VICTORIES

18 Winning Scores—Averaging 95.27%

MADE WITH **Peters** FACTORY LOADS

The law of averages affirms again the superior shooting quality of the Red P Ammunition. **Fourteen** different men, amateurs and professionals, competing in **eighteen** tournaments, won **eighteen** first averages. Isn't that conclusive? Here is the dope:

New Orleans Rifle and Revolver Club.

THE preliminary meeting of the New Orleans Rifle and Revolver Club was held in this city Oct. 23, and steps taken for a permanent organization. The temporary headquarters will be at 307 St. Charles street. S. A. Heitkamp acted as temporary chairman, and will probably be elected president. The organization will apply for membership in the National Rifle and Revolver Association. It was stated that there are forty-five applications for membership in the local organization, and it is expected this number will be increased, if the club desires it.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

A VACATION IN THE ADIRONDACKS.

Continued from 588.

dotted the greens, and the soft mysterious light peeping through the trees, the scenes were beautiful and varied, for at every turn in the trail, there were new delights to the eye.

But on the upward trip one does not have time to enjoy all these beauties, as no time for meditation or appreciation is given by the ever-energetic and practical guides.

We footed the narrow and steep ascent of the Hedgehog's Back Ridge, which is the watershed between John's Brook and Ore Bed Brook. Of course, the trail is not cleared every year, and often we got a bruised knee or stubbed toes against the trees in our path or the boulders that raised their heads defiantly in our way. Some of the way we had to wade in water and mud ankle deep to avoid a precipice.

Mr. Martin then led us through a half mile of woods, where many of the trees had been cut, and the underbrush was thick and hard to pass. We came upon a lumberman's trail, a monotonous stretch of corduroy road. This took us to a clearing where Beede's lumber camps give a cheering sign of humanity to the weary, foot-sore climber. These camps (two large ones, one for cooking and dining and the other for sleeping) besides some smaller ones, are huddled together like a colony of white men in an Indian village.

Picturesque as these rough log huts are, upon inspection they proved to be filthy and verminous. The beds were wooden frames, straw-filled.

Further travel through the mud and burnt timber lands brought us to a steep and stony

climb, forcing us to stop several times for breath. A very tiresome part of our trip was the stumbling through brush and fallen pine trees, long turned rusty and brown. Wading through this, a foot or two deep, for half a mile, we were surprised to see a deer lying directly in our path. It had been dead a day or two and was the prey of myriads of deer flies.

A very hard and steep climb, during which we brushed most of the tree moisture on to bloomers and blouses, led up very suddenly to our home for the night, the Martin Camp, situated on a small clearing, surrounded by the ever-present pine. The camp consisted of one good rainproof shack in which there is a tin stove resting on a couple of stones, a table big enough for eight, and two cots, one on each side of the stove. Our map and charts had to be suspended from the ceiling to keep them dry. There were no luxuries in camp. Dishes were of tin or granite, chairs were rough but comfortable, being patterned after the Adirondack sanitarium chair. The shack had two windows and a door.

To the right of the door and abutting the shack was a lean-to, roofed with logs and tar paper; it was closed on the north and east sides and entirely open to the south.

The guides relieved themselves of their packs and set to work. Mr. Martin built a fire in the stove and made lavish preparations for our evening meal. Hull and Hail took ax and saw and crossed the head of John's Brook just a few feet back of the lean-to, and while one gathered pine boughs for our bed in the lean-to, the other chopped down a few trees and built a roaring big fire just outside the camp.

We huddled about the quickly made fire,

and removing our dripping wet shoes, tried to dry them. Unfortunately some dried too fast, thus wrinkling the lining inside. Curious was the sight of half a dozen pairs of stockings steaming and as many pairs of legs, all stretched out toward the little stove.

We girls fell exhausted upon the welcome pine-bed, and rested our bruised and over-worked legs until supper time. A gentle rain set in, and we were thankful that we had reached camp and had no more climbing to do that day.

While we were resting comfortably by the blazing fire, four followers of the trail came upon us. They were young men from the Lake Placid Club. One was as white as death and looked too weak to continue upward. Another, the youngest of the quartette, had been injured in the climb and limped. They seemed much disappointed at finding Martin's camp occupied, but proceeded bravely to the summit of Marcy.

Great was our hunger, but greater our delight, when we sat down at the table, covered with white oil-cloth, and ate our fill, while Mr. Martin made delicious Adirondack Mountain flapjacks.

We ate the flapjacks with maple syrup as thick as molasses in January.

Our long and tiresome journey did not impair our appetites, for we ate heartily of broiled steak, boiled potatoes, bread, baked beans, stewed corn, pickles, olives, coffee, pears and peaches. While we ate, Hull and Hail laid to in a second lean-to in which there is a long table with a loft above "furnished" with a mattress upon which a lone traveler might find rest for the night.

The girls had a wood-sawing contest after supper. Two at a time took the big cross-saw and labored to learn which two could saw through the trunk of a tree in the shortest time.

Just west of the camp there is an immense rock with a flat top about fifteen feet in diameter. We climbed upon this plateau after our wood-cutting, and from there we got a splendid view of the valley through which we had traveled that day. Way off, beyond the valley, we could see the two lakes, Mirror and Placid, and the beautifully illuminated town of Lake Placid. The sky cleared and a few stars appeared. After lounging lazily about the blazing fire just outside our doors, we retired in bloomers and blouses to the lean-to. We covered ourselves with steamer-rugs and blankets and fell asleep.

The three guides took to the cabin and slept on the two cots by the stove. Hull, being a big and burly fellow, probably left little room for Hail, who spent most of the night outside, feeding the flames and guarding us against the intrusion of bears which inhabit that region.

We awoke about three the next morning, full of enthusiasm, donned our sweaters, took some bread and sardines with us, and by the light of a single lantern and a flashlight, started the tortuous ascent, hoping to see a glorious sunrise.

But the way was treacherous and dark and wet. The stony steep climb bruised us many a time, and most of the way led us through the brook bed of icy water which froze our feet. Once we lost the trail in the darkness and were

FOR EVERY GUN

Every gun owner everywhere needs "3 in One" oil all the time. No other oil on earth is so good for lubricating lock, trigger, ejector, break-joints. It goes right into contact point, removes dirt and grease, reduces friction and makes every action part do its work easily, accurately, surely at the right time. Moisten cleaning rag with "3 in One" and rub inside of barrel. This removes all residue of burnt powder, prevents leading, pitting and rust. "3 in One" cleans and polishes wooden stock.

FREE Write at once for free sample bottle and "3 in One" dictionary. 3 IN ONE OIL CO.,

almost precipitated down the steep bank in the direction of the cañon. The stiff frost-covered limbs of the balsam had to lend us their aid over the high rocks and deep holes, and so our hands were frozen, too.

We reached the clearing just below the summit in time to see the big red sun trying to burst through a cloud. It was wonderful and awe-inspiring to see all the earth beneath, still as death, and we, a handful of women, with two men, above it all.

After passing the vegetation line on the mountain, there was a good stiff climb over bare, bald rocks for at least half a mile. With chattering teeth and wavering limbs we reached the top-most point of old Tahawus, better known as Mount Marcy. A feeling of thankfulness, because we had all reached the summit in safety, made us speechless for a few moments. It was about five-fifteen when we arrived.

Looking about below the big rock, we saw, hugging a small fitful fire of pine bough-tops, the four youths who had passed our camp the evening before. In the most sheltered spot they could find, they had started a fire of wet boughs. Nearby were a couple of white oil-cloth sheets and a few cotton blankets.

We were warmly welcomed by the boys, who hastily made room for us at their fire, that we might thaw our fingers and toes and dry out our clothes. The boys bathed their faces in a little pool, made by the rain in the hollow of a rock. Then they cooked coffee and broiled steak which gave us an appetite that would not be appeased by our meagre breakfast of bread and sardines. We used the oil from our lantern to start a fire of our own.

The clouds hung heavily in the valleys and over the many lakes, and although the sun had risen a few hours before, the clouds would not lift. All about us we could see the lordly procession of peaks in the Sentinel Range, while Marcy lorded over them all.

Partially dried and still a little tired, we started down the mountain at a greater pace than when we came up. We descended by way of the same wet and muddy trail as far as the camp, when Mr. Martin had a good breakfast awaiting us.

Shortly after nine we took our baggage and started down the South Meadows trail, which is much easier, though longer than the John's Brook trail. Much of the way, on the lower trail, was a broad wagon road. The day was hot but the previous rain kept the road almost free from dust.

The descent was uneventful, and we reached the foot of the trail about two o'clock, bathed our weary and sore feet in the brook, ate our lunch, and were driven home to the Owl's Head in time for dinner that night.

To the hardy and adventurous, I would recommend the Mount Marcy trip by way of John's Brook trail, but to those who like a good twenty-mile tramp but care not too much for dangerous and difficult paths, I would recommend the South Meadows trail. And to all, both men and women, who have a good pair of lungs, a good pair of legs, the spirit of adventure and a love of nature, I would recommend the Marcy trip as part of an ideal vacation.

THE SENTINEL OF THE DEEP DEN.

BY ROBERT PAGE LINCOLN.

My friend the woodchuck, the sentinel of the deep den on the hillside where the low hanging trees droop their branches over the retreat. Truly, my friend, for have I not watched him and lived with him for many and many a day throughout the summer? Perhaps I am rather a suspicious object, but still he has come to know me as being harmless and very much interested in his affairs. Else why should I lie in the shade of the large oak and sketch him as he sits solitary at sentinel duty before his door? Why should I bring a camera with me and seek to take some pictures of him when he ambles around in search of things to eat? Both interesting from the naturalist point of view and as a mild observer of wild life. Who indeed has not heard of the woodchuck, and forsooth what farmer's boy has not had experiences with his lordship? Truly, he is familiar to all lads in the country, for there they are common, and at times said to raise havoc with the farmers' gardens.

This animal is generally of a light or dark brown color and sometimes even black. They are slow in their motions, and at certain times of the year they become fat and amble around like a gentleman of undue proportions. Then they are rather comical to look upon. The home of the woodchuck is usually in some secluded wood in a bank or in some tree. However, they are rarely found in the latter. This interesting little animal is often seen near our homes in the midst of civilization where they make homes under barns and under walls. However, they usually are found in a den which is dug on some hillside where the sunshine has a chance to filter through where they can bask and sleep in the genial warmth on tranquil summer days. This den slopes downward for some distance and then gradually turns upward where it strikes a level and continues on till it comes to the chamber. The chamber is where the animal sleeps and is

comfortably lined with selected grasses and fine leaves, making it warm and cozy. Generally there are some exits, but in most cases there is just one entrance which is the main one. It seems rather funny that the animal can dig down so far and push the dirt out, and yet they do it with apparent easiness. They work for some time, throwing out dirt with their fore feet and then when they have accumulated a pile, they work with their hind feet, throwing it out with great energy. Thus they keep on till they come below the surface, and then they turn around and push it out with their nose, clearing away as fast as they go. One only has to watch them to know that they are rapid workers. Armed as they are with sharp claws, they make the earth fly until they have finished their abode, and then of course they rest from their labors in a long nap that lasts all through the winter months.

Early in the month of May they bring forth their young which usually number as high as four and five—cute little things that are innocence personified. During the weeks that follow they grow and bask like their mother in the warmth of the awakening world. Many a day I hid me away to the den on the hillside, for I knew that new arrivals in the woodchuck circle were to be expected. The mother appeared to be strangely uneasy and would regard me with suspicion as I lay motionless under the shade of the wide spreading oak. I was a familiar figure in that neighborhood, and I was pained to think that she would not trust me. However, it was many days before she brought out her little brood, and when she did she kept all her faculties on the alert for any suspicious movements from under the tree. You may well suppose that I was highly engrossed in my observations and stirred not the least. So she ambled forth at the head of the youngsters and gave them their first lessons in the school of nature. When the mother stopped and listened, the cubs did likewise, holding their heads on a slant and peering forth with their little eyes in wonder. They imitated her in everything and she looked on in what I took to be a pleased manner. Not far from the den were some tender shoots of bushes, and here she led the band that tumbled over each other trying to be the first to taste the new-found delicacy, for it was their initial trial at selecting their own food. Carefully the mother sought out a twig and nipped the tender bark. In a moment and a moment only the youngsters set to work with great energy to appease their hunger, and soon they were very busy. Now the mother would sit up and glance about her with keen eyes, immovable as a statue. Knowing that something was on, the cubs stopped eating and sat perfectly silent, waiting for their mother's warning ere they scooted for shelter. Thus the old one sat for some time, and finally she had some premonition that there was danger in the air, and dropping lightly to her feet she ambled off with the young ones at her heels, no doubt with quaking hearts. The little ones tumbled into their home and the mother turned her eyes toward the oak where I lay and watched the shadows intently. Then she softly followed her offspring.

Thus, day after day I watched them and was repaid many times over for my observations. Gradually the cubs grew and soon they were most as large as their mother. Their fur was a light gray which changed as the weeks went by until it was a dainty brown that glittered in the rays of the summer sun. They learned to sit sentinel and often the whole band would be on their haunches, alert to the dangers that beset them. Boys often strayed that way, and once a dog got the notion to come there, but I saw to it that he did not stop and do any damage to the family and their home. So the summer went by and autumn, crisp and golden, was heralded and a new leaf was turned. The mother woodchuck was plump and inclined to grow fatter every day. Great pouches gathered at her cheeks and almost hid her eyes. The young ones left the home of their parent and strayed for themselves, each to make his home and go to sleep for the winter. The old mother stayed at her den and I saw her quite often sitting solitary and watchful. Where her young ones were I cannot say, but the vicinity

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

The Kind of Gun "Dope" That Helps You to Shoot Better

EXPERT accuracy with rifle, pistol, revolver or shot gun, demands that you "know how". Mere practice by yourself does not take you far toward expert efficiency. A little direction, a few suggestions from some past-master to put you wise to the tricks and "kinks" of shooting, works wonders for your marksmanship. Mere theoretical discussions can never do it for you.

The Outer's Book Brings You the Practical Knowledge of the Gun Experts of the World the kind of gun "dope" that really helps you to shoot better at the targets and in the field. The world's recog-

nized gunnery experts—Mr. and Mrs. Adolph Topperwein, Lieut. Whelan, U. S. A., Chas. Newton, Ashley Haines, E. C. Crossman, Pascal De Angelis, A. Lowdermilk, Chas. Askins, L. A. Danse, Maurice H. Decker, Dr. F. W. Mann, N. H. Roberts, A. O. Niedner, Fred. Adolph, Robert A. Kane—are all regular contributors.

To introduce you to the Outer's Book with its unique gun department, its outdoor ginger, its graphic photos, live outdoor stories, and interesting special articles, we will send you three months for 25c. Regular year's subscription \$1.50.

Your quarter back if not satisfied. Send it today.

bore evidence of the workings of other woodchucks. Sure enough there in yonder wood I found a young one busily at work throwing the dirt up with the easiness of an old-timer.

So the mild days of autumn waned and winter was on the way to shroud the hills and vales in ermine. The snow clouds gathered in the west and the sky assumed a leaden color that foreboded bad. Now the dens of the woodchucks were ready and the days of sleep were coming. Long ago the chambers had been lined with the grasses and leaves and was ready to admit the occupant. Only one, for each woodchuck has a den of its own. At rare times more than one is found in a den, but seldom. Cold weather came, and in its wake the snow winged its way to earth in feathery multitudes. Deep down in the underground homes the woodchucks curled up and closed their eyes in slumber. What cared they if the snow piled high above them and the raging winds tore the bare limbs of the trees and whined mournfully down the vale. The cold penetrated not the warm abode in the hillside where everything was silent in sleep.

That very winter I drove a rabbit into one of the holes and was rather glad that he had found shelter. Did the occupant and owner awake from his sleep and seek to drive the intruder out? No, for little knew he that his chamber was shared by a rabbit, shaking with fear. He slept on and on.

EAGLE'S FIERCE FIGHT.

EDWARD PHILLIPS, sixteen years old, who lives in the neighborhood of Cold Springs, had an experience with a wounded eagle that will last him for some time as far as excitement is concerned. Young Phillips was tracing a "bee" tree by the honey bees from some late clover that blossomed in his father's fields, and the trail lay across the plateau that crosses into the Big Schrader country, a high and somewhat barren stretch of a dozen miles, over which the fires have run and killed many of the trees. It is a section noted for its number of eagles and hawks, because of its isolation.

Phillips was as much as three miles from home when his attention was attracted by the queer maneuvers of a monster bird which was moving about over a great fallen tree, with its wings dragging alongside as if it were wounded. The bird proved to be an eagle of the gray variety and one of the largest of its kind. His wings were wounded, evidently having been shot by some bear hunter that came across his path. The bird was showing evident resentment at the approach of the youth, and rather than fright, was evincing a spirit of pugnacity that at first somewhat frightened the youth.

Phillips finally decided to capture the big fellow and believed that if he could throw his coat over the bird's head, he would be able to carry him off. The coat went wide of its mark, though the effort at throwing it had caused the boy to lose his equilibrium, and he found himself stumbling within reach of the big bird.

The eagle attacked him with its talons, and though one of its wings was shot so that it dropped helplessly at its side, the other one still had sufficient strength to bear some weight, and with this the bird managed to get on the youth's back. Its talons grasped his neck and shoulders, while with its beak it wrought terrible vengeance upon the boy before he succeeded in shaking it off. Phillips finally managed to grasp the bird by the neck, and then he made it give up the fight. But once on its feet it managed to get away into the thicket and was gone before the boy could prevent its escape. Young Phillips was badly torn of flesh and one hand, which was grasped in the bird's beak when he attempted first to reach its neck, was severely wounded.

Phillips let up on the job of trailing the bees and went right home to have his wounds dressed.—Laporte Correspondence, Philadelphia North American.

FOREST AND STREAM has a large circulation among clubs.

Kennel Department**Southern Ohio Field Trial Association.**

THE trials were run near Bethel, Ohio, on Oct. 28 and 29. The territory selected was in a gently rolling country, and included a number of fields large enough to try out the speed and range of the dogs to good advantage. One thing only detracted from the pleasure of the trials, and that was the absence of birds on which to work the dogs. This was especially deplored in the all-age stake, as from the quality of the starters, some fine exhibitions of bird work had been looked for. The weather was pleasant on both days, but in the middle of the day it was very warm, making the running hard for dogs and handlers. Babblebrook Bob ran a good race, showing himself to be an earnest and intelligent hunter, and won the derby here, as he had done the week before at Hamilton, Ohio. In the trials at Carmichaels, Pa., he showed his quality by getting second place in the all-age. He is by Mohawk II. out of Blackeyed Susan, and is owned by Louis McGrew, of Pittsburgh.

Babblebrook Joe, winner of first in the all-age stake, is a speedy, wide-ranging dog, stylish in action, and with good bird sense, as could be seen by his conduct when in the field. He is by Mohawk II. out of Early Dawn, and is also owned by Mr. McGrew. Babblebrook Buster, second in the derby and all-age stakes, fared better here than at Carmichaels, where he finished two places below Haverland's Buster in the free-for-all stake. He is a litter brother of Babblebrook Bob, a nice ranging, speedy dog, and was thought by some of the trial followers to be a trifle the better of the two, but Bob's lucky find in his first heat gave him the preference in the derby.

After the drawing of the all-age dogs on Monday evening there was a bench show of the competing dogs. C. H. Cord offered a silver cup for the best pointer and G. R. Harris, the club secretary, gave a cup for the best setter. A. F. Hochwalt acted as judge. Eight pointers and eleven setters were entered. Mt. Tabor's Sensation, owned by H. D. Abbott, and Haverland's Buster, owned by L. G. Haverland, were given first and second in the dog division; Morlidge's Babe, owned by George E. Morlidge, and Fannie, owned by W. S. Harris, first and second in the bitch division. The cup for the best pointer was won by Morlidge's Babe.

In the setter class Joe Whitestone, owned by B. H. Delin, and Medler, owned by Louis Reehl, took first and second respectively. Prus Bondhu, owned by W. E. Oliver, the only bitch entered, was given first. The Harris cup was won by Joe Whitestone.

Shetland Sheep Dog Cup.

ONE of the handsomest cups thus far offered for competition at any dog show will be that presented by the Shetland Sheep Dog Club. It will be known as the American challenge cup

PRESENTED BY SHETLAND SHEEP DOG CLUB.

of the Toy Spaniel Club of America and will first be put up for competition at the show at Waldorf, New York city, Dec. 6 and 7. The cup, which is seventeen and one-half inches high, heavily and artistically built and mounted on an ebony pedestal, must be won three times by the same owner before becoming individual property.

Soudan Swiveller.

W. P. WOLCOTT, of the Kenmare Kennels, has purchased the Airedale Terrier, Ch. Soudan Swiveller, from the Batson Estate. This dog has been a consistent winner since the first show. Mr. Wolcott also owns Kenmare Sorcesses.

Toronto Kennel Clubs' Beagle Trials.

THE first annual trials of the Toronto Kennel Club took place at Guelph, Ont., Oct. 28. It was decided to put the dogs down at Parker's Bush, some three miles out from Guelph. Arriving there in due time, grounds were looked over by the rules committee and decided as satisfactory. The entries were as follows:

Beagles over 13 inches to 16 inches, F. E. Smith, Guelph, Ont. Primus, dog, 15 months, black, white and tan. Hiram Cord, Elora, Ont., Sun Bonnet Sue, bitch, 4 years, black, white and tan. T. R. DeGeer, Toronto, Ont., Wee Melody, bitch, 15 months, black, white and tan. J. T. Smith, Guelph, Ont., Champion Yodler dog, 6 years, black, white and tan. Geo. Palmer, Guelph, Ont., Gypsy bitch, 4 years, white, black and tan.

Beagles under 13 inches: Hiram Cord, Elora, Ont., Elora Jennette, bitch, 3 years, white, black and tan. Sun Bonnet Sue, handled by Hiram Cord. Champ Yodler, handled by J. Smith and Gypsy, handled by T. R. DeGeer, were put down at 11:05 and immediately ranged away in good form, trying well in several likely places

(Summer) Berkeley-Waiontha, Richfield Springs, N. Y. Address up to November 25, Prince George Hotel, New York.

COTTAGES TO RENT

without a cry. There was considerable water in most of the flat places worked over (I must say I have hunted a great many days every fall for thirty years, and in all that time I never experienced anything that could compare to the condition of the county—it is simply inundated) which made it extremely hard for dogs to get scent sufficient to make a start. Hounds whimpered occasionally, as if some scent was still lying. Dogs were lifted at 12 o'clock noon without a start. It was decided by the committee to try a swamp a short distance away where there was a good ridge along it where conditions might or should be more satisfactory, and where there was expected some hare would be found.

At 12:30 P. M. same dogs were cast off again for another try and were soon lost to view of the spectators. Gypsy was the first to tongue and was quickly joined by Yodler, and then Sue chimed in, the three running well with a graded burst of music, rattling bunny clear through the swamp to the opposite side to a check. After several casts the line was again picked out by Sue and run for a considerable distance before being joined by the other hounds who only just got nicely in to a check. It was some time before the line was straightened out and owned by Yodler for some considerable distance when all three dogs settled down again to a real good run for thirty minutes to a loss.

Hounds were then called up, the heat being awarded to Gypsy, who in the last twenty minutes, running well ahead all the time, easily showed the speed to the others and was a keen, tireless little worker who was hunting every minute she was down. At 2:15 P. M. Wee Melody, handled by T. R. DeGeer, and Primus, handled by Jim Smith, were taken to the east end of the same swamp and turned loose. Both hounds ranged away well and were soon heard giving tongue. Unfortunately for this brace, some other hounds were heard coming up the swamp in full cry. This pair harked to them and soon were out of hearing. It was surmised the visiting hounds were running a fox. After a wait of thirty minutes, hounds not returning were counted out.

The only entry in the under 13 inches was

LIVE WILD RABBITS

Cottontails for sale. E. B. WOODWARD,
302 Greenwich St., New York, N. Y.

Hiram Cords, Elora, Ont. Elora Jennette was put down and furnished a really genuine surprise to a great many of the spectators the way she worked. After two or three casts she owned a scent, and in a few jumps was trailing her hare at a real good clip without a loss for fully 200 yards. The check was short and soon again she was hustling the rabbit along in really high class form and was easily entitled to the honor of winning the silver cup for beagles under 13 inches, presented by the Toronto Kennel Club; also a special prize of a pair of hunting boots donated by Messrs. D. Pike & Co., Toronto, for the best beagle owned by a member of the Toronto Kennel Club.

At 3:10 P. M. Gypsy and Elora Jennett were put down to decide which hound would win the honor and title of champion for 1912, also the silver cup the emolument for the struggle. It was an uneven trial in one sense, but the "little un" demonstrated to a great many of us that it is the size of the heart, not the quantity of lumber that wins oftentimes and makes the ideal hunting dog. This pair put a hare up and down the swamp, now a loss then a full cry, both working keen for a quick find after every check. I could do nothing else but award the title to Gypsy for speed, other qualities being equal. Gypsy also won the Fred Smith cup for speed and tongue, open to hounds over 13 inches.

Awards: Hounds, over 13 inches, first, Gypsy; second, Champ Yodler; third, Sun Bonnet Sue.

Hounds under 13 inches: First, Elora Jennette.

Several new members were added to the Toronto Kennel Club.

Property For Sale.

A RARE INVESTMENT Safer than Bonds and Mortgages

Four hundred and eighty acres of beautiful level land in Keith County, Nebraska. Rich black loam, six feet deep, which produces all kinds of big agricultural crops. Forty bushels of wheat to the acre, and all other crops in proportion. These lands are located eight miles from the county seat, and six miles from the thriving, bustling town of Brule, on the main line of the Union Pacific Railroad. The town has church, high school, hotels, all kinds of stores, grain elevator, etc., etc. I will also sell 160 acres adjoining Brule, fronting on the Union Pacific Railroad, under cultivation, with all improvements. The climate is unsurpassed for all lung or throat difficulties. Elevation, 3,200 feet.

For terms and particulars address

E. H. BARTON, 32 Bank St., Batavia, N. Y.

ATTENTION SPORTSMEN!

For Sale—About 400 acres of fine open land that has not been in cultivation for several years, and well stocked with partridge and other game. Situated four (4) miles from Ridgeway, S. C.; three (3) miles from Blythewood, S. C., on Southern Railway, and twenty (20) miles north of Columbia, S. C., in a beautiful rolling country and an ideal hunting section. This place has seven cottages, fine drinking water, together with several streams running through the place, and would rent for sufficient to pay interest on the investment. Privilege could be secured on 1000 or more acres at a very reasonable price for hunting purposes. Price, \$20.00 per acre. For further information address

R. T. FEWELL, Rock Hill, S. C.

FOR SALE—Four thousand acre farm; 500 acres cleared; balance has good growth of pine and gum timber. Fifteen room dwelling, with out-houses. Located in eastern North Carolina, just half-way from Newbern to Morehead City, on Norfolk Southern Railroad, and on National Highway, in heart of the trucking section. Good fishing and hunting, especially quail shooting. Price, \$7.50 per acre, with terms. Wadesboro Loan & Insurance Co., Wadesboro, N. C.

THE ANGLER'S WORKSHOP

Rodmaking for Beginners

By PERRY D. FRAZER

Not only Americans, but anglers of Great Britain and nearly every European State, South Africa, Australia, Canada, are making their fishing rods under the simple instructions laid down by the author in this useful little manual. A Japanese, after reading the book took up rod repairing for his fellow countrymen as a business. An Englishman followed it in making several of the sixty-five rods that he has in his collection. A Russian appreciated the book so much that he suggested a Russian translation. The British sportsmen's papers have quoted from it time and time again. In that country it has helped bring about a great change in rod types, and to attract attention to the excellence of American fishing rods. In fact "Rodmaking for Beginners" has become the standard manual wherever fishing with rod and reel is practiced.

The reason is obvious. The book is written in plain English, and all the details are set down so simply that a boy can follow them. All of the types of rods used on fresh and salt water are described and specifications given. Separate chapters cover all details, and the one on split cane rodmaking is the only comprehensive treatise on that subject ever published.

Cloth, 180 pages, four full-page illustrations, 60 working drawings, making plain every feature of the text. Postpaid, \$1.00.

FOREST AND STREAM PUBLISHING CO., 127 Franklin St., NEW YORK

THE established supremacy of FOREST AND STREAM as a carrier of advertising is alone indisputable evidence that its circulation reaches every week in the year that class of places in which there is at all times not only a disposition to read its advertising columns, but the ready means with which to take advantage of the opportunities therein offered.

You like to HUNT and FISH

You like to go CAMPING —

then surely you will enjoy the **National Sportsman** magazine, with its 160 richly illustrated pages, full to overflowing with interesting stories and valuable information about guns, fishing tackle, camp outfits—the best places to go for fish and game, and a thousand and one valuable "How to" hints for sportsmen. The **National Sportsman** is just like a big camp fire in the woods where thousands of good fellows gather once a month and spin stirring yarns about their experiences with rod, dog, rifle and gun. Think of it, twelve round trips to the woods for a \$1.00 bill.

SPECIAL TRIAL OFFER

Just to show you what it's like, we will send you the **National Sportsman** magazine for three months and your choice of a handsome **National Sportsman Brotherhood** emblem in the form of a Lapel Button, a Scarf Pin, or a Watch Fob, as here shown, on receipt of 25c in stamps or coin. FOREST AND STREAM PUBLISHING CO., 127 Franklin Street, NEW YORK

AFRICAN PUFF VIPER.

It is seldom one sees such a rare combination of beauty in color and pattern and of repulsiveness in form and aspect as is exhibited by the two puff adders of tropical Africa, commonly called the gaboon viper and the nose-horned viper. Entirely lacking the sinuous grace characteristic of the majority of snakes, these vipers have a body almost sluglike in its obesity, while the huge arrow-shaped head, supported on a slender neck, and with glassy cat-like eyes set close behind the blunt snout is the very incarnation of the popular conception of the word "venomous" when applied to poisonous as opposed to harmless species of snakes.

Of the color and pattern no words can give an adequate idea, but perhaps Sir Harry Johnston's description of the gaboon viper's beautiful carpet pattern of pinkish gray, black, lemon yellow and slaty blue summarizes the general effect as well as another. It must not be supposed that the pattern is a confused medley of these tints. On the contrary, the patches are arranged sub-symmetrically with reference to the middle line of the body, a row of about a dozen or more large oblong yellow marks running down the spine being the first feature in the coloration to catch the eye. Another noticeable characteristic is that the skin has none of the sheen which whether accompanied or not by metallic reflections one associates with the scaling of snakes, but is dull and suggestive of carpet pile as much as of anything else.

Despite the beautiful coloration of these vipers it seems that they must be very difficult to see lying on the variegated carpet of fallen leaves in the forest. And there is evidence that the common puff adder of north, east and south Africa is also obliteratedly tinted. At the same time they are extraordinarily fearless and sluggish reptiles, as if conscious of immunity from attack. Nevertheless when provoked or alarmed they speedily advertise their presence by inflating their lungs with air and slowly expelling it with a loud and prolonged hiss comparable in effect, according to the "warning" theory to the rattle of the rattlesnake.

The deadly daboia, or Russell's viper of India, is also a loud hisser, and in this connection it is interesting to recall that the desert viper attracts attention in a different way—namely, by rubbing the heeled and serrated scales of one part of the body against those of another part, thus giving rise to an audible rustling.

Nevertheless the "warning" methods of all these viperines are in principle the same in the sense that they appeal to the ear. In this respect they differ from the "warning" methods of the cobras, which appeal to the sense of sight.—London Field.

MILKWEED AS FOOD.

ONE of the economic triumphs of the age is the utilization of waste material, and the use of weeds as food staples is a phase of this triumph.

The most interesting of these new "weed foods" is milkweed, the common wild variety that grows in every rocky pasture, in meadows and by roadsides.

Its large thick smooth leaves are familiar to all, and its deep, dull pink tuft of flowers, and later its seed pods filled with delicate floss and flat brown seeds. When it is broken off a thick white milky juice exudes. This is rich in nutrition.

This common and luxuriant weed is now being cultivated in gardens as a valuable food staple and makes one of the most delicious of vegetables. It tastes almost exactly like asparagus and is cooked in much the same way as spinach. It has been found to be rich in natural salts and nutrition and is easily cultivated.—Leslie's Weekly.

MY BOOK IS FREE

I have written a book that I believe will help you realize a fuller appreciation of the possibilities of nature from the stand-point of health, pleasure and comfort. I had this in mind as well as the commercial idea; for, of course, this book is intended to sell goods.

CAMPING AND HUNTING

I have camped, canoed, hunted, fished and trapped from my childhood days—often far from the usual haunts of man. I am a baseball, tennis and golf enthusiast as well. I ought to understand this business thoroughly; at any rate, it is my pride.

Ask for Catalog and Guide No. 530

All the hundreds of things this book describes are sold under a strict guarantee. If you are not pleased with your purchase—if any item does not measure up to your standard, don't hesitate—send it back. My book is free, if you mention No. 530.

Otter Hunting with the Essex Otter Hounds

By J. M. M. B. DURHAM

Photographs by the Author.

SEEING that the United States of America simply teem with rattling good sportsmen, it seems passing strange that the grand old English sport of otter hunting has never been given a fair trial in that country. We use the words "fair trial" advisedly, as doubtless master *Lutra canadensis* is occasionally hunted in your rivers and streams by a scratch or bobbery pack (i. e., a heterogeneous rabble of dogs of all sorts, breeds, conditions and sizes), but never so far as the present writer has been able to ascertain by searching the kennel books and records of the various packs of English, Irish, Scottish

advice, but with drafts of good hounds from their own kennels to boot.

Otter hunting, which may be pursued during the warm season only, is essentially an early morning sport, and to assure a good drag, huntsmen and hounds must be astir early, for during the summer months the ground, generally speaking, holds but very little scent when the heavy night dew has been dissipated by the hot rays of the sun; while to follow on "shank's mare" a long and fast drag, with the thermometer registering perchance 90 degrees in the shade, would savor too much of furnace stoking in the tropics.

panied us, and which had been used to otter hunting in his native Scottish isle, bolted a fine dog otter from its holt (usually a hole in the river bank, or the hollow trunk of a tree, the entrance to which is below the surface of the water) at the foot of a large alder. For thirty minutes or so we enjoyed quite an exciting hunt up the valley, the stream being too shallow and clear to allow the quarry to elude us by breaking back under cover of water, and thanks to a very heavy thunderstorm the preceding night the earth was well saturated and held a burning scent. The little terrier, who possessed a

A HALT ON THE WAY.

HARK TO THE RAMBLER.

and Welsh otterhounds has anything in the shape of a pack of otterhounds ever crossed the "herring pond."

There is, we believe, no dearth of otters in the rivers and streams of the North American continent, and our acquaintance with some of the waters in question prompts us to state that they might easily be hunted by the "shaggy beauties." Ten or twelve couple of the rough-coated, bell-voiced, old-fashioned strain of otterhounds and foxhounds (some M. O. H.'s swear by the latter) would prove quite sufficient to hunt the American waters, and masters of otterhounds on this side of the Atlantic would, we feel sure, be only too glad to see their favorite sport established in the United States of America and would further the endeavors of any sportsman or sportsmen desirous of introducing otter hunting thereto, not only with sound practical

Notwithstanding such small drawbacks as heat and early rising, however, we believe that otter hunting would prove a huge success if it were once set on foot in districts where sportsmen, and incidentally others, are sufficiently numerous to make the game worthy the candle. All expense should of course be covered by subscription. *Lutra's* natural habitat being ever by lake, river or stream, a drag often runs through highly picturesque scenery, and we have in our mind's eye a charming little valley situate not a hundred miles from the good old city of Boston, Mass., and watered by a bubbling elder-fringed brook.

One glorious July morning, while collecting botanical specimens, we came across the seal (i. e., pad-prints) of an otter in the spongy bed of a small spring or feeder of the brook. A little later old "Mac," the Skye terrier which accom-

wonderful nose, was able to carry the line with scarcely a check or a falter, but a single and somewhat ancient Skye terrier and a man armed with a specimen tin could scarcely be expected to hunt an otter to the death.

Be that as it may, we proved unequal to the task, and master *Lutra*, after showing us what he could do as a beast of the chase, made good his escape by bolting into a rocky stronghold furnished by a cluster of half-submerged boulders from which haven of refuge we were unable to dislodge him. A well hunted pack of otterhounds, however, would in all probability have accounted for that game otter after showing a grand hunt along the banks of the little river and through some of the most beautiful sylvan and moorland scenery imaginable.

And now a few words about ways and means. Not every sportsman's purse is suffi-

HAS HE GONE UP OR DOWN STREAM?

OFF TO DRAW.

ently well lined to permit him to maintain a pack of otterhounds at his own expense. The would-be M. O. H. of limited means should, therefore, call a meeting of his fellow sportsmen to discuss the possibilities of raising a pack by subscription, as mentioned earlier herein. About a dozen couple of hounds are all that are required to hunt the otter. English M. O. H.'s would be only too happy to send out drafts from their kennels, and among such drafts a few couple of old and reliable working hounds should be included to lead and teach the younger entry their business. Masters cannot be expected to part with the "cream" of their kennels, but the hunting instinct is strongly inherent in otterhounds, and the tyro M. O. H. will find that even the unentered hounds of his pack will take very kindly to the chase of their legitimate quarry, providing they come of good stock.

The waters hunted by the West of England packs are, generally speaking, not unlike many of the small rivers and streams of the Eastern States as regards shallowness and swiftness of current, and a draft of those dashing hounds that hunt the Welsh, Herefordshire, Devonshire, Somerset and Cornish streams should, if possible, be acquired. By even mail we are sending to the editor of *FOREST AND STREAM* a list of every recognized otter hunt in the United Kingdom, together with the names of the respective masters thereof, and this might prove useful to any American sportsman desirous of forming a pack.

Though otterhounds require less skillful handling in the field than foxhounds, and indeed they are often seen at their best when left to puzzle out a "problem of scent" unaided, it behooves the huntsman and his whippers-in to learn their business thoroughly, while a knowledge of the habits of *Lutra* is indispensable.

There are many good works on otter hunting and on the haunts and habits of the otter, from the pages of which a great deal of interesting and useful information may be gleaned, but practical knowledge gained in the field will alone teach one to become a proficient huntsman and a keen, intelligent novice may, by closely watching and studying the working of hounds and the movements of their quarry, very soon learn the rudiments of his craft; the rest will come to him in due course.

Trencher-fed hounds seldom, if ever, hunt with the same amount of unity and amity as a pack kennelled under one roof, but when subscriptions are few and far between, a trencher pack may be maintained at comparatively small expense, one man keeping a couple of hounds here, another man a couple and a half there, and so forth until the whole pack is "lodged" and "boarded" out as it were. On the other hand, when sufficient funds are available for hounds to be kenneled in the orthodox manner, care should be taken that a healthy, open site be chosen for the housing of the pack, as not only do hounds require plenty of pure, fresh air, but also space upon which to exercise on non-hunting days, while plenty of road exercise is essential to all hounds, otherwise their feet are liable to become tender.

The erection of small kennels (lodging and feeding rooms and concreted yard) will not cost a very large sum, but particular attention must be paid to ventilation and drainage, for unsanitary kennels "spells" sick hounds.

As regards diet, both oat and corn meal porridge boiled in broth are excellent, especially the former, and the kennel larder must be kept well supplied with beef, horse, mule or donkey meat. The flesh is boiled and broth from the same mixed with meal will form the staple food of the pack. Too much flesh is not good for hounds during hot weather, but in moderation it is quite essential, and fresh vegetables (cabbage, carrots, etc.) may not be omitted from the canine menu.

A good deal more might be written regarding the possibilities of otter hunting on American soil, but having already encroached upon the limits of space allotted to us we must perforce lay down our pen.

The Trapping and Selling of Grouse.

BY THEODORE GORDON.

IN the lower portions of the Catskills, particularly in parts of Sullivan and Ulster counties, a good deal of trapping and selling of ruffed grouse has already been done. It is probably practiced more or less wherever there is much wild land and a comparatively small population. The stock of grouse had been slowly increasing since the bad year of 1907, and this season pros-

pects for sport seemed good. Many full broods were reported in August and September, but when the season opened they were found to be widely scattered, and in a short time it became difficult to locate them.

The trappers must have been very busy. One respectable farmer bound for New York was caught on an O. & W. R. R. train with forty-six grouse in two suit cases and got off with a fine of \$100, as he "split" on one or two of his confreres. One of these paid a small fine. I understand that in certain districts this trapping and buying of grouse has been going on for several years. Women have carried the birds to New York at times when it seemed too risky for the men.

It is a miserable business. A man named De Silva, a Delaware county game protector, seems to have done most of the detective work so far. With a good stock of birds in the big woods there is a reserve supply to draw upon, as in the autumn grouse are great wanderers. They drift out into the smaller woodlands and covers near the streams where a good dog can work to better advantage. Even without a dog one can bag a few birds occasionally.

There was a good flight of woodcock on the first moon in October, but they did not tarry, except in the few places where they found good feeding grounds.

It may be worth while to send these notes to *FOREST AND STREAM*. The American people are peculiar in regard to the laws. Some of these are scrupulously obeyed, while others are lightly considered. There is a constant tinkering with the game laws of most States which benefits neither the birds nor the people. There are many factors influencing the supply of game, good breeding seasons, the presence of natural enemies, epidemic diseases, extremely severe winters, etc. With rational laws well enforced large covers and plenty of food, the ruffed grouse (except in wilderness) is a wild and hardy bird, and with present bag limits (four birds) is not likely to suffer greatly at the hands of sportsmen, but owing to certain habits they are quite easily trapped.

THEY are feasting on dog steaks in Germany—eating the demnition bow-wows to keep from going to them, as it were.

Hints for Campers.

BEDS: First on the list comes the old-time bed of balsam browse. If you have faithful guides and camp in a balsam or hemlock region, it makes a fair bed. But it requires an hour's time to make it and requires rebuilding every day. It is surprising how the browse will pack under the weight of your body. This can be lessened to a great extent by first building a spring mattress of hemlock branches (not browse) laid crosswise with the butts outside and the feather in the middle, and then build the browse bed on the branches. Your guide may kick because it is not according to Indian usage; but you can tell him that many old campers have built beds in this way, although few have written about it.

A canoeist does not have to make his bed every night. Frazier's cork cushion bed cannot be surpassed. But two cushions, each three feet long, eighteen inches wide, and three or four inches thick, are better than one. If you have your camp furnisher make them, give him very positive directions not to pack the cork tightly. He will try to give you your money's worth of cork and you will wonder why any one ever recommended cork cushions. These cushions serve as a floor to your canoe, as a seat, and as a bed. They are light, and it does not matter if they get wet, as they quickly dry out, and your waterproof sheet will take care of that. And speaking of waterproof sheets, I do not mean a rubber blanket, but one made of waterproof balloon cloth.

Rope mattresses are made of two logs with pegs driven in auger holes and rope laced between them. They do not appeal to me as I do not take an auger to the woods. I have never tried them, but I think a canvas stretcher bed would be far better.

Canvas stretcher beds cannot always be rigged for lack of suitable poles or logs, and the poles generally do not fit well in the tent. I have one. I tried to use it once. It makes a very good floor for my tent.

Folding cots are a luxury, the catalogue says, but on ordinary trips we leave luxuries at home. On a wagon trip to a permanent camp they are all right if properly used. Kephart says they are like a pine board, and he is right. He suggests the use of a quilt; but a quilt will not remove the trouble. A much better plan is to build a mattress of branches and browse or leaves, at least six inches thick, on top of the cot. So used, a folding cot affords a most luxuriant bed, the best I have ever slept on in camp. But a folding cot weighs sixteen pounds, and, excepting on a wagon trip, is, for me at least, a burden not to be thought of.

Hammocks are very nice for an afternoon siesta, but hardly all that you could wish for as a bed in camp.

And now, where is the bed perfect for all purposes? I have not found it. So far as canoeing and a permanent camp are concerned, the cork cushions and the folding cot with its spring mattress of branches are good enough.

As to a canvas bag filled with browse or leaves, my experience has been that it makes you tired to fill it properly, and it makes you tired the next morning if it be not properly filled.

LORNA.

TWO FROM NEW BERN, N. C.

New Publications.

THE COMPLETE WILDFOWLER, ASHORE AND AFLOAT. By Stanley Duncan and Guy Thorne. Illustrated, \$3.75 net. Outing Publishing Co., New York.

To paraphrase the revered W. S., a good book needs no prologue. This book has one which explains in effect why the work was not called the wet nurse to English wildfowlers, for it is that in everything but title. If the composition did not cost \$3.75, the book could be passed by with this suggestion: If you build your library from the viewpoint of artistically bound books, with comprehensive titles, you should by all means have a place made for this book. If, however, as is the case with most of us, your sportsman's library is selected for service, you do not want this collaboration. The sportsman who prides himself upon his knowledge of dog, gun and birds will mentally fight his way through the "Wildfowler," for its authors are imbued with the conviction that no one treats a gun properly, wears the right sort of shooting clothes, and that every reader has an insane desire to cross breed shooting dogs, which inci-

dentally is about the last thing a bird hunter would think of. Even a bad boy with a good gun couldn't spoil it in the padded cell architecture of Mr. Thorne's ginger bread gun room. Our old friend Kiffe will, for twelve dollars, give us a gun cabinet in which may safely be racked the best friend in the gun line we ever had.

Our further criticism of the "Complete Wildfowler" is its title, which is an absolute misnomer as far as American wildfowl shooting is concerned, for there is not in the entire 360 pages a single bit of information helpful to the wildfowl shooter on this side of the Atlantic, where punt guns are outlawed and where guns of calibers from 2 to 10 are things of the past, having been superseded by 12's and 16's because the American sportsman shoots for fun and not for feathers.

How about sending us a card with the name of a friend who would like a sample copy?

Fishing in Great Watchet Lake

By HENRY D. ATWOOD

I WAS at my desk in the office engaged upon my books one morning in March when the door opened, and in walked old Sam Whittworth. Sam was a curious character, employed by the railroad as freight agent and collector. He was about five feet six inches in height, of dark complexion, with straight, black hair, and bright, piercing black eyes; his weight was 190 pounds. He greeted me with a hearty good morning and presented me with the company's freight bill for the past month for settlement.

After looking the bill over, I in turn presented him with a check for the amount. Sam receipted the bill, and as he was about to depart, said: "How would you like to go fishing down East with me?"

"I would like it well enough. When are you going?"

"I shall have my vacation next week and will be ready to leave here on Saturday."

"Very well, I will go with you. What shall you want me to carry?"

"Oh, I have got the traps and lincs, etc. All we want will be some live bait. The fishing will be through the ice, and we can get no bait there."

"Very well, I will see that you have bait enough." Thereupon Sam departed with the understanding that I was to meet him on the following Saturday at 4 P. M. at the depot in Boston.

In the course of the day I hunted up an old acquaintance, and getting him into the carriage with me, drove to a creek I knew of, where minnows were likely to be found.

The winter had been very cold, and there were great fields of ice all over the meadows, where it was stranded, and had settled down as the tide went out. For some time we were not rewarded by the sight of a single minnow, and Dan walked up the bank to the head of the basin when he called out: "There are shoals of fish here enough to fill your basket." When we drew the seine and dumped the minnows into the basket we had bait enough.

I had not got half way across Boston Common on the next Saturday when I ran against another pedestrian. It was snowing and both of us had our heads down to face the bitter blasts. I dropped my pail of minnows; the other fellow dropped his umbrella, each equally ready for an emergency. When we had taken a good look at one another, each exclaimed: "Halloa, Atkinson! Halloa, Atwood!"

Atkinson was my classmate, the son of a minister, which may have induced him to have better tendencies than myself, but he was glad to see me. Then he asked me where I was going. I told him to the station.

"I will go with you," said he, and taking hold of one side of the handle of my pail, he asked: "What have you got in there?"

"Bait," said I.

"What for?"

"Any fish that swims."

"Well, I will help you carry them."

At parting Atkinson said: "I wish you luck and would like to go with you."

"Come on."

"No, I have got to go and see my cousin,

who lives nearby." And so we parted. If Atkinson had only gone with me he might have become a good fisherman. As it was, he went to California and became the president of a college.

At the railway station I met my friend Sam and we took our seats in the smoking car and in due time reached Portland.

The next day being Sunday we kept indoors, for the snow was still falling fast. There was no let up in the downfall until Monday forenoon. Then we started for Great Watchet. Sam secured a horse and sleigh and we bundled our traps aboard.

The snow was badly drifted, and we made

people so much that we told him we would stay with him a day or two before going to Great Watchet Lake. With shovel, axe, ice-spade, traps and bait we arrived at the pond and commenced operations.

We first shoveled away the snow from the location where we intended to fish, cut the holes and set our traps. As the ice was very thick, it was slow work and occupied the whole forenoon.

The fish bit well and we caught a goodly number, the bulk of them being perch.

On the following day we tried our fortune on one of the other ponds in the vicinity, but had poor success, and accordingly made up our minds

BEFORE THE LAKE FROZE OVER.

Lewis and His String.

slow progress. When night overtook us, we stopped with a man who ran a shingle mill by water power, and whose house was near the road, and who readily agreed to harbor us over night or as long as we concluded to stay, "for," said he, "there is very good fishing on my mill-pond, and also on other ponds in the neighborhood." This miller was a very jolly old fellow. I shall never forget him, for he and his wife treated us with great hospitality.

They had a famous old kitchen with a fire-place large enough for half a dozen to sit around comfortably and enjoy the welcome warmth.

Prompt with the sun we heard the good folks stirring, and so we arose and were on hand for an early breakfast of potatoes, pork, pie and coffee.

Sam and I liked the hospitality of the old

to try the mill pond the next day, where we met with better fortune and made a fair catch. On Friday we again tried a neighboring pond, but the wind was from the north and had a fair sweep over the pond and skimmed over the holes almost as fast as we could break them out, so that we eventually abandoned the attempt and retreated to the house to thaw out our benumbed fingers.

Saturday we decided to set out for the goal of our original intentions, and so after breakfast, bidding the miller and his wife good-bye, and making them due compensation for their kindness, we hitched up old Dobbin and started.

We arrived at Alfred at noon, and just as a wedding party was coming down a steep hill on their way to the church, where the wedding ceremony was to take place. There was a long

string of sleighs, each one having a couple, and the bride and groom were in the lead. The snow lay deep from the foot of the hill across the main road to the church, and all of the party were going at a pretty fast gait. The steed driven by the groom dashed across the road, and plunging into the snow the sleigh went up into the air, and bride and groom left it as if fired from a catapult. Both came down head first into the snow in front of the church door. I never saw a moving picture to equal this.

When we reached the lake, Sam went to work shoveling off the snow in the location where he proposed to place the traps, and I began to take some healthy exercise with the ice chisel. This was an iron spade with a long handle, which Sam had sharpened to perfection, and was far better than any axe for the purpose; in fact, the ice on the lake was between three and four feet thick, almost as thick as it is on the St. Lawrence River. We set some twenty traps as fast as possible, for it was now near sundown, and scrambled up the bank, carrying our impedimenta with us, and made tracks for the sleigh. The way was long and dreary before we saw a light, which emanated from a house where we were.

I have never forgotten that woman and her husband. The supper that was soon to be served was a regular New England Saturday night supper, consisting of hot brown bread and homemade butter, baked beans, coffee and apple sauce, and Sam and I ate as never men did before, unless they had been on short rations for a week.

When we arrived at the lake next day, Sam said: "Now, you go down and pull up the traps, and I will stay here and look on, for I told my wife when I left home that I would not fish on Sundays."

"You did! Why, I thought you were a Baptist and not afraid of water."

Sam lingered on the bank, looking with longing eyes as I set forth to pull up the lines. Every line that I drew in had either a fine togue or fat pickerel attached to it, with exception of a few, from which the bait had been taken. As I pulled in the fish I saw Sam jumping up and down as if he were cold, and finally he sprang down the bank and commenced pulling up the lines and throwing out the fish without stopping to detach them from the hooks.

A few minutes sufficed to rebait and replace the traps, and then Sam and I started across the lake to the island on the north side of which was a deep hole, wherein the fish gathered, and sheltered by the island, we could fish without being exposed to the full sweep of the wind. Here Sam cut a number of holes and I set the traps. Then he went over to the mainland to a cove, a little south of our first line of traps, and there he put in a number of others. Then he came back and said he would go up to the south end of the island, and there he would put in the remainder of the traps.

Little did I think, as he departed, that my jesting words upon a Baptist being afraid of water on the Sabbath would come near to having a tragical conclusion. Sam was a good half-mile away from my position north of the island, and it would have taken a fast traveler through the snow to have gone the distance in ten minutes. While I was watching my traps and also casting a look occasionally to those on the line of the lee shores, and more especially those in the cove, I saw a number of the traps flick

up, and so started for them. I got over to the cove and succeeded in pulling in three fair fish and losing a fourth. I rebaited all the traps which were bare and stood for some time watching them to see if there would be any more hungry rovers waiting for a meal. There was one trap in especial which occupied my diligent attention. It would fly up and drop back, and every time I pulled in the line the bait was gone.

I concluded I had a dainty fish to deal with or a consummately cunning one, so I stepped up to the trap and waited for several minutes until up went the trap again. I grabbed the line and pulled in. The bait was gone. I rebaited and waited around until tired, so I walked back to my station by the island and proceeded to attend to business there.

In a short time, having examined all of my lines I looked over to the cove, and behold, my especial trap was up again and wiggling back and forth at a great rate. I started on the run to get there in time, as I hoped, to secure the fish. About half way across the lake the ice

fully back again, and presently I saw my traps flick and stooped gently over it and gave a quick and vigorous pull. And this time I had something in earnest. The fish was fast. I hauled him in and eventually brought to bag a good six-pound pickerel.

I took my good fish, and observing a lot of hungry crows around, I dug a hole in the snow and deposited it therein and carefully covered it up. Then I went back to my island as happy as a clam. I was for some time engaged in rebaiting and replacing my traps there, and when I looked up from my labors, I saw a congregation of crows, all forming around the spot where I had concealed my big pickerel at the cove.

I knew what they were up to as soon as I saw them and started on the run for them, but despite all my exertions, before I got there these harpies had uncovered and torn and picked my much prized pickerel half to pieces. To say that I was mad would not be correct, unless you should add several intensives, and I hurled expletions after my departing guests, whom I ab-

AN UNCOMMON CARRIER.

Photograph by O. B. Waters, New Bern, N. C.

broke under me, and down I went. I thought I was a goner sure enough, but suddenly I brought up in solid footing again.

The case was this: The first ice that formed had been covered by a heavy snow fall; upon that snow fell rain, and the snow was melted. Over that water ice again formed, and upon that ice subsequently a heavy fall of snow was deposited. The water all around the margin of the lake was frozen solidly down to the bottom for a considerable distance from the shore. I scrambled out of that chasm as quickly as possible and proceeded with a grateful heart and good hopes of catching the wiley fish that was still tugging at the fateful line. When I arrived these hopes fell, the hook was bare, the fish departed.

Alas, for blasted hopes. "Bait it," said I. "I'll have you yet." So I rebaited and then made all the noise I could as I went away. Having retired a few rods, I turned and walked care-

jured by all the names that suggested themselves in my vocabulary, as thieves, robbers and black-dyed villains, to which they answered with derisive "caws" and perched themselves in plain view on top of the big pines on the shore, and no doubt enjoyed the reflection upon that sumptuous feast with little compunctions of conscience. Oh! how I pined for a gun.

"Confound those crows," was the last thing I said as I turned to my traps again at the island. About four o'clock I saw Sam coming around the head of the island, bearing with him a large string of fish, and he had one pickerel taken out of the deep hole that weighed about eight pounds.

I told Sam about my big fish, and the feast the crows had made of him, and all Sam said was: "I don't blame the crows."

We had all the fish we wanted, however, and so many in fact that in order to get them from the lake to the sleigh we cut a lot of cedar

boughs and made a sled of them, laying the fish upon them and dragged them over the snow to the shore, up the banks and along to the place where we had left our horse.

We then hitched up, put all our stuff aboard, and harked back to our headquarters. When we arrived there we found another good supper in waiting, to which we did ample justice. And whereas the wise man has said, "That it is impossible to crave food with any ulterior design, and it is impossible to eat food with any ample calculation," I am sure that I partook of that meal with craving for it, and a hopeful calculation that there might be enough left for the next morning's service.

And here ends the truthful recital of the incidents attending my long desired excursion to Great Watchet Lakes.

THE TOP RAIL.

SPRINGFIELD, Vt., Oct. 23.—*Dear Grizzly King:* Recently a young friend of mine, a lawyer, had occasion to take a team and drive into the wilds of the town of L. He arrived at the small apology of a hotel late at night, and after seeing his horse carefully attended to, he entered the office where six of the local celebrities, including the proprietor, sat about the great stove warming their toes and smoking freshly lighted cigars. This caught my friend T.'s attention and he drifted over to the cigar counter, and noticed that it was absolutely empty. He pretended not to notice, however, and asked the young girl who stood behind the counter for some cigars. At the word the proprietor, a man with grizzled hair and long goatee, thick eyebrows, a hawkish nose and a raucous voice, dropped his evening paper, and bringing his heavy hand down with a slap on his thigh, exclaimed, "Hell fire! Cigars! I've had them six cigars a-layin' in that case more'n a year and I told the boys tonight that we'd smoke 'em up and get rid of the danged things, and just as we got 'em goin' you comes 'round and asks for cigars"; and without another word he buried himself in his paper.

My friend has a most acute sense of humor and he appreciated all this to the last notch and thought he would follow up the vein a little, so he casually asked the landlord where the lavatory was.

"Lavatory! Well I guess that must be up to Bill Sykes' store. The post office an' town clerk's office an' everything else is up there, and I guess that must be, too."

After supper my friend thought that he would retire early and suggested as much to the landlord, who said he had better wait until the room could warm up and he would go and build a fire right away; so T. waited until the landlady, after numerous flying trips, told him she "guessed 'twould be all right now," and

the landlord showed him up the stairs and into an old-fashioned room some twenty-five feet square, in one corner of which was the bed, with its typical huge feather-bed and homely but comfortable quilts, and in the most distant corner a miniature sheet-iron stove, capable of holding about one stick of ordinary stove wood, and calculated to heat up that room in the winter season at the end of the first week.

Mr. T., in order to keep the landlord interested, asked him if he would kindly bring him a pitcher of ice water. "Hell fire!" says he, "ice water!" and he went off down the hall and T. could hear him saying, at every step: "Hell fire! ice water. Hell fire! ice water!" Soon he came back with a big pitcher and an apologetic air, and said, "Guess you'll find that cold enough. We hain't got any ice water," and then his face lighted as one inspired, and he rushed to the window, threw up the sash, reached out and pulled in an icicle as long as his arm, broke it over his knee, soused it into the pitcher, and handed it to T. "There," says he, "guess that'll be cold enough for you," and went away mumbling "ice water" and his favorite cuss word under his breath.

T. sat up all night trying to keep that stove warm, and in the morning the fastidious young man, who was accustomed to breakfast on an orange and a little crisp toast and coffee, sat down to a menu of bean soup, pork steak, fried sausage, mince and apple pie; but as he is young and healthy, he did justice to the repast, and ordering his team hitched up, bundled himself in the sleigh and pulled out for home, the last words of his host ringing faintly in his ears: "Say, mister, Bill Sykes says this town don't boast no lavatory, but old Doc Peters has got a jim-dandy phonegraph." W. W. B.

WITH the completion of the Panama Canal, Japanese steamships will probably, for the first time, ply on the Atlantic seaboard, particularly in connection with the extensive raw cotton freight traffic.

"Names of Animals."

SEATTLE, Wash., Oct. 26.—*Editor Forest and Stream:* In the issue of Oct. 12, under the heading, "Names of Animals," quoting from the New York Sun, you say, "The red Indians speak of the wishton-wish, when they mean that pretty little marmot of the plains, which we refer to as the prairie dog." Now, I take exception to this statement. I do not think that the Indians called this animals by any such name. According to Fenimore Cooper this was their name for the whippoorwill. The Indians are inclined to call an animal or bird by a name that would represent its call, as much as they could imitate it, and "wishton-wish" would represent "whippoorwill" a great deal more than it would the barking note made by the *Cynomys ludovicianus*, from which it gets its name of "prairie dog."

I have seen several articles in FOREST AND STREAM about the wild pigeon. I well remember, when a small boy, the great flocks of wild pigeons that would go over our house in the fall and winter. I think it was about 1873 or '74 that they were very abundant. The next year they were scattering, and then they never showed up again. I remember hearing my mother tell of the great times they had when they came in such great numbers. Last October I made a trip to the coast from Roseburg, Oregon. From Roseburg to Myrtle Point, a distance of sixty-three miles, we traveled in a stage. In a cañon along the Coquille River we came across a small flock of very dark blue pigeons, which looked like the ones I had seen as a boy. I asked the driver what they were and he said, "Wild pigeons," but said he did not think they were the wild pigeons that he had seen as a boy, when living East. We saw these several times, but not very close by. I could not see any marking at all on the wings or tail—they seemed to be a dark blue all over. I could not identify them at all. I would like some reader who is acquainted with the Oregon birds to name them if they can.

Shooting Conditions in Different States

(Continued from last week.)

Oregon.

PENDLETON, Ore., Oct. 11.—*Editor Forest and Stream:* Game and game fish conditions generally throughout Oregon have improved since the creation of the present fish and game commission.

Prior to that time, May, 1911, enforcement of protective laws had degenerated into a standing joke. The first work of the commission was to appoint an energetic and efficient game warden, in the person of William L. Finley, widely known previously as an agent of the National Audubon Society and an interesting writer on the subject of American birds.

The salary of the game warden was immediately raised to a figure commensurate with the work demanded and the whole warden service entirely reorganized.

Results in the shape of decreased violations and an improved public sentiment toward laws for protection and propagation were noticeable almost immediately. We believe improvement in these directions has been constant, and we are hopeful that it will continue indefinitely.

The State board, of which I am the chairman, has control of all matters relating to the game of the State and also the game—and commercial—fish and fishing of the State. Propagation and protection of game—and commercial—fishes is under the management of a Master Fish Warden in the person of Mr. R. E. Clanton, an efficient and energetic officer.

The State Game Warden and the Master Fish Warden work in conjunction as far as the propagation and protection of game fishes is concerned. We are doing artificial propagation work on a large scale and are confident that results already apparent fully justify us in our determination to continue on an increased scale in the future.

We have also undertaken propagation of game birds, but on a rather modest scale as compared with our fish propagation work. We have leased a game farm, bought breeding stock and contracted for the services of an experienced game breeder, 'Gene Simpson. We are now liberating the birds reared this past season. Our main effort has been directed toward raising two species, namely China ring-neck and Reeves' pheasants, but we are experimenting with many other species and varieties. All our liberations are upon areas under contract to the State by the owners to be protected as game-bird refuges, and our hope is that the birds thus liberated will there naturally increase and gradually spread and stock surrounding areas.

Our work in connection with the game mammals of the State has been almost entirely confined to an effort to enforce the protective statutes now in force. We have conducted one experiment, with which you are probably familiar, in introducing the Wyoming wapiti into Oregon. The results of that trial, so far, bid fair to prove successful. A fair proportion of the elk survived the trip and have adapted themselves to their new surroundings. I have no report on them down to date, but the last word received indicated that

we may hope for a good increase of the band next season.

Game and game fish are fairly abundant throughout the whole State of Oregon. Elk, all the species and varieties of Western deer, American antelope, mountain sheep, mountain goats, gray squirrels, all the species and varieties of American grouse (except ptarmigan), Oregon mountain quail and practically all of the American aquatic game birds may be found wild within the State. To this list of native game must be added the bobwhite quail and the China ring-neck pheasant. Both of these fine birds have been introduced, and the latter particularly has

CARIBOU ON ALASKA PENINSULA.

Photograph taken December, 1911, by J. C. Tolman, Game Warden.

thrived marvelously. In 1911 a law was enacted stopping shooting of pheasants for two years, in order to allow the stock to "catch up" from the effects of over shooting. Reports this summer indicate that they have "caught up" all right. Over the area of the State where they were formerly plentiful they are now more abundant than ever. The portion of the State west of the Cascade Mountains is practically all well stocked with pheasants. The Grande Ronde valley, in Eastern Oregon, has a very fair start, and we are making numerous liberations in other parts of Eastern Oregon. Elk have become very scarce in Oregon. No open season for shooting them is allowed, and we think it doubtful that they will become plentiful enough to permit of an open season being declared for many years in the future, if at all. Deer may be found in most of the rough, sparsely inhabited sections of the State, but deer can hardly be said to be plentiful in more than a few isolated places of comparatively small areas. I attribute the depletion of the stock of deer in this State to a number of causes, chief of which is, I believe, the close pasturing of the forest areas by sheep. Preda-

tory animals and unfair hunting have also contributed their share of the damage. Native quail are still abundant in a few localities, but they, too, are greatly depleted over much of the range where they were once plentiful. Southwestern Oregon is, probably, the part of the State where the most quail exist. Blue and ruffed grouse are still fairly abundant in most of the parts of the State where they were originally found. The blue grouse, or sooty grouse, is perhaps most abundant in the northeast corner of the State, in Wallowa county.

It just occurs to me that I have said nothing about the many fine streams of the State and the fine stock of game fishes which inhabit them. We probably have as fine angling waters in Oregon as in any place in the world, bar none. Our stock of game fishes includes all the American trouts, the pacific salmon, Williamson's whitefish, black bass, crappies and

bullheads. It would take another page or two to enumerate and describe the waters where fine angling may be had, so I will not elaborate further.

C. K. CRANSTON,

Chairman Fish and Game Commission.

South Carolina.

SUMMERVILLE, S. C., Oct. 23.—*Editor Forest and Stream:* Although impaired by long neglect, the game resources of South Carolina are still considerable. With adequate protection they would be enormous.

As it is, good hunting may be had in many parts of the State by parties who go for it and exercise a little judgment and patience.

The rivers and marshes of Georgetown, Charleston and Beaufort afford abundant duck shooting, the best being mallard and blackduck. Georgetown, on account of its vast area of abandoned rice fields, affords the best ducking ground. Naturally the choicest shooting has been pre-empted by hunting clubs, but there is enough good shooting outside that may be had, with proper guides that know the country. This is all reached from Georgetown.

HON. J. K. FLEMMING,
Surveyor-General, New Brunswick.

The counties that furnish deer and turkey shooting are: Horry, Georgetown, Charleston, Berkeley, Colleton, Hampton, Beaufort and Jasper on the eastern side. Further inland there is good deer and turkey hunting in portions of Chesterfield, Darlington, Marion, Kershaw, Orangeburg, Williamsburg and Dorchester.

In nearly all counties partridges (bobwhite) are abundant and the shooting is fine. The bag limit is twenty-five per day to each gun, and may be made whenever desired. The limit ought to be reduced. The same limit is on doves (turtle doves), and they furnish abundant sport.

Woodcock abound in Horry county; in fact, they are more numerous there than in any locality with which I am acquainted in the South.

Snipe are found in abundance only after Christmas when they are returning to the breeding grounds.

Shore birds are numerous anywhere on the coast line, and especially on the numerous sea islands, from fifty miles north of Charleston to the Savannah River on the south.

Canada geese are still fairly numerous on Broad, Catawba and Saluda rivers. The greater snow goose is sometimes found.

Of cottontail rabbits, opossums, gray squirrels and fox squirrels and raccoons there is no limit.

The nonresident license is \$10.25, procurable from the clerks of courts in various counties.

Any holder of a shooting license is permitted to take out fifty partridges, fifty doves, fifty ducks, two deer, twelve woodcock and fifty shore birds.

The present season has been an exceptionally good one for birds, as they have passed all vicissitudes and my wardens report decided increase in all kinds throughout the State.

Deer suffered during last season with "black

tongue," but none has been reported this year, and in some sections farmers are complaining of damage done to crops by deer being too numerous.

The river swamps on Santee, Pee Dee, Waccamaw, Savannah and lower Edisto contain a good many black bear, and they are apparently increasing in numbers. There are a few ruffed grouse in the mountain counties.

The winter climate of South Carolina is perhaps the most bracing in America, being neither too hot nor too cold, but with just enough champagne in the air to make the nerves tingle and to add proper zest to sport.

Good accommodation can be had cheap and strangers are welcome. No man who can find his way home when he is two miles away ought to have the slightest trouble in South Carolina.

JAMES HENRY RICE, JR.,
Chief Game Warden.

New Hampshire.

CONCORD, N. H., Oct. 20.—*Editor Forest and Stream:* Game conditions are better than last year. Partridge, woodcock, duck, shore birds, deer, rabbit, fox, bear, raccoon, etc., are found in this State in abundance. Shooting is good in all counties.

CHARLES B. CLARKE,
Secretary Department of Fish and Game.

An Odd Little Owl.

BY CHAS. S. MOODY.

SOME years ago a gentleman discovered, deep in the wooded mountains of Central Idaho, an owl entirely unknown to science. It proved to be a tiny little owl, living deep in the wilds far from human habitations, so shy and retiring in its habits that it is small wonder bird students had overlooked it. The gentleman only succeeded in capturing a very few specimens, and these, together with a full description of the bird, he sent to Washington, where all the ornithologists united in agreeing that it was a new species, and they called it *Megascops flammeola idahoensis*, which means that it has a round head and large eyes, is colored reddish brown, and lives in Idaho. While the head tells you that the owl is a *megascops*, it is far from being a screech owl. The bird would scorn to produce some of the unearthly sounds affected by the eastern screech owl, for no other purpose, I verily believe, than to scare boys out of their wits when they are sent to drive the cows up from the woods pasture of a late evening.

Being interested in birds, I naturally became interested in this one as soon as I read about its discovery, and, living on the borderland of the country where it had been discovered, determined to know more of it from actual observation. I learned much about the dwarf screech owl, as it is called, and the knowledge came purely by accident. One summer, in company with a number of my Nez Perce Indian friends, I encamped on the Lochsaw branch of the Clearwater River in the dense cedar, pine and hemlock forests of Central Idaho. My attention was attracted to a clear bell-like note which came ringing through the still air at sunset. The sound was unlike any bird note I had ever heard and still I was sure it was produced by a bird, for

it had a certain avian quality unlike the vibrant tones of a quadruped. You grow to know bird sounds from those of the animals by a certain something impossible to define, yet quite characteristic. I was unable to locate the twilight bell ringer. Tread as softly as I might, no sooner had I entered the forest than the sound ceased. I might seat myself on a fallen log and remain still as the log itself, yet all was silence save the rustle of a poaching weasel among the dried leaves, or the murmur of the night wind in the treetops. No sooner, however, had I returned to camp than the sound came again, now here, now there, a weird baffling ventriloquial note breathing the very spirit of the somber cedars.

I was several days before I knew the author of those beautiful clear tones. I questioned the Indians, but they were unable to tell me, so I was forced to find out for myself. There was a mountain meadow of some few rods in extent not many miles from where we were encamped, and this meadow and the small stream flowing through it had been pre-empted by a small colony of beavers. I watched this meadow in the hope that I might surprise the artisans at work. It was growing dusk one evening and I had arisen from my place of concealment to return to camp, when right above my head came the elusive bird sound. I sank back quietly and strained my eyes to see the bird. Soon it came again, then another from a different point, then another, and another. In a short time a tiny owl slipped silently out of the forest and perched on a dead limb just at the edge of the meadow, where the last rays of the setting sun shone full upon him. It was the long sought for dwarf screech owl. The little bird turned his head from side to side watching the marshy ground below, then ruffled his feathers, sat up straight, cocked his head and uttered the bell-like note, a single tone like the striking a silver bell. The marsh was peopled by innumerable green frogs that sat on the half submerged logs and croaked the evening through in unison. These frogs were the object of the owl's visit. He swept down, alighted on a half sunken log, walked out it for a distance, lifted an unsuspecting frog and returned to the dead limb. I was struck with a singular fact. The owl did not swoop down upon the frog as do most birds of prey, but caught it from the ground. All about the marsh the owls were calling and dark forms were flitting across the open space until it grew too dark for me to see.

The season was too late for nest hunting, but I never forgot the owls, and one spring early found me again in the mountains. Owls nest early, sometimes before the snows are gone, and I reasoned that the little owl was no exception to the rule. Nor was it. Contrary to my expectations the dwarf owl was strangely silent. The deep toned hooting of the great horned owl, singing his love song, rang through the woods day and night, but never once did I hear the note of the little fellow. After several days' close watch I saw a pair of them slipping through the dark timber, watching me anxiously from the covert of some deeply umbrageous cedar. Their anxiety convinced me that their nest was near. A half hour's search revealed a woodpecker hole in a tall fir snag that stood on an open hillside above the cedar forest. I "shinned" up this snag at the cost of a pair of badly torn trousers, gazed down into the dark cavity and saw six milk-white eggs about the size of robin's eggs, re-

posing on a bed of moss and feathers. I left the parents in possession of their treasures, what though ornithologists offered fabulous prices for a set of the bird's eggs. I could not bring myself to disturb the housekeeping for a mere matter of dollars. I could hardly see where the cause of science would be advanced by my committing burglary.

It is hardly probable that you will ever see the dwarf screech owl even were you to visit the country where they dwell. To discover one requires sharp eyes and a certain knowledge of the habits of birds. This owl does not resemble his Eastern cousin either in looks or manners. While the Eastern bird is familiar, living near farms and even villages, the Western owl seeks the immense solitudes, far from settlements of

men. The Eastern bird is noisy, while the Western is silent save for the one note which is the most musical sound I ever heard. Instead of the flat face and prominent ear tufts of the screech owl, the Western bird has a round head and face with eyes set so near the top of the head that he has the appearance of always gazing at the stars, while ear tufts are very small, being raised only in anger or excitement. The dwarf owl has a blackish band extending from just behind the ears, around and under the throat, which gives him a ludicrous resemblance to an old lady with a black silk bonnet with the strings tied beneath her chin. He is much smaller than the Eastern bird, being not over six inches in length. The back is a rusty brown, breast and under parts lighter with umber-brown streaks.

Stone Harbor, N. J., a nesting place of laughing gulls and other shore birds, a warden being in charge of the refuge. This island had been the scene of barbarous slaughter among the gulls to supply the heartless demand by women for the plumage of the gulls, and had not protection been given, the colony would long ago have ceased to exist, so nearly was this the case that only a few hundreds remained. Under protection the birds have greatly increased in numbers. In the month of May the multitudes of gulls building, brooding or hovering over their nests presents a most interesting spectacle to bird lovers.

The value of the league work among the young is universally recognized by school principals as a moral as well as a protective agency, and the progress of the movement is held in check only because of the lack of funds to pay for competent workers to spread the gospel of protection broadcast over our States.

While men of science are paid for service in their respective fields, the aggressive work has so far been done entirely for love of the cause—the organizing and interesting the young through earnest talks from high school to kindergarten, all of which has been done without cost for service.

The movement is practically at a standstill, as far as aggressive steps are concerned, for the want of means to put workers in the field. The school doors are open and the calls for service come from many sides, but without increase of income the possibilities lie chiefly within already established lines.

The executive officers are as follows: President, Waldron De Witt Miller, Museum of Natural History, New York City; First Vice-President, P. E. M. VanWyck, Summit, N. J.; Second Vice-President, Alfred C. Kinsey, South Orange, N. J.; Treasurer and Recording Secretary, Captain Geo. S. Musgrave, Summit, N. J.; General Secretary, Mrs. Benj. P. Holmes, Summit, N. J.

For the Protection of Nature.

BY GEORGIANNA KLINGLE HOLMES.

THE La Rue Holmes Nature Lovers' League for the protection of nature was incorporated in 1906, and is doing an increasingly beneficent work, especially among the young.

It has been erroneously said that the movement was instituted by the mother of the young naturalist whose name it bears, but it existed before the death of the latter and was only continued, and the name given after this demise, by those who became responsible for the further conduct of the work.

The membership, which exists chiefly in schools, has reached over 9,000, the organization being so simple, and the requirements so amenable to possibilities that it is received in the busiest of public, private and parochial schools.

The league motto is—self-sacrifice, heroism for another. Its corner stone of sentiment is—kindness to all things having life. Its reason for being is—to help make the world happy. Among the ways proposed for accomplishing the latter purpose is the protection of nature's riches through which alone the health, happiness and general prosperity of this country can be maintained.

The mission of bird life as a protector of vegetation, the especial mission of tree life as a protector of the country's water supply, the mission of our wild flora as a means of uplifting pleasure to poor and rich alike are themes impressed constantly upon the minds of the young through lectures, leaflets and tramps for observation in woods and meadow.

To quote some items of work done as given in last report:

- Blanks for wild flora census given out.... 234
- Packages of garden seeds distributed, about .70 000
- Books, pamphlets, leaflets, etc.35,900
- Bird pictures12,276

Many books and periodicals were loaned. Some hundreds of petitions and circular letters were sent out in the interest of the Burton Act for the preservation of Niagara Falls; the Appalachian and White Mountain bill; the plumage bill; bill for game protection; the hawk and

owl bill, etc., when the bills were before Congress or the New Jersey Legislature.

Mere assent to become nature's friend is required of the young people who thereby become associate junior members. The payment afterward of any trifle in money for a badge or toward maintaining the cause constitutes a sustaining junior member.

Committees of three are chosen in each school room, such committees to represent the league cause and to place in sight, on the first school day of each month, the league day card, which bears the motto and serves as a mute reminder of league sentiment.

The work is administered by a central organization, located at Summit, N. J., with power to create chapters in any State.

In 1907 the league purchased an island of 150 acres off the coast of Cape May county, near

ON SUMMIT OF MT. TAMALPAIS, CALIFORNIA.

SEA AND RIVER FISHING

A Little Talk About the Anglers' Flies

By THEODORE GORDON

THE study of the insects born of the water and forming a considerable portion of the trout's food is one proposition. The imitation of these delicate creatures is another and requires much time, labor and close attention to detail. The hard-worked business or professional man, whose recreation is angling, can by close observation become sufficiently acquainted with the insects most favored by the trout for all practical purposes. He will, if he is a believer in imitation, have sufficient knowledge of the insects that prevail upon the waters he fishes, to guide him in the selection of his artificial flies and will know naturals when they appear, also their seasons, and when to expect them. He has not much leisure for fly dressing, nor for the endless task of searching for and buying perfect materials that will satisfy him and enable him to realize his ideals. Many of the best amateur fly tiers purchase a portion of their stock, thus saving time for the creation of a few favorite patterns. They know that enormous stocks of well dressed artificials are carried by the best shops, and that they can match most flies in size and color. However, their fingers are often busy in leisure hours, and there is great satisfaction in killing trout with the work of one's own hands.

Those of us who have actually lived upon the trout streams in youth and in maturity have been favored by opportunity. We have not the diversions, the excitement and keen competition of life in a great city. In the country, sport and all things pertaining to it becomes of great importance to us, and fishing and shooting become to a great extent our only recreations. We spend our leisure in or near the water, and the habit of observation grows upon us. The flies that interest the angler and the trout, aside from those land insects occasionally blown upon the water, or like the ants, seek it in the winged state of their own will, may be divided into a few great families and may be recognized by the position of their wings and their habits when in or on the water. These insects are the day flies (*Ephemera*), the stone flies (*Perlida*), the case worms or caddis flies (*Phryganida*) and gnats and midges which belong mostly to the order of the *Diptera*. There are other flies, of course, but these are by far the most important. We wish to know in advance what insects may be expected at certain times, and their sizes and colors, as we do not care to be tying flies when we would be fishing. Then we ascertain the time of the rise; that is, the hours of the day when these insects will undergo the transformation from larva, nymphs or grubs, into winged flies, and this varies with the seasons and temperature. Yet day after day it may occur at nearly the

same hour. I fancy that the temperature of the water has a good deal to do with it. Early in the season the rise is usually after mid-day and before 3 o'clock p. m. As the weather becomes warmer, the flies may appear early and late in the day, but the best of days for the angler are those when the rise is at short intervals, or when a few flies continue to hatch out all day long. The day flies come from a larva that lives in the gravel, under stones or in moss or mud; the caddis flies from little cases of sand and gravel or bits of wood; the stone flies from larva and the gnats and midges from the water and the land. A well made artificial fly having a natural appearance and having good colors put into it may answer for more than one species.

Dun for instance is a common color among insects, from gray to almost purple, a dark blue dun. Yellow is another standard color, from a pale fleshy yellow through delicate primrose to orange. Brown is quite fashionable, particularly for evening wear, although in spring it is quite proper in the morning and may run from a soft yellowish brown to brown red. Black is never out of season and is *comme il faut* for bugs and gnats of many sorts.

I have even collected a black spinner, a perfect day fly with clear wings.

The family names of all the gnats and midges need not trouble us over much. We want only the position of the wings, color and size of these tiny creatures. Many of the day flies and caddis are extremely small, but are easily recognized. The larger trout are not much given to midging on our mountain streams, unless these insects are superabundant. If any man wishes to tackle a tough proposition, let him try for a big trout that is rising at tiny insects, in quiet water that is as clear as glass (and as smooth). Unless the fish happens to be unsophisticated and will accept a fly of respectable proportions, the task is a difficult one. Then, if ever, one wishes for invisible gut and the hand of a fairy. Trout that are feeding, or ready to feed, in rough or crinkly water are easy if the surroundings are such that we can present the fly from the correct position and place it so that it floats down naturally.

A fly dressed after a day fly may answer for one of the caddis of similar coloration. Pull off the tail if you like, but it assists in balancing and floating the fly. When the caddis flutters, its wings are up. When in the air and sunlight, its buzzing wings and the legs give one the impression of a little halo around the body. The stone flies often raise their big wings when running on the water, and when laying eggs of course their wings are up. Because of the color of the wings the English yellow Sally is often used for one

of our caddis flies, but a simple yellow hackle of the right shade will often kill better, and I have seen a yellow tag do good work. Hackle flies may be made to float and kill well. I have used what are called spent spinners a great deal, and these are supposed to represent the day flies in the very last stage of their existence, but mine are not always spent. Some insects carry their eggs in a bag at their hinder ends, and when this is conspicuous, it must be quite attractive to the trout. The insect may deposit its eggs in one parcel by a single dip in the water, but then again it may not. I have seen them come down from a height, make one dip and fly away, but many flies dip a number of times in one place, then fly a short distance and do it again. I have seen an insect come out from a bush and pound up and down like a piece of machinery, then fly back to the bush. The female stone flies are heavy and clumsy in laying eggs. They are sometimes caught by the current and carried down stream a short distance before they can rise again.

The common stone fly appears on these waters in limited numbers throughout the season, but there are other species of this fly that have a short season during which they are plentiful. One of these is quite fat and more yellow than the common species. Some of the western rivers have great hatches of stone flies. We have at least two species of May fly (*Ephemera*) and probably many more. I have had specimens of three that I thought differed most decidedly in coloration and even in size, but color is not very reliable in distinguishing the species in fish and flies. Some familiar insects rise in multitudes one year and are scarce the next season. Any angler of experience can select an assortment of artificial flies that will kill well on all waters where the dry-fly is good medicine. As the years pass, he picks up a pattern here and there and stows it away in his box for a special occasion. He has known days when one little shabby fly made all the difference between a full creel and a few small trout, and he has an eye for any fly of perfect coloration.

One day last June I would have (cheerfully) paid \$2 for just one more fly. I had tied only one, as I fancied it too dark for the season, and the hackles were too rare to waste. However, there was a tremendous rise of these dark caddis flies. Many were hatching out, while older insects were laying eggs and doing stunts in the air over the water. All the water and the air over it seemed full of excitement and the trout were crazy. I broke my hook in extracting it from the hard roofing of a big trout's mouth, and there I was with the fish rising under my nose. I tried pattern after pattern and did kill one trout with a very dark hare's ear, but that was all. I put in the broken fly by way of experiment and rose six large fish one after another. We do not have these opportunities often in a season, but I shall not stock up with this fly. Its period is too short, as next day the

show of fly was not great, and I had difficulty in finding the good fish. They had dropped down on to the shallow water while I was patiently fishing the pools. However, I found them before dusk and killed three, every one of which made a grand rush for his pool the instant he felt the hook. After leaving the water the dun (sub-imago) does not move about much after finding a good resting place, sheltered from the wind and sun until it undergoes the transfiguration into a spinner, or perfect insect of the *Ephemeridæ*, and the latter will often remain at rest for a day or two.

I have had them under observation at large and also in boxes. The caddis flies are perfect insects when they rise from the water and the stone flies remain among the stones for some time while growing their wings. Many queer insects appear from time to time, but they are not usually of importance to the angler. If he fishes at night he may want a few big flies. The moths and large brown caddis flies are often about, but for daylight work rather small flies usually kill best. On the high water, when the trout had fed well, I made the mistake of fishing flies too large and lost a couple of fine fish by it. I discovered that the trout were not hooking well and changed to much smaller flies with satisfactory results. The fish were probably a bit shy and indifferent, as the first conspicuous fly put up was refused by two trout. Yet many had been taken with the same pattern earlier. When the stone flies are growing wings, one may find the trout close in shore in water that will scarcely cover them. When a man takes to the floating fly, it is well for him to have had much experience of wet-fly fishing, not only with lures, but with small imitations of nature. He will not be apt to affect or feel superiority, as he knows that there is a science of the wet-fly as well as of the dry.

Big trout are at times averse to breaking the surface, and in waters where they feed almost entirely upon minnows, the floater may only tempt the small fish. A man who confines himself to fly-fishing on free waters should be proficient with the wet, dry and even the sunk fly. If there are very big trout about, you want one of them, and there is this to be said for the artificial purist. He develops all that is inherent in the fly. Small wet flies and imitation of the nymphs are being used to some extent on the chalk streams of England; the home of the dry-fly for a great many years. If the trout are feeding just under the surface upon immature insects, why not meet them there? The larva and remains of grub cases will often be found in their stomachs. We fish the dry-fly because it is most interesting, not because superior. There have been some wonderfully clever men with the wet-fly. If a man is excited when casting a dry-fly to a large trout, he is apt to strike too quickly and too hard, pull the fly away from the fish, or leave it in its mouth. Fine gut will not endure being jerked, yet will bear a steady strain.

Fishermen should be considerate of each other and remember that other men are following them. On a big stream in a full water the trout are not so easily scared, and I have had a good day after nine men had preceded me, but a careless or indifferent angler can spoil sport for hours on low water or in a small stream.

We are greatly interested at present in the problem of providing sport on free waters for

the rapidly growing army of anglers. Much can be done by restocking with fingerlings or larger trout, but probably still more by saving the streams of rapid descent, checking the terrific forces of the water and rolling stones in time of flood, and providing safe harbors with deep waters for the larger trout during long drouths. If this work is skillfully done, the cost need not be very great. Trout can go without food for a considerable time, but feed freely when the water rises. In floating flies much depends upon a well-shaped hook, and for small flies nothing seems to be better than the Hall. Big hooks may spoil sport when not well taken, and with tiniest midge hooks one is apt to miss or scratch a good many fish. I have fussed over hooks for many years and spent time and more cash than I should in the pursuit of perfect hooks, only to arrive at the conclusion that several bends are good when well made. Also that fine wired hooks are best for fine fishing in a low water, but that stout wires are required where the trout run large. On the back cast the fly is moving at high speed, and any hook may be broken if it touches a hard object. Plenty of expensive salmon flies have been ruined in this way, even when dressed in the heaviest O'Shaughnessy or Pennell hooks.

While we have a wonderful variety in insect life, and many more large flies than are found on English waters, we also have many flies that approximate British species in size and color. For instance, we have lovely little red spinners, Jenny spinners, yellow and blue duns, big spring Browns and many others. We have whacking big red spinners and many caddis flies different from any described by English writers. Even when one finds insects that are very similar in size and color, they are not quite the same.

I found a lot of small *Ephemeridæ* that appeared to be dull Jenny spinners, but saw that they were duns (sub-imagos). After shedding their coats they appeared as lonely little spinners with clear glassy wings. The markings at the tail end and thorax were similar to the English Jenny. A similar but larger fly had only a touch of color below the wings.

When insects are plentiful upon the water or have been so recently, imitation may be of great importance, but when the trout are in position to feed, they may be quite ready to accept any natural appearing fly if it is presented attractively. Theories are interesting, but of little value unless they have been tested on the stream. We can theorize as much as we please and fish as much as we are able during many years, but there is always something new to learn; some fresh difficulty to be conquered.

Britian River.

THE stream indicated tumbles its way down from the Canadian Cascade Mountains and finally into Jervais Inlet, an arm of the Pacific, coursing through a forest of gigantic fir and cedar. Cold and clear, one's thirst is continually invited, and upon the July day I am going to tell you about, it was gratefully accepted.

We were a party of four, good companions at home, in the woods, and mountains. An early start from our cruiser, the Totem, allowed us an easy tramp of about six miles over a crooked blazed trail before 11 o'clock. The point of arrival at the river was shaded and cool. The

writer suggested lunch, and that for lunch I would catch a few trout.

Setting up my rod I rigged a cast of a gray and a brown hackle No. 8. Meanwhile the three good fellows under the maples hauled out of my creel a nice lot of sliced bacon, lettuce, sandwiches, fruit and other ictas. Biff! My flies had struck the pool nicely and I had struck a 24-inch rainbow, which after a beautiful vigorous fight I landed in about ten minutes, having no net to discourage him with.

Walking across the bar with this perfect specimen I presented him for lunch, but though we admired him greatly, the opinion was unanimous that he would be awkward to fry in a tin pie plate, so he was dressed and laid carefully on the wet moss in the shade.

While I fried bacon, the commodore took the rod, and in a few minutes landed a modest offering of four pretty six-ounce fellows of the same kind, but from a shallow riffle. Of course those who have been there know that it is right difficult to keep trout as fresh as these from curling right out of the pan, but notwithstanding the sweet smelling smoke, which seemed to follow one around the little fire, they were done to a turn.

When this "best ever" lunch was finished and the cigars lighted, the commodore in the mean time having stolen from my pool on that same gray hackle a three-pound perfect cut-throat, I went back to the music of the uneasy water and took another three-pounder and five from one to one and a quarter pounds each, all rainbows, certainly the brightest jewel of all the trout.

Then the rod was taken down. Our party on board could not eat more than sixteen pounds of trout, and besides, the creel was full, and for me at least the day was full, and in truth I am not so sure that those under the maples, all good sportsmen, had not enjoyed it as much as I, for the landing of those big rainbows was against as pretty a fight as I ever saw; one of them by actual count having leaped twelve times fully two feet in the clear.

So much for the trout, and I could tell you something about the timber which we really went up there to look at. The cedars are 200 feet high, the lower half free of limb or knot. I will not mention the firs because I would like to have you believe all of this story (it being my first appearance and I intend to tell you something more later on). But there are red deer as well as rainbow trout. A pretty two-year-old buck deliberately waded the river on a riffle not 200 feet above where we were resting and filling our pipes on our way up stream. But though I believe our Canadian cousins would not expect us to go hungry even in the close season, we were not in fact very hungry, and besides there was no rifle, and what was more regrettable we did not bring the camera.

Britian River, though beautiful and wonderfully attractive, is by comparison with other British Columbia rivers not a trout stream. The bars are miles long of smooth flowing rapid water with practically no pools, but the few trout are certainly fine.

THE total American yield of diamonds, emeralds, sapphires and other precious stones in 1911 amounted to only \$343,692. Most American diamonds come from Arkansas and California.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 20 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

RED WHALES CAPTURED.

In the American Museum Journal, published by the American Museum of Natural History, Roy C. Andrews has given an interesting account of a recent visit to Korea, made to complete the study and collection of the Japanese whales, upon which work had been begun in 1910.

The two species especially sought were the California gray whale and the humpback. The first of these has been thought by many naturalists to be extinct. It is so rare that no complete specimen exists in any other museum of Europe or America. Mr. Andrews has before been to the Orient in search of whales and porpoises besides killing at different points along the Atlantic coast animals thrown up on the shore. He has thus had much experience. How successful he was in securing the desired specimens is told in the Museum Journal article, from which we extract a few paragraphs:

"When I arrived in the Orient at the beginning of 1912," says the explorer, "everything had been prepared for my reception. I left Japan immediately upon one of the company's transports for the Korean station, situated in the beautiful bay at Ulsan, on the east coast forty miles north of Fusan. The next day I had my first view of the California gray whale, for a splendid specimen was brought in by the steamship Olga Maru.

"It was especially interesting to examine the specimen with reference to the accounts of the species which have already been published, for all are full of inaccuracies. Probably no whale has more individual peculiarities than has this species—the shape of the head, of flippers and flukes, and in fact of the entire body is quite unlike that of any other large cetacean.

"Its habits, too, are distinctly individual. About the middle of December the animals begin to appear on the coast of Central Korea, follow-

ing the shore line closely on their migration to the islands of the south.

"In April the young are large enough to travel northward and accompany their parents on the long trip to the Okhotsk Sea and the ice-bound shores of the Arctic.

"Gray whales live in perpetual terror of the killer whale, which seems to single this species especially for attacks.

"When a herd of killer whales surrounds a gray one, the latter will often turn upon its back, the fins extended, and lie quietly at the surface, seemingly paralyzed by fear.

"The killers force open the mouth and at times eat out almost the entire tongue before the gray whale escapes, or the animal may be killed and completely devoured.

"One fine skeleton was taken for the museum and a second, by arrangement, for the National Museum at Washington. Many photographs also were secured (the only ones in existence of this species) together with much alcoholic material and three rolls of motion picture films, besides notes and measurements of the thirty individuals which were taken during my stay at Ulsan.

"We wished to get the skeleton of a humpbacked whale. Although humpbacks are common in many parts of the world, they have been so persistently hunted in Japan that they are now extremely rare.

"The humpback furnishes the most highly esteemed food of all the whales, and in the Japanese markets the flesh of a single individual brings as much as 5,000 yen (\$2,500).

"February came and I had almost despaired of getting a humpback in Corea, for only one had been taken during the entire season. On the 13th of the month, however, three specimens were brought in and the skeleton of the largest was preserved, a male, 48½ feet long. The museum is fortunate in securing such a splendid representative of this species.

"As soon as the bones had been cleaned and crated, I chartered a schooner and sent the whale skeletons to Shimonoseki for transportation to New York."

EPIDEMIC AMONG DUCKS.

For several weeks prior to the opening of the duck shooting season reports were received by the California Fish and Game Commission to the effect that in certain sections of the State ducks were dying by thousands, and a careful investigation of this matter has been made to determine, if possible, the nature of the epidemic. A number of dead birds were sent to the San Francisco office of the commission, together with several that had not yet succumbed to the malady, and these have been placed in the hands of experts for examination. Theodore Kytka, the prominent hand writing expert, chemist and bird fancier, took a number of these and has just made a report of his findings. There are no evidences of a contagious disease to be found in the birds, and it is now believed that the heavy mortality is the result of food and water conditions. The sick ducks placed in charge of Mr. Kytka speedily recovered when given clean food and water. However, it is possible that the ducks are affected with a disease that is communicated from one to another and the investigation will be continued.

The frequent recurrence of epidemics among

ducks and deer in California has brought out clearly the need of a change in the game laws whereby the commissioners would be empowered to declare a closed season in any section where disease was prevalent. Just now it is almost impossible to secure a sick duck, as these, being unable to make their escape, have fallen an early victim to the market hunter. The present epidemic seems to be confined to Buena Vista and Tulare Lakes and the Alvarado marshes.

HIGH COST OF LICENSE.

Now and then we get letters from gunners who complain of high cost of license. It is difficult to make some of these complainants understand that every dollar paid for license by the sportsman comes back to him through its investment in improving game conditions. There are those who raise the issue that they cannot take out enough game on a non-resident license to pay the cost of the license. We hope this is true. In no line of sport does the true sportsman expect remuneration for his pleasure. Does the trapshooter get back in prizes the cost of his season's shells and targets? Does the golfer get any money back for the balls he slices into the woods or fozzles into the water hazard? Does the baseball player draw any dividend from his time and expense through indulgence in the national pastime? Does the yachtsman win in cups the money invested in yachting? To every question the reply is no—decidedly no. Nor do any of those indulging in these sports expect in return anything but the recreation and improved health that goes with each divertimento. To those unconvinced by the "value received in sport" argument we cite the deadly parallel—that of the cost of license, or certificate, in England. To carry a gun, 10 shillings; to shoot game, 5 pounds a year or 2 pounds for less period; for two weeks' period, 1 pound, with shooting prohibited Sundays and Christmas.

THE FLUSH OF AUTUMN.

DURING these days the pulse of nature is beating fast and sending added color to her cheeks. We stand awed by her beauty and sobered by her fate.

The hectic flush is but the indication that she is wooed by death. A feeling that nature but reflects our life, comes over us, and we bow our heads in sympathy with her.

But is she wooed by death or by the promise of a larger, more complete life?

As a babe, mother earth nursed her. She was rocked by the breezes and kissed by the light. Her father sun smiled upon her and she grew through the spring of her youth into the summer of her maidenhood.

She flirted with the elements and danced her merry youth away until autumn, in all the bloom of life, wooed her. Then she waxed beautiful. Sobered by new responsibilities, yet sweetened and chastened by experience, her autumn is one of fulfillment of life rather than resignation to death. Tenderly she cared for her children, knowing full well their little hearts would develop even as hers. Sublime faith and love illumined her days. She had married death and found that his soul was eternal life.

[This pretty bit of sentiment was written by Miss Elsie Schneider.]

Archery

Drawing the Short Bow.

BY DR. EDWARD B. WESTON.

MR. RENDTORFF, of Lake Forest, Ill., has been shooting for only two seasons, and for several weeks in that time was unable to draw the bow on account of an accident to one of his hands.

Never having attended a public meeting his scores have not become generally known. When a few of them were recently published, the archery world was startled by what he had accomplished in so short a time. The comments on his tackle and methods were very interesting, and will probably lead to considerable discussion and perhaps to some dissent from the older archers.

Though Mr. Rendtorff is a young archer he has read and thought much on the science of the sport, and his opinions would carry weight, even if his scores had been small.

Being a tall, powerful man, he uses a heavy bow, shorter than the usual length, and long heavy arrows. Being perfectly able to use a strong bow he can get a better loose than with a light one, though a heavy bow is not necessary to command the ranges of the American round.

Some archers would differ with him in regard to the length of bow.

W. A. Clark has made 63 hits with 72 arrows at 100 yards. We believe this number of hits has never been equalled in this country. Mr. Clark, owing to a gun shot wound received in the Civil War, has a short arm. He uses a 25-inch arrow, which he draws about eighteen inches. And still he can make a higher score with a 6-foot bow than with a shorter one.

Mr. Rendtorff shows the skillful archer that he is by his ability to change his point of aim when shooting at 80 yards and using arrows which are so nearly alike that the slight difference between them can only be detected by their flight. The average archer could not do this.

But the thing which interests us most in Mr. Rendtorff's comments is the statement that in aiming at all ranges up to and including 80 yards, his direct vision is on the gold, and his indirect vision on the point of aim. This differs with the practice of nearly all archers. This subject was considered in the *Christian Science Monitor*, May 25.

The Rev. Eyre W. Hussey, in Badminton, and other prominent archers, considers it a good method at the shorter ranges, where the point of aim is on the ground in front of the target, but as it is not so good at 100 yards, where the point of aim is above the target, the method used at the shorter ranges should be sacrificed to the one best adapted for 100 yards.

It hardly seems logical to give up the method best at four ranges, for the one which may be best at one range, and that the one cared least for by most archers. However, it should not be difficult for an archer who has shot much to use a different method of aiming at the long and at the short ranges.

Suppose we are shooting at 60 yards, and our point of aim is 20 yards in front of the target. There may or may not be something at

that place for us to use as a "point." It must be on a straight line from the archer to the target. If the point of the arrow and the direct vision are held on the "point of aim," and the shot perfectly made, the result will be satisfactory.

As soon as the arrow leaves the string, one almost always watches it. Often one looks up an instant before the arrow has left, and if he does the bow hand also moves up and the shot is spoiled. This does not often happen when direct vision is fixed on the gold, for the eyes do not have to be moved in order to watch the arrow in its flight.

But to whichever place your direct vision is turned, be sure to hold it there until the arrow is well gone.

In the early days we were taught to look intently at the gold and shoot. This is the hunter's method. One instinctively looks at the object he is trying to hit, whether he is shooting a gun or throwing a ball. However, if we look at the gold directly and intently we must not forget that there is a "point of aim" to be seen indirectly. And if we can find no "point," we can by practice readily and accurately estimate a distance from the target to where "the point" should be. We know of archers who have adopted the method of aiming followed by Mr. Rendtorff after having for years used the orthodox one, and at once have greatly improved their scores.

And we believe some do this without knowing it. Otherwise how could a good archer move several feet sidewise while shooting an end? It is not so easy to find "points" that he could find a new one every few seconds. He probably unconsciously estimates a distance.

Since the above was written we have received from Mr. Rendtorff his first double York round score, made in the last week in October.

Archery Scores by Novices.

CHICAGO, Ill., Nov. 8.—*Editor Forest and Stream*: It may be a question when an archer passes from the novice class to the higher ranks. Is it a question of time, or of skill? We should say that an archer who had shot a year was no longer a novice, whatever his skill might be.

A man who had practiced for years could not be called a novice, simply because he was a poor shot.

We report fine scores made by novices, for a number of reasons. Every one likes to read about them. It shows those who have taken up the sport that they can become good shots in a comparatively short time by patient, intelligent practice.

Those who have never drawn the long bow may be divided into two classes—those who think it an easy, childish sport and are surprised when they try it to learn how mistaken they were; the other class is made up of those who look at the matter seriously, and dread the long time which they think must elapse before they can become fair shots.

All should be encouraged when they see what has been done in a short time. No one

should be discouraged because he has not advanced as rapidly as some others have. Some grow faster than others. And remember that if you never make the higher scores, you may get more pleasure from the recreation than those who do. It is the doing, the trying, which satisfies as well as the result.

The following scores were made by archers young in the sport.

Dr. O. L. Hertig is a dentist, and a teacher in the University of Pittsburgh. He showed his good sense by taking part in the National archery tournament in Boston last August, the first held after he took up the sport.

The doctor wrote on the 22d of October: "My year as an archer was up on the 19th inst., and I celebrated by shooting an American round, making 87 hits, 487 score, and a team round of 86 hits, 416 score."

He reported his best practice scores as follows: Single York round, 99 hits, 459 score; double York round, 181 hits, 807 score; seventy-two arrows at 100 yards, 40 hits, 156 score; forty-eight arrows at 80 yards, 36 hits, 190 score; twenty-four arrows at 60 yards, 24 hits, 148 score; single American round, 88 hits, 514 score; double American round, 168 hits, 918 score; thirty arrows at 60 yards, 30 hits, 176 score; thirty arrows at 50 yards, 30 hits, 194 score; thirty arrows at 40 yards, 30 hits, 194 score; team round, 87 hits, 451 score. An end at 60 yards, 9, 9, 9, 9, 7, 7, 6 hits, 50 score.

Few archers do as well as Dr. Hertig has in their first year. All beginners should try and do better. But they will have to think hard in order to succeed.

F. Nelson Clay took up archery in the summer of 1911. He joined the Chicago Archery Club, but is now living in the East. He expects to attend the next national tournament.

His rise was not meteoric, but steady and sure. We will let him speak for himself of his first four months in the sport:

"From the start I kept careful memoranda of all scores made, both in private and in the meets. I seldom shot a team round by my own choice, but I was vitally interested in the American round.

"I began shooting July 12, 1911. On the following morning I shot thirty arrows at 40 yards, making 16 hits, 88 score. My first American round was shot on July 16, 1911, at 5:45 A. M. Conditions were cloudy and damp; results were 60 yards, 6 hits, 22 score; 50 yards, 15 hits, 57 score; 40 yards, 20 hits, 88 score. I immediately 'whipped out' my Spalding's Guide to Archery to find out how I ranked as an archer.

"The tournament records that I found in the guide incited me to spend most of my efforts on the American round. I shot early in the morning, before sunrise sometimes. I shot until dusk many an evening. I shot whenever I had an opportunity. I shot too, too much, as you frequently told me, to make good scores. Nevertheless my health was never better, and I have rejoiced many a time that I ever met Mr. Blank; that he acquainted me with this fascinating, cleanly, health-giving diversion.

"Just to give you an opportunity to study my case I present below the averages per month for 1911, there having been about four months devoted to this sport:

"American round averages for first month, 55 hits, 239 score; for second month, 68 hits,

310 score; for the third and fourth months, 72 hits, 354 score.

"Counting every American round I find my average for the season was practically 65 hits, 301 score.

"On Sept. 30, 1911, American round—A. M., 79 hits, 427 score; P. M., 81 hits, 399 score. Total, 160 hits, 826 score.

"On Columbus day I made the following double American: First round, A. M., 79 hits, 413 score; second round, P. M., 74 hits, 394 score. Total, 153 hits, 807 score.

"Have not been able to be out much this year, but am scoring each arrow." E. B. W.

Columbus Day Scores.

ON Oct. 12 it was planned to shoot for the championships of the Eastern League, composed of archers east of the Alleghany Mountains. The association owns gold challenge medals to be held one year by the winners and representing the championships.

The archers were to gather in groups according to locality and send in the scores. As in Boston on that day the weather was wet and bad, and the same conditions prevailed in other places; most of the archers shot on Oct. 19. In Boston there was a high wind and rain on the 19th.

The Chicago archers and some others also shot at the same time, and all the scores are in the tabulations, though not all are eligible for the league championships:

The archers around Boston shot for the first time on the grounds in the Fenway, a part of the Boston Park system, which has just been given up to archery. The grounds were fine, but the weather abominable.

Archery in Pittsburgh.

THE range of the Oakmont Country Club was opened on Saturday, Nov. 2.

The club has one of the most beautiful golf grounds in the country, and the archery range occupies one of the many level spots.

The weather was cold, with first snow of the season, consequently a number stayed away, who otherwise would have attended.

Jas. C. Patch, Prof. G. W. Postgate, T. R. Hartley, W. J. Holmes and Drs. Haines, Howard and Hertig braved the weather and shot the opening arrows over the 60-yard station.

No definite program and no scores were

taken, but a great deal of interest was aroused.

During the week ending with Nov. 2 the following scores were made:

	H. S.	H. S.	H. S.	H. S.	
Dr. O. L. Hertig..	93	461	W. H. Haines.....	56	210
W. J. Holmes....	90	385	Patch	44	188
Wolf	70	240	Jiles	75	320

Dr. Hertig made 76 straight hits at 60 yards and Mr. Holmes, the boy wonder, made 68.

On Election day the Beechview Club held an all-day shoot with the following scores:

	100Yds.	80Yds.	60Yds.	Total.				
	H. S.	H. S.	H. S.	H. S.				
Dr. Hertig	46	160	35	143	23	104	104	407
Jiles	23	90	24	87	22	98	67	275
Gray	5	20	8	31	12	50	25	101

American round, 30 arrows at 60, 50 and 40yds.:

	60Yds.	50Yds.	40Yds.	Total.				
	H. S.	H. S.	H. S.	H. S.				
Dr. Hertig	29	133	29	175	30	206	88	514
Jiles	24	92	26	123	29	145	79	360
Gray	12	48	14	64	15	78	41	190

During the York round the wind was very high and variable. Dr. Hertig's score of 46 hits, 160 score, was under the circumstances a creditable performance.

J. S. JILES.

STORY and scores of National Archery Association's thirty-fourth annual tournament appeared in the Aug. 31st issue of FOREST AND STREAM. A few copies are still on hand.

New One-Design Schooner.

AN evidence of the increasing popularity of one-design classes is illustrated by the new Stamford Y. C. one-design schooner class, the designs for which were prepared by Messrs. Cox & Stevens, the contract having been awarded to Robert Jacob, of City Island. The dimensions of these schooners are: Length over all, 62 feet; water line, 40 feet; beam, 11 feet; draft, 7 feet. They are to be pole-masted vessels of the knock-about type, there being no bowsprit, and the main boom extending but a very short distance beyond the transom.

The proposition presented to the designers in this case was to produce a schooner that could be handled with two paid hands, would have comfortable cruising accommodations for five persons in addition to the crew, including one double stateroom, a comfortable toilet and galley of ample size, and further that the vessels when built should be excellent sea boats and have a fair turn of speed so that in addition to the one-design racing they will be able to make a fair showing when racing out of their class.

Having these requisites in mind, a minimum water line length of 40 feet was adopted as being necessary to secure a good cockpit and the accommodation required, and it being necessary to give the vessels a small rig, so that the sails could be easily handled by the contemplated crew, a beam of 11 feet was selected as being the maximum possible, in order that the vessel should not be over-canvased.

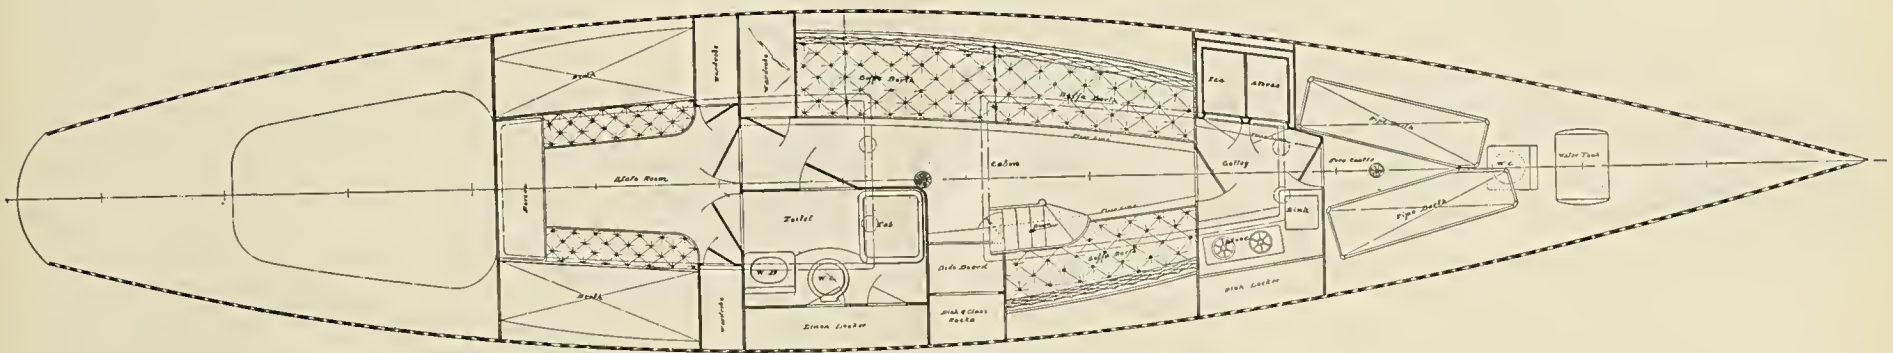

An inspection of the line shows a very fast form, and one that will drive easily even in a lump of a sea, the sections being fine, but of

sufficient power to make the boats carry their canvas well, even in a heavy blow.

These schooners have good freeboard associated with a rather lively shear and well turned and nicely proportioned ends, the entire design being pleasing and workmanlike.

In order to secure ample head room in the living quarters, two low cabin trunks have been provided, the access to the accommodations below being at the after end of the forward trunk, the companion stairs leading into a saloon having three transoms which make up as berths. Under the after trunk is a large double stateroom extending the full width of the vessel, and between the stateroom and the saloon on the starboard side is a bath room of liberal size. Forward of the saloon comes a galley with all the necessary and usual fixtures, and forward of this again is the forecabin. Special attention was paid to securing a large roomy cockpit, and it was decided to steer the boats by wheels instead of tillers in order to preserve the usefulness of the cockpits.

In construction these vessels are to be as well built as possible, all fastening being of copper or composition; the ballast, of which there will be approximately eight tons, being of lead, the keel, stem and stern timbers and frames being of oak, the planking yellow pine, the cabin trunks of mahogany, the decks of white pine and the interior finish below being colonial, the furniture, doors, berth fronts, etc., being mahogany with bulkheads and saloon of white enamel finish. While it is not proposed that these vessels shall have motors installed, they are to be provided with shaft logs so arranged that if at a future date any of the owners wish

STAMFORD Y. C. ONE-DESIGN SCHOONER.

to do so, they may install 25 horsepower motors at a minimum of expense without interfering with the accommodation as arranged.

At the present time five of these vessels have been ordered, the owners being Irving E. Raymond, Edward Corning, Howard C. Smith, C. W. Wetmore and C. G. K. Billings. It is anticipated that at least five more of these vessels will be ordered during the winter.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Harmsworth Cup Challenge Accepted.

THE Motor Boat Club of America has received from London a formal acceptance of its challenge for the Harmsworth trophy. The race will take place during the second week in August, 1913, following the Cowes regatta.

IN consequence of the continuous rain in Southern Russia, the corn crop cannot be cut. The harvest is considered a failure.

Canoeing

Annual Meeting A. C. A.

THE annual meeting of the American Canoe Association was held on Oct. 26. Meeting was called to order by Commodore Cramphorn at 10:10 A. M. There were present Commodore Cramphorn, Treasurer Samuel B. Burnham, Secretary Bancroft L. Goodwin.

The members of the executive committee who were present in person were: A. D. Berning, E. B. Ayers, F. C. Buchenberger, C. F. Wolters, William Collins, B. F. Jacobs, C. L. Patterson, H. C. Morse, W. W. Hinckley.

The following were represented by proxy: H. B. Fort by D. B. Goodsell, F. H. Smith by G. P. Douglas, F. T. Wilson by H. L. Quick, E. C. Kelly by P. F. Hogan, G. G. Richards by Payne Kretzmer, C. A. Spaulding by "Dad" Thorne, John Teach by John Wright, E. H. Demmler by Jesse Armstrong, F. W. Houston by W. A. Heath, H. P. Miller by F. B. Huntington, H. L. Boynton by J. W. Barker.

The Northern Division was not represented.

THE MINUTES OF THE ANNUAL MEETING OF THE EXECUTIVE COMMITTEE.

There were present of the Board of Governors: H. L. Quick, Jesse J. Armstrong, F. B. Huntington.

There were present of the Racing Board: G. P. Douglas, Arthur G. Mather, Daniel P. Pratt, J. W. Barker.

These were represented by proxy: E. V. Walker by F. C. Buchenberger, C. T. Wilson by L. Friede, H. D. James by C. F. Wolters, J. W. McConnell by H. C. Morse.

The invitation of the Panama Pacific Exposition was read and ordered placed on file. The names of Mrs. Oscar West, Mrs. Carl Martin, Mrs. John McKay, Miss Charlotte Friese, Miss Elizabeth Friese and Miss Charlotte Mount were presented as having been properly advertised, and upon vote the ladies were declared elected associate members.

Among other routine business it was decided that the annual meeting of the association be held at Sugar Island, Aug. 8-22, 1913.

It was moved by Mr. Quick, seconded by Mr. Berning, that the retiring executive committee and officers be thanked for their very able services.

A letter from Messrs. Douglass and Palmer was read, giving to the association the Manhattan Athletic Club one-mile double blade tandem paddle trophy.

It was voted that this trophy be accepted and turned over with the original deed of gift

to the board of governors, and the matter placed in their hands.

The meeting adjourned at 3:50 P. M.
BANCROFT L. GOODWIN, Sec'y.

A. C. A. Membership.

NEW MEMBERS ELECTED.

Atlantic Division.—6546, Angus S. Macdonald, 612 West 115th street, New York city; 6547, Jesse L. Austin, 227 Rodney street, Brooklyn, N. Y.; 6548, Harry Henemier, 125 Manhattan street, New York city; 6549, David W. Thorn, 1851 Carter avenue, Bronx, N. Y.; 6550, Frederick Grant, 306 East 142d street, New York city; 6551, Carl T. Hatch, 746 St. Nicholas avenue, New York city; 6552, Alfred N. Rea, Jr., 65 East Tremont avenue, New York city; 6553, Charles W. Rea, 65 East Tremont avenue, New York city; 6554, N. Wright Crowder, 3939 Frisby street, Baltimore, Md.; 6556, Henry C. Webendorfer, 544 West 147th street, New York city; 6557, Waldemar van B. Claussen, 235 West 100th street, New York city.

Western Division.—6555, Roland S. Brand, 505 Belle avenue, Highland Park, Ill.; 6558, Hon. William Hector Maclean, Wilmette, Ill.

MEMBER TRANSFERRED.

4663, Joseph E. Zdankiewicz, Fort Sheridan, Ill., from Atlantic Division to Western Division.

MEMBER DECEASED.

Northern Division.—1838 (Life Member No. 79), Joseph W. Sparrow, 72 Wilson avenue, Toronto, Ont., Canada. Mr. Sparrow was rear commodore of the Northern Division and has been a regular attendant at the annual camps of the association and has always been one of those good men who, while having a good time himself, has helped all around him also to enjoy themselves. Commodore Sparrow will be greatly missed by all who knew him.

Western Division.—12 (Life Member No. 32), Lucien Wulsin, 142 West Fourth street, Cincinnati, Ohio. Report comes that Mr. Wulsin, who was one of the charter members of the association, died early in the summer, but so far it has been impossible to obtain absolute confirmation of this report.

Philadelphia Trapshooters' League.

ON Oct. 26 the first shoots of the P. T. S. S. were held with following results. Scores of Du Pont-Camden match (won by Du Pont) appeared in Nov. 2 issue:

S. S. White Gun Club.	Highland Shooting Assn.
Griffith 49	McCarty 48
Willson 49	Cooper 47.
Newcomb 48	Pfeger 47
H Powers 48	Tansy 47
Cantrell 47	Hibbs 47.
W H Matthews..... 46	Wm Dalton 45
Thompson 46	Dr Crooks 44
Pratt 45	Perry 44
Howard 45	Mooney 43
Hand 43-467	"Landis" 42-455
Meadow Springs G. C.	Clearview Gun Club.
Torpey 48	Elwell 49
Hillpot 47	Oliver 46
Soley 46	F Coleman 45
Sloan 46	Fisher 44
Thompson 45	Dr Gideon 44
Rowland 44	Ferry 42
Letford 44	Green 41
Emerson 44	Steller 41
Murdock 44	McCullough 40
Renner 43-451	Puff 40-432
Lansdale Gun Club.	Glen Willow Gun Club.
Rogers 50	Hall 43
L L Swartz..... 46	Knickman 42
C C Swartz..... 46	A George 41
Rauch 45	Sheen 41
F Bender 44	Free 41
Lambourne 43	Bickings 40
Nyce 41	Wm Carter 39
Metz 41	Gillinger 37
D Schultz 40	Wilds 37
Harring 40-436	Wm Clegg 37-398

The official standing of the clubs at the close of the first shoot is as follows:

	Points.	Targets.
S. S. White Gun Club.....	2	467
Du Pont Gun Club of Wilmington.....	2	460
Highland Shooting Association	1	455
Meadow Springs Gun Club.....	2	451
Lansdale Gun Club.....	2	436
Clearview Gun Club.....	1	432
Camden Shooting Association.....	1	426
Glen Willow Gun Club.....	1	398

The second shoot of the League series is scheduled for Saturday, Dec. 7, when the clubs meet as follows: Glen Willow vs. Highland, at Edge Hill; Meadow Springs vs. Camden Shooting Association, at Camden; S. S. White vs. Lansdale, at Lansdale; Du Pont Gun Club vs. Clearview, at Darby.

The Du Pont Gun Club.

WILMINGTON, Del., Nov. 9.—As another instance of the winnings of persistence, to-day J. B. McHugh took Delaware State championship away from A. B. Richardson. The chasm between winner and loser was bridged by just one target. The fact that neither score was intimately related to standard form of either shooter was due to a squally cross-wind and kaleidoscopic clouds overhead and behind the traps. The race was interesting, as may be seen by the total, 91 and 90. Each man broke 7 straight, then Richardson undershot No. 8, at which McHugh sympathetically "went and done the same." Title holder passed up his tenth. Relative positions remained the same until the 31st bird synocopated away from McHugh's fire. At first quarter score stood: Richardson 23, McHugh 22.

Each man lost his fourth, from which scale they puffed along to the tune of dead until the sixth, missed, which soared away from McHugh. Richardson then passed his 12th; then McHugh lost No. 20, and Richardson his 24th. Total, 45 to 44; Richardson one up and 50 to go.

In next 25 each broke 23. On last 25 McHugh cleaned his shooting glasses and wiped the champion's eye "worsen 'Norm' scoured 'Bob's lamp'"—to speak in a Collier's sense. The challenger disposed of 17 aerosaucers before he tripped on the 18th parallel and spilled his load into the ambient atmosphere. Richardson dropped his 3d, 15th and 20th, while challenger keen-eyed selected successfully the discs from between atmospheric molecules and luminous particles on to his last bird.

In Class A trophy event, McHugh scoured the Senator's son from Dover, 47 to 45.

For the Coleman du Pont silver souvenir spoons there were 40 contestants in the several classes, who finished as shown below. Among the visitors were Dale Bumstead, of Chicago, and Herbert Taylor, of Joplin, Mo., managers of the du Pont Company's offices in their respective cities.

The totals made by the forty-seven shooters present in the first 25 targets they shot at (the spoon event) were as follows: A. B. Richardson 21, George F. Lord 14, D. R. Rutter 16, W. A. Joslyn 17, Clyde Leedom 15, E. M. Ross 14, J. W. Anderson, Jr., 21, J. B. McHugh 21, J. H. Minnick 22, *Ed. Banks 19, C. T. Martin 16, R. P. Willis 20, J. T. Roberson 22, J. C. Rhoads 11, J. A. McMullen 7, L. C. Lvcn 15, H. P. Carlon 21, Lee Moore 15, J. G. Highfield, Jr., 14, *W. S. Colfax, Jr., 20, *L. D. Willis 22, W. G. Robelen 16, W. J. Highfield 21, H. T. Reed 19, W. B. Smith, Jr., 20, Dr. A. Patterson 19, S. G. David 14, E. H. Lambert 12, Stanley Tuchten 19, *J. T. Skelly 22, J. H. Squires 14, T. W. Mathewson 18, W. Edmanson 22, *E. A. W. Everitt 18, Victor du Pont 21, W. G. Wood 15, *Herbert Taylor 18, Eugene du Pont 20, *Dale Bumstead 15.

*Professional.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

- Nov. 21-22.—Clinton (Ont.) G. C. J. E. Cantelon, Sec'y.

DRIVERS AND TWISTERS.

Trapshooter Banks: Well, Ted, baseball is a great sport, isn't it?

Teddy High Gun: It sure is; without it some of our leading vaudeville stars would have no summer employment.

Last week I said that State Champion Von Lengerke had beaten Louis Colquitt for New Jersey honors. This was one of those "inadvertents." Al Ivins took "champ" away from Colquitt and in turn let it slide before Von Lengerke's accurate fire. The fact remains that at this writing E. Von Lengerke, of the firm of Von Lengerke & Detmold, is champion aerosaucer exterminator of the State of New Jersey.

The Swedish rifle clubs, in response to the American invitation to send a team of marksmen to the United States, are making efforts to organize the strongest possible combination of riflemen to participate in the tournament. Swedish riflemen proved the closest rivals of the Americans in the shooting contests at the Olympic games, where they led all other nations. They know each other's caliber, and Capt. P. H. Hedenbald, president of the Swedish division of the International Rifle Union, is of the opinion that some keen contests may therefore be expected.

W. G. BEECROFT.

Crescent A. C.

BAY RIDGE, N. Y., Nov. 5.—An all-day shoot inaugurated formally the trapshooting season here to-day. Twenty aerosaucerists voted for the sport, depositing with more or less regularity their ballots of chilled 8's into the receptive saucers. The 100-target handicap Holiday cup went to T. S. Lawson, whose free 16 gave him 92. He took home also the Election Day Trophy; with 28 unpulled clays he scored 100 gross. George Brower made good on Committee cup with 48 from a start of 6 free birds. The new trap house and ground improvements were much appreciated by the shooters.

Election Day cup, 100 targets, handicap:

T S Lawson	100	George Bingham	82
C A Lockwood	88	J F James	80
F Weilbacher	84	F S Hyatt	80
Dr Sauer	83	P Van Boeckman	79

Committee cup, 50 targets, handicap:

H. T.	H. T.		
George Brower	6 48	George Bingham ..	14 39
T F James	0 45	R Morgan	0 39

D T Leahy	1 22	C R James	1 16
G G Stephenson ...	3 20	J S Lawson	3 15
J F James	0 19		

*Guests.

Northern Kentucky Gun Club.

THE series of monthly money-back tournaments is ended for this year. These shoots have been well attended. At the last one fifteen shooters took part, among the out-of-town shooters being Lee Omohundro, New Orleans, and J. French, Texas, both trade representatives; R. Gaskell, Morrow, O.; W. Webster, Columbus; Ike Brandenburg, Dayton, and L. J. Squier, Pittsburgh, Pa.

High score of the day was made by J. S. Day, who dropped 7 out of 150. S. W. Dameron and R. Gaskell tied for high amateur score on 139. At the half-way post, 75 targets, C. W. Ford was high amateur with 73, tying with J. S. Day, but the pace was a little too hot and he finished second on 138. J. French was back here after an absence of several years, and received a warm welcome. He used to be a regular at the weekly shoots of the Cincinnati Gun Club on the old grounds, and was one of the most popular trade representatives in this section. The scores:

*J S Day	143	M J Welsh	130
G W Dameron	139	H Ertel	125
R Gaskell	139	M H Johnson	121
C W Ford	138	*Lee Omohundro ...	118
W Webster	135	*L J Squier	118
J Schreck	133	*J French	113
I Brandenburg	132	*O Holaday	106
H R Irwin	131		

The weekly shoot on Nov. 3 was poorly attended, only four men taking part. Irwin shot a good gait, breaking 91. He is "coming back" evidently, as he made high amateur score at Hamilton last week. The club will give a turkey shoot on the Tuesday before Thanksgiving, Nov. 26. The program will probably be five 20-target events, or it may be decided to make the events shorter and have more of them. Turkeys, ducks and chickens will be given in each event; ties to be shot off in following event, and in the last event, miss-

Overwhelming Landslide for Remington-UMC

A Few of the Splendid Winnings in the 1912 Campaign

Join this big party that stands on a platform tried by a century's experience.

Shoot the Champion-making Arms and Ammunition :: ::

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO.
299-301 Broadway - - - - - New York, N. Y.

and-out. It is going to be a fine chance to have some sport and get a Thanksgiving turkey cheap, and we want all the shooters in this part of the country to come. You can shoot in one event or in all, as suits you.

Following are the scores of Nov. 3: H. R. Irwin 91, Robin 45, Cameron 47, Richards 35.

Greenwich Field Club.

GREENWICH, Conn., Nov. 5.—A five-man team from Noroton Gun Club came over to-day and was properly Turkeyed by the Greenwich Field Club Bulgars. The score was 405 to 339. A. Elliott Ranney was big gun for the day with 92 out of his 100 Turks. Charley Martin, of the Bulgar bunch, and Fred Gallagher, of the Shotups, tied for second high with 87. Third plug was pulled by A. L. Ferguson with 82. Some of the scores by members of each team were somewhat sad, probably through lack of practice. The scores:

Field Club of Greenwich.	Noroton.		
A E Ranney	92	Fred Gallatin	87
Charles Martin	87	Dr Staub	77
A L Ferguson	82	George Hoyt	77
J R Coffin	75	J. D. Crimmins Jr.	56
John D Chapman	69	L M Dickson	48

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Nov. 2.—In the club practice to-day Moller led with 92½ per cent, Edmonson and Veitmeyer in second place with 90. In the first competition for the Stevens Arms Co. job and button, Edmonson broke the most targets, but number added under terms of the competition gave Wilson temporary possession. The scores follow:

	Practice.	Trophy.
	Shot at. Broke.	B. H. T.
Edmonson	120 108	45 0 45
*Veitmeyer	110 99	...
Alig	100 78	43 4 47
Wheeler	90 48	...
Moller	80 74	43 4 47
Lewis	60 47	43 2 45
Neighbors	60 42	34 12 46
Dixon	40 32	43 2 45
Rritton	40 30	33 10 43
Wilson	40 30	43 6 49
Appel	20 17	35 6 41

*Professional.

New York A. C.

PELHAM MANOR, N. Y., Nov. 5.—At the Election Day shoot the score sheet looked more like "those present" during the busy season in trapshooting at the island. The number was not large, but was representative. Capt. Billings, however, still is among the absent. G. M. Thomson scored one pedestal on the November cup with (3) 25, in addition to which he tied, and lost on shoot-off on Travers Island trophy. R. R. Debacher got a doubleheader, winning Ogden cup and Olympic style event.

G. J. Corbett and D. F. McMahon tied for McMahon cup, Corbett, of course, won the shoot-off. Dr. Held scored on Travers Island cup, while Ralph Spotts, from 21yds., won distance handicap with 22 out of 25.

Added events were two 100-target events, handicap and scratch, won by D. F. McMahon and G. M. Thomson, respectively. The scores:

November cup, 25 targets, handicap: G M Thomson 3 25, Dr De Wolfe 3 24, T Lenane, Jr. 5 24, Capt Borland 4 24, W B Ogden 1 23, D F McMahon 1 23, Dr Held 1 22

Ogden cup, 25 targets, handicap: R R Debacher 7 25, G F Pelham 3 24, Dr De Wolfe 3 24, W B Ogden 1 24, G M Thomson 2 23, O C Grinnell 2 23, D E McMahon 1 23

McMahon cup, 25 targets, handicap: G J Corbett 1 25, D F McMahon 1 25, G M Thomson 2 24, Dr De Wolfe 3 24, D L Spotts 0 24, T L Lenane, Jr. 5 24, O C Grinnell 2 22

Travers Island trophy, 25 targets, handicap: Dr Held 1 25, G M Thomson 2 25, D F McMahon 1 25, T Lenane, Jr. 5 25, G F Pelham 3 25, R L Spotts 0 24, Dr De Wolfe 3 24

Olympic cup, 25 targets, handicap: R R Debacher 6 25, Dr De Wolfe 3 23, D F McMahon 1 21, R L Spotts 0 15

Distance handicap, 25 targets: R L Spotts 21 22, W B Ogden 20 20, O C Grinnell 19 20, D F McMahon 20 20, B M Higginson 20 19, E M Thomson 19 19, T Lenane, Jr. 16 17

Nov. 9.—There were some changes in names and scores to-day, but no increase in the number. There was a bad down-channel wind, which sped up the saucers considerably. November cup went to Brandenburg on a shoot-off with Lenane, with a handicap of 6. A. Elliott Ranney was there with his windward eye, taking high gun with 91 out of 100. Dr. Culver followed with 88. Ranney took, among other things, Ogden trophy, shooting off with C. Stein. Lenane scooped McMahon trophy leg after a shoot-off. Travers Island trophy went to Dr. De Wolfe, who won also Day trophy, after a tie with Ranney, and a tie on Olympic cup with C. W. Billings. This tie will be decided at next shoot. The distance trophy also was won in part by Lenane, but Billings took it away on shoot-off.

This was Billings' first appearance since the regular events began, and he shot in pretty good form. Spotts was somewhat wind-fettered, being placed only in high gun event, when he made 86 from scratch. Scores:

November cup, 25 targets, handicap: J I Brandenburg 6 25, T Lenane, Jr. 5 25, G J Corbett 0 24, Dr L Culver 0 24, W J Simpson 3 23, W J Elias 2 23, G E McLemore 5 23, A E Ranney 1 22, W B Ogden 1 22, V Thaw 0 22, E N Huggins 6 22, R L Spotts 0 21

Ogden trophy, 25 targets, handicap: A E Ranney 1 25, C Stein 7 25, Dr De Wolfe 3 24, R R Debacher 6 24, J I Brandenburg 6 23, W J Simpson 3 23, W J Elias 2 23, B M Higginson 1 22, V Thaw 0 22, Dr Held 0 22, Dr Culver 0 22, C W Billings 1 21

McMahon trophy, 25 targets, handicap: T Lenane, Jr. 4 25, J M Jones 5 25, W B Ogden 1 25, Dr De Wolfe 3 24, B M Higginson 1 24, A E Ranney 0 23, R R Debacher 6 23, R L Spotts 0 23, G J Corbett 0 23, W J Simpson 3 23, S Scott 0 23, Dr Culver 0 22

Travers Island trophy, 25 targets, handicap: Dr De Wolfe 3 25, R R Debacher 6 24, J S Blackton 7 24, A E Ranney 0 23, C W Billings 1 23, J I Brandenburg 5 23, W J Elias 2 23, E N Huggins 6 23, R L Spotts 0 22, B M Higginson 1 22, W J Simpson 3 22, S Scott 0 22

Distance trophy, 25 targets, handicap: C W Billings 20 21, T Lenane, Jr. 17 21, Dr Culver 21 21, A E Ranney 21 19, R L Spotts 21 19, B M Higginson 20 19, V T Shaw 21 19, S Scott 21 19, W B Ogden 20 18, Dr Held 21 18, Dr De Wolfe 19 17, R R Debacher 16 17

Olympic cup, 25 targets, handicap, gun below the elbow rules: Dr De Wolfe 2 23, C W Billings 0 23, R L Spotts 0 20, G J Corbett 0 20, R R Debacher 6 19, A E Ranney 0 18

Shoot-off of tie between Dr. De Wolfe and C. W. Billings postponed on account of darkness. Dav trophy, 100 targets, handicap: A E Ranney 4 96, Dr De Wolfe 12 92, J I Brandenburg 20 91, W J Simpson 12 91, T Lenane, Jr. 20 90, R R Debacher 24 89, W J Elias 8 89, B M Higginson 4 88, Dr Culver 0 88, J M Jones 20 87, R L Spotts 0 86, W B Ogden 4 86

Jersey City Gun Club.

Jersey City, N. J., Nov. 9.—This was one grand day for trapshooting, even if the wind did blow considerable, but that only made the competition all the keener; but if any one thinks the targets were easy, just ask Kearney, as this is the third time he had ever shot at the rocks and drew a pretty bad day for a beginner. Shannon had the honor of being high gun with the unusually low score for him of 80 per cent. Dixon and Dr. Bogart were giving him a close race for the honors until they both tried out their new guns, and, of course, their scores then took on a sickly tint. Dr. Bogart has been absent from our Saturday shoots for so long that he had forgotten the location of the club evidently, as he was almost out to Newark before he realized that he had "got by." However, after giving orders concerning a private garage he is having put up for his own private use, he promises to motor over every Saturday until the snow gets too deep. The scores follow:

Strings of 25 targets: Shannon, 18, 23, 17, 20, 21, 22, 19; Kearney, 2, 4, 6, 6, 14; Dr. Russell, 14, 11, 4, 12, 12; Dixon, 18, 21, 20, 17, 20; Dr. Bogart 19, 21, 15, 21, 16, 19; Kelly, 11, 15; Burlington, 18, 15; Kurzel, 14, 14; Dobson, 4, 8.

SECRETARY.

Danville Rod and Gun Club.

Danville, Ill., Nov. 3.—Diamond medal went to J. Ed. McMillan here to-day on a score of 46 out of 50. Dog medal (gold) was bagged by Fax Bartlett, 42 out of 50. Kinningham eliminated 61 out of 75 possibilities, while Hendrich popped away at 100 and successfully negotiated 60 of them. Fourteen trappists burned powder. The medal shoot is a regular fortnightly feature and brings out great competition. The scores:

Table with columns: Name, Shot at, Brk, Shot, Brk. Hendrick 100 60, Bartlett 50 42, Bales 100 53, Robbins 50 34, Kinningham 75 61, Kick 50 26, McMillan 75 57, Squiers 50 20, Gast 75 48, Leonard 50 20, Barkman 75 41, Kill 25 17, Barton 75 37, Plummer 25 14

H. T. TEUGEN.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Nov. 1.—The faithful seven practiced to-day with the result that Ahmann, Lichtenberg and Wyatt tied on 37 out of 40 for upper berth. These weekly rehearsals are showing wonderfully in the scores. The scores:

Table with columns: Name, Shot at, Broke. Ahmann 40 33, Freese 40 27, Lichtenberg 40 33, F Suhre 40 21, Wyatt 40 33, Meyer 20 15, E Suhre 40 30

J. O. WILSON, Sec'y.

WINCHESTER

Red **W** Goods

WIN THE

High Amateur Average For Single And Double Targets; High Amateur Average for Double Targets, and High Professional Averages for Single and for Double Targets, for the Season of 1912

THE official returns for the trap shooting season of 1912 are now all in. The result was as the canvass indicated it would be. Winchester Red **W** Goods, by the run they made again proved, as they have many a time before, that they are the winning campaigners. There was no split or defection in the ranks of the vast army of intelligent shooters who used Winchester Loaded Shells and Shotguns. They supported them straight. There was no falling off in Winchester quality or popularity. The mid-season claims of some brands would make a political aerocyst green with envy. But the result—and the result is the thing that counts—shows another landslide for the old reliable Winchester Red **W** Brand. The self-proclaimed “world-beating”, “speed” candidate was snowed under by the world-beatingest, speediest combination extant, while of the contender of the ebon name naught was left save a cavernous flash-passage into which to withdraw.

And now for the official returns to which, in the language of the prevalent politician, “we point with pride.”

11 out of 13 Official Seasons' Averages

Out of the first 12 professionals in the Season's Average Contest for 1912, 9 used Winchester Loaded Shells, or Winchester Shotguns, or both. Some shooting, eh?

Season's High Amateur Average on Single and Double Targets: Won by Allen Heil of Allentown, Pa., with Winchester Loaded “Leader” Shells. Score, 1023 x 1100.

Season's High Professional Average on Single Targets: Won by W. R. Crosby of O'Fallon, Ill., with Winchester Loaded “Leader” Shells. Score, 1952 x 2000.

Season's High Amateur Average on Double Targets: Won by Allen Heil of Allentown, Pa., with Winchester Loaded “Leader” Shells. Score, 260 x 300.

Season's High Professional Average on Double Targets: Won by Fred Gilbert of Spirit Lake, Ia., with Winchester Loaded “Leader” Shells. Score, 522 x 600.

.98% FOR 4895 TARGETS — THE REAL UNBEATEN RECORD

This epoch-making record, which well-posted shooters all remember, was made in 1910 at REGISTERED TOURNAMENTS on *regulation targets*, by E. F. Forsgard with Winchester Loaded “Leader” and “Repeater” Shells and a Winchester Repeating Shotgun. The figures are susceptible of proof by the Interstate Association records. They stand unbeaten. Don't be misguided. Shoot Winchester Red **W** goods—they make good every claim.

WINCHESTER QUALITY WINS THE BIG VICTORIES

Marine and Field Club.

BATH BEACH, L. I., Nov. 5.—Some voted and some shot, while some voted and shot. We had out quite a few of the latter. C. D. Sayre and E. H. Lott tied on November cup with 95 out of 100, Lott shooting from scratch, while Sayre had a free start of 18. Lott then took trophy shoot with 25 straight, while in the handicap trophy event Sayre copped the mutton with 5—23. Scores:

November cup, 100 targets, handicap:			
E H Lott.....	0 95	E T Church.....	18 85
C D Sayre.....	18 95	C M Camp.....	12 84
J H Vanderveer....	14 92	P R Towne.....	10 79

P R Towne.....	2 22	C D Sayre.....	4 20
J H Emanuel, Jr....	4 22		

Cincinnati Gun Club.

ELEVEN members took part in the weekly shoot on Nov. 10. The scores were not up to the mark, owing to the high wind, which affected the flight of the targets. In other respects the weather conditions were perfect. High score was made by J. Schreck, who broke 83 out of 95. Connelly gave him a close race, finishing in second place with 80. The near approach of the open season brought several shooters for a little practice before taking to the field for quail and rabbits. Hammer-schmidt was trying out his new 20-gauge Winchester, and did some good work, breaking 88 per cent. of his targets. McArdle also shot an 88 per cent. clip. At 12 pairs of doubles Connelly broke 10, Schreck 14, and Hammer-schmidt 15. Northcutt broke 12 and Walker 11 out of 10 pairs each.

It is a long time since Harig faced the traps, and his work showed the lack of practice, being much lower than in the old St. Bernard days, when he used to break up in the 90s.

The club will be well represented at the turkey shoot of the Northern Kentucky Gun Club on Nov. 26.

Targets:	15 15 20 15 15 15	Total.
Connelly	11 12 17 12 14 14	80
Northcutt	9 9 13 10 8 11	60
Walker	10 5 12 8 12 8	55
Schreck	13 13 18 14 12 13	83

EVERY TIME

Independent Gun Club.

HOLMESBURG, Pa., Nov. 9.—Henry Powers and Clarence Hand played bandits here to-day, and as the guns boomed they held up Independent Gun Club for about all the goods available. Hand took his third and winning limb on president's trophy. Powers spooned away a couple of ladles and topped the bunch on the day's upper with 92 net.

McKean and Hand, with the kindly consent of the handicapping committee, tied with full scores on the dish for little fishes. Pratt took Class B feeder with 88—8 free. Scores:

Fontaine, 1620 18 21 20	79	15	94
Peeden, 1624 20 17 17	78	0	78
Smith, 1616 14 20 17	67	0	67
Ford, 1723 22 24 19	88	5	93

Harkins, 1616 13 16 15	60	26	86
Pratt, 1823 16 18 23	80	8	88
Hinkson, 1610 19 19 17	65	15	80

Harvard—Princeton.

ON Nov. 2, at Princeton, Harvard Gun Club hung it on the Orange and Black by one aerosaucer. Score was 162 to 163 out of 250. No member of either team shot worth mentioning. Bullock, of Harvard, was high with 39 out of 50, while Jackson, also from Cambridge, cracked only 9 out of 25. Princeton shot five men against six scores from Crimsonville:

Harvard.		Princeton.	
Benson34	White31
Bullock39	Fumpson38
Jackson9	Greene38
Cutting16	Horne26
Lockwood34	Minrick29—162
Swift31—163		

Smith Gun Club.

NEWARK, N. J., Nov. 9.—Those who would not substitute elay for feathers kept down attendance here to-day, but good sport was the portion of those who stayed. Sam Thornton hefted and then lifted first gold by separating 42 fliers from the atmospheric molecules, while eight others blended too successfully into the luminous particles and went their way unbroken. J. Baldwin got 40 out of 50. Sweeps made considerable joy for all and profit for some—mostly Brother Shanley. The scores:

B. M. Shanley, Jr., 20, 20, 21, 17, 15, 36; E. Robinson, 9, 11, 5; J. Baldwin, 18, 24, 13, 18, 24, 40; William Kussmaul, 7, 11, 11, 19, 27; Dr. Moeller, 13, 11, 10, 20, 15, 26; T. Pryor, 15, 9, 31; S. G. Francisco, 15, 14, 19, 29; J. H. Francisco, 20, 20, 28; John Erb, 11, 30; F. Apgar,

11, 20, 37; Sam Thornton, 16, 22, 42; C. Von Lengerke, 20, 18, 20, 39; W. Hassinger, 17, 17, 34; S. G. Barnett, 13.

Rifle and Revolver

High School Rifles.

NEW YORK, Nov. 9.—Stuyvesant, High School of Commerce, and Curtis High won to-day's matches in Public Schools Athletic League tournament. The rep-

resentatives of the former school won from the Morris High in a close match by the score of 264 to 262 over Stuyvesant range. It is the first time Morris team has been defeated this season. Scores:

Table with columns for Stuyvesant, Morris, Commerce, Eastern District, Curtis, De Witt Clinton, and Morris No. 2. Lists names and scores for various individuals.

For The Convenience of FOREST AND STREAM Readers

We offer the following combination rates on two or more periodicals. They are also the lowest obtainable legitimately. Your subscription can be renewed now at these rates no matter when the present one expires. We guarantee prompt service.

By following directions you can make your own selection and fix the proper remittance price. DIRECTIONS: From the list below select your magazines, add their class numbers and multiply by five—the result is the cost in dollars and cents.

For instance, FOREST AND STREAM, Class No. 47 NATIONAL SPORTSMAN, " " 18 OUTER'S BOOK, " " 20

HAUNTERS OF THE ERMINE WAY.

BY ROBERT PAGE LINCOLN.

THE woods lay silent— deep, endless silence such as is only found in the dim solitudes; in fact, the stillness was so deep that it brooded on the brink of an indefinite melancholy monotony that seemed to permeate everything in the realm of nature. The day was drowsed away on the mothering breast of the earth, sleepy and tired. The huge trees rose on every side and on the branches yet remained evidence of the great snow storm that had been raging the previous night. I could see through the trees the fields lying outspread in their spotless grandeur far westward till they met a wood. Here and there tufts of grass jutted through the ermine and shivered when the crisp west wind bore down upon them and was lost among the shadows of the wood. I stood motionless with alert senses beside a tall white oak. Though the day was bitter cold I felt not the chill, for I was clad in woolens and the high hunting boots were strapped tight about the ankles. My bare hands were now warm—a vigorous exercise having sent the blood down to the blue finger nails. A drowsiness possessed me, but it was only that keen exhilaration that comes after traveling many miles in the snow. Suddenly a black-capped chickadee darted through the air, seemingly from the unknown, and alighting on a dead limb, sent forth his cheery call to wake the silence that enwrapped the scene. Somehow, I cannot well tell why, I felt that something was about to occur, and I stood there waiting with eyes glancing into every covert. And then it happened. Through the trees I could discern a fluffy brown object making its way over the snow. It paused every now and then to peer into the depths of the shadows, as though in fear, and then with renewed confidence set out to brave the clutch of the loose snow. It was a muskrat that had left his home in the reeded marsh, curious to know what there was to see in the great unknown that stretched before him on every side. He did not see me and I did not move, for I was busy wondering at the queer-ness at seeing this little amphibious creature braving the woodland snowdrifts so far from his environments. Simple as it was, it impressed itself upon my mind as a mystery to be solved. What would he do, and where, in case he knew,

was he bound? I stood as rigid as a statue and watched the progress of the animal; his beautiful coat was something to marvel at. The long guard hairs were tipped with black, while the rest was a deep nut brown that seemed to change when the light fell on it. The eyes were like beads and flashed as they were turned inquisitively from side to side.

Presently, as I watched, I heard a faintly perceptible murmur in the brush to my right, and turning I saw a rabbit race into view with long graceful leaps. His course lay directly past me, but he saw me not, and darted by as though badly frightened. The muskrat in his blundering trail had risen on his haunches with a quickness that was admirable, and now sat back in the deep snow showing his teeth in a most menacing manner, calculated to drive fear into the heart of the tab-footed cousin of the wild. The rabbit perhaps would have kept right on, but suddenly stopped at a bush and began to gnaw the bark, at the same time keeping his eye on the alien. What would have happened it is uncertain to say, but at that moment afar off among the woods a beagle hound sent his prolonged, mournful bay echoing through the lonely aisles and then the spell was broken. The rabbit froze in his tracks, listening with wide ears quivering forward, and then noiselessly, as another howl melted into echoes, disappeared in a snow-wreathed tangle of brush.

After the rabbit had vanished the muskrat continued on his way and was presently lost to view. Then for the first time I moved from my position, yielding to the notion that I wanted to know what lay on the muskrat's back trail. So I set out, following the back route as it lay printed on the white mantle. I knew very soon from the general direction of the trail that the animal had stopped at the wood brook. At the side of a large oak the muskrat had rested, and I judged from the number of tracks around that he had been very restless. In a slight swale the snow had drifted over the trail, but I could make out its indistinct course without undue searching. And then as I neared the stream, slowly and silently I made my way, half crouching through the snow. There are always things occurring in the great realm of nature, but only one schooled in the ways of the wild may obtain a glimpse of the wild kindred in their haunts and truly study them. Over a snowy bank I peered, holding to a bush that I first tested for strength and any stir that it may arouse. The creek lay below, the water showing black against the heavy snow that was around the edges. In one long sweeping glance I took in all the details of the scene. At first I could detect no movement whatever, and then my eye rested on the sinister water that lay below. Suddenly a ripple appeared on the surface, and as it receded it was followed by another and then a little black head appeared, the owner of which was a black-furred mink. Impaled on his teeth was a large frog that was endeavoring to free itself from the deadly clutch, but its efforts were fruitless. The mink reached the edge of the ice and laid its victim down, watching it with savage intentness. The frog, bitten through the head, made an effort to escape, but the mink pounced upon it once more and bit it viciously, causing it to squirm piteously. I then noticed a number of other dead frogs lying in the snow at intervals in various stages of devastation. Again the mink dove silently into the water and returned to the brim presently with another of the inert hibernators. I noticed where the muskrat trail led down to the ice. Would the mink find that trail, and if so, would he follow it? Why not! Suddenly the mink turned his eyes in my direction and watched my snow bank fixedly with his bead-like eyes. His sensitive nostrils trembled as he scented the air, but with the wind blowing toward me, he was fooled. Then apparently satisfied he turned to the muskrat trail as though he had known all the while that it was there and had left it for further consideration after his frog-killing feat. With lithe leaps he followed it until it brought him to the rise and almost on a level with me. But just at that moment my bush cracked warningly, and it was all over. Like a shadow the mink disappeared. Again all

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

PARKER BROS. :: Meriden, Conn.
New York Salesrooms, 32 Warren Street

New Model 27

Marlin

Repeating Rifle

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working "pump" action; the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

No Shortcomings

The Smith Gun has no shortcomings—not one. The 6 Hunter brothers, with inventions, precision, workmanship and experience, kept after shot gun shortcomings for 22 years, until they had wiped out the last and least important one.

"6 Times 22 Years Experience" gives the shooter of a Smith Gun the fullest possible pleasure in the field, and the maximum game in his bag.

Ask your dealer to show you the new L. C. Smith 20-gauge. Send for Catalog.

was silent on all sides. The brook flowed on without a murmur, the frogs stirred faintly on the ice, and over all some sweet tranquillity hung its curtain.

A MODERN HERCULES.

RAMA MURTI NAIDU won the name of India's Hercules by letting an elephant weighing four tons walk over his abdomen, a 12-horsepower motor car run over his shoulder and back, two country carts loaded to the limit of their capacity with men and boys from his audience pass over his shoulders and thighs; also by bearing a stone weighing 3,000 pounds on his chest and back and letting men break a large rock on it with heavy sledge hammers, and finally, according to the Review of Reviews, by snapping asunder a stout chain about one-eighth of an inch in thickness by merely raising his shoulders.

He is a most popular figure in India and receives wherever he goes the reception of a prince. With high thinking he combines plain living, being a pure vegetarian. About two hours after his night performance is over he takes a light meal of rice, pulse, greens or one or two vegetables, all mixed together and weighing not more than half a pound in all.

He takes water or sometimes plain soda and that, too, very moderately, disdaining tea, coffee, cocoa and spirituous liquors. He leaves his bed at 8 o'clock in the forenoon, when his favorite drink is ready for him. This is made from almonds, cummin seed and black pepper, weighing in all two pounds, soaked overnight, made into a fine pulp, then mixed with a pint of water, strained through a piece of muslin and sweetened with sugar.

An hour later he eats a quarter of a pound of raw fresh butter. Breakfast is served at 1 o'clock in the afternoon. It is about the same sort of meal that he eats after his performance. At 4 o'clock he takes a drink similar to the one already described, made from almonds, wheat, bran and milk, and eats a sort of pudding made by boiling together clotted cream, honey, butter and sugar.

NET MAKING IN HOLLAND.

THE manufacture of fishing nets has for centuries been a very important industry in Holland, which in the seventeenth century had a fleet of over 2,000 smacks engaged in the herring fishery. The latest census of the industry shows that there is one fishing net factory at Scheveningen, where the first factory was established, with about ten hands; one at Apeldoorn, with about 250 hands; two at Goor, of which one is also a cotton mill, with about 630 hands; one at Leyden, with about 80 hands, and one at Gouda, with about 30 hands.

Those at Scheveningen, Goor and Leyden make chiefly nets for the herring fishery in the North Sea; the Apeldoorn factory makes all sorts of fishing nets and lines, both for the anchovy and sardine fisheries and for the herring and mackerel fisheries. The Gouda factory makes all sorts of fishing nets and lines. At Sneek there is a ropery yard which mounts and finishes nets for games as well as for fishing purposes; and there are net works at Maassluis and Katwijk. In addition to the large factories there are many small ones where hoop nets and fishing tackle are made by hand.—London Globe.

A NEW AUTOMATIC GUN.

A PRESS report states that Vickers (Ltd.) England, have recently received orders for 1,080 new automatic rifle caliber guns, the Government adopting the gun including five of the first-class powers of Europe. The new gun differs in many respects from the company's earlier types, being lighter and more mobile, while modifications have enabled the gun to continue firing for much longer periods without becoming overheated. This has been achieved partly by a new system of condensation, with the water in the jacket for cooling

the barrel in continuous circulation in association with a separate condenser. On one trial 180,000 rounds were fired from one gun, and of these 30,378 rounds were fired from the same barrel. It was only at this point that there was any falling off in efficiency. In fifteen minutes 2,672 aimed rounds were fired, and of the original supply of six liters of water in the jacket and the condenser combined, one liter still remained.

The gun weighs only twenty-seven pounds, as compared with sixty pounds of the former service automatic rifle caliber guns, while with the necessary cooling water the weight is thirty-six pounds against sixty-six and three-quarter pounds. The length of the barrel is about the same, but length of the water jacket has been increased at the chamber end, where the heat is greatest.

THIS PICTURE GRATIS

JOHN PEEL.

The above picture of the immortal John Peel, framed and glazed, will be presented free to all new subscribers to "The County Gentleman & Land & Water," England's leading weekly illustrated sporting paper.

The picture measures 11 in. x 7½ in. (frame 17 in. x 12 in.). The original was painted by Mr. Joseph Simpson, R. B. A., from old photographs and prints of the famous huntsman. It is said to be the finest representation of John Peel ever published, and is worthy of a place in every sportsman's home.

The subscription to "The County Gentleman & Land & Water" is \$9.50 per annum, payable in advance, for which the paper will be sent, postage free. Checks should be made payable to the County Gentleman Publishing Co. and crossed the London County & Westminster Bank, Hanover Sq. Branch.

Kennel Department

Airedale Club of America.

THE second annual bench show of the Airedale Club of America was held on Nov. 9. It brought many surprises, principal of which was Kenmare Sorceress which won over the newly imported Abbey King Nobbler for best dog or bitch in the show. Another surprise was John McGough's Gold Heels, getting the blue in open dogs, beating Champion Soudan Swiveller and Champion King Oorang. E. M. Post's cracking pup Epost, Capt. Andrew, beat a good field for the blue in the novice class. Steve Swiveller, owned by Henry Rogge, won puppy (dog) blue, while blue for bitch pup went to Cactus, owned and bred by Thomas Cadwalader. Novice bitch was won by Mr. Wolcott's Bothwell Sorceress. Other winners were: American bred dogs (champions barred) Bryan Boy, owned by T. Offerman; limit, dogs, F. G. Porter's Abbey King Nobbler; American bred, bitches, F. G. Porter's Abbey Sultana; limit, bitches, Abbey Sultana; open, bitches, Clonmel Command; open, sweep dog or bitch, American bred, Gold Heels; team and brace won by W. P. Wolcott. Judge was William L. Barclay, whose decisions were generally satisfactory and absolutely unbiased.

DISTEMPER.

To write an original article on "distemper" would be impossible. All that has been said has been said a thousand times and more, yet old stories sometimes admit of new flavors, and I will try to put a new flavor to this. Here are a few cases, and several lessons to learn from each, not lessons altogether scientific, but practical ones as well, says Dr. McLaughlin in the American Kennel Gazette.

This first case is in relation to a "Boston" that died fifty-six hours after I first saw him. I do not think any expert would have pronounced it a case of "distemper," and yet it was. If I had a strong suspicion, it was not on account of the symptoms that presented themselves. It seemed a case of pleurisy pure and simple, and so I diagnosed it. The fever was quite high, 104 2-5, the eyes and nose presented no discharge, the bowels were normal or slightly constipated, appetite very poor, vomiting constant. The latter symptom was peculiar as raw minced meat was rejected two hours after being eaten, in the same condition as it was eaten, that is, still red, still raw meat that had undergone no digestive change (yet the post-mortem showed no gastritis.) There was no cough, only that short, raspy, painful breathing so peculiar to pleurisy.

The next day he retained his food, appeared somewhat improved, his temperature was down a degree, even his breathing was easier. He certainly was holding his own, but during the night he took a sinking spell. It was apparent to his nurses that he was very ill, but before they realized it the little fellow was asleep—his last sleep.

Fortunately this little "Boston" belonged to sensible people, and they permitted an autopsy, in fact desired it. This is what the autopsy disclosed: Pleurisy, enteritis, a slightly enlarged liver, and a very much enlarged spleen. In the pleural cavity was a large mass of semi-solid, or rather a soft jelly like substance, which the microscope proved to be the result of an old pleurisy. The abdominal cavity was filled with blood.

Now let us study these post-mortem appearances: The immediate cause of death was of course the hemorrhage into the abdominal cavity. That carries no special lesson, except

that its occurrence is not as uncommon as supposed. The enteritis was distemper, and it was extreme; it began at the stomach (the stomach itself was not involved) and continued an uninterrupted course to the large intestines.

This enteritis is what I wish to call attention to. For four months previous this dog never once had diarrhea, he eat well, evidently digested what he eat, for he seemed in splendid condition, was quite plump and showed remarkable spirits, and yet the small intestines for those four months were in an extremely crippled condition. Such experiences as this upsets all theories, except it may be the old saying "that fact is stranger than fiction."

That this was a case of recovered distemper, I do not think any expert would deny, yet for four months he had a plastic mass forming in his pleural cavity and a continual case of enteritis. Is it any wonder that such a disease baffles all investigation and obstinately refuses to be cured by any specific medication, old-fashioned or new-fashioned, drugs or serums, when it plays us such clinical tricks?

As distemper usually shows itself, the veriest tyro can diagnose it; it resembles in its early stage an ordinary cold, the symptoms are a slight watery discharge from the eyes and nose, and sometimes this is all there is to distemper, but usually these symptoms become aggravated, the discharge increasing and becoming purulent; then diarrhea sets in, a cough accompanies, breathing becomes difficult, and a long siege is in sight.

But between a typical case, and the extreme I have described, there are a thousand others, each possessing peculiarities of its own, and which give the dog breeder a shock every time they occur. Here is a case to point:

In this particular case there was no symptom whatever that was in the least characteristic of the disease. When I saw him, it was to see a lame dog, the owner suspected no illness, unless it might be rheumatism. When exercised he traveled on three legs. When resting for more than five minutes, the muscles of his head began twitching, then those of the hind leg, the lame leg showed none at all. The dog had chorea. It was the only evidence of distemper. Here is the history: Two weeks before he began vomiting, and had been vomiting more or less constantly ever since. I examined this dog (a white bullterrier) thoroughly, his eyes, ears, lungs, etc., and made every inquiry to bring out the real state of the dog, and as far as they knew he showed no other symptom. They had called me only on account of lameness, and had never noticed the chorea movements.

Here is another: A very valuable "Boston" pup. He had distemper for six weeks, he

never was considered in danger. Like a bolt from a clear sky, a spasm and—death. Until he took the spasm, it was a simple case, a slight discharge from nose and eyes, very little cough, eating well, in good condition and in good spirits. He lived under ideal conditions in every sense of the word, and when he showed the first symptom he was given a serum treatment.

I could continue such cases indefinitely. But the lesson to be learned? Begin your treatment early and continue until every vestige of the disease disappears.

What is the treatment? The main treatment necessitates, in the first place, in the second and last, a good nurse. A good nurse is never a veterinarian any more than a good human nurse is a M. D. It is a case of help one another every time, and even then it is a hard and patient task, and when success crowns our efforts, there is enough for both and a little to spare.

The medicines? There is no specific. It is a game of skill every time, the less a nurse has to do with medicines, the better a nurse he or she is. To recommend a medicine would not be a square deal to the patient. Here is one rule that is worth remembering: separate your sick dogs, two or more dogs suffering from distemper and in close and constant contact are more difficult to cure than the same number separated. The particular germ seems to thrive outside the body as well as inside, and evidently loves its own company, and the more you crowd dogs the more you cultivate the disease.

UPLIFT THE GOAT.

CAN the goat be made to change his pelt? Can the horny grain of a goat's skin, while it is growing on his back, be made as smooth as the pelt of a calf, demands the Shoe Retailer. If it could, tanners would be saved millions they now spend for glazing goat leather.

The Scriptures say that the leopard cannot be made to change his spots. Too strict interpretation of this passage has held hosts of men in darkness for ages. Surely, the cabretta, which is neither sheep nor goat, has been bred, wild cattle have been domesticated, cows have been grown to great size, the orange has been made seedless and the cactus edible.

Why should not the goat be bred a sweeter and a smoother creature, and also a larger creature? Why should he not shake off the degradation that has been upon him for ages? Why not make him to lie beside the fatted calf on the banquet table and his pelt to serve with the pelt of the calf on the feet of the people?

Primarily the goat is held down in the shoe and leather trade because his pelt is not as smooth and as hard grained as is the pelt of a calf. Its fiber is tough, all right, but the hair pores make its grain rough, and strange to say, its grain will chafe and peel, despite the fact that the goat is one of the toughest of the small animals.

The kid leather tanners of the country would render their fellow citizens a great service and at the same time benefit themselves if they would appropriate a sum each year to encourage the breeding of a better grade of goats whose flesh would make a sweet and tender meat for the table and whose pelt would make strong and durable leather for boots and shoes.

SPARROW CARRIED LIGHTED CIGARETTE TO NEST.

THE discovery of fire in the belfry of the original building of Valparaiso University prevented a probable destruction of the structure, which is one of the landmarks of the present varsity settlement.

After the fire was extinguished an investigation to ascertain the cause was started and disclosed that a sparrow picked up a lighted cigarette from the street and flew with it to the belfry, where the cigarette ignited the straw of half a dozen nests.—Valparaiso Correspondence, Indianapolis News.

"The first rifle I ever owned was a Stevens. The new Stevens .35 High Power I have tried and found first rate. Balanced to perfection, low in the hammer, just right in width to carry in the scabbard and set nifty under the left leg when in the saddle, easy to load. The magazine that holds five shells and with one in the chamber provides enough for anyone; sights that are standard and used by all the best shooters, a slightly swelled fore-end that fits the hand, side ejection; solid steel receiver; as accurate as any of the Stevens famous rifles. Hammer always in sight and 'sweet' to the touch, a perfect coil mainspring that does its work always and positively—these as well as other features which I have not space to call attention to, are the features which caused me to place this rifle at the head of the many striving for all 'round honors."

That's what one of the greatest BIG GAME Hunters in the world wrote to us a few days ago.

J. STEVENS ARMS & TOOL COMPANY

Dept. 325

Chicopee Falls, Mass.

ARE YOU A GUNNER?

Do you love to follow your good dog over the fields in search of quail or chickens, or to struggle through swamp or along thick grown hillside, expecting to hear the roar of the ruffed grouse or the twitter of the fall woodcock? If so, you should have this new book.

AMERICAN GAME BIRD SHOOTING

By GEORGE BIRD GRINNELL

This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys.

The first part of the volume is devoted to a description of the various species and their habits—the way in which they live their lives.

The second part of the book is devoted to upland shooting and treats of the methods by which all the upland birds are pursued and taken. The chapter "Aids to Shooting" describes the clothing, guns, and loads and dogs that the gunner may profitably use; while the last section of the book treats of the shooting of the future and the efforts to rear our native quail and grouse in domestication.

The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full page portraits of different game birds and hunting scenes, with a number of cuts in the text.

Cloth. About 575 pages. Price \$3.50, net. Postage 25 cents.

This book is of inestimable value. It contains the genuine hunter-naturalist facts given in the most entertaining and interesting style.

THE NORTHERN CONDOR.

It is not commonly known that we have a condor in the United States, yet there is one on the Pacific Coast that in weight and spread of wing surpasses all other birds. From tip to tip of wing it measures more than ten feet, considerably more than the condor of the Andes and about a yard more than the largest eagle or swan.

This condor is black, tinged with brown, except under the wings, where there is a long narrow strip of almost pure white running the whole length of the wing and widening near the body. It has no ruff around the neck, but a fringe of long narrow black feathers on the back of the neck gives it a savage appearance. It nests among the rocks in lofty cliffs, laying several white eggs much larger than those of the turkey or goose. From 1875 to 1885 condors were so abundant in Southern California that I used to see them almost every day, but now they are found only in the wilder mountains. Their eggs bring \$100 each in the larger museums of the country.

If an animal is sick or disabled the condor rarely hesitates to attack it, and its fate is soon sealed if it is not strong enough to defend itself or escape its enemy.

Like the condor of the Andes, that of California will so gorge itself with food at times that it can be lassoed in the quick dash of a good horse. A friend of mine at San Jacinto had one that had been caught in that way. But, although he had thousands of sheep and cattle, he had to give the bird away, because he could not afford to feed it. It would eat a whole sheep at a meal and then look hungry and sad, as if it were badly treated.

Once clear of the grounds with wings outspread, the condor has no trouble in bearing away into the clouds a dinner that will last a week or two.

Standing on the ground at a distance, this great bird looks much like a big black Newfoundland dog sitting up for a cracker; but in the air it surpasses in grace and variety of action every other wanderer of the skies. The whooping crane that floats like a speck of down in the remotest blue; the frigate bird, whose wing seems never made to fold, even the albatross, are all clumsy and monotonous compared with the condor. It travels in a series of winding lines, in which symmetry and grace always govern the boldest sweeps of the highest bursts of speed.

Dozens of times I have laid among the rocks and had the condor come so near that I could plainly see the sparkle of the brown eyes in the vivid red of the bare head, and with the strong glass that I always carried in hunting deer I have brought the bird much nearer. Yet never could I detect the slightest motion of wing or feather beyond a lazy flap or two at intervals of several minutes or a simple inbending of the tips of the wings as if feeling the breeze to be sure it was there. And the bird often floats an hour or more without even this slight motion.

It is quite as wonderful when the condor sets its wings and slides sideways across a strong breeze, without any descent yet without falling backward, and still more so to see the great bird return with a swing of half a mile or more, arriving hundreds of feet above the point of starting and perhaps hundreds of yards ahead of it.

When I have been well hidden among the rocks I have seen a condor within a few yards hanging on the air from many seconds at a time, not like the hawk, balancing itself to fall upon some bird below, but seeming to sleep there as peacefully and quietly as a summer cloud. Then suddenly the bird has turned half over and cleft the air with a sharp hiss of wing feathers, for which there was not the slightest motion of a wing to account. And all this time the condor has been rising instead of falling, and I have vainly watched the fringed tips of the great wings for the slightest sign of motion.—Youth's Companion.

A PROBLEM'S SOLUTION

Log Cabins and Cottages; How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work. Cloth, profusely illustrated, \$1.50 postpaid.

The Big Bull of Great Lake

By "OLD WABEI"

Photographs by the Author.

THE BIG MOOSE.

LIKE all hunters and sportsmen who hunt and travel the Canadian wilds and hear wonderful stories of exceptionally large deer, caribou or moose, so I on a previous trip had heard of the big moose of the Great Lake region.

Now, a greater part of these stories are sometimes true, and it was my opportunity in a past season while hunting to hear such a wonderful tale that I decided that it was at least worth while to see what I could do, so acted accordingly.

Whether I got the big bull I do not know. My readers may draw their own conclusions.

The following season, as the time for hunting drew near, I kept the mail busy with letters to my friend, whom I shall call "Lew," for a proposed trip to the neighborhood of the big lakes near the upper portion of Shelbourn county.

At last after several days of train and steamer I jumped off at the little station and

was greeted by Lew and old Jim McKay. When Jim put eyes on me, his face beamed, and after shaking hands, he said: "Weel, weel, noo Jock, I'm verra glad to see ye," and in reply to my questions about the prospects of a good hunt, he said: "Weel, mon, I hae nae doot that ye'll manage to get muckle sport, ye ken the groons arecht." I then told him of our proposed direction and his quaint answer was, "Ye're a gid mon, and hae the proper spirit, it's a muckle shame there's nae Scotch in ye." He would have talked longer, but as I was in haste to get to the woods I bade him good-bye and jumped into the team to take me to my friend's house where I could unpack my trunk and transfer my dunnage into pack sacks and place them aboard the ox team for the first portion of our journey up the usual tote road.

The first few days were incessant paddling and portaging around bad rapids. By the fourth day in the early morning we heard a cow call toward the east, evidently about a mile away

from the river. We saw numerous good moose signs quite fresh.

The scenery had become more and more wild as well as beautiful, and finally as we turned a bend in the river we saw before us the entrance to the lake, a sportsman's paradise.

Here and there were several flocks of ducks in the distance, quite a few asleep on the rocks, while out in the lake many small islands thickly wooded having small sand banks, and in the shadows of the shore we could see the trout jumping after flies and bugs. It was indeed a sight such as would delight the heart of any sportsman and lover of nature.

Upon entering the big lake we saw approaching on the western side a small hunting canoe in which were two Indians, John Glode and Louis Francis, one of whom I knew quite well. They greeted us with their customary "Bon jou, bon jou." "How you come, eh? By river? We see good moose sign on de west side of lak; mebe you git dat big feller. We go down Walbi Lak for still-hunt; dat one good plac, must go now. Bon jou," and with their curt answer, off they paddled away.

We paddled about three miles further up the lake, found a sheltered spot and in a short time had our tent up and duffle unpacked, and while Lew cooked the supper of trout, beans and tea, I got busy with the spruce bough bed.

After a short smoke, about an hour before sundown, we started in our canoe toward the northern end of the lake to try a call. We had to be extremely careful to keep well along the western side, as there was absolutely no wind, and sound can be heard a great distance on a clear, quiet evening. Finally Lew broke the stillness with "Let's go ashore here and try a call." So we pushed our craft into the shallows and waded ashore.

Animals seem possessed of some marvelous power of distinguishing between innocent sound and noises indicating danger, consequently and absolutely calm, windless night is required for calling, and moreover the game being so wary that in coming to a call it will always circle around and try to come up the wind in order to get a scent of the animal or being from which the call seems to come. So far for the technical part of the hunt.

We carefully selected a small mound about a hundred feet from shore, facing a small birch growth. Lew climbed to the top. We waited, straining our ears to catch the slightest sounds,

but silence reigned all about us, except the melancholy hooting of a great owl close by.

We waited fully twenty minutes and then tried another, but after repeated efforts we decided to give it up, as it was so dark we could not have seen our game, so back to our canoe, to camp and into our bags.

The next morning we were up long before dawn, and after a hasty cup of coffee made over the remaining embers, we put on jackets and moccasins and climbed into our canoe for a paddle to the eastern side of the Great Lake.

We certainly appreciated the short paddle, as it helped to warm us up, as the lake was covered by a thick mist which seemed as cold as ice, but in ten minutes we reached the eastern side of the lake and disembarked. A short distance from the shore was a thick spruce covert. Here we decided to remain hidden and to give our call, as we could see the big swamp at the end as well as on the sides.

After listening a few minutes Lew gave his hoarse call three times and waited. I was just going to ask him if he had heard a noise on our right, when he said, "Listen, hear that?" and sure enough from the swamp on our right came a loud "Bwah, bwah." It sounded like a large goose and would have fooled any novice, but when you have once heard a moose call, you never forget it, and in a few more minutes he let out his "Bwah, bwah, bwah" as if requesting an answer from the supposed cow, but as he was fairly close, we dared not call again. In an hour a slight wind sprang up, and we immediately made tracks for our canoe lest he get wind of us and clear out of the locality altogether.

We quietly paddled across the lake and after eating a good breakfast took down our tent and moved our outfit about a mile down the lake so as not to disturb the big fellow.

We spent the day in cruising and fishing

around the lower shore, but refrained from doing any shooting, although we raised flocks of black ducks at every bend in the lake and river, but as we had great sport with our rods, we contented ourselves with a generous catch of the speckled beauties. That night it rained, but toward midnight the wind changed to northwest, and at dawn it was cold. Lew whispered in my ear, "Come on, get out, it's fine morning to call; we'll get that big cuss to-day."

We made our voyage across the lake and took our station, Lew on top of a handy rock and myself concealed on his left.

Again Lew gave his call, and in five seconds we had an answer, the same deep bark; in fact, it was the deepest tone I have ever heard. Lew said: "By gosh! that must be some old grandfather; I'll bet he has a pair of horns on him like a chandelier;" and I felt sure I was going to get a crack at something that day.

In another few minutes he gave a couple of short barks and Lew motioned me to be ready. Fortunately there was absolutely no wind. You could not have smelt a Gloucester banker sixty feet away. I lit a safety match, but not a breath was stirring, and to make matters better the sun was just rising over the tops of the green woods directly in front of us.

Once more Lew called, putting his horn close to the ground and giving a low, whining call with a decided gurgle on the end, and as he threw down his horn he looked at me and said: "I did the best I could on that call," and the next second he whispered excitedly, "By gad, look out! Here he comes!"

At first I did not see him, as he was sneaking down along the edge of the spruce thickets, stopping every now and then to get sight of us, but on he came until he got within about ninety yards, then crossed over in front of us. Lew gave me the signal for first shot and I put my big .45-70 up and drew a bead on his shoulder

"OLD WABEL."

and fired. He, however, did not jump at the shot, and I thought I had missed him and gave him another. "Shoot lower," yelled my companion and once more I fired, aiming about six inches lower. Then he reared up on his hind legs and turned to go back from where he came, but I hit him once again and he ran a short distance, then made his final plunge and after a few kicks, he was ours.

We quickly ran to where he lay. He was a wonderful specimen. I counted twenty points, the shovels of the horns being fourteen inches wide and the antlers having a maximum spread of forty-nine inches, both being very even.

We immediately commenced skinning the head and quartering him. It took us three days to get him to the last lake. After continuous hard packing and portaging and canoeing, where with the help of a team of oxen, we brought the outfit and our moose to the little village of Clyde.

How proud we felt both over our victory, and as we were unloading who would congratulate us but old Mac, as he said: "Mon! Mon! ye hae the recht kind now, as how did ye manage tae get sic a big yin. Ma boi! I hae the utmost respect for your hunting qualities and am verra proud o' ye. Its a muckle shame there's nae Scotch in ye."

After shaking hands with the old chap and the usual backwoods gentlemen at the little cross roads store, I immediately prepared for my trip homeward. This was the best of all my trips, and as the great head hangs on my wall, I ask myself, "Did I get the right one this time?"

Well, let my readers give me the answer. I, at least, am satisfied.

FORGETFULNESS.

ON election day, 1912: Gone and forgotten, except by a little household in Utica and some good neighbors,

JAMES SCHOOLCRAFT SHERMAN,

Vice-President of the United States.

BARRINGTON RIVER—SMALL GAME IN SIGHT.

Our Thanksgiving Ducks

By FRANK W. BICKNELL

I WASN'T going to be cheated out of the last southward flight of my favorite game, the wild duck, though it was only a few days before Thanksgiving that I was just getting up from an attack of lumbago and had plenty to do besides hunt ducks. All my usual hunting companions had had their share, were busy chasing dollars, and I could not find one to go with me. My life partner began to hope that I would have to give it up, for though she likes a duck on the table as well as anyone, she thought sitting in a blind in a cold marsh was about the last place for me at that time, and I suppose she was right as usual. But I had made up my mind to try it and could not be turned aside. If none of the boys had sense enough to take advantage of such a good thing, I would just go alone.

In Calhoun county, Northern Iowa, two little lakes once existed, with a high ridge between them. They were called Twin Lakes, and off to the south of them stretched marshes, runs, sometimes almost creeks, but always rich mud underneath in which grew the many plants that ducks like. There was the "Gunbarrel" slough, a great long irredeemable marsh that stretched for fifteen miles between slight elevations. Not far away was "Hell slough" or "Purgatory," as it was sometimes called. It was not to be trifled with, for its deadly quicksands swallowed up anything that had weight enough to sink. A farmer undertook to drive across once and was never heard of again, either he or his team or wagon. At the time of which I write all this was changing, and has now yielded still more to the demand for land. The forbidding morass has surrendered to the persistent skill of the drainage engineer, and thousands of acres of the richest land on earth have been literally lifted out of its depths. During the days of the lakes, before the draining began, a little summer hotel had been built on the ridge between. The first few ditches put the hotel out of business. Its principal guests in the summer were the gigantic mosquitoes bred in the swamp nearby. The lakes receded until nothing but sloughs were left. The hotel property became worthless and unsaleable. But in the fall, and I am ashamed to say to some extent in the spring, it was a glorious resort for duck hunters. Some of us in Des Moines planted wild rice and celery in the old lakes and had the place patrolled by wardens during the closed season, so we had splendid shooting there for a few years before too many bummers got to going there, more intent upon killing "booze" than ducks. About fifteen years ago, the time of this adventure, the place was at its best. All kinds of ducks came there, spring and fall, from the dainty little teal to the big, tempting mallard and canvasback.

Without notice to our man in charge at the lakes I arrived at the station, eight miles away, got a rig and went out. The weather was certainly getting cold, and I did not hurry out the next morning till a fire had been built in my room. After a little preliminary walk along shore, killing a few small birds and mostly losing them, I persuaded the lazy fellow in charge to take me out in our boat, for I thought with

a lame back I could not row myself. He was so awkward that I finally took hold and rowed him ashore in disgust. Nothing doing.

In the afternoon I got this man to hitch up and haul me and my boat and decoys to my sure place in the swamp about two miles away, where after a half mile of rowing I established myself in a good blind with my decoys beautifully deployed in front in open water. It looked very promising, but nothing happened till late in the afternoon, when the mallards began to spy my bogus birds, and even to come to my imper-

and told me he would always be ready to join me if I came up and wanted company. He was hungry for some congenial spirit from town. My messenger found him in the midst of several big jobs with a lot of men waiting for orders. He put in the afternoon and early evening getting rid of those men or trying to find something for them to do while he was gone, and at 1 A. M. he turned up at Twin Lakes, ready for the serious business of helping me hunt ducks.

We turned out next morning long before daylight, temperature far below freezing, cloudy

"ONLY A FEW SILLY ONES CAME NEAR US."

fect calling. By the time it was too dark to shoot I had eight mallards, two redheads and several bluebills and widgeons. I had regularly missed the spike-tails that came shooting by, and it was not till next day that I was able to hit one. Somehow it always happens that way—more trouble to gauge the flight of a pintail than any other duck, even the green-winged teal. By now my hands were nearly frozen, ice forming all around me, and I fully expected to find myself dead with a broken back next morning. But the pull out to the landing place and the walk back to the hotel warmed me up beautifully, and I was overjoyed to hear that the boy I had sent nine miles for a friend returned with the news that he would come "some time in the night." I must tell you about that friend.

Sherman Smith was a real sport. He had been an architect in Chicago on the World's Fair job under Burnham. He broke down, had nervous prostration, and had to get back to nature. Having the most convenient father imaginable, he was provided with a 700-acre farm in Calhoun county, where he was fighting swamps and nostalgia with some success, money not being much of an object. He had happened around before when we were shooting at Twin Lakes

and apparently getting colder and looking like snow. "I don't like this," observed Sherman, as we stumbled along in the dark making our way to the boat. "It means snow soon and regular winter."

"But you can't pick nice weather for duck shooting, Sherm," I replied, "and this will bring one thing sure, and that is a big flight of the last of the big ducks. We ought to make a record killing to-day."

"You can't tell me anything about that," returned Smith.

We did fairly well, what would have satisfied me under ordinary circumstances with the greenheads tumbling around us till we had a dozen or so scattered about and a few other ducks. But it was mighty cold. We had been obliged to break ice to reach the blind, and the decoys we found frozen in and had to remove the ice. About 9 o'clock Sherman had an experience that warmed him up some. We were in opposite ends of the boat, and he, being an expert, was doing the calling. I peeped up and saw two mallards coming into my field and into easy range. I waited as long as I dared, then sat up and made a double and got them both. Sherman, after letting go both barrels over my

RAILBIRD SHOOTING—PATUXENT MARSHES.

head, dropped his gun and began to kick and cuss something awful. I managed to understand that he had been calling some geese; that they had their wings set for the descent, and in a few seconds would have been "right on top of us" if I, like a fool, had not frightened them away. They were just out of range when I reached up for the two mallards. Right there we arranged some signals for a possible recurrence of such luck. The ducks now began to be rather scarce.

"Pshaw," declared Sherman, "I can show you better shooting than this right on my place. I tell you there is too much open water here; they want more shelter from this wind. Come over with me and I'll show you something worth while the next day or two. This is going to end in snow inside of twenty-four hours, and you know what that means." So we lugged the ducks and decoys back to the hotel, loaded our traps into Sherman's buggy and drove out to his farm, where I had warm bed and such fare as his Swede farmer's wife could prepare, which was plenty and good. That night we got a few ducks, but the flight had not really begun. It was the next day that I started to tell about.

We did not have far to go and set out our decoys in a little marsh behind a hill, protected from the northwest wind. The flight did not begin early—it never does on these cold mornings—but by 10 o'clock the air was full of them. They had little use for us or our decoys or calling. They rightly judged that ducks that knew no better than to sit still with such a storm coming were not fit company for sensible birds whose business was to get south as fast as possible. We could see them away up in the sky, it looked like a mile, but of course it wasn't a quarter. Only a few silly ones came near us and we missed most of them. We were so cold and had so little shooting we did not rightly judge the high speed. But about noon the snow began to come a bit, and Sherman jumped and danced with joy. "Now we'll get 'em!" he shouted. "Might as well go in and get a hot dinner. We'll have plenty of time to kill all the ducks we can eat the rest of the winter. Why, you can just stand up in plain sight by 4 o'clock and let your

gun off in any direction and kill ducks," he exulted. I had never tried this before and Sherman had, and being quite ready for the hot dinner I took his word for it.

As soon as we had eaten Sherman made me put on all the warm clothes I had till I declared I felt as still as a mummy and could not handle a gun. "Don't matter," he assured me; "any old woman can kill ducks this afternoon. I tell you I am going to show you some sport. Don't you see it's getting colder every minute and snowing harder? The cold is driving the ducks to fly south and this snow is blinding and confusing them so they hardly know what they are about. We can't begin to carry the ducks we'll get this afternoon. Come on."

Sherman knew what he was talking about. We hid near a slough, without decoys, and they began to come in great numbers. We killed many, all big ducks, but had trouble in getting them, so we got out away from the pond in the way of the flight, and still they came—mallards, redheads, canvasbacks, pintails, widgeons and a few bluebills and blue-winged teals. Just for the sake of moving about we located in a corn field, and there the mallards late in the afternoon found us ready to receive them. Finally, as it was nearing dusk and we were a couple of miles from home, Sherman insisted that as we had all we could carry and would get more on the way home, we better pull for shelter. "But get a plenty while you're getting," he advised me, "for they will all be gone to-morrow and everything frozen up solid for winter. This is the last day. Isn't it great? Hope you're not disappointed."

About 200 yards from the farm house was a little pond, really overflowed meadow, very shallow and close to a big ditch with a high bank. There we took our last stand, "for we can come back for a second load if we can't carry them all at once" my provident host observed. It was now nearly dark. I have hunted ducks all my life, often with a fair amount of success, but I never saw or heard of such shooting as this for about thirty minutes. The ducks saw this water, still and sheltered, and they came for it so thick and fast we could not begin to

tell what we were doing. It was simply shoot and load as fast as the guns would operate and Sherman had a repeater. Finally we came out of the little cover we had and stood in plain sight, and they came just the same while we were picking up our birds. It was the most exciting half hour's sport I ever had, but the light was so bad and the confusion so great that I did execrable shooting, while Sherman was pumping his Winchester with deadly effect. Of course we did not find half the birds we killed, but many were discovered frozen in the ice next morning.

We made our way to the house under a staggering load, pockets full, duck stringers full, dozens tied together with string and rope which the farmer produced from his pockets. "I knew we'd need this string," he remarked. We hung the birds up to freeze, and I spent the evening trying to express my appreciation. Sherman was satisfied with his success in showing me a good time.

Next day he took me to the station in weather below zero, but I did not mind that, for I carried eighty beautiful ducks, having enough left when the baggage man stole ten of them after I had paid him to carry them. These fine fat birds went into cold storage, and it was worth all the hardship they cost to be able to telephone down any day for some weeks afterward and have some of them sent up, dressed, ready for the madam's final touches. Also to send various pairs to friends.

I cannot refrain from just a word about cooking a wild duck. I don't want my duck raw or stinking from lack of washing, and I venture to say that very few would if they tried our way. The duck should be thoroughly scrubbed inside and out. It is even sometimes desirable to use a pure soap, followed by much rinsing, both outside and inside. Then stuff him, using a moist dressing, containing apple, celery and the merest suggestion of onion. Roast the duck till it is done, but never parboil a duck. It is a sin, unforgiveable and almost as bad as to skin the duck instead of picking. It will take from forty-five to sixty minutes to put the duck in shape to suit us, unless it is a very small one, and the tighter your roaster the better. Basting helps. Ducks prepared this way will overcome the objections of those who do not like "that wild taste." A large part of "that wild taste" is just unremoved filth. Have your duck clean if you want it good, then roast to taste, but don't decide against my way till you have tried it.

And thus we had our Thanksgiving ducks.

HONK! HONK!

MEETING OF THE WATERS, VALE OF OVOCA.

Through Charming Wicklow on an Irish Jaunting Car

By W. J. MURRAY

IN a country such as Ireland, where admittedly nature has been lavish in her distribution of scenic attractiveness, it would seem almost invidious to suggest a comparison between one district and another. But any one who has paid a visit to the glens and hills of the county Wicklow will readily admit that there is enough of natural beauty and charm there to satisfy the tastes and æsthetic ideals of the most fastidious lovers of nature and art.

I have a very lively and pleasant recollection of a few holidays spent there not long ago, during which I visited several well-known and prominent places of interest, not only on account of their natural attractiveness, but also because of their association with some of the sweetest poems of Ireland's famous bard—Thomas Moore.

Taking the train at Harcourt street station of the Dublin, Wicklow and Wexford Railway, I proceeded to the lovely seaside resort—Bray, County Wicklow, familiarly known as "The Brighton of Ireland," which is about twelve miles from Dublin.

On arriving there I was very much struck with the prominence, beauty and grandeur of Bray Head, which is an abrupt termination on the verge of the sea of a mountain chain embracing the larger and smaller Sugar Loaf. The termination is so sudden that it looks as if a portion of the mountains were cut clean away, leaving a sheer declivity of about 700 feet to the water's edge. The Head is well wooded to about half way up, and heather-clad on the upper portion.

When this heather is in full bloom, about the month of August, it affords a sight of beauty which is not likely to be soon forgotten.

Leaving Bray, I drove on an Irish jaunting car to the demesne of Lord Monck, which is only a few miles distant. Here is the famous Dargle River flowing at the bottom of a very deep glen, which on its sides is beautifully wooded by a natural growth of a great variety

of trees and shrubs. This glen stretches across the greater part of the demesne, and is noted for the charming picture it presents.

Another little drive brought me to the demesne of Lord Powerscourt, and I visited here the far-famed Powerscourt Waterfall, which very much reminds one of Tork Waterfall in Killarney. It must be about 800 feet in height. It falls from a projecting ledge of rock on a mountainside, clear over a portion of the demesne wood, in its course toward the valley underneath. The surrounding scene is beautiful in the extreme, and one likes to tarry there.

However, I wanted to get along, so I continued my drive to the Glen-of-the-Downs, which has the appearance of a mountain which was cleft in two by an earthquake, in which no doubt it had its origin. Both sides of this ravine are richly wooded by purely natural growth, and also by planted trees and shrubs from among which great cleft rocks of rugged aspect project here and there, the whole exhibiting a most picturesque scene of natural beauty. This is a favorite resort of holiday makers and picnic parties.

Some miles distant from here is the Devil's Glen, which bears a very great resemblance to the Dargle in its general features and is equally beautiful.

Several miles from the latter place I visited the classic region of the "Seven Churches" in the valley of Glendalough, with its ancient round tower, and the fragmentary remains of its Seven Churches. The lake of Glendalough is small and its waters always look dark and gloomy, perhaps due partly to the shade cast by a dark-colored hill overhanging the lake. On this hill there is a natural outlined figure of a couch or bed, called "St. Kevin's bed." It was of Glendalough Lake that Moore wrote:

"By that lake whose gloomy shore
Skylark never warbles o'er."

Within an easy distance from here I visited the well-known Vale of Ovoca immortalized in

song by Thomas Moore in his "Meeting of the Waters," from which the following lines are an extract:

"There is not in this wide world a valley so sweet
As the vale in whose bosom the bright waters meet,
Oh! the last ray of feeling and life must depart
Ere the bloom of that valley shall fade from my heart."

The meeting of the waters, which means in this case the junction of the River Ovoca with one of its tributaries, takes place in a valley of most charming woodland and hill scenery, and is quite in keeping with the general character and natural features of the County Wicklow.

Before concluding my round of Wicklow, I paid a visit to Lough Dan, where I had some good sport with rod and fly. The disciple of the far-famed Izaak Walton would find his ideal fully realized by paying a visit to this celebrated haunt of the enthusiastic angler, where the mountain trout are both abundant and gamy.

Lough Dan is situated at a high altitude in a mountainous region of the County Wicklow, "far from the busy haunts of men," but in a beautiful and wild surrounding of rock and heather. The lake is about fifteen miles from the town of Bray.

On arriving at Lough Dan the fisherman will find an old-fashioned inn overlooking the fishing ground, and here he will also find every convenience and comfort during his sojourn—everything clean and good, both eating and drinking, with plenty of fresh air and delightful scenery, etc.

The lake is not very large, as is the case with most mountain lakes. It is about a mile and a half long, and a mile wide, but it is teeming with trout of a good sporting sort. They seldom grow over one pound in weight and their usual size is that of a herring. They are rather deep golden color, except on the back which is brownish, but they are well spotted with a bright red color and they look very pretty when taken out of the water.

The "take" is usually very good, often up

GLEN-OF-THE-DOWNS.

to two or three dozen fish to each rod per day, and it is a very rare experience for any fisherman to go home with an empty basket.

When the trout are in good rising humor they take almost any small fly, but the following are usually killers: (1) Claret body, silver tinsel ribs, snipe's wing feather for wings and a mallard's coat for jib. (2) Hare's ear body, black hackle and starling's wing with ribs of gold tinsel. (3) Brown mohair body, jib of partridge's tail, red hackle and landrail's wing. (4) Prussian blue body, black rooster's hackle, silver tinsel ribs. (5) Body, brown mohair, jib, should be in different shades to suit the changes

in the atmosphere and in the water, such as a bright or a dark day, a clear or muddy water, etc. A bright fly being better for muddy water and a dark fly for clear water. For the latter a black midge is often a very good killer.

It is rather remarkable that several attempts have been made from time to time by local gentlemen to introduce other breeds of trout into Lough Dan, such as the Loch Leven (Scotch) and rainbow trout, but never with success. Generally after a few months the newcomers have disappeared, leaving the native trout in undisputed possession of the lake, where they still continue their good reputation for affording

plenty of sport to the lovers of the gentle art of angling.

Lough Dan is always a great attraction for the tourist and picnic party out for a day in the country.

In conclusion I would say that while I hope the foregoing brief sketch may serve to direct attention to a region of rare beauty and interest, no mere pen-and-ink description can do it justice; it must be seen to be adequately appreciated. The tourist should make his base of operation in Bray, where he can procure every facility for traveling over the whole of the County Wicklow.

Back Again Home.

BY ROBERT PAGE LINCOLN.

DEEP in the hollows, the green grassy hollows,
In the dim little land I have known,
There's an old empty cottage, a weary old cottage,
Where my heart and my joy all have flown.

There's a sunken old cottage, a dreary old cottage,
On the banks of the old, old stream;
And the last light of day marks a traveler's way
In the haunt of his last fond dream.

Back again home to the old, old home,
When the calm evening shadows do blend,
When the birds in their covert are whispering love
And the spirit cows homewardly wend.

Back again home, mother, call from the door;
Call to me, mother, I'm coming again;
Barefooted lad from the haunt of the past,
And the weary old tramp of pain.

Treading once more, the path now is hidden
Under the tall grasses swayed to and fro;
Treading it softly for fear there present them
Ghosts of the loved once now hidden below.

Sweet little cottage home, are you still dreaming?
See, I am back again, troubled no more;
What though we aged, be sunken and weary,
There shall be joy again still as of yore.

Lift up your mossed roof, smile, little cottage,
Bring once again to me thoughts of my youth;
Weary, worn beggar, thou dawn in thy splendor,
Rise like a castle and tide me the truth.

Here is the mossed well, old now and shattered;
Oft in my cheery youth here have I stood;
Now I am standing here bent-backed and aged,
Gnarled as the mighty oak deep in the wood.

O can it be, Life, so quick the journey,
Sped on its course has far left me behind?
Where are the fallen years, where is the gay lad,
Search where I will, not a vestige I find.

Here are the orchard trees, ancient and hoary,
Sunshine no longer ripens fruit on that crest;
Youth ripens dreams nevermore in my bosom,
For I am old now and crying for rest.

Here in Life's morning glow, sunshiny spirit,
Heard I the birds gayly calling with love;
And brightly rose in me thoughts of a city,
Haven, it seemed, of a fair treasure trove.

Oh how we learn this the bitter taught lesson,
We who take wings and leave home evermore;
O how we suffer when yearning for comfort—
Naught in a breast lives but memory sore.

There is nobody home in the cottage this even,
Gay will a pleasantry nevermore there resound;
Mother's fond lullaby is stilled to a memory,
There in the graveyard her mute little mound.

Scarce can I think that the past is a vision,
Cottage home, why seem you bowed low in grief?
See I am home again, a traveler burdened,
And I would rest a while calm in belief!

Back again home, mother. See, I am withered!
Cold as November blasts sweeping the plain;
Winter is coming soon, and I will join thee,
Soon will there be not a hint of my pain.

So is the journey done, mother I wait thee,
Take me this eventide close to thy breast;
For I am home, mother, home from my journey,
Lull me to sleep, mother—lull me to rest!

THE DARGLE BRIDGE.

A Day Off Cape Cod

By CHAS. G. SANDFORD

"LOW bridge," called Captain Bourse again, and the fat doctor ducked with a groan of anguish in body and mind.

We were just inside of Monomoy Bar, a finger of land, extending nine miles to the westward from Chatham, on Cape Cod.

Less than a half hour before we had sailed out of Wychmere Harbor, Harwichport, in a mild freshening breeze, and now it was blowing great guns from the southwest.

Between Nantucket (twenty-eight miles off) and Martha's Vineyard there is a clean ocean sweep that lets in ground swells on days when the wind is right, and this was one of the days.

The fat doctor had advertised himself as a good sailor and really believed it, or he never would have risked making the spectacle of himself he did before a bunch of twelve Boston school marms, good looking and good sailors all. Even now, there are some of the party who do not doubt for a minute but that he is a good sailor, for he still affirms it was only an off day with his in'ard workings.

It was dead low tide, and there was white water a-plenty. Captain Nathan Bourse had his hands full, dodging gigantic combers that seemed eager to make a mess of smart frocks and things that the wind and spray soon proved to be woefully out of place.

The first wave that came aboard hit the fat doctor. He was standing by the companionway and caught it full on his broad back. About a bucketful slopped upward and gracefully raised his new Panama hat, washing it away to leeward.

Isn't that too bad!" ejaculated one, and there came a chorus of "O's" from the others. The fat doctor seemed not to care much. A sickly smile overspread his splotchy, pallid face. It was an eloquent smile. It said: "What do I care for the loss of such a little thing as a hat when I feel so rotten all over inside."

"Can't you get it, captain?" asked one sympathetic little school marm, following the pirouetting Panama with her eyes.

"Got all I can do to keep you ladies dry," said the captain, gazing sharply ahead, where the weather was fast thickening.

The Ida Mildred, a staunch twenty-six-foot cabin cat, with a ten horse kicker, was doing nobly, but wisps of spray kept flying aboard. Occasionally, a good solid wave would come churning over the bow, searching out school marms and reducing to a sadly bedraggled condition hats and bright-colored veils that belonged ashore.

Watching his chance, Captain Nathan, with a low bridge warning, came about, shut down his motor and "went scudding" before the wind.

"No use," he said, regretfully, "we can't make Monomoy to-day."

Then there came another chorus of "O's", for Monomoy with its life saving and wireless stations was to be the chief attraction of the day.

"Sorry to disappoint you, ladies," said the genial old captain, "but it's white water over there and we couldn't get within a half mile of the point."

"What can we do to pass time before dinner?" inquired one. "The shore dinner at Monomoyck Inn isn't to be served till two."

"We can sail around in Stage Harbor for a couple of hours," answered the captain, looking at the fat doctor, "or we can land near Chatham and walk across to the upper life saving station."

"Oh, let's sail," said some, enthusiastically.

"Let's land," plead the fat doctor.

We were now sailing easily before the wind under a double reef. Captain Bourse was whirling his wheel, to hold the course against great combers that threatened to get us broadside.

It was a new experience for most of the

sunk down on the seat, and with all those school marms looking, lapsed into the throes of sea sickness. The way to the cabin was clear, and a general rush was made for below. Some didn't stay long, for "Old White Ears" loves stuffy cabins, where are hung smelly suits of oilers and sou'westers. Others remained till we landed, and if they were sick, none knew of it but the captain.

Soon, under the lee of Monomoy, smooth water was reached, and "Old White Ears" balked of his prey, silently slipped overboard and dropped astern.

Funny how miscry likes company. As we came to anchor in Stage Harbor, the fat doctor

"OLD WHITE EAR" COMING ABOARD.

school marms, yet none was sick. Rapid fire questions were flung at the captain, who never tired answering. Spar buoys were taken for wrecks, fish weirs for lobster traps and once there was almost a panic when a red can buoy was pronounced a floating torpedo. The fat doctor sturdily stuck to his post abaft the companionway.

"What's the matter, boss, ain't you feeling well?" asked the captain, anxiously.

The fat doctor braced his feet with an effort. A wan smile played over his damp and pallid face.

"Not very well, captain," he confessed, wearily.

"Guess 'Old White Ears' is coming aboard," said the captain, laughing. "He likes sailing afore the wind."

"Who?" chorused the ladies.

"Old White Ears," repeated the captain. "There's two or three of you ladies that has his calling cards already."

"How ridiculous," whispered one.

"There," said the captain, speaking low, "I told you he was here."

With ponderous deliberation the fat doctor

came over to me and whispered, "Old man, it came near getting you, didn't it?"

I stoutly denied the insinuation, though now it is all over, I confess yes.

The tide was still so low that the dory could not make the shore by a dozen feet, so the captain, sly old dog that he is, carried in his arms each of those fair school marms ashore.

There was one certain trip he made that the fat doctor followed with longing eyes, but he did not volunteer, for the captain was surer of foot.

It was a mile and a half to the life saving station, and away we started, burdened with wraps, packages, cameras, etc.

As we advanced a gathering host awaited us. We had ventured on the original breeding grounds of mosquitoes. There was the choice of walking on the heavy sand of the dunes, or in short, crisp grass that held the enemy. There were thousands—millions of the pests, stinging and filling mouth, eyes, nose and ears. I was too busy saving my own life to determine whether those particular mosquitoes preferred silk stocking or the fat doctor's bald head, for an argument arose later about it.

After a walk of a mile and a half we came to a lagoon, which stopped our merry progress. We christened it "The Styx." It was a case of turning back or making a detour of a half mile with the station only 200 yards away. A really, truly life saver saw us from the lookout of the station, and detailed a fellow guard to ferry us across in a dory, and the day was saved.

After visiting the station and being shown about we adjourned to the beach and stood watching the great waves dashing over Pollock Rip Shoal, known as "The Grave Yard of the Atlantic." There were no mosquitoes here, only the fresh, cold, salt-laden wind from the ocean.

Midway between Chatham twin lights and our position we could distinguish through the mist the masts of a schooner that had struck on the shoal only the night before. All were for the moment silent, then a school marm found a bottle, lately tossed up by the waves, and the spell was off. It was a white flint bottle, well corked and ground to opaqueness in the hard sand. She shook the bottle.

"There's a message in it!" she exclaimed, looking around woman-like for something to break the bottle on.

"Calm yourself," ordered the fat doctor, authoritatively.

Then he dove down and produced a corkscrew. Doctors are always there with the implements. The cork was drawn, but the message refused to come forth. So the bottle was broken anyway. It was a piece of card board, cut from a paper carton and folded once. "Doe" and I thought it was a "plant," for in a thousand years' journey that bottle could never have found a better time to get "discovered." In plain type were these two cryptic words "UNEEDA BISCUIT."

The trip back to the Ida Mildred was uneventful, save that reinforcements had arrived in Mosquitohurst, and how they pestered those swatting school marms!

We arrived at Stage Harbor landing an hour ahead of stage time, so decided to walk to Monomoyck Inn. It was a mile and a half, but the going was good and the steamed clams, bluefish and lobsters made up for some of the morning's hardships.

Only six of the party elected to make the trip home by boat. The heavy gale blowing with a fog accompaniment looked too nasty for the balance of the party, including the fat doctor, who escorted his sister victims of *mal de mer* home by rail.

It was some trip back. None attempted to remain in the cabin, for the way things were flying about down there it would have been worse than a "rough house."

When finally we reached the quiet water of Wychmere Harbor all were soaked to the skin in spite of oilers and wraps.

The sail bore mute evidence of the force of the wind, being wet to a height of ten feet from the deck.

As Captain Bourse helped the party to the deck, he said, gallantly: "I take off my hat to a brave lot of ladies."

One of the game wardens estimates that there are 10,000 deer roaming about the woods of Massachusetts—Boston Globe.

Florida Game.

ST. VINCENT ISLAND, Fla., Nov. 8.—*Editor Forest and Stream:* Ducks are here in good numbers now, including many of the choicest varieties, there being quite a good many canvas-backs and many mallards and teal.

All my fresh water lakes and ponds contain an abundance of wild celery (*Vallisneria spiralis*), foxtail grass (*Potamogeton pectinatis*), widgeon grass (*Rupia maritima*) with some wild rice (*Zizania aquatica*) and very many other of the best duck foods.

I have introduced pretty much all of these plants since I purchased St. Vincent Island about six years ago. Within a few days I have noticed quite a good many English snipe in my marshes. I have four varieties of deer which are the Virginia whitetail, Osceola, Indian, Sambur and Sika or Japanese deer. The large Sambur deer have crossed with the Virginia whitetail deer and they are likely to develop some fine large deer of the mixed strain. R. V. PIERCE.

Vermont and Connecticut Game.

GROTON, Conn., Nov. 12.—*Editor Forest and Stream:* Your request regarding game conditions in Connecticut has been mislaid, so I have been unable to answer the questions until the present time.

Have just returned from a six weeks' vacation in Vermont. Partridges are very plentiful up there this season, probably owing to the early spring and favorable conditions during the hatching time. The hardy old New England ruffed grouse can always find plenty to eat during the most vigorous winters and will come out in the spring in good shape no matter how trying the weather has been. What depletes the covcys in

my mind is the natural enemies, not so much man with dog and breechloading gun as foxes, minks, hawks and the common house cat so numerous in most small villages.

It is true that a wet, cold spring existing for a long period during the hatching and nesting season work havoc with the little chicks. I am of the opinion that quail could be made to thrive in most localities of Vermont if they were regularly fed and looked after during the long winter months.

In our section here in Connecticut our commissioner put out twenty-four bobwhite just before that severe snow storm came on, and they all did well and came out in the spring good, healthy, strong birds. These birds were fed regularly and were in a locality free from vermin.

FRANK W. HEWES, M.D.,

Pres. Conn. Com. of Fisheries and Game.

Circumstantial Evidence.

EAST ORANGE, N. J., Nov. 16.—*Editor Forest and Stream:* When two or more sportsmen get together, nine times out of ten, outdoor experiences are in order.

I have read so many absorbing experiences in FOREST AND STREAM that I feel constrained to add one of my own, and let me say that one of the hardest things is to listen to one man's story and not have it remind you of one of your own.

In November, 1898, I had been spending some months at a camp in the Dead River region, Maine. Although having secured one-half of my legal kill; i. e., one deer—the head wasn't good—I made up my mind that every doe and spike buck in Maine could pass by before a soft point would leave the barrel of my rifle. Therefore, I started in the direction of Big Spencer,

TEACHING THE OFFSPRINGS TO SHOOT.

Photograph by George F. Halliday.

where the "seven pointers" roamed, taking it quietly and slowly. Smash! Crash! to my right. I didn't shoot, though I found myself trying to put my front sight on a "white flag." I recognized this disturber of the peace, a nice fat doe. Another half hour of stalking, and as I looked ahead, about 125 yards, I saw off through the trees my buck. He was feeding, and a magnificent pair of horns stretched away in the direction he was facing, as his nose was on the ground. Thin brush was between him and me, but I could see his tail flick to drive away an occasional fly. I got the ivory on him about what I judged was his fore shoulder, and when I pulled he went down—and stayed there.

I lit my pipe and walked over to him. When I pushed through the brush there lay a poor little yearling doe. Something seemed wrong. I was certain I saw the horns. Without touching her I walked back until I found my empty shell. I looked again. Sure enough there were the horns, but no deer.

The little miss had been feeding with her spikes up against a windfall in such a position that a couple of small dead branches appeared to be horns. A clear case of circumstantial evidence. Result: Death to the little one and no head that year for me. L. L. LAWTON.

Hunting in California.

BY GOLDEN GATE.

THE month of November has been ushered in by rains, and duck shooting is showing a decided improvement, especially in the interior where water was scarce at the opening of the season. The supply of home-bred birds is being supplemented by the arrival of great numbers of Northern birds among which are numbers of canvasbacks and geese. The best sport being enjoyed at present seems to be in the San Joaquin Valley section in the vicinity of Los Banos, but the market hunters are now commencing to send shipments from Sacramento Valley points also. Good sport is to be had on the Suisun marshes and even on the marshes of San Francisco Bay.

The supervisors of Alameda, Santa Clara and San Mateo counties have joined in passing ordinances reducing the daily limit on rail from twenty to twelve and have prohibited the shooting of these birds from boats or blinds.

The deer season is now at an end, and from every section of the State reports are being received of the heavy killing made this year. Many suggestions are being received by the fish and game commissioners for changes in the game laws and a shorter and later season for deer is advocated by sportsmen generally. The present division of the State into districts is not entirely satisfactory, and new divisions are being planned, these being based upon the natural divisions of the State, climatic conditions, and the natural habitat of the leading species of wild game. Many changes in the opening and closing of the seasons on game will be recommended, and it is believed that many of these will be adopted by the Legislature which meets next January.

The use of motorcycles as a means of conveyance for deputies doing patrol duties has proved a great success here, and nine are now in the service of the Fish and Game Commission. With the automobile playing such an important

part in the transportation of hunters, the motorcycle has become a necessity. One machine has a record of 10,000 miles with an expense account of one cent a mile.

A. O. U. Annual Meeting.

THE annual meeting of the American Ornithologists' Union was held in Cambridge, Mass., Nov. 12, 13 and 14. The Nuttall Ornithological Club entertained the Union four years ago.

The scientific sessions were held in the University Museum, Oxford street, Cambridge at 10 A. M. and 2:30 P. M., Tuesday, Wednesday afternoon and Thursday in the geological lecture room (south entrance), and on Wednesday morning in the Nash lecture room (middle entrance). The public was invited to attend the meetings.

A committee of information, designated by red badges, was in attendance at the meetings. Luncheon was served to members of the Union at 1 P. M. each day by invitation of the Nuttall Ornithological Club.

On Tuesday afternoon, Nov. 12, immediately after the meeting, Mr. and Mrs. Charles F. Batchelder held a reception at their home, 7 Kirkland street, for members and their friends.

On Tuesday evening, Nov. 12, at 8 P. M., the men of the Union attended a reception at William Brewster's Museum.

On Wednesday evening, Nov. 13, the members and their friends met at the usual subscription dinner.

On Thursday afternoon, Nov. 14, at 4 P. M. the ladies of the Union were asked to see Mr. Brewster's collection of birds at his museum.

During the meeting the museum and library of the Boston Society of Natural History, corner of Berkeley and Boylston streets, Boston, were open, free to members of the Union.

For Friday, Nov. 15, Colonel and Mrs. John E. Thayer invited the members of the Union to their home and Museum at Lancaster, Mass.

The officers were re-elected as follows: Frank M. Chapman, President; Dr. A. K. Fisher, Henry W. Henshaw, Vice-Presidents; Dr. Jonathan Dwight, Jr., Treasurer; John H. Sage, Secretary.

The list of papers read on the various days follows:

TUESDAY MORNING, NOV. 12.

Notes from Northern Labrador, A. C. Bent, Taunton, Mass.

Some Labrador Notes, Charles W. Townsend, Boston, Mass.

Notes on the Migrations and Habits of Some Long Island Shore Birds (lantern slides), Francis Harper, College Point, N. Y., and John Treadwell Nichols, New York city.

On the Present Status of the Bobolink or Rice-bird in the South (lantern slides), Edward Howe Forbush, Westboro, Mass.

Queer Nesting Sites of the House Wren (lantern slides), Wilbur F. Smith, South Norwalk, Conn.

A New Subspecies of Crossbill from Newfoundland (specimens), A. C. Bent, Taunton, Mass.

The Nest Life of the Sparrow Hawk, Althea R. Sherman, National, Iowa.

TUESDAY AFTERNOON.

Informal Notes on the Work of the Field Museum in South America, W. H. Osgood.

Further Observations on Colombian Bird Life (lantern slides), Frank M. Chapman, New York city.

Propagation and Restoration of American Wildfowl (lantern slides), Herbert K. Job, East Haven, Conn.

Notes on the Present Breeding Range of White Egrets in the United States (lantern slides), T. Gilbert Pearson, New York city.

WEDNESDAY MORNING, NOV. 13.

Passenger Pigeon: Report of the Year's Work, C. F. Hodge, Worcester, Mass.

Problem of Domesticating the Ruby-throated Hummingbird, Katherine E. Dolbear, Worcester, Mass.

Notes on the Panama Thrush-Warbler, Hubert Lyman Clark, Cambridge, Mass.

Report of Progress on the "Life Histories of North American Birds," A. C. Bent, Taunton, Mass.

The Value of Bird Study in a Limited Area, Alice Hall Walter, Providence, R. I.

Some Notes from Sheepshead Bay and Manhattan Beach, New York City, George E. Hix, New York city.

Concealing Action of the Bittern, Walter B. Barrows, East Lansing, Mich.

WEDNESDAY AFTERNOON.

THE tremendous number of animals that are killed every year for their furs seems almost incredible. In Russia alone during the past 12 months there were gathered the furs of 4,525,000 gray squirrels, 1,500,000 white hares, 200,000 ermine and 12,250 sables—a total of 6,237,250.

"Who is so deaf or so blind as is he
That willfully will neither hear nor see?"

Some Humors of Florida Fishing.

JACKSONVILLE, Fla., Nov. 12.—*Editor Forest and Stream:* Early in July, when we left that little fishing hamlet X. near the mouth of the St. Johns with its up-to-date hotel and various other attractions, we declared that we never wished to see it again. The spirit of Izaak Walton was too much for me, and yesterday my fishing blood ran up to 110, and there was nothing to be done but reduce the fever. Dr. G. was called in; he had expressed a desire to accompany me on one of my fishing expeditions. I told him to get ready for a trip to X. at 5:30. It was then 1 o'clock and raining in torrents. He said: "Why, man, it's pouring down." I replied: "Yes, commence knocking now after begging a month to be taken along." This brought him around, and at 5:30 we were on the little dinky bound for X. thirty miles away at sixty-five cents per round trip. On arriving we found "John," our boatman, to whom we had phoned, awaiting us. He had just come in from securing live mullet bait, and was as wet as the proverbial "drowned rat." Evidently he did not expect us. The rain was simply trying to break the weather man's record and had been for most of the day. He gave me one long grin when he saw us climb out of our "Pullman" and sidling up to us, said: "Are you the gentlemen who phoned me to make ready for a fishing trip?" I replied: "You guessed right that time. Are you ready?" "Yes, sir," he said. "All the bait you are looking for up to one-pound mullet, but what about the rain?" "We have brought a change of raiment," I said, "and never let a little thing like a shower interfere." He gave us a long look, as much as to say, you'll do, and turning, led the way to that so-called hotel, which will bring up such pleasant recollections to you.

"Go in and get supper," he said, "and then I wish to see you a few moments and all arrangements will be completed." Dr. G., who had never been in this hostelry before, now took the lead, and I followed very reluctantly. I thought I knew what to expect, but found I didn't. My face had to brighten up a little when I took my seat at the table, for I recognized some old friends. There in the same spot was that identical dish of fish which we had looked on and inhaled several weeks gone by. Age had not added any attractiveness to it nor had its odoriferous qualities been lessened in the least. No one had been so bold as to tackle it without a deodorizer, and its place at the table was as secure as McGraw's management of the Giants. The coffee had evidently been practicing for a bout with Frank Gotch; the butter was old enough to be bald-headed, but I noticed some scattering hairs in it. The light bread looked as though it might have landed with Ponce de Leon, and like him hunting for that same "Fountain of Youth." Not wishing to crush any of my old friends, I soon made a hasty exit and found John.

"When will you be ready to go," was his greeting. "Now, suits me," said I, and already I could feel the water trickling down my neck and saturating my every pore when we should have been out only a few moments, for I knew I would catch it, not having a raincoat of any kind, and right here let me tell you that mosquitoes, the big gray-backed rascals, swarmed around us, giving us a warm reception. I retreated into a screened room, but it was like Mark Twain's "mosquito bar"—more under than on the outside, so out I came again. Let me digress long enough to say that in some places in Florida the chickens have to be screened in or the mosquitoes will kill them. As for myself I believe that mosquitoes as large and blood-thirsty as the X. brand could reach through the wire and pull the chickens out. Dr. G. joined us at this time and John informed us that the tide would be on about 2 A. M. and to fish before that time was only wasted energy. As no fisherman is long on this article, we retired, John promising to call us at midnight.

We had plenty of calls between times, however. Mosquitoes called incessantly, and when John called for us, we were ready to go. At 12:05 we were dressed, and on our way to the boat, a large gasoline launch capable of holding ten or a dozen people, with a nice little well in the center of the boat for the bait. Here minnows could be kept indefinitely. We ran diagonally across the river to the "Oyster" beds and cast anchor in one fathom of water, and at once commenced arranging our rods and reels. We were told again that we would get no bites until the tide began to run, but we were there for fishing. The mosquitoes were also fishing for suckers, and for more than an hour we held rod in one hand and fought mosquitoes with the other. We had been fishing in semi-darkness, but now a faint light appeared in the east. A little breeze started up and the mosquitoes vanished. The old wreck in the mouth of the river loomed up in the distance. Two Government boats near us were more sharply outlined. Suddenly the moon appeared, coming up out of a bed of molten silver, and as its rays danced on the waters and the waters lapped against our little vessel, the brilliancy of the scene became more and more entrancing, and I began to be lost in reverie, when swish went my line, and my reel was singing a song that is so dear to a fisherman's heart.

The contest was on. Would I land him in the boat? No time for reverie now. If one ever needed one's wits, the event was at hand. I remembered you had told me never to let a large one go straight away from you if you only had a short line. This was my condition, and as he would bend my rod almost double and then would start straight away, it was almost impossible for me to so change that at any time I could give him a little more bent rod instead of a straight pull. John was yelling to me that it was a sea bass, and for me to do thus and

so, and I was all the time trying to think what you would do under the same circumstances, and this helped me, for after what I thought was an extra long time I succeeded in getting him alongside the boat, but just as John reached down for him, away he went again, and it was all to do over, if anything more difficult than before.

I was in the vessel, on the side, now up and now down, and swishing that rod while Mr. Bass was giving me the fishing event of my life. Once more I got him headed toward the vessel. He was coming like a racehorse, and I wondered if it was to be his finish or mine. I was trying to keep my line taut. He was now near the boat and I suppose this was what John was waiting for. He seized my line, and with one quick jerk the momentum of the fish landed him inside the boat before he or I knew just what had happened. After we got him he weighed 9½ pounds. Before he was landed I knew that he would weigh 25 pounds at the least. Game, did you say! Well, I don't believe they put up a better fight anywhere. We caught ten; the first was the largest and the smallest weighed 4½ pounds. Every time one made my reel sing I wished for you, for I knew you would have enjoyed it to the utmost.

Our catch weighed 57½ pounds—six bass and four trout. At no time were we bothered with any other than those we caught except two or three that got away from us, that I am satisfied that a skilled fisherman like yourself could have landed. We were through, but I was not ready to come back to Jacksonville at train time, 5:30, but did so.

Inclosed find some scales from the largest one and wish you could have been here to have helped me eat him, as he was as fine flavored as one could wish.

W. T. McCOWN.

New Publications.

"THE ENCYCLOPEDIA OF SPORTS AND GAMES," by Earl of Suffolk and Berkshire. Four vols. Cloth. Gilt top. Illustrated, \$12.00 net. J. B. Lippincott Company, Philadelphia.

Each sport is treated from the viewpoint of the expert, with illustrations full of action, and thoroughly descriptive in their profuseness. An encyclopedia is expected to provide records, explanations and all manner of references, and these volumes, while covering the ground amply in those respects, go further. They are alive with lucid, readable articles by writers whose names are well known in the various branches of sport. Turning up a subject at random one has access to admirable chapters on trapshooting, big-game hunting, canoeing, duck shooting, fast and fancy skating, steeplechasing and hurdling, swimming; in fact, every subject of interest to the sportsman and outdoor recreationist is lavishly arrayed for his or her inspection.

These volumes should be in every library.

“Now, That Reminds Me.”—VII.

BY O. W. SMITH.

Photograph by the Author.

“Now, that reminds me” of a little creek I once fished, and where I played, won and lost a record-breaking trout. Oh! smile if you want to. I know all about the large one that got away and that sort of thing, but just the same this is a true story. I had the trout on the bank and all but in my hands, mind you, then lost him, so I know just how large he was.

The name of the creek I do not remember, but I was told that it emptied into one of the Chain o' Lakes near Waupaca, Wisconsin, the State that abounds in what one may term immature streams, though when it comes to grown up fish, they can supply them. We reached the creek from Amherst, a little town on the Soo Line, though I imagine that one could drive from Waupaca, or perhaps take a boat from the Soldiers' Home, which is on one of the lakes, and reached from the city by electric, but of that I am not informed, neither do I know anything of the fishing to be had in the lower reaches of the creek. Where I fished the stream for the most part it was pretty well overgrown with brush, and making one's way along the bank was anything but a pleasure. At one place I got into a prickly ash thicket, and for ten rods I crawled on hands and knees, an attitude suggestive of humble invocation, but I fear that I was in anything but a prayerful mood. There were trout and some good ones in the little stream, the red-spotted species generally, though once in a while I took a German brown and I secured a small rainbow.

At one point on the stream I came out in an open pasture, rather low land all punched up by cattle, but the stream held many good pools, so I did not mind the rough ground. After working through brush for three hours, open fishing is a pleasant relief, and I went to it with avidity. Of course I stepped into a hole and went down into the black mud well above the top of my high boot, but that was to be expected, an incident in the day's work, so I scraped off the foul stuff and continued on down stream. Spying an up-turned tree with trunk lying lengthwise of the stream some distance below me, and surmising from long experience on trout streams that the gnawing current would have formed a pool beneath it, I made a wide detour and stealthily approached, the quaking soil making extreme care necessary. I was not disappointed, the pool was there, deep, dark and inviting. Quickly I made ready my fly, a nondescript but successful creation of a Wisconsin angler who ties dry flies after no pattern, with wide spread eagle wings and of a general dead color. Perhaps the odd creations would harrow the sensitive soul of the fly artist, but they take fish, and are truly wonderfully successful.

With a little twitch I sent the fly out upon the blue-black water, danced it up stream and down, but not a fin stirred. Still I had the feeling—you know what I mean—that that water concealed a good fish. Throwing the fly back of me I circled it through the air to dry, after the English method, then brought it down, “plop,” upon the water just at the edge of the tree trunk. Caught in the circling current, it is promptly drawn down under the log, a dry-

fly gone wet-fishing. I let it go. Suddenly there came a half defined tug, then a steady strain. “Snagged,” I said to myself, for that was exactly what it felt like. Disgusted, I began to pull gently, for I did not want to lose the fly, then harder and harder. Suddenly I received an electric shock, a “chugitty, chug, chug,” that set all my nerves attingling. You know the feel of a heavy fish when it first awakes to the fact that it is hooked. I judged that the fish was beneath the log and rooting perhaps in an effort to tear loose the hook. I exerted all the strength I dared, and for an instant thought that I was going to fail to get my capture to fight in the open, but steady insistence conquered, as it con-

“A POOL, DEEP, DARK AND INVITING.”

quers in the school room, and out dashed the trout, tearing the line through the water and causing the little pool to boil as though a submarine volcano had broken out in its depths. What would I not have given for a stiff rod, even the heavy cane pole of boyhood days? I had ceased to desire to play fair, to be a sportsman; I wanted that fish, and it made little difference to me how I got him. Forth and back he raged, I always straining the rod to the utmost, knowing well that only so could I hope to conquer him. Once he got back under the log and I spent an eternal moment of torture while he nosed away, seeming to rid himself of the stinging steel which led him where he would not go. Suddenly the rod conquered—somehow a change in a piscatorial battle is always sudden—and my capture was again out in the free water.

Now, I am not going to tell all that transpired during the ten or fifteen minutes, and it may have been sixty; but if you will take all the stories of all the piscatorial battles you ever heard and combine them into one, it will serve as a preface to the story of my battle. Smile, if you want to. I have not spent all my days in a school room teaching the young how to shoot, but have captured some mighty big fish in my time, and I want to tell you that the memory

of that battle in the low pasture dwarfs them all. Not because the fish escaped, for remember I told you when I began that I captured the fish before I lost him.

Now I hurry to the end and climax of the story. The monster gradually weakened, and at last utterly vanquished, floated on his side. I was a proud man when I bent and slipped my hand into the great gaping gills and threw the fish out upon the bank, the hook breaking as I did so. Proud? Yes, and I had every right to be. Not every one and not every day can a man play and conquer such a fish in such a pool on a four-ounce rod. There have been some supreme moments in my life, but that capped them all. I thought of the story I would have to tell the boys, of the picture I would have to show, and of the fish I would have to display. Alas, I have only the story; the picture and fish are among the things that might have been.

Briefly what happened. The fish slipped into one of those holes which the cows had punched through the sod and that hole connected with some subterranean passage, probably a muskrat hole, that opened upon the creek. When the fish disappeared, of course I fell upon my face and plunged my arm elbow deep into the hole. I touched the body, but it slipped through my eager fingers and was gone. All was over but the tears. Yes, there have been several moments in my life and that was one of them.

Fishing in California.

BY GOLDEN GATE.

THE trout fishing season came to a close on the 1st of November, and anglers are now devoting their attention to steelheads and striped bass with splendid catches of these being made. Steelhead fishing on the Eel River has been indifferent of late, but in tide water around San Francisco Bay some fine catches have been made since the early rains.

Striped bass fishing is affording some great sport at the present time, and some very large fish for this season of the year are being landed. The run of bass has commenced at Wingo Slough and many anglers are now visiting this popular place instead of the Carquinez Straits section where most of the activity has been noted of late. At Wingo recently, a 35-pound bass and two 25-pound fish were taken the same day. In Back-door Slough, a tributary of Napa Creek, were landed a 40-pounder and another 35 pounds. Even better catches of bass are expected as soon as some heavy rains are experienced, as it is believed that the fresh water will cause the myriads of crabs now in the sloughs to leave for the bay.

San Francisco wholesalers of fresh fish recently asked that a carload of refrigerated salmon be allowed to enter the State from Oregon before Oct. 23, so that the fish might be placed on sale as soon as the season opened, but the Fish and Game Commission refused to grant the request on the ground that it would be unfair to the bay fishermen to allow the market to be filled before they had a chance to make a catch.

Swordfish fishing is now at its height in Southern waters, and a number of enthusiastic anglers from San Francisco, among whom are Drs. B. F. Alden and J. A. Wiborg, are planning to leave shortly for Catalina Island for a few days' sport.

Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THANKSGIVING.

DOUBTLESS many a sportsman has bethought him that his Thanksgiving turkey will have a finer flavor if the feast is prefaced by a few hours in the woods with dog and gun. Meaner fare than this day of bounty furnishes, is made delicious by such an appetizer, and the Thanksgiving feast will be none the worse for it.

What can be more delicious than the wholesome fragrance of the fallen leaves? What more invigorating than the breath of the two seasons that we catch—here, in the northward shade of a wooded hill the nipping air of winter; there where the southern slope meets the sun, the genial warmth of an October day. Here one's footsteps crunch sharply the frozen herbage and the ice-sharded border of a spring's overflow; there splash in thawed pools and rustle softly among the dead leaves.

The flowers are gone, but they were not brighter than the winter berries and bittersweet that glow about. The deciduous leaves are fallen and withered, but they were not more beautiful than the delicate tracery of their forsaken branches, and the steadfast foliage of the evergreens was never brighter. The song birds are singing in southern woods, but chickadee, nut-hatch and woodpecker are chatty and companionable and keep the woods in heart with a stir of life.

Then from overhead or underfoot a ruffed grouse whirrs away into the gray haze of branches, and one hears the boom and crash of his headlong flight long after he is lost to sight, perchance long after the echo of a futile shot has died away. Far off one hears the intermittent discharge of rifles where the shooters are burning powder for their Thanksgiving turkey, and faintly from far away comes the melancholy music of a hound. Then nearer and clearer a rustle of velvet-clad feet, and reynard himself, the wildest spirit of the woods, materializes out of the russet indistinctness and flashes past with every sense alert. Then the hound goes by, and footstep, voice and echo sink into silence. For silence it is, though the silver tinkle of the brook is in it, and the stir of the last leaf shivering forsaken on its bough.

In such quietude one may hold heartfelt thanksgiving, feasting full upon a crust and a draught from the icy rivulet, and leave rich viands and costly wines for the thankless surfeiting of poorer men.

ANTI-REVOLVER LEGISLATION.

THE wounding of ex-President Roosevelt by a maniac with a revolver brought to their senses some of the newspapers that have been unable to see the importance of the principle of the Sullivan law, relative to carrying of firearms small enough for concealment. Almost every important newspaper in the country published editorial comment on allowing carrying of concealed weapons, while some editors were erudite enough to touch the root of the revolver evil by demanding certain restrictions in the manufacture of small firearms. The New York World, one

THE NATIONAL MENACE.
 From New York World.

of the most editorially keen newspapers, printed in its editorial columns a picture entitled, "The National Menace," by Macauley. This we reproduce herewith. We predict—and signs point to the realization of our prediction—that the United States Government will, sooner or later, prohibit the manufacture of firearms small enough for concealment; that military, target and police revolvers will be made with longer barrels and that no one, except those duly authorized so to do, will be allowed to carry revolvers or pistols of any sort. What a sad case was that, a few days ago, of the young woman who shot her mother on a Pullman car. It was an accident, unavoidable under the circumstances, but what a blessing for that girl had she been unable to secure a revolver. This case is only an instance of what goes on every day in different cities. Innocent persons are killed through accident or design by firearms in the hands of inexperienced or criminal individuals. As we have said before, the Sullivan law is by no means perfect, but

rigidly enforced it would go far as a hold-over until a Federal measure be enacted absolutely prohibiting the manufacture of firearms of size small enough for concealment on one's person. Indications point toward early enactment of such a law, and the better class of public sentiment is heartily in favor of it.

ARCHERY IN CITY PARKS.

FEW are those who know how delightful a pastime is archery. What enjoyment and health ladies and gentlemen derive from this recreation! How many persons play away their spare time in the good old sport of our forebears? It is coming back into its own in cities throughout the country. In almost every large city in the United States ranges have been laid out in city parks. Notably there is one exception among cities that have anticipated the demands of archery—by setting aside a part of the park's playground for the accommodation. That exception is New York city. In the Borough of Brooklyn a request has been made of Park Commissioner Kennedy for space. Thus far he has not seen fit to give his permission. He has not, however, refused to grant permission. He is pondering on the subject. Knowing Mr. Kennedy to be a man of fairness, we hardly see how he can do other than grant the request of Brooklyn archers, of whom there are several hundred. At any rate we hope archers across the bridge may receive co-operation from Commissioner Kennedy—and we think they will.

STOVER VS. STADIUM.

PARK COMMISSIONER STOVER, of Manhattan Borough, has made some mistakes in his administration in so far as it refers to Central Park, but we congratulate him on refusing to sanction the colossal grab framed by James E. Sullivan for his hobby, the Amateur Athletic Union. Central Park belongs to the people—all classes. It is the big public playground for a big working city, a place where the wealthy drive and motor, the poor walk and rest, and where both may play and recreate to their heart's content. There is no room in Central Park for a stadium for the A. A. U., a considerable portion of whose membership is non-resident.

KING CARIBOU.

ONE of the finest caribou heads it ever has been our pleasure to see (though we had opportunity to see it only in photograph) inadvertently appeared in the Oct. 26 FOREST AND STREAM as the opening illustration in an article by George B. Clark, entitled, "Caribou Hunting, Newfoundland vs. New Brunswick." The head in the illustration was not shot by Mr. Clark, but by another of our subscribers, a well-known big-game hunter, who will have a very comprehensive Newfoundland caribou story in an early issue under pseudonym, "The Judge." You will immensely enjoy reading this story.

Archery

Archery-Golf.

A NOVEL and enjoyable game, introduced into this country by George W. Wingate, instructor in archery at the Pittsburgh A. A., was played recently at the Edgewood Country Club. It is called archery golf and bids fair to become as popular in America as it is in England.

The archers were George W. Postgate, instructor at the Pittsburgh Athletic Association, and one of his pupils, Master Harold Knapp, while the golfers were R. L. Kester and Jack Kennedy, of the Edgewood Country Club. It is said that this is the first time a competition of this sort has ever been held in the United States, though it is becoming prevalent in England and the British Isles.

The golfers played winter rules—no penalty for losing a ball, and placing the ball when in the tall grass or bunker. The archers shot off the tee, and on approaching the green they placed a target of cardboard, the same size as the hole, attached to a stick and placed "hole-high" on either the left or the right side of the green, so as to avoid any possibility of injuring the fine grass. This target they were required to hit, while the golfers of course had to put the ball into the hole in the usual manner.

Two rounds of nine holes each were played, and at the end of the second round the archers were two holes to the good, their total scores being 150, while the golfers were charged with 152.

The best score was made by Prof. Postgate, who negotiated the eighth hole of the first round in two. Postgate's score for the full course was 69. Kester's score was 77, while Knapp shot the course in 81 and Kennedy drove it in 75.

Quite a crowd of men, women and children followed the players over the course. A. D. Knapp, the father of Harold Knapp, kept the scores. The bogey for the course is 78, and Professor Postgate took fewer shots than any golfer has ever been able to make the course in.

About a week previous a similar contest was held on the course of the Oakmont Club between Dr. W. H. Haines, Dr. O. L. Hertig and Lester Ussing, of the Pittsburgh Athletic Association, and Professor Postgate. The archers won by ten holes, Dr. Hertig and Professor Postgate both making the course in less than bogey. Considerable excitement was caused among the golfers by this novel exhibition.

Archery in Pittsburgh.

PITTSBURGH, Pa., Nov. 11.—*Editor Forest and Stream:* On Saturday afternoon a typical November wind prevailed, making high scores impossible:

York round:					
	72 arrows.	48 arrows.	24 arrows.		Total.
	100yds.	80yds.	60yds.		
Dr. Haines	17	38	15	44	17 60 49 142
Dr. Hertig	39	161	37	169	21 105 97 435
Jas. Jiles	25	98	27	108	20 96 72 302
American round, 30 arrows at each distance:					
	60yds.	50yds.	40yds.		Total.
Dr. Hertig	27	143	29	135	30 188 86 466
Jas. Jiles	25	115	21	122	30 180 76 417
Geo. Smith	6	20	8	17	10 30 24 67

Mr. Jiles is making marked improvement in

his scores. The above score of 76 hits, 417 score, is his first American round of over 400. He now goes around with a broader smile than usual, saying in his humorous way that before Thanksgiving he will have Hertig's scalp, and after that he will just naturally line up Elmer, Rendtorff, Gray, Spear and all the new ones. That confidence comes from having licked his teacher, Prof. Postgate, one evening in a private shoot, scores of which he refuses to divulge.

Private opinion prevails, however, that as the professor is a man weighing 118 stripped and Jiles somewhere under 250, the licking was of a corporeal nature rather than a defeat at the target. Meanwhile Postgate is silent.

DR. O. L. HERTIG.

National Archery Association.

To the Archers of the United States of America:

Owing to ill health and press of work, Ellis Spear, Jr., has felt obliged to resign as

GEORGE PHILLIPS BRYANT.

Secretary-Treasurer, National Archery Association.

secretary-treasurer of the National Archery Association to the regret and loss of all its members and officers. G. P. Bryant, of Boston, has been elected by the board of directors to fill the vacancy.

The new secretary earnestly desires the cooperation of all archers in the work of promoting the sport and building up the national organization. The growth of the sport is now healthy and rapid, and the officers of the association sincerely hope to make the 1913 champion tournament the greatest in scores, attendance and pleasure to all concerned that has been held for many years. This will be obtained by the hearty assistance of all in maintaining the interest by published articles, the organization of local clubs, the financial assistance of prompt payment of dues and the addition of new members, and finally by informing your secretary as early as

possible of your intention to attend the tournament.

The number of names for correspondence on the secretary's list makes it a matter of great labor and a burden on the association funds to try to personally correspond with each one on all matters, and so your secretary urges all to take one of the magazines that has proved so friendly and of such assistance already, as for instance FOREST AND STREAM.

Members are urged to help by sending in their yearly dues of \$2 and prospective members are informed that the fee for joining the association is \$3 and the annual dues \$2.

GEORGE PHILLIPS BRYANT, Sec'y-Treas.

750 Tremont Building, Boston, Mass.

Chicago Archery Club.

CHICAGO, Ill., Nov. 11.—*Editor Forest and Stream:* The Chicago Archery Club finished its yearly contest for club championships on Nov. 2. The following scores have been made recently:

Team rounds, 96 arrows at 60yds.:					
H. W. Bishop	22 124	22 120	23 107	23 121	90 472
	23 135	21 109	23 137	19 93	86 474
	24 140	24 134	23 119	23 135	94 528
	21 111	21 109	21 105	20 110	83 435

DR. EDWARD B. WESTON.

A Bow for a Musket.

BOSTON, Mass., Nov. 8.—*Editor Forest and Stream:* I read with great interest the account of archery at the Lake Forest (Ill.) Academy under E. J. Rendtorff. I wish I had been under just such a man some thirty-five years ago. However, doubtless the above is the first school in fact to practice archery, but it is not in fiction. For as far back as 1889 in one of my books for boys (and girls) "Shoulder Arms," I had the big preparatory school discard military drill with muskets and take up instead regular archery drill in battalion. Now, the boys says the book is a good one, and as a matter of fact it is still alive and selling, so I just want to suggest the idea of regular battalion drill to Mr. Rendtorff for the whole school, not a fraction thereof. I reckon he would get lots of fun out of it and the boys a lot of exercise, and on field days the public would have a sight worth seeing.

JOHN PRESTON TRUE.

Swatow Peanut Crop.

THE harvest of the peanut crop in the immediate vicinity of Swatow has been completed, and, contrary to expectation, proved about the same as that of last year. The price of peanuts has risen, however, and now stands at about \$2 Mexican (\$1 United States currency) per bushel. It is regretted that no statistics as to production are procurable. However, as the crop is said to be about the same as that of last year, one may predict that about the same quantity of peanuts and peanut oil will be free for export. The exports for 1911 were 1,063 tons of peanuts and 1,557 tons of peanut oil.—From Consul C. L. L. Williams, Swatow, China.

YACHTING

Bayside Y. C.

CLOSING the year with a fleet of 107 boats, money in the treasury and perfect amicability among the members, the Bayside Y. C. held its annual meeting on Nov. 10. G. Waldo Smith once more honors and accepts honors as commodore of the club, this being his eighth term in office. William H. Johns, whose efforts and interest have done so much toward placing the Bayside Y. C. on the yachting map, and keeping it there, was re-elected secretary, while the following also reaccepted their former offices: Elmer G. Story, Vice-Commodore; Archibald Nesbett, Rear Commodore; Frederick Floyd Jones, Treasurer; Joseph E. Hill, Measurer; William Teller, James Nash Webb, C. W. Bergen and Russell A. Field, Governors.

A number of innovations were in order, among them the adoption of a junior membership, boys under twenty-one being eligible at nominal dues of \$10 a year, while dues were raised for regular members.

"Bayside Butterflies" will help the "Birds" keep up small yacht supremacy of the club.

Yacht Cacique Sold.

THE Hollis Burgess yacht agency has sold the big auxiliary yawl Cacique, owned by E. E. Conway, of Boston, to John S. Curtis, of Boston, a member of the Eastern Y. C. Cacique is one of the finest cruising yachts afloat and was formerly owned by Lawrence Armour, of Chicago. She is 80 feet long, 17 feet wide, with a 40 horsepower auxiliary motor. She has a very large cabin and four staterooms. Cacique is now in New York, but will be taken around the Cape to Boston next spring.

The same agency has sold the 35-foot water-line auxiliary yawl Rebecca, owned by John S. Curtis, of Boston, to a prominent member of the Boston Y. C.; the 40-foot water line sloop Hera, owned by Oscar M. Angier, of Dorchester, Mass., to F. L. Eno, of Boston, and several small boats to the Herreshoff Manufacturing Co., Bristol, R. I., for use on the famous Herreshoff racing schooner Westward, which sails for Europe shortly.

Canoeing

Through the Delaware and Chesapeake Canal.

BY STEPHEN C. SINGLETON, JR.

ON July 9, 1911, the majority of the members of the Delaware Canoe Club, and not a few guests, assembled at Delaware City, the eastern terminus of the canal, prepared for a week's trip through the canal out in into the Chesapeake Bay, and return over the same route. The men went from Wilmington to Delaware City by launch, taking the canoes in tow, while the women and guests went to Delaware City by trolley.

As the trolley party arrived first, the ladies

supplemented the commissary department. Soon the party was on its way to Summit Bridge, our favorite camping spot. We reached there about 7:30 o'clock and hastily made camp, supper being prepared by the ladies, while the men put up the tents. There were nine canoes and thirty people.

The next day we were off early, and taking our time arrived on the lower shore of the Bohemia around 5 P. M. Here we made camp for the night, and as it was scorching hot, no one slept very soundly.

The following day we proceeded to Pond's Neck, about six miles above Betterton, on the Elk River. Here we stayed for about three days. Two days hotter than blazès; one day pleasant.

MAKING UP TOWS AT DELAWARE CITY.

The second day the river was so warm that it was no relief to go in for a swim. At night one could discern several of the canoes silently glide with their crews out unto the bosom of the river in hopes of finding relief from heat and mosquitoes.

The last night about midnight a crowd of youngsters took some of the blackened embers from our camp-fire, and silently and stealthily swimming out to those slumbering in their canoe, blackened their faces so softly that they woke not during the performance. In the morning there was a considerable disturbance from the region of the river-rocked sleepers, for each one upon waking and seeing the face of his partner let out an uproarious laugh, and then commenced to see if his own face was the same, which of course it was.

The next day we proceeded on into Chesapeake City, and after getting grub and papers to go through the canal, entered the lock. We were lifted sixteen feet into still water, where it was easy paddling to our camping place at the bridge four miles and a half away. This being our last night in camp, the bunch of black faces declared that no one was going to sleep that night. But fate plays tricks sometimes on

the tricksters. Several of the older men assembled in the next tent to them, and singing all the old and new and otherwise songs, sang them to sleep.

This was the last day, and as usual everyone was loath to break camp, knowing that it would not be pitched again for weeks, maybe months.

The tows were made by taking a length of three-quarter inch hemp rope long enough for three canoes, and to this fastening the canoes about twenty-five feet apart by means of a towing cradle. The latter is made with two pieces of rope, three-eighths of an inch or one-half inch, tied so as to form a "Y," the knot being placed against the keel of the boat and the two upper ends fastened to the front of the seat and the single end being fastened to the tow line. By thus having them tied to each other, strain upon any one canoe was avoided.

The lock was now full and the three strings of three canoes each were towed into it, and the gate put into place. When the water had been lowered to that outside in the river, the outer gates were opened, and when the canoes gracefully slid out of the canal, we knew our cruise was at an end.

For the benefit of those who may wish to know how much grub it required, and the expense per capita for such a trip, I give the following:

Grub bought at Delaware City, going down	\$1.65
Grub bought at Chesapeake canal going down	.81
Milk61
Salmon, canned40
Eggs94
Beans, baked15
Bread and hardtack	1.61
Beef45
Vinegar08
Chickens, two	1.00
Lemons20
Potatoes20
Cakes53
Matches05
Rusk and cinnamon buns16
Tomatoes48
Sugar30
Oranges and bananas18
Grub, Chesapeake canal, coming up.....	.58
Tolls, two canals at \$1.50	3.00
Towing charges, Wilmington to Delaware City	2.35
	\$10.73

Lunch, Delaware City	\$1.40
Corn10
Peas12
Coffee, tea, cocoa50
Rice10
Bacon46
Butter40
Ham19
Lard21
Coal oil and alcohol (for stove).....	.25
Squashes and other vegetables54
	\$15.00

As there were five of us carrying expenses, it made the share three dollars a piece for grub and necessary expenses, not counting carfare for same from Wilmington to Delaware City and return, which amounted to sixty cents, making a total of \$3.60.

OUR PYGMY HIPPOPOTAMI.

DESPITE all the exploring to and fro in Africa, and all the slaughter of big game that for a century has furiously proceeded, the dark continent has not yet given up all her wild animal secrets. The wonderful pygmy African elephant (*Elephas pumilio*) stole into the world very quietly in 1905, but in 1889 the far more wonderful okapi burst upon the scientific world like a meteor. Since that astounding animal, the zoologists have been in a mental state of what next.

The pygmy elephant of the Congo country and elsewhere, "we have with us to-night," as it were, in the lusty personality of the type specimen now about fourteen years of age, but thus far the okapi has eluded us. Major Powell-Cotton literally called back the supposedly almost extinct white rhinoceros by discovering in the Lado district an entirely new outcrop of them. For this species we have striven, but thus far without avail.

With the exception of a few museum men, and the few zoologists who are specially interested in the ungulates, says William T. Hornaday in the Zoological Society Bulletin, the pygmy hippopotamus has been to the world nothing more than a name, and to most people it has been not even that. Its discovery was made known to the world in 1844 by Dr. Samuel G. Morton, of the Philadelphia Academy of Science, but with the publication of his papers, the diffusion of knowledge regarding the new species almost came to an end.

Speaking generally, and so far as the standard works on natural history have been concerned, the pygmy hippopotamus has been almost as unknown and as mythical as the queer beasts of the visions of St. John the Divine. Touching the literature of *Hippopotamus liberiensis*, we might almost say that there is no general literature, except a very interesting chapter in Mr. Graham Renshaw's book, "Natural History Essays."

The best way in the world to secure zoological varieties from the remote corners of the earth is by taking pains to provide funds with which to purchase the animals that bold and venturesome men are ever ready to capture and bring out for a price. It is impossible for any zoological park or garden to capture its own animal collections, without becoming a dealer in wild animals—an impossible undertaking.

Eighteen months ago, Carl Hagenbeck, ever ready to try the untried, and attempt the impossible, dispatched to Liberia, west coast of Africa, an intrepid hunter and explorer named Hans Schomburgk. His mission was to find and secure alive several specimens of the almost mythical pygmy hippo. The region which finally had to be penetrated was found to be reeking with cannibals, for whose diversion an imposing company of native soldiers had to be enlisted. Mr. Hagenbeck pithily declared that "My traveler objects to being eaten."

The travels, experiences and hardships of Hans Schomburgk remain to be related, for the trophies have traveled faster than their history. At the present moment the public will be most concerned in the fact that the New York Zoological Society has secured the best portion of Herr Schomburgk's catch—a living pair of pygmy hippopotami!

The adult male in the case is thirty inches high at the shoulders, seventy inches in length from end of nose to base of tail, and the tail itself is twelve inches long. The weight of this animal is 419 pounds, and all these figures are offered subject to correction.

The female is believed to be only two years old. It stands eighteen inches high at the shoulders and weighs 176 pounds.

The pygmy hippo is characterized first of all by its midget size, which in the adult animal is about equal to that of a twelve-months-old baby hippo of the large species. Its skull is more convex or rounded on its upper surface than that of *H. amphibius*; its legs are longer and more slender in proportion, and its eyes do not "pop" out of its head like those of the giant species. Another striking character is the long

tail, which in proportion is about twice as long as that of its only living relative, *amphibius*.

The face of the pygmy is relatively smaller than that of the large species, which brings the eyes nearer to the median line of the skull. The lower jaw of the pygmy bears only two incisor teeth, while the large species has four, and while the orbits of *liberiensis* are large, they are proportionately less elevated than those of the large hippo. As the latter swims nearly submerged, the eyes seem to float on the surface of the water like two shiny glass marbles.

The color of the pygmy is recorded as "slaty black" on the back, "sides greenish slaty gray, and under parts grayish white." Pending the arrival of our specimens we quote this remarkable color scheme with all reserve, and subject to amendment.

We await with keen interest Hans Schomburgk's account of the habits and life history in general of this rare and strange animal. We have been informed, however, that it makes its home in swamps and wet forests, often at a distance of several miles from the nearest river or lake, and that it is not at all dependent upon large bodies of water, as its colossal relative always seems to be. We may confidently expect to hear that it subsists on fleshy and tender plants and reeds, and grass that is not too coarse and tough to be masticated by small jaws.

Regarding the habitat of this animal, we can at present only describe it as the interior of the Republic of Liberia and regions adjacent, a designation not quite so vague as it seems, because Liberia as a whole is not large. We imagine that Herr Schomburgk penetrated about 200 miles into the interior from the coast, but the awful character of that region would make this equal in difficulty and hardships encountered to about 500 miles in East Africa. Heretofore it has been known that the species inhabits the Little Scarcies River, St. Paul's River, Du Queah River and Fishermen Lake.

The pygmy hippopotamus is, beside its only living relative, a midget, no more. Caliph, the enormous male hippo, who now stands in a mounted state in the American Museum of Natural History, stood four feet nine and one-half inches in shoulder height, twelve feet and four inches in length from end of nose to root of tail, his circumference was eleven feet and eight inches, and his weight has been given as close to 6,500 pounds. Besides the enormous bulk of a full grown male hippo of the common species, it is like a six-months-old human infant of thirteen pounds weight beside a man of 180 pounds. The disparity in size fairly challenges the imagination. In bulk one adult male Nilg hippo weighing 6,000 pounds is equal to fourteen adult male pygmy hippos. Strange to say, notwithstanding the fact that many big hippos have died in the Zoological Gardens during the last hundred years, we cannot learn that thus far anyone ever has had the enterprise to ascertain the weight of a full grown male by actually weighing its remains. When our Peter the Great passes from earth, he will be weighed.

Up to this time, so Mr. Renshaw informs us, only one living specimen of the pygmy hippo ever has been sent from Africa to Europe. That was in 1873, when one was sent to the Dublin Zoological Gardens, arriving at that institution in a dying condition, and lived there only "about five minutes." Not a single living specimen ever has been exhibited prior to the arrival of our specimens at Hamburg on June 15, 1912.

The museum of the Philadelphia Academy of Science contains the only series of museum specimens of the pygmy hippo now in America, embracing a mounted skin, a mounted skeleton, two skulls and an unmounted skeleton. The Leyden Museum (Holland) is the only other which can be said to possess a series of specimens. There is one mounted skin in the London Museum and another in the Paris. This, with the mounted skin of the Dublin calf, in the Dublin Museum, completes the list of Museum specimens now extant of an important species that was discovered and described sixty-eight years ago.

Our unique pair of living pygmy hippos will be exhibited in the elephant house. For their accommodation a small additional bathing tank,

communicating with their apartment, will be constructed immediately. The cost of the pair was \$12,000, and as zoological rarities they are well worth their cost.

ON THE TRAIL OF THE PYGMY HIPPO.

"COME to see me at once," was the telegram I received from Carl Hagenbeck, when I had let him know that my projected trip through the French Congo had been abandoned. I hurried to Hamburg to meet our grand old man of Stellingma, who greeted me with these words: "Will you go for me out to West Africa to try and capture an animal that has never been brought to Europe alive, and help me to preserve a dying species of the African fauna?"

"Why, certainly," was my reply; "have I not just equipped an expedition to go to the western coast?"

But when he then told me in confidence, says Hans Schomburgk in the Zoological Society Bulletin, that I was to go to Liberia, capture and bring back alive specimens of the pygmy hippopotamus, I must confess that I hesitated. Here I was asked to catch alive an animal which had not even yet been shot by a European hunter. Prof. Buttikofer, the great authority on Liberia, had tried for years to secure a specimen, and after all he had to be content with the skins and skeletons of three animals that had been shot by native hunters without himself even having seen a live animal.

During my twelve years of African travel my motto had been, "Nothing is impossible." I had explored the Wa Lunda country on the watershed of the Congo and Zambesi, without an armed escort, in the face of the evil prophecies of old hands who took leave of us for good when we started on our trip. I had succeeded in bringing home alive the first East African elephant, an undertaking that had been tried by many a well-known hunter without success. "Yes," I said, "I will go."

Six weeks after this conversation I landed in Monrovia, the capital of the Republic of Liberia. Here I was greeted from all sides with the assurance that no such animal as the pygmy hippo existed, but only the big hippo.

Having read in Buttikofer's book that he had obtained a specimen of the pygmy hippo on the Duquea River, I decided to give this river the first trial. Unfortunately I arrived just in the beginning of the rainy season. With the greatest difficulty I managed to collect twelve carriers, who on the promise of extra high wages, agreed to follow me.

In this lot I must have found the human sweepings of the streets of Monrovia. How they humbugged me! They evidently thought I was powerless to do anything, and I knew only too well that they would desert on the slightest pretext.

In Sheffeliensville I got the first news of pygmy hippos. Mr. Lett, an American mulatto, who had been a hunter with the Buttikofer expedition, gave me the assurance that the pygmy hippo existed on the upper part of the Duquea River, while his big cousin, the "kiboko" of East Africa, only frequented the rivers near the coast. I hired six canoes in Sheffelen to bring me up to Jeltown, six days up the Duquea River.

Rain was the order of the day. In pouring rain we started every morning, and pulled all day long against the current of the swollen river. The second day out I thought the time had come to teach my carriers a lesson. We were so far from civilization already that I no longer feared desertion.

When I called the boys in the morning to start, nobody came, so I called up my headman, and asked him very quietly if the boys were packing up.

"No," was the reply, "they do not want to start yet."

Without saying another word I took up my Browning automatic revolver, and put seven shots through the roof of the boys' hut. Then they came quickly. From that moment I took the reins, and after I had picked out the biggest and laziest of the motley crowd, and had given him a good hiding, I had no further trouble.

After a month's hard hunting I at last had the luck of a pygmy hippo. I was drifting down the river in my canoe late one afternoon, when I saw the animal trying to climb up the steep bank of the river. Before it had noticed us we were within ten yards. I stood with my gun ready to shoot, but with a great effort I curbed my hunting passion. Carl Hagenbeck's last word had been, "Now, remember, we must have our animals alive. Do not shoot before you are sure to be able to catch one." Not five yards from the canoe the little brute dropped back into the water and disappeared.

Shortly after that I returned to the coast and fitted out anew to penetrate into the Golah country. Two months I hunted there without any success. In the rains it was practically impossible to find any tracks, but in spite of everything I managed to find about thirty promising places in which to dig my pits. At first I had the intention to try netting the animals, but the uncertainty of their movements, and the thick undergrowth of the dense Liberian forests made net-hunting impracticable.

One day a hippo fell into one of the pits. It had rained for thirty-six hours, and before my scouts reached the place it escaped unharmed. For the first time in my life I knew myself beaten. Practically all my carriers were sick; the whole country was under water and the native trails were recognizable only because in them the water raced down like mountain torrents.

I returned to the coast and cabled to my people that the only chances for success were in the short dry season from January to May. The net result of this expensive expedition was that I had absolute proof of the existence of the dwarf hippo.

But what Hagenbeck undertakes he carries through against all odds, and without consideration of financial sacrifices. He had not lost faith in me, and in December, 1911, I started out on my second expedition. This time I was known in Liberia, and had but small difficulties in raising a caravan of fifty good men.

I had seen on the last trip that nothing could be done near the coast, though the beasts exist even within a day of the coast, but there it is hunted too much by the natives and is consequently too rare and shy.

The confluences of the upper Lofa River were this time my goal. Here, in the practically unknown Gorze territory of the powerful and war-like Golah tribe, near the big Sue Bush, where there is no human habitation for days and days, I could reckon on success.

But again I encountered an unforeseen obstacle. The Pesse tribe had declared war, and was fighting the Government and its allies.

Yangaia, a big fortified Golah town. I reached without any considerable trouble, but when I called my carriers the next morning to start, they rebelled, one and all. The previous day we had had a sharp march of twenty-five miles through thick bush. Instead of taking their loads, the whole crowd came down to my tent, which I had pitched outside the village, and refused to go on. They said: "We are tired to-day, and there is war ahead. To-day we will not move, for tomorrow we hold word."

This was all I could get out of them. The whole success of the expedition was in the balance. Had I made them the slightest concession everything would have been lost. Once more I told them to take their loads, but only a threatening murmur was the answer. Then I saw red, open rebellion. I slipped the Browning in my pocket, took my hunting crop and went among them. Clash, crack went the whip on the naked body. A few straight hits from the shoulder on the jaws of those who did not move, and quicker than I can tell it I drove the mutinous crowd before me like a herd of sheep. The result of the rebellion for the boys was that I stopped their rations for three days, and their allowance of gin for a month.

The same day I reached Taquema, the fortified town of the paramount chief of the Golah, Tawe Dadwe. I had reckoned greatly on the assistance of this omnipotent native king, but to my great sorrow he declared openly that he could

not help me, because the war pressed him too hard. He even expected an attack from the Pesse daily. Against my usual custom I had to submit to the entreaties of the chief, and pitch my tent in the middle of the town.

During my stay at Taquema the scouts of the enemy approached the town, but hearing that a white man with a big caravan and guns had arrived, they thought discretion the better part of valor. Here I had an opportunity to study the most secret sacrificial rites of this unknown tribe.

The Lofa River, one of the biggest rivers in Liberia, flows within an hour of Taquema. For two months I hunted on the small tributaries of this river, the course of which will appear entirely different from what it has been thought, when my map of the hinterland of Liberia is finished.

In spite of the greatest endeavors and the hardest work which I have done during my long hunting career in Africa I did not even manage to shoot one of these shy and secretive animals, in order that I might send home positive proof of its existence.

The greatest difficulty in hunting the Liberian hippopotamus is that unlike their big cousins they do not frequent the rivers. They make their home deep in the inhospitable forest, in the dense vegetation, on the banks of the small forest streams, but not satisfied with the protection the forest affords them, they enlarge the hollows which the water has washed out under the banks; and in these tunnels, where they are invisible from the bank, they sleep during the heat of the day.

Day after day I patrolled the streams, continually in water up to my hips, frequently to my shoulders. At last, as I was nearly despairing, on the 27th of February, Diana, the goddess of the hunters, smiled on me, and the first Liberian hippopotamus fell a victim to my gun. It was a nearly full grown cow. I was following the spoor of a small herd of the newly-by-me discovered dwarf elephant, when a fresh track

of a mwe (Golah name for the pygmy hippo) made me leave the elephants. I followed this spoor down to a small streamlet with hardly two inches of water, where it led into one of the above mentioned holes. I sent my boy round, and when he started poking into the hole with a stick, a responsive grunt followed, and not two yards from me the head of the much coveted animal appeared. I still carried my elephant gun. As my shot rang through the forest, one of the rarest animals of the African fauna lay before me.

My camp was far away in the bush, and to my great regret I had to abandon the skeleton. It was only with the greatest difficulty that I managed to skin the animal and have the skin brought by my two hunters to the tent.

In spite of all difficulties, however, I had not given up the idea of catching a hippo alive. Wherever I found a likely place I had a pit dug. It is easy to catch the great East African hippo, which keeps continually in the same water and uses the same tracks. With the pygmy hippo it is very hard to even find a place where there is the slightest chance of catching one, because this brute roams through the forest like an elephant or a pig, mostly goes singly, though sometimes in pairs, and rarely uses the same track twice.

Meanwhile over a hundred pits had been made by my men, all carefully dug seven feet deep and covered so that not the sharpest eye could detect any sign of danger.

At last, two days after I shot my first animal, and when I was still working on its thick skin, a boy rushed to my tent breathlessly shouting from afar: "Massa! Massa! Dem mwe done catch!"

On Nea Tindoa, an inhabited island in the Lofa River, a big bull had fallen into one of my pits. My sergeant, Momoro, started at once with a few boys to reach the place the same night and keep guard to prevent the meat-hungry native from killing the hippo.

At last I had succeeded against the prophecies of Europeans, Liberians and natives. And
(Continued on page 674.)

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

- Dec. 2-6.—St. Thomas (Ont.) G. C. W. J. McCance, Asst. Mgr. 1913.
- Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
- Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, Ohio.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

"A" cup game down du Pont way seems to be a round of roodles, with the buck sojourning at present in front of Eugene du Pont, with Ed. Banks dealing.

Oh! ye Bulgars! here are turkeys ready for the slaughter at the Du Pont Gun Club Thanksgiving Day shoot at Wilmington, Del. There will be five classes, four turkeys to a class. The shoot will be open to all.

No matter where you commute from, there will be a shoot close by on Thanksgiving Day. If you do not know of one near the place your ticket is punched to, drop me a card. I think I can satisfy your Missouri curiosity.

T. E. Doremus has been appointed manager of the Sporting Powder Division of E. I. du Pont de Nemours Powder Company, to succeed J. T. Skelly, who has gone with one of the new companies organized under the ruling of the court.

Buckwalter and Trumbauer want you to help them pull a live-bird shoot at Royersford, Pa., on Dec. 18. Jack Rabbit system. Every bird you kill nets you \$1.50—every miss credits the jack-pot \$1.50, to be divided 50, 30 and 20 per cent. There will be much else doing this date, same place. Send to Buckwalter and Trumbauer, Royersford, Pa., for particulars.

W. G. BEECROFT.

Columbus Gun Club.

SCORES made at Columbus Gun Club and at the Indian Lake shoot follow. The wind blew a gale at both shoots, hence such poor scores. The next shoot to be held at the Columbus Gun Club will be on Dec. 18 on the Lewis system. The Columbus Gun Club is asking for the Grand American Handicap for 1913:

Columbus scores:		Shot at. Broke.		Shot at. Broke.	
Davis	150	103	Eby	150	111
Hall	150	112	Shilling	150	131
Moeller	150	141	Ward	150	126

LON FISHER.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Chicago Gun Club.

CHICAGO, Ill., Nov. 9.—A pleasant afternoon and the opening of the winter season program brought out a field of fifteen shooters, several of them being beginners.

In the practice event, Young and Kirkwood each broke 25 straight, Goode taking second place with 23, while Barto and McDougal each broke 21. In the first 50-target event, Barto, Young and Kirkwood each broke 48, Goode again coming in second with a score of 45. First honors in the next event went to Silver on a score of 48 out of 50, Young running second with 95. Event No. 4 was shot with the gun below the armpit when calling for the target. Barto came in for first honors with 23 out of 25, Goode taking second with 21, while Young broke 20. The double-target event was won by Kirkwood on a score of 20 out of 12 pairs, Barto and Young each breaking 18.

This was Schroeder's second tryout at the trap and he was trying out a new gun. He was not satisfied with his scores.

Nov. 10.—Ten marksmen appeared at our grounds to participate in the several events of the afternoon. Thomas, Seelig and Silver each broke 14 out of 15 in practice, after which Thomas broke 94 out of 100 in the two 50-target events, Seelig being close behind him with a total of 93. Thomas was also high in event No. 4, which was shot with gun below armpit.

In the handicaps, Seelig won the first with a score of 24 out of 25 from 19yds., Thomas breaking a total of 85 out of 100 from 22yds. in the four events. Silver gave Thomas a close race of it, as he tied him in the first three frames, but lost out by 2 targets in the last, shooting from the 19yd. mark. Scores:

Adams Gun Club.

ADAMS, Neb., Nov. 8.—Two days' smoke joy ended to-day with Bill Ridley, from over "I. O. Way," occupying upper berth for the tournament. Brother Bill took the scales off the sun's rays to the tune of 287 out of 300. Another Bill—Hoover—was sent in for second lucre; he split with Varner on 280 busted rocks. The one-armed phenom., George Maxwell, got the for-wads-only honors with 282. A remarkable demonstration of reversal of trap form was that of Carter, a targets-only exponent, who cracked 141 on opening day and 133 on second day. Scores of first day:

Cincinnati Gun Club.

THE open season is responsible for the small attendance at the weekly shoot on Nov. 17. The call of the clays was not strong enough to keep most of the regulars from going afield for a try at the real birds. The weather conditions were perfect, but the shooters could not hit up their usual gait at the traps. Hammerschmidt

history and letters."—*Francis Trevelyan Miller*. "The last word in design, illustration, text and execution."—
Herbert L. Bridgeman. "Very interesting."—*Francis Bannerman*.

was high man with 91 out of 100, breaking 23 out of 25 with his new 20-gauge Winchester.

The Northern Kentucky Gun Club has gone a-hunting, and there will be little doing at their traps until after the season closes. H. R. Irwin visited Falmouth, Ky., for the opening day, Nov. 15, and will go to Glasgow Junction this week with several other sportsmen. Capt. George Dameron leaves early this week for a few days' hunt in Greenup county, and expects later to join Irwin's party at Glasgow. Hammerschmidt has been going a little rabbit hunting, and has had good success. He also is thinking of a trip to Glasgow. Supt. Arthur Gambell took his place on the firing line for the first time since his accident, and broke 76 per cent. of his targets. Scores follow

Birmingham Gun Club.

FIFTEEN shooters were at the weekly shoot of the Birmingham Gun Club. The weather was fine and good scores were made. Several of the shooters were using 20-gauge guns. We now have a full squad of 20-gauge marksmen. Professional P. B. Plummer shot with us, but for some reason was shooting away below his average. He probably works too hard helping the secretary. K. H. Baugh shot high percentage for the day. Some of the shooters have been hunting, and report plenty of birds. Scores were made as follows:

Shot at.	Broke.	Shot at.	Broke.

PARTICIPANT.

The Du Pont Gun Club.

WILMINGTON, Del., Nov. 16.—Considering to-day the first Saturday of the season in Delaware, attendance at the Du Pont Gun Club was good.

J. T. Roberson, at 22yds., was a luminary, breaking 22 out of 25 in F. L. Connable silver cup event. This was the tenth contest, so that but two more chances remain for shooters to "get their name on the cup," the winner of each contest having his name engraved on it. The winners thus far are: W. M. Foord, W. Edmanson, J. B. McHugh, A. B. Richardson, H. W. Bush and J. T. Roberson, once each, while Dr. Stanley Steele and H. P. Carlon have each scored twice.

There are therefore eight members of the Du Pont Gun Club who are entitled to shoot off for final ownership, and this assures a good race at 100 targets after the next two contests have been decided.

Eugene du Pont defeated J. B. McHugh for the 1912 Class A cup which A. B. Richardson tried to take from Mr. McHugh last week. Mr. du Pont made 24 and 23 to 23 and 22 for his opponent. Edward Banks has challenged the winner of this match, the match to be shot Nov. 23.

J. T. Skelly was high on 100 targets, breaking 91 from 16yds. H. P. Carlon was second with 90.

The scores in the Connable cup event were as follows, handicap yards:

Table with 2 columns of names and scores for the Du Pont Gun Club event.

New York A. C.

PELHAM MANOR, N. Y., Nov. 16.—Six events were pulled here to-day, of which R. R. Debacher took one-third. His portion included a limb on McMahon cup (6) 24, and a handle on the below-the-elbow Olympic trophy (5) 25. There were three ties at 24 on November cup, C. W. Billings, W. J. Simpson and E. W. Huggins. Billings, Thompson and Lemore tied for distance handicap. Dr. Bogart ran away with the Ogden trophy event (4) 24, while Dr. R. J. Held made his mark on Travers Island cup, 23 from scratch. The scores:

Table with 2 columns of names and scores for the New York A. C. event.

Crescent A. C.

BAY RIDGE, L. I., Nov. 16.—A piping wind brought Piping Rock to Bay Ridge to-day, gyrating the clay scalers about like an aeroplane steered by a lunatic. A good guess was about as important as a good eye, unless the good orb of vision perchance was a weather eye.

J. H. Vanderveer was high gun for the day, winning the take home trophy event with 89 from a free start of four. Monthly cup ran into a 22 tie between J. F. James, F. B. Stephenson and J. H. Vanderveer. C. R. James got his name on committee cup (2) 44. Jack Fanning, for wads only, took care in his usual gentleman-Jack way of the professional interests. The scores:

Table with 2 columns of names and scores for the Crescent A. C. event.

Table with 2 columns of names and scores for the Committee cup event.

Table with 2 columns of names and scores for the Take-home trophy event.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Nov. 9.—Parry led in the practice shooting to-day with 94 per cent. and had an unfinished run of 69. Others to beat 90 per cent. were: Moller 93 and Edmonson 92. They, with Dixon, posted one or more straights. Moller, at 20yds., won the spoon. The scores:

Table with 4 columns: Name, Pactice, Hdcp., Spoon. Shot at. Broke.

Nov. 16.—Edmonson led in the practice to-day with 96 out of 100, heating Moller by one target only. The latter made a run of 85 and led in the trophy event, which went to Britton by the terms of the handicap. The scores:

Table with 4 columns: Name, Practice, Trophy, Hdcp. Total.

Bergen Beach Gun Club.

BROOKLYN, N. Y., Nov. 9.—With 97 out of 100, Paul Von Boeckman took high gun honors to-day. Dr. Hopkins cracked 85 for second, while J. W. Dreyer took place with 83.

Weather conditions were very difficult for clay-target breaking. The scores:

Table with 4 columns: Name, Targets, Hcp. Total.

Ten to-day (Sunday), but good sport nevertheless. J. Voorhees selected 90 from the gusts, while ten went on their precipitous path to destruction on the sands; 89 took second, third and fourth through a tie between Dreyer, Von Boeckman and Hewens. The scores:

Table with 4 columns: Name, Events, Hdcp. Total.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Nov. 9.—The inclosed scores may need a little explanation. They were made at a match on our grounds for beef. The beef was put up one-half in each of two events of 10 birds each. The half beef was divided into six parts in order to make more prizes. The ties were shot one at a time, which accounts for the difference in the numbers shot at in times.

Table with 4 columns: Name, Two events, Ties, Hdcp. Total.

Larchmont Y. C.

LARCHMONT, N. Y., Nov. 17.—Trappists formally got together here to-day to inaugurate the aerosaucer season of 1913. Ralph Spotts appeared in the role of Colonel Bogy, setting a score of 98 out of 100 as a stimulant for the present season, and perhaps some seasons to come. For 98 out of 100 is a pretty exalted pinnacle as a mark where the clays are subjected to indignities by the wind as they generally are at the shore traps here. The previous Bogy, held by Mr. Spotts and Stuart Scott, was 97. Strange to say, the former mark was made on a clear day and almost windless conditions, while the new record was made in a misty rain and decidedly uncertain winds. Spotts event winnings included: Visitors' cup (1) 25; handicap trophy (4) 102; high gun 119 out of 125; accumulation cup (0) 25; a tie with J. Jones on November cup; with H. H. Childs on club cup, and with T. Lenane, J. Jones and C. Whiting on take-home trophy. In other words, Spotts won or tied on everything excepting 15-bird scratch event, taken by S. Smith with 14, and 10-target scratch, which went to J. Jones on a straight.

Table with 2 columns of names and scores for the Accumulation cup event.

Table with 2 columns of names and scores for the Fifteen targets event.

Table with 2 columns of names and scores for the Ten targets event.

Buffalo Audubon Club.

BUFFALO, N. Y., Nov. 16.—Frank Wright, formerly champion of New York, was high man at the club's shoot this afternoon with a good 91 out of the century. John Ebberts, a Class C shooter, was second high man with 89, and is going to make the higher classmen look to their laurels to beat him out. The scores:

Table with 2 columns of names and scores for the Buffalo Audubon Club event.

Monmouth Beach Gun Club.

THE Monmouth Beach (N. J.) Gun Club elected the following officers for the ensuing year: President, Frank Johnson; Vice-President, Ernest West; Treasurer, Morgan Woolley; Secretary, Nicholas Woolley; Field Captain, John A. Maney.

This club was organized less than a month ago, and now has twenty-eight members enrolled, with ten additional applications on hand.

A tournament has been arranged for Thanksgiving Day, and a hearty welcome is extended to all visitors. A silver cup and watch fobs will go to the winners of the main events, and live turkeys, ducks and geese will be an added attraction.

J. O. WILSON, Sec'y.

Marine and Field Club.

BATH BEACH, L. I., Nov. 16.—Paul R. Towne, our worthy president, ran from his 10-handicap to a full score of 100, thereby corraling some underpinning on November cup. For Sayre trophy he cracked 24 out of 25, and the club event with a like score. He picked Jumpers and Dervishes to quarter with equal ease. C. D. Sayre, in scratch event, which he won, broke 24 out of 25, and there were mighty few easy birds in the outfit. Scores:

November cup, 100 targets, handicap:			
P R Towne 10 100	J M Knox 18 91
S P Hopkins 8 95	W H Davol 12 85
C D Sayre 18 94	C M Camp 12 76

J Hamblin 20	J M Knox 20

Pacific Indians.

THE sixth annual tournament and pow-wow of the Pacific Indians will be held during the week of July 21 to 25, both days inclusive, on the grounds of the Raymond (Wash.) Gun Club.

The Indians will add as much or more money than in their 1912 tourney, besides the thirty solid gold honor medals that proved such a great hit at last meeting, and other new and special features calculated to make the game more attractive, which will be later announced in detail.

Raymond is one of those phenomenal Western cities, sprung up almost literally in a night; to be exact, five years old, with a population of 5,000 of the best people on earth, all modern equipments and conveniences, including a hotel of a hundred rooms, that is second to none in appointments.

The shoot this time will be held a few miles down the river, literally on the shores of the great Pacific Ocean, at Wallapa Harbor, where the Raymond Club has one of the finest club houses and shooting ranges to be found anywhere in the world. In addition to the usual attractions of an Indian shoot, there will be this time the inducement of going to the seaside during the finest midsummer month, where every accommodation is to be had, and it is confidently predicted that the attendance this time will be the largest on record.

Maryland County Championship.

IN Maryland it takes more than one shoot to make a county championship team. There have been three thus far between them, of which Chesapeake City and Rising Sun each have cribbed one.

Linn Worthington ran 84 straight, finishing with 97 out of 100. Jake Reynolds broke 88 for second.

The first shoot, held at Elkton, resulted as follows:

Rising Sun.		Chesapeake City.	
Worthington 48	Rees 43
Kirk 35	Brown 41
Riale 44	Bouchell 41
Anderson 39	Everett 44
Reynolds 43	Watson 45
King 38—247	Arrants 41—255

Last Saturday's scores on 100 targets ended thus: Worthington 97, Riale 92, Reynolds 88, Anderson 82, King 82, Brown 82, Bouchelle 80, W. Stevens 79, Everett 79, Currie 79, Hoover 78, Stephens 77, Rees 77, Kirk 68, Hazel 40.

New Hanover Gun Club.

WILMINGTON, N. C., Nov. 15.—The following scores were made to-day on the New Hanover Gun Club grounds. As the hunting season is on, we only shoot once or twice a month, just to keep in practice for the Pinchurst shoot in January. The scores, 100 targets per man:

J H Dreher 94	L Clayton Grant 83
F L Robbins 85	H A Underwood 78
		J. H. DREHER, Sec'y.	

Yale Trims Princeton.

WHILE all the shooting through the line on the gridiron here Nov. 16 resulted in a tie, the Eli families was shooting up the Tiger in the annual rock-breaking contest. Yale won by eight flyers, the final score being 182 to 190 out of a 250-target total—five men to the team.

WINCHESTER

Self Loading Shotgun MODEL 1911

A comparison between the Winchester Self-Loading shotgun and other makes is all that is necessary to convince anyone of the great superiority of the Winchester Self-Loader. Note the absence of unsightly screws and pins and of dangerous projecting parts. Note the neat little trigger lock, which operates cross-wise and cannot be jarred out of place. Take the gun down and see how easily it separates into only two parts, without releasing small parts. Note how simple is the action, and that the springs are of coiled wire, the most durable kind. Then note the general finished appearance of the whole gun; and remember that all metal parts are made of nickel steel—about twice as strong as that used in repeating guns of other makes. The barrel has to be pulled back only when starting to shoot, as the recoil does the reloading afterwards. The gun is readily used as a single loader. No adjustment is required to shoot different loads; and no unpleasant effect is felt from the recoil, as it is divided in the gun. Made in 12 gauge only, and a much better shooter than the ordinary gun. Examine one at your dealer's.

“steel where steel belongs”

Peters

FACTORY LOADED SHOT SHELLS

THE greatest triumph of modern ammunition making has been scored in Peters Steel Reinforced Shot-Gun Shells. They are reinforced in the HEAD AND RIM—"STEEL WHERE STEEL BELONGS." It was with Peters Steel Reinforced Shells—factory loaded—that Harvey Dixon won the 1911 Grand American Handicap—99 out of 100 from 20 yards.

For this year's hunt insist on Peters Steel Reinforced Shells. They are superior to any others, afford protection to the user, and shoot perfectly in ANY good gun.

ASK YOUR DEALER. Accept no substitute. Should he not happen to have them, he will get them at your request.

Illustrated booklet, describing Peters Steel Reinforced Shells and "Sportsmen's Handy Book" with 1912 Game Laws—FREE. Write for them.

Important Notice to Our Rifle Clubs.

WASHINGTON, D. C., Nov. 18.—We wish to call the attention of our rifle clubs to the fact that two weeks from to-day, i. e., Dec. 2, entries for the National gallery championship competition for 1921-23 will close and the schedule of matches will be made up for the clubs that have sent in their entries, along with the entrance fee of \$10 previous to that date. Every year, we are asked to let in clubs after the schedule has been made up. Obviously it is impossible to do so.

Owing to the demand from certain clubs (seven in all to date) to be allowed to use telescopic sights in these matches, we have decided, if it is desired, to organize one league of clubs using telescopes, with the understanding that the winning club of that league, should it desire to compete for the National trophy, could do so by entering the shoot-off with the winning team or teams of the other league or leagues for the championship, without telescopes. Clubs when making their entries should designate whether they wish to be entered in the telescopic league or not.

To save time in getting up the schedules, clubs, when making entries, should designate if possible who is available in their city for the appointment as N. R. A. representative to take charge of and supervise the shooting of the league matches. The official targets to be used in the match will be sent to this representative, who will take charge of same and return the ones shot on each week to the N. R. A.

As there will be ten medals given to the winning clubs, it will be necessary to keep the record of all ten men shooting each week, as these ten medals will be given to the men competing in the greatest number of matches. Percentages will also have to be kept, as it is the intention to select the American Small-Bore team for 1913 from the records made by the men in the league matches.

ALBERT S. JONES,
Assistant Recorder and Secretary, N. R. A. of A.

THE ECUADOR BLANKET TREE.

BLANKETS grow on trees in Ecuador, and while the idea of an all wool, fresh from the forest bed covering might give insomnia and a backache to the child of civilization who likes to snuggle comfortably under several layers of down and wool, the natives find it all right, as in fact it is.

When an Ecuador Indian wants a blanket he hunts up a demajagua tree and cuts from it a five- or six-foot section of the peculiarly soft, thick bark. This is dampened and beaten until the flexibility of the sheet is much increased. The rough, gray exterior is next peeled off, and the sheet dried in the sun. The result is a blanket, soft, light and fairly warm, of an attractive cream color. It may be rolled into a compact bundle without hurt, and with

ordinary usage will last for several years.—Harper's Weekly.

THE SAME FISH ON FOUR LINES.

A STORY is going the round in which four anglers were occupied with one fish, a big mackerel. It took the bait of one of them, and then proceeded to entangle the four lines, so that it seemed there were four fish. I daresay it came in for some hard sayings when the truth was made manifest. But it is not uncommon for fish to take two different baits. I have known it to happen with both perch and pike. Dogfish of course will often do it; in fact, I doubt if there is a limit to the number of baits a dogfish would take, if you only gave him the baits and the time and the opportunity.—London Telegraph.

MAINE DUCK DRIVE.

A DUCK drive is what they called a novel way the early settlers took to capture the ducks that were plentiful in the early settlement of Maine.

For a few days in August the birds could not fly, as they were shedding their feathers. The time was well known to the inhabitants of all the towns about Deer Isle and those who could come did not fail to be present. First a circle of boats was formed so as to partially surround them and others were stationed so as to prevent the birds taking a wrong direction.

Duck Harbor was the place selected to drive them into, it being narrow and extending half a mile inland. Beginning at the upper part of the bay, the boats were drawn in for several miles. As this went on more birds were overtaken, and as they reached their destination a large number were included in the drive.

Reaching the shore at the head of the harbor, the ducks, not being able to run much, were overtaken and killed in large numbers. At one time a large drive was made and the birds attempted to walk through the woods to the other shore, but being unable to walk, died in large numbers. This was the last big drive that was made. Birds that escape a great danger avoid the same locality.—Lewiston Journal.

"SQUIRRELS do swim," says an authority on natural history. Sure; but they would rather climb a tree.—The Megaphone.

I Want Some of

THE BLACK SHELLS

Here's a smokeless load of common sense about uniformity and driving power.

Our Non-Mercuric Primer contains neither light ground glass nor heavy mercury fulminate. When these materials are mixed, gravity separates them. Think of the difficulty of getting uniform primers from such a mixture.

Again, quick, hard shooting requires a hot, large flame from the primer. Glass absorbs 20% of the heat of the explosion. The materials used in our primer *actually increase the heat*. Therefore, THE BLACK SHELLS are always uniform, quick, of maximum driving power, and require taking almost no "lead" on the bird or target.

As to the large flame from the primer: In THE BLACK SHELLS, the Flash Passage is 100% larger than usual. Practically all of the flame from the primer rushes into the main charge, practically none of it recoils useless and wasted.

Send for Free Book

on the other modernisms in THE BLACK SHELLS—unequalled waterproofing, the hard, smooth crimping, and our one-piece brass head.

Game Law to be Enforced.

THE California Fish and Game Commission is now engaged in a legal struggle brought about by its decision to strictly enforce the provision of the game laws limiting the number of ducks that any person may have in his possession at any one time to twenty-five. The deputies in the field are seeing to it that market hunters are not bagging more than the limit, but in the attempts to enforce the law in the large cities a stumbling block has been met with. Game transfer companies have been found with several hundred ducks in their possession at one time, and confiscations have been made, but these concerns have secured a temporary injunction preventing the commission from interfering with their business. It is claimed that the birds are killed by employes of the game transfer companies, but this is denied by the latter, who declare that every shipment made to them is a separate transaction. The companies get the game in lots of twenty-five, which is the legal limit, but inasmuch as they have more than twenty-five birds in their possession at one time, the commission contends that the law is violated. Judge Murasky, of San Francisco, has heard the arguments in the case and will render a decision shortly.

Publicity for Game Laws.

MONTGOMERY, Ala., Nov. 7.—*Editor Forest and Stream:* Noting your suggestion relative to giving publicity to provisions of the game and fish laws, you are advised that since its organization the Department of Game and Fish of Alabama has had posted in various portions of the State hundreds of thousands of notices similar to the ones mailed you to-day under separate cover.

I have proceeded upon the theory that in many instances the law is violated through ignorance, therefore I have taken occasion through the medium of posters, newspaper publicity and the publication of the game and fish laws in pamphlet form to inform the people of Alabama relative to every provision of our conservation statutes.
JOHN H. WALLACE, JR., Com.

Benefits of Non-resident Tax.

NEVERSINK, N. Y., via Liberty, Nov. 4.—*Editor Forest and Stream:* So many sportsmen look to this easily accessible country for a few days' shooting that this fresh outburst of greed is exasperating. Until the non-resident tax was placed so high, great numbers of men from other States visited this country in October and November. I could go more into details and write quite an article, but all that seems necessary is to have attention drawn to the matter in FOREST AND STREAM. Of course there has been much talk and some notices in the newspapers.

I get a few grouse and woodcock in the afternoons, but only a few. Hard work and grand shots. You must not miss the few decent shots you get, or you will have no birds in your pockets.
THEODORE GORDON.

FOREST AND STREAM prints more snappy, readable, practicable news for sportsmen, we daresay, than any other magazine, and what it preaches editorially is practical and on a level that begets the confidence of its subscriber friends.

ANCIENT POWDER.

THE most ancient powder, such as was used in the old "bombardas," was made of equal parts of saltpetre, sulphur and charcoal. Evidently these proportions would give a powder scarcely fit to make squibs or rockets, and yet perhaps even this was too powerful a mixture for the weak built up bombardas of that era.

A later proportion was refined saltpetre, eighteen parts; sulphur, two parts, and charcoal, three parts, which approached more nearly the formulas of to-day, which in practice, for good service, black powder may be set at; saltpetre, 78; sulphur, 10, and charcoal, 12 per cent.

Such powder in 1860 was expected when new to stand the English service test; and with a charge of four drachms propel a steel ball quite through fifteen to sixteen half-inch, wet, elm planks, placed half an inch apart, the first being thirty feet from the muzzle of the barrel.—National Magazine.

EAGLES IN MISSISSIPPI.

FOR the first time in several years reports are coming in of many eagles being seen and killed. A tremendous one was killed in Harrison county a few weeks ago, and now comes the report of the death of another one of considerable size.

W. M. Baylor killed an eagle near the beach home of J. H. Walsh that measured 5 feet 8 inches from tip to tip. This magnificent bird had been seen near the place where it was killed for several weeks and was mistaken for a huge hawk.—Biloxi Herald.

Guns of Lasting Fame

23 Maltbie Street Syracuse, N. Y.

RECOIL AND RECOIL RESULTS.

THERE is no doubt that the recoil, or "kick," of a gun is due entirely to the method of loading used, and to the amount and weight of shot, says a writer in the Shooting Times. It can be easily understood, if one will but consider a little, what a loaded gun really is. The gun is a means to utilize the force exerted by the expansion of gases set free on the ignition of the powder; and the explosive force is placed between two confining obstructions—that is, between the breech of the gun, as may be considered the most nearly immovable obstruction, and the charge of shot. Now, the gases set free by explosion set up a momentary pressure in every direction within the breech chambers of the gun of some 15 tons per square inch, more or less; and, of course, the obstruction of least capacity to hold its own (that is, the movable charge of shot) gives way first, and the pressure within the gun is relieved. But, the pressure being exerted in every direction, there is a backward blow (so to speak) on the breech of gun, and this blow is the "kick," which causes the shoulder-ache and swollen middle fingers. The writer well knows these latter symptoms. But the action of these forces is easily understood. If the gun can be held so that no movement is possible, the force applied to shot is, of course, increased, as there is no loss due to recoil or the giving way on the part of the gun. But in shotguns or rifles fired from the shoulder it is not possible so to hold the gun that there is no loss of power to drive out the shot, as man's body is not a rigid structure; and, therefore, if the gun is overcharged there must be a great increase in the "kick." If the gun is so charged that the shot is immovable, the gun bursts, as is not uncommon in the hands of ignorant people. As some of your correspondents suggest, moderate and well-proportioned charges of powder and shot will produce the best results; overcharge of either only causes disaster. Too much powder or too light shot charge produces a loss of power, as some of the powder is driven out of the gun in an unburned condition. This, of course, is not easily noticed in shooting game; but in larger guns, like those used on board ship, if the powder is not burned within the gun I have often seen the grains passing through the air lighting or blazing; and I have often watched the course of the shot through the air from behind the big gun. It sometimes looks like a cricket-ball in its flight. But I have never been able to see the gunshot from cartridge leave the muzzle, as perhaps it is too small to attract notice. Perhaps some one of your shooting correspondents may have noticed the flight of the shot through the air as I have described. To sum up, the explosion of powder charge between the breech and the cartridge produces the "kick" and the flight of the shot. Now, suppose an irresistible force were to meet an immovable obstruction, what would be the result?

LAST OF THE TEXAS LONG HORNS.

THE most perfect and practically the last survivor of the breed of cattle that made Texas famous is the property of the "Mule Shoe" Ranch, Burnet, Tex.

His equal does not exist in the State. It is conceded that he has the most perfect horns of any animal now living in the State. The horns are fully three and one-half feet long. They are absolutely uniform in length, curvature and angle of divergence from the head. He is twenty-two years old and is sixteen hands high. Mr. Greene, the owner of Mule Shoe Ranch, is one of the old line cattlemen of Texas. He made a fortune in raising and selling the old long horns.—From the Indiana Farmer.

AN American gentleman one evening at dinner happened to get a hair in his soup, and, raising it on his spoon, said to the waiter: "Pat, is this an Irish hair (hare)?"

"Begor it is, sir, said Pat, "but it took an American hound to catch him."

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

New Model 27

Marlin

Repeating Rifle

The only gun that fills the demand for a trombone ("pump") action repeater in .25-20 and .32-20 calibers.

Shoots high velocity smokeless cartridges, also black and low pressure smokeless. Powerful enough for deer, safe to use in settled districts, excellent for target work, for foxes, geese, woodchucks, etc.

Its exclusive features: the quick, smooth working "pump" action; the wear-resisting *Special Smokeless Steel* barrel; the modern *solid-top* and *side ejector* for rapid, accurate firing, increased safety and convenience. It has *take down* construction and *Ivory Bead* front sight; these cost extra on other rifles of these calibers.

Our 136 page catalog describes the full *Marlin* line. Sent for three stamps postage. Write for it.

Ask your watch repairer whose Oil he is using on your watch.

Don't Let Your Shooting Be Spoiled—Read This Book

LEARN this important fact: when your shot gun goes wrong in field or trap, the gun fault which spoils your shot is *inherent in the gun*. And furthermore, it would not have been there if the maker had known *how to get rid of it*.

Every gun lover needs this latest gun information. When you read it you will feel that only such concentration of purpose as the six Hunter Brothers have devoted could produce a gun with **NO SHORTCOMINGS**.

It will show you how *loss of aim from fumbling for the trigger* has been eliminated by the Hunter One-Trigger—which recently broke the world's

record on double targets. How *inaccessibility of working parts* has been eliminated by the Smith One Screw Access. How shooting loose has been eliminated by the Smith Rotary Bolt which takes up wear to a certainty, in all directions. Etc., etc.

This book is free to gun lovers. Full of valuable gun information, tables, charts, etc. Shows colored plates of fine shot guns, ranging from \$25 net to \$1500 list.

Price, \$25.00 net

TELLS OF HABITS OF RHINOCEROS.

THE rhinoceros is, with the giraffe, the hippopotamus, the gerrenuk and the camel, one of Africa's unbelievable animals, says a writer in the American Magazine. Nobody has bettered Kipling's description of him in the Just-so Stories—"a horn on his nose, piggy eyes and few manners." He lives a self-centered life, wrapped up in the porcine contentment that broods within nor looks abroad over the land. When anything external to himself and his food and drink penetrates to his intelligence he makes a flurried fool of himself, rushing madly and frantically here and there in a hysterical effort either to destroy or get away from the cause of disturbance. He is the incarnation of a living and perpetual gronch.

Generally he lives by himself, sometimes with his spouse, more rarely still with a third that is probably a grown-up son or daughter. I, personally, have never seen more than three in company. Some observers have reported larger bands, or rather collections; but lacking other evidence, I should be inclined to suspect that some circumstance of food or water rather than a sense of gregariousness had attracted a number of individuals to one locality.

The rhinoceros has three objects in life—to fill his stomach with food and water, to stand absolutely motionless under a bush and to imitate ant hills when he lies down in the tall grass. When disturbed at any of these occupations he snorts. The snort sounds exactly as though the safety valve of a locomotive had suddenly opened and as suddenly shut again after two seconds of escaping steam. Then he puts his head down and rushes madly in some direction, generally upwind. As he weighs about two tons, and can, in spite of his appearance, get over the ground nearly as fast as an ordinary horse, he is a truly imposing sight; especially since the innocent bystander generally happens to be upwind, and hence in the general path of progress. This is because the rhino's scent is his keenest sense; and through it he becomes aware, in the majority of times, of man's presence. His sight is very poor indeed; he cannot see clearly even a moving object much beyond fifty yards. He can, however, hear pretty well.

The novice, then, is subjected to what he calls a "vicious charge" on the part of the rhinoceros, merely because his scent was borne to the beast from upwind, and the rhino naturally runs away upwind. He opens fire; and has another thrilling adventure to relate. As a matter of fact, if he had approached from the other side, and then aroused the animal with a clod of earth, the beast would probably have "charged" away in identically the same direction. I am convinced from a fairly varied experience that this is the basis for most of the thrilling experiences with the rhinoceros.

BIG PEPPERMINT FARM.

WHEN Prairie Farm, near Saginaw, Mich., came into the possession of the present owners about nine years ago, its 9,500 acres were practically all marsh and largely covered by water. Immediately engineers prepared plans for the draining of the land and for its protection from floods.

Three dredges were built and twenty-five miles of dikes constructed, including a cross dike through the middle of the farm to protect the lower half. Ditches fifty feet wide were excavated on each side of the dikes, and at the present time the works of reclamation and protection are completed.

A pumping station is located at the west side of the farm at the middle dike, making it possible to pump out both sides in case of rains or floods, and a railroad has been built into the center of the farm to care for the numerous products.

As it now stands, says Popular Mechanics, it is a scientifically managed farm of the best modern type, with 4,000 acres actually under cultivation, to which it is planned to add 400 acres each year. There are 1,250 acres of peppermint, this crop being exploited in two dis-

tilleries for the manufacture of peppermint oil. Among the other crops sugar beets is the next in importance, but ample acreage is also given to the more ordinary farm products.

SAVED RABBIT FROM BLACKSNAKE.

WHILE hunting for rabbits in Hickory township recently, Lamont Stivers heard a commotion in a clump of bushes. Approaching the spot, he found a large blacksnake slowly wrapping itself about the body of a rabbit. The rabbit was making a desperate effort to escape.

Stivers blew the head off the snake, which measured nearly six feet in length. As soon as the coils of the snake relaxed, the rabbit made its escape.—Pittsburgh Dispatch.

THIS PICTURE GRATIS

JOHN PEEL.

The above picture of the immortal John Peel, framed and glazed, will be presented free to all new subscribers to "The County Gentleman & Land & Water," England's leading weekly illustrated sporting paper.

The picture measures 11 in. x 7½ in. (frame 17 in. x 12 in.). The original was painted by Mr. Joseph Simpson, R. B. A., from old photographs and prints of the famous huntsman. It is said to be the finest representation of John Peel ever published, and is worthy of a place in every sportsman's home.

The subscription to "The County Gentleman & Land & Water" is \$9.50 per annum, payable in advance, for which the paper will be sent, postage free. Checks should be made payable to the County Gentleman Publishing Co. and crossed the London County & Westminster Bank, Hanover Sq. Branch.

Kennel Department

Kentucky Trials.

THE annual trials of the Kentucky Field Trial Association were run at Glasgow Junction, Ky., on Nov. 12. When the entries closed on the morning of the trials, seven setters and two pointers had been named, and the entrance fee of \$5 paid. The territory selected was a good one for field trial purposes, practically level, with diversified cover and plenty of birds. The club had the privilege of about 2,000 acres, but it was not found necessary to use more than a small portion of this tract. The services of M. Shiley were secured as field marshal, and being perfectly familiar with the grounds, he avoided all but the birdiest portions of the country. The conditions were not of the best, it being very dry and unseasonably warm all day with a strong wind blowing. Only one stake was run, open to setters and pointers of all ages. Charles H. Gorham, of Louisville, Ky., acted as judge. The winner, Jessee's Mohawk Kate, owned by P. C. Jessee, of Bowling Green, is by Mohawk II. She is a classy little bitch, very fair in range and speed, and handles birds in a workmanlike manner, being well broken and under good control. She was not in the best of physical condition, and let up a little toward the last of the forty-minute heat, but at all times stayed out to her work and hunted industriously. In her second series heat she showed well on scattered birds, refusing to become excited and chase, as singles flushed around her in rapid succession.

Mack, a black and white pointer, owned by J. G. Ray, of Bowling Green, is a strong goer and stylish traveler, good range and speed, but needs toning down, as he is apt to be headstrong when on game. He is a bird finder and had a number of points to his credit in both his heats, but was unsteady when they were flushed.

Aristocrat, orange and white setter, owned by Alanson Trigg, of Louisville, was placed third. He is a stylish mover and can find birds, but lacks steadiness. In the second series heat he was handled by S. W. Linebaugh. In the first heat he made a good bevy find, but was not steady to flush. In the second heat he pointed several times, but no birds were raised.

The Effect of Worms.

THE presence of worms has a very bad effect on a gun dog, for it is always ill-nourished, and for that reason slack. It entirely lacks energy, and a very easy day thoroughly tires it out. The dog invariably appears short of wind. The morbid appetite created by worms is ruinous to a dog, especially a retriever. If the dog does not commit the extreme crime of eating game, the game may be crushed, and then a hard mouth is developed. We have seen a dog throw its training to the winds under the influence of the lassitude and ill health engendered by worms, and the real cause was never suspected. The course of preparation which a dog goes through before the shooting season should always include treatment for worms. This is most necessary, and ought never to be neglected.

ON THE TRAIL OF THE PYGMY HIPPO.

Continued from page 664.

only a few days before Tawe Dadwe told me: "It is impossible to catch a mwe. It has never been done, and they have only been shot after they have been caught in the pits. They are too dangerous. Many a hunter has been killed. You white men know a lot, but here you are trying something that is impossible."

Early the next morning I reached the place. Before night a fence had been built around the hole, and the animal was let out. It was a beautiful full-grown bull, in the prime of his life.

Nothing succeeds like success. Six days after that the second one was caught, this time a two-year-old cow. A week later the third, a young three-quarter-grown bull was taken. Now I had three animals at three different places. Mecca, where the little cow was caught, I decided should be my central collecting station, and we started to bring the animals there.

Now the real trouble commenced. The Golah people refused to carry them. For the big animals I needed at least forty men each to cut roads and carry.

Had it not been for the unselfish assistance I had from the Liberian Government, which had appointed me major on the geographical staff, I never would have been able to bring my expedition to a satisfactory end.

Nobody can imagine the enormous difficulties of the transport of those heavy animals, which we had to carry in self-invented native-made baskets, through the roadless hinterland of Liberia. From the furthest place inland, where I caught three animals, it took me, even after the men had cut the roads, twelve days to reach the first river on which I could use boat transport to the coast.

A native king, Gongzoo, had, on the promise of a big present, promised carriers for the first animal caught in his district, but when I asked for the men, he point blank refused. By that time I had put the hippo in a basket and had brought it with my own carriers under the most frightful difficulties to his town. It was a matter of getting men from him or standing the chance of losing my hard-won animal.

I tried a bluff, with only my sergeant for support. I arrested the chief in the middle of his own town, kept him in front of my revolver, loaded all my guns, put them before me on the table, and declared war, provided the men were not forthcoming within two hours. It succeeded. When the people saw their king a prisoner, the men came. What would have happened if they had accepted my challenge I do not know.

After I had got the first three animals to my central station and handed them over into the charge of one of Hagenbeck's most experienced

keepers, I returned to Monrovia, to arrange all about the further transport, and to meet my wife, who had come out to join me, and to put the experience which she had gained during an eight months' horseback ride through the hinterland of the Cameroons into the services of Hagenbeck.

Shortly after we had returned to Mecca, another big bull and a youngster were caught, and then it was high time to return to the coast before the rains should set in and make the country impassable. His Excellency, President D. E. Howard, very kindly put soldiers at my disposal, to assist me in collecting sufficient carriers.

After I had managed to tame a full grown mwe, the natives feared me so much that I succeeded in collecting 150 men in three days. While Mr. Moltmann, the keeper sent by Hagenbeck, and I hurried ahead to arrange for the food for the animal, Mrs. Schomburgk superintended the transport, as it was absolutely necessary that one European should keep an eye on the carriers so that they did not drop the heavy baskets on the uneven and partly mountainous trails.

At last we had reached Japacca, and could put our poor, ill-treated animals into proper cages which had been sent out from Hamburg.

Now our greatest troubles were over. The animals were in good condition and feeding well, so that we could expect to get them safe to Hamburg. But another trouble arose. When we got to the coast at Cape Mount, we were prophesied a bad sea for the first of June, the day the steamer Alexandra Woermann was to call for us. But even then our luck did not desert us. Certainly with difficulties, but without mischief, we shipped our valuable cargo. In the Bay of Biscay we had stormy weather. The ship rolled heavily, but the animals did not seem to mind it.

The enormous expenses of these two expeditions can easily be imagined when one considers that in Liberia everything has to be carried. Great quantities of trade goods are necessary to procure food for the carriers, and also as presents for the native chiefs.

Fortune has again been kind to Hagenbeck's colors. For forty years attempts had been made to bring these animals to Europe, and we had succeeded. The greatest satisfaction to me, however, was when I had the honor to be presented by Mr. Hagenbeck to His Majesty Kaiser Wilhelm II., when he visited Hagenbeck's Animal Park, at Stellingen, on the 17th of June, where he congratulated me on my success.

A FISH STORY.

THE grandfather of big fish in the Gulf of Mexico has been discovered. Twenty-nine feet of dark blue flesh, shaded with a faint tint of sea green, having a breadth of beam estimated at nine feet, with a topmost fin five feet high and with side flippers reaching to a length of three feet, he appeared this week to Captain Jim Neilson of the Gulf Fisheries schooner Dorothy. That the big fellow was a "grandfather" was indicated by the every appearance of age and veneration that he bore. His broad sides and back were encrusted deep with barnacles; his monster jaws and fins were cut and slashed, the evident result of many deep sea battles. His teeth were snagged and rusty and in many places gone altogether. The most notable evidence of his age, however, was the fact that he was blind as a bat.

Captain Neilson, who is known to the fishermen of the Gulf from Galveston, his home, to the Florida Keys, as "Lucky Jim," is now skipper of the fishing schooner Dorothy, of the Gulf Fisheries fleet of Galveston. His story of the big fish is that he met up with him while the Dorothy was at anchor in the Gulf about thirty miles from the Heald Bank Lightship, which is stationed thirty miles southeast of the Galveston bar. A calm coming up in the night had compelled the Dorothy to come to anchor, and it was when the broad expanse of the Gulf was lighted up by the first rays of the morning sun that the big fellow was seen. Discovered by the lookout it was first thought it was an overturned vessel of some kind, and immediately the attention of Captain Neilson was called to it, it being thought that it might be a clue to the unfortunate sailors missing from the wreck of the steamship Nicaragua. While lowering away the dory to make an investigation, however, there was an upheaval movement of the supposed derelict, and there arose to sight the back, and part of the head of a monster shark.

No time was lost by the crew in getting back on board the Dorothy, for there is no telling what a shark might do, if so inclined, to a dory loaded with tempting looking fishermen. The big fellow was not pugnaciously inclined, however, but, to the contrary, seemed to be seeking company and sympathy in its old age and plight. Lifting its head out of the water, and opening its jaws to an extent that would easily have taken in a good sized barrel, it apparently "sniffed the air," as if seeking its bearings. The aroma of fish on board the Dorothy, or possibly that of the coffee which was boiling in the schooner's galley apparently

was good to him, and he at once proceeded to seek closer acquaintance. He came up within fifty or sixty feet of the schooner's side, and there remained rising and falling with the swell of the Gulf. His age, his sightless eyes and his battle scars and damaged teeth were plainly seen by all on board. He remained alongside for nearly an hour, and when, to see if he was in need of food, one of the crew threw overboard the remains of a June fish captured the day previous, the big fellow slowly made his way to it, smelled around, and opening the ponderous jaws, swallowed the fifty-pound piece of fish like a hungry man would an oyster. With a flirt of his aged tail, as if in thanks, he then disappeared, and a breeze coming up, the Dorothy lifted anchor and sailed away to her fishing grounds.

A VISIT TO PITCH LAKE.

PITCH LAKE, the strange expanse of asphalt which makes Trinidad the chief source of the world's supply, is described by a writer in the National Magazine as decidedly out of keeping with the other features of that beautiful island. This writer was one of a party of nine American girls who, arrayed in their oldest clothes, made a journey to the lake in spite of discouragements from those who had taken the trip before them.

"One can actually 'walk upon the waters' of this lake," writes the girl explorer. "Of course, it is somewhat sticky strolling, since the pitch is about the same consistency as tar. It comprises 104 acres in the southeastern part of Trinidad, and, located as it is on the Gulf of Paria, the pitch is shipped direct to foreign ports.

"Pitch Lake has an unusual history. It was discovered some 500 years ago, when Sir Walter Raleigh landed in La Brea Harbor and proceeded to demolish the capital of the island. Before sailing away on another filibustering expedition he repaired his ship with pitch taken from Pitch Lake.

"Pitch has been put to every possible use by the natives. The streets of the Port of Spain were lighted by torches of pitch until the people objected to the odor. Nothing, however, was done to develop the pitch and oil industry until recent years. This indifference to its value has been credited to the fact that the Trinidadians had so many other resources, such as their cocoa, coffee and sugar, from which to gain an abundant living, that they were content to leave Pitch Lake alone.

"Scientists have often discussed the formation of the lake. Kingsley describes it as a 'vegetable matter which would become peat and finally brown coal in a temperate climate, but which in the tropics becomes asphalt and oil, oozing up through the strata above it.'

"Many scientists have reached the conclusion that the pitch is an emulsion, 45 per cent. of which is bitumen, 25 per cent. clay and 30 per cent. water. The pressure of the gases from the oil deposits beneath push up the underlying pitch as fast as that above it is removed. So the pitch is in reality the unevaporated residue of millions of tons of petroleum which has for years oozed from the oil sand.

"Originally the asphalt industry was under English ownership, but the concert failed and it is now under American control and is worked by an American manager and American engineers and laborers. We were given a ride out onto the 'lake' in a small sightseeing car, and soon we reached the spot where the laborers were digging great lumps of pitch and tossing them into the cars.

"Seven hundred and fifty tons are excavated daily, and within a few days the hole from which it is taken fills again to a smooth surface. The lake has the appearance of an asphalt pavement with here and there pools of water. The pitch does not soil the hands but sticks forever to shoes, as we were destined to discover. About 125,000 tons of pitch are exported each year, the principal market being the United States. This may not always be true, since California is already producing a good substitute for asphalt."

GREATEST OCEAN DEPTH.

A DEPTH surpassing all previous records has been sounded by the German survey ship Planet forty nautical miles east of Northern Mindanao. The depth obtained was 9,780 meters, or 5,348 fathoms, and the sounding was obtained under conditions which permit the fullest confidence in its accuracy, while a determination of bottom temperature and a sample of the sea bottom at the spot were also secured.

The greatest depth previously known was that found by the American ship Nero near Guam in 1899, which was fixed at 5,268 fathoms. This has now been exceeded, therefore, by eighty fathoms.—Geographical Journal.

The Caribou Barrens of Newfoundland

Pictures and Text by the "Judge."

ON the 24th of August, 1911, I left Boston for Newfoundland. The dream of years was at last to be realized. The memory of my earliest wanderings afield as a lad in Colorado and in the far Northwest, while it was still the frontier and before the railroads came, dates not back to a time when the mention of caribou failed to bring before my mind more than that of any other of the great game animals save possibly only the bighorn sheep itself, a vision of snow and winds and wide open country stretching far away to the north. I used to hear the old hunters in Colorado and in Oregon speak of the caribou as of the grandest of all the deer, surpassing, when considered in all points, even the elk and the moose. Possibly this may have been because there were no caribou in Washington or Oregon, although there were at that time, I believe, some few in Northern Idaho around Kootenai Lake.

My desire to hunt these noble beasts had been whetted to a keen edge the last two years by reading before the blazing log fire in the country during the long winter evenings the delightful stories of the veteran Selous, and H. Hesketh Prichard, and above all that most charming of books, J. G. Millais' "Newfoundland and its Untrodden Ways."

So I set forth from Boston, and at McAdam Junction picked up my young Maine guide, Ralph Beach, who was all handsomely dressed up in a new set of store clothes in honor of his first trip out of the woods. We rolled away down through Nova Scotia and Cape Breton, past lovely farms and wide hay fields, over a splendid road bed, and in a surprisingly good train manned by courteous officials. This I have found to be generally characteristic of Canadian railways, and even the Pullman conductors and porters did not scorn us. At Sydney, the jumping-off place, a thin rain was falling, and smoke hung in a black pall over the steel works, afflicting the town with a depressing atmosphere. We were not sorry, therefore, to embark on the Ss. Invermore at evening for the short run across the Straits of Cabot to Port aux Basques, the westerly point of the Island of Newfoundland.

Fog and rain had all been left behind, and a lovely morning shone on Port aux Basques as we came in from the Straits. Many small sailing vessels were anchored in the port, and we thought that the sea-faring folk must make but little voyages in these short boats. Colonel Pike, the customs official at Port aux Basques, was most courteous and considerate, and before 9 o'clock we were all comfortably installed in the

STAG ON THE BARREN.

nice little narrow gauge train, having a first class breakfast as we rolled away into the island.

Up from the shore into the high land, crossing occasional small streams and now and then a river, we sped along, enjoying the landscape full of purple flowers and yellow goldenrod; also getting some raspberries now and then, when the train stopped for water. Then out upon the wide barrens, shining a radiant green under the blue sky.

Crossing Little River, the conductor declared that this place is headquarters for all the winds of heaven, which are gathered up in the south end of the Grand Range, standing off deep blue against the sky, and poured out through a narrow channel down to the sea. He said that the previous Tuesday the train had been held up in the cut back of this trestle for hours, waiting for the wind to go down enough so that she might safely cross. The stunted growth of trees and big deadenings spoke eloquently of the rough hand laid upon this island by the long dark winters.

At midnight we piled out at Glenwood and were met by our native guides, Bob Brooking and Lionel Hynes. The grub ordered from St. Johns' had all arrived in good order, and better still, the two canoes which had been especially constructed for this trip were in the freight house ready to take the water.

The next morning we overhauled everything and packed the stuff in the canoes and in Lionel's boat, which we took along to handle extra grub to be cached at the head of navigation against possible necessity. Glenwood, which

has seen better days, is a forlorn, wind-swept, narrow-chested little community that has not spent a dollar on house paint in fifteen years, and we were not a bit sorry to turn our backs upon it and make off up the Gander River.

Lionel and Bob both wore the native boots of half tanned caribou hide, waterproof to the knee, and with pucker strings at the top; and Lionel's particularly, which were new, were beautiful examples of native skill.

Ralph poled the big canoe up through the stiff rapids with his load rather than pack it around to load above the rapids as did Bob and Lionel. The Newfoundlander is a wonder with a head strap, but I think the boys from Maine "have a little something on them" when it comes to handling canoes in rough water, either upstream or down.

At 2 p. m. we finished making camp at Sandy Point, at the outlet of the lake, repacked all the grub in waterproof sacks, properly tagged, and had a fine night's sleep in the dry sand, which always makes a good bed.

Heading out into Gander Lake we encountered a high wind at King's Narrows, and soaked with spray and rain got across with difficulty to the lee shore. Gander Lake, with its high, clean shores, beaches of shale, and dark green hills rising away in the distance, seemed very much like Grand Lake, Maine.

As we beached the canoes to "bile the kettle" we found our first caribou track, that of a stag which had passed down along the beach during the early morning.

By evening we had reached the head of the

lake and camped again in the clean sand off the mouth of the Southwest Gander River. Our candle lantern, with tight bottom, proved to be very satisfactory, as did also the midget carbide lantern. Lionel and Bob took the reserve grub up-river two miles to cache it on a platform safe from bears and other prowlers. The bacon, however, they put into a canvas sack and hung it by a wire from the limb of a birch tree at some distance from the main cache, for it appears that while a bear will not make any great effort to get up on to a platform after condensed milk and flour, there is nothing he will not go through to get a supply of bacon.

Caribou tracks were numerous along the beach near camp. The clear musical whistle of yellowlegs was occasionally heard, and at evening a big flock of blackducks splashed down into the river just across from camp. Just at 7 P. M. the sun dropped out of sight behind Mount Peyton across the lake, firing it all up like a volcano.

Speaking of volcanos and lakes, Newfoundland must at one time have had a good deal to

every minute or two. The boys insisted that it was impossible to take a salmon with a rod at this time of year. "We never flies 'em now," says Lionel; "in June we flies 'em whatever."

Three days we traveled up the stream in this fashion, the canoes getting much broken up in spite of dredging operations conducted through the worst "rattles" by the boys with the fine, strong, straight-grained ash paddles that Ralph had split out for this special purpose before leaving home. Everywhere were clean, hard banks and beautiful groves of white birch, making delightful camp sites. Yellow-legged plover whistled up and down the stream, affording sport with the twelve-gauge, and occasionally a small flock of blackduck would come tearing by. One evening a big flock of yellowlegs, chased by a small hawk, turned right in to shore and alighted almost in the camp, appearing to prefer our society to that of the hawk, and we did not violate their confidence.

Finally encountering more and worse "rattles" and islands, we unburdened the canoes, cacheing about half the stuff; even then we could

eats salt pork I can feel it right there, a nourishin' of me and a nourishin' of me."

Lionel and Bob went down stream to bring up our cached stuff. By actual weight on my steelyards their packs weighed respectively eighty and sixty pounds; no light burden for men, both of whom were over fifty years of age, to carry through water and loose shifting gravel underfoot. It amazed me to see the burdens these men carried with their head and breast straps, the latter thrown across the breast outside the arms, keeping the upper arms close to the body. In addition to this Lionel would usually have an axe in one hand and his little tin tea kettle in the other.

Everything was dried out in the high wind, a cook shanty of birch bark built, a good table and bench set up under the fly of my brown hunting tent, and packs made up for the little hunting camp we determined to set up fifteen or twenty miles further up-stream.

While Bob and Ralph, with sixty-pound packs, were gone south to fix up the hunting camp, Lionel and I blazed a trail from a point

KING CARIBOU—A REMARKABLY FINE SPECIMEN.

AMAZING BURDENS CARRIED WITH HEAD AND BREAST STRAPS.

do with the former, for along the stream beds there are frequent evidences of lava flow; and as to lakes, the island is full of them, like Northern Maine. Says Lionel, who is an old sailor: "She's got a tight bottom, this old island; she holds water well."

Getting our reduced outfit snugly packed away in the two canoes, we turned our backs upon the lake and started into the hunting country. The water in the river was low. The men spent most of the day dragging the canoes over the "rattles," only occasionally getting a ride through a short "steady." I kept a mile ahead of them, with rifle and small pack, delighting in the thought that now the population of earth was behind me. Away upstream I found a little island in the midst of a wide "rattle" away from the flies, and sat for a long time reading "Toilers of the Sea" until the canoes arrived and startled, not twenty yards behind me, a caribou doe that had come out to drink. Away she went, plunging across the stream.

Occasionally in a pool a salmon would leap, and in a long "steady" where we stopped at noon I jointed up a rod and cast without success with wet flies, large and small, and dry flies, too, over three or four five-pounders that were leaping

proceed only three or four miles further. At this point there were scarcely two inches of water spread across the wide gravel bars. Everywhere along the beaches were footprints of caribou and occasionally the slot of a big stag.

The exertions of this up-stream pull affected Lionel, ordinarily tougher than a boiled owl, but now out of training, and he fell sick. I turned doctor and administered strong remedies where they would do the most good, and we decided to make our permanent camp. In a grove of great big birches, with a fine view up and down stream, right where a little cold spring brook had its outlet, we set up our tents. The river was divided at this point, a long green island thickly covered with low shrubs lying opposite camp. Back of the camp on the rise was plenty of good fire wood and fir balsam feathers for beds.

A heavy rain and wind at night were succeeded by clearing weather and a fine cool morning. "She's be a hard day," says Lionel, meaning a cold day, good for hard work. Lionel talks backward. Says "a big wind would stop us now" when he means that it would take a very big wind to stop us now. He prefers to hunt on hardtack and raw salt pork, saying: "When I

on the river two or three miles above camp up into the high open country easterly from the river, so that we might be able to get in there later in the month when the movement of caribou should start, and the stags begin to work up from the river bottoms out on to the high bogs.

The woods were very quiet. In Newfoundland there are no chipmunks or red squirrels to break the silence with their noisy chatter. The evening song of the white-throated sparrow, however, seemed very home-like. Hornets were very plentiful about the camp, crowding into the sugar at every chance; inoffensive, so far as we were concerned, but very quarrelsome among themselves. Their rough and tumble fights on our little table of hewn birch poles were funny to watch. Dozens of them buzzed around and crawled over my hands as I posted my note book, but without offense; and their music was much preferable to the irritating, high-pitched "zing" of the occasional big blue bottle fly. These were not the long, slim war-like black hornets, but thickset yellow-jacketed fellows, and Lionel says: "Him's not sting never less'n you's bother he; spos'n you's kill him's nest he's sting we." We left

(Continued on page 698.)

A Prairie Chicken Hunt

By W. V. NETHKEN (BUCKSKIN BILL)

A LIKELY PLACE.

THE fall of 1894 I was in Des Moines, Iowa. The circus season had just closed, and as the saying is among show people, I was "at liberty." On an invitation from several sportsmen friends, I went to a small town in Kossuth county, called West Bend, for a chicken hunt. After purchasing a case of 500 loaded shells, I boarded a train for West Bend. Several of the boys were at the train to meet me and discussed dogs, guns, horses, rigs, ammunition, doubles, singles and last, which I thought most important, birds. There were several different opinions expressed as to which route to take that would promise the best results, and still more forcible discussion as to the best dogs in that town, all of which seemed to be the best from the owner's point of view.

I had of course been in this town before, and there were two pointer dogs that I was slightly acquainted with that belonged to one of the gentlemen present. I had seen these dogs work once before on a short hunt and was very much pleased with them, but I took no part in the conversation. We lost no time making arrangements, and soon framed up a light covered spring wagon with a good team of horses and three bird dogs which included the two pointers I have just mentioned and a red setter, all of which looked to me like the real thing. It was agreed that four of us would make up the party and that we would start the next morning about 3 o'clock, so as to be on the stubble. When daylight came we had to drive about eight miles to start hunting. We loaded the dogs into the wagon, so as to have them fresh when we got on the stubble. The weather was not as cold that morning as usual for that section, it being the middle of October. It was a little cloudy, an ideal morning to hunt chickens.

There is one sure thing that prairie chickens and grouse certainly know the value of a field of standing corn for protection, and when flushed will get into the corn. Where there are stubble fields with corn nearby is a good place to look for chickens, and by this time the birds are well grown and strong flyers. I have frequently seen, when the season first opened, young coveys of chickens that had never been shot at. When the dog would come to a point, they would seemingly be either so tame or badly scared that you would almost have to kick them out to make them fly. But all this is changed after the birds get older and stronger and have been hunted.

They won't lie so close to the dog, and usually get up all at once and go like a brown streak.

Early in the morning and late in the evening the birds come out of the corn or other cover to feed on the stubble. Then is the best time to hunt them. Dew makes the scent stronger for the dogs. On this kind of ground the hunter will generally walk or drive near the corn along the stubble, sending his dogs all around in the edge of the corn and in front, and especially covering the stubble beyond him, where if the dogs should come to a point or flush any birds, they will usually fly for the corn. This makes the game fly across the hunter and gives him a couple of open shots before they can reach the corn.

When we arrived at the starting point it was agreed that it was necessary for the gentlemen owning the dogs to go with them. This left the other non-dog owner and myself to decide which of us would drive the team, but he

"WILL WE CALL THE OTHER FELLOWS?"

generously told me to go ahead for a while, as it was my first hunt of the season, and they wanted me to have a good day's sport. He also laughingly remarked that before night he expected everybody would want to drive. The gentleman with the pointer dogs and myself took one side of a large oat stubble near a corn field, and the other gentleman who, by the way, was a doctor, with his setter took the other side of the stubble. There was also a corn field on his side of the stubble. It was just good daylight and we hadn't gone one hundred yards, when the dogs came to a point in the edge of the corn. The gentleman with me remarked we were a little too early, and that the birds were just going on the stubble to feed, but that had nothing to do with the dogs pointing now. I got my repeater ready. He spoke to the dogs and up went the birds a little above the corn, but darted right down, scattering through the corn. When they raised above the corn I shot at one and killed two and didn't get another shot. My companion got one with his first barrel and missed a single through the corn with his second. We went after them as fast as we could. They didn't seem to fly far, but

how they did run! Off to my right about fifty yards went an old cock as hard as he could run. Leading him about a yard I got him all right. This brought the dogs running to me. I showed them the chicken. Then they went back to chasing the game around through the corn, trying to bring some of them to a point. Just then I heard the doctor shoot twice in rapid succession, then two more shots back of us on the stubble. I went to the edge of the corn. The doctor's dog had raised a large covey on his side of the stubble and one of the chickens had flown back near the wagon. The driver got him, although, as he explained, it took two shots to accomplish the feat. The doctor had made a nice double. We went on to the other end of the stubble but didn't start anything. When the team came up we drove half a mile to a wheat stubble, not a very large piece of ground. The doctor offered to drive awhile, so all three of us started with the dogs scattered in front.

We had nearly reached the other side of the field when the dogs came to a point on an open stubble. It was a grand sight to see three dogs at a point in the open. We had agreed if a single bird got up I, having a repeater, was to shoot first. Single birds got up one at a time before the main covey raised. I got one, then one of my companions made a double and the other had to be satisfied with a single. The birds flew across the open prairie, the doctor yelling, "Watch them down." He ordered everybody, dogs and all, to jump into the wagon. Away we went at a gallop. Arriving at the spot where the game went down, we jumped out. Dogs soon began trailing the running chickens. I stumbled over one and my companion next to me saved me one shell and probably two. The dogs after trailing and working about fifteen minutes came to a point. We moved up behind them and the chickens raised pretty well out. I got one with my first shot as did each of my partners, but the other bird got away. There were only four birds in this bunch. We all got into the wagon and drove about two miles to another stubble. The dogs already were on the stubble marking this field.

"THERE WAS A CORNFIELD ON THE SIDE OF THE STUBBLE."

LUNCH.

While it looked fine for chickens, it seemed to have none for us, so we drove about half a mile to some stacks of grain and the dogs began to make game as soon as they got out of the wagon. When the dogs went in, the birds went out from behind the stacks like a cyclone. Neither the doctor nor myself got a shot. Our friend got one and the covey flew a short distance to a corn field. The dogs went into the corn and we followed. I stayed along the outer edge of the corn and soon walked up a single bird, which I brought to the ground with my first shot. My companions were more successful and got three more. Then we drove about a mile to the largest stubble we had seen yet, and there was no corn near, allowing open shooting. Just as the dogs were getting out of the wagon a big white jack rabbit jumped up and one of the pointers, who had a weakness, went yelping after him. Then there was some fun. That old jack rabbit hopped off apparently on three legs. I thought he was crippled, but was informed that was his regular style of movement, and that the dog was stretching himself for all that he knew how. The jack just seemed to keep about fifty feet between him and the dog. His owner was fuming and fretting that he had thrashed that dog a dozen times for chasing jacks, and that he wouldn't be any account the rest of the day, but I was enjoying the race. The jack made a kind of circle for about half a mile, apparently keeping the same distance between him and the dog. The dog was too busy to yelp now, but just to get that rabbit seemed to be his sole object, for that time at least. I thought the dog was going to get him, but the doctor informed me that the jack hadn't let himself out yet, and sure enough just about then that jack seemed to have business somewhere else, and there looked to be like a gray, whitish streak across the open prairie, and the distance between him and the dog seemed to be about 200 yards in half a minute. The dog seemed to be taken by surprise and began to slow up, then stopped and after smelling around a little and looking in the direction the rabbit had gone, stood a couple of minutes as though thinking the matter over, then started to return to us, a disappointed and to be hoped a wisecracker dog. As his owner had said, he was all in, and we loaded him into the wagon for a rest. Taking the other dogs we went out on the big stubble. When near the middle of the field where the grass and stubble were unusually high,

the dogs began giving signs of game and soon came to a point. We wanted to be careful now, as chickens had not been as plentiful as we had anticipated. As they were going up in the air pretty well bunched, I killed two with my first shot and got a long single with my second. The doctor made a nice double and our other companion got one. He fully explained the matter by saying the other bird wasn't in the right place to stop the shot when he fired. The chickens scattered far and wide and we only got two more birds out of that covey. It was nearly noon, and getting very dry we thought of making for a grove a short distance away where there was an old house and a well where we could water our team. We had water in the wagon for the dogs. We thought it was about lunch time, and that grove looked good to us, so we drove over there. After we reached the well, and while one of our party was watching the horses and the doctor was arranging the lunch, the other gentleman said to me: "I see an old garden down below the house and no one has been living in this house for some time. We might start something down there." So we started just to be gone a few minutes. Jack, the dog that had given the jack rabbit such a race, had got over his humiliating experience, and when we started he jumped out of the wagon, and away he went toward the old garden, the other dogs following him. When he came near the edge of the garden he came to a point, the other dogs backing beautifully. I said to my partner: "Will we call the other fellows?" He answered, "No." That he was behind the score and here was his chance to get even. We went close up to the dog. I knew the birds must be close the way the dog acted. Also my companion said we were right on top of those birds, when out jumped another jack rabbit, but my friend ended his career with a load of No. 6 shot and saved Jack another strenuous effort. We picked up the jack and went to interview the lunch. Then all took a good smoke and a rest, in the meantime trying to find out who was the most eligible for the Ananias Club in telling of past hunting experiences.

We were then about twelve miles from town, but there was a lot of good hunting between us and West Bend. We thought in or near the corn fields the best place for that time of day. When we came to the corn, three of us scattered out, so we could just see each other, and with the dogs proceeded to comb that corn field, and we soon flushed a covey without the dogs knowing anything about it until the birds flew. None of us got a shot, as they raised too far in front of us. They didn't fly far, so we got the dogs after them. The doctor and my other partner each got a chicken, but I didn't get a shot. We got the dogs out of the corn, and after driving some distance came to a wheat stubble, an ideal spot for chickens, but a little early in the afternoon to find them feeding. So two of us took one side and the doctor the other. We kept well out in the corn, letting the dogs go out on the stubble in the hope of finding the chickens coming to feed, but they were still in the corn, and I soon saw a large covey running from me too far away to shoot.

The dogs came to a point right at the edge of the corn. Myself and partner moved up behind the dogs. That of course brought both us and the dogs between the birch and the corn.

When they went up my friend killed two with his first barrel and missed with his second, while I made the neatest double I had made all day. The covey nearly all flew across the stubble for the corn on the other side, but the doctor was there and got two. If that doctor could handle medicine like he could handle that shotgun, I told him I would like to have him for my permanent physician. We did not follow the chickens into the corn after the doctor shot, as it was getting along in the evening. We jumped into the wagon and drove quite a distance to a fine looking place on both sides of us. We decided to tie up the team and finish the day's sport in the immediate vicinity, as it certainly looked like good ground, although I suggested that we had a reasonable bag if we didn't want to be game hogs. Still we all seemed to want just that one more shot, and that is all we got.

We saw a pond a short distance from the corn with a small patch of stubble near by. It proved to be the right place. The dogs soon came to a point. We all lined up. I was joking the doctor about his double this time, but the minute the birds raised such a fusillade was never heard before. After the roar of battle cleared away, there was just three birds to be found. The gentleman that had been driving claimed two of them. This didn't leave many doubles for the rest of the crowd, but it made something to argue about on the way to town, although the doctor quietly informed me that he was positive he killed two of them. I replied with all the dignity I could command that as a matter of course I killed two myself. "Well," said the doctor, "that being the case the other man just shot two large-sized holes in the atmosphere." We loaded ourselves, dogs, game and birds into the wagon and pulled for town. At a good trot with a good team and as fine a bunch of chickens as anyone would want to see, and as jolly a crowd of sportsmen as anyone could want to meet, who shall say it was not a great day's sport.

Hunting Sable Prohibited.

ACCORDING to the law of June 22, 1912, the hunting of sable will be prohibited in Asiatic Russia from Feb. 14, 1913, to Oct. 28, 1916. It also is prohibited to sell, buy, transport, or export sable furs not stamped with a special stamp certifying that they were obtained before Feb. 14, 1913.

"BETWEEN THE BIRCH AND CORN."

The Brentwood Papers

I.—The Glory of Winter

By ROBERT PAGE LINCOLN

WE stood one winter evening high on a snow-bemantled hill and gazed down into the valley where the last glamorous rays of the sunset were trailing their nervous fingers to and fro as if to find a resting place on the icy breast of the earth. All was still; so very still and awe-inspiring that we, mere human beings of flesh and blood, seemed wholly out-of-place in this kingdom of soundless waste and tranquillity. The sky in the west had undergone an ethereal transformation, for gradually it became bathed in showers of gold of the purest calm. Great banks of lavender that mellowed gradually away into bronze amid fantastic shapes of all sorts appeared, until one wondered with bated breath what next would enhance the scene portrayed on the face of the waning day.

The brightness rested on our features; we seemed ready to receive a divine blessing, and we felt with that keen anticipation of the true nature lover brought nearer the magic throne of the beautiful queen. The stillness was intense, save for now and then afar off a farm dog barked, or children's voices, silvery-pitched, winged across the frosted fields, or the sighing of the breeze through the reeds at the roadside. But even these partook of the universal quietude, and even to name them were to name a soundless sound, so drowsy with sleep did they seem. The sun, a disk of silent flame, drooped slowly down; in fact, it seemed to hang suspended over the horizon, and then crept down into the mothering arms of the night, and the clouds closed softly over the form. The curtain unfurled and was daintily drawn; the drama of the day was at a close, and the time had come to leave, with that clinging memory stamped irrevocably on the mind. The colors faded and twilight dimmed to silent darkness. The stars, like so many billion tapers, were trimmed, and each in its place shed forth a wane light upon the world below. In the valley the cottage lamps suddenly streamed yellow through the windows and everything seemed safe and contented from the invigorating cold without. I do not think man can express the beauty, the awful sublime beauty of winter, the terrible tenacity of his mood, the unrelenting fierceness of his vow to wreak havoc on the spoils of summer, the mildness and the coldness and the change from anger to beautiful serenity.

It is impossible for us to know all there is in this season or any season, and we cannot express it in mere words, but perhaps feel in some distant mystic way. Where are the poets of the winter? They are most chance sitting by some cheerful hearth stone punning away or stealing the eternal bubbles off of a bumper of ale, and disclaiming on the delights, when they can trace the wraiths of the summer fields in the darting snakes of flame in the dying embers; when they once more are in the meadow grasses that are swaying now up and now down, billowing as the wind creeps across the scene; when they once more hear the birds calling from the

silence of the woods; when the flowers nod and smile up at the mellow heaven's blue and all is warm and sweet on the breast of nature. But of the awful grandeur outside they find no voice save the mournful inspiration wrought by the wind howling around the gables. Yet what vast store of good I have derived from my cross country walks in the rural districts when the snow has been so deep that I have floundered

SILENT SENTINELS OF WINTER.

and stumbled, and when the cold has preyed upon me with terrible rigor.

There is some unknown, yet joyful inspiration in it all. The blood throbs warmly through the veins and the body feels at its fittest. There is always something in winter that catches my fancy. Perhaps it is the storm-bound birds swaying on the dead weeds in the fields, or the moan in the branches of an oak or the overcast sky foretelling the oncoming of another wealth of that matchless ermine; perhaps it is the feathery flakes just beginning to sift through the barren boughs, now lifted and now eddying downward as though reluctant to so soon give

up their joyous sailing through the icy atmosphere. That fascination I always feel. Especially is this true when standing in a solitary wood hemmed in by the giants of nature. Although alone in human shape, I feel the companionship of the great rugged trees most keenly, and every wind that sways their branches has meaning to me who is so closely a lover of nature.

It seems that I have what one would call a second mind or a conscience that is quite apart from the common place. This mind harbors all that is poetic and full of feeling; this mind is the dwelling place of every fancy, and from this I am able to study nature most readily and feel that which others are seemingly so lacking in. The changing chords in the breeze—now a lilting cadence in the summer grasses and now a ghost of sorrow in the bleaken winter woods—sound with an indefinite thrill the inmost wonder of my soul. This being a poet has its wonderful side and its gloomy side, and though somehow I feel wrapt up in both, the wonderful, the awful serenity of life and nature is a powerful factor in my dual existence, and has proven the conquering victor. The depth of the winter wood is a solemn place. The great trees with their various sounds, the snow stretching dimly shadowed far away, criss-crossed by the squirrel trails and those of the birds; the mystery and the silence—it is all the make-up of a perfect peace, rigid and cold the day may be, and sinister the mood of the Ice King. A cloudy day just before the coming of the snow storm, then it is most pleasant to enter the big wood, and selecting some sheltered place between some towering trees, gather together a goodly supply of firewood and build a fire. See, here is a fine place under this wealth of dead grape vines which, used as a roof, will be perfectly in keeping with my notion. Clear away a spot and roll that dead tree in for the back log and build your fire on this side. You can now unpocket the birch bark we gathered over at the pond, and with that for the basis heap on a few twigs till the little snake of flame has attained due proportion. Then add fuel until all is warm and bright and clear. When a possible waning has been safeguarded against, one may lean back contented, and over a freshly replenished pipe drowse away in reminiscence. And this is sure to come. There is always that spell of tranquil forgetfulness present when, after a long tramp through the woods, one ends up by a cheery fire. The woods have grown deeper in gloom; a veil of mist seems to be hovering over the landscape, and the foreboding feel is in the air. The stillness of the solitudes is certain. There is no sound even of the wind, for it has died down, and but the partial turn of a leaf wakens a sense of there being life in the atmosphere. The crackle of the falling embers and the thin trail of smoke arising, the sound of your voices; that is all. But soon the snowflakes appear in the air, eddying downward through the barren branches, and in ten minutes the vision is ob-

scured by the star-like conformation that we have so often marveled at. Thicker and thicker they appear, but what need to fear this calm onslaught since there is wood at hand, and evening and its shadows are yet two hours off. These are happy hours fruitful of boyhood memories when likewise the trail led to the rural woods on like sojourns. And then there is the homeward walk. How pleasing it is; the blood stirring in the veins, and with a song on the lips there is everything to make the hour a cheer.

The charm of winter is strikingly felt by the true lover of nature. He recognizes in this season not so much the direful calamity that has befallen the land, but rather the fearful beauty that it affords. In yonder pastures, once so green and fresh with the herbage of June, are now tucked down to sleep under the sheltering snow. One experiences a sense of wonderment at it all, and the realization that summer has been and will come again meets with sweetly fleeting thought. In six months' time I will stand here on the same spot, and where once was snow, there will be plots of fresh outlaid emerald—the dingle, dongle, dangle of the cow bells will sound mellow once more on the cross country breezes, and warmth will be in the air. But now the grass is asleep and the flowers are dreaming, and the birds are far away in the balmy land of the South, waiting the turn in the season's wheel to call them to their nesting grounds in the North. To the man with a penchant for studying nature or rambling around in the fields and woods with a gun perhaps, is there ample store to draw from. The tattered corn shocks that some negligent farmer abandoned to the clutch of the winter, form an interesting place for the tab-footed kindred—they of the powder puff tails and the piratical tendencies to congregate at. Here on moonlit nights they assemble, and judging from the collection of tracks in the field witnessed in the morning, what enjoyment they must have realized. We will watch the two men approaching from the outskirts of yonder wood. Both are clad in the paraphernalia of the hunter and carry double barrel shotguns. There is felt that sense of anticipation when the destination is reached, for what will those corn shocks yield? One hunter walks through the center of the field, and having reached a likely spot pauses, with gun ready and eyes on the alert. There is a certain degree of sureness about him. One knows at a glance that he is an old-timer with the use of a gun. His companion approaches a shock, and circling to the further side commences a series of jabbing and stamping into the body of the fodder destined to drive out the rabbit or everything else. But there is no result. Another shock and still no result. But the third shock by a lucky stroke harbors that little thief who thinks himself resting securely away from the harms of the world. But this thought is quickly dispelled when that intruding human foot comes in contact with his quivering body. A rustle and stir and he is out.

The man with the gun catches the warning shout of his companion and the shotgun is swung into position. The startled rabbit speeds down the row, but still the man with the gun is mute and one wonders not a little if the little fellow gets out of range. The rabbit turns suddenly in a zig-zag to the right and in a twink-

ling there is a report and the depredator turns end over end and lies very still and unseen in the snow behind a ridge. Got him! A clean hit! Sneer at this ye who have trod the depths of the unbroken wilderness in the haunt of moose and bear; who have roamed where the wild kindred stir in every lair, and yet there is the same intense delight in either case. One being mild and the other rigid and fruitful of mightier sensations, but the satisfaction at the end of the chase is relatively the same.

What a beautiful spot is the ice-bound wintry brook! After a night of snowfall, pleasing it is to look upon this merry old beggar wreathed all over with ermine, here and there the black waters showing through the frosty mantle with a sinister glance at the day yet a ripple and wash that seems to be the laughter of a thousand nymphs. Was the brook ever warm with

"THE DEPTH OF THE WINTER WOOD."

the goodness of the summer? Were its shores ever lined with the drooping flowers that have so tremblingly kissed the waves? What though the grip of the winter be sordid, the purl of the waters against the jagged ice were never sweeter. Come with me to this nook, led by a sound that the ear is quick to catch and classify. Bend low. Now rises for a space the clear and definite notes tinkling up the scale with a merry abandon, and now sinking to a minor note at the lowering of the water. And so it keeps on all day long, rising and falling and laughing with never a thought of troubled worry; always gay and light-spirited; always young and never fearing the break of day.

Tracks in the snow. Printed on the clear expanse of royal are the tell-tale trails weaving in and out of the thickets. Here you will note a mink coming up the brook, stopped to investigate by the bank and found a dead chicken frozen in the ice. He had evidently spent the night killing frogs for sport, and his appetite was not of the best, since but a nip here and there demonstrated his indifferent hunger. One will notice at the edges of the ice along the open spots bodies of frogs in various stages of devastation; here is one nipped through the head still crawling weakly along the snow, particularly

inert. Here are others chewed up beyond shape. Black Mink had best guard his evil doings, for that lone man trail winding up the brook looks mighty suspicious. Note how it leads up to that bank. Already perhaps that little life is plotted against, and the coming night at some wayward den an unsuspecting foot may touch the pan of a wicked trap, and the end of life's trail will have been reached for Black Mink.

What a realm of magnificent beauty meets our eyes after an all night fall of snow! The woods will then seem like a scene taken from fairyland, for surely it cannot all be true—all this splendor and lavish display. The branches of the trees that seemed so barren yesterday are now ridged over with a wealth of fluffy whiteness that seems uncertainly poised in position. A breeze wafts by and though the tree arms stir the clinging snow refuses to let go its hold, still flirting a wink at the overcast sky. And all is so wonderfully silent. It is a drowsy silence replete with goodly thought; quite different from that of the snappy days in the woods. A shrill-voiced jay suddenly startles the sense and darts down to a perch nearby, flicking away the downy snow at contact with the limb. On such days the nature lover fares him forth with a heart glad within him, and the lady of moods greets him with welcome arms. Top boots and the blood-stained hunting pants and that old shirt; what more could one ask to wear on such a day, neither too balmy nor too cold, but seasonable? Wood after wood is traversed and sensation is piled up and thought is stored away. Ah! it is good to live. To stand on a rise and fill the lungs deep with the breath of the west wind, and on the wings of fancy hover over all, absorbing as it were every beauty within sight. And then at night, after a good hearty meal, to sit down at the fireside and over the old brier live again the experiences of the day out in the snow-clad hills.

Wyoming Game Conditions.

LANDER, Wyo., Nov. 13.—*Editor Forest and Stream:* Your letter of Oct. 8 found awaiting me on my return to the office after several weeks' absence, and it gives me great pleasure to give you the following information.

The game in the State of Wyoming, which includes elk and deer and protected game which is moose and antelope and also mountain sheep, were never in better condition than they are now. The most abundant game animals of the State are the elk, which are lawfully killed in the western part of the State which includes Uinta, Fremont and that portion of Big Horn and Park counties west of the Big Horn River. An estimate of elk in the State is 30,000 head, all of which, with the exception of a few, are in the above described sections. The State of Wyoming has approximately 500 head of moose, which are protected until the open season on large game in 1915. Antelope are scarce within the State, but from all reports are gradually on the increase. They are protected until open season on moose as above. Deer are abundant in all the mountains of the State. In the Sundance country, which is the northeastern section of the State, there are two kinds—the black and whitetail deer. All other sections have black-tail deer.

D. F. HUDSON,
State Game Warden.

Seven Hundred Miles by Canoe

By J. FRANK NEWELL

A 700-MILE trip, which we took from Buffalo to Cincinnati via the Allegheny and Ohio rivers, is not so tame as one might think, even though it is through civilized and thickly populated country. However, we found some portions of it which were evidently as rough and uncivilized as the days when the Indians plied the rivers in their "birch-barks."

Originally, we intended to go through to the Gulf, but as cold weather set in as we reached Cincinnati we abandoned the trip.

Four were to compose the original party and go in two canoes, but as one of the fellows decided that the trip was too risky to be undertaken by canoe, he dropped out. The other three were anxious to go, and as we could not find a fourth one, we three decided to take a chance in one canoe.

For information concerning the trip we found most reliable information given by the people along the route. We did not find river maps of much use, although in the case of a

camp about forty miles below Salamanca, after a fine day's run. Two of us hiked over to a nearby farmhouse for fresh milk and a bundle of straw to sleep on, as we had no folding cots or other beds. The straw spread on the ground with the blankets on top made a fine bed.

We arrived at Warren at noon next day, stopped and stocked up our larder. A few miles below we found a half-mile of rapids, which we shot with great pleasure. That night we found a pretty camp site on an island with the tree-covered mountains looming up on all sides of us.

Saturday we passed the towns of Tidioute and Tionesta. At night we camped on an old camping place near Walnut Pond.

Sunday was a fine day and we stayed in camp until noon, making repairs and airing out our outfit.

We were now in the midst of the oil country, oil wells and refineries on every side of us and the hills studded with the oil derricks.

groceries. About four o'clock it began to rain quite hard, so we pulled ashore and donned our oilskins, and as it continued to rain, we decided to look for a place to pitch our tent. As we neared the shore we ran upon a submerged log and stuck there. In trying to push off with the paddles against a rock they slipped and the side of the canoe went under, causing it to ship about a barrel of water, soaking everything we had. We saw a barn a short distance away, so we immediately started out to see if we could get permission to stay in it, and the "old mountaineer" who owned it bade us welcome. We heaved the canoe ashore, took our blankets, which, fortunately, did not get wet, as we had them tied up in waterproof canvas, and "beat it for the hay." This place was between Upper and Lower Hillsville.

Wednesday the going was so good that we paddled eight and one-half hours without stopping; we ate lunch while drifting along. That day's run was through the coal and gas coun-

DISH WASHING NEAR WHEELING, W. VA.

larger boat they would be a necessity. They can, however, be procured from the U. S. Geodetic Survey, Washington, D. C., or along the Ohio most any wharf-boat can supply maps and other river information.

We shipped our canoe and duffle from Olcott Beach, N. Y., to Salamanca, and on Oct. 5, 1911, took the first stroke of our long journey. The canoe was an eighteen-footer, with extra long decks and keel. We attached lazy-backs to the seats; they saved us many a stiff neck and back ache.

Our duffle outfit consisted of one 7x9 rope ridge tent, one pair blankets apiece, one special compact cooking outfit, oilskins, two-quart canvas water bottle, two duffle bags containing extra clothes, toilet articles, camera, hunting knives, etc. We also carried one repeating No. 12 shotgun, camp ax, coil of rope, folding lantern and a can of marine glue. Our grub-box was a large telescope case, handy and compact. Large baking-powder cans fitted into the case for butter, lard, matches, etc. Potatoes, onions and canned goods were carried in a canvas bag stowed under deck. With the three of us and the outfit, the canoe was carrying about 650 pounds, but as the water was high and swift, we experienced no difficulty. We made our first

The odor of petroleum filled the air. Even the river was covered with a coating of oil. After noon we paddled as far as Oil City, stopped, looked over the town, then started out again, camping a short distance from the city. The river seemed to be getting swifter and camping places harder to find after we left the oil section. We were getting into wilder and thinly populated country. Occasionally we would hear the clank of a cow bell attached to some bovine wanderer grazing on the hills, then we would begin to look for a farmhouse, which we usually found hidden in a hollow behind the trees. The scenery was beautiful through this section. High, tree-covered mountains rose directly from the water's edge.

Owing to the swiftness of the river, we made excellent time, averaging about thirty-five miles in eight to nine hours' paddling. Here is a suggestion for keeping posted on the distance traveled each day along the Allegheny: Get a Pennsylvania R. R. timetable, for the road parallels the river nearly its entire length. By this method distance can be figured almost to a fraction of a mile. This also applies to the Ohio River.

Tuesday, at 11:30 o'clock, we arrived at Emlenton, where we stopped and stocked with

try. We passed many large mines and gas wells.

At Mosgrove we met the first big paddle-wheel steamer. As we had been cautioned to beware of those "paddle-wheelers," we kept our distance. She was not kicking up much of a wash, however. Good landing places through this section were scarce; for miles we saw nothing but quicksand shores. Near Kelly we found a fine camp site on a high point at a big bend in the river.

Thursday morning we started out, hoping to complete the first leg of our journey by reaching Pittsburgh. We locked through the first dam about 1:30 P. M., encountering rough water on leaving the lock. We were very busy for a few moments keeping right side up. Locking through the next one, nine miles below, was still more thrilling, as coupled with the rush of water out of the lock, was the wash of an upward bound steamer making for the lock. However, we succeeded in passing it in safety. We arrived at Pittsburgh at 5:30 P. M. and tied up at a boat house on Duquesne Way. The distance from Salamanca, approximately 220 miles, we made in about forty-seven hours of paddling.

Friday and Saturday we spent sight-seeing

in Pittsburgh. Sunday we lightened up our luggage by sending back home everything not absolutely necessary.

We left the city at 4 P. M. Saturday, with quite a send off by a crowd which had gathered to bid us bon voyage as we started out on the second leg of our trip down the Ohio. We encountered some rough water at the junction of the three rivers. We camped about three miles below Pittsburgh on an island, a sort of summer resort, across from the penitentiary.

Sunday morning we were visited by an old river-man who had boated it from Pittsburgh to New Orleans. He gave us a lot of information concerning the rivers.

We left camp at 1:15 P. M. and started out on our first run down the Ohio. At Legionville we met a theatre boat, giving a performance. She is fitted up inside like a regular theatre and plies up and down the Ohio giving shows at the small towns.

We passed through five dams going to Rochester, but as the wickets are all down, we sailed over without stopping to go through the locks. These dams are all made of iron in sections, called wickets, about four feet wide, hinged at the bottom. At high water they are let down on the bottom of the river, thus allowing the boats to pass over. We arrived at Rochester at 5:30 P. M. and camped just below the city, after making twenty-two miles in four and one-quarter hours.

Monday morning, as the fog was heavy, we did not start until about 11 A. M. At 3 P. M. we passed State Island where Pennsylvania, Ohio and West Virginia come together. At night we made our first camp in Ohio, a few miles below East Liverpool, at Dam No. 8, opposite Newell, W. Va.

Tuesday morning, the 17th, it rained hard and kept up all day, so we stayed in camp. We tried our luck fishing, but did not get a bite.

The next morning we found the river a raging torrent from the heavy rain of the day before. It had risen to within a few feet of our tent door, where the day previous it was about fifty feet away, and our canoe was nowhere to be seen, although the night before it lay but a few feet from the tent. We immediately started down the river in search of it. We inquired of a woman on a cabin-boat, and she told us she had seen it floating by early that morning. At Wellsville the ferryman had captured the runaway. We piled in and paddled the four miles back to camp, loaded in our effects, and proceeded on our way. According to the Government gauge at Dam No. 8, the river had risen four feet over night. The total rise was 9.9 feet. We passed Steubenville, O., and Dam No. 9, and that night we made our first camp in West Virginia.

Thursday morning the canoe was again afloat, although the night before we pulled it back quite a ways from the waters' edge. The river was full of drift wood, and it kept us dodging to evade the numerous logs, planks and trees. We met many "river rats" in skiffs searching the drift for something of value. They pick up everything that might bring a few cents. Occasionally they pick up some valuable stuff during high water.

We arrived at Wheeling at noon and there spent a couple of hours. Just below Wheeling

(Continued on page 699.)

The Hunting Season's Toll.

ALBANY, N. Y., Nov. 18.—*Editor Forest and Stream:* Some years ago, while secretary of the old Forest, Fish and Game Commission, I kept careful track of and published the list of hunting accidents each year. My object was to arouse a sentiment against carelessness on the part of all those who go afield with a gun, and apparently there was considerable interest taken in this and other States in the compilation. The Conservation Commission that succeeded the old Forest Commission does not think the collection of such statistics any part of its duties, but a wide awake local newspaper, the Knickerbocker Press, has set its Saranac Lake correspondent at work on the compilation, and he reports that this season when deer hunting ended, the record was eight hunters killed and twenty-four wounded. I have made careful inquiry about these figures, and am advised that they are correct in the opinion of practical woodsmen. J. D. WHISH.

[Special to The Knickerbocker Press.]

SARANAC LAKE, N. Y., Nov. 16.—Eight persons killed and twenty-four wounded is the roster of victims of the hunting campaign just closed in the State of New York. The death list exceeds that of 1911, when five were killed; 1910, when six were killed; 1909, when a half dozen were sacrificed; 1908, when only one was killed, and equals 1907, which up till this year was the record year of deaths by hunting accidents. The number of injured far exceeds that of any previous year of which there is a full record.

These long lists of dead and injured occur in spite of legislation attempted by the State last winter, the intent of which was to reduce the number of accidents in the woods. Well may the citizens of the State pause and inquire: "What is the matter?"

Men in the woods know; few others do. The cause of all killings and maimings of human beings on the hunt is in the last analysis, carelessness. And the Legislature of the State of New York cannot make laws legislate against carelessness. Every accident of this and every other hunting season may be laid at the door of this single cause, subdivided into a number of other causes which as a matter of fact are effects of the one great cause. Shooting at objects indistinctly seen, carrying cocked guns in thick undersbrush, too familiar handling of loaded weapons, "didn't know it was loaded," and other common direct causes are all traceable to the same origin. Intoxication is another cause—the man who goes into the woods with a gun and with liquor is either a fool or a criminal.

Our Dear Old Friend.

CINCINNATI, Ohio, Nov. 21.—*Editor Forest and Stream:* Inclosed find my annual contribution. I used to be an occasional correspondent. Have read FOREST AND STREAM since its inception and expect to while I live. Am now in my seventy-fifth year and take but one outing each year. E. S. WHITAKER.

Killing Does.

GLOVERSVILLE, N. Y., Nov. 16.—The deer season in New York State closed yesterday. On the whole it was a good season for the hunters who were out in Fulton and Hamilton counties. During the entire week parties brought in large bucks and larger stories of what might have been had not their guns missed fire or had they been better shots. Several automobile parties arrived Wednesday from the Ostrander camp at Griffin. They averaged one buck to every two men, which is considered unusually good luck.

This year saw the working of the new deer laws, and according to hunters from the cities, it was satisfactory. Guides, farmers and backwoodsmen say it proved a farce. One guide, who arrived in this city Wednesday, said that in his opinion there were no less than 100 does lying in the woods dead within twenty miles of Northville.

He asserted that no guide or backwoodsman was going to let a deer get away just because he was unable to tell whether it was a buck or a doe, and that the rule was to shoot first and look afterward. If the animal proved to be a buck, the hunter dressed it out and summoned aid to get it back to camp. If it proved to be a doe, he let it remain in the woods to rot, or as has been reported unofficially in several cases, he took it home after first dressing it so that no one could tell whether it was a doe or a buck.

Several local hunters have returned to this city with stories along the same lines. They report that does are not infrequently seen lying dead in the woods. In several instances, they say, parts of the animals have been cut off, evidently showing that the hunter saved part of the meat.

Dogging deer had been reported a little less frequently this year than previously, although the practice still continues in the more remote sections back of Northville. It is asserted that the buck law has in a measure done away with the hounding of deer, as the hunters found that their dogs often put in a whole day running a doe which could not be brought out even if they should get it.

Another illegal method of taking deer, jacking them by night from a boat, has been indulged in less than ever this year because of the new laws. It is contended that although unpopular, the laws have resulted in great protection to the deer in localities where a hunter would not dare to take a chance on shooting a doe.

Another favorable sign this year is the rare occurrence in this neighborhood of a hunter being shot for a deer. Thus far only three have been injured in this way and they not seriously. In other years the number of hunters taken for deer have been large, and the fatalities shocking. Those who are praising the new laws claim that the buck law is responsible for this and point out that if the hunter has to see horns on a deer before he shoots, he will not be liable to take a crack at a human being.

With the deer season closed, hunters will turn their attention to rabbit and fox hunting.

Rabbits, or varying hares, as the big white fellows are called, are very plentiful throughout the swamps of the Adirondacks. There is no law against hunting them with a dog provided it is not on land known to be inhabited by deer.

John Dence, of Temple street, returned Thursday evening from a hunting trip to Gus Avery's camp at Arietta, bringing with him a 180-pound buck. He said he had seen no less than five dead does rotting in the woods. One of them had been partly eaten by an animal which a guide told him was a bear. J. G. W.

Woodcock Migration.

BRATTLEBORO, Vt., Nov. 13.—*Editor Forest and Stream:* I would like the opinion of the gunners who read FOREST AND STREAM regarding the time woodcock migrate. There seems to be a great variety of opinion. Some claim there are two flights; an early and a late one. A friend in a letter speaks of flight woodcock as a "different breed of cats from a native." When one brings in a bag of birds, how often it is that someone picks out all the large and full plumaged birds as flight birds.

I have hunted woodcock for forty years and have spent much time in the closed season roaming about with the old pointer, prospecting, and I must say, I do not agree with many of our gunners. My opinion is that the woodcock is governed by conditions in his flight. If the weather is warm and the feeding ground wet, the woodcock stays on contented, but in case the particular swamp he is feeding in becomes dry, then he is forced to look for a new feeding ground, and his flight begins, naturally to the south, and I cannot see why a woodcock one mile on his way south isn't a flight bird to that extent as much as one that has come one hundred. In fact, I believe the food supply governs the time of the flight. Take this season: Our swamps were very dry here in Southern Vermont in August and September, and as early as Sept. 28 I found birds very plenty in strictly flight covers, and I fully believe there were more woodcock in the covers on that date than at any time this season. I have never believed in a late season for gunning. If I had my way I would open the season Sept. 1 and close Nov. 1 in all States like Maine, New Hampshire and Vermont.

G. F. BARBER.

The Baltimore Coon Hunting Club.

BALTIMORE, Md., Nov. 21.—*Editor Forest and Stream:* The organization of a raccoon hunting club has met with great success in this city. Weekly excursions into the immediate country have been greatly enjoyed by its members.

This is the first organization of its kind in the monumental city. The club boasts of one of the finest packs of hounds in the State, and to date has captured ten raccoons and thirty opossums. The members and officers are: Allen Jackson, President; Hugh Bell, Vice-President; Alfred Mobra, Treasurer; Wm. Lauterbach, Advertising Secretary; Harry A. Jackson, Wm. Dunnington, Wm. Gorsuch, M. Smith, S. Martin and Josh Wells (colored) climber.

THOMAS R. LAUTERBACH, Sec'y.

FOREST AND STREAM is a specially invited guest in the homes of many sportsmen each week.

High Cost of License.

NEW YORK CITY, Nov. 16.—*Editor Forest and Stream:* I read in your issue of Nov. 16 what you say in reference to the high cost of license, and I think you are correct in your idea, except that I must admit that in some localities it certainly robs some good Americans and sportsmen of the privilege of hunting, because they cannot afford to pay the high price, and in this case it certainly works hardship and in some cases makes poachers of men who will hunt in spite of the license, which would not happen if within their reach. Another thing I think you ought to take up in your valuable paper for the benefit of all sportsmen is this: A man hunting outside of New York State should certainly be allowed to bring his limit of game into the State, no matter what the law here, as long as a man can prove that it was legally taken, and this he can do and must do by presenting his license and tags before any express agent will take them for shipment. Now, for instance, I just returned from a hunt in Maine with several friends, and we were not able to bring out any does or small bucks on account of the law in New York State, except if we purchased a special license for \$5 to prove it was legally taken. Now, why should \$5 prove anything more than hiring a licensed guide, paying \$15 for a license, being identified by express agent before accepting our game? I think this the worst law I ever heard of and certainly does not encourage sportsmen to hunt, but discourages the decent, healthful sport. Of course, if a man is caught doing anything illegal, I am certainly in favor of punishing him to the full extent of the law, because I am a great believer in the correct protection of game and sensible laws.

There are quite a few people I know of being fined for bringing in does who didn't know anything about the interference of the New York State law. It is the same with the New York State law prohibiting the killing of does and small bucks. This law hasn't helped in the least to protect deer. On the contrary it has been the means of, I should judge by reports, killing just as many does and spike bucks which were left in the woods to rot. If deer are and must be protected in New York State, it will take a different and more stringent law to do it. I would like as a constant reader of your valuable paper to hear your idea on this matter, as it will be interesting to others.

FRED. SAUTER.

"Warning" Signs.

CAPITOLA, Cal., Nov. 7.—*Editor Forest and Stream:* I note with great interest the cut representing the warning sign pasted by J. A. Vequesney, Forest, Game and Fish Warden of the State of West Virginia, which appears on page 561 of the Nov. 2, 1912, issue of FOREST AND STREAM. Thinking you may be interested I send you under separate cover copies of such warning signs I post as county fish, game and fire warden of Santa Cruz county, California. These cloth signs I post on trees and in conspicuous places while I am patrolling the fields and streams. Inclosed herewith you will find copies of leaflets, one of which I inclose with each brush or rubbish burning permit I issue. I find by posting these warning signs and distributing copies of the leaflets the people both

old and young become familiar with the fish, game and forestry laws, and in consequence these laws are understood, their necessity appreciated, and that the laws are better observed.

WALTER R. WELCH,
Fish, Game and Fire Warden.

One of the leaflets is ordinance 240, relating to brush burning and forest fires. Its cover reads as follows. It is a capital idea:

Do your best to prevent forest fires by strictly observing the State forestry laws.

Cut brush, slashings and rubbish allowed to remain on the ground during the summer months are a dangerous forest fire hazard.

Timber burned up pays no wages, and means high prices for lumber and wood.

Forests burned means drouth and floods.

Forest protected means water supply, fish and game conserved.

Moral.—Protect the forests, fish and game by removing forest fire hazards between Nov. 15 and April 15, as required by the within ordinance.

The Game Breeders' Association.

THE following resolution was adopted by the Game Breeders' Association on Tuesday, Nov. 12:

Whereas, one of our members was arrested for taking two pheasants to his home in New Jersey, said pheasants having been bred by the Game Breeders' Association and legally shot in New York,

Be it Resolved, that we deplore this occurrence and that we call this to the attention of the game commissioner of New Jersey with the request that the law be amended so as to permit game breeders to take their game home when properly identified, and that a copy of this resolution be sent to the American Game Protective and Propagation Association and the Sporting Press.

Missouri Game Notes.

WARRENSBURG, Mo., Nov. 13.—*Editor Forest and Stream:* The scarcity of game in this locality is the topic of much comment by hunters. Last winter proved very disastrous to the bobwhite, many coveys being reported frozen. The birds that came through the severe weather surely have had a successful breeding season, but their numbers were so few, the shooting is very poor. Squirrels and rabbits also are scarce, the latter ordinarily being quite common. Waterfowl shooting has been a failure owing to the bayous being dry. A. F. SMITHSON.

New Brunswick.

GAME conditions are better than last year. Moose, caribou, deer, bear, wildcat, beaver, otter, mink, fisher, fox, muskrat, wild goose, duck, brant, teal, snipe, partridge and woodcock are found here, with moose and deer most abundant. Shooting is good in nearly every part of the Province. The interior and northern part is probably the best.

NATURAL HISTORY

Our Hawaiian Bird Refuge.

SOME years ago FOREST AND STREAM described at some length the interesting discoveries made by Dr. Walter K. Fisher at the Island of Laysan, that great bird colony constituting the extreme western extension of the Hawaiian archipelago.

This island and those near it were set aside early in the year of 1909 as a bird refuge, to be known as the Hawaiian Island Reservation. The refuge consists of a dozen islands, reefs and shoals, stretching westward for more than 1,500 miles toward Japan. Some of the islands are volcanic masses thrust up from the depths of the ocean, while others are mere sand pits, and others still large, low coral islands more or less covered with soil.

In the spring of 1909 Japanese plumage hunters were reported to have visited Laysan Islands and to have wrought immense damage among the bird rookeries.

In 1911 the Iowa State University asked the co-operation of the Department of Agriculture for the purpose of securing for its museum representative groups of Laysan birds. The request was a welcome one, for such an expedition would enable the Department to secure an authentic report of present day conditions on these bird islands. A party made up of five persons—Prof. C. C. Nutting, Prof. Homer R. Dill, Prof. William A. Bryan, of the Oaha College, Honolulu, with two others—visited Laysan in 1911, reaching there April 24, and remaining until June 5. Their observations and a list of the birds they found are printed in a recent bulletin of the Biological Survey. The report is in two parts, the first dealing with present conditions and the second giving a comparison of conditions in 1903 and 1911, and making recommendations for the future protection of the refuge.

By far the most spectacular things to be seen on the island are the great bird colonies of the albatross, tern, man-o'-war bird and others; but perhaps quite as interesting as these rookeries, are the land birds that are so few, and whose existence now seems so precarious. There are but three such birds, the honey eater, a finch and warbler, called the "Miller bird."

The introduction of the rabbits and guinea pigs is apparently resulting in the destruction of the vegetation of the island. If this vegetation is destroyed, the land birds will no longer have food, and will unquestionably pass into the list of extinct birds. The animals that are exterminating the vegetation ought to be destroyed.

Aside from the land birds the Laysan teal, the flightless rail, and one of two of the wading birds found here in small number are extremely interesting.

Formerly the island was covered with an enormous number of sea birds, which nested in colonies and in rotation, one group of birds leaving the island after it had reared its young and giving place to another species which might occupy the same ground.

The visits of the foreign poachers to Laysan interfered with the breeding of the birds and with the condition of the breeding grounds. Nobody of course can tell how many individual birds were killed, but with some species the former breeding area was tremendously reduced by the depredation of the poachers.

On the first arrival of the investigators it was their impression that the poachers had stripped the place of bird life. An area of over 300 acres was apparently abandoned. Great piles of bones lay here and there, and some shed con-

THE GREAT WHOOPING CRANE (*Grus americana*).

taining thousands of wings left when the poachers were obliged to get away. Before the party had been long on the island, birds began to arrive, and it was found that notwithstanding the appalling destruction, there were still vast numbers of birds there to breed.

Terns, albatross, puffins, petrels, boobies and many other water birds were most abundant. The beautiful tropic bird is still found there.

The investigators made a remarkably careful census of the island, and their conclusion was that it contained somewhat over 1,000,000 birds. Of these one-third were sooty terns, 180,000 Laysan albatross and less than one-half that number black-footed albatross. Of a certain petrel only three were found and of the little Laysan teal but six.

It is earnestly to be hoped that adequate protection will be granted to the bird colony on these islands. It is known that sea birds in many parts of the world are growing fewer in number. They serve a useful purpose and should be protected, not only by the revenue cutters, but also by people stationed on the island. It has been reported that the Audubon Society purposes to take up this work.

Whooping Cranes.

SAGINAW, Mich., Nov. 11.—*Editor Forest and Stream:* Oct. 25 you wrote for a photograph of a specimen of the wild turkey to illustrate a story of the wild turkey gobbler. I have just had time to make a new one, and I am sending it herewith. [It will be used in a subsequent issue.—EDITOR.]

This is the finest specimen of a wild turkey that I have ever seen mounted anywhere. You will notice that the photograph shows the metallic luster of its feathers. The tail got a little mussed up, but when you think that it is nearly twenty-five years since this bird was killed, it is in excellent condition.

I also inclose photograph of a great whooping crane (*Grus americana*). This bird from the crown of its head to the top of the board on which it is mounted, just as it stands, measures 4 feet 5 inches. I wonder if this, too, has not become extinct or practically so. I haven't seen one now in the wild state for about six years. At that time one evening over at Buffalo Lake, north of Moose Jaw, Sask., a flock of about a dozen of these birds passed.

I have been going to North Dakota and into the Canadian Northwest now annually in September and October for twenty-nine years. We used to see lots of them in North Dakota around Dawson, but maybe my travels of late have been out of the line of their regular flight, but I have made many inquiries and have had no definite information in relation to any in the last few years. Who knows about the great whooping crane? Is it gone? Many times have I watched the sandhill cranes go through their grotesque dances. It was certainly an amusing performance.

W. B. MERSHON.

Big Turtles.

FROM time to time great sea turtles are seen in the North Atlantic Ocean, and occasionally some are captured and brought into the port of New York. In the New York Aquarium there are now twelve green turtles of various sizes, the smallest weighing not more than ten pounds and the largest about 400. A loggerhead turtle received in the late summer of 1900 is still on exhibition and weighs about 450 pounds.

The leatherback turtle, which is not very infrequently seen in summer and is sometimes captured, do not appear to endure captivity. They swim continually, take no food, and soon die.

Brazilian Tree Duck in New Jersey.

NEW YORK CITY, Nov. 21.—*Editor Forest and Stream:* In October last, my attention was called to an unusual duck in the shop of Thomas Rowland, a New York taxidermist. The bird proved to be a Brazilian tree duck, something of course quite unknown in this part of the world. It is a native of Eastern South America and of Western Africa, but is said to be rare even in its natural habitat. This specimen was killed on the Hackensack Meadows in New Jersey, and sent to the taxidermist for preservation by Hon. John W. Griggs, of Paterson, N. J. Governor Griggs was kind enough to give me the circumstances of its capture.

He was coming down the Hackensack River in a boat, when he observed this duck sitting on a drift log at a place where the tide overflowed the meadow, about a mile and a half above the village of Hackensack. Governor Griggs at once saw that the bird was unusual and had his boatman approach it. As it was evidently a bird strange to the region, he felt that it should be captured, and shot it. It was alone and appeared to be not at all shy. It made no movement of alarm or suspicion.

The bird showed no signs of having been in captivity. Its feathers were clean and its feet altogether normal. The fact of such an unusual occurrence in New Jersey seems to deserve public mention.

GEO. BIRD GRINNELL.

The Cock-of-the-Rock.

NEW YORK CITY, Nov. 21.—*Editor Forest and Stream:* Some weeks ago I saw a paragraph in FOREST AND STREAM in which the cock-of-the-rock (*Rupicola crocea*) was described as a sort of crow. To say the least such a description is rather misleading. J. J. Quelch, in speaking of the avian fauna of British Guiana truly says: "Brilliant even among its congeners is the unique and lovely cock-of-the-rock." Even this latter statement is hardly adequate, for certainly there is no more beautiful bird in equatorial regions. Its rich orange plumage of the liveliest hue, together with its double crest running from the beak backward, and the delicate filaments of its wing feathers, make it peculiarly striking among its kind.

When I lived in British Guiana, the cock-of-the-rock was domiciled on the upper reaches of the Mazaruni River, and so far as I know it rarely if ever wandered from its highland home.

At the time I left South America, Sir William Ingram had attempted to acclimatize birds of paradise and the cock-of-the-rock on the island of Little Tobago, which lies east of Trinidad. Whether or not the effort was successful I am entirely unable to say.

J. W. Y., JR.

Wild Pigeon.

HENDERSONVILLE, N. C., Nov. 4.—*Editor Forest and Stream:* I read with a great deal of interest Drayton F. Hastie's letter in your issue of the 2d inst. It takes me back to my early boyhood days in the fifties and early sixties when the wild pigeons were in such great abundance. Now, in regard to the fall flight of these birds my statement, "All flocks were flying South," I mean the general direction was always southward. They passed through, in other words, from the North or Northern States south-

ward. Really, to be more exact, the trend of the migrations was west of south. I accept, therefore, the "Hastie amendment." Now, these birds seemed to follow the valley, and as the Hastie home is really on a plateau of the Blue Ridge Mountains, the birds naturally turned toward the valley of the French Broad at that point, because of the long ridge of Pinnacle Mountain, thus getting by so doing over the wide flats or bottom lands of the French Broad River, thence up the French Broad valley and so on over into North Georgia.

It would be interesting to hear from points all along the line of their migration, for I rather think they may have turned more westwardly as they progressed in their journey. They never nested in these mountains, but evidently made a current nesting in Michigan and elsewhere.

Grouse, I am told, are more plentiful than usual this season, and partridges (quail) are abundant everywhere.

ERNEST L. EW BANK.

New York Zoological Society Report.

THE annual report of the Zoological Society for 1911 is its sixteenth, and certainly there are few among those who, before and immediately after the year 1895, were struggling to secure for New York city a Zoological Society and a park, could ever have believed that in sixteen or seventeen short years such tremendous results as here shown would have come from these early efforts. The society has now nearly 2,000 members, of which nearly 1,600 are annual members. It has developed the largest zoological park in the world and a great aquarium, and reports an annual attendance at these two institutions of nearly three and one-half millions of people; in fact, the total number of persons who have visited the Aquarium since it was opened fifteen years ago exceeds 30,000,000.

The year 1911 was an important one in the history of the Zoological Society. The New York Board of Estimate and Apportionment gave its approval to the new plan for the construction of a new Aquarium at Battery Park, and granted the funds to begin work. The Endowment Fund increased, and the finances are in admirable condition. A number of very interesting additions were made to the park's collections of mammals, birds and reptiles, and to the collections installed in the Aquarium.

During the year Captain John Sanford Barnes, a warm friend of the society, and one of the most important and forceful of the members of its executive committee, passed away.

A zebra house, an eagle and vulture aviary and additional bear dens have been completed and are occupied. There was a large list of births in the garden, among them one of the Prjevalsky wild horse. The muskox herd has remained entirely healthy, and the little animals have grown. The walrus has also grown, though not so rapidly as was expected. The little gorilla, brought from Africa by Mr. Garner, lived only two months.

Messrs. Beebe, curator of birds; Ditmars, of reptiles, and Mr. Merkle, in charge of construction and forestry, all present reports of very great interest.

Dr. C. H. Townsend, of the Aquarium, reports for that institution, and tells much that is interesting about the Albatross exhibition of

1911, when the colony of elephant seals were discovered, of which six were brought to New York and were for a long time on exhibition.

As usual, the report is beautifully illustrated.

At the New York Aquarium there are now, in the hatching trays, together with many other species of fish, a considerable number of the black-spotted trout which were taken last season in the Yellowstone National Park. These fish were collected at the Yellowstone Lake, packed in ice and hauled by express wagons sixty or seventy miles to the railroad station at Gardner. From here by rail they are sent usually to the State Fish Hatchery at Bozeman, Mont., and Spearfish, S. D., and of course those that come to New York have to take their chances by rail.

There is a great deal of interest to be seen at the Aquarium, and a useful and interesting half hour may be spent there every day by those who have the time.

Destruction of Life in Spitzbergen.

DR. W. S. BRUCE and Dr. R. N. R. Brown not long ago returned from their expedition, undertaken for the purpose of surveying in Spitzbergen. They made a detailed topographical survey, and a general geological inquiry of the region they passed over. From Bjona Haven to Advent Bay, traveling by a new route, they saw no game whatever, though it is believed that foxes, ptarmigan and other game once abounded here. Norwegian hunters seem to have gone into the country and are destroying life as badly as if they were Americans. They habitually set out poison for birds, foxes and other animals, and unless severe measures are taken to protect the fauna of Spitzbergen, it will soon be absolutely exterminated.

Notes on White Egrets.

AN island of two acres near Charleston, S. C., which has been the breeding ground of thousands of herons, including a large colony of snowy egrets, has been bought by citizens of Charleston and presented to the Charleston Museum to be kept as a permanent refuge. This action was taken because the owner of the island had started to clear it of the bushes (in which the herons nested) and put it in hay. A large number of the herons had been driven from the island through this action, but the museum plans to replant the island with bushes, and by this means restore the heronry completely to its former condition.

Montague Sharpe, chairman of the council for the Royal Society for the Protection of Birds, reports that during a recent visit to Egypt he elicited from various government officials the information that the egret has practically disappeared from Lower Egypt.

The Egyptian Department of Agriculture has issued a circular calling attention to the importance of protecting herons.

By order of the State Game Commissioner, James A. Shinn, the sale of aigrettes in Colorado will not be permitted after Dec. 1, 1912.

 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL

will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

BIRD ENEMIES OF DESTRUCTIVE MOTHS.

Most birds devour insects in greater or less numbers, and for some species these constitute almost their exclusive diet. The greatest harm is done by the larva, for the adult usually does little direct damage and confines itself to laying the eggs, which must take their chances in the struggle for existence.

The investigations of the Bureau of Entomology seem to show that the damage done by insects to the apple crop of the United States amounts roughly to \$12,000,000 each year, and in addition to that it must be remembered that \$3,000,000 or \$4,000,000 are expended annually in trying to fight insects. Most of this damage is done by the codling moth, whose larvæ bore into the growing fruit and spend a period of from ten to thirty days feeding on the seeds and about the core. They then come out and take refuge in the crannies or crevices in the bark of the branches where they spin their cocoons, perhaps to come out as adult insects later in the season; perhaps not to appear until the following spring.

Woodpeckers, titmice, chickadees, nuthatches and creepers are the chief enemies of these pests, and the usefulness of these different groups in destroying these worms can hardly be overestimated. Many interesting observations were recently given by W. L. McAtee. He quotes evidence to show that the woodpecker has some way of judging of the position of the caterpillar which lies under the bark. He does not believe that this is done by smell or sound, but that the bird finds the situation of the prey by tapping on the bark and that the sound of this tapping tells him where the caterpillar is, just as the physician learns of the condition of his patient's lungs by what he calls percussion.

It is believed also that the downy wood-

pecker not only gets codling worms from the trunks of the apple trees, but even takes them from the fruit. Mrs. S. H. Hine, of Indiana, a very careful observer of birds, declares that she has seen a downy woodpecker feeding on these larvæ, extracting them from apples hanging on the tree. She has watched a downy woodpecker on a tree in her yard until it worked upon an apple within her reach, and then picked this apple and found that the young larva had begun to bore into the fruit, but had been extracted by the woodpecker without injury to the fruit. Judge McBride, of Elkhart, Ind., a careful observer of birds, has declared that he had seen downy woodpeckers extracting the worms from young apples. A certain California observer states that the California and Lewis woodpecker, in certain localities, picked open the apples for the codling moth worms they contained. The red-shafted flicker is given credit for much work in killing codling worms, and so are a number of other important woodpeckers. Some flycatchers do yeomen's work against this larva, catching not only the adult codling moth, but the larvæ as well. The codling moth is largely nocturnal in its habits, and the adult would, therefore, escape the attacks of most birds.

Crows, blackbirds, orioles, sparrows, swallows, vireos and warblers all eat the moth or its larvæ to some extent, but it is the creepers, nuthatches and titmice that are the most useful. Creepers and nuthatches are comparatively few in number, and while it is likely that they devour great numbers of these harmful insects, they probably are not nearly so effective as the titmice, which search every nook and cranny in bark and fence and patiently go over trees and fences and stumps looking for their food.

Prof. Beal met a case where nesting birds had fed extensively on larvæ of the codling moth, and his observations led him to the conclusion that the parent birds went from their nesting site across a stream into a neglected orchard, where they foraged for food which they took back to their young ones.

As already said, all entomologists agree that "by far the most efficient aids to man in controlling the codling moth are birds." In Virginia, where 400 cocoons were observed on apple trees in the autumn, it was found later that the birds had destroyed fully 85 per cent. of the worms. In New Hampshire similar observations showed 87 per cent. killed by birds, 4 per cent. by disease and 3 per cent. by cold.

Whatever apples are harvested by the farmer in this country are literally owed to the birds.

OFFERED TO MICHIGAN.

LAST month Mr. Hanson, a resident of Michigan, offered to present to the State of Michigan 13,000 acres of land about Portage Lake, near the city of Grayling. This he offered as a military camp and maneuvering ground, to be handed over to the State free of cost. A sole condition is attached to the gift, according to private information which reaches us. That is that no shooting of wild things shall be done on the property. In other words, Mr. Hanson proposes that besides a military camp and drill ground this large area shall be a game refuge.

It is reported more recently that instead of

being 13,000 acres, the gift covers a whole township.

Portage Lake lies three or four miles west of Grayling, Michigan, and is a beautiful body of water three or four miles long, and in some places more than a mile wide. The white pine has been cut from the land about it, but it is still, to some extent, covered with jack pine. It is traversed in all directions by logging roads; the Manistee River lies on the north and the Ausable on the east. Certain spots on the property are said to be 800 feet above the lake level.

Portage Lake used to be a stopping place during the migration for many kinds of ducks and geese, and in earlier days was a breeding ground for the wildfowl which nested over much of Michigan.

It will be for the Legislature to determine whether the State of Michigan shall accept this generous gift. Meantime, the tract offered by Mr. Hanson has been inspected by committees from the State militia, who will undoubtedly report fully on the subject.

IF Noah had used the chosen pair
 O' worms that went in the ark,
 To fish through the window in the flood
 From his somewhat crowded bark,
 And thus had used up the squirming stock
 In his own original way,
 How many a lie it had spared and saved
 To the fishermen of to-day.

OUR CHRISTMAS NUMBER.

So much above par material has come to hand, all of it with the atmosphere of Christmas about it, that we have decided to bring out a Christmas number. Dr. Edward Breck, than whom no one knows better the ways of the wood and the sentiments of its dwellers, promises something particularly good.

We have thought of the many times we have been in a quandary over what to buy the boy for Christmas. This problem will be solved for you, and early enough to help you in your selection this year, because the Christmas number will be published next Saturday, Dec. 7. Now that quarantine precludes foreign Christmas trees, it is fitting that a true story be told as to how the home-bred trees are harvested. Frank Farrington, a delightful descriptive writer, has contributed a bully paper on this subject. "Christmas in '65" is a historical romance by Fred A. Olds, whose charming writings are well known to FOREST AND STREAM readers. "Getting a Christmas Turkey," by Amos Burhans, tells of a wild turkey hunt on Island No. 10 on the Mississippi. The story teems with Burhansisms. There will be a lot of other good seasonable text with a wealth of illustrations.

To Nature.

BY ROBERT PAGE LINCOLN.

I HAVE been much in love with this enchanted day,
 For many scenes my mind hath reveled in—
 The blossoming fields—the woods that know no din,
 The open skies—the brook and the broad winding way;
 And much I've learned since morn did sweetly play
 Her symphonies of peace that make all souls akin.
 Yea, much I've learned nor hath intruding sin—
 Festered my happy hours with memories cold and gray.
 Truth, joy and innocence—O happy comrades mine!
 With ye I've mused and wandered into night,
 While the lone shepherd sleep his long and patient wait
 Shall call ye back into the dawning light.
 Then, then to hear the murmuring steps of Fate—
 Die to forgetfulness in dreams of thee and thine.

Archery

Long or Short Range?

CHICAGO, Ill., Nov. 25.—*Editor Forest and Stream:* Times change and we change with them, though many questions in archery are today as unchanged as they were years ago.

It is not likely that an agreement will ever be reached as to whether, in order to become a

FABUSTINO, SON OF GOVERNOR OF TARAHUMARES, MEXICO.

Photo by Edward Hoefflich.

good shot, our early practice should be done at the longer or the shorter ranges. Probably some will advance faster by one plan and some by the other.

The following article is interesting, because this question is discussed, and also because it was printed in *FOREST AND STREAM* on April 24, 1879. It is signed N. K. D.

LONG-RANGE ARCHERY.

The interest in archery, which within a few years has been created in this country, and perhaps in a great measure by the magazine articles written by the Hon. Maurice Thompson, of Crawfordsville, Ind., spread to a large number of towns, both east and west, last season. And if we read aright the signs of the times, this grand sport and exercise will extend still more widely during the season now opening. Those archers who have acquired any degree of skill are now practicing diligently, and although it is beyond question true that "once an archer always an archer," it is also true that the activity thus early displayed has been stimulated by the

organization of the National Archery Association, and by the grand annual meeting which the association will hold in Chicago next August. At this meeting many large money prizes and valuable specials will be given. Championship medals will also be given for both ladies and gentlemen.

The competition for these medals will involve shooting at longer ranges than most practiced at last season, viz.: For ladies at 30, 40 and 50 yards; and at 60, 80 and 100 yards for the gentlemen. Now the following question arises in many minds: What course shall we pursue in order to become skilled at these longer ranges? Shall we continue shooting at the shorter ranges, from 30 to 60 yards, until we attain a degree of proficiency and increase the distance as our skill increases, or shall we begin at once to shoot only at the long ranges? This question is one about which the theory and practice of equal good and enthusiastic archers differ. Those advocating only long range practice say, "He who can shoot well at long distances can shoot well at short," and advocate shooting at long range, even to become a good short range shot, and shooting only at long range for this purpose. Granting that it is true that in most cases he who can do good far shooting can do good near, the question is, what course shall be pursued in order to do good far shooting? Maurice Thompson, in his publications, advocates shooting at very short distances until an almost perfect score can be made. Aldred, the celebrated London bowmaker, advocates the same course, and it seems to us that this is the true one. It is of our American natures to be impatient and strive to accomplish the most difficult things at once without first resolutely engaging in the necessary preliminaries. But let us "make haste slowly" and surely. Long range shooting is beautiful; there is strong temptation for the young archer (young in archery, if not in years) to indulge in it too soon. Our advice to anyone wishing to shoot well at the York round, and at the short ranges next August would be about this: Shoot at 40 yards, thirty arrows, until a score of 200 can be regularly made; at 50 yards until 175 can be averaged; then at 60 yards, until you can be depended on for 125.

Let us hear from other archers on this subject.

EDWARD B. WESTON.

Archery-Golf.

WAYNE, Pa., Nov. 22.—*Editor Forest and Stream:* In your issue of Nov. 23 there is an article called "Archery-Golf." A claim is made in it that a contest between an archer and a golf player, each with his own tackle, is a new form of sport. This is not true.

In the fall of 1910, I played a nine-hole game on the course of the Saint David's Golf Club against the club champion, Frederick J. Wendell. The game was refereed by Herman Wendell, and the score was kept by Douglas C. Carey and Stewart Wendell. I reported the score to Dr. Weston, President of the National Archery Association. We halved the game for both medal and match play, winning an equal number of holes and making a gross of 81.

At the first hole I shot clear through the iron cup so that thereafter we used as my target a piece of paper of the diameter of the cup, but laid on the green beside it.

The game offers a good opportunity for sport, but played under the ordinary rules of golf, it is not at all fair. To the archer it makes no difference what hazards lie before him, as his arrows fly over the top of everything, even a grove of trees. He is sure of a drive of 200 yards, his approach shots are without risk, and because of his holding the missile in his hands he can shoot almost straight down into his target for a short putt. The chances could be made more even by limiting the archer to a path not over five yards in width between the tee and putting green, and stipulating that his last shot should be made from a point not less than five yards from the target.

ROBERT P. ELMER.

"Bow Skirmish" or "Arrow Fight."

COS COB, Conn., Nov. 22.—*Editor Forest and Stream:* For twenty years I have been actively interested in archery and for fifteen years have been advocating and using it in my Indian scout camps, so you can imagine that I am very happy to see the revival of this ancient and honorable sport, led by *FOREST AND STREAM*.

I want to suggest a game that you will find described on page 293 of my new book of "Woodcraft," a copy of which is being sent you. We call it a "bow skirmish" or "arrow fight." Two teams or patrols or bands stand side by side. Thirty or forty yards away is a row of wooden dinner plates set up in split sticks. Each man is represented by a plate, but the six that represent one team, for example, are opposite their enemies. The plates are distinguished by numbers and colors, and each man has a dozen arrows. At the word "Go," each band sets to work to exterminate the other by shooting at the representative dishes. As soon as a man's dish is down, he is dead and out of it. It is a fight to the finish, and extremely amusing and interesting, as well as furnishing fine tests of nerve and archery.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

Dec. 2-6.—St. Thomas (Ont.) G. C. W. J. McCance, Asst. Mgr. 1913.
Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
July 8-13.—Cedar Point, Ohio.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

Look out for registered all-day shoot at Birmingham (Ala.) Gun Club, Feb 22. O. L. Garl, Secretary, will give you all the dope on it.

Fifth annual Long Island Sound clay target championship will be held on Jan. 12. It will be shot under auspices of Manhasset Bay Yacht Club, at Port Washington, L. I. It is expected that, as usual, the best aerosaucer eliminators along the Sound will be on hand to covet the handsome trophy.

Because of Thanksgiving holiday we went to press on Monday instead of Tuesday this week. In consequence, if you sent your scores and they do not appear in this issue, they were received too late. Late scores will appear next week, which reminds me there are quite a few secretaries who just naturally expect us to get, by absent treatment, the scores of their shoots. The interest of the entire rock breaking fraternity would be better served if every club secretary supplied us with scores each week—not later than Tuesday. Comprenez?

Elmer E. Shaner, Secretary-Treasurer, writes: "The annual meeting of the stockholders of the Interstate Association for the Encouragement of Trapshooting will be held on Dec. 5, 1912, at 2 o'clock in the afternoon, at the office of the Association, with the Corporation Trust Company, 15 Exchange Place, Jersey City, N. J., for the purpose of electing a Board of Directors, receiving and acting upon reports of the officers, and for the transaction of such other business as may properly come before the meeting."

W. G. BEECROFT.

New York A. C.

PELHAM MANOR, N. Y., Nov. 23.—There was only a fair representation to-day at Travers Island, many regulars having gone to New Haven to see the Crimson trail the Blue about the gridiron. Old reliable Ralph Spotts stayed at home and encouraged the nears and hopetos by displacement of 93 out of draft of 100. This, of course, gave him the day's high gun honors. Mr. Spotts decided to take high gun trophy instead of Dav cup, on which he was top gun. This trophy went to R. R. Debacher with 91 from 20 free saucers. Three ties were recorded on leg on November cup, which finally went to C. Stein, his last shoot-off netting a full on a 7-disc draw.

Ogden cup ran into a draw between R. R. Dehacher and Dr. Bogart and went to the former on shoot-off. H. H. Duden a comparatively new shooter, copped McMahon trophy from a handicap of 7. This same shooter scored on Travers Island cup with a full from 6. It took a shoot-off for W. J. Simpson to take distance handicap from A. E. Ranney.

Olympic trophy was an unshot tie between C. W. Billings and Dr. De Wolfe.

Mrs. G. Vogel was a visiting shooter, and if she did nothing else, she proved herself the superior fraction in her family as a clay bird breaker by beating her husband in every event.

The Delaware State Championship.

WILMINGTON, Del.—The organization of the Du Pont Gun Club has been directly responsible for the activity which prevailed both last year and the current one in the matter of State championship honors at the traps. Until the club started off so auspiciously in December of 1910, little was heard of the State championship and the trophy emblematic of the title, after the club house of the old Wawaset Gun Club of this city was burned to the ground by some hoodlums who hailed from Gander Hill or Goose Creek, or some other point on the outskirts of the city. Small wonder, was it, that "Dal" Richardson, of Dover, Del., the then holder of the trophy and title, began to look upon both as almost in the nature of heirlooms.

Then came the birth of the Du Pont Gun Club, new life thrown into the trapshooting game, and certain folks walking around with chips on their shoulders asking "Who's the champion of this State?" It was then that Uncle Sam's messenger carried to A. B. Richardson a written communication containing words to the effect that W. M. Foord, of Wilmington, Del., wished to tread on the tail of his coat, and show him at the traps that Wilmingtonians were not all dead ones. And Billy proved the truth of his assertion, as on Feb. 4, 1911, he successfully trimmed his opponent and won the cup by breaking 95 to 93.

Six matches in all were shot for the State championship during 1911, and strangely enough in every case except one, the holder of the title was defeated by the challenger, so that, taken all in all, 1911 was not a bad year for new champions in the Diamond State.

This year five open challenge matches have been decided, and one open competition was also shot for the State title, this latter being May 30 last, when A. B. Richardson once more came to the front and scored 96 out of his 100, shot in five 20-target events. In these six contests, however, no new champion has been developed, but judging from the way some of the new blood are shooting, it won't be long before the list of eligibles for championship honors will be much enlarged.

The following table will show how State championship honors at targets in the State of Delaware have been won and lost since the Du Pont Gun Club first took a hand in trapshooting matters in December, 1910, as above mentioned:

1911.	Holder.	Challenger.
Feb. 4.—	A B Richardson.... 93	W M Foord..... 95
Aug. 5.—	W M Foord..... 97	E E du Pont..... 91
Aug. 26.—	W M Foord..... 93	Edward Banks ... 99
Sept. 30.—	Edward Banks..... 88	L D Willis 93
Nov. 4.—	I. D Willis..... 90	J B McHugh..... 92
Nov. 18.—	J B McHugh..... 89	W S Colfax, Jr.... 96
1912.		
Mar. 16.—	W S Colfax, Jr... 99	E A W Everitt... 83
April 13.—	W S Colfax, Jr... 97	A B Richardson... 93
May 30.—	A B Richardson... 96	
Aug. 3.—	A B Richardson... 93	E A W Everitt... 85
Nov. 2.—	A B Richardson... 97	J H Minnick..... 91
Nov. 9.—	A B Richardson... 90	J B McHugh..... 91

*Open competition at State shoot.

From the above it will be seen that McHugh is now State champion, having defeated Richardson by the narrow margin of one target. Both men made low scores, but the wind blew a gale and "90 per cent. or better" was rattling good shooting under the conditions. It is safe betting that McHugh won't be allowed to wear his honors long in peace; in fact, it is understood that Edward Banks has already filed a challenge to the present holder of the State trophy, and that the match will be shot off about the middle of next month. JAKE.

Hudson Gun Club.

APPENDED are the scores of the Hudson Gun Club's regular bi-monthly shoot, which was held Nov. 24. There were twenty-two members in attendance, seventeen taking part in the Du Pont trophy event, which is the fourth contest for this prize. The scores are shown with the added handicaps. Lou Schortey came over with a new gun this morning, and after a poor start managed to clean up all hands for high average, getting a straight score in his last try. Messrs. Kurzell, Burlington and Dobson shot several three-cornered matches this morning to settle a dispute as to who was the best shot on game (the outcome of their recent visit to their Forked River game preserve), and for a very suitable purse. Kurzell showed up in very poor form, and would lose his shirt had the other two wished to take advantage of his poor shooting.

The day was bright, but the wind that was blowing across the traps made the targets very erratic in their flight, and hard to get, which accounts for some of the poor scores that were made.

Our next shoot will be held on Dec. 1. Come out and see us. Everybody is welcome at our grounds.

Chicago Gun Club.

CHICAGO, Ill., Nov. 16.—This was a splendid afternoon, and should have brought out a larger field of shooters, but we will probably have a good number out each week after the hunting season is over.

Young and Graham put up the top scores of 45 out of 50 in the first club event, Dickerman tying Young on the same score in the second event, in which Graham broke 48.

Young broke his 25 straight in the practice event, while Graham ran second with 24.

Silver came out late, but shot 50 and scored a total of 45.

Don't fail to look up, in another column, the notice of our Thanksgiving Day shoot, which will be shot in the morning in time for you to get home for your turkey dinner.

Nos. 5 to 8 inclusive were at 12 pairs each. No. 9 was at 22yds.

Table with 10 columns (Events, Targets, 1-10) and rows for J S Young, H E Dickerman, J R Sharp, C B Barnes, M Ballou, E S Graham, J W Egan, E Silver.

Nov. 17.—A field of nineteen shooters responded to the call of the firing line, most of them shooting quite a number of frames. Thomas and Heyford tied for first honors in the club event at 50 targets, each making a total of 43.

Table with 10 columns (Events, Targets, 1-10) and rows for D E Thomas, T P Bue, Dr E L Heyford, P Miller, C R Seelig, J H Shrigley, M Gelder, Dr W C Sanford, Dr R L Griffith, Geo A Crane, Willard Sanford, Dr G A Miller, H W Johnson, S W Trone, J Reid, F Reid, C F Seelig, H Wolfe, F E Gould.

Crescent A. C.

BAY RIDGE, L. I., Nov. 24.—An unfinished run of 63 went to credit of J. H. Vanderveer in weekly shoot at Crescent Athletic Club to-day. He won the fifth leg on the November cup, also the 25-target sweepstakes handicap with perfect scores.

A. Corlies, making his first appearance of the season, was the winner of the take-home trophy, at 100 targets, handicap with 96. J. H. Vanderveer and F. S. Hyatt tied for second place.

Clinton R. James, the chairman of the shooting committee, continued his good work by capturing the fifth leg on the committee cup at 50 targets, handicap. Mr. James totaled 47, aided by a handicap of 2, which was one better than the score of A. Corlies, who shot with an allowance of 4.

In a handicap sweepstakes at 25 targets, J. S. Lawson carried off the honors with a score of 25, but he was in receipt of a handicap of 6. F. S. Hyatt with an allowance of 4 and a total of 24 was second.

There will be shooting at the New Moon traps on Thursday, commencing at 10 o'clock, and special holiday trophies will be awarded. The scores:

Multiple tables showing scores for Committee cup, Take-home trophy, Monthly cup, Sweepstakes, and other events with names like C R James, A Corlies, J H Vanderveer, etc.

Medford Gun Club.

MEDFORD, Okla., Nov. 22.—Nine members of our gun club enjoyed our regular Friday afternoon practice shoot to-day. Our club expects to do things for 1913. We will have a high average trophy for the year, and a monthly handicap shoot for a trophy.

Table with columns 'Shot at', 'Broke', and names: Shanklin, Soucek, Bunch, Hardy, Dotts, Hutchinson, Wilson, Brown, Strider.

I. V. HARDY.

Marine and Field Club.

BATH BEACH, L. I., Nov. 23.—F. P. Hopkins won three out of four events here to-day, scoring on November cup, (8) 93, and getting both scratch sweeps, each with 23 dead ones. C. M. Camp, who generally shows

somewhere at every shoot, tightened his cinch on club trophy with 22 from scratch.

Attendance was light owing to football and wild ducks, which do not mix well with inanimate targets.

Table with columns for November cup, 100 targets, handicap: F P Hopkins, C M Camp, E D Church.

Table with columns for Club trophy, 25 targets, scratch: C M Camp, C D Sayre, W McConville.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Larchmont Y. C.

LARCHMONT, N. Y., Nov. 24.—Spotts—yes, Ralph Spotts, of course—outshot everything in front of the club house at Larchmont Yacht Club to-day. As usual, he cared not what kind of weather was furnished as spinning ground for the saucers. To-day's gales were ice laden and uncertain. The targets rose and fell in pleasant undulation or syncopated like a ten-year-old single cylinder motor in a heavy sea. He led in the high gun trophy with 139 out of 150 targets. He ran straight to a full score in the accumulation cup event, and sailed off with the 15-bird scratch event with 14 breaks. Dan McMahon ran a good second for high gun with 132. The scores:

Table of scores for Larchmont Y. C. events including November cup, Day trophy, Visitors' cup, Take-home trophy, Handicap cup, High gun trophy, and Accumulation cup.

Jersey City Gun Club.

JERSEY CITY, N. J., Nov. 23.—We had the largest crowd so far this season to-day, when eighteen shooters participated in the regular Saturday shoot of the Jersey City Gun Club. As the club's high average trophy is figured on 100 or more targets, Dixon, who could only stay for two events, and set a hot pace at the rate of 90 per cent., was not eligible, and so the real fight was between the two veterans at the sport, Engle and Shannon. They both shot in the same squad, and fought it out all afternoon, and when it was all over, Shannon carried home the honors with an average of 84.45, while Engle had an even 84 per cent., he missing one target more than Shannon. The scores follow, in strings of 25:

Table of scores for Jersey City Gun Club members including Engle, Shannon, Dobson, Sturdevant, Matthieson, Dalton, Windisch, Dr Groll, Kearney, Williams, Burlington, Lawton, Hubbell, Dixon, Sampson, Jones, Brady, and July.

Don't forget that the Jersey City Gun Club shoots every Saturday afternoon, and extends an invitation to any one who likes to break bluerocks, to pay us a visit and shoots as few or as many as they like. We always have a full supply of shells on hand.

The prize for a 25 straight was also won by Shannon to-day, he getting the second one made this season in the fourth event. Kearney is showing great improvement in his shooting, and looks like a winner before the season closes.

SECRETARY.

Yale Wins Triangular.

NEW HAVEN, Conn., Nov. 23.—Not because of Yale's good form, but in spite of her mediocre showing, she won to-day from Harvard and Princeton. It was John Harvard's day with punts and passes, but not for her aerosaucer artists as discriminators between jumpers and fast quarterers. She finished last—very last, being 36 targets behind Yale, whose five lead Princeton only 3 discs disintegrated.

Princeton was cracking at about her average for this season, while Yale was considerably off plumb. That sterling dependable dried mud distributor, White, although shooting only 85, took top berth among the three squads. Bullock, from the Cambridge aggregation, lacked only one break of the Orange and Black Captain's breakage, while Simpson, from Wilsontown, littered fragments

YALE UNIVERSITY GUN TEAM.

Left to right.—B. H. Scott, '13; L. H. Thompson, '13; G. E. Dimock, Jr., '12 (captain); H. R. L. R. Emmet, '12; Spencer Biddle, '12.

of 83 flyers about the green, taking third high average. Cutting, of Harvard, a youth who has shot 86 per cent., allowed 48 per cent. of his allotment to slip between his chilled '8s. Scott, from among the bulldog rapid fire experts, ordinarily good for 85 per cent., ran at a 77 per cent. clip. Team scores follow:

Table comparing scores of Yale and Harvard teams across various events.

Ossining Gun Club.

OSSINING, N. Y., Nov. 23.—The following scores were made at a practice shoot of the Ossining Gun Club, at 25 targets. Blandford got a win with 24, Bedell and Wood coming second with 21. The cup is to be won three times to own, and is to be put in competition whenever five or more shoot for it at a regularly called shoot. Harold Washburn, son of "I. T.," and a chip of the old block, shot along to-day and did some good work. Geo. Romaine, a new one at it, also shot along. Win. Smith did some snappy shooting in the prize event after a long absence from the traps. Brandreth was out of form, but is just as likely to put up a 90 per cent. score any time. Scores:

Table of scores for Ossining Gun Club members including D Brandreth, C G Blandford, J T Hyland, A P R Wood, L F Lyon, H Washburn, A Bedell, Wm Holden, W S Smith, and G Romaine.

Johnny Hyland shot duck loads in the first three events, but negotiated a 21 with his trap load. C. G. B.

Birmingham Gun Club.

BIRMINGHAM, Ala., Nov. 18.—Eleven shooters were at the weekly shoot of the Birmingham Gun Club. E. M. Cornwell, Mrs. O. L. Garl and O. L. Garl tied on high percentage, each breaking 39 out of 50 shot at, which was very good, considering the extremely dark day. Several shooters were using 20-gauge guns.

Table of scores for Birmingham Gun Club members including S Smith, Mrs O L Garl, E M Cornwell, O L Garl, Hodges, Strange, Dr M Jourdan, Porter, J Smith, Tyler, and J Tower.

The Birmingham Gun Club is going to have a one-day registered shoot on Feb. 22, 1913.

Glenwood Country Club.

GLENWOOD, L. I., Nov. 23.—Six sweepstakes, 25 targets each, were shot at traps of Glenwood Country Club. In first match, W. Silkworth, scratch man, was the winner, shooting 22 straight. In the second, Silkworth tied with L. E. K. White, with a total of 23, Samuel Isaac took the third with a score of 22 straight. In this match White and Silkworth tied again with 18, but in the fourth Silkworth received a total of 22 and White 13. This fourth match was taken, however, by Allen Pirie with 25 total, shooting on a handicap of 5. In the fifth match, S. Isaacs and W. Silkworth, scratch men, tied with 22, and on the shoot-off Silkworth shot 25 straight. The scores:

Table of scores for Glenwood Country Club Handicap sweepstakes.

Table of scores for Glenwood Country Club Handicap sweepstakes.

The Du Pont Gun Club.

WILMINGTON, Del., Nov. 23.—They are getting romantic down du Pont way. At least it generally is conceded that moonlight meetings are manifestations of romance. H. P. Carlon, Vic du Pont and J. W. Anderson, Jr., selected lunar rays in preference to the beatings of Old Sol as time opportune for settling a Class B Spoon tie. Carlon won the title with 20 out of 25.

In Class B challenge match for the 1912 Class A trophy between C. Thorpe Martin, holder, and Nelson K. Smith, challenger, Martin broke 23 and 24 to Smith's 21 and 24; total of 47 to 45.

Colman du Pont silver souvenir spoons brought out a number of contestants in several classes. Class A, however, had only four entries, and M. E. Rose won with 24. In Class B, there was a tie between Victor du Pont and Dr. Arthur Patterson on 24 each, but the Doctor had the spoon in his hand until he slipped up and lost his 25th target. The winner in Class C was C. E. Springer, who shot altogether too well for his opponents, and for that matter any of the contestants, by breaking 25 straight.

In Class D, the veteran S. G. Davidson won a well deserved victory by smashing 20 out of his 25 in good

WINCHESTER

style, while in Class E, Dr. J. H. Squires was the top-notch with 19.

Taking it altogether, it was a good shoot, with thirty-three members of the club and five who were not eligible for the trophies shooting in several events. Of the non-eligibles a new comer and non-member, E. F. Curley, broke 17 out of 25. He promised better things in the future, after he has become one of the Du Pont Gun Club's regulars.

Among the visitors was H. E. Diekerman, of Chicago Gun Club, who made his presence felt by breaking 93 out of 100, and following it up with 20 out of 24 at 12 pairs. The best score on 100 was made by Victor du Pont, who started out with 24. He then made 25, and next scored 24; 73 out of 75. His fourth string only netted him 21, so that he was out with 94. Edward Banks had 93, made up with 22, 21, 25 and 22. Edmanson next with 92.

The scores in the Coleman du Pont spoon events were as below, each man shooting at 25 targets:

Class A.—M. E. Rose 24, W. Edmanson 21, J. T. Roberson 21, L. C. Lyon 14.

Class B.—Victor du Pont 24, Dr. A. Patterson 24, J. J. Magahern 23, L. L. Jarrell 23, C. T. Martin 23, N. K. Smith 22, J. W. Anderson, Jr., 22, H. P. Carlon 21, Clyde Leedom, 20, W. B. Smith, Jr. 17, S. Tuchten 17.

Class C.—C. E. Springer 25, H. P. Reed 21, William Coyne 21, T. W. Matthewson 19, H. C. McClane 19, C. D. Prickett 19, Dr. H. Betts 17, S. J. Newman 17, J. B. Grier 15, Senator Ewing 15, Z. H. Lofland 14.

Class D.—S. G. David 20, W. J. Highfield 19, A. J. Curley 18, John E. Miller 17, D. A. Grier 16, W. Jensen 15, J. E. Rhoades 14.

Class E.—Dr. J. H. Squires 19, C. C. Mammele 17, J. B. Hickman 9.

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., Nov. 24.—Despite the bad weather, a cheerful five turned out here to-day. Four events were pulled, of which three were capped by J. W. Alker, who didn't care a darn for the weather man nor the synecopated way the targets turkey-trotted about in the blue-gray background. His coppers were: Ten-bird scratch, 8 dead; 25-bird handicap, 24 with 2 gratuitous offerings; monthly cup, 24 disintegrated from a free start of 2. D. E. Smith smoothed the wrinkles out of the bunch on the limb for yearly cup with 19 accepted opportunities out of 25, added to which were 3 encouragers, which, grossly estimated, gave Mr. Smith a full score.

Trophy shoot, 10 targets, scratch:
 J W Alker..... 10 B G Loomis..... 6
 D E Smith..... 8 A Marsh 3
 C M Gould 7

Trophy shoot, 15 targets, scratch:
 D E Smith..... 9 B G Loomis 8
 J W Alker..... 8 A Marsh 2
 C M Gould 7

Sweepstake, 25 targets, handicap:
 J W Alker..... 2 24 B G Loomis..... 3 20
 D E Smith..... 3 23 A Marsh 7 15
 C M Gould..... 6 22

Monthly cup, 25 birds, handicap:
 D E Smith..... 3 20 C M Gould..... 6 19
 B G Loomis..... 3 20 A Marsh 7 14

Yearly prize, 25 birds, handicap:
 D E Smith..... 3 22 C M Gould..... 6 19
 J W Alker..... 2 20 A Marsh 7 14
 B G Loomis..... 3 20

High gun trophy, 100 targets, scratch:
 J W Alker..... 80 C M Gould..... 55
 D E Smith..... 75

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Nov. 16.—This practice shoot was turned into a match for mutton. Two sheep were put up in six parts each and shot for in two events of 10 birds each. The scores do not include tie shots.

Claude Kite, one of our best shots, has been absent for some time, yet he landed near the top. Our secretary did not shoot with us to-day, but was at a "match for geese" at Holstein, Mo., about eight miles away, where he "made good" and won three geese on a score of 47 out of 54, including tie shots made on the plan of "shoot and step back." Scores:

H Bollmann	18	Lichtenberg	15
J Mutert	17	Florence Mutert	15
Ahmann	16	Meyer	15
Kite	16	Fortmann	10
Wyatt	15	E Suhre	9

J. O. WILSON, Sec'y.

Danville Rod and Gun Club.

DANVILLE, Ill., Nov. 17.—She may be the inferior fraction when it comes to voting for Wilson, but Mrs. Less Snooks is the better half as a wrecker of clay discs enrampant in the ambient atmosphere. To-day she eliminated 45 out of 50 scalars, for which she won the gold bulldog medal. The voting members of the Snooks family got no medals. R. C. Kinningham took diamond medal with the cracking good score of 48 out of 50. Open season and plenty of wild ducks took away many of our regulars. Scores:

Shot at. Broke.		Shot at. Broke.	
Hendrick	100 65	Burton	50 32
Balls	100 55	Snooks	25 20
Kinningham	50 48	Bell	25 18
Mrs Snooks	50 45		

H. T. TANGEN.

Self Loading Shotgun MODEL 1911

A comparison between the Winchester Self-Loading shotgun and other makes is all that is necessary to convince anyone of the great superiority of the Winchester Self-Loader. Note the absence of unsightly screws and pins and of dangerous projecting parts. Note the neat little trigger lock, which operates cross-wise and cannot be jarred out of place. Take the gun down and see how easily it separates into only two parts, without releasing small parts. Note how simple is the action, and that the springs are of coiled wire, the most durable kind. Then note the general finished appearance of the whole gun; and remember that all metal parts are made of nickel steel—about twice as strong as that used in repeating guns of other makes. The barrel has to be pulled back only when starting to shoot, as the recoil does the reloading afterwards. The gun is readily used as a single loader. No adjustment is required to shoot different loads; and no unpleasant effect is felt from the recoil, as it is divided in the gun. Made in 12 gauge only, and a much better shooter than the ordinary gun. Examine one at your dealer's.

A Gun That Is Unexcelled For Duck Shooting :: ::

Guernsey Gun Club.

GUERNSEY, Ia., Nov. 16.—A few of our members met this afternoon for a little practice. There being a high wind, shooting was rather difficult. We will give our last shoot for this season on Thanksgiving Day, as previously announced, modified Jack Rabbit system to be used, 5 cents back for each target broken; all other entrance money, except 2 cents for targets, divides three moneys. Following are scores of to-day's practice:

Shot at. Broke.		Shot at. Broke.	
J W Dobbins...	90 73	D Mead	25 22
Mrs J Dobbins.	72 50	A Pence	10 5
Joe Dalezal	55 50		

J. W. DOBBINS, Pres.

ANT HILLS FORTY FEET HIGH.

WEST African ant hills are veritable giants, frequently standing forty feet high. These ant hills are shaped something like a sugar loaf

and are divided inside into hundreds of tiny rooms.

They have, needless to say, myriads of inhabitants, and these are all busily occupied in various ways—forming tunnels, making roads, gathering food and watching over the eggs and youngsters.

The natives are afraid to touch these hills, except from a distance with firearms. The ants often make their strongholds around trees and they are built very solidly, with sides sometimes twenty inches thick.

The inside is hollow and at the top there is a sort of attic. The "royal cell," where the queen ant lives, is always found on the ground floor. This good lady is a prisoner but is carefully fed by her busy subjects, the eggs she lays being immediately carried away and deposited in "rooms" set apart for the purpose.—Wide World.

“steel where steel belongs”

Peters

FACTORY LOADED SHOT SHELLS

THE greatest triumph of modern ammunition making has been scored in Peters Steel Reinforced Shot-Gun Shells. They are reinforced in the HEAD AND RIM—“STEEL WHERE STEEL BELONGS.” ¶ It was with Peters Steel Reinforced Shells—factory loaded—that Harvey Dixon won the 1911 Grand American Handicap—99 out of 100 from 20 yards.

For this year's hunt *insist* on Peters Steel Reinforced Shells. They are superior to any others, afford protection to the user, and *shoot perfectly* in ANY good gun.

ASK YOUR DEALER. Accept no substitute. Should he not happen to have them, he will get them at your request.

Illustrated booklet, describing Peters Steel Reinforced Shells and “Sportsmen's Handy Book” with 1912 Game Laws—FREE. Write for them.

THE CARIBOU BARRENS OF NEW-FOUNDLAND.

Continued from page 682.

half a cup of prune juice in the bottom of the kettle in the morning, and they cleaned out every particle of it during the day.

After a couple of days in this camp the sociable Canada jays began making their first calls upon us, and uttered polite pleasantries in acknowledgment of the light luncheon we set out near the wood pile for them. Lionel says there are in Newfoundland no bluejays, which I described to him as something like a kingfisher, but bluer, taller and carrying a smaller crest.

Yellow-legged plover were plentiful. A big flock of them visited the wide gravel bar in front of camp every morning. It was good fun to answer the clear musical whistle they make in flight and call them down to visit us, and really fascinating to observe through my powerful binoculars the big fellows wading along in the edge of the backwater, daintily picking up breakfast from among the pebbles within twenty yards of camp.

While blazing out the trail up from the river, Lionel and I jumped a caribou in the thick spruces, and that same evening a three-year-old stag crossed the river just below camp, his coat almost black, his antlers small and all in velvet. The boys said that the old stags have about half cleaned their horns by Sept. 5, and would usually be all cleaned by the 12th, whereas the younger stags will carry shreds of velvet ten days later. Lionel, who has hunted caribou thirty years, killing for meat and hides in the old days as high as twenty-one stags in a season, told me he had upon two occasions skinned stags possessing the curious throat sac filled with hair which Mr.

Millais observed in a stag shot by him on the N. W. Gander in 1904.

As to whether the caribou are on the decrease, the boys differed. One was of the opinion that the present wise enforcement of the game laws had resulted in checking the killing to well below the natural increase, while the other held that there are about half the deer in the island compared to the number twenty years ago “before the rail track came through.”

Both agreed, however, that the vast areas of the interior, bearing no merchantable timber, unfit for agriculture, inaccessible, save at considerable effort, and only by back packing and plentiful in cover and feed, should support the present population of deer a thousand years hence, provided there be adequate enforcement of the present law limiting the annual destruction to three stags per man.

They smoked up a whole box of matches arguing the question, but the above seemed to be the net result. An idea of the condition which prevailed formerly may be had from the statement that twenty years ago two Indians and one white man operating together killed one fall sixty stags and forty does, spearing them from canoes as they swam across the Exploits River and dragging the carcasses ashore. Half the meat they sold to lumber camps, the remainder spoiled in the woods.

After the day's hard work on the trail I was rewarded by ten hours' delightful sleep on as good a fir balsam bed as one ever saw. Next morning Lionel and I decided to take a day off and shave, bake bread, cut wood and fix up camp generally. We held in reserve the fine hardtack sent us from St. Johns for use as a travel ration when we should really get down to serious hunting.

This hardtack is about four inches long, one and three-quarters wide and three-quarters of an inch thick, hard as cobble stones, but very satisfying. You can split it with a wedge and toast the halves. The parts of two hardtack thus prepared and broken into pieces with an axe will require enough chewing to satisfy the most ardent apostle of Horace Fletcher; and the results are very upbuilding, far more so than is the case with American pilot bread, which powders up in your pocket so that when you arrive at the end of a good hard walk, it is reduced to a handful of messy cracker crumbs. This Newfoundland hardtack is all in all one of the best travel rations I have found, being as light as the flour from which it is made, requiring no preparation, standing the weather well and involving no waste.

[TO BE CONTINUED.]

THE RUMANIAN'S TOBACCO.

RUMANIA, the dark horse of the Balkans, may be said to have been wafted into good government on a cloud of tobacco smoke. For it was the tobacco monopoly established by the degenerate ruler Couza that brought about his compulsory abdication. Every Rumanian smokes, and Couza came up against a national habit—with the usual result. It was in 1866 that the present ruler, Prince Charles of Hohenzollern-Sigmaringen was invited, in the teeth of the concert of Europe and the Sultan, to become Couza's successor; and nothing finer ever happened to Rumania—except its Queen, “Carmen Sylva.” But the good fortune of Rumania is also due to Bismarck, who counselled the young Prince to accept the offered throne, remarking, “If you fail you will at any rate have a pleasant reminiscence for the rest of your life.”—London Chronicle.

SEVEN HUNDRED MILES BY CANOE.

Continued from page 688.

we saw a big tow of coal barges headed our way, and as there was an island just ahead where the river on one side seemed to be quite narrow, we paddled in on the narrow side, expecting the tow would take the wide channel. But they came in on the narrow side and we thought it would be "Davey Jones' Locker" for us. However, we managed to keep abreast of the rollers and escaped without shipping water. A little later, however, we came face to face with the packet "Queen City," the fastest boat on the river, and terror to small craft. She has the reputation of swamping more small boats than any other craft on the river. We pulled ashore and waited until she passed, and when the water was evidently quite smooth, we pushed off. We did not reckon on the undertow, however, for directly big waves began to roll up in front of us, we bumped over several; then one big one came rolling along, we poised for a moment on the crest, then down into the trough went the bow, letting the next one roll right over us, and "Dewey," who was handling the bow paddle, was nearly drowned. We had to go ashore, unload all our dunnage and dump the water out of the canoe. We passed the city of Bellaire, O., and camped that night near Moundsville, W. Va.

As soon as we had made camp, John and Dewey went back to a mountaineer's cabin a short distance away in search of potatoes, and found he raised sweet potatoes, of which he gave us nearly a half bushel for "two bits." He informed us that from then on sweet potatoes could be obtained from most any of the farmers. And thereafter they were our main fare. The mountaineer came down to our camp in the evening and entertained us with stories of the country round about. In speaking of the frequency of trips to town by the people back in the mountains, as he expressed it: "I reckon there is a lot of them back there that never set eyes on a railroad train, and a right smart passel of them are still votin' for Abe Lincoln."

Friday morning a heavy fog prevailed, and we started out before it had cleared, much to our inconvenience, as in rounding a sharp bend in the river we nearly collided with an upward bound steamer. We also had a thrilling ride over a wing-dam. These are quite numerous and hard to see far in advance. They are built from the mainland to one side of an island to divert the flow of water and make a channel on the opposite side.

Friday and Saturday we passed the towns of Powhatan Point, O.; Long Beach, and Eureka, W. Va. We made camp just below Eureka, and as we had an excellent site, we stayed over Sunday.

Monday, the 23d, we had to beat into a heavy headwind, and as the river was very rough, we made poor time. We stopped at Marietta, O., for provisions, and camped just below the city.

Tuesday we arrived at Parkersburg and stopped there for a short time to see the town. Met the Queen City again, which made us beat for cover, as usual. We began to think that the pilot had a grudge against canoeists, as he always seemed to head straight for us and then switch around, so we would be in the wake.

This country is a regular hunter's paradise.

We ran into many large flocks of ducks and geese, of which we shot a few. We also surprised a covey of quail. They were too quick for us, however, as we did not get a shot at them. We met many clam-diggers; their method of catching clams we thought was quite unique. They used simply a long stick with steel hooks suspended by cords from it, which they would drag along the bottom, and the clam would grip on the hooks. When the hooks were full they would pull them in.

Wednesday and Thursday were uneventful. We passed the towns of Murraysville, Ravenswood and Milwood, W. Va., and Racine and Pomeroy, O.

Friday, the 27th, we stopped at Point Pleasant, W. Va., and passed the junction of the Kanawha River. As there was a favorable wind, we tried to sail and made excellent time.

We arrived at Huntington at 4 o'clock Saturday and camped on the outskirts of the city, where we stayed over Sunday. We left Huntington Monday in a heavy fog. Just below the city we passed an island which was the rendezvous of Aaron Burr and Blennerhasset in 1805. We passed Kenova, W. Va., at noon and soon pulled out of West Virginia, and that night made our first camp in Kentucky, near Ashland.

Tuesday, the 31st, we left Ashland with a

strong wind at our backs. As the weather was getting too cold for canoeing, we rushed to Cincinnati, where we ended the trip, which should have started a month earlier.

For appetite, muscle and general health, no recreation can improve on a trip like this. We each gained from ten to twelve pounds. We had adventures with mountaineers and moonshiners. The mountaineer, as a rule, are very kind and hospitable people. But a moonshiner is always suspicious of a stranger. Sometimes it was necessary to climb mountains to fill our grub box. Oftentimes we were in danger of being robbed by negroes and "river rats," as they sneak along the river nights in a dugout looking for anyone who might have anything of value.

From Ashland we passed the towns of Greenup, Vanceburg and Maysville, Ky., and Portsmouth, O., and on the third of November, at 5 P. M., we arrived at Cincinnati in one month's time, after approximately seven hundred miles of paddling, without a single carry.

As far as we can discover we have the record for a long distance canoe trip. We passed over the wickets of nine dams in the Ohio River, saw a lot of country at a total expense (including outfit, except canoe) of about \$115, and much of this was spent sight-seeing in cities en route.

We left our canoe with "The Kentucky Launch Club," at Newport, across from Cincinnati, where we packed it for shipment back home. Thus ended a most glorious vacation.

SCHOONER YACHT ELSANA.

To be a good skipper is no unusual occurrence. Good artists are found in almost every city. A most unusual, in fact, one might say unique combination, is that of sea captain and painter. On the cover of this issue appears a photograph of a painting by Captain Thomas Petersen of the yacht of which he is captain—Elsana, owned by Henry C. Pearson, of New York city. Critically, we opine that Capt. Petersen's work compares favorably with that of Zogbaum and other prominent marine artists. This sea-dog-painter is a Norwegian. A description of his charge is interesting in that she represents a "new" type of yacht taken from the lines of a modern fishing schooner—a build that is bound to increase in popularity among conservative yachtsmen.

Elsana is sixty feet over all, fifteen feet wide and seven feet draft, is of the flush-deck, keel type, having both inside and outside ballast. She has cruised extensively along the coast and has proved a wonderful sea boat. Her equipment consists of a twenty-five horsepower engine, which gives her a speed of seven miles an hour under power, an independent electric light plant and all the comforts and conveniences of a modern yacht. All deck houses and interior finish are of solid mahogany.

THE SOCIETY OF NAVAL ARCHITECTS AND MARINE ENGINEERS.

THE twentieth general meeting of the Society of Naval Architects and Marine Engineers was held in Engineering Societies Building, Nov. 21 and 22, 1912, with a banquet at the Waldorf-Astoria as a final good taste. Papers read were decidedly interesting, provoking considerable controversy.

1. "Experiments on the Fulton and the Froude," by Prof. C. H. Peabody, Member of Council.

2. "The Design and New Construction Division of the Bureau of Construction and Repair of the Navy Department," by Naval Constructor R. H. Robinson, U. S. N., member.

3. "Engineering Progress in the U. S. Navy," by Captain G. W. Dyson, U. S. N.

4. "Marine Lighting Equipment of the Panama Canal," by James Pattison.

5. "Notes on Life-Saving Appliances," by W. D. Forbes, member of Council.

6. "Developments in Oil Burning," by E. H. Peabody, member.

7. "The Preservation of Metals Used in Marine Construction," by Lieutenant-Commander Frank Lyon, U. S. N.

8. "An Electrically Propelled Fireproof Passenger Steamer," by W. T. Donnelly and G. A. Orrok, members.

9. "Notes on Fuel Economy as Influenced by Ship Design," by E. H. Rigg, member.

10. "Active Type of Stabilizing Gyro," by Elmer A. Sperry, member.

11. "Rudder Trials, U. S. S. Sterett," by Assistant Naval Constructors R. T. Hanson, U. S. N., and J. C. Hunsaker, U. S. N., Juniors.

12. "Logarithmic Speed-Power Diagram," by Thomas M. Gunn.

THIS PICTURE GRATIS

JOHN PEEL.

The above picture of the immortal John Peel, framed and glazed, will be presented free to all new subscribers to "The County Gentleman & Land & Water," England's leading weekly illustrated sporting paper.

The picture measures 11 in. x 7½ in. (frame 17 in. x 12 in.). The original was painted by Mr. Joseph Simpson, R. B. A., from old photographs and prints of the famous huntsman. It is said to be the finest representation of John Peel ever published, and is worthy of a place in every sportsman's home.

The subscription to "The County Gentleman & Land & Water" is \$9.50 per annum, payable in advance, for which the paper will be sent, postage free. Checks should be made payable to the County Gentleman Publishing Co. and crossed the London County & Westminster Bank, Hanover Sq. Branch.

13. "Tool Steel for the U. S. Navy," by Lewis Hobart Kenney, member.

14. "The Sperry Gyro-Compass in Service," by Lieutenant R. E. Gillmor, U. S. N.

The attendance both days was fair and most enthusiastic. Officers elected were: Col. Robert M. Thompson, of New York, President; D. H. Cox, Secretary and Treasurer, re-elected; Capt. A. P. Niblick, Vice-President, to fill the vacancy caused by the death of Rear Admiral Evans; G. W. Dickie, Vice-President, to fill the vacancy caused by the death of Rear Admiral Melville; Commander L. H. Chandler and Capt. C. A. McAllister, members of the Council; Naval Constructor F. R. Fernald, Honorary Vice-President, and Lewis Nixon, Vice-President.

The society voted to take part in the Panama Pacific Exposition at San Francisco in 1915 and to raise \$2,000 for that purpose.

VOLCANO SCARED WHALES.

THE whaling bark Gayhead, Captain Wing, which left San Francisco seven months ago on a blubber expedition in the frozen north, returned with 350 barrels of sperm oil, the product of eight whales, and an account of the volcanic eruption at Katmai last June. The Gayhead was 200 miles from the volcano and 150 miles off shore at the time of the eruption. Whales were plentiful, sea birds were visible in all directions and fish, large and small, could be seen in the clear, green water.

A whale had been cut out of the school that was spouting not far from the bark, had been killed and made fast alongside the vessel. Fires had been started under the blubber kettles, and the work of cutting up the whale was in full blast when a muffled explosion that seemed to shake the universe was heard. It was followed by six more explosions.

A few minutes later there appeared on the horizon a small black cloud, that assumed leviathan proportions as it rushed toward the Gayhead. There was wind with it, and it struck the vessel with the violence of a hurricane squall. As it hit the bark the air was filled with fine white dust that soon covered the decks.

The blackness was on both sides of the vessel. "Black as the darkest night," is the way Captain Wing describes it. Between the two strata of black was a column of fiery yellow, bright as gold. Captain Wing, who has passed many years in the Arctic, and who recognized the explosions as of volcanic origin, says that the combination of black and yellow was the strangest sight he had ever seen.

The Portuguese whalers quit work, dropped to their knees and invoked the aid of every saint on the calendar. They were satisfied that the day of judgment had arrived. The shower of ashes and the accompanying darkness lasted for forty-eight hours.

"As the squall approached," said Captain Wing, "I noticed the whales skeddaddle. They hooked on at full speed. When the air cleared, two days later, there was not a whale in sight, nor a fish nor a fowl, nor a sign of any kind of life. It was not until the Gayhead had cruised many miles and had winged its way far out of the track of the volcanic dust that as much as a bird was seen. That cussed squall queered our cruise all right."

It was more than a month later that the people on the Gayhead learned what had happened.

BIRDS' BONES HOLLOW.

THE bones of birds are hollow because they are thereby lighter and do not interfere with the flight of the bird as much as they would do if they were solid. Greater strength is also obtained by the cylindrical form of the bones and a larger surface afforded for the attachment of muscles.—Kansas City Star.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

Do you know that advertising in FOREST AND STREAM is good publicity?

No Shortcomings

The Smith Gun has no shortcomings—not one. The 6 Hunter brothers, with inventions, precision, workmanship and experience, kept after shot gun shortcomings for 22 years, until they had wiped out the last and least important one.

"6 Times 22 Years Experience" gives the shooter of a Smith Gun the fullest possible pleasure in the field, and the maximum game in his bag.

L. C. SMITH GUNS

Why don't you Reload your Shells?

It pays to reload your shells! They are the expensive part of factory ammunition. They're as strong and good as new, can be reloaded a dozen times, and it's easy to reload! Merely de-cap and re-cap shell, insert powder, crimp shell on the bullet. You can do it!

The Ideal Hand Book, new edition, 160 pages, shows in detail the enormous saving by hand loading and reloading your cartridges; factory .32-40 high power cartridges cost \$34.20 per 1000; hand loaded, buying new primed shells, etc., \$26.96 per 1000; reloaded, only \$13.46 per 1000 (you save \$20.74). 1000 .32-40 smokeless S. R. factory cartridges cost \$25.20; by reloading you can have 1000 short range loads for \$3.80. **It pays to reload.**

The Ideal Hand Book contains full information regarding powders, bullets, primers and reloading tools for all standard rifle, pistol and shotgun ammunition, tells how to measure powders accurately, and gives information on everything relating to loading and reloading of ammunition.

It lists hand-cast bullets; tells all about gas-check bullets (which take the place of metal-jacketed bullets, giving increased accuracy with less wear of barrel; gives tables of velocity, penetration, etc.; twists in rifling in rifle barrels made by the various arms companies; tells how to find the twist in any rifle barrel; tables reducing drams to grains; tables of powders, primers, etc. **160 pages of information every shooter needs;** sent free to any shooter for three stamps postage by

DICKY THE CROW.

BY ROBERT PAGE LINCOLN.

WE located the nest where Dicky was born along in the month of June, when the crow families all over the wood we called the Oaklands were busy feeding open-mouthed youngsters with the worms and mice gathered for the consumption of those offsprings who always seemed craving for nourishment, and whose cries, so harsh and grating, were to be heard everywhere when one entered the sanctity of the shadows, and stood for a time listening and taking stock of his surroundings. It was on one of our rambles, and my companion suggested that we hunt out a nest and take possession of one of the youngsters to raise it at home as a sort of pet. At first I would have nothing to do with this, but finally I consented, and, looking around, we found a nest high in a monarch white oak which was composed of branches and vines. It was certainly a climb up to it, but my companion was skilled in the art of tree ascending and made short shift of it. All the time the parent crows flew on high with raucous cries, now and then swooping low, but never endeavoring to attack the intruder. Arrived at the nest my companion picked out one of the two occupants and unceremoniously flung it down, and prepared to descend. The young crow lay there on the ground looking up at me with big eyes that asked a sort of a mute question, evidently trying to form in his immature brain just what had occurred, and looking upon me as a monster with all its frills and furbishes. Gently picking it up, I put it in my coat and stroked the head with two fingers, calling it such names as come to mind.

At once he was dubbed Dicky, and the christening was simple and without the least ceremony. The little fellow eyed me with patient concern, and seemed to entirely have forgotten about his parents which had now perched on nearby treetops with shrill cries of rage. Dicky looked at me with consideration in his eyes and rested on his weak legs, feebly swaying if he missed his balance. And so it came to pass, as the writers say, that Dicky found a home, quite unlike the home that would have been his out there in the silence of the Oaklands, to a more practical one in my own place of occupation. And Dicky at once took possession, and it did not take many weeks before he was well and able to hop around and take things as they came.

One of the first things that we ascertained was just what was best to feed him, but I hastily solved that problem, for I knew from observation that one of the main foods of the crow family was these grub worms that you will find curled up in the moist loam when the ground is turned, or in some manure pile, where they grow fat and husky. Dicky with eager cries was on the spot in a moment and flew here and there, or rather flapped, and picked them up, stowing them away in his little big stomach with gluttonous gurgles of glee, and watching our every move with those black little eyes of his. Angeworms he tucked down his throat with avidity, always finishing his swallowing stunt with that gurgle and a lifting of the head to help the fellow from the earth in his descent to interior oblivion. The eating capacity of Dicky would have made an epicure blush. As a gormand, Dicky held all the cards in the deck, and then I do believe he had some up his sleeve, for you just ought to have seen him braced there on his two feet taking nourishment hand over fist.

Dicky grew fast and became a little alderman as he sauntered up and down the rustic walk with his breast thrust out, cawing a shrill defiance to everybody and everything that did not seem to please his majesty. A fine little fellow he was. His feathers, so slick and clean, were of a blue-black hue, and there was not one of them out of place in his make-up. His head was held high that he might survey everything that came within his dominion, and there was just a trace of hauteur about him that made him conspicuous wherever he chanced to be, though, as it was, he was an undeniable attraction.

Now Dicky made friends with the goat. At first he would have nothing to do with this animal, but after a few preliminary buttings by his goatship and a few shrill caws from Dicky, they adjusted themselves into the niches of friendship, just as goats and crows must do in time. Of course, we taught him to ride on the back of the aggressive one, and, while that clothes-eating individual did not like it at first, he soon took it as a matter of course; after that we would see the black fellow leaping up and down on that sleek back with screams of glee. They were two queer fellows, that goat and that crow, and, bless me, what a time we had with them! What amusement they provided us as they rambled along, side by side, with sundry grunts, and caws, as the case may be.

I have a steel-plated notion that Dicky firmly believed that he had conquered the world and all its minions, which extended as far as the confines of the estate, but the rooster was not yet met with, and his colors were not down by the least scintilla of conception. This leghorn rooster did not go out of his way to beset the crow; it is doubtful if he ever conceived of the crow as a fighter, but one day when they met, Dicky took the aggressive, and then and there, there was a hotly contested battle in which various and sundry feathers flew, mingling with the denouncing cries that issued from the throat of the crow. But the leghorn proved the victor, and Dicky, with a flap and a flutter, made his retreat with the rooster in hot pursuit, bent upon doing the job up brown. But a handy piece of coal issuing from my good right hand made him suddenly think better of it, and, midway in his descent, he swung away with his long legs working like piston rods. Dicky was greatly humiliated by the disgraceful showing he had made, and the rest of the day sat on top of the stone pile, with his head down in his feathers, looking upon the world with a dreary, melancholy view. Once, to be sure, he essayed a caw, but it was choked with tears and repressed sobs; even the well-fed worms that we sported before his beak did not seem to appeal to him and we left him to his sorrows for the day. But the next morning he was up and doing, harshly demanding that the goat be let out of the barn for his amusement, fluttering wildly and cawing as we lifted the latch.

Dicky was a well behaved and cleanly sort of a fellow, and, for that matter, right in every way, so he had the run of the place. Hearing me up in the study knocking away at the typewriter, he would come up the stairs with big hops, walking in with a martial tread and breast thrust out. He never did understand the eternal question of: Why is a typewriter? That he was interested in the machine from the first time he laid eyes on it was evident, and it is certain that every time he came up the stairs it was with the fixed purpose of clearing the mystery, once and for good. He would witness my fingers playing over the keys, the carriage slipping along its well oiled path and the other movements that go with it. And then the bell. Every time the carriage had run its limit that bell would tinkle to his profound bewilderment. It then occurred to me to let him ride on the carriage, and after a time achieved my end, much to my satisfaction, for I had doubted that it could be done. So he often sat on one or another of the projecting incidentals, keeping his balance with an effort. But this happened only now and then, and I doubt whether he ever felt safe, as long as that bell insisted upon making its presence known. Often, I believe, he looked at me as though to say: "What's the use?"

We experimented with Dicky to ascertain if he would consume any of the winged insects that are the food of other birds, but he was shy at accepting them, swallowing them with reluctance, as in the case of the gypsy moth, tussock moth and butterflies. But he often ate the hairless caterpillar. Grubs were the main feature of his daily dish, and worms that were to be found around the barn where it was damp, and they grew to an enormous size. Often by lifting a board we would find them congregated there and then with a dive Dicky got to work pulling them out so deftly that we could not have done it better. But he had a system that I used afterward if I wanted to pull worms out when but their head showed. Said Dicky, squeeze the head and the rest of the body loses its power and comes out without breaking off.

There were a hundred little incidents that always appealed to me, but one of them showed that he had all the mischief of a youngster in his heart. The washing was out on the line one day and starting at one end he went the length picking out the pins and dropping the clothes to the ground. Oh! it certainly appealed to him, and he poised there, screaming with glee, as the white linens fell. It was rather an acrobatic stunt, too, as we noted, for

he almost had the whole affair down when we came upon the scene. Now, of course, we had to cure him of that, for it is certain that if we allowed him to go on, this amusement would be one of his regular features. My companion on the moment prepared a cure, but it rather shocked me at first, and I would have none of it, but, finally, I gave in. The idea was to heat the wire line at a certain place in between left bare. Thus when the crow came along he would burn his soles and teach him never to step on a wire again. This was done, and from a covert we watched proceedings with bated breath. Arrived at the heated place he balanced himself and walked across, or endeavored to walk across, when, of a sudden, he darted into the air, turned three or four times wildly, and came to earth with a string of expletives, disgracing the stillness of the summer day. A more surprised bird I never hope to see, and his eyes fairly protruded out of his head. He looked around as if to say, "Now what do you think of that!" Did he pull down any more clothes? No! No, he didn't like that amusement ever thereafter, and if a wire was thrust at him he would flap away with an angry, shocked cry that was torn from his heart. Instinct, coupled with a distinct remembrance, had had its play.

Summer waned along and fall came with its changing leaves, and that stillness that seems to forebode some great calamity; September slipped away and October came with all her golden grandeur, and the sighing winds that crept through the woods and were spent out on the fields. The birds were going South; now and then the robin bands would fly by. Dicky seemed to feel it all, and some strange thing took place that we could not understand, for then we were nothing more or less than mere humans. Dicky had never essayed a great flight. Once we had feared he would leave us, but we had clipped his wings, very little. But now they were grown out again. Dicky sat out there on the big pole looking up into the skies and seemingly listening—listening. He did not seem to see us, and nothing we could do had any effect upon his mood. We knew it was no use. But one day as he sat thus, I remember it was one waning afternoon, a flock of some twenty crows passed over with much cawing. Dicky answered back. Again the calls, and, as if beckoned, Dicky rose, fluttered a couple times in the air, and then took his course after the band. Further and further away he dimmed, and soon caught up with the others and fell in behind; straining our eyesight we saw them vanish against the face of the heavens, and lastly, nothing at all remained but a pleasant memory.

FIGHTING THE BIGGEST GORILLA.

WHEELING round, says a writer in the December Wide World Magazine, the gorilla dashed away at its top speed through the tall grass, the natives in hot pursuit. Like beaters they drove the animal toward their village, and with loud shouts endeavored to give the alarm to those remaining there. The gorilla, more agile than the hunters, increased his lead somewhat, but was obliged to go straight on, for already the cries of the natives scattered through the plantation were heard on all sides. The great brute leapt toward a little path, but was quickly obliged to abandon it, on perceiving new enemies coming toward it. Breaking through some thick bushes, which hindered its pursuers for a moment, the animal passed quickly over a small river and climbed up the opposite bank with great rapidity, in spite of its huge bulk. Though streaming with perspiration, the blacks were none the less resolute in the chase, for they felt sure of victory, and that the destroyer of their crops was at last to pay for his misdeeds with his life.

Continuing its headlong course, the gorilla descended a slope and suddenly appeared at the extremity of the village, where the huts, built of red earth, extended in parallel lines along a slight ridge, at the top of which is the chief's dwelling. At the sight of the hideous monster

the women ran screaming into their huts, the children fled after them, uttering loud cries, the goats and fowls scattered on all sides, and the dogs barked with rage. In the midst of this pandemonium of noise the few men present rushed for their arms and prepared to do battle with the common enemy.

The struggle promised to be severe, for in its flight the beast had armed itself with a big branch, torn from a tree, as thick as a man's arm.

With this club, brandished in his powerful fist, he held the most audacious at bay. Spears whistled continuously through the air as the hunters closed up, but the beast avoided them with amazing skill, meanwhile trying to force its way through those who barred the path. A bullet struck it in the thigh; it staggered, but did not drop. Grinding its teeth in rage, it struck the nearest native a smashing blow on the head with its great club. He dropped like a log, his face badly cut, and was hurriedly picked up and dragged away by his comrades before the gorilla could damage him further.

By this time there was a circle of men round the animal—yelling, hurling spears, and firing their guns—while the gorilla darted and whirled this way and that, striking out furiously with its club. The uproar was indescribable. Suddenly a shot, fired wildly, struck one of the hunters in the arm and shattered it. He fell with a cry of pain, and the gorilla, rushing in upon him, tore savagely at his back. The man was in deadly peril when another native, coming quite close, shot the brute in the left side, whereupon it released its victim and fell. From all sides there was a rush to finish it, but in a last effort it arose, whirling its club and champing its jaws—the incarnation of brute ferocity. As it stood there a spear, cleverly aimed, hit it near the heart, while at the same moment a bullet struck it above the left eye. Mortally wounded at last, the monster dropped dead.

INSECTS THAT PLAY MUSIC.

"MANY of the little folk of the field and forest have fine musical instruments, and play on them night and day for three or four months of the year," says a writer in the Woman's Home Companion. "The long-horned grasshopper, or true katydid, is the leader of the band. He has two sets of wings, the outer ones used for flying, the inner ones making up the bow and fiddle. Near the base of these inner wings is fastened a set of strong veins. When he moves them so that the veins on each wing rub together it makes a funny little wiry sound, and that is what is called 'grasshopper's fiddling.'

"Our common little green grasshopper is another fine player. His fiddle is attached to one wing, and he uses his hind leg for a bow. On this leg is a line of little beadlike lumps, from each of which grow a number of fine hairs. When Mr. Grasshopper draws this leg back and forth over his wings, his lovesongs trill out on the summer air. His poor little mate tries hard to make the same kind of music; she goes through the same motions, but can never produce a single sound.

"Another first class fiddler is the cricket. His tune is loud and shrill. One tune by night, one by day, is his rule. He has even been known to change his note when the clouds darkened the sun for a while in the day. Some insects beat little drums when they want to make music. The seventeen-year locust has two tiny drums fastened to his abdomen. They are fixed firm and tight, and to each one is attached a strong muscle which the insect can tighten or relax at will. It makes a sound something like beating on a tin pan, and will drown out every other musical note of the summer day."

THE Northwest has a grain crop in sight more than 35,000,000 bushels larger than any other on record. And yet some people have been trying to persuade us that the country is going to the dogs.

LIST of

ODD and SECOND HAND GUNS

In the height of the gun buying season we present this list, quoting odd and second-hand guns at prices unheard of. This list comprises our entire stock of second-hand, shopworn, travellers' samples and old model, high grade, medium and low-priced Shotguns and Rifles. We have cut the prices *so low* on these guns and rifles to induce our customers to *buy quickly* and when they want the goods. Usually bargains are offered at the end of the season when the demand is not great. Every gun is guaranteed as described. Guns sent on *bona-fide orders only*.

TERMS: CASH.**ORDER AT ONCE.**

If you do not see exactly what you want on this list, write us your requirements. At this time of the year guns come and go very fast, and we may be able to suit you if we have your name on our list.

Send for our Fall Hunting Catalogue, No. 59, or Skating and Winter Sports Catalogue, No. 60. Both are most interesting volumes.

Everything The Hunter Needs

These are the pleasantest days in the North Woods, and if you are correctly outfitted, no discomfort will be experienced. We sell every requisite for the Fall hunter at prices that are consistently low. Tents that are waterproof; sleeping bags, blankets, light but warm; folding stoves and cooking outfits; natural wool stockings, mackinaw coats, flannel shirts and jackets; moccasins and hunting boots; in fact, everything you can think of to add to your comfort.

The Season For Big Game

In Maine, New Brunswick, Nova Scotia or Newfoundland, this is the ideal time for big-game hunting. The weather is not uncomfortably cold, and if a light snow should fall, your chances for a big head are much better than in the early season. Ask us where to go or what to take without cost or obligation.

SPORTING GOODS CATALOGUE FREE!

STEVENS RIFLES STEVENS RIFLES STEVENS RIFLES

HERE'S ANOTHER:—

“I found the rifle in fine shape and is very accurate with factory loads, also reduced loads; with 8 gr. Dupont No. 1 Smokeless and 86 gr. bullet I can equal any .25 cal. target rifle made, and with 16 gr. No. 1 and Metal gas check, bullet is very accurate up to 400 yards, and no fouling and nitro troubles.

“It is a marvel of accuracy and manipulation—it is above anything yet on the market.”

That's what Mr. C. P. Stoner of Hartford City, Indiana, says about the
STEVENS HIGH POWER RIFLE No. 425.

CRIME OF A CREEPER.

A HIGHLY original plot for a detective story was suggested by the Rev. Prof. G. Henslow, who lectured on the "Senses of Plants" before members of the Royal Horticultural Society recently.

"A distinguished gardener," said the professor, "was dozing in a chair in his drawing room one sultry summer afternoon, and a bottle stood on the table by his side. Suddenly the bottle began to move stealthily across the table. The sleeper woke up; the bottle had disappeared. In astonishment, which might have been agitated had the bottle contained anything but a bunch of blossoms, he set out to investigate.

"In the midst of his meditations the thief fortunately gave audible warning of his proximity. Glancing out of his window the horticulturist saw an astonishing sight. The tinkle, tinkle he had heard was a Virginia creeper rattling the bottle against the window pane!"

The lecturer pointed out that little parlor tricks of this sort were quite a favorite pastime with the creeper. "The adhesive pads on its tendrils are irritated by anything it touches and stick to it like a leech. Really it may be quite feasible to train a plant to pick pockets.

"The fashionable sweet pea if touched on one of its tendrils with a stick or rubbed gently for half an hour will begin to twist round the stick. If teased further it will grapple with its tormentor. Besides the twisting motion it has another which has been described as 'bow around,' or circum-mutation. This is an endeavor to fasten on something. 'It was undoubtedly its success in "bowing around" or circum-mutation, my dear Watson, that enabled the creeper to carry off the bottle.'

"Though we have yet to find plants that can hear or smell, many of our common growths are sensitive to touch, taste, sight and thirst. Chlorophyll, which is the green coloring matter of leaves, not only stores up the energy of the sun in plants, but enables the plant to select the light ray that is most beneficial to it. In millions of little green granules under the epidermis of the leaf, it is in fact the eyes of the plant. It can detect every color and rays the human eye cannot see.

"The projected giant sun concentrator which may make the Sudan the power house of the world was long ago anticipated by nature in the schizostigma. This apparently terrible creature is nothing more formidable than a type of moss. Nature has endowed it with lenses in the form of globular granules which concentrate and condense light and so feed the plant in the shade. Too much light, however, turns leaves yellow, and plants can be made to turn their coats by the action of light upon them.

"Plants in fact are just as sensitive as we are. Insectivorous plants can undoubtedly taste what is given them and refuse it as certainly as the gourmet would an inferior dish at the dinner of a city company. They only like nitrogenous substances; sugar, starch, oil, and such fattening carbohydrates they have no use for.

"The craving of plants and trees for water has sometimes led them to terrible extremes. A poplar has been known to burrow beneath a wall, under a road, and down a well—all in search of water, and a pertinacious turnip which got the tip of its root into the crack in a field drain went on and on until it was six feet long in the drain. So sensitive is the tip of the root on the water question that Darwin declared it must have a brain in it.

"If ever a book is written on 'vegetable mechanics' one will find that plants have made levers, screws, columns, wedges—everything in fact that engineers do."—London Standard.

Briggs—No you don't! No more pointers for me. What I'm looking for now is a retriever.—Boston Transcript.

AMERICAN WOOLEN COMPANY

You need an outdoor suit of FORESTRY CLOTH

Stamped like this on the back of every yard.

WINTER sports are calling. Young men and women everywhere are answering with red blood leaping to the stimulus of bracing cold.

Right clothing is essential to full enjoyment and no other garb is so satisfactory as a suit of FORESTRY CLOTH, Shade 65. This fabric is made especially by the American Woolen Company for sporting purposes; there is no other like it. Closely woven and purest wool, the wind cannot penetrate and it is warm and comfortable without impeding activity.

Soft gray green in color; tough and long wearing; withstands hard usage. FORESTRY CLOTH is made in all weights, up to 22 ounces.

Another special cloth for sporting wear is OLIVAUTO CLOTH, a beautiful, olive-brown, closely-woven serge for riding and motoring clothes, golf suits, traveling coats, etc.

Ready-to-wear garments made up in Forestry and Olivauto Cloths for men's and women's wear may be obtained from Abercrombie & Fitch Company, New York, and other first-class outfitters.

Samples of Forestry and Olivauto Cloth sent on request. If your tailor cannot obtain them we will supply you through regular channels as we do not sell at retail. Send check or money order for quantity desired (3 1/2 yards for man's suit). Olivauto Cloth \$3.50 per yard; Forestry Cloth \$2.75 for medium weight.

American Woolen Company
Wm. M. Wood, President.
 Selling Agency: AMERICAN WOOLEN CO. OF NEW YORK
 American Woolen Bldg., 4th Ave., 18th to 19th Sts.

Our Outing Blankets are made to meet the requirements of camp life. Made in various weights and figures.

Getting a Christmas Tree

By FRANK FARRINGTON

YOU may think it strange that a man living alone out in the woods as I do should have any use for a Christmas tree, and in a sense you are right. But if I did not myself expect to set up in my shanty, "Spruce Hut," a beautiful, fresh evergreen and decorate it with candles and dance around it in their flickering light, I at least knew of some people who did expect to do something like that.

The village storekeeper is a pretty good scout, as the boys say, and many a time he does me a favor that makes me feel pretty kindly toward him.

He has two children, a small boy of three and a girl of five. He does not seem to have as much money as some people, but I have never seen him when that shortage was causing any grouching upon his part.

His whole family have enough to eat, and he is saving up some money so that the boy and the girl can have an education that will fit them for something—and that is more than the children of a lot of people with more money will get.

Christmas is the storekeeper's busy time. He gets a chance to come out shooting with me occasionally in the fall, or fishing in the summer. He enjoys a good deal more liberty than his city cousins do. But not a bit of that liberty comes just at the time when it is open season on Christmas trees.

And so, after talking to his children about it one day in the store, I agreed to get them a Christmas tree if they would let me come and see it after it was decorated.

Little Tommy and his motherly five-year-old sister Kate both grew very enthusiastic over the proposition, and I was committed to the task of bringing in a suitable tree, and I mentally determined that it should be the best of the woods, though it could not be more than eight and a half feet tall and stand up in the storekeeper's parlor.

Snow began to come early up in the mountains and the river was frozen up tight the first of December. One begins early to think about the holidays in such a year, and while I knew that it was not best to cut the tree too soon, I could not put it off any later than the 21st.

There were some hemlocks and a few spruce on the hillside that sloped toward the village, but they were scraggly, unsymmetrical, ragged specimens and none of them was good enough for any friend of mine, so I determined to take a chance and go over into a piece of hemlock timber across the swamp from "Spruce Hut" and help myself to a young and perfect tree that

"THE TREES HUNG HEAVY WITH SNOW."

stood not far from a board bearing the legend, "No Trespassing."

That sign is not as irritating to me as it is to some people, because I have grown used to seeing it there. I know the man who owns the property and I know that there is some reason in his posting his farm. He has had bars left down by hunters who did not care that the cows got out and into the corn. He has had pieces of stone wall and pieces of wire fence made easy gaps for stock by careless hunters climbing over them. He has had to get his neighbors to come and help him put out fires in his timber, fires that campers or picnickers started and left burning.

If there were no trampling upon property owners' rights by the people who go hunting and fishing, there would be few farmers who would take the trouble to post their farms.

We had been treated to a fall of about eight inches of snow on the 20th, so that everything was white and clean when I started out the next morning to get my tree.

I went around the swamp to where the little outlet stream flows along the edge of the posted woods, and thence off down the slope to the creek. The trees hung heavy with the snow and the brooklet itself was almost buried in it. I

was familiar with every foot of the way and many a time I had marked that particular little hemlock as the perfect Christmas tree.

I crawled through the fence, dragging my axe after me and measuring with my eye what I thought would be about the right height for the tree. I struck into it with a few sharp strokes and soon had the upper part, the part that I wanted, lying on the snow before me, while I was myself covered with a mass of white shaken off by the blows of the axe.

I was trimming up the branches around the base of my prize when I heard a snapping of twigs and looked up to see the owner of the timber land striding toward me.

There was no way of escape. I was caught with the goods on me. There was nothing to do but stand my ground and have it out with a man whom I had been caught robbing just as much as if I had been discovered taking a sack of grain out of his stable.

"Whose trees are you cuttin' down?" he demanded.

"This is that tree that I wrote you about," I said.

"You ain't wrote me about any tree," said my visitor. "Can't you see that sign over there, 'No Trespassin'?"

SNOW BEGAN TO COME EARLY UP IN THE MOUNTAINS.

"Yes," I replied; "I know that this timber is yours, and that it is posted. You know me well enough to know that I am informed about all that, but Mr. Hannibel, I want to buy this tree, and I wonder that you haven't got my letter before this, saying that unless I heard from you to the contrary I would consider that you were willing that I should come in here and take one of these for a Christmas tree and pay you two dollars for it."

"Well, I ain't had any such letter and I ain't any too sure that you ever sent me one."

"You never caught me in a lie yet, did you?" I asked jocularly.

"I never caught you in a lie before," said he emphasizing the "before." That did not seem to call for any reply, so I kept still.

"What 're you going to do with this tree?" he asked.

"It doesn't look as if it were up to me to say under the circumstances. I had expected to take it down to the village and give it to two kids I know there for a Christmas tree."

"Humph! Do you mean to say that you were going to drag that sixteen-foot hemlock clear over the hill and down to the village. It would make a nice Christmas tree by the time you got it there—if you ever did, wouldn't it?"

The tree did look more than eight and a half feet long now that it lay on the ground; that's a fact. But sixteen feet—never!

"That isn't within five feet of sixteen," said I.

A grim smile overspread the features of Mr. Hannibel. "Anything the matter with your eyes?" he asked as he drew out a folding two-foot rule.

"Not so you'd notice it," said I. "I'll bet you a dollar that tree won't measure twelve feet long."

"You're inchin' along," said he, "but I'll just take your bet," and he pulled out a silver dollar and laid it on the stump of the fallen tree. I covered it with a paper dollar.

He had not laid his rule on the tree twice

before I saw that I had lost, and I told him to take the money, which he did without a word.

"Now," said he, "seems to me you said something about a letter saying you were going to give me two dollars for a tree about like this one."

"That was the price mentioned, I believe. Shall I pay you now?"

"Can't pay me any sooner. I cal'late to sell my lumber always for spot cash—right on the stump."

So I put two dollars more on the stump and thanked my lucky stars that I had happened to have a little money with me.

"Now, who's your tree for?" he asked.

I told him.

"Brother o' mine," said he, referring to the storekeeper. "Come on and we'll carry it over the hill now."

So after cutting about six feet off from the heavy end, we got hold of the rest and started.

Hannibel was right. That tree would have been no Christmas tree by the time I would have got it in its original condition over to its destination. It would have been an Easter tree more likely.

It was a hard tug up to the top of the hill, and we both breathed much easier when we reached the point where the snow-clad village lay below us. I will give the farmer credit for carrying more than his share of the load every foot of the way.

The sun came out as we were dropping over a ledge down into a long stretch of pasture, and we both sat down on an exposed piece of dry stone and I offered a cigar.

The cigar was accepted, and while we lingered a little to rest and smoke, I said: "Mr. Hannibel, if this is a joke it is on me. If you regard it as a serious matter, well, it is on me just the same. I know I had no right taking that tree, but I've had my eye on it for a long time, thinking what a perfect little Christmas tree the top would make, and when I found that your

brother's youngsters wanted a tree, I couldn't resist taking this one. Of course I never sent you any letter, but to be honest about it I would of course have told you about it and paid for the tree."

"Well, I ain't kicking any over my bargain," said he. "I ain't sayin' that that's just the right way to go about buyin' a man's property, but under the circumstances and knowin' you as I do, I know you are honest about it. If it was some folks, I'd have chucked 'em right over the fence—body, boots and breeches."

While this was not exactly complimentary, and while it did not exactly whitewash me, still it was letting me out of my misdeed as well as I could expect to get out, and I decided to let it go at that.

"Come over to my shanty some day," I said, "and I'll set you up to as good a dinner as you ever ate. I'd like to visit with you and talk over things about the woods. You've got the prettiest piece of timber land around here."

Hannibel was a bachelor as I knew, and I expected him to accept my invitation, nor was I disappointed.

"I'll come some day. I've got the best piece of timber around, as you say, and that ain't all I've got. I've got the best foxhound in these parts, and when this snow gets settled a little so the dog can run a fox, I'll come over with my gun some morning and we'll just go out and get a fox before dinner, and then I'll come in and see if you're as good at cookin' as you are at guessin' the height of a tree."

TO OLD PAL: Send FOREST AND STREAM to your bunkie for Christmas. He will think of you every week in the year—and every thought will be one of pleasure and gratitude. Three dollars won't go further.

Christmas in North Carolina

By FRANK W. BICKNELL

CHRISTMAS in Dixie isn't what it used to be in the "good old days befo' de wah," as I have been told many times by the survivors of that interesting and more care-free period. Then it was the great family day, when the children came home and the nearest of kin got together for the week's celebration on a grand scale. There were big house parties, especially on the great plantations, little kingdoms in themselves, with innumerable servants—slaves, of course—and there and then the poet's command to "Let joy be unconfined" was heartily obeyed. Youth and pleasure did indeed meet, while the older set had their share, too. Every Christmas caller was cheered on his way by the hot toddy they knew so well how to make, and in many instances had produced all the ingredients on the plantation. It was a great day for the colored population, for they were not omitted in the serving of the cheering beverage, nor in the distribution of generous gifts. Also they had their social diversions.

Now this is much modified. So many of the old families were broken by the war, and the plantations, planned for cotton and slaves, cut up and more or less dismantled, that the Christmas doings have undergone radical changes, too. Many of the old families were no longer able, after the war, to indulge in these bountiful entertainments, and they have not been resumed on the scale once so typical of Southern hospitality, now that prosperity, happiness and contentment have come back to Dixie. Still, the old spirit of hospitality is strongly in evidence at this time. Changing fortunes have not been, and never will be, sufficient to stifle it, though certain unavoidable alterations have taken place in the life of the South. Many Southern people would like to do much more than they do in the way of entertaining their friends and visitors. They make the paying guest from the North feel very much at home. Thanksgiving Day has become more of a day for family gatherings than Christmas Day, and this year was one of great rejoicing among the old families, as well as many others, for they feel that the South is coming back into power at Washington under very favorable conditions.

The most striking difference between the observation of Christmas in the South and in the North is the very extensive use of fireworks at this time in the South. In fact, Christmas is to the South about what the Fourth of July is in the North. Firecrackers, and too often firewater, play a large part. Persons, even families, that rarely touch liquor at other times, consider it quite important to be supplied for Christmas. They tell me, however, it is less so than formerly. North Carolina is a prohibition State, but the thousands of express packages that may be seen almost any day at any railway station, show that the alcoholic taste has not departed from the people. Moonshine, or "blockade" whisky and apple-jack, as it is called here, still is sometimes to be obtained by the trusted ones. This industry,

GALAX PULLERS' WINTER SHELTER IN THE BLUE RIDGE MOUNTAINS.

too, has suffered decline, owing to the activity of the Federal revenue officers.

From a sportsman's standpoint, the Christmas season in North Carolina offers choice attractions, particularly the quail shooting in the Piedmont and mountain sections, from the middle of the State to its extreme northwestern corner. The variety of climate offered by this State is so great that one may find almost anything he chooses, from the mild low country of the middle and eastern sections to the cool, pure air of the mountains. On the coast he may have some of the finest duck shooting in North America. Up in the mountains it is usually, though not always, a little late for bear, 'coon and 'possum. Squirrels are plenty and rabbits a nuisance, they are so numerous all over Western North Carolina, in spite of the fact that they are much hunted by the men and boys all fall and winter. Rabbit hunting has become the favorite sport in many localities on Christmas Day. Quail are quite often to be found in the mountain farming country, while the pheasants, or ruffed grouse, are gaining in numbers and in some localities are very numerous. I know of several places where the hunting would be first-class with a good dog for a man who can "shoot some." These birds are not easy game in the woods, any more than quail, and for this reason are little hunted by the mountain hunters. I have heard them drumming all through the mountains this fall.

The mountaineer's favorite game is bear, 'coon and 'possum, and by Christmas time he has had many a race after them. If the weather is not too cold, he will have more, while lower down, in the warmer zones, the pursuit of these highly prized food animals will continue.

The amusing sport of "turkey-rolling" is still kept up about Christmas time, especially up in the mountains. It never fails to attract a crowd and after one or two have made a start, others soon enter. The contestant is blindfolded, stood between the handles of a wheel-barrow and whirled around rapidly by two men. Then he is told to wheel the barrow to a stake in the ground, which he has seen before being blindfolded, and toward which the barrow is pointed. It is about 75 to 100 feet distant, usually, and when he has reached the stake, or thinks he has, which is usually quite another thing, he is then to turn around and bring the barrow back. It is surprising how far the average man will miss it the first time, both in reaching the stake and in returning to the starting point. The hilarity of the crowd is noisily manifested. Ten or fifteen will enter, each paying a dime, and the one who makes the best record gets a turkey.

Wild turkeys, too, are still to be found if one knows where to go, and no other bird is quite so satisfying for Christmas, in the opinion of mountaineer, visiting sportsman and all others of good taste. The last one we had was a yearling gobbler weighing 19½ pounds, and no domestic turkey can compare with the flavor of that great bird.

The old-fashioned rifle-shooting matches are also kept up in Western North Carolina. The usual plan is to shoot for a beef, divided into five "choices." The best man gets first choice of hind quarters, second the other hind quarter. The front quarters go to third and fourth men, while the fifth gets the hide and tallow. The old deer rifles, or hog rifles, appear for these contests, sometime with barrels

THE CHRISTMAS TURKEY SHOOT.

forty-eight inches long, muzzleloaders and very accurate for short range when the secret of the misfit sights is understood, as it is by every man concerning his own gun.

As everyone knows, the Southland supplies much of the decorative material used in the North for Christmas. Holly, mistletoe, galax and leucothoe sprays are the chief items known commercially, though many other plants, shrubs and trees contribute to the cheer of the cold Northern Christmas. Magnolia leaves from further south are also extensively used, and so are the pretty little ground pines from the mountains. Gathering these leaves, especially the galax, green and bronze, which is used by florists the year around, affords the mountain people a good living during the winter and carries them through a season that was often hard for many of them. Many millions of galax leaves are gathered every winter by the mountaineers, largely women and children, tied in bunches of twenty-five and traded to the little country stores for needed supplies. Often families will go out into the mountains, far from home, take along some "rations" and spend several weeks, sometimes all winter, pulling galax. They put up a temporary hut, or find shelter under some huge overhanging rock, building a front to it to keep out the wind and cold. They get from twenty-five to thirty cents per 1,000 for the leaves, and where the crop is good, will get from 4,000 to 8,000 leaves a day, usually averaging about 5,000, and the children less. These must then be bunched and packed down. The galax industry has made the mountain people more careful about letting fires get out in the woods, for that destroys the galax. Before Christmas the "galackers," as they call themselves, are very busy, for the leaves are just getting good, and the more they get the merrier will their Christmas be.

Northern hunters, coming to North Carolina for its varied attractions, sometimes spend the Christmas season here, and if they do they are sure to have a good time, seeing the people at their best. One form of entertaining them is to get up a fox chase, which is very interesting, particularly if it is a red fox, for he will keep two alternating packs in hot pursuit for twelve hours and never be in the slightest danger, though letting the dogs get near enough to make it interesting.

In the Blue Ridge country we have our first big snow usually not long before Christmas, or just about that time, and if it comes softly, perhaps with a little sleet to hold it to the trees, a picture of fairyland will be formed that baffles any camera or artist's brush.

Carrying Game Through New Jersey.

TRENTON, N. J., Nov. 26.—*Editor Forest and Stream:* Any New York gunner shooting game in the State of New York and reaching his home in New Jersey via a railroad which traverses New Jersey, should not be held up or fined for carrying such game, provided he exhibits a New York hunting license and can satisfactorily prove that such game was not killed within the State of New Jersey.

If there is any question about such gunner satisfactorily proving his right to carry such game through our State at the time of his being prevented, I think in all justice to the Fish and Game Commission of New Jersey he should leave a deposit in a suitable amount, which deposit should be returned to him when he furnishes such proof by affidavit or otherwise that the game was killed without our boundaries.

It is not the intention of this commission to persecute anyone, and we do not propose to allow any warden or deputy warden to extort

unjustly any fines that are not perfectly proper, and at any time we are glad to take up and carefully examine into any cases that may occur about which there is any question. Attempts are made so often to infringe and impose upon our laws that we simply in self defense must throw every possible safeguard about them, and I can assure you that no injustice shall be done anyone if it is in the power of this commission to avoid it.

ERNEST NAPIER,

President New Jersey Fish and Game Com.

2,600 Deer Shot This Year.

APPROXIMATELY 2,650 deer were killed in the Adirondacks this year in the forty-five days of open season, extending from Oct. 1 to Nov. 15, according to complete returns filed with the New York State Conservation Commission. The records of the Department, which were compiled from the reports of the railroad companies and the scouts who are stationed in the forests during the open season, show that 2,500 carcasses, 96 saddles or the hams of the deer and 54 heads were shipped out of the woods between Oct. 1 and Nov. 15.

The State Conservation Commission has reports which are indicative of the unusual increase in the deer population of the Adirondacks. Not in the memory of the oldest attaché of the Conservation Commission has there been so many deer in the mountains. Game protectors, wardens and watchers report deer in large number in all the favorite hunting places.

Long Lake West this year yielded over 125 bucks, Big Moose contributed 40 and Clearwater topped its 1909 production by 30, the total number of deer killed here being 97.

The deer shot this season ranged in dressed weight from 180 to 260 pounds. The largest, 260, was taken near Long Lake West.

The Duck Epidemic.

NEVERSINK, N. Y., via Liberty, Nov. 27.—*Editor Forest and Stream:* It seems that the epidemic disease which has killed so many ducks in Utah was due to peculiar local conditions. As long as there is an abundance of water, the ducks are fairly well distributed and find plenty of food, but when drouths occur and the demands of irrigation are supplied, the ducks are concentrated in the fresh water ponds and marshes that have not dried up. The water is polluted and stale, and the disease again makes its appearance. There is no spring shooting, and an enormous number of ducks being undisturbed, remain in Utah to rear their broods.

A heavy fall of rain which fills up all the streams and ponds and relieves the needs of the agriculturists usually cures the disease by extending the range of the ducks and restoring natural conditions. Apparently it is a case of tenement house conditions being forced upon the ducks in dry season by civilization and the needs of a rapidly increasing population. The duck clubs, I am informed, had the dead ducks gathered and buried as soon as possible. That the sick ducks were all bagged by market hunters is an amusing yarn, as the disease was checked by rains before the season opened.

We cannot have game fish and game birds unless the environment is sanitary and natural. They must have reasonably pure water and proper food.

THEODORE GORDON.

The Caribou Barrens of Newfoundland—II.

Pictures and Text by the "Judge."

BOB and Ralph got back from the South at 4 P. M.—a quick trip—and reported seeing many ducks and geese, a doe and a small stag. Lionel says: "All the big stag hides now way back in the edges of the mesh, sunning he's horns, gettin' 'em ready for we."

There were a few mosquitos around, but they had only strength enough to fly and sing; and the black flies did not bite with that vicious bloodthirstiness which characterizes them in June, confining their attentions to crawling up our sleeves and into our ears. There were lots of fox tracks in the sand along the river, and bear signs, too; but Bob said it was no use hunting them before the middle of October, the fur being poor now. There are no skunks or porcupines in Newfoundland, though there are plenty in Labrador.

Speaking of shelldrakes and coots and various fish ducks, Lionel expressed a lively liking for them all; but said: "I can't come a hen, I'm not like she whatever," reminding me of old Peter Therkelsen, of fond memory, who said, as to skunks: "Wall, you tak 'um young skunk, parboil 'um in salt water and fry 'um in butter—bah gosh, ah'm jes soon have chicken."

In the woods near camp we found a 21-point horn, very much chewed up by mice, which reminded Bob that while guiding a government surveying party in the upper Terra Nova country last November he found, in the water's edge of St. John's Lake, the wasted remains of a couple of stags with the horns tightly interlocked. The heads he hung in a tree, and while passing there trapping, in February, took them with him; the skulls meanwhile having been nicely cleaned off by the Canada jays, and he had them then at home. He said the angle of contact would be perfect for cross-corner mounting, and that he could supply a pair of scalps during the winter if desired. Upon returning, I mentioned the matter to Wm. T. Hornaday, Curator of the New York Zoological Society, and he expressed a desire to have these horns for the heads and horns exhibit in the Administration Building at the Bronx Zoo. I accordingly got Bob to send them along, and they are now mounted in the Administration Building. A photograph of these unique trophies appears herewith.

Barring occasional showers, the days were fair, the sky blue and the weather cool. Having finished spotting out the trail into the "Big Mesh" over the ridge southeast, we found a great, rolling country, covered with tiny scattering bushes, six to eighteen inches in height, carpeted with the most beautiful continuous bed of moss, deep brown, bright chestnut and gray; all dry and velvety under foot, and intersected in every direction with caribou leads cut down into the roots of the mosses eight or ten inches below the surface of the bog. The curly toe prints of the deer were everywhere, in the leads and upon the surface of the moss.

The bog was about two hundred feet high above the river and there was a splendid view.

LOCKED HORNS OF STAGS FOUND DEAD AT ST. JOHN'S LAKE, BY ROBERT BROOKING, OF ALEXANDER BAY, NEWFOUNDLAND.

Now in exhibit of heads and horns at Bronx Zoological Park, New York City. Described in this issue.

Mount Peyton stood up nobly upon the north-eastern horizon. There are a great variety of marsh shrubs: such as the Indian tea, six inches high, with a slender green leaf rich brown underneath; stunted red spruces only one to four feet in height; the "goul-withey," a large leaf smooth and green on both sides and twelve inches high; the black plum bush, about two inches high, which, in the season, bears a small black plum about the size of a cranberry; the bake apple bush, four to six inches in height, and with a broad green leaf, and the marsh berry bush, bearing a fruit about like cranberries, but slightly smaller, and much used for making jam. Blueberries were plentiful in the old burnt lands and were much favored by the "grouse" (ptarmigan), and black bears. In the woods a tiny vine crawling over the stumps bore a "capillary berry," as

Bob called it, or as Lionel put it, "Maidenhair teaberry"; a pure white berry, the size of a red currant, but elongated and of a very sweet flavor. Red partridge berries (mountain cranberries) are plentiful on the old burned "dry barrens," and are shipped by thousands of barrels to England, where they are used for making jam and red dye stuff.

The characteristic trees of the country are white birch, cherry, poplar and maple along the river banks and on the ridges; alder in the little wood swamps; thick groves of spruce, tamarack, fir, pine and a very little cedar.

Chickadees and Canada jays are numerous, and there are small hawks, some few larger ones, and at night is heard the cry of owls, large and small.

The weather now turned very cold and clear, and Bob and I crossed the river to hunt

THE NARROWS.

out a big bog up to the northwest; but while there was plentiful sign we found no deer. Upon returning to camp the boys said that a grand white stag, with horns all peeled, had come out across the river three hundred yards below camp, just about 4 P. M.; that he got a whiff of the camp when about in the middle of the river and went tearing down stream, nearly kicking all the water out of the river. Ralph declared that his horns and legs and the water, altogether, looked like a spring log jam going down at Grand Lake Stream.

Next day I started up stream with Bob and Lionel at daylight, for the real hunting camp the boys had located fifteen miles to the south. Considering the slippery stones of the river bed and the hard portages through the thick woods around bad places in the river, I called it a hard day, although I carried only my rifle and camera; but Bob and Lionel, with their packs of sixty pounds or so each, did not seem to mind it much. My feet were sore from fighting the frequent beds of sharp shale rock along the river bed.

The bed of the river is broken here and there by lava dikes, and as we went along, filled up more and more with great boulders. At one point the river emerges from a dark cañon with steep rock walls, into which we could not penetrate. This Bob called the "tunnel," and we had to make a three-mile portage to reach the head of it. Resting there, we could hear the faint sound of falls down in the tunnel. Bob said that no one had ever been able to penetrate this tunnel. As a matter of fact, it appears that very few white hunters have ever come on to this particular river, although the country has been trapped by the Indians since the memory of man runneth not to the contrary.

We saw fox and cat tracks along the beach. It seems that there are no wolves in Newfoundland now, although Lionel said that he had heard of a pack three years ago in the northern peninsula, along the Straits of Belle Isle. They are said to cross from Labrador occasionally on the ice pack, the narrowest place being only nine miles in width.

After a sleep and breakfast Lionel returned down stream to the main camp, while Bob and I settled down for a hunt, getting firewood and fixing up comfortably the tiny camp, which stood just inside the edge of the bank, close by the river.

I observed that Bob was very careful with his ax, and commented upon it. Said he: "I have a good right to be, for I got a good lesson once and I will tell you about it. When I was a young fellow about like Ralph I made up a deal with another lad to trap in partnership one winter. We spotted out a line into a good bit of country about forty miles from home, just a good day's travel, and got our leanto built and our grub packed in and cached in the late fall, and everything all ready.

"We trapped through the winter until March, and then the other fellow got discouraged and jacked up. I wanted to have more sand than that; I didn't want to jack up, so I made up my mind to go over the line at least once more. So I set out before daylight with just a bit of lunch in my pocket and by night

I reached the camp, only to find that some one had come in there hungry and eaten up all the grub we had; not a morsel was left.

"That didn't bother me any, for I was just a young buck and could live on meat and knew I could get a ptarmigan or deer to eat, so I set out to build a fire and began to cut down a small birch just as it was getting dark. My ax must have crossed a small twig, for the next thing I knew the point of it was into my left knee cap. I always was an awful coward about human blood anyway, the worst you ever see, and the blood and all finally made me sick. I had no clothes of any soft, so I cut up the better part of my undershirt to make bandages and lay still all night. In the mornin' my leg was that stiff and painful I couldn't move. I dragged myself out and managed to start a fire and get some water heated, and by bathing the knee in hot water a long time, and tying it up as much as I could, got so I could crawl along after a sort of fashion and look for game, for there was nothing whatever left to eat.

"Not a deer or bird could I find, but at length when I came out on to the shore of George's Lake, I saw way down on the edge of the white ice something black, like a man's coat sleeve, and I knew it was an otter. I crawled along through the edge of the woods to get at him, but when I got down there not a sign of him could I see. Now the ice was about two feet thick and a big heave had come and cracked it up right there in a wide crack and forced it up, and as I peeked about under there I saw him right handy to me in under on a little shelf of ice, watching me. He knew the minute I seen him, for I seen his eyes twinkle, and, like a flash, he was gone under the ice. But I was sure he'd come out soon for a look, and when he did I shot him. Of course, an otter isn't much for eating, he's not a thing you'd pick if you had much choice, but I made up my mind he'd keep me from starvation, and for a fact he did, until I got so I could walk after a fashion and be able to get out of the woods. Ever since that I always takes a look over my head before I begins choppin'."

Speaking of seal hunting, Bob said: "There

(Continued on page 735.)

FOLLOWING THE TRAIL.

Choosing a Christmas Gift for Outdoor Boy and his Father

By UNCLE WILLIAM

WHEN I was a small boy I remember there was some friction between my father and mother over the gun question. Should I be allowed to have a gun of any kind? Would I do any harm to myself with an air rifle, or as mother argued, should I have a "little real gun?" The compromise finally petitioned Santa for an air rifle, with cute little darts decorated with fancy silk tail pieces; these for fancy shooting, while for every day shooting I was to use slugs. Christmas morning came, pursuant to the calendar's regular custom, and with it a shiny rifle, which gladdened my heart beyond comprehension. I hurried out to try my gun. Sitting on a stone wall across the street about forty feet away was a chipmunk. Slipping into the chamber one of the darts, I aimed carefully—and missed. Four times more I mused up the ambient atmosphere with my fancy ammunition, apparently much to the amusement of Mr. Chipmunk, who chattered gleefully. This was using up my "best" bullets too prodigally. I loaded with a slug, put the bead on the little rodent and pulled. The chatter ceased and over the wall fell the chipmunk. In the dozen bounds across the road I mentally had the skin stretched and tacked on a board drying, and the squirrel fried in butter on my plate for breakfast. Alas, I was too young to swear. When I reached down to pick up my quarry, he scampered into the wall and was gone. He had been only stunned; the toy gun didn't have enough hitting power to kill a four-ounce chipmunk at less than fifteen yards. To say that I was disappointed is no more an adequate term than "pretty" describes an October sunset. I was broken-hearted. I took the toy gun into the house and got out my sling shot—a real killer, though barred by father, mother and the neighbors. I waited around and by and by I got that chipmunk with a marble propelled by two elastics.

At dinner father asked me how I liked my new gun. I tried to evade the question, but finally, almost tearfully, I told my sad tale. The next day dad took the toy gun back to the sporting goods store and exchanged it for a pretty little 22 caliber Remington, from which I grew, with long trousers, into bigger calibers, with

which I have secured big-game heads of almost every description. However, the moral of the foregoing is obvious. Don't disappoint the boy on Christmas day, even if you "make good" the day after. The time has passed when an outdoor boy can be satisfied with a spring gun, a set of dominoes, neckties or things of the sort he knows are household necessities and clothing that dad has to buy him, anyhow. There are many useful gifts for a boy as well as for his father, as for instance a watch, than which there is none better than the Waltham-Riverside; a safety razor, of which the Durham-Duplex is as good as the best and better than the rest; Williams' shaving soap, cream or powder adds much to the enjoyment of this tool. Cigars, yes. They make an acceptable present for father and son when the latter has reached the estate of the rifle that "hits like the hammer of Thor," the great self-loading arm made by the Winchester Arms Co. However, no one should make a gift of cigars unless the giver is a smoker and a judge of smoke, because more bad cigars are disguised in selling wrappers than proverbial wolves appeared in sheep's clothing. Pipes and tobacco go far toward pleasure and comfort of the recipient, though only standard brands of the smoke weed are to be considered. Of these there are many of various flavors, all good and agreeable. The question of cigarettes—well, it isn't a question; it's a habit; to some a joy. From the Christmas gift menu the paper-covered smoke may be omitted. Boys, all boys, like skates as a means to an end. Sometimes the intermediate end is reached painfully during the interim. The end reached by skates is that of

filling in between other sports. In my youthful days I liked Barney & Berry skates, a veritable Christmas trade mark. Now, years later, I prefer the B. & B. product. Shooting glasses please father or son, especially such as are made by the F. W. King Optical Co. F. W. King is a trapshooter in the upper register. He attributes much of his success to "F. W. K." glasses, which he invariably uses. F. A. Hardy & Co. make an "auto glass" that is to be highly recommended to shooters as well as to motor boat and automobile drivers. A shooting coat is among the practical gifts, along with sweaters and hunting jerseys. The Nelson or Webber manufacture is made to fit the purpose as well as the figure. The youth and his father have

BEFORE BREAKFAST—ST. PAUL'S RIVER, LABRADOR.

GROWING UP IN THE ATMOSPHERE.

A BIRD IN THE HAND.

Photographs by Mary E. Weber.

taken to trapshooting to a tremendous degree. Boys of ten, on through the 'teens, are among the shooters at many clubs each week, while in the championship class appear Kahler, Bruns and others, still in the too young to vote class.

To such boys and men, as well as to field and fowl shooters, a shotgun would absolutely fill the bill. Good guns are made to suit all purses, but it is imperative that they be of standard make—Winchester, Remington, Baker, Lefever, Marlin, Parker, Davis, Smith, Stevens, Sauer, Daly, Francotte, Fox, Ithaca, Greener—every one full value for its price. A non-standard gun at a low price is a dangerous thing. School boys have enthusiastically taken up rifle shooting. In every city a school rifle team thrives. Target rifles as well as rifles for big-game shooting to be recommended are: Ross, Remington, Winchester, Stevens, Sauer-Mausser, Marlin.

In buying a gun it is well to remember that a gun is only as good as its lock, and that to keep the lock in condition requires oil—good oil. There are two good oils for guns—Nyoil and Three-in-One. A convenient as well as utility offering is the Maxim Silencer. This, attached in a minute to the small-bore rifle, will enable one to shoot indoors with almost no report. It's a great help in indoor target practice. I doubt if anyone yet has thought of ammunition as a gift. Yet, nothing could be more suitable than a box or a case of shells for a man or boy gunner. Care should be used, however, in selecting ammunition. Choose such brands as Peters, Robin Hood, Black Shells, Winchester, Remington-U. M. C. or a set of Marlin loading tools so that he may reload his shells. Specify the brand of powder you want, as all powders are not alike in power or reliability. A safe rule is to order those advertised in *FOREST AND STREAM*. These all are reliable. There are many others made, of which this may not be said. Fishing tackle and equipment brings gratitude from the man who is a disciple of Sir Izaak. Selecting tackle can best be done from catalog of which numberless are issued, and a few complete and dependable. In Brooklyn, Marsters, Michaelson; in Manhattan, William Mills & Son, Thos. J. Conroy, H. H. Kiffe Co., New York Sporting Goods Company, Schoverling, Daly & Gales, Von Lengerke & Detmold, Abercrombie & Fitch, D. T. Abercrombie; J. B.

Haskell, Crosby, Minn.; W. J. Jamison, Chicago; Jack Barnwell, Cabot, Ark.; F. W. Loomis, Saranac Lake, N. Y., or your local dealer if you know he may be relied upon. Tents and camp kits are valued presents. It is well to ask advice of an expert in selecting these various things. Powhatan Robinson, of New York Sporting Goods Co.; Ezra Fitch, of Abercrombie & Fitch; Ernest Von Lengerke, of Von Lengerke & Detmold, all are widely experienced in wood wants. Outdoor books—nothing better for man or boy, space being too limited to mention them here. They have been tabulated and priced elsewhere in this issue. There are many other outdoor articles excellent as gifts, namely: golf sticks, tennis rackets and last, but not least, archery requisites, bows, arrows, quivers, targets and so on. For these goods we gladly refer you to the dean of their manufacture, E. I. Horsman, or to a younger, though no less enthusiastic maker—James Duff, of Jersey City. I think Bill Nye, on youth, will aptly finish our advice on grown-up and youthful wants:

"Youth is the springtime of life. It is the time to acquire information, so that we may show it off in after years and paralyze people with what we know. The wise youth will 'lay low' till he gets a whole lot of knowledge, and then in later days turn it loose in an abrupt manner. He will guard against telling what he knows, a little at a time. That is unwise. I once knew a youth who wore himself out telling people all he knew from day to day, so that when he became a bald-headed man he was utterly exhausted and didn't have anything left to tell anyone. Some of the things that we know should be saved for our own use. The man who sheds all his knowledge and doesn't leave enough to keep house with, fools himself."

My knowledge practically all is shed, but still more may be gratuitously had by writing the Information Department of *FOREST AND STREAM*. Their experts in each department are at your service.

To MOTHER: Perhaps father buys *FOREST AND STREAM* on the newsstands now and then—when he thinks of it. He surely would be grateful if you subscribed, so that he found the paper on his table each week. It is a Christmas present that won't wear out.

Two Grouse Cases.

ALBANY, N. Y., Nov. 18.—*Editor Forest and Stream:* Believing that publicity is the best possible deterrent for crime of any sort, I was glad to read Theodore Gordon's exposé of the case of trapping and selling grouse in the Catskills. It is my opinion that all cases of violations of the fish and game law should be made public just as soon as a conviction is had, and there is no reason, except politics, why they should not be published. I am advised at the office of the Conservation Commission that the man caught by Protector DeSilva was John M. Decker, of Willowemoc; that he was caught on Oct. 24 on a train going from Livingston Manor to New York, and that he had forty-seven partridges in a dress suit case. He was arraigned and confessed judgment for \$100 and costs. Secretary Hoyt, of the Commission, says: "The Department believes that Decker has been acting as a sort of fence for the illegal hunters in both Delaware and Sullivan counties, the partridges being delivered to Decker and the running them into New York." He says also that "Decker was suspected of being mixed up in other violations of the law, that a search warrant was secured, his house searched and considerable fur found that was taken out of season. Decker made no denial of his guilt and confessed judgment for \$100 and costs in the fur case."

A newspaper dispatch from Gloversville, dated Nov. 15, relates that Frank L. Clunis, of Broadalbin, was fined \$100 by Justice Bass, of Northville, during the previous week for illegally transporting grouse. The Conservation Commission says that Clunis had five grouse and five woodcock in his possession. The newspaper dispatch says:

"According to information received from Northville, Clunis early in the week was in the Lake Pleasant region and returned with a number of partridges. Ten of these he packed for shipment, and it is stated sent them to the Elk Club of Amsterdam. This leaked out in some manner and Clunis appeared before Justice Bass, confessed judgment and paid the fine before complaint was made." J. D. WHISH.

THE area of Australia is three-fourths that of Europe.

Getting a Christmas Turkey

By AMOS BURHANS

MY first trip on the Mississippi was with my father when I was a lad of ten, but the last trip was the best I ever have made. It followed a canoe trip of the Mississippi from its headwaters in Hernando De Soto Lake in Northern Minnesota, north into Lake Itasca and through the State Park, thence southward as the river flows; followed it so that I could say I had made the entire trip from source to mouth.

We had stopped at Hickman, Ky., for supplies during a certain morning. At noon we started for any good point further south that would give us a Christmas turkey. Past many Government river improvements being put in, through some interesting goose country, watching the thousands of ducks and countless cranes, all headed our way to spend the winter in a milder clime, we sped during the afternoon. The Mississippi River Commission's map gave us an idea that we might find one at Island No. 10. Sometimes we could not distinguish the islands shown on the map by any surrounding water.

But we caught the inlet of water from the Mississippi just in time and made for it. The cut-off, a small stream fed by the main river and again wedding it twelve miles further down, was called Winchester chute. We dropped into it and hove the anchor, planning to spend the night, fill water casks and see what the prospects were for hunting. Up on the point formed by the cut-off and the river were the shacks of a dozen fisher folk. They had floated into their locations forty feet above the present stage of water while the river was on its annual tear during the spring.

The mudhook had no more than touched bottom before a delegation from the shanties came out to make sure we were not game wardens. The spokesman came aboard, sampled our sure cure for snake bite, left and assured his companions we were "right." As we mentioned some time ago, they were catching their fish in Missouri and selling in Kentucky. I think Hickman was their market. Probably this was not all that worried them. Setting off with the tender for water, we found a shack back among the cottonwoods. A split log fence surrounded it. Behind the yard as far as the eye could reach was corn and then more corn, all of the scraggly sort which an Iowa farmer would laugh at and shake his sides over for a month. Ill bred hogs rooted in the yard under the dwelling. A pack of curs challenged our approach. In a cage a wild goose honked. And then our survey of the shanty and its wards came to a cease.

"Hullo, stranger." The front door had opened and a stoop-shouldered man of sixty came out, thin of face and pale, cob pipe in mouth and a sickly smile trying to steal out the corners of his mouth. "Who might you be?"

"I'm after water, neighbor. What's the prospects?"

"Purty good. Well's down by the chute. Never goes dry and mebbe not so good as you're used to, but fair, anyway."

"Ever have snakes hereabouts?" I looked at him and tried to give him the key to the

riddle with my smile, but he did not catch it.

"Plenty of 'em in the summer."

"I'm sorry I cannot be here in the summer when you need it, but you better take a bit of the cure now," and with that I reached under the southwest end of my pea jacket and resurrected the cure. His face beamed.

"I might ask about the turkey shooting here in the bottoms if I had the time to stop and take it in," I ventured as an opener to a subject near my heart.

"Take my advice and stop here now while you're here." Perhaps more of the cure was what he wanted to meet.

"Why so?" I was innocent in my query.

"I see a flock of seventeen out on the bar t'other night as I cum along from tendin' the light." He cared for a Government lamp on the river.

"That sounds encouraging. I suppose I might take the time now as well as any."

"Sure. Take it now. I ain't able myself to git out much, but I'll send the lad. He's as good as me, anyhow. He kilt the bigges' one in these parts last winter."

That settled it. I had to stay. The thing was arranged to begin the following morning, and I went down to the well, filled the casks, walled through the mud to the tender, carried the water aboard and sorted the shells I would carry.

At daybreak we shifted the cruiser to the bank of the chute so the wife could call on the folks in the shanty and have other means of divertisement while the captain hunted a Christmas turkey. The lad in question, a shy

youth of some 'teen summers, who looked as if a number of "shakes" more would kill him for good, came carrying his ten-gauge. Rightly loaded, there is no use for a turkey arguing with a shoot stick like this, especially under a hundred yards. The whole case rests with the gun, and the eye behind it. A No. 6 or 8 buck-shot fairly well placed in the vitals of that two-legged Christmas delicacy transfers him to the commissary department for a brief period before he enters the happy strutting grounds where hens are aplenty and hunters nil. And it takes a ten-gauge of proper bore and choke to accomplish this desideratum, according to the market hunters of the section we were in.

Picking up my sixteen-gauge I crawled out on the forehead hatch and loosened the dink, for we had to cross the swift chute and thus get on the island where the turkeys were supposed to be. The island was inhabited by a few negroes and some elm peeler hogs. The hogs were in the ascendancy. They could get under the angle where a man could not, and the chances were all in their favor if one tried to run them down. We set out for a path that led down the river bank, through a patch of corn and into more brush and timber. The latter was so dense one could not see more than a few yards ahead. Every step forward not made in the path was a sure turkey alarmer, for the earth was covered with brittle twigs and fallen leaves.

I had thought the best manner of pursuit was to locate their night drinking place and secure ourselves among the brush, maintaining silence until such time as we should let the guns loose and pick up the cripples and the dead. But it was not to be such an easy matter as this even. The lad led the way. He knew where he was going. Lower and lower became the jungles, the trees denser and denser. Birds of all kinds flew off at our approach. I believe I

THE AUTHOR'S CRUISER WANDERLUST.

never saw as many red birds as in the brush on this island. Jays were numerous. It was a veritable feathered paradise. Food was everywhere. Shumac, acorns, weed seeds, corn and other food in abundance held them temporary prisoners on the way south. Passing along another patch of corn we scared a covey of young quail into the air. They dodged into the brush, and we could hear their fat little bodies drop into the leaves as they plumped, plumped, first here and then yonder according to the distance they had separated by the time they alighted.

A swampy stretch of timber and bush we soon came to. The lad said that we were getting into the mast grounds where the birds would be feeding more than likely. He moved more cautiously than before and unlimbered his gun. I dropped behind and to the right of him, thinking from the looks of the tangles I would be safe in trying my hand alone. Then, too, I stood a chance of getting into the birds alone and making a record. (I have had this feeling a number of times when hunting with others, and some day when I have time I shall analyze it. I have heard that others experience the same thing.) Just as soon as I was out of sight, of Bill my stealth became incredible. I moved very slowly. A good half hour was spent casting about in this manner, nothing showing that the birds had even been in the section that morning.

Shortly I heard a young cannon break the silence somewhere ahead of me and imagined a turkey came to death at each of the four shots. The gun must have been pointed toward me, for the reverberation was something startling, although it was a distance off. I dropped into a clump of brush and dead stuff and cleaned a place to the bare earth, so that my turning about in the shield would not break something under foot and warn the quarry should it approach. It was well I did this.

From overhead I heard the flapping of enormous wings and looking up saw four young turkeys dropping into the brushy spot before me. They dropped so suddenly that I had no time to shoot. There was nothing to do but take a chance on them, approaching within range, for they would surely advance toward me instead of going back toward the spot where they had been shot at. I was quiet at least ten minutes. Looking back on the incident I see, if I had moved, the game would have deserted me with but slim chance for a fair shot. I have seen a startled deer stand in an open spot for a long time before making off, seemingly trying to ascertain where his danger lay. And it must have been the same with the turkeys. Their patience saved them for some time. But mine outlasted theirs, for after a time one of them stuck its head out of the brush and came toward me. He was easily a hundred yards off. If the others followed him they would not be in range of the sixteen-gauge when their leader was, and my chances for more than one fair shot seemed poor.

Two of the others came out of hiding cautiously as the first young Tom came toward me. I was inspecting them with my glasses and admiring the trio, when the fourth one came out to follow them. I laid aside the glasses and grasped the grip of the repeater. The Tom was getting within range of my sights. The closer he approached, the more cautious he became. But I tried to remain motionless and let him get into the muzzle of the gun so that I might

have a shot for one of the others behind. They had been coming on, too. Suddenly he stopped. Down he squatted for a spring that would help him get under way by wing power. I already had the gun through the brush and touched the trigger. With a flop he turned over on the leaves and off went the young hens behind. I sent two charges of shot after the tardiest one of them, and she fell winged a long way from where she went into the air. Feeling sure I had the young Tom, I hastened past him and made for the crippled hen, as she was apparently badly hurt. But when I arrived at the spot I marked there was no sign of her and search was fruitless; I mean turkeyless. Going back to the spot where I had knocked down the young Tom, he too had disappeared.

A step in the leaves behind caused me to

AS THEY USED TO FLOCK.

turn round. There was the boy with a fine pair of turkeys hanging over his shoulder.

"What's all the shootin'?" he asked.

"Look at this spot," I commanded, pointing to a few feathers where Tom had fallen.

"Went off and left him, thinkin' he was dead, huh?" He had the situation grasped in a twinkle. "Lots o' folks do it, not knowin' better. Sometimes they's dead and sometimes not—mostly not."

That excused me.

We cruised on next day. I thought it too much to try the game again and have to stand the looks of a community of select turkey hunters. They would be sure to stare at the man who did not know enough to pick up a dead bird.

To LITTLE SISTER: Big brother will be mightily pleased if you send him a subscription to *FOREST AND STREAM* for Christmas.

To EVERYBODY: If you know a man whose blood corpuscles are red, you know a man who would appreciate *FOREST AND STREAM*. If you intend making this man a Christmas present, send him *FOREST AND STREAM*. Besides being interesting, it is the indisputable authority on subjects it covers.

Hon. James Gordon.

FORMER United States Senator James Gordon, the grand old man of Mississippi, died at Okolona, Miss., Nov. 28, after a week's illness, due largely to advanced age. He was known to all old-time readers of *FOREST AND STREAM* as "Pious Jeems."

Senator Gordon was born in Monroe county, Mississippi, in 1833, and became a national figure when he made the famous "good will" speech in the Senate immediately upon his appointment to fill the unexpired term of the late Senator Anselm J. McLaurin. He was appointed Dec. 27, 1909, and served until Feb. 22, 1910. In that short time he endeared himself to the nation by his quaint utterances and his unbounded optimism.

He was described as a "belated survivor on the American stage, of a civilization and mode of life which exists no more and never will exist again. He is as far removed from this world of chicanery and commerce as the knights of King Arthur's Round Table. He is a chateau vintage product of ante-bellum days in the South. The conditions which produced the flavor and bouquet of his personality can never be reproduced. He is as distinctive a product of those other older, happier times as a piece of Georgia silver or mahogany. In mind, manners, mode of thought, and attitude toward life, he is no more like his modern fellows than the output of Grand Rapids is comparable with the finished craftsmanship which gave a name to Sheraton and Heppelwhite."

Colonel Gordon is known to all, save the youngest generation of readers, as a famous sportsman, planter, statesman and soldier. Few men were so familiar with life of the old South in the days before the war as Colonel Gordon. The owner of vast estates and many slaves, he also possessed the swiftest horses, the best dogs, the most modern arms and equipment. No eye quicker than his to stop the buzzing quail, no ears keener to listen to the cry of the hounds and tell which way the fleeing buck or bear would direct his course. When the war between the States came on, Colonel Gordon at his own expense raised and equipped a company of cavalry, was at once in the field, and fought through the long conflict to its bitter end.

Some years after the war, Colonel Gordon lost all his property. He came to Okolona, his present residence, without means, and by his own unaided exertions re-established himself. He camped in the fields, cut hay and made it himself. With a few Jersey cows he established a dairy, drove his own milk wagon and worked in the field before the dew was off the grass. This he continued until he had entirely paid for his farm.

For many years the signature of "Pious Jeems" has been familiar to sportsmen. In the old days he wrote for Porter's Spirit of the Times, and for thirty-five years he was a frequent contributor to *FOREST AND STREAM*.

Roach with Two Mouths.

W. HATT, fishing at Walton, and piloted by Jack Hone, caught a roach about seven ounces with two distinct mouths, evidently both in use.—Angler's News (London).

Dripping water may wear away a stone, but a stream of water will do it sooner.

The Green Plover.

(Vanellus cristatus.)

BY W. J. MURRAY.

THIS European bird belongs to the family of "waders," of which there is a great variety distributed almost over the whole world, more especially in the north and south temperate zones. In shape it is somewhat like a pigeon, but not quite so large. On the top of the head it has a crest consisting of a few shining black feathers which usually lie horizontally, but can assume an erect position when and as may be required. The breast is black. The sides of the neck and the lower portion of the body are white, and the upper parts are of a deep shining green with a tinge of purple and copper shade.

While this plover, which is perhaps best known as the "lapwing" (and locally as the "pee weet") is to be found plentifully all over the British Isles, it seems to spend most of its time in Ireland, and at all seasons of the year. Here it affords excellent sport in autumn and winter to the fowler, as the supply of birds is usually very good, and the sportsman is always certain of securing a good bag during the season, provided of course that his aim is not at fault.

The green plover or lapwing is very highly prized for table purposes and justly so, as it is both gamey and delicate in flavor, and except in severe frost it is usually in excellent condition.

The birds do not go to cover, but keep to the open marshy meadows and low-lying lands adjoining lakes, marshes, rivers and slob lands of shallow seas. Although they are very watchful and post sentries and send out scouts, they can be stalked successfully from behind rocks, reeds, bent grass, sand dunes, etc., and sometimes they fly low enough to come within range of an ordinary shotgun with No. 5 shot. They nearly always fly in large flocks and also feed together. Although they may wander singly over a large meadow while feeding, they muster again before leaving the ground. The food consists chiefly of small animals such as worms, grubs, insects, etc. During the feeding time they always appear to be busily occupied in searching for food, and in doing so they show great fleetness and nimbleness of foot, as if their object were to get the task over and get out of danger at the earliest moment possible.

In the breeding season the lapwing is a most interesting bird and shows not only remarkable affection for its young, but the greatest resource and fox-like cunning in protecting them from all real or even supposed enemies. The nest consists merely of some withered grass arranged in any little hollow on the surface of the ground, such as a cow track, and here the eggs, three or four, are laid, and are carefully and jealously guarded by the female, while the male hovers around in a state of continuous excitement, uttering shrill and wailing sounds like "ee-a-wee" and indulging in extraordinary evolutions on the wing. When any person enters the field in which the nest is situated, the cries of the lapwing become frantic, and the male bird flies about in all directions. Sometimes he almost knocks one's hat off, so closely does he approach the strange visitor. Then comes the remarkable piece of strategy for which the bird is noted. If the visitor walks in the direction of the nest, the lapwing at first gets very much

excited, but as the nest is approached, the whole excitement subsides and soon the cries are transferred to another portion of the field where they are started with redoubled vigor, thus making believe that the nest is there in the hope that the visitor will be attracted to the place where the nest is not. This will-o'-the-wisp ruse is practiced regularly wherever there is suspicion of an enemy of any sort in the field. The eggs of the lapwing are somewhat smaller than those of a pigeon and are a sort of muddy green color with black and brown spots. These eggs are considered a great delicacy, and are very highly prized in England, and large quantities of them are sent to the London market, especially from Holland during the laying season (in the months of May and June.) The eggs are so delicate in flavor and so easily digested that they are specially recommended for the use of invalids and those who suffer from deficient digestion. Unfortunately, however, the price is prohibitive to all who cannot afford to indulge in luxuries, so that few are able to enjoy the coveted delicacy of "plover's eggs" which appear to be more difficult to procure than the birds themselves, which are generally moderate in price.

How Much Does a Fish Shrink?

So many have been the inquiries as to how much has been lost in weight of the "whopping" fish between the time he was pulled out of the water and put on the scale that we print a shrinkage table. This estimate table is based on opinions of those whose experience vouches for its comparative accuracy. If any reader has other views on the subject we should be glad to hear from him. We realize that no shrinkage table can be exact because fat fish naturally shrink faster than thin ones, while weather conditions, as well as conditions under which the catch is kept before reaching the weighing place, has much to do with the amount of weight lost. Those who have had experience in "fish shrinkage" are requested to send us their bits of information. Table of fish shrinkage follows:

Just Killed.	Dead 6 Hours.	Dead 12 Hours.
1lb.....	15¼oz.	15oz.
2lbs.....	1lb. 14½oz.	1lb. 14oz.
3lbs.....	2lbs. 13¾oz.	2lbs. 13oz.
4lbs.....	3lbs. 13 oz.	3lbs. 12oz.
5lbs.....	4lbs. 12½oz.	4lbs. 11oz.
6lbs.....	5lbs. 11½oz.	5lbs. 10oz.
7lbs.....	6lbs. 10¾oz.	6lbs. 9oz.
8lbs.....	7lbs. 10 oz.	7lbs. 8oz.
9lbs.....	8lbs. 9¼oz.	8lbs. 7oz.
10lbs.....	9lbs. 8½oz.	9lbs. 6oz.
11lbs.....	10lbs. 7¾oz.	10lbs. 5oz.
12lbs.....	11lbs. 7 oz.	11lbs. 4oz.
13lbs.....	12lbs. 6¼oz.	12lbs. 3oz.
14lbs.....	13lbs. 5½oz.	13lbs. 2oz.
15lbs.....	14lbs. 4¾oz.	14lbs. 1oz.
16lbs.....	15lbs. 4 oz.	15lbs.
17lbs.....	16lbs. 3¼oz.	15lbs. 15oz.
18lbs.....	17lbs. 2½oz.	16lbs. 14oz.
19lbs.....	18lbs. 1¾oz.	17lbs. 13oz.
20lbs.....	19lbs.	18lbs. 12oz.
30lbs.....	28lbs. 9½oz.	28lbs. 2oz.
40lbs.....	38lbs. 2 oz.	37lbs. 8oz.
50lbs.....	47lbs. 10½oz.	46lbs. 14oz.

Woman Catches Record Bass in Meramec River.

WHAT is said to be the largest bass ever caught in the Meramec River by a woman was landed by Mrs. John Weert, 1038 Grandview Place, St. Louis, at an outing resort near Cuba, Mo.

The fish was hooked and landed by Mrs. Weert unaided and when weighed immediately after landing it scaled 6 pounds 3 ounces. After being packed and shipped to St. Louis it dried,

weighing 5 pounds 9 ounces after its arrival there.

Mrs. Weert used a combination of a brown hackle fly and a Hildebrand spinner. Being somewhat of an amateur, she added a plain, everyday earthworm to make sure of tickling the piscatorial fancy.

Position of the Reel Handle.

PORTLAND, Me., Nov. 14.—*Editor Forest and Stream:* Why do almost all of the writers on fly-fishing instruction advise the placing of the reel with the handle to the right?

Wherein is the advantage of striking your fish, and then transferring the rod to the left hand (which in most men is the weaker)? Why advise a procedure that entails a few instants of loss of control? Why not eliminate the danger of losing your fish during the change of hands by placing the reel with handle to the left?

A deer hunter does not advise cocking his gun with the left thumb and then shooting from the right shoulder. Neither does the football player make preparation with the left foot and then punt with his right. With a man stealing to second base, the catcher does not gauge his throw with the ball in his left hand and deliver it with the other. Neither is there any such change of hand in the case of the croquet player, the tennis player, the lariat thrower, nor any other that I know of.

MOCCASIN.

Saved by Prompt Action.

ST. AUGUSTINE, Fla., Nov. 21.—*Editor Forest and Stream:* Inclosed find clipping which should have the widest possible circulation, and it shows what can be done by prompt action in cases of snake bite, and which, if carefully followed, would be the saving of numerous lives every year.

DE WITT WEBB, Mayor.

Tampa, Fla., Nov. 21. (Special).—Lee MacDonell, the wholesale grocer, was bitten by a rattlesnake while hunting some twelve miles southeast of the city to-day. His promptness in slashing his right leg at the point where the snake's fangs entered and letting the poison exude with a copious flow of blood saved his life. The physicians say he will be well within a few days.

With Leroy Cotter, Mr. MacDonnell went into the woods after quail. Their dog pointed a covey and Mr. MacDonnell started through some palmettoes after the birds. He heard the snake's rattle and jumped, but not soon enough, and the reptile's fangs entered his right calf. Mr. MacDonnell quickly shot the snake. Mr. Cotter, who is a druggist, had a hypodermic needle and some antiseptic medicine, and he injected it immediately, then drove hurriedly back to the city, where Drs. Cook and Adamson dressed the wound.

It is said that a boa constrictor is prepared to swallow anything he is unable to dodge. There is another member of the *Boidæ* family who acts in exactly the opposite manner. He belongs to what is called the "loan-shark" variety.

FOREST AND STREAM aims to keep always before its readers a high, sane and cheerful ideal of American sportsmanship.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 20 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

MERRY CHRISTMAS.

THIS is our Christmas number. It brings with it, whether it finds you near at hand or in remotest corners of the continent, our sincere wish for a very Merry Christmas, and our hope is that this offering of stories and sketches which FOREST AND STREAM contributors have provided for your entertainment may add its mite to your enjoyment of the holiday season.

THE STILL-HUNTER.

THE typical hunter is the still-hunter. There are many and diverse ways of taking big game—jacking, hounding, calling, floating, baiting—but none of them is so universal, none so truly typical of the essence of the thing as still-hunting.

The still-hunter trusts to beating wild nature at her own game. He enters the wilderness haunts with all the stealth of his aboriginal ancestors or of the wild things themselves.

Though his senses are less keen than theirs, he has the added power of reason, and a terrible foe he proves. No panther creeping for the spring, no wolf howling its wild pæan, strikes a keener terror to the heart of the deer than the suddenly realized presence of the still-hunter. And the fierce animals of the forest have learned to dread him likewise.

The still-hunter skirts the hardwood ridges noiselessly, his moccasined feet resting on the moss-covered rock or fallen tree trunk with a light surcuss that suggests simian prehensile powers. His progress is slow, but terribly suggestive of reserve power. Frequently he stops altogether as he scans some hollow where mouldering trees have furnished food for a luxuriant growth of the young hardwoods, or peers under the dense shadows of some balsam brake.

The things he sees and hears are full of meaning to the still-hunter. The turned leaf, the depression in that red-brown soggy pile where some old forest monarch fell and disintegrated the sharply defined footprint in the black muck at the edge of the spring—all these tell their story—the broken branch and nibbled

bough, the crackling of a stick far off under the forest arches. So he becomes aware of the presence of his game. Then with most infinite patience the approach is compassed and he stands waiting his chance for a shot. An indefinable something causes the wild thing to look up, and as it catches the dread eye that seals its fate, it is rooted to the spot with fear.

The still-hunter is the king of the forest. All nature owes him allegiance, and he accepts his tribute at will. He is close to the source of things, and at night sleeps with the spirits of his primal ancestors—old Nimrod and the lot. To him the trees talk and the waters whisper. Old Mother Earth with all her burden of years is young again and smiles as she did on the first man. Freedom and power is his song—freedom and power.

THE DEAD CAMP-FIRE.

A HEAP of ashes, a few half-burned brands, a blackened pair of croched sticks that mark the place of the once glowing heart of the camp, furnish food for the imagination to feed upon or give the memory an elusive taste of departed pleasures.

If you were one of those who saw its living flame and felt its warmth, the pleasant hours passed here come back with that touch of sadness which accompanies the memory of all departed pleasures and yet makes it not unwelcome. What was unpleasant, even what was almost unendurable, has nearly faded out of remembrance or is recalled with a laugh.

It was ten years ago, and the winds and fallen leaves of as many autumns have scattered and covered the gray heap; or, if it was only last year, and you fancy that the smell of fire still lingers in the brands, how vividly returns to you the anxious deliberation with which the site was chosen with a view to all attainable comfort and convenience, and the final satisfaction that followed the establishment of this short-lived home, short-lived, but yet so much a home during its existence.

Nothing contributed so much to make it one as the camp-fire. How intently you watched its first building and lighting, how labored for its maintenance with awkwardly-wielded ax, how you inhaled the odors of its cookery and essayed long-planned culinary experiments with extemporized implements, over its bed of coals, and the consequent exaltation of triumph or mortification of failure.

All these come back to you, and the relighting of the fire in the sleepy dawn, the strange mingling of white sunlight and yellow firelight when the sun shot its first level rays athwart the camp, the bustle of departure for the day's sport, the pleasant loneliness of camp keeping with only the silent woods, the crackling fire and your thoughts for company; the incoming at nightfall and the rekindling of the fire, when the rosy bud of sleeping embers suddenly expanded into a great blossom of light whose petals quivered and faded and brightened among the encircling shadows of the woods. You laugh again at the jokes that ran around that merry circle and wonder again and again at the ingenuity with which small performances were magnified into great exploits, little haps into strange adventure, and with which bad shots and poor catches were excused.

At last came breaking camp, the desolation of dismantling and leave taking. How many of you will ever meet again? How many of those merry voices are stilled forever, from how many of those happy faces has the light of life faded?

Who lighted this camp-fire? Years have passed since it lit the nightly gloom of the woods, for moss and lichens are creeping over the charred back log. A green film is spread over the ashes, and thrifty sprouts are springing up through them.

You know that the campers were tent dwellers, for there stand the rows of rotten tent pins inclosing a rusty heap of mold that once was a fragrant couch of evergreens inviting tired men to rest. You know they spent their nights in a shanty, for there are the crumbling walls, the fallen-in roof of bark that never again will echo song or jest.

The pile of fish bones attests that they were anglers, and skillful or lucky ones, for the pile is large. If you are an ichthyologist, you can learn by these vestiges of their sport whether they satisfied the desire of soul and stomach with the baser or the nobler fishes; perhaps a rotting pole, breaking with its own weight, may decide whether they fished with worm or fly, but whether you relegate them to the class of scientific or unscientific anglers, you doubt not they enjoyed their sport as much in one way as in the other.

You know that they were riflemen, for there is the record of their shots in the healing bullet wounds on the trunk of a great beech. For a moment you may fancy that the woods still echo the laughter that greeted the shot that just raked the side of the tree, but it is only the cackle of a yellowhammer.

There is nothing to tell you who they were, whence they came, or whither they went, but they were campers, lovers of the great outdoor world, so akin to you, and you bid them hail and farewell without a meeting.

SAYS LONDON FIELD.

LONDON FIELD, the most comprehensive sportsman's periodical in Europe, in fact, we may say, in the world, publishes in its issue of Nov. 16 an unusual and interesting article on the "stimulating reading" to be found in FOREST AND STREAM, which it recognizes as "the paper which deals more fully with shooting and fishing than any other in America." The article is well worth reading. It appears in the trap department in this issue.

To the Canada Jay.

BY PAUL BRANDRETH.

Little brother of the green solitudes,
 Whose silent flight and mild, mysterious eye
 Seem wrought of twilight and poetic moods,
 Whose wings are like a veiled November sky,
 With here and there a dark cloud floating by—
 Come, take your share of venison-meat and game,
 And while upon fresh balsam boughs we lie
 Join us beside the camp-fire's ruddy flame.

Like a gray shadow, glancing into light,
 Softly you come and go. Oh, impish sprite,
 Born of the snow-lands and the north wind's sigh,
 Wild as an arctic spell, half-tame, yet shy,
 Withal so strange the magic forest seems
 In you to voice its everlasting dreams.

Archery

Scottish-American Archers.

JERSEY CITY, N. J., Nov. 30.—*Editor Forest and Stream:* The Scottish-American archers were much disappointed at the snow storm which overtook them on Thanksgiving day, making it impossible for them to shoot in the annual team contest. For although the shooters in this club are all in the novice stage still, they are to a man more enthusiastic archers, if that be possible, than most of the shooters who have handled the bow for many years. However, fortune favors the brave, and that describes the boys who turned out on Saturday, Nov. 30, to add their small contribution to the Eastern League team shoot. The day was bitterly cold, with a strong wind blowing across the field, and the last twenty-four arrows were shot in semi-darkness. The final scores were:

	Hits.	Score		Hits.	Score
Jas. Duff	73	309	Geo. Milne	41	144
J. McRae	54	226	Wm. McOwan...	30	130
J. M. Cleland....	49	189			

This is the first occasion, since the institution of this club in September, that there have been less than ten shooters on the range at one time, which no doubt can be accounted for by the weather conditions. The Scottish-American Club has hitherto shot only one team round, but would have had more practice had it not been that the last few weeks have been devoted almost entirely to the breaking in of recruits for the formation of a new club in New York in connection with the Y. M. C. A., several of whom have been shooting with us for the last two weeks. In Jersey we have prospects of a club for next season of at least forty shooters, but as this seems too many to handle on one range, there is talk of starting another club in Newark, N. J.

JOHN M. CLELAND.

New York Archery Club.

THE New York Archery Club, organized last summer, has elected the well known and enthusiastic archer, W. H. Wills, President, with F. Hamilton Hobbs, A. B., upon whom the further degree of P. P. (prominent and popular) might be conferred, as Secretary-Treasurer. A few members of the club have been shooting at Sheepshead Bay during the summer. A meeting will be called shortly for the election of additional officers and selection of range and permanent club rooms. Full particulars may be had by addressing Secretary at 76 Park Place, New York City.

“Just Before the Loose.”

THE following article is taken from the Archer's Register for 1879, and is as interesting to-day as when written:

That the successful practice of archery should be so extremely difficult and attended by such numerous trials and obstacles that numbers of persons are deterred from attempting to attain proficiency in the pastime, while others who essayed the initial stages to success have, many of them, given it up in despair at not at the outset becoming good shots is much to be regretted. But the fact that votaries of the bow should

often so be discouraged cannot be considered surprising, when it is remembered that Horace Ford used to say that there were about four and twenty little difficulties to be surmounted before an archer could succeed in planting an arrow correctly in the center of the target. Archery is a sport which renders it necessary for the beginner to place himself in a position in which limbs and muscles take attitudes different to any which are peculiar to other athletic exercises,

W. H. WILLS,

One of the best and most enthusiastic archers in the East.

and herein is one chief impediment to off-hand becoming an accomplished archer; for it is impossible for the tyro when shooting to know his exact position, and this at once makes it apparent how necessary it is that someone skilled in the time-honored game should be at hand to give hints, bred of experience, as to the correct attitude to assume, and thus prevent ungainly habits being acquired, which are not easily got rid of, and which tend to prevent the learner, even after due practice, from becoming a really good shot. Unfortunately, however, how few there are who are qualified “to teach the young idea how to shoot”; or who, knowing how, will take the trouble to do so! On the other hand, the beginner often seems to imagine that proficiency in archery is a kind of divine gift, in-

stead of an art to be acquired by good teaching first, and patient practice afterward. Indeed, I have often seen a friendly hint, given in the kindest manner, resented almost as an insult instead of being taken in good part. I remember once shooting at a public meeting, a good many years ago, with an old archer, and one who thought he knew all about archery. The range was 100 yards and the arrows of the gentleman in question were all well shot and straight to the mark, but nearly every one went just under the target. After this had gone on for the best part of that distance, I ventured to remark: “Mr. P., would it not be better if you raised your aim a little; most of those arrows would then go in, instead of under, the target.” Turning round to me he rather angrily replied: “I tell you what, sir, I have been shooting with that aim for twenty years, and I am not going to alter it now,” quite forgetting that many circumstances render it necessary to alter the elevation in order to hit the target. Even the bow itself does not shoot so quickly toward the end of a day's shooting as at the beginning. An archer's muscles must, moreover, give way a little from the strain put upon them in the course of a prolonged spell of shooting with a bow which, to shoot well with, must be well up to the archer's power. These and other considerations have all to be taken into the reckoning if golds are to be made.

I do not agree with the strictures in a recent number of *The Field* as to the method of shooting from the arrow fully drawn just before the loose, and I think that the great improvement which has taken place in the average scoring of both ladies and gentlemen is owing to this very cause. The chief thing in archery as in rifle shooting is to do everything in the same way each time, and the most easy and likely way to accomplish this is to keep the aim for the very extreme point of the draw, as it is almost impossible with any length of loose to get rid of the string at exactly the same point at every shot. On looking over the field at any large public meeting, it will be found that those archers who use the former method are at the head of the list of successful shooters, although I am aware that Mr. Ford in his book upholds the contrary view. I admit you get a better flight of arrow the other way, still that is not what is wanted, but accuracy of elevation so as to hit the center of the target as often as possible.

BAAL HATZIM.

Archery in Pittsburgh.

PITTSBURGH, Pa., Nov. 26.—*Editor Forest and Stream:* An interesting shoot was held at the Oakmont Country Club, Saturday, Nov. 23. Sides were chosen, W. J. Holmes and O. L. Hertig being captains. Quite a little rivalry prevailed and no doubt the low scores were due to the unavoidable excitement incident to a contest of this nature. Mr. Jiles had the misfortune to break his fine Barnes yew bow right in the middle of one of its limbs, while shooting on his range, and consequently shot his score with a strange bow. Scores:

48 arrows at 60yds., half team round:					
Hertig	40	202	Holmes	35	150
O. Sorber	25	103	Jiles	33	148
M. Sorber	37	123	Patch	26	80
Haines	14	48	Holroyde	24	74
				113	474
				108	452

The same team will in all probability shoot

ARCHERY RANGE, OAKMONT COUNTRY CLUB.

Left to Right—T. C. Patch, Dr. Haines, Dr. Hertig, Dr. F. Howard, G. W. Postgate, W. J. Holmes.

a full team round contest soon, for Holmes and Jiles are confident of doing better in a long race. Haines, however, says that he will soon recover from his surprising slump and more than make up for the uneasiness he gave his captain in this bout. There are many benefits to the archer in these little battles on the green, for the nerves are schooled to steadiness by constant familiarity with tension and excitement. Many a good shot goes to pieces under stress of tournament work, and the remedy is to accustom one's self to shooting under adverse conditions.

At the Bon Air Club the following scores were made during the week:

Team round, 96 arrows, 60yds.:				
W J Holmes.....	81	385	O L Hertig.....	94 520
O L Hertig.....	95	513		
American round, 60, 50 and 40yds., 30 arrows at each distance:				
	60yds.	50yds.	40yds.	Total.
O L Hertig.....	30 156	28 156	30 176	88 488
J S Jiles.....	23 105	25 121	30 160	78 386

Milton Loeber, a member of the Wilkinsburg Club, is developing into a fine shot, having made an American round of over 500 score recently.

The archers in Poughkeepsie and vicinity all are equipped with Barnes yew bows and Duff lemonwood bows and find them fine reliable weapons. Dr. Haines with a little 45-pound Barnes bow shot a flight of over 250 yards on the Oakmond Golf course. This is a surprisingly long shot for so light a bow.

O. L. HERTIG.

Ford's Archery.

CHICAGO, Ill., Nov. 16.—*Editor Forest and Stream:* Horace A. Ford's "Theory and Practice of Archery" has been out of print for many years, and probably some of the older archers, and most of the younger ones have never seen a copy of the book.

The following quotation from it is given in the author's own language. It is copied from the *Archer's Register* for 1878-79.

We are confident that the opportunity here given of reading a part of the great archer's work will be appreciated.

EDWARD B. WESTON.

POSITION.

An archer's general position, to be a good

one, must be possessed of three qualities, namely—firmness, elasticity, and grace. Firmness to resist the force, pressure, and recoil of the bow; for, if there be any wavering or unsteadiness, the shot will prove a failure; elasticity, to give free play to the muscles, and the needful command over them, which will not be the case should the position be too stiff; and grace, to render the shooter and his performances an agreeable object to the eye of the spectator.

The first point that calls for remark is the footing or standing. The heels should be about six or eight inches apart, not further. The feet must be flat and firm on the ground, both equally inclining outward from the heels, so that the toes be some six or seven inches wider apart than they. The position of the feet, as regards the target, must be such that a straight line drawn from it would intersect both heels. The knees must be perfectly straight, not bent in the slightest degree. The weight of the body should be thrown equally on both legs; for, as Mr. Roberts very justly observes, a partial bearing on one leg more than the other, tends to render the shooter unsteady, and enervates his whole action.

If the foregoing rules respecting the footing be accurately observed, it will be found that the side only of the archer's person is turned toward the target; and this is what has been invariably recommended by every author upon archery, and is, indeed, the proper attitude. The left shoulder must not, however, be additionally forced forward, set in a vise, as it were, but allowed to remain in its natural position, otherwise the required element of elasticity will be lost. The body should be upright, but not stiff; the whole person well balanced, and the face turned round, so as to be nearly fronting the target, with the expression calm, yet determined and confident. The whole attitude, in short, should be generally suggestive of power, command over the muscles, and the will to use them, so as to produce the desired result.

During the brief period of time between the assumption of the footing and the loosing of the arrow, some slight alteration of the body's attitude first assumed will, of necessity, take place. During the act of drawing and

aiming the right shoulder will naturally come a little forward, and the left shoulder retire a little backward. The slightest possible inclination forward should also be given to the head and chest. The object of this is to bring the muscles of the chest into play to assist those of the arms, and is what good Bishop Latimer called "laying the body in the bow."

When the arrow is nocked and the footing taken, let the bow lie easily and lightly in the left hand, the wrist being turned neither inward nor outward, but allowed to remain in that position that nature intended for it. As the drawing of the bow commences, the grasp will intuitively tighten, and by the time the arrow is drawn to the head, the position of the hand and wrist will be such as to be easiest for the shooter, and best for the success of his shot.

DRAWING.

I shall venture to recommend as being, all things considered, the best system of drawing, that the pulling of the bow and the extension of the left arm be a simultaneous movement; that this be to the extent of drawing the arrow at the least three-fourths of its length before the aim be taken (if to such a distance that the wrist of the right hand come to about the level of the chin, so much the better) that the aim be found by a direct movement on to it from the starting place of the draw; that the right elbow be well raised, and that the arrow be then pulled home, either with or without a pause, preference being rather given to the latter.

One of the main features of good drawing is, that the distance pulled be precisely the same every time, that is to say, the arrow always be drawn to identically the same spot. Unless this be accomplished, the elevation must be more or less uncertain, since the power taken out of the bow will, of course, be greater or less according to the extent it is pulled. There appear to be no artificial means by which similarity of draw can be beneficially obtained. Nothing but constant and unremitting practice will serve the archer here.

The pile of the arrow should not be drawn on to the bow—at least it is better that it be not—as, unless it is exactly the same shape as the arrow itself, it will throw the latter out of line. Thus, the arrow should be longer, by the length of the pile, than the archer's actual draw.

Now, let it be remembered, that the right hand must always be drawn to the same spot for all kinds of target-shooting, be the distance what it may, and the arrow be pulled the same length. Some archers have a very bad habit of varying the length of their draw at different distances, while others endeavor to accomplish the desired elevation by raising or depressing the right hand. This is all decidedly wrong. It is the left arm, and the left arm alone, that should do this part of the work, this being elevated or depressed according to circumstances, the right hand being maintained invariably in the same position at the moment of the arrow's departure. This is an incontestable rule in archery to obtain a true elevation, and one that admits of no variation, however many archers of the present day may be disposed to dispute its correctness.

Finally, upon this point of drawing, it should be remarked, that the pull from end to

end should be invariably even, quiet, and steady without jerk or sudden movement of any kind.

AIMING.

In aiming with the bow, to arrive at anything like certainty, it is necessary to obtain a view of three things, namely, the mark to be hit (which is the gold of the target), the arrow in its whole line and length (otherwise its real course cannot be appreciated), and the point of aim.

It may, perhaps, be as well to explain here, that by the point of aim is meant the spot apparently covered by the point of the arrow. Now, as to whether the direct vision should be applied to the mark or the point of aim, the argument is all in favor of the latter; for the point of aim must, necessarily, be in relation to the mark, either in a perpendicular line with it or outside of that line; if outside, then the direct vision must certainly be upon the point of aim, otherwise the arrow cannot be directly beneath the line of the axis of the eye; therefore, the only remaining question to be decided is, when the point of aim falls in a perpendicular line with the mark, which of the two should be directly looked at? I strongly recommend that in all cases the direct vision be upon the point of aim. This is contrary to the usual received opinion, which is, that the eye should always be intently fixed upon the mark to be hit; but I am very much inclined to think that even those archers that imagine they do so, will find, as I have done, upon careful experiments, that the point of aim is directly looked at, and not the mark, this being only seen indirectly, except when the aim is point blank.

HOLDING.

By "holding" is meant keeping the arrow fully drawn before it is loosed. Ascham says, "Holding must not be long, for it puts a bow in danger of breaking, and also spoils the shot; it must occupy so little time, that it may be better perceived in the mind, when it is done, than seen with the eye when doing." This is an entire and exact description of what holding should be, and I shall, therefore, only add that this almost imperceptible pause before the act of loosing serves to steady the arm and correct the aim, and is a grand assistant to the obtaining of a certain and even loose.

LOOSING.

Though the last point to be considered is not one which is the less important on that account, for, however correct and perfect all the rest of the archer's performance may be, the result will infallibly prove a failure, and end in disappointment, should this said point of loosing not be also successfully mastered. Upon this the flight of the arrow mainly depends; and how to a great extent this may be affected by it, may be gathered from the fact that the same bow, with a like weight of arrow and length of pull, will cast forty or fifty yards further in the hands of one man than it will in those of another, owing solely and entirely to the different manner in which the string shall be quitted; consequently, in target-shooting, the aim which may be perfectly correct for one shooter, may be either too high or too low for another, who frees the string in a different manner.

From this it may be gathered what a deli-

cate operation in archery it is to loose well. To accomplish it with evenness, smoothness and unvarying similarity, is, perhaps, the most difficult one of all, and yet for accurate hitting fully as necessary to be attained with all these requisites as any other point of archery. I think a great misapprehension exists among archers as to what is and what is not a good loose; it being generally thought, that if an extreme sharpness of flight be communicated to the arrow, it is conclusive evidence as to goodness. How often do we hear the observation, "What a beautiful loose he has!" though the archer to whom this remark is applied may be missing arrow after arrow, and vainly endeavoring to hit his mark twice in succession; this encomium being passed upon him merely because his arrow flies keen and sharp. Now, without in the least undervaluing this very excellent quality in the flight of an arrow, and, so far as it goes, the goodness of the loose which produces it, I must still maintain that it is not the only requisite; and that unless a certainty, as well as keenness of flight be also obtained, the archer's "beautiful loose" will be of little avail to him. Undoubtedly the best and most perfect quit of the string would be that which combines both of these qualities; but if the two cannot be obtained together, a slower flight and certainty rise immeasurably superior to the rapid flight and uncertainty.

The question then resolves itself into this practical form: "Is it possible for the same mode of loosing to give extreme rapidity of flight, and, at the same time, certainty of line and elevation?" So far as my experience goes, the answer is decidedly in the negative. This difficulty, amounting almost to an impossibility, of obtaining a loose which shall combine great sharpness and certainty of flight at the same time, arises from the fact that such a loose requires (to obtain that sharpness) that the fingers of the right hand be snatched from the string with such suddenness and rapidity as to compromise the second quality of certainty; such a sudden jerk of the string endangering the steadiness of the left arm at the final moment, and, by its unavoidable irregularity, not only having a tendency to drag the string, and, consequently, the arrow out of its proper and original line of flight, but also constantly to vary its elevation.

It must not be supposed, from what has been said, that the exact opposite of the very sharp loose is advocated; that is to say, that the string is to be allowed to slip, or loose itself, as it were, without any assistance whatever from the archer. On the contrary, this mode of quitting the string is the very worst that can be adopted, and one that does more to stay and unsteady the flight of the arrow than any other; in fact, no cast at all can be got out of a bow in this way. But there is a medium between the two extremes, and leaning rather toward that of sharpness, which, in its practical results, I have invariably found to answer best. The *modus operandi*, like so many other things connected with archery, is extremely difficult to describe, if not altogether impossible; but the great characteristic with regard to it is, that the fingers do not go forward one hair's breadth with the string, but that their action be as it were, a continuance of the draw rather than an independent move-

ment, yet accompanied with just sufficient additional muscular action in a direction away from the bow, and simultaneous expansion of the fingers at the final instant of quitting the string, as to admit of its instantaneous freedom from all and each of them, at the same identical moment of time; for should the string but leave one finger the minutest moment before its fellow, or any of them follow forward with it in the slightest degree, the loose will be bad, and the shot in all probability a failure. So slight, however, is this muscular movement, that, though a distinct and appropriate fact to the mind of the shooter, it is hardly, if at all, perceptible to the looker-on; yet, though apparently of so slight a character, so important is it, that the goodness of the loose, and the consequent accurate flight of the arrow, mainly depend upon it.

Some archers use two fingers in drawing, but, by far the larger part use three, on account of the greater power the latter mode gives. Provided, however, sufficient strength can be obtained with the first-named method, it may be well recommended, as the string when quitting the fingers has less surface to glide over, and the accomplishment of the loose is therefore easier; but very few, indeed, can manage a bow of any power without the third finger; consequently, the majority of archers use it. The position the string should occupy across the fingers is above their first joints, but not too near their tips. On the one hand, a too great grip of the string necessitates a drag or jerk to free the finger, besides giving the string more surface to glide over than is conducive to a smooth and even loose; on the other hand, an insufficient grip of the string deprives the shooter of his necessary command over it, and renders the giving way of the fingers of constant occurrence. Here again, as in so many other instances, the medium between the two extremes is the best, and it is, therefore, recommended that the string be placed midway between the tips and first joints of the first and third fingers, and rather more toward the end of the middle one—this latter difference being rendered necessary by its greater natural length.

Especial care must be taken that, while loosing, the left arm maintains its position firmly and unwaveringly, and does not give way at the final moment in the slightest degree in a direction toward the right hand, as in this case the arrow is sure to drop short of the mark. It will have precisely the same injurious effect upon its flight as would, allowing the fingers of the right hand to go forward with the string. This yielding of the left arm is of more common occurrence among archers than is generally supposed, and is the cause of many an arrow, otherwise correctly shot, missing its mark. All must be firm to the last, and the attention of the shooter never be relaxed for a single instant until the arrow has actually left the bow.

The shooter should remain perfectly quiescent, in "statue" quo—if I may be allowed so questionable a pun—until he is assured of the final destination of his shaft, and satisfied of its success or failure.

FOREST AND STREAM is the official organ of the National Archery Association.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS. 1913.

- Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
- Feb. 22.—Birmingham (Ala.) G. C. tournament. O. L. Garl, Sec'y.
- Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, Ohio.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

To-day is date for second shoot in Philadelphia Trapshooters' League series.

Hast your weather eye on J. W. Alker at Manhasset? He has both weather and lee eye on Long Island Sound championship—and he is practicing with a 20-gauge gun at that.

Owing to the vicious weather, Thanksgiving Day tournament at Monmouth Beach Gun Club has been indefinitely postponed. A registered tournament will be held early in the year.

The Birmingham Gun Club will hold a registered tournament on Feb. 22, 1913. Program will include 150 targets and a 100-target distance handicap for trophy; handicap open to members of Birmingham Gun Club only.

One of the most popular trade representatives in the country, Carl von Lengerke, has left New York Sporting Goods Co., to handle Eastern territory in interest of Black Shells for U. S. Cartridge Co. For whom he works there are bound to be results. His efforts are conscientious—his personality decidedly attractive—analyze the combination when you get time.

Manager Luther J. Squier and Secretary Herbert L. Jillson both report record entrance, not alone in numbers, but in class and range, for Pinehurst's sixth annual midwinter handicap trapshooting tournament, scheduled for Jan. 22-23, and many are planning to come in advance of the opening for the enjoyment of quail shooting and practice. The number of ladies in attendance also will be large, and several delightful affairs are planned in their honor. All in all, the week promises to be one of pleasant memory and anticipated by the entire village, for no entertainment feature is more generally enjoyed.

W. G. BEECROFT.

The Du Pont Gun Club.

WILMINGTON, Del., Nov. 28.—The turkey shoot today on the grounds of the Du Pont Gun Club supplied turkeys for fifteen tables, fourteen among the shotgun exponents and one to the club's crack rifleman, D. Appleby.

Contestants were divided into A, B, C, D and E classes; one turkey for every five entries or fraction thereof, but not more than four turkeys to any one class. In Class A there were only six contestants, but that meant two turkeys, and Harry Sloan, with 48, and J. T. Roberson, who broke 46, captured the two. There were four turkeys for the sixteen men in Class B to be shot for. C. G. Hand and C. Thorpe Martin tied for the first two prizes in that class on 45, Stanley Tughton and R. P. Willis, of Penn's Grove, taking the other two on 44 a piece. The seventeen shooters in Class C also had four Bulgar's delights to shoot for. William Coyne carried home a 16-pound gobbler as the result of his morning's work and his score of 42, which was high in his class. Gregg Godwin was second with 40, and L. L. Jarrell and C. H. Simon each got a turkey on landing third and fourth in their class with scores of 39. Two turkeys were put up for the nine entries in Class D, M. E. Ross winning first choice with 37, C. C. Gerow taking second with 36. In Class E there were seven entries, so two more turkeys were disposed of, one going to Canby C. Mummelle on 32, John E. Miller collaring second choice with 24.

Sixty shooters in all took part in the sport, five being ineligible under the club's ruling to win prizes. These were Lester German, J. T. Skelly, L. D. Willis, E. A. W. Everitt and Edward Banks. Mr. German broke 46 out of 50, but Harry Sloan's 48

captured first honors for the day and was a most excellent piece of work under the hard conditions.

The scores:

Class A:	
H H Sloan	48
J T Roberson	46
J B McHugh	44
Class B:	
C A Hand	45
C Thorpe Martin	45
Stanley Tughton	44
R P Willis	44
M L Hopkins	42
J F Fontaine	42
Clyde Leedom	41
John Magahern	40
Class C:	
William Coyne	42
Cregg Godwin	40
L L Jarrell	39
C H Simon	39
T W Matthewson	38
J A Campbell	38
H C McClane	38
Dr Arthur Patterson	37
F F Lofland	36
E Springer	35
Class D:	
M E Ross	37
C C Gerow	36
W G Robelen	33
Major Wm G Ramsay	33
W F Jensen	28
Class E:	
Canby C Mummelle	32
John E Miller	24
Dr Hibbert	20
G A Passwaters	19
The ineligible's score:	
Lester S German	46
J T Skelly	41
E A Everett	41
H P Carlson	43
W Edmanson	41
J H Minnick	41
Class B:	
F Matthewson	39
W M Armistead	39
J W Anderson, Jr.	38
W G Woods	38
L C Lyon	37
N K Smith	37
R J Willis	35
M W Mitchell	33
Class C:	
H T Reed	34
J A McMullen	34
R E Bowland	34
Z H Lofland	33
S J Newman	32
F P Ewing	31
J F Straughn	27
J Mathews	25
A M Lindsay	22
Class D:	
W J Highfield	25
R S Robinson	25
Dr Betts	19
Dr Bullock	17
Class E:	
J B Hickman	15
H Sillitoe	14
W W Bacon	3
The ineligible's score:	
E Banks	40
L D Willis	37

The winners on Nov. 30 were W. M. Hammond, who defeated J. H. Minnick 22 to 21, in Class A; C. Thorpe Martin, who had a walkover in Class B with a score of 24 out of 25; R. S. Wood in Class C, with 22; Dr. Horace Betts in Class D, and C. C. Mummelle in Class E.

Messrs. Hammond and Minnick tied, the former winning on the shoot-off. Dr. Betts and W. J. Highfield also tied in Class D with a score of 18. Dr. Betts won on a toss.

A number of marksmen competed who were not eligible for the turkeys. Among them were J. T. Skelly, L. D. Willis and R. A. McGrath. The latter is a trade representative. It was his first visit to the Du Pont Club.

The high scores of the day were made by Messrs. Skelly and Hammond, who each broke 91 out of 100.

Next Saturday the Du Pont Club will shoot its second match in the Philadelphia Trapshooters' League series with the Clearview Club of Darby, Pa.

The scores in detail were:

Class A:	
W Edmanson	19
J T Roberson	21
J B McHugh	21
Class B:	
Issac Turner	20
C Thomas Martin	24
Clyde Leedom	22
L C Lyon	18
Stanley Tughton	22
Class C:	
T W Matthewson	19
W Tomlinson	18
F P Ewing	16
C D Prickett	17
R S Prickett	17
J H Minnick	23
H P Carlson	20
W M Hammond	23
Class B:	
J J Magahern	20
I L Jarrell	16
W G Wood	20
Dr Stanley Steele	21
Dr Arthur Patterson	20
Class C:	
R S Wood	22
J A McMullen	18
H T Reed	17
William Coyne	17

Stamford Rod and Gun Club.

STAMFORD, Conn., Nov. 28.—A turkey sweepstake, a scratch cup event, and a handicap, kept the members of the Stamford Rod and Gun Club busy to-day. The scratch event was won by E. L. Hatch with 45 out of 50.

Scratch cup, 50 birds: E. L. Hatch 45, R. A. Gillespie 44, W. W. Herrick 43, G. Dickerman, Chicago, 43; C. von Lengerke, New York, 40; J. H. Staub, 36.

Handicap, 50 birds: R. A. Gillespie (2) 40, E. L. Hatch (0) 45, W. W. Herrick (0) 43, G. Dickerman (0) 43, C. von Lengerke (0) 40, A. S. Pitt (6) 40, M. R. Pitt (8) 35, Gayer Dominick (5) 30, E. C. Hoyt (10) 39, Oliver Hoyt (5) 38.

Sweepstakes: E. C. Hoyt (5) 24, A. S. Pitt (3) 21, W. W. Herrick (0) 21, E. L. Hatch 10 straight, R. A. Gillespie (0) 22.

G. A. Dickerman won a 25-bird double event with 21.

Orange Gun Club.

ORANGE, N. J., Nov. 28.—Dr. F. W. Lockwood won the club championship at the annual tournament held to-day at the Orange Gun Club traps, with 84 out of 100. I. D. Unger was second with 82. There were six clay target eliminators present, finishing as follows: A. Mosler 73, Dr. G. W. Wakeley 73, O. L. Yeomans 72, H. Kingsland 68.

Ossining Gun Club.

OSSINING, N. Y., Nov. 28.—A very successful shoot was run here to-day. It was open only to residents of Westchester county, and nearly fifty shooters participated. The first event, at 50 targets, decided the five-man team championship of the county, as well as the individual county championship. Teams from White Plains, Mt. Kisco, Mt. Vernon and Ossining entered. Peckskill had four men on hand, the fifth, Wm. Abele, being detained till it was too late to enter. Ossining won by the scant margin of one target from White Plains. Mt. Vernon was third.

C. G. Blandford won the individual championship cup, as well as the fine cup given for high score on the winning team.

There were many surprises in the way of low scores, owing to hard targets and patches of snow, that made difficult shooting. The different cities that sent teams were represented by a fine bunch of sportsmen, for no one but a dyed-in-the-wool sportsman would shoot on such a day, and turkeyless as well.

Following are scores in team championship:

Ossining.		White Plains.	
C G Blandford.....	46	L M Petry.....	43
R W P Wood.....	38	E F Ward.....	40
L F Lyon.....	37	E Townsend	39
J T Hyland.....	34	A L Burns.....	37
A Bedell	33-188	W McCormack	28-187
Mt. Vernon.		Mt. Kisco.	
T H Lawrence.....	44	J A Benedict.....	38
T L Yates.....	37	L C Remsen.....	37
A M Dalton.....	35	F B Smith.....	32
G C Offutt.....	35	A Betti	31
G A Wylie.....	32-183	A M Cornell.....	30-168

County championship, 50 targets:

C G Blandford.....	46	H Washburn	35
T H Lawrence.....	44	J T Hyland.....	34
L M Petry.....	43	W E Borden.....	34
E F Ward.....	40	Dr P H Mason.....	34
E H Townsend.....	39	Wm C Holden.....	34
W H Coleman.....	39	A Bedell	33
C G Hudson.....	39	G A Wylie.....	32
J Benedict	38	F B Smith.....	32
P Wood	38	W C Tompkins.....	32
T L Yates.....	37	A Betti	31
L F Lyon.....	37	A M Cornell.....	30
L C Remsen.....	37	H J Smith.....	29
A L Burns.....	37	W McCormack.....	28
I T Washburn.....	36	Miss J Thorpe	28
A M Dalton.....	35	W M Wylie	26
G C Offutt.....	35	O B McCall.....	22

Merchandise event, 50 targets, distance handicap:

Yds. T'l.		Yds. T'l.	
C G Blandford..	20 36	G C Offutt.....	18 35
T H Lawrence..	19 34	H Washburn ..	16 35
L M Petry.....	19 36	J T Hyland.....	18 34
E H Townsend.	18 36	W E Borden....	16 35
P Wood	18 38	Wm C Holden..	16 34
L C Remsen....	19 37	A Bedell	19 39

Medford Gun Club.

MEDFORD, Okla., Nov. 28.—Our club held a handicap shoot on Thanksgiving day for a suitable silver trophy, which was won by County Champion Soucek, who now has silver cups enough to set the table. Scores and handicaps follow:

Yds. T'l.		Yds. T'l.	
Elders	16 10	Wilson	19 12
Russell	17 14	Hardy	19 15
Walling	18 16	Soucek	20 17
Hutchinson ..	18 11	Brownie	20 16
Dotts	19 14	Strider	20 16

These scores are very good considering the weather. After the handicap shoot, the following scores were made:

Shot at. Broke		Shot at. Broke	
Hardy	30 11	Strider	15 11
Hutch	25 15	Russell	15 12
Soucek	30 24	Elders	15 8
Brownie	15 14	F Wilson	25 18
Dotts	30 26	Croxtton	25 1
Wilson	25 15	Vaughn	25 4
Walling	30 19		

For Friday, our regular shoot day only a few turned out, with the following scores:

Shot at. Broke		Shot at. Broke	
Brownie	45 38	Dotts	40 34
Shanklin	75 67	Strider	15 13
Hardy	30 25		

I. V. HARDY, Sec'y.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Nov. 23.—The regular practice of our club was not held to-day because many of our members went to a clay-bird match for turkeys at Hopewell, Mo., about eight miles from here. Sixteen turkeys were put up, eight at a time, but there were so many shooters who wanted turkey that there was a shortage of birds, so each event was at 4 birds only, and the prizes for high guns. Of the thirty-seven shooters present, our club had nineteen, Warrenton Gun Club (twelve miles away) was fairly represented, and the others were shooters who do not belong to any regularly organized club. Our club won eleven of the sixteen turkeys.

Frank Mutert and J. O. Wilson led the field, as neither of these made a miss, which was remarkable shooting, for there was a strong, but irregular, cross-wind blowing from the left, and the shooting was in front of a wooded hill, which gave a bad background.

Daniel Boone members who were present follow: Frank Mutert, J. O. Wilson and Wm. Koch, two turkeys each; Underwood, Bollmann, J. Mutert, Meyer, O. Kienker, one turkey each; Lichtenberg, Wyatt, R. Gardyne, W. Gardyne, Wm. Koelling, A. Johannaber, Kite, O. Berg, Strueble, Holt.

J. O. WILSON, Sec'y.

Cincinnati Gun Club.

CINCINNATI, O., Nov. 24.—Eleven shooters faced the traps at the weekly shoot to-day, and in spite of a driving snowstorm, which prevailed most of the afternoon, some very good scores were made.

Two team matches were shot and were both very closely contested, the winning team having only one target the best of the losers. In the first match, Gambell's team got a lead of 6 targets in the first round, tied with their opponents in the second round, but met their Waterloo in the third, when Hammerschmidt beat them by 7 targets and won the match, 117 to 116.

Hammerschmidt shot a few targets with his new 20-gauge, and improved on his work of a week ago with the same gun. The match was finished at dark, and the shooters were pleasantly surprised with an invitation from Supt. Gambell, to remain for a turkey dinner, prepared and served by his good wife.

Team matches will be a feature at the shoot on Dec. 1, and it may be that the Super. will spring another pleasant surprise on the faithful ones who attend. Better come over and see, regardless of the weather. Scores:

Table with 7 columns: Targets, 15, 15, 20, 15, 15, 20, Total. Rows include Gambell, Randall, Ward, Hammerschmidt, Connelly, L. Gambell, Dr. Quewer, Welsh, McArdle, Mullin, Goshorn.

Team match No. 1, 50 targets per man: Gambell 33, Hammerschmidt 44; Randall 43, Connelly 38; Ward 40-116, L. Gambell 35-117.

Team match No. 2, 50 targets per man: McArdle 37, Hammerschmidt 46; Randall 43, Connelly 31; Ward 35-115, L. Gambell 37-114.

Nov. 30.—Arthur Gambell headed the list at the weekly shoot yesterday, breaking 84 out of 100, with John Schreck giving him a hot race and finishing in second place on 83.

The team matches were closely contested, Gambell's team winning the first by one target, and tying with Schreck's team in the second match.

There will be special doings at the shoot on Dec. 8, many of the old-timers are expected to be present, and Supt. Gambell has something pleasant in store for those who attend.

Table with 7 columns: Targets, 25, 25, 25, 25, Total. Rows include Schreck, Ward, Hammerschmidt, Gambell, McArdle, R. W. Pogue, Capt. Hershler, S. F. Pogue.

Team match No. 1: Gambell 21, Schreck 22; McArdle 22-43, Hammerschmidt 20-42. Team match No. 2: Gambell 22, Schreck 20; McArdle 20-42, Hammerschmidt 22-42.

Frontier Rod and Gun Club,

BUFFALO, N. Y., Nov. 26.—Unfavorable weather conditions kept the attendance down at the Frontier Rod and Gun Club shoots. Arrangements are being made to visit the traps of the various gun clubs in this vicinity in the near future.

Events: 1 2 3 4. Targets: 10 15 25 25. Rows include Ebberts, Wakefield, G. McKenna, Hoebel, E. Ketter, Tompkins, W. O. Hewitt, Squelch, Peasland, H. Utz.

Point winners.—Event No. 3, cup race: Class A—W. O. Hewitt 21. Class C—Peasland 21. Handicap—H. Utz, 25.

The Season's Roll of Honor

Being a partial list of successful amateur shooters and their year's triumphs

HERE IS THE MESSAGE FROM THESE WINNERS TO YOU

Shoot Remington-UMC—a Century's Experience to Back Up Your Aim

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO. 299-301 Broadway - - - - New York, N. Y.

FOR 50c. (less than actual cost) we will send a "A NEW CHAPTER IN AN OLD STORY" copy of our beautiful and valuable book. This book contains the most remarkable hunting photographs ever taken. "I have been reading your book with pleasure and profit. Such a work is bound to do good."—Elbert Hubbard. "It is a contribution to national history and letters."—Francis Trevelyan Miller. "The last word in design, illustration, text and execution."—Herbert L. Bridgeman. "Very interesting."—Francis Bannerman.

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Nov. 23.—With the wind blowing a gale across the traps, a bad light, and freezing temperature, Dixon won the spoon to-day, scoring 45 out of 50 at 19yds., and beat Edmonson by a fraction of one per cent. in the practice numbers, while Vietmeyer, professional, was high score over all. The figures do not tell the merit of the performance.

Practice: Shot at. Broke. Rows include White, Vietmeyer, *Edmonson, *Hymer, Moller, Russel, Dixon, Parry, Lewis, Denny, Neighbors, Hymer, Jr.

Spoon event, 50 targets, distance handicap: *Edmonson 20, 33; Moller 20, 38; Dixon 19, 40; Parry 20, 37; Lewis 18, 36; Denny 16, 29.

place with a fraction better than 95 per cent. and made a run of 54. Dixon next with 94 per cent. Next Saturday we begin shooting for the Du Pont trophy. The scores follow:

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Rows include Edmonson, Moller, Parry, Dixon, Lewis, *Hymer, Vietmeyer, Hofer, Britton, Wilson.

Speedway Gun Club.

NEWARK, N. J., Nov. 23.—Members of the Speedway Gun Club held their weekly shoot at the local traps yesterday. B. M. Shanley, Jr., was high gun. The scores: B. M. Shanley, Jr. 20 25 20 23 25 24 23 21 19; F. Apgar 24 18 14 19 13; Geo. Ohl, Jr. 20 21 21 17 18; W. Hassinger 24 24 22 21 23 24 18 21; N. Apgar 22 22 23 20 15; H. Stevens 24 25 22 24; W. Rockwell 18 18 21 12.

Nov. 30.—Conditions favored the target shooters to-day, and good scores followed. Parry shot into first

New York A. C.

PELHAM MANOR, N. Y., Nov. 28.—B. M. Higginson shot all around the snow men here to-day. He took high gun in both the scratch and the handicap legs, the first with 90 out of 100; the latter, from a handicap of 4, with a total of 94. As no shooter can take these two cups, the handicap went to C. Stein and Dr. De Wolfe on a tie at 93. Stein won the shoot-off. Higginson took McMahon cup with 25 straight. Dr. De Wolfe landed the Travers Island trophy after a shoot-off against B. M. Thomson, under Olympic rules. The November cup went to Dr. Bogart on a full score of 25. C. Stein took home the Ogden cup.

The weather conditions included snow and a high wind. The scores follow:

November cup, 25 targets, handicap: Dr Bogart 4 25 B M Thomson..... 3 21 R R Debacher 4 24 J M Jones..... 5 21 Dr De Wolfe..... 3 24 G J Corbett..... 0 20 C Stein 6 24 T Lenane, Jr..... 4 19 B M Higginson... 1 22 H H Duden..... 5 18 W B Ogden..... 1 22 D F McMahon..... 1 17 Dr Culver 0 22 J F Wellbrock..... 0 13

Nov. 30.—To-day wound up the November cup event, the trophy going to C. Stein, who has been shooting under a fairly generous handicap. His month's work, however, has been very consistent. He also became permanent custodian of Ogden cup. McMahon cup also ended its days of uncertainty as to ownership by finding a life home with R. O. Muller. B. M. Higginson has stopped, temporarily at least, the relentless work which Ralph Spotts has pursued the scaling targets to successful conclusions. Mr. Higginson again took high gun honors with 93 out of 100 from scratch. Several events ran into ties, some of which were postponed on account of darkness. Scores:

November cup, 25 targets, handicap: C W Billings... 2 25 H S Wells..... 0 22 W J Simpson... 3 24 H Martin..... 0 20 D F McMahon... 1 24 G J Corbett..... 0 20 Dr De Wolfe... 2 24 Dr Bogart 3 19 C Stein 5 23 H Keller..... 0 18 T Lenane, Jr... 4 23 J W Hessian... 0 17 B M Higginson... 0 23 W B Ogden..... 1 17 Dr L Culver... 0 23 J I Brandenburg... 5 17 R L Spotts... 0 23 R R Debacher... 4 17 F A Hodgman... 1 23 I Meyer..... 0 16 R O Muller... 6 23 G L McLemore... 0 12 A E Ranney... 1 22 E N Huggins... 7 12

Shoot-off for permanent possession of November cup: C Stein 4 24 Dr Bogart 3 22 W J Simpson... 3 24 W B Ogden... 1 21 C W Billings... 1 22

Second shoot-off: C Stein 4 23 W J Simpson... 3 13 Ogden trophy, 25 targets, handicap: C Stein 5 25 F A Hodgman... 1 22 J I Brandenburg... 5 24 W J Simpson... 3 21 R O Muller... 6 24 D F McMahon... 1 21 T Lenane, Jr... 4 23 H S Wells..... 0 21 G J Corbett... 0 23 Dr De Wolfe... 2 20 W B Ogden... 1 22 E N Huggins... 7 20 H Martin..... 0 22 H Keller..... 0 20 C W Billings... 1 22 Dr Bogart 3 19

Paleface Shooting Association.

WELLINGTON, Mass., Nov. 28.—Thanksgiving Day trotted the turkey—in fact, ten of them—fed, killed and picked in Vermont, were among the offerings. Eighty targets were divided into four events. Pick of the dry-picked went to high gun for actual smashes. This proved to be F. O. Williams, who eliminated 75 out of his allotment. Second high for actual damage went to Dr. W. C. Newton with 74, with W. R. Baldwin in the money with 73 actual deads. One lone for-wads-only powder burner was present, Sibley, who removed from further competition 74 aerosaucers—and he got a turkey. The leading scores:

Targets: Jones 14 16 17 13 16 76 Baldwin 18 18 17 20 2 75 Williams 18 20 18 19 0 75 Swift 18 15 19 13 10 75 *Sibley 19 19 19 17 0 74 Sweet 15 18 18 15 8 74 Dr Newton 19 19 18 18 0 74 Richardson 18 15 15 16 10 74 Blinn 18 12 14 19 10 73 H Smith 15 17 16 14 10 72 Isola 17 20 16 14 5 72 J Snow 18 20 17 17 0 72 H L Snow 19 18 19 16 0 72 *Professional.

Crescent A. C.

BAY RIDGE, L. I., Nov. 28.—Ten gunners, whose appearance resembled the child conception of Santa Claus, snow-bedecked and cheerful, worked hard to-day trying to pick clay saucers from among snowflakes. W. W. Pell's was the eye of discernment. He broke enough discs to score 88 out of 100, from a gift of 16, thereby winning holiday cup. F. B. Stephenson made certain of beating the corner on turkeys and their consequent high price by getting one with his gun, via the clay saucer route. He made 82 out of 100 in the scratch event. J. F. James got some feathers out of the bird with 76, while "buttsy" for third score went to C. R. James on a transposition of J. F.'s figures. Mr. Stephenson won also the leg on committee cup with 45 out of 50 from scratch. G. G. Stephenson, J. P. Fairchild and W. W. Pell tied at 22 on fourth leg on monthly cup—water's edge odds are 4 to 1, no takers, that G. G. S., now leading, will cop the cup. The scores follow:

Committee cup, 50 targets, handicap: F B Stephenson... 0 45 J S Lawson..... 0 36 J P Fairchild... 6 41 J F James..... 0 35 *H Stevens 0 40 G G Stephenson... 0 34 Geo Brower 2 40 C R James..... 2 31 W W Pell..... 8 40 M Stiner 2 29

Turkey shoot, 100 targets, scratch: F B Stephenson... 82 C R James..... 67 *H Stevens 78 G G Stephenson... 64 J F James..... 76

Holiday cup, 100 targets, handicap: W W Pell..... 16 88 R C Williams..... 20 72 J P Fairchild... 12 84 G G Stephenson... 12 72 F B Stephens... 0 81 M Stiner 4 71 J F James..... 0 80 C R James..... 4 62 Geo Brower 4 72 J S Lawson..... 16 62

Monthly cup, 25 targets, handicap: G G Stephenson... 3 22 F B Stephenson... 0 21 J P Fairchild... 3 22 C R James..... 1 20 W W Pell..... 4 22 R C Williams... 5 18 M Stiner 1 17 J S Lawson..... 4 17 Geo Brower 1 16 J F James..... 0 15 *Guest.

Nov. 30.—J. H. Vanderveer once more took things home with 86 from scratch. C. R. James did mighty clever shooting on a strong quartering wind, when, for committee cup, he broke 48 out of 50, which, with his handicap, gave him a full. This tied F. B. Stephenson for the trophy. James won the shoot-off handily. R. C. Williams won the leg on monthly cup with (5) 24, but as this trophy already was cinched by F. B. Stephenson with 66, it was glory, but no gilt. James took second on monthly cup with 64. Scores:

Take-home trophy, 100 targets, handicap: J H Vanderveer... 0 86 M Stiner 8 74 J F Weilbacher... 20 81 J S Lawson..... 16 73 J F James..... 0 80 C R James..... 4 70 R C Williams... 20 78 L G Langstaff... 0 50 G G Stephenson... 12 76 W G Kerr..... 28 63 F B Stephenson... 0 75

Committee cup, 50 targets, handicap: C R James..... 2 50 W A Kerr..... 14 32 F B Stephenson... 0 45 R C Williams... 10 31 G G Stephenson... 6 41 J S Lawson..... 8 31 F W Weilbacher... 10 39 J H Vanderveer... 0 30 J F James..... 0 38 L G Langstaff... 0 24 M Stiner 4 35

Shoot-off: C. R. James 24, Stephenson 22. Monthly cup, 25 targets, handicap: R C Williams... 5 24 G G Stephenson, Jr. 3 21 M Stiner 2 23 F Weilbacher 5 21 F B Stephenson... 0 23 J S Lawson 4 20 C R James..... 1 23 J H Vanderveer... 0 19 J F James..... 0 21

Three best scores for month: F Stephenson, 22 22 22—66 C R James..... 64

Jersey City Gun Club.

JERSEY CITY, N. J., Nov. 30.—Several members were out at the regular Saturday shoot of the Jersey City Gun Club to-day. The day was ideal for those that do not like it too windy or too frosty. Geo. Piercy was out for the first time this season trying out his new gun, and from the way he put the rest of the boys down and out, it would seem as though he had struck the right combination at last. George finished up with an average of 83 per cent. for the day, his nearest competitor being Dave Engle, with an average of 81 per cent. The scores follow in strings of 25:

Metz, 12, 15, 20, 21; Piercy, 18, 22, 23, 24, 22, 24; Lawton, 18, 14, 14, 14, 14; Engle, 22, 19, 19, 23; Dalton, 18, 19, 19, 15, 22, 20, 13; Williams, 13, 16, 18, 15, 13; Shannon, 18, 20, 19, 18, 22, 20, 19, 20; Kearney, 8, 11, 12, 8, 13, 10; Dixon, 18, 20, 19, 19; Kent, 16, 21, 17, 16, 19; Summerfield, 4, 5, 6; Windisch, 21, 20, 24, 13; Jones, 16, 14, 12, 12. SECRETARY.

Rhode Island Country Club.

BARRINGTON, R. I., Nov. 30.—Twenty-one aerosaucer experts called pull in a handicap event here to-day. The winner got a bronze beauty, second a duck, third and all others had their goose cooked. Upper berth was occupied by Kenneth Wood, who hung up a full, which, added to his handicap, gave him 29. Among those in upper and lower register, and how much they hung up, follow:

Kenneth F. Wood 29, H. T. Merriman 27, Richard W. Comstock 26, I. B. Merriman 26, H. B. Deming 25, F. H. Elmore 23, Lewis Colwell 22, F. W. Matteson 22, A. C. Blanding 21, Edwin Metcalf 21, G. M. Parks 21, G. T. Hanley 21, C. H. Merriman, Jr., 21, H. A. Hoffman 20, L. O. Tingley 18, J. B. Lewis 18, Dr. J. W. Keefe 18, Pardon Miller 16, Henry Dunnell 15, B. E. Kile 15, C. B. Marshall 11.

Hudson Gun Club.

JERSEY CITY, N. J., Dec. 1.—Appended find scores of the regular shoot of the Hudson Gun Club, held this morning. There was a good attendance at the grounds and some very good scores were made by several of the "old-timers," with Dave Engle showing the way with 92 per cent. for high average. Billy O'Brien was the runner up with 90 per cent., and George Piercey a close contender with 88 per cent. The Du Pont trophy event had twenty shooters competing for it this morning, and the lucky shooters that pulled through with straight scores were Williams and O'Brien. On Dec. 15, our next shooting date, the last contest for this prize will be held, and the winner will be awarded the trophy.

The club, through the kindness of one of our oldest members, Mr. L. Schortemeier, is arranging for a series of shoots for several prizes that he so liberally donates, and we would like to have a good attendance at these shoots before commencing this event, so that handicaps can be adjusted satisfactorily, and the shooters placed in their respective classes. So come out, boys, the prizes will be good and very suitable ones, and just what the boys want.

Al. Kurzell came over this morning to shoot Burlington and Dobson a return match, and try and get satisfaction for the trimming that he was handed at the last shoot, but he discovered that he had brought his game gun along, so had to postpone the match till Dec. 15, our next shooting date.

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., Dec. 1.—When Gould and Hoyt are away there is no keeping Alker in leash. Again to-day he pulled down the major portion of the swag. In other words, out of five events he waded successfully into three of them. The monthly cup on a full from a 2-disc draw, which, though called by H. Funke, stood the raise in the shoot-off and tore the hide off the kitty. On the yearly prize, another full came Alker's way on a one-disc draw to a broken straight. The 25-bird sweep also lined the pockets of the thus-far topper. A. Funke reduced the average for the rest of the bunch by taking the remaining two events. He broke 7 out of 10 in the Short event, and let only one slide between his chilled 8s in the 15-saucer event. The big shoot, Long Island Sound championship, Jan. 12. Spotts, Higginson, Stephenson, Hoyt, Billings, Scott, Alker and other toppers probably will compete for this choice title. Scores:

Monthly cup, 25 birds, handicap:			
J W Alker.....	2 25	D Provost	6 20
A Funke	4 25	C von Lengerke....	0 19
D E Smith.....	2 22

Montclair Gun Club.

MONTCLAIR, N. J., Nov. 30.—Regardless of the fact that one almost never hears of the shoots here, there are in Montclair Gun Club a number of excellent target eradicators. George Batten, Y. T. Frazee, I. S. Crane, Edward Winslow, all of whom shoot in 75 per cent. class, and yet of whom one seldom hears. The big event to-day was won by Mr. Frazee, who snuffed from the ambient atmosphere 18 out of 25 aerosaucers, which, with 4 gratis encouragers, gave him 22, one better than Batten and Crane.

There were three 25-bird sweeps, won as follows:			
Frazee	19 14 19	Batten	17 19 20
Crane	19 20 19	Winslow	16 19 19
Boxall	17 15 19		

WINCHESTER

Rifles and Shotguns Make

Highly Prized Holiday Gifts

A Winchester .22 Calibre rifle for a boy; a repeating shotgun or hunting rifle for the mature sportsman, or a light-weight rifle or a 20 gauge repeating shotgun for the out-of-door girl, will make a most acceptable Christmas present. For completeness include a supply of Winchester cartridges or shotgun shells. Winchester ammunition not only give the best result in Winchester guns, but with all other makes.

Winchester Rifles, Shotguns and Ammunition
The W Brand—Are Sold Everywhere

Greenwich Field Club.

GREENWICH, Conn., Nov. 28.—The Field Club had its annual Thanksgiving trapshooting contest to-day in the face of a blinding snowstorm, which partly obscured the birds. Twelve men participated in a 50-bird handicap match. First prize went to A. L. Ferguson, second to H. S. Marston and third to F. W. Hoeninghaus. Other contestants were John D. Chapman, Clarence Martin, Jr., Lamont Dominick, O. Feitner, W. Vanderhoof, Jr., George Lauder, Jr., Louis Watkin, J. R. Coffin and H. J. Fisher.

Nov. 30.—November cup will decorate the trophy room of R. Newell, who, in the final shoot to-day, closed on it with 11 points. This was three better than his nearest competitor. Scores follow: W. F. Hoeninghaus 8, J. R. Coffin 6, A. L. Ferguson 6, R. C. Bolling 5, Louis Watkin 3, R. C. Crocker 3, Clarence Martin, Jr., 3, George Lauder, Jr., 2.

GREENWICH, Conn., Nov. 30.—N. Webb was top berth occupant in weekly sweeps here to-day. He paved the lawn with the crumbings of 84 out of 100 pulled for him, which, added to his free scalers, gave him a full score. J. D. Chapman occupied the lower

berth with 80 actual eliminations, while George Pynchon used his tiller hand to advantage on 76. The other three-day saucer exponents finished just ten apart in actual killings—A. B. Foster 88, E. C. Willis 78, F. B. Tuttle 68.

Holland Gun Club.

BATAVIA, N. Y., Nov. 29.—We closed our season yesterday with the following scores:

Targets:	25 25 25 25	Targets:	25 25 25 25
Gardiner	22 20 25 21	Tomlinson	20 21 .. .
Brumber	17 17 15 ..	Walls	20 17 .. .

We have been shooting a handicap this summer, the scores for one shoot governing the handicap for the next program.

The tie held over from Topperwein day was won by Brumber. Thanksgiving Day trophy was won by Tomlinson. The Du Pont trophy, shot for during the season, was won by Brumber. The season prize for the regular program was won by Walls with two-fifths of one per cent. over Gardiner, which shows how near we came to figuring an equitable handicap.

CHAS. W. GARDINER, Sec'y.

5 out of 6 REVOLVER CHAMPIONSHIPS

PRACTICALLY A CLEAN SWEEP, WON BY

THE FAMOUS  BRAND

Peters

Ammunition

The results of the United States Revolver Association 1912 Outdoor Championships, just officially announced, show that users of Peters Cartridges won FIRST in every match but one, also Second place in one match, Third in three matches and fifth in two.

Match A. Revolver Championship
 1st—A. M. Poindexter.....467
 3rd—J. E. Gorman.....455
 5th—C. M. McCutcheon.....448

Match D. Military Record
 1st—Dr. J. H. Snook.....212
 2nd—C. M. McCutcheon.....207

Match F. Pocket Revolver Championship
 1st—Dr. O. A. Burgeson.....208

Match B. Pistol Championship
 3rd—A. M. Poindexter.....574

Match C. Military Revolver Championship
 1st—Dr. J. H. Snook.....621
 3rd—A. M. Poindexter.....574
 5th—C. M. McCutcheon.....570

TWO NEW RECORDS

Match E. Revolver Team Championship
 1st—Denver Revolver Club....774

These victories, won against the hardest possible competition, show that our oft repeated claim for the ABSOLUTE SUPERIORITY of PETERS AMMUNITION is not mere idle talk, but a conservative and provable statement of FACTS.

PETERS REVOLVER AND RIFLE CARTRIDGES of 32 and larger calibers are just as surely superior to other makes as Peters 22 caliber. PETERS SMOKELESS Cartridges are as far ahead of competing brands as are PETERS SEMI-SMOKELESS.

Shoot the P brand, the only kind that will shoot perfectly in ANY good gun.

THE PETERS CARTRIDGE COMPANY, CINCINNATI, OHIO

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

London Field's Appreciation of Forest and Stream.

SOME CONTRASTS.

THERE are many differences between shooting in this country and shooting in America, as we have recently been reminded by that amusing and interesting little book "Stories of Some Shoots," in which General Drain, of Washington, has described his experiences in Scotland and England with pheasants, driven partridges, and wild duck. We shoot different birds, and we shoot them in a different way. But there are other differences besides those of field and covert, and one of them is the reading and writing about the sport by those who take part in it. I have just been looking through the special number of FOREST AND STREAM, the New York paper which deals more fully with shooting and fishing than any other in America, and I have been struck with the very large proportion of the paper which is filled with news—that is, news of shooting. Part of this, of course, is news specially collected for this particular number, for there are nearly twelve columns of reports from the "game and fish commissioners and wardens" of the various States as to the prospects of sport for the season. But there are other items of news in which interest seems to be pretty constant, and chief among these come the accounts of the doings of the various clay-bird shooting clubs and their tournaments. The Field prints each week during the season short accounts of the meetings of the Gun Club, the Middlesex Gun Club, and so on—perhaps a column. But here in FOREST AND STREAM are ten pages of news and advertisements mixed, all dealing with the shooting of clays. If this form of shooting is not the most popular of all forms in America, at all events it seems to get most of the attention of the papers and the gunmakers. Incidentally, it provides some stimulating reading.

WITH THE REPEATER.

Accounts of actual sport in the field often read familiarly enough, though here and there a sentence goes a little oddly, possibly owing to the fact that the narrator has been shooting with a magazine instead of a double-barreled gun. We get an account of walking up prairie chickens in South Western Minnesota, for instance, and after a little find John, the setter, stiffening to a point: "The lashing of his great tail ceased. He was immovable. Yet we could see no birds, and went ahead carefully to give the dog a chance. Then from beneath our feet rose eight young birds, frightened and anxious to be off. They made for the corn east of the field, and, when they were a fair distance off, two guns began to decimate their ranks. Only four birds dropped to six shots, and a cripple dropped a little way off, too weak to fly further." A little further on the decimation was evidently more complete, though the actual numbers are not given. "John dropped his nose, roared a bit, and advanced into the wind toward the ground we had just covered, and raised his head. The pointer drew alongside, and both their noses quivered as they sniffed the odor of the birds. Being curious we went back the way we had come over the knoll, and soon the air was thick with rising chickens. They had laid

tight to the ground, and as we passed them before, they had failed to flush. The battery of guns began their usefulness. * * * Well, there is a satisfaction in dropping a right and left out of a covey, even when other birds rising a little later escape because the gun is unloaded. And a right and left, it seems to me, is quite enough for one gun to take at one time out of one covey. At the same time I should rather like for once in a way to see a battery of quick shots with repeating guns begin their usefulness on a covey of grouse or partridges rising at an ordinary distance.

A VARIED VOCABULARY.

To "begin usefulness" is an expressive phrase. But the dictionary of the shooter in the field has not nearly so many new pages as that of the clay-shooting gun club. Some of the terms in common use among clay shooters are plain and straightforward enough; others need comment. A moment's reflection suggests that the "high amateur" of a tournament is the highest scorer who is not a professional. You are given photographs of "high amateurs" and "high professionals," all of them sitting in the correct position, which is with the gun across the knee with the breech open and the barrels dropped. The "high professional" on the first day broke 140 clays out of 150, and 90 per cent. seems to be an indifferent score. One of the competitors, for instance, "made a clean score at the lunch table, though he did not make his usual good showing on the firing line;" he scored only 135. Another competitor would have done well, but "struck a snag" and finished third. Another one, in the "doubles" event, "in spite of a 'dutch double,' went out with 46, which shows that Jimmy is some quick with his shooting stick." A "dutch double" presumably is a miss with right and left. But what is a "merchandise shoot?" "There will be a merchandise shoot of five events of 10 targets each," you read, "and a Jack Rabbit shoot of ten events." Perhaps a Jack Rabbit shoot is the kind of shoot you would expect to follow if you had made a clean score at one of the shooting lunches of which the menu is given; "Heublein cocktails, caviar slices, turtle soup, fried sea pommes grande, peas, potatoes, head lettuce, coffee, cheese, ice cream, cigars." This is more elaborate than the average snipe shooter can manage on the bog, but you need something fortifying to withstand the contingencies of an important clay tournament—plating a gun, for instance. "Lester German, based upon the fact that he had missed a target, went over into an adjoining field to again pattern his gun. A complaint was made by the owner of the farm. It required the united efforts of Elmer Shaner, Tom Marshall and Bill Crosby to keep him out of jail." It is a world of action indeed, in which, based upon the fact that you have missed a clay pigeon, you find yourself the next moment confronted with a dungeon. But deeds, not words, are the rule throughout. You are asked to observe "William H. Heer, 'Cyclone shooter,' not talker. Constant at all times, and crushes mud pies with regularity. Witness his work on Friday, in bad weather, 200 without a miss. You must pass it along to Billy." But this clearly might place one in a difficulty.

WHAT OFFERS?

Advertisements are occasionally more interesting than

letterpress. This, from a column adjoining the description of William H. Heer's dealings with mud pies, suggests further inquiry into the merits of the hotel accommodation offered: "Kent Island Narrows, Md. There are reasons, ask why." Another rendezvous, Bear Mountain Camp, describes the advantages offered more definitely, "Deer and bear shooting for the big game man, and plenty of partridge for the spread shot preferent." At Centreville Station, Sullivan Co., N. Y. you can be sure of "good bird dogs and hounds." From Montgomery, Pa., on the other hand, comes an offer of "two good female rabbit dogs." But the really attractive offers are of land for sale. There are about 400 acres of "fine open land, well stocked with partridge and other game, with seven cottages, fine drinking water, together with several streams running through the place," for twenty dollars an acre. Or you may buy a 4000-acre farm, with a fifteen-room dwelling, outhouses, "good fishing and hunting, especially quail shooting," at seven dollars fifty cents per acre. The only disturbing reflection is that the price of the property with all its advantages being plainly set down in black and white, the owner would probably take much less.—"Cheviot" in London Field of Nov. 16, 1912.

Boston A. C.

BOSTON, Mass., Nov. 28.—The day of thanks broke forth with the noise of powder and the song of shot at the Boston Athletic Association. First shoot of the season went to R. A. Faye, who won take-home trophy with 93 from scratch. F. Whitney took lower berth with 92 from a start of 20 free ones. T. C. Adams sat on the Pullman steps on 89 from scratch. The weather was regular made-to-order kind—no one could ask for better. P. R. Tucker was a guest. The scores:

	Broke.	Hdep.	T't'l.
R A Faye	93	0	93
F Whitney	72	20	92
T C Adams	89	0	89
L H Davis	75	11	86
P W Whittemore	68	16	84
C B Tucker	65	5	70
W C Brooks	62	8	70
P R Tucker	34	0	34

Eugene Gun Club.

EUGENE, Ore., Nov. 22.—Only six shooters took advantage of the nice weather to-day, but they feel well repaid, as conditions were fine. Seavey shot his old consistent clip and was high with 92. Deierlin was runner-up with 90 to his credit. Following are the scores:

Seavey	23	22	23	24	92
Deierlin	20	24	23	23	90
Bean	24	19	21	22	86
C Kompp	18	21	20	24	83
Veatch	21	19	19	21	80
Darrow	17	19	20	19	75

E. A. BEAN, Sec'y.

Chicago Gun Club.

CHICAGO, Ill., Nov. 23.—A dark, cloudy afternoon, with a blustery cold wind, were not very good weather conditions to bring out a large field of trapshooters. Those who did come out to the park had a most excellent chance to test their skill on very erratic targets, and many excellent shots were made during the afternoon. The feature of the day was the splendid race between Young and Northcott in both the first and second events, Young winning out by one target in each event, scoring 46 in the first and 50 straight in the second. Northcott broke 45 and 49 in the first and second events respectively and then scored 24 out of 25 in an extra event. Foley, Reid and Newkirk did splendidly for their first trial at the traps, considering the hard conditions. Scores:

Events:	1	2	3	4	5
Targets:	50	50	25	25	12p
J S Young.....	46	50	18
W P Northcott.....	45	49	24	..	16
E Lyon	39	41	18	..	14
E Silver	41	19	21	..
M Ballou	35	51
J W Eagan.....	..	38	17	..	10
W C Foley.....	22	29	16	..	4
J H Hanson.....	13	10	..
W F Quarry.....	2	6	..
O Reid	15	11	11
H A Newkirk.....	8	11	..

Nov. 24.—The first snow of the season was ushered in by a young blizzard, which blew in during the night and covered the ground with a thin white blanket. As it was dark and cloudy, with a raw, cold wind blowing, which at times blew almost a gale, only four trapshooters concluded to try their hand at breaking the dodging spheres, and they found the conditions hard enough, but they got some fine practice at that. Phil Miller topped the list in both 50-target events, having started in by breaking his first 15 straight, but after that a few managed to get away. Thwaite concluded to get his gun in action after over a year's vacation from the traps. Kammerer missed his train connection, but came out on the car. We had a card from "Doc" May, who reports splendid duck shooting down the country. Keller was trying out a new 20-gauge, and while he did not break as many as he should have liked, he made some excellent shots, and broke his targets in fine shape. Scores:

Targets:	50	50	25	25
P Miller	39	40
H Thwaite	37	..	15	..
Targets:	50	50	25	25
B Kammerer.....	32	16
J W Keller.....	28	29	..	8

Marine and Field Club.

BATH BEACH, N. Y., Nov. 30.—When monthly cup totals were footed to-day it was found that C. D. Sayre had under varying weather conditions, the creditable breakage of 289 out 300 aerosaucers. Of the four other 25-target events, E. H. Lott took two from scratch, one with a straight, the other with two missing from his full. Sayre, Towne and Knox tied in another event with 24, while Sayre won the fourth with a full on a four-saucer draw. The scores:

November cup, handicap, 100 targets:					
C D Sayre.....	54	289	C M Camp	36	259
E H Lott	0	280	C D Church	54	248
P R Towne	32	280	C D Ludwig	36	239
J M Knox	54	271	W H Davol	36	236

Trophy shoot, scratch, 25 targets:					
E H Lott	0	25	C D Sayre	0	20
J M Knox	0	23	P R Towne	0	20
C M Camp	0	21	W H Davol	0	13

Trophy shoot, handicap, 25 targets:					
C D Sayre	4	24	C M Camp	3	21
P R Towne	1	24	W H Davol	4	19
J M Knox	3	24	E H Lott	0	18

Trophy shoot, scratch, 25 targets:					
E H Lott	0	23	C M Camp	0	20
P R Towne	0	21	W H Davol	0	18
J M Knox	0	21			

Trophy shoot, handicap, 25 targets:					
C D Sayre	4	25	C M Camp	4	22
P R Towne	1	23	W H Davol	3	20
E H Lott	0	22	J M Knox	3	16

Evanston Gun Club.

CHICAGO, Ill., Nov. 25.—Twenty-one shooters entered for the turkey handicap shoot, held by the Evanston Gun Club, on their grounds, Saturday and Sunday, Nov. 23 and 24. There were four events of 25 birds each, two on Saturday and two on Sunday. The system used was the added target handicap. The handicap in each event was based on the difference between the actual number of targets broken in the preceding event and 23. Of the twenty-one entries, the highest man had a score of 92 and the lowest man 80, keeping up the interest to the last shot of the last man. A terrific wind blew both days, making the handicap very large and the actual number of birds broken very small.

The winners of the turkeys were the following gentlemen: Dr. Ford, J. F. Davis, W. R. Watson, R. De Clercq and H. Van Patten. Owing to the popularity of this event, it is the intention of the club to hold another turkey shoot on Dec. 7 and 8, with the same system of handicapping.

W. J. PHALEN, Sec'y-Treas.

Glenwood Country Club.

GLENWOOD, L. I., Nov. 28.—J. H. Higgins was top gun in the 100-target take-home-turkey shoot to-day at Glenwood Country Club from handicap of 6. Scores were much better than weather warranted, the high being 91. The scores:

J H Higgins.....	6	91	B Parsons.....	5	85
W S Silkworth....	0	91	J C Severance....	5	85
J S Crosby.....	5	89	H C Severance....	5	85
C W Berner.....	3	88	Lionel Moses	5	84

HIGH VELOCITY

There Are No Powders "Just As Good As"

Du Pont, Ballistite,
Schultze or Empire

MODERATE RECOIL

"THE proof of the pudding is in the eating,"—more shooters are using Du Pont Sporting Powders today than all other sporting powders combined. The confidence in the load you are using is a strong factor in making a good score or in bringing home a full game bag. Enjoy that confidence by selecting Du Pont Powders—the powders which embrace 111 years' experience in powder making—use the powders "father used to shoot."

REGULAR AND RELIABLE

REMEMBER

It's the powder that makes the shot go and SHOOT Du Pont, Ballistite, Schultze or Empire

THE DEPENDABLE POWDERS

PERFECT PATTERNS

Birmingham Gun Club.

BIRMINGHAM, Ala., Nov. 23.—Only six shooters were at the weekly shoot. Most of the shooters had gone to the football game. The wind was blowing very hard, and the scores are away below the average. Dick Leland started out well, but lost out badly in the end. Mrs. Garl finally won out for high percentage after a rather bad start. Scores as follows:

Shot at. Broke		Shot at. Broke			
Dr Sellers	90	69	E M Cornwell..	65	46
D Leland	100	61	O L Garl.....	35	26
Mrs Garl	65	51	J J Smith.....	65	24

Nov. 30.—Eight shooters were at the weekly shoot of the Birmingham Gun Club, held to-day. R. H. Baugh did the best shooting, breaking 65 of his 75 shot at, winning high gun button. Several new shooters were out shooting for the first time. The weather was fine, but wind caused targets to be erratic. There will be a one-day registered tournament at the Birmingham Gun Club on Feb. 22, 1913, and a 100-target distance handicap for trophy given by the secretary to club member making highest score. Scores follow:

Shot at. Broke		Shot at. Broke			
R H Baugh.....	75	65	W B Lecroy....	65	39
Wm Dunn	75	46	Mrs Garl	50	36
O L Garl.....	50	43	Dr Sellers	55	31
R H Myers.....	65	41	W H Padget....	65	29

PARTICIPANT.

Essex Country Club.

WEST ORANGE, N. J., Nov. 30.—The first shoot of the season at Essex County Country Club took place this afternoon, when B. M. Shanley, Jr., and H. S. Brown tied with a full score for the Die cup handicap at 25 targets. The other scores were: C. H. Daly 24, A. O. Headley 24, J. D. Pryor 24, James A. Hart 17, H. T. Folsom, Jr., 17.

Take-home trophy: Headley 25, Brown 33, Shanley 22, Daly 22, Hart 21, Folsom 17.
Sweep, 25 targets: Shanley 24, Daly 23, Folsom 23, Brown 22, Hart 21, Pryor 21, Headley 18.
Ten pairs double: Daly 15, Hart 13, Headley 11, Brown 9, Folsom 9, Shanley 8, Pryor 7.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

Why don't you Reload your Shells?

It pays to reload your shells! They are the expensive part of factory ammunition. They're as strong and good as new, can be reloaded a dozen times, and it's easy to reload! Merely de-cap and re-cap shell, insert powder, crimp shell on the bullet. You can do it!

The Ideal Hand Book, new edition, 160 pages, shows in detail the enormous saving by hand loading and reloading your cartridges; factory .32-40 high power cartridges cost \$34.20 per 1000; hand loaded, buying new primed shells, etc., \$26.96 per 1000; reloaded, only \$13.46 per 1000 (you save \$20.74). 1000 .32-40 smokeless S. R. factory cartridges cost \$25.20; by reloading you can have 1000 short range loads for \$3.80. **It pays to reload.**

The Ideal Hand Book contains full information regarding powders, bullets, primers and reloading tools for all standard rifle, pistol and shotgun ammunition, tells how to measure powders accurately, and gives information on everything relating to loading and reloading of ammunition.

It lists hand-cast bullets; tells all about gas-check bullets (which take the place of metal-jacketed bullets, giving increased accuracy with less wear of barrel; gives tables of velocity, penetration, etc.; twists in rifling in rifle barrels made by the various arms companies; tells how to find the twist in any rifle barrel; tables reducing drams to grains; tables of powders, primers, etc. **160 pages of information every shooter needs;** sent free to any shooter for three stamps postage by

NEWFOUNDLAND

A Country of Fish and Game. A Paradise for the Camper and Angler. Ideal Canoe Trips. The country traversed by the Reid Newfoundland Company's system is exceedingly rich in all kinds of fish and Game. All along the route of the Railway are streams famous for their SALMON and TROUT fishing, also Caribou barrens. Americans who have been fishing and hunting in Newfoundland say there is no other country in the world in which so good fishing and hunting can be secured and with such ease as in Newfoundland. Information, together with Illustrated Booklet and Folder, cheerfully forwarded upon application to

J. W. N. JOHNSTONE, General Passenger Agent, Reid Newfoundland Company, St. John's, Newfoundland.

Larchmont Y. C.

LARCHMONT, N. Y., Dec. 2.—There was a good muster of gunners at the traps of the Larchmont Yacht Club opening day for December cups. Tom McCahill took 10-bird scratch and 100-target handicap trophy; the first with a full score and the latter with 96 targets. R. L. Spotts was high for December cup with 25; he took the 150 scratch event with 132. B. M. Higginson broke 132, but as he is not a member, the prize went to Spotts. Higginson won the visitors' special trophy and the 15-target scratch contest.

With a full, A. Whiting won the take-home trophy, and T. L. Lenane, Jr., won the leg for the accumulation cup with a full score. J. Henry broke all of his 25 targets in the special trophy match.

North Brewster Gun Club.

BREWSTER, O., Nov. 29.—The Thanksgiving Day shoot held by the North Brewster Gun Club was a complete success. A large number of shooters were in attendance, there being members of Massillon Rooburban, Canton, Navarro, Wilmont, New Philadelphia, Orville and Dalton gun clubs present. The following were winners: R. Metzgar, Crawford, Essig, Felling, Witters, J. Zurcher, D. Young, A. Coblentz, M. Glick, W. D. Fairfax, J. M. Arnold, J. Christman.

The ladies of the Union Church entertained the contestants at Thanksgiving Day dinner. The weather was ideal for the sport, and the day was enjoyed by all present.

AL. J. BURNS.

Rifle and Revolver

Cincinnati (O.) Revolver Club.

THE club is shooting a series of telegraph team matches this winter, the second in the series being with the Denver Revolver Club, on Nov. 27. The matches are shot in the Brendamour range, under the rules of the United States Revolver Association. Dr. A. A. Yungblut has been appointed Governor for these matches. High score was made by W. Howard Cox, 208 out of a possible 250. He also made high five-shot score of 47. G. E. Pugh made second high score, 46. The team will shoot against the Portland, Ore., team on Dec. 4.

Team match with Denver (Colo.) Revolver Club, 20yds., 25 shots, standard American target, possible 250, U. S. Revolver Association rules:

W Howard Cox	44	40	47	36	41—208
Elmer C Hake	40	36	42	38	39—195
A H Kenan	37	44	34	43	29—187
G E Pugh	33	46	26	39	43—187
Dr A A Yungblut	32	39	41	38	36—186—963

Scores made by other members:

J F Stevenson	41	21	33	31	38—164
J R L Carrington	31	35	30	37	41—174
Col C F Hake	31	39	34	40	34—178
H F Schaefer	38	27	37	26	36—164

The scores made in the first telegraphic match of the season, with the Washington Revolver Club were as follows: W. Howard Cox 209, Dr. A. A. Yungblut 197, Col. C. A. Hake 195, A. H. Kenan 188, Elmer C. Hake 175; total, 964.

MANUFACTURE OF POWDER.

VLADIVOSTOK papers report that a factory at station Sviagin, Siberia, on the Ussuri Railroad, is manufacturing "rackarock" in a very primitive manner. This factory undertook to deliver to the Government ninety tons of the explosive and was producing it without having obtained a permit from the authorities. It is said that the explosive is produced by mixing potassium chlorate (KClO₃) with red lead (Pb₃O₄) and another ingredient similar to protochloride of iron (FeCl₃). The mixture is packed in paper cartridges. Rackarock is an American product, manufactured in New York, and was formerly sold in large quantities in this district for use in railway construction work, etc.—Vice Consul, Vladivostok.

A TEST FOR DRINKING WATER.

ONE of the best and simplest tests is to put a pint of the water in a flat earthen vessel, evaporate it quickly and scrape the receptacle clean of any residue.

If such residue is white and powdery it means lime or gypsum, hence the water is hard but safe. A whitish green or whitish yellow gummy residue is suspicious. Burn it, and if it turns black, giving out the smell of burned feathers, the water is contaminated with animal refuse and a likely breeder of typhoid.—Christian Herald.

CARIBOU IN NEWFOUNDLAND.

Continued from page 718.

are the harp, the hood and the bay seal, differing in color and size, the hood seal being the largest and the male having a hood or bag which he blows up over his head, the color, brownish; the harp seal, smaller and blue in color, and the bay seal white and brown spotted—all hair seals. Hides worth \$1.00 to \$5.00, and the oil thirty cents per gallon. The young harps, when born, have a white coat for ten days and do not swim, so they are killed on the ice with clubs, this being between the 10th and 20th of March. They turn to a dark brown after going into the water, after which it is necessary to shoot in order to get them.

"A sealing steamer in a good season may take 30,000 or 35,000 seals. She is a powerful boat and can force her way through two feet of ice. The largest steamers carry 200 men, all of whom live down in her hold like dogs in a kennel, in the worst crowded, worst smelling den you ever saw, and hunt out from the ship in parties of ten or twelve across the ice. The seal catch does not seem to diminish, there appears to be just as many on the average as there were forty years ago."

He proposed that some fine summer I join him about the first of July, the very best time for salmon and trout in Terra Nova waters, which are later than the Humber and the western rivers; that we fish for two weeks and then go to Rocky Bay, fifteen miles east of Alexander Bay, and shoot bay seals for ten days or so, saving the skins to make winter coats for a lady and a little girl I know. This sounded good to me, and it is one of the things I am going to do.

Just as Bob finished telling me about the seal hunting, two splendid flocks of geese passed up the river, flying low, within thirty yards of camp.

It rained hard all night, and we started hunting in the morning through thickets of spruce and fir, wet as a rag, crossing out northwest of camp on to small hardwood ridges, through occasional little bogs and brooks. Having seen no recent fresh sign of stags along the river, Bob concluded that the old fellows were still in the woods, putting the finishing touches on their new horns, and that for the present we must still-hunt for them instead of watching the river crossings and bogs. There was a little chain of small ponds not very far back of camp, and we hunted down across two of them and past the others, one by one, seeing little fresh sign of stags. It started to rain again, and by mid-afternoon we were pretty well drenched, so turned back toward the river. Said Bob: "We might take a last turn up by the little pond, but it doesn't seem much use. I never knew sign of stag in here so scarce."

The changes in hunting luck come swiftly, and I suppose that is half the charm of it; the ever-present thought that suddenly the toil and watching and discouragement may be rewarded by the sight of noble game. As we peered out across the little upper pond, Bob slid down in the roots of the small spruces, and there, standing above the water back to us, looking up hill, was a splendid stag, so large and white and topped by such a spread of red horns that I could scarcely believe my eyes. He seemed much more like a white moose than a deer.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen. Shoot well because they hold the charge compactly together at extreme ranges. Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline. Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

Don't Let Your Shooting Be Spoiled—Read This Book

LEARN this important fact; when your shot gun goes wrong in field or trap, the gun fault which spoils your shot is *inherent in the gun*. And furthermore, it would not have been there if the maker had known *how to get rid of it*.

Every gun lover needs this latest gun information. When you read it you will feel that only such concentration of purpose as the six Hunter Brothers have devoted could produce a gun with **NO SHORTCOMINGS.**

It will show you how *loss of aim from fumbling for the trigger* has been eliminated by the Hunter One-Trigger—which recently broke the world's

record on double targets. How *inaccessibility of working parts* has been eliminated by the Smith One Screw Access. How shooting loose has been eliminated by the Smith Rotary Bolt which takes up wear to a certainty, in all directions. Etc., etc.

This book is free to gun lovers. Full of valuable gun information, tables, charts, etc. Shows colored plates of fine shot guns, ranging from \$25 net to \$1500 list.

Send For Your Copy Today

If you care for guns and shooting, don't fail to send for this book. Don't fail to send post card today—*now*.

NYOIL

Nyoil Absolutely Prevents Rust
Use it on your gun, revolver, bicycle, talking machine, reel—in fact, for any purpose for which a fine, pure, lubricating oil is desired. It never chills or hardens, "gums" or smells bad. Ask sporting goods or hardware dealer. Large bottle, cheaper to buy, 25c.; trial size, 10c.
WM. F. NYE New Bedford, Mass.
Ask your watch repairer whose oil he is using on your watch.

"Two hundred yards," said Bob, and I made the mistake sportsmen so often make. I started by raising my sights, took a very steady aim at his rump, and fired. He stood still. I fired again. He never moved a muscle, but at the third shot he jumped, and we afterward discovered that it had passed through the webbed top of his right horn, throwing up the gravel ahead of him, so that Bob cried: "You are shooting high." Down with the two-hundred yard sight, and as he trotted along the side hill, I brought him to earth with a shot through the foreshoulders. His horns, while evenly matched and very pretty, carried only twenty-five points, although he was, as Bob said, an exceptionally heavy animal. After photographing him we took the head and a quantity of meat and were at camp in time to skin out the head before dark, all save the ears.

Next morning I tackled the ears. Score: First ear, three hours; second ear, one and one-half hours; both ears, a large amount of language and backache, and eighteen black fly bites on my forearms, inflicted while I was helpless to slap flies. Skinning out ears is to a greenhorn quite a nerve-racking job, and I have heretofore brought in my head skins with the cartilage in ears. The final result, however, while good at the hand of a first-class taxidermist, is not as safe for the long pull as if the ears be skinned out fresh and thoroughly salted clean to the tips.

[TO BE CONTINUED.]

Improved Fish Hatchery at Pratt, Kan.

BY LEWIS LINDSAY DYCHE, STATE FISH AND GAME WARDEN.

THE pond system of the new and improved fish hatchery at Pratt, Kansas, was completed in November, 1912. It has been said that the building of this hatchery is an epoch in the history of fish hatcheries. Not only is this the largest fish hatchery so far as we know that ever has been built, but in many respects it is the most complete and best equipped. The water system, controlled by over 100 solid concrete structures with bronze and iron gates securely fitted, is the most complete arrangement for handling water that has yet been constructed for a fish hatchery. The water itself is ideal for fish culture purposes. The supply is taken from the South Ninescaw River, just south of the city of Pratt. A solid cement dam 500 feet long holds a supply lake of about seven acres. A cement chamber receives the water through heavy wire screens from the supply lake and passes it through a gateway into the 21-inch conduit pipe. While the water is clear, coming from innumerable springs a few miles west of Pratt, yet it runs several miles through beds of watercress, moss and other water plants before it reaches the supply lake. Hence the water is well supplied with minute animal and plant life and other fish food, and is well aerated before it is poured into the breeding ponds.

OBJECT OF HATCHERY.

The chief object of the State fish hatchery is to supply brood stock fish for the ponds, lakes and streams of Kansas. There is no better food than fish, and with most people fresh fish is a real luxury. Most fish lose flavor and quality very rapidly when removed from the water. It

Hartford, Conn.

can be stated as a rule, that has very few exceptions, that the sooner a fish is cooked and eaten after it has been taken from the water and killed, the better it is. It follows then that the best way for Kansas people to get good, fresh fish is to raise them, and the nearer they are raised to the place of consumption, the better they will be.

Kansas has many good fish streams. They have been abused by turning sewage into them. The fish interest of the whole people has been greatly injured by certain individuals who have taken fish by unfair means and thus depleted the streams of breeding fish. It is believed that the above abuses can be corrected, and that Kansas streams can be made to produce a good crop of fish each year and yet sufficient breeding stock left to insure a next year's crop. It will be a good part of the business of the fish hatchery to help bring about such conditions. The hatchery will do everything in its power by disseminating knowledge of fish and all things pertaining to fish and the fish culture business to help each individual who is in any way interested in the fish business.

HATCHERY THE BEST PLACE IN THE WORLD TO LEARN ABOUT FISH.

Those who desire to learn about fish and the best methods of raising and handling them should visit the State fish hatchery. With a hundred ponds in operation and every kind, size and age of fish in the ponds, an opportunity would be furnished for gaining a great deal of information in a short period of time.

Studied and looked at from their food habits, fish can be divided in a general way into two groups—vegetable feeders and animal feeders. All young fish eat nearly the same kind of food, minute forms of animal and plant life. As they grow older and larger such fish as the carp, buffalo, the red-horse, in fact all the suckers, are essentially vegetable feeders. Such fish as the bass, catfish, the crappies and the sunfish are essentially animal feeders. However, the catfish, even when grown, eat more or less vegetable matter, and the crappies and sunfishes eat a little vegetable matter, especially when they are young. However, the great bulk of the food of the bass, the catfish, the crappie and the sunfish is animal. These fish feed very largely upon other fish, especially upon minnows and the young of the carp, buffalo, and in fact the young of all the vegetable-eating fish. It is much easier to raise the vegetable-eating fish in great quantities than it is the animal-eating fishes. There is usually plenty of food in streams and ponds for vegetable-eating fishes, but the supply of animal food is never so abundant. To meet this demand nature has so arranged that most vegetable-eating fishes spawn eggs by the million, while animal-eating fishes spawn eggs by the thousand. For instance, catfish and bass spawn from one to twenty thousand eggs in a year, while carp and buffalo spawn from five hundred thousand to five million eggs each in a year. The vegetable-eating fish convert much waste vegetable matter into fish flesh. This fish flesh in the form of young fish serves as food for the animal-eating varieties. For instance, the black bass will eat from three to five times its own weight in other fish each year.

The object of the fish hatchery is then to deal with every problem of fish culture that may present itself, and if possible to cause fish to be-

come a common article of food in the homes of Kansas people, and thus furnish a cheap, wholesome and delicious article of food. We believe that the fish hatchery can in a few years be made to return to the people of the State fish food enough to more than pay for the cost of the entire plant each year.

Crimes of the Crayfish.

VERY beautiful are the photographs which illustrate the article on the crayfish in the November number of the Zoological Society Bulletin. This is an Aquarium number, and is full of interesting material, having to do with marine and fresh water life.

The article on the crayfish possesses a peculiar interest for readers in the South where the crayfish or crawfish does considerable damage by boring into dams or dykes of earth, causing leaks which may produce extensive damage. In certain localities it is a serious menace to the farmer because it does much damage to crops.

The crayfish is of some value as an article of food, yet though used in some quantities in Louisiana, Oregon and Wisconsin, the money value of the crayfish caught is not large.

The crayfish is nocturnal in habits, but some species go about a good deal in the day time. It is, however, at night and in rainy, showery weather that they chiefly go abroad, and it is at such times that they work the greatest injury to crops in the South. In certain clay lands of Mississippi and Alabama it is stated that it is impossible to raise any crops with profit. The animals inhabit the heavy gumbo soil which is full of water, and under which there is a layer of sandstone, impermeable to water. Over quite a stretch of country, estimated at not less than a thousand square miles, the crayfish do so much damage to the crops as to prevent, to a large extent, the successful raising of cotton and corn. Their depredations are committed immediately after the plant appears above the ground, and at this time large fields of young cotton have been destroyed in a single night. The damage to the corn is not so severe as to the cotton. If a cotton field be examined after a raid made by crayfish, it will be seen that they tear away the tender sprouts and carry them to their burrows. At the mouth of a single burrow a dozen entire leaves have been found, and of course these are only bits that are dropped by the creatures in its traveling.

So numerous are the crayfish in this region that 8,000 to 12,000 holes to an acre are sometimes found there.

After the destruction of their first crop the farmers are likely to replant, and if the weather is dry, they may secure a fair stand. The worst weather for the farmer is when frequent rains occur soon after planting. Then the crayfish are much abroad, and the chances for a crop are poor, but in dry weather the plants may develop so rapidly as to be out of danger when the wet weather comes.

The Bureau of Biological Survey has made some investigation into the damage done by these little animals, and an account by Dr. A. K. Fisher, Assistant in charge of Economic Investigation, is full of interest. Dr. Fisher recommends, as the best means of getting rid of these swarms of injurious crustaceans, killing them when they leave their holes. They can be killed

by clubs or crushed under foot, and when the weather is right and a very large proportion of the animals are abroad, laborers can pass over the fields and destroy all the crayfish in sight. Those killed ought to be gathered, cooked and mixed with meal, because they make a valuable egg-producing food for poultry. It is obvious that all the crayfish in a given area could not be killed by this means. Certain poisons are recommended, in connection with the mechanical process. Of these poisons carbon bisulphide, chloride of lime and calcium carbide are mentioned. The first two of these are the least expensive, and it is believed will be effective.

The matter is one which possesses a very vital interest for Southern farmers. Such readers would no doubt be gratified to procure a copy of the Zoological Society's Bulletin which gives these excellent pictures of an animal which, in certain sections, is a pest.

CABLE ADDRESS, FORESTRIM, N. Y.

127 FRANKLIN STREET

New York June 20, 1912.

Durham-Duplex Razor Co.,
#111 Fifth Avenue,
New York City.

Gentlemen:-

For a number of years I have taken an active part in shooting, fishing and yachting, and like many other enthusiasts in these lines of recreation, have sworn by old fashioned "common" or "garden" razors.

Once or twice I have tried safety razors, (celebrated through their advertising) for use on a yacht when it was a little rough for the straight razor, and on camping trips, when a mirror was more or less of a luxury, and I am frank to say that I have been greatly disappointed in all these implements. Their advertising copy is much more satisfactory than the article itself.

The other day, in going down to the Manhasset Bay Yacht Club at Port Washington, L. I., I saw in the window of a hardware store a table on which was a large sign "Durham Demonstrator - 35 cents". Being flush, I invested in one of these and all of the above communication relates to what is to follow.

The "Durham-Duplex" is a wonder. I have used the same blade nine times to date, and in every instance have had the cleanest, smoothest, and most comfortable shave that my face has ever indulged in.

The fact that it is built like an ordinary razor and does not have to drag over the face is probably the "cause of it all". At any rate the "Durham-Duplex" is a beaut.

I have to-day invested \$5.00 in a box "with the goods".

Cordially yours,

WGB/EBL.

WGB
Editor.

35¢

This is the razor you get for 35c. if you take the coupon to any of our dealers. It is equally as good a shaving instrument as our regular razor.

DURHAM-DUPLEX RAZOR COMPANY, F. & S.

CARIBOU HORNS—THREE TYPES

CHRISTMAS BOOK LIST

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and hand-somest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Uncle Lisha's Shop.

Life in a corner of Yankeeland. By Rowland E. Robinson. Cloth, 187 pages. Price, \$1.25.

The shop itself, the place of business of Uncle Lisha Peggs, bootmaker and repairer, was a sort of sportsman's exchange, where, as one of the fraternity expressed it, the hunters and fishermen of the widely scattered neighborhood used to meet of evenings and dull outdoor days, "to swap lies."

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod-maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevil. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur, who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness, as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated. 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated, 150 pages. Postpaid, \$1.00.

HISSING OF A SNAKE.

F. W. FITZSIMONS, director of the Port Elizabeth Museum, says that snakes change their skins several times a year before reaching the adult state. The main reason why snakes cast their skins is to provide for increased growth. The skin of a snake does not grow with the growth of the body, as is the case with warm-blooded animals. So when it begins to get too tight, it is discarded.

The hissing of a snake, Mr. FitzSimons explains, according to the Westminster Gazette, is caused by the long sack-like lung being inflated with air, which is forcibly expelled through the glottis and nostrils. The puff adder makes the loudest and most prolonged hiss of any South African snake. When alarmed, snakes hiss with the object of frightening off their enemies. If snakes were not able to make their presence known, they would be frequently trodden upon and injured by the various creatures of veld, forest and mountain.

An animal will often manifest the wildest alarm at the sight of a snake or on hearing one hiss, although it has never before come in contact with one of these reptiles. "This power of transmitting experiences is," remarks Mr. FitzSimons, "a wonderful provision of nature, for if every living creature had to learn entirely by personal experience to avoid its enemies and find out what kinds of food were wholesome or the reverse, a great number of species would rapidly become extinct."

Among the snakes described is the African python. The statements in regard to the length of these reptiles are very conflicting. Mr. FitzSimons says he has examined many and the longest was twenty feet. The average length he puts down as about sixteen feet, the circumference at the thickest part being about eighteen inches. Pythons are very fond of water and often lie along the branches of trees with their eyes fixed upon the ground below.

If something good to eat comes along, the snake simply drops upon it, the end of the tail gripping tight to the branch. Pythons are not venomous, and the tales about them swallowing people have never been thoroughly authenticated. Pythons will show fight when wounded or cornered, and at these times it is distinctly dangerous for man if alone to tackle them.

"I have had much experience of snakes," writes Mr. FitzSimons, "and have made it my business to observe carefully their habits and ways both in their natural condition in the wild state and captivity, and in no instance have I ever known a snake to fascinate an animal in the manner it is alleged to do." He has seen two species, which he mentions, many a time in trees surrounded by a crowd of fluttering, chattering, excited birds. But the birds were not, he says, fascinated by the snake; they were endeavoring to intimidate it in order to frighten it from their haunts.

According to one authority, about half a drop of Indian cobra venom is sufficient to kill a man. That means, as Mr. FitzSimons states, that a full sized cobra would be able to eject enough venom at a single full and complete bite to kill about twenty men. The Indian cobra yields as much as twenty drops, and Dr. Hanna mentions having obtained as much as twenty-eight drops.

In experiments with the venom of the Cape cobra, Mr. FitzSimons found that one drop diluted in a little water and injected into the tissues of the leg of a large monkey killed it in half an hour's time. A fraction of a drop was sufficient to kill a rat and a fowl within half an hour. Judging from the effects of cobra venom on the higher animals, Mr. FitzSimons considers that one full drop is a fatal dose for a strong, healthy man.

OPTIMISM pervades the advertising world. Manufacturers are preparing to make the coming busy winter season a record-breaker. All want to get their full share of the ten-billion-dollar erop.

A PROBLEM'S SOLUTION

Log Cabins and Cottages; How to Build and Furnish Them

A seasonable book when all minds are bent on the problem of getting close to nature. Mr. Wicks in this delightful book offers timely advice to every one who wants to build a simple summer home at one with its surroundings of wood or stream or shore.

This is a thoroughly practical work, treating of the how, the where, and the with what of camp building and furnishing. It is helpful, too, in regard to furnishing, and withal a most beautiful work. *Cloth, profusely illustrated, \$1.50 postpaid.*

RAIL SHOOTING ON PAWTUXENT.

Note—Just below the line of fire, $1\frac{3}{4}$ inches from the left side of the picture, the crumpled rail bird may be seen. Photograph by Dr. H. Lindley.

Christmas in '64

By FRED A. OLDS

THE autumn of 1864 had begun in Piedmont, North Carolina, and the flaming glory of the foliage vied with the gorgeousness of the sunset. There was a tang in the air, and in the retired country home, where the little Confederate boy lived, life ran very smoothly. The story has been told of how he made the shot for his gun, how he got the powder for it, and also how he killed his first turkey and thus "won his spurs," which his beloved Uncle Frank, home from the battlefield minus his best arm, had given him as a reward for his marksmanship.

The war was on in all its bitterness, and it bore very hard upon Jimmy's mother, whose husband, though twice wounded, was still in the field fighting with Lee's ragged, but dauntless, veterans; men who illustrated in a splendid way the American spirit, its pride and its valor, and who in this happy day have come to share with their erstwhile enemies the respect and the regard of all people who love the memory of men who dare to die for what they think is right, no matter whether their uniform happened to be Blue or Gray.

Father was still at the front, and mother, with Uncle Frank, helping all he could, was do-

ing her best to keep things going. There were the forty slaves, little and big, to be looked after, clothed, fed and cared for, and there was the little boy, Jimmy, the only child to be cherished and looked after in every way. It was astonishing in those days how self-reliant even children became, for there were boys of Jimmy's acquaintance barely turned sixteen years, at the front in the battle line, and one under seventeen had been brought back to the neighborhood, one leg gone, taken off by a shell. But to the little lad all these things seemed remote and yet strangely near. He had not seen father in three years, and sometimes a fortnight passed and even more without a word of him or from him. Fighting and not writing was the fashion in those days.

Jimmy, by the aid of the trusty and well beloved Uncle Esek, the oldest of the slaves, had built a sort of shack, which he called his "fort." It was roofed and in it were some of his treasures, including first of all the Joe Manton gun so dear to his father and himself. It was well kept, though its barrels were worn at the muzzle almost to paper thinness, but still shooting fine and strong, provided one held it on the game.

One day of days—after Jimmy had oiled this precious gun and put it lovingly back on the prongs of the deer horns which formed a gun-rack, and had gone out to the front of his fort and looked at his two cannon which were in truth old pillars of a portico, mounted on dis-used wagon wheels, all painted black, and had cast an eye upward to see if his Confederate flag, the "Stars and Bars," was floating in the properly dignified way from the top of a high pole—he saw a wagon coming to the house and presently mother appeared on the porch with half a dozen slaves around her and beckoned for Jimmy. There had come from the nearest railroad town, a good many miles away, a box or two with very precious things which had been brought "through the blockade"; in other words had come from England to Nassau, from that island to Wilmington, and then by railway, and but slowly, too, into the Piedmont country among the mountain foothills. In the box were some "cards" used for carding cotton for spinning, for the spinning wheels and the looms were great features of the Southern homes of those dreadful days, and they had to whirr and clank until the very last, to keep families and slaves clothed.

Uncle Esek's wife, known to Jimmy and indeed everybody else as "Aunt Clarisy," as white of hair as Uncle Esek himself, was simply one broad grin as she said: "Miss Harriet, dem kyards sholy does look good ter me. Dem whar we has is pint blank worn out." There was a gay bandanna handkerchief for Aunt Clarisy and a lot of other things, not forgetting some gun caps and some English powder of the fine kind known as rifle powder for Jimmy, for the friend who had sent these boxes with their wonderful contents was a man who lived at Wilmington, and who had been a guest of this family while he was convalescing from a sickness that summer. It was a proud day for Jimmy, and the can of powder was "toted" by him directly to the fort, and there put on a shelf. There were writing paper, real ink, lead pencils and a book or two in the boxes, and when Jimmy compared the clean-printed English books with his poor Confederate geography, printed at Raleigh, the contrast was almost painful, for the maps in that geography looked as if pokeberry juice had been used to give one of the colors. There was Jimmy's arithmetic, too, also printed in North Carolina with so "many of its examples" telling about the war, such as for example, "If Captain Tuttle, of a company of the Twenty-sixth North Carolina regiment, took into the battle of Gettysburg three officers and eighty-one men and came out with one officer and two men, how many were killed, wounded and missing?"

But, though the opening of these boxes, which really seemed to be from another world than this, was something which no child of today can even conceive of so far as pleasure is concerned—for the very finest Christmas box of this period is as nothing compared to it—yet there was something else in store for Jimmy, for there came down the lane between the high-staked and riddled rail fences Jimmy's grandpa in his old "stick gig," which he thought the best vehicle in all the world. It had been about a year since Jimmy had seen this much beloved grandparent, but it was Uncle Esek who saw him first and absolutely ran to meet him, his wooden soled shoes with their tops of half-tanned yellow leather fairly clattering as he went, but Jimmy was right at his heels. Grandpa had in the gig two or three bundles and also his long rifle. He had been in the Mexican War and had been injured, and so was not able to do service in the Confederate ranks. He was very active, considering his injured leg, however, and as Uncle Esek put it, "Got erbout sprizingly." Jimmy was allowed to "tote" the long and heavy rifle, as well as the powder horn and bullet pouch; Uncle Esek "tuk dem bundles an' de carpet bag;" another slave looked after the horse and the gig, and in a minute there was a happy party at the house. Mother was there to embrace the old man, and grandfather very proudly went along with one arm around her neck and the other around that of his tall and wounded son, while Jimmy and Uncle Esek brought up the rear. Grandpa had some mighty fine chestnuts and had also brought some real sugar and coffee, which he had obtained in some wonderful manner, and the supper that night was something never to be forgotten. Grandpa said he had come to stay a fortnight, and Jimmy had to run to tell Uncle Esek this good news. Uncle Esek expressed his delight and said to the little fellow at the cabin door: "Yo grandpa sho is

A BAG IN CURRITUCK.

er mity man. He's been a-huntin' many in his time. I members one night when Marse Henry was er havin' de famby prar at the gret house dat he read fum de Scripture erbout er man whar wuz er mity hunter fo' de Lawd. Yo grandpa wuz one er dat sort er man. He's killed deers an' bears an' wildcats an' panthers an' buffaloes an' lions an' elefunts in his time. He don't use no kind uv gun, 'ceptin' er rifle, dat one whar he brung wid him terday. He don't believe in no scatter-gun, like Marse Henry an' you uses. He all de time say er flint lock gun is de only kind, and dem whar uses caps ain't 'pendable. I've hearn yo' grandpa say dat dem cap guns is too quick, an' dat dem flint locks is slo' but sho'. Many's de squrl whar I've seen yo' grandpa knock outen de high trees, 'thout makin' no wound in 'em. He 'barks' um." Jimmy, who had never had the great good fortune of hunting with grandpa, wanted to know what "barking" was. Uncle Esek laughed and said: "Barkin' ain't what a dog does. Hit is shootin' er squrl ez he's er lyin' out on de lim', so de bullet goes under his throat an' pint blank knocks the wind outen him. Down he falls and you don't find no wound 'till you skin him, and den yo' finds er little bruise place whar de bullet kinder grazed."

Jimmy right then began to regard his grandpa as simply wonderful, and the long flint lock gun, with its slender hickory ramrod, was regarded as a "sure killer" at any distance. The next day grandpa said he would take a little hunt with Jimmy, who must first of all be told about the wonderful rifle. There was the powder horn made out of a well-shaped cow horn, with some very creditable engraving done upon it, and hanging from the small end, in which was a little wooden stopper, was a piece of reed infinitely smooth from long use, this being the powder gauge. Grandpa explained to Jimmy that to tell how much powder a rifle should use, a bullet should be put in the hollow of the hand and enough powder poured to cover it, and then the gauge could be fixed to hold just that much. In the bullet pouch there were the bullets, which grandpa himself had made, the slender bullet mould, a few extra flints for the

lock, and some "patching," together with a little box of grease. Jimmy must needs see the rifle, which was fully as long as grandpa, loaded and this operation was performed. The powder was poured in, then a bullet was laid in a little corner of a piece of thin cloth, which had been greased, and with a knife grandpa cut off the cloth after the bullet had been started. Then with the long ramrod he gently but steadily sent the patched bullet down on top of the powder. Next he looked at his flint to see that everything was all right, and put a few grains of powder in the "pan" so that when the flint struck the steel, the resultant spark would touch off the powder. Uncle Esek was on hand, for he was going on the little hunt, too, and the way he praised grandpa as a shot delighted that good old soul and pleased Jimmy, as Uncle Esek said, "mighty night ter death." Jimmy was armed with the Joe Manton, and one-armed uncle looked at the group very admiringly, intensely proud of the boy who in his homemade shoes and clothes and rough hat of rabbit fur and wool was ready to go anywhere and take a chance at anything in such an environment. Uncle Esek said: "Jimmy, yo' grandpa kin knock de eye outen er hawk. I seen him do it. Hawks better keep outen his way. Ef he gits nigh one er dem chicken-stealin' birds, he sho is er gwine er knock him, and ter git chicken pie." Jimmy laughed, for he knew very well the good old country rule in the South, that if you kill a hawk on the premises you are fully entitled to the best chicken pie the woman can provide, and she is only too happy to do the providing. So the three of them started off, mother standing in the porch and smiling. Grandpa was unusually sure of his rifle, for his powder horn had been filled with some of the English powder which had so luckily come in. It chanced that in a tree there was a very beautiful bird which Uncle Esek called a "yaller-hammer, an' one uv de sociablest birds whar dey is, fur he goes wid dem birds whar flies high all de time, an' dem whar stays mostly on de ground." Jimmy begged his grandpa to show what he could do right then and there, and luckily for his reputation down fell the yellow-

hammer, shot right through the head. In a house not far away lived a woman who was termed by Uncle Esek "Ole Miss Lewis, whar has er heap uv trouble wid hawks and sich." As they came near her place a hen hawk alighted in the top of a big persimmon tree some seventy-five yards from a barn, and grandpa, who wanted to add to his reputation in Jimmy's mind, said: "You all lie low now, and I will creep up and get him." Jimmy and Uncle Esek obeyed and went down in the grass like lizards. It seemed like a long time before grandpa's rifle cracked, but when it did the big bird seemed to try to rise in the air, and then came tumbling through the trec, clawing savagely at this limb and that. When Jimmy ran up to the place with his dog the mortally wounded bird was as savage as could be, and Uncle Esek finished it with a blow on the head with a stick. Jimmy took the hawk by the heels and ran to "Ole Miss Lewis" with it. She was delighted and declared that the next day she was going to make a big chicken pie for grandpa and him, and in fact, for all the family.

Into the woods the trio went, and everything seemed to go grandpa's way, for a squirrel

flashed into a hollow limb, not many feet above the ground. The limb seemed to have been struck by lightning, for it was split and the squirrel ran in it in such a way that its head showed through a narrow opening not over half an inch wide. Up went grandpa's rifle, his trusty right forefinger touched the slender trigger, and the squirrel collapsed. Jimmy was helped up the tree and contrived to get the squirrel out. Grandpa had shot him through the eye. In Jimmy's mind his grandpa's admiration for that old flint lock was more than shared.

By and by they came to a young poplar tree, its leaves nearly all fallen, in which there was an exceedingly big squirrel's nest. Uncle Esek begged for Jimmy's gun, saying, "I know's er gemmun whar makes hit er pint ter shoot in dem sort uv nesses, fur diffunt animals lays up in dem nesses; jus' quiles up an' goes ter sleep." Uncle Esek blazed away, while Jimmy and grandpa watched. Some leaves drifted off, but very quickly the nest shook and something began to drop on the ground. Uncle Esek went to the foot of the tree and at once said, "Hit's blood a-droppin'. I lay you a wager I got sumpn

dat time. Yo' jes' watch." And sure enough out tumbled a great big 'possum and hit the ground with a thump. Uncle Esek's eyes seemed to stand out from his head like a sand fiddler's, and it was a pure joy to see him pick up that animal dearer than any other in all this world to the darkey stomach. Uncle Esek did not want to shoot any more. He had seen "ole Marse" show off with the trusty flint lock, and all his stories had been proved, and after knocking about a little bit more, they decided to go home. As Jimmy was striding along with gun on shoulder, a rabbit ran lightly across in front, and at the edge of a little patch of reeds actually sat up and very coolly "washed de face," as Uncle Esek put it. Jimmy laughed so much he could not shoot, but let the rabbit go. Presently another rabbit was jumped. There was a little "patch of cotton" nearby and into this the rabbit ran and "squatted." Uncle Esek said: "Rabbits sholy has sense. Dey knows dat the frosted cotton smells high an' drowns de scent and dat's why dey goes inter de cotton patch an' lays low." Grandpa admitted that there must be something in this.

The Caribou Barrens of Newfoundland—III.

Pictures and Text by the "Judge."

BY prowling around we discovered southerly two or three miles from camp an open hill, whence we could see half a dozen small lakes and bogs. Three does were feeding on a marsh a mile east of us, but no stag was to be seen. On top of a high ridge three or four miles southeast we could just see the edge of a big flat open country, which we resolved to hunt over later. Soon three small stags worked out on to the big bog below us, a mile distant. Going down toward them we jumped another. Crossing the brook we came upon a doe, fifty

feet away, drinking, but she dashed through the stream with a great splashing before I could get her picture.

Then we saw two young stags and a doe feeding down across the bog, and leaving Bob. I crawled along through the moss like a serpent, holding the camera ahead of me ready for a picture; finally I gained the shelter of a tiny shrub, into the top of which I pushed the camera, waiting for the deer to come across in front of it. At fifty feet the doe became uneasy and I could see the hair raising upon her

shoulders, but the stags remained indifferent, and I exposed the film. At the click of the shutter she saw me, but I remained frozen until her curiosity had overcome her fear, and she advanced cautiously toward the tiny bush through which I was peering at her. At the second click she jumped and started away, accompanied by the stags.

At a distance of 100 yards out upon the marsh the stags resumed feeding, but the doe turned sharply and cut straight across the wind at a swinging trot, her head high and her funny little tail cocked straight up in the air in a comical fashion. Although going through soft moss, which gives down six inches at every step, she had a most elastic trot, springing right up smartly into the air at every stride. Upon finally crossing our scent in the wind she made one fine buck jump and started down the breeze at top speed.

Later we saw more does and young stags in velvet. Fifteen deer in all for the day, but no worthy trophy. Often we would espy among the green spruces and tamaracks fringing the bog, what seemed surely to be the white throat of an old stag; but a look with the glasses invariably converted it into the trunk of a birch, or the dead and whitened roots of an old pine. From "stag" to "snag" requires but momentary use of the binoculars and the shifting of a single letter, but when the change is called for a hundred times daily, it does become tiresome.

While Bob was fleshing out the head skin of our first stag one morning he discovered an old buckshot embedded in the thick hide of the neck. "An Indian's work," said he, "no white man shoots at stags with buckshot."

Bob, however, credits the Indian trappers

BACK TO GLENWOOD.

largely with the extinction of the wolf packs, which formerly harried the deer, although it is true their motives were not altruistic, for they only began diligently to poison deer carcasses when the Government bounty of \$20 per wolf was established thirty years ago. About that time, Bob said, two powerful wolves afflicted the settlers around Alexander Bay for many weeks, killing dozens of sheep and evading all traps and poison set for their undoing. Finally Bob's uncle observed that when the trap was set at a carcass these wolves would walk around and around it, but never approached within four or five feet of the trap, with whatever care it might be concealed. So he got another trap and buried it in the moss at a distance of six feet from the carcass, and from the first trap, and so caught both wolves.

Bob's latest personal knowledge of wolves dates back ten years, when one fed upon a carcass near his hunting camp at White Plains, in the Gaff Topsails region.

Returning to camp at dusk one evening, I thought I heard the "plump" of a frog leaping out of the grass into the river, but Bob said, "No." One would conclude that St. Patrick must have stopped off in Newfoundland on his way back from Ireland, for it is said that there is not a frog, toad or snake on the island.

Next day we hunted the bogs and small hills northwest of camp, drawing a blank, and seeing no living thing of note save a great horned owl which flew up from the swamp in front of us, alighting upon a dead pine and hooting until attacked and driven to the cover of the dark spruces by a pair of kingbirds. On our way back to camp we gathered a fine mess of ripe purple partridge berries, which, when well stewed with plenty of sugar, make an excellent sauce for venison.

The heavy rain having been carried off by a high wind, the weather turned clear and cold again, and we moved up stream two or three miles and in from the river a short distance, with light packs, constructing a small birch bark leanto close to a little pond. That night it turned very cold, ice forming all around the edges of the pond, but we were cosy and warm in our leanto, with the heat reflected from a little fireplace of flat stones.

For two or three days we hunted constantly across the big bog, up through a thick woods on to the great high rolling open country to the east, around little ponds, and two or three small lakes, seeing a good many does and small stags with their horns still in velvet, but jumping only one big stag, and he seen in thick woods, only for a second. The weather became warm and summery again, altogether too much so for hunting. Salmon were still passing up the shallow river occasionally, or leaping in the pools. In the small streams we saw now and then a school of trout, but could not catch one.

The compass which I always carried showed Mount Peyton north, 25 degrees east, from this bit of country. Bob, however, scorns the compass, relying upon the occasional high pines and tamaracks which project above the general growth, and all of which incline east or northeast, owing to the prevalence of southwest winds.

The ubiquitous Canada jays infested our camp, stealing every speck of meat or bread

KING STAG—BACK VIEW.

they could get at. While making notes one afternoon I heard a tremendous squealing, and running out, found that Bob had sneaked up behind one of these birds which was stealing meat, and caught it in his hand; and I took the bird's picture while it cried loudly for help.

We had agreed with Ralph and Lionel that we would return to the main camp Sept. 18, and we met them about half way down, coming up to get such duffle as we did not have in our own packs. As we came around the bend opposite the mouth of Dead Wolf River a stag was seen across the stream, browsing on the bushes which hung over the bank. It was raining and foggy and impossible to study him carefully, for he was apparently about to go into the woods. So I took a quick chance at him at 250 yards, for his horns looked good. Having missed him, we concluded that they were poor anyway.

The rain increased, and we arrived at the camp in the midst of a heavy downpour. A big flock of yellowlegs were feeding on the sandbar in front of camp, and upon the woodpile was a fine pair of horns which Ralph had picked up on the high bog to the southeast. Heavy rain continued all night, and next morning the river began to rise swiftly, coming up over twelve inches in three hours. The boys arrived at four o'clock, very wet, having been

driven out of the upper narrows by rising water, forcing them to go straight up the cliffs in a very dangerous place.

While we sat about the fire talking it all over, Bob suddenly exclaimed: "There comes a big stag right out of the bushes across the river." Our camp was concealed from the river by a thick fringe of bushes along the bank, and I had a chance to glance at him through the binoculars long enough to see that his horns were all rubbed clear of the velvet and stained a deep red. As he came down into the water at not much over one hundred yards distance, I fired, striking him squarely in the nose; and as he wheeled brought him down with a shot through the foreshoulders. After all our toil and traveling around over the country, early and late, it did seem ridiculous to come back to our main camp and sit down and have a big stag walk right into camp and nearly run over us.

At the moment when this all occurred Ralph was shoeless and sockless, toasting his toes before the coals, so that the other boys and I had a chance to look the stag over and guess his weight before Ralph appeared. He was a big fellow, very fat indeed, and I thought he should weigh 400 pounds. Lionel thought 420 pounds would be nearer right, and Bob guessed 460 pounds. When Ralph appeared,

Woodcock in Waltham, Maine

By "WOODCOCK"

his guess of 700 pounds was received with derision, and it was agreed that whosoever proved to be the farthest off his weight should, upon our return, purchase, at Glenwood, cigars. Having previously scented a Glenwood cigar from afar off, I secretly prayed that I might lose the bet, which, in fact, I did, for his weight, in chunks, carefully added up, proved to be 606 pounds. The fat upon his haunches was nearly three inches thick.

During the night I was awakened by the sound of caribou crossing the river just below camp, and as I lay listening I heard from time to time the splash of salmon which were working their way up stream in the rising water.

Next morning it was still raining, and the river coming right up the banks. That evening it cleared away, and we made ready for an early start the next morning. At daylight we started up stream, the three boys loaded with grub, tents, cooking utensils, bedding, etc. Driven out of the river bed by the high water, we waded along through the grass on the slippery banks, or struggled through thickets which fringed the woods, and finally turned away from the river easterly, up across the high benches and out at noon into the big open country again. On the way up I shot a goose just in the edge of the water, but he was able to get into the water and was swept down in the swift current.

The day was cold, the sky clear, and a stiff breeze was blowing across the bog as we finally emerged from the woods and threaded our way across the moss, following caribou leads, until we finally struck a long tongue of spruce which lay between two bogs, and through which ran a tiny stream of clear water. Here we made "High Camp," pitching a small tent and getting firewood.

Lionel commented on the favorable opportunity for tanning hides, a plentiful supply of clean water and bark. He soaks his caribou hides in running water for ten or fifteen days to soften the hair, and then removes it; then soaks them ten or fifteen days in brine strong enough to float a potato. After this all shreds of flesh and tendons are cleaned off and the hides immersed for from two and one-half to three months in a tanning liquid steeped from barks of the birch, spruce, tamarack and fir; a layer of hide, then a layer of bark, the hides not to touch. Examine in thirty days; he removes the hides when they are well reddened all over.

This leather is very durable, soft after a good oiling, and absolutely waterproof. Caribou skins are non-porous, the hairs do not grow clear through the hide. The natives of Newfoundland make all their boots of caribou hide, but the Eskimos of Labrador use seal-skin. The seal hairs, however, go clear through the hide, so that if they are pulled out the hides will be porous. To avoid this calamity, the Eskimo shaves the hairs off instead of pulling them out, thus producing waterproof boots which remain soft if well chewed every night by the lady Eskimos; a practice which the missionaries have endeavored in vain to discourage.

[TO BE CONTINUED.]

WHIST is the game for a yacht with a bridge deck.

THIS is not an epic of faultless shooting, nor of wondrous bags of game. It is a memory of one crisp, blue day in October when two gunners shot poorly indeed, and when the woodcock—plump, alert little fellows, keen as ginger, rose in front, behind and at each side of us and winged their way across the brown covers to further covers and safety—at least, many of them did so. Yet, though at evening we had but seven woodcock and one partridge to our credit, my mind goes back to that day in favor, disregarding days when my coat has hung much heavier from my shoulders at the fall of the sun.

October in Maine! Never, in any State or in any clime can there be more to stir the blood of a sportsman than can be found in our June grass-covered uplands at this season of the year. The leaves are falling, the frost has

other as we drew nearer the woodcock haunts.

"Let's try the Reynolds cover first, if they haven't got ahead of us," remarked K., and we leaned from the car to watch where the marks of tires passed. And luck was with us. No marks of turning on the crossroad.

Half a mile scant, and we reached a lone, tumbling farmhouse, long abandoned of its owners, where the car was stopped and we climbed out. Wag's dress collar was removed and the bell-collar slipped over his head. Once free and he made a few joyous circles and headed toward the cover, being called back with difficulty, whimpering and pleading with us to be gone.

Our coats changed, our gun barrels proven clean and unobstructed, and we were ready for Wag to go. And go he did. Over the narrow brook, across the bit of open grass-land and

A FULL HAND OF YOUNG QUAIL.

crisped the "brakes" and under each pasture beech one is likely to find a solitary partridge hunting for beech nuts, and one walks softly as he approaches a sugar-pear bush by the stone wall of the pasture lest some stray bird rise with swiftly beating wings and find the gunner unprepared. He must be constantly prepared and eager.

This day was an ideal woodcock day. An autumn haze was in the air and the long, level hump of Olamon Mountain showed blue and beautiful to the north. K. and I were at last ready and safely in the tonneau of the car holding the dog, who would have jumped out and hunted a mowing-field, so wild was he. Broad tracks of motor cars showed us where other gunners had gone before and raised fears in our hearts that some of our favorite and jealously cherished covers would be shot out and spoiled before we could reach them. Fears of this sort were spoken of by one and dismissed with a carefully-acted "Shucks!" by the

into the low poplar and birch bushes on the further slope, he went as if certain of his goal. Once in the cover the bell changed its clamor for a hesitating tinkle—half stopping—tinkle-tink again—around and around in a devious path.

"He's making game!" croaked K., and broke into a run.

Through the brook we floundered and up the ragged flank of the rise, where we paused for ten thrilling seconds while we peered through the hardhacks and sweet fern to discern the liver and white of the dog.

"He's right in here somewhere," murmured K., happily. "Oh! what a peach of a day!"

Then, all at once, we both saw him and the marvel was that we had not seen him before. Straight in front of us and not thirty yards away, Wag stood frozen on a bird. The bunch of cover may be thirty feet across—not more than that. I stepped to the right and K.

WAITING FOR DINNER.

DINING.

to the left as we went forward. All about us was open shooting. K. stamped heavily upon the ground. The bird rose beautifully and from my gun came two spiteful cracks of smokeless powder. I missed with both barrels.

"Hoh!" snorted K., and fired his right in vain. We looked at each other shamefacedly. Wag looked at both of us as if he were bewildered. K. rested his gun upon the ground.

"We're going to have that bird," he announced, "if I have to go in there and bring him out with my hands and beat him to death with the gun. We can't afford—holy cats!"

Between us and a little to our right a woodcock had risen with its subdued whistle, and making one brief dive, had vanished from sight toward the brook. I fired as he went out of sight and mentally berated myself for doing so. Wag vanished behind the bird.

"Second bird to get away," I remarked. K. made no reply and I turned, to find him staring at Wag, who was approaching from the brook with a limp woodcock in his mouth.

"Will you kindly explain to me," queried K., politely, "how you manage to shoot birds behind you—and out of sight at that—when you miss those in front and in open shooting? I'd really like to know."

I dissembled, turning from him to hide my astonished face, and taking the bird from Wag. "Oh, it's largely a matter of habit—and judgment," I replied. "When one gets used—"

"Aw, shucks!" remarked K.

So, failing to make him accept this view, we turned our attention to the first bird. Wag raced ahead and we followed more slowly, the stiff birch limbs making a pleasant scratching upon our hunting coats and the fallen birch and poplar leaves upon the brown June-grass making a soft carpet for our feet. Down the hill toward the point where the first bird had gone out of sight, Wag had stopped his racing and was quartering the ground carefully, his tail waving frantically. We broke into a run.

Wag had roaded the bird into a dense thicket of alders, and for a moment we stood debating. It looked like hopeless work to attempt to shoot in there.

"Oh, well," said K., "you've had the luck to kill one bird and maybe you can shoot this

one. I'll go in and drive him out and you can try again."

So in he went. I could see the brown shooting coat for a moment, and then it was swallowed up in the tangle of growth, and my only guide to his progress was the waving of the alder tops as he forged ahead. Suddenly there was the sharp crack of his sixteen-gauge. A moment later he emerged with a woodcock in his hand.

"Did you get it in there?" I asked, stupidly. To me there seemed hardly room to swing a revolver in that tangle, to say nothing of a shotgun.

"Sure," he replied, contentedly. He placed the bird carefully in his pocket and beamed upon me. "Takes an expert to get a bird in a place like that," he went on. "A dub couldn't do it once in a thousand. Lucky I was the one to go in."

"Where's Wag?" I queried, shortly. K.'s luck was disgusting.

"He went through," replied K. "I thought I'd rather back out and go 'round. It's mighty thick in there. Wag acted as if he were roading a partridge. He'll run her out on the other side. Maybe we'd better get 'round there sometime to-day."

As he spoke there arose on the further side of the thicket a mighty beating of wings and there hove into view a partridge, coming down the wind and dead toward us. K.'s gun came to his shoulder like a flash and cracked as it came to a pause. The partridge wings spread rigidly and, as if borne on a current of rising air, it shot almost straight into the air for fifty feet.

"Got a shot in its head," remarked K. tranquilly. "They always tower like that when they're shot in the head." He walked forward and picked up the partridge. "Dead as Oliver Cromwell," he remarked, "and look at his head."

Wag had not returned nor could we hear his bell, so we made a long detour to the right to get around the alders. K. was ahead and to my left, and as we rounded the end and came to the higher ground, two woodcock arose from a bunch of gray birches and winged away in front of us at acute angles.

"Mark, right" I said.

"Mark, left!" said K., and we both shot. It was open shooting—not a tree between us and the birds. Then we used our second barrels. But not even a fluttering feather rewarded us and we looked at each other in disgust.

"Well," remarked K., "I'm glad the dog didn't see that!"

What makes this difference in one's shooting? All that day we shot like this. Open, clear shots that looked easy brought no game to our pockets. Hard shots in which there seemed to be no promise of success returned woodcock to us. All through this pleasant cover we worked that day and started over forty woodcock and out of all that array we got only seven. K.'s partridge was the only bird shot under normal conditions. Up on the top of the hill by the scrub beeches we found woodcock all around us and the sharp crack of the sixteen-gauges was heard almost constantly. Here the shooting was complex—some shots were in the clear and some were made under difficulties. The "brakes" were high and there was much sweet fern. Blackberry thorns made it hard going for the dog. Scrubby beech—to which the leaves cling all winter—interfered with our seeing the birds as they rose and blended with the brown leaves. Flaming sumac hid them. Yet all day we shot and missed and shot again, quartering over that best of all covers near Bangor, and at night we climbed into the car contentedly, with only seven woodcock and one partridge. And we knew then that it is not always the number of the birds shot that makes the happy feeling that one remembers.

"After all," remarked K., as we drove homeward. "I'm pretty well satisfied. Every bird had a sporting chance with us to-day. At best, I only bet the price of a shell against a bird's life and he bets his very existence. These seven lost out—that's all."

GREELEY'S Tribune and Dana's Sun were forces in their day because of the magnetic contact of editor and reader. Search America and you will find at least one such paper to-day; FOREST AND STREAM, the sportsman's weekly.

Way Up North

By E. S. WHITAKER

A GAIN away for my summer vacation to Douglas Lake in the semi-wilds of Cheboygan county, and meeting old friends, it seemed very pleasant, notwithstanding during August and September there was scarcely a day when it did not rain more or less. A large portion of the time the wind blew with unwonted velocity, so that rowing, fishing and woodland walks were only occasional rather than daily pastimes.

New guests would come and were glad to be escorted through the island, the neighboring woods and over to the famous "Big Springs," and when it was a bit sunny, take snapshots of such views as took their fancy. A camp of Michigan lumbermen cutting immense hemlock trees near by was very interesting, and sawing into logs—hauling to, and upon huge skidways and making roads, so that they might be hauled in winter to the mills at Pellston—proved a very attractive sight to the majority of tourists. Some of the logs were over five feet in diameter and required skill to handle, but these old veterans knew what they were about and made no false moves. In the districts burned four years ago, it is remarkable how rapidly the second growth has sprung up and covers the hideous scar on nature's face, and under it blueberries ripened this year in profusion and were very appetizing when served with cream or made into pies; also the blackberry bushes have sprung up thickly in many localities, and this year yielded considerable fruit to those who had the temerity to force a way into the prickly tangles. The season was so wet that plants and shrubs grew luxuriantly, and those that bore flowers and fruit were burdened by the quantity, and as masses of berries began turning from green and yellow to blue and black-purple, red or orange, according to their nature, the bushes of three or more kinds grouped together made lovely pictures, and each succeeding day the change was more apparent, until the perfection of colors in the ripened fruit remaining a week or so was succeeded by the gradual decline and the dropping off. Never before had I seen such wondrous combinations. Most conspicuous among them were the withe bush, red-stemmed dogwood, choke berry, American holly, together with small trees of mountain ash and wild red cherry, all of which are natives of this part of Michigan. The leaves of all these were unusually large, and as we had no frost whatever until in October, remained green until very late, and then the gradually changing colors and their great diversity presented daily pictures of much interest to the lover of nature, and could be seen at the best advantage in rowing a boat about the lake.

High winds and rain prevented much fishing and bass were not taking bait freely during the season, small strings as a rule being brought in. I used only my twenty-six-year-old seven-ounce split bamboo rod with an artificial fly and caught altogether thirteen fine bass, one pickerel and an eight-pound Northern pike and had much pleasure in handling them. The pike towed my eleven-foot canvas boat over half a mile, and

it took me three-quarters of an hour to bring him exhausted to the net. While not taking as many fish as others who use minnows and artificial lures, I have more satisfaction in getting one with my fly-rod than in taking a dozen on my steel rod, which I have not used for some years. Of course it is merely a question of taste.

For some years the hunting of deer has been prohibited in this section of the State, and they have increased very much in numbers, and in my wanderings I frequently came across tracks. The embargo being removed this fall, quite a number of hunters were afield, and some venison secured. Ruffed grouse were fairly plentiful, and many were brought to bag and proved an appetizing addition to the hotel bill of fare.

apart. It is hard for the beholder to realize the fact that the water of Burt is 102 feet lower than that of Douglas Lake, or that the vision covers fully ten miles over the former. It is certainly a beautiful panorama of woods, water and some cultivated country that one never forgets.

In my walks through the woods I could not but miss the gray, black and occasional fox squirrels that I have heretofore seen in certain localities, and which—when resting on a log—I have watched with much interest in previous years, but their absence this fall was especially noticeable. After late frosts in October, I found that there was very little for them to eat, as there were no beechnuts whatever, and this fact

RESTING IN THE BIG WOOD.

FIVE LITTLE INDIAN MAIDS (WHITE).

Upon the lake an occasional flock of edible ducks would tempt pursuit in rowboats, and a few were obtained, but as a general rule few frequent this water, the greater number passing to the larger lakes of Mullet and Burt.

A few plover are occasionally seen and many gulls have their nesting places here and are daily seen sailing above the water in search of their food, and their movements and weird cry prove of much interest to city people taking launch rides, while the peculiar call of the loons, who are more or less frequent, is startling and puzzling to many.

The interesting camps of the civil engineering and biologist classes of the Michigan University prove a great attraction. They are located in the curve of South Fishtail Bay and the tents are put up on streets in symmetrical order, while those of the professors in charge are back partly up the high ridge, and at the top is located the cook and eating houses, and the American flag being planted near finishes the pretty picture seen from the lake. It pays to land at their dock and ascend the pathway of steps, and from the middle of the ridge have a fine view of both Douglas and Burt lakes, which at this point are but a mile and a half

has caused them to migrate to better feeding grounds.

It adds very much to the enjoyment of a lover of nature to see wild life occasionally when wandering over hill and dale in the woods. The whir of a grouse, the scurry of a squirrel, fox or hare, and the flap of an owl or hawk are all interesting, and each so different, too, and when one sometimes is fortunate enough to get a good view of a graceful deer bounding in its native wilds, with so much poetry of motion, it compensates for many a mile of travel, and is a sight not to be soon forgotten. And this reminds me of my tours through the Adirondacks of New York many years ago, when it was more of a rough wilderness than it is to-day, and when scarcely a day passed in which deer were not seen, also many other varieties of animal and bird life. It is a fact that I kept count during my first season there until I had enumerated 175 deer. It was before the kodak era, so that no snapshots were secured, but several groups and picturesque poses which I saw were indelibly impressed upon my memory, and in my mind's eye can be recalled at any time with great pleasure. At one time as I was in my boat and turned into a little bay, I saw a splendid buck on a

little rocky island with fore feet elevated on a central rock, with head poised in a listening attitude, and did not discover me for some minutes. He had large branching antlers with eight or nine points on each side, which would weigh not less than 200 pounds, and the picture was very pleasing until, by sight or smell, he was aware of my presence, when he bounded through the shallow water to shore, and into the woods.

Another pretty view which I recall was of a doe with two yearling fawns as they stood together in the middle of a shallow river, listening to the bark of a hound which was on their trail, until I started them off and stopped the dog. At another time my guide and myself, descending a river in a boat as we entered a small lake, saw a group of five deer most gracefully posed on a point of land, but a few rods distant, and the wood background and the water foreground made it a beautiful picture.

Alas, the deer and other game have rapidly disappeared since those days. Pre-season shooting, running by dogs, and water-killing, as well as wanton work, such as all true sportsmen decry, has been the cause. In both Emmet and Cheboygan counties this season dogs were heard running deer day after day, although it is possible without the knowledge of the owner, and many rifle shots were heard before the season was open. Deer will not long remain in any locality where they are thus harassed.

The trout season was enjoyed by many and the catch from Maple River was very good. This stream is one of the best, and is kept well stocked. Altogether I had a pleasant vacation, notwithstanding the vagaries of the weather, and the views inclosed will, I hope, give you some idea of life in the Northern woods.

THE TOP RAIL.

MIQUE WEBB was so serious a fisherman that it never entered his mind that anyone could joke on so important a subject. A few days ago, however, his illusions were shattered by a friend of his just returned from a fishing trip in Florida. This chap told Mique so many and weird tales about sting ray, whip ray, jewfish and other finny occupants of Southern waters theretofore unheard of on the Cumberland River, whence came Mique, that he grew more bewildered with each variety. Finally said he: "Mique, have you ever heard of the whiffle-tit?" and the following dialogue ensued:

"The whiffle-tit! What in the name of Sam Hill is that?"

"It's a fish," he said, "the greatest in the water. The whiffle-tit is it. You want to catch one whiffle and then you can receive your diploma and become an expert at the fishing game."

"What do you bait with?" asked Mique.

"No bait for whiffle-tits. Just keep quiet now and I will tell you all about him. Follow

me closely, for to catch a whiffle is some stunt. No bait, no hook, no line, no sinker, no cork, no pole, no fishing tackle of any kind that you are familiar with."

"Yes."

"Just a boat and an auger."

"What!"

"Keep quiet. An auger and a boat. Row a boat out from shore about five hundred yards, then anchor. Be very quiet. Then bore a hole down into the water—"

"But, but, but!" exclaimed Mique.

"No but about it. Then bore a hole down into the water and—"

"You mean you bore a hole into the boat?"

"No, I said the water. It would be just like you to bore the hole into the boat. When you are in forty feet of water, the last thing you want to do is to bore a hole into your boat, unless you are a good swimmer, and then it is not advisable, as you can't catch a whiffle by swimming after him."

"I see the point, or hole. Go on."

"Then you bore a hole into the water after leaning out as far as you can from the side of the boat. After boring the hole, withdraw the auger and place it carefully in the boat without making any noise. Then lean out over the hole you have bored and whistle, "Dixie," "Hot Time," or some other "rag" you may know, and if you are a good whistler you may soon see a whiffle start up the cylinder. Be very careful until he is well up. Now, run your hand down under the water and circle the hole with your fingers. When you have them well below the whiffle, squeeze up on the cylinder, thus preventing him from crawfishing. Then take your left hand and lift him into the boat. It is very simple and—"

"Mique, I have seen fish, caught fish, eaten fish and smelt fish until I have had a sufficiency. They are there, old boy, alright, alright. I have caught them with bait, without bait, and had them chase me off the beach when I showed them a hand full of sardines. I have taken the naked hook and slashed it about in the water and had the good fortune to hook them in the tail or elsewhere, they were so thick. You are bound to admit that there were some fish where I have been, and that they were biting some. But I want to say to you, in all sincerity, that suckers are biting in Tennessee just as well or better. You swallowed all my tackle and would have swallowed me if I hadn't let out a giggle. I did not have this happen to me in Florida."

* * *

At a big social dinner in a town in the West of Ireland on one occasion a number of sporting gentlemen indulged rather freely in the pleasures of the table—both solid and fluid—particularly the latter. One "jolly dog" was so full of good nature on his way home, about 3 A. M., that on seeing a fishing tackle shop with a show sign of a fishing rod, line and fish hanging out of the shop window, he immediately pulled vigorously at the bell, and brought the old hot-tempered proprietor out of his bed to see what was the matter. His informant coolly told him that he merely wished to tell him *there was a fish on his hook!* It would not need any vivid power of imagination to picture the feelings of the old fishing tackle man.

GRIZZLY KING.

Tod's Letter to his Father.

DEAR DAD:

I SUPPOSE if some author were writing this he would christen it "The Limit," or "Going Some," or "Two-Twenty," or some such title. Not being an author, I will do no christening.

Green was to hunt Di the first day and I was to hunt him the second, or rather on Saturday afternoon. We had made the arrangements. I had shells, complete rig, and an anxious spirit. Saturday morning, Green called me up and said Di had run on to a porcupine and run his nose full of quills. Would I use him? I said I would look at him first. So I got the old fellow, and after looking him over, decided that despite the way his nose was swollen and despite the way he looked after the first day's trip that he would still be some good. So I said I would take him, and with him limping "at heel" went back to the office.

At quarter of twelve I cut for the train, and at 1 o'clock Cathryn (who met me at the train) and I stepped into the woods. We had dined at the Junction. We were warm and cosy, and money could not have bought from us our afternoon.

It had snowed a little the night before and as we got into the woods, snow began to fly again, little round balls that stung when they hit our faces and that burned when they got into our eyes. We were going up an old log road, and as we went up, the snow came thicker and harder until we were working into what was almost a blizzard.

We reached the top and with our backs to the wind started down a branch road. I was first, Cathryn next, and behind her lagged Di, a picture of a much abused dog.

All at once Cathryn said "Look at Di." I turned and saw the old fellow frozen to a point, and looking as trim as a two-year-old. You know how long it took me to get behind him, and then at the word he went in. But no bird rose and so I followed him. It was one of those old familiar marches of his—a point, a few steps ahead, then freeze; a cast to right or left, finding the trail, two or three steps, and another point. My knees were getting weak from the strain when old Di's head swung and stretched out a little sideways in one of his points, and then he very carefully turned to see where I was, and I knew the first bird to get up lay ahead and a little to the right. I gave him the word, and he took about two steps, when whir! and a bird rose to my right, tried to light in an oak, failed and turned, quartering over me to the right. A right quartering shot in oak brush eight feet high with your bird going down hill is no easy shot. But when the old pump cracked I saw the first bird for 1912 stop in mid air and come down. There are sports, I suppose, that are greater to other men, or jewels or wine or food may count, but to men who have lived and been raised as we have been, I think the thing in sport that lifts us highest must be that picture over a gun barrel—a mounting grouse cut down.

Old Di returned with the bird and I went back and got Cathryn, and we hunted around for a while in the brush, but found no more birds. So back we started for our old road. Di was ahead, and suddenly he turned and stiffened, pointing a bird between himself and me. I gave him the word and he flushed the second bird,

and as it came over me, I trimmed its head off as neatly as a man could have done with an axe. Luck? Of course, but may be too the god of sport was making up for my lost year, 1911.

Di returned again, and we went out into our road and down about 200 feet when a bird rose off to our right and went up over the hill. I shot twice, long chance shots that did nothing but give me the joy of noise and kick and the smell of burned powder.

I shoved in new shells and went forward perhaps twenty feet, when suddenly the air was full of birds. A covey in the road got up. There were birds on every side, and I couldn't choose. My gun kept going off, but no birds fell, until at last I saw one big fellow wilt, and I knew that one shot had not been a miss. He fell a little, recovered, and went sailing off. I saw where he lit, followed him, and Di first stood him and then brought him in. I went back and hunted around, but could find no birds to show for those two first wild shots.

Two birds had gone up on a bench and I followed them, jumped one and missed it twice, saw where it lit, jumped it again, and missed it again. I was up in the air, so I sat down and waited until Cathryn caught up to me. We ate a sandwich as a way of cooling my nerves and then started for our second bird. We went back to where the first one had risen and just a few feet beyond Di stood. I stepped aside to get a view beyond a little oak, and as I did so the bird rose and went straight away on the level, an open shot. I shot and missed, but I jumped and shot again, and that time the bird came down. I sent Di in to retrieve, and when he

had brought the bird out, he stood almost immediately above us to the left. I handed the bird to Cathryn and stepped up on a stump and said to Di, "Go in." He worked around for a minute or two and no bird rose. Then all at once I saw a rabbit slipping away. The old gun cracked and we gathered in Mr. Bunny and went on. I hunted around quite a while, but could find no more birds, so we decided to renew acquaintanceship with our old road.

We reached it and went on for a couple of hundred feet when a bird rose. I dusted him, but he sailed on out of sight. Telling Cathryn to stay in the road, I went down below, and as I did so, she jumped three birds above. I took a long shot at one and missed. She said she knew where two had lit, so I came up and went in by the place she showed me. Di stood, one rose, and I dusted him, but he, too, sailed and sailed, but did not stop. I felt pretty bad about those two shots, for I hate to cripple a bird and not get it. However, they were out of reach, so we went on. A rabbit jumped up and I downed it, and presently another jumped up and I downed it. But as I was going toward the place where it lay, a bird rose above me, a big yellow fellow, quartering off to the left. With a background of gray rock and scrub oak he made a beautiful picture, and when the gun cracked, the day was done, for the fifth bird had fallen and home and supper awaited us.

I looked at my watch when we started in, and it was 1 o'clock; when the last bird was being retrieved, it was 3:20, and it was just 5 o'clock when I took off my coat in the kitchen at home. TOD.

great valley known as the "Pink Bed" (on account of the immense areas in rhododendron), and it has been said pot-hunters started some of these fires in an effort to drive out some of the deer. The very plain charge is now made that the last great fire was set in a long line for this very purpose, so as to force the deer outside of the boundary in order that the pot-hunters could shoot them, and it is this phase of the question which the detectives are working on, not only in the immediate region, but for some distance around, and the result of the investigation will be of very great interest.

There have been extensive fires in the Linville Falls region where there are some grand forests, and there, too, the snow came as a savior of the woods. FRED A. OLDS.

Deer Hunting Accidents.

ALBANY, N. Y., Dec. 3.—*Editor Forest and Stream:* In the Game Bag and Gun department of your issue of Nov. 30 you print three contributions which give the impression that the "buck law" has failed to accomplish its primary purpose of conserving human life, and its secondary purpose of conserving the deer supply. Mr. Whish refers to a wide awake newspaper which set a correspondent at work compiling a list of accidents. Mr. Whish's precise language is: "When deer hunting ended the record was eight hunters killed and twenty-four wounded." He adds that he made careful inquiry about these figures and found that they were correct in the opinion of practical woodsmen.

The reader would instantly think, although Mr. Whish does not say, that eight deer hunters have been killed. As a matter of fact there was only one fatal deer hunting accident, and the victim of that one "was not mistaken for a deer." But to show you how accurately the correspondent of the wide awake newspaper described the situation, let me quote from dispatches sent to his newspaper under date of Nov. 16 and 27:

Dispatch of Nov. 16:

Doctor Henry S. Foltz, of Cortland, went hunting with J. J. Gillette. Dr. Foltz wore a heavy gray beard. * * * Gillette had mistaken the bushy beard for a gray squirrel * * * and received a charge of shot in the face.

Dispatch of Nov. 27:

Dr. H. S. Foltz, of Cortland, who has a red beard, was mistaken for a deer and shot in the face by his companion.

Your Gloversville correspondent has perhaps unwittingly helped along what looks like a concerted effort to impress the public with the wrong idea that there has been a great slaughter of does. I am glad to note that he says that the shooting of a hunter for a deer was a rare occurrence in his neighborhood, but he quotes a number of unnamed persons who saw a large number of dead does in the woods. The only man mentioned by name is quoted as saying that he saw no fewer than five dead does rotting in the woods. One of our field force interviewed the man, and we have a signed statement from him that he saw only two does. A man in Canastota wrote to a local newspaper that in ten days in the woods he had seen twenty dead does. We understand that a private association has offered him \$100 if he will prove this statement.

A single season is no test of a law, but the results so far, if not conclusive, are at least extremely encouraging.

JOHN D. MOORE, Commissioner.

Snow Saves the North Carolina Woods.

RALEIGH, N. C., Dec. 3.—*Editor Forest and Stream:* The autumn had been extremely dry up to the falling of the first snow recorded in the State for many a long year on Thanksgiving day, the average fall being something like three inches. Quail, though certainly more abundant than in several years, have kept in cover near the streams on account of the drouth, and so far not a great number have been killed. They are well grown and in fine condition. For some reason Thanksgiving day, which as a holiday has not been observed in this part of the country for a longer period than say thirty years, is for some unexplained reason chosen as a sportsman's day, and any sort of a dog and any sort of a gun is counted worth while this one day in the year; and no matter what the weather, sportsmen and near sportsmen take the field, these ranging all the way from the gentleman with a \$250 gun to the negro with a \$1 musket; the dogs ranging all the way from the high-bred setter and pointer to the "bench-legged fice" to be found at so many negro cabins. Unless a negro's dog chances to be "er houn'," the odds are that the negro does not know his breed, and if he is asked what sort of a dog it is, the reply will very probably be "jes' er dawg, Boss."

But the snow was a mighty good thing, and

it did what hundreds of men, in fact thousands of them, could not do, for it put out the fires in the big woods, not only in the swamps in the East, but in the great Vanderbilt preserve, which the writer described so fully after a visit in 1899, and in other parts of the high mountain region. It seems safe to say that up to the night before Thanksgiving, when the gracious snow came, at least \$500,000 worth of timber was destroyed in this State. The drouth had made the woods like tinder, and they were ready for a fire. Detectives, representing both Mr. Vanderbilt and the United States Secret Service, have been busy in Pisgah Forest, making investigations as to the cause of this fire. Three years ago George Vanderbilt, the owner, not only of that great forest, but of many thousands of acres of high mountain land in original timber, deeded to North Carolina all his forests, which are over 3,000 feet above sea level, and so these high forests are a public domain so to speak, and very naturally will pass into the great Appalachian forest reserve.

In the Pisgah Forest, in 1899, there was ten times as much game without doubt as there was in the region round about; and deer, grouse, etc., could be seen any time in the writer's tramp. Of course these have increased, for the wardens have been careful. There have before been some bad fires in Pisgah Forest, notably in the

Connecticut Game Conditions.

DANBURY, Conn., Nov. 25.—*Editor Forest Stream:* Have just read with interest the report of F. W. Hewes, Commissioner of Fish and Game of Connecticut. His view of the situation hits the nail squarely on the head—that no man with dog and gun can utterly exterminate that noble game bird, the ruffed grouse, even if he were paid to do it. Grouse is fairly plentiful hereabout; that is, a good stock is left over for next breeding season, and I hope that sneak, the snarer, leaves them alone. Although the sickly warm weather we have had since the 8th of October, the opening season, made the hunting of grouse more than usually a task even for the most robust and hearty hunter, a good many fair bags were made.

The birds did not come down the swales at all, and one had to find and kill them mostly on the steep hillsides among the scrub oaks in cedar and hemlock lots where a good snapshot only could bring one of these sly and shy birds to bag; still there were days where they lay well to dogs, especially in the morning at the foot of a hillside where they enjoyed the warm sunshine and were reluctant to fly. On one such day I bagged five birds—the legal limit—by about 11 o'clock. On other days three, two, even only one bird could be brought to bag even after the hardest kind of a tramp, but real blank days were very few. I for one would be in favor of a fourteen days' longer open season, with a reduction of the bag limit from five birds to three, which number ought to be enough for any man that goes out for sport and not for meat. I could give you a description of the workings of my dogs, but this would sound too much like a cheap advertisement; at least, for me.

So much for partridge. But where, oh where was the woodcock flight this year? They must have passed us over entirely this year. The few birds I bagged were all native bred, and I have not heard of any even moderate bags of any of our local hunters compared with last year. Quail are certainly on the increase. I know of three bebies only about six miles out of town that hardly were disturbed. There is also a certain farmer to the west of the city that has four good-sized bebies on the farm. (He let me hunt over his place, but did not allow me to take gun along.) This will be a rattling good place to breed, and the birds will spread over the neighboring farms that are not so rigidly and uncompromisingly posted. Anyway, good luck to little bobwhite. C. F. BROCKEL.

Boys' Wartime Sport.

HENDERSONVILLE, N. C., Nov. 27.—*Editor Forest and Stream:* In a recent number of FOREST AND STREAM, Colonel Olds gave quite an interesting description of war times sport. The ammunition then used by him as he describes was no doubt fine as compared to that used by some of "us boys." Powder, shot and caps got to be so scarce that we managed thus: I made bows and arrows and exchanged for lead pipe and "cannon powder," and any kind of caps from G. D. to musket, Ely double waterproof being the best because we used them more than once by taking off the top of a match head and putting it in the used cap. The lead pipe was mashed out flat and cut in strips. These strips were rolled and then cut in little bits and then

rolled with a flatiron on a flat hearthstone. The shot were rather uneven in size and shape, but we killed with them. The large grain cannon powder we also crushed fine, though unevenly so. With paper as wadding we were equipped for the fields. Now in those days even this outfit was very hard to obtain, so we could not afford to waste it. Doves were our specialty and we could not afford to miss or even to shoot at a single dove. From two to four at a shot was about our killing.

Then as to guns: My first I got from a soldier, giving a pocket knife for it. It was an Austrian rifle about 56-gauge and weighed ten or twelve pounds. However, I borrowed a single-barrel before that.

Once a lady friend of the family gave me six rounds of shot and powder and six caps and asked me to shoot her some doves. I took her .22. We could not then do any wing-shooting with what we had; that came later. Too expensive. But my first bird was with bow and arrow. The bow was made of tough white hickory and arrows of cane or reed, the end near string of bow split and feathers neatly trimmed and put in split. The top or head of arrow was armed with a small spike or bit of nail. My next step was the cross bow. The barrel covered and strong cord for bow running through the covered barrel. I used slugs made of a bit of cane with nail or piece of one in one end, often the head end of a nail alone. With this crossbow I killed birds.

So from earliest boyhood, from bow to crossbow, then any kind of a gun I could get, and such ammunition as I have described above. Now it is smokeless powder and hammerless gun and a 16-gauge at that, but the game is not so plentiful. ERNEST L. EWBANK.

The European Rail.

A Sub-family of the Rallidae.

BY W. J. MURRAY.

THE most plentiful and the best known European rail is the land rail, or corn crake (*Crex crex*), and it is one of the most familiar "harbingers of spring" in the temperate portion of Western Europe, including the British Isles, France, Holland and Belgium. It is, in these countries, mainly a summer bird, and its well-known note of "crake crake" is first heard in the meadows about the beginning of May. This is about the time the breeding season commences, and when it ends in July the note of "crake crake" is heard no more until the next season.

The land rail is partly migratory and partly stay-at-home. Some are known to remain where bred during the whole winter in close quarters or some place of retirement, in a lethargic or semi-hibernating condition where it seems they can exist on little or no food for a long time. Others go south for the winter.

The land rail is about the size of a woodcock, but is quite a different shape. Its body is very slender and supple, and is laterally compressed. Its legs and toes are long and slender and of a yellowish red, as also the bill. It can run very quickly through long grass, notwithstanding that it is very unsteady on its legs, and makes a poor attempt to walk on a bare field. It seems to need the support of long grass in order to get along quickly.

The wings are very short, which causes the bird to fly with difficulty, and it is only to escape immediate danger that it takes to the wing at all. Its plumage is of a reddish brown or chestnut color, and incidentally the feathers of its wing are constantly used in tying trout and salmon flies.

The table qualities of the land rail are somewhat inferior, but the bird is frequently eaten, notwithstanding.

THE WATER RAIL (*Rallus aquaticus*).

This European bird is in most respects—size, shape, mode of locomotion and retiring disposition—an exact duplication of the land rail. There are, however, two important points of difference. The water rail is always to be found along the weedy banks of rivers, streams and drains, where it always loves to secrete itself; more especially should there happen to be a rustie bridge made of branches of trees under which to hide. They lie so closely that the fowler often gets startled when the rail unexpectedly springs forth just as the search has been given up as fruitless.

The plumage of the water rail is of the same formation as that of the land rail, but the color is entirely different. That of the latter being a kind of slate color on the sides, with a tinge of red and an olive-green color on the back and head, while the bill and legs are of a greenish yellow. The rail, so far as is known, is not migratory, although like his congener the corn crake, his habits are obscure and often puzzling. But being a fairly good table bird and a favorite with many people, the fowler is always glad to secure a brace of water rail. If it does nothing else it adds the charm of variety to his game bag.

Col. Archibald Gracie.

HAUNTED by his memories of the wreck of the Titanic and never completely recovered from the shock of his experiences in that disaster, Col Archibald Gracie, U. S. A., retired, died on Dec. 6. Death was immediately due to a complication of diseases, but the members of his family and his physicians felt that the real cause was the shock he suffered last April when he went down with the ship and was rescued later after long hours on a half-submerged raft.

After the Carpathia had brought the Titanic survivors to New York, Colonel Gracie did nothing to banish the tragedy from his thoughts. On the contrary, he spent the succeeding months in correspondence with other survivors, gathering data for his article and subsequent book, "The Truth About the Titanic." In his last hours the memories of the disaster did not leave him. Rather they crowded thicker, and he was heard to say: "We must get them into the boats. We must get them all into the boats."

Colonel Gracie was born in Mobile, Ala., in 1858, and made his home in Washington. He was the fifth Archibald Gracie in direct descent. He was married in 1890 to Constance Elsie Schack. Colonel Gracie was a man of remarkable personality and had a host of friends. His death will be mourned by all.

WITH very few exceptions, every chief game warden in the United States is on our subscription list.

SEA AND RIVER FISHING

BENJAMIN EVERHAM.

Striped Bass, 38 pounds 4 ounces. Record for 1912.

Salt Water Fishing Season Ends.

THE fishing season of 1912, according to records of the Asbury Park Fishing Club, has proved satisfactory in some respects and disappointing in others. The main incentive for beach fishermen, striped bass, shows a total catch of seventy-nine fish. The largest, 38 pounds 4 ounces, was taken by Benjamin Everham, which won first prize in the local contest. The average weight of fish caught was 8½ pounds; there was one between 30 and 40 pounds; two between 20 and 30 pounds, four between 15 and 20 pounds and seventeen between 10 and 15 pounds.

A feature prominently identified with this season was the large number of striped bass captured in the night time, eighteen being taken then out of a total catch of seventy-nine and eleven among which weighed over 10 pounds and also included Everham's 38-pounder.

The channel bass fishing this fall was not as good as last year, as full records from Barnegat City and vicinity and Seaside Park show a total catch of forty-two fish, as compared with 185 in 1911. Bluefish and weakfish were much scarcer than last year, and practically no angler tried for tuna, which generally accompany bluefish, very few being taken until late in the season and

those by hand lines only. The following is a list of awards of the Asbury Park Fishing Club for 1912:

Beach Fishing.

STRIPED BASS.

Largest, Benjamin Everham, 38 pounds 4 ounces; second, Louis J. Brown, 20 pounds 8 ounces; third, John Vogler, 17 pounds 4 ounces; fourth and fifth, tie between W. D. Pennypacker and A. W. Flavell, both fish weighing 16 pounds 4 ounces; sixth, Fred Wilkie, 14 pounds 3 ounces; seventh, Frank P. Johnson, 13 pounds 14 ounces; eighth, Harry W. Troth, 12 pounds 8 ounces; ninth, William N. Applegate, 13 pounds; tenth, Frank H. Westervelt, 12 pounds 9 ounces; eleventh, Victor de Wysocki, 12 pounds 6 ounces; twelfth, D. W. Mitchell, 12 pounds.

Largest number of fish taken during season by one individual, Frank Sinsinger, nine fish.

Greatest amount of pounds during season (Sinsinger and Brown counted out, having won previous prizes), John H. Wortman, three fish, total weight, 28 pounds 4 ounces.

Last taken, Waldo E. Rice, Oct. 26.

Special prize, first taken, Charles H. Smith, June 17.

CHANNEL BASS.

Largest, Edward Cramer, 40 pounds 7 ounces; second, Victor de Wysocki, 30 pounds; third, Louis J. Brown, 29 pounds 15 ounces; fourth, Robert A. Inch, 29 pounds 6 ounces; fifth, H. W. Gilbert, 27 pounds 8 ounces; sixth, Jack Clayton, 26 pounds 8 ounces; seventh, A. Allen, Jr., 24 pounds 13 ounces; eighth, William N. Applegate, 22 pounds 14 ounces.

Special prizes, first taken, H. W. Gilbert, Sept. 13.

Greatest amount of pounds, sunrise to sunset, Louis J. Brown, two fish, 53 pounds 11 ounces.

KINGFISH.

Largest, E. N. Dolbey, 2 pounds 1 ounce; second, William N. Applegate; third, H. G. Cline.

BLUEFISH.

Largest, C. M. Wyant, 4 pounds 8 ounces; second, L. V. Hawley; third, Ben Everham.

WEAKFISH.

Largest, Allen F. Brewer, 4 pounds 2 ounces; second, Bela C. Clapp; third, George Perry.

PLAICE.

Largest, James A. Davett, 7 pounds 2 ounces; second, H. C. Bydell; third, William James; fourth, Hartie I. Phillips.

BLACKFISH.

Largest, Charles H. Smith, 8 pounds 14 ounces.

Special prize for night fishing, largest edible fish taken between 7 P. M. and 7 A. M., Ben Everham, striped bass, 38 pounds 8 ounces.

Boat Fishing.

BLUEFISH.

Largest, Dr. R. J. Parker.

BLACKFISH.

Largest, W. A. Leavitt, Jr.

SEA BASS.

Largest, Dr. R. J. Parker; second, Capt. H. H. Maddox.

Ladies' Prizes.

STRIPED BASS.

Largest, Mrs. Frank Sinsinger, 10 pounds 14 ounces; second, Mrs. J. A. Mackintosh, 8 pounds 3 ounces.

BLUEFISH.

Mrs. C. M. Wyant, 3 pounds 7 ounces.

WEAKFISH.

Mrs. A. F. Brewer, 6 pounds 3 ounces.

KINGFISH.

Miss Eva Viering, 1 pound 12 ounces.

PLAICE.

Mrs. A. F. Brewer, 6 pounds 14 ounces.

Record of Striped Bass.

The complete record of all catches of striped bass for season of 1912, from John Scger's list, which includes club members and others, shows a total of 123 fish.

June 17.—Charles Smith, 3lbs.; Charles M. Wyant, 6lbs. 8oz., 4lbs. 3oz.; Mrs. M. Wyant, 3lbs. 11oz.

June 18.—John Clayton, 7lbs.; Percy W. Kendall, 6lbs.

June 19.—Arthur J. Gude, 11lbs. 5oz.; George Bennett, 8lbs.

June 27.—Sidney T. Holt, 3lbs. 13oz.

June 29.—Gus Popkin, 2lbs. 4oz.; L. J. Brown, 4lbs. 5oz.; J. C. English, 2lbs. 8oz.

June 30.—G. A. Allsep, 4lbs. 7oz.; William H. Schwartz, 2lbs. 10oz., 2lbs. 6oz.; B. Robbins, 8lbs.; J. A. Davitt, 8lbs. 3oz.; Dr. Lamont, 6lbs. 8oz.

July 1.—Charles Louis, 15lbs. 5oz.

July 4.—M. Crosson, 5lbs. 10oz.; Benj. Everham, 11lbs. 9oz.

(Continued on page 758.)

JOSEPH CAWTHORN.

Record to date for Channel Bass, 63 pounds.

Published Weekly by the
FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

TO PROTECT MIGRATORY BIRDS.

ALTHOUGH the Weeks bill, which provides that the Federal Government shall have charge of all migratory birds, did not come to a vote at the last session of Congress, it has never been in a livelier condition than at the present time. Sportsmen know more about it than ever before; the protectors of insectivorous birds understand the bill's purpose and heartily approve it; and, for the first time, the great public comprehends something of what the bill should accomplish when it becomes law.

All this knowledge is due chiefly to the energy, industry and unflinching persistence of the American Game Protective and Propagation Society, whose president, John B. Burnham, organized the forces in favor of the bill and brought together in Washington, at the hearing held under the chairmanship of Senator McLean, for the Senate bill (S. 2367) and Mr. Weeks for the House bill (H. R. 36), such a showing of persons interested in wild bird protection as was never made before. Able and useful assistance was given by a number of societies of national importance, as the New York Zoological Society, the Association of Audubon Societies and the Boone and Crockett Club.

The Weeks bill for the House, and the McLean bill for the Senate, are practically identical, and the hearings on the two measures took place in Washington on the same day, March 6. At these hearings there were represented, either by delegates or by communications, more than forty States and Provinces, and there were represented also a great number of associations from all over the country, some actuated by one motive and some by another, but all with the good purpose of preserving, for the benefit of the citizens of the whole country, a great economic asset—our wild birds.

A few perhaps may have been brought here by selfish motives; sentiment may have drawn to the hearing some of the protectors of small birds, but among the broadest men present it cannot be doubted that the welfare of the country was the first consideration; and on the North American continent the welfare of the country

means the welfare of the farmer. He produces the food on which the country subsists, and his surplus, sent to other less favored lands, is sold, the money coming back here and ultimately reaching the hands of the farmers.

Whether the birds protected be game birds or wildfowl, or herons or song and insectivorous birds, each species and each individual does its part toward helping the farmers of this land to raise their crops, and for this reason should be protected. It is not too much to say that we owe to the birds all the profit in every crop that comes out of the ground.

Whether during the short session of Congress now just beginning it will be possible to bring this bill to a vote is quite uncertain, but we may feel sure that the work of educating the public and members of Congress will continue, and that before very long Congress will act, and act favorably on this bill. In order that this action may come as soon as possible, it is the duty of all associations and all individuals interested in bird protection to bring to bear on members of Congress all possible influence in behalf of the bill, and to endeavor to make their representatives understand that this is a measure purely for public good and not for the benefit of any group of people, any political party or any section of the land.

GAME LAWS IN BRIEF.

FOREST AND STREAM's new edition of Game Laws in Brief is now ready for delivery. There never was a time when this compendium was more needful to hunter, fisherman or to anyone wishing to keep posted on laws governing the taking of game and fish. It has been a considerable task to bring this issue up to date. Sixty-seven new laws were enacted in fourteen States as well as in three Canadian Provinces. These changes were as follows: Alaska, 1; Arizona, 1; Georgia, 7; Kentucky, 1; Louisiana, 2; Maryland, 17; Massachusetts, 8; Michigan, 1; New Jersey, 17; New Mexico, 1; New York, 2; South Carolina, 1; Virginia, 4; Wisconsin, 1; Newfoundland, 1; Nova Scotia, 1; Ontario, 1.

This edition we believe to be absolutely correct to December, 1912. It is pocket size physically and a complete library in the information it contains of every day use to the well informed sportsman. We have no hesitation in referring to the Game Laws in Brief as the indisputable authority.

THE ETHICS OF SPORT.

Is it not true, perhaps, that in our discussions of "sportsmanship" we constantly overlook the existence of that vast army of those who kill game and fish for game and fish, and not in any measure whatever for sport? If a man requires a mess of bass or trout for his home table, or a bag of quail, and if he goes out to gather in the one or the other precisely for the purposes and with the utilitarian hunger appeasing motive that controls him in digging potatoes or wringing the neck of a hen that has ceased to lay, why should he be denounced because of his unsportsmanlike conduct? What is sport to him; or what is he to sport? He has a perfect right to the fish and the game, and should have the unquestioned privilege of taking them in any way under heaven that pleases him provided only that the method he chooses is not unreasonably

destructive. The only excuse, for instance, to forbid the trapping of game is found in the practical experience which has demonstrated that trapping so destroys the stock that the supply is depleted to a point where no more birds are left for either shooter or trapper. The gunner may very properly claim that his way of taking game is of a higher grade than the trapper's way, but he can rightly have no quarrel with the trapper because the man of the snare is wanting in sportsmanlike sentiment. As well might the amateur tooler of the tallyho coach berate the unsportsmanlike spirit of the driver of the ash cart. It is well and proper to hold a professed sportsman in the exercise of his sportsmanship strictly to the dictates and limitations of sport; but is it reasonable to require that every person who takes game or fish must do it for sport and after a mode recognized as sportsmanlike?

E. REED SHANER.

A FITTING tribute was paid father and a proper appreciation shown son when the Interstate Association, at its annual meeting, Dec. 6, elected E. Reed Shaner, Secretary of the Association. The new secretary is just like his father, Elmer E. Shaner, and has the "to be done" of the Association at his finger tips, while his popularity—for he has inherited the qualities that make for geniality from Elmer—makes him the logical successor to his pater.

The "big association" is to be congratulated upon being able to retain the services of Elmer E. Shaner, as treasurer, which retention we believe to have been due to the persuasive power of J. T. Skelly, its able president.

MENU ADDENDA.

THE bounties of Christmas were bestowed upon us so copiously in the way of holiday articles for our Christmas number, we were obliged to omit Fred A. Olds' story of "Christmas in '64" and Edward Breck's Canadian romance. The former appears in this issue; the latter will follow. *Magna est veritas, et prevalebit* being our office motto, we are asked by our industrious advertising manager to say that the list of Christmas books, crowded out of the hundermost pages in the holly and ever green number, will be found in this issue.

ARTHUR ST. JOHN NEWBERRY.

ONCE more the ranks of the old guard suffered depletion. Arthur St. John Newberry, a foremost fisherman, authority on fishing subjects and places, has joined the great majority. He died in Cleveland, Nov. 30, 1912. Our condolences go forth to the family of this remarkable man.

LAST summer we promised an article from an unusual angle on the sinking of the Titanic. At the time we called attention to this paper it was in preparation by Col. Archibald Gracie, who had spent some little time with our editorial staff in planning for it. Colonel Gracie's impaired health, due to the sinking of the great ship, made it necessary that he go very slowly in his work. Unfortunately the Reaper moved more rapidly than convalescence could progress in the patient's battered physique, so that Col. Gracie's version of the wreck of the ill-fated liner never was heard and perhaps never will be known.

Archery

Archery in Pittsburgh.

THE Thanksgiving day shoot given by the archers of the Pittsburgh Archery Association was a success. The weather, though cold, was snappy and invigorating. It was an ideal day for outdoor sport.

The morning was devoted to practice and an American round match between Mr. Jiles and Dr. Haines was held, the result being: Jiles, 75 hits, 347 score to 65 hits, 331 score for Haines.

So many new men were present who were anxious to try out the long bow that a number of the archers did not shoot in the regular afternoon program, but devoted themselves to the imitation of what is hoped may prove a valuable addition to local archery circles. Prof. Postgate was so busy taking orders for outfits that he forgot all about the program.

Scores for team round, 96 arrows, 60yds.:

Hits. Score		Hits. Score	
M. L. Sorber.....	60 238	W. H. Haines....	46 169
J. S. Jiles.....	75 313	O. L. Hertig.....	96 443

Mr. Locker had the misfortune to break his fine yew bow early in the round, which no doubt accounts for his low score.

On Thanksgiving day one year ago Dr. Hertig's score was 44 hits, 156 score. A companion of this score with results one year later showed what can be done by practice. In the last seven team rounds his average has been 92 hits with 474 score at 60 yards.

On Saturday afternoon, Nov. 30, the following scores were made by members of the Bon Air, Beechview and Oakmont archery clubs:

Team round, 96 arrows, 60yds.:

Hits. Score		Hits. Score	
W. J. Holmes.....	79 337	O. L. Hertig.....	92 490
Jas. J. Jiles.....	78 311		

American round, 60, 50 and 40yds., 30 arrows each distance:

Hits. Score		Hits. Score	
Jas. S. Jiles.....	83 443	W. J. Gray.....	47 150
	83 392	Dr. Haines.....	75 347
O. L. Hertig.....	84 464	Mr. Hartley.....	60 238
	84 470		

Double American:
Jas. S. Jiles.....166 835 O. L. Hertig.....168 934

Messrs. Jiles, Gray, Haines, Patch and Hartley are showing great improvement, both as to form and scoring.

The Pittsburgh archers are planning to shoot all winter outdoors as long as the ground is not frozen hard and indoors during the severe weather.

They all express the desire that other clubs send in scores to FOREST AND STREAM. New advocates of the sport are always anxious to compare results.

JAS. S. JILES.

Boston Archery Scores.

ACCORDING to custom the archers shot a team round on Thanksgiving day. Gentlemen shot 96 arrows at 60 yards; ladies shot 96 arrows at 50 yards.

The weather was against good shooting or many scores.

Chicago reported freezing temperature, clear with strong wind. New York had a snow storm, so that those who shot did so on Saturday.

In Boston and vicinity cold and high wind brought a driving snow before half the arrows were shot, and many gave up, but some finished out in the snow to the detriment of their scores.

Other places were about as unfortunate. Below are the tabulated scores:

E. J. Rendtorff...	24 156	24 144	24 138	24 132	96 568
G. L. Nichols....	23 125	23 115	23 147	24 156	93 543
G. P. Bryant.....	23 135	24 144	24 124	23 129	94 532
H. Bishop.....	24 136	23 133	22 120	23 117	92 506
Dr. C. S. Case...	24 122	21 103	23 117	23 105	91 447
Dr. O. L. Hertig.....					93 443
S. W. Wilder.....					87 427
C. T. Switzler.....					85 383
H. L. Walker.....	22 106	15 73	20 92	22 90	79 361
B. P. Gray.....	20 78	18 88	22 108	20 70	80 334
Dr. E. B. Weston..	19 75	21 71	19 99	24 94	83 339
Jas. S. Jiles.....					75 331
James Duff.....					73 309
C. S. Woodruff... 17 79	12 68	12 54	11 59	52 260	
H. L. Lake.....	13 43	15 69	11 52	19 75	59 239
L. C. Smith.....	17 71	16 82	11 25	16 60	60 238
Milton Sorber.....					60 238
John McRae.....					54 226
John M. Cleland.....					49 189
Dr. W. H. Haines.....					46 169
G. Milne.....					41 144
Wm. McGowan.....					30 130
Dr. R. P. Elmer.. 23 125	21 101	24 132	23 109	91 467	
Mrs. L. C. Smith.. 18 80	17 87	18 78	11 41	64 286	
Miss M. Brownell. 11 45	9 33	16 68	5 11	41 157	

G. P. BRYANT, Sec'y N. A. A.

Archery in the Early Eighties.

CHICAGO, Ill., Dec. 1.—*Editor Forest and Stream:* In the early eighties, when Will H. Thompson was the archery editor of FOREST AND STREAM, we had a Private Practice Club, of

LINCOLN PARK RANGE, CHICAGO.

From left to right: Mrs. Homer S. Taylor, Mrs. A. Barber, Mrs. J. H. Pendry, Mrs. A. G. Cox.

which Mr. Thompson was the secretary. The members sent all their scores to him each month; he would tabulate them and they would be published in your columns.

They make very interesting reading and I regret that I have preserved only a few of them.

We were very enthusiastic in those days and shot a great deal too much, as will be seen. I remember very well that at times when I would be scoring worse than usual that instead of stopping I kept trying to do better and shot until I could hardly stand.

The following records are taken from FOREST AND STREAM:

Prof. Thomas R. Willard of Knox College, Galesburg, Ill. was an archer whose devotion to the sport led him to practice too much. He was a man loved by all, and it is hoped that he will again draw the long bow.

The following scores are his, taken from rec-

ords of the Private Practice Club. March 10 to 29, 1880: Five York rounds, average 244. Average at 100 yards, 86. Average at 80 yards, 73; average at 60 yards, 71. He also shot seventy-two arrows at 100 yards five times and twenty-four arrows at 60 yards four times.

In October, 1880, Prof. Willard shot thirteen York rounds, averaging 334. Average at 100 yards, 101; average at 80 yards, 130; average at 60 yards, 96. Best 80 yards score, 33 hits, 167 score. Best 60 yards score, 23 hits, 131 score. He also shot in this month eighteen team rounds.

In the month of March, 1880, Dr. Edward B. Weston shot 73; twenty-four arrows at 60 yards, averaging 70.5.

In October, 1880, he shot 112, twenty-four arrows at 60 yards, averaging 81. Best 24, 23 hits, 153 score, which he has not equalled since. In the same month he shot forty-eight arrows at 80 yards, forty times, averaging 93. Best score, 32 hits, 146 score.

One should not be proud to have done this amount of work, but rather much ashamed of it.

If only half the number of arrows had been shot the scores would have been better.

EDWARD B. WESTON.

Pittsburgh Archery.

PITTSBURGH, Pa., Dec. 8.—*Editor Forest and Stream:* Yesterday Dr. O. L. Hertig, J. C. Patch and myself shot a team round of ninety-six arrows at 60 yards with our guest on the Pittsburgh Athletic Association range, with the following remarkable scores:

	Hits.	Pts.	Hits.	Pts.
Hertig.....	91	470	Wills.....	58 246
G. W. P.....	66	276	Patch.....	31 113

The day was ideal for shooting, excepting that it became much colder around 5 o'clock. There was very little wind. The doctor was the only one shooting in good form, and who made anything of a score. I overtook Wills on the last twenty-four arrows.

G. W. POSTGATE.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

N. A. A. Championship Scores.

CHICAGO, Ill., Dec. 5.—*Editor Forest and Stream:* The championship scores of the National Archery Association up to and including 1908 are published in the revised edition of Spalding's Archery Guide. Those of 1909 and since are here given:

Double York round:				
	II S.	H. S.	H. S.	H. S.
1909—G. P. Bryant.....	102 402	80 330	45 243	227 975
1910—H. B. Richardson..	96 400	89 445	46 256	231 1111
1911—H. S. Taylor.....	78 338	63 269	40 228	181 835
1912—G. P. Bryant.....	105 435	78 374	47 285	230 1094
Double American round:				
	60yds.	50yds.	40yds.	Total.
1909—G. P. Bryant.....	56 322	60 380	60 416	176 1118
1910—H. B. Richardson..	59 291	58 352	60 406	177 1059
1911—Dr R P Elmer....	56 262	59 261	60 418	175 1041
1912—G. P. Bryant.....	58 338	59 373	60 442	177 1158
Double National Round:				
	60yds.	50yds.	Total.	
1909—Miss Harriet Case.....	79 343	46 234	125	577
1910—Miss J. V. Sullivan.....	71 339	44 230	115	629
1911—Mrs. Witwer-Taylor.....	53 197	41 199	94	396
1912—Mrs. Witwer-Taylor	66 304	46 220	112	524

HOMER S. TAYLOR.

Ex-President and ex-Champion, N. A. A.

Double Columbia round:				
	50yds.	40yds.	30yds.	Total.
1909—Miss Harriet Case..	37 171	47 241	48 320	132 732
1910—Miss L. M. Witwer..	36 168	46 268	45 297	127 733
1911—Mrs. Witwer-Taylor..	38 168	45 231	48 332	131 731
1912—Mrs. Witwer-Taylor..	39 181	45 261	47 345	131 787
Men team round:				
1909—Boston team	300 1436			
1910—Chicago team	330 1506			
1911—Chicago team	318 1528			
1912—Boston team	324 1618			
Women team round:				
1909—Chicago team	277 1295			
1910—Chicago team	315 1517			
1911—Chicago team	201 861			
1912—Boston team	248 1078			
Flight shooting:				
1909—Z. E. Jackson.....	245yds.			
1909—Mrs. E. W. Frenz.....	188yds.			
1910—H. W. Bishop.....	213yds. 8in.			
1910—Miss L. M. Witwer.....	162yds.

 Aug. 8.—Winfield Scott, 11lbs. 6oz.
 Aug. 9.—Mrs. Howard M. Kain, 7lbs.
 Aug. 10.—Harry W. Troth, 13lbs. 8oz.
 Aug. 11.—John C. Bauers, 8lbs. 3oz.; Victor De Wysocki, 12lbs. 6oz.
 Aug. 12.—W. E. Sylvester, 7lbs.; John Wolter, 11lbs. 1oz.
 Aug. 13.—E. N. Dolbey, 9lbs. 4oz.; John Vogler, 17lbs. 4oz.; Edwin Shepard, 4lbs.
 Aug. 14.—B. Weisenfeld, 6lbs. 5oz.
 Aug. 15.—A. Havell, 16lbs. 4oz.
 Aug. 17.—H. C. Rydell, 3lbs. 2oz.; F. H. Westervelt, 12lbs. 9oz.
 Aug. 18.—Wm. Applegate, 5lbs. 9oz.; Fred Wilkie, 14lbs.; Frank Sinsinger, 9lbs. 6oz., 7lbs. 7oz., 9lbs.
 Aug. 23.—Frank Sinsinger, 10lbs. 14oz., 6lbs. 1oz.
 Aug. 24.—Frank Sinsinger, 19lbs. 9oz.; Mrs. Frank Sinsinger, 10lbs. 14oz.
 Aug. 26.—L. J. Brown, 8lbs. 7oz.
 Aug. 29.—Wm. Applegate, 2lbs. 14oz.; H. G. Cline, 4lbs. 1oz.
 Sept. 1.—Andrew Hurley, 6lbs. 2oz.; Fred Wilkie, 7lbs. 15oz., 2lbs. 7oz.; W. H. Schwartz, 3lbs. 10oz.
 Sept. 2.—Raymond Westerfield, 6lbs. 8oz.
 Sept. 4.—Eugene Warford, 8lbs. 8oz.; Mrs. Frank Brewer, 3lbs. 1oz.
 Sept. 6.—William James, 3lbs. 4oz.; J. Wertheim, 6lbs. 8oz.
 Sept. 7.—Horace Dutcher, 6lbs. 13oz.
 Sept. 11.—Frank Westervelt, 5lbs. 15oz.
 Sept. 12.—Charles White, 9lbs.
 Sept. 14.—Frank Sinsinger, 7lbs. 1oz.
 Sept. 15.—Frank Sinsinger, 7lbs. 7oz.
 Sept. 22.—Jacob Wertheim, 16lbs. 8oz.
 Sept. 24.—S. F. Fox, 3lbs. 2oz.
 Oct. 5.—Hoffman Blau, 6lbs.; Gus Popkin, 3lbs. 13oz.
 Oct. 26.—W. E. Rice, 9lbs. 6oz.

A. C. A. Membership.

NEW MEMBERS PROPOSED.

Atlantic Division.—Robert Edward Fithian, Bridgeton, N. J., by Levi Hindley; William John Herdina, 54 Riverdale avenue, Yonkers, N. Y., by Paul J. Kuhn; Clarence W. Capes, 43 West Thirty-seventh street, Bayonne, N. J., by Edmond vom Steeg, Jr.

INSURANCE FOR MOUNTAIN CLIMBERS.

OWING to the large number of accidents occurring every year to mountain climbers and tourists in the Alps, several insurance companies have established an accident policy for the benefit of persons undertaking these mountain excursions. For a premium of twelve cents per season certain Alpine clubs offer insurance to their members to the amount of \$71.40, with medical care, etc., included. An insurance company, of Vienna, offers "Alpine insurance" at a premium of \$1.42 per year for every \$203 of benefit in case of accident which causes invalidity or death. The amount of the premium is less in case groups of five or ten persons are insured together. There is also an insurance policy issued for the winter season against ski and bob-sleigh accidents in the Alps.—Consul John H. Grout, Odessa, Russia.

THE MANICURE LADY.

"GEORGE," said the Manicure Lady to the Head Barber, "did you ever catch one of them horned pouts? What kind of a animal are they, anyhow?"

"They ain't a animal," said the Head Barber. "It is a fish."

"There you go murdering the English language again," said the Manicure Lady. "They ain't a animal; it is a fish. That's fine talk for a grown-up man, ain't it?"

"I said, 'it is a fish,' and I mean it," declared the Head Barber, stolidly. "What did you start this conversation for, anyhow? If you want to get nasty about murdering the English, I could get nasty right back at you and tell you how you send all them verbs and nouns to the guillotine. If you want to gab me this morning, be civil, kiddo, be civil."

"I didn't mean nothing, George," said the Manicure Lady. "Only I do like to hear our beautiful language spoke as it ought for to be. What I started out for to say was that I got a letter from Wilfred this morning. The poor boy felt that broke down from looking for a job all these months that he persuaded the old gent to stake him to a trip up in the country. He's up there now, and this letter I got from him told about him catching a lot of horned pouts. He said they caught them at night with a lantern light to get them around, like old soldiers gathering around a camp-fire. Maybe it must be some kind of a fish, as you said, George."

"Wilfred had to put some of his poetry into the letter, of course. He wouldn't be my brother if he didn't spout some of them rhymes. He called this one 'Lines to a Horned Pout,' and this is how it went, if you want to take a chance the way Mr. Brodie did.

Little horned pout that I caught last night
 When the silvery moon was shining bright,
 I think how short thy existence was
 And shudder to think I was the cause.
 Why should a strong man go about
 Catching and killing you, horned pout?
 Far from your friends and family dear,
 You lie cold in death in a pantry here,
 Dreaming dreams that no mortal can see,
 And waiting to be swallowed up by me.
 This fact by me shall not be forgotten,
 Little horned pout, I treated you rotten."

"If he felt that tender toward the fish, why didn't he go hunting instead?" asked the Head Barber.

"They wouldn't let him go hunting up there where he is, George," replied the Manicure Lady. "He was up there last year with a old gent named Ben Spear, and the two of them went out with two rabbit dogs, looking for rabbits. Before the sun had set they came back without the dogs. Wilfred had shot one of the dogs for a rabbit, and Mr. Spear had shot the other on the way home. He was aiming at a bluejay and shot low."

"They oughn't to let a greenhorn handle a gun," said the Head Barber.

"No," agreed the Manicure Lady, "or a razor, either."—New York Evening Journal.

MODERN USE OF FLAX.

THE flax industry of this country has reached a stage of considerable importance, but the product is not made use of in the production of linen, but in the manufacture of linseed oil. It is said that at the present time about 2,500,000 acres of land are given up to flax growing. A problem of the industry is to make some use of the straw, which now goes wholly to waste, this amounting to about 3,000,000 tons.

Experiments in the direction of papermaking with the straw have met with some degree of success, but the scheme is not commercially practicable.—Indianapolis News.

A HIGHER TRIBUNAL.

MAGISTRATE—Well, Moriarty, what's the trouble to-day?

Moriarty—O'Flaherty, he threw a hod o' murther on me, yer honor, and nearly kilt me, and whin I axed him for compensation, he towld me to go to the divvel, so I come to yer honor's worship.

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

1913.

- Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
- Feb. 22.—Birmingham (Ala.) G. C. tournament. O. L. Garl, Sec'y.
- Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, Ohio.—The Indians' tournament. D. H. Eaton, Sec'y, Cineinnati, O.

DRIVERS AND TWISTERS.

Last shoot of season for Machinery Gun Club, Beverly, Mass., will be held Dec. 21, at 1 o'clock. It will be a turkey shoot, open to all amateurs—this means you—75 targets, \$1.50 entrance fee, including targets. Six turkeys as prizes, class shooting. More information from W. R. Hurd, 2d, or A. C. Speneer, at Beverly, Mass.

To-day down at Du Pont Gun Club, J. B. McHugh, holder of the State championship, and Edward Banks, the challenger for the title and eup that goes with the title, will shoot the big event. The Class A 1912 trophy held by Eugene du Pont, goes into open competition, Mr. du Pont not being on hand to defend his title to the eup by reason of his absence in South Carolina.

G. W. Bennett, who has a keen sense of the fitness of things, has started a rifle and trapshooting club among employes of Willys-Overland Automobile Co. at Toledo, O. Already the organization numbers fifty-one members. Mr. Bennett, who himself is an excellent shot, has been elected honorary president of the Overland Gun Club. This suggestion would work equally well among employes of other manufacturing concerns. It is a healthful and comparatively inexpensive pastime.

The famous fowling piece of J. J. Audubon, naturalist, artist, author, is for sale in Philadelphia for \$1,500. The gun is in fine condition, and aside from the material used in its construction, its physical make-up is remarkable. It is an 18-bore, built in England by Conway, in 1830. Its length is 63 inches; weight 12lbs. Mountings are gold and silver, with hollow butt, thought by some to have been put there to relieve the hip—the trap cavity being about half-pint size. Audubon is supposed to have used the arm on his collecting trips from 1832 to 1837.

Evidence of interest in the fifth annual midwinter handicap trapshooting tournament began early in September, and since that date the inquiries, numbering several hundred, have come from all sections. Texas, Colorado and California are the more distant points which evince special interest with many queries from the South, middle South and West, Pennsylvania, New York State and New England. The lavish added money of \$2,500 is of course, the drawing card, but the special class events, sweepstakes and the delights of a week at Pinehurst are also playing an important part in making this event one of America's most classic shoots.

Tenth annual merchandise handicap shoot at targets New Year's Day, open to all amateurs, beginning at 10 A. M., under the auspices of the Bergen Beach Gun Club. Handicaps, 16, 17 and 18yds., according to past performances. Fifty targets, entrance \$2.50, including birds. Re-entries up to 3 P. M., \$1.50. Come early, as the days are short. Refreshments gratis, as usual. Dues for 1913 (\$1.00) are in order to-day. Practice events in order all day. Shells for sale. Subway to Flatbush and Atlantic avenues, Brooklyn, then Flatbush avenue trolley car; or from New York City Hall—Brooklyn Bridge—direct, or will transfer to shooting grounds, Avenue N and East Seventy-first streets, Bergen Beach, Brooklyn. Shoots held every Saturday except during July and August.

The Sunbury-Selinsgrove Gun Club will hold their third annual turkey shoot on Friday, Dec. 20, at 1 P. M. The program will be at 100 targets, \$2 entrance, which includes the turkey entrance. The men will be arranged after shooting into classes, four men to a class, the high man of each class getting a turkey and the second score getting a nice chicken. Ties for place shoot off at extra targets. There will also be an optional sweep on each event, divided into four moncys, 25, 25, 25 and 25 per cent., class shooting, the poorer shooter having as much in their purse as the good shots. The club will also give a turkey to the professional high score.

W. G. BEECROFT.

Philadelphia Trapshooters' League.

Du Ponts Beat Clearviews.

DARBY, Pa., Dec. 7.—Dupont Gun Club outshot the Clearview Gun Club here to-day by 448 to 426. The Wilmington men shot with wonderful accuracy from the start, and of their thirty-one gunmen, twenty-four finished with 40 or better. Harry Fisher, of Clearview, led the entire field with 47. Robinson and Guest led the visitors with 46 apiece. Scores:

Du Pont.		Clearview.	
Robinson	46	Fisher	47
Guest	46	Fink	44
Joslyn	45	Davidson	43
Carlin	45	Elwell	43
McHugh	45	Bonsall	43
Tuckton	45	Seller	43
Tomlinson	44	Paulson	42
Minnick	44	Shuster	41
Colfax	44	Oliver	41
N K Smith	44-448	Ferry	39-426

Scores made by the gunners who failed to qualify for their respective teams:

Du Pont—Willis 44, Edmonson 44, Grier 42, Magalern 43, Anderson 43, Everitt 43, Winchester 42, Bush 42, Simon 42, Highfield 41, Betts 38, Martin 41, Mathewson 41, W. B. Smith 40, R. F. Willis 39, Ryan 38, Straughn 38, V. du Pont 37, Leedom 35, Jarrell 42, Mannail 30.

Clearview—Gideon 39, Bockius 37, Puff 33, McCullough 28, Allen 38, Green 36, Braun 32.

Edge Hill Outshoots Glen Willow.

EDGE HILL, Pa., Dec. 7.—Highlands' twenty-seven clay-pigeon exponents trimmed Glen Willow Gun Club to-day. Tansey, of Highlands, was high gun with 45 out of 50. G. S. McCarthy, of Highland, and Kinchiner, of Glen Willow, tied for place with 43. Scores:

Highland.		Glen Willow.	
Tansey	45	Kinchiner	43
G S McCarty	43	McFall	40
Perry	41	Smith	39
David	41	Gillinger	38
T Meehan	40	Reicheldifer	38
Freeman	40	Weinman	37
Hibbs	39	Merkle	36
Crooks	38	Riggs	34
Pharoah	38	Free	33
Pfelegar	38-403	Ulmer	33-371

Scores made by the gunners who failed to qualify for their respective teams:

Highland—Lindley 24, Harkens 35, Draehley 34, Cooper 36, Hoover 28, Freed 38, L. Jones 34, Greenwood 36, Boyer 34, Davis 31, Dentz 25, F. Meehan, Jr., 22, Laurent 29, Clark 37, A. McCarthy 37, F. Meehan 32.

Glen Willow—Rambo 27, Mattis 21, Fessler 22, Wylde 26, Shuster 33, Reed 30, Bickings 21, Tomlinson 18, McClennen 33, Hall 29, Steen 24, Powers 32, Gearhart 19, Clegg 31, George 33.

Camden Wins from Meadow Springs.

CAMDEN, N. J., Dec. 7.—Camden won from Meadow Springs to-day, with 425 to 417. Sloan, of Meadow Springs, was high man with 47, while Renner and Garnet, two members of losing team, tied high gun Springer of winning team, for place with 45. Scores:

Camden.		Meadow Springs.	
Springer	45	Sloan	47
H Anthony	44	Renner	45
Borden	44	Garrett	45
Hineline	42	Mace	43
Slar	42	Henry	42
Chalmers	42	Williams	41
Peckman	42	Hutton	39
F Holloway	42	Charles	39
Horner	41	Turner	38
Wakeman	41-425	Torpey	38-417

Scores made by the gunners who failed to qualify for their respective teams:

Camden—W. Johnson 41, Eisenhardt 40, Mink 40, Greene 39, J. Anthony 38, Fleming 38, E. Holloway 38, McConnell 38, Cross 37, Rcxon 37, Edwards 37, Warren 36, Kling 34, Radcliffe 34, Wills 31, Grooves 29, Simkins 24, Lichtenstein 14, Moore 13, Lippincott 17, Soistman 9.

Meadow Springs—Turner 37, Fish 37, Pierce 36, Hilpot 36, Deiley 36, Coyle 36, Gracely 33, Emerson 33,

Kirk 33, Alexander 32, Wiley 32, Gothard 31, Armstrong 31, Pyle 31, Hewlett 30, Soley 30, MaeAlonan 28, Keenan 28, H. Harvey 23, Woodward 20, Christman 18, Anderson 15, Letford 13.

Whites Defeat Lansdale.

LANSDALE, Pa., Dec. 7.—S. S. Whites, dental specialists, put a dent in Lansdale to-day—422 to 405. Griffith, with 47 of his 50 birds, was high gun. Cook, also of Whites, 45, was second, while Severn, of Whites, and Taylor, of Lansdale, tied for place with 44. Scores:

S. S. Whites.		Lansdale.	
Griffith	47	Taylor	44
Cook	45	Nicc	41
Severn	44	Reeve	41
Newcomb	42	I Schultz	41
Powers	40	F Henry	40
Wescott	40	Rauch	39
Sidebotham	40	C Swartz	42
Cantrill	43	Rodgers	39
Cotting	41	Bender	39
Eyre	40-422	L L Swartz	39-405

Scores made by the gunners who failed to qualify for their respective teams:

S. S. White—Georges 37, Ford 37, McGrath 34, Abbott 34, Thompson 38, Keene 26, Waters 37, Wilson 38, Denham 29, Howard 35, Beyer 39, Pratt 37, Heite 52, Kendal 27, Robinson 40, Hinkson 26, Smith 29, Hand 39, Stevens 30.

Lansdale—Metz 38, Kauffie 39, Gerber 34, J. White 35, C. Swartey 21, Henning 31, D. Scheltz 26, Haas 34, Hill 27, Martin 38, Bright 32, Cochran 15, Jones 29, Vambourne 37.

Chicago Gun Club.

CHICAGO, Ill., Dec. 1.—Rainy weather with a strong wind blowing all day marred the opening of our first monthly shoot, open to all amateurs, consequently the attendance was poor and most of the scores were considerably below the average of those present. Kirkwood topped the list in the first event with a total of 90 out of 100, also taking first place in the regular club event with a score of 49 out of 50. Brown, of Riverside, was high amateur in event No. 1, breaking a total of 84, with Thomas second with a total of 82. Bue and Silver made the best scores in the two-man team race, each breaking 44 out of 50 for a total of 88 as the team score. Events Nos. 5 and 6 were shot with gun below the armpit. Scores:

Events:	1	3	4	5	6	7	8
Targets:	100	50	50	25	25	25	25
W C Brown, 16	84	35	..	16	..	20	..

Event No. 2 was a two-man team match and had the following scores:

T P Bue, 16	44	D E Thomas, 20	36
S Silver, 16	44-88	Geo. Eck, 18	38-74
M Gelder, 16	38	B L Kammerer, 16	39
John Eck, 16	39-77	H C Wolfe, 18	40-70
W C Boltman, 18	37		
W C Deal, 16	40-77		

Nov. 28.—Although it was a pleasant day for shooting, only thirteen marksmen toed the mark on the firing line to-day, Thanksgiving dinners and shoots at neighboring clubs no doubt holding down the attendance to this number. Young cleaned up the boards with a total of 96 out of 100 in event No. 1, and then broke 25 straight in an extra event. Bills shot three frames of 25 each for a total score of 72 out of 75. C. M. Grubb will be remembered by most of the older shooters, and while he has not shot targets for seven years, he tried one frame of 25, of which he broke 15.

Events:	1	2	3	4	5	6	7
Targets:	100	25	25	25	25	12p	12p
J S Young	96	25

C W Grubbs	..	15

Nov. 31.—The following scores were made to-day:

Targets:	50	50	25	25	25	25
J S Young	48	48	20	25	24	..
E Silver	..	47	22	23
O P Goode	38	38	19	21	22	20
J W Egan	32	33
M E Bosley	..	43	18	18	15	20

Event No. 3 was a distance handicap:

Marine and Field Club.

BATH BEACH, N. Y., Dec. 7.—Only four gunners turned out at the Bath Beach traps of the Marine and Field Club to-day. First leg on the December eup ended in a tie between H. B. Hopkins and E. H. Lott, while Lott won both trophy events.

Interstate Association's Annual Meeting

THE annual meeting of the stockholders of the Interstate Association for the Encouragement of Trapshooting was held at the Association's office with the Corporation Trust Company, 15 Exchange Place, Jersey City, N. J., on Thursday, Dec. 5, at 2 P. M.

The roll call showed the following members represented in person: Remington Arms-Union Metallic Cartridge Co., by A. F. Hebard, F. B. Clark and T. A. Marshall; E. I. du Pont de Nemours Powder Co., by J. T. Skelly, T. E. Doremus and L. J. Squier; Winchester Repeating Arms Co., by F. G. Drew; Parker Bros., by W. F. Parker; The Peters Cartridge Co., by W. E. Keplinger and T. H. Keller; The Chamberlin Cartridge & Target Co., by Paul North; the Western Cartridge Co., by F. W. Olin; the United Lead Co., by P. D. Beresford, and the American Powder Mills, by Murray Ballou.

W. B. Stadfeld, of the Selby, Smelting & Lead Co.; C. A. Haight, of E. I. du Pont de Nemours Powder Co.; T. H. Keller, Jr., of the Hunter Arms Co., and H. E. Winans, of the Western Cartridge Co., were present by invitation. T. S. Dando and E. C. Stark, of Sporting Life; H. S. Rosenthal, of Sportsmen's Review; Chas. Otis, W. J. Gallagher and W. G. Becroft, of FOREST AND STREAM, honorary members of the Association, were also present, as were John R. Turner, resident director, and Elmer E. Shaner, secretary-treasurer of the Association.

The secretary presented and read a copy of the notice of the meeting, together with proof of the due mailing thereof to each stockholder of the Association at least two weeks before the meeting, as required by the By-Laws.

The transfer book and stock book of the Association were produced and remained during the meeting open to inspection.

Upon motion, duly made and seconded, the minutes of the last meeting were approved.

Messrs. Henry S. Rosenthal and Edward C. Stark (neither of them being a candidate for the office of director) were appointed inspectors of election and duly sworn. The meeting then proceeded to the election of the directors by ballot, in accordance with the By-Laws.

The report of the president for the past year was presented, read and ordered to be filed. [This appears in another column.—Ed.]

The financial report of the secretary-treasurer for the past year was presented and ordered to be received and filed. The financial report of the secretary-treasurer covering the registered tournament fund was then presented. Summarized, this report showed that 230 tournaments were registered during the year, of which number 201 were conducted under the Squier money-back system; that \$20,000 was contributed by the Association to gun clubs, state associations and leagues of gun clubs; that \$23,003.62 was paid back to amateurs to cover their losses, and that \$25,680.63 in average money was divided among amateurs after all of said losses were paid back.

The annual report of the secretary-treasurer, giving a résumé of the year's work, was also presented and ordered filed. [This appears in another column.—Ed.]

The polls having remained opened the period prescribed by statute, were ordered closed and the inspectors presented their report in writing, showing the following persons, stockholders of the Association, had received the greatest number of votes: J. R. Wettstein and P. D. Beresford, of the United Lead Co.; A. F. Hebard, F. B. Clark and T. A. Marshall, of Remington Arms-Union Metallic Cartridge Co.; J. T. Skelly, T. E. Doremus and L. J. Squier, of the E. I. du Pont de Nemours Powder Co.; John Hunter, of the Hunter Arms Co.; F. G. Drew, W. R. Clark and H. S. Leonard, of the Winchester Repeating Arms Co.; W. F. Parker, of Parker Bros.; W. E. Keplinger and T. H. Keller, of the Peters Cartridge Co.; Paul North and J. H. Webster, of the Chamberlin Cartridge & Target Co.; A. H. Durston, of the Lefever Arms Co.; Murray Ballou and E. B. Drake, of American Powder Mills; G. S. Lewis, of the J. Stevens Arms & Tool Co.; F. W. Olin and A. J. Norcom, of the Western Cartridge Co.; C. H. Dimick and O. R. Dickey, of the United States Cartridge Co.; John R. Turner and Elmer E. Shaner. The chairman thereupon declared that the above-named persons were duly elected directors of the Association.

Upon motion, duly made and seconded, the secretary was directed to file with the records of the Association for the purposes of reference, the following papers:

1. List of stockholders entitled to vote at this meeting.
2. Proxies presented at the meeting.
3. Notice of meeting and proof of mailing thereof.
4. Inspectors' oath and report.
5. President's report.
6. Secretary-treasurer's financial report of assessment fund.
7. Secretary-treasurer's financial report of registered tournament fund.
8. Secretary-treasurer's annual report.

Upon motion, duly made and seconded, a meeting of the new Board of Directors for the election of officers, etc., was directed to be held immediately after the close of the stockholders' meeting.

No further business coming before the meeting, upon motion, duly made and seconded, the same adjourned.

THE DIRECTORS' MEETING.

A meeting of the Board of Directors was held immediately after the close of the stockholders' meeting. The meeting was called to order with J. T. Skelly acting as chairman and T. E. Doremus acting as secretary. The following officers were elected to serve during the ensuing year: President, J. T. Skelly; Vice-President, F. G. Drew; Treasurer, Elmer E. Shaner; Secretary, E. Reed Shaner. The officers elected thanked the directors for the honor conferred upon them.

The minutes of the Directors' meetings, held Dec. 7-8, 1911, and the several mail votes taken during the year were duly approved.

By resolution, the Selby Smelting & Lead Co., of San Francisco, and the Hercules Powder Co., of Wilmington, Del., were elected members of the Association.

The resignation of the J. Stevens Arms & Tool Co. was presented, and on motion accepted.

By resolution, Breder and Sportsman, of San Francisco, was elected an honorary press member.

By resolution, it was decided to present trophies to the winners of the high amateur and high professional averages of 1912.

The next matter taken up was in respect to the future policy of the Association. This was discussed at great length, but no action thereon was taken at this time.

Upon motion, duly made and seconded, the Directors meeting adjourned at 5 P. M., to meet the following day at 9:30 A. M.

The adjourned meeting of the Directors was called to order at 9:55 A. M., Dec. 6, with President Skelly in the chair. New business was at once taken up where left off.

By resolution, it was decided to discontinue the Post-Season tournament.

By resolution, it was decided to establish a new event to be known as "The Interstate Association's Southwestern Handicap Tournament."

By resolution, it was decided to guarantee the winners of first, second and third places in the 1913 Grand American Handicap, \$600, \$500, and \$400 respectively.

The matter of employing a paid force of gun club organizers was next taken up, discussed and by resolution, rejected.

By resolution, it was decided to invite the President or some duly accredited representative of the several State Associations to deliberate with the Association at its annual meeting of 1913, and give it the benefit of their views on trapshooting.

A plan covering a change in policy of the Association was next presented, discussed at great length, and by resolution rejected.

By resolution, it was decided to continue in 1913 the policy that governed in 1911 and 1912, but granting gun clubs the privilege of using any system of money division they wished.

By resolution, it was decided to recommend to gun clubs holding registered tournaments that their programs shall consist of not less than 150 targets nor more than 200 targets per day.

By resolution, it was decided that the yearly averages of 1913, for both amateurs and professionals, shall be computed on 2,000 or more single targets shot from the standard distance fixed by the Interstate Association (the distance at this time being 16yds.), and this only at registered tournaments and the tournaments directly given by the Interstate Association.

The next matter taken up was the report of the committee appointed at the annual meeting of 1911 to confer with Elmer E. Shaner with an object in view of having him continue with the Association. Said committee reported that it would be agreeable to Mr. Shaner to continue with the Association in the nature of a minor official, but not as the active, responsible head of the organization. Mr. Shaner was thereupon made treasurer of the Association and manager of those tournaments directly given by it.

By resolution, a vote of thanks was tendered to C. H. Newcomb, of Philadelphia, for the active interest taken by him in the promotion of trapshooting, as well as in the welfare of the Interstate Association.

By resolution, it was decided to make a contribution to the Indian tournament of 1913, now that said tournament will be given for the benefit of amateurs only.

The next matter taken up was a petition from the San Jose Blue Rock Club, of San Jose, Cal., requesting that O. N. Ford be made eligible to compete at the Interstate Association tournament. By resolution, unanimously carried, the President being recorded as not voting, the Secretary was directed to write the San Jose Blue Rock Club, stating that it is not agreeable to the Interstate Association to permit Mr. Ford to compete at the tournaments directly given by it, the right to refuse any entry without giving reason therefor being reserved in all programs issued by it.

By resolution, it was decided to permit manufacturers' representatives to shoot for "targets only" in the Professional Championship at the Grand American Handicap tournament.

The next matter taken up was the recommendations offered by President Skelly in his annual report.

By resolution, it was decided to restore the Preliminary Handicap to the programs of all subsidiary handicap tournaments given by the Association.

By resolution it was decided to continue the standard distance for trapshooting at 16yds. The other suggestions offered by President Skelly were previously covered by resolution or otherwise.

Upon motion, duly made and seconded, the following resolution was adopted: "Any club that has held a two-day registered tournament in 1911 or 1912 at which the attendance did not reach 25 or more entries the second day, shall not be granted registration for more than a one-day tournament, unless said club shows increased strength and is able to assure the Association of prospective success."

By resolution, it was decided that in 1913 the Grand American Handicap tournament shall be given at Dayton, O.; the Southwestern Handicap tournament at San Antonio, Tex.; the Southern Handicap tournament at Montgomery, Ala.; the Eastern Handicap tournament at Wilmington, Del., and the Western Handicap tournament at Omaha, Neb. The place for holding the Pacific Coast Handicap tournament will be decided later.

By resolution, it was decided to refer the appoint-

ment of a committee to allot handicaps at the Grand American Handicap tournament to the Association's Tournament Committee.

The following committees were appointed to serve during the year 1913: Tournament Committee: Paul North, chairman; F. G. Drew, F. B. Clark, T. H. Keller, W. B. Stadfeld, T. E. Doremus and H. McMurchy. Trophy Committee: Elmer E. Shaner. Gun Club Organization Committee: F. G. Drew, chairman, T. H. Keller and F. B. Clark.

After reading several letters and discussing matters of no particular interest to the general public, the Directors' meeting adjourned at 4:20 P. M., to meet at Dayton, O., during the week of the Grand American Handicap tournament.

THE INTERSTATE ASSOCIATION,
E. REED SHANER, Secretary.

Report of Mr. J. T. Skelly, President Interstate Association, for the Year 1912.

To the Members of the Interstate Association:

Gentlemen—Without going into details, I feel that generally, 1912 has been the most successful trapshooting year we have ever had. This is easily borne out by Mr. Shaner's records of registered tournaments, and will, I assume, be covered by his report.

MEMBERS.

During the year we lost the membership of the A. H. Fox Gun Co. and secured the U. S. Cartridge Co. Applications will be presented at this meeting by the Selby Smelting & Lead Co., of San Francisco, Cal., and the Hercules Powder Co., of Wilmington, Del. There are several other manufacturers who have been solicited, and I might say have rather encouraged us, but thus far have not seen fit to share in our work. I am hoping that they will soon realize that it will be to their advantage to become members.

IN GENERAL.

Now that we all realize the advantage of concerted action, it is to be hoped that our members will continue to view broadly the work of our Association and urge field representatives to look upon the Association in the same light. In the absence of a national organization of amateurs, the existence of which would, I feel, be the ideal condition, it behooves us to continue our substantial support and even to increase it on a basis comparable with the growth of trapshooting. To this end, I shall make some recommendations, which I feel should receive your careful consideration.

RECOMMENDATIONS.

The class of shooters for whom the Post-Season tournament was inaugurated seems not to have given this tournament the support it deserved, and I would recommend that it be discontinued, but I hope some one can offer a substitute which will bring the desired result, i. e., a classy affair which would be recognized and supported by the "classy shooters."

I would recommend that the Preliminary handicaps be again included in our subsidiary tournaments, i. e., Southern, Eastern, Western and Pacific Coast handicap tournaments.

That the regulation distance in all of our tournaments and in registered tournaments be made 18 instead of 16 yards as at present.

That for the tournaments given under our direction, in addition to the scorer and referee at each trap, that a judge be also appointed to insure additional and necessary protection of the contestant's rights.

That the winner of the Grand American Handicap be guaranteed \$500 and the trophy, instead of \$1,000 as heretofore, and that the next five or six places or more be guaranteed fixed amounts. Obviously, there has been too great a difference between the first and other places.

That fixed guaranteed amounts be considered for the first few places in subsidiary handicaps.

That arrangements be made, at a nominal expense, to secure more daily paper publicity for tournaments given under our auspices.

I would strongly urge that our Association begin the work of organizing gun clubs; that one or several organizers be employed to work under the direction of the Secretary-Treasurer; that these organizers also be utilized to manage important tournaments, such as State events, when requested and when the party directing them deems it advisable. It is to be hoped that this important suggestion will be favorably received, and that provision be made to care for the necessary expense.

In order to further convince the amateurs of our desire to co-operate with them, and to give them an opportunity to meet with us and participate in our discussion, suggest that the President, or other official or some one indicated by each State Association be considered by the Interstate Association as honorary members or directors without vote, thus bringing our Association in closer touch and enabling us to have advice from an outside viewpoint. By considering all angles our scope would be broadened and we would continue to conduct our organization along lines which would be productive of the most good for the majority.

SUGGESTIONS.

I have about come to the conclusion that it is only a question of time when sweepstake shooting will be eliminated, excepting of course in occasional instances, consequently we should look to the future and consider changes which would be abreast with the times. It may come to the point where most of the money we are now donating to the purses can best be used in trophies.

In time I feel that the best good might be accomplished by giving to each State Association a fixed sum on a basis to be determined by population or in some other equitable manner. This sum to be devoted to purses and trophies. I also feel that we should consider limiting the purses to which we subscribe to residents of the State in which the tournament is held. There has been the criticism that a few of the better shots or expert amateurs have profited considerably in the division of average money under the system under which we are now working.

If we are to continue adding money, I think that the Squier money-back system is the most equitable, and one which pleases the greatest number of shooters. We might consider some modification of this system by applying it to money division other than the Rose system. I would like to see this worked out. Think it is something that should be looked into to determine if it could be applied to the various systems, for example, percentage, class, Jack Rabbit, etc., etc. I also think that perhaps it would be well to consider the division of the surplus accruing in the Squier money-back at each tournament on a class basis.

My foregoing suggestions may not be at all practical, at the same time they are thoughts of mine and suggestions which have come to me from the field. I think they are worth looking into, particularly since it is our desire not to appear to be taking an arbitrary position in the conduct of the many tournaments held annually in this country.

Would also suggest that in the event the Post-Season tournament is not continued and a so-called "classy affair" is not substituted for it, that we establish the Interstate Association Southwestern Handicap tournament, to be given in addition to the present subsidiary events, and that this tournament be given in the southwestern part of the United States, embracing the territory of say Louisiana, Arkansas, Oklahoma and Texas.

I could not well conclude this report without commenting on the loss to our Association and to trapshooting in general if Mr. Shaner should decide to leave us at this time. I have had considerable team work with him during the past year. I know that he is always working for the cause, his standing among the sportsmen is an invaluable asset to us, and we do not want to cripple our organization by losing his valuable services. I hope the committee which was appointed to look into

Annual Report of Elmer E. Shaner, Sec'y-Treas. Interstate Association, for the Year 1912.

PITTSBURGH, Pa., Nov. 30, 1912.

To the President, Officers and Members of The Interstate Association:

Gentlemen—The record of another year's activities is presented for your consideration in this my annual report. Our accomplishments, failures, hopes and ambitions are herewith outlined and your careful and earnest perusal of the same is requested. The statistical data, giving operations in detail of the Secretary-Treasurer's office, will be found on separate sheets herewith inclosed.

In presenting my report this year I crave the pleasure of saying at the outset that this marks my twentieth year as the active head of the Interstate Association. Surely you will pardon me for taking a glance backward and scanning in short measure the two decades of strenuous duties. I only regret that I cannot take up your time in bringing to your memory a few of the many pleasant incidents of that period, together incidentally with some trials and tribulations; but I assure you the latter are ever dissipated when one thinks of the marvelous success that has crowned our score of years. Therefore, to my mind, this is a momentous occasion in the history of the Interstate Association. It commemorates the inaugural of a step that placed American trapshooting on the plane of glorious sports. Compare the recreation in 1892, the year of our origin as the governing body of trapshooting, with to-day. A glance will convince you that from a chaotic pastime, purely local in its workings, trapshooting has become a universal sport, flourishing in every State of the forty-eight, and is conducted on systematic lines with the registration of tournaments, conservation of records and a dozen and one branches that go toward making our sport and organization national institutions. Place the popularity and conduct of our sport alongside that of other American diversions, and it will not suffer by comparison. It is founded on a sound basis, its permanency cannot be questioned, and generations to come will profit by the work we established. It is indeed a pleasant matter to look back to twenty years ago, when we realize that within that period a useful and powerful organization has been built up, and from a very small beginning we are now in a position to reap reward for the labors performed by those who have guided our affairs so carefully, so systematically and so successfully to where we now stand.

OUR POLICY.

One year ago it was my duty to bring to your attention the fact that we had made a radical change in policy, viz., the adoption of the Squier money-back system. This plan then had only been given the test of a season, but its hearty acceptance by the trapshooting realm had been made manifest. The year just closing has given another emphatic endorsement of the system, and leads me to say that it has come to stay; in fact, its superiority over any yet in vogue is so pronounced that I question whether we even should consider a change in policy at this time. Unbounded success bespeaks its merit beyond any shadow of doubt. It is true that the plan is not perfection, nor does it please everybody, but it is unquestionably the best method so far advanced and is "doing the greatest good for the greatest number"; therefore, why think of a change? Opponents when driven to the wall for a reason, simply fall back on the oft-repeated argument of the fair sex—"because." They can offer no tangible plan as a substitute.

IN GENERAL.

At this juncture a pleasant duty confronts me. I desire to make mention of the fact that a large share of credit for the excellent year is due to our estimable president, Mr. J. T. Skelly. Without any disparagement whatever, I am anxious to go on record as saying that no chief executive has been a better right-bower in the twenty years of my service. Mr. Skelly, being thoroughly familiar with trapshooting, was able to aid me by both deed and counsel in the mastery of pitfalls and discouragements, that arose during the season. I certainly feel free to say that should any praise be distributed, our worthy president is entitled to the lion's

The Season's Roll of Honor

Being a partial list of successful amateur shooters and their year's triumphs

ACHIEVED WITH *Remington-UMC* SHOT GUNS OR SPEED SHELLS OR BOTH

- R. H. Bruns, Indiana State Tournament, tied for 2d highest 1912 Amateur Record.
- Vassar Cate, Southern Handicap.

Bridgeman.* "Very interesting."—*Francis Bannerman.*

portion. He deserves it in every sense. It would certainly redound to the best interests of the Association if Mr. Skelly could be induced to accept the reins for another year.

In accordance with a resolution adopted at the last annual meeting, invitations to become members of the Association were extended to the United States Cartridge Co., Selby Smelting & Lead Co., Baker Gun & Forging Co., the Marlin Firearms Co., the Ithaca Gun Co., Von Lengerke & Detmold, Schoverling, Daly & Gales, New York Sporting Goods Co., Robin Hood Powder Co., Sportsmen's International Cartridge Co., and the Liberty Cartridge Co. This resulted in the United States Cartridge Co. becoming a member early in the year, and others will follow. The application for membership of the Selby Smelting & Lead Co., of San Francisco, and the Hercules Powder Co., of Wilmington, Del., will be passed upon at the coming annual meeting.

The A. H. Fox Gun Co. was dropped from membership in April.

One of the most pleasing features of the year was the formation of new State organizations in Delaware, Michigan, Georgia, and California-Nevada, with Oregon probably in line in the near future. A new trapshooters' league was also formed in central Pennsylvania.

An interesting feature of the year was the consolidation of the two Missouri State organizations under the name of the Missouri State Trapshooters' Association.

REGISTERED TOURNAMENTS.

There is no doubt that the trapshooting world is well satisfied with our registered tournament plan. An increase in 1912 over 1911 of more than 40 per cent. in number of tournaments registered is fully indicative of this thought. Applications were received in such number that our registered tournament fund, contributed early in the year, was exhausted before the season was three-quarters over. It was necessary to appeal to our members for a replenishment of this fund. They came forward most generously, and we were thus able to contribute to tournaments in sections that had not received their full quota in the early allotment. The number of applications rejected during the season, for reasons other than not complying with the rules, was so small that it is really not worthy of mention. As to those refused for non-compliance of rules, the principal fault lay in their failure to comply with the time limit for making applications. While on this subject it is appropos to say that the period is passed when thirty to sixty days are sufficient to work up a tournament,

give it the proper publicity and secure the support of the trapshooting element in the vicinity where it is conducted. Our records show that the most successful tournaments were those in which four to six months were utilized to bill them as fixtures in trapshooting circles. Even with the system at the Interstate Association's command I would hesitate to handle one of our own tournaments on less than ninety days' announcement, and I much prefer a longer time than this to care for the multitude of details in connection with an up-to-date tournament.

Under the head of "Recommendations" I have a couple of suggestions to make, which, in my opinion, will materially improve and add to the registered tournament plan.

SOUTHERN HANDICAP.

Our initial tournament of the season, the Southern Handicap, was held at Columbus, Ga., May 14, 15 and 16.

This was our second trip to Columbus, the Southern Handicap of two years ago having been held there. This spring the elements were a decided factor in the event. The South was torn up by floods, the like of which is declared by veterans to be without equal. The fact that the country had been inundated knocked travel conditions galley-west within a two hundred mile radius of Columbus. Shooters from Memphis, Vicksburg, New Orleans and other cities could not reach the scene of sport without suffering long delays en route. This barrier restrained many from making the trip. As a result, the entry list was not up to that of two years ago, when Columbus registered 128 entries in the main event. Columbus Gun Club members, however, worked just as hard as though they had a record-breaking count. They were on the alert. Shortly before the tournament was scheduled to be opened, a telegram was received from a party of shooters, asking that the "getaway" be delayed for an hour, as their train was held back by high water. The request was acceded to. This delegation's plight will give an idea of the hampering conditions surrounding the tournament. Regardless of all imposts, the Southern Handicap passed into history as a gathering which not only yielded rounds of sport for the participants, but also brought about boons for trapshooting in general. As an example, there can be cited the formation of the Georgia State Trapshooters' Association. This is the first time sportsmen in Georgia have ever combined to further the clever pastime.

GRAND AMERICAN HANDICAP.

The thirteenth Grand American Handicap was held at Springfield, Ill., June 18 to 21, inclusive, under the auspices of the Illinois Gun Club.

Selection of the Capital City as the spot for the peerless annual tournament was more or less of an experiment in this wise. "Never before had the Association chosen a small city for the stellar struggle." All former renewals of America's superb shooting competition had been conducted in good-sized civic settlements. The venture proved to be an agreeable action, for while a number of Grand American Handicaps have collected larger entry lists, none have excelled this year's affair at Springfield in satisfactory consummation. The tournament was a brilliant one, and when historians start to page the various big gatherings since the origin of the Grand American Handicap, back in the 90s, Springfield's number will not be overlooked. Ideal weather, a 30-acre shooting grounds, level as nature's compass can adjust, an armv of good shots, and guided by a crew of active, energetic officials of the Illinois Gun Club, could anything else be yearned for? From first to last the tournament progressed swimmingly, each day succeeded by a better one. When the final gun had been fired, and nightfall closed on busy scenes for the last time, members of the Illinois Gun Club, in special session, impromptu, of course, decided that Springfield would be right after the Grand American Handicap for 1913. There was ample evidence that a bustling, wide-awake city of Springfield's magnitude, was fully as capable of conducting the vast contest as her larger brethren. "Give us the 1913 tournament and our grounds will be perfection," they declared.

EASTERN HANDICAP.

The Eastern Handicap was held at Bradford, Pa., July 9, 10 and 11, under the auspices of the Bradford Gun Club.

Pennsylvania did themselves proud in the conduct of this tournament. There have been many excellent Eastern Handicaps since the Association first established the event, and Bradford men were confronted with the hard task of showing finely against rivals of former years. Well did they turn out their work. When the tournament was in progress, local shooters were untiring in their efforts to make things go. The day over, social features engaged the attention of the home boys. They were equal to all occasions. No visitors were overlooked, a fact deserving of mention. Not only did the Bradford contingent show themselves to be artistic entertainers, but they were also classy with the gun. A Bradford man won the main event against some of the best shots in the country. A feature of the Eastern Handicap certain to be entertaining was the magnificent array of top scores. Conditions favored the contestants, and remarkable scores were chalked up. Amateur shooters were particularly skillful in gun pointing. It is a matter of gratification to say that many contestants made fine averages in the three days' shooting. This good shooting was the talk of the town. One could also hear men praising the appointments, showing clearly that the tournament met with general approval. Few men attending the renewal of the Eastern Handicap at Bradford will forget the affair. There were sufficient facts of importance to make a lasting impression.

WESTERN HANDICAP.

The Western Handicap was held at Kansas City, Mo., Aug. 14, 15 and 16, under the auspices of the Kansas City Gun Club.

This tournament was conducted on the Blue River grounds, a fact most reminiscent to veteran shooters. Prancing around again on that shooting inclosure, my memory was carried back to 1902, when the renowned

Grand American Handicap at live birds was held on this field. Though a decade has passed by since that famous gathering, a number of entrants to the affair were on the spot this year to swap stories and see that fellowmen had a good time. This old guard comprised the rank and file of the Kansas City Gun Club, an organization with a history of thirty years, still strong and stanch. Old boys put their shoulders to the wheel to make the Western Handicap a success. Their efforts were, of course, fruitful. Closing day found a local newspaper saying that "the Handicap was one of the best events in this line of amusement that Blue River Park had ever housed." Gun, ammunition and individual perfection were well nigh presented in the tournament, the scores being "way up" from the opening "scramble" to the last event. Numerous big runs of "straights" were recorded. When the winner was called to the front and given his well earned reward, the "vets" set up a shout that rang merrily over the assemblage and made every onlooker happy that he was on hand.

PACIFIC COAST HANDICAP.

The Pacific Coast Handicap was held at Portland, Oregon, Aug. 27, 28 and 29, under the auspices of the Portland Gun Club.

"It was a notable success—a record-breaker—the best trapshooting gathering every held on the Pacific Coast." Am sorry that my vocabulary fails me in further depicting the glories of this session in Oregon's bustling city. From the standpoint of the Interstate Association, the tournament was among the best ever given by us. The enthusiasm manifested and renewed interest taken tend to make new devotees of trapshooting—one of the prime objects of our organization. Members of the Portland Gun Club paid a high tribute to the Association by declaring that the efficient work of their club and its appointments, and also the revival of interest in trapshooting throughout the length and breadth of Oregon, were due to the intelligent work done by our organization on the West Coast.

Though the dates, in a measure, encroached a trifle on the game hunting season, lovers of trapshooting were out in full force and shot through the program. The Portland Gun Club had only recently secured a home, but was "up to snuff" in every part of the many details that fall on to the shoulders of the home organization when a fixture of the Association is decided. Fine grounds at Kenton, not long since cleared of woodland growth, proved to be one of the most pleasant and adaptable places for trapshooting in the West. When the club accepted the tender to operate the Pacific Coast Handicap, so much work was staked ahead that some men had misgivings as to the prospects of having everything ready in time. Aladdin and his wonderful lamp could not have cleared the way in better style than did the Portland Club hustlers. Their work was a revelation, a superb example of Oregon "git up and do it." Decks were cleared for action when the hour for the start hove to, and there wasn't a hitch anywhere to be located.

POST SEASON TOURNAMENT.

The third Post-Season tournament was held at Cincinnati, O., Oct. 15 to 18, inclusive, under the auspices of the Cincinnati Gun Club.

Latonía, a beautiful spot in old "Kaintuck," forty minutes' ride from Cincinnati, was the scene of the autumn assemblage of America's greatest trapshooters. Handled by the Cincinnati Gun Club, made up of experienced men in tournament manipulation, the event was decided on schedule time. There was nothing lacking on this score. The big guns of the recreation had every chance to enjoy themselves in the yearly struggle against fellow "crackerjacks." Fine weather, except on the last day, also put forward its share toward providing a good time for the "kings of trapshooting."

These balmy hours were much appreciated by a large concourse of visitors on hand each day. The spectators admired the talented devotees and no golf expert was ever accompanied by a larger "gallery" as were the world's best shots when they walked down the line, piling up pretty scores at every stop. The attendance was not up to anticipation, fully one hundred being expected. There is no doubt that many men had planned to be present, but were sidetracked somewhere, as their ammunition was shipped to the scene, but the owners failed to appear.

RECOMMENDATIONS.

1. I would suggest that the registered tournament plan be amended so that all average money accruing through the Squier money-back system be divided among bona fide residents of the State in which the tournament is held, regardless of the position non-residents hold in the shooting averages of that particular tournament. This would be in keeping with the original import of the registered tournament idea, namely, that the money allotted to any particular State should go to members of gun clubs in that State.

Probably the most serious objection to the plan now in use is that it attracts the circuit chaser, ever a capable shooter, who gives a good account of himself and is nearly always able to participate in the average money, thereby working to the disadvantage of the resident of the State in which the tournament is given. The intention is not to bar the non-resident from the tournament proper, but merely to eliminate him from participating in a fund created for the special benefit of the trapshooter residing in the State where the tournament is given.

2. Our records show that two-day tournaments, in many instances, have not proven as successful accordingly as have one-day tournaments, which leads me to believe that some gun clubs, regardless of the probable attendance on the second day, make application for a two-day tournament simply to secure the extra contribution which the Association makes to such tournament. I would therefore suggest the adoption of the following rule:

"Any club that has held a two-day registered tournament in 1911 or 1912, at which the attendance did not reach twenty-five or more entries the second day, not be granted registration for more than a one-day tournament, unless said club shows increased strength and is able to assure the Association of prospective success."

3. It has been fully demonstrated by the three Post-Season tournaments given that a majority of the high class shooters of the country are not eager to attend a tournament where they must compete with contestants all of whom are of equal skill. The Post-Season tournament was established in response to a demand that trapshooting have an annual competition similar in its lines to the world's series of baseball games—a sort of a survival of the fittest. Contrary to expectations, there has been a gradual decline in the number of entrants at this tournament, and it is plainly evident that the "kings of the sport" will never enthuse over an event where they will meet on an equal footing only the top-notch talent of the country; therefore, in view of this lack of appreciation, I would suggest that the Association consider the advisability of discontinuing the Post-Season tournament.

4. Two years ago it was ruled that the Preliminary Handicap be abandoned at all tournaments directly given by the Association, with the exception of the Grand American Handicap tournament. This ruling does not seem to meet with the approval in general of trapshooters. Objection to the ruling was shown immediately after its issuance and has never subsided. Careful consideration of the long prevailing sentiment convinces me that a mistake was made. I would therefore strongly urge that the Preliminary Handicap be restored to the programs of all our subsidiary handicap tournaments.

LOOKING FORWARD.

The foregoing is a record of the activities of the Association for the year 1912. The measure of our success or failure in the performance of the duties which claimed our attention, will best be left to the judgment of those who have had the patience and perseverance to read this report up to this point. Suffice it to say that all efforts put forth have been with an eye single to the general interest of trapshooting, and with that thought in mind might I not ask a continuance of the unselfish effort of our active workers and deeper interest and co-operation of those of our members who have not availed themselves of the opportunities afforded by their organization to do some splendid work in associated action with their fellowman. If we can but obtain this co-ordinated effort upon the part of all our members, each contributing their share to the advancement of the work at hand, the success of future years is assured, and the benefits accruing therefrom will surely contribute to mutual progress. If 1912 was a grand year, 1913, from indications, will be surpassing. This is not an utterance fashioned on individual enthusiasm, but a declaration consistent with substantial support that can be brought forward for the asking.

IN CONCLUSION.

I wish to repeat my thanks to our members for their unflinching support and uniformly generous treatment. I am deeply grateful to them for their acts of kindness, and though virtue may be its own reward, I fervently wish them something more tangible.

I wish to renew my expression of obligation to the sportsmen's journals, honorary members of the Association, for the faithfulness shown in publishing reports of all registered tournaments sent them, as well as printing matters of general and particular interest in this connection. I also wish to thank them for the many unsolicited marks of appreciation they have bestowed upon me personally through a long series of years.

Happy as I have been to express my views in the foregoing report, I now approach a situation that is tinged with sadness, inasmuch as I must bid you farewell as the active head of your organization. This year witnesses a cessation of my labors in that position. I am loth to doff the harness, but I think I have well earned a respite from the cares of the berth whose trying duties are many.

Very respectfully submitted,
ELMER E. SHANER, Sec'y-Treas.

Crescent A. C.

BAY RIDGE, N. Y., Dec. 7.—To-day the first shoot for the December, new Committee and J. H. Vanderveer cups took place. The first leg on the latter trophy ended in a tie between A. Adams and F. S. Hyatt. Both gunners made 44 out of 50. F. B. Stephenson finished third. He won the take-home trophy with 90 out of 100. J. F. James scored on the Committee cup, breaking 44 out of 50. He tied F. S. Hyatt for monthly cup with 23 out of 25. The scores:

Trophy shoot, 25 targets, handicap:					
F S Hyatt	4	22	F Wellbacher	5	17
*J A R Elliott	0	23	H M Bingham	0	17

Guernsey Gun Club.

GUERNSEY, Ia., Nov. 29.—On Thanksgiving Day our gun club held a successful shoot, notwithstanding it was rather a cold day and target shooting was very difficult on account of a strong south wind, which we had to shoot into. When Bill Ridley says, "It is a hard day to shoot targets," there is no use to ask any one else, and that is what Bill said. Mr. Ridley was high gun with a score of 117 out of 135. A. Grabin was second high with 115, and the president of the club, who had charge of the cashier's office, was third high with 106. Mr. Ridley was handicapped to 20yds.

Our gun club is less than one year old, and this is our third shoot this summer, and we have trapped almost 10,000 targets on programme. However, we intend to change our trap ground another year and trap more targets and have a better attendance and more pleasure out of it than we have had this year. The writer is teaching his wife to shoot. The first targets she ever shot at were last June, and she has been gradually getting better since, learning something of the speed of the targets and the speed of the shot. On the evening of the 27th—it was a nice evening to shoot—and she broke 21 out of 25, as against her husband's 23 out of 25. She says she is going along next year to shoot targets. In all probability I will have company when I go to attend tournaments.

At this shoot twenty-one contestants faced the trap, but several only shot a few, as the targets were so very difficult to hit on account of the wind. Scores:

Shot at. Broke		Shot at. Broke	
Wm Ridley	135 117	Glenn	50 34
Crabin	135 115	Border	50 36
J W Dobbins	135 106	Wagner	45 23
Mrs Dobbins	75 48	Wenger	45 21
Woodbridge	135 70	Feller	25 12
Maxwell	135 82	Hogan	15 3
Wokesin	100 52	E E Dobbins	15 6
Sherlock	75 51	Glen	10 4
Dalezal	75 51	Sherlock	20 10
Koth	75 51	Foster	10 6
Joe Dalezal	65 38		

The sixth event on this program was at 25 targets, and the highest score made in this event by the home talent was to receive the Du Pont trophy as his property, this shoot closing the season. Most of the boys dropped below 20 targets. The trophy was won by A. Crabin. The three highest guns in this event were A. Crabin, 22; J. W. Dobbins, 21, and Wm. Ridley, 20.

J. W. DOBBINS, Pres.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Nov. 28.—The regular weekly shoot of our club was held to-day instead of Saturday. An interesting event was the third of a series of inter-club matches between the Warrenton Gun Club, of Warrenton, Mo., and our club. This match being a little out of season, Warrenton had but seven men here. We put up an equal number, each man to shoot at 50 targets. At each of the other two of the series all members of each club present shot, but only the ten highest scores of each were counted.

The clubs are nearly even in skill, for in the first and third our club won by 6 each time, and Warrenton won the second by 7. Below are the scores of the match, also the scores of a little practice after the match:

Team match, 50 targets per man:		Team match, 50 targets per man:	
Warrenton G. C.		Daniel Boone G. C.	
Dr F W Lennert ..	44	A F Ahmann	45
Wm Harbaum	46	G Lichtenberg	44

Fortmann	20 8	Johannaber	10 4

J. O. WILSON, Sec'y.

Huntingdon Valley Country Club.

JENKINTOWN, Pa., Dec. 7.—Huntingdon Valley Country Club to-day had the largest gallery of clubmen-shooters thus far recorded. Four main events, and several practice events were shot. Rowland was high gun in both of the 25-target events. Elkins won the 15-target handicap with 13, and the 25-target handicap event with 24. The scores:

Handicap, 10 targets:		H. T.	
W L Rowland, Jr. .	4 9	G F Tyler	4 8
G W Elkins, Jr. .	0 7	A M Biddle, Jr. .	0 8
Handicap, 15 targets:		H. T.

WINCHESTER

Rifles and Shotguns Make

Highly Prized Holiday Gifts

A Winchester .22 Calibre rifle for a boy; a repeating shotgun or hunting rifle for the mature sportsman, or a light-weight rifle or a 20 gauge repeating shotgun for the out-of-door girl, will make a most acceptable Christmas present. For completeness include a supply of Winchester cartridges or shotgun shells. Winchester ammunition not only gives the best result in Winchester guns, but with all other makes.

**Winchester Rifles, Shotguns and Ammunition
The W Brand—Are Sold Everywhere**

Jersey City Gun Club.

JERSEY CITY, N. J., Dec. 7.—We had a good turnout to-day, and the only trouble was that it was dark before the shooters had nearly all the shooting they wanted, and several special matches between the members had to be postponed. Piercy and Engle tied for the club's high average prize with an average of 87 per cent., and Shannon was next with an average of 85 per cent. Mrs. Vogel, of New York, paid us a visit and shot very consistently all through the program. Piercy and Shannon were the only ones to register a straight 25, and both received congratulations for doing the unusual. The scores follow in strings of 25 bluerocks:

Piercy	18 21 23 25
Dr Bogart	21 16 19 19
Dalton	20 13 15 16	16	15
Mrs Vogel	18 20 17 17
Keller	23 19 22 18
Kent	17 20 16 15	18	..
Hubbell	19 17 19 16	16	..
Hallinger	20 19 22 23
L Piercy	16 13 15 17
Kearney	12 10 12 5	8	..
Sturdevant	7 11 6 13

Summerfield	16	8	9	9
Tewes	19	17	16	18
Shannon	18	20	21	23	25	..
Higgins	15	19	13	17
McLenore	13	10	11	11
Dixon	22	16	21	20

Lawton	11	16	12	15
Williams	17	23
Burlington	14	15
Leary	18	18
Dobson	11	12
Jones	12	10

We are going to have our yearly turkey shoot on Saturday, Dec. 21, and will mail programs within a few days, and to all those who should miss getting one we take this means of notification. Shooting will commence at 10 A. M. sharp, as the days are short now and too dark to shoot by 5 o'clock. So be on hand and get a chance at the first and largest turkey for first prize, or a pair of chickens for second prize. Our poultry comes direct from Rhode Island to us, which means enough said.

SECRETARY.

5 out of 6 REVOLVER CHAMPIONSHIPS

PRACTICALLY A CLEAN SWEEP, WON BY

THE FAMOUS  BRAND

Peters

Ammunition

The results of the United States Revolver Association 1912 Outdoor Championships, just officially announced, show that users of Peters Cartridges won FIRST in every match but one, also Second place in one match, Third in three matches and fifth in two.

Match A. Revolver Championship

1st—A. M. Poindexter.....467
3rd—J. E. Gorman.....455
5th—C. M. McCutcheon.....448

Match D. Military Record

1st—Dr. J. H. Snook.....212
2nd—C. M. McCutcheon.....207

Match F. Pocket Revolver Championship

1st—Dr. O. A. Burgeson.....208

Match B. Pistol Championship

3rd—A. M. Poindexter.....574

Match C. Military Revolver Championship

1st—Dr. J. H. Snook.....621
3rd—A. M. Poindexter.....574
5th—C. M. McCutcheon.....570

TWO NEW RECORDS

Match E. Revolver Team Championship

1st—Denver Revolver Club....774

These victories, won against the hardest possible competition, show that our oft repeated claim for the ABSOLUTE SUPERIORITY of PETERS AMMUNITION is not mere idle talk, but a conservative and provable statement of FACTS.

PETERS REVOLVER AND RIFLE CARTRIDGES of 32 and larger calibers are just as surely superior to other makes as Peters 22 caliber. PETERS SMOKELESS Cartridges are as far ahead of competing brands as are PETERS SEMI-SMOKELESS.

Shoot the P brand, the only kind that will shoot perfectly in ANY good gun.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

B. A. A. Gun Club.

NEWTON, Mass., Dec. 7.—Capt. C. B. Tucker won the take-home trophy after a shoot-off with L. H. Davis. Capt. Tucker tried out a new gun, which would seem to be satisfactory, as he cracked 47 out of 50. Each tied at 49½ targets, and on the shoot-off Tucker won the trophy by ½ target.

The December trophy was shot for, and Capt. Tucker and Davis again tied scores. The trophy will be awarded to the member whose total for any three of the Saturday shoots is the highest. The scores:

	Broke.	Hdep.	Total.
C B Tucker	47	2½	49½
L H Davis	44	5½	49½
C P Keeler	41	6½	47½
H W Knights	43	4	47
G F Goodwin	36	10	46
J E Lynch	42	2½	44½
T C Adams	44	0	44
R Faye	43	0	43
F Whitney	33	10	43
C C Clapp	40	2½	42½
M Ballou	37	2½	39½
C A Johnston	20	12	32

Shoot-off, 25 targets:

Tucker	21	1¼	22¼
Davis	19	2¾	21¾

December trophy:

Tucker	47	2½	49½
Davis	44	5½	49½
Faye	49	0	49

Lynch	45	2½	47½
Keeler	41	6½	47½
Whitney	35	10	45
Clapp	42	2½	44½
Adams	44	0	44
Goodwin	34	10	44
Ballou	34	2½	36½
Johnston	24	12	36

Smith Gun Club.

NEWARK, N. J., Dec. 7.—The monthly merchandise shoot, held to-day on the Bloomfield avenue traps of the Smith Gun Club, was the last event to be held on the grounds. The new public school athletic field, adjoining the grounds, is the cause of giving up the present site. It was necessary to shift the position of the traps to prevent any possibility of shot going over the wall into the athletic field. This shift placed the traps in such a position that the afternoon sun shines directly in the faces of those facing the traps. Nothing could be more of a hindrance to good shooting than such a handicap.

For some months the Smith Gun Club has been trying to find new suitable shooting grounds, but without success until recently. Circumstances surrounding the decision of Joe McGinnity to leave Newark offered the opportunity.

Until recently McGinnity was at the head of the

Eastern League Gun Club, with grounds adjoining the baseball park. Since he has left town, the club has not been prospering, and the Smith Gun Club has consented to consolidate with it. The name of the club will still be Smith Gun Club, and starting with next Saturday, the grounds of the former Eastern League Gun Club will be their new home. It is the intention of the Smith Club to greatly improve the new grounds. Arrangements are already under way for the provision of new traps, a new platform and enlargement of the present club house. The grounds will be put in shape for temporary use next Saturday. When improvements are finished, a big opening shoot is planned, which will attract marksmen from this section of the country.

In the prize shoot, held to-day at 50 targets, J. Baldwin was high with 45; W. Trowbridge second with 44; W. Hassinger third with 43; L. Trowbridge fourth with 41, and Sam Thornton fifth with 40. For sixth prize Charles T. Day, Jr., and M. Apgar tied with 38 each. In the draw-off Day picked the trophy number, giving him the prize. The prizes consisted mostly of pieces of cut-glass. Sweepstake shooting was indulged in both before and after the prize event. The following scores were made:

W Hassinger	20	17	19	20	48
J S Weiler	19	17	19	22	29
S A Francisco	16	17	19
J Baldwin	21	22	21	19	45
Dr Moeller	16	15	22	17	34

Essex Country Club.

ORANGE, N. J., Dec. 7.—Albert O. Headley won the December cup and the Olympic trophy limbs to-day. L. H. Ross and W. E. Stewart took the sweeps. The scores:

Sweepstakes, handicap—L. H. Ross (6) 23, B. M. Shanley, Jr. (scratch) 21, James A. Hart (scratch) 19, E. H. Graves (8) 19, W. E. Stewart (8) 18.

Sweepstakes, handicap—W. E. Stewart (8) 25, James A. Hart (scratch) 23, A. O. Headley (4) 23, B. M. Shanley, Jr. (scratch) 22, L. H. Ross (6) 22, E. H. Graves (8) 21.

December cup shoot—A. O. Headley (4) 25, B. M. Shanley, Jr., (scratch) 23, E. H. Graves (8) 23, L. H. Ross (6) 21, James A. Hart (scratch) 20, W. E. Stewart (8) 17.

Olympic shoot—A. O. Headley (4) 22, W. E. Stewart (8) 21, L. H. Ross (6) 21, B. M. Shanley, Jr. (scratch) 20, James A. Hart (scratch) 17.

Rhode Island Country Club.

BARRINGTON, R. I., Dec. 7.—A leg on the President's cup at the Rhode Island Country Club was won by J. B. Lewis to-day with 38; and now he leads for the trophy, with K. M. Wood second. The scores: J. B. Lewis 38, H. L. Merriman 35, K. M. Wood 34, F. H. Elmore 29, J. B. Merriman 28, E. M. Parks 28, L. O. Tingley 22, Henry Dunnell 19, G. T. Hanley 17, R. H. Blanding 13, Mrs. Spender Borden, Jr., 11, R. W. Comstock 8, Spencer Borden, Jr., 4, *L. Wheeler 47, S. M. Chapin 48.

*Professionals.

Sea Side Gun Club.

THE Sea Side Gun Club, Inc., Bridgeport, Conn., announce the following dates for their winter schedule: Dec. 7, 21; Jan. 1, 18; Feb. 8, 22; March 8, 21; April 5 and 19.

A very interesting program has been arranged for the winter and several fine prizes have been offered for competition, among them the President's cup, Handicap cup and Island Brook cup. Mr. W. B. Leigh, one of our enthusiastic shooters, has offered a handsome trophy, which will create keen competition among the scratch men. Each day's program will consist of 100 birds, divided into three events, as follows: Event No. 1, 15, 15 and 20 birds, President's cup; No. 2, 25 birds, Handicap cup; No. 3, 25 birds, Island Brook cup. Each day's shoot will constitute a leg in the different events, to be decided at the end of the season by the winning of the greatest number of legs, all handicap events.

The two-man team match has got the boys all busy, and will serve to keep them on edge all winter.

Twenty-one members and three visitors attended the opening shoot on Saturday, Dec. 7. The scores:

President's cup, handicap:					
Adams	10	51	E Lewis	6	43
Kellogg	8	50	W B Smith	6	42
Southey	2	49	Billings	8	42
Senior	0	48	Wilson	0	40
Cate	2	48	Leigh	6	40
R Lewis	4	48	Hall	2	38
Lyon	5	46	Fisher	10	36
Sterling	10	46	Miller	12	35
Hull	6	46	Kiefer	12	33
Vanstone	0	44	Ten Eyck	12	31
Fox	5	44			

In the shoot-off Adams beat Kellogg.

Handicap cup:					
Sterling	5	25	Billings	4	23
Lyon	2	26	S Kellogg	4	23
E Lewis	3	25	R Lewis	2	22
W B Smith	3	25	Hull	3	22
Fox	2	24	Wilson	0	21
Hall	1	24	Southey	1	21
Cate	1	24	Kiefer	6	21
Adams	5	23	Fisher	5	20
Senior	0	23	Leigh	3	19

In the shoot-off, W. B. Smith won the leg.

Island Brook cup, handicap:					
W B Smith	3	26	Vanstone	0	23
E Lewis	3	27	Cate	1	22
Adams	5	26	Kiefer	6	22
Sterling	5	26	Leigh	3	22
Hull	3	25	Lyon	2	21
R Lewis	2	25	Fisher	5	20
Wilson	0	24	Billings	4	20
Senior	0	24	Fox	2	20
Hall	1	24	Kellogg	4	20
Southey	1	23			

In the shoot-off, Sterling won the leg.

Evanston Gun Club.

EVANSTON, Ill., Dec. 9.—Ten members turned out to shoot for the turkeys at the Evanston Gun Club on Saturday. There were two events of 25 targets each, resulting in the following scores: Bristle 45, Coleman 46, Carman 46, Ford 45, Harrison 49, Kennicott 47, Millen 48, Pace 47, Smith 46, Scowley 44. Harrison and Millen were the winners.

Sixteen shooters appeared for the Sunday events, resulting in the following scores: Coleman 38, Carman 45, Doyle 47, Darby 45, Davis 45, Harrison 44, Hanson 46, Kennicott 46, Langworthy 45, Millen 44, Miller 46, Phalen 46, Smith 46, Searle 44, Tichenor 41, Watson 46. Doyle was high man with 47 and was awarded a turkey. Six were tied for four turkeys, and in the shoot-off at 25 targets, the following were declared the winners, each receiving a turkey. Hanson with 19, Kennicott 23, Phalen 25 and Watson 24.

A handicap tournament for the Directors' cup will be held beginning on Dec. 28. The finals will be held on New Year's morning. The contest will be 100 targets. Members can shoot at their first 50 on either Saturday, the 28th, or Sunday, the 29th; the final 50 to be shot at on New Year's morning, beginning at 9:30 A. M. There will be a prize for the runner-up.

W. J. PHALEN, Sec'y-Treas.

Larchmont Y. C.

LARCHMONT, N. Y., Dec. 8.—A strong northwesterly wind made difficult shooting conditions here to-day. Nevertheless, fifteen trappists shot, a few making good scores.

Ralph L. Spotts took high gun for the day with 130 out of 150 in the scratch contest. G. J. Corbett was runner-up with 122. The other scratch events, at 10 and 15 targets, were won by J. Henry and T. Lenane, Jr., respectively, each with a full score.

Tom McCahill won take-home trophy with a full score of 25 and a handicap of 3. The 100-bird handicap match was won by T. Lenane, Jr., his score of 95 beating A. Whiting and G. J. Corbett by two birds. Lenane was also the winner of the special trophy match with a full score of 25. A. Whiting captured the visitors' cup and won the leg for the accumulation cup. S. Halstead proved the winner of the leg for the monthly cup with a full score.

Eagle Gun Club.

MANOA, Pa., Dec. 7.—Hummel, Jackson and Jones tied for first money to-day, with 10 straight each, at the Eagle Gun Club's shoot.

In a miss-and-out event Felix and Wingate ran 5 straight and then split the coin. In the 10-bird event the scores were: Jones 10, Hummel 10, Jackson 10, Knowles 9, Aiman 8, Taylor 8, Mirath 8, Hall 8, Felix 8, Wingate 7.

There Are No Powders "Just As Good As"

Du Pont, Ballistite, Schultze or Empire

"THE proof of the pudding is in the eating,"—more shooters are using Du Pont Sporting Powders today than all other sporting powders combined. The confidence in the load you are using is a strong factor in making a good score or in bringing home a full game bag. Enjoy that confidence by selecting Du Pont Powders—the powders which embrace 111 years' experience in powder making—use the powders "father used to shoot."

Northern Kentucky Gun Club.

OWING to the disagreeable weather of Dec. 8 there was nothing doing at the grounds. The club has arranged a fine program for its turkey shoot on Dec. 22, and one that will attract a large number of local and out-of-town shooters. There will be five 20-target events, with four prizes in each event—turkey, duck, chicken and can of select oysters for first, second, third and fourth high scores respectively. Entrance for the entire program will be \$3.50, including targets. All start at 16yds., winners of first prize being handicapped in following events. All ties will be shot off miss-and-out. Class shooting. If there are twenty or more entries for the entire program, a turkey will be given to the high and the low man in the 100 targets. The high man in the first event will go back to 18yds. for the second event; if he wins again, he will go to 19yds., and a third win puts him back to 20yds.

A gun club was organized recently in Westwood, a suburb of Cincinnati, and was incorporated on Dec. 5 with the following officers: Peter Ruelhman, Jr., President; John Snyder, Secretary; A. C. Kuball, Treasurer. A large tract of land on Montana avenue has been leased for a term of years, and three traps installed. A

comfortable club house will be erected, to be replaced later by a more pretentious structure.

Bennet Gun Club.

GLOUCESTER CITY, N. J., Dec. 7.—Twenty marksmen took part in the weekly shoot of the Bennett Gun Club this afternoon. Stokes Prickett, F. McGinley and E. Johnson shooting, as did the balance of the participants, at 15 blue rocks, each hit 15 straight, but in the shoot-off, Prickett hit 8, Johnson 7 and McGinley but 4. Scores: Stokes Prickett 15, E. Johnson 15, F. McGinley 15, Benjamin Martell 14, A. Thomas 14, Alonzo Cheesman 14, John Hewlings 14, B. Holloway 14, E. Anthony 14, J. Fowler 14, Thomas Horner 13, Frank Bennett 12, C. Wasson 12, D. Hatfield 11, C. Sanderson 11, John Owens 10, John Lee 10, C. Wilson 10, George Sanderson 9, W. Burgett 9.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

NEW
12 GAUGE *Marlin*

Hammerless Repeating Shotgun

This Model 28, 12 gauge *Marlin* shotgun is the finest repeating gun in the world. It has every up-to-date feature, perfected far beyond all previous standards, and it has exclusive advantages not obtainable in other guns.

Note these features: **Hammerless—Solid Steel Breech** (inside as well as out)—**Solid Top—Side Ejection—Matted Barrel** (as on our highest grade hammer guns)—**Press-Button Cartridge Release** (to remove loaded cartridges quickly from magazine without working through action)—**Double Extractors—Take-Down Feature—Trigger and Hammer Safety.** Price, \$22.60.

The Model 28 is a fine appearing, beautifully balanced gun, without any objectionable humps or bumps; its **Solid Steel Breech** (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; **it is the safest breech-loading shotgun ever built.**

Our free circular gives large illustration of gun and full description. Our complete 122-page catalog of all other *Marlin* repeating rifles and shotguns mailed for three stamps postage.

Our 160-page **Ideal Hand Book** tells about reloading all cartridges; mailed for 6c. stamps.

Buffalo Audubon Club.

BUFFALO, N. Y., Dec. 7.—Twenty-one strong, the members and friends of the club turned out for the first shoot in December. It is getting to be a regular thing for Mr. Frank S. Wright to lead, and to-day was no exception. We were glad to have as visitors to-day, Messrs. Hassam, Dickey, Fay and Farrell, who were on their way from the International shoot held at St. Thomas, Ont., last week. Our club is arranging for a special shoot, at which poultry will be the prizes, to be held on the Saturday between Christmas and New Years. Scores:

Events:	1	2	3	4	5
Targets:	15	20	20	20	25
Mesinger	10	16	17	16	20
Hassam	9	18	18	18	21
Dickey	13	17	17	14	22
Wright	15	17	17	16	23
Kelsey	12	16	18	17	18
Blackmer	11	17	17	15	20

Reynolds	8	..	15	12	..
Wootton	18	..	21

Nos. 4 and 5 were distance handicaps.

Cincinnati Gun Club.

THE threatening weather of Dec. 8 kept many of the shooters from attending the weekly shoot, and only seven took part in the events. An incoming wind of considerable velocity made the targets very uneven in their flight, and no high scores were recorded. John Schreck led the bunch with 87 out of 100. Hammerschmidt came second with 86. In the first event he used his 20-gauge, which, together with the wind, was too much of a handicap, and cut his scores badly. In the next two events he broke 94 per cent. of the targets, using his old 12-gauge standby. Ford was the only contestant to go straight in any one of the events, and he turned the trick in the last 25 targets, going out in third place. Erdel and M. H. Johnson shot at 125 each, the latter breaking 95 and the former 90. L. Gambell has just returned from a week's hunt in Laurel and Clay counties, Kentucky, where he and C. C. Regan got over 100 birds. The next shoot will be held on Dec. 15.

Targets:	25	25	25	25	25	Total.
Schreck	22	22	22	21	..	87
Erdel	20	20	18	16	16	90

McArdle	18	21	39
L Gambell	20	20

Rifle Shooting

Perry Victory Centennial Celebration.

WASHINGTON, D. C., Dec. 9.—At a meeting of the executive committee of the National Rifle Association of America, held here to-day, Col. H. G. Catrow, third Ohio Infantry, was appointed Commissioner General for the international matches, which will be held at Camp Perry, Ohio, September, 1913, in connection with the Perry Victory Centennial celebration.

A program of the matches was approved, covering not only the official matches of the International Union, composed of European nations, and the Pan-American Union, organized among the republics of the Western Hemisphere, and additional matches, open to the world, which includes the famous Palma match and a new Pan-American match for a two-man team for a trophy presented by Hon. John Work Garrett, United States Minister to the Argentine Republic, and the new trophy voted by the National Guard Association of America at its late convention in Norfolk. This trophy will represent the long range individual military championship of the world, calling for 15 shots at 800, 900 and 1,000 yards.

The prizes will amount in all to about \$20,000 for the international matches alone.

The State and War Departments are co-operating with the National Rifle Association of America in making this tournament a success. Invitations are being sent to all the nations throughout the world through the State Department, and the War Department will manage the tournament, detailing the executive officer and range officers and soldiers to man the targets.

Assurances have already been received from France, Italy, Switzerland, Sweden, Germany, Argentine Republic, Peru, Canada and Belgium that they were sending delegations to the United States for the shoot. It is expected that about twenty-two nations will be represented.

The following new clubs were elected to membership in the National Rifle Association: The Overland Rifle Association, of Toledo, O.; the New Orleans (La.) Rifle Club; the Pottsville (Pa.) Rifle Club; the St. Louis-Colonial Club; Monongakela Rifle Club, of Brad-dock, Pa.; Watertown (N. Y.) Rifle Club; University of Maine Rifle Club; University of Vermont Rifle Club; Newton (N. J.) Rifle Club (Academy); Charles City (Ia.) High School Rifle Club; Randolph Military Academy, of Norristown, N. J., Rifle Club; and the Manual Training High School Rifle Club, of St. Louis, Mo.

The new War Department trophy for the interclub indoor rifle shooting championship, will be competed for by twenty-four clubs. These clubs have been divided into two leagues, one representing the Eastern and the other the Western.

NOTES FROM THE GAME PRESERVES.

A POACHER'S FEELINGS WHEN CAUGHT.

WHEN a poacher is engaged in setting a snare, ferreting a rabbit burrow, or is just about to shoot a pheasant and suddenly finds the game-keeper's hand laid heavily on his collar, his first feeling is one of fright. If he is a very old hand, fright may not assail him, but anger will, and then the poacher is often an ugly customer to deal with. Generally, however, he is greatly alarmed, and that feeling renders him as clay in the hands of a determined keeper. After a time his alarm gives way to another feeling, this being astonishment that the keeper should have managed to catch him. He thought he had laid his plans so well and so cleverly ascertained the keeper's movements, that his enemy was in perfect ignorance even of the fact that he was a poacher. So he puts down his ill fortune to pure chance, and considers the fates against him, and that the keeper had all the luck.

THE POACHER'S FIRST MISTAKE.

The majority of poachers make the initial mistake of regarding the keeper as an easily duped fool, and there is no greater error one can fall into than underrating the enemy. There is reason to believe, too, that the keeper finds it worth while to encourage poachers to consider him a fool, for he generally succeeds in convicting them once or twice before they take him at his real value. The average keeper thoroughly believes in the old system of allowing poachers an inch and dropping on them when they attempt the ell, for the ell makes a better case, and the punishment they receive for it is more likely to have a deterrent effect. It is useless to haul poachers continually before a bench of magistrates for trivial offenses, and if that course is followed there is no possibility of imposing a penalty calculated to impress on an offender the necessity of mending his ways.

CAN THE LEOPARD CHANGE HIS SPOTS?

Poachers go to the greatest trouble in endeavoring to conceal from the keeper the fact that they do poach, but their efforts are all in vain. An experienced keeper, who is a far better judge of human nature than many imagine, can tell at a glance if any man he meets is inclined to poach. Such a person can rarely look the keeper straight in the eye, and if he does, he indulges in an insolent stare; his glance at the keeper is invariably a furtive one, and nothing more is necessary to show that he has something to be ashamed of. Sometimes a poacher seeks to deceive the keeper by posing as his staunch friend, and will even go so far as to give away a mate for the sake of misleading, but the keeper sees through it all.

THE POACHER'S HABITS.

A poacher's habits and ways are totally different from those of the ordinary country dweller, and no one sees this more plainly than the keeper. He is obliged to do a good deal of patrolling and watching before he feels fairly safe to make an attempt at poaching, and this

necessitates his being abroad to a considerable extent. The keeper is fully aware that the man's interest in nature is not the feeling which impels him to wander, and that it is a more sordid interest. The laborer who does a hard day's work is too tired and desirous of repose to take long walks in the evening and at early morning, and that is a habit of the poacher which gives the show away. He may trust to spies to do the preliminary scouting, but they are seldom trustworthy, and at any time may sell him for "a mess of pottage."

THE POACHER AND LABOR.

It is most necessary for the poacher, if he would cloak his real intentions, that he should work regularly. Nothing arouses the suspicions of village dwellers so speedily as to see a man able to idle all day and yet have money to spend. Such behavior, according to their ideas, does not tally with honesty, and it is just as necessary that a poacher should deceive his neighbors as the keeper, for any one of them is liable to "go and tell." So the poacher makes strenuous endeavors to keep in regular employment, but there again fate is against him. A laborer who does not get proper rest cannot do a good day's work, however hard he tries. He falls behind the other man and soon gets the reputation of being a "slacker." He becomes unpopular with his companions, too, for they detest to work in company with a man who cannot take his fair share of the labor. In the end, no one will employ him, and he becomes a regular ne'er-do-well.

POACHER CANNOT CONCEAL HIS TACKLE.

There are other matters which prevent the poacher concealing from the keeper the fact that he poaches. Should he try to hide a gun on his person, the set of the coat betrays its presence. If the barrel is in one pocket and the stock in the other, the coat sags in front. Should the barrel be down a trouser leg, his walk betrays it. Ferrets, too, cannot be trained to lie still in the pocket, and their wriggling is easily detected. Snares may be hidden in the pockets, but a man who sets snares wears the knees of his trousers and the toes of his boots and such small tokens convey a world of intelligence to the keeper. If a poacher is to keep a dog which will be useful to him, it must be of a certain variety, and the purpose for which it is maintained is at once apparent. Therefore, he seldom invests in a dog till he knows the game is out and that everyone knows he is a poacher.

IF HE DOES KEEP DOGS AND FERRETS.

Once a villager sets up a lurcher, everyone is aware of his purpose, for such a dog can be kept with only one intent, and there is no mistaking it. When the professional rat-catcher was in vogue, he was able to keep a kennel of these dogs without his motives being openly questioned, as they are useful animals for killing rats, but the rat-catcher of to-day is a skillful poisoner, and does not depend on dog and ferret. It would be useless for any villager to keep a lurcher now and pretend that it was intended for rats alone. Neither does anyone keep ferrets solely as pets, and besides they would be expensive pets; a certain quantity of flesh food they must have and the ordinary person cannot procure this necessary except at considerable expense.

THE POACHER'S FERRET.

Gamekeepers will give a good deal to get hold of a poacher's ferret, as it is generally a good working one. It would not be worth the poacher's while to keep any other. Therefore, he selects one of the best and trains it carefully. On being alarmed, poachers seldom stay to withdraw a lined ferret from a burrow, as that would involve a risk of being caught, and the keepers find many a one which has been left behind on a false alarm. If they work a ferret in the dark without a line, it often slips out of a burrow unseen and creeps away, to be picked up later by the keepers. It was the poacher who first placed a bell on a ferret to prevent its getting away at night unseen.

THE POACHER AND ALARM GUNS.

The poacher goes about at night in great fear of alarm guns, not bodily, but mental fear.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

for he knows that once the loud report of one of these resounds in the still night air, all he can do is to make tracks at once, and even then he may be intercepted by keepers making for the spot. If he suspects the presence of these guns, he will spend a long time carefully feeling for the wire, and he uses a slight metal rod for the purpose, as once this touches the wire, a slight metallic sound is heard, which cannot be mistaken. Afterward it is not difficult to trace the location of the gun and prevent its going off. If poachers are clever at this, the keeper should substitute for the wire very fine and strong fishing gut.—Shooting Times & British Sportsman.

PROTECTION OF THE PENGUINS OF THE FALKLAND ISLES.

THE Governor of the Falkland Islands has directed the customs officer attached to the whaling service of the South Shetlands to instruct the managers of whaling companies to forbid their employes to kill penguins or other birds. The granting of fishing licenses is made conditional on a promise to respect both seals and penguins, and, if possible, other birds. Whalers have been accustomed to kill the penguins wantonly.

"DEAD SHOT"

Shooting game birds that travel from 75 to 90 miles an hour requires a *quick* and *sure* powder like "DEAD SHOT". It also requires a *smokeless* powder that will not obscure your vision after the first shot—also a powder *that doesn't knock you off your balance*.

If you are going after duck, rabbits or quail be sure your shells are loaded with "DEAD SHOT". The best wing shots in the world use it. All the best makers of shells load their shells with it. All you have to do is to *ask for it*.

"DEAD SHOT" has highest velocity and lightest recoil. It keeps your shot well bunched—*maximizes* your chances of killing your bird and doesn't pound your shoulder to pieces. You'll appreciate these facts after a day's hunt.

Just say "DEAD SHOT" to your dealer when buying shells and *he'll* know that *you* know the game.

AMERICAN POWDER MILLS

CHICAGO BOSTON ST. LOUIS DES MOINES

Watches Ships Pass Cape Cod.

FIFTY-two years ago the first weather report from Cape Cod was sent to the Chamber of Commerce at Boston, says the Yarmouth (Mass.) Register, from a little marine observatory, perched on one of the highest sand dunes of the Cape, half way between Wellfleet and Provincetown.

Isaac M. Small, the seventy-eight-year-old marine observer of the station, sent the report. Since that time he has not lost a day at the North Truro observatory by sickness; is as hale and hearty as a man of forty-five, and is actively engaged in observing from sunrise to sunset the weather and the constant parade of ships that beat around the Cape.

The observatory itself is perhaps the oldest in the United States. Fifty-two years ago it had none of the facilities of modern communi-

ISAAC M. SMALL.

tion. To-day it has a wireless station, the telephone, the telegraph and everything up-to-date in the way of marine observation.

Seated in the tower, Mr. Small sweeps the horizon with a long telescope from Nausett Lights to Peaked Hill Bar, picking up the different ships and steamers that pass and reporting their position to the Chamber of Commerce at Boston. Five minutes from the time he sights a vessel, her position is known to the Chamber.

The Government weather signals are in Mr. Small's charge, and four times a day he reports the weather to the Chamber of Commerce. Inbound steamers from foreign ports depend on Mr. Small for knowledge of inshore weather conditions. From 250 miles out at sea they query him by wireless. In turn they advise him of storms at sea.

Recognizing ships far out at sea is something akin to second sight with Mr. Small. He hardly can explain it himself, but says that every ship has some feature that is unlike any other. Once in a while a foreign boat is not recognized until he is able to distinguish her name, but once seen she is never forgotten. Years afterward Mr. Small will identify the craft. During his more than a half century of service Mr. Small estimates he has reported 300,000 vessels, an average of about twenty a day.

EARLY CONSERVATION IDEAS.

IN the provincial charter of 1691, under which the Plymouth colony and the Province of Maine were united with Massachusetts, it was provided that all trees of the diameter of twenty-four inches and upward, twelve inches from the ground, growing upon land not heretofore granted to any private person, should be reserved to the crown for the furnishing of masts for the royal navy.—American Forestry.

KENNEL

Airedales' New Coat.

NEW YORK CITY, Dec. 5.—*Editor Forest and Stream:* I wish to call your attention to a

the dark wire hairs show most prominently for perhaps six weeks. And it is just at a certain period during this six weeks that the dog is considered right by the present standard of

AIREDALES FROM EPOST KENNELS.

From left to right, top row: Epost Princess Nell, Epost Endora, Epost B. Price. Bottom row: Epost Oui Oui (dam), Epost Emma R., Epost Capt. Andrew, Epost Tot McLean.

matter in connection with the judgment of the popular Airedale terrier.

The great points now insisted upon by practically all the judges seem to be the black color of the coat and the dark-colored eye. If a dog has a grizzled gray coat on his back, no matter how fine he may be in terrier conformation, showing qualities and the other points, he has no show against the fancy bred black-coated dog that is in no other sense as good a terrier as he.

If he has a light-colored eye, the blue ribbon is almost as quickly taken away by an inferior dog.

Now the Airedale terrier has been bred and inter-bred with various breeds to produce an ideal hunting dog, a dog that can stand a partridge, retrieve a duck and tree a bear; an improvement on any breed of hound, setter or pointer. In effect he is a combination of all these breeds and possesses more gray matter in his head than any other dog. He can kill a rat with the same agility as a cat and the power of his jaws is so great that he can bite through the hide of a grizzly bear; in fact, some of the Western bear hunters say they don't use them because they tear whole pieces out of the skin and spoil the pelt.

They have been crossed several times with the old English sheep dog to give them a soft woolly coat under their terrier wire hairs to enable them to stand any extreme of temperature, and the result is that they can come out of the water, give themselves a shake and dry off in a few minutes. The undercoat of gray wool acts like the down beneath the feathers of a bird and protects them from the chill of the water. Now this woolly coat grows just as fast as the wire terrier hair, but it is curly and lies closer to the skin, so when you strip the dog to get him ready for the show ring,

judging. Two weeks earlier or two weeks later he will not be in perfect coat, as the refinement of judging goes now. It takes from ten to twelve weeks to grow a show coat, and there-

fore a dog can be got ready fit to show four times a year at the outside.

I maintain that this is a ridiculous condition of affairs and should be abolished. It is just as artificially produced a coat as if the hair were dyed and stiffened with rosin for the day of the show. It is not the dog's natural coat; in fact, it is an artificial condition that can only be arrived at three or four times a year. Why, every Airedale that is to be shown at the Westminster Kennel Club Show next February will be stripped this week in order to have his coat just right for that event. Every dog there will be in an artificial condition, and the most artificial one of all will win the blue ribbon.

Now, this is all wrong and will do more to kill the breed than any other thing. The great English terrier, the Airedale, is too fine a specimen of the dog family to be abused in reputation by any such silly requirement that his coat shall be jet black. In the English dog books they require that he should have a grizzly gray coat, and surely that is much more desirable for a dog that is to be used in all kinds of hunting. It makes him less conspicuous on the trail or in the water, and the less it approaches the pure black, the better.

The question of the color of the eyes is another one that seems to me to be absurd. It is all right to require the proper shaped terrier eye, small, narrow and placed deep in the skull out of harm's way, but why in the name of Dame Fancy should it be dark brown, or dark anything, rather than light? Does anyone contend that a dark-eyed dog can see any better than a light-eyed one? If such a person exists, let him bring out his theory before the world. It would be new and startling. If no such claim is made, why should the dark-eyed dog win over the lighter-eyed one?

The whole situation can be briefly stated. The "fancy" requirements of the present judges are all wrong and devoid of reason. They are encouraging certain artificial points that have nothing to do with the merit of the Airedale or his usefulness. As an Airedale breeder myself I have to breed to their requirements, and my last litter of seven pups were whelped on Election day. Every one of them has a jet black coat and very dark eye; the two requisites that count the most nowadays. But I maintain it is an artificial requirement and might well be superseded by requiring better manners, obedience to command, docility and safety. I mention these as we have more than one champion now on the benches so dangerous and unruly that they have to be screened off from the public to prevent their biting someone. At a recent show I offered to wager the owner of one of these champions that he could not throw his glove and make his dog retrieve it nor make his dog obey any command whatever. He declined the wager and said "No, he won't mind anybody." Now, is that the proper kind of dog to make a champion of?

I wish FOREST AND STREAM would publish this letter and invite a wide discussion over the points I have tried to make. I realize that I have only stirred the surface, but I feel it is in a worthy cause. I do not believe the winners in the show ring to-day are as good for the purpose the Airedale was bred for as many of those who have not the artificial perfections that bring ribbons. If this is true, should there not be a change?

Forest and Stream Cup.

J. G. SHERMAN'S Lerwick won the first leg on FOREST AND STREAM'S handsome silver cup at the Toy Spaniel Club of America show, held on Dec. 6 and 7, at the Waldorf-Astoria, New York city. The cup was offered for the best Shetland sheep dog pup at the show, to be won twice before becoming individual property. Lerwick Rex, sire of the winning pup, also owned by J. G. Sherman, won the big cup for the best dog at the show. There was great competition, practically every Shetland in America being benched.

FOREST AND STREAM may be ordered from any news-dealer. Ask your dealer to supply you regularly.

THE DISAPPEARING COD.

FAR from a cheerful message was brought to Portland recently by Capt. John Clifford in the little British schooner Ariadne. The craft came with 700 quintals of salt fish from Tiverton, N. S., and this amount proved to be the smallest she has ever brought here.

"The salt fish business has all gone," said Capt. Clifford. "Hand lining for cod is an industry that has gone. Next year I don't believe there will be a vessel engaged in the industry in the Bay of Fundy. There were only eleven or twelve this year, and I can remember the time when forty-five sails was a small fleet. The fish are disappearing, and the fishermen cannot take the time to go after them. Some of the old-timers, men who have been hand lining for years, have been forced to give it up and go haking."—Portland Press.

Resolved

- To visit about two million people every week during the coming year.
To be uniformly cheerful.
To help others to bear their burdens.
To tell the truth and shame the devil.
To charge the ridiculously low price of five dollars for fifty-two visits.*
To come on special terms for three months for one dollar.
To be kind and sympathetic to those who don't want me.

"MULLERITE"

Powder Has Won by Sheer Merit

Thousands of dollars are spent yearly in advertising and hundreds of demonstrators are continually extolling the virtues of other Smokeless Powders, but the sale of **MULLERITE** with practically no publicity, steadily increases.

Once a **MULLERITE** Shooter Always a **MULLERITE** Shooter

Such satisfactory results could not be accomplished if Mullerite was not a truly remarkable powder. No inducements are offered to use this powder and no paid professionals say a good word for it because their bread and butter does not come through Mullerite channels, but the amateur who once uses it gets results and that counts more than smooth talk.

Don't take our word for it—just try a box of Mullerite in the field or at the traps.

CHRISTMAS BOOK LIST

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Modern Training.

Handling and Kennel Management. By B. Waters. Illustrated. Cloth, 373 pages. Price, \$2.00.

This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With art-type portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod-maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevil. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur, who does not care to trouble his head with involved technical information. Cloth. Illustrated. 123 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 170 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness, as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated. 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated, 150 pages. Postpaid, \$1.00.

Christmas Day at Wildcat

By EDWARD BRECK

IT had snowed hard since morning, but just as good Father Leroy elevated the host in the little chapel at St. Ignace, it ceased, and the sun broke through the unpainted window and deluged in refulgent light the high altar with its gleaming silver, glorified the crude picture of Our Lady above it, and touched with fire, as from heaven, the host itself as it was held aloft in the adoring hands of the kindly-faced priest, even as the Grail itself shone wondrously in the uplifted hands of Parsifal. Not a soul in the assembly, which was composed of French-Canadians, Irish immigrants and Scottish highlanders, but felt the inspiration of the divine in his heart of hearts; and they filed out and made their difficult way to their several homes through the foot of snow that had fallen, to enjoy their Christmas dinners with cleansed consciences and appetites sharpened by the stiff exercise in the bitter cold air, for it was the increasing cold that had stopped the snowfall. Father Leroy had retired to the vestry, and was in the act of putting off his priestly vestments, when a timid knock was heard at the outside door.

"Who is there?"

"It is me, Father; I want to see you," came a low, trembling voice.

"At this time, my child! Is it then so pressing?"

"Yes, yes, Father! I must see you!"

"Very well, very well, my daughter. Just a moment and you shall come in." The priest hastened his disrobing, and soon opened the outer door and let in a young woman of sweet face, who was evidently in great trouble.

"O Father!" she gasped. "Pierre, my Pierre!"

"What is it, my daughter? Is your husband ill?"

"No, no! He's gone to Wildcat, to his cabin, you know, to look after his traps."

"What! He did not wait to attend church on Christmas Day!"

"He was at early mass, and we had our dinner yesterday, you know, because my brother Gabriel was there, and he promised Mr. Allen to send in that bunch of fur. We had to pay so much, you know, for my little Jean's illness, and money is pretty scarce."

"Yes, yes, I did see him at early mass. Well, go on, Gervaise."

"O, Father Leroy, that bad Dominique Pilon he's after my man. He's followed him in the woods. You know he swore he'd shoot Pierre ever since they caught him snaring that moose and put him in jail. It wasn't Pierre's fault. He was deputy and had to go with the sheriff

and the head warden when they heard about it, but Dominique he never believed anything but Pierre told on him. And he says Pierre took his best trapping grounds and stole that big otter from one of his traps. O, Father, he is a bad man! You know he killed a man once up near Quebec, and had to run away. O, what shall I do?" And the poor little woman broke into hysterical sobs.

"Are you sure he's gone after Pierre?"

"Yes, yes. His friend, Tony the Injun, he came and told me he was afraid, and said I'd better not let Pierre go. Dominique took all

life of him he could think of nobody living near by to whom he could entrust the task of following the would-be assassin into the woods, for it required someone who was not only a good woodsman, but who knew the long difficult way to Wildcat Lake in the newly fallen deep snow.

Finally he asked, "When did Pierre go?"

"About nine, sir, and Dominique he started about ten. He hurried and got all his things together as soon as he saw Pierre was leaving." The priest thought it over. Pierre would not go straight to his Wildcat Lake camp, but would likely look at a number of traps on the way,

ALBERT BIGELOW PAINE (SITTING), AUTHOR OF "TENT DWELLERS" AND EDWARD BRECK, AUTHOR OF "WAY OF THE WOODS."

his money with him and his rifle, and Tony says if he gets Pierre he'll never come back here any more."

"Why did Tony let him go?"

"I don't know. Tony says he is afraid of Dominique, and Tony has gone away himself to Trois Rivières."

"Hm! Who is there else?" murmured the priest. He well knew the utterly bad, desperate character of Dominique Pilon, as well as the bitter feud between him and the trapper and deputy game warden, Pierre Durand. Many threats that Dominique had lately made had come to his ears, and he judged the situation to be quite as critical as Gervaise feared. But for the

especially as it promised to snow hard at that time, and he would wish to get to them before they were too deeply covered. And Dominique would reason just as he, the priest, did, and take it easy, knowing that he was sure to get to Wildcat before Pierre if he went straight. Dominique would wait at the camp, or more likely, somewhere on the trail near it, shoot down the man who, he had got into his brooding head, was the author of all his ills and run away, probably to a totally different part of the country, or even south to some big place where he could get work in a factory for the rest of the winter. Father Leroy shook his head. It was late, very late. Dominique had a start of two hours and more.

He thought hard for five minutes, until the trembling little woman could stand it no longer.

"Father," she cried in agony, "is there nothing we can do?"

The good priest's eyes filled with tears in spite of himself. He stroked her head and said: "Go home now, my daughter, and hope for the best. I will go to Wildcat as fast as I can, and—"

"You, Father!" exclaimed the young woman. "In this storm!" The priest smiled. "Never fear, I am not so tender as you may think, and besides the good God will put strength into me. Go to Raoul Lamotte, and tell him to place a notice on the church door that I had to take the sacraments to a distant place, and let as many know about it as possible, so that not too many will make the journey to evening service for nothing. Now go, my dear daughter, and pray that I may arrange everything in good time. Pray for Pierre, and for me; yes, and pray for Dominique, too; pray hard for Dominique. He needs it most." And he pushed her out of the house.

"Now," he murmured to himself, "to save a life. Who knows? Perhaps, with the help of Him who was born this blessed day, a soul!"

Ten minutes later there was nothing left in the outward appearance of this man that was priestly, except the strong, ascetic and yet kindly face that had now taken on an expression of grim resolution. Dressed in a mackinaw coat, and high larrigans over homespun trousers, he paused a moment in front of the hatrack, but finally set on his head a light coonskin cap which he suddenly remembered was much like the one that Pierre wore in cold weather. The priest's last act was to pack a small rucksack with some lunch and a light blanket, in the middle of which he wrapped a good-sized flask, filled with the best of Jamaica rum. Then, with a hurried look at his watch, he turned the key in the outside door, and set his face to the biting northeast wind that bore the icy greetings of the frozen Labrador.

* * * * *

The winter sun, though bright, was getting low as Father Leroy paused on the shore of a little lake in the deep woods and stooped to pick up a tiny bunch of dark hair which he ex-

amined carefully. "Otter!" he murmured to himself. "Pierre is having luck. He knocked that out of the beast in killing it." He had come for the first time on the trail of the trapper, but he noticed that there appeared to be but one track, half covered by the snow, and of much larger footsteps than his own, or of Pierre's, since Pierre's and his were of a size. "Dominique!" muttered the priest. Had the would-be assassin arrived before Pierre and robbed the trap? A careful scrutiny of the surface of the snow dispelled the idea, for there, almost obliterated it is true, but still apparent, was a second trail that told its own tale. "Fool that I am!" said the priest. "There's the trap set again. Dominique wouldn't have troubled to do that. He's following Pierre—that's bad."

As he pushed on, led by Dominique's trail, his reasoning proved to be correct, for the second track became slightly though steadily plainer, and led from trap to trap, all reset, in several of which fur had evidently been found. It was plain that Pierre was having grand good luck on this round, and that, at this rate, he would arrive at Wildcat with a rich booty. At the fourth trap the plunder had evidently got so burdensome that he had stopped to skin the otter, the freezing carcass lying on the trail.

"Dominique will not only satisfy his revenge," murmured Father Leroy, "but his cupidity, too." The priest sat down on a log to reflect, and also to rest, for though he had led a clean and wholesome life and was sturdy of back and limb, such a tramp as this was a strenuous task for a man on the wrong side of fifty, who was not used to cruising the winter woods. "This will never do," he thought. "At this rate I shall arrive long after the murderer has done his work and escaped with his booty." He guessed rightly that the trapping line led round through a well-known chain of small lakes and ponds to a slight height of land, on the other side of which was Wildcat Brook, a considerable stream that flowed south again into Wildcat Lake. Dominique might at any time have abandoned his dogging of his rival, and turned off on a short cut to the cabin, there to await the coming of his certain victim. On the other hand the priest had reason to believe that the halfbreed would stick to his quarry, not being sure where the latter would pass the night, for he had other shacks in outlying sections of the woods. In any case the priest made up his mind that he must get to the cabin first, and then in case no one had yet been there, work back up the Wildcat stream until he met Pierre; for he argued that, as long as Pierre made his way, even indirectly in the direction of the Wildcat cabin, Dominique would postpone his murderous deed, since it would be easiest for him to escape out of the country by going down the Lasouche stream that flowed out of Wildcat, and eventually led to the settlements below. Father Leroy therefore consulted his compass, and then started straight across country in the direction of Wildcat Lake.

It was not long before the good man had reason to regret this course, for it is one thing to follow a trail, even a rough one, through the winter woods, and another to plunge in any given direction straight through the country, negotiating windfalls, half-frozen brooks, thick copses of scrub spruce, with many a pitfall in the treacherous snow. Time and time again he

was obliged to stop and rest, and it is very certain that nothing but the imminence of danger to his friend would have kept him to his plan. Although as a matter of fact hardly an hour was consumed in this hard scramble, he almost despaired of arriving in time. All the greater was his joy when upon emerging, lame and exhausted, upon the little clearing on the shores of Wildcat Lake, where stood the comfortable cabin of Pierre Durand, he saw no sign of life about it, and no trail in the snow leading to it, and in his heart he sent up a prayer of thanksgiving that he had arrived in time. Quickly he entered the cabin and started a fire in the big stone fireplace, and then fetched a kettle of water from the little stream that flowed into the lake by the cabin. He hung it over the flames and sat down to warm himself and wait for the coming of Pierre. But suddenly it occurred to him that his thanksgiving was premature, for how did he know whether Pierre would not be overtaken by the murderous Dominique before he reached the cabin. The terrible idea brought him to his feet in consternation, and he was struggling in very agony to make up his mind whether or not he should rush forth once more and try to reach Pierre before Dominique, when to his great joy he saw through the door, which he had left ajar, the sinewy figure of Pierre striding toward him across the clearing with a heavy bundle of fur on his back. As the trapper caught sight of the open door and the smoke curling from the chimney above, he stopped short in astonishment, but recovered himself in a moment and strode into the cabin.

Good Father Leroy was so overcome with fatigue, as well as emotion, that he could scarcely stammer a word.

"Thank God you have come, my dear son!" he finally managed to gasp out, and without saying more, he closed the door and bolted it on the inside. Meanwhile Pierre was extremely mystified, not only by Father Leroy's actions, but by the very fact that the old priest, who Pierre knew had celebrated the mass that very noon should be found here in this far-off cabin in the woods and on such a day. Father Leroy was too excited for the moment to explain his appearance. He had but one thought—to save his young friend. Without further ado he dragged Pierre away from the window and made him sit down upon a settle in the far corner of the cabin. Then he asked: "Have you candles, my son?"

"Yes, Father," replied the wondering Pierre. "Up there on the shelf."

The priest placed two candles upon the rough
(Continued on page 798.)

The Caribou Barrens of Newfoundland—IV.

Pictures and Text by the "Judge."

FOUR VIEWS TAKEN BY THE JUDGE.

COMMENTING upon our favorable situation, with plenty of wood and water, said Lionel: "This would just suit old Esau, the trapper; so long he's got meat an' tea he's camp wherever he's fin' an oat sack to stick he's head into." Lionel declared he could camp out without any tools whatever if he had only a pan in which to bake bread. Ralph thereupon guaranteed to bake bread without implements if Lionel would make tea without cup or kettle.

Accepting the challenge, Lionel got a piece of birch bark, bent up the corners to make a dish, set it neatly up on stones banked about with clay, put water and tea into it, and built beneath it a small fire. The tea boiled handsomely, the fire being unable to get around the stones and clay and attack the dry birch bark.

It being now up to Ralph to produce bread without tools, he made a birch bark dish, mixed his dough in it with a stick, pulled it out into a long white snake, which he wound neatly around a freshly peeled pole. This he laid on two crotched sticks before the fire, and by rotating it constantly produced a beautiful brown twisted bread stick.

The evening came on, clear, blue, cold and beautiful. Lionel climbed a high dead pine to spy across the bog, and then reported that a stag was following along the edges of the woods about a thousand yards from camp. Bob and I made haste to seek him, taking along a camera, but at five hundred yards the glasses showed him to possess only a twenty-point head, though his horns were well peeled and polished. Leaving Bob, I crawled across the bog toward him, taking advantage of every little hummock, and finally by means of a small shrub getting up within thirty yards of him. Nearer approach being impossible, I exposed

the film. At the click he changed instantly from a very domestic cow-like looking creature into a wild beast, alert and thoroughly alarmed. Another click, and he sprang away for a dozen yards. I uttered two or three low rough grunts and saw the hair raise upon his shoulders. Shaking his head, he charged up to within fifteen or twenty yards of the bush, but would not come nearer, and finally made off at top speed.

We put in two days of reconnaissance about the bogs, great and small, which ran in and out among the peninsulas of spruce about camp. The weather remained clear, the nights were cold, with the stars all out. Mount Peyton was due compass north, true north appeared to be about 22 degrees east of compass north. Lionel left to go down again to main camp. Upon being pressed for a prophecy as to the weather, he looked the sky over, smelled of the wind, and finally opined: "P'r'aps rain, mebbe so snow, prob'ly fine day, I'm not know."

Followed an ideal week upon the high bogs of Newfoundland. I quote from my diary:

"Monday.—Two big stags and a small one crossed the bog northwest of camp last evening at sunset, but the horns of the largest, while large, had thin tops, and so we spared him. Bob and I off northeast early to-day, on to a great big bog, seeing first thing a doe and very white fawn, very cautious, the doe. We watched the bog from a white rocky mound. The sun shone brilliantly, creating thin wavering heat waves across the bog, and making it difficult to use the glasses.

"About noon Bob thought he spied a band of deer about two miles southeast down the bog. I doubted it, concluding that it was

merely spots of white moss or stones. An hour later Bob said: 'That is certainly deer; the grouping has changed,' and I was obliged to agree with him. So we made off down the bog, and finally, arriving within five hundred yards, made a careful crawl through the caribou leads up nearly to the edge of a little plateau upon which the deer lay. Nearest to us was a doe. She finally rose. I could just see over the edge of the bog the tip of a great red horn. Crawling ten yards further, I could see half the horn and the round white side of a big stag. Another doe got up. Lying very close and pushing along with my toes, I could see that there was indeed a big stag, with a fine head, lying asleep back toward me, his head twisted awkwardly over by the great horns. Two more does got up and began to walk about nervously. I rose then, turned around and sat up, with my rifle upon my knees. The does made off, but still the great stag lay there asleep, seventy-five yards away. Bob broke a stick, then whistled, then shouted, and still the old fellow snored along. Then we both shouted at him to wake up and look out for his harem, which had decampel in toto, but he minded us not.

"Then I made a number of wrong moves. I crawled up fifteen or twenty yards nearer, then got up and ran in toward him. Bob called to me sharply, and it occurred to me that possibly I might get in so near that he would attack me if wounded. Fearful of breaking his horns, I shot quartering into his rump, expecting to break his back, but to my astonishment he sprang to his feet and started away; then, half falling, I thought he was down, but he got up and started off again, and I shot him again. He half fell, but got up once more and went on; just as I fired again, he stumbled in a soft place, and I missed him. A little rise obscured him, and I missed him again, expecting every moment to see him fall down; but he got away, with his left hip going down at every jump.

"It really seemed incredible that such a thing could happen. I must have shot him through the fleshy part of the hip, without breaking the bone. His left hind foot struck out of the trail at every jump, and we followed him for a full mile, expecting all the while to find him dead, but without success. I was intensely mortified and chagrined, and we both returned to camp feeling mighty blue. Fourteen deer seen to-day.

"Tuesday.—Bob, Ralph and I off early to pick up trail of the wounded deer. Several deer on the bog, one pretty good stag, not quite good enough the glasses say, his horns curved partly in and very red. Nine deer seen up to noon. I slept but little last night, tortured by visions of that wounded stag, which Bob declares carried a forty-point head. The boys tracked him two miles and then were obliged to give up, hoping that he might work out on to the bog again before the end of the month. Upon thinking it over more carefully,

Bob concluded that he must have had a fifty-point head, and after further thought was of the firm conviction that this was the finest head he had seen in Newfoundland in ten years; all of which of course made me feel very happy indeed.

"After lunch we ran into three ptarmigan, of which Ralph shot two with the little .22 rifle. They appear to be the same willow ptarmigan as those which are found in British Columbia, though the throats of the males do not seem quite so rich and strong a rufous brown. A big stag was way down the bog two miles off at 3 P. M., but we could not see his horns. Twelve deer seen to-day.

"Wednesday.—Bob has gone off to spot out a line to a still higher bog off south, which he has seen the edges of by climbing a tree. A good tree climber, Bob, as is also Lionel, who at the slightest provocation swarms up a tree like a bear cub. Ralph and I watch 'our' bog near camp, and see a young stag drinking at

nine times out of ten. Bob tells me that he once shot a four-year-old stag with a .22 automatic, killing him with two shots through the fore ribs into the lungs.

"To-day a southwest wind, the blue sky very deep, flecked with scattering white clouds, and a clear rim of purple horizon all around. A great sweep of green forest falls away to the north, thirty miles, to where Mount Peyton rears his bald summit against the sky. Ducks are passing overhead, the loons traveling and calling wildly. From afar comes the honk of geese, and about the little ponds the merry whistle of plover. Bob in at 4 P. M., reports fourteen deer, including a good stag. Total seen to-day, sixteen deer.

"Thursday.—A clear sunrise, and an early start. Several does and fawns about, their coats glittering in the frosty early morning. From a little island of white stones rising above the bog we spy the red horns of a great white-throated stag, and soon he comes out

"Friday.—The wind has gotten around into the northeast, and deer seem scarce. Only one doe seen up to noon. In the afternoon three stags came out upon the bog, but all with poor heads. Upon returning to camp we find that Lionel has come in from below and made a fine suet pudding. He says one never sees many deer when the wind is in the northeast. Ralph has gone down to main camp for a fresh supply of grub. It came on to rain at dark.

"Saturday.—Lionel up at four-thirty, has combed his hair with a dry bough, and built a fire to dry us out after a night of heavy rain. Says he left the canoes 'close hauled up in a spruce alder bed, and all tight.' Ralph is back, and he and Lionel make off southerly to scout the high bog, while Bob and I go easterly, to our little white Spion Kop again. We photographed a two-year-old stag at thirty feet. Saw a very big doe way down the bog, but no other deer.

"We crossed the bog and climbed up through the timber by Bob's blaze marks, on to the very high bog, and jumped a big stag, which I wounded with a quick shot, just clipping the skin across his neck. We tracked him a mile and lost him.

"Coming out on to a very high point, six fine ptarmigan sat huddled together in the lee of a great rock out of the wind, all in fine plumage. From this point we could see miles upon miles of rolling bog and lakes, with here and there a deer, but no big stags. A lot of rain, altogether a cold, sloppy day. We arrived at camp as the storm increased, the wind and smoke whirling around the cooking outfit and into the tent, while Ralph wrestled with the frying-pan and rubbed the smoke from his eyes.

"Ze wind she blow from nor', eas', sou',
Ze wes' win' she blow, too,
Ze cook he's say, 'Monsieur Capitaine,
Monsieur, vat shall I do?'"

"At dusk a big flock of geese, storm-tossed, tumbled out of the fog into our little bog, honking loudly. Lionel predicted that they would 'bawl all night,' which in fact they did, departing, however, before breakfast without paying for their lodging the toll we had vowed to exact."

Thus the days passed. Ralph and Lionel went down to main camp again for grub and for my other boots, for whichever boots one happens to have in Newfoundland, he always seems to wish to have his others.

We had not come nearly to the end of our September season, and while I had two fair heads, we had not yet got the great head for which we had hoped and worked, so Bob was feeling rather blue as we made off again for the big bog easterly from camp and settled down upon our little island of white rocks to watch. It was very raw and cold. We built a low fire among the rocks in the lee of the little island and spent some hours there, spying across the wide expanse of marsh, making an occasional sally forth from our stronghold after wood; wrenching up the tiny dead spruces, rotten at the ground, but dry and hard as bone in the air. I cut off the trunk of one of them with my small pack ax where it was about 2½ inches in diameter, to count the annual growth rings, and as nearly as I could estimate, there were 230 of them. For over two hundred years

SPYING FOR CARIBOU.

10 A. M. I am just beginning to be able to think of that sleeping stag and the whole miserable business without sickening rehearsal of the scene, and fruitless wishes that I might only have the chance over again. It was surely a beautiful head, and might be mine right here in camp now, if only, etc., etc., etc. To extract and to resolutely forget the sting, and to read and learn well the lesson of experience, that is the problem, as in all defeats and misfortunes of life. Now for the lesson.

"A great brute like this, lying down, muscles bunched, fat rolled over haunches, makes a bad mark for a fatal shot. His bones are all slipped into unnatural positions and covered with heavy rolls of flesh. Make him stand up, and when he does, give him the shoulder shot. He has got to come down when he is shot through the shoulder; or shoot him through the lungs and he cannot possibly go over fifty yards. Shot through the shoulder, he is bound to drop in his tracks, for he is broken in two and cannot move. Shot through the lungs, his pipes will choke up with blood the moment he starts to jump. Of course, a shot in the neck is fatal, or one straight into the middle of the rump, raking him fore and aft, but the shoulder or lung shot is the safest,

upon the bog a thousand yards away. A long crawl shows very thin tops. I decided upon a picture, and give Bob the rifle. The day turns warm. We 'bile the kettle.' A big flock of ptarmigan gets up near Little Dead Wolf River as we come down the bog, and the .22 automatic which Bob carries accounts for four of them. A big flock of black duck pitches down into a pond, and after a long, careful crawl the .22 adds two of these fine fowl to our bag. Said Bob: 'That's the finest bird that flies in Newfoundland.'

"Down the long bog comes a stag, mighty, but with thin horns. I crawl into a favorable position with the camera, and he passes within thirty yards of me, his dew claws clicking together. When a band of deer are passing near the click of their dew claws is clearly audible at 100 yards, sounding like the rattling of small castanets.

"Back to our white little, tight little, stony bog island, and then home to camp, a two-mile tramp in the falling shadows. Venison steak and rice pudding for supper, then the delicious fragrance of tobacco, and such wonderful sleep before the great snapping fire, while the stars glitter and the northern lights flash up across the heavens.

that tiny tree had grown there, and the Lord only knows how much longer it had been dead, hardening and whitening there on that rocky, wind-swept little bog island. This dead spruce makes a wonderful bed of coals over which to "bile the kettle" and broil the bacon at noon time, and the green spruce makes a first-class fire, aside from its tendency to crackle and throw big sparks toward the little paraffined cotton tent. There is no birch wood up here among the high bogs.

Bob complained of the scarcity of deer, ascribing it to the lateness of the season, for the warm weather was only now well over, and the little maples scattered about the edges of the bog just beginning to redden; Bob said they should have turned a month since. The hardwood ridges along the hillsides were still all green.

A doe came up the wind within 100 yards of our ambush, and I crawled out to take her picture. Then about twenty yards apart came three does, each with a fawn, all coming out of the far end of the bog at the northeast and crossing southwest, straight up the wind. After a lunch of corn bread, broiled bacon and tea, I snuggled down by the fire to read a little leather-bound volume of "The Pirate," which was in the pack-sack.

About four o'clock Bob suddenly exclaimed: "I see three does running a mile away across Little Dead Wolf." The glasses showed a fourth, then a stag pursuing them, and then another; a good head. Taking only the rifle, we made a hard mile run toward a point which they must surely pass if coming up the wind, occasionally sinking down into the soft wet moss up to our hips; I arrived at the desired point entirely winded.

Ten minutes' waiting, and we saw them coming up from the river, having crossed it and come straight up the wind, as we had expected. The does were leading and stopped to feed, the big stag following and the smaller one coming up behind. As he approached, the old fellow turned and rushed at him, and they locked horns, pushing back and forth until the youngster, becoming discouraged, fell back, narrowly escaping a savage thrust from the master.

I crawled to within 120 yards, then, fearing that an eddy of the wind might carry a scent to the deer, sat up, and with rifle upon my knees, shot the big stag through the lungs. He took only one step and stood swaying back and forth, as if hit with a sledge, then plunged forward on to the moss, dead. Bob won in the 100 yard dash which followed, and as I came up, cried out: "Hooray for a very beautiful head!" His horns were beautifully matched, with very sharp points all over, and splendid brows of six points each, one middle point rising straight above his head like the horn of a unicorn. These horns were not red, as had been those of the other stags, but very yellow. The boys said that he was a stag in perfect condition, right in his prime, and had lived high up about the edges of the bogs, rubbing his horns on the small firs, which stained them a bright yellow. The red stain is characteristic of the deer which rub their horns in the alder thickets lower down, as most of them do.

This was a "saddle back" stag, white upon the rump and neck and belly, but brown upon

back and sides. There is a tradition among the natives of Newfoundland that the saddle back stags always carry the biggest heads, and certainly it held good in this instance at all events. Said Bob: "You will hunt Newfoundland for many a day before getting another head so handsome as that in every way."

He went back for the camera, and after taking pictures and the measurements, we returned to camp with the head and a supply of fresh meat, arriving there at dark. Every one very happy now; "it's funny what a difference just a few hours make." "A really universally pretty head," says Lionel.

It rained in torrents during the night. Just what we needed to put the river up again. It was clear starlight at breakfast time, and the sun rose into a cloudless blue sky as we took the trail, Lionel for the head and the fresh

foxes often visited such carcasses, although he had known but one bear to do so. We were always sure to see upon this bog a few deer, perhaps a doe walking along up wind, stopping to look back every fifty or sixty yards, as most of them do; or a couple of stags grazing at the edge of the moss. Ptarmigan were not plentiful, as they are said to be in some other parts of the island, although we would see a small flock every day or two. These birds object to the camera. They will not shoo along over the mossy hummocks and look pleasant, as their relatives do among the rocks of British Columbia. Dozens of dropped horns were found all over these bogs, some of them gnawed by the mice, but many of them in almost perfect condition.

It began to rain a part of every day. There was a good big duck puddle in the fire

THE POND STAG.

meat, which we were glad enough to get, the rest of us to spend the day way up on the high bog. All nature, as well as our own views of life, had changed in twenty-four hours.

"From grave to gay,
From somber to serene."

I had obtained all the heads allowed by my license, but hoped for a chance to get some photographs of deer in bands. Usually by the end of September the deer are banded up into herds of ten, fifteen or twenty. The September movement of deer is not a migration, but an up-wind working from the lowlands into the highlands. The migration of deer in herds of from twenty to one hundred, does, fawns and young stags together, big stags in bands apart, occurs after the rutting season, toward the end of October.

We had poor luck with the camera these last two or three days before breaking camp, but it was good fun prowling around and watching the deer. The rheumatism and insomnia with which I had been afflicted the first few days after we left the railroad had all departed, I had picked up weight, and the outdoor life was a constant joy.

We watched the carcass of our last deer for a few hours every day, for Bob said that

hole in front of the tent, and everything got quite sloppy around camp. Finally after a tremendous downpour of rain all night we awoke one morning to consider the canoes. Was it possible that they had not been pulled up far enough into the thicket? Could the river have come up three or four feet and carried them away? We began to feel decidedly uncomfortable in contemplation of the consequences, and Lionel took a load of duffle and made off down the river without breakfast.

While Ralph got breakfast, it rained furiously, and as we finished breaking camp, all the spigots of heaven were pulled wide open, lightning flashed, thunder rolled, and the water descended in pails full. Slipping and splashing across the bog and down the blazed trail, across the high, wet benches, through the alder beds to the river, we were glad to find the canoes safe high up on the bank, with Lionel contentedly smoking his pipe under one of them. We made the trip down stream to head camp in a few minutes, built a big fire and were soon outside of a fine hot lunch.

[TO BE CONCLUDED.]

On the things that every sportsman should know and think about, FOREST AND STREAM is honest, frank and independent.

Old Fusee

By W. H. EDDY

"GOING to take the old gun along this time?" "Yes; thought I would give her a whiff of salt air once more. You know she had a reputation years ago for close and hard shooting."

"That's right. Many a goose and several deer have been credited to her, and I reckon she can still deliver the goods if you fellows haven't forgotten how to load a muzzleloader, seeing as all you have to do with your new-fangled breechloaders is to press a button, so to speak, and let the machinery talk. No call for judgment like the old-timers needed to get results."

Thus it happened that when Captain "Nick" boarded a certain staunch sloop-rigged boat very

to say nothing of shellfish *au naturel*, were not to be despised.

The old gun was the subject of considerable jest and merriment, and was promptly christened "Old Fusee." Her awkward looking hammers seemed strangely in the way as she was tucked into the sneak box, but when being loaded with the shiny black grains and the wads sent down the barrels with a sharp "ting," followed by the rattle of the coarse pellets and the seating of the final wad, and then carefully capped with Ely's best, at least one member of the party recalled the time when he could shoot better than he ever will again. And there are others.

Although "Old Fusee" had accounted for two brant out of a distant flock on her very first

ging of the boat, so that a fair showing was assured. It was decided to put out decoys once more, so an early start was made, this time to a sedge island point, and concealment being made by piling seaweed on the sneak boxes. Large bodies of brant were feeding in the coves on either side, but the day proved still and calm, and all the party concluded it would be a blank. Well along in the morning a neighboring gunner, with the best of intentions for his mates, waded out on the flats and routed the feeding brant. Instead of doing as he evidently anticipated, the contrary brant swung to the south and the air seemed full of cackling and c-r-r-onking birds. A bunch of possibly forty caught sight of the decoys and came in nicely, and after

CAPTAIN NICK.

OLD FUSEE AND THE EVIDENCE.

ON THE SANDBAR.

early one morning in November, 1912, he carried besides his trim and up-to-date hammerless an old-time "charcoal burner." With three boon companions he was bound down the bay for at least ten days' vacation, and hoped to bring back enough wildfowl, particularly brant, to give his friends and neighbors their annual treat.

As the breeze that day was very light, it was nearly sundown when the boat with four gunning skiffs or sneak boxes in tow reached its anchorage in a safe and convenient location near several islands and gunning points.

Then followed days of solid enjoyment for these "boys," as they still like to call themselves, even though the years have brought gray locks and slowed up the work with oars and putting out decoys. As their chief desire was to outwit the wary brant, much hard work had to be done in shoveling places to bury the sneak boxes on sandbars. Then the rising or falling tide would necessitate a repetition of this work, so none complained of lack of exercise. If the day proved still and calm, no effort was made to deceive the wildfowl, but instead journeys were made over the flats after clams and oysters, and the savory chowders and stews that resulted,

test, her guardian often left her behind when he would start long before daylight for some sandbar or point. One day in particular he regretted this fact and longed for the old gun and her heavy load of big shot. It was shortly after sunrise, and the four sneak boxes were well hidden away on a sandbar. Looking up the bay, a flock of nine swan was seen slowly winging their way southward. If they should hold their course they would pass almost directly overhead, so there was a hurried scramble to substitute shells of BBs for the smaller sizes. As the swans neared the sandbar, they swung to the westward and passed at a distance of a good seventy-five yards. The salute from the hidden gunners was unanimous, but though the patter of shot against the big birds sounded somewhat like that heard when a load is fired at a barn door, none of the arguments was convincing. Then someone said: "That was a chance for 'Old Fusee'." "Right you are!" replied Captain "Nick," "and I'll see that she is on the job next time."

The days passed all too quickly, and it was time to think of returning home. Some fifty brant and a larger number of blackducks, broadbills and a pair of canvasbacks hung in the rig-

the excitement was over, ten of their number were gathered. Later on a smaller flock sought to be sociable and five remained with the gunners. Then an occasional blackduck would pay the penalty for "butting in," and so the total reached sixteen brant, ten blackducks and a broadbill.

All had quieted down, when one of the party chanced to glance over his shoulder and then exclaimed: "Look out, boys, here come some swan right in the glare of the sun!" All kept well down and reached for shells of coarse stuff, but only one succeeded in making the substitution before it was seen that the swan were six "honkers" and were swinging wide and high, fully eighty-five yards away. The gunner who had changed shells sent his compliments, but the spiteful crack of the nitro was of no avail.

Then Captain "Nick" reached for the old gun, and as the boom of the black powder sounded over the bay, one of the Canadas gracefully planed down and struck the water like a man overboard. Something very like a war whoop came from Captain "Nick" as he shouted: "How about 'Old Fusee,' now?"

"Old Fusee" had "come back."

Indiana Nature Notes

By F. L. PURDY

IT is probable that the uninformed are of the opinion that nothing of moment comes out of Indiana but the productions of "them literary fellers." This is a serious mistake. We have other claims to fame, although we are compelled to admit, for the sake of sterling truth, that some of them are based on fiction.

In Indiana this is the open season for fish and snake stories, and the cleaning up is one to stagger the record. Take the contribution of Mrs. Grace Enos, for instance. She lives down St. Paul way, not far from the famed Flatrock River. In due course of her domestic duties she placed a batch of fine eggs under a faithful and motherly pullet and the latter confidently began the task nature vouchsafed as her portion. One

coaxed them with red pepper and meat and various mixed foods, but nary an egg. The other day she wandered into the hennery, and there met face to face a large snake. Mr. Bennett came quickly on call, and after killing the snake found twenty-four eggs in its stomach.

Mrs. Catherine Swafford, south of Milton, heard a commotion among her turkeys, and hastening to the orchard she was confronted by a snake. She seized a fence rail and killed the snake. It was six feet eight inches long, but it had not swallowed any of the turkeys as yet.

Farmer Ben Perry, down near Columbus, started across one of his fields to see what his hired man was doing with a plow, when a swarm

prove the time-worn theory that the blacksnake never attacks a person.

George Givan, of Lawrenceburg, comes on the scene with a story that is worth while. He pulled a water moccasin out of the Ohio River, opened it and found a catfish in its stomach at least—at least, mind you—six inches long. And right on Givan's heels was Charles Wolff, a wharfmaster, who killed a hissing adder three feet long on the wharf.

And there are fish, too! Little Charlie Mayhall went fishing in the waterworks lake at Oakland City the other day and he hooked a bass. And the bass pulled little Charlie into the lake. His rescue was accomplished with difficulty and the bass ran off with the line and pole.

A HOME MADE SPOON FROM INDIANA.

day she left her nest in quest of food and a dust bath, and during her absence a blacksnake invaded the nest and proceeded to absorb the eggs one after another. Like one who has feasted overmuch, drowsiness seized the snake and he cuddled up in the nest and fell asleep. In a short time the hen returned to take up her duties and saw the snake. Did she cackle and fly away? She did not. Did she fly at the snake and beat it with her wings and pick it? She did not. She gave herself over to sober cogitation, the result of which was that she concluded the eggs were inside the snake and she could serve the purpose of her nature and her mistress by sitting on the snake. She settled herself over the invader and thus Mrs. Enos found her. The lady soon discovered the presence of the snake and hastily called the hired man who killed the snake. The reptile was five feet two inches long and the eggs were found in its stomach. Here the chronicler of this tale stops, and it is not known whether or not the eggs were replaced under the pullet.

Then there is the experience of Mrs. Samuel Bennett, who lives over near Bedford in the region of the great stone quarries. Mrs. Bennett discovered that her hens had apparently ceased to take an interest in laying eggs. She

of bees attacked him and drove him to the tall alfalfa to nurse various contusions. Awaiting the abatement of the bees' anger, he again crossed the field and there found an enormous blue racer coiled around the blade of the plow and emitting threatening hisses. Again Mr. Perry sprinted. After giving the snake ample time to go about its business, Perry and the hired man, who had also fled, returned to the plow and there they found his snakeship as full of fight as ever. They succeeded in giving the racer his quietus, but the length of this hideous monster is not a matter of veracious record.

Mrs. Swafford, of Milton, again came to the fore at this point. This time her chickens were acting in an unseemly manner, and she went forth to reprove them. It was a snake, and having heard her, it fled. She seized a club and killed it. It was five feet seven inches long and measured five inches around the body.

Marion Keaton, who runs a ferry across the Ohio River at Lawrenceburg, started his little launch, and instantly a "monster" blacksnake swam angrily out from under the treadles. Mr. Keaton knew that trouble was imminent, and seized a board and hurled it at the snake, breaking its back. It measured seven feet two inches. Of course this truthful tale is expected to dis-

Near Evansville, Grover C. Maunie went fishing on the banks of the Wabash and he caught a catfish that weighed eighty-two pounds. He would have admitted it had it weighed twice as much.

But talking about fish, up at Wabash during the recent high water they found and captured a lot of enormous carp on the interurban track. They had lodged between the rails, but they had not flipped a car off the track with their tails during their stay there. And in the same town—right in Carroll street—carp were discovered in the overflow water. A genius with an automobile drove his machine through the shallow water and the carp, in order to escape the wheels, flopped out of the water and were picked up by the chauffeur.

Irwin Smith, of Wabash, went fishing in the Mississinewa and cheerfully admits that he caught a carp weighing twenty-three pounds. He tells a beautiful and thrilling story of his twenty-minute fight with a monster of the deep. When the fish was measured, it was found to be thirty-two inches long, three inches between the eyes, its head was eight inches long and its body thirteen inches wide. It contained six pounds of eggs.

Harry Felty, of Garrett, went fishing at Lake

Wawasee, off Buttermilk Point. Harry felt a tug at his line and in a moment he landed a little brown jug. He went ashore and broke the jug over a log and found in it a large catfish. If you don't believe it, he will show you the log whereon he broke the jug.

Let us get back to snakes. Uncle Joe Roseman, of Vincennes, went up to Otter Pond with a borrowed rod to fish. He caught one, and while he was busily engaged in landing the fish, he failed to notice a large water moccasin swimming directly toward the boat. When he did discover the snake, he dropped his borrowed rod overboard and seized a paddle. The snake thrust its head over the side of the boat and struck at Uncle Joe several times, but the fisherman was protected by his rubber. He finally hit the snake a resounding thwack with the paddle and the reptile started for shore. Uncle Joe says the snake was six feet long. This also disproves the claim made by the nature fakirs to the effect that the water moccasin will not attack persons, and we might just as well begin now as any time to revise our ideas about Indiana snakes at least.

Just to round out the story and at the same time pulverize the nature books, this little tale of a poll parrot, twenty-five years of age, is offered in evidence. Poll belongs to C. C. Rada-baugh, of Muncie, and is kept isolated in a cage. A few days ago the bird laid an egg in the cage. Since it has been the accepted theory that parrots do not lay eggs in captivity, and that there is an age limit, the presence of this particular egg in the Muncie cage can only be accounted for on the theory that Poll, being a very intelligent bird, decided to smash a record.

These stories are told merely for the purpose of getting the truth before the people and demonstrating that even in a "dry" State things are likely to happen.

FOREST AND STREAM endeavors to speak fearlessly without partisanship on all questions affecting the sportsman's welfare.

JAMES HENRY RICE, JR., CHIEF GAME WARDEN OF SOUTH CAROLINA.

NATURAL HISTORY

Practical Points About Attracting Birds

The Birds' Christmas Tree.

BY E. H. FORBUSH, STATE ORNITHOLOGIST OF MASSACHUSETTS.

MANY people who try to attract birds about their homes fail in their efforts, not because their methods are wrong, but because they lack that practical knowledge of small details that often makes the difference between success and failure in this as well as in many of the larger undertakings of life. It is the object of these articles in a measure to supply these details.

It should be understood at the outset that such foods as we may be able to offer birds will be used by them mainly as a makeshift at times when their natural food supply is short, and for this reason when we begin feeding, the supply must be constant during the winter months or we shall fail to accomplish our object. The birds may desert our artificial feeding places during fine weather, but if the supply is kept up and in the right way, they will surely find it in inclement weather when they most need it.

The objection so often urged that in feeding the birds we shall pauperize them should have no weight, as insect-eating birds always prefer their natural food to anything that we may be able to supply them; but by feeding birds in winter we may save their lives at times when snow and ice have covered their natural food supply.

No one living in the country districts is so poor that he cannot feed the birds, for if nothing else offers, chaff, hayseed, meat trimmings and scraps will answer every purpose. If the trimmings are all utilized in the home, it is a poor butcher who will not give the children a few scraps or bones now and then to feed the birds. There is food enough wasted in this country every year to save from starvation ten times as many birds as winter with us.

It is one of the joys of winter in the country to watch the birds about the farm house, but unless they are attracted there by feeding in the right way, they will not come. Feeding should begin in October or November, so that migratory birds may make the place their winter home. Hayseed and chaff may be scattered about the yard on the sheltered sunny side of the buildings or under an open shed facing to the south.

Scratching sheds for poultry make excellent feeding places for the birds, for they will always find there some weed seeds or fine particles of grain that the hens have missed. Bits of suet, bones broken to expose the marrow, or fat pork may be used to attract woodpeckers, nuthatches and chickadees. These may be tied to the branches of the orchard or shade trees about the house, and if the fat or suet is likely to be carried off by cats, dogs, crows, squirrels or jays, it may be wound about with twine or covered with "cellar wire" netting so that the birds can peck it out piecemeal and nothing can carry it away bodily. The birds finding these tidbits in

their excursions about the neighborhood will begin to nip at them occasionally, meanwhile feeding mainly on hibernating insect pests.

But we shall hardly accomplish all we set out to do unless we can find some way to attract the birds to our very windows where we can watch their cunning ways. To do this we must gradually draw in our feeding stations until these feathered neighbors gather around the house. There by right methods we may soon teach them to come wherever we want them. A feeding shelf, about 2 by 4 feet, may be put upon a post in the yard out of the reach of cats, a little evergreen tree may be erected upon it, hayseed may be scattered upon the shelf and suet, doughnuts, nuts, etc., may be tied upon the tree until all the birds have learned to come to it, when the other feeding places may be gradually discontinued and this one made permanent. It is even better to have the shelf put up at a window sill on the sunny side of the house where it may be reached by merely opening the window. Then it is easy to put out food, brush away the snow and keep the food always ready for the birds. If, as is sometimes the case, the birds do not quickly find the tree, or fear to come so close to the house, a feeding place may be established on top of a large box near a tree on which the birds have become accustomed to feed, and when the birds have found the new supply, it may be moved nearer the window day by day and finally replaced by the window shelf. Under kind and careful treatment the birds will soon become so tame that one may sit by the window and watch them as they feed, and on cold snowy winter mornings quite a little flock will make themselves at home at the window shelf and tree.

Unless the food table can be kept well tended it is better to have a little permanent structure under a roof where snow and ice cannot accumulate, and where no food will be wasted. Such little food houses are used, both by individuals and States in Germany for feeding the birds. These German States have found that it is money well invested to provide food houses in the parks and the State forests.

The New Little Chief Hare from Colorado.

IN the Bulletin of the American Museum of Natural History, Volume XXXI., Dr. J. A. Allen describes a new little chief hare from Pagado Peak, Colorado, which differs—in coloration only—from the better known little chief hare *Ochotona saxatilis*. Dr. Allen calls the new form *O. figginsi*.

Mr. Figgins, the collector, states that this rock rabbit form has quite a different note from those found above the main divide.

OTHER magazines may come, other magazines may go, but FOREST AND STREAM must go, if not forever, at least so long as past and present superiority continues.

Recent Extinction of Muskox in Alaska.

IN modern times the muskox has been believed to be peculiar to the Barren lands of North America lying between the Mackenzie River and the Atlantic Coast. Anciently it was a species of circumpolar distribution, and in Glacial time was found well south in North America—say as far as the Ohio River.

So far as known no specimens have ever been taken in Alaska or in the country west of the Mackenzie River by white men. On the other hand, bones, which do not appear very ancient, have very frequently been found in Alaska.

In 1829 Richardson stated that the Indians reported that the flat country west of the Rocky Mountains—Yukon Territory and Alaska—was inhabited by the muskox and reindeer.

It is certain that the Alaska Eskimo of modern times know the muskox well, and call it by nearly the same name as the Eastern Eskimo, but do not appear to have seen it. They declare, however, that their fathers used to kill muskox in that country.

All this and much more is brought out by Dr. J. A. Allen in commenting on a letter about the muskox received from Vilhjalmur Stefansson, who has just returned from a four years' exploration in the Arctic, during which he made many discoveries of extraordinary interest and incidentally suffered great hardships.

Stefansson brought back to the museum many specimens, among which were remains of muskox. Concerning these, he has written to Dr. Allen, giving the sources of his information as follows:

"Information secured from natives and white residents in Alaska: During the winter 1899-1900 there died at Cape Smythe (or near there) the Eskimo man called Mangi by the whalers (probably Mangilanna). He was the last to die of Cape Smythe (Point Barrow) natives who had seen live muskoxen in that vicinity. He was probably born between 1845 and 1850, as he was able to remember Maguire's visit to Point Barrow. A few years after Maguire's time—perhaps therefore about 1858—there was scarcity of food in winter at Cape Smythe. Mangi's father then went inland looking for caribou, and some distance up the Kunk River, which flows into Wainwright's Inlet, they fell in with a band of thirteen muskoxen and killed them all. Since then no one near Point Barrow is known to have killed muskoxen or seen them.

"There are many places inland from Point Barrow where muskox skulls and bones are abundant. As these are heavy and there is no market for them locally, few are brought to the coast. Our party secured one skull only.

"Information based on specimens: While digging in an old house ruin about fifteen miles

southwest along the coast from Cape Smythe an Eskimo last summer (1912) found a muskox skin and brought it to me for sale. It is in the Point Barrow collection which has just arrived at the Museum, but has not yet been unpacked. Another Eskimo found a smaller piece of skin in another house which I believe to be of a muskox, though its badly decayed conditions makes it difficult to say positively that it is not the skin of the barren ground bear."

Our Narrow Escape from a Fish-Like Existence.

BY W. J. MURRAY.

ASSUMING the correctness of the nebular

MUSKOX IN THE BRONX ZOO.

Photograph copyright by New York Zoological Society.

theory of the origin of worlds as set forth by Newton and Laplace, it follows that this earth of ours formed at one time an integral portion of the sun when in its primal and fiery nebulous condition before the earth was cast off as a ring from the rotating solar mass.

When this event took place many millions of years ago—estimated by some physicists and astronomers as not much less than one hundred millions—the earth must have started on its separate career as an independent planet in a fiery incandescent condition and must have gone through a gradual process of cooling during the whole of the azoic or lifeless period of its history.

In this natural grading of temperature a stage was reached where under a special set of conditions, chemical, thermal, electrical, aqueous, etc., the passage from the inorganic to the organic, from non-living to living matter, was brought about. But previous to this stage, however, the heat of the earth was too great to support life, even in its most lowly form.

Water is a first essential to the formation and the maintenance of life, and it was only after the enveloping vapors of the earth had cooled down and had fallen in the form of rain that the development of life became possible.

When the first faint throb of life appeared in the lukewarm lagoons and shallow margins

of the Laurentian seas, the ductile and plastic germs of life became subject to the operative laws of evolution and entered on the world's vast struggle for existence and for survivorship in the race of life.

It is estimated that there is a sufficient quantity of water contained in all the seas to cover the whole earth to the depth of an English mile, provided there were no inequalities on its surface; that is to say, if it were quite even and smooth like a billiard ball. In such a case it is evident that there could have been no dry land at all, and hence life could only have been developed on an aquatic basis, along fish lines.

Suppose that the earth in cooling contracted uniformly, as for anything we could tell to the contrary it might well have done, then of course there could not have been any land animals at all. This apparent possibility was, however, averted by the fortuitous fact that incidentally to the cooling and shrinking of the earth, inequalities arose on its surface, such as mountains and valleys, hills and hollows, in the same manner that an apple shrinks when stored in the cellar, leaving wrinkles on its surface.

This process brought about the appearance of dry land on the earth, but only to a comparatively limited extent, as three-quarters of its surface are still covered with water.

The strange and weird feeling induced by these reflections is somewhat mingled—surprise that our fate hung on such a slender thread and a sense of satisfaction that we escaped after all, although at the earth's beginning the chances would appear to have been as much as three to one against our ever being land dwellers at all.

Of course it is impossible to say what the human race, living an aquatic existence, might have been able to achieve in such a strange environment. Quite possibly we might have had an opportunity of playing some useful part and even to make our lives sublime in the regions swayed by the scepter of Neptune, but even the most restless and daring adventurous spirit among us, if he had the opportunity, would most likely be quite content to leave such possibilities to the imagination only, rather than sever his connection with his old habitat, terra firma.

Altogether it would appear, from a naturalistic standpoint, that our escape from a fish-like state of existence has been a very narrow one indeed. It is happily, however, a case of "all's well that ends well."

Paul Smith Dead.

PAUL SMITH, known to everybody who knows the Adirondacks, died on Dec. 15 in Montreal, at the age of eighty-seven years. He was born in Milton, Vt., and took up the life of hunter and guide in the Adirondacks more than sixty years ago.

He saved most of his earnings and invested in lands and lakes. He was the head of the Paul Smith Hotel Company and owned the town of Paul Smith's.

THE aigrette is now worth more than its weight in gold. The latest quotation from Paris is 150 to 200 francs per ounce, or \$80 per ounce in the New York market.

GAME BAG AND GUN

Game Birds, Wildfowl, Shore Birds.*

THE Massachusetts Board of Agriculture did a good work in issuing this volume, and in entrusting its preparation to Mr. Forbush, whose studies of birds all over the continent have been well known for many years.

The large volume of more than 600 pages deals with about all the edible birds of Eastern North America, including doves, pigeons, turkeys, grouse, quail, shore birds, rails, cranes and wildfowl. It is not generally realized that there were nearly 200 different forms of game birds found on this continent, and that when the white man came they had been practically undisturbed, except by their natural enemies, which nowhere destroyed the annual increase. The number of the birds was limited only by the amount of their food, and the winter waters were black with the feeding flocks.

Here is a picture, painted in his introduction by Mr. Forbush:

'The Indian hunter, standing on the river shore at sunset, might then have seen the whole sky overcast by clouds of birds, formed in dun strata, moving fast and far in varying lines, but all trending toward the South. Dense masses of scaup winnowed their way low over the land. Vast flocks of teal swept close by, with a roar of rushing pinions as they swayed and turned in quest of feeding grounds. Lines of mallards extended across the dome of the sky, flock after flock, in almost continuous array. Swift flights of canvasbacks kept their unwavering course. Masses of redheads kept them company, while smaller flocks discharged their members like zig-zag bolts to the wave below. Here and there teal and widgeons rode down the air with stiffening wing, centering upon lake or river, where many a weary flock sought rest, until the water was black with floating birds, and still unwearied myriads high in air sped southward. Canada geese in the long "V" formation of the unbroken flock, in shattered ranks or in changing lines, trailing, crossing and diverging or converging in the sky, passed over in untold numbers with unslackening wing. Their musical notes filled the air like the cries of a thousand packs of hounds. The upper air was full of nameless waterfowl, while far above them all great flocks of cranes swam in the blue sky, and higher still in the full light of a sun now passed from view rode long lines of snowy swans, their clanging trumpet tones lost among the nearer sounds of voice and wing that fell from the mighty hosts of smaller waterfowl and waders rushing on their way.'

Some appreciation of the astonishing abundance of birds in those old days—and even to-day there are places where something similar may be seen—are given in a multitude of paragraphs in

*History of the Game Birds, Wild Fowl and Shore Birds of Massachusetts and adjacent States, including those used for food, which have disappeared since the settlement of the country, and those which are now hunted for food or sport, with observations on their former abundance and recent decrease in numbers; also the means for conserving those still in existence. By Edward Howe Forbush, State Ornithologist of Massachusetts. Illustrated with drawings by W. I. Beecroft and the author, and photographs by Herbert K. Job and others. Issued by the Massachusetts State Board of Agriculture by authority of the Legislature, 1912.

Mr. Forbush's introduction, quoted from authors of ancient and modern times. He tells the story also of the decrease in game birds; the old, old story, which grows more and more true as the years pass by, and which gives so sickening an exhibition of greed for the present and thoughtlessness of the future.

Following its introduction, the volume is divided into three parts; the first being a history of the birds now hunted for food and sport in Massachusetts and adjacent States. This includes grebes and loons, ducks, rails, shore birds,

SANDY NECK (CAPE COD) LIGHT HOUSE.
Photograph by H. B. March.

grouse and quail, and pigeons and doves. Part II. gives a history of the game birds and other birds hunted for food or sport which have been exterminated, or driven from Massachusetts and adjacent States since the settlement of the country. The extinct species are great auk, Labrador duck, Eskimo curlew and passenger pigeon. Those species which, though no longer found in Massachusetts, still exist elsewhere, are the trumpeter swan, whooping crane, sandhill crane and wildturkey. The former occurrence of the trumpeter swan in Massachusetts has never been demonstrated, though the inference that it was once found there may perhaps be justified. Part III. deals with the conservation of the groups treated of in the work. It speaks of the economic value of these birds, of their decrease, the causes for this decrease and the wrong beliefs which exist with regard to the causes of the decrease.

Man is never willing to accept the responsibility for his own errors or crimes, but always strives to place that responsibility on someone else. The most destructive enemy to any of these birds is the man with the gun. There are methods of attracting both waterfowl and upland game birds. There are still opportunities for statutory game protection. We have game laws in plenty, but too often they are not enforced. Short seasons, the prevention of the sale and export of game and a limit on the bag will do much to help matters along. Federal supervision of migratory birds is desirable, as are game refuges in which all the wild birds shall be free from molestation.

The book closes with a brief summary of needed reforms to bring about game protection.

The volume is full of matter of extraordinary value and interest; and the first part of it, covering nearly 400 pages, is in effect a useful ornithology of our edible birds. Each article opens with the English, followed by the technical name of the species. There is generally a drawing showing one or more plumages; then comes the description; a suggestion of the most obvious marks about the bird, so that it may be told at a distance; its cry, nest, eggs and the season at which it is likely to be found in the region treated of and its range. A history of the birds' habits follows. Often this history is quite full. In the case of some of the duck family or of certain quail and grouse, this history may run to eight or ten pages.

The volume thus becomes a useful handbook to all gunners and enables them to identify the birds that they shoot, while the wealth of ancient and modern history that it contains makes it as fascinating as any story that ever was written. This to our mind is the book's greatest use: that it points out what we have had and what—in great part through our own folly—we have lost.

Game Bills Now Pending in Congress.

BY T. S. PALMER.

IN the third session of the Sixty-second Congress, which convened Dec. 2, 1912, a number of bills affecting game will be under consideration. Some of these were introduced in the first session, which convened in April, 1911, and some in the second session which began Dec. 4, 1911. In the first session little headway was made in game legislation, as attention was confined to the tariff and a few other matters, but in the second session, which adjourned Aug. 26, 1912, considerable progress was made in the introduction of new measures, and in the advancement of some already in committee. Through the efforts of the American Game Protective and Propagation Association a largely attended public hearing was held by the Senate and House Committees on March 6 on the McLean, Weeks and Anthony bills for the protection of migratory birds. These measures were thoroughly discussed and an extended report of the hear-

ing was published by the Senate Committee. The McLean bill in amended form (S. 6497) and the Weeks bill (H. R. 36) were both favorably reported and are now on the respective calendars of the Senate and House. The game refuge bill (S. 6109) provides for the establishment of game refuges on available public lands and for the acceptance of private lands offered for the purpose, was introduced by Senator Perkins and was favorably reported by the Senate Committee on Forest Reservations; the corresponding bill (H. R. 23839) introduced in the House by Mr. Kent, is still in the Committee on Agriculture. Another measure (S. 6942) providing for a game preserve in the Pecos National Forest in New Mexico, introduced by Senator Catron, passed the Senate and is now in the House Committee on Public Lands.

MEASURES WHICH PASSED.

The only bills which became law were those which were incorporated in the regular appropriation bills and the fur seal bill. The bill introduced by Mr. Martin, of South Dakota, providing for a game preserve on the Wind Cave National Park, was included as a paragraph in the Agricultural appropriation bill and is now a law. This paragraph appropriated \$26,000 for the acquisition of lands adjoining the park, necessary to provide an adequate water supply, and authorized the construction of a suitable inclosure for a herd of buffalo to be presented by the American Bison Society. The Agricultural bill also carried an appropriation of \$45,000 for the purchase of a winter refuge for elk in Jackson Hole, Wyoming; an increase of \$2,500 for the maintenance of reservations for mammals and birds, and a decrease of about \$5,500 for the maintenance of the Wichita Game Preserve in Oklahoma. The Sundry Civil bill included the usual items of \$15,000 for game protection in Alaska, and \$3,000 for maintenance of the buffalo in the Yellowstone National Park. The bill carrying into effect the provisions of the treaty entered into by the United States, Great Britain, Russia and Japan for the preservation of the fur seal herd was passed in the closing days of the session and included a provision for a five years' close season on the fur seals on the Pribilof Islands. The net result of game legislation at the last session was the enactment of measures providing for two game preserves and for putting an end to pelagic sealing. Four other measures, the Pecos Game Preserve bill, the general game refuge bill, and two of the migratory bird bills made substantial progress.

MEASURES UNDER CONSIDERATION.

The opening of the third session will find the calendar crowded with measures. Already there have been introduced 35,638 bills and resolutions, of which 8,049 are in the Senate and 27,589 in the House. Of these less than one in a thousand relate to game. The House Committee on Agriculture is said to have pending before it 125 bills and the House Committee on Public Lands about 300 bills. With the congested condition of the calendar and the regular appropriation bills requiring attention at a session including only about seventy working days, there will be little chance for consideration of measures not already reported from committee
(Continued on page 800.)

Another Tod Letter.

DEAR DAD:

Kathryn's sister, Ellen, is here and she was just crazy to get out in the woods, so yesterday I met them at the station and we went down Pine Creek for the afternoon. They had a royal lunch, and we built a fire and made coffee and cooked frankfurters. These with grapes, olives and sandwiches satisfied the two girls.

I of course had my fishing rod, and on the way down I was a bit taken aback to have several persons say, 'Why, you can't catch any fish; Pine Creek is too high.' When I saw the creek I began to fear they were right. It was high and raging, but it was fairly clear, and in some places it was not too swift for a bass to live.

I tried several places, but couldn't get a rise until we got pretty well up; in fact, to the first hole below where the "Pine Creek Rapids" begin. Here there was a flat stone sticking up out of the water and below it several fish were rising. I figured out that if I could get on that stone, by careful fishing I might get a fish or two.

I went up the creek some distance above the rock and started wading down with the current. And I came down some, believe me. But I made my rock and crawled out, and after shaking myself began to fish. But the bass were further down than I could cast, so I hit on another plan. I would cast out in the current as far as I could and then pay out line until my flies would be below where the fish were working, and then I would tighten up until my flies were floating right, and then with my rod straight up in the air I would reel in and cast again. I had gone through this performance perhaps a dozen times when there was a swirl and a splash, and my old rod began to creak and bend. I was fast to a fish, and I had some fun in that water, for whenever he got out of the eddy he took line from me. Gradually I worked him up and at the end of a few minutes' fight, I had him on about twelve feet of line below me. Taking the rod in my right hand I knelt down, and by nearly breaking the rod slid my first fish out on the rock. It was a bass about sixteen inches long, a beauty, all black and cold and shiny. I killed him, put him into my basket and tried again. After a little time another big fellow threw himself out of the water, and I had another fight at twenty yards' range. I landed this one, too, and it proved to be about one inch shorter than the first one.

And now comes the part of the story you will find difficulty in believing. After killing my second fish, which like the first had been caught on the leader fly, a big Seth Green, I tried a new trailer. In place of a Ruben Wood that I had been using, I put on a spinner of my own device, a tiny disk of mother of pearl, and below it a royal coachman fly. And then I cast out into the current and let my lines float down. I paid out all the line I had and then tightened up and began to reel in. I had pulled my flies past the point where I had hooked the other two and could see my mother of pearl spinner

glinting when an old fellow rose to my lead fly. I could see him come, and I saw him take the fly and then rise into the air shaking his head like a dog. It was the largest bass I have seen here this summer, a good three-pounder, easily seventeen inches long. And every ounce of him was fight. Three times he took line from me and each time I swung him safely back into the eddy, and then coaxed him up to my rock. I had him within thirty feet of me and could see the little spinner trailing off behind when there was another swirl behind my fish, and the spinner disappeared and immediately the load on my poor old rod was materially increased.

There I stood on my little rock with the water rushing by me on either side with two fine bass fast in a little eddy below. I knew I couldn't hold them if they both together got out in that swift water, and so I played them for all I was worth.

Maybe the numberless fish I have seen you land, and the experience I have gained that way helped, for I kept them where they were safe and gradually I worked them up to the rock, and then carefully and slowly I knelt and slid first one and then the other out. The first one was the big one, and next came a bass about a foot long, both fine fat black fellows. I stood with one in either hand and rested for a minute and looked at them, and if the smile on my face was not angelic, surely it was a contented one.

I caught two more then, one about a foot and one about fourteen inches, and then I was so cold I had to quit. So I trusted myself to the current, and after getting soaked above my belt, finally reached shore.

Here I built a fire and the girls cooked supper while I cleaned the fish, and then after supper we went back into the woods and looked for pheasants until dark and then went to the train and came home.
Tod.

The Rapacity of the Pike.

(*Esox lucius.*)

As the lion, by common consent, is regarded as the "king of the forest," so it may be said that the pike is king of the lake. Both derive their warrant "not from the divine right of kings," however, but from sheer brute force—the principle that "might is right." Both of these monarchs sway their subjects by fear and not by love. It is true that they have no active enemies, but this may be explained in a similar way to that of the Spanish brigand who told his father-confessor, when about to die, that he had not an enemy in the world, *as he shot the last of them a week ago!*

QUEEN MARY of England does not permit the use of aigrettes in her millinery, according to a statement contained in a letter published in the London Times by the Duchess of Portland, in which this ardent bird protectionist appeals to women to refrain from buying or wearing osprey plumes, as aigrettes are called in England.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE OBJECT OF THIS JOURNAL
 will be to studiously promote a healthful interest in outdoor recreation, and to cultivate a refined taste for natural objects.

—FOREST AND STREAM, Aug. 14, 1873.

EDWARD FARNAM TODD.

EDWARD FARNAM TODD died Dec. 16, 1912. Mr. Todd was one of the best informed men in this country on fresh water fishing. As an anglers' statistician he had no superior. He has for many years been one of the experts on the FOREST AND STREAM anglers' staff.

NEW HAMPSHIRE DEER RECORDS.

ONE by one different States are coming to realize that the easiest way to keep an inventory of game within its borders is to subtract the number killed during the open season from the number on hand at the opening of the season. It is the simplest kind of bookkeeping. We have just heard from Charles B. Clark, of the New Hampshire Fish and Game Commission, that the commission has no way of "knowing anything about the number of deer killed during the open season." It is, however, a source of great satisfaction to note progress, for Mr. Clarke says, "We shall try to perfect our law at this session of the Legislature." Every prospect pleases, even though it may have a long ride and a rough trip through the Legislature.

REASON AND INSTINCT.

ALL animals, including man, are possessed of both reason and instinct. The lower animals are of course less developed in reasoning power than man. But the difference is in degree only, and not in kind.

Many intelligent apes, dogs and ants have a cerebral capacity which, in some cases at least, is little short of human, or at all events of that of savages and children. It is all nonsense, and without any scientific warrant, to deny the rea-

soning power to the lower animals, and the merest tyro in the study of physiology ought to know that man has no monopoly of this quality.

That the human family possesses instinct as well as lower animals is shown in the many things infants do "naturally"; closing one's eyes suddenly to avoid a blow, or other injury threatening that organ; changing one's position during sleep, so as to avoid an unpleasant attitude, etc.

Then as to lower animal intelligence, it may be asked, is it instinct or reason that makes an ant organize a highly complex community with a code of laws and executive officials to carry them out, and that in a manner that men might emulate to their own advantage?

Man's ignorance and vanity prompt him to deny reason to his "poor relations" of the woods, the jungles and the fields, but in this twentieth century ideas of this sort have only an anti-quarian interest, even if they have that; and old errors, no matter how venerable, must go by the board.

OUR NEW DEPARTMENT.

THE departments of this journal are in that healthy condition where each several department editor is forever wrangling with all the others about space. Each one, every week, demands that fewer columns be given to his esteemed associates and more to himself. There is a never-ending week's end to week's end the year round clamor by the Kennel editor for some of the space he declares to be "thrown away" on the Yacht man, and the Yacht man never tires of devising schemes, fair or foul, for appropriating some of the space over which the Trap editor stands guard with a shotgun. Every newspaper man will recognize that all this is just as it should be. It shows that the departments are alive.

Now, all things working together for good, we have revived and added another department—"Archery." This sport, which FOREST AND STREAM was the first to support, fell by the wayside a few years ago. Recently its following has become so great, and its outdoor interest so strong that a medium for its exploitation was needed. By virtue of prestige and ability to properly handle the news, we were selected as the mouthpiece of the National Archery Association.

From now on, for all live news in archery, seek the department in this paper.

HAPPY indeed is the sportsman who is mated with just the right companion for a shooting chum. In such a union the rules of mathematics are thrown to the winds, for while twice one is two, and two guns may secure twice as much as one, the satisfaction two friends can get out of an excursion is ten-fold or a hundred-fold what may be given to one alone. To begin at the very beginning—and that is where the fun of an outing begins if at all—there is a deal more pleasure in planning and discussing the campaign with another who is to share it than there is in figuring it out alone. And to go on to the end of it—if the end ever comes while memory holds—recollections are fresher and clearer and dearer if there be two to remember and talk together of the field days of the past. In all these three phases of one's outing—the anticipation, the re-

alization and the retrospect—one needs a friend to share them, and by sharing each to increase it.

Thus much of the satisfaction of field sports consists in the companionships they create and foster and cement. Take away from an outing this element of social intercourse and often there will be very little left. Some of the pleasantest and firmest friendship of a lifetime have been formed in the field. Some of the friends whose absences we most deplore, for whose deaths we sorrow most sincerely, are the friends and companions of the camp and field and stream and shore. For more than one gunner, old or young, the charm of his once favorite sport has vanished, because he can no longer enjoy it in company with one whose personality lent to it its chief fascination.

Most men find solid satisfaction in showing the tangible testimonials of their luck in the field. They are not satisfied with the mere catching of fish or bagging of birds; they must bring them home to distribute to friends. This is one reason why the non-export fish and game laws bear heavily where they make no distinction between game carried out by sportsmen as trophies of amateur skill and game shipped to market by professional shooters. The purpose of these statutes is excellent; their practical enforcement results in benefit to the game supply. But there is a happy medium between unrestricted traffic and absolute prohibition of game-carrying by sportsmen. Some privilege should be accorded the sportsman, but not unlimited license, for there are those whose greedy instincts require curbing. Eastern sportsmen who go west, to make pot-hunters of themselves there and kill barrels of birds and put them in cold storage to be smuggled to Brooklyn, say, in the winter, should have their thrifty schemes smashed by the laws and the wardens.

SOCIETY dictates from year to year that woman must change her coat by fitting her figure into a new corset model. As woman, suffragetically speaking, is her own boss and unquestionably is the superior fraction of the family, we have no intention of combatting her right to alter her shape and likewise her coat to suit the dictates of Paris coatmakers. We do, however, object to fashion upsetting a standard coat as worn by the Airedale terrier. In the kennel department in our last issue appeared a letter from E. M. Post, long standing and careful breeder of Airedales. We should like our readers to consider carefully Mr. Post's contentions and write us according to conclusions reached after the reading.

YACHTING

Schooner Yacht Monk.

THE schooner yacht Monk was built this year from designs of J. Murray Watts, by the Salisbury Marine Construction Company, for Powell Evans, of Philadelphia. This boat is 58 feet over all, 46 feet on the waterline, 16 feet 9 inches beam and has a draft of 4 feet. She has been used on fishing and ducking expeditions on the Delaware River and Chesapeake Bay.

The arrangement below decks shows an engine room in which is installed a 45 horsepower Reeves-Graef motor, which drives the boat about 9½ nautical miles, together with the necessary fuel tanks, lubricating oil tank and work bench. The cabin is entered by a flight of steps from the after deck leading to a lobby on the port side. This lobby has a double berth in it and can be used for a stateroom. There is another stateroom on the starboard side. Amidships there is a large dining saloon 16 feet wide with

sofa transoms on either side, and a Franklin stove at the after end.

Forward of the main saloon is a large bathroom on the starboard side and a galley on the port side. The galley is fitted with a Webb perfection range, and the usual ice chest, sink and lockers. The coal range has a hot water back which supplies hot water to the bath tub and wash basin in the owner's bathroom.

In the fore peak are the crew's quarters with accommodations for three men and a crew's toilet. There is a raised hatch over the crew's quarters with glass set in at the sides where the boat can be steered from as from a pilot house in bad weather when running under power. When under sail, she is steered by a typical schooner's wheel on the after deck. This steering wheel is of the Edson screw type. The boat is rigged as a pole-masted schooner and carries a large sail spread. Owing to her great beam she has proved very stiff in the winter weather found off the Delaware and Chesapeake capes. This boat is easily handled under sail by one man, as all the sheets lead aft to the wheel.

The distinguishing feature of the boat is the large amount of deck room and the good head room in the cabin which averages about 6 feet 5 inches. The boat draws about 4 feet in her normal loaded condition and about 9 feet with her centerboard down.

For summer cruising she is equipped with copper mosquito screens throughout and has unusually fine ventilation. Large mahogany skylights, 5 feet by 3 feet, ventilate all these compartments. There is, moreover, an electric exhausting fan which constantly renews the air in the boat and sucks out all fumes of oil, bilge water or cooking, so that she is always kept sweet.

The owner's idea was to get a boat on which he could go off and be as comfortable as in his country house. As an example of real comfort, it can be seen that the double berths live up to their name, being 3 feet 9 inches wide. The bathroom is 8 feet wide by 6 feet long and the rest of the rooms in proportion.

Yacht Club Elections.

ATLANTIC Y. C.

COMMODORE J. STUART BLACKTON, of the Atlantic Y. C., was re-elected at the annual meeting. Willard M. Taylor will be Vice-Commodore, and Arthur W. Teele, Rear Commodore. James F. Allen was elected a trustee, term to expire next year; Edwin Palmer, term to expire in 1914, and Peter W. Rouse and Albert E. Smith, terms to expire in 1915. Edward L. Graff was elected as Secretary; P. H. Hart as Treasurer.

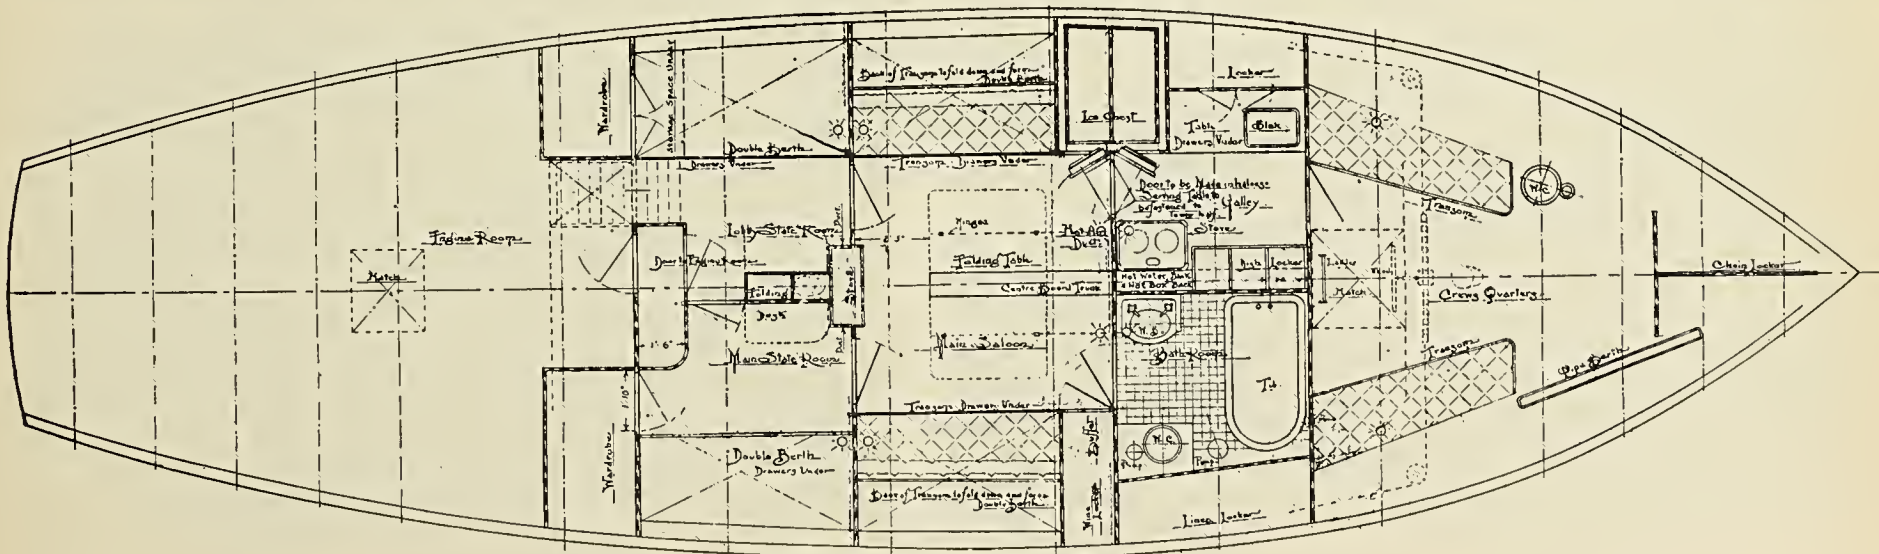

There will be three new Class Q sloops built for the season of 1913. The owners will be Commodore Blackton, Albert E. Smith and Peter W. Rouse.

BENSONHURST Y. C.

GEORGE R. LE SAUVAGE was re-elected commodore of the Bensonhurst Y. C. at the annual meeting of the organization. It was the first annual meeting that the organization has held in its new home, and was attended by more than 150 Lower Bay Corinthians. The full ticket chosen is as follows: Commodore, George R. Le Sauvage, sloop Joy; Vice-Commodore, Richard W. Hummell, sloop Dixie; Rear-Commodore, Harris A. Robbins, yawl Wahkan; Secretary, W. W. W. Roberts; Treasurer, C. H. Clayton; Board of Directors, George L. Beston, Charles H. Bassler, Charles M. Wells, Bruce Stickle, Carl L. Dingens, John W. Cherrie; Nominating Committee, yacht owners: Robert E. Dingham, Charles H. MacKrell, R. W. Rummell, Jr.; non-yacht owners: E. S. Golding, William T. Davis, William E. Wilson.

LARCHMONT Y. C.

At the annual meeting held at the Waldorf-Astoria on Dec. 4 the following were elected officers of the Larchmont Y. C. for the ensuing year: Commodore, Charles Smithers, yacht Muriel; Vice-Commodore, Francis M. Wilson, yacht Sumida; Rear-Commodore, Chas. Morgan,

PLAN OF SCHOONER YACHT MONK.

SECTION 6, LOOKING AFT.

SECTION 5, LOOKING FORWARD.

Described on preceding page.

yacht Grace II.; Secretary, Edward C. Griffin; Treasurer, Robert E. Robinson; Trustees, Class 1915, Wilson Marshall and Leonard Richards; Nominating Committee of 1913, G. S. Runk, S. T. Hodgman, G. W. Scott, J. F. Lovejoy, Butler Whiting, L. H. Spence, R. K. Plum, R. H. Halstead, H. N. Fletcher.

INTERSTATE YACHTING ASSOCIATION.

THIRTEEN clubs of the Interlake Yachting Association were represented at the annual meeting held in Cleveland, Ohio. Officers for 1913 were elected as follows: Commodore, Geo. H. Worthington, Cleveland Y. C. (fourth term); Vice-Commodore, S. O. Erickson, Jr., Toledo Y. C.; Rear-Commodore, G. B. Ford, Country Club, Detroit; sail yacht Major, H. W. Card, Lakewood Y. C., Cleveland; power boat Major, R. L. J. Wager, Sandusky Y. C., and Fleet Surgeon, Dr. C. W. Jennings, Country Club, Detroit.

BAYSIDE Y. C.

At the annual meeting the following officers were elected: Commodore, G. Waldo Smith; Vice-Commodore, Elmer G. Story; Rear-Commodore, Archibald Nesbitt; Secretary, William H. Johns; Treasurer, Frederic Floyd-Jones; Measurer, Joseph E. Hill; Governors, William Teller and James Nash Webb for a full term; Russell A. Field for three years and C. William Bergen for two years.

INDIAN HARBOR Y. C.

At the annual meeting of the members of the Indian Harbor Y. C., held at the club house, Greenwich, Conn., on Wednesday evening, the following were elected officers: Commodore, William H. Childs; Vice-Commodore, Lorenzo D. Armstrong; Rear-Commodore, A. Gardiner Cooper; Secretary, Walter A. Hughes; Treasurer, Richard Outwater; Measurer, Morgan Barney; President of the Corporation, Charles T. Wills; Directors (term expiring 1915), Charles T. Wills, John D. Chapman; Regatta Committee, E. Burton Hart, Chairman, Henry C. Pelton and Abbott P. Brush.

Yacht Sales and Charters.

MESSRS. COX & STEVENS, of New York, report an unusually active market for the purchase and charter of yachts of all types. Among their recent transactions are the following:

The 100-foot cruising power yacht Mona, sold for estate of William Campbell Clark, of Newark, N. J., to Uzal H. McCarter, New York Y. C.

The 81-foot gasolene cruiser Faalua, sold for Sherburn M. Becker, of New York, to Edwin J. Steiner, of New York. Her name will be changed to Wanderlust.

The 105-foot auxiliary schooner yacht Haida, chartered for Max Fleischmann, New York Y. C., to a prominent Philadelphia yachtsman for Southern cruising.

The 105-foot gasolene houseboat Captiva, chartered for Payne Whitney, New York Y. C., to E. Mapes, who is now cruising in Florida waters.

The 100-foot gasolene yacht Mona, chartered for Uzal H. McCarter, New York Y. C., to a New York yachtsman. She will cruise in Florida and West Indian waters and recently left New York for the South.

The 70-foot power yacht Gladiola, sold for Geo. B. Spearin, of New York, to Coburn Haskell, of Cleveland, Ohio, who will use her at his summer home at Blue Hill, Me.

The 70-foot gasolene yacht Wanderlust sold for Edwin J. Steiner, of New York, to Albert C. Middleton, for use on Barnegat Bay.

The 140-foot steam yacht Osceola, chartered for Robert Stuart, New York, to a member of the New York Y. C.

The 110-foot steam yacht Ava, sold to New York parties for Walton Ferguson, of Stamford, Conn., for passenger service. Name is changed to Manhattan.

The 70-foot gasolene houseboat Mary Anna, chartered for H. Ashton Little, of Philadelphia, to C. M. Meyer, New York Y. C., for the winter for Florida cruising.

The 75-foot gasolene yacht Achelous, chartered for E. P. Lawson, Columbia Y. C., to a New York yachtsman.

The 65-foot gasolene cruiser Mittie, sold for Henry N. Richards, of Boston, to A. C. Battelle,

of Ottawa, Kan., for service among the Thousand Islands and Great Lakes. Will be renamed Emily.

The 110-foot steam yacht Duchess, sold for estate of L. J. Busby to New York parties for commercial purposes.

The 60-foot auxiliary yawl Katherina, sold for C. A. Godshalk, of Philadelphia, to Gardiner H. Bell, Washington, D. C., and resold to Frank Burgess of Quincy, Mass., for cruising in Eastern waters.

Class P sloop yacht Corinthian, sold for Howard C. Smith, New York Y. C., to Charles B. Keeler, M.D., Norwalk Y. C. Corinthian won the championship in her class last season and will race again on the Sound in 1913.

The 65-foot auxiliary sloop yacht Mermaid, sold for Charles Soosmith, Larchmont Y. C., to a Southern yachtsman for cruising on Chesapeake Bay.

The 65-foot gasolene yacht Weow, chartered for E. E. Gray, of Boston, to a Philadelphia yachtsman.

The 52-foot gasolene cruiser Wistaria, sold for A. G. Chesbrough, Northport, L. I., to C. N. Jelliffe, of New York.

The 45-foot power boat Psyche III., sold for M. S. Bentham, of New York, to Frank B. Bower, of Philadelphia. Her name has been changed to Mie.

The 60-foot gasolene yacht Manzanita, sold for Joseph R. Grismer, of New York, to William Baker, of Chincoteague, Va.

The 60-foot raised deck cruiser Ethel May, sold for Charles Coryell, of Bay City, Mich., to John J. Harty, of Kingston, Can. Name changed to Aurora.

The 45-foot auxiliary yawl Gladys sold for G. Outwater, New York, to Harold W. Browne, of New York. Has been renamed Nirvana.

The 40-foot raised deck cruiser Arab, sold for Gardiner H. Bell to C. A. Godshalk, of Philadelphia.

The 36-foot raised deck cruiser Meadow Lark III, sold for Julian Mitchell, of New York, to the U. S. Life Saving Service for use at Galveston, Tex.

The 40-foot power boat Opitsah, sold for J. J. Harty, Kingston, Can., to Charles Coryell, of Bay City, Mich.

Motor Boating

Power Boat Race Reform.

At the annual meeting of the American Power Boat Association, which was recently held, a complete plan to reform racing methods was adopted for all competitions held under the rules of the association. In addition to revising the rules, the delegates defined the amateur status of a motor boat owner and adopted a ruling eliminating all professionals from competition in races. It was also decided to prohibit the offering of cash prizes except in deep-sea races of 600 or more miles.

The future of the American Power Boat Association under the revised rules promises renewed vigor and will make absolute the organization in controlling all competition. In adopting the new plan, the definition of an amateur

(Continued on page 802.)

Robin Hood, Bold Bowman of Sherwood Forest

An Old Story Retold

By JOSEPH JESSOP, Coronado Beach, California

ROBIN, whose real name is said to have been Robert Fitzooth, was born at Loxley Chase near Sheffield, Yorkshire, and was purposefully bled to death by his cousin, a nun at Kirklees Hall, about two miles from Huddersfield, in Yorkshire, and only a few miles from where I was born. In the grounds at Kirklees, and only a short distance from the old hall, the residence of Sir George Armytage, Bart., can be seen the grave of this famous outlaw. The stone slab surrounded by heavy iron railings bears the following inscription in very old English, but modernized is as follows:

"Here underneath this little stone
Lies Robert, Earl of Huntingdon.
N'er archer were as he so good,
And people called him Robin Hood.
Such outlaws as he and his men,
Will England never see again."
"Obit, 24 Kal Decembris, 1247."

Robin's main stronghold was in Sherwood forest, near Nottingham, where he held high carnival, robbing fat bishops, high prelates and whoever came in his way if they had plenty of money, but it has never been recorded that he molested the poor.

On the contrary, it is said, he robbed the rich and gave it to the poor, and the fatherless and the widow was his special care. It is said that his band, composed of the best men in the country, consisted of one hundred men.

His manner of recruiting was somewhat singular, for in the words of an old writer, "Wheresoever he heard of any that were of unusual strength and hardiness, he would disguise himself, and rather than fail go like a beggar to become acquainted with them, and after he had tried them with fighting, never give

them over until he had used means to draw them to live after his fashion."

Their unusual way of fighting was what was called the quarter staff, and the better the drubbing he got, the better he liked his man. In the great forests which covered the best part of the north of England at that time he reigned like an independent sovereign at perpetual war indeed, with the King of England and all his subjects, with the exception, however, of the poor and needy. When molested by a superior force in one place, he retired to another, still defying the power of the law and the Government. The deer with which the royal forests then abounded afforded our hero and his companions an ample supply of food throughout the year.

The feats of marksmanship of Robin and his men were wonderful, if true. It is said that Robin could take two arrows from his sheath and at thirty paces could cut off a leaf from a tree and shoot the other arrow through the leaf before it fell to the ground. His other accomplishments at the butts were to hit the dead center of the target and split the arrow with the next shot. The William Tell act would be nowhere compared with this.

Robin and his leading men—that is, Little John, Will Scarlet, Allen A Dale and Much, the Miller's Son, "Whose every inch of his body was worth a whole man, according to Robin's idea"—were said to have been dressed in Lincoln green, or light green, and the remainder in brown, and the foresters and gamekeepers in Lancashire and Yorkshire to my knowledge are thus dressed to this day, the headkeepers in green coats and the underkeepers in brown coats, mostly velvet. Friar Tuck was said to have been

dressed in dark gray, with an immense hood, and of course Robin's band was never complete without old Tuck. Robin's bow is still preserved, they say, at Fountain's Abbey in Yorkshire.

It was in the river near this venerable old pile where Robin commanded Friar Tuck to carry him across the stream, and where the wily old Friar dumped Robin in when he got in the middle.

The many dramatic pieces of which Robin Hood is hero, or in which he is introduced as an important character, indicate the extensive popularity of the wondrous bowman. He is mentioned several times in Shakespeare. In the "Two Gentlemen of Verona" one of the outlaws swears "By the bare Scalp of Robin Hood's fat friar." In the comedy "As You Like It" where on Oliver asking, "Where will the old Duke live?" Charles answers, "They say he is already in the forest of Arden, and a merry man with him, and they live like old Robin Hood of England."

No fewer than a dozen lanes, courts and alleys in London bear the name of Robin Hood, and it looks as if his name and fame will be popular for all time.

And of Tuck the merry Friar, which many a sermon made

In praise of Robin Hood, his outlaws and their trade,
An hundred valiant men and this brave Robin Hood,
Still ready at his call, that bowmen were right good,
All clad in Lincoln green, with caps of red and blue,
His fellows winded horn not one of them but knew,
When setting to their lips their little bugles shrill,
The warbling echoes waked from every dale and hill,
Their baldricks set with studs, athwart their shoulders
cast,

To which under their arms their shafts were buckled fast;
All made of Spanish yew, their bows were wonderous
strong.

They not an arrow drew but was a cloth-yard long.
Of archery they had the perfect craft, with broad arrow,
or

Butt, or prick, or roving shaft. At marks full ten score
They used to prick and rove.

Yet higher than the breast for compass never strove;
Yet at the farthest mark, a foot could hardly win,
At long-outs, short, and hoyles, each one could cleave
the pin;

Their arrows finely paired, for timber and for feathers,
With birch and brazel pierced, to fly in any weather;
And shot they with the round, the square, or forked pile,
The loose gave such a twang, as might be heard a mile.
And of those archers brave, there was not any one
But he could kill a deer, his swiftest speed upon,
Which they did boil and roast in many a mighty wood,
Sharp hunger the fine sauce, to their more kingly food.
Then taking them to rest, his merry men and he,
Slept many a summer's night under the greenwood tree.

MAJOR OAK IN SHERWOOD FOREST, ENGLAND.

It is said Robin Hood slept under this tree in summer.
Hollow trunk will hold fifteen people.

FROM WINDOW MARKED WITH A CROSS ROBIN HOOD

SHOT HIS LAST ARROW, DEC. 24, 1247.

FOUNTAIN ABBEY, YORKSHIRE.
Scene of Robin Hood and Friar Tuck episode.

ROOM WHERE ROBIN HOOD WAS BLED TO DEATH BY ELIZABETH DE STAINTON.
This room has not been changed or occupied since Robin Hood's death.

From wealthy abbot's chests and churl's abundant store,
What oftimes he took he shared amongst the poor.
No lordly bishop came in Robin's way,
To him before he went, but for his pass must pay.
The widow in distress he graciously relieved,
And remedied the wrongs of many a virgin grieved.
He from the husband's bed no married woman wan,
But to his mistress dear, his loved Marian
Was ever constant known, which wheresoe'er she came,
Was sovereign of the wood's chief lady of the game.
Her clothes tucked to the knee, and dainty braided hair,
With bow and quiver armed she wandered here and there
Amongst the forest wild; Diana never knew
Such pleasures nor such hearts as Mariana slew."

In Arnot's "History of Edinburgh" we are told that in Scotland the game of Robin Hood was celebrated in the month of May for hundreds of years; indeed, he seems to have been the very foundation of May gatherings and May pole dances all over Great Britain. King Henry III. sent many expeditions to capture him and his band, but all failed for the reason that every poor man or woman was Robin's friend, and he was always warned in good time of the approach of any enemy. At length the infirmities of old age increased upon him, and in a fit of sickness he was desirous to be relieved by being bled, "which was a common custom then, and even down within sixty years ago in the North of England." He, therefore, went to his kinswoman, the prioress of Kirklees nunnery for women, and particularly those connected with religious houses were at that time skilled in surgery. By her he was treacherously suffered

to bleed to death at the instigation, it is said, of Sir Roger of Doncaster, a Knight who was hostile to our hero, and to whom the prioress was attached as paramour. He was interred under some trees a short distance from the house. When Robin felt that he was growing weak and found the door was locked, he at once suspected treachery, and he put his horn to his mouth and blew as best he could. Little John, faithful and affectionate to the last, was hovering near the woods, and when his quick ear caught the well-known sound of his master's horn, "I fear my master is nearly dead," he said; "he blows so weakly," he hurried to the nunnery gate, and not being able to gain admittance, he broke several locks and at last found his way to his master's room. When he saw how matters stood, he wanted to burn down the priory then and there, but Robin would not hear of it. When Robin saw that his end was near, he called for his bow and arrows and ordered the casement window opened and said he would shoot his last arrow, and wherever it dropped, they were to dig his grave.

This short dirge that I committed to memory forty years ago describes the last hours of Robin:

His pulse was faint, his eyes were dim,
And pale his brows of pride;
He heeded not the Monkish hymn
They chanted by his side.
He knew his parting hour was come,
And fancy wandered now

To freedom's free and happy home
Beneath the forest bough.

A faithful follower, standing by,
Asked where he would be laid;
Then round the Chieftain's languid eye
A lingering luster played.

"Now raise me on my dying bed;
Bring here my trusty bow;
And ere I join the silent dead,
My arm that spot shall show."

They raised him on his couch, and set
The casement open wide.

Once more with fain and fond regret,
Fair nature's face he eyed;
With kindling glance and throbbing heart,
One parting look he cast,
Sped on its way the feathered dart,
Sank back and breathed his last.

And where it fell they dug his grave,
Beneath the greenwood tree,
Meet resting place for one so brave,
So lawless, frank and free.

Very beautiful for situation is the Kirklees burial place of the bold outlaw. The umbrageous and stately woods, wearing their summer garb of many-hued leaves and glistening under the brilliance of golden sunlight, are perhaps never seen to better advantage than at the fall of the year.

The dense and variegated undergrowth of bracken and fern and varicolored grasses, the songs of the birds, the ripple of the pellucid trout stream as it meanders through the spacious

(Continued on page 802.)

TRAP SHOOTING

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.

1913.

- Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
- Feb. 22.—Birmingham (Ala.) G. C. tournament. O. L. Garl, Sec'y.
- Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, Ohio.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

Rising Sun Gun Club will hold an all-day shoot Dec. 30. The Cecil county championship, open to all amateurs residing in the county, at 50 targets, will be shot; winner to receive a gold watch fob. This event was postponed from the tournament of Oct. 16. A feature will be a special team race among Avondale, Kennett Square and Rising Sun gun clubs.

Annual turkey shoot of the Jersey City Gun Club will be held Saturday, Dec. 21. There will be eight events at 20 targets each for turkeys and chickens. Entrance, 75 cents each, targets included. Sliding handicaps, 16 to 20yds. A person after winning a turkey will be handicapped an additional yard. For the grand finish the club will give a \$10 gold piece. This will be for 50 targets. The handicaps to be the same as the last event for turkeys. Entrance \$1. To the shooter shooting through the entire program and having the highest average, the Club will give \$5. Optional sweeps for those desiring same. Two sets of traps. All practice targets, one cent each. Shooting commences at 10 A.M. sharp. R. Young, 383 Fairmount avenue, is the secretary.

W. G. BEECROFT.

Essex Country Club.

WEST ORANGE, N. J., Dec. 14.—There was a pretty even distribution of honors here to-day, although Hart, a scratch man, was in better form than other regular toppers. He won 25-target sweep, handicap with 22, beating Shanley at scratch by one rock. He tied H. S. Folsom, Jr., in December cup event with 23—Folsom had 6 free targets prefixed to his actual breaks. Goodrich, from 8, made a full on 25 targets, handicap. Scores:

Sweepstakes, 25 targets, handicap:	
A O Headley..... 4 25	J A Hart..... 0 20
C C Goodrich..... 8 21	E N Phillipi 8 13
B M Shanley, Jr.... 0 19	

Sweepstakes, 25 targets, handicap:	
J A Hart..... 0 22	H L Folsom, Jr... 6 17
B M Shanley, Jr... 0 21	C C Goodrich..... 8 16
C H Daly..... 0 21	E N Phillipi..... 8 13
A O Headley..... 2 20	

December cup, 25 targets, handicap:	
J A Hart 0 23	C C Goodrich..... 8 20
H L Folsom, Jr... 6 23	B M Shanley, Jr.... 0 19
A O Headley..... 2 22	Peter Hauck, Jr... 8 19
C H Daly..... 0 21	

Sweepstakes, 25 targets, handicap:	
C C Goodrich..... 8 25	J A Hart..... 0 17
Peter Hauck, Jr... 5 22	C H Daly 0 17
H L Folsom..... 6 21	G H Macey..... 8 14
B M Shanley, Jr... 0 20	

Westwood Gun Club.

WESTWOOD, O., Dec. 14.—The recently organized gun club held its weekly shoot to-day, with an attendance of ten members. The targets were hard ones, as a strong cross-wind caused them to take very erratic flights. With one or two exceptions the members are all new at the game, but they are all enthusiastic lovers of the sport, and before spring will be putting up scores that will compare favorably with those made on other local grounds. The range is on Montana avenue, a short walk east from the car line. Regular weekly shoots will be held on Saturday afternoons during the winter, weather permitting. J. Schneider was high man in the first 50 targets, breaking 62 per cent.; Val. Schroder and A. Kuball came next with 25 and 24 respectively. P. Ruehlman made his second appearance on the firing line to-day, and need not feel discouraged at his inability to hit 'em all, for the wind was making them some hard, and experts would have missed a lot. La Boiteaux used to be a familiar figure at the Cincinnati grounds, but has not shot at the traps for several years, and his rather poor showing comes from lack of practice. J. Conner is another old-timer, but it is over a decade since he shot over the traps; a little more practice and he will catch on to the trick again.

The club will erect a temporary house at once, and later will put up a more commodious building. It was rather chilly work to-day, but the shooters warmed up between events at the big log fire started by H. Carson.

Targets:	25	25	25	Total.
La Boiteaux	9	13	15	37
C Kuball	8	11	14	33
J Conner	8	12	..	20
P Ruehlman	2	4	..	6
H Carson	9	12	..	21
A Kuball	10	14	..	24
Val Schroder	14	11	16	41
J Schneider	14	17	..	31
F Disser	9	14	..	23
M Stopper	11	12	..	23

Larchmont Y. C.

LARCHMONT, N. Y., Dec. 14.—Weather for trapshooting was ideal here to-day, with the result that many shooters toed the score and tacked up good cards. Dan McMahon, who has been coming all year, is here, right along with Ralph Spotts, Higginson, et al., from exalted places. A. B. Alley, who though on a long handicap, shot well enough to pull down 100-bird handicap, and a trophy event. Ralph Spotts took high gun with 140 out of 150 and cabbaged the 15-target scratch event. McMahon slipped the cover over the remaining two trophy events, visitors and take-home, each on a full. On monthly cup, J. Henry returned a full score from a handicap of 3. A. Whiting and four others tied for second place with 24. J. Batterson was the winner of the 10-bird scratch with a full score, and B. M. Higginson won the leg for the accumulation cup with a full. Second take-home trophy shot for, in which nine men took part, was won by T. Lenane, Jr.

REMINGTON ARMS—UNION METALLIC CARTRIDGE CO.
299-301 Broadway - - - - - New York, N. Y.

St. Thomas Gun Club.

ST. THOMAS, Ont., Dec. 6.—One of Baedeker's followers has said that when the weather in Canada is bad there is nothing so rotten. This just about covers conditions here during most of the five-day shoot just ended here. Clay bird eradicators from the upper register were here in abundance, both amateur and professional. The program included both feathered and unfeathered targets. The Grand International Handicap was won by George Beatty, of Hamilton.

Twenty-five shooters entered the preliminary events, and H. D. Bates, of Ridgetown and Wm. Ridley, of What Cheer, Ia., tied on 94 out of 100. Ridley won the toss.

George McCall, manager and W. McCance, assistant manager, had everything in fine shape, and are to be congratulated on the way everything was handled. The scores out of a possible 100 follow: J. S. Boa 80, J. R. Taylor 93, E. White 84, G. Dunk 79, W. S. Hare 65, W. Hart 84, G. Beatty 85, R. Day 84, F. Kerr 91, H. L. Taylor 84, J. Jennings 92, W. Dillon 55, P. Wakefield 83, John Broderick 85, F. S. Wright 84, W. Henderson 88, O. R. Dickey 87, E. S. Graham 79, W. Ridley 94, G. McCall 79, A. M. Smith 65, H. D. Bates 94, F. Galbraith 85, Nelson Long 83, R. W. Clancey 92.

Second Day.

Seventy-five of America's targeters broke targets the whole day. The program called for ten 20-target events, or a total of 200 targets per man; the following percentages were hung up: J. S. Boa 93, J. R. Taylor 91, E. G. White 91, W. S. Hare 72½, W. Hart 82½, G. Beatty 92½, R. Day 90, F. Kerr 98, H. L. Taylor 84, J. E. Jennings 91½, F. Wright 92½, P. Wakefield 86, H. D. Bates 90, W. Henderson 95½, O. R. Dickey 91, E. S. Graham 94, W. Ridley 94, George McCall 72½, M. Raspberry 73½, F. W. Watson 79, Nelson Long 82, W. Dillon 64½, F. M. Fay 85½, R. W. Clancey 95, J. Eberts 78, R. Bruns 87½, J. Paine 76, J. B. Stevenson 77½, H. O. Loane 83, S. G. Vance 84, G. L. McLaren 69, Dan McNeil 90½.

Extra sweepstake at 10 live birds, \$5 entrance, distance handicap: R. H. Bruns (30yds.) 9, F. W. Watson (26) 6, R. D. Emslie (30) 9, J. Coffey (30) 10, G. C. Ritchie (30) 10, R. Coffey (30) 10, J. McLaren (28) 9, J. M. Dunk (20) 9, J. M. McCoig (26) 5, W. Hare (26) 7, F. Kerr (30) 8, P. Wakefield (30) 10, J. Jennings (30) 9, H. L. Taylor (30) 10, F. S. Wright (30) 9, G. M. Broderick (30) 10, Graham (30) 10, Dickey (30) 9, Vance (30) 8, McNeil (30) 8.

Third Day.

Special feature of the third was a 10-live-bird event, handicap rise, in which several perfect scores were made. The scores: J. M. McCoig (26) 6, J. Mander (28) 9, F. M. Fay (28) 7, H. L. Taylor (30) 10, F. A. Dolson (30) 9, P. Wakefield (30) 9, J. L. McLaren (28) 8, A. E. McRitchie (30) 9, J. E. Jennings (30) 7, Bob Emslie (30) 6, J. Coffey (30) 10, H. Scane (30) 10, S. Coll (28) 16, S. G. Vance (28) 8, G. McCall (30) 9, H. D. Bates (31) 10, R. Coffey (30) 9, E. S. Graham (31) 9, J. Payne (28) 9, B. V. Covert (30) 7, W. G. Pow (28) 8, F. W. Watson (26) 7, O. R. Dickey (30) 10, F. Kerr (30) 9, F. S. Wright (30) 10, G. L. Vivian (30) 9, R. H. Bruns (30) 9.

Early in the morning the target program was started, the day's events calling for 200 targets per man; percentages in possible 200: *J. S. Boa 88, *J. R. Taylor 94½, *E. W. White 87, *G. M. Dunk 82, *W. S. Hare 69½, *W. Henderson 95½, *O. R. Dickey 94, *E. S. Graham 92½, *Geo. McCall 83½, *F. M. Fay 84½, *S. G. Vance 84½, *J. Payne 77, *J. W. Eberts 85½, W. Hart 85, G. Beatty 89½, R. Day 82½, F. Kerr 90, H. L. Taylor 84½, J. E. Jennings 88½, F. Wright 92, P. Wakefield 85, J. W. Broderick 78, H. D. Bates 93½, W. Ridley 90, Nelson Long 84, R. H. Bruns 87, D. R. Covert 89, J. B. Fick 48, Scane 80½, C. Axford 60, F. W. Watson 82½, G. Ferris 60, H. Vollans 55, F. A. Dolson 79½, E. G. Marsh 76½, G. L. Vivian 84, O. E. McGaw 75½.

Fourth Day.

The entries in the several events of the fourth day's program were large. The Grand International Handicap at 20 birds was not finished owing to darkness. In the two events finished to-day, both at live birds, and each shot under a distance handicap, the scores made were as follows:

Event No. 1, 10 live birds, distance handicap, \$100 guaranteed: Joe Wagner (30) 10, S. E. Sangster (29) 8, E. W. Blackwell (30) 9, W. Root (28) 10, R. Beatty (30) 9, P. Wakefield (30) 9, J. E. Jennings (30) 9, W. Ridley (32) 9, H. L. Taylor (30) 8, E. S. Graham (31) 8, W. Smith (30) 10, F. A. Watson (26) 7, H. L. McLaren (28) 8, L. J. Jacques (28) 8, J. C. Cantelon (30) 9, J. M. Scane (27) 10, W. Thorold (30) 8, C. Scane (30) 10, Bob Emslie (28) 6, R. H. Bruns (30) 9, H. D. Bates (32) 9, F. Kerr (30) 10, A. C. McRitchie (30) 10, J. Wetherall (29) 7, F. S. Wright (30) 10, F. A. Dolson (30) 4, G. M. Dunk (30) 9, J. Payne (28) 8, E. W. Knight (28) 7, F. Galbraith (30) 9, G. Mander (28) 7, A. A. Webb (28) 7, S. G. Vance (28) 9, S. Coll (29) 8, J. Coffey (31) 9, F. Stotts (30) 8.

Event No. 2, 10 live birds, distance handicap: Joe Wagner (31) 9, H. D. Bates (32) 10, W. Blackwell (30) 8, W. Root (30) 10, R. Beatty (30) 8, J. E. Jennings (30) 8, W. Ridley (32) 8, E. S. Graham (31) 9, W. D. Smith (31) 9, L. S. Jacques (27) 9, Bob Emslie (27) 8, J. M. Coig (26) 4, R. Day (30) 6, J. E. Cantelon (30) 10, F. Stotts (29) 9, J. Stroud (30) 5, W. Reardon (30) 9, G. Beatty (29) 10, F. S. Wright (31) 10, A. M. McRitchie (30) 9, L. McLaren (27) 9, Robt. Coffey (30) 10, H. L. Taylor (29) 9, F. Galbraith (30) 9, J. W. Scane (29) 10, J. Coffey (31) 10, C. Scane (30) 9, S. A. Webb (29) 10, Joe Wetherall (20) 10.

Fifth Day.

George Beatty, of Hamilton, won the Grand International Handicap to-day, beating out Robert Coffey, of

St. Thomas, by one bird on the miss-and-out shoot-off. Of the thirty-six who entered for the event, all were amateurs with the exception of E. S. Graham and J. M. Dunk, and neither one of them succeeded in getting away from the non-pros. John Stroud, of Hamilton, pulled off the most spectacular play of the afternoon, getting 9 birds in succession with one barrel, but falling below the high average by one. The consistent shooters were the winner, George Beatty, and Robert Coffey. Each got 19 in the shoot, along with J. E. Jennings, of Todmorden, and W. Thorold, of Ridgetown, but, as previously stated, Coffey lost out in the shoot-off.

The first 10-bird event of the day went to W. Root with a total of 10 birds. The scores made during the day follow:

Event No. 1, 10 live birds per man, distance handicap: J. Wagner (32) 8, H. D. Bates (32) 9, J. H. Coffey (31) 3, A. C. McRitchie (30) 5, J. Scane (20) 5, B. Beattie (30) 6, C. Scane (30) 8, J. R. McLaren (28) 6, J. E. Jennings (30) 8, F. S. Wright (31) 7, W. Ridley (31) 7.

Event No. 2, Grand International Handicap, 20 live birds, distance handicap:

Table with 4 columns: Name, Yds., T'l., Name, Yds., T'l. Lists scores for various shooters like J. Stroud, M. Reardon, J. Wagner, etc.

Beatty and Coffey, who tied for the honor, shot the tie off, miss-and-out, Beatty winning by killing 13 to Coffey's 12.

Much praise went to management for excellent work.

Crescent A. C.

BAY RIDGE, L. I., Dec. 14.—Much good shooting was done here to-day, with several ties, during the afternoon. Leg on committee cup was won by G. G. Stephenson with 47 from a free start of 6. Take-home trophy ran into a tie at 95 between C. R. James and M. Steiner. In shoot-off James cracked 24, one more than he needed to win. Monthly cup brought three ties at 24 between handicap men. R. C. Williams lifted a leg on Vanderveer trophy with a full from a 10 draw. C. R. James cinched a leg on the same trophy by beating Hyatt in shoot-off held over from last week. The scores:

Table with 4 columns: Name, Score, Name, Score. Lists scores for committee cup and take-home trophy events.

Table with 4 columns: Name, Score, Name, Score. Lists scores for monthly cup and shoot-off events.

Table with 4 columns: Name, Score, Name, Score. Lists scores for shoot-off on Vanderveer trophy.

Table with 4 columns: Name, Score, Name, Score. Lists scores for shoot-off on Vanderveer trophy, 50 targets.

Manhasset Bay Y. C.

PORT WASHINGTON, L. I., Dec. 8.—The regulars and a few others waded the waters toward Hart's Island here to-day, and as usual, two-thirds of the kale was coffered by J. W. Alker, he cribbing second limb on I'ember cup, Manhasset cup, and another pedestal on Yearly cup. D. E. Smith had the eye in 10 scaler, scratch event. He paved the beach with 8. Fifteen aerosaucer scratch event was properly cinched by H. F. Funke. Scores:

Table with 4 columns: Name, Score, Name, Score. Lists scores for trophy and cup events.

Chicago Gun Club.

CHICAGO, Ill., Dec. 7.—The cold, penetrating wind which was blowing not only had the shooters guessing where to hold on the targets so as to score a "dead bird," but also made them hustle into the club house after snooting each frame and warm up for the next round.

Goode took the amateur honors in each event, scoring 22 out of 25 in practice, breaking a total of 90 out of 100 in the two club events, and high over all on the doubles. Silver was a close second in the two club events with a total of 89. John Boa, accompanied by W. S. Hare, were with us to-day, and expect to be out again to-morrow. Boa was breaking the targets in his same old style for a total of 96 out of 100 in the singles, breaking his last frame of 25 straight.

Stannard also made a strong finish, with 25 straight. Hare has only been at the trapshooting game for two months, but feels that he is learning fast.

Table with 6 columns: Events, 1, 2, 3, 4, 5, 6. Lists scores for various targets and shooters.

Dec. 8.—While it was quite cold yesterday, the Weather Man gave us our first real winter weather to-day, when the thermometer registered 16 degrees, which was cold enough to make the shooter's fingers tingle before finishing a frame on the firing line, and they lost no time getting back into the club house to thaw out near the warm fire.

Dave Thomas ran up the high score in the practice event when he broke 24 out of 25, also being high amateur in the two 50-target club events, with a total of 89 out of 100. F. Miller, a visiting shooter from St. Paul, was a close second with 88, and then broke 45 out of the next 50. Geo. Eck took the honors in event 5, breaking 21 out of 25 with gun below the armpit. Fred Bills broke 49 out of 50 in the first 50, with Boa running him a close second with 49. John Taggart tied Boa for second in the practice event. Moore was shooting a new gun and is going to be out more regularly in the future.

Table with 5 columns: Events, 1, 2, 3, 4, 5. Lists scores for various targets and shooters.

Saratoga Gun Club.

SARATOGA, N. Y., Dec. 12.—The members of the Saratoga Gun Club had an afternoon's sport at their club grounds, Tuesday. A program of 50 targets was on tap, and scores in a few instances were good, considering the young gale that blew across the field. Sim Glover, of the Du Pont Powder Co., and Mr. Gates, of the Marlin Co., were the professional guests present. In the 50-target event, Harry Levingston, Saratoga's pride at annihilating clay saucers, and Mr. Glover shot a pretty race. Levingston missed his fourth and fifth and then smashed clean to the end. Glover cleaned up the club profits till the fiftieth was thrown, and that one is flying yet. The closeness of the match resulted in a match between these old-time rivals, and a 25-target match was shot by both gentlemen. Glover was the first to fall on an easy straightaway, his 18th bird. Levingston, not to be outdone, missed his 19th and repeated on the 24th. The match was a pretty performance, and was much enjoyed by the spectators. Gates broke 19 out of 25; he is a new-comer, and with a little more practice, should be a factor in the big shoots. Following are the scores:

Table with 4 columns: Name, Shot at, Broke, Name, Shot at, Broke. Lists scores for Glover, Levingston, etc.

E. C. COREY, Referee.

Sewanoy Country Club.

MT. VERNON, N. Y., Dec. 14.—The Ossining Gun Club, which won the Westchester county championship on Thanksgiving Day, was defeated to-day by the Siwanoy Country Club by one bird. The match was for 50 birds, and each club was represented by five men. Scores:

Table with 4 columns: Name, Score, Name, Score. Lists scores for Siwanoy and Ossining clubs.

Other Siwanoy members shot as follows: Hill 38, Guggenheim 33, Morgan 31, W. Thorpe 37, Bond 32, Smith 30.

By special request, we omit the scores of Haas, Hadlock, Curry, W. M. Wylie, Lent and C. Dick. L. D. HILL, Sec'y Siwanoy G. C.

New York A. C.

PELHAM MANOR, N. Y., Dec. 14.—Too many events and too few hours left some matters unsettled at Travers Island to-day. Travers Island trophy event ran into a six tie, and on shoot-off a triple tie resulted, to be finished next week. Grinnell won distance handicap; Ranney took Olympic trophy; R. L. Spotts carried away a mark on Culver cup; McMahon finally took the lid off the 100 target scratch event. The summary follows:

December cup, 25 targets, handicap:			
R R Debacher.....	6 25	T Lenane, Jr.....	4 21
A E Ranney.....	1 25	B M Higginson....	1 20

Bergen Beach Gun Club.

BROOKLYN, N. Y., Dec. 10.—J. F. Simonson won first coin to-day with 95 out of 100. His strings were 23, 22, 23, 23. His handicap was 4. Scratch man, R. Morgan, was second with 92, while H. Edmonds came into the money with 91 from 15 free ones. The scores:

J F Simonson.....	4 95	J Voorhees	5 84
R Morgan	0 92	P von Boeckman..	0 83
H Edmonds	15 91	L Schorty	2 83
A V Suydam.....	7 91	H Tracy	20 82
A Russell	17 90	P May	12 82
C Medler	7 89	P Moeller	10 80
H W Dreyer.....	10 89	W Dannefelter ..	0 70
W L Skidmore....	15 89	P Collins	0 70
W L Groll.....	8 89	T Davis	0 62
H Keller	0 86	C Bitz	0 49
H D Bergen.....	10 86		

Dec. 15.—With a handicap of 20 scalers, P. Collins won the weekly high gun to-day with 92 out of 100. Paul von Boeckman with only one free saucer, took second with 90. Dr. Sauer, who drew 2 without shot, made 89 for third lucre. It was Sunday, and the Gulf

Stream accounted for the same weather as elsewhere in the East—ideal. Scores:

P Collins	20 92	R Morgan	0 84
P von Boeckman ..	1 90	C Schroeder	9 84
Dr Sauer	2 89	H Tracy	20 77
H W Dreyer.....	10 88	G Morris	12 67
J Voorhies	6 84	L Chapman	12 64

North Side Gun Club.

WILMINGTON, Del., Dec. 12.—Three shooters tied in the main event of the regular weekly shoot of the Fort Side Inn Club to-day at Whitmarsh, before a big crowd. In a special 25-bird match, Izzy Hoffman, of this city, defeated Harry Sterling, of Merchantville, N. J., with 23 to 21. Scores of 15-bird event:

I Knowles	Yds. T'l.	29	15	H Kahler	Yds. T'l.	30	14
I Hoffman	30	15	H Bowers	27	12		
D Paul	29	15	Sterling	27	10		
Special match, 25 birds:							
I Hoffman	30	23	H Sterling	28	21		

Montclair Gun Club.

MONTCLAIR, N. J., Dec. 14.—Two events filled the bill here to-day. The first event was for Fall trophy, at 25 targets. Seymour Crane, with a gift of 3, was winner with 24. Winslow was second with 23 from a hand-out of 5. Other scores were: Crane (3) 24, Williams (5) 22, Phelan (5) 21, Henderson (6) 23, Winslow (5) 23, Francisco (3) 22.

In two 25-target shoots Crane and Francisco tied with 19 in the first, while Crane led the way in the second with 22.

Englewood C. C.

ENGLEWOOD, N. J., Dec. 14.—With more or less ease the Marine and Field Club six trimmed those devotees here to-day; 521 to 517 was the bluerockeloo ending. A return match will be held at the Bath Beach Club on Jan. 4. Marine and Field team were: E. H. Lott, L. C. Hopkins, C. D. Sayre, J. M. Knox, C. M. Camp and J. H. Emanuel, Jr. Englewood team: A. B. Gaines, M. Maclay, F. Ferguson, N. Peters, C. Schultz and H. M. Coxe.

WINCHESTER

Rifles and Shotguns Make

Highly Prized Holiday Gifts

A Winchester .22 Calibre rifle for a boy; a repeating shotgun or hunting rifle for the mature sportsman, or a light-weight rifle or a 20 gauge repeating shotgun for the out-of-door girl, will make a most acceptable Christmas present. For completeness include a supply of Winchester cartridges or shotgun shells. Winchester ammunition not only gives the best result in Winchester guns, but with all other makes.

Winchester Rifles, Shotguns and Ammunition

 3rd—A. M. Poindexter.....574
 5th—C. M. McCutcheon.....570

TWO NEW RECORDS

Match E. Revolver Team Championship
 1st—Denver Revolver Club...774

These victories, won against the hardest possible competition, show that our oft repeated claim for the ABSOLUTE SUPERIORITY of PETERS AMMUNITION is not mere idle talk, but a conservative and provable statement of FACTS.

PETERS REVOLVER AND RIFLE CARTRIDGES of 32 and larger calibers are just as surely superior to other makes as Peters 22 caliber. PETERS SMOKELESS Cartridges are as far ahead of competing brands as are PETERS SEMI-SMOKELESS.

Shoot the P brand, the only kind that will shoot perfectly in ANY good gun.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

Western Connecticut Trapshooters' League

In giving an account of our year's work of the League it might be of interest to those interested in the sport to know just how we conduct our tournaments, as there is a good deal of criticism going on in the sporting papers as to how a tournament should be conducted so the average shooter will have a look-in.

In the first place, sweepstakes are a side issue with our League, only two of the six tournaments had sweeps, and then only fifteen or so entered, so it shows the shooters of Connecticut are not shooting for the money they can get out of it, but for the love of the sport, and the good fellows they meet and a general good time. I don't believe there is a League in the country that draws as many 80-per-cent.-and-under shooters as we do. It is the system we have adopted by giving a good list of prizes arranged so all classes of shooters have a chance to win something, as it pleases most any one to take home a prize, not for its intrinsic worth or value, but just something as a reminder of the day. The good shooter is looked after, as the first prizes are always the best, and then there is a special event with a high grade gun or gold for the better class of shooter to go in for if he so desires.

The average attendance this year was 83, not quite as good as last year, which was 89 for the six tournaments. The had weather at Waterbury and Bridgeport accounts for the decrease this year.

The first tournament was held at Bethel, on May 4, with 75 shooters: New Haven, May 25, with 86; Long Hill, June 20, with 65; Danbury, July 20, with 122; Waterbury, Aug. 10, with 47; Bridgeport, Labor Day, with 100.

The scores this year were far above those of last, which goes to show the experience gained from last year was beneficial, almost every shooter this year going through the entire program.

There was much interest shown for the different trophies the League had to offer, and a battle royal ensued until the last shot was fired, as it depended on the last shot for one trophy.

The League offered a trophy for the shooter making the highest total score for the six tournaments. This was won by A. L. Chamberlain, of New Haven, with 825 out of 900, an average of 92 per cent. He kept up his good work, and won high score at the Westy Hogans, which was going some with that classy lot of shooters. W. A. Gregory, of Danbury, was the only one who had a chance with Chamberlain, as he was only four targets behind up to the fifth tournament, when Chamberlain increased his lead to 9. At Bridgeport, Gregory had hard luck, and finished in third place, with W. W. Rice, last year's winner, finishing second: A. L. Chamberlain 825 out of 900, W. W. Rice, New Haven, 810; W. A. Gregory, Danbury, 807; C. Van Stone, Bridgeport, 804; L. H. Bradley, 802. Last year the winner broke only 796.

The Du Pont Connecticut amateur trophy was the one in which the most interest centered, as there were six different shooters who won a "leg," the high score at each tournament to count as a "leg."

C. Sherwood, of Bridgeport, won a leg at Bethel with 139 out of 150; L. C. Wilson won at New Haven, with 145, which was the high score of the series. W. A.

Gregory, of Danbury, won at Long Hill with 141; L. H. Bradley, of Hartford, won at Danbury with 137; A. L. Chamberlain, of New Haven, won at Waterbury, with 139; E. G. Southey, of Bridgeport, won at Bridgeport, with 141. The conditions were that if there were any ties they should be shot off at 50 targets at the last tournament. Believe me, it was some shoot-off. The six shooters comprised the squad, with Mr. Ed. Banks, of the Du Pont Powder Co., and Mr. Funk, of the Liberty Cartridge Co., acting as referee. The first 25 shot at it looked like another tie, as every one was centering his targets. At the finish there were five 24s and a 23, which was going some. When the smoke had cleared from the last round, the scores showed L. C. Wilson, of Bridgeport, the winner, with 48 out of 50, W. A. Gregory 47, A. L. Chamberlain 47, L. H. Bradley 47, C. Sherwood 46, E. G. Southey 44. Everyone said it was the best shoot-off they had ever seen.

The Liberty Cartridge Co. trophy was won by E. G. Southey, which was for the longest run at the six tournaments; his run was 78.

The Western Cartridge Co. trophy for the shooter winning the most legs in the team race, was won by A. L. Chamberlain, he winning three of the six.

The team race was another feature which attracted a good deal of interest and was won by New Haven again this year, they winning three legs, Bridgeport two, and Danbury one.

The amateur championship of Connecticut was shot for at the Pahquioque's tournament, at Danbury, C. Howard Daley, of Danbury, being the winner.

The annual meeting of the League will be held at Bridgeport Feb. 1, when they will make arrangements for the season of 1913, which looks very good. It is expected the Hartford Gun Club will become a member of the League next year.

E. H. BAILEY, Sec'y.

Smith Gun Club.

NEWARK, N. J., Dec. 14.—Smith gunners took a try yesterday over traps at Wiedenmayer's Park, with eleven contestants on score. Scores made look about as follows:

J C Weiler	20	19	21	21	23	19	..
W Hassinger	19	22	19	20	21	21	21
Neaf Apgar	21	20	24	23	25
A Chandler	16	13	15	21	13	17	..
J Murphy	16	18	17	20
Chas T Day, Sr.....	16	14
F Apgar	16	17	23	17
H Hassinger	13	16	19
J Wilderman	8	16
J Wheaton	16	15	21
J Rink	20

Stamford Rod and Gun Club.

STAMFORD, Conn., Dec. 14.—Stamford is a lively town, but its pull on trap gunners is none too magnetic. Only four, about the usual day's bag of trappists, were coraled to-day. E. L. Hatch won both 25-bird sweeps, first with 21; second with 23. Ten-bird event fell to R. A. Gillespie with 9 dead ones.

Cincinnati Gun Club.

CINCINNATI, O., Dec. 15.—Eleven members took part in the weekly shoot to-day. The weather conditions were exceptionally good for this season of the year, but a strong wind, blowing across the traps, caused the targets to be very uneven in their flight, and kept some of the scores below the average. J. Schreck was high man with the excellent score of 93, going straight in the last two events. H. Connelly was also in fine form, tying with Schreck in the first half of the program, and going out in second place with 90. W. R. Randall, of Mason, shot a close race with McArdle, finishing in a tie. Many of the members will visit the Northern Kentucky Gun Club on Dec. 22, for the turkey shoot. Arrangements are being made for a series of team matches between the local gun clubs, and it is expected to hold the first match in the near future. Ed. Frohlinger has not shot at the trap for several months, and showed a lack of practice in his work to-day. Bob Ward shot a 82 per cent. clip; but this is not quite up to his mark—the wind got the best of him. Hammerschmidt was not in shape, his score being several targets less than usual.

Randall	12	13	15	11	11	19	81
Schreck	13	14	18	13	15	20	93
Hammerschmidt	12	15	15	12	15	17	86
Frohlinger	12	10	15	10	11	11	69
Ward	11	12	18	41
Connelly	13	14	18	14	12	19	90
McArdle	14	10	17	12	11	17	81
Mullins	2	4	9	7	22
Goshorn	6	7	15	9	37
L Gambell	12	12
Northcutt	9	9

Indianapolis Gun Club.

INDIANAPOLIS, Ind., Dec. 14.—Dixon with 91 1-3 per cent., led the field to-day and posted long run of 45. Parry was in second place with 90 per cent. Shooting for the Stevens fob, an added target competition, ended in favor of Edmonson. The scores follow:

Shot at. Broke		Shot at. Broke	
Dixon	150 137	Wheeler	120 59
Parry	150 135	*Hymer	100 90
Edmonson	150 129	Britton	100 84
Short	125 99	Neighbors	100 73
Moller	150 126	Shepler	45 24
Lewis	120 99	Swallow	25 15
*Professional.		R. R.	

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Dec. 7.—The day was cold and blustery, and only seven shooters were present at the regular practice shoot. Scores:

Shot at. Broke		Shot at. Broke	
Lichtenberg.	50 46	Meyer	25 19
Wilson	50 33	E Suhre	25 12
Wyatt	25 21	Koch	15 7
Bollmann	25 22		

J. O. WILSON, Sec'y.

The Du Pont Gun Club.

WILMINGTON, Del., Dec. 14.—Owing to the fine weather, and the attractive program scheduled for yesterday afternoon's shoot, the attendance at the grounds of the Du Pont Gun Club was more than satisfactory. The frosty air apparently had no effect upon the members of the club, forty-two taking part in the afternoon's sport.

The club events were the regular monthly competitions for the Eugene E. du Pont team trophies, and the open competitions for the 1912 Class C and Class D cups. The match between J. B. McHugh, holder of the State championship, and Edward Banks, challenger for the title, was also scheduled.

It will be remembered that Mr. McHugh recently won the title from A. B. Richardson, of Dover, who had held it ever since he won it in open competition at the Delaware State Sportsmen's Association's tournament on May 30. Mr. Banks challenged Mr. McHugh for the title, and afterward W. S. Colfax, Jr., put in his challenge to the winner of the McHugh-Banks match. As matters now stand, he will have Banks for his opponent, as the latter defeated McHugh yesterday afternoon in a rather one-sided match by the score of 92 to 78.

Apparently the weather conditions were distinctly all right for good scores, although the light and the haze seemed to affect the scores to a certain extent. It is clear, however, that McHugh was unfortunately entirely out of form, and what was expected to be a close race was really a procession from the start, as McHugh lost the first three targets that he shot at. In practice, Banks broke 24 to McHugh's 22, and finished his first 100 targets with two 24s and two 22s, or a total of 94. His last string in the match netted him 22, and made his total for the day 9 lost out of 125 shot at, or an average of one less than 93 per cent. The scores in the match were:

Targets:	25	25	25	25	Total
J B McHugh.....	20	22	17	19	78
Edward Banks	23	23	24	22	92

As at present arranged, the match between Banks and Colfax, Jr., will be shot at 11 A. M. on New Year's Day, during the turkey shoot, which the Du Pont Club will hold that day. Yesterday afternoon Colfax broke 94 out of his first 100 shot at.

For the Eugene E. du Pont team trophies, fifteen teams entered, and scores made with added target handicaps, were as follows:

R S Wood.....	5	25	J H Minnick....	1	23
W Edmanson ..	1	25-50	C T Martin.....	3	22-45
J B McHugh...	1	23	J H Squires.....	7	25*
A J Curley.....	7	24-47	L C Lyon.....	1	20-45
H J Newman....	5	25	R P Willis.....	3	21
H P Carlon....	1	22-47	H W Bush.....	1	23-44
L L Jarrell....	5	25*	C H Simon.....	5	19
W Hammond....	1	22-47	C Leedom	3	25-44
C E Springer... 5	24	W B Smith, Jr..	3	20	
S G David.....	7	23-47	Z H Lofland... 5	23-43	
E M Ross.....	7	24	T Matthewson... 5	23	
J J Magahern... 3	22-46	V du Pont.....	3	19-42	
J Anderson, Jr. 3	21*	A Bird	9	25*	
W Tomlinson... 5	25-46	Dr A Patterson. 3	17-42		
W J Highfield... 7	25*				
W G Wood.....	1	20-45			

*No contestant can score more than a highest possible, viz., 25.

As a result of the above contests, R. S. Wood and W. Edmanson landed in first place with 4 points each to their credit. Teams scoring a total of 47 targets get 3 points each. Ross and Magahern get a credit of 2 points each for their team total of 46, and the 45s score 1 point each.

Other scores made in the team event, the individuals not being paired off, were: Edward Banks and W. S. Colfax 24; E. E. du Pont 22, E. R. Galvin (a newcomer from Duluth, Minn.), 20; Dr. Horace Betts, W. A. Joslyn and W. B. Sturgis 19; George Frank Lord 18; Stanley Tughton 17; W. A. Casey 15, and Coleman Johnson 5.

In the open competition for the Class C cup, R. S. Wood and S. J. Newman tied on 20, the shoot-off of the tie being postponed until a later date on account of darkness. W. J. Highfield with the sterling score of 21 out of 25, made things warm for his opponents in Class D, and won the trophy without a tie.

The club is making great preparations for its annual New Year's Day turkey shoot, but all the details in connection with the event have not as yet been decided. It is promised, however, that it will be fully up to the standard of all similar events held by the club, and due notice of the particulars will be sent to the club members.

Eugene Gun Club.

EUGENE, Ore., Dec. 6.—To-day was very foggy and cold, and the duck season being on in the bargain, accounts for only eight of the boys trying their eyes at the elusive clay birds. McCormack was high with 92, while Moullen was crowding him with 91. Seavey, Koopp and Bean all waiting for the leachers to slip one or two.

McCormack	25	24	22	21	92
Moullen	23	23	23	22	91
B Koopp	21	23	22	23	89
Seavey	21	22	25	22	90
Bean	22	22	24	22	90
Deierlin	18	21	18	20	77
Heckart	19	17	18	17	71
C Kompp	16	21	20	..	57

E. A. BEAN, Sec'y.

Medford (Okla.) Gun Club.

MEDFORD, Okla., Dec. 13.—The following scores were made by members of our club and their guests to-day. Patterson, who shot with us, is a member of the Arkansas City, Kans., Gun Club, and Dr. Taylor is secretary of the gun club at David City, Neb.

Shot at, Broke		Shot at, Broke			
Patterson	65	43	Taylor	50	39
Shanklin	100	84	Blood	55	49
Wilson	30	21	Anderson	35	24
Dotts	25	21	L. V. HARDY, Sec'y.		

H. E. SNYDER

Mr. H. E. Snyder of Kansas City, Mo., Wins High Amateur Average on targets shot at in registered tournaments in 1912.

96.36%

MAKE AND BREAK RECORDS

Frontier Rod and Gun Club.

BUFFALO, N. Y., Dec. 9.—Stormy and disagreeable weather caused low scores and poor attendance at the regular shoot to-day of the Frontier Rod and Gun Club. Nomination and election of officers will take place at the regular meeting on Wednesday, Dec. 18, at 8 P. M. Members of the Jefferson Gun Club will visit the traps on Dec. 22, the last and deciding shoot of 1912. Scores:

Events:	1	2	3	4	Events:	1	2	3	4
Targets:	10	15	25	25	Targets:	10	15	25	25
Wakefield	3	8	12	15	W Utz	2	9	..
W O Hewitt..	4	7	11	16	Hoebel	6	9	..
G McKenna	8	14	M Ketter	2	..

Thompkins	19	25	Bailer	1
Short	16					

Points won: Class A—Wakefield 12; Class C—Thompkins 19; Handicap—Thompkins 25.

Northern Kentucky Gun Club.

H. R. IRWIN captured high honors at the weekly shoot Dec. 15, with a score of 87, not quite so many as

he often breaks, but a very good showing in the strong wind which prevailed and tossed the targets about at unexpected angles. Capt. George Dameron and O. J. Holiday had a close fight for second place, the former going out with one target to the good, although the wind cut both scores below the average. Henry started out well, but failed to keep up his pace, and dropped into fourth place. A big crowd is expected at the turkey shoot on the 22d. Many local shooters will be present, and the managers, H. R. Irwin and Capt. Dameron, have received notification that delegations of trapshooters from nearby cities will be on hand. The program is a liberal one, five 20-target events, with four prizes in each event, and a prize of a turkey to high and low men if there are 20 or more entries, for the entire program. Sam Leever, the former ball tosser for the Pittsburgs, will come down from Goshen with a bunch of shooters; Dayton will send a squad; Columbus has been heard from, and other places will be represented.

Targets:	20	20	20	20	20	Total
H R Irwin	17	19	19	15	17	87
G Dameron	17	18	18	17	15	85
Holiday	16	16	18	18	16	84
Henry	15	15	12	10	7	59
Wuerdeman	15	15	30

NEW *Marlin*
12 GAUGE

Hammerless Repeating Shotgun

This Model 28, 12 gauge *Marlin* shotgun is the finest repeating gun in the world. It has every up-to-date feature, perfected far beyond all previous standards, and it has exclusive advantages not obtainable in other guns.

Note these features: **Hammerless—Solid Steel Breech** (inside as well as out)—**Solid Top—Side Ejection—Matted Barrel** (as on our highest grade hammer guns)—**Press-Button Cartridge Release** (to remove loaded cartridges quickly from magazine without working through action)—**Double Extractors—Take-Down Feature—Trigger and Hammer Safety.** Price, \$22.60.

The Model 28 is a fine appearing, beautifully balanced gun, without any objectionable humps or bumps; its **Solid Steel Breech** (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; **it is the safest breech-loading shotgun ever built.**

Our free circular gives large illustration of gun and full description. Our complete 122-page catalog of all other *Marlin* repeating rifles and shotguns mailed for three stamps postage.

Our 160-page **Ideal Hand Book** tells about re-loading all cartridges; mailed for 6c. stamps.

The Marlin Firearms Co.
27 Willow Street, New Haven, Conn.

Boston A. A.

BOSTON, Mass., Dec. 14.—Although O. R. Dickey broke straight the entire program over the McCrea, he lost on shoot-off at 25, after being tied by L. H. Davis, who shot from a handicap of 5, which filled his 50. The shoot-off resulted in a difference of only 3/4 of a target. The handicappers at Boston A. A. deserve recognition as being as good as the best and better than the rest. Third in this event went to R. A. Faye with 49 from scratch. H. W. Knights, 49 from 4, and F. Whitney 49 from 10.

L. H. Davis took a bit more glory with a full from a 5 disc draw over Sargent traps for leg on December trophy. F. Whitney made 48 from 10 gifts and R. A. Faye got place on 46 from scratch.

December trophy, 50 targets, Sargent:

L H Davis..... 5	50	F H Richards...	8	44
F Whitney..... 10	48	O R Dickey.....	0	43
R A Faye..... 0	46	M E Cobb.....	12	43

Shoot-off, 25 targets:

O R Dickey..... 0	23	L H Davis.....	2 3/4	23 3/4
		C. B. TUCKER.		

Jersey City Gun Club.

JERSEY CITY, N. J., Dec. 14.—Geo. Piercy was high gun to-day, winning high average prize with an average of 87 per cent., and Dr. Groll was second with 81 per cent. McLemore won the weekly prize, a dandy carving set, with a full score of 25, counting the handicap. Dixon was high in the distance handicap with 22, and received for his trouble a classy little picture given by President Hallinger. Mrs. Vogel was over again and shot at a 76 per cent. clip, which was excellent shooting over our traps, she getting four 19s. The scores follow, in strings of 25:

Mrs Vogel.....	19	19	19	19	..
Keller.....	19	25	20	15	..
Kent.....	19	21	16	17	..
Piercy.....	22	23	21	21	22
Hallinger.....	21	20	19	20	..
Dixon.....	21	16	14	22	..
Hubbell.....	20	21	18	18	..
Summerfield.....	11	12	11	11	..
Shannon.....	20	22	15	21	11

Huggins.....	18	18	22	14	..
McLemore.....	20	17	14	14	..
Windisch.....	21	18	17	13	..
Dr Groll.....	21	22	18	20	..
Kearney.....	10	15	15	7	..
Cranford.....	21	22	16
Williams.....	11	15	15

Messrs. Huggins, Hubbell and Kent are full-fledged members now, having received their last degree to-day. Don't forget to be on hand early Saturday, Dec. 21, for the turkey shoot. Shooting starts at 10 A.M. sharp.

Rifle Shooting

Cincinnati (O.) Revolver Club.

THE fourth in the series of telegraphic team matches was shot on the Brendamour range, Dec. 11, the club's opponents being the Manhattan Revolver Club, of New York. High scores were made by W. H. Cox and G. A. Muenzenmair, 202 each, the latter making high five-shot score of 45 in his second round. Elmer Hake is rapidly coming to the front. The team has improved in each match, and will get in the 1000 class if the members continue their good work. A. H. Kenan is getting the hang of his new .44 Colt's. At practice this week he shot two scores of 49 and 48. Ten members were at the range to-day.

W H Cox.....	40	40	40	41	41—202
G A Muenzenmair.....	36	45	36	41	44—202
Elmer Hake.....	37	40	39	44	39—199
Col C F Hake.....	37	42	30	41	43—193
A H Kenan.....	39	37	41	30	50—192

Scores made by other members:

C D Erd.....	34	23	41	39	29—166

How Brier Pipes Are Made.

BRIER, which furnishes the root from which the brier pipes are made, is the shrub called the white heath or heather, and is found chiefly in the south of Italy, or on the Island of Corsica, and in Algeria. The shrub often grows to a large size, although only the roots are used in the pipe-making industry.

After the roots have been cleaned of the earth which clings to them, they are sawed into blocks of various dimensions, placed in vats and allowed to simmer for twelve hours, which brings out the rich brown color for which the finest pipes are prized.

Following this boiling process the blocks are steam dried for two weeks and then are sent to the factory, where they are converted into pipes. The blocks are assorted according to size by experts, are placed on shelves and kept at an even temperature for ten days. Then they are dyed and sent to the machines, where the actual manufacture begins. After the blocks have been trimmed to the proper size, the upper part of the bowl is turned, then the lower part and stem, and they are sandpapered. The finishing of the bowls then takes place.

CHRISTMAS DAY AT WILDCAT.

Continued from page 778.

slab table which stood next the wall opposite the door and lighted them. Then he drew from his bosom a small crucifix with the Christ upon it, and set it on the table so that the light would fall directly upon it. Next he threw Pierre's big bundle of fur into an obscure corner. When this was done, he took the now steaming kettle from the fire and prepared two stiff drinks of hot rum, one of which he handed to the trapper.

"Down with it, my boy!" he commanded, and set the example himself, after which he handed Pierre his rifle and cautioned him to keep quite still in his seat, while he himself took a position at the window, where he could command a view of the clearing without being seen from without. In a few words he explained the situation to the astonished young man, keeping a sharp lookout the while.

"Do just as I say, my son, and all will be right. Defend your life if you must, for your family's sake, but I have higher hopes."

Hardly had he got the words out of his mouth when he made a quick gesture of silence and caution, for he had seen the bushes opposite the cabin shake slightly, discharging some of their burden of heavy snow. Presently the dark figure of Dominique, the halfbreed, stepped out into the clearing and skulked toward the cabin door. Suddenly, however, it stopped as if uncertain what to make of the unusual illumination and appeared to drop on one knee behind a little snow-laden bush.

Dominique saw a sight that made him smile grimly; nothing less, so he thought, than Pierre sitting with his back to the window, for there was his fur cap just above the window sill—Dominique even saw it move slightly. Ha, what a chance!

The next moment the loud bang of a rifle reverberated through the frosty evening air, and the fur cap, which had been held by Father Leroy on the point of a stick, disappeared. An instant later a heavy piece of wood fell loudly upon the cabin floor, and the priest called in a hoarse whisper to Pierre, "On your knees by the table, quick!"

Hardly had Pierre had time to throw himself upon the floor and the priest to kneel himself in front of the crucifix with his back directly toward the door, when it was thrown open, and the savage halfbreed bounded into the cabin.

The sight that met his eyes rooted him to the floor. The crucifix with the lighted candles, the good priest of St. Ignace before it as if about to say mass, the man whose body he had heard strike the floor after receiving a bullet through his head kneeling there tranquilly—nay, more, all this as if no shot had been fired, no noise heard! Dominique's eyes fairly stood from his head. The priest—a feeble old man—why, he was celebrating the mass in his own church but a few hours before!

Meanwhile all was still, save for the crackling of the fire. Poor Pierre knelt in a fever of fear. He was not in a position to realize the situation, and he was prepared to get a bullet through his back at any moment, and yet he dared not move. The good priest kept his eyes and his mind fixed upon the image of the Son of Man, for the moment he was not of this earth.

Actually the situation was one of great peril.

In spite of the superstitious nature of the half-breed, upon which Father Leroy had rightly counted, the fellow was nevertheless more than half a savage, and at any moment some uncontrollable impulse might cause a terrible reaction, and the result would be murder, very likely double murder.

Dominique looked from one to the other of the kneeling apparently serene figures in speechless wonder. And then the voice of the good priest, very low and soft, began to repeat the Ave Maria. When this was finished, he began other prayers, his voice growing steadily in volume, until rising slowly and majestically from his knees, he finished the last one with his face turned toward the motionless halfbreed, and his arms outstretched in supplication to the Most High. For a time he stood there in that position in silence, and then dropping his arms slowly he said, in a low, sweet voice to Dominique: "Kneel, Dominique, my dear son! Kneel and give thanks to God, the Almighty Father, to His Blessed Son, and to the Holy Virgin, that you have been preserved this day by a great and holy miracle from worse than death itself." The man hesitated. "Kneel, I say! In the name of God—kneel!"

At the last word the would-be murder, shaking like a leaf, dropped in a limp mass in front of the priest, grovelling and gibbering, while his rifle fell upon the floor with a clatter.

Father Leroy stooped and laid his hand upon the man's head. "Do you repent, my son?" he asked softly. But the fellow was far too unnerved to speak. All he could do was to grasp the priest's hand and kiss it passionately again and again. Finally he gasped out: "You will not put me in jail—kill me—no?"

"My son, do you repent your sins, truly and deeply? Tell me!"

"Yes, yes! Mother of God, yes, I do!"

"Dominique, listen to me, for you know that I do not lie. You believed that Pierre here was jealous of you and caused you to be arrested. That is not true; he was forced to do his duty and help his superior officer. You thought he stole the big otter from your trap. That is not true, either, for the man who really took the otter confessed to me and gave me money for you, which I shall give you. So you see, my son, that you have done this man a great injustice, and even tried to kill him, an innocent fellow creature with wife and child to support."

"Pity, my Father! Have pity!" moaned the halfbreed.

"My son, the good God is ever ready to forgive true penitents, and so must I be. Receive the absolution of Heaven, Dominique! And now you have but the forgiveness of this man to beg, whom you have so grievously wronged."

But Pierre came forward before the other could reply, and stretching out his hand, cried: "Your hand, Dominique, and never think about it again! Come, shall we be friends?" And the next moment the good priest was invoking the blessing of heaven upon the newly cemented friendship.

* * * * *

An hour later, after the grand Christmas dinner of partridge and bacon and good bread and butter had been washed down with generous swigs from the good Father's flask, Pierre opened his bundle of fur before the admiring eyes of his fellow trapper.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

GAME BILL NOW PENDING IN CONGRESS.
Continued from page 787.

or which cannot be incorporated in one of the great supply bills.

About thirty bills affecting game are now before Congress, but several of these are corresponding bills in House and Senate, and others are revisions of earlier bills. Thus there are three bills in the Senate and two in the House protecting migratory birds (S. 2367, S. 6478, S. 6497; H. R. 36, H. R. 4428); two for the establishment of the Peter Lassen National Park (H. R. 19557, H. R. 22352); and two for the importation of wild and domestic animals into the United States (H. R. 1303 and H. R. 24324), so that the number of distinct measures is less than twenty. Of these the McLean and Weeks migratory bird bills are now on the calendar and may come up for consideration, the Catron bill for a game refuge in New Mexico and the Perkins general refuge bill, having made some progress, may pass, but the other measures seem to have little chance for passage at this session. The latter measures include bills for enlarging

the Grand Cañon Game Refuge; establishing game preserves in Arizona, Montana and Wyoming; creating National parks in California, Hawaii, New Mexico and Washington; for the protection of game in the District of Columbia and in the Glacier National Park; for the importation of certain wild and domestic animals into the United States; and a constitutional amendment giving Congress power to legislate for the protection of migratory birds. These measures, with the number, title, date of introduction and committee to which referred, are as follows:

- LIST OF BILLS.
- S. 417.—A bill to enlarge the Grand Cañon Game Refuge. Introduced by Senator Smoot, April 10, 1911. Committee on Forest Reservations.
 - S. 2367.—A bill to protect migratory wildfowl in the United States. Introduced by Mr. McLean, May 17, 1911. Committee on Forest Reservations. (See S. 6497.)
 - S. 3937.—A bill to protect the birds and animals in Glacier National Park, etc. Introduced by Senator Dixon, Dec. 19, 1911. Committee on Conservation of National Resources.
 - S. 3948.—A bill authorizing the creation of a game reserve in Fremont county, in the State of Wyoming. Introduced by Senator Warren, Dec. 19, 1911. Committee on Forest Reservations.
 - S. 5257.—A bill to establish Mt. Olympus National Park in the Olympic Mountains, in the State of Washington, etc. Introduced by Senator Jones, Feb. 13, 1912. Committee on Public Lands.
 - S. 5286.—A bill for the protection of game animals and birds in the Snowy Mountains, in the Jefferson National Forest, etc. Introduced by Senator Dixon, Feb. 4, 1912. Committee on Public Lands.
 - S. 6109.—A bill for the protection and increase of State game resources. Introduced by Senator Perkins, April 2, 1912. Reported by Committee on Forest Reservations, May 17, 1912. Report No. 767, Calendar No. 679.
 - S. 6478.—A bill to protect migratory game birds of the United States. Introduced by Senator McLean, April 23, 1912. Committee on Forest Reservations. (See S. 6497.)
 - S. 6497.—A bill to protect migratory game and insectivorous birds in the United States. Introduced by Senator McLean, April 24, 1912. Reported from Committee on Forest Reservations, April 26, 1912. Report No. 675; Calendar No. 606.
 - S. 6714.—A bill to create the Rio Grande National Park in New Mexico. Introduced by Senator Fall, May 7, 1912. Committee on Public Lands.
 - S. 6799.—A bill granting to the State of Arizona the Fort Grant Military Reservation for an industrial school, and for other purposes (including a game preserve). Introduced by Senator Smith, May 13, 1912. Committee on Military Affairs. Reference changed to Committee on Public Lands, May 17, 1912.
 - S. 6942.—A bill to establish the Pecos National Game Refuge in the State of New Mexico, and for other purposes. Introduced by Senator Catron, May 24, 1912. Reported by Committee on Forest Reservations, July 24, 1912. S. Rept. 963. Passed the Senate Aug. 15, 1912. Referred to House Committee on Public Lands, Aug. 17, 1912.
 - S. J. Res. 39.—Joint resolution for amendment to Constitution, giving Congress power to protect migratory birds. Introduced by Senator McLean, June 29, 1911. Committee on Judiciary.
 - H. R. 36.—A bill to protect migratory game birds of the United States. Introduced by Mr. Weeks, April 4, 1912. Reported by Committee on Agriculture (H. Rept. 680), May 9, 1912.

KENNEL

Game Dogs and their Ways.

BY W. R. GILBERT.

PECULIARITIES among sporting dogs can be instanced and multiplied to any extent, viz.: dogs refusing to bring woodcock, gray squirrels and the English starling, but after all there are very few dogs but will respond to judicious training and will retrieve anything he has been educated on.

With a pretty long experience of game dogs I am of opinion there is just as much room for wonder at the way some dogs go to work in finding their game as in the peculiarities of others in retrieving it. Most pointers and setters will "acknowledge" a meadow lark, and indeed will often "set" it stiff as if it were a snipe or quail.

I was training four young setters some years ago, and when they came on meadow larks' "spoon" they at once "acknowledged." At least, I should say that three of them did so, for as a matter of fact the fourth never took any notice of meadow larks all through his life. Now, here were four young dogs, all of the same litter: Three of them showed the natural disposition to "acknowledge" and even "set" larks. The fourth never from infancy to old age took any notice of them. Can anyone explain this? At another time I had three curly-coated Irish water spaniels; two of them turned out excellent in all respects, but the third was both gun shy and water shy. Fancy a pure bred Irish water spaniel being afraid of the water! He never could be tempted into it, and never could be cured of gun shyness. On land he would fetch and carry anything shown him, but fire a shot, and he made a bee line for home. Into the water he would not go, so after keeping him for a time as a curiosity, I got rid of him. He went to his grave, still possessed of his repugnance to water and gunpowder.

In some countries and districts I have been in, pointers are used instead of setters because they are considered steadier and stancher on game than setters.

One of the best pointers I ever came across was in Ireland, but even this animal had peculiarities; his particular idiosyncrasy lay in the ability of the shooters or rather in the want of it. Possibly the dog argued that it was his place to find the game, and the shooter's place to kill it; but at any rate, if he was fired over and the game missed, he was off home as fast as he could lay his legs to the ground. Granted for argument's sake that dogs will get careless

and indifferent to searching for game if the shooting is bad, I think all the same there are not many instances on record of a pointer behaving splendidly up hill the time somebody missed a couple of shots and then suddenly making off home. I once owned a dog—a red setter—that never would "back" under any circumstances. He would quarter his ground, find and sit as steady as a rock; but if his companion happened to find and sit, he at once rushed in instead of backing and thus spoil everything. No amount of chastisement had any effect. He simply would not "back" and that ended it. Again, in a country where mixed game predominates, in Ireland, for instance, where a pheasant or partridge or a grouse or a snipe may be your next mark, it is very interesting to note the likes and dislikes of some dogs as to game. Grouse are not by any means prime favorites with certain dogs, and I knew certain dogs that had been used for partridge shooting in England and taken on to a Scotch grouse moor that would not set or point at all until much valuable time had been lost in practically training them over again. I can go further even than this, and can call to mind at least two pointers that would not "point" grouse, under any circumstances, and never could be made to do so, for grouse are dark-fleshed and peculiar as to odor just as woodcock are, and like as some dogs will not touch the latter, so some are averse to the former.

There are few men of life-long experience with game dogs who could not relate some interesting details of temperament and nature among their canine friends, and I am sure that some useful knowledge of game dogs might be gained if these experiences were recorded. Anyway, they would be far more interesting than a lot of the stuff that is constantly written in regard to sport.

Winter Conditions in Ireland.

WINTER privations, as known in England, seldom assail Irish game. Even in the extreme north of the island spells of frost rarely last long, and it is not often one sees the whole countryside frost-bound. Snow falls, it is true, but does not lie long, and much of it melts while falling or immediately on reaching the ground. As long as the earth is not all covered up, feathered game is able to obtain food, and kill birds when you may, each one is invariably in first-rate condition. Although the Noxious Weeds Act is being somewhat strictly enforced the country is still "weedy old Ireland" and dock, thistle, and nettle seed heads stand above the snow to provide food for all birds.—*Shooting Times.*

To such advertisers FOREST AND STREAM appeals.

POWER BOAT RACE REFORM.

Continued from page 790.

as laid down by the Amateur Athletic Union and other amateur organizations was accepted.

The appointment of a racing commission of three members of the organization is important in cleaning up the now demoralized sport. Wildcat races will be eliminated and an effort will be made to prevent bogus records through official certification of short courses.

Special races were authorized and penalties prescribed for entries at unofficial and unauthorized races where national records are sought. Nautical miles will be the official designation of the association instead of statute miles. A sliding scale for cruisers will be determined according to the breadth and length. This will rule out boats which heretofore have raced in cruising classes, when in reality they were speed boats.

The definition of an amateur, as adopted by the association, follows:

"An amateur in power boating is one who participates for sport as distinct from gain; one who acquires nautical experience through the love of sport, rather than through necessity or the hope of gain. No person who follows the sea as a means of livelihood, or who has accepted remuneration for service in handling or serving on a yacht or power boat, except as a cash prize, shall be considered an amateur."

Under no circumstance will a boat steered by any other than an amateur be eligible for a certificate.

982 Motor Boat Accidents.

WASHINGTON, Dec. 11.—There has been an increase in the number of motor boat accidents in the last year, according to the annual report of S. L. Kimball, general superintendent of the lifesaving service in his annual report made public to-day. A total of 982 accidents were reported from lifesaving stations last year. The boats involved carried 3,221 persons and were valued at \$1,525,887.

While a much larger number of disasters were reported last year than in any previous year, only sixteen lives were lost out of a total of 7,193 persons on board the 1,730 vessels which suffered accident. All these vessels except fifty-nine were aided by the lifesaving service. The total estimated value of the vessels and cargoes was \$13,248,305, of which amount \$2,093,135 represents the value of property lost.

Mr. Kimball attributes a large measure of the success of his service to the motor lifesaving boats now used. Of 3,678 persons brought ashore 2,669 were carried in power boats. The net expenditures for the maintenance of the service last year amounted to \$2,346,861.

Canoeing**New York C. C.**

THE forty-first annual meeting of the New York C. C. was held at the Astor Hotel on Dec. 12. The following ticket was elected: Commodore, E. A. Bennett; Captain, S. R. Church; Measurer, H. M. Humphryes; Secretary, A. Rossa; Trustee (three years), A. M. Barnes; Trustee of Sinking Fund, B. V. R. Speidel;

Auditing Committee, W. Gould and E. H. Patrick.

It was decided to accept the international challenge for the sailing canoe trophy from the Gananoque Canoe and Motor Boat Club of Gananoque, Ont., Canada, and the races for same will probably be held in July next off the club house on Gravesend Bay in the lower harbor.

ROBIN HOOD, THE BOLD BOWMAN OF SHERWOOD FOREST.

and, well-kept park land, all combine to make up a scene at once pleasing to the eye and delightfully refreshing to the senses, and Sir George Armytage deals kindly and with a reverent care with the historic landmarks of his fine old estate.

Archery in Pittsburgh.

PITTSBURGH, Pa., Dec. 10.—*Editor Forest and Stream:* W. H. Wills, an enthusiastic archer of New York, was with us during the week and divided his time between the convention of the warehouse men at the Hotel Schenley and the various bowmen of the vicinity.

A match between Mr. Wills and Mr. G. W. Postgate, arranged for Saturday afternoon, afforded much entertainment for those who witnessed it.

The New Yorker was handicapped by having to use a strange outfit and also by the Pittsburgh atmosphere, which seems to have a peculiar effect upon visitors, especially those attending conventions in the vicinity of the P. F. F. and the Schenley Hotel.

Mr. Postgate was behind in the race until the beginning of the last twenty-four arrows, when by a strong recovery he finished in the lead. The scores:

Ninety-six arrows, 60yds.:										
G. W. Postgate...	15	57	17	65	15	61	19	93	66	276
W. H. Wills.....	17	58	17	73	14	64	13	51	58	246

Mr. Wills attributes his low score to lack of practice, having done no shooting since the Boston tournament in August, when he finished in second place.

The scores of the archers shooting on the other targets were as follows in total:

Ninety-six arrows, 60yds.:					
Jas. C. Patch.....	31	113	H. Anceduk	20	60
T. R. Hartley.....	29	111	O. L. Hertig.....	91	475

A good many archers were away on hunting trips which accounts for the small number present.

Mr. Wills and Mr. Postgate will in all probability shoot a second match in the near future. Mr. Postgate is quite willing to allow his opponent to use tackle with which he is familiar, but positively insists that the race be shot under the same atmospheric conditions as those prevailing on Saturday afternoon. O. L. HERTIG.

A Correction.

BOSTON, Mass., Dec. 14.—*Editor Forest and Stream:* The scores of Thanksgiving day shoot, as published in the issue of Dec. 14, should not have been headed "Boston Archery Scores," as they contained all the scores at that time sent to the National Secretary, and were intended to show after each archer's name the place at which he shot, which information was omitted by the publisher. G. P. BRYANT.

	21 87	20 92	24 130	65 309
	41 187	42 188	48 276	131 651

Points:

	Mrs. Taylor.	Miss Brownell	Miss Sullivan
Total score	2	0	1
Total hits	1	0	1
50yds. score	0	0	1
50yds., hits	0	0	1
40yds., score	1	0	0
40yds., hits	1	0	0
30yds., score	1	0	0
30yds., hits	0	0	1
	6	0	4

Mrs. Witwer-Taylor won the Columbia round championship with 6 points to Miss Sullivan's 4.

Miss Brownell led Miss Sullivan 43 in score, but did not get a fraction of a point.

If Miss Sullivan had made four more whites at 40 yards, which would not have made her shooting even ordinarily good, she would have taken the point for hits at 40 yards, the 2 points for gross hits, and the championship with 6 points to 4 points.

And yet Mrs. Witwer-Taylor's score would have been 132 higher than Miss Sullivan's. We wish someone would explain the righteousness of the point system of scoring.

HOLIDAY BOOK LIST

THE following is a selected list of *Forest and Stream's* books which are most suited to the taste of men and women who are fond of outdoor life—Shooting, Fishing, Natural History, Camping, Canoeing, Yachting. A good book does not wear out, but continues to give pleasure.

Catalogue giving full list of books will be sent on application.

American Duck Shooting.

By George Bird Grinnell. Cloth, 630 pages. With 58 portraits of North American Swans, Geese and Ducks, Plans of Boats and Batteries. Fifty Vignettes in the text, and a Chart of the topography of a duck's plumage. Price, \$3.50.

American Game Bird Shooting.

By George Bird Grinnell. This companion volume to "American Duck Shooting" treats of the upland game which American sportsmen shoot over dogs—woodcock, snipe, all the quail, grouse and turkeys. The volume is illustrated by colored plates of ruffed grouse and quail, and 48 full-page portraits of different game birds and hunting scenes, with a number of cuts in the text. Cloth. About 575 pages. Price, \$3.50 net. Postage, 25 cents.

My Sixty Years on the Plains, Trapping, Trading and Indian Fighting.

By W. T. Hamilton ("Bill" Hamilton). With 8 full-page illustrations by Chas. M. Russell. New York. Cloth. 223 pages. Price, \$1.50.

American Big Game Hunting.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Illustrated. Cloth, 345 pages. Price, \$2.50.

Hunting in Many Lands.

The Book of the Boone and Crockett Club. Editors: Theodore Roosevelt and George Bird Grinnell. Vignette. Illustrated. Cloth, 448 pages. Price, \$2.50.

Trail and Camp Fire.

The Book of the Boone and Crockett Club. Editors: George Bird Grinnell and Theodore Roosevelt. Illustrated. 353 pages. Price, \$2.50.

Like its predecessors, the present volume is devoted chiefly to the great game and the outdoor life of Northern America; yet it does not confine itself to any one land, though it is first of all a book about America, its game and its people.

American Big Game in Its Haunts.

The Book of the Boone and Crockett Club for 1904. George Bird Grinnell, Editor. 490 pages and 46 full-page illustrations. Price, \$2.50.

This is the fourth, and by far the largest and handsomest of the Club's books. It opens with a sketch of Theodore Roosevelt, founder of the Boone and Crockett Club, and contains an extremely interesting article from his pen, descriptive of his visit to the Yellowstone Park in 1903. Other papers are on North American Big Game; Hunting in Alaska; The Kadiac Bear; Moose, Mountain Sheep; Game Refuges, and other big game topics.

Camp Life in the Woods.

And the Tricks of Trapping and Trap Making. Containing hints on camp shelter, and all the tricks and bait receipts of the trapper, the use of the traps, with instructions for the capture of all fur-bearing animals. By W. Hamilton Gibson. Illustrated. Cloth, 360 pages. Price, \$1.00.

Modern Training.

Handling and Kennel Management. By B. Waters. Illustrated. Cloth, 373 pages. Price, \$2.00.

This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

Danvis Folks.

A continuation of "Uncle Lisha's Shop" and "Sam Lovel's Camps." By Rowland E. Robinson. 16mo. Price, \$1.25.

Uncle Lisha's Outing.

A sequel to "Danvis Folks." By Rowland E. Robinson. Cloth. Price, \$1.25.

A Hero of Ticonderoga.

By Rowland E. Robinson. Cloth, 187 pages. Portrait of author. Price, \$1.00.

A Danvis Pioneer

A story of one of Ethan Allen's Green Mountain Boys. By Rowland E. Robinson. Cloth, 214 pages. Price, \$1.25.

In the Louisiana Lowlands.

A sketch of plantation life, fishing and camping just after the Civil War; and other tales. By Fred Mather, author of "Men I Have Fished With," "Adirondack Fishes," and "Modern Fishculture in Salt and Fresh Water." With portrait of the author. Cloth. Price, \$1.50.

Forest Runes.

Poems by George W. Sears ("Nessmuk"). With artotype portrait and autobiographical sketch of the author. Cloth, 208 pages. Price, \$1.50.

The Angler's Workshop, Rod Making for Beginners.

By Perry D. Frazer. Cloth, 180 pages. Four full-page illustrations, sixty working drawings. Postpaid, \$1.00.

A complete, simple and thoroughly up-to-date work for the guidance of the amateur rod-maker, carrying him from first principles through all phases of successful rod making. There is no theorizing or speculation. All terms are simple, and all kinds of rods and woods are treated of.

Modern Fishculture in Fresh and Salt Water.

By Fred Mather, author of "Men I Have Fished With," with a chapter on Whitefish Culture by Hon. Herschel Whitaker, and a chapter on the Pike-Perch by James Nevil. Illustrated. Price, \$2.00.

My Angling Friends.

A second series of "Men I Have Fished With." By Fred Mather. Cloth, 369 pages, with 13 illustrations. Price, \$1.50.

Rhymes of the Stream and Forest.

By Frank Merton Buckland. Cloth. Heavy laid paper. Sumptuously bound. Postpaid, \$1.25.

A charming collection of verse by an author who knows and loves nature well. A particularly pleasing gift for fishermen, closely simulating in form and ornamentation the standard fly-book.

Jack the Young Ranchman;

Or a Boy's Adventures in the Rockies. By George Bird Grinnell. Illustrated. Cloth, 304 pages. Price, \$1.25.

Jack Among the Indians;

Or a Boy's Summer on the Buffalo Plains. By George Bird Grinnell. Illustrated. Cloth, 301 pages. Price, \$1.25.

Jack in the Rockies;

Or a Boy's Adventures with a Pack Train. By George Bird Grinnell. Illustrated. Cloth, 272 pages. Price, \$1.25.

Jack the Young Canoeeman.

By George Bird Grinnell. Illustrated. 278 pages. Price, \$1.25.

Jack the Young Trapper.

By George Bird Grinnell. Illustrated. Price, \$1.25.

Jack the Young Explorer.

By George Bird Grinnell. Price, \$1.25.

Men I have Fished With.

Sketches of character and incident with rod and gun from childhood to manhood; from the killing of little fishes and birds to a buffalo hunt. By Fred Mather. Illustrated. Price, \$1.50.

It was a happy thought that prompted Mr. Fred Mather to write of his fishing companions. The chapters were received with a warm welcome at the beginning and have been of sustained interest. The "Men I Have Fished With" was among the most popular series of papers ever presented to FOREST AND STREAM readers.

Houseboats and Houseboating.

By Albert Bradlee Hunt. The book contains forty specially prepared articles by owners and designers of well-known houseboats, and is beautifully illustrated with nearly 200 line and half-tone reproductions of plans and exteriors and interiors. A most interesting chapter is devoted to houseboating in England. Extra heavy paper, buckram. The price is \$3.00 net. Postage, 34 cents.

The Art of Shooting.

An illustrated treatise on the art of shooting. By Charles Lancaster. Illustrated. Cloth. Price, \$1.25.

Gas Engines and Launches.

By Francis K. Grain. A few pages are devoted to launches in general, with some excellent advice to the prospective owner of a motor boat; but the author's attention is given chiefly to explaining the principles, working and practical handling of the marine motor for the amateur, who does not care to trouble his head with involved technical information. Cloth. Illustrated. 128 pages. Postpaid, \$1.25.

How to Build a Launch from Plans.

By Charles G. Davis. A thoroughly practical guide for the amateur. Shorn of all blind technicalities, it considers displacement, good construction and faulty stability, setting up the keel, framing and planking, with careful explanations. Each step is followed up to the care and running of the gas engine. Cloth, 9 folding drawings, 8 full-page plates, 40 smaller diagrams, 176 pages. Postpaid, \$1.50.

Fetch and Carry.

By B. Waters. Tells minutely of the methods by which a dog, young or old, willing or unwilling, may be taught to retrieve either by force or "natural" system. Cloth. Illustrated. 124 pages. Postpaid, \$1.00.

Nursing vs. Dosing.

By S. T. Hammond. A most practical book for the dog fancier, based largely on Mr. Hammond's observation that dogs, and particularly house dogs, suffer from too much medicine. Contents—Nursing, Cleanliness, Diet, Other Foods, Kennel and Exercise, Common Ailments, Diarrhea, Convulsions, Epilepsy, Distemper, Eczema, Need of Proper Care, Stomach, Vermin, Ear, Mange, Nervous System, Colic, Worms. Cloth. Illustrated. 161 pages. Postpaid, \$1.00.

Training vs. Breaking.

Or Practical Dog Training. By S. T. Hammond. The author tells how to bring out the wonderful intelligence of the dog by kindness, as opposed to force. A clear, explicit work, which will appeal to dog lovers. Contents—First Lessons, Charge, Canine Accomplishments, The Whistle, Quartering, Retrieving, In the Field, Working in Company, Raising Puppies, Training Pet Dogs, Conclusion. Cloth. Illustrated. Postpaid, \$1.00.

Training the Hunting Dog for the Field and Field Trials.

By B. Waters. Probably the most comprehensive work on the subject written, covers every phase of training and field trial preparation with reasons. Kennel Management, Breeding, Kenneling, Points of Judging. It is a work well calculated to enable the amateur to become a successful breeder and trainer. Cloth. Illustrated. Postpaid, \$1.50.

Woodcraft.

By Nessmuk. No better or more delightful book for the help and guidance of those who go into the wild for sport or recreation was ever written. No one ever knew the woods better than Nessmuk or succeeded in putting so much valuable information into the same compass. Camp equipment, camp making, the personal kit, camp fires, shelters, bedding, fishing, cooking, and a thousand and one kindred topics are considered. Beyond this, the book has a quaint charm all its own. Cloth. Illustrated. 160 pages. Postpaid, \$1.00.

Log Cabins and Cottages.

By William S. Wicks. This book covers building for the woods from the simplest shelter to the most elaborate cottage, cabin or house, and their furnishing and fitting. The details and directions are at once simple and comprehensive, and the illustrations are numerous and illuminative. Cloth. Illustrated. 44 full-page plates and numerous text illustrations. Postpaid, \$1.50.

My Friend the Partridge.

By S. T. Hammond. A delightful reminder of crisp autumnal days in the covers. It tells of sport with the noblest of game birds, the habits and habitat of the ruffed grouse, with just the right touch of reminiscence and personal experience. Cloth. Illustrated, 150 pages. Postpaid, \$1.00.

California Associated Societies for the Conservation of Wild Life.

REPRESENTATIVES from the following organizations met recently in the rooms of the Sierra Club, 402 Mills Building, San Francisco, for the purpose of effecting a permanent organization to unify work in behalf of a wise conservation policy with regard to the wild life of the State of California: Sierra Club, Tamalpais Conservation Club, State Humane Association of California, Cooper Ornithological Club, Paleontological Society of the Pacific Coast, Biological Society of the Pacific Coast, San Francisco Society for the Prevention of Cruelty to Animals, California Academy of Sciences and California State Audubon Society. The nine societies here listed constitute the charter members of the new organization. The Associated Societies is thus inaugurated with a membership of more than 9,000 persons in different parts of the State, including many persons of considerable influence along game legislation lines.

A constitution was adopted and Mr. William F. Bade, director of the Sierra Club, was elected president and W. P. Taylor, of the Cooper Ornithological Club, Secretary.

Others prominent in the organization of the new Associated Societies are: John W. Mailiard, California Academy of Sciences; J. Grinnell, Director California Museum of Vertebrate Zoology; Prof. L. L. Burlingame, of Stanford University; J. H. Cutter, President of the Tamalpais Conservation Club; Matthew McCurrie, Director of the State Humane Association of California; Bruce Martin, of the Paleontological Society, and W. Leon Dawson, author of ornithological works.

The following are some of the reasons for the organization of this large California Associated Societies for the conservation of wild life:

(1) Several species of California birds and mammals are now approaching extinction, as the woodduck, land otter and California condor; others are already practically extinct, as the white-tailed kite and Southern sea otter; still others are altogether gone, as the Columbian sharp-tailed grouse, trumpeter swan and grizzly bear.

(2) Every species of game bird and mammal within the State, with the possible exception of quail in certain localities, is decreasing in numbers.

(3) Multiple additions to the numbers and effectiveness of the army of wild life destruction are continually taking place, and as civilization advances, an army of occupation keeps crowding more and more the native species of birds and mammals.

Objects to be subserved by the California Associated Societies are as follows, particular attention being called to the fact that it will constitute an efficient aid to the securing for San Francisco in 1915 an International Congress for the conservation of wild life:

(1) It will serve to fix the attention of the members of the constituent societies on the great necessity for immediate action if we are to save what remains of our native fauna.

(2) It will operate so that a solid front may be presented when, during the coming legislative session, measures concerning wild life are introduced. Great possibilities of effectiveness

undoubtedly pertain to a non-political organization of this type.

(3) It will be able to give its aid to national problems in the conservation of natural resources, especially wild life.

(4) It will give to each society concerned something of the viewpoint of the others along conservation lines.

(5) It will tend to draw the recognition of legislators of the State to the fact that the welfare of the wild life is of interest and concern, not only to the comparatively small element in the State constituted by the sportsman, but also to the comparatively large element represented by the average citizen, nature student, farmer and scholar, which element has hitherto had little recognition at the hands of the legislators.

(6) It will constitute an efficient aid to the securing for California in 1916 of an International Congress for the conservation of wild life.

Among the recommendations made were:

1. A law prohibiting the sale in California of any American-killed wild game, except jack rabbits.

2. A law prohibiting the use of automatic "pump" guns and silencers.

3. The abolition of the game districts as at present outlined within the State, and if necessary a redistricting according to life zones and faunal areas.

4. A law providing for the establishment of State game refuges.

5. A law providing for the breeding of game in captivity, and the sale of such game under license.

6. A law placing the assistants and game wardens of the Fish and Game Commission on a civil service basis.

7. Discouragement of county game laws except where a county desires to extend restrictive measures and encouragement of a strong centralized administration of game laws by the State Fish and Game Commission.

8. The shortening of the season on certain game birds and the placing of certain birds now considered game birds on the protected list.

9. Reduction of the bag limit on certain game birds.

10. A law providing for the protection of the bear, raccoon, mink, badger, marten, fisher, otter, red fox, wolverine, skunk and ring-tailed cat during all seasons except during the winter when their fur is prime, the seasons to be determined on the basis of the facts of the case in the different species, provision to be made in the law permitting the killing of these mammals by the owner or tenant of any premises when found doing damage. Cases of this necessary killing to be reported to the State Fish and Game Commission.

These measures the California Associated Societies intends to fight for during the next legislative session. Perhaps the most important one is the "no-sale of American-killed wild game" law, which would unquestionably be a most efficient measure in favor of game protection. A tremendous advance in wild life conservation was marked by the passage of a law of this kind in the State of New York, the fight being led by Dr. W. T. Hornaday against a powerful lobby in opposition. California still allows the sale in the market of ducks, geese and rabbits, all of which species are rapidly decreasing in numbers.

FERGUSON'S Patent Reflecting Lamps

THOMAS J. CONROY, Agent.

28 John Street,
Cor. Nassau St.,
New York.

With Silver Plated
Locomotive Reflectors
and Adjustable
Attachments.

UNIVERSAL LAMP.
For Sportsmen's use. Combines Head Jack (Front and Top), Boat Jack, Fishing, Camp, Belt and Dash Lamp, Hand Lantern, etc.

EXCELSIOR LAMP.
For Night Driving, Hunting, Fishing, etc. Is adjustable to any kind of dash or vehicle. Send stamp for Illustrated Catalogue and address all orders Lamp Department.

CANTEEN—VAATJE

For Hunters,
Ranchmen,
Explorers, etc.

Made of selected white oak, will stand lots of hard knocks, cannot be punctured like metal, water will keep longer, sweeter and cooler in one of these Oak

Canteens than in one made of metal.

Up the Opeongo

By T. M. TOBIN

Photographs by the Author.

WE paddled into McDougall Lake, Don and I, having left Scott and Comstock, our companions, at the outlet where a stretch of rapids so strongly suggested brook trout that they could not break away from the charm of rushing waters without casting a line among the boulders. While waiting for them, we dropped out the deep trolling spoon and leisurely circled the lower bay, and when our companions overtook us, three fine salmon-trout were ready as a surprise for our fishless friends.

McDougall is a remarkably attractive little lake about four miles long and a mile wide. It has several deep bays, and the picturesque shores are bold, rising to high elevations in many places and all well wooded to the water's edge. Skirting the right shore to about midway of the lake we found a fine shelter hut diagonally opposite the mouth of the Opeongo River. It was well up from the shore, with a primitive breakwater in front, which the Government rangers had made by felling a big pine tree at the water's edge. This enormous pine, extending well out upon the lake, its butt resting securely on the bank, and its top branches gripping the bottom like stays, will serve for many years breaking the waves kicked up by a northwest wind, and for making a snug harbor and safe landing for canoes.

The cabin, clean, bright and inviting with spacious bunks, cushioned with balsam boughs, had an atmosphere of quiet welcome, and we gladly accepted the hospitality. Nearby, under the shadow of some rocks, was a splendid spring of cold water from which a little stream babbled merrily to the lake. During our many outings in Algonquin Park, this McDougall spring was the clearest, coldest and best of any we found.

It was a hungry crowd that gathered around the pine table that evening, and made away with two frying-pans of salmon-trout, well browned with corn meal, a lot of hot biscuit and some fragrant black tea.

We passed a few delightful days at this place, catching salmon-trout aplenty, enjoying the comfortable quarters, the restful seclusion of the wilderness, and the picturesque scenery. A flock of Canadian jays, or moose birds, noiselessly fluttered into our "front yard" one morning, with the rising sun, in a surprisingly fearless and friendly manner, to gather up food scraps. These hardy birds are quite common in that region. Fire rangers and guides speak of the bird as "Whiskey John," which is said to be a corruption of the Indian name "Wis-ka-tjon." It is

a handsome bird, larger than the robin, a silent graceful flyer, and the way they circled over our heads and then glided to the ground for crumbs almost at our feet was a pleasing revelation to us. The upper parts of the bird are gray, darkest on the wings and tail. Back of the head and nape of the neck almost black; forehead, throat and neck white with a few white tips on

turned without the least show of fear and with the greatest deliberation walked back into the scrub brush. Then the canoe floated while we discussed the picture we had seen, and all about a dandy camera we had left in camp. Soon we noticed a slight agitation of the foliage and the tips of a pair of eight-pronged antlers appeared among the leaves, and we knew unsatisfied curi-

THE AUTHOR ON THE BREAKWATER.

wings and tail; underneath lighter gray; tail long and plumage fluffy.

Just before sundown Don and I paddled across the lake and into the west bay in search of the mouth of Opeongo River, in order that there might be no delay in an early start next morning on our journey up the river to bigger waters. The lake was like a mirror and flooded with a brilliant sunset that streamed over the distant hilltops. When well in the bay we saw a big eight-pronged buck on a stretch of sand beach, the fringe of thick foliage in the background making a rare picture, a striking reproduction of a print I had often admired. Noiselessly, with never a word, we drove the canoe straight for him, and he stood there, not scenting us, head high in air, with curiosity manifest in poise and look. Quietly we drew nearer and nearer, and when a few rods away, the buck

osity had drawn the owner back. Loath to break the charm of confidence, we silently passed on, but as long as we could see the spot, the antlers appeared fixed in the foliage.

At seven in the morning our canoes headed sharply for Opeongo. Our outfit, after several seasons of roughing it, had narrowed down to just three packages for each canoe while traveling, with not a single loose thing except the paddles. In this way portages were made with no loss of time, and we never missed an article. We have followed others, however, over trails blazed with carelessness, picking up fishing rods, an axe and all sorts of useful and necessary things, even to a tump line. Here is our method: A waterproof duffle bag holds a small miners' tent and two sleeping bags, and the whole secured with a tump line. Then a second package consists of an Adirondack pack basket. Ours are

BURIAL PLACE OF JOHN DENNISON, TRAPPER.

covered with duck and a top cover of the same. Painted brown and varnished, they are waterproof. The third package consists of miscellaneous stuff such as fishing rods, tackle, an axe, etc., strapped up in a waterproof covering. The second canoe has a duplicate outfit. One pack basket contains a little of all food supplies in daily use, and always packed on top of the food was a simple cooking kit of two handleless frying-pans, four aluminum plates, four panikins, four cheap tin pails from two to six quarts that nested, knives and forks and four dessert spoons. Tea and coffee we made in the small pails. The second basket carried our reserve supplies. Labeled canvas bags held tea, coffee, rice, flour, in fact everything except baking powder, small cans of cream and a specially made tin box with trays holding six pounds of butter.

Food supply is largely a question of appetite and fancy of the individual, and an outing supply of food that suits one person will not answer the other fellow; but the following is what our party of four takes and this, with what fish we catch, carries us through two weeks all right: Six pounds bacon, 6 pounds pork, 3 pounds coffee, 1 pound tea, 6 pounds butter, 10 pounds flour, 10 pounds corn meal, 4 pounds rice, 2 pounds beans, 5 pounds granulated sugar, 1 pound baking powder, 2 pounds wheatena, 1 pound salt, ¼ pound pepper, 1 pound dried peaches, 2 pounds prunes, 10 small cans cream, 2 cans condensed milk, 2 pounds onions, a very few potatoes, ½ dozen candles and a few bars sweet chocolate.

At noon we were at the old dam at the lower end of Annie's Bay, an arm of Great Opeongo Lake. We met lively water all the way up, and the boys waded in some places and towed the canoes. Where the water was too deep they took a line from the shore. There were a few short paddling stretches, just enough to give a

little breathing spell. The shores are well wooded and the trip interesting, though somewhat strenuous. As soon as we landed, the light rod fishermen got busy, and quickly secured a fine mess of speckled trout from some pools where the water breaks away from the dam in its rush for McDonald. Then the dinner, fried trout and bacon, and pancakes and tea. Could anything be better with appetites, trained to the minute with our forenoon's work?

Passing up the long narrow bay we stopped at an interesting old lumber camp, a deserted little village, the former habitation of several hundred men. The buildings of logs included cabins, offices, cook houses, mess buildings, blacksmith shops, stables and storehouses wholly abandoned several years ago, apparently, and about everything dropped, in the way of tools, just as the men quit work. As we rounded the point and faced the broad lake, we found whitecaps aplenty, and we were compelled to go ashore, and we remained tied up on that point two nights and a day. When we finally got away early one morning, the lake was still pretty rough, but we made the other shore and the shelter hut "Sunny Side" all right, but it took some careful paddling to do it. Opeongo kicks up a big sea when the wind blows and the canoeist must beware.

Years ago, when trapping was unrestricted in the Province of Ontario, John Dennison penetrated the wilderness in the region of the "thousand lakes," and built a log cabin on a neck of land dividing portions of Great Opeongo Lake. (Opeongo is an Indian word meaning narrows connecting two big lakes.) He set his traps, cleared a little land, and as the years went by, children and grand children grew up around him. When the buying seasons came, trapper Dennison followed the blazed trails and water by-paths leading to the edge of civilization, well loaded with the pelts of the beaver, the otter and the mink.

With no neighbors within many miles, except the wild animals of the woods, Dennison trapped on, growing old and gray. One day, using a dugout canoe, he visited his numerous traps, for Opeongo is sixteen miles long and has many deep bays. The old trapper had with him his eight-year-old grandson who often accompanied him on his trips. Nine miles from home, up under dark shores on Black Creek, a big bear was found in one of the traps, and Dennison undertook to kill the animal with a club just as he had done in many cases in years gone by. But the bear was unusually large and fierce, and in an unguarded moment ugly claws drew the old man into an embrace more vicious than the steel jaws of the trap that gripped the hind leg of the infuriated beast. Well knowing that he had tended his last trap, Dennison ordered his grandson to go home, and the terrified little fellow, half dead with fright, fled to the canoe, with the fierce growls ringing in his ears, and managed to find his way back to the old log house in a faraway section of the lake.

With the eight-year-old guide to lead them, the family made a brave attempt to find and aid the old man, but darkness of the forest night had blotted out head lands and trails, and it was not until the light of early morning had come that the stricken members of the Dennison family reached the scene. The bear was still in the trap, alive and fierce, and in his embrace the lifeless form of the old trapper. With much labor

they took him tenderly back to the clearing and laid him to rest not far from the log house, hewing out of pine a thick crude marker with a peculiar-fashioned top and surrounding the mound with a fence of cedar.

This is a true story of a wilderness tragedy that has been told to the writer many times by fire rangers met during our annual trips to what is now known as the Algonquin National Park of Canada. During our stay at the log shelter hut on Opeongo Lake—our first visit to that locality by the way—we had a friendly call one afternoon from Richard Owen and William Arnott, fire rangers who happened to be in that vicinity. When the conversation turned to the Dennison tragedy, our visitors suggested that we visit the spot where the old man was buried and volunteered to guide us to the place a mile away. So we tramped up the hillside over a winding trail among the evergreens and birches, and as we wound down the slope on the other side and neared the clearing, several deer broke for cover as the watchful bluejay sounded notes of warning.

In order that our cameras might have full play, the rangers removed some of the rails surrounding the grave, and standing about the little inclosure, the story of trapper Dennison was retold substantially as we had heard it many times before. There is a fine bit of sentiment about the incident, as fire rangers, strangers to the Dennison family long since gone, as they pass and repass in that region, seem to feel it a duty to care for the old trapper's burial place, kindly hands keeping the rustic fence about the plot in repair. The surroundings of that lone grave are impressive and the solitude fairly eats into the visitor. The mound is on the crest of a small clearing which slopes gently to the east, meeting Beaver Bay, fringed thickly with poplar trees and falling away to the west to an evergreen-lined shore. Over the grave and marker a self-sown balsam spreads its friendly branches. While the beaver builds its home undisturbed and munches buds and barks on the Opeongo, John Dennison, the old trapper, sleeps peacefully on.

SCOTT LANDS SALMON TROUT.

The Sand Sharks and the Man Eater

By THOMAS TRAVIS

EVERYBODY along Cape Cod knows the sloop Hattie B., of Hyannisport, and everybody knows her captain, too. That I found out one day as we lay tossing on the great waves off Bishop's and Clerk's lighthouse.

We were hauling in tautog, scaup and seabass, and merrily the big fellows were drumming their greetings in the bottom of the boat, when far off on the skyline, a black sloop appeared, stealing like a ghost-ship athwart the haze.

Whether it was the fact that she had a new mainsail and an old jib, or whether it was her lay (for she sat low and broad on the water), I cannot say. But something about her attracted me strangely, and I asked the captain what boat that was, threading her way so silently, and yet so business-like, among the reefs and shoals.

"Why, sir, that's the Hattie B.," said he, "everybody along Ca' Cod knows her."

"Well," said I, "the Hattie B., and what is she, a fisherman?"

"Sharker."

"Sharker?" and I watched her with new interest, as she trimmed sail and disappeared to southward.

Two days later, I was at the wharf waiting for the Hattie B., hired that day for a trip out to Horseshoe Shoal, sharking. For I had heard great tales of the huge monsters lying out there on the shoals, and though I had caught an occasional shark, as every fisherman alongshore will, I had never caught any sizeable ones such as those here described. And that was exactly the one and only business of the Hattie B.—the catching of huge sharks.

Her captain had told me the night before that I need bring neither tackle nor bait. None the less, being acquainted with the tackle furnished by these old wind-jammers, I had brought some of my own; among which was as fine a tarpon rod and reel as ever an artist in the fishing line would want to see. Also, I had gaffs and copper-wire lines, swivels, and all sorts of paraphernalia that go to make life in a southern fisherman's hotel bearable.

So eager was I, that long before the captain flung the rope, I leaped aboard, and we were off, with a spanking breeze, straight southwest from Hyannisport. A bucket of menhaden, another of porgies, and still another of good-sized blackfish, caught my eye.

"Bait," said the Captain, interpreting my glance.

We wound our way along the channels to make a good offing; and while the captain was busy with the wheel, I began to overhaul his tackle. A box of lines with ordinary cod hooks, presented itself, and of course I thought these were what he would use. But not so; fitted into boxes with a roller were long coils of half-inch rope, and dangling from the ends of these, a yard of cow chain, ending in a hook some eighteen inches long and made of quarter-inch steel.

Mark you, I am not exaggerating, even

though I have the fisherman's license so to do. That was precisely the kind of chain with which, as a boy, I had been wont to tether Rena, the family cow; and that rope was precisely the same left, though tarred, as the rope with which I had been accustomed, as a boy, to restrain the roamings of that same cow. Therefore, I looked at it with interest. Had not the hooks been barbed, I should have supposed they were part of the hoisting tackle of the sloop. But there was no mistaking the business-like barb, and no misunderstanding the polished and scored condition of the steel. These were real fish-hooks, and had seen real service.

Having had several Cape Cod jokes played on me by the "simple" natives, I had become

THE MAN-EATER.

somewhat wary. So I carefully and surreptitiously stowed my beloved tarpon rod and reel in the cockpit, and joined the captain.

The wind was making, and against the tide was kicking up somewhat of a sea. A schooner foamed by us on the port tack, her rail awash, and a smother of foam rolling from time to time across her. Here was my opportunity; for I had been on many much-lauded grounds, only to be told in explanation of our small catch, that the weather was a little windy, or that they never did bite with the tide as it was, or that this was an off season.

"Captain," said I, "it isn't a very good day for sharking, is it?"

To my surprise he answered cheerily, "Fine day, sir; couldn't be better. They allus bites better with a sea runnin'. Why, Lo'd bless ya, I've been there on a ca'm day, an' seen 'em a-cruisin' around with their fins a-stickin' out

o' water, an' never a bite. Oh, Lo'd, this is a fine day!"

Evidently there was no intent to joke. His weather-beaten face was entirely serious. Could it be that for once I was about to get a delivery of goods equal to the advertisement? So we sat smoking, while the old salt pointed out to me the ranges, the buoys, the beacons and the lights.

Soon the last glimpse of land sank below the sky line of the sea, and we were apparently out on the open ocean. Then the excuse came: "It'll be pretty ha'd to find the spot on the ledge with this sea runnin'. Now if 'twas ca'm, I could put ya right there, sir; right on the spot."

My heart began to sink, for was not this the familiar language preliminary to a disappointment? "Ah well," said I to myself, "I'll have a nice sail anyhow."

"You might put out a line for bluefish, sir; they do git one or two here sometimes. Ya see, sir, I'm followin' down this tide rip for five miles."

I looked about for the rip, but saw nothing more than a ripple such as a school of menhaden might make in a rough sea. None the less, I put out an eel-skin squid, and then I felt the rip. She was running like a mill race over the shoals, and out of sight of land, we had a flat three fathom of water only. For over an hour I trolled, while we tacked across the rip and back. But not a single strike rewarded me. So I was perfectly ready to haul in when the captain bade me, telling me we were almost there.

Out came the lead, and with the boat steering herself along the shoal, the captain took soundings, thus feeling his way. "Four fathom! We're over the shoal. Stand by to go about. Hard-a-lea—so. Three fathom! Now we're gittin' there," said the captain. "See that white bottom?"—and he pointed to a light-colored spot in the water—"That's the place!" And as we came up, "Let her go!" he called to the ship's boy, and we were anchored.

I sat me down and waited. If there was any joke this time, I would not be so quick to bite. But the serious old man hauled out that cow-rope and chain, sliced a big blackfish in three pieces, jabbed the huge hook through one, and handed the line to me with the words, "Heave her over, and when ya git a bite, haul onto her like the devil."

I looked at the bait, sticking on the hook like a piece of beef on a butcher's peg, with no attempt at concealing the barbed iron; then I looked at the captain, and dropped the thing overboard. I felt it ground, for the water was not more than three fathoms deep. Two minutes later a little jerk, twice repeated, came, and I twitched the line smartly as one would for cod. Then something began to walk away with the line—it was clearly up to me. So I pinched that half-inch rope and hauled. Three minutes later I had a sixty-pound sand-shark alongside.

"So this is sharkin'," said I to myself, not

without disgust. "Why, I wouldn't disgrace my rod with doubting she could haul that clear out of water as a small boy lands his first sucker. What in the name of Sir Isaac did we bring this cow-rope for?" and I handed the line to the captain, who merely turned the shark over as he struck the side, and then hit him a whack over the snout with a baseball bat.

"Bait gone," said he, as he heaved the shark aboard. Hold a minute, an' I'll put a good one on." Still, as he sliced a porgy in half and jabbed the hook through as before, I thought, "Why this sort of tackle for these? I could hoist these out with a cod line and

"Heave? why bless you, Captain, that heave would have stopped a cow."

"Lo'd no, that wa'nt no heave; sock the hook right into her next time," and he jabbed a great slice of blackfish on.

Now I was fully awake to the situation. This time I stood on the seat by the side of the boat, and when I felt the same sort of a bite, I simply jumped backward off the seat with the line pinched desperately in my fists. "That ought to 'sock' the hook in," thought I, before I landed, and it did. It also "socked me," for I came up standing, with a jerk that snapped my teeth till sparks almost flew from

hold him. There was simply nothing to do but let him run, and keep a taught rope clear.

When he showed signs of weakening, I began to haul in. From stem to stern of the sloop I was jerked by that shark. Time and time again the captain stepped in to help, but I warned him off, determined to see if that fish could beat me with such tackle. It was twenty minutes of the most strenuous tug of war that I ever have experienced before he came to the side.

Even then the work was not over. No one man could hold that ponderous head from swirling. Showers of foam drenched the cap-

SHOOTING THE SHARK.

HAULING HIM ALONGSIDE.

save some of my self-respect." So I threw the line over again.

Perhaps five minutes passed, and I felt another bite—just a twitch and a tug about what a cod would give—and I pulled as before. Ye gods and little fishes! That rope came tight with a jerk that sent spray flying from it in jets, and tore the line through my hands till they burned.

"Hold him! Hold him tight!" said the captain. "Heave ahead!" and I hove. I had a good brace against the side of the sloop, and I leaned back with a will. By and by I saw a huge gray shape loom up through the wave, and with a slat that sent the water in showers over me, disappear, while I fell backward against the opposite thwarts.

"Ya didn't set the hook into him, sir. Ya want to heave right sma't when she bites. Ya see, if ya don't, the hook don't go through his thick skin."

my jaws. If you ever chanced to jump from a high limb, and thinking to land clear, tangled your fist in a noose and came up with a snap, you will know what happened on my end of the line. With blistering skin I held on till I fetched up with a slap against the side of the boat.

This time I took a turn about the rail, and looked to see what would happen. That half-inch rope was cutting through the water like a trout line with a lively six-pounder on. Bit by bit I got him started from the bottom, then with a surge he lunged surfaceward. I could see the dark-gray form shadowed through the green water, then the white belly, as he turned over, then in a shower of spray, up shot the head and front part of a great shark, his white maw and jagged teeth spitting out foam, and the huge hook clanking against the chain as he wagged his lumbering head against the barb. Hold him? It would have taken three men to

tain and me, as the shark threshed and rolled till the chain was wound about him, and everything in confusion. But taking a turn again, I waited till he unrolled himself. Then holding him as steady as I might, for the mere slatting of his head jerked the arms with almost a dislocating strain, I kept him close while the captain gave him his quietus. Just a little twenty-two bullet forward, not back of, but forward of the eye, almost at the end of the snout, and that monster shark fell limp in an instant with his mouth opening and his teeth spitting forth one long rattle of death.

Then we hooked him on the hoisting tackle and drew him aboard; nine feet and some few inches he was in length, and as thick about the belly as a flour barrel, two hundred and fifty to three hundred pounds, the captain declared. That was some fish.

I played several of them in order to see

Hunting Game in Maine

By WILLIAM SIMPSON

THERE is a good deal of the primitive in most of us, even though we reside in cities of large population, enjoying as we do the improvements and luxuries of a modern city life, surrounded by comforts of culture, science and art, and their obvious environments.

There frequently comes, after a period of energetic engrossing business duties, which in these days of rivalry and universal strife to attain and excel, a sort of self-imposed slavery, and I know there is such a thing as taking the world and ourselves too seriously or anxiously, and the half of life's troubles come from a greedy notion that a man's life consists in the abundance of things that he possesses now. This frame of mind occasionally breaks out into a magic beckoning of old Mother Nature to emerge from the routine of these cares, and to betake ourselves to the woods, redolent in the invigorating atmosphere. Nowhere as in the wilderness is there such a change or variety of scenes, mountains, lakes, ponds, rivers, streams and brooks. And so I chose autumn for a few weeks in the heart of the Maine woods.

Between five and six o'clock in the morning, on my arrival at the Norcross railway station, Thomas Mullen, a strong, active healthy and agreeable young fellow came into my life—not altogether by chance, but partly by pre-arrangement.

It was a cold morning, colder for me than it seemed to be for Tom; but after a howdy and hand-shake, he and I fitted into each other's lives just as the cartridges fitted the three-barreled gun, the weapon of destruction, I brought along. He was not exactly an old-timer in the guiding business, but was the better for that. He knew the woods better than a farmer knows his fields; even tempered, always cheerful, honest, patient and as modest as a maiden with a wholesome way of saying and doing things. He had worked several years on the Lumber Company's job "on the drive," had "driven team" and had worked up to the position of camp boss; but for two years he had been guiding sportsmen in the summer for the fishing, and in the fall for the hunting, over Ambajesus Lake, and the west branch of the Penobscot. Tom entertained me with memories of these places, the names of which enliven the fancy and paralyze the tongue.

"Ye see that grassy p'int jest ahead of us? Last summer I was comin' down to the landin', there was three deer a-standin' on that p'int, a buck and two does. It took just a little while for us to look over each other and get acquainted; but as each one was looking into the other for the same purpose, the fit was speedy and proper.

"I g'ess there is going to be a blow of wind. This lake gets awful rough when she has a mind to. Some years ago two fellers started to go acrost in a canoe and both drowned."

I asked him if they had any jigwater in the canoe, but he said he did not know—he was not there.

The territory north from the west branch of the Penobscot River along the Sourdnhunk stream for some twenty-five miles to a lake of the same name, is one of grand scenery. The mountains are higher and more numerous than anywhere in the State of Maine. Katahdin lies to the east of the stream. There is something charming in the name "stream." It is the most companionable of all placid and material things. It lives a lively life, has a good character, a voice of its own and speaks to people of various tongues, as on its banks we met a lady and gentleman who were Russian artists by profession who conversed to it in various languages; to the trout fisherman there is

At dawn around a turn on the river we were in sight of Davis' camps, that home of many woodland comforts, neatly and carefully built of peeled spruce logs, lined with cedar boards, and with trim cosy appointments, perfect linen tastefully arranged, toilet appointments that gave an air of city manners in a forest home.

Of course, Mr. and Mrs. Davis were on hand to administer in their inimitable manner the creature comforts to weary wayfarers.

After a good night's rest and sound sleep—nature's great restorer—put us in good shape for our journey up the stream. After a few miles of smooth water we reached a place

KATAHDIN FROM DAISY POND.

nothing outside of the animal kingdom that favorably compares with its intimacy.

The formation or bottom, over which Sourdnhunk stream runs, is rocky and gravelly; it has many picturesque falls and rapids, as it hurries on its waters to the Penobscot, and it unquestionably contains more and livelier trout than any other water of its size in the Eastern States. Trout are invariably gamier, livelier and better fighters when they live in swift running water, where they have to battle with the current, but if they must live in a luxurious home of that nature, this one ought to be their first choice.

On the first day of our journey of over twenty miles, the scenery was magnificent. The mountains seemed to be getting higher and more rugged, and the leaves were gorgeous—the beech and maple had turned to orange and purple, the birch and poplar were in the gold, the soft wood retained its soft green, along the banks shrubs of various hues were bathed in a flood of living color, the sky was almost cloudless, enveloping in a delightful blue a woodland scene of superb aspect. At eve the birds were singing their closing song as the fading light disappeared, and soon all was slumbering and nature had drawn her curtain for the night.

where the canoe had to be left and no other alternative but go afoot on a stiff tramp of about four miles. We reached Daisy Pond, a small beautiful pond nestled here. It is about a mile wide, and from this point is a new trail up to the top of Katahdin that I will venture to say no lazy person ever reached. I asked Tom how high the mountain was, and he said the only way to be sure about that was to climb up to the top, adding that every person that had climbed up there found it high enough.

Here we came to a pause in our expedition. The landlord of the cabin was very talkative. I remarked to my guardian Tom that his conversation was excessive, and he admitted it, but added that he was always that way when he imbibed from those brown glass vessels with the long necks. He was chock full and bubbling over with politics, and like most of the people in his social set, was very positive his favorite candidate was certain of election.

However, the lady of the manor served us a game luncheon, of several courses, including broiled partridge and venison, that brought about in us a state of blessed contentment. Tom seemed to be doing a lot of thinking, then looking me over from head to foot and finally square in the eye, said, "The old man has a horse and I g'ess ye better hire him to

DRESSING FOR DINNER.

TALKING IT OVER.

take us up for the next ten or twelve miles," which I learned afterward was a very wise proceeding. "Rough" was a mild term for that trail. But there is an end to all material

things, and so it was with that trail, for at the end of it was Sourdnahunk Lake, the greatest place I ever saw for trout. A sheet of water four miles long, about one mile wide, fed by

innumerable springs, one of nature's masterpieces, where trout freely take the fly from May to October, and but for the wild cry of the
(Continued on page 823.)

The Caribou Barrens of Newfoundland—V.

Pictures and Text by the "Judge."

THE river was brimming full. Down camp and all away at 1 P. M. into a raw head wind from the north. Lots of black ducks were coursing up and down the river, and I shot two of them as we swept along, picking them up as Ralph skillfully drove the canoe ahead. The river tore along, cutting out the banks and letting down the little birches which fringed the edges, with here and there a big one toppling over. The wind increased and a cold rain came on again, numbing my hands and chilling me through and through, but life contains a few supreme moments which fully compensate for weeks of cold and exposure and discomfort. My body seemed impervious to the drenching rain and raw wind as I lived over again and again the scene up there on that high bog, every corner of which had become so familiar from days of tramping and watching, and which was now falling so rapidly away behind us as we raced back toward civilization, of which we had known nothing and heard nothing for so many weeks.

The fleeing does, the pursuing stags, the glimpse of that grand head through our binoculars, the hard run, the agony of waiting, the herd, the battle, the stalk, the hard holding down of nerves while the crucial moment of the shot hung breathless, the stricken stag, the fleeing herd, the ecstasy of savage exultant joy as I fully realized the beauty of the wonderful trophy which crowned the noble head of that truly royal monarch of the barrens—all this and a hundred details more passed again through my mind and will pass a thousand times, so often as my eye falls upon the rich golden curves of those antlers, the beauty of that head, the snowy

whiteness of the flowing pelage which adorns his throat.

Who, save the hunter of big game, is permitted thus to indulge without regrets and without reaction an outburst of that savagery which lies so close beneath the thin veneer which "civilization" has succeeded in spreading over the nature of man? I actually got out of my blankets the other night and went out with the tiny carbide lantern and looked and looked at that head, which proves that "men are but boys grown tall," and brings me closer to my golden-haired laddie at home who insists upon taking his new toy rhinoceros to bed with him.

At 4 P. M. we camped in the shelter of the last point which turns the river into Gander Lake. The wind was howling in from the lake tremendously, but at 2 A. M. I woke and realized that it had subsided to some extent, and arousing the boys, we bent our backs to the paddles and drove out on to the inky water, illuminated only by the Aurora Borealis which flashed up across the northern sky.

Arriving at Southwest Islands before dawn we found a heavy sea running in the straits outside, so got up a big beach fire and lay there waiting for the cold gray dawn. With daylight the wind eased off a bit, and we made off across the rollers safely and down on to the lee shore at Sandy Point at 7 A. M., dead tired, but safe from being wind-bound.

Here we had come from the heart of the wilderness out to within sound of the steam whistle inside of twenty-four hours, a journey which inbound had consumed many days. With camp pitched and a good breakfast I had an hour's sleep, then paddled down to Glenwood

to receive mail and papers and send telegrams informing my family of my safe return from five weeks of wandering in the wilderness, during which period I had seen sign of no human being save the members of my own small hunting party.

Next morning, with everything well dried out, we broke camp and moved down to Glenwood and packed everything up for the return journey. The good fortune which attended the trip continued to the end, for no sooner had we finished this task than the storm fiends which had been held in leash for two days were loosed and a violent northeaster full of snow smote Glenwood, hip and thigh. To have been upon the lake would have been most uncomfortable if not quite dangerous.

While waiting for the train I talked with Lionel and looked over his accumulated plunder. He gave me a beautiful eight-point cupped brow which I have had mounted with silver and made into a fine pin tray for my den, and showed me with warrantable pride the fine sled which his skill had produced for winter use. This sled he had shod with runners nine feet long, sawed out of a pair of fifteen-foot whale's jaw bones. They are strong and hard as iron and very smooth. He also gave me a fine slab of this hard white bone to take home.

I shall always retain a feeling of genuine affection for Lionel Hynes of Glenwood. He is a man of years near sixty, but of heart near twenty; a cheerful bearer of heavy burdens, a flowing well of good humor, bristling at every pore with stories, anecdotes and quaint comical observations; his presence in camp a sure antidote to bad luck and bad weather. A man accus-

tomed from youth to study very carefully the wild life about him, and now stored chock full of most interesting information pertaining to wilderness ways on the island of Newfoundland. An AI mechanic withal and equally at home with the needle or the ax. Better all around man for such a trip I would not wish to meet.

My hunter, Robert S. Brooking, of Alexander Bay, was an indefatigable tracker, persistent as Satan in pursuit of game and possessed of a pair of very long range blue eyes which kept about one lap ahead of the binoculars all day. He was obliging and considerate to the last degree; a first class man for results.

Our cook, Ralph S. Beach, of Grand Lake Stream, Maine, was "young and strong lak' moose," a master canoeman, careful and observant, a skilled juggler of the frying-pan, out of which by his magic he continually took all manner of good things to eat; well informed, but not afraid to learn. An old head upon young shoulders, and a good tent companion, for he does not snore.

I was at considerable pains to select these men, and the combination was a good one, in sharp contrast to some past experiences. I have upon occasion expended hard-earned kopecks to obtain the "services" of a Western guide who after breakfast each morning would mount his horse and keep to the trail a mile ahead of me, leaving me to my own devices. Upon the appearance of any game he would leap from the saddle and start his Winchester to squirting lead across the face of nature. I have had a horse wrangler who, upon observing me to light one of the very few cigars I ever carry, would with an air which plainly said, "One man is just as good as another and a good deal better," remark: "Boss, I'll stick one of them things into my face, too, if you don't mind."

In Mexico once we had a cook with us. He was "a white man, you understand" who, upon my timidly suggesting that during the hours between dawn and dusk while along in camp he fixed up a sort of a low table upon which the necessities of life might be displayed instead of disporting themselves longer in the sand, replied that better men than we had before now been "damn glad" to come right up to his frying-pan and get their grub, and that was just what we could do or starve.

All of which has made me a trifle gun shy, and the careful observer will note that all my kyacks, duffle bags, etc., carry chain locks whereby maple sugar, tobacco, cartridges, etc., may be preserved for the enjoyment of the proprietor and invited guests. This trip, however, was made, as I am glad to say many others have been, with everything unlocked, and it was a pleasure to be able to distribute equitably among the boys the small stock of extra luxuries which I always try to carry for this purpose.

My Newfoundland trip was one of the best. The island is easy of access, the people kindly and considerate. There is an atmosphere of real wilderness about the country which the North Woods of Maine and Canada do not possess for me. Good wood and pure water are plentiful, game abundant; what more could one ask?

Every little hunting trip has some characteristic all its own. The peculiar feature which this Newfoundland hunting impressed upon me most particularly was the traveling about the edges of the bogs, and from camp out on to

the bogs and back, through the caribou leads, which are cut down ten or twelve inches below the surface of the moss. Across these leads small spruces and firs have everywhere fallen, so that constantly, save when right out on the open bogs, one is stepping up over these little hurdles. Until the leg muscles become adjusted to this action, the effect is very tiring, and particularly after a very long hard day, when one is rather irritable, on the way back to camp, there seem to be literally thousands of these little sticks to step over. But there is absolutely no other way to get back to camp, and one has to keep right on stepping over them, the feet determined to drag back, the toes catching and tripping. With Bob ahead of me, my eyes

watching the sticks and following his heels up and down, there would run constantly through my head the complaint of Kipling's raw recruit marching in the Boer war in the rear rank of his company:

"Nothin' but boots, boots, boots, boots,
Comin' up and goin' down,
And there's no discharge in the war."

Our train arrived in due time, and with a hearty farewell from our good friends, Bob and Lionel, Ralph and I departed. At midnight we went aboard the steamer Invermore again at Port aux Basques, and putting out into the choppy sea, which was running in the Straits of Cabot, said au revoir to Newfoundland.

[THE END.]

"THAT GRAND HEAD."

Shot by the "Judge" and referred to in this chapter and in our editorial entitled "King Caribou" in issue of Nov. 23, 1912.

NATURAL HISTORY

Some Extraordinary Extinct Birds.

BY W. J. MURRAY.

THE DODO (*Didus ineptus*).

IN the whole range of natural history few animals of any class, whether existing or extinct, have attracted more attention and interest than the dodo. This extinct bird was a native of the island of Mauritius in the Indian Ocean. From its size, which was about that of a swan, as well as its strange appearance, it seems to have been at all times an object of much interest and curiosity to travelers visiting Mauritius, many of whom wrote home descriptions of this extraordinary bird, which were more or less interesting. In the year 1628 an Englishman named Altham, in writing from Mauritius to his brother at home, says: "You shall receive a strange fowle which I had at the Island Mauritius, called by ye Portuigalls a Do Do, which, of the rareness thereof, I hope wilbe welcome to you if it live."

About the same time a Mr. Herbert, writing also from Mauritius, says: "The dodo comes first for a description; here and in Dygarrois (and nowhere else that I ever could see or heare of) is generated the dodo (a Portuigize name it is, and has reference to her simpleness) a bird, which for shape and rareness, might be called a phœnex (wert in Arabia)."

In a catalogue of rarities preserved in South Lambeth, London, and published in 1656, the following entry appeared under the heading of "Whole Birds": "A Doder from the island of Mauritius. It is not able to fly, being so big." The last evidence as to the dodo's existence is furnished by a journal kept by a Mr. Harry, and is now in the British Museum. This shows that the bird had not become extinct up to the year 1681. But all the writer had to say about it was that "Its flesh is very hard."

It was only after the discovery of large quantities of the remains of the dodo, by Mr. Clark, in the year 1865, that zoologists were able to trace its close relationship to the pigeon family (*Columbidæ*); and there appears to be sufficient evidence to justify the belief that the dodo was a huge pigeon of remarkable specialization in many respects. The wings, owing to gradual disuse, had become rudimentary and consequently it had lost the power of flight. This together with its reputed good edible qualities no doubt led to its extinction soon after the colonization of Mauritius nearly 300 years ago. Following the usual tendency of very large animals to produce few at a birth, it is said that the dodo laid only one egg for each hatching.

THE GREAT AUK (*Plautus impennis*).

This auk, or gare fowl, as it was also called, became extinct about sixty-eight years ago. It still, however, continues to be a subject of much interest to lovers of nature in general as well as to zoologists in particular. While the auk bore a strong resemblance to the penguin, it was

found to be closely allied to the puffin and to the albatross. It inhabited the north of Scotland, Iceland, Greenland and Newfoundland, in which latter country its skeletons have been discovered buried in heaps of guano, and in sand on the sea coast. The auk was about the size of a domestic goose. Its wings were rudimentary, and therefore useless for flight. Like the penguin it used its wings as flippers in the water in searching there for its food.

In the year 1844 the last pair of auks were killed on an island off the coast of Iceland. At an auction in London in 1895 one auk's skin sold for £360 (\$1,800), and one egg for £180 (\$900) thus showing the remarkable public interest taken in the history of this extinct bird.

THE MOA (*Dinornis robustus*).

This gigantic extinct bird of New Zealand possessed the most massive bones of the entire class of birds. The bones of its feet almost rivaled those of the ground sloth, or the elephant, in size. In the museum in Canterbury College, Christ Church, New Zealand, there are two specimens of the moa which measure 12 feet 3 inches in height, such remains having been found in the peat bogs of New Zealand. In the seaside sand dunes and caves were preserved the ligaments holding the bones of skeletons together, also pieces of dried skin and feathers, etc.

The moa is more nearly allied in structure to emus, cassowaries and kiwis (apteryx) than to the ostrich. It closely resembles the kiwis except for its short beak, and for having after-shafts upon its feathers.

For a long time it was hoped that in some of the backward mountainous regions of New Zealand some living specimen of the moa might be found. But the expedition of an Austrian naturalist, Herr Reischek, in 1877-8 for this object, was fruitless, so that the question of the moa's extinction was considered finally settled, and it is believed to have occurred a little over 500 years ago. The fact that it was flightless—not having a trace of rudimentary wings—no doubt contributed largely to render it an easy prey to its natural enemies, including man, and thus to lead to its early extinction.

The Dwarf Screech Owl.

SANTA BARBARA, Cal., Dec. 12.—*Editor Forest and Stream:* Dr. Moody's writings in *FOREST AND STREAM* have always been of great interest to me, and up to now I have always regarded them as the trustworthy notes of a trained observer, but after a careful perusal of his article on the "Dwarf Screech Owl," published Nov. 16, I very much doubt if he has really met with this rare species.

The "heavy cedar and hemlock forests" of Idaho would be the last place to expect to find this owl, which is an inhabitant of the driest and hottest localities.

Brushy cañons in the sage brush country,

or dry southern exposures at low elevations would more nearly meet its requirements; the type specimen came from the southern portion of the State (Idaho), where such conditions exist.

The only dwarf screech owl I have taken personally was picked up dead at Pentictou, British Columbia, a locality almost Sonoran in its fauna and flora.

If Dr. Moody had been able to get a close observation of a dwarf screech owl, the first thing that would have struck him would have been the dark brown eyes—so different from the yellow eyes of most owls. Nor has this species the eyes set close to the top of the head, as he describes. This, as well as all his notes, habits and habitat of the little owl he met, exactly corresponds with the Pigmy owl.

The single bell-like whistle, uttered often in broad daylight, is especially diagnostic of the Pigmy (*Placidium groma*).

It is not generally known that Pigmy owls have distinct aigrettes or "horns," which are only in evidence in life.

I have often called these little owls up to me by an imitation of their whistle, and as they peered down at me, often not ten feet away, the "horns" would be quite conspicuous. After death these tufts become merged with the feathers of the crown.

It is hard to understand the Doctor's disinclination to call a specimen and so put his record on a definite and unassailable basis, when it is evident from some of his accounts of his recent hunts, that he is not averse to the killing of animals, such as the white goat, that are yearly growing scarcer in his state.

ALLAN BOOKS.

The Wild Pigeon.

MEADVILLE, Pa., Dec. 12.—*Editor Forest and Stream:* Inclosed find a clipping from the Buffalo Express of Dec. 12, 1912, in regard to the return of the wild pigeons.

What do you know about it? Kindly answer through *FOREST AND STREAM*.

E. H. KNISKERN.

PIGEONS COMING BACK?

Sportsman Declares That He Saw Flock of Them in Arkansas.

Have the wild pigeons, which flew across the Mississippi valley by the millions, a quarter of a century ago and then suddenly disappeared, returned? If they have, it is the best news sportsmen have heard in many a day, and Michael G. Burns, of Minneapolis, merchant and sportsman, declares that they have. Men who heard Mr. Burns' statement are inclined to discredit it, but the Minneapolis nimrod declares he has seen wild pigeons in great numbers along the White River in Arkansas.

"I was a member of a floating party that started at Beaver, Ark., three weeks ago and

floated to the mouth of the White River. One night, the second one out, I believe, our attention was attracted to a dead tree on the bank of the stream. Its branches seemed fairly alive with birds. None of us could guess what they were, but the old guide, who was sitting in the stern guiding the boat. He dropped his paddle in surprise. 'Gosh, fellers, them's the first wild pigeons I've seen in twenty-five years,' he yelled, and reached for the fowling piece. He brought down ten at a single shot.

"All of the old-time sportsmen will remember when wild pigeons were plentiful in this country and how they fairly covered the limbs of trees when they ceased their flying for the night."—From the Kansas City Journal.

[Possibly so, probably not. However, if—mind our emphasis on the if—this story is all a fact, the "old guide" to whom the feature relates, should be refused the privilege of guiding sportsmen. He is entirely lacking in the rudiments of sportsmanship.—Ed.]

SAGINAW, Mich., Dec. 11.—*Editor Forest and Stream:* I have had sent to me by friends who, whenever they see anything in print about the passenger pigeon, clip it and send it to me, the account of the so-called "passenger pigeon" found at Odelltown, Quebec, which was first published in a Montreal paper.

This story has been going the rounds of the press now for a long while. It is misleading and should be corrected. When it was first called to my attention I investigated the report and got a reply that it was the mourning dove and not the passenger pigeon, just as all these reports turn out to be. The passenger pigeon is gone and all of these reports are mistakes.

W. B. MERSHON.

Whooping Cranes.

IMPERIAL, Cal., Dec. 3.—*Editor Forest and Stream:* Sandhill cranes are numerous in this region. Large bands of them are seen quite often flying over the valley, and I have seen great numbers of them in the Colorado delta on the Mexican side of the boundary. White pelicans also are plentiful. They breed on the islands in Salton Sea, where I have seen many nests and thousands of eggs. The large white heron—egret—is seen here occasionally. It nests in the delta. Pity the delta cannot be made a bird reservation, but it is in Mexico.

ALLEN KELLY.

The White Fruit Pigeon.

ONE more bird of especial interest is a specimen, in very perfect condition, of the white fruit pigeon of Celebes and Sula Islands. It is a large pigeon, white with a slightly creamy tinge, the quills being slate gray, the terminal half of the tail and some of the under tail coverts black.

There are five species of these white fruit pigeons, ranging from the Nicobars and Andamans through the Malay Peninsula to Australia, the one with the most extensive range being the white nutmeg pigeon (*Myristicivora bicolor*), which only differs from the present species in having the primary feathers black instead of gray. These pigeons form a nest of twigs in the branches of trees, laying a single white egg instead of a pair, as with most pigeons.—London Field.

A Hunting Trip from Kyle, Texas.

KYLE, Texas, Dec. 16.—*Editor Forest and Stream:* On Oct. 31, we took the train for Southwest Texas, arriving at our destination about 3 P. M., where, with wagons and provisions ready, we left for the hunting grounds, twelve miles in the country.

Next morning about four o'clock we all hunted in different directions. By night we had three deer and a wolf hanging in camp. One of our party killed two bucks and the wolf within a space of twenty feet.

On the evening of Nov. 4, we had ten deer

JUST TO PROVE IT.

hanging in our camp, and so we decided to go home that night.

The hunting in Southwest Texas is very good, but the weather is too hot to enable one to keep game long. Deer are numerous, quail are very plentiful and javalin are abundant. We killed three and captured two small ones alive. We also saw a great many ducks. The writer will always remember this hunting trip with pleasure. The people are as kind as any in the world, and it is a pleasure to be with them. A few years more and the land will all be converted into fertile farms.

C. J. BORCHERT.

Deer Season in California.

BY WM. FITZMUGGINS.

ALLEGHANY, SIERRA COUNTY, Cal., Nov. 5.—*Editor Forest and Stream:* The open season for the shooting of deer in the Sierras was closed. All in all it has not been a satisfactory one to the general run of hunters, though in the aggregate a large number of the cervines were slain. For some unexplained reason the deer did not this year, as customary, go to the highest altitudes, but remained in the intermediate territory—that between the crest of the divide and the foothills. In fact, many deer usually migrating to the high altitudes were seen during the summer and fall in the foot-

hills, and many were there killed. In early September the animals were reported in the press as plentiful in certain sections of Northern Nevada county. Immediately parties of hunters went out from Nevada City and Grass Valley, the two principal gold lode mining cities of Northern California. More experienced and lucky hunters made good bags. But in the eastern portion of Nevada, Plumas and Sierra counties the deer were very scarce in their usual fall and summer haunts.

October hereabouts proved both a good and bad month for the pursuit of venatic animals. Early and severe frosts brought down the leaves of deciduous trees and brush, making the vistas clearer. Cold rains brought discomfort to the hunters; but a light fall of snow last week along the summits of the ridges made the tracking easier.

The writer has been too busy at compulsory, sordid occupation to find time to do any shooting, though quail have come within close gunshot of my domicile. Following the unwritten code to kill nothing that sought the shelter or society of your dwelling premises, the temptation to shoot was repressed, and the game was allowed to get away. However, friends who did get an opportunity to go out, brought evidence of their luck or prowess in the shape of gifts of bear meat, venison, squirrels and quail.

Bear meat, as a rule, is not the epicurean dainty that the uninitiated universally imagine it; and I have partaken of much which I would not have eaten had any other provision been obtainable. But in this instance it happened to be nearly as nice a piece of meat as I ever tasted. Guests said that its excellence was due to the manner in which I cooked it; but I heard from other persons who also were fortunate enough to get a chunk of that particular bruin's anatomy that their portion was very good, too. It was a two-year-old cinnamon, with a layer of fat half an inch thick under his skin, and a generous "fleece" to his kidneys. He had undoubtedly been feeding well; and the cool summer might have had something to do with making his flesh a toothsome morsel to the human palate.

More recently I received a couple of steaks from a buck deer killed by a hunter, of whom I expected incidents for a story. But nothing romantic developed. He simply drove to a spot in the forest where he expected to find game, and shortly after stepping from his buggy, got sight of the animal on an oak tree flat only a couple of hundred yards away. A quick shot, and the deer fell almost within its tracks. The hunting knife was promptly applied to the "sticking place," and the dressing and quartering followed. An hour after first sight of the deer, the hunter was driving home with his game.

According to all accounts there has been a good deal of hunting this season. The alleged high cost of butcher's meat has lent an incentive to many who can handle a gun to attempt

(Continued on page 824.)

Hunting Accidents Again.

ALBANY, N. Y., Dec. 18.—*Editor Forest and Stream:* Doubtless many sportsmen, in common with myself, read with real pleasure the contribution in the issue of Dec. 14 by Conservation Commissioner Moore on "Deer Hunting Accidents." It is notable as the first time any one of the three commissioners has shown an interest in the statistics either of the killing of deer or of hunters. Formerly such matters formed an interesting feature of the annual report, as FOREST AND STREAM readers can testify.

Personally I am interested in the commissioner's contribution because in it he mentions me by name, as he did at the banquet of the League of Clubs, when he knew I was not present to defend the statements he criticised. The statistics attacked by Commissioner Moore were collected in the Adirondack region by a reputable and reliable newspaper man, were printed in a reliable paper, and are supported as to accuracy by the consensus of opinion of the guides and woodsmen, as well as some of the oldest of the game protectors themselves. Such men know the great Northern wilderness and its wild life at first hand, and as between their knowledge and that of Commissioner Moore, who is a "consulting engineer" with a present tendency to hydraulics, which does not include woodcraft, I am willing to let the readers of FOREST AND STREAM choose.

Personally I have no interest in the new deer law, except to note how it works out. But, to quote Commissioner Moore, although he does not say so directly, the law seems to have "failed to accomplish its primary purpose of conserving human life, and its secondary purpose of conserving the deer supply." No law which depends on the hunter accurately determining the sex and length of horns before he fires, will conserve either human life or animal life, unless it opens the hunting season after the leaves are off the brush. The only criticism I would pass on the "Uniform" law, to whose defense Commissioner Moore has hastened so suspiciously, is that if it had been drawn by practical woodsmen, hunters and fishermen instead of by practical politicians, those most concerned in having a reasonably perfect law in New York State would have got something for the \$15,000 spent on it.

JOHN D. WHISH.

Hunting in California.

BY GOLDEN GATE.

THE total number of hunting licenses issued in California during the fiscal year 1911-1912 amounted to 141,777, as compared with 138,669 during the preceding year, bringing in an income of \$146,181. Sixty-eight non-resident hunters took out licenses at \$10 each, while 140 aliens purchased licenses at \$25 each.

During the months of August, September and October there were sixty-three arrests made for violations of the fish laws of California, one hundred and nine arrests for violations of the game laws and ninety-eight arrests for hunting and fishing without licenses. During this time 212 convictions were secured, twenty-two cases were dismissed and ten acquittals resulted. The fines imposed amounted to \$4,560 with jail sentences of 114 days. The seizures amounted to

581 ducks, 55 quail, 65 doves, 7 snipe, 27 non-game birds, 82 rabbits, 1 deer, 1 white heron, 1,783 pounds of salmon, 2,152 pounds of striped bass, a few trout, clams and crawfish, together with twenty-five ncts. During this period bounties were paid on forty-two mountain lion claims from twenty counties of the State.

Big Goose Stew.

THE greatest gathering of sportsmen ever held on the Pacific Coast took place on Sunday, Nov. 24, when 5,000 devotees of the shotgun were entertained at Sacramento by the sportsmen of that place. The occasion was a great goose stew, and it certainly was some event with 1,500 geese in the great cauldrons at one time, to say noth-

and of the farmers both if there were a change in the laws whereby there might be one day in a month, or something like that, when the deer could be killed. It is a matter of fact that the present open season comes when the flesh of the animals is the least desirable, as far as there is any choice between the different months of the year.

A further change which is proposed as tending to keep up the numbers of the deer is to permit hunters to kill nothing but bucks. There is a further consideration making in favor of this point that such a law would tend to prevent the accidents which occur at times in spite of all the precautions. It is said by Commissioner Garfield that if the hunters were all compelled to wait before shooting until they could see

BLUFFS AT HIGHLAND LIGHT, CAPE COD.

Photograph by H. B. March.

ing of one hundred tureys, forty hams and other provender. For a week previous to the great event, hunters were busy slaying geese in the Sacramento valley, and for a time it seemed as though there would be a goose to a man, but the attendance proved to be beyond the expectations of the hosts. The idea originated with Frank Newbert, President of the Fish and Game Commission, and at first was planned along very modest lines, it being intended that the sportsmen of Sacramento would go on a goose hunt at the same time and hold a feast at the close of this. It ended with Sacramento being host to the sportsmen of the State, with the feast being prepared by twenty cooks and served by a hundred waiters. Trapshooting contests were held before the dinner, followed by vaudeville shows, horse racing and boxing bouts.

Massachusetts Deer Season.

ALL pre-season reports to the contrary notwithstanding, there were fewer deer in Massachusetts this year than last. The number killed during the season which closed Nov. 30, was 1,170 as against 1,268 in 1911 and 1,281 in 1910. Hunters' reports generally show that the increase in breeding has not been commensurate to the killings of 1911. Chairman George W. Field, of the Forest, Fish and Game Commission, thinks it would be better for the protection of the deer

the horns of the deer, then there would be impossible the shooting of men which occurs when the hunter sees something brown through the brush and blazes away at it without waiting to see whether it is a deer or the coat of some other hunter.

Wisconsin's New Game Preserve.

BY MOLLIE RICE.

PLANS have been made by State Forester Edward Griffiths to fence in a game preserve of 14,000 acres which will house wild animals and eventually stock the entire northern part of the State with its old-time quota of game animals and birds.

The township of North, Range 7, East, located almost in the center of Vilas county, and which is almost entirely owned by the State, has been chosen for this purpose. A heavy wire fence nine feet high will be erected about the preserve. Among the animals with which it will be stocked are elk, moose, Virginia deer, and either Rocky Mountain or blacktail deer, mink, otter, beaver, Mongolian pheasants, Scotch blackcock and partridge. It is expected that the wild game—mallard and canvasback especially—will make it a refuge, and will breed there in the spring.

This preserve is directly east of Big Turtle
(Continued on page 824.)

Southern California Angling

By CHARLES FREDERICK HOLDER

THE Tuna Club tournament for sea anglers ended the first of October, but did not close the fishing season, which bids fair to be the best in the history of the islands, Santa Catalina and San Clemente. The Tuna Club alone records ninety-seven swordfish, taken with rod and reel and 21-thread line. The fish averaged 188 pounds, and in all weighed 18,104 pounds.

This extraordinary fish, which Dr. Jordan supposed to be a Japan fish, has undoubtedly visited the islands to spawn for ages, but has never been fished for until the Tuna Club men began to experiment for it some six or seven years ago, when the tuna became erratic and threatened by a big band of blackfish, which prey upon this game fish. The result has been, it has been discovered, that the swordfish has developed remarkable game qualities. It puts the Florida tarpon to shame as a jumper, making fifty leaps where the tarpon makes ten, and is, all in all, a most spectacular fish. Dr. Gifford Pinchot in Collier's pronounces it the most sensational of all game fishes. There also is an element of danger in the sport, though no one has been "rammed" on the Pacific Coast.

The yellowtail fishing at Santa Catalina has been above par in every respect, the fish being large and game. The good fishing is laid to the fact that the islands have not been disturbed as much as usual by the market men who, as a rule, loot the shores of these islands; and as they are the spawning grounds of scores of fishes, the entire region is threatened with depletion. A movement is on foot to have this spawning ground along the Government island, San Clemente, and the island of Santa Catalina set aside as fish refuges. If this is not done, the Japanese alone will loot the coast of crabs, lobsters, shells and fish. Anything with life is their game, and the money gained goes to Japan.

Anglers at Santa Catalina found that on the south shore of the island, exposed to the sea, there is a duplication of the mainland beach fishes, the roncador, surf fish and several others. These are taken at the mouths of sandy cañons and off the wind-and-sea-swept beaches. An especially fine catch was made by Thos. McD. Potter and Chas. Barton. Santa Catalina is not only a prolific fishing ground, but it is unique in the variety of its fish which come and go with extraordinary uncertainty.

The swordfish, the tuna, the long-fin tuna, the strange Luvarus Jack and many more are found here. The ribbon fish is perhaps the rarest of fishes; so rare that practically every specimen ever found can be located; yet the Tuna Club records six or seven, and the writer kept one alive and photographed it alive. The rare and beautiful opah is not uncommon, and the radiant dolphin is not an unusual catch,

the Tuna Club having a dolphin cup.

At the present time the Tuna Club has the greatest assortment of cups and trophies owned by any anglers' club in the world. Not only are valuable cups and medals given, but nearly all the record holders have offered cups to anyone who will exceed their record. The result is, a lot of cups, badges, rods, reels and trophies in gold and silver, diamond-mounted badges, valued at six or seven thousand dollars. Every game fish in California waters has its cup, the object being to encourage the public to fish with the rod and light lines, thus stopping the waste of fish. A most remarkable reform has been accomplished in this manner, and nowhere is there a higher standard of sport.

The Tuna Club has an interesting affiliation with a dozen or more clubs in America, France and England to introduce the methods of each and entertain visiting members of foreign clubs. Members of such affiliated clubs visiting the Tuna Club are for the time being honorary members, having the privileges of the club. It is seen that they secure the best boatmen and meet members of the guild. It would be a good plan if this idea could be carried out all over America, so that all the clubs could have an annual convention and discuss the game laws relating to angling and educate the youth of the country to respect them.

I have recently returned from the region about Klamath Falls. It was said that as soon as the railroad reached this region anglers would crowd in and deplete the most wonderful trout country in the world. In a previous trip I crossed the lofty Cascades and Siskiyou Mountains in a stage, making in all a four days' trip from Los Angeles. Now I entered Klamath Falls in a Pullman, passed the night at a modern hotel, the White Pelican, going in the morning thirty miles up the Upper Klamath in a good launch, to find the old trout grounds as good as ever and the same old droves of trout.

This might be called the home of the big rainbow. My own catches are 6, 7, 8, 9 and 10 pounds, and a few lower than three pounds. Years ago when an angler told me that he threw back everything under three pounds I accepted it with reservation, as I had never taken a three-pound trout with a fly. But when later I took a seven-pound rainbow with a March-brown, and a nine and three-quarter pounder with a spoon the size of a picayune, I began to believe things.

I found salmon trolling in the Williamson—a branch of Upper Klamath Lake—a most exhilarating sport. My best fish (with a spoon, of course) was a twelve-pounder, but a lady hooked and played one in a beautiful pool for an hour and then lost it. We never saw the fish, so did not curb the imagination. We passed an Indian who displayed a twenty-five

pounder, so our unknown must have been a "whale." My eight-ounce split bamboo was entirely outclassed by this fish and by the ten-pound rainbows, and I recommend for this fishing a rod with the reel above the hand, ten ounces, and with some lifting power.

I pretend to no angling virtues, but I have never—that is, barely ever—used more than one fly and should be glad to hear some argument for more than one. It is not so much, to my mind, a question of ethics as of pleasure. If you hook more than one fish the game is up; the fish, as a rule, fight each other and you play a dead weight.

I fished the waters of the Laurentian Club in Canada several years ago and found, as a rule of the club, the anglers were obliged to use flies. This should be applied in Southern California. Last April in Southern California men camped out or slept on the sand in the stream to, at the first intimation of day, thrust worms into the pools and "yank out" the biggest fish in the San Gabriel. These fish hogs practically ended the big trout fishing of that stream in a few days, when, if the fly rule had been enforced, it would have been extended for weeks.

The San Gabriel River, which has for years been the best stream in Southern California for the angler, is being ruined by the power companies, who probably have rights. They are diverting the water from long reaches.

The same old story is being repeated in California; the Japanese and Chinese are looting the sea coast of every living thing and the dead shells; the game commission is unpaid—a thankless task; experts are rarely, if ever, found on it, the jobs in the past years going to men in the main to pay political debts, and when good men do get on the board, they are often helpless and subject to attacks.

Position of the Reel Handle.

NEWTON, Mass., Dec. 13.—*Editor Forest and Stream:* Mr. "Moccasin" wishes to have the reel handle facing to the left, apparently so that the rod being retained in the right hand, the reel can be operated by the left hand. There is no objection to this, but he will find it a much better plan neither to transfer the rod to the left hand nor to operate the reel. An angler should not change hands for quite a while, but should hold the rod in his right hand (being of course right-handed), and use the left hand in place of the reel, pulling off line or giving it as circumstances require. Later, if too much line is accumulated between hand and reel, the rod can be transferred, say during a pause in the conflict, and the line reeled in. Why should an angler hold the rod in either hand exclusively? No authority should teach such a rule. If the reel were placed facing to the left, one could not transfer the rod from right to left hand, which is often a relief in a hard fight.

If "Moccasin" will read the paragraph on the use of the hands in fly-fishing in Breck's "Ways of the Woods," by all odds the best authority of the kind, he will find the above stated better than I can do. ALLAN CHAPMAN.

LARGE quantities of dead and dying fish are being thrown on the coast of Uruguay, the mortality being due to some disease now being studied.

Published Weekly by the
 FOREST AND STREAM PUBLISHING COMPANY,
 CHARLES OTIS, President.
 W. G. BEECROFT, Secretary. S. J. GIBSON, Treasurer.
 127 Franklin Street, New York.

CORRESPONDENCE—FOREST AND STREAM is the recognized medium of entertainment, instruction and information between American sportsmen. The editors invite communications on the subjects to which its pages are devoted, but, of course, are not responsible for the views of correspondents. Anonymous communications cannot be regarded.

SUBSCRIPTIONS: \$3 a year; \$1.50 for six months; 10 cts. a copy. Canadian, \$4 a year; foreign, \$4.50 a year. This paper may be obtained of newsdealers throughout the United States, Canada and Great Britain. Foreign Subscription and Sales Agents—London: Davies & Co., 1 Finch Lane; Sampson, Low & Co. Paris: Brentano's.

ADVERTISEMENTS: Display and classified, 20 cts. per agate line (\$2.80 per inch). There are 14 agate lines to the inch. Covers and special positions extra. Five, ten and twenty per cent. discount for 13, 26 and 52 insertions, respectively, within one year. Forms close Monday in advance of publication date.

THE SEASON'S GREETINGS.

FOREST AND STREAM extends to you the compliments of the season and wishes you and yours a happy and prosperous New Year.

AUTUMN AND WINTER.

So prone are most of us to lay our physical ills to the changing weather that it is a pleasure to find poetry enough in Cleveland to transform the succession of seasons into a delightful bit of imagination. To the average city dweller the transformation from late summer to winter is a jump from summer suit to overcoat, from open doors to coal bills; but a reading of Miss Elsie Schneider's interpretation almost leads us to believe that the coal barons and the caribou barrens are equally estimable:

"The glory of rosy Autumn is past, and in its train is the white sister of the North. Bedecked in brightest raiment, Autumn tripped merrily along, ruthlessly snatching the leaves that turned to see her pass. She trod in the meadow, and the grass took on a deeper hue. She paused beneath the wild plum, to listen to the mockingbird's last call. Stopping among the briars, she startled the ground thrush. She tarried long enough to hear the closing concert of the meadow larks.

"But the white sister raised an icy hand and pursued her until she fell, shrinking from the cold touch. Clad in drifting white robes, the sister marched slowly but steadily on, over the meadows. She covered the short-lived verdure with a snowy shroud, purified by her touch. From the wild plum tree she heard the hooting of the horned owl, while from the bare briars a startled rabbit frisked away. The lark took wing and the optimistic song of the chickadee was stilled. She crossed the stream and it turned to crystal at her step. As she neared the woods, the trees seemed to stand in closer companionship with each other. They huddled together to delay her march. Sturdily, and with the strength born of mutual sympathy, together they stood the test of her touch and growled defiance in her ear. She stooped low and glided away to the little cottage on the edge of the

woods. The rough logs were well put together and the chinks and crevices filled with moss and bark. The dripping eaves grew icicles at her glance. She loosened a bit of bark and peered in. The oil lamp sputtered. The flames in the cheery grate blazed higher and sent sparks flying up the chimney. The hickory logs snapped 'defeat' and she slunk away over the hills."

TAKING CARE OF THE OLD CHAPS.

ISN'T it great to know of the pleasure the old sportsman, now not able, because of financial condition, to take FOREST AND STREAM, gets out of the publication. Any man who has shot a gun or played a fish never tires of reading the news from the front. Veterans of the army, the navy, or from the retired rod and gun navy or army—as the case may be—love to keep in touch with those who still are doing. Appended is a letter from the Commandant of the Soldiers' Home in Massachusetts. Have you time to think of thousands of other institutions whose residents would appreciate FOREST AND STREAM? We have done our best to help them. How about you?

SOLDIERS' HOME IN MASSACHUSETTS.

Chelsea, Mass., Dec. 19, 1912.

Forest and Stream Pub. Co.:

Dear Sirs—I have the honor to acknowledge receipt of your communication of yesterday bearing the information that some kind-hearted gentleman had subscribed for FOREST AND STREAM as a gift to the Home.

I have every reason to believe it will please the old fellows very much, particularly those who in the past have been able to shoot and fish in the forests of the country. We have with us many men who have known what it is to have the best of everything in this life, and have enjoyed in their younger days everything which is talked about in FOREST AND STREAM.

Please convey to the gentleman who has so kindly remembered us our thanks for his generous gift.

Thanking you for the part you have taken in the matter, I am, very truly yours,

(Signed) RICHARD R. FOSTER, Commandant.

A. G. P. & P. ASSOCIATION DOINGS.

ENGLISH pheasants and wild mallard ducks have recently been sent to all parts of the United States by the American Game Protective and Propagation Association, according to an announcement just made at its offices, 111 Broadway, New York city. The birds were distributed free to members of the association who agreed to protect them.

These shipments are the first to be made in accordance with a plan for restocking the country with game through the establishment of sanctuaries on which birds can increase unmolested. The overflow from these sanctuaries will provide shooting on contiguous lands. With the aid of its members the association hopes to start such refuges in every suitable community by supplying the birds to stock them.

Although only pheasants and mallard ducks were reared last summer in sufficient numbers for distribution, experiments with quail, ruffed grouse, wild turkeys, woodducks and Canada geese proved very satisfactory and resulted in a supply of these birds from which it is hoped that enough can be raised next year to warrant sending them out. Especial attention is being given to the native upland birds, and if success with quail and grouse continues, they will in time entirely supplant the English pheasants at the association's farm.

MAKE IT A CRIME.

NUMEROUS mortalities and casualties to human beings, resulting from shooting of men by hunters who mistook their fellows for game this season, as in other years, prompts us to reprint a suggestion made years ago by FOREST AND STREAM.

"Section 1. It shall be unlawful for any hunter, or other person, carrying firearms, to shoot at any object without knowing by actual sight and observation that such object is not a human being; and any such hunter or other person who, by so offending, shall kill any human being, shall be adjudged guilty of manslaughter in the second degree; and any such hunter or person who, by so offending, shall wound or injure any human being without thereby causing death, shall be adjudged guilty of an assault in the second degree.

"Sec. 2. It shall be the duty of the Forest, Fish and Game Commission to post notices reciting the provisions of this act in the same form and manner and in like places as notices for the prevention of forest fires as are now posted by said commissioner."

Such killings as are here concerned would appear to come legitimately under the definition of manslaughter even as the law now stands, but to incorporate in the statute some such specific provisions respecting these particular acts would doubtless emphasize the criminal aspect of the deed, and the effect could not but be salutary. As we have often pointed out, the knowledge that it is a crime to shoot at an object without knowing that the thing aimed at is not a human being, and the consciousness that one violating the rule incurs a penalty for this criminal act, must exert a constantly restraining influence. The thing to be attained here is restraint. The necessity is for caution and precaution which shall prevent the act, not for an added penalty after the deed has been done and the perpetrator has punished himself with the remorse which follows. If we had such a law, and the warning notices containing it were posted where they could not fail to impress themselves upon the hunter who goes into the woods, the list of hunting "accidents" would certainly be lessened.

DAYS OF REST FOR DUCKS.

THE Long Island Game Protective Association has under advisement the question of using its efforts toward closing the duck season two days each week on Long Island. One of these days will of course be Sunday, which day at present is observed to only a small extent on Great South Bay, where most of Long Island's ducking is done. The other day, probably, would be Wednesday. This proposition sounds a little harsh on gunners who go down to Long Island to shoot, but as a matter of fact the only ones hurt would be the hotels, Long Island railroad and the bay boatmen who hold out all sorts of allurements, and after the first week of the open season take your money without returning its equivalent in sport. Two closed days would benefit the gunner in that the ducks would have a chance to feed and get fat, undisturbed, so that on the open days they would not be so wild as to require a high power rifle to bring them within range, as is the case at present. We trust President Van Norden and his organization may do more than agitate this question, which, if it comes to an issue, will have our support.

ARCHERY

Pittsburgh Archers.

PITTSBURGH, Pa., Dec. 16.—*Editor Forest and Stream:* The three regulars of the Bon Air-Beechview clubs shot a team round Saturday, Dec. 14. The day was fine, cold and invigorating, with just a little too much wind for fine work. Scores made at this time of the year, under

MRS. J. H. SEAMAN, TROPICO, CAL.

conditions prevailing in December, must be given higher credit than those made in the calm warmth of an early autumn afternoon.

Mr. Jiles, when interviewed over the telephone in the morning in regard to shooting in the afternoon, complained of having a cold, "afraid to go out, wind too strong, ground too hard," etc. But, after having given all the excuses he could muster into service, finally went out to the range, shot the best score of his life to date and came home full of enthusiasm. Just a case of cold feet warmed up by

success. Scores, ninety-six arrows at 60 yards:

	Hits.	Score		Hits.	Score
Jas. S. Jiles.....	86	410	O. L. Hertig....	90	486
W. J. Holmes....	78	328			

Mr. Holmes is shooting below his usual form, owing to his inability to get out to practice. The improvement of Mr. Jiles is gradual and substantial, and we look for him to be a big factor next year in the Keystone team, of which Dr. Elmer is captain. He is a real archer, notwithstanding previous mention of cold pedal extremities, and is full of the right kind of enthusiasm. A skilled mechanic, he is busy evenings, making bow cabinets, arrow racks and boxes, and even real bows and good arrows. He comes second to our good Boston friend, Edw. W. Frenz, who, as a purely amateur archery maker, stands at the top. Of course, the veteran Capt. Barnes and the energetic, capable Jimmy Duff are much envied by Jiles, who says, "Give me the wood and I'll make you the bow." Apropos to this statement I relate the following:

Our friend, somewhat weary with his evening's work, had sat down in his workshop easy chair "just to rest a minute," so he says. He fell asleep, dreamed of finding a fine yew tree on Mt. Washington, and when he awakened, found himself frantically hacking away at the leg of his work bench.

I know that all the archers in the United States are wishing for many more recruits to this deserving sport just like Mr. Jiles.

O. L. HERTIG.

Chicago Archery Club.

CHICAGO, Ill., Dec. 14.—*Editor Forest and Stream:* Since midsummer, George L. Nichols, of the Chicago Archery Club, in shooting the American round, has passed the 500 mark twelve times, averaging 86 hits, 528 score.

Since the Thanksgiving Day shoot, Homer W. Bishop, up to to-day, has made the following scores:

Team round:					
24	140	24	158	24	142
23	145	23	137	24	128
21	125	22	128	22	120
				23	117
				22	126
				22	126
				95	157
				92	536
				87	499

American round:					
29	157	30	204	30	220
29	157	30	188	30	216
				89	581
				30	166
				30	204
				30	228
				90	598
				30	176
				30	206
				30	236
				90	618

To-day the following scores were made. Temperature 40 degrees, west wind, 26 miles an hour, cloudy:

Team round:						
H. W. Bishop....	21	125	22	128	22	120
G. W. Nichols...	21	109	24	122	22	102
				21	125	87
				21	125	88
				19	99	83
				21	109	83
Dr. E. B. Weston	16	66	17	79	21	89
				23	101	77
				77	335	

American round:						
H. W. Bishop.....	26	154	29	181	30	214
G. W. Nichols	28	128	30	168	30	212
				85	549	
				88	508	

It is hoped that when the next season opens the archers will report their scores, for the pleasure of their friends, and the good of the sport.

EDWARD B. WESTON.

Novice Scores.

BOSTON, Mass., Dec. 17.—*Editor Forest and Stream:* The following scores made by Mr. S. W. Wilder, of Newton Center, Mass., show what may be done by an enthusiast in a short time. Mr. Wilder took up the game last June and bids fair to keep at it in January. His enthusiasm equals his determination and is being rewarded as follows:

American Rounds.—Nov. 30:				Nov. 30:			
60yds.	50yds.	40yds.	Total.	60yds.	50yds.	40yds.	Total.
29	125	30	162	30	194	89	481
				26	134	29	169
				30	194	85	497
				26	138	29	169
				30	186	85	493
				25	135	29	153
				30	186	84	474
				27	139	26	142
				30	174	83	455
				29	167	29	163
				30	222	88	552
				29	165	29	135
				30	202	88	502

Mr. Wilder's steadiness is shown by the

GEORGE L. NICHOLS.

fact that while he never quite succeeded in getting a clean ninety hits, yet he never missed at forty yards—something we all cannot say.

G. P. BRYANT,

Sec'y-Treas. N. A. A.

SUFFRAGETTES in New York city hung up a huge, red Christmas stocking, hoping for the best. Isn't it lucky Santa didn't prove militant and fill that stocking with acid and coal tar?

YACHTING

Yacht Club Elections.

NEW YORK Y. C.

At the meeting of the New York Y. C., held Dec. 19, His Majesty, King George V., of Great Britain, was elected an honorary member of the club. The massive gold cup which he presented to the club, was on exhibition.

Twenty-three regular and seven naval candidates were elected to membership. The following are the officers and committees elected for 1913:

Commodore, Dallas B. Pratt; Vice-Commodore, George F. Baker, Jr.; Rear-Commodore, J. Pierpont Morgan, Jr.; Secretary, George A. Cormack; Treasurer, Tarrant Putnam; Measurer, William Hallock; Regatta Committee—H. de B. Parsons, J. M. Macdonough, and C. Sherman Hoyt; House Committee—Thomas A. Bronson, Samuel A. Brown and Commander James F. Carter, U. S. N.; Committee on Admission—William Buttler Duncan, Henry A. Bishop, Charles Lane Poor, Harold S. Vanderbilt and Commander F. L. Sawyer U. S. N.; Library Committee—Charles W. Lee, Henry B. Kane and James D. Sparkman; Model Committee—John Neilson, Frederick M. Hoyt and W. Harry McGill; Committee on Club Stations and Anchorage—J. Pierpont Morgan, Jr., Robert E. Todd, Vernon C. Brown, Charles Lane Poor, Arthur Curtiss James, George F. Baker, Jr., and Harvey Ladew.

Twin Screw Ocean Cruiser for Canada.

J. MURRAY WATTS, naval architect, has designed a 63-foot boat now being built for Mr. Fred Magee, of Port Elgin, N. B. The owner's requirements called for a seaworthy type of vessel, suitable for the rough waters of the Nova Scotia coast, and as it was intended that the boat should take extended trips along the coast, a pilot house was fitted, from which the boat could be controlled in bad weather, while there is a steering position on the bridge deck for summer use.

The motive power consists of two four-cylinder, heavy duty oil engines, with their center of gravity corresponding to the center of buoyancy of the vessel. This is an ideal arrangement for sea-going work, not only on account of the proper location of weights, but it allows of short shafting with a small angle of rake and simple controls to the steering position.

The engine room skylight is very large, so that the motors can be easily lifted out for repair or replacement. The use of oil instead of gasoline makes more safety, and economy in cost of fuel on long runs.

The most noticeable feature of the design is the very large stateroom for the owner, 15 feet long and 13 feet wide, with a dressing room and toilet communication. This stateroom is reached from the chart house by means of steps leading into a lobby which also has access to the toilet room. The chart house is fitted

up to make a comfortable saloon with sofas 2 feet 8 inches wide on either side, making a very pleasant lounging place in bad weather.

The floor of this chart house is sunken to form a well 4 feet wide and 6 feet 6 inches long, which comes down right over the double bed in the stateroom and leaves plenty of headroom all around. This well is supported by the four posts of the double bed in the stateroom and is concealed by a chintz canopy, matching the other hangings of the stateroom, which is finished in Colonial style.

The after quarters consist of a large dining saloon with wide sofa transoms so arranged that three or four bachelor guests could be taken for a cruise and given comfortable sleeping accommodations in this room. There is a folding table fitted which can be stowed away after meal times. A commodious galley has access to this saloon.

On the port side is a dressing room and toilet. Amidships is the engine room, ventilated by a large stack, in which are installed the two heavy duty four-cylinder engines, a separate electric power plant and a work bench. There are two transoms for the crew at the side of the engine room and two pipe berths, so that four men can be carried in an emergency.

The dimensions of this boat are 63 feet over all, 14 feet 9 inches beam and 3 feet 11 inches draft. With two 35-horsepower engines, she is expected to develop a speed of 12½ miles.

New Cox & Stevens Steam Yacht.

A TWIN screw oil-burning steam yacht is now under construction for D. C. Jackling, of Salt Lake City. She was designed by Messrs. Cox & Stevens, of New York. The contract has been let to the Seattle Construction Company, Seattle, Wash. The dimensions of the vessel are: Length over all, 212 feet; length of waterline, 205 feet; beam, 27 feet; draft, 12 feet 6 inches.

This yacht has many striking features, Mr. Jackling having imposed upon his architects the task of designing for him a vessel combining an unusually high maximum speed with the greatest possible accommodation, and a vessel that should have a steaming radius of at least 3,500 miles at cruising speed and capable of extended ocean cruising in heavy water with comfort and safety to those on board.

The adoption of twin screw propulsion and oil fuel large reduced the length of space assigned to the machinery department; also made a considerable reduction in the force required in the engine department and made it possible to secure the unusually large cruising radius. The construction is to be in accordance with Lloyds' requirements.

The interior of the continuous deck house on the main deck provides a large amount of available space. While there is a passage on each side of the vessel on the main deck outside of the deck house, an interior passage also has been provided, so that the owner and his guests may pass from the dining room throughout the whole

length of the deck house and also from the quarters below forward to those below aft without going on deck.

Hardwoods, particularly Circassian walnut, are used throughout the interior equipment. The placing of this order in Seattle is of especial interest, as when completed Mr. Jackling's yacht will be the largest on the west coast, and the only steam yacht of any size ever built in any of the Western ship yards. This is undoubtedly a direct result of the near completion of the Panama Canal, which, when in operation, will open entirely new cruising grounds to yachts owned either on the Atlantic or the Pacific coast.

Yachts Change Hands.

THE Hollis Burgess Yacht Agency has sold the 35-foot waterline auxiliary yawl Rebecca, owned by E. E. Conway, of Boston, to a Marblehead yachtsman, who will use her for cruising along the coast next season; also 25-foot waterline sloop yacht Mignon, owned by E. A. Coupal, of South Boston, to E. A. Nelson, of New York; and the knockabout Edythe, owned by F. H. Davis, of Cambridge, Mass., to C. P. Cottrell, of Westerly, Rhode Island.

For This—Thanks.

CHICAGO, Ill., Dec. 16.—Forest and Stream Publishing Co.: Gentlemen—Having read FOREST AND STREAM for a number of years, I cannot refrain from writing in order to let you know how much I have enjoyed it, especially the yachting news.

I have come to look each week for the yachting news, and I find I derive more information from reading it than from any other paper. It is so good, I regret you do not devote more space to it. Am always pleased to recommend FOREST AND STREAM to fellow yachtsmen, for it is a live-wire on yachting news.

With best wishes for a prosperous New Year, I beg to remain,

Sincerely yours,

(Signed) SHELDON CLARKE,

Secretary Chicago Yacht Club.

NEW MEMBERS ELECTED.

Atlantic Division.—6559, Robert Edward Fithian, Bridgeton, N. J.; 6560, William John Herdina, 54 Riverdale avenue, Yonkers, N. Y.; 6561, Clarence N. Capes, 43 West Thirty-seventh street, Bayonne, N. J.

A Lighthouse Takes Life.

AN old sportsman of Normandy declares that round the lighthouse of Barfleur last November there were picked up in the course of four nights 10,000 birds of all sorts, including 1,800 woodcock. The lighthouse on the Pointe de Penmarch, in Brittany, has a revolving light of 30,000,000 candle power. Visiting this on Nov. 10 last year, and again on the 12th, an observer saw tens of thousands of birds whirling round, and it seemed to him that the light shot out a perfect hail of electric sparks among the migrants. Next morning he was present while the dead bodies were being collected. They are dispatched every day to Paris by train, and the "catch," he was told, often comprised from 2,000 to 4,000 victims; one morning alone there had been more than 500 woodcock in the "bag." —The Argonaut.

THE SAND SHARKS AND THE MAN EATER.

Continued from page 812.

what their particular style of procedure was when hooked. I found that it was to dive down and swim along the bottom. Not one took the bait in mid water, and I tried with over twenty of them caught and many missed. Also my theories about sharks were all smashed—not one of the twenty caught turned over when they took the bait, for I never got a bite till the heavy line with its thick chain leader and massive hook was flat on bottom in two or three fathoms of water.

When seventeen fairly big sharks had thus been hauled aboard, I determined to try them with the rod and reel. To my surprise, the captain acted as though he knew exactly what was coming. He hauled the tender alongside, while I proceeded to screw up my gaff, and rig the rod with regular tarpon hook, leader, and line.

In five minutes I had a good one on. There was no trouble about bites, for the place was swarming with sharks, and when I struck, he scooted along the bottom. I could scarcely bring him up enough to see his shadow through the waves. Fifty yards ran off and no pause; then a hundred, and soon I was at the end of the line. There was nothing more to do but give him all the butt and try to turn him. The captain yelled for me to jump in the tender, and then we could bring the shark to gaff. But I held on, only to lose the line and gear.

Twice this happened before I consented to play the shark from the tender. I wanted to see how much strain a shark of size would stand without turning. And this I believe: a ten-foot shark will stand all a strong man can give with the purchase of a half-inch rope; stand it and not turn either, for some of these walked off as if I were hooked on to an automobile, not even wagging their heads—just a straight walk-away.

Rigging on a new line and gear, I got a bite, and after setting the hook, simply stepped into the boat with the captain's helper. Then the tale was different. The water was nowhere more than a few fathoms deep, and most of the time less than five. So he could not take advantage of his huge weight to sulk, or break connections with a dive. Nor did he try, but simply started along the shoal while we followed, partly towed by the fish, partly headed up by the oars.

In twenty minutes or half an hour I had him alongside, and was thinking the shark an easy prey when compared with a tarpon. But, alas! I had counted too quickly. For the first time he seemed to wake up when he caught sight of the boat, and away we went on a real cruise. The waves were tossing us about so, that it was impossible to stand. Between baling and rowing, my helper was having all he could do. We went along that shoal in a series of rushes which tore the line from the reel, and sent jets of spray over the boat.

Time and time again we could see the shark roll up with a wave; see the whole fish outlined in the green water, and then, with what seemed to be an easy wag of his head, he jerked the rod till, spite of the holder, the butt rattled my waistline and made me gasp for breath—or a pad.

We were two miles from the sloop when he came to gaff. Reaching down, I set the steel deep in his maw, and held on with all my might. The shark rolled around like a spinning minnow, around and around, winding the line about him, and to my no small chagrin, unscrewing the head of the gaff till it came away. Had the gaff held, I doubt whether I could have kept it in my hand, for the rolling of the shark and the slapping about of his monstrous head were almost incredibly strong. Even with a chain and rope, neither the captain nor I could hold a shark without taking a turn about the rail, and with a rod in one hand and a gaff in the other, the holding was simply out of the question. He went away with the gaff in his throat, and yards of the line wound about him so tightly that it seemed it must cut through even his tough skin.

Still the battle was not over, for hook and line both held. It was only a question of minutes before we had him up again, and this time we shot the shark just forward of the eyes—a constant surprise to me that day that such a monster thing should be killed as by a stroke of lightning, yet with only a little twenty-two bullet.

Three times this was repeated with slight variations, and I excused my apparent fish hoggishness on the score that these were a menace to life and limb, as well as to the game fish and food fish of the waters. So at last, thoroughly tired and drenched through with spray, we hauled up anchor and made for port with a score of sharks aboard.

The wind was fair. Far on the skyline a big schooner, with all sails set, stole along. About us the sea roared and foamed as the Hattie B. came down on a wave. No wonder the captain found trouble in locating a bar three fathoms under water, and thirteen miles out to sea. Yet he declared we could not catch a half dozen sharks in a week outside of that spot, perhaps half a square mile in extent.

"But they's hundreds of 'em there," said he. "It's a regular bedding ground for 'em. Lo'd love you, I've caught thousands of 'em right on that one shoal."

"Did you ever see one of them attack a man?" said I; for I had in mind the lurid stories of this monster of the deep.

"Wal," said he, "these ain't rightly man-eatin' sha'ks. The blue sha'ks is what they say eats men, and they look it. Only one you caught to-day is a blue sha'k. There he is—that pearl-gray one."

He certainly looked big enough—a monster of eleven feet, with a maw that would close over a man's shoulders.

"Well, Captain, you've been in this business twenty years? Did you ever see even signs of one attacking a man?"

"I never did—to speak the truth. Though I guess I wouldn't want to risk 'em none if they was in warmer water. Ya see, sir, them sha'ks don't stay hereabout in the winter. Along about the middle of August, the blue sha'k comes on the ledge and drives the sand-sha'ks off. Then's the time we catches the biggest."

"Did you ever fish for them in winter, Captain?" said I.

"Lo'd bless you, yes, I've come along here when that old lighthouse on Bishop's Ledge was covered thick with ice. Ya couldn't git into

her nohow, less'n you chopped through with an ax. Many a time we'd drop a line in the winter, but never a sha'k. They're off for the warm water when the ice comes here.

"Why, sir, it was in warm weather—fifteen, eighteen, twenty years ago—when I first found 'em. This sloop Hattie B. was bran new then, and we was seinin' for mack'rel. Well, sir, we had her out behind us, five hundred ya'ds o' fine new seine, and we come along the tide rip just the same as we done to-day. We had a fair net full when we hove over the ledge an' began to git ready to haul in on Horseshoe Shoal.

"Well, sir, I've been a long time fishin', but never did I see anythin' the like o' that. All on a sudden Scuppy sings out, 'Lo'd love ye, see the sha'k!' An' all along that five hundred ya'd o' seine the foam come poppin' up, and the blood, an' bits o' fish. Gulls come a squawkin' an' the net a wobblin' like she was in a backswirl. Ya'd better believe we got busy. All hands turned over an' we raised the very devil with them sha'ks. We shot 'em, an' belted 'em with the ax. We slugged 'em with pins an' everythin'. But I want to tell ya, when we gits that net aboard we done some cussin'. Ya could shove that boat through the holes. Five on us, four days' labor it took to mend that damned net. Yes, sir, five on us four days a-workin' like niggers. That's how I found 'em—right in the Hattie B. D'you think I'm likely to forgit 'em?"

"Well, Captain, there certainly are some sharks there. I'd like to have seen what was on the end of that line we broke to-day, with all three of us heaving."

"Sha'k?" said the Captain; "sha'k? by the gods they's sha'k to burn there. Un do ya know, sir, a fellow asks me last trip how in the world did I find them, the ledge bein' so small. 'Find 'em?' says I. Lo'd, I found them sha'k afore you was born; 'n' I aint likely to forgit where I found 'em neither."

HUNTING GAME IN MAINE.

Continued from page 814.

loons, the drumming of a partridge, the whistling of a frightened deer or call of the moose—that monarch of the thick timber—all is stillness and an ideal place to cultivate a quiet heart and a contented mind.

In tramping through the woods we saw many signs of deer, bear and moose. Every day we brought down a few partridges for the table and a sufficient supply of venison, which is cooked here at Charles Daisey's to perfection. However, the most enjoyable meal was that at midday, cooked on an open fire in the woods. There were many elements of enjoyment here—the cutting down of the wood for the fire, the building of the fire itself, which is to sportsmen generally one of the pleasantest recollections of the chase. Here we broiled partridge, a piece of luscious venison or a speckled beauty, all cooked hunter's style, a veritable triumph of culinary art. With a good appetite and a reasonable thirst, what could be better than this? True, we had no plates, but we never mourned their loss.

It is a long road and hard traveling, with many moss-covered fallen timbers, from finely decorated table-ware to the lair of the wild moose, and here Tom was at his best. He

knew exactly where the spring ought to be, and almost always where it was, and made the fire near it; and he certainly was a past master as a fire architect and cook.

During this trip, every day of which he led me over a new trail or spent a new day in a new way—from the first day, spent in a canoe trip around the lake, to rest up a little and make some photographs. In paddling to one of the spring holes we saw hundreds of trout in the spring some four or five feet deep. And on another day a little further up on the shore of the lake, where we could see the beavers busy at work on one of their dams, and in the distance a long blue heron wading about helping himself to small unsuspecting trout, we got a few nice partridges. One day we would be up on a high ridge for deer, the next through a dense thicket for moose, and on two occasions we went back to small ponds for moose, but all we could see of them was their footprints in the soft mud. We saw a lot of black ducks that kept a safe distance from us, but as our desires were centered on moose, we did not care to make a noise shooting at anything so small here in the wilderness.

One morning we came upon a very haughty buck. This unsuspecting victim arose, shook the dew-drops from his flanks and strolled about leisurely in the thick brambles and underbrush, and for some time it seemed a close race as to whether the deer or the sportsman would win. It is not always safe to shoot at a moving object a distance away, even in the woods, and victory was trembling in the balance. If he had got our wind, naturally and promptly his hide would have been safe, but he exposed himself to view for a moment. A steady aim and a well-directed soft lead bullet and the victory was mine, and our coveted prize, a fat deer, beautiful of form, lay stretched on the ground in the ferns and wild raspberry bushes.

Laura Lousie, the spirit who directs my domestic affairs, had not been in very robust health when I left home.

There is not a very extensive mail communication with the outer world, and as I had not received any for two weeks, and the only way of getting it was to go after it, I decided to retrace my way back home. So Dell the teamster was hired with the two horses, neither of which looked like prize winners, but Dell said they were handy in the woods, and he ought to know, for he had just come into camp that day in a downpour of rain, bringing in a moose and a deer that had been shot five or six miles away, and notwithstanding the breaking of an axle, the losing of two shoes from one of the horses and his water-soaked condition, he was as cheerful and happy as a May Queen. With the rising sun the stuff we had was put securely on the trusted gray, and I rode on the other horse—not the glossy black in the story, but a black without the gloss. Everything went as "merry as a marriage bell" for seven or eight miles, by cutting out a fallen tree on the trail or going around another that interfered with our progress. Finally we came to a place where there was a general blow-down, and Tom, who was the master of ceremonies, called a council, which decided to tie the horses to a tree and divide the stuff. In this way each one took his allotted load down the trail for

about five miles where the canoe was hidden in the bushes. I had some freshly shot partridges in the pack to take home, but I wanted a deer also, so we went quietly, when presently Tom saw a small deer on the shore, and in his matter-of-fact way, said: "You better take him." He was a small buck, probably about eighteen months old, and when dressed weighed about fifty pounds, and Tom said he got heavier the further he carried him.

Close to where we got the small deer we met a man with a large black bear that he got over near Harrington Lake, and Tom said he knew two "fellers" that got three bears over there last season. It was past noon when we reached Ambajesus Lake. The wind was puffy and quite strong, but it is astonishing the rough seas those canoes can ride, but with Tom at the paddle, there was no fear. He was engaged to take charge of the Paper Company's camp for the winter, and it was mutually agreed.

"That each go off his several way
Resolved to meet some other day."

DEER SEASON IN CALIFORNIA.

Continued from page 817.

the getting of a deer or bear, to help replenish or stock up the larder. One hunter told me that it was a "ground hog case" with him, because of the "high cost of living."

Mountain quail proved to be quite abundant here this year, and there has probably been a very good natural increase, as climatic conditions have been right for breeding, and forest fires have been comparatively few. The inclement weather of October has started the quail's "runs" toward the lower country, and the danger of being decimated by smothering under a heavy precipitation of snow is minimized by the probability of the birds getting below the snow line in time to avoid the treacherous "beautiful."

The other day I partook of a mess of cooked squirrels that mine host had obtained by good work with a rifle, getting his little quarry in each case with a single shot that decapitated each. Included in the bag were gray, tree and ground squirrels, and a few chipmunks. The ground squirrels were of the variety called here the "Johnny Digger," or gopher. Mine host did not harbor the prejudice existing in some places that the gopher was a "too ratty" rodent, nor that it was a carrier of bubonic plague. "That's all nonsense," he said. His opinion is shared by many other mountaineers, and particularly by the Chinese placer miners. The Orientals have box traps set all the time, and the meat of gophers is a frequent item in their bills of fare. Gopher meat tamale is deemed an especial luxury by many of the Latin people in the mining camps of the Sierra Nevadas.

"And why shouldn't the ground squirrel of the mountain be good eating at this time of year?" queried mine host. He went on to tell how they foraged in the vegetable gardens of the mountain ranchmen, and that they ought to be healthy and their meat palatable and nutritious. However, I prefer the tree squirrels.

The heavily timbered cañon slopes are scenically of wondrous beauty just now, the

golden yellow of the maples and oaks, and the fiery-red of the dogwoods contrasting vividly with the fresh green of the pines, cedars, firs and olive oak. But for the past week there has been daily precipitations of rain, snow and sleet, and while it has been light, a low enough temperature has accompanied it to make it rather disagreeable. The first onslaught of winter in this region generally has a depressing effect upon the spirits—that sharp, bracing one it has back in the New England and Middle States is lacking; but after the winter has advanced some, a reaction for the better obtains. To the present week of "indoor weather" FOREST AND STREAM is indebted for this letter. The promised dissertation on other topics may follow soon. Since my last I have had new adventures in my roving—nothing sensational, but, nevertheless, I hope, interesting to all your readers.

To-day I read every printed word and figure in the issue of Oct. 19 of FOREST AND STREAM, from date line on the title-page, clear through to the very last line on the last page, where I secured the address for the superscription. The loan of the copy has been promised to half a dozen disciples of Nimrod, and I guess it will be pretty well thumb-worn by the time it is returned to me.

"High class reading in FOREST AND STREAM," says one welcome borrower, who has been an enthusiastic reader of former numbers.

WISCONSIN'S NEW GAME PRESERVE.

Continued from page 818.

Lake and includes nine other lakes within its limits. The great wire fence, which will keep in the moose and elk, will also keep out the foxes and wolves. This fence will at first be extended around three sides. A drive will then be organized with men on horseback, which will drive a great number of deer into the preserve, and the fence will then be closed.

The elk will be shipped by the Government from the Jackson's Hole country in Montana. There the elk formerly came down from the mountains in winter to look for food under the snow. As the country settled up, much of the land was fenced, and so short did food become for the elk that they died standing around the haystacks which the settlers protected with fences of heavy timber. For the last year or two the State has appropriated a sum to buy alfalfa to feed them. This could not be done from a wagon standing still, for the elk would crowd around, and many of the calves would be killed by being trampled under foot. At present the wagons are driven at full speed through the forest, with men pitching off hay from the side.

In three or four years it is expected so many of the animals will have bred in the preserve that it will be possible to release them into the woods. The moose and elk are protected throughout the whole year; the beaver is also protected. There is a trapping season for the mink and otter.

'Ware 13.

BESIDES all else the future now holds, next year will be the thirteenth in the century.—Commercial Appeal.

If you want your shoot to be announced here, send a notice like the following:

Fixtures.

REGISTERED TOURNAMENTS.
1913.

- Jan. 1.—Utica, N. Y.—Genesee Gun Club. E. J. Loughlin, Sec'y.
- Feb. 22.—Birmingham (Ala.) G. C. tournament. O. L. Garl, Sec'y.
- Jan. 22-25.—Pinehurst (N. C.) Country Club. Leonard Tufts, Pres.
- July 8-13.—Cedar Point, Ohio.—The Indians' tournament. D. H. Eaton, Sec'y, Cincinnati, O.

DRIVERS AND TWISTERS.

Don't overlook Amateur Championship of Long Island Sound at Manhasset Bay Yacht Club traps, Jan. 11. It's a jolly place to go, and will offer a competition worth winning.

Owing to domestic inclinations of du Pont members—and the fact that they all had turkeys—no shoot was held Christmas Day. However, all latent and pent-up desire for contest, turkeys and powder combustion may be indulged on New Year's Day, when a sufficient quantity of fat, chestnut-fed birds will be in the prize pens for those who can "hit the side of a barn."

Harry Kahler, the boy phenom clay bird eliminator, has slipped from the ranks of amateurs and gone pro. He will represent Peters Cartridge Co. in the West. Kahler has done remarkable shooting in his short career as a powder burner, and there will be many a sigh of relief from circuit trotting amateurs at the parting of the ways—Harry will now sell instead of buy. Good luck to the popular boy, say I.

The new trophies at Travers Island this year are handsome enough to bring out the best and bring out the best there is in the best after they are out—sounds Dutch, doesn't it? Well, parse it, and you sure will take to the cups—the three-finger variety. Well, to return to our mutton, or cups, Ralph Spotts has put up a beautiful silver one for high scratch season average. Charley Billings has Black, Starr & Frosted for 100-bird scratch for first four 100-bird events on any club day. Other silver linings for the clouds of smoke are B. M. Higginson for season high average, handicap; Geo. J. Corbett for handicap high score at 100 birds, same conditions as Billings' trophy; E. N. Huggins, for long straight run in any of first four events on any club day.

W. J. Wilson, Sec'y-Treas. Dows Gun Club, Dows, Ia., writes: "Our club is a newly organized one, composed of young shooters, and we are all striving to make ours a real live gun club. We are going to hold our first club tournament on Christmas Day, when turkeys will be shot for. We contemplate holding a couple of registered tournaments next spring and summer, and hope to entertain a number of out-of-town shooters."

[To this I may add that if FOREST AND STREAM can be of any help in making the march easier for Mr. Wilson's club, or any other young organization, just say what you want.—EDITOR.]

W. G. BEECROFT.

Evanston Gun Club.

EVANSTON, Ill., Dec. 19.—The Evanston Gun Club, of Evanston, Ill., held their annual dinner and election of officers at the City Club, of Chicago, on the evening of Dec. 17, at which the following officers were elected for the ensuing year: H. F. Darby, Jr., President; G. H. Coleman, Vice-President; W. J. Phalen, Secretary and Treasurer; W. R. Carman, Captain; H. Van Petten, Director.

It was decided that, owing to the rapid growth of the club, it was necessary to have larger quarters, and a committee was appointed to plan a larger club house and to arrange for the installation of another automatic trap.

Two teams, composed of fifteen members each, were formed to shoot for a trophy donated by Mr. F. H. Tichenor. New Years morning a contest will take place for the first leg on the Director's cup.

W. J. PHALEN, Sec'y-Treas.

Birmingham Gun Club.

BIRMINGHAM, Ala., Dec. 14.—Only five shooters were at the weekly shoot of the Birmingham Gun Club. The afternoon was the darkest in which we have ever shot, so the scores are away below the average.

Mr. Lee was shooting a 20-gauge gun. Mrs. Garl and Mr. Garl were trying a new gun in one event, which caused them to lose some. E. M. Cornwell has his gun away to the factory for repairs, and was shooting Baugh's gun.

Members of the Birmingham Gun Club are pleased to know that the Southern Handicap will be held at Montgomery. And also at the action of the Interstate Association in restoring the Preliminary Handicap to the subsidiary Interstate handicaps, and allowing the

purses divided as the gun clubs decide. Most of all, that E. E. Shaner and J. T. Skelly still remain at the helm of trapshooting in America.

Scores were made as follows:

	Shot at.	Broke		Shot at.	Broke
T K Lee.....	100	46	F Cornwell	50	34
Mrs Garl	65	43	E M Cornwell..	50	29
O L Garl.....	50	39			

Concordia Blue Ribbon Gun Club.

CONCORDIA, Kans., Dec. 18.—Chas. Sewart, of Hollis, was the high gun with 57 out of 60; Caldwell second with 55, and W. Price third with 54. Visiting shooters who shot through the program were: Geo. Mallo, of Aurora, and Frank Cote, of Rice, Kans. Following are the scores:

Sewart	60	57	Snyder	60	46
Caldwell	60	56	Myers	60	43
Price	60	54	Mallo	60	41
Empson	60	49	Birch	60	40
Huscher	60	49	Cole	45	42
Phillips	60	48	Cote	45	27
Krohn	60	47

299-301 Broadway - - - - - New York, N. Y.

Chicago Gun Club.

CHICAGO, Ill., Dec. 14.—May weather in the middle of December, such as we had to-day, certainly should have brought out a good field of shooters, but only a few came out for practice at the traps. Let us hope that those who have been going out after game will have the best of success, so that they will come back filled with new enthusiasm for shooting, and fill their places on the firing line before the traps.

Goode ran up a total of 91 out of 100 in the two 50-target club events, and then broke 24 out of 25 in event No. 4, gun below the armpit. Barnes took first honors in the practice event, scoring 14 out of 15, breaking 40 and 44 in the next two events. Cannon and Fetherston were out to-day for the first time in several moons. Scores:

Table with 2 columns of Events and Targets, and 4 columns of scores for various participants like O P Goode, C B Barnes, C W May, T V Cannon, L M Fetherston.

Dec. 15.—The pleasant weather of yesterday did not hold over for to-day, as dark, heavy clouds hung overhead, which made it dark, and a strong wind from the northwest had the shooters guessing as to whether the targets would soar up in the air or be driven down by the wind. But at that a number of good scores were made. Silver broke his 25 straight in practice, Thomas coming in for second place with one down, while Dickerman made a total of 23. Silver again took first place in the first 50-target event, when he made a total of 47, Eck, Thomas and Dickerman tying for second place with 45 each. George Eck was going along at a fine clip in the second 50, when he had brought down 42 straight; but the next was a bad one, which got away, and then he dropped two more out of his last three, which brought his total of 47. Dickerman came back with another 45, while Thomas had to be content with third place with a score of 44. Thomas ran up a total of 46 out of 50 in the last two events, breaking 23 out of 25 in each frame, gun below armpit. Eck rolled up a total of 44 in these two events, while Hardy Wolfe scored 40. Phil Miller shared second place with Eck in event No. 1, each breaking 21.

Barribal is one of the former "regulars," who had not shot at the traps for over a year. Raithel made his first visit at our club grounds to-day, this being his second trial at the traps. Scores:

Table with 2 columns of Events and Targets, and 5 columns of scores for participants like Geo Eck, D E Thomas, E Silver, H E Dickerman, P Miller, M E Bosley, A France, A G Raithel, A Moore, C H Barribal, J H Shrigley.

Crescent A. C.

BROOKLYN, N. Y., Dec. 21.—Four events were trapped here to-day. G. G. Stephenson won committee cup with 45 from 6 free ones. R. C. Williams copped Vanderveer cup with 49 from 8. A. Blake made take-home trophy with 89 from 8, and monthly cup was divided between J. F. James and A. Blake, each of whom found 23. Scores:

Table with 2 columns of Events and Targets, and 4 columns of scores for participants like G G Stephenson, F S Hyatt, A Blake, J F James, C Blake, F B Stephenson, J H Vanderveer, R C Williams.

Orange Gun Club.

ORANGE, N. J., Dec. 21.—Two scratch men, T. Dukes and F. W. Lockwood, tied at 24 on first sweep to-day. Second sweep went to F. D. Perkins, who drew one disc and made a full. In the third sweep two men stayed—A. Mosler drew 2 to a full, while M. R. Guggenheim, standing to right of the dealer, also drew 2, each making the full. In the last event Perkins needed one, which he got on the draw and made his full. Three others had calling hands, but with their draws all got busted straight, 24 being the

hand held by A. Mosler, Guggenheim and E. L. Haas. The scores:

Table with 2 columns of Events and Targets, and 4 columns of scores for participants like A Mosler, M R Guggenheim, G W Wakeley, N Wallau, W J Kingsland, E L Haas, T Dukes, W Rockwell, F W Lockwood.

Larchmont Y. C.

LARCHMONT, N. Y., Dec. 22.—It looked like a concentrated attack of experts at Larchmont Yacht Club to-day. There were twenty-two trappists en squad, and some upper register chaps were among the new comers. High gun went to Ralph Spotts with 134 out of 150 from scratch. December cup leg went to E. G. Unitt after a shoot-off with J. V. Henry and A. W. Whiting. Unitt also tied Tom McCahill and S. Halstead for Larchmont trophy, which was won by Halstead on shoot-off. Visitors' cup went away with G. W. Lembeck. Take-home trophy was smashed into submission by Dr. W. B. Short, Jr., after a shoot-off with W. E. Ferguson and A. W. Whiting. This is Dr. Short's first appearance this season. He showed in a tie with Dan McMahon and A. L. Burns. Danny copped the kale on shoot-off. Day trophy was Buffaloed by W. E. Ferguson, who made 97 from a hand-out of 28.

Table with 2 columns of Events and Targets, and 4 columns of scores for participants like R L Spotts, D F McMahon, A W Whiting, J G Batterson, G W Lembeck, E G Unitt, J V Henry, T J McCahill, E Wood, T Lenane, Jr., S Halstead, P J White, A B Alley, L C Dalley, C A Singer, W E Ferguson, F W Fitzgerald, G Morrison.

Buffalo Audubon Club.

BUFFALO, N. Y., Dec. 21.—The last shoot for December and 1912 was held under favorable conditions, but the boys were not all pointing right. F. S. Wright finished with 93 out of his century, which was high for the day. Mr. G. H. Hassam was with us and made application for membership, and, when elected, will probably make the boys shoot to beat him. The scores:

Table with 2 columns of Events and Targets, and 5 columns of scores for participants like Messenger, Ebberts, Wright, Lambert, Immel, Hassam, Covert, Cannon, Wacker, Rogers, Blackmer, Waldon, Seymour, Woolton.

On Saturday, Dec. 28, an all-day shoot will be held at which poultry will be the prizes, sliding handicap to govern four fowls in each event.

Essex Country Club.

ORANGE, N. J., Dec. 21.—B. M. Shanley, Jr., was it out here to-day. He shooting from scratch as usual, won take-home trophy with a straight 25, 25-bird sweep with 24, and tied on leg for December cup with 21. W. R. Delahanty, who tied for December cup, made his 21 from 6 free scalars. C. H. Daly, also a scratcher, did good, consistent shooting and deserved much more than he got.

Table with 2 columns of Events and Targets, and 4 columns of scores for participants like B M Shanley, Jr., C H Daly, J A Hart, W C Shanley, S Halstead, P J White, R L Spotts, W E Ferguson, T Lenane, Jr., E Wood, E L C Dalley, F W Fitzgerald, G Morrison.

Table with 2 columns of Events and Targets, and 4 columns of scores for participants like B M Shanley, Jr., W R Delahanty, C H Daly, J A Hart, W C Shanley, Jr., W C Shanley, A O Headley, P Ross, E H Graves, W R Delahanty.

Table with 2 columns of Events and Targets, and 4 columns of scores for participants like B M Shanley, Jr., A O Headley, C H Daly, J A Hart, W C Shanley, Jr., W C Shanley, P Ross, W R Delahanty.

Brewster Gun Club.

BREWSTER, O., Dec. 16.—The name of the North Brewster Gun Club has been changed to the Brewster Gun Club. The members of the new organization are as follows: W. Glick, President; Al. J. Burns, Secretary; A. Glick, Treasurer; J. Christman, E. Stevens, B. Glick, J. M. Arnold, W. Wilson, D. R. Webner, C. W. Coe, C. H. Holmes, F. A. Reinhart, D. Mossep, Chas. Engleman, W. D. Fairfax, D. A. Young, H. Glick, W. M. Duncan, J. G. Code, C. C. Needham, Alva Arnold. The club will hold a practice match on its old grounds on Christmas afternoon. On New Year's Day the club will go to Canton, Ohio, where they will be the guests of the Reed Urban Gun Club. The club's new grounds, with a brand new trap installed, will be ready for operation on Washington's Birthday, Feb. 22. This day will be made attractive by the attendance of shooters from a large number of gun clubs in this section, representatives of arms and ammunition companies who care to be with us on that day, and the prizes that will be awarded. A. J. BURNS, Sec'y.

Daniel Boone Gun Club.

MARTHASVILLE, Mo., Dec. 14.—Shoot to-day was for half a beef, each quarter divided into five parts, high gun system. Two events, 10 birds each. Ties not given: Ahmann, Lichtenberg, Meyer, F Mutert, F Koelling, Wyatt, Koch, Kite, J Mutert, Bollmann, McVey, W Gardyne, Wilson, Struebbe, Freese.

J. O. WILSON, Sec'y.

A TRAP SHOOTER HAS BEATEN 1955 x 2000 For a Season's Record

It Was Done With

WINCHESTER

REPEATING SHOTGUN and SHOTGUN SHELLS

"No Trapshooter Has Ever Beaten 1955 x 2000"

"The phenomenal record, made by W. H. Heer with Remington-UMC Gun and Speed Shells."

*** "It stands as a remarkable example of the possibilities of skilled marksmanship in combination with modern arms and ammunition."

This gem of inaccuracy, quoted above, was recently offered in the advertisement of a gun and shell maker as a "True Guide To Would Be Winners." All well posted trap shooters know just how true a guide such a misstatement is and will classify it properly. That trap shooters who have recently taken up the sport may not be misguided, and in justice to the man whose average for a season's trap shooting in tournaments registered by the Interstate Association has never been equalled, we give herewith his unbeaten record.

E. F. FORSGARD

whose record of 98+% for 4895 targets shot in Registered Tournaments remains unbeaten.

¶ In the year 1910, E. F. Forsgard, of Waco, Texas, shooting in *Registered* tournaments at *regulation* targets, averaged 98+% for 4895 targets. Is that beating 97.75% for 2000 shots?

¶ At five consecutive *Registered* tournaments at *regulation* targets, Mr. Forsgard broke 2077 x 2100, 98.90%. Is that beating 97.75 for 2000 shots?

Mr. Forsgard in all his shooting used Winchester "Leader" or "Repeater" loaded shells. His gun was a Winchester repeater—not a double barreled one of a make so "modern" that it is no longer manufactured.

If the above records of Mr. Forsgard don't beat 1955 x 2000, for a season's shooting, we will "pass the buck" with a smile. We know that it does, however, and consequently rest the matter with trap shooters generally, with a feeling akin to "the calm confidence of a Christian sitting behind four aces," as Mark Twain once said.

Winchester Repeating Arms Company, New Haven, Conn.

5 out of 6 REVOLVER CHAMPIONSHIPS

PRACTICALLY A CLEAN SWEEP, WON BY

THE FAMOUS  BRAND

Peters

Ammunition

The results of the United States Revolver Association 1912 Outdoor Championships, just officially announced, show that users of Peters Cartridges won FIRST in every match but one, also Second place in one match, Third in three matches and fifth in two.

Match A. Revolver Championship

- 1st—A. M. Poindexter.....467
- 3rd—J. E. Gorman.....455
- 5th—C. M. McCutcheon.....448

Match D. Military Record

- 1st—Dr. J. H. Snook.....212
- 2nd—C. M. McCutcheon.....207

Match F. Pocket Revolver Championship

- 1st—Dr. O. A. Burgeson.....208

Match B. Pistol Championship

- 3rd—A. M. Poindexter.....574

Match C. Military Revolver Championship

- 1st—Dr. J. H. Snook.....621
- 3rd—A. M. Poindexter.....574
- 5th—C. M. McCutcheon.....570

TWO NEW RECORDS

Match E. Revolver Team Championship

- 1st—Denver Revolver Club...774

These victories, won against the hardest possible competition, show that our oft repeated claim for the ABSOLUTE SUPERIORITY OF PETERS AMMUNITION is not mere idle talk, but a conservative and provable statement of FACTS.

PETERS REVOLVER AND RIFLE CARTRIDGES of 32 and larger calibers are just as surely superior to other makes as Peters 22 caliber. PETERS SMOKELESS Cartridges are as far ahead of competing brands as are PETERS SEMI-SMOKELESS.

Shoot the P brand, the only kind that will shoot perfectly in ANY good gun.

NEW YORK: 98 Chambers St., T. H. Keller, Manager.

SAN FRANCISCO: 608-612 Howard St., J. S. French, Manager.

NEW ORLEANS: 321 Magazine St., Lee Omohundro, Manager.

New York A. C.

PELHAM MANOR, N. Y., Dec. 21.—The same old bunch of upper register gun men took all events here to-day. Ralph Spotts took two, high gun with 91, and Travers Island trophy, the latter being taken on a straight from scratch. C. W. Billings took a pair, including high gun handicap with 97 from 12 free ones, and Olympic cup with 24 from an oval. Dr. Culver also lifted two cups—Held trophy, with a full from a 2-disc draw, and distance handicap event with 24 from 19yd. mark. B. M. Higginson won Culver cup leg after a tie with Billings and Stein, all three gunners having full scores. Dan McMahon scored on December cup with a full from one, after a shoot-off with Billings, who filled on a 3-disc draw. Scores:

Hudson Gun Club.

JERSEY CITY, N. J., Dec. 15.—Find scores of the Hudson Gun Club, held to-day. Dr. Culver with 92 per cent. was high, with good consistent shooting; C. Von Lengerke was the runner-up, scoring 85.6 per cent. The Du Pont trophy was won by B. Beyersdoft with a score of 192 with added handicap, out of 200 birds. W. Tewes and T. Kelley shot a 100-bird race with H. J. Burlington and A. Kurzell, and succeeded in trimming them to the tune of 17 targets, with the following scores: Tewes 69, Kelley 83; total 152. Burley 72, Kurzell 63; total 135.

On our next shooting date, Dec. 29, we expect a large gathering, so that we can arrange to fix handicaps for our prize event, that starts early in January. Everybody is welcome at our grounds, so come out and pay us a visit.

T. H. K., Sec'y.

Sunbury-Selinsgrove Gun Club.

SUNBURY, Pa., Dec. 20.—At our third annual poultry shoot to-day some very good scores were made, despite the high wind. The targets were caught in the gusty wind and were made to do all kinds of stunts to deceive the shooters. Hawkins, with 93 out of 100 targets, was high professional, Hassam at 86 being second professional. The high amateur score was rung up by Rohrbach with the good score of 88, he thereby winning the turkey of Class A. Schoffstall with 82 was second high amateur, getting the chicken of A class. Sigfried won the turkey of Class B, and Foster the chicken. Dawes and Spicer won the turkey and chicken of Class C. Cummings was the lucky man for a turkey in Class D. The scores follow:

Events:		1	2	3	4	5	6	Total.

J. W. SCHOFFSTALL, Sec'y.

Westwood Gun Club, of Cincinnati.

CINCINNATI, O., Dec. 21.—Seven members attended the weekly shoot to-day. The weather conditions were not favorable for high scores, a strong, chilly wind causing the targets to take very erratic flights and making it very cold on the firing line. C. Rosemeyer was high with 39, and was closely followed by J. Schneider with 35, the latter breaking his last 13 targets straight. Three new expert traps with electric pulls were installed yesterday, and getting them into working order delayed the shooting until late, so that only two events could be finished before dark. Weather permitting, the club will hold its next shoot on Dec. 28.

The club has not put up its house, and it is rather cold work shooting in the open with the mercury several degrees below freezing and a brisk wind sweeping over the hills. That so many turn out speaks well for the enthusiasm of the members, and augurs well for the success of the club, and practice will soon bring up the scores of the beginners.

The scores, 50 targets per man, follow: C. Rosemeyer 39, J. Schneider 35, M. Stopper 26, H. Carlson 22, C. Kuball 22, A. C. Kuball 20, Val Schroder 17.

The Du Pont Gun Club.

WILMINGTON, Del., Dec. 21.—The desire of man to break succumbed to his inherent right to go broke, so Santa Claus beat the gun to-day, and got away with most of the regulars. The merry Mulletied make shoppers of shooters. However, among the early shoppers were thirty-two Du Ponters, who turned out to-day to try to add their names to Connable cup and to eat with one of the Coleman du Pont silver spoons. The cuppers ran into a tie between W. Edmanson, already being a signatural resident of the cup, and J. H. Minnick, who, strange as it may seem, has not yet been able to get a scratch on the tankard. He has one chance left, for there is one more shoot, after which all those whose mark shows on the mug will shoot at 100 aerosaucers to decide to whom shall go the honor of its custody.

CONNABLE CUP.

The scores in the Connable cup event were: 23 yards—J. B. McHugh 21. 22yds.—J. H. Minnick and W. Edmanson 23; H. P. Carlon 22; W. M. Hammond 17; W. G. Wood 15; L. C. Lyon 11. 20 yards—Dr. A. Patterson 18, Victor du Pont 17, L. L. Jarrell 16, E. R. Galvin 16, Stanley Tughton 12. 18 yards—T. W. Matthewson 19, G. F. Lord 16, S. G. David 13. 16 yards—Dr. J. H. Squires 20, W. J. Highfield 16, Dr. Harris 5.

COLEMAN DU PONT SPOON.

In the Coleman du Pont spoon event the winners in their respective classes were: Class A—W. Edmanson 24; Class B—J. W. Anderson, Jr., 24; Class C—Walter Tomlinson 22; Class D—W. J. Highfield 19; Class E—Albert Bird 20.

The scores of the contest in the several classes were as below:

Class A—W. Edmanson 24, H. P. Carlon, W. M. Hammond, J. B. McHugh and J. H. Minnick 21; W. G. Wood 20; L. C. Lyon 17.

Class B—J. W. Anderson, Jr., 24, L. L. Jarrell 22, Dr. A. Patterson 21, Victor du Pont 20, Stanley Tughton 18, Henry Winchester 15.

Class C—Walter Tomlinson 22, G. F. Lord 18, Dr. Horace Betts 16, J. G. Highfield 14, T. W. Matthewson 13.

Class D—W. J. Highfield 19, W. G. Robelen and Dr. E. O. Bullock 10, R. S. Robison 15, S. G. David and W. G. Ramsay 14, A. F. du Pont 13, Lee Moore 13.

Class E—Albert Bird 20, Dr. Squires 14, E. R. Jenks 5.

Those who were not eligible for the prizes were Edward Banks 23, L. D. Willis 22, W. A. Joslyn 19, B. F. Stevens 13. Two weeks ago Dr. Arthur Patterson and Victor du Pont tied for the spoon in Class B, and the tie was decided yesterday afternoon, when Victor du Pont won by breaking 24 out of his 25.

DR. SQUIRES WON.

During the afternoon a match was shot for the Class D cup, Dr. H. J. Squires, of Class E, challenged W. J. Highfield, holder of the Class D cup. Dr. Squires won, breaking 33 to Highfield's 27. Thus a Class E man holds the Class D cup, the conditions permitting any person in a lower class to challenge for a cup in a higher class. Should he win, his name is inscribed on the trophy and he is entitled to take part in the final shoot-off for ultimate ownership.

Collegiate Shooting.

PRINCETON, N. J., Dec. 22.—Perhaps readers of FOREST AND STREAM may be a little interested in what we are trying to do with trapshooting in the colleges. Possibly this fall's record may tend to give us a black eye in your opinion, and I do not blame any one in the least. However, all of us had the misfortune this season to experience extreme adverse conditions on the dates of our intercollegiate team shoots. There was but one exception, when Harvard met Yale over the New Haven traps. Given average conditions, there are several of us that have developed close to a 90 per cent. average at the end of a season's practice.

I have only direct statistics from the Princeton Club, but have had opportunity to know of the work of several dependable men in the others. Thompson and Scott, of Yale; Bullock and Lockwood, of Harvard, and Comstock, of Dartmouth, are all experienced men, and, allowing for an occasional off day, will be seen near the top in any of our matches.

The difficulty with most college shots is generally in timing too slowly on a windy day. Older shooters who have more opportunity for practice, are able to narrow their marginal difference between windy and calm days to a few birds. The average college man is in the stage of experience when one timing has to do for both conditions, making a big difference in his scores.

Last year and year before, Yale led the best teams ever put out by any college, establishing records that we are proud to hand down.

The intercollegiate team record was boosted to 445 out of 500, while Biddle and Thompson, of Yale, put the individual mark at 95.

The intercollegiate shoot last spring indicated a high-water mark in collegiate shooting, all teams participating (Yale, Dartmouth, Princeton, Harvard), keeping well above the 80 per cent. mark. This fall has indicated a slump, but we all feel confident that next spring's showing will be of a higher order.

Just a word about what we are doing at Princeton: During the last three years interest in the traps has steadily increased. Now we have two trap pits—an Ideal Leggett installed in one, and three experts in the other. Some days twenty or more shooters turn out. Last spring and this fall a cup has been put up for the season's high average in practice. N. R. White won both cups with a total of 991 out of a possible 1,100 pigeons, an average of 90 per cent. R. Simpson and F. B. Nimick led him a very close race, losing but few more targets.

NEW YEAR'S GREETINGS

To All Sportsmen:

1913

The Du Pont Powder Company extends the readers of Forest and Stream sincere wishes for a Happy and a Prosperous New Year.

1913

At this time we also wish to express our thanks for the most satisfactory treatment accorded us during the past year.

1913

We feel that our increased business is largely due to the high quality of our powder. We wish to assure you that our manufacturing plants are continually striving to excel in that particular.

1913

The high quality of Du Pont Powder is conclusively shown by the splendid records made by sportsmen at the traps and their success in the field.

1913

Preference for Du Pont Powders, "The Regular and Reliable Brands," during 1913 will be appreciated.

START THE NEW YEAR RIGHT BY SHOOTING DU PONT POWDERS

Certain weeks during the season handicap cups are shot for, which tends to keep everybody interested.

Next spring we are going to bend our efforts to have it the best season of all, and we hope if any visitor interested in shooting is in Princeton when we are holding forth, he will come down and see us.

A TIGER.

Greenwich Gun Beats Greenwich Field.

GREENWICH, Conn., Dec. 21.—To-day a 50-target match was shot at the traps of the Greenwich Field Club between a team from that Club and one from the Greenwich Gun Club, the match being won by the latter team. On account of the high wind the targets were very difficult. Scores:

Table with 2 columns: Greenwich Field Club and Greenwich Gun Club. Lists names and scores for various participants.

Marine and Field Club.

BATH BEACH, L. I., Dec. 21.—Only two events were pulled here to-day—December cup, which ran into a tie between C. D. Sayre and C. B. Ludwig, each getting 92 out of 100—no mean shooting, considering conditions. Take-home trophy went home with L. C. Hopkins, but not until he had shot off a tie with Sayre, who had 22 out of 25. There was lots of good shooting on the beach, which, however, is not unusual for the Marine and Field aerosaucer exponents. The scores:

Table with 2 columns: December cup, 100 targets, handicap and Take-home trophy, 100 targets, handicap. Lists names and scores for various participants.

This Model 28, 12 gauge *Marlin* shotgun is the finest repeating gun in the world. It has every up-to-date feature, perfected far beyond all previous standards, and it has exclusive advantages not obtainable in other guns.

Note these features: **Hammerless—Solid Steel Breech** (inside as well as out)—**Solid Top—Side Ejection—Matted Barrel** (as on our highest grade hammer guns)—**Press-Button Cartridge Release** (to remove loaded cartridges quickly from magazine without working through action)—**Double Extractors—Take-Down Feature—Trigger and Hammer Safety**. Price, \$22.60.

Our 160-page **Ideal Hand Book** tells about reloading all cartridges; mailed for 6c. stamps.

The Model 28 is a fine appearing, beautifully balanced gun, without any objectionable humps or bumps; its **Solid Steel Breech** (not a shell of wood) permits a thoroughly symmetrical gun without sacrificing strength or safety; **it is the safest breech-loading shotgun ever built.**

Our free circular gives large illustration of gun and full description. Our complete 122-page catalog of all other *Marlin* repeating rifles and shotguns mailed for three stamps postage.

The Marlin Firearms Co.
27 Willow Street, New Haven, Conn.

Dows Gun Club.

Dows, Ia., Dec. 14.—Hemenway was high with 46 out of 50, with Shafer next with 40. A few more practice shoots and we all hope to make our averages swell. Scores:

	Shot at.	Broke		Shot at.	Broke
Hemenway	50	46	Wilson	50	33
Shafer	50	40	Carpenter	30	20
Saterlee	50	36	Nelson	5	3

W. J. WILSON, Sec'y.

To Preserve Fort Edmonton.

MRS. ARTHUR MURPHY (Janey Canuck), president of the Women's Canadian Club, of Edmonton, Alta., is at the head of a movement to bring before the Provincial Legislature, which will meet in Edmonton next spring, the desirability of taking immediate steps to preserve for the people the buildings known as Fort Edmonton, formerly owned and occupied by factors and traders of the Hudson's Bay Company, organized in 1670.

These buildings have been used by the Department of Public Works of Alberta for storage and office purposes, "but now," Mrs. Murphy says, "that the Parliament buildings, costing \$1,500,000, have been completed and opened there no longer exists any valid reason why the fort should not be restored and kept as a memorial of the days when it was known as 'the last house of the world.'"

The original fort was owned by the Northwest Fur Company, and was built in the latter part of the eighteenth century by J. Hughes, M. Shaw and J. McDonald, of Garth. It was known as Fort des Prairies and sometimes as Hughes Fort, in 1805. Later it was called Fort Augustus. There is no authentic record of the exact date when the Hudson's Bay Company built its fort in Edmonton, but it is known the company had one as early as 1805, for in that year it was taken in charge by Donald McDonald. It was a small and comparatively unimportant post at this time, for the main post of the Hudson's Bay Company was at Dogrump Port, near St. Paul de Metis.

These two companies were amalgamated in 1821. At this period the Hudson's Bay Company fort was in charge of M. Bird, who named the new post Fort Edmonton after his birthplace in England. Mr. Bird was retired from service, and the new fort placed in the charge of John Rowand, a native of Quebec, associated with the Northwest Fur Company, who built the house known as "Rowand's Folly," so named

because it consisted of three stories. This was the first skyscraper of the Province of Alberta. Rowand died in Edmonton. He was the factor of the post, and on his death bed commanded that his bones be interred in Quebec. It may interest the curious to know that his order was carried out to the letter, the flesh first being removed from the bones by the process of boiling.

Rowand's successors as chief factors were in turn Messrs. Sinclair, Christie, Swanson and Hardisty. "Rowand's Folly" was razed in 1874 by Chief Factor Hardisty, who built what became known as the "Big House." This residence was destroyed by fire ten years ago.

Many notable men visited the post at Fort Edmonton from time to time, one of the most interesting being Captain Palliser, who was sent out in 1856 by the British Government to study the conditions in Western Canada with a view to considering its possibility as a home for white people.

Mrs. Murphy's plan is to either have the decayed logs replaced or to rebuild the structure in the same manner and in the same dimensions, using wherever possible the original materials. The massive timbers in the old assembly hall, which were whipsawn and hewn with broad axes, are still in good condition. The clamps and bolts which fastened the shutters to the windows and the ponderous locks and keys which weigh a pound each, are yet in the building. The cellar, where the honorable company of gentlemen adventurers stored their wines, is still preserved, and the brick powder house was until recently used by the Government as a rabbit-hutch.

"In requesting the Legislature to reserve these buildings," Mrs. Murphy said, "we need feel no diffidence nor offer any apology. The fort is provincial property, and as citizens of Alberta we look to our representatives to see that it is preserved, and if necessary properly restored.

"We have come a long way since then, but the remains of the old fort we have with us still, and I believe the members of the Legislature and people in general will agree with me that its history is of sufficient interest and value to be preserved as a central landmark of the capital city of the Province of Alberta."

SPORADIC advertising gives but moderate returns. For advertising to be entirely successful, continuity is essential.

Charge of the Rhino.

GENERALLY the rhinoceros lives by himself, sometimes with his spouse, more rarely still with a third that is probably a grown-up son or daughter, writes Stewart Edward White in the *American Magazine*. I personally have never seen more than three in company.

Some observers have reported larger bands or rather collections, but lacking other evidence I should be inclined to suspect that some circumstance of food or water rather than a sense of gregariousness had attracted a number of individuals to one locality.

The rhinoceros has three objects in life—to fill his stomach with food and water, to stand absolutely motionless under a bush, and to imitate ant hills when he lies down in the tall grass. When disturbed at any of these occupations, he snorts. The snort sounds exactly as though the safety valve of a locomotive had suddenly opened and as suddenly shut again after two seconds of escaping steam.

Then he puts his head down and rushes madly in some direction, generally up wind. As he weighs about two tons and can, in spite of his appearance, get over the ground nearly as fast as an ordinary horse, he is a truly imposing sight, especially since the innocent bystander generally happens to be upwind, and hence in the general path of progress.

This is because the rhino's scent is his keenest sense, and through it he becomes aware, in the majority of times, of man's presence. His sight is very poor indeed; he cannot see clearly even a moving object much beyond fifty yards. He can, however, hear pretty well.

The novice then is subjected to what he calls a "vicious charge" on the part of the rhinoceros, merely because his scent was borne to the beast from upwind, and the rhino naturally runs away upwind. He opens fire, and has another thrilling adventure to relate. As a matter of fact, if he had approached from the other side and then aroused the animal with a clod of earth, the beast would probably have "charged" away in identically the same direction. I am convinced from a fairly varied experience that this is the basis for most of the thrilling experiences with rhinoceroses.

Owing to his size, his powerful armament and his incredible quickness, the rhinoceros is a dangerous animal, at all times to be treated with respect and due caution. This is proved by the number of white men out of a sparse population that are annually tossed and killed by the brutes and by the promptness with which the natives take to trees—thorn trees at that—when the cry of faru! is raised. As he comes rushing in your direction, head down and long weapon pointed, tail rigidly erect, ears up, the earth trembling with his tread and the air with his snorts, you suddenly feel very small and ineffective.

If you keep cool, however, it is probable the encounter will result only in a lot of mental perturbation for the rhino, and a bit of excitement for yourself. If there is any cover you should duck down behind it and move rapidly but quietly to one side or another of the line of advance. If there is no cover, you should crouch low and hold still. The chances are that he will pass to one side or the other of you and go snorting away in the distance. Keep your eye on him very closely.

If he swerves definitely in your direction and drops his head a little lower, it would be just as well to open fire. Provided the beast was still far enough away to give me sea room, I used to put a small bullet in the flesh on the outer part of the shoulder. The wound thus inflicted was not at all serious, but the shock of the bullet usually turned the beast to one side, and as usual he went right on through. If, however, he seemed to mean business or was too close for comfort, the point to aim for was the neck just above the lowered horn.

In my own experience I came to establish a dead line about twenty yards from myself. That seemed to be as near as I cared to let the brutes come. Up to that point I let them alone on the chance that they might swerve or change their minds, as they often did. But inside of twenty

yards, whether the rhinoceros meant to charge me or was merely running blindly, did not particularly matter.

Even in the latter case he might happen to catch sight of me and change his mind. Thus looking over my notebook records I find that I was "charged" forty-odd times; that is to say, the rhinoceros rushed in my general direction. Of this lot I can be sure of but three, and possibly four, that certainly meant mischief. Six more came so directly at us and continued so to come that in spite of ourselves we were compelled to kill them. The rest were successfully dodged.

Fortunately it is often possible to avoid the chance rhinoceros through the warning given by the rhinoceros birds. These are birds about the size of a robin that accompany the beast everywhere. They sit in a row along his back occupying themselves with ticks and a good place to roost.

Always they are peaceful and quiet until a human being approaches. Then they flutter a few feet into the air, uttering a peculiar rapid chattering. Writers with more sentiment than sense of proportion assure us that this warns the rhinoceros of approaching danger. On the contrary, I always looked at it the other way. The rhinoceros birds thereby warned me of danger, and I was duly thankful.

How the Birds Consume Destructive Insects.

WEATHER conditions, parasites, fungi, insect diseases and mechanically applied poisons (most of which are both dangerous and expensive) together are insufficient to check the multiplication of insects without the assistance of insectivorous birds. Edward H. Forbush records seeing a pair of grosbeaks visit their nest 450 times in eleven hours, carrying to their young two or more larvæ at a time. Sparrows, chickadees, vireos, martins and warblers, says the American Review of Reviews, made from forty to sixty trips an hour to their nests with all kinds of insects for their young. One of the reports of the Biological Survey records the finding of sixty grasshoppers in the crop of one nighthawk and 500 mosquitoes in another; thirty-eight cutworms in the crop of a blackbird and seventy cankerworms in the crop of a cedar bird. Professor Tschudi estimates that a song sparrow devours 1,500 larvæ a day, and Professor Forbush says that a single yellow-throated warbler will consume 10,000 tree lice in a day. A scarlet tanager has been seen to devour gypsy moths at the rate of thirty-five a minute for eighteen minutes at a time. It is known that more than fifty species of birds feed upon different kinds of caterpillars, while thirty-eight species live largely upon destructive plant lice.

"By far the most efficient aids to man in controlling the codling moth are the birds," says the "Year Book" (1911) of the Department of Agriculture. A report of the Bureau of Entomology says that this insect does more damage to apples and pears than all of the other insect pests combined, this damage being estimated at from \$12,000,000 to \$15,000,000 a year. Thirty-six species of birds attack this insect, these species representing thirteen families, of which the three most important are the woodpeckers, the titmice and the sparrows. In some localities these birds destroy from 66 per cent. to 85 per cent. of the hibernating larvæ of this insect.

Coyote Went Back to the Wild.

MISS ELIZABETH COYNE, living on a homestead north of Grover, being a good rifle shot, lay in wait for a coyote that had been stealing her chickens.

The other morning she killed it and upon examination was surprised to find on its neck an ordinary dog collar with a small plate engraved "Jerry McGahan."

The animal was at one time a pet of Wild Horse Jerry, a widely known character of the Chalk Bluff country, who was killed three years ago.—Denver Republican.

PARKER GUNS

Wear Well, Shoot Well and Handle Well

Wear well because they are made of the best material by the most skillful craftsmen.

Shoot well because they hold the charge compactly together at extreme ranges.

Handle well because the greatest attention has always been paid to the distribution of wood and metal, to insure perfect balance and the most symmetrical outline.

Twenty-bore Parkers have set the pace for small bores in America, and are growing in popularity every year with the most progressive sportsmen.

For further information regarding guns in gauges ranging from 8 to 28, address

PARKER BROS. :-: Meriden, Conn.
New York Salesrooms, 32 Warren Street

(Patented, Feb. 20, 1912.)

CLEAR VISION means a sure shot. The bright rays of the sun, or the haze of a dark day can't affect your vision if you wear **KING'S SHOOTING GLASSES**. Made of **Akopes Crystal**, our exclusive product and infinitely superior to amber. Non-magnifying. Postpaid, \$1.50 to \$7.00. Prescriptions ground to order.

The **KING** and the **KING-BUSCH-STELLUX** Binoculars have wonderful magnifying power, are handsomely finished, durable and scientifically correct. Endorsed by the leading sportsmen of America. You save \$10 to \$25 buying direct from us.

Write to-day for Booklet and Prices

THE F. W. KING OPTICAL CO.

Cleveland, Ohio

"So Why Fret?"

ARE the trains too slow for you? Cæsar, with all of his court, never exceeded the speed limit.

Are your wages too small? In Europe people are content with making a living.

Are the lights too dim? David wrote his Psalms by the light of a smoky torch.

Are you ugly? Cleopatra, though homely, bewitched two emperors.

Are you cold? The soldiers of Valley Forge walked barefoot on the ice and snow.

Are you hungry? The children of India are starving for want of a crust of bread.

Are you tired? Why fret about it? Jacob was tired when he dreamed of the angels of heaven.

Are you sick? Suppose you had lived 2,000 years ago, when sickness was fatal.

Are you poor? The Saviour of men was not wealthy.

Cheer up! Praise God that you live in the midst of His blessings.

Why fret?—American Magazine.

Wild Ducks are Tamed.

THE Agricultural Experiment Station at the Connecticut State College is taming wild ducks. The station was enabled this season through funds provided by sportsmen to send an expedition to the Canadian Northwest to study methods of increasing wild ducks and getting breeding stock for experimental purposes. The expedition was in charge of State Ornithologist Herbert K. Job.

Most species of wild ducks have not been persuaded to breed under restraint, but it has been believed they would do so if stock could be secured that was hand reared from the egg and had never learned wild ways. Job established a camp on the shore of Lake Manitoba. Wild duck eggs were collected in the surrounding wilderness and hatched out in incubators. Twelve species of wild ducks' nests in that region and eggs of young of all these were secured.

In the majority of cases every egg hatched. The average for the season was 92 per cent., far better than poultry men often attain. Most of the young, except of two peculiar maritime species—the white-winged scoter and the ruddy duck—were reared with little loss. Even such

supposedly wild natures as the redhead, canvas-back, bluebill and various others proved perfectly docile, thriving in confinement.

On the 2,000-mile journey back, Job personally cared for and tended the consignment in the express cars. A fine large stock, representing eleven species, arrived in good condition and are now thriving at one of the large preserves affiliated with the experiment station. Experiments with them will be conducted there. On the trip only one duckling, some three weeks old, died.

The achievement is expected to prove the beginning of an important movement to save and restore the wildfowl, while demonstrating the effect of environment on even the wildest creatures.—Winnipeg Correspondence, Minneapolis Journal.

Big Game in Portuguese East Africa.

THE big-game shooting grounds of British East Africa have become so widely and generally known that they have blotted out of mind the Zambezi Valley to the south, the forests of Gorongoza and Govuro, and the courses of a dozen rivers that break into the Indian Ocean through Portuguese territory. To the big-game hunter with a desire for trophies, British East Africa presents undoubted advantages over any other country in the world, but to the sportsman who wishes to test his powers of woodcraft to the full and on the supreme scale, so far as game is concerned, Portuguese East Africa offers a field that is unsurpassed.

Portuguese East Africa still contains the following big game in abundance: Buffalo, crocodile, eland, elephant, giraffe, brindled and white-tailed gnu or wildebeest, hartbeest, hippopotamus, hyena, koodoo, rhinoceros, roan antelope, sable antelope, waterbuck and zebra. There is a great variety of smaller game. Not all of the species mentioned can be hunted indiscriminately, but each may be hunted under certain conditions in certain districts after securing the necessary gun permits and shooting licenses.

(Consul Chamberlain's complete report, giving information as to the required permits and licenses and fees therefor, ammunition, guns, outfit and probable expense will be loaned to interested sportsmen by the Bureau of Foreign and Domestic Commerce, Washington, D. C.)—Consul G. A. Chamberlain, Lourenco Marquez.

High Gun

AT DENVER, 1912
HANDICAP, SEPT. 10-13

Mr. R. H. Bruns, shooting his

LEFEVER

made the marvellous run of
283 without a miss.

On the 700 single targets, including handicaps, Mr. Bruns scored **683 out of 700.**

The second day of the tournament on the day's program of 200 targets, Mr. Bruns and his Lefever gun scored **200 out of 200.** A world's record for ten traps.

On the 500 single 16-yard target for amateurs, Mr. Bruns scored **494 out of 500.**

ANOTHER WINNER AT THE PACIFIC COAST HANDICAP

Mr. L. H. Reid, shooting his Lefever gun, won second high average with **381 out of 400.**

Why don't you shoot a LEFEVER?

Taking the Pucker Out of the Persimmon.

THE popular demand for the large and beautiful Japanese persimmon has been retarded by the marked astringency of the fruit when firm and tempting to the eye, says the Scientific American. Moreover, if the fruit is allowed to ripen until the "pucker" is lost it becomes soft and mushy, decaying very rapidly.

In Japan they have for years practiced the art of removing the "pucker" by sealing the firm fruit in barrels which have been rinsed with "sake," a sort of Japanese beer. Our bureau of chemistry finally took the hint and has recently found that the same effect is obtained by keeping the persimmon in carbon dioxide from three to five days.

Some varieties come out of this "processing," as it is called, as firm as an apple and may be peeled and eaten like an apple with great satisfaction. Our native American persimmon, however, does not respond to this treatment. The fruit grows easily on the Gulf Coast, and the demand is increasing. When the growers and retail dealers learn that persimmons may be put on the market in firm, rosy and edible condition the industry will take on new life.

Fox-Farming a Gold Mine.

SOME years ago a Canadian farmer, while hunting strayed cattle in the woods, found two silver-fox pups, a male and a female. He swapped them with a neighbor for a cow and a few dollars to boot. The neighbor experimented for several years with various kinds of pens and treatment, but finally became discouraged and sold the foxes for eighty dollars. This second man gave over his experiment to a third man, who lived on an island in Cascumpec Bay. The quiet of the new place, the increasing tameness of the foxes, and the intelligence of the new keeper produced conditions that relieved Mme. Reynard's nervous apprehension for her young's safety, and three pups were reared to maturity in two seasons. This success, the result of eight years' experimentation, gave a strong impulse to a brand-new industry. Farmers have not many new industries to turn to nowadays, and this one began in earnest. About six men possessed a knowledge of the fine art of rearing foxes in captivity, and jealously guarded their secret until 1910. Up to that time no live foxes were sold except some light "silvers" to distant places.

The surplus animals were killed and the pelts marketed in London. One dark silver pelt was sold for \$3,000 at a London auction, and in 1910-11 prices of \$2,700 and \$2,500 were obtained. Since then as much as \$3,500 has been realized, the highest price ever paid for the pelt of any kind of animal.

Now that the secret is out, fox-farms are springing up in Canada in all directions, and henceforth it would seem that the production of costly fur is only a problem for the animal husbandman. Perhaps the day will soon come when books of fox, marten, otter, and mink pedigrees will be published. One fox-farm recently visited by the writer on the banks of the St. Lawrence contained eighteen animals, for which the owner demanded \$75,000.—From "Fox-Farming" in Strand.

Ten Million Oyster Shells.

OYSTER shells have of late become quite valuable. It has been discovered that they are excellent to build roads with; they are also used for fertilizers and the manufacture of buttons. Nowadays, says the Wide World Magazine, the oysterman saves his shells and sells them at a profit. The biggest pile of shells in the world is situated at Hampton, Virginia, on Chesapeake Bay, the greatest of oyster waters. This miniature mountain is the product of one season's catch of one man, Frank Darling, the millionaire "King of the Oystermen." The pile is fifty feet high and a hundred and fifty feet long, and contains about two hundred thousand bushels of shells, which yielded about five million oysters. These shells will sell for ten thousand dollars, and before the next season the pile will have disappeared, to make room for another as large. There are many oyster-shell hillocks in the Chesapeake Bay region, though none quite so large as this.

Trapping a Game Keeper.

A WEST HIGHLAND gamekeeper one afternoon, not very long ago, came across a number of young men from a small neighboring town ransacking his best grouse stretches, and evidently making a heavy bag. Being alone, he deemed it prudent not to challenge them, but he devised a little scheme which he believed would result, if cleverly executed, in their being nicely trapped. He guessed that the boat which had conveyed them thither lay anchored in a certain creek, and concluded that, if he could, disguised, secure a passage with them to the town, he could get them handed over to the police immediately on landing. Their "swag" and gear would form irrefutable proof of their guilt. He hurried home and effected such a transformation in his personal appearance as old clothes and an application of the razor rendered possible. He then repaired to the place where the boat was fast-

ened, and patiently awaited the return of the impudent marauders. They appeared in due time, laden with plunder, and jubilant and happy. The fantastically arrayed keeper meekly begged a passage to town, which was cordially granted. They all embarked, and the oarsmen bent to their work. When about a mile from the shore they reached a large buoy considerably provided by a solicitous Government to warn navigators of the presence of a sunken rock. Straight for this colossal hogshead the boat was steered, and when it had been touched, the ragged passenger was peremptorily commanded to climb to its top. Expostulations and entreaties were alike in vain. It was clear that his disguise had been pierced and his mission correctly guessed. It was equally patent that the boisterous youths were bent on administering a salutary lesson in punitive justice. He was compelled to leave the boat and climb to the apex of the rickety and isolated float. The young men bade him an effusive and affectionate farewell and sped along on their homeward voyage. Next morning the poor gamekeeper was rescued from his perilous position by a passing yacht, after having been nearly terrified out of his seven senses.—Shooting Times & British Sportsman.

Catching Turtles for Market.

CATCHING mud turtles for the eastern market is not only exciting, says the Chicago Inter Ocean, but it is extremely remunerative. For several months past hundreds of pounds of mud turtles have been shipped via the boat line to Chicago billed to Philadelphia, where they are placed on the market as ocean terrapin. So fine and highly flavored is the flesh of the turtles caught in this locality that a great market has been opened for them in the east, where even a connoisseur of ocean turtle cannot distinguish them from the real article.

The variety of turtle shipped is the diamond-back, about the gamiest and best known fighter of the mud turtle family. Because of his aggressiveness he is crowded into a box with a half dozen others of the same size, where there are just enough holes to admit sufficient air to keep him from going to waste on the way. If he was given any more liberty the freight handlers would be minus some fingers, besides storing up a lot of grievances against the shipper.

The diamond-back turtle brings the shipper from \$3 to \$5, according to his size. The ones shipped from here vary in weight from thirty to fifty pounds, and are some turtles.

On a day when the weather is particularly fine the turtles are sure to show themselves. They will come up on top of a floating log and sun themselves. Sometimes as many as forty or fifty will occupy one log, ranging in size from infant turtles to grownups. As they are not fast travelers, when driven to the shore it is not difficult to corral them, but a bite from one of them has been known to bring serious results to the one bitten. For this reason the occupation is not as agreeable as some others might be, and not one to be chosen as a pastime.

A Missouri Deer Farm.

IN a half developed hill country a few agricultural side lines may mean the difference between farming at a loss or at a profit. Chalmer Roseberry, of Stella, Mo., has half a dozen of these side lines, and the most unusual of them, deer farming, has in recent years proved the most remunerative.

There was no demand at all for deer in the Ozark hills when a little over twenty years ago as a boy of sixteen Roseberry penned off one and a half acres for a fawn which a neighbor gave him for a pet. The first fawns that the young deer farmer sold a few years later brought \$20 a pair, and grown deer \$30 a pair.

The demand for the animals for parks and circuses and country places recently has got far ahead of the supply, and Roseberry's common or Virginia whitetails are fetching \$50 to \$60 for a pair of fawns and \$75 to \$85 for a pair of adults.—Farm and Fireside.

KENNEL

The Airedale's Coat.

CHICAGO, Ill., Dec. 17.—*Editor Forest and Stream:* Reviewing Mr. Post's interesting letter on Airedale judging is a little difficult, as it is such a joyous mixture of facts which have no existence and fancies without foundation.

First—No Airedale judge at all worthy of consideration insists upon the dark-colored coat or the dark-colored eye. I do not recall a single show in recent years in which the judge has not put up one or more dogs with gray or grizzled coats and one or more dogs with light-colored eyes. True, all other points being equal, a black coat is preferred, but all other things never are equal. Quality of coat is insisted upon and black is the most difficult color in which to obtain the harshness and density combined. So with a dark eye. The darker the eye, the better, but many a dog with comparatively light eyes has won premier honors in the last three years. The Champion of Champions for at least two years in succession is a light-eyed dog. But—and here lies the difficulty—there are degrees in this as in other qualities. A yellow-eyed dog ought never to be put up. There are many good reasons for this, but the all-sufficing reason is that standard reads "small dark eye deeply set." If this is incorrect, the remedy is an appeal to the A. T. C. of America to change the standard, not an abuse of the judge who follows the standard. "Almost good" dogs with one glaring defect are easy to produce. The problem is to breed good qualities in and bad qualities out, and the nearest approximation to this gets the blue.

Second—The statement that a dog can be got ready fit to show only four times a year is absurd. The steady campaigns of Ch. Red Raven, Ch. Prince of York, Ch. Tintern Royalist, Ch. King Oorang, Ch. Soudan Swiveller, Ch. Soudan Stamboul, Ch. Cloumel Isonomy, Ch. King Nobbler and numberless others disproves it without argument. True, any dog is best on some particular day, and naturally an effort is made to have this best condition coincide with the most important show, but it is not one time in a hundred that the effort succeeds, yet the dog wins because he is the best dog on the day under the standard. Mr. Post has a litter of seven puppies born Election Day and all have a black coat and dark eyes. Five hundred other puppies born within thirty days each way from Election Day have black coats and dark eyes. Now, if the expectation based on pedigree be excluded, Omniscience only can say whether five of the five hundred will have black coats and dark eyes ten months hence. In fact, it is better than an even bet that Mr. Post cannot pick out the one of the seven which will have the darkest eye at one year old.

Third—It is true that some dogs are bad actors in the show ring; it is also true that all judges penalize such a dog when he appears, and there are times when such a dog should be given the gate. However, this is so much more the fault of the handler than the dog, that one should move carefully. No one ever saw the

late "Auchairnie" Smith, George, Thomas or Richard Abbott show a dog whose ring deportment was not almost the perfection of gentle and restrained dignity. A genuine handler always controls his dog more with voice than with lead. I have never yet seen the Airedale which could not be trained, but I know scores of dog owners and dog showers who have neither the skill nor the patience to train a dog.

The best bear dogs, the best lynx dogs and the best mountain lion hunters I have ever bred have been from the best prize winning stock. I am therefore constrained to believe either that Mr. Post is in error in his sweeping generality concerning the dogs now being bred or he has had a very unfortunate and an isolated experience.

The judge is trustee of a little brief authority and charged with the duty of so discharging this trust as to improve the best qualities of the entire breed. He is corrected and helped by criticism. Personally, I like the critics—in part because I do not have to agree with them.

EDWIN A. MUNGER.

The Psychology of the Dog.

(*Canis familiaris*).

THE dog is a very highly organized vertebrate, and in zoology it shares with man himself the distinction of being included in the class mammalia. The earliest remains of this class have been traced to the Jurassic period, but beyond this fact nothing is accurately known of the origin of the dog. It seems highly probable, however, that the Canidæ family, which includes dogs, wolves, jackals and foxes, was derived from a common source in remote prehistoric times, from a group of promammalian carnivores which were distributed over the central regions of both hemispheres. This view is supported by the fact that all sorts of dogs, no matter how different in size, shape, color and habits they may be, yet they interbreed freely, the offspring of such union being almost invariably fertile; and further, these "crosses," under favorable conditions, show a readiness to revert to the wild state. In this respect they show a remarkable similitude to the pigeon family (*Columba vidua*). These, like the Canidæ, no matter how many varieties may be produced by the selective art of the breeder, all tend to revert to the original rock pigeon found on the European coasts.

It is a long call from the crowned pigeon to the turtle dove, but perhaps not so long as between a St. Bernard and a Yorkshire terrier, or between both these and a greyhound.

As is well known, the dog is by nature and by necessity a hunter, and in his wild state he lived by the chase, trusting to the fleetness of his limbs rather than to methods of cunning and strategy like his congener the fox. It is generally supposed that the dog was the first wild animal that was domesticated by man, and the reason is not far to seek.

Our savage ancestors, in common with those

of the dog, were obliged to shift for a living, and they both found in the chase the most ready and congenial expedient; a fact which no doubt brought them into early association for a common purpose—their mutual help and agreeable companionship.

To this fact more than any other is due the highly developed intelligence and emotional nature of the dog as well as his (at least rudimentary) ethical, or moral sense, as well as his veneration and unfailing fidelity to his master in the protection of whose life and property he is at all times ready to sacrifice his life if necessary. The nature of his attachment to and genuine affection for his master has often been exhibited by his dog often following him to the grave, the result of uncontrollable grief on account of his bereavement.

Closely related to his emotional nature is the dog's moral sense. Any civilized (if the term may be used) dog, when detected in doing what he knew he should not have done, will appear quite ashamed of himself, and will cower

in a penitent attitude before his master or mistress, as if asking for forgiveness.

The sense of justice or fair play is often exhibited as between dogs. For instance, they recognize vested interests, and much as the natural impulse of greed may be present, a decent dog will not deprive his fellow canine of his meal or his bed, even though perhaps twice his size and strength. Now can human practical ethics surpass this? Doubtless not, and only too often this standard is not attained in human experience. Of course there are "black sheep" in every flock, but we cannot afford to be too hard on even erring dogs.

As regards the cerebral development of the dog, it is of a very high order indeed, and it is probably the nearest approach of all the lower animals to the human standard, not excepting the higher primates, including the chimpanzee. But the latter scores heavily against the dog, in comparison with the human animal, when it comes to anatomy and relative morphology. The dog's anatomy is totally unlike the human in various important respects, while the human organism and that of the anthropoid apes, so far as bodily structure goes, are almost identical—the same 200 bones, the same 300 muscles, the same dentition (thirty-two teeth, sixteen above and sixteen below, set in the same order in their jaws), the same plan of the limbs, the same vital organs, the same glands, the same hairy covering, similar features (external and internal), the erect or semi-erect position and the same absence of a caudal appendage or tail; in short, every essential detail is similar so far as anatomy goes. It is in brain development that the chimpanzee falls so far short in comparison with man, while it is in bodily shape that the dog shows such a wide difference from the human form. If a chimpanzee only had more of the dog's higher attributes such as his human-like intelligence, his moral sense, his fidelity, and his emotional nature, he might fairly be regarded as the nearest approach of all animals to man, but not having these, there seem no grounds for doubt that psychologically regarded the dog comes nearer the human standard.

Can anything be more distinctly human than the various emotions exhibited by the dog, such as affection, jealousy, anger, gratitude, joy, etc.? Of course the dog has not the gift of speech, but many dogs can understand what is spoken to them, and will promptly carry out instructions given them by word of mouth. If this is not the next thing to speaking, it is hard to know what is.

How often has one heard the remark regarding an intelligent setter or fox terrier, "Well, that dog can do anything but speak." There is one thing he can at all events do: he can express his pleasure very clearly by the familiar wag of his tail. This method possibly originated by association of ideas. When the wild ancestors of the dog used to hunt in packs through jungles and long grass, the tips of their tails would often be visible above cover, especially when those tails (as is often the case) would be white-tipped. It is supposed the dogs used to signal to their companions by wagging their tails when locating their quarry, and thus the idea of pleasure became associated with the wagging of the tail, and so the idea has persisted in the mind of the dog through the force of heredity to this day.

As regards the senses the dog has some (such as that of smell, hearing and sight) which far surpass those of man and most other animals. He appears to have a special sense also by which he finds his way home directly and quickly if liberated in a distant and unknown locality.

As previously stated, a dog has intelligence of a high order, and if the hiatus between his and man's is still great, the difference is only in degree and not in kind.

The Pointer Club of New England.

At a meeting of the directors of the Pointer Club of New England, held at the Hotel Essex, Boston, on Wednesday, Dec. 18, 1912, it was voted to offer \$55 in cash to the Eastern Dog Club for prizes at the coming show in February, the same to be placed as follows: Five dollars for best novice dog, \$5 for best novice bitch, \$5 for best limit dog under 55 pounds, \$5 for best limit dog under 55 pounds and over, \$5 for best limit bitch under 55 pounds, \$5 for best limit bitch under 55 pounds and over, \$5 for best open dog under 55 pounds, \$5 for best open dog under 55 pounds and over, \$5 for best open bitch under 55 pounds, \$5 for best open bitch under 55 pounds and over, \$5 for best dog or bitch in field trial class.

VINTON W. MASON, Sec'y.

A Mange Remedy.

ONE of the most efficacious and quickest mange remedies that has come to our notice is as follows:

Mutton tallow, 8 pounds; carbolic acid, 6 ounces; pine tar, 1 pint; sulphur, 1 pound; kerosene oil, 1 pint.

Mix ingredients hot, except sulphur, which add when mixture is cool. Apply with small stiff brush to affected parts once a day, keeping dog in room with clean board floor.

The remedy was given the writer by F. R. Clarke, of Bloomington, Ill., and used successfully for several years. It will keep indefinitely.

Continental Field Trial Club.

At a meeting held at Waynesboro, Ga., the Continental Field Trial Club decided to hold their nineteenth annual meet and field trials at Waynesboro, Ga., on Nov. 26, 1913, beginning with the members' stake. At the same meeting nine new members were elected, making the list at present eighty-one. W. G. Hundley, of Virginia, and W. B. Hamilton, of Mississippi, have been engaged to judge all stakes. A third judge, selected from the list of members, will be added.

JOHN WHITE, Sec'y.

Bruin Becoming a Nuisance.

ARE bears to become a nuisance in Warren county? From all parts of it reports of bears are received.

At Cortelyou recently a big bear was killed by a freight train. On Brown Run a lumber camp larder was cleaned by bears. On Quaker Hill a big black bear strolled up to the school house, looked in and shambled off. Near the late Hon. C. W. Stone's country home a bear invaded an orchard and ate apples side by side with cattle.

Most of the animals have escaped, but several have been killed and bear meat is offered at nearly all of the local meat markets.—Warren Correspondence, Pittsburgh Dispatch.

Breath of Mammoth Cave.

MAMMOTH CAVE breathes once a year. That is to say, in summer, when the temperature of the external air is above that of the cave, the current sets from the latter to the former. In fact the cave is the entire summer making an expiration.

On the other hand, when the order is reversed or the outer atmosphere is below 54 degrees, the cave makes an inspiration, or draws in its breath. This, according to the Mammoth Cave Magazine, is accomplished during the winter.

Charles W. Wright in describing the respiratory mechanism of Mammoth Cave says this mechanism ceases to operate, or in everyday language the cave holds its breath, when the mercury in the thermometer stands at 54 degrees in the outer air; that is, the average temperature of all parts of the cave, winter and summer. Hence it is frequently observed in the spring and fall that there is no motion of air in either direction at the mouth of the cave.

In summer, when the temperature is near 100 degrees, the air rushes out at the entrance to the cave with such force as frequently to extinguish the lanterns carried by visitors. This condition prevails, however, for but a few yards. At a distance of about half a mile from the entrance the motion of air is hardly perceptible at any time from the fact that the main avenue enlarges so rapidly that it plays the part of a reservoir, where a current of air from any direction is speedily neutralized.

If a current of air blows from without inward and is below 54 degrees it does not pass more than a quarter of a mile before it is brought up to that point. Air above the average temperature of the cave never blows into it.

The element of change inevitably entwined with the passage of time above ground is singularly absent in the passage of time underground. In Mammoth Cave, where there is no variation of temperature, no water and no light, the three great forces of geological transformation cease to operate, and even Father Time must perforce pass through some parts of Mammoth Cave and leave not the slightest imprint of his journey. A change of seasons is unknown; day and night, morning and evening have no existence in this subterranean world. In fact, there is an external sameness here which has no known parallel.

The proportions of oxygen and nitrogen bear the same relation to each other in the Mammoth Cave that they do in the external air. In those avenues of the cave that are at a great distance from the rivers, upon the walls and floors of which there is a deposit of nitrate of lime, the air is almost entirely destitute of moisture owing to the hygroscopic properties of the salt, and animal matter mummifies instead of suffering decomposition. And for the same reason, no matter what state of division the disintegrated rock may attain, dust never rises.

How Moose Jaw Got Its Name.

MOOSE JAW is a strange name for a city, and it may be of interest to know how such a name was given. Some fifty years ago, so the story goes, a pioneer with his team of oxen and "prairie schooner," while passing along the banks of the river, was obliged to camp at this point, in Saskatchewan, on account of an accident to his cart, as a spoke had fallen out during the day and the wheel was falling apart. He looked around for something to insert for a temporary brace for the wheel, while his wife busied herself with the evening meal.

The pioneer's child, while romping around, found the jawbone of a moose, which she held up to her father, who by this time almost despaired of finding something with which to mend his wagon, and was delighted to find that the jawbone exactly fitted the place of the missing spoke. The Indian thereafter named this part of the river "The Place Where the White Man Found the Moose Jaw." This accounts for the town's unforgettable name.—London Standard.

Taxidermists.

J. KANNOFSKY, PRACTICAL GLASS BLOWER

and manufacturer of artificial eyes for birds, animals and manufacturing purposes a specialty. Send for prices. All kinds of heads and skulls for furriers and taxidermists. 369 Canal Street, New York.

Remember only \$1.00

FOREST AND STREAM PUB. CO. 127 Franklin St., New York City

"MULLERITE"

Powder Has Won by Sheer Merit

Thousands of dollars are spent yearly in advertising and hundreds of demonstrators are continually extolling the virtues of other Smokeless Powders, but the sale of **MULLERITE** with practically no publicity, steadily increases.

**Once a MULLERITE Shooter
Always a MULLERITE Shooter**

Such satisfactory results could not be accomplished if Mullerite was not a truly remarkable powder. No inducements are offered to use this powder and no paid professionals say a good word for it because their bread and butter does not come through Mullerite channels, but the amateur who once uses it gets results and that counts more than smooth talk.

Don't take our word for it—just try a box of Mullerite in the field or at the traps.
