雜貨 Miscellaneous Goods	64 - 107
附錄 Appendix	108 - 120

凡 例

- (一) 本刊所列貨品係依據本處所造呈部季報刪繁就簡以期切要爲主旨
- (二) 本刊所列貨價均係躉售貨價計每星期調查一次至月終按算術平均法登記故與各個的實在成交價不能盡同
- (三) 各種貨物均冠有牌號等標識以免含混籠統之弊
- (四) 各種貨價參列兩種貨幣本位列規銀所以便調查列關銀所以資比較至上海規銀與江海關關銀之比率則爲一百一十四錢與一百兩之比
- (五) 上海爲通用銀兩碼頭而習用洋碼者亦頗不少本刊仍按當時釐價折合規元以歸一律
- (六) 買賣單位悉從市面習慣
- (七) 本刊目次略按上海市場分業狀況分爲五部八類並分別載明稅則號數以資參考
- (八) 本刊並用中英兩國文字以便中外商人參證

PREFATORY NOTE.

- (1) The commodities contained in this quarterly are selected from our quarterly report to the government and are compiled in an abridged and concise way.
- (2) This quarterly contains wholesale prices only. Investigation is once a week and the average price is calculated by the arithmetic method and recorded at the end of month. Thus a slight difference is likely to happen between that and the actual price.
- (3) In order to be more specific, every kind of commodity is affixed with its trade mark, brand and, in some cases, the name of the company.
- (4) Every price is expressed in Shanghai Taels and HK. Taels. The first is used because of its convenience in investigation and the latter for comparison. Their ratio is as 111.4:100.
- (5) Since taels and dollars are in dual use in Shanghai, all prices in dollars are converted to taels as per the rate of dollars during the occasion.
- (6) The units or measures are based upon the custom of the market.
- (7) The commodities are classified into five parts, eight groups in accordance with the division of trade in the Shanghai market. Tariff numbers are inserted for reference.
- (8) This quarterly is published both in English and Chinese for the reference of all native and foreign merchants.

卷 一

市 況 說 略

總 說

本季對外匯市頗形順利。七月分上海倫敦間電匯在三先令三辨士至三先令三辨士二五之間。及東南戰事風聲緊急。生絲出口匯票發動。銀市堅俏。竟長至三先令四辨士五。查大條在七月中。市面極平淡。自八月倫敦會議畢事以後。成績良好。商業有望。歐陸各國銀貨之鑄造日盛。印度亦以農產豐收。吸收甚鉅。中國銀用復未見衰弱。故至九月末近遠期均長至三十五辨士一二五。東匯本處逆境。因此而益見疲軟。金價亦一落不返。當七月初。東匯掛牌每百圓合上海規元五十九兩七錢五分。為本年以來之最高紀錄。金價亦高至二百八十九兩五錢。其後即以日美匯兌續縮。及本埠戰事影響。落至五十三兩。金價亦低至二百五十一兩六錢。前後相較東匯跌落六兩七錢五分。標金跌落三十七兩九錢。誠為近數年來未有之劇變。至於本埠銀洋行市。在此三個月中。上落甚鉅。七月本為銀洋用途平淡時期。故洋厘最高祇七錢一分七毫。最低至七錢七厘。銀拆最低為一錢五分。最高亦不過三錢五分。然至八月中旬。則以公債行市之虛抬狂漲。金融公債現貨價高至九十一元五角。整理六厘公債亦升至八十一元二角五分。超峯躋極。即不有事故發生。亦將無法以繼其後。適逢東南備戰日亟。各省水災類仍。賣方乃乘機壓抑。數日間跌去二十餘元。金融業影響最捷。錢莊受軋倒閉者凡數家。銀行家亦急於收回拆款。充實準備。以致市面騷動。銀根愈緊。洋厘最高至七錢五分。銀拆七錢掛牌者歷一旬。本埠商業

受公債風潮、金融恐慌、及附近戰事之抨擊。九月之一月中。市面沉寂異常。正頭叫莊停市。紗花市價大跌。五金市面本不見佳。至是更形寥落。他若麻袋銷令本在九月。亦因戰事而停頓。呢絨銷場向恃東北。因此而交易不動。惟開灤諸煤、蘇常梗米。則以來源阻絕而上漲。雖本埠與長江流域一帶之交易未絕。然各埠金融寬緊。向視本埠為轉移。本埠金融既緊急異常。若魯。若皖。若湘。無不禁現出口。以資維持。各地週轉不靈。商貨自失其流通之力。而况洋行定貨之到期者又不能不出。錢莊用款則艱難萬分。資本短絀。惟有出於虧本出售之一途。其在戰事之前者。又有直鄂湘贛諸省之水災。受災各地。無不與本埠商業至有關係。因水災而交易停頓者歷時亦久。此皆為本埠商業衰落之大原因也。

進口各貨。東洋貨以匯市順利。到貨甚湧。西洋貨尙能維持現狀。不致過分搖動。惟糖市因產地報漲。本埠秋銷發動。市面曾有一番升騰。染料除落令之漂白粉外。交易俱暢。木材則以時局影響。建築工程停頓。銷路大為減色。此外則軍用諸品。轉以戰事而大為活動。如鉛類以各地兵工廠採辦而轉機。灰毛毯為行軍所需而挺秀。餘如乾糧罐頭食物之銷場。亦頗不弱。惟點銅則以成色問題。甯紹幫停辦幾及二週。銷數甚鉅之老美女等雪茄。同業為防維互相貶價起見。收歸公會專賣。然五金同業之鉄管子公賣。則已無形消滅矣。

糧 食

本季糧食市面。東南若不發生戰事。可謂始終平穩之局。洋粉洋麥。以本廠粉麥積存尙厚。且當新麥上市之際。故進口甚少。加以粉價便宜。洋粉行銷頗不合算。客幫即有採辦。為量亦微。且以北幫居多。洋米初亦無市面之可言。迨戰事發生。產米諸區運輸艱阻。滬

上來源斷絕。米價一日數漲。高等白米竟至十七元五角。米商始注意採辦洋米。粉向西貢等地定貨。價合申規五兩六七錢左右。洋粉亦以米價昂貴。漲起四五分。惟洋麥市面仍疲。定價約四兩三四錢。銷路不旺。日商轉往大連等埠銷售云。

海 味

海味營業。初因新陳不接。市景凋零。嗣後時局紊亂。運輸困難。故本季交易。無甚發展。三閱月中。惟八月銷路較暢。產地新貨陸續運到。來貨既湧。市價不免見跌。十番參海帶干貝均趨跌勢。迨戰雲既啓。市價益形步降。各幫銷路停滯。惟魷魚一項始終挺秀云。

十番參存底早枯。青黃不接。市價飛漲。八月新貨到埠綿亘不絕。價即步跌二三十兩。客幫漸有採辦。而下旬來源反稀。價回漲十餘兩。各號僉謂銷場當可順適。迨戰事突生。市價仍落。頗爲失望。

三角干貝來源湧到。銷路清淡。價較上季末跌去十餘兩。七月中復跌十數兩。其後來源見稀。價稍回復。迨受戰事影響。客銷均停市又步鬆。海帶七月上旬。長江各埠走銷頗健。市面穩定。及下旬銷路見呆。價格跌四五錢左右。至新貨上市。來源不多。市又堅俏。魷魚因產地秋水失收。市價陡漲。申地亦跟緊。雖受戰爭影響。仍未挂落。八月升漲五六兩。至今猶堅定。薩門魚新貨上市。市價頗稱穩固。季末來貨過多。隨之見鬆。

糖

本季糖業。初因期貨與現貨價格相距甚遠。各洋行拋出不已。各幫恐致受虧。不敢進辦。實銷既淡。到貨不多。營業頗爲寂寞。八月間曾有一度之週翔。蓋客幫以前久不進貨。底存已虛。至是月餅旺

銷。需求甚殷。市面遂呈活潑之象。復得荷日電傳。產地價格遞增。處於久疲之糖市。乃得漸入佳境。即太古怡和車白。本埠交易素稱有限。至是亦有大批購辦。旬日間漲起五六錢左右。八月廿號以後。江浙戰雲瀰漫。匯兌運輸。諸感困難。更兼金融緊急。錢莊受軋而倒閉者多家。財力薄弱之行家。遭此種種打擊。不得不貶價求售。市價遂盤旋下落。幸客幫進胃頗好。魯皖一帶客商。多由長江輪轉津浦車繞道運輸。然轉折太多。運費過巨。交易仍無巨大發展。茲更分述於後。

太古怡和車白平時交易極微。八月荷電驟漲。客幫採辦。三溫半七月跌至九兩四錢。至是連漲三盤。增至十兩。四溫半漲至十兩五錢。各開一萬餘包。但自東白進口以後。太怡車白即注重各埠分銷。故至八月下旬。本埠成交已屬有限。四溫半降至九兩九錢。三溫半續跌至九兩四錢。至於東白。在季初實銷固甚清淡。如八號東白自九兩七八錢降至九兩一二錢。但上擋貨因現底軋缺。獨見堅俏。彼時洋行定貨開出亦復不少。數日內售開九萬餘包。八月中荷日電訊增漲。本客幫存貨空虛。遂引起大批交易。八號東白最高漲至九兩九錢。月末因時局影響。又跌至八兩九錢五。行家以跌風過巨。收進數千包。市面得以稍穩。

荷糖產地市面。在七月初近期與遠期相離一盾左右。本埠市價亦疲軟異常。八月各糖步漲。荷糖亦繼續上升。荷赤漲至八兩六錢餘。至下旬來源奇湧。銀根暗緊。又跌三四錢左右。廿四號粗砂白亦跌二三錢不等。呂宋青季初交易平淡。八月中稍有變動。戰事起。各號久不開盤。存貨見缺。客銷尚佳。三號小包在七兩二三錢左右。四號七兩一錢。餘如泗水碗青因價格低廉。銷場亦佳。較八月末漲起二三錢云。

洋酒食物

本季香檳酒。銷路不佳。但市價尚穩。葡萄酒價亦穩定。銷胃以歐而皮最旺。三星海內斯白蘭地。當七月份交易稱盛。自八月杪以至九月。因江浙戰事影響。銀根奇緊。銷路亦隨之呆滯。市價乃逐漸降落。他若三星麥退爾、金葉、等白蘭地。交易則尤為沈寂。

罐頭水菓。七月份中銷場極旺。至月末幾有斷貨之虞。市價遂漲。罐頭白塔。自法白塔來源斷絕後。七八兩月中。如花牌、金桶牌、及美白塔等。銷路大增。九月中因來價低廉。市面隨跌。故以前進貨者。吃虧不淺。咖啡自七月以來。定貨價貴。市價於是暴漲。但以其為西人日用必需之飲料。銷路故未見減少。

棉 花

七月美政府發表棉產估計為尋常百分之六八。五。國內之陝西、通州、等處。亦有棉作順利棉區擴大之報告。本埠棉價因之屢跌。通州標準。竟由四十六兩五錢。跌至四十四兩五錢。惟實際多係投機者所操縱。其後美棉有虫害旱災之損傷。利物浦棉商因之意存觀望。印棉區亦苦水旱不勻。棉市乃漲落靡定。然國內大勢仍是漲多跌少。入秋後中外棉區報告。又見順利。預料可得上中年成。但以時當青黃不接之際。投機者仍得施其操縱慣技。價乃盤旋不已。及國內時局金融相繼發生變故。美棉英棉來電。跌風居多。通姚新花到貨甚湧。棉價乃一瀉直下。跌落七兩有奇。自非大局平靜。當無活動之望也。

棉 紗

季初華紗、英紗均跌三兩有奇。東紗頗有進口。跌勢尤甚。究其原因。乃中外新花發育暢茂。咸抱樂觀。兼之盛暑之際。客幫貿易清淡。湖南、江西二屬。水災為害。市面更為寥落。在七月上旬。每日平均

統計難達四百件成交。詎料變動迅速。中外新棉俱有歉收消息。交易漸旺。日扯二千餘件。價亦漲起五兩有奇。八月間。紗市仍堅。較上月續高三兩餘。此由江西、天津、四川等幫。生意甚暢。其餘各幫亦源源不絕之故。計每日平均扯一千五百件有零。存貨空枯。供不應求。且東行互相聯合。內買標準。外收現貨。人氣因之激昂。迨金融風潮及時局變化先後發生。紗市除標準有市外。其他成交而未裝者。亦紛紛電止。結價掉期。紛擾異常。致華紗、東紗。跌落十兩有餘。

正 頭

本季西貨正頭市况蕭條之至。交易較前季約減少五分之二。其主要原因。計有三端。(一)時交夏令。大部份客商。均因氣候酷暑。辦貨減少。(二)紗花價格漲落靡定。(三)各省水災為害。凡主要銷路省份。皆被水患。有此三端。市場清淡。自無疑義。幸七月初裝運之貨。尚屬不少。災後起運。則首推長江諸省為最旺。然價格不免較前稍跌。惟羽紗一項。尚稱堅定。八月適值秋銷發軔之際。半月內運往外埠之貨。為數甚鉅。惟自下旬以來。受時局之影響。銀根奇緊。市價遂鬆。進出口行號。均束手無策。計各貨行盤。與前季相較。均在九五以下。其最低者在八八之則。查本季叫莊。共成交二十四萬四千一百四十二疋。自八月中旬以後。殆完全停頓。比前季少十六萬九千八百十疋。

本季東貨正頭市面較上季更形呆滯。此乃受水災影響所致。七月中棉價倏漲。東貨連帶上升。該業因成本攸關。售價亦略為提高。八月間如長沙、漢口等埠。採辦者已絡繹於途。不意中旬以來。時局緊張。謠誣紛紜。人心恐慌。本外埠金融同時緊急。匯兌不靈。交易停頓。來源則又不絕。市面混沌。至斯而極。

麻 袋

新綠線袋自七月下旬以至八月。交易極盛。市上存貨。幾將售罄。新藍線袋亦復如是。十一行新麻布。雖有裝出。然皆零星小數。而無大宗交易。緣滬上紗廠。因花貴紗賤。多半停工。惟天津一埠。棉花得由陝西供給。故稍有銷路。以上各貨。自七月以來。外國定價。有增無減。售價因之暴漲。同業復多所顧慮。不願定貨。致現貨又缺。漲風更甚。舊麻袋之市面情形。與新麻袋無異。糖斜紋袋。因來貨不多。時感缺乏。惟九月本為麻袋交易暢旺之時。自有戰事發生。各貨幾無交易。該業之損失甚大也。

土貨之中。杭巾麻幾無出口。但本埠銷場尚佳。因各業縫包與扎手。以及同行修理舊袋等。用場甚廣。價格因收成不好而上漲。原機織布。除八月中裝出數千疋外。七九兩月。皆無甚交易。價格亦因收成關係而上漲。重機織布出口雖無。本街因新花上市。需用尚廣。九月滬杭火車不通。來源斷絕。拆價激增。

呢 絨

本季銷路呆滯。客幫雖有買進。而成交額甚少。祇羽紗一類走銷極暢。市價堅挺。餘如麥爾登、雨衣布、元直貢價均跌。黑槍絨、豹皮絨、夾呢到貨甚多。但銷路仍滯。價跌三四錢不等。季末受戰事影響。客銷更形沉寂。市面疲滯。唯嗶嘰、直貢等貨。尚有交易。價得穩定。其他諸貨。無少差異云。

綢 緞

綢緞市面以時交夏令。社會所需。俱為細紗。故銷場以番治綢、白洋紡、質地鈔等為大宗。入秋以後。客幫交易仍暢。大盤穩定。絲織物進口。法日兩國居多。諸貨之中。以水印滿地花為最。至九月上旬。

到貨雖不絕。然祇應市銷。花香茂、軟緞、實地紗最合現時社會需要。花香茂漲二三錢不等。餘貨稍有漲跌云。

五 金

查本季五金各月指數。七月爲一五三.五。八月爲一四九.二。九月爲一四六.三。按月下降。景象殊劣。不獨爲今庚所未有。抑亦爲近數年所罕見。茲爲便利觀察起見。特列今歲各月及去歲同季各月指數於次。

十三年	十三年	十三年	十二年
一月 157.9	四月 167.4	七月 153.5	七月 155.9
二月 166.6	五月 164.5	八月 149.2	八月 156.8
三月 172.0	六月 154.1	九月 146.3	九月 166.9

據上表以觀。本季最高數。較過去六個月中之最低數。尙少〇.六。較之去歲同季。尤爲懸殊。推其原因。季初北部水災。滬上所受影響匪細。僅有青島烟台及長江沿岸各幫。略有採辦。進口則旺盛異常。以致市氣混亂。入八月後。北方水勢仍未見退。商務難望恢復。長江各幫。進胃仍弱。加以點銅成色問題。甯紹幫停辦幾及二旬。其後江浙戰起。金融頓起恐慌。東北風雲。又同時告緊。以致銷路四塞。但進口貨並不因之減少。供過於求。宜其價格之日形下落。壹按各貨下落情形。以鋼鐵類爲甚。如新洋元、竹節鋼、黑白鐵皮、三角鉄、鉄絲等。均因到湧見跌。法西釘變化尤鉅。價不過四兩左右。與去歲七兩二錢許相較。跌落竟達三兩以上。說者謂爲廿年來未見之現象。而爲去歲東京地震時價格過高之反動云。爐子鋼板等原以本埠造船廠等爲大宗銷路。故受影響尙少。白鉄瓦存貨極稀薄。價故堅定。在此疲軟之鉄鋼市氣中。不得不稱之爲庸中佼佼。銅類銷路較鋼鉄略優。但存到俱厚。售價亦跌多漲少。鉛類季初出口不甚暢。進口

頗湧躍。後以錫紙廠進胃轉健。甯紹及長江諸幫。亦有添辦。頗有轉機希望。然以外洋廠盤不堅。價仍平平。及九月福州德州奉天諸兵工廠。電辦甚多。價以同業競銷。亦未能十分見高。錫市銷路尙好。來源又少。兼之新加坡香港等處。迭電報漲。售價甚堅定。後以戰爭關係。略轉疲軟云。

煤

本季七八兩月。天氣炎熱。各方需要減少。加之來源湧旺。棧存壅積。故價格屢跌。市面頗形蕭索。惟東貨二號塊煤。如新手、高松、木屋瀨、楠木等貨。因到源不多。價尙穩固。若頭二三號各種煤屑。則一再跌落。勢甚可危。兼以八月中。本埠金融界發生恐慌。銀根奇緊。致存貨多者更爲棘手。中國煤及白煤。因客幫限制進貨。銷路亦大爲減色。逮夫九月中旬。銀市漸復原狀。本外埠各用戶。需要有增加趨勢。但以江浙用兵。內地各埠不能裝運。銷路仍受打擊。同時東北風雲緊急。交通機關。疲於輸送軍隊。致國煤各貨。來源絕跡。此間煤號。有鑒於前次直奉戰爭時各埠之煤荒。故一聞國煤來源斷絕之訊。卽利用機會。將定盤迭次加高。而市上缺乏之貨。若山西白煤。及東貨頭二三號各塊煤。底盤亦均增加。因九月末旬。本埠同行。向煤號有大宗現貨拋進故也。

木 材

本季市況。甚爲清淡。據本處所發表指數以觀。木材總指數爲一四四。六。較前季低落六六。一。較去年同季低落六七。〇。跌落之甚。殊爲年來所罕觀。攷諸往昔情形。秋季爲木材廣銷之時。因其適爲建築時期。需材甚殷故也。今歲之驟改舊觀。蓋以季初承前季之疲。生意平平。嗣以戰雲四起。金融告緊。交通阻隔。鄰滬各埠。均爲軍事

區域。當無生意之可言。即遠方各埠。本可照常買賣。然以金融緊急。亦不得不減少進貨。滬上一地。既因交通阻塞。建築重要材料之磚瓦石灰等品。均見缺乏。各種工程勢非停止不可。木材與有連帶關係。自難獨殊。一顧進口方面。如美松等仍源源而來。供多求少。價格之下落。固為當然之結果。而得差強人意者。祇有留安木亞克數種。留安木市價雖未見增高。但收存無多。木器號及營造廠需材尚殷。後市或須看漲。亞克存薄到稀。價頗堅定。其餘柚木銷路甚平。白松價格與美松相差無幾。用客不甚合算。致無銷路。黃白麻栗無大批成交。紅白板到存不少。各行家以銀根緊急。不願拋進。號家以棧租關係。賣氣極盛。是以市價步跌云。

染 料

本季染料市况。七八兩月中。大致尚佳。價格亦頗堅穩。惟入九月後。江浙戰興。客幫銷路幾完全停頓。本埠廠家。受各種影響。亦皆不能開工。故市面轉為沈寂。然其中如直接性染料。銷路尚旺。八月中且呈漲風。本埠絲廠家。添進尤為踴躍。而以靛粉、硃紅、桃紅、等染料為最。酸性染料行市頗穩。硃紅、金黃、元色、等貨。較為暢銷。灰色次之。裕興雙鵝硃紅。牛牌品藍。和合金黃。以及鹽基性染料之品紅。品藍。青蓮。塊綠。淡黃。等貨。銷路皆暢。售價堅挺。德貨硫化元。本季漲起二三兩不等。日貨亦隨之略漲。俱因來價增高。客銷復佳。惟靛油以來源接踵。漂白粉以時令已過。市面頗為疲軟也。

紙

紙業因各行存底堆積。各種價格逐漸下降。天津、長沙各處水災。裝運不便。銷路呆滯。即漢口、廈門、汕頭等處。交易亦復無多。戰端既起。為銀根所困。市面更無起色。蘇常各幫客賬。收斂無着。目下價

格雖無大變動。然自春徂秋。同業所蒙之損失已屬不貲。初以英匯不利。繼受戰爭之影響。營業始終未能發展。惟報紙在戰爭期間。行銷頗暢。存底本不為厚。來源亦極稀少。故價格升騰。七月價為二兩二錢。九月為二兩五錢。十七磅白有光紙季初市況與上季相仿。水災之區。採辦均停。而來源絡繹不絕。華嘉茂孚進貨頗夥。市價步降至一兩二錢五。嗣後進口仍湧。華嘉現貨跌價售出數千餘件。九月營業更形蕭條。價格疲軟。日見下降。玻璃紙、道林紙均以到貨過旺。市面回小。餘如毛太紙、毛邊紙運輸不便。來源極稀。上海存底缺乏。價因陡漲。走銷亦稱不惡。

煙 類

本埠煙業。在前為營業競爭。拆貨折扣甚大。本季經公會集議之後。凡銷數最大之雪茄。如美女廠及亨白廠出品。劃歸公會公賣。同行不得私自貶價。互相傾軋。弊風既絕。獲利自厚。加以八月中戰事醞釀。呂匯疲軟。亦為獲利原因之一。然自九月三日實行開戰以後。外埠銷路。則大為減色矣。

紙煙中銷數最大者。如大英牌、茄力克、大前門等。前數年市價無定。甚至一日數變。今則經年無甚上落。蓋因近年以來。市間新牌迭出。即使上述三種。偶一缺貨。操此業者。亦不能居奇。蓋消費者不難改吸他煙。大號內未克。近來銷路日盛。此煙吸者。前本限於外人。今則華人亦多喜之。三五牌無甚漲落。吉士平平。紅屋則一蹶不振。南洋公司之紙包長城。貨價均宜。故銷路甚好。聯珠自跌價後。成績亦頗可觀云。

本季美國煙葉。銷路沈寂。因各行存貨有限。新貨九月底方可到滬。各煙廠需用之葉。已於夏季中辦就。足供秋季三月之用。或偶有缺少。為數亦屬零星。且聞今年美國煙葉。產額豐富。九月內美匯

又疲。價格似可看鬆。於是各廠咸懷觀望云。

西 藥

本季西藥市價。除英貨（愛蘭漢百利藥行）德貨（怡豐公司）無甚變動外。日美各貨。（日商重松藥房及美商科發藥房）入九月分後。漲落互異。往往同一藥品。同一單位。所售之價。相差甚巨。大致美貨則跌多漲少。若麥角、精製糖、白阿膠、跌落三七。五%。幾河蘇跌三〇%。水楊酸、白降汞、跌二五%。水楊酸鈉、硝酸番木鱈精均小二〇%。惟倒魯脂突漲八二。五%。蛋白銀亦漲起一六%。日貨情形則反是。若莖菁漲起八一%。吐根漲起五四%。鹽酸高根漲起三三。三%。薔薇油漲起二〇%。麥角則跌四八%。較美貨為烈。其他之上落甚微者。不及備載。查西藥一項。市間百貨雜陳。紛紜錯綜。價格變動之由來。頗難探得其真相。然各國匯兌行市。時有伸縮。不無影響物價。又同一藥品。其品質未必盡同。或濃淡有別。或狀態差異。則其功用即有區分。行市遂不能一致。凡此二端。要不失為藥價變動之最大原因也。

電 料

電料進口貨。歐戰前以德貨占首位。英、美、日次之。近則日貨占多數。英美次之。德貨來源雖斷絕許久。然自民國九年來已蒸蒸日上。市面行銷最暢者。為電燈泡、橡皮線、燈罩、磁料、乾濕電池、電鈴、及小量馬達等。查本季市况疲軟。到貨以磁料為多。如葫蘆罩、木埠存貨不少。五彩果子泡。南京幫稍有辦進。長江一帶。如漢口亦見起色。花線、皮線進口亦多。風扇因時令已落。無大變化。S. E. S. 牌馬達。市平價穩。行銷尚佳。價亦較廉。入秋後。存貨以平開關、九寸鉄盆罩、果子泡、及卜落為多。但價仍堅定。戰事開後。影響所及。交易沉寂。祇本

埠廠家、用戶稍有成交。市價仍少變動。

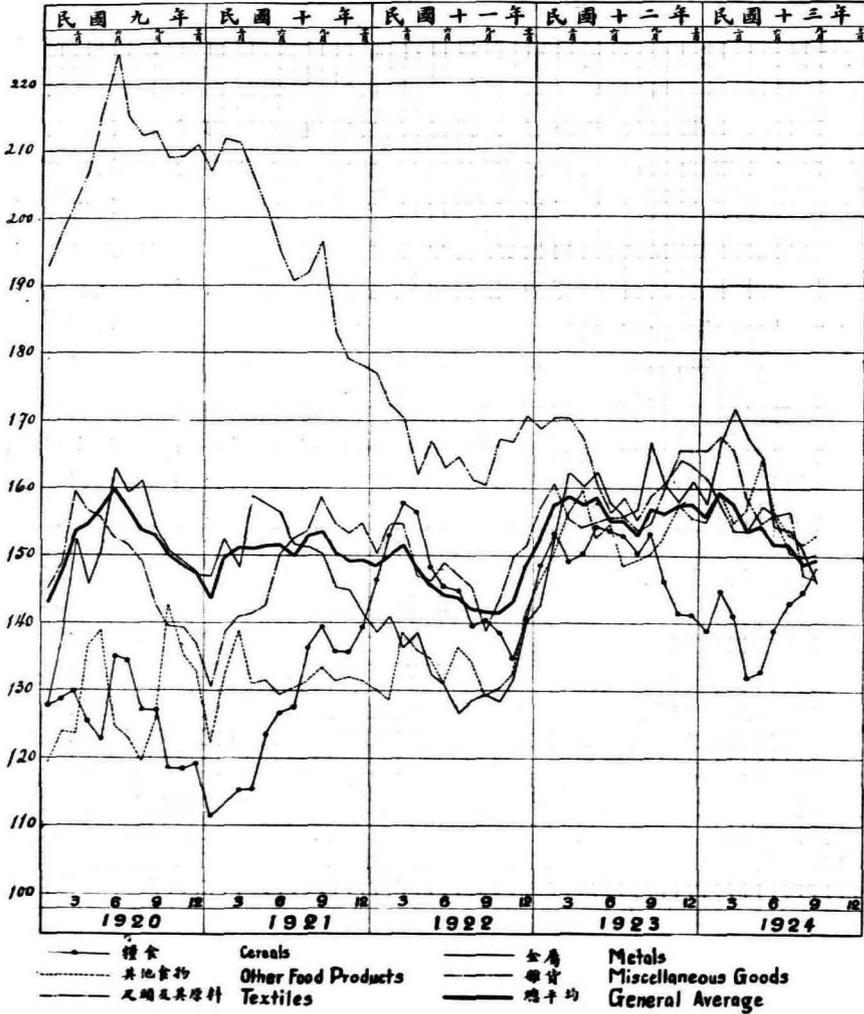

洋 雜 貨

本季營業。夏令之貨已落市。冬貨未動。故較他季為清淡。各行存底頗足。去路呆滯。天津漢口等幫雖有動辦為數甚微。惟本地一隅稍有交易。存底巨者咸願減價脫售。自東南戰事發生。東北繼起。北方各幫採辦均停。西洋貨市價雖挫尙能支持。東貨來源湧躍。跌價最甚。操是業者。莫不虧耗。惟絨毯中之灰毛毯。獨以行軍所需採用頗夥。市價挺秀。餘如駱駝毯車毯等價均趨下。呢帽銷路本在秋季。七月本埠走銷尙好。市價較去秋漲三四兩。入八月銷路復滯。存貨聚積。又跌一二兩。

磁器、錫器、料器等各貨湧到。存底均足。本埠無大宗交易。客幫有漢口、烟台、四川等採辦。數亦不巨。各種價格均趨跌勢。八月後銀根暗緊明鬆。錢莊用款不易。而外埠進口有增無減。市面益形零落。幸先令鬆動。東匯步落。成本尙不致受損。而市上之本廠燭。忽然跌價。進口之洋燭則漲起一倍。故外埠來申定購本廠貨者。為數頗旺。

第三季之上海物價指數

本處所編上海一般的躉售物價指數。在七月份爲一五一·五。八月份爲一四八·八。九月份爲一四九·〇。自去年一月以來。蓋以本季物價爲最低。比十一年本季雖猶漲起不少。而比九十兩年之本季相去尙遠。茲列六年來本季各月份之指數如下。

月別 年別	七 月	八 月	九 月
八 年	一四六·三
九 年	一五六·八	一五三·八	一五三·〇
十 年	一五〇·〇	一五三·〇	一五三·六
十 一 年	一四三·九	一四二·〇	一三九·六
十 二 年	一五五·四	一五三·一	一五六·八
十 三 年	一五·一·五	一四八·八	一四九·〇

各類指數。惟糧食類顯見提升。爲一年以來所僅見。除如其他食物、疋頭及其原料、金屬、及雜貨各類同趨下遊。此總指數之所以不振也。

雜貨類包含細類四。即（一）燃料。（二）建築材料。（三）工業用品。（四）其他物品。其中燃料一項疲而復甦。在本年中。以此季爲最高。與過去兩年之本季。差堪比擬。其他物品亦尙能站定。惟建築材料及工業用品兩類。一再下降。其指數之低。皆六年以來所罕見。

糧食類之同高。由於米價之步漲。在九月第一二兩週間。蘇同河下白米及高常河下白米均達十兩左右。高常河下白米曾經十一兩出關。一年以來。上海無此高昂之米價。又小麥、麵粉、花生、生油等貨亦同時漲起。所幸荳類芝麻升沉不一。否則本類指數尙不止此。

七月間肉類市價尙平平。八月第三週後。鮮鹹肉同時騰漲。蛋白蛋黃亦續見上升。但糖價疲滯不起。終此三月間。各貨標準無過十兩者。海味行情較爲凌亂。茶葉亦跌多漲少。此爲其他食物類指數回審之主因。

疋頭及其原料類指數。七月份較高。良由八九月間紗花市面一再回落之故。匹頭呢絨無大出入。湖綢下趨。府綢尙屬穩定。而廠經則自六月間跌進千二百兩以後。迄未能超過此限度。九月末週。上等白廠經一千一百兩。頭號沔陽黃絲五百二十兩。上海久未視此項絲價矣。

金屬之中。祇點銅一項。差比六月份為貴。然視四五月間已多遜色。其他銅、鐵、鋼、鉛、錫各項花色。一跌再跌。幾有沛然莫禦之勢。白鉛皮最稱穩定。十六兩之老盤。五月以來迄未搖動。而至九月末週。此關亦不能不打破。自去年春季以來。五金市面之疲。久推本季為最。茲錄本表各類指數之最高最低點及其日期如下。

日期 類別	最高指數	最低指數	
糧食類	一五七·九 (十一年三月)	一一一·三 (十年一月)	
其他食物類	一六四·二 (十三年五月)	一一三·八 (八年十二月)	
疋頭及其原料類	一六七·九 (十三年二月)	一三〇·七 (十年一月)	
金屬類	一七二·〇 (十三年三月)	一二六·八 (十一年七月)	
雜貨類	燃料類	一九一·六 (八年十一月)	一五七·九 (十三年三月)
	建築材料類	一七九·四 (十年八月)	一三六·六 (九年二月)
貨類	工業用品類	三九六·二 (九年六月)	一六〇·八 (十三年七月)
	其他物品類	一四三·六 (九年六月)	一二一·七 (十一年九月)
類	雜貨類平均	二二四·七 (九年六月)	一五一·〇 (十三年八月)

如上所述。糧食類、其他食物類、疋頭及其原料類、金屬類、及雜貨類。為構成上海物價指數之五大類每類所包物價。少自十一種。多至二十七種。都凡一百四十七種。除牛、羊、豬肉、雞蛋、牛乳、柴六種採自工部局衛生處之虹口菜場市價表外。其餘俱由二人以上特約之當業者所報告。調查日期定為每星期三。而每月指數。則以每月最後之星期三物價為依據。平均採用單純算法。以二年二月為標準年度。又本表宗旨。在窺測一般物價之趨勢。故所選標準貨物。均屬進出口大宗及日用必需品。作法及編製經過。詳見十二年第一季本刊。

PRICES IN SHANGHAI

This quarter's wholesale price index numbers at Shanghai stood at 151.5, 143.8 and 149.0 respectively for July, August and September which are the lowest price-level since January of last year. Quotations during the quarter represented market declines compared with same periods in 1920 and 1921, though they are still higher than the corresponding time in 1922. Our comparative figures for the last six years are given below:

<i>Year Month</i>	1919	1920	1921	1922	1923	1924
July	158.6	150.0	143.9	155.4	151.5
Aug.	153.8	153.0	142.0	153.1	143.8
Sept.	146.3	153.0	153.6	139.6	156.8	149.0

Among the different groups cereals only show an increase, while other food products and textiles, metals and miscellaneous goods registered declines. Miscellaneous goods fluctuated. The highest index figure was noticed in fuels since January. Other food products were steady, but building and industrial materials fell repeatedly and reached the lowest figure in the last six years.

The reason for the elevation of cereals is due to the appreciation in the price of rice. During the first two weeks of September quotations of both good and common white rice rose approximately to \$10.00. Good rice increased at one time to as high as \$11.00 or above. Wheat, flour, groundnut and groundnut oil responded to this upward movement, while counteraction was noticed in beans and sesamum.

Meats were normal in July, but saw sudden rises in the latter part of August helped by duck's albumen and yolk. On the contrary, sugar remained below \$10.00 throughout the period. This, together with sea products, caused the fall of that group.

Textiles were comparatively higher in July, as cotton and yarn again declined in August and September. Piece goods and woolen goods changed little. Huchow crape tended downward. Silk pongee was steady, while raw silk never exceeded \$1,200 since its opening fall in June. At the end of September white re-reeled silk and Meah-Yang first quality yellow raw silk were quoted only at \$1,100 and \$520 respectively.

In metals nearly all products fell considerably except tin in slabs, but in the case of the latter the price was lower than in April and May. Zinc sheets stood firm at \$16. 00 ever since May, but at the end of September it dropped like other groups. Metals were at their lowest this season.

The highest and lowest index numbers occurred at the various periods are enumerated as follows:

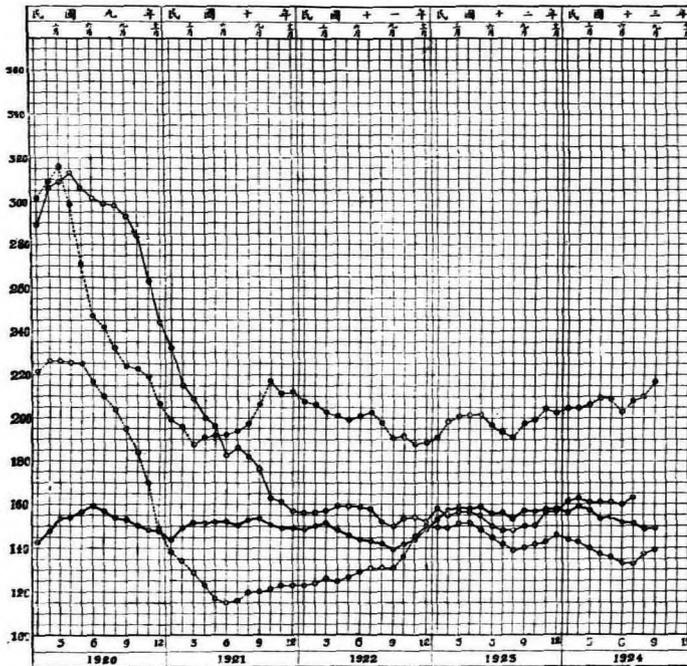

<i>Date Group</i>	Highest Figure	Lowest Figure
Cereals	157.9 (March, 1922)	111.3 (January, 1921)
Other Food Products	164.2 (May, 1924)	113.8 (December, 1919)
Textiles	167.9 (February, 1924)	130.7 (January, 1921)
Metals	172.0 (March, 1924)	126.8 (July, 1922)
Miscellaneous Goods		
Fuels	191.6 (November, 1919)	157.9 (March, 1924)
Building Materials	179.4 (August, 1921)	136.6 (February, 1920)
Industrial Materials	396.2 (June, 1920)	160.8 (July, 1924)
Sundries	143.6 (June, 1920)	121.7 (September, 1922)
Total	224.7 (June, 1920)	151.0 (August, 1924)

The above five principal groups, namely; cereals, other food products, textiles, metals and miscellaneous goods are the principal constituents of the Shanghai index number of prices, each of which contains a number of commodities from 11 to 27 kinds, making the total of 147. Except the prices of beef, mutton, pork, eggs, milk, and fuel which are taken from the table of prices published by the Health Department of the Shanghai Municipal Council, all other quotations are based upon the reports of at least two business men actually engaged in different lines of trade. The data for investigation is fixed on every Wednesday and the index number taken in the month February 1913 as the basic year is founded on the quotations in the last Wednesday of the month as per the arithmetical average. As the compilation of our index number is for observing the tendency of the general price level, so nearly all the standard commodities are principal imports, exports and daily articles. The method of its compilation is fully discussed in the January-March, 1923, issue of this quarterly.

REVIEW OF THE PERIOD

This season witnessed favourable rates for foreign exchanges. In July the official rate on London for T. T. was between 3s. 3d and 3s. 3½d but owing to the rumours of war, silk export bills and the steadiness of silver, the rate declined to 3s 4½d. London bar silver being quite easy in the middle of July but rose to 35.125d. at the end of September, when the results of London Conference had had satisfactory results and the demands for silver coinage were expanding in Continental countries. Purchases were also heavy in India and China, the former taking large volumes to finance the bumper crops. The price of gold bars in Shanghai slumped violently from ¥239.5 to ¥251.6, caused largely by the depreciating value of yen, which was quoted at \$59.75 in the first part of July and \$53.00 in the end as a result of drop in the cross rate between New York and Yokohama. Chinese dollars and native interest suffered big fluctuations this quarter. In July there was a small demand for dollars, the highest rate then recorded being ¥0.7107 and the lowest ¥0.707 only. Native interest was somewhere between ¥0.35 and ¥0.15. However, the middle of August saw sharp rises in Chinese national bonds owing to the activities of speculators. 6% short term Loan, cash, turned as high as \$91.5 and 6% Consolidated, cash \$81.25. Just then the war cloud appeared in the south-east after floods have devastated many provinces. The gamblers were able to control the bonds market which registered falls averaging more than \$20.00 a day. This caused a panic in the money market and forced several native banks to liquidate. The Dollar rate and native interest both reached maximum, business being done at ¥0.75 for the dollar and ¥0.7 for interest per day.

In sympathy with the money market other commodities experienced simultaneous falls. The piece good auctions were suspended then as well. Cotton and Yarn depreciated heavily and the metals market went from bad to worse. Gunny bags which are marketed usually in September, found poor buyers owing to the civil war. Woolen goods having principal demands from the north remained stationary. On the other hand, native coals and white rice ceased to come. Although business continued to be transacted with the Yangtse Valley, yet the high intense feeling in the local money market set obstacles in places, like Shantung, Anhui, Kiangse, Hunan and Hupeh, where money could not be exported. In order to fulfill formal contracts with foreign firms, some merchants disposed their goods at losses. The flood in Chihli, Hupeh, Hunan, and Kiangse had already made business at standstill before outbreak of the war.

Among imports, Japanese goods had abundant arrivals because of the favorable rate of exchange. Western goods were able to remain at its "status quo". Sugar happened once an appreciation due to the increasing cost and autumnal demands. Dyestuffs proceeded fairly well, except bleaching powder which was off season. Timber suffered heavy blows from the civil war which suspended all building works. Necessary army equipments like lead, and grey blankets adn

extreme bullish demands, the former being abundantly purchased by arsenals in various localities. Canned goods were also in good request. Shipments of tin in slabs for two weeks to Ningpo and Shaoshing on account of the dispute over the quality of tin. For preventing undue discounts as result of competition the quotation of La Perla Del Orient cigars was regulated by the tobacco guild, but the attempt of establishing an uniform quotation of iron tubes failed to accomplish.

CEREALS

But for the civil war the cereal market would have been featureless. Supplies of native wheat and flour were plentiful and as new wheat was being marketed just before the outbreak there were little foreign imports. Moreover, native flour was quoted at a very moderate price which naturally restricted imports of foreign wheat. Only a little foreign flour was shipped to outports, chiefly to the north.

The demand for foreign rice was also insipid at the beginning. When the war broke out, transportation from the interior was interrupted, and the local rice market registered sharp rises daily. White glutinous rice rose as high as \$17.50 per picul. Dealers were compelled to order rice from Saigon at a price of approximately \$5.7. In sympathy with the demand for rice the price of foreign flour also increased about \$0.5, but foreign wheat was selling at \$4.4. Japanese merchants re-exported some quantities to Dairen for disposal.

SEA PRODUCTS

Sea products had a dull outlook during the transition between the old and new cargo and the trend was later interrupted by the disturbed condition in the country. August saw a comparative better trade, but reaction soon set in because of immense imports. Quotations of "Jih Fan" bicho de mar, seaweed, compoy fell generally and there were further declines during the war, cuttle fish being the only exception.

"Jih Fan" bicho de mar tended upwards at the beginning, but experienced a fall of approximately of \$30 in August, when excessive cargoes arrived in. Businessmen were optimistic at the revival of some \$10 afterwards, but were greatly disappointed by the war.

Common compoy was the medium of quite a good business and was quoted at more than \$10 lower than at the end of last season, falling further in the middle of July.

There was a good demand for seaweed from Yangtse Valley in the first part of July, falling about \$0.5 later, while it strengthened at the end of the quarter.

Cuttle fish also improved. In August there was a rise of about \$6. The market remained steady throughout the period.

Salmon was steady during the time of the marketing of the new cargo, but turned sluggish at the end of the quarter.

SUGAR

The sugar market was at first handicapped by the big difference in prices between spot and forward cargo. The abundant sale of the latter by foreign firms caused dealers to refrain from purchases and this made business sluggish. In August a revival set in owing to seasonal demand and the rise of Dutch and Japanese quotations. Even "Tai Koo" and "Ewo" white sugars, which have had little sales in this port, were sold to a great extent. In sympathy with other products during the outbreak in September the price of sugar fell simultaneously. Shipments to Shantung and Anhwei were carried through the Yangtse River under high freight.

Owing to the improvement in Dutch quotations in August, "Taikoo" and "Ewo" white sugars rose to \$10 and \$10.50 for HX and B grades respectively, each of which enjoyed a sale of about 10,000 bales. However, in the latter part of that month B declined to \$9.9 and HX fell to \$9.4. Japanese white sugar had an unfavorable outlook at the beginning, first grade cargo being an exception. In the early part of the quarter sales of this amounted to more than 90,000 bales. In August the increase in Dutch and Japanese quotations and the scarcity of stock resulted in a great amount of business. No. 8 Japanese white sugar rose as high as \$9.90 but declined to \$8.90 at the end of the quarter.

At the beginning of July Dutch sugar showed a difference of a guilder between spot and forward cargo. Local quotations were exceedingly weak. In sympathy with other sugars the Dutch grade mounted upwards in August, brown sugar being then quoted at \$8.6, but afterward a decline set in.

Manila green sugar was quiet at first, but strengthened in the middle of August. During the war No. 3 small bales were quoted at approximately \$7.3 and No. 4 at \$7.1.

WINES AND CANNED GOODS

Champagne registered a weak tone this season, but prices remained stationary. Port wine was likewise steady, W. A. Gibbey's finding large sales. Hennessey's Three Star brandy was the medium of a good business in July, but a reaction set in during the later part of August on account of the civil war. J. & E. Martell's and Gold Leaf brandies had even a duller outlook.

Canned fruits were extremely bullish in the middle of July during which prices rose as a rule. In July and August butter such as "Rose", "Golden Chun" and "Golden States" brands enjoyed steady increasing sales owing to the suspension of supply of French butter. However, in September quotations were lower and the dealers who placed their orders before, suffered losses. There were violent increases in coffee ever since July, but sales did not suffer owing to its daily consumption by foreigners.

COTTON

In July the U. S. Government estimate of cotton production was given out as 68.5% of

normal condition. Reports of the standing crops in Shensi and Tungchow were also promising. The local market consequently began to decline and the quotation of standard Tungchow cotton decreased from ¥46.5 to 44.5. However, the rates were largely under the influence of speculators. On the other hand, American cotton forecasts owing to the boll weevil and the drought experienced were bullish. This coupled with inadequate rainfall in the cotton growing regions of India caused Lancashire manufacturers to refrain from buying. There were thus fluctuations in the world cotton market, but in this country the cotton market experienced an upward trend.

In the beginning of autumn foreign and native cotton reports became favorable, but speculation was rife and quotations fluctuated uncontrollably. Latterly the local market was affected by the abundant arrival of new cargo from Tungchow and Yu-Yao.

COTTON YARN

At the beginning of the quarter native and British cotton yarns declined about ¥3.00. Japanese yarn which was imported continually, suffered a bigger fall in values. This was accounted by the optimistic outlook of cotton crop and the dullness of business during the hot weather. The floods in Hunan and Kiangsi further weakened the market. In the first part of July the transactions amounted to less than 400 bales a day on the average. The situation soon changed, as the daily business gradually expanded to approximately 2,000 bales at a quotation of about ¥5.00 higher, when unfavorable reports of cotton crops reached from foreign countries and the interior alike.

In August the market continued steady and registered a further rise of about ¥3.00 due to the intense purchasing by Kiangse, Tientsin and Szechuen merchants. The total transactions recorded amounted to about 1,500 bales a day. Japanese interests united in buying enthusiastically both spot and forward cargo. This left a very insufficient supply on the market.

Unfortunately, the money market soon experienced a panic owing to military movements in the country. The cotton yarn market readily yielded to this influence and fell into disorder with the exception of standard cargo which yet recorded quotations daily. Native and Japanese yarn fell more than ¥10.00 each.

PIECE-GOODS

This season witnessed a great decline in the piece-goods market. In European piece-goods the turnover was only two-fifths of last year. This was due to the hot weather which lessened the demand from customers, the high fluctuation in cotton and yarn, and the floods which devastated several provinces.

In the beginning of July fair quantities were shipped to outports. After the floods the largest quantity was sold to Yangtse Valley at slightly decreasing prices. Alpaca was the only one which remained steady. August witnessed a demand for autumn goods and there were large shipments to different ports, but the market declined later on owing to political disturbances and the stringency of the money market. As compared with last season, the quotations fell below 95%,

the lowest being 88% only. The total turnover in auction this season amounted to 244,142 pieces, showing a total decrease of 169,810 pieces than the previous season. Business ceased almost entirely since the middle of August.

Japanese piece-goods revealed even a duller outlook than last season largely due to the floods. In July the sudden rise of cotton caused the quotations of Japanese piece-goods to appreciate. There were orders in August from Changsha, Hankow and other places, but after the middle of that month the market soon fell into confusion owing to the disturbed condition of the country.

FLAX, HEMP & JUTE GOODS

A very good business resulted in new green and blue stripe gunny bags from the latter part of July to August and this nearly exhausted the whole stock of the market. There were occasional shipments of hessian cloth to outports, particularly to Tientsin, because local cotton mills mostly suspended work on account of the comparative dearth of cotton over yarn, while those in Tientsin were able to get their supplies from Shensi. Since July all these articles rose because of the increase in foreign quotations and the lack of spot cargo.

Old gunny bags had a similar market as new gunny bags, twills gunny bags being scarce in supply. September is usually a good month for gunny bags, but sales were seriously handicapped this time by the civil war.

There were almost no sales of Hangchow hemp to outports but there was a good local sale. Bad harvest made the price to appreciate. In native 84 hemp cloth there were several thousand pieces shipped to outports in August and sales were also extensive in this port, especially when new cotton was marketed. September saw sudden rises in its price as a result of the civil war.

SILK GOODS

As the quarter under review comprised the summer months georgette crape, soft silk and silk gauze were all in good demand. In autumn large quantities were sold to outports at steady prices.

France and Japan took the bulk of the imported silk goods, dyed and figured ones being specially welcomed by consumers.

September saw large imports and a good business. These seasonable articles, namely, shamurs, soft satin and silk gauze were disposed of at different rates, the first kind being about \$0.3 higher in price.

WOOLEN GOODS, COTTON & WOOL UNIONS

Woolen goods had a dull market this season, little being sold to outports. Except alpaca, which was sold in large quantities and at steady quotations, others such as melton, waterproof and black venetians generally fell off in demand. Black fancy mohair seals and overcoating were in abundant supply with imports showing a fall off of about \$0.4). In the end the war broke out

and further caused a slackened off market. Only serge and venetians were able to remain at their old status.

METALS

The metal market this season as shown by this Bureau's index numbers registered continual declines. The index figures are these:

1924	1924	1924	1923
January 157.9	April 167.4	July 153.5	July 155.8
February 166.6	May 164.5	August 149.2	August 156.8
March 172.0	June 154.1	September 143.3	September 166.9

The highest index number this season was 0.6 per cent lower than the smallest figure in the last six months. Compared with the corresponding period of last year this season's index number fell greatly. The reason may be explained as follows:—

At the beginning of the season, the floods in the North dislocated the local market, and only small shipments went to Tsingtao, Chefoo and the Yangtse Valley, while excessive imports were received during that time. Conditions continued unfavorable in August and, besides, the Ningpo and Shaoshing merchants stopped buying for two weeks on account of disputes over the quality of their tin purchased. Soon afterwards the civil war broke out in the southeast and northeast which brought a halt to the demand everywhere. However, imports continued abundant and this naturally caused the downfall of prices.

The iron and steel group suffered the largest falls, mild steel round bars, bamboo steel, black and plain iron sheets, iron angles and iron wire falling together. Wire nails were quoted at about Tls 4 only, being £3 cheaper than the price in last year. Wire nails touched bottom this season, since they fell during the Japanese earthquake. Boiler plates enjoyed the largest sale among local ship-building works and thus fell in a less degree. Corrugated and plain sheets were short stocked and remained steady. Copper had a better aspect, but prices registered more falls than rises. Lead was dull at the beginning, but turned active later on owing to purchases by tin paper factories and the demands from Ningpo, Shaoshing and Yangtse Valley. Until September the arsenals in Fochow, Tchow and Fengtien ordered big quantities, but competition prevented prices appreciating. Tin had a good demand but a normal supply and was strengthened by repeated rises of Singapore and Hongkong quotations. It turned a little sluggish during the civil war.

COAL

July and August saw a flat demand for coal, owing to the hot weather. Local warehouses were heavily stocked except No. 2 Japanese lump coals, such as Arate, Takamatsu, Koyanase, and Kusunoki, which were comparative steady. All other kinds met repeated falls particularly No. 2 and No. 3 dust coal. The financial panic in the middle of August caused further obstacles to those who kept large stocks. Until the middle of September the money market regained its normal

position and local consumption was increased. The war in the neighbourhood of this port prevented shipments to the interior and native coals ceased to arrive owing to the endless transportation of troops along the railways. In view of the exhaustion of the supply during the last Fengtien-Chihli conflict, dealers took this opportunity to raise their quotations successively. The short-stocked cargo in Shansi anthracite and Japanese lump coals increased jointly, because at the end of that month a good deal of spot cargo was purchased by coal shops.

TIMBER

In accordance with our index numbers the total index figure for timber this season was 144.6 which marks a fall of 66.1 over the previous season and 67.0 lower as compared with the same season last year. This indicates a heavy decline in the timber market and is contrary to the common expectation that a good business usually results in the autumn.

At the beginning the market was dull and began to decline during the civil war. The transportation difficulty depleted supplies of important building materials like bricks, tiles and lime, and construction work was impeded. As for timber, Oregon pine was imported in large quantities with prices declining. Luan and oak enjoyed a better trade, the former being in fair demand by furniture works and construction companies. Other timbers such as white pine, ash and red and white planks all registered falls.

INDIGO & ANILINE DYES

Dyestuffs were in normal demand at steady prices during the first two months, but export sales almost ceased during the war. The market was further slackened by the suspension of work in the local dye houses.

Direct colors increased slightly in August and found the greatest outlet among local silk factories, indigo blue, scarlet and pink being the most prosperous in sales.

Acid colors had comparative better sales in scarlet, golden yellow and black. Grey was the next. New Scarlet 3G, Pure Soluble Blue and German Orange N were abundantly purchased by customers.

The basic dyes like magenta, blue, violet, crystal green and light yellow were in good request with steady quotations.

German sulphur black rose some 33 this season and Japanese imports were also increasing owing to the high cost and expanding demands. There were heavy imports of indigo but these fell off with bleaching powder which was out of season.

PAPER

Paper experienced gradual falls during the quarter under review owing to its heavy stock. Little was shipped to Tientsin and Changsha, which suffered from the terrible floods lately. Only

a small volume of business was transacted, namely with Hankow, Amoy and Swatow. The paper market was at first handicapped by the unfavorable exchange for imports and later by the civil war. Paper merchants were faced with heavy losses during spring and autumn, when the market ruled dull.

News printing paper rose from \$2.2 to \$2.5 in September due to the surprising large circulation of the daily papers as a result of the civil war. 17 lbs. white M. G. cap paper found at the beginning a similar demand as last season, but fell to \$1.25, reaching the lowest ebb in September. Heavy stocks were carried by Siber, Henger & Co. and Molnar & Greiner. The former sold several thousand packages at reduced prices. Glass paper and M. F. book printing paper depreciated due to heavy imports. On the other hand, those native papers produced in Fukien were in scarce supplies and consequently rose in price.

TOBACCO

The local tobacco market has been characterized by sharp competition and discount, but the outstanding feature was enforcement of uniform quotations as decided by the tobacco guild. Wholesale prices of popular cigars like the products of La Perla Pal Orient and Alhambra are also all regulated by the guild. This increased the profit of the dealers who were helped by favorable rate of the Manila exchange in August. However, when the civil war actually broke out on September 3, business with outports decreased in volume considerably.

In the last few years such cigarettes like Ruby Queen, Garrick and Chienmen were subjected to several daily changes, but now they are constant even in a whole year. Sales of Magnum Capstan Navy Cut formerly were confined to foreigners. Now it has a good demand among Chinese. State Express 555 showed no change in price. Chesterfield was normal and Old Mill declined very considerably. Great Wall and Pearls of Nanyang Brothers tobacco Co. both had prosperous sales.

American tobacco leaves had a dull outlook this season because of the scarcity of old stocks and non-arrival of new cargo. Most tobacco factories had bought enough for their autumn requirements and refrained from placing large orders, as quotations were expected to go down in view of the plentiful tobacco harvest in the United States this year.

DRUGS

A very great variety of drugs were imported during the quarter. Those of British and German manufacture represented respectively by Allen & Hanburys and E. Foong Commercial Co. were not in great demand but there was a good movement of Japanese and American products namely of the Kasamatsu and American Drug Co.'s brands changed hands in September. On the whole, there was a general decline in imports of American drugs. Ergot, refined sugar, gelatin dropped 37.5 per cent; creosote, 36 per cent; acid salicyl, ammoniated mercury, 25 per cent; sodium salicylate, strychnine nitrate, 20 per cent; but balsam of tolu enjoyed a sharp improvement of 82.5

per cent and silver protomate of 16 per cent. Japanese drugs had met with a varying market as witnessed by the following fluctuations:- Cantharidin an increase of 81 per cent: ipecacuanha root, 54 per cent: cocaine hydro-chloride, 33.3 per cent: and oil of rose, 20 per cent, but in ergot there was registered a fall of 43 per cent at a comparatively heavier rate than American goods.

Owing to the various classes of drugs both in origin and quality it is quite difficult to obtain an exact phenomenon of the drug market. We are content with depending upon the exchange fluctuations and the difference in quality, for a true appraisal of the position.

ELECTRICAL SUPPLIES

Before the European War German imports of electrical supplies occupied first place, British, American and Japanese being the next in order. Recently Japan has furnished China with the largest cargo, with Great Britain and American second and third. German imports have during the Great War been unable to come into China, but since 1920 these imports have gradually expanded. Lamps, rubber wire, shades, porcelain insulators, batteries, electrical bells and small motors are in great demands in the local market. This quarter the enquiry for same was sluggish with a large stock carried from last. Porcelain insulators, flexible cord and rubber wire were imported abundantly this quarter under review. Some orders come from Nanking and Hankow. Electrical fans remained constant owing to off season. S. E. S. motor sold promisingly at steady prices. In autumn in switch, 9" metal shade and decorating lamps there was a large stock. Only a little local business was effected during the civil war, but prices remained the same as before.

MISCELLANEOUS GOODS

The market for miscellaneous goods exhibited a dull outlook in this period, as summer ware were out of season, while demand for winter goods remained dormant. Business men found it difficult to dispose of their heavy stock and were compelled to sell at a discount, notably of Japanese products. Local sales had a comparative better aspect, but only a very small quantity was shipped to Tientsin and Hankow. When war broke out in the southeast and north, prices depreciated considerably and heavy losses resulted to dealers.

Grey blankets which form a necessary army equipment were sold extensively. Woolen blankets and woolen and cotton rugs both declined in price. Hats which are usually in good demand in autumn were quoted in July at about \$4 higher than last year, but in August there was a poor market for them. China-ware, aluminium tool and glass ware had little local sales and there were only small shipments to Hankow, Chefoo and Szechuen. The market became slacker after the middle of August, owing to the severe monetary stringency. Fortunately, the favorable rate of the sterling exchange and the fall in yen relieved merchants from big losses. At that time locally manufactured candles offered a great attraction to buyers in outport, because imported candles rose twice their value.

Appendix

I, The following letter is addressed to Dr. Irving Fisher, Prof. of Economics at Yale University, Prof. David Kinley of the University of Illinois, Prof. C. Mitchell of the Columbia University, Prof. Horace Secrist of North Western University, Prof. J. Lawrence Laughlin of the University of Chicago, Prof. A. L. Bowley of the London School of Economics and Political Science, also the Bureau of Labour Statistics at Washington, the Federal Reserve Board, Bradstreet, the "Economist", the "Statist", etc.

July 18, 1924.

Dear Sir or Sirs:—

I am sending you herewith a copy each of the January-March issues of "Shanghai Market Prices Report", 1923 and 1924.

In order to get the opinion of experts and to improve our index number I am writing to you with the following questions and beg you will kindly answer them in your reply. As this Bureau is planning to compile several index numbers on imports, exports and cost of living, etc., your suggestions will be greatly beneficial for our work.

(1) Whether we should choose the quotation of a single chop, which has the widest demand, to represent a commodity or the average of various quotations of that commodity. For instance, may we use Honbey to represent $8\frac{1}{2}$ lbs. grey shirtings or should choose several chops for that special kind of piece-goods? If the latter plan is followed, is it necessary to use the method of weighting? In case that the method of weighting is unpracticable under certain circumstances, how shall we be able to avoid undue influences of violent changes of one or two commodities on the result.

(2) When a certain chop in the standard table of prices ceases its existence, it is necessary to choose another chop in stead of it, but if the basic price of that new chop is not obtainable owing to the far off time or that new chop has not been placed on the market during the base year, is it all-right to continue to use the basic price of the discontinued commodity provided that they are of the same quality and grade?

(3) If some commodity in the table of prices displayed no market during certain date, which method would be preferable: by continuingly employing the quotation of that commodity at the previous date or simply omitting this particular one in calculation. (For instance, if no quotation is given to one of the fifteen commodities in the group of cereals, is it permissible to obtain the final average from the fourteen commodities only?).

(4) In compiling an index number on cost of living if we should fail to get the proper data of the various methods of weighting, may we arbitrarily adopt a theoretical or assumed datum, and if it is allowable, what principles hold good for such an assumption?

(5) Some writers suggest that the table of prices should contain as many commodities as possible, what is your opinion in that point?

Any points pertaining to the construction of index numbers other than those mentioned above will be highly appreciated.

Thanking you very much in anticipation and with highest regards, I am,

Very respectfully yours,
T. Sheng (signed)
Chief Director

II, The various replies are printed in order according to the date of receipt.

U. S. DEPARTMENT OF LABOR
BUREAU OF LABOR STATISTICS
WASHINGTON

August 15, 1924.

Mr. T. Sheng, Chief Director,
Ministry of Finance,
Bureau of Markets,
50 Avenue Edward VII,
Shanghai, China.

Dear Sir:

The receipt is acknowledged of your letter of July 18 containing several inquiries concerning this Bureau's views on the subject of index numbers of prices, also the copy of the January-March issue of "Shanghai Market Prices Report" has been received, for which please accept my thanks.

Answering your inquiries seriatim:

(1) In most cases the Bureau of Labor Statistics uses a single price quotation for a thoroughly representative grade or quality of a commodity, rather than the average of quotations for various grades of that commodity. Care is exercised, however, that the selection shall be fully representative of the class for which it stands. Weighting should be employed, if possible, in constructing index numbers for groups of commodities. If weighting is found to be impossible and it becomes necessary to construct the index by averaging price ratios of the commodities, the only alternative is to so enlarge the number of quotations in a group that the effect on the group result of violent changes in one or more commodities will be minimized by the influence of the remaining commodities.

(2) The substitution of one article for another of the same grade or quality which has disappeared from the market is considered permissible, notwithstanding the absence of a base price, provided prices on the old and new articles coincide at the time of the substitution. Each description should be carried, however, for the period over which it runs.

(3) If a commodity is temporarily off the market, it is the Bureau's plan in computing the index for the group in which it is found to interpolate a price from the best information available. This may be either a repetition of the last quoted price or an estimate based on the best information to be obtained. An interpolated price, if printed, should be so labeled. In the example you cite, it is not considered by this Bureau as permissible to compare an average of fourteen commodities at one date with an average of fifteen commodities at a previous date.

(4) In computing an index number of cost of living if actual weighting data based on family consumption are not obtainable it would appear permissible to adopt an arbitrary standard based on such information as can be obtained. Any standard, however arbitrary, that approximates the facts is believed to be better than no standard at all. As standards vary widely in different countries, it is difficult to suggest what principles might hold good for Shanghai and vicinity.

(5) An index built on a large number of commodities is considered for most purposes preferable to one built on a few commodities. However, a judicious selection of the commodities is more important than mere numbers.

(6) The table of prices published by this Bureau contains, in most instances, prices for a single commodity of a particular kind and in a particular market. Averages are resorted to only in cases where no single quotation is considered sufficiently representative for the commodity in question. At the same time, all of the more important grades and markets should be represented in the compilation of prices.

Under separate cover there is being forwarded to your address a copy of Bulletin No. 234 of this Bureau, entitled "Index Numbers of Wholesale Prices in the United States and Foreign Countries", on pages 5 to 114 of which will be found a discussion of the making and using of index numbers. There is also being mailed to you a copy of Bulletin No. 326, entitled "Methods of Procuring and Computing Statistical Information of the Bureau of Labor Statistics." Your attention is invited to the chapters on cost of living, retail prices, and wholesale prices in this publication. Answers to most of your inquiries will be found in these two bulletins.

I am, very truly yours,

Chas. E. Baldwin, (signed)

Acting Commissioner of Labor Statistics.

Labor Office,
Old Custom House
Bombay.
The 13th August 1924.

No. 4236

Dear Sir,

I have much pleasure in acknowledging your letter of 18th July. Mr. G. Findlay Shirras, who was Director, Labour Office, Bombay, has just gone home on one year's leave, and I am officiating in his absence.

I am new to this class of work, and therefore give my replies to your queries with considerable diffidence.

(A) So far as I can see, the best system for constructing a Cost of Living Index Number is to take the simple price-relatives of the various commodities, weight them by factors representing the approximate relative importance of each commodity in the total expenditure of the community which is being examined, sum the results, and divide by the sum of the weights.

(B) But for a Wholesale Index Number one would preferably take the actual prices, multiply them by factors representing the actual physical amount of each commodity placed on the market in a given period (usually the base period), sum the results, and reduce the sums to simple ratios of the base period.

(C) In the alternative, for the Wholesale Prices Index Number we can take the Arithmetic mean of a number of price-relatives. In that case we can roughly weight the commodities by taking several readings for different commodities, or weight by arbitrary weights.

Now for your questions:—

(1) It is better to get quotations for several chops. Under (A) and (B) above you would average the quotations to get the price of the commodity. Under (C) above you would, for the more important commodities, take all the quotations, counting each separately.

(2) If you use a fixed base period it is not scientifically correct to change a quality and treat the price of the new quality as comparable with the price of the old. But if you use chain bases there is less objection, provided that you can get the price of the new chop for the period immediately preceding. Even if you use the fixed base it would clearly be unobjectionable to change the chops if the old and new chops are of the same quality.

(3) We follow the second system for our Wholesale Prices Index. But our Index Numbers are calculated monthly. We have no articles which go off the market for a whole year. Neither method is scientifically correct, especially when the Arithmetic average is used.

(4) In the United Kingdom arbitrary weights are used. Any logical method of selecting weights is valid. Moreover, in contradistinction to prices, which should be accurate actual quotations, there is no possible system of weighting which could be mathematically exact. All weighting systems are based either on samples (such as sample budgets) or on probable quantities (such as quantities marketed)

(5) Obviously the more commodities we take the less danger there is of an exceptional movement in the price of any one commodity affecting the movement of the General Index Number. We are usually limited by the question of expense.

(6) In some cases a single quotation, in others many. Our retail prices are recorded daily by Investigators, and the arithmetic mean taken.

As for Index Numbers for Imports and Exports, I do not see what problems arise, as we do not deal with such matters

I am,
Yours faithfully,
T. V. Sedgwick (signed)
OFFG. DIRECTOR.

The Chief Director
Ministry of Finance
Bureau of Markets,
50 Avenue Edward VII,
Shanghai, China.

FEDERAL RESERVE BOARD

WASHINGTON

August 20, 1924.

Mr. T. Sheng, Chief Director,
Bureau of Markets,
Ministry of Finance,
50 Avenue Edward VII,
Shanghai, China.

Dear Sir:

We thank you very much for the copies of the "Shanghai Market Prices Report" which you sent us. We are interested in the index numbers that you are planning to compile, and hope that you will let us have the results as soon as they are completed.

The questions which you have submitted to us for answer are nearly all questions of practice to be followed in cases which require exceptional treatment. The procedure in such cases generally varies among the many compilers of index numbers and is often determined by expediency. We are glad, however, to give you the advantage of our experience in these matters.

1. As to the use of a single or many quotations representing a given commodity, we should say that the practice would depend upon the importance of that commodity and of its particular grades and species. A single quotation is often sufficient, (a) if sales of that grade make up a substantial part of the total sales of the commodity in question, or (b) if fluctuations of the single quotation seem to agree with those of other quotations on the same commodity. We should suggest that at least in the case of more important products you compare quotations on several grades, if available, to see if they move together. If no single quotation seems representative of the price fluctuations of a given commodity, several quotations should be combined. They should be weighted according to (a) relative importance of each grade to the others, and (b) representative character of the quotation (i.e., if it is subject to unusual and erratic fluctuations, its weight should be lessened). These latter weights are, of course, rather arbitrary.

2. Substitutions of new quotations for old are generally effected by the use of month to month link relatives. This procedure requires rather detailed explanation and can be best shown by the use of figures. The following data were used to compile our index of prices of raw materials imported.

Year and month	Aggregate	Link Relative (Per cent aggregate to preceding month)	Index
July, 1921.....	1,111,173	102.681
August, 1921.....	1,124,531	101.202	} 103.915
August, 1921 (revised).....	1,099,531	
September, 1921.....	1,125,842	102.393	106.402

The column headed "link relative" is derived by dividing the aggregate for the current month by that for the preceding month. For instance, the August aggregate 1,124,531, divided by the July aggregate 1,111,173, gives 101.202 which is the August link relative. This link relative multiplied by the July index 102.681 gives 103.915, or 104, the August index. In August a substitution occurred which changed the aggregate to 1,099,531. This figure was used in compiling the September link relative and index. Thus, you see that to permit substitutions and change in the quotations used in the price index, it is necessary to compute the index by the use of chain relatives rather than by simply dividing the aggregate for the base period by the aggregate for the given period.

3. In the case of omissions if only for a short period, it is usually better to continue the quotation as of the last date available unless reliable estimates of corresponding changes can be made from other grades of the same commodity. If the omission is permanent or for a long time the quotation should be dropped and adjustments should be made in the index by the same procedure used in the case of substitutions, explained in paragraph 2 above.

4. Because of our lack of experience with cost of living indexes and because of inadequate knowledge of your specific problem, we do not feel capable of answering your fourth question.

5. The number of items included in the index would depend upon the purpose of the index. A few representative quotations would give an index that would be highly sensitive to price fluctuations but would not be an accurate measure of the extent of change in the general level of prices or in the purchasing power of money. For a general purpose index a rather large number of commodities is desirable. Beyond a certain point, however, further additions have little effect upon results. The more important requisite is to have as many groups of commodities as possible represented, rather than to have many quotations on single commodities.

6. In the case of more important commodities which enter the market in the form of different types and grades, such as iron and steel and cotton goods, we use in our indexes several

quotations, weighted, if information is available, according to the relative importance of grades and types represented. For less important products single quotations are used.

We hope that the above information will be useful in solving your problems. We are sending under separate cover a copy of our bulletin on "Prices in the United States and Abroad" which explains in some detail the computation of our various price indexes.

Very truly yours,

Walter W. Stewart (signed)

Director, Division of Research & Statistics.

BRADSTREET'S

A Journal of Trade, Finance, and Public Economy.

New York, August 23, 1924.

Mr. T. Sheng,
Bureau of Markets,
Ministry of Finance,
59 Avenue Edward VII,
Shanghai, China.

Dear Mr. Sheng,

In acknowledging receipt of your esteemed letter of July 18th, I wish to express my regrets for the delay of two weeks caused by the writer's absence from the office.

In starting, I would say that I believe you could get a good deal of assistance from a book on Index Numbers, written some years ago by Professor Wesley C. Mitchell. I am writing today to the Bureau of Labor Statistics of the United States Department of Labor asking them to send me a copy of this publication which I may mail to you. In that book you will find a short history of Index Numbers, an explanation of most of the existing numbers and what I think a very important conclusion by Prof. Mitchell confirmed by our own experience of 35 years, that the field work of collecting prices is far more important a work than is the compilation of an index number from these prices.

As regards Bradstreet's Index number, I would say that our's is a simple unweighted number based on the sum totals of the prices per pound of ninety-six articles included therein. Respecting the matter of weighting, I would add that our experience seems to coincide with that of some others who have found that weighting is not so important as is the selection of a number of representative staples of wide popular consumption, quotations for which are available for years past. The inclusion of as many really staple products as is possible might be recommended but it has been our experience that there is a greater liability for fully manufactured products to vary in size, weight in other basic respects than do raw materials or partly finished products.

Hence, we do not feel inclined to assent to some criticisms of index numbers our own among others, based largely on such raw or partly manufactured staples because we feel that the markets and quotations for these raw materials very generally reflect the well based views of both dealers and manufacturers as to real present and prospective values. Finally, I would say that, our own experience is that a simple unweighted number, simple that is, except as to selection of the staples themselves, is rather more sensitive and indicative than is one based on a more or less complicated system of weighting calling for estimates of quantities consumed or passing through the markets, due regard being had to the fact that such latter estimates are also liable to error. Besides this fact, we have, in the past few years, seen cases where at the outset demand governed prices, but later we thought we saw indubitable proof that prices if pushed high or low enough in turn governed both demand and consumption, with the result of warping the index numbers.

Touching your question as to whether our tables of prices cover single quotations or are averages, I would say that I enclose a list of our commodities most of which are in the index number and would add that we do not use averages, either of the prices themselves or for reckoning the Index numbers, our numbers covering the price per pound on certain specific dates.

We have never made estimates of cost of living and do not claim that our price index number is such a measure, except that the price fluctuations shown necessarily have an influence upon living cost. Here again our experience has been that standards of living differ and we think that prices of some staples and costs of rent, etc., have caused changes in standards of living which must have inevitably affected the cost thereof. Just as an illustration in this matter, I believe consumption of meats of late years in this country has been affected by high prices and I also believe that a greater share of cost of living has gone into rent because of the doubling and trebling of rents and prices of houses, land, etc.

I learn from the first three paragraphs of your letter, what I had already inferred from your description of the method of collecting prices in your market, published in *Broadstreet's* of August 9, 1924, that you do not have systems of grading products similar to those existent in this country where trade exchanges and customs call for and facilitate trading in well defined varieties of products. Under the circumstances, I suppose you must depend upon well-known chops or brands of commodities. So long as quotations on these chops or brands are obtainable through all seasons of the year and for many preceding years, I imagine the necessary comparisons will be preserved but unfamiliarity with conditions precludes me advising you too particularly in this respect. It seems to me that if the Honbey 8½ grey shirtings cover a well understood and distinctive kind of cotton fabric of common use one chop would do. I imagine however, that this weight indicates a rather heavy product for special use. Here again, I must suggest ignorance of local conditions as forbidding extended advice. All I would suggest is that the chops or brands of cotton goods and of other staples be truly representative not only of the quantity used but of quality employed. Of course, if weighting is employed in one instance, I think it should be general.

As to the matter of substitution of one chop or brand for another, I should think with of course due allowance at this distance for lack of knowledge of the products; that such substitution

might properly be made. In case of the disappearance of a commodity, I think that if averages are used, the average of fourteen commodities in place of fifteen might be made with safety.

We had the experience years ago of having violent price changes in some commodities threaten to warp comparisons in a group and met this trouble by going back and excluding them from comparison throughout.

Apologizing for the length of this communication but trusting it contains some few grains that will be of value, I remain,

Very truly yours,
Frank Greene (signed)
Managing Editor.

THE STATIST.

51, Cannon Street, London, E. C.

August 25, 1924.

T. Sheng,
Chief Director, Bureau of Markets,
Ministry of Finance,
50, Avenue Edward VII,
Shanghai, China.

Dear Sir,

We have been very pleased to receive your letter of July 18.

1. If there are several varieties of a commodity in fairly general use we think it would be desirable to include them all in the index number. If possible they might be weighted according to the amount sold. In cases of violent changes in price there is no reason why these movements should not be allowed to have their full effect on the index number, unless it happens that the change in price has a visible effect on the amount bought by the public, in which case the weighting might be proportionately changed.
2. This is a very difficult problem. If it is possible to find a commodity of the same quality and grade in the base year than it might be used for getting the base price, but this is generally not possible. If one cannot get such a base price the best thing would probably be not to replace the quotation at all.
3. We think it much preferable to retain the nominal quotation.
4. If one cannot get the proper data for weighting then it is usual to adopt an arbitrary weighting. It is better than having no index number at all. The only principle that we can suggest for selecting such data is to use whatever material is available regarding cost of living in the community or in a community with a similar standard of living. For instance, the Irish Free State uses the British weighting.

5. The danger in increasing the number of commodities is that one may be introducing nominal quotations. The commodities used should, as far as possible, be only those with an active market. One might reduce the number of commodities without losing much in the precision of the index number. A very good illustration of this will be found by comparing the curves of the "Statist" index number (45 commodities) and the Board of Trade index number (157 commodities)
6. In our price group some of the commodities are given more than one quotation. For instance, iron has 3 quotations - Scottish pig, Cleveland pig and common bars. In some cases these are treated as individual commodities and have a separate price relative, in others - like pork - the average of certain varieties is taken and only one price relative calculated. The effect of such an arrangement is, of course, to give iron greater weighting than pork. It is purely a case of relative weighting and might be arranged by giving each quotation an actual weight.

We are always interested in discussing the topic of index numbers. We cannot recall at the moment any other points we would like to mention to you, but are always at your service.

Yours faithfully,
John Busted (signed)

25th August, 1924

T. Sheng, Esq.,
50, Avenue, Edward VII,
Shanghai.

Dear Sir,

In reply to your letter of July 18th, I suggest the following as the answers to your various inquiries.

(1) So far as our own index number is concerned we try as much as possible to avoid including manufactured goods or goods which from time to time may change their quality. In most cases there is no difficulty about this as our index number mainly relates to food and raw materials. The two most important exceptions are that we include cotton cloth and steel rails. In the latter case we use a quotation for a standard rail which has been in common use for a number of years. Similarly in the case of cotton cloth we use grey shirting which is the standard product of Lancashire looms. In cases where this is not possible or if the index number aims at reflecting

the prices of more finished goods or of retail prices, the problem of getting a standard quotation becomes much more difficult, and the possibility of getting movements in quotations really reflecting changes in quality and not true changes in price, is greatly increased. You can, to some extent, prevent any such errors from making too serious an influence on the index number by taking a very large number of quotations as suggested in question 5. The difficulty of getting a large number of quotations promptly in respect of articles the definition of which is liable to change, is one of the chief reasons why commercially compiled index numbers have generally been confined--like our own--to a comparatively small number of articles, of which we can get prompt and standard quotations.

As regards weighting it is impossible to avoid some arbitrary use of weights. One is making an arbitrary rule even if one only gives a small weight to every commodity. But in fact, in our index number, we have given a more carefully considered weight to different commodities, but the weighting is only rough. Thus we have four quotations associated with the cotton trade; American cotton, Egyptian cotton, cotton yarn and cotton cloth. We could of course have averaged these indices and given them a weight of one, but we thought a weight of four was not disproportionate to the importance of Lancashire in British industry. The relative importance which we attach to different commodities was substantially changed when we revised our index number fifteen years ago.

(2) In the circumstances suggested in this question the device we have occasionally had to use has been to bring in an entirely new commodity at about the level which the old one occupied when the change was made. Thus if South Wales coal was standing at an index to-day of 150 and we found it necessary to substitute Northumberland coal we should do this on the basis that to-day's price for the latter represents 150. As a matter of fact in practice one would not take the price of a single day as a point at which to adjust the new quotation since one or other might be at an unduly high or low level, and we have always found it possible to take a period of a year or so during which the price curve of the new and the old commodity can be fitted to one another fairly closely. If this is fortunately the case one can calculate the basis figure for the new article. For purposes of simplicity in calculation we should never use the basis price of one commodity or quality of a commodity as the base price of another quality.

(3) The answer to this question partly depends on whether the cessation of the quotation is likely to be permanent or temporary. In any case it is not too unreasonable to use a certain amount of discretion. For example, if one is quoting more than one grade of sugar or wheat and there is no reason for thinking that the article for which no price can be obtained is moving differently from other similar commodities it would be wise to assume that the quality in question will have moved with the rest. But if you are quoting say three kinds of wheat and one grade cannot be quoted from perhaps some purely technical reason, it would be better to assume the other two are representative of all three than to leave it out from the average for all cereals.

(4) As regards weighting for a cost of living index number, the only sound method is to ascertain as nearly as possible the number of different commodities which are consumed by the

public. It is not necessary to get this accurately and if need be you can get it by a few sample inquiries. Clearly, however, there is no standard rule since consumption varies so much between one country and another. Experience proves that the final results do not differ very much so long as the weights are not grossly wide of the truth. If, however, there is very little information available it would be necessary to test your results by adopting different methods of weighting, estimating as accurately as you conveniently can if the results more or less agree. Clearly the method of weighting is not very important. If they differ greatly the only course is to make further detailed inquiries.

I think I have answered 5 and 6 in what I have already said. If there is anything further I can tell you I shall be glad to do so. I enclose a statement showing what we did at the time the "Economist" index number was revised.

Your faithfully,
W. T. Loyton (signed)

EXTRACT FROM "THE ECONOMIST" OF FEB. 4th 1911 page, 206.

"But while it is a great advantage to have an Index Number calculated in the same way over a long period of years, it is evident that in the course of half a century great changes occur in the nature of the commodities which enter into general consumption and are, therefore, dealt in on the world markets. In 1845-50, for example, British wheat supplied most of our requirements, but nowadays there are sometimes considerable periods at the end of a cereal year when practically no British wheat comes into the market, the quotation being almost a nominal one. At such a time one of the well-known foreign brands of wheat would clearly give a better indication of the wheat market. Again, in 1850 steel was limited to a very few uses, Bessemer's great invention being still in the future. Petroleum and rubber were also of very small importance, while the chemical trades were only in their infancy. In order, therefore, to make our monthly review of prices more far-reaching, we propose in future to embody in our Index Number quotations of some important articles which play a large part in modern commerce, while at the same time retaining its character as a wholesale market Index Number. The chief commodities to be added are coal, steel rails, petroleum, rubber, oil seeds, jute, soda crystals, rice, barley, and oats. These additions will enable us to bring under regular review a number of markets of very great importance. It has thus become necessary to adopt a new basis, and for this purpose the first quinquennial period of the twentieth century has been chosen, which at once avoids the boom of 1907, and is sufficiently recent to include standardised quotations of modern commodities."

As regards weighting, the following comparison between the constitution of the index number before and after the change of 1911 may be found useful.

Basis 1845-50.Food.

LONDON SCHOOL OF ECONOMICS & POLITICAL SCIENCE

Houghton Street,
Aldwych, London

September 4th, 1924.

T. Sheng, Esq.,
Ministry of Finance,
Shanghai.

Dear Sir:

I have received your letter dated July 17th, and will endeavour to give an opinion of the questions you ask.

1. Single or multiple quotations of one commodity.

If there is one grade that is of predominant importance and that is frequently in the market, the one price is sufficient.

If there are two or more grades are of nearly the same importance the simple average of their price relatives can be used: thus—

	Base	Price relative
		1924
Grade 1	100	125
2	100	130
3	100	128
<u>Σ</u>	<u>300</u>	<u>393</u>
	100	: 131 use 131

2. If the grade chosen ceases to be marketed, another as similar as possible should be substituted. The prices of the earlier and later should be quoted in a period when both are frequently marketed: Thus—

	Base year	1924 Jan. to March	1924 April to June
1st grade	100	125	no record
Substituted Grade	}	100	120
Series		= 125	: 150
	100	125	150

3. If in a particular week or month none of a commodity is marketed, it is customary to repeat the entry at an earlier date.

An alternative method is as follows:—

Suppose there are commodities A, B, C, D, E, whose prices are given for three periods, except that E is not recorded in the third period:—

Index numbers based on A, B, C, D,

1st period	2nd period
100	120

Index numbers based on A, B, C, D,

2nd period	3rd period
100	125
≡ 120	: 150
Series 100	120
	150

The second method is only preferable, if E has disappeared for a long interval.

4. Cost of living index. This should always be weighted. If there are no exact data, arbitrary weights based on general impression of relative importance are better than none. But general statistics of consumption are sometimes available, and failing these a slight preliminary enquiry should readily give some information.

5. The most important considerations in compiling an index number are that the commodities included should be *invariable in quality, exactly defined and sold in such a way that a definite market price is known at every date for which the index number is compiled.* Subject to these, the greater the number of independent prices included, the more accurate is the measurement; but the number of entries for each commodity and each group of kindred commodities should be roughly proportional to their importance, unless a system of weighting is used which is related to their importance. 150 separate entries is quite sufficient, and in fact few existing index numbers depend on a greater number, because the considerations named above are not satisfied for more.

I hope that what I have now written is sufficient for your purpose.

I am, yours faithfully,

Arthur L. Bowley (signed)

MINISTRY OF LABOUR

(STATISTICS BRANCH)

QUEEN ANNE'S CHAMBERS

TOTHILL STREET

London, S. W. I.

2 October, 1924.

The Chief Director,
Ministry of Finance,
Bureau of Markets,
50, Avenue Edward VII,
Shanghai, China.

Dear Sir:

I have to thank you for the copies of the Shanghai Market Prices Report which you kindly sent me.

In reply to the enquiries in your letter of 18th July, I would offer the following suggestions based on my experience in Great Britain. Whether or not they will be acceptable for application to conditions in China I am unable to say.

(1) I think it is generally desirable to obtain quotations for several varieties or descriptions of an article because it is possible that, in course of time, circumstances may arise which may render it impracticable to rely on continuing any single quotation which may be selected now. For example, the character of the trade done may change. If quotations for several descriptions are used it will probably be unnecessary to weight the figures for the different descriptions. But if any one description of any article is considerably more important than all the others taken together, then it may give a truer result to rely on this one description only.

(2) If the newly selected description is of similar quality and grade to the discontinued description, it would, in my opinion, be reasonable to continue with the original basic price. Any alternative would involve a degree of assumption which would result in a figure no more satisfactory than a figure related to the original basic price.

(3) If there is no market for a short time only, I should regard it as being preferable to continue to use the last quotation available, so as not to alter the level of the index number when

there is no actual alteration in prices. But if quotations are missing for a considerable time, it would be better to omit the item from the calculation.

(4) If exact data for weighting are not available, it would be in accordance with recognised practice to adopt a series of weights based on estimates, or in the absence of any basis for estimation, on general knowledge.

(5) The number of commodities should depend on the importance of the various commodities, the possibility of obtaining trustworthy quotations and weights for them, the degree of accuracy which can reasonably be aimed at, and the amount of money available for payment of the cost of compiling the index number. All of these vary so greatly between different countries that it is impossible to generalise. You will know, of course, that after a certain number of commodities has been included, the addition of more commodities increases the volume of work and the complexity of the statistics without necessarily strengthening the resultant index number obtained. Sometimes indeed an index number may be weakened by the inclusion in it of some commodities of minor importance.

(6) In the Ministry of Labour index number of the cost of living large numbers of quotations are obtained for nearly every commodity and are combined to obtain a single figure for each commodity by means of the simple arithmetic average. By obtaining a large number of quotations from shops of varying types, it is possible to rely on the simple arithmetic average yielding a satisfactory average for each commodity. But the figures for the various commodities are combined into a single figure for all the commodities together by means of the weighted arithmetic average, which allows for the relative importance of one commodity to another.

As it may be of some interest to you, I enclose a copy of a Paper which I read recently before the Manchester Statistical Society on the subject of the cost of living index number which I prepared in the Statistics Division of this Ministry.

Yours faithfully,

John Hieton (signed)

Director of Statistics.

III, Extract from "Capital & Trade" of September 26, 1924

The Ministry of Finance-Bureau of Markets is actuated by a desire to improve its index numbers, and thus be of great service to the mercantile community of China. With this object in view it has addressed a letter to Dr. Irving Fisher, Professor of Economics at Yale University. An encouraging feature is the fact that the Bureau of Markets does not consider its labour to be perfect, and, what is more, no two opinions on index numbers are identical. The work has reached a stage where the Bureau has to take stock of its methods and decide whether these are in actual conformity with the practice in Europe and America. The Bureau, for instance, is planning to compile several index numbers, some on imports, exports, cost of living, etc. and for that reason it is justified in consulting authorities abroad with regard to the best method of procedure.

Genuine Analysis of Economic Possibilities In Markets Here

Information of such a character pertaining to the construction of index numbers must necessarily be of value to the Bureau, and it is well that it has taken the trouble of consulting authorities on the matter. Some writers suggest that the table of prices should contain as many commodities as possible, but others dissent from it. The first essential in successful exploitation in markets lies in a genuine analysis of economic possibilities and strength of the market in question. The value of such an analysis has become apparent to almost every manufacturer. The work of the Ministry of Finance-Bureau of Markets can, at best, however, only take the place temporarily of markets survey departments organized in private industry. Theoretically, the position might be reached were each of these departments organized by private industry would report to a central department or a particular industry, and ultimately to a central board for all industries, which would act in an advisory capacity in matters of national policy bearing on trade. If properly conducted, a manufacturer need not subsidise his own market service department for China or if his plant delivers a small production intended for Chinese consumption rely on the Bureau of Markets for guidance and information on aspects of trade.

Preliminary Survey Merely Raw Material For Real Study

The question of market analysis goes beyond the range of information supplied by the Ministry of Finance Bureau of Markets. Such information is only the beginning of the survey which uses it largely as raw material before engaging on the real study preliminary to discussion of the market. Each industry requires detailed information regarding those factors influencing its trade alone, but, with the examination of those factors, must be in a position to attach its interests to the investigation of the whole economic status of the market. A depression in one product may react on the interests of others which apparently have no connection whatever with it.

Economic tendencies may lead to a crisis at the moment when the possibilities of expansion in one branch of industrial production appear full of promise. The technical knowledge required for detailed analysis of special industrial interests is beyond the power of a general institution devoted to commercial intelligence and the economic training required to bring this detailed analysis into co-operation with the broader economic analysis goes beyond the range of such an institution. The academic economist working on theory and precept is quite useless in this connection.

The gist of the letter addressed to Dr. Irving Fisher is an enquiry as to whether the Bureau should choose the quotation of a single chop, which has the widest demand, in order to represent a commodity, or whether it should choose the average of various quotations of that commodity. For instance, it has asked the Professor whether it would be correct, when dealing with piece goods, to take Hornbey's to represent 8½ lbs. grey shirtings or whether it is necessary to select several chops at arrive at a basis of valuation. This opens up the avenue to further speculation. If several chops are accepted for this method, would weight be a sine qua non, and, in the alternative, where weights are not procurable, what method has to be adopted so as to avoid undue influence of violent changes of one or two commodities of the same kind?

A Question Of Vital Importance to Merchants In Shanghai

The whole question is a vitally important one to merchants in this country and reveals a laudable desire on the part of this organization to be of some service to the community in arriving at an accurate monthly valuation based on a correct system of indexing. It is best to quote extracts from this letter that has been addressed to Professor Irving Fisher. A similar letter has been written to recognised economists throughout Europe and America, names such as Prof. David Kinley of the University of Illinois, Professor C. Mitchell of the Columbia University, Prof. Horace Secrist of North-Western University, Prof. J. Lawrence Laughlin of the University of Chicago, Prof. A. L. Bowley of the London School of Economics and Political Science, also the Bureau of Labour Statistics at Washington, the Federal Reserve Board, Bradstreet, the "Economist", etc. Addressing them, the Bureau enquires: "When a certain chop in a standard table of prices ceases to exist, is it necessary to choose another chop in place of it, or continue to use the basic price of the discontinued commodity provided it is of the same quality and grade than would be if a quotation is given to one of the fifteen commodities in a group of cereals?" (b) Is it presumable to obtain the final average from the fourteen commodities when there is no market for the fifteenth commodity? and (c) "In compiling an index number on the cost of living, if we should fail to get the proper data for various methods of weighing, may we arbitrarily adopt a theoretical or assumed datum, and, if it is allowable what principle hold good for such an assumption?"

IV, 近月上海物價指數表之觀察

(轉載銀行週報第八卷第四十一號)

(一) 厘價低落之影響 駐滬調查貨價處所編六月份物價指數報告中。曾論及(其他食物)指數下落之原因。謂「……且有一部分物品。如牛肉、羊肉、豬肉、雞蛋、牛乳、食鹽、醬油、紹酒、勃蘭地、江北鄉肉等。市場本售洋碼。值此厘價低落之際。一律折合銀碼。其於平均上之影響。亦殊不小」云云。此實大可玩味者也。按上海為通用銀兩碼頭。而躉售貨物之。以洋碼計價者。亦頗不少。該處於編製指數時。凡遇以洋碼計價之貨物。均按當時厘價折合規元。以歸一律。此固為兩元并用時代不得已而必要之辦法。然於指數之實在價值。不無稍形減色。蓋論今日之銀元。表面雖亦儼然貨幣。實際會何異於商品。因其對於比肩并行之銀兩。尚須發生早晚不同之

厘價也。故在洋碼計算之物價。明明爲漲。而因厘價劇跌關係。折爲銀碼時。反形跌落者有之。或則在洋碼明明爲跌之物價。而因厘價暴漲關係。折爲銀碼時。反形上漲者有之。又或在洋碼始終未動。徒因厘價之前後不同。以致折爲銀碼即呈或漲或跌之奇觀者亦有之。此種由洋碼折合銀碼所得之物價。其於物價漲落之眞象。頗欠明瞭。故據此以編成之指數。於物價漲落程度之測定。或者不無稍嫌含混。是誠美中不足之處。然此爲我國幣制上先天的缺陷。目前除努力於減少此種以洋碼折合之物價。并力求折合之準確而外。在我國幣制尙未根本革新以前。殆毫無着手改良之餘地者也。

(二) 江浙戰前米糧問題沉寂之參證 滬埠人口稠密。食物以米爲大宗。如以面積爲比例之標準時。滬埠米消費量之鉅。當爲全國之冠。米之來源。多數仰給於國內。一部則仰給於海外。來源一經缺乏或不足。米價可以飛騰。全市爲之震動。三數年來。滬埠人士關於米糧問題之討論維持。每年必有數次。非無故也。惟今年於江浙戰事未起以前。則關於米糧問題。絕對未聞提起。其原因斷然在於來源之豐富。與米價之平穩。毋待深贅。惟吾人從近三年糧食指數上以爲比較。亦足以窺見一斑。即今年糧食指數。戰前最高爲二月份之一四五。六四五月份且低至一三一。〇左右。七月當青黃不接之際。亦僅漲至一四三。一而止。以視十二年份累月超過一五〇。〇與十一年份最高之達一五七。九者。俱相去懸遠。不可併論。且即以戰期中九月份之一四八。一而言。仍較前去兩年。顯爲遜色。可知苟非江浙之戰。今年米糧問題。迄於年終。仍無發生之餘地也。附表如左。以資參照。

近年九月以前糧食指數月別比較表

月別	十一年份	十二年份	十三年份
一月	一四六.三	一四八.五	一三九.一

二月	一五三.二	一五三.五	一四五.六
三月	一五七.九	一四九.二	一四一.二
四月	一五六.三	一五〇.一	一三一.九
五月	一四八.一	一五四.一	一三二.七
六月	一四五.六	一五三.七	一三八.六
七月	一四四.八	一五二.八	一四三.一
八月	一三九.七	一五〇.九	一四四.六
九月	一四〇.三	一五三.二	一四八.一

(附註) 右表係以民國二年二月初糧食價作為百分

(三) 江浙戰事影響物價之異趣 自江浙戰事發生。滬埠對外之陸路交通。完全斷絕。即水路交通。捨淞口外。亦盡有蜀道之歎。於是滬埠各項物價。乃因需給失調而呈急遽之變化。惟其變化之結果。則又互異其趣。試分各項指數證之。如(一)為糧食類中之米。江浙鄰近產米區域。均因軍事阻礙。米船不得來滬。調查存底已屬有限。米價遂因購者之爭先與售者之居奇而暴漲。當時糧食類中如小麥、麵粉、黃荳等。雖因貨多銷滯。價仍站定。然該類之八月指數。則已因米價之獨漲而高至一四四.六。九月戰事延長。滬商向上江採辦之米。復被扣於鎮甯。存底益薄。人心愈慌。故同月指數更一躍而至一四八.一。今年來糧食類指數之最高者也。(二)其他食物及建築材料兩類。於八月風雲緊急之際。因恐滯銷。價皆趨跌。指數遂較七月份跌去百分之一。九月份則其他食物類中。如牛肉、羊肉、雞蛋、鴨蛋等。及建築材料中之屬於土貨者。均以來源斷擋不敷需要而復漲。(三)正頭及其原料與金屬兩類。初因銀根緊迫貨主亟於售現。繼以躉批交易。大都停頓。各貨滯銷。市價下落。八九兩月之指數。亦即隨以步低。大概以九月份之指數。比較七月份時。約各低去百分之八九。(四)綜觀糧食、其他食物、正頭及其原

料、金屬及雜貨之五大類中。除糧食類指數之趨漲。最稱顯著外。其餘則以跌勢佔優。故八九兩月五大類平均之總指數。仍屬於下落也。附表如左。以資參照

最近四個月間物價指數比較表

月別	糧食	其他食物	正其 原料	金屬	雜貨					雜貨平均	總平均
					燃料	建築材料	工礦用品	其他物品	雜貨平均		
六月	一三八·六	一五六·四	一五六·〇	一五四·一	一六二·二	一四七·七	一七六·二	一三〇·三	一五四·一	一五一·八	
七月	一四三·一	一五三·〇	一五六·五	一五三·五	一六七·七	一四六·一	一六〇·八	一三一·七	一五一·六	一五一·五	
八月	一四四·六	一五二·九	一四七·三	一四九·二	一六七·二	一四〇·八	一六四·七	一三一·六	一五一·〇	一四八·八	
九月	一四八·一	一五三·〇	一四六·七	一四六·三	一六六·八	一四六·八	一六二·六	一三三·四	一五二·四	一四九·三	

(附註) 右表係以民國二年二月初市價為百分

(四) 江浙戰後物價指數之預測 江浙戰事。目前已暫告段落。如無其他障礙發生。滬甯路交通。不日當能恢復。內河水運。亦可漸次通航。大概半個月內。除滬杭路外。交通皆可不成問題。交通復原後。物價指數首受影響者。殆為糧食類指數之趨跌。據聞江浙今年米產極豐。其未直接遭遇砲火地方。因無從外運。市價極廉。一旦交通照常。鑒於滬市米價之佳。到源必將湧至。湧至之後。價必暴落。可以斷言。查該處之編每月物價指數時。係以最後一週水曜日市價為標準。至本月二十九日(即本月最後之水曜日)米價當以跌去不少。故本月初旬米價。雖因浙屬來源中斷而奇漲。但預料於十月份糧食指數之低落。可以不生影響。除糧食類而外。其餘各類指數。大致應與戰中趨勢成反對之象。即跌者轉漲而漲者轉跌是也。惟其中如其他食物類之指數。變動或將甚速。至正頭及其原料等之指數。其恢復力當比較遲頓。或於十月份之指數上。不能表示若何顯著之漲風也。至於九月份之平均總指數。曾因戰事影響而低落。十月份是否可以轉漲尚難預定。惟時局如無變化。十一月份總指數之趨漲。殆為當然之趨勢耳。
