the 1990s, the number of people in the UK who are aged 65 and over has increased from 10.5 million to 13.5 million (1990-2000) (ONS 2001).

There is a growing awareness of the need to address the health care needs of the ageing population. The Department of Health (2001) has set out a strategy for the care of the elderly, and the Health Service Research Fund (2001) has funded a number of research projects in this area.

The aim of this paper is to describe the development of a research project which is designed to address the health care needs of the ageing population in the UK.

## Background

The ageing population in the UK is a major public health problem. The number of people aged 65 and over is expected to increase from 10.5 million in 1990 to 13.5 million in 2000 (ONS 2001).

The Department of Health (2001) has set out a strategy for the care of the elderly, and the Health Service Research Fund (2001) has funded a number of research projects in this area.

The aim of this paper is to describe the development of a research project which is designed to address the health care needs of the ageing population in the UK.

## Methods

The research project is a multi-centred study which is designed to address the health care needs of the ageing population in the UK. The study is being conducted in three centres: London, Manchester and Newcastle.
