## P R E F A C E .

---

THIS work has been prepared for the purpose of supplying a want long felt by intelligent Americans, engaged in every kind of avocation, who may not have leisure or opportunity for consulting volumes on our national history when in quest of information upon any subject of special inquiry. It is intended to be a labor-saving implement for busy people. Its usefulness as such may be more readily secured by first consulting the full Analytical Index at the close of the work.

It has been said that a cyclopædia should be, itself and alone, a sufficient index. Experience proves that an analytical index appended to a cyclopædia of history of human events vastly increases its power and essential value as a labor-saving implement. There are numerous important topics treated in a cyclopædia of history that may not be considered under separate titles, and which, without a reference to them in an index, might be overlooked. In treating upon any topic under a special title—for example, UNITED STATES OF AMERICA—there are events which deserve more notice than can well be given to them in a general and brief sketch. In this work events have been introduced under separate titles, which are referred to, in alphabetical order, under the general title of United States of America (and others), thus :

UNITED STATES OF AMERICA, 1438, (see *Amnesty and Pardon in the*) 40, (see *Army of the*) 67, 68, (see *Coinage in the*) 264, (see *Colleges in the*) 268, (see *Eastern Boundary of the*) 421, (see *Education in the*) 424, (see *Expenditures of the, for the War for Independence*) 461, (see *Farms in the*) 468, (see *Financial Condition of, in 1861, and Financial Embarrassment of, in 1815*) 477, (see *First French Minister to the*) 482, (see *First Import Duties in the*) 483, (see *Foreign Governments and the*) 501, (see *Foreign Intercourse with the*) 502, (see *Fruit-Culture in the*) 551, (see *Roman Catholic Church in the*) 1227, (see *Slave-trade in the, Abolished*) 1303, (see *Spain Hostile to the*) 1325, (see *Ultimatum of the*) 1426.

The most important events in the history of our Republic from the Aboriginal period to the present time, with the dates of their occurrence, and their connection with other events, may be found briefly recorded herein. Each record is generally preceded by a reference to the causes of the occurrence of the event, so that its relations to the general history of the Republic may be clearly seen. Brief biographies of the more conspicuous actors in the scenes recorded may also be found, for men and women constitute an essential part of every historical incident.

In this age of varied and intense activity of mind and body, none but persons

of leisure, or plodding specialists, can afford to spend time in the perusal of the minute details of history. The vast multitude of men and women who are the chief constituents of society ask for the kernels of knowledge as sufficient for their daily intellectual food. It is for that intelligent multitude this work has been prepared—this want supplied—by which, without expensive research and by reference only, in the Index, to the proper initial letter of the title of any event or name of person mentioned in our history, they may find a general outline picture of that event or character, which may be filled in, if desirable, by consulting regular histories or elaborate biographies.

Illustrations have been given whenever practicable, not for embellishment only, but for usefulness; and great care has been taken to make them truthful delineations of the objects depicted. Many of these have been selected from other historical works by the author of this cyclopædia. The chief object in the preparation of this work has been to make it a useful aid in the diffusion of a knowledge of our national history among our people. It is believed that it will be found very helpful as a book of reference—

1. To families, as an ever-ready response to questions concerning events in the history of the United States which may arise in the course of conversation or of home instruction;

2. To professional men, who often wish to find some recorded facts in our history, but have not the leisure or the opportunity to search through volumes for them;

3. To instructors of the young, especially to those who in schools teach the elements of our history from text-books, for teacher and pupils often wish to know more of subjects which are sometimes barely alluded to in the manuals.

4. To journalists, publicists, and writers of every class, whose vocation compels them to obtain information upon all subjects with as much facility as possible; and to statesmen and public speakers for the same reason.

This work combines the qualities of an illustrated history of the United States, a dictionary of American biography, and an American portrait-gallery. In its preparation every available source of information has been sought. In its scope it is confined strictly to our national history, including persons and events elsewhere, having a relation thereto.

To this revised edition a supplement has been appended and necessary additions.

BENSON J. LOSSING.

# INDEX TO ILLUSTRATIONS.

## A.

ABATIS, 883.  
 Acland, Christina Harriet, 5.  
 Acland, Major John Dyke, 5.  
 Adams, Charles Francis, 6.  
 Adams, John, 7.  
 Adams, John Quincy, 8.  
 Adams, Samuel, 8.  
 Agassiz, Louis John Rudolph, 13.  
 Alabama, State Seal of, 14.  
*Alabama*, The, 15.  
*Albemarle*, Ram, 18.  
 Algiers in 1800, 389.  
 Allatouna Pass, 24.  
 Allen, William Henry, 26.  
 Allison, Washington, 27.  
 Americus Vesputius, 38.  
 Ames, Fisher, 39.

# HARPERS' POPULAR CYCLOPÆDIA

OF THE

## HISTORY OF THE UNITED STATES.

### A.

**Abbadie, M. DE, Governor of Louisiana 1763–65.** The King of France had a factory at New Orleans, and, in 1763, Abbadie arrived and assumed the functions of its director-general with the powers of a military commandant. In 1764, he was ordered to surrender the country to Spain, which he did at the close of the year. Grief at this change in his fortune caused his death, Feb. 4, 1765. Abbadie was a man of noble impulses; he protected the Indians, caused the masters to treat their slaves more kindly, and in many ways endeared himself to the Louisianians.

**Abbott, JACOB,** an eminent writer for youth, was born at Hallowell, Maine, Nov. 14, 1803; died at Farmington, Maine, Oct. 31, 1879. He graduated at Bowdoin College in 1820, and at Andover Theological Seminary in 1825. From 1825 to 1829 he was professor of mathematics and natural philosophy in Amherst College. He chose the pursuit of literature in the attractive and useful field of affording instruction to the young. One of the earliest of his almost 200 volumes printed was *The Young Christian*, issued the year of his graduation at Andover. His books are remarkable for their wealth of information, their absolute purity of tone and expression, and for their wonderful attractiveness for the young of both sexes. Few men have done so much for the intellectual and moral training of the young for lives of usefulness as Jacob Abbott. His interest in young people never abated through a long and laborious life. His later years were spent upon the old homestead at Farmington, significantly called "Few Acres," for its area of land was small and it was cultivated and adorned by the hands of its owner. His personal character was as lovely as his most ardent admirer, among his millions of readers, could imagine.

**Abbott, JOHN STEVENS CABOT** (brother of Jacob), historian, was born at Brunswick, Maine, Sept. 18, 1805. He graduated at Bowdoin College in 1825, and at Andover Theological Seminary in 1829. Ordained minister in 1830, and first settled at Worcester. His first work, *Mother at Home*, has been translated into several foreign languages. His literary labors have

been chiefly in the field of history. He was settled over a congregation in Fair Haven, Conn., at the time of his death, which occurred on June 17, 1877.

**Abenakes, or Abnakis** (men of the Eastern Land), a group of Algonquin tribes originally occupying the State of Maine. They adhered to the French, whose missionaries converted most of them to Christianity. (See *Algonquins*.)

**Abercrombie, JAMES,** was born at Glassaugh, Scotland, in 1706; died April 23, 1781, while governor of Stirling Castle. In 1746 he became a colonel in the British army; was made major-general in 1756, lieutenant-general in 1759, and general in 1772. He came to America in 1756, where he held the chief military command until the arrival of Lord Loudon. After the departure of that officer, Abercrombie resumed the command. In July, 1758, he attacked Ticonderoga with a large force, but was repulsed (see *Ticonderoga*) with a loss of about 2000 men. He was succeeded by General Amherst in September following, returned to England in 1759, and became a member of Parliament, wherein he advocated the obnoxious measures that led to the war of the Revolution in 1775.

**Abercrombie, JAMES W.,** died at Boston, Mass., June 24, 1775. Son of General James Abercrombie. He had served on the staff of General Amherst, in America, and was commissioned a lieutenant in the British army in March, 1770. While leading the British Grenadiers in the battle of Bunker's (Breed's) Hill, June 17, 1775, he was mortally wounded.

**Abercrombie, JOHN JOSEPH,** graduated at the West Point Military Academy in 1822. Entering the 1st Infantry, he was its adjutant from 1825 to 1833. Serving in Florida and Mexico, he was promoted to brevet-lieutenant-colonel for gallantry in the battle of Monterey (which see), where he was severely wounded. He was commissioned lieutenant-colonel in May, 1852, colonel in Feb. 1861, and was breveted brigadier-general U. S. Army March 13, 1865. In June following he retired. He was a brigadier-general of volunteers in the Civil War, and commanded a brigade in Patterson's division on the

Upper Potomac in 1861. He was transferred to Banks's division in July. Early in 1862 he joined the Army of the Potomac, and was slightly wounded in the battle of Fair Oaks.

**Abolition Convention (1794).** Societies and individuals had, from time to time, called the attention of Congress to the subject of the abolition of slavery and the slave-trade. There were several abolition societies formed in various parts of the free-labor states, and these sent delegates to a convention at Philadelphia, which opened Jan. 1, 1794. The Convention presented a carefully worded petition to Congress, praying that body to do what it might, constitutionally, for the suppression of the slave-trade, to which the Constitution gave a lease of life for sixteen years longer. This memorial, with several petitions from Friends, or Quakers, was referred to a select committee. A bill which the committee reported was passed without opposition. It prohibited the fitting-out of ships in the United States for supplying any foreign country with slaves, under penalty of forfeiture of the vessel and a fine of \$2000. This was the first act of Congress for the suppression of the slave-traffic.

**Abolition of the Slave-trade in Virginia.** While Jefferson was on his way to attend a meeting of the Convention of Virginia (August, 1774), he was detained by sickness. He sent forward a paper for the consideration of that body, in which his convictions concerning slavery and the slave-trade were freely uttered, and foreshadowed his draft of the Declaration of Independence. He made special complaints of the wrongs to Virginia by forcing slavery upon her, by the king's repeated veto of laws for its banishment. The paper was approved everywhere, and the following resolution, afterwards offered by Peyton Randolph, was passed by the Virginia Assembly: "After the first day of November next, we will neither ourselves import, nor purchase any slave or slaves imported by any other person, either from Africa, the West Indies, or any other place." Nearly all Virginia agreed to it, and the traffic ceased for a time.

**Acadia, or Acadie,** the ancient name of Nova Scotia and adjacent regions. It is supposed to have been visited by Sebastian Cabot in 1498, but the first attempt to plant a settlement there was by De Monts, in 1604, who obtained a charter from the King of France for making settlements and carrying on trade. In that charter it is called Cadié, and by the early settlers it was known as L'Acadié. A settlement was made at a place named Port Royal (now Annapolis), by Poutrincourt, a bosom friend of De Monts, but it was broken up in 1613, by Argall, from Virginia (see *De Monts*). In 1621, the peninsula was granted to Sir William Alexander (see *Alexander*). It was finally settled by the French, and was known as Acadia until it was ceded to the English in 1713. The Acadians quietly remained after the cession, and, having taken an oath of fidelity to the British king, they were known in the English-American colonies as the Neutral French (see *Acadians*). After the treaty of Utrecht (1713), the question arose,

"What is meant by the 'ancient limits of Acadia?'" The English claimed, under that appellation, both shores of the Bay of Fundy—in fact, the whole region eastward of the Penobscot. The French limited it to the peninsula now known as Nova Scotia, claiming the north shore of the Bay of Fundy as a part of Canada. After the treaty of Aix-la-Chapelle, these opposing claims were pressed with vigor. De la Galissonniere, governor of Canada, one of the boundary commissioners, proceeded (1749) to Paris, with a vast number of documents, to settle the question; and troops from Canada established the military posts of Gaspereau and Beau Séjour at the narrowest part of the isthmus which connects Nova Scotia with the main and separates the Bay of Fundy from the Gulf of St. Lawrence. In that vicinity was planted a considerable body of French colonists, warmly attached to their ancient government. Colonel Cornwallis, English governor of Nova Scotia, not having sufficient force to expel the intruders, caused two opposing forts to be built at Beau Bassin and Menas. Meanwhile the French had established a fort near the mouth of the St. John.

**Acadia, ENGLISH SETTLERS IN.** Nova Scotia having been ceded to Great Britain by the treaty of Aix-la-Chapelle (which see), Parliament voted \$200,000 to pay the expenses of settling an English colony there. Nearly 3800 adventurers were sent over in 1749, and settled on the borders of the Bay of Chebucto, where they founded the town of Halifax, and fortified it as the seat of the English government there. These colonists were accompanied by Colonel Edward Cornwallis as their governor. The Acadians, or former French settlers, were allowed peaceably to remain there, and, having sworn never to take up arms against their countrymen, submitted to the English government, and were called "French Neutrals."

**Acadians.** A colony of Bretons, from France, settled at Port Royal (now Annapolis), in Nova Scotia in 1604-5 (see *De Monts*); and the territory now included in Nova Scotia, New Brunswick, and the adjacent islands was called Acadia. These French emigrants built cottages sixteen years before the Pilgrims landed on the shores of New England. When English people came, antagonisms arising from difference of religious and nationality appeared, and, after repeated struggles between the English and French for the possession of Acadia, it was ceded to Great Britain by the treaty of Utrecht in 1713. But for many years not a dozen English families were seen there. The descendants of the early French settlers occupied the land, and were a peaceable, pastoral people, who never engaged in the forays of the French and Indians along the New England frontiers. They were attached to their fatherland and their religion, and they refused to fight against the former or abjure the latter. This attitude was accorded to them by solemn agreements, and they were known as "French Neutrals." They were happy in their neutrality, and in their isolation they formed one great and loving family. Pure in

morals, pious without bigotry, honest, industrious and frugal, they presented an outline picture of Utopia. When New-Englanders began to colonize Nova Scotia vigorously, their priests, fired with zeal for the Church, disturbed their repose by dread of "heretics" and warnings not to take the oath of allegiance to Great Britain. "Better," said the Jesuits, "surrender your meadows to the sea, and your treasures to the flames, than, at the peril of your souls, to take the oath of allegiance to the British government." So the priests, with which Canada furnished them, and on whom they implicitly relied, disturbed the peace and led them on to their ruinous troubles. At one time they would resolve to flee to Canada; at another the love of their homes would make them resolve to remain. The haughtiness of British officers aided the priests in fomenting disaffection. The English despised the Acadians because they were helpless in their lack of knowledge of English laws, and they were continually robbed of their rights and property by English officials. Was any of their property demanded for the public service, they were "not to be bargained with for payment;" so the orders ran. Under various pretences they were continually shorn, yet they meekly submitted to the tyranny of their masters. The English officers were authorized to punish Acadians for what they might deem misbehavior, at their discretion, and if British troops should be annoyed by them, they might inflict vengeance on the nearest Acadians "whether guilty or not." Finally, persuaded by the French government and their priests, the Acadians abandoned nearly all of the peninsula, and settled themselves in a fertile region on the isthmus between the northern extremity of the Bay of Fundy and Northumberland Strait. The object of the movement was to make them form a barrier against the encroachments of the English. There the French built two forts, the principal of which was Beau Séjour, on the Bay of Fundy, where the isthmus is only fifteen miles wide. In June, 1755, a land and naval armament came from Boston, landed at the head of the Bay of Fundy, captured the forts, and took military possession of the country of the French Neutrals. The French soldiers were sent to Louisbourg, and the Acadians who had been forced into the French service were granted an amnesty. They readily took an oath of allegiance, expected forbearance, and went on quietly cultivating their land. But the exasperation of the people of New England, because of the horrible forays of the French and Indians on their frontiers, had to be appeased, and vengeance was inflicted upon these innocent people. It was resolved to banish the French Neutrals from their country. Governor Shirley had proposed it years before, in order to supply their place with Protestants; and the British government had promoted emigration thither, that a strong admixture of Protestants might neutralize the efforts of the priests to make the Acadians disloyal. Now Shirley's scheme was adopted, and General Winslow, who commanded the invaders, was made the executor of it. The Acadians were

driven from their country, and scattered among the English colonies. (*See Acadians, Expulsion of the.*) Even in this sad and bitter exile they were subjected to the hatred and cruelty of English officials. When Lord Loudon was commander-in-chief in America, some of the Acadians settled in Pennsylvania ventured to address a respectful petition to him. Offended because the document was in the French language, the earl seized five of the leading men who signed the petition, and who had been persons of wealth and distinction in Acadia, and sent them to England, with a request that, to prevent their being troublesome in the future, they should be consigned to hard service as common sailors in the Royal navy. The king seems to have approved the measure; and the Lords of Trade, when the desolation of Acadia was made complete, congratulated the profligate monarch that the zeal of the Governor of Nova Scotia, who had driven them away, had been "crowned with entire success." Exquisitely cruel was the treatment these poor people received at the hands of their conquerors. The method employed to legally dispossess the Acadians of their coveted lands was most disgraceful. They had taken the oath of allegiance, but refused to take an oath that they would bear arms against the French if required, and practically abjure their religion. Exemption from this had been solemnly promised them. The Governor of Nova Scotia referred the matter to the chief-justice of the province, as a technical question in law, whether one who refuses to take all required oaths could hold lands in the British dominions. The chief-justice decided against the Acadians, and it was determined to take their lands away from them, and distribute them among the English colonists. The French government asked leave for the Acadians to take with them their effects and to settle where they chose. "No," replied their masters, "they are too useful subjects to be lost; we must enrich our colonies with them." Unfortunately for the poor people, some of their best men presented a petition to the governor at Halifax. He would not receive it, and demanded that they should immediately take the oaths required before the Council. "We will do as our people may determine," they meekly replied, and asked permission to return home and consult them. The next day, perceiving the perilous position of their people, they offered to take the oaths. "By a law of the realm," said the governor, "Roman Catholics, who have once refused to take the oaths, cannot be permitted to do so afterwards, and are considered Popish recusants." They were cast into prison, and the chief-justice decided that all the French inhabitants—hundreds of innocent families who were ignorant of all these proceedings—were "rebels and Popish recusants," and stood in the way of "English interests" in the country, and that they had forfeited all their possessions to the crown. So their doom was sealed.

**Acadians, EXPULSION OF THE.** The English conquerors of Nova Scotia, or Acadia, were made uneasy by the presence, in that country, of 12,000

or 15,000 French Roman Catholics attached to their fatherland and their Church, and in close friendship with the surrounding Indian tribes. The English also coveted the rich lands in possession of this simple, pastoral people (see *Acadians*), and it was determined at a council of the local government at Halifax to carry out the atrocious proposal of Governor Shirley, namely, to remove them in a body from the peninsula, and distribute them among the several English colonies. If they were permitted to go to Canada or Cape Breton, they would thus strengthen the enemies of the English; to distribute them would destroy their strength and prevent attempts to return. To accomplish this, a disgraceful artifice was employed. The English authorities issued a proclamation, ordering "both old and young men, as well as all the lads of ten years of age," to assemble on Sept. 5, 1755, at designated places. They obeyed. The proceedings at one place afford a fair picture of those at all others. At Grand-Pré, 418 unarmed men and youths were assembled, and marched into the church. There General Winslow told them they had been called together to hear the decision of the King of England in regard to the French inhabitants of the province. "Your lands and tenements," he said, "cattle of all kinds, and live stock of all sorts, are forfeited to the crown, and you, yourselves, are to be removed from this his province. I am, through his majesty's goodness, directed to allow you liberty to carry off your money and household goods, as many as you can, without discommoding the vessels you go in. *You are now the king's prisoners.*" Every household in Grand-Pré was filled with consternation. At Grand-Pré alone 1923 men, women, and children were driven on board British vessels at the point of the bayonet. Fully 2000 were thus expelled from their homes in Acadia. The men and boys assembled at the church went first; the sisters, wives, and daughters had to wait for other transports. They marched from the church to the water's edge, some in sullen despair, others with hands clasped and eyes uplifted, praying and weeping, and others singing hymns, while on each side of the sad procession was a row of women and children on their knees, imploring blessings upon the heads of dear ones. They were all finally distributed in the various English colonies. Many families, separated at the outset by the cruel arrangements for their transportation, were never reunited; and for a long time the colonial newspapers contained advertisements seeking information about fragments of dismembered families. They were dropped along the shores of the English colonies, from the Penobscot to the Savanuah, without resources, and ignorant of the language of the people among whom they were thrust, excepting in South Carolina, where the Huguenot families treated them with great kindness. They abhorred the almshouse and dreaded service in English families. They yearned intensely for their native land and kindred in language and religion. Many wandered through the forests to Canada and Louisiana—men, women, and

children—sheltered in bush-camps and kindly cared for by the Indians, that they might rest under French dominion. Some families went to sea in open boats, to find their way back to Acadia; and, coasting along the shores of New England, were there met by orders from Nova Scotia to stop all returning fugitives. Many touching stories of parents seeking their children, husbands their wives, and lovers their affianced have been related. It is a sad, sad story of man's inhumanity to man.

**Accession of Rhode Island to the Union.** Rhode Island at first refused to consider the National Constitution; but when the new National Government went into operation under it, the people of that little state (who had been generously offered by the new Constitution an equal representation in the National Senate with the largest state), began to feel their isolation keenly, and early in 1790 the Legislature, by the casting vote of the governor, authorized the calling of a State Convention to take that fundamental law of the land into consideration. In that convention there was a majority of opponents of the Constitution. They dared not reject the instrument outright, and postponed action by carrying a motion for adjournment. The secession of the two commercial towns of Providence and Newport was openly talked of, as was also a partition of the whole state between Massachusetts and Connecticut. At length (May 18, 1790) the National Senate passed a bill, and sent it down to the House, for prohibiting commercial intercourse with the recusant state, and authorizing a demand upon it for her quota towards the Continental debt. On the reassembling of the Rhode Island Convention, the Constitution was ratified by a majority of two votes. The convention proposed twenty-one amendments to the Constitution, and adopted a Bill of Rights. On the 1st of June, 1790, the President, in a message to both Houses, announced the accession of Rhode Island. Thus the thirteen states were again united.

**Accidental Discoverers.** About the year 860, Noddodr, an illustrious sea-rover, driven by a storm, discovered Iceland, and named it Snowland. Not many years afterwards, Earl Ingolf, of Norway, sought Iceland as a refuge from tyranny, and planted a colony there. Greenland was discovered by accident. One of the early settlers in Iceland was driven westward on the sea by a storm, and discovered Greenland. To that retreat Eric the Red was compelled to fly from Iceland, and finding it more fertile than the latter, named it Greenland, made it his place of abode, and attracted other Northerners thither. Among Eric's followers was a Norwegian, whose son Bjarni, or Biarne, a promising young man, trading between Norway and Iceland, and finding his father gone with Eric, proposed to his crew to go to his parent in Greenland. They were driven westward, and, it is believed, they saw the American continent in the year 986. The sons of Eric heard the stories of Bjarni, and one of them, Lief, sailed in search of the new-

ly discovered land, and found it. (See *Northmen*.)

**Acland, CHRISTINA HARRIET CAROLINE FOX**, daughter of the Earl of Ilchester, was born in 1750; died at Tetten, near Taunton, England, July 21, 1815. She married, in 1770, Major John Dyke Acland, of the British army, who was with Burgoyne in his campaign in Northern New York, which ended with the capture of himself and army at Saratoga in the autumn of 1777. In the battle of October 7, her husband was severely wounded and taken prisoner. She obtained permission to join him within the American lines, where she tenderly nursed him. She had accompanied her husband during the whole campaign, and had won the admiration of all by her gentle spirit, her wifely devotion, and her fortitude. After Major Acland's recovery they went to New York and thence to England. She is familiarly known as "Lady Harriet Acland." The popular story that, after her husband's death in a duel, she became insane for a time, and finally married Mr. Brudenell, a chaplain in Burgoyne's army (who accompanied her through the lines to her wounded husband), is untrue. She died the widow of Major Acland, as the burial register attests, according to a letter received by William L. Stone from Sir Thomas Dyke Acland, a grand-nephew of Major Acland. In that letter

CHRISTINA HARRIET ACLAND.

it is asserted that the story that Major Acland was "shot through the head and killed" in a duel is equally untrue. (See *Acland, Major*.)

**Acland, MAJOR JOHN DYKE**, was an officer in the British army, and a commander of grenadiers. He was with Burgoyne in his invasion of Northern New York in 1777, and at the same time he was a member of Parliament. In the battle at Saratoga (Oct. 7, 1777) he was severely wounded—shot through the legs—and made a prisoner. Taken to the American headquarters on Bemis's Heights, his devoted wife, Lady

Harriet, was permitted to pass through the lines and attend him. She was kindly received and treated by the American officers;

MAJOR JOHN DYKE ACLAND.

and their bearing towards their wounded prisoners excited the Major's gratitude and warm esteem. After his return to England he was provoked to give the lie direct to Lieutenant Lloyd, at a dinner-party, because the latter cast aspersions upon the Americans. A duel ensued on Bampton Down. The Major was unhurt, but a severe cold, which he contracted at the time of the duel, culminated in a fever, which caused his death at his seat at Pixton, Somersetshire (now the residence of the Earl of Carnarvon, a great-grandson of Lady Acland), on the 31st of October, 1778. His widow survived him thirty-seven years.—*Sketch of Lady Acland by W. L. Stone.* (See *Acland, Christina Harriet Caroline Fox*.)

**Acuera's Rebuke.** The cruelties of Narvaez and De Soto in Florida aroused among the native tribes feelings of the bitterest hatred. Narvaez caused a captive cacique, or chief, to be mutilated after the first engagement with the hostile Indians. His nose was cut off, and he was otherwise disfigured; and the invader caused fierce blood-hounds to tear the chief's mother in pieces in the presence of her children. Narvaez supposed this would strike terror, and make conquest easy; but he was mistaken. (See *Narvaez*.) De Soto had blood-hounds, iron neck-collars, hand-cuffs, chains, and instruments of torture, wherewith to subdue the barbarians, who were really less barbarous than he. He loaded his captives with chains, and made beasts of burden of them regardless of age or sex. After some acts of this kind, he sought to conciliate Acuera, a Creek cacique, or ruler, whose territory he had invaded, for he was powerful, and commanded many warriors. De Soto invited the dusky sovereign to a friendly interview, when he received from Acuera this haughty reply: "Oth-

ers of your accursed race [Narvaez and his men] have, in years past, disturbed our peaceful shores. They have taught me what you are. What is your employment? To wander about like vagabonds from land to land; to rob the poor and weak; to betray the confidence [see *Maiden Indian Queen*]; to murder the defenceless in cold blood. No! with such a people I want neither peace nor friendship. War—never-ending, exterminating war—is all I ask. You boast yourselves to be valiant—and so you may be; but my faithful warriors are not less brave, and of this you shall one day have proof, for I have sworn to maintain an unsparing conflict while one white man remains in my borders; not openly in the battle-field, though even thus we fear not to meet you, but by stratagem, ambush, and midnight surprisal." De Soto then demanded that Acuera should yield obedience to the Spanish monarch. "I am a king in my own land," said the cacique, "and will never become the vassal of a mortal like myself. Vile and pusillanimous is he who submits to the yoke of another when he may be free! As for me and my people, we prefer death to the loss of liberty and the subjugation of our country." De Soto could never pacify Acuera, and during the twenty days that he remained in the cacique's dominions his command suffered dreadfully. A Spaniard could not go a hundred paces from his camp without being slain, and his severed head being carried in triumph to Acuera. Fourteen Castilians so perished, and many were severely wounded. "Keep on! robbers and traitors!" said the cacique. "In my province and in Apalacha you will be treated as you deserve. We will quarter and hang every captive on the highest tree." And they did so. (See *De Soto and Narvaez*.)

**Adair, JOHN**, born in Chester Co., S. C., in 1757; died at Harrodsburg, Ky., May 19, 1840. He served in the Continental army during the Revolution, and in the wars against the frontier Indians, 1791-93. He was U. S. Senator in Congress in 1805-6; and as volunteer aid to General Shelby at the battle of the Thames, in 1813, he showed much bravery and skill. He distinguished himself as commander of the Kentucky troops in the battle of New Orleans, January, 1815. From 1820 to 1824 he was Governor of Kentucky, having served in the Legislature of that state; and from 1831 to 1833 was a representative in Congress.

**Adams, CHARLES FRANCIS, LL.D.**, son of John Quincy Adams, was born in Boston, Aug. 18, 1807, and graduated at Harvard University in 1825. He accompanied his father to St. Petersburg and England, where he passed much of his childhood until the return of his family to America in 1817. Mr. Adams studied law in the office of Daniel Webster, and was admitted to the bar in 1823, but never practised it as a vocation. In 1829 he married a daughter of Peter C. Brooks, of Boston. For five years he was a member of the Legislature of Massachusetts. Having left the Whig Party, he was a

candidate of the Free-soil Party (which see) in 1848 for the Vice-Presidency of the United States, Mr. Van Buren being the candidate for the Presidency. They were defeated. In 1850-56 Mr. Adams published the *Life and Works of John Adams* (his grandfather), in ten volumes. In 1859 he was elected to a seat in Congress from the district which his father long represented. He was then a Republican in politics. In March, 1861, he was appointed Minister to Great Britain, where he managed his diplomatic duties with much skill during one of the most trying times in our history—that of the Civil War. He remained as American Minister in London until 1863, when, in February, he re-

CHARLES FRANCIS ADAMS.

signed. In 1876 Mr. Adams was first a Liberal Republican, and then a Democrat, in politics. His labors in the field of literature have been various. From 1845 to 1848 he edited a daily newspaper in Boston, and has long been either a regular or an occasional contributor to the *North American Review*. His principal task has been the preparation of the *Life and Works of John Adams*, and a *Life of John Adams*, in two volumes. He has also issued the *Life and Works of John Quincy Adams*, in 12 volumes. (See *Adams's Resolution*, 1860.) He died Nov. 21, 1886.

**Adams, HANNAH**, historian, was born in Medfield, Mass., in 1755; died at Brookline, Mass., Nov. 15, 1831. By an early fondness for study, which was promoted by her father, a man of literary tastes, she obtained a knowledge of Latin and Greek from some divinity students boarding at her father's house before she had arrived at full womanhood. Her father, a shop-keeper, failed in business when she was seventeen years of age, and his children were compelled to help themselves. During the war for independence, she supported herself by teaching and lace-making. Miss Adams wrote a *History of the Jews*, in which she was assisted by the Abbé Grégoire, with whom she corresponded. She also wrote a *History of New England*, published in 1799. She also wrote books on religious subjects; and, in 1814, she published a *Controversy with Dr. Morse* (Rev. Jedidiah). Her autobiography, continued by Mrs. G. G. Lee, was published in 1832. Miss Adams was small in stature, very

deaf in her old age, fond of strong tea, and an inveterate snuff-taker. She derived very little pecuniary gains from her writings; but her friends established a comfortable annuity for her. She was one of the pioneer literary women of our country, possessing rare modesty and great purity of character. Her remains were the first interred in Mount Auburn Cemetery.

**Adams, JOHN**, second President of the United States; born at Braintree (near Quincy), Mass., Oct. 19, 1735; died there July 4, 1826. He graduated at Harvard University in 1755, and immediately afterwards taught school at Worcester, where he began the study of law. His father was in moderate circumstances—a selectman and a farmer. Beginning the profession of law in Braintree in 1758, he soon acquired a good practice; and, when he was twenty-nine years of age, he married Abigail Smith, an accomplished woman possessed of great common-sense. His first appearance in the political arena was as author of "Instructions of the Town of Braintree to its Representatives on the Subject of the Stamp Act," which was adopted by over forty towns. Associated with Gridley and Otis in supporting a memori-

JOHN ADAMS.

al addressed to the Governor and Council, praying that the courts might proceed without the use of stamps, Adams opened the case by declaring that the Stamp Act was void, as Parliament had no right to make such a law. He began early to write political essays for the newspapers; and, in 1768, he went to Boston, when the town was greatly excited by political disturbances. There he was counsel for Captain Preston in the case of the "Boston Massacre" (which see); and in the same year (1770) he was elected to a seat in the General Court. From that time John Adams was a leader among the patriots in Massachusetts. He was a delegate to the first Continental Congress (1774), where he took a leading part. Re-

turning, he was elected a member of the Provincial Congress. He was an efficient speaker and most useful committee-man in the Continental Congress until he was appointed commissioner to France, late in 1777, to supersede Deane. He advocated, helped to frame, voted for, and signed the Declaration of Independence, and he was a most efficient member of the Board of War from June, 1776, until December, 1777. He reached Paris April 8, 1778, where he found a feud between Franklin and Lee, two other commissioners. He advised intrusting that mission to one commissioner, and Franklin was made sole ambassador. He was appointed minister (1779) to treat with Great Britain for peace, and sailed for France in November. He did not serve as commissioner there, but, in July, 1780, he went to Holland to negotiate a loan. He was also received by the States-General as United States Minister, April 19, 1782. He obtained a loan for Congress of two million dollars, and made a treaty of amity and commerce. He returned to Paris in October, and assisted in negotiating the preliminary treaty of peace. With Franklin and Jay, he negotiated a treaty of commerce with Great Britain; and, in the following winter, he negotiated for another Dutch loan. In 1785 Adams went as Minister to the English court, and there he prepared his *Defence of the American Constitution*. Being coldly received, he returned home, and, in 1788, was elected Vice-President of the United States under the National Constitution. He sustained the policy of Washington through the eight years of his administration, opposed the French Revolution, and was a strong advocate for the neutrality of the United States (see *Washington's Proclamation of Neutrality*). In 1796 he was chosen President by a small majority over Jefferson, and his administration was vehemently opposed by the new party known as Republicans, led by the latter, its real founder. He had much trouble with the French Directory (which see) throughout his entire administration, and drew upon himself great blame for favoring the Alien and Sedition Law (which see). In his eagerness for re-election Adams offended a powerful faction of his party, and was beaten by Jefferson at the election for President in 1800. Then he retired to private life, where he watched the course of events with great interest for twenty-five years longer. His death occurred on the same day, and at almost the same hour, as that of Jefferson, his colleague on the drafting-committee and in signing of the Declaration of Independence, fifty years before. His biography, diary, essays, and correspondence were edited and published, in ten octavo volumes, by his grandson, Charles Francis Adams. Though courteous in his manner usually, he was, at times, irritable and imperious. (See *Adams's Scheme of Government*.)

**Adams, JOHN QUINCY**, sixth President of the United States; was born in Braintree, Mass., July 11, 1767; died in Washington, D. C., Feb. 23, 1848. He was a son of President John Adams, and graduated at Harvard University

in 1787. In February, 1778, he accompanied his father to France, where he studied the French and Latin languages for nearly two

JOHN QUINCY ADAMS.

years. After an interval, he returned to France, and resumed his studies, which were subsequently pursued at Amsterdam and at the University of Leyden. At the age of fourteen years, he accompanied Mr. Dana to Russia as his private secretary. The next year he spent some time at Stockholm, Copenhagen, and Hamburg. He afterwards accompanied his father (who was American Minister) to England and France, and returned home with him early in 1785. After his graduation at Harvard, he studied law with the eminent Theophilus Parsons, practised at Boston, and soon became distinguished as a political writer. In 1791 he published a series of articles in favor of neutrality with France over the signature of "Publius." He was engaged in the diplomatic service of his country as Minister, successively, to Holland, England, and Prussia from 1794 to 1801. He received a commission, in 1798, to negotiate a treaty with Sweden. At Berlin he wrote a series of *Letters from Silesia*. Mr. Adams married Louisa, daughter of Joshua Johnson, American Consul at London, in 1797. He took a seat in the Senate of Massachusetts in 1802, and he occupied one in that of the United States from 1803 until 1808, when, disagreeing with the Legislature of Massachusetts on the embargo question, he resigned. From 1806 to 1809 he was professor of rhetoric in Harvard University. In the latter year he was appointed by President Madison Minister to Russia; and in 1814, while serving in that office, he was chosen one of the United States commissioners to negotiate a treaty of peace at Ghent. After that, he and Henry Clay and Albert Gallatin negotiated a commercial treaty with Great Britain, which was signed July 13,

1815. Mr. Adams remained in London as resident Minister until 1817, when he was called to the cabinet of President Monroe as Secretary of State. In 1824 he was elected President of the United States (see *Adams, J. Q., Election of*), serving one term from March 4, 1825. In 1831 he was elected to a seat in Congress, and was continued in it by successive elections until his death, which occurred suddenly in the Capitol. His last words were, "This is the last of earth; I am content." Mr. Adams was a ripe scholar, an able diplomatist, a life-long opponent of human slavery, a bold and unflinching advocate for its abolition from our land, and an eloquent orator. When he was eighty years of age he was called "The old man eloquent." He wrote prose and poetry with almost equal facility and purity of diction.

Adams, SAMUEL, was born in Boston, Sept. 27, 1722; died there, Oct. 2, 1803. He graduated at Harvard University in 1742, and was honored with the degree of LL.D. by it in 1792. The tendency of his mind was shown when, at the age of twenty-one, receiving the degree of A.M., he proposed, and took the affirmative on, the question, "Whether it be lawful to resist the Supreme Magistrate if the Commonwealth cannot otherwise be preserved?" He published a pamphlet at about the same time entitled *Englishmen's Rights*. He became an unsuccessful merchant, but a successful writer; and gained great popularity by his political essays against the administration of Governor Shirley. Stern in morals, a born republican, and with courage equal to his convictions, Samuel Adams was a natural leader of the opposers of the Stamp Act and kindred measures of Parliament, and from that period (1765) until the independence of the colonies was achieved he

SAMUEL ADAMS.

was a foremost leader of the patriot host. He suggested the Stamp Act Congress, and was a continual object of dread and hatred to the colonial governors. He proposed the first Committee of Correspondence in Massachusetts in

1772; and, when General Gage besought him to make his peace with the king, he replied, "I trust I have made my peace with the King of kings. No personal considerations shall induce me to abandon the righteous cause of my country." In 1774 he was the chief in maturing the plan for a Continental Congress; was a member of it; and served in that body most efficiently from that time until 1781. So early as 1769 Mr. Adams advocated the independence of the colonies, and was one of the warmest supporters of it in the Congress. When debating on the Declaration of Independence, Adams said, "I should advise persisting in our struggle for liberty though it were revealed from heaven that nine hundred and ninety-nine were to perish, and one of a thousand were to survive and retain his liberty. One such freeman must possess more virtue, and enjoy more happiness, than a thousand slaves; and let him propagate his like, and transmit to them what he has so nobly preserved." Mr. Adams assisted in drafting the State Constitution of Massachusetts (1779), was President of his State Senate (1781), member of his State Convention that ratified the National Constitution, lieutenant-governor (1789-94), and governor (1794-97). He sympathized with the French Revolutionists, and was a Jeffersonian Democrat in politics in his latter days. The purity of his life, and his inflexible integrity, were attested by friends and foes. Hutchinson, in a letter to his government, said he was of "such an obstinate and inflexible disposition that no gift nor office would ever conciliate him." His piety was sincere, and he was a thoroughbred Puritan. Without fortune, without a profession, he depended on moderate salaries and emoluments of office; and for almost fifty years a daily maintenance, frugal in the extreme, was eked out by the industry and prudence of his second wife, whom he married in 1757. Samuel Adams appears as one of the grandest figures among representative Americans.

**Adams and Hancock.** Samuel Adams and John Hancock were regarded as arch-rebels by General Gage, and he resolved to arrest them and send them to England to be tried for treason. A capital part of his scheme, in sending out the expedition to Lexington and Concord (April 18-19, 1775), was the seizure of these patriots, who, members of the Provincial Congress, had tarried at Lexington on being informed of Gage's intention to arrest them on their return to Boston. They were at the house of Rev. Jonas Clarke, and Gage thought to surprise and capture them at midnight. The vigilant Warren, learning the secret of the expedition, sent Paul Revere to warn the patriots of their danger. Revere waited at Charlestown for a signal-light from the sexton of the North Church, to warn him of the forward movement of the troops. It was given, and on Deacon Larkin's swift horse Revere sped to Lexington. At a little past midnight he rode up to Clarke's house, which he found guarded by Sergeant Monroe and his men. In hurried words he

asked for Hancock. "The family have retired," said the Sergeant, "and I am directed not to allow them to be disturbed by any noise." "Noise!" exclaimed Revere; "you'll have noise enough before long; the regulars are coming out!" He was then allowed to knock at the door. Mr. Clarke appeared at a window, when Revere said, "I wish to see Mr. Hancock." "I do not like to admit strangers into my house so late at night," answered Mr. Clarke. Hancock, who was not asleep, recognized Revere's voice, and called out, "Come in, Revere, we are not afraid of you." The warning was given; the whole household was soon astir, and the two patriots awaited the coming of the enemy. When they approached, the "arch-rebels" were persuaded to retire to a more secure retreat, followed by Dorothy Quincy, to whom Hancock was affianced (and whom he married in September following), who was on a visit at Mr. Clarke's. When Adams, from a wooded hill near Clarke's house, saw the beginning of the skirmish at Lexington, he exclaimed, with prophetic prescience, "What a glorious morning for America is this!" In a proclamation (June 12) in which he denounced those in arms and their abettors to be "rebels and parricides of the Constitution," and offered a free pardon to all who should forthwith return to their allegiance, General Gage excepted Adams and Hancock, who were outlawed, and for whom he offered a reward as "arch-traitors."

"Adams and Liberty." In the spring and early summer of 1798, a war-spirit of great intensity excited the American people. The conduct of France towards the United States and its ministers had caused the American government to make preparations for war upon the French. In June, Robert Treat Paine, a poet of considerable merit, and a native of Massachusetts, was engaged to write a patriotic song to be sung at the anniversary of the "Massachusetts Charitable Fire Society." He composed one which he entitled "Adams and Liberty." It was adapted to the spirit of the time, and had a wonderful effect upon the people. It was really a war-song, in nine stanzas. The following verses expressed the temper of the people then:

"While France her huge limbs bathes recumbent in blood,  
And Society's base threats with wide dissolution,  
May Peace, like the dove, who returned from the flood,  
Find an ark of abode in our mild Constitution.

But though Peace is our aim,  
Yet the boon we disclaim,  
If bought by our Sov'reignty, Justice, or Fame.

"Tis the fire of the flint, each American warms;  
Let Rome's haughty victors beware of collision,  
Let them bring all the vassals of Europe in arms—  
We're a world by ourselves, and disclaim a division.  
While with patriot pride  
To our laws we're allied,  
No foe can subdue us, no faction divide.

"Our mountains are crowned with imperial oak,  
Whose roots, like our liberties, ages have nourished;  
But long ere our nation submits to the yoke,  
Not a tree shall be left on the field where it flourished.  
Should invasion impend,  
Every grove would descend  
From the hill-tops they shaded, our shores to defend.

"Let our patriots destroy Anarch's pestilent worm,  
Lest our Liberty's growth should be checked by corrosion;  
Then let clouds thicken round us, we heed not the storm,  
Our realm fears no shock but the earth's own explosion.

Foes assail us in vain,  
Though their fleets bridge the main,  
For our altars and laws with our lives we'll maintain.  
For ne'er shall the sons of Columbia be slaves  
While the earth bears a plant or the sea rolls its waves."

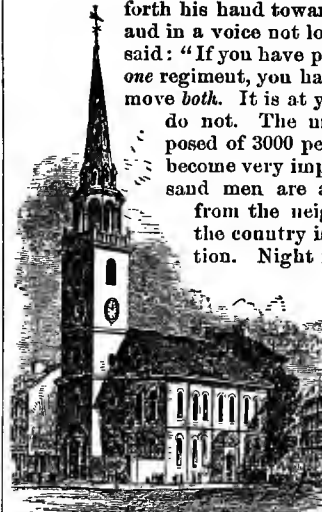

At the home of Major Russell, editor of the *Boston Centinel*, the author offered it to that gentleman. "It is imperfect," said Russell, "without the name of Washington in it." Mr. Paine was about to take some wine, when Russell politely and good-naturedly interfered, saying, "You can have none of my wine, Mr Paine, until you have written another stanza with Washington's name in it." Paine walked back and forth a few minutes, called for a pen, and wrote the fifth verse in the poem as follows :

"Should the tempest of war overshadow our laod,  
Its bolts could ne'er rend Freedom's temple asunder;  
For, unmoved, at its portal, would Washington stand,  
And repulse with his breast the assaults of the thunder!  
His sword from the scieep  
Of its scabbard would leap,  
And conduct with its point ev'ry flash to the deep!  
For ne'er shall the sons of Columbia be slaves  
While the earth bears a plant or the sea rolls its waves."

This song became immensely popular, and was sung all over the country—in theatres and other public places, in drawing-rooms and workshops, and by the boys in the streets. The sale of it, printed on a "broadside," yielded the author a profit of \$750.

**Adams (JOHN QUINCY), Election of, as President.** When Monroe's administration was drawing to a close, several prominent men were spoken of as candidates for the Presidency—William H. Crawford, John Quincy Adams, Henry Clay, John C. Calhoun, and Andrew Jackson. The votes in the autumn of 1824 showed that the people had not elected either of the candidates; and when the votes of the Electoral College were counted, it was found that the choice of President devolved upon the House of Representatives. In February, 1825, that body chose John Quincy Adams President, and John C. Calhoun Vice-President. Mr. Adams received the votes of thirteen states on the first ballot, General Jackson seven states, and Mr. Crawford four states. Mr. Calhoun received the votes of 182 of the electors, against 78 for all others. The Electoral College had given Jackson the largest vote of any candidate—99—and Adams 84.

**Adams (SAMUEL) overawes Hutchinson.** Immediately after the "Boston Massacre" (which see), a monster meeting of citizens of Boston was held in the Old South Meeting-house, and appointed a committee, consisting of Samuel Adams, John Hancock, William Molineux, William Phillips, Joseph Warren, Joshua Henshaw, and Samuel Pemberton, to call on Lieutenant-governor Hutchinson, and demand the removal of the British troops from Boston, by presenting resolutions to that effect adopted by the meeting. Adams submitted the resolutions. The Lieutenant-governor and Colonel Dalrymple were disposed to temporize. Hutchinson said he had no power to remove all the troops. Adams proved that he had, by the terms of the charter. Still the crown officers hesitated. Adams resolved that there should be no more trifling with the will of the people. Stretching

OLD SOUTH MEETING-HOUSE.

forth his hand towards Hutchinson, and in a voice not loud but clear, he said: "If you have power to remove one regiment, you have power to remove both. It is at your peril if you do not. The meeting is composed of 3000 people. They are become very impatient. A thousand men are already arrived from the neighborhood, and the country is in general motion. Night is approaching; an immediate answer is expected." This was the voice of the province—of the continent—Hutchinson grew pale; his knees trembled; and Adams afterwards said, "I enjoyed the sight." After conferring together in a whisper, Hutchinson and Dalrymple promised to send all the troops to Castle William, in Boston Harbor.

**Adams's (JOHN) Cabinet Ministers (1797).** Timothy Pickering, Secretary of State; Oliver Wolcott, Secretary of the Treasury; James M'Henry, Secretary of War; Charles Lee, Attorney-general. This was the cabinet council left by Washington, which Mr. Adams adopted. Washington's first cabinet had all resigned during the early part of his second term of office, and the above-named gentlemen were appointed during 1795 and 1796.

**Adams's (JOHN Q.) Cabinet Ministers (1825).** President Adams nominated for his cabinet Henry Clay, of Kentucky, Secretary of State; Richard Rush, of Pennsylvania, Secretary of the Treasury; James Barbour, of Virginia, Secretary of War. These nominations were all immediately confirmed by unanimous votes excepting that of Mr. Clay, against whom fourteen votes were cast. Samuel L. Southard, whom Monroe had appointed Secretary of the Navy, Dec. 9, 1823, was continued in office; so also was William Wirt, appointed Attorney-general by Monroe, Dec. 15, 1817. John M'Lean, of Ohio, appointed Postmaster-general by Monroe, Dec. 9, 1823, was also continued in office.

**Adams's (JOHN) Prophecy.** While John Adams was teaching school at Worcester, in 1755, at the age of twenty years, he wrote a letter to Nathan Webb, in which he remarked: "Mighty states and kingdoms are not exempted from change. . . . Soon after the Reformation, a few people came over into this new world for conscience' sake. This apparently trivial incident may transfer the great seat of empire to America. . . . If we can remove the turbulent Gallics, our people, according to the exactest calculations, will, in another century, become more numerous than in England itself. The united

force of Europe will not be able to subdue us. The only way to keep us from setting up for ourselves is to disunite us." Less than thirty years afterwards the prophet stood before the monarch of England as the representative of an American republic, where, only ten years before, were flourishing English colonies. And just a century after that prophecy was uttered the number and strength of the people here exceeded the calculation of young Adams. The population then was more than double that of England; and, while his country was fiercely torn by civil war, its government defied the power of Great Britain, France, Spain, and the Papal States, whose rulers were enemies of republican government. Lord Kames uttered a similar prophecy in 1765.

**Adams's (C. F.) Resolution (1860).** When the spirit of secession was rampant in Congress late in December, 1860, Charles Francis Adams, of Massachusetts, tried to soothe the passions of the Southern politicians by offering, in the House Committee of Thirty-three (see *Thirty-eighth Congress*), a resolution, "That it is expedient to propose an amendment to the Constitution, to the effect that no future amendments of it in regard to slavery shall be made unless proposed by a slave state and ratified by all the states." It was passed by only three dissenting voices in the committee.

**Adams's Scheme of Government.** John Adams saw with alarm the contagion of revolution that went out from Paris, in 1789, affecting England, and, in a degree, his own country. It was different, in form and substance, from that which had made his own people free. With a view to avert its evil tendencies, he wrote a series of articles for a newspaper, entitled "Discourses on Davila." These contained an analysis of *Davila's History of the Civil War in France*, in the 16th century. In those essays he maintained that, as self-esteem was the great spring of human activity, it was important in a popular government to provide for the moderate gratification of a desire for distinction, applause, and admiration. He therefore advocated a liberal use of titles and ceremonial honors for those in office, and an aristocratic Senate. He proposed a popular Assembly on the broadest democratic basis to counteract any undue influence; and to keep in check encroachments upon each other he recommended a powerful executive. The publication of these essays at that time was unfortunate, when jealousy was rife in the public mind concerning the National Constitution. His ideas were so cloudily expressed that his meaning was misunderstood by many and misinterpreted by a few. He was charged with advocating a monarchy and a hereditary Senate. The essays disgusted Jefferson, who for a time cherished the idea that Hamilton, Adams, Jay, and others were at the head of a conspiracy to overthrow the republican institutions of the United States.

**Addressers.** There was far from unanimity of sentiment in opposition to British authority even in Boston. With the Boston Port Bill

(which see) came Governor Hutchinson's recall. He had been writing, in seclusion, for fear of the indignant populace, to find an opportunity to leave the province for England; and before he departed (June 1, 1774) 120 merchants, and many lawyers, magistrates, and principal men of Boston, with others at Salem and Marblehead, signed an address to him, in which they expressed entire approbation of his public conduct, and affectionate wishes for his prosperity. These "addressers" were afterwards required to recant, and those who refused to do so became refugee loyalists, who fled from Boston in 1776.

**Addresses and Remonstrances** were sent to King George in 1768 against the taxation schemes of Parliament, by the assemblies of Massachusetts, Virginia, Delaware, and Georgia. These were all couched in respectful language, but ever firm and keenly argumentative, having for their premises the chartered rights of the various colonies. But these voices of free-born Englishmen were not only utterly disregarded, but treated with scorn. The pride and the sense of justice and self-respect of the Americans were thereby outraged. It was an offence not easily forgiven or forgotten.

**Addresses of the People of New Netherland.** The first address of the people of New Netherland to the authorities in Holland was in October and November, 1643. The savage conduct of Governor Kieft (which see) towards the surrounding Indians had brought the Dutch colony into great distress because of the hostilities of the barbarians. Kieft, in the extremity of perplexity, had called the people together to consult upon the crisis, and begged them to choose a new popular council. They chose eight energetic citizens, who seized the reins of government and prepared for defence. On Oct. 24, they addressed to the College of XIX. at Amsterdam, and on Nov. 3, to the States-General, statements of the sad condition of the colony caused by Kieft's bad conduct. Two letters were also sent directly by citizens of New Amsterdam, written in simple but eloquent language. In these letters the eight men drew a pitiable picture of their sufferings—women and children starving; their homes destroyed; the people skulking around the fort at Manhattan, where they were "not one hour safe." They prayed for assistance, to save them from "the cruel heathens." The winter that followed was a terrible one in New Netherland. A second appeal from the Council of Eight Men at Manhattan to the College of XIX., in October, 1644, reached that body while it was considering the first address. The second gave a bolder and more definite statement of the grievances of the colonists, and more specific charges against the governor, to whose acts all their troubles were attributed. They asked for his recall. The States-General had already peremptorily ordered the West Indian Company to take measures to relieve the people, but the corporation was bankrupt and powerless. The immediate purpose of the eight men was gained, for Kieft was ordered to Holland, and Lubbertus van Dincklagen, the former

sheriff, was appointed provisional governor, until the commission of Peter Stuyvesant was issued in May, 1645.

**Adet, PIERRE AUGUSTUS**, was born in Nevers, France, in 1763; died about 1832. He was educated for the artillery service; but leaving it, he devoted himself to the study of the sciences, and became a skilful chemist. Engaging in politics, he was successively chief of the administration of the colonies; member of the Council of Mines; colleague of the Minister of Marine in 1793; resident at Geneva in 1794; and ambassador to the United States in 1795-97. Here he, too, interfered too much in local politics, and became unpopular with the government party. He issued an inflammatory address to the American people, in which he accused the administration of Washington with violations of the friendship which once existed between the United States and France. On his return to France, Adet was called to the tribunate, and in 1803 was made Prefect of Nevers. In 1807 he was chosen to the French Senate, and to the Chamber of Deputies, in 1814, as a Constitutionalist. M. Adet published some works on chemistry. While in the United States he was a busy partisan of the Republicans. In 1796 he presented to Congress, in behalf of the French nation, the tri-colored flag of France; and just before he left, in 1797, he sent to the Secretary of State the famous note in which the Directory, contrary to the spirit of the treaty of 1778, declared that the flag of the republic would treat all neutral flags as they permitted themselves to be treated by the English. Soon afterwards Adet suspended his diplomatic functions, and returned to France.

**Adet's Final Appeal.** Ten days after the issuance of his "Cockade Proclamation" (which see), the French minister, Adet, sent a note simultaneously to the State Department and to the *Aurora*—the opposition newspaper—demanding, "in the name of the faith of treaties and of American honor, the execution of that contract [treaty of 1778] which assured to the United States their existence, and which France regarded as a pledge of the most sacred union between two people, the freest upon earth." He announced, at the same time, "the resolution of a government terrible to its enemies, but generous to its allies." With grandiloquent sentences he portrayed the disappointment of the French nation in not finding a warm friend in the American government. "So far from offering the French the succor which friendship might have given," he said, "without compromising itself, the American government, in this respect, violated the obligations of treaties." This was followed by a summary of these alleged violations, including the circular of 1793, restraining the fitting-out of privateers in American waters; the law of 1794, prohibiting hostile enterprises or preparations against nations with whom the United States were at peace; the cognizance of these matters taken by the American courts of law; and the admission of armed British vessels into American waters. He complained of the "British treaty" as inimical to the interests of

France. This paper, published in the *Aurora*, was intended more for the American people than for the American government.

**Admiral of New England.** Francis West was commissioned Admiral of New England in 1623, with power to restrain such ships as came upon that coast to fish without the consent of the Council of Plymouth; but finding the fishermen too stubborn and numerous to be controlled, on his arrival in June, 1623, he sailed to Virginia. This interference with the New England fisheries called forth a petition to Parliament from the owners of the fishing-vessels, and an order was issued that the business should be free. In the spring of 1624 about fifty English fishing-ships appeared on the New England coasts.

**Advertising in the United States.** The advertisement of business of every kind in the United States is now almost universally practised. Agencies have been established as mediums between the advertiser and the vehicle for advertising. The first agency in America was established by Orlando Bourne, in 1823, and was followed, in 1840, by V. B. Palmer, who established agencies in Philadelphia, New York, and Boston. The business was fully systematized in 1860, when complete lists of all the American newspapers were kept at the agencies. A New York advertising agency now (1876) publishes an *American Newspaper Directory*, and employs about forty persons permanently. The amount paid for advertising is enormous. *Harper's Weekly* receives from \$2.00 to \$4.00 a line for advertising, according to position; the *New York Weekly Tribune*, \$2.00 to \$5.00 a line, the latter price being for advertisements inserted among the news items. Some mercantile firms spend \$100,000 and \$150,000 a year in advertising. A patent-medicine dealer paid, in one year, \$250,000 for advertisements. The Pacific Railway companies paid between \$400,000 and \$500,000 for advertisements in a year; and in 1867 the United States government collected a tax on nearly \$10,000,000 worth of advertisements. The use of pictures in advertising is coming more and more in fashion.

**African Labor-supply Association.** (See *Slave-trade Reopened*.)

**African Slave-trade.** In New England this trade was begun in Massachusetts, almost simultaneously with its ship-building and commerce. Indeed, it soon formed an important part of the latter. The ships that took cargoes of stores to the Canaries were in the habit of touching on the coast of Guinea, where they traded for negroes, who were generally, at first, carried to Barbadoes or other English islands of the West Indies. Afterwards the demand for negroes in New England caused many to be brought directly there from Africa. (See *Slave-trade in America*.)

**Agamenticus.** There were a few English settlers in the region now known as York County, Maine, between the mountain and the sea, in 1636, and the territory was named Agamenticus.

It was within the grant given to Gorges and Mason. There a city was formed, and incorporated in 1641, in imitation of English municipalities, with a mayor and aldermen. The city was called Gorgeaua. The occupants of the land in Agameuticiens were tenants at will of the proprietor. There English apple-seeds were planted and thrived, and one of the trees that sprang up lived and bore fruit annually so late as 1875, when it was cut down.

**Agassiz, LOUIS JOHN RUDOLPH**, naturalist, was born in Mottier parish, near Neufchatel, Switzerland, May 28, 1807; died Dec. 11, 1873.

LOUIS AGASSIZ.

He was of Huguenot descent, was thoroughly educated at Heidelberg and Munich, and received the honorary degree of Ph.D. He prosecuted his studies in natural history in Paris, where Cuvier offered him his collection for the purpose. The liberality of Humboldt enabled him to publish his great work (1834-44) on *Fossil Fishes*, in five volumes, with an atlas. He arrived in Boston in 1846, and lectured there on the Animal Kingdom and on Glaciers. In the summer of 1847 the Superintendent of the Coast Survey (which see) tendered him the facilities of that service for a continuance of his scientific investigations. Professor Agassiz settled in Cambridge, and was made Professor of Zoology and Geology of the Lawrence Scientific School at its foundation in 1848. That year he made, with some of his pupils, a scientific exploration of the shores of Lake Superior. He afterwards explored the southern coasts of the United States, of Brazil, and the waters of the Pacific Ocean. An account of his explorations on the Brazilian coast was given in *A Journey to Brazil*, by Mrs. Agassiz, in 1867. He received the Copley Medal from the Royal Society of London; from the Academy of Sciences of Paris, the Moutyon Prize and the Cuvier Prize; the Wollaston Medal from the Geological Society of London; and the Medal of Merit from the King of Prussia. He was a member of many scientific societies, and the universities of Dublin and Edinburgh conferred on him the honorary degree of LL.D. Professor Agassiz published valuable scientific works in Europe and in this country.

**Agnew, JAMES**, a British general, who came to Boston late in 1775; participated in the military movements there; and was engaged in the battle of Long Island, where, and in subsequent campaigns, he commanded the fourth brigade of the Royal army. He accompanied ex-Governor Tryon in his marauding expedition to Dan-

bury, Conn., April 26, 1779. He was slightly wounded in the battle of Brandywine (Sept. 11), and in the battle of Germantown (Oct. 4, 1777) he was slain. His remains were interred, with those of Lieutenant Bird, in the South Burying-ground at Germantown; and over them John F. Watson, the annalist, placed a neat white-marble slab.

**Agricultural Colleges.** In 1857, J. S. Morrill, M.C., Chairman of the Committee on Agriculture of the House of Representatives, introduced a bill appropriating to the several states a portion of the public lands for the purpose of encouraging institutions for the advancement of agriculture and the mechanic arts. The bill lingered in Congress (having been vetoed by President Buchanan) until July, 1862, when it became a law. The act provided that each state should receive a quantity of land equal in value to thirty thousand dollars for each of its senators and representatives in Congress under the census of 1860, to establish at least one college in each state where "all the needful sciences for the practical avocations of life" should be taught, and "where agriculture, the foundation of all present and future prosperity, may look for troops of earnest friends studying its familiar and recondite economies." It provided that all expenses of location, management, taxation, etc., should be paid by the respective state treasurers, that the entire proceeds of the sales of the land may forever remain undiminished, and that every state receiving the grant must provide an institution within five years from the date of filing its acceptance of the grant. Every state in the Union has established one or more of these industrial colleges, with ample equipments, in which persons of both sexes may equally enjoy the benefits of the institution. Each student is paid a stipulated sum of money for every hour of labor given to the institution; and by this means students are materially aided in defraying the expenses of their education. In these colleges the mechanic arts and certain branches of the fine arts are studied. The movement in Congress was undoubtedly suggested by the success of the "Pennsylvania Agricultural College," established in 1854 by the late Dr. Evan Pugh. It was the first institution of the kind established in this country.

**Agricultural Implements.** The manufacture of agricultural implements in the United States is a very extensive and profitable industry. In 1880 there were nearly 2000 establishments devoted to this manufacture, of every kind, from the hand-rake to the reaper, employing more than 39,000 persons, who received annually over \$15,000,000 in wages, and produced yearly wares valued at about \$69,000,000. Scarcely a single agricultural implement remains in its old form of structure, having been improved so as to economize material, time, and form.

**Agricultural Societies.** The first society in the United States was formed by planters of South Carolina in 1784, and it is yet in exist-

ence. The next year the "Philadelphia Society for Promoting Agriculture" was formed, and in 1791 citizens of New York organized a similar society. In 1792 the "Massachusetts Society for Promoting Agriculture" was organized. These were city institutions, and not composed of practical farmers. They dealt with facts and theories. The majority of husbandmen then did not hear nor heed their appeals for improvement. But finally the more intelligent of that class of citizens became interested, and a convention of practical farmers in the District of Columbia, held in 1809, resulted in the formation of the "Columbian Agricultural Society for the Promotion of Rural and Domestic Economy." They offered premiums; and their fair, held in May, 1810, is believed to be the first exhibition of its kind in this country. Elkanah Watson (which see) founded the "Berkshire (Mass.) Agricultural Society" in 1810, and there was a grand "Agricultural Fair and Cattle Show" at Pittsfield in September, 1811. It was the first of the county fairs held in this country. From that time until now there has been, at first a gradual, and then a rapid, increase in such institutions; and in 1883 they existed in every state and territory of the Union. There were more than two thousand of them in the Republic, the greatest number of them in one state being in Iowa. There were one hundred and ninety-six in that commonwealth.

**Agriculture and Manufactures, VALUE OF IN THE UNITED STATES.** The entire value of the annual agricultural products of the United States and Territories in 1880, including crops and betterments, animals slaughtered and sold for slaughter, home manufactures, and forest, market-garden, and orchard products, was estimated in value at about \$3,650,000,000. The total product of our manufactures the same year was valued at \$5,369,579,191, or \$1,719,179,191 more than the total value of the agricultural products of the country. The rapid increase in our manufactured products is shown by the fact that the amount produced in 1880 was \$1,137,254,191 more than in 1870.

**Aid from France.** In the spring of 1777 arms and ammunition for the American patriots were sent from France (see *Beaumarchais*). These arrived at Portsmouth, N. H., in a French vessel of twenty-four guns. There were more than eleven thousand muskets and one thousand barrels of gunpowder. At about the same time ten thousand stand of arms arrived from the same country at another American port. These were intended as gifts to the Americans, to enable them to carry on the war against England; but circumstances frustrated this intention, and payment, in part, was made for them.

**Aitken, ROBERT,** publisher of the first American edition of the Holy Scriptures. He was born in Scotland in 1734, and died in Philadelphia in July, 1802. Mr. Aitken arrived in Philadelphia from Scotland in 1769. He was a practical printer, and published the *Pennsylvania Magazine*, or *American Monthly Museum*, from Janu-

ary, 1775, to June, 1776. He was a warm Whig, and was thrown into prison after the British took possession of Philadelphia, late in 1777. He very narrowly escaped the horrors of a British prison-ship in New York. (See *Prison-ships*.) He issued the first American edition of the Bible in 1782, by which he lost considerable money. He is supposed to have been the author of a paper entitled *An Inquiry Concerning the Principles of a Commercial System for the United States*.

**Aix-la-Chapelle, TREATY OF (1748).** This treaty, between Great Britain, France, Holland, Germany, Spain, and Greece, was a famous one, and was signed by the representatives of these respective powers on the 18th of October (N. S.), 1748. By it the treaties of Westphalia (1648), of Nimeguen (1678-79), of Ryswick (1697), of Utrecht (1713), of Baden (1714), of the Triple Alliance (1717), of the Quadruple Alliance (1718), and of Vienna (1738), were renewed and confirmed. It was fondly hoped this treaty would insure a permanent peace for Europe.

**Alabama.** The soil of this state was first trodden by Europeans in 1540. These were the followers of De Soto (which see). In 1702, Bienville, the French Governor of Louisiana, entered Mobile Bay, and built a fort and trading-house at the mouth of Dog River. In 1711 the French founded Mobile, and there a colony prospered for a while. Negro slaves were first brought into this colony by three French ships

STATE SEAL OF ALABAMA.

of war in 1721. By the treaty of 1763 this region was transferred by France to Great Britain. Alabama formed a portion of the State of Georgia, but in 1798 the country now included in the states of Alabama and Mississippi was organized as a territory called Mississippi. After the Creeks disappeared (see *Creek War*) the region of Alabama was rapidly settled by white people, and in 1819 it entered the Union as a state. The slave population increased more rapidly than the white. In the Democratic National Convention at Charleston in 1860 the delegates of Alabama took the lead in seceding from the convention (see *Charleston Convention*). A convention assembled at Montgomery early in January, 1861, and on the 11th passed an ordinance of secession. (See *Alabama Ordinance of Secession*.) The Alabama senators and representatives withdrew from Congress Jan. 21, 1861. On March 13 a State Convention ratified the constitution adopted by the Confederate Congress. The authorities of the state seized the national property within its borders, and sent troops to Florida to assist in capturing Fort Pickens and other public works there. Alabama sent a commissioner to Washington as an ambassador, but he was not received. During the civil war that

ensued, Alabama bore her share of the burden, and her cities and plantations suffered from the ravages of the conflict. Wilson's cavalry raid through the state caused great destruction of property. (See *Wilson's Raid*.) During the war Alabama furnished one hundred and twenty-two thousand troops to the Confederate army, of whom thirty-five thousand were killed or wounded. Montgomery, in the interior of the state, was the Confederate capital until July, 1861, when the seat of government was removed to Richmond. At the close of the war a provisional governor for Alabama was appointed (June 21, 1865), and in September a convention reordained the civil and criminal laws, excepting such as related to slavery; declared the ordinance of secession and the state war-debt null; passed an ordinance against slavery; and provided for an election of state officers, who were chosen in November. The government thus constituted remained in force until superseded by military rule in 1867. In November of that year a convention formed a new constitution for the state, which was ratified Feb. 4, 1868. State officers and members of Congress having been duly chosen, and all requirements complied with, Alabama became entitled to representation in Congress; and on July 14, 1868, the military relinquished to the civil authorities all legal control. The Fourteenth and Fifteenth Amendments to the National Constitution were ratified by Alabama, the latter Nov. 16, 1870. Population in 1880, 1,262,505.

**Alabama, DESTRUCTION OF THE.** The *Alabama* was a Confederate privateer; a British vessel, manned chiefly by British subjects at a British port; armed with British cannon, and pro-

THE ALABAMA.

vided with coal and other supplies from British soil. She had no acknowledged flag, nor recognized nationality, nor any accessible port to which she might send her prizes, nor any legal tribunal to adjudge her captures. She was commanded by Raphael Semmes, a native of Maryland, and roamed the seas, plundering and destroying vessels belonging to American citizens. Her commander avoided contact with American armed vessels, but finally encountered the *Kearsarge*, Captain John A. Winslow, off Cherbourg, France, in the summer of 1864. On June 19 Semmes went out of the harbor of Cherbourg to fight the *Kearsarge*, which was watching her out-

side. She was followed by the yacht *Deerhound* (belonging to Mr. Lancaster, one of the English gentry), a sort of tender to the *Alabama*, to take care that Semmes, if defeated, should not fall into the hands of Winslow. The *Alabama* was accompanied by a French frigate to a point beyond the territorial waters of France. At a distance of seven miles from the Cherbourg breakwater, the *Kearsarge* turned and made for the Confederate cruiser, when, within 1200 yards of her, the latter opened fire. After receiving two or three broadsides, the *Kearsarge* responded with telling effect. They fought for an hour, the steamers moving in a circle. At the end of the hour the *Alabama* was at the mercy of her antagonist, and a white flag was displayed over her stern. Respecting this, Winslow ceased firing. Two minutes afterwards the *Alabama* treacherously fired two guns at the *Kearsarge*, and attempted to run to the protection of French neutral waters, not more than three miles distant. Winslow opened fire again, and very soon a boat came to his vessel from the *Alabama*, saying she had surrendered and was fast sinking. Just then the *Deerhound* passed by, when Winslow humanely asked her owner to assist him in saving the unfortunate crew of the *Alabama*, which, in twenty minutes, went to the bottom of the sea. The *Kearsarge* rescued sixty-five of the crew; the *Deerhound* picked up Semmes, his officers, and a few mariners, and carried them away from the lawful custody of Winslow, to England. There Semmes was received with great honor. The *Kearsarge* had three men badly wounded—one of them mortally. The *Alabama* had nine men killed and twenty-one wounded. (See *Tribunal of Arbitration*.)

**Alabama Ordinance of Secession (1861).** Elections for members of a State Convention in Alabama were held Dec. 24, 1860, and, as in some of the other states, the politicians were divided into "Secessionists" and "Co-operationists." (See *Mississippi Ordinance of Secession*.) The latter were also divided; one party wishing the co-operation of all the slave-labor states, and the other caring only for the co-operation of the cotton-producing states. The vote for all but ten counties was, for secession, 24,445; and for co-operation, 33,685. In the ten counties, some were for secession and some for co-operation. In the convention assembled at Montgomery, Jan. 7, 1861, every county in the state was represented. William Brooks was chosen president. There was a powerful infusion of Union sentiment in the convention, which endeavored to postpone a decision, under the plea of the desirableness of co-operation. A committee of thirteen was appointed to report an Ordinance of Secession. It was submitted on the 10th. It was longer than any other already adopted, but similar in tenor. They assumed that the commonwealth, which had been created by the national government first a territory and then a state (1819), had "delegated sovereign powers" to that government, which were now "resumed and vested in the people of the State of Alabama." The convention favored the formation of a confederacy of slave-labor states, and formally invited

the others to send delegates to meet those of Alabama, in general convention, on the 4th of February, at Montgomery, for consultation on the subject. The convention was not harmonious. Union men were not to be put down without a struggle. There was a minority report on Secession; and some were for postponing the act until the 4th of March, with a hope of preserving the Union. Nicholas Davis, from Northern Alabama, declared his belief that the people of his section would not submit to any disunion scheme, when Yancey (which see) denounced him and his fellow-citizens of that region as "tories, traitors, and rebels," and said they "ought to be coerced into submission." Davis was not moved by these menaces, but assured the secessionists that the people of his section would be ready to meet their enemies on the line and decide the issue at the point of the bayonet. The final vote on the Ordinance of Secession was taken at two o'clock P.M. on Jan. 11, and resulted in sixty-one yeas to thirty-nine nays. An immense mass-meeting was immediately held in front of the State-house, and timid "co-operationists" assured the multitude that their constituents would support the ordinance. A Secession flag, which the women of Montgomery had presented to the convention, was raised over the capital. In Mobile, when the news reached that city, one hundred and one guns were fired in honor of Alabama, and fifteen for Florida. At night the city blazed with fireworks, the favorite pieces being the "Southern Cross" and the "Lone Star." The convention had voted against the re-opening of the slave-trade, and adjourned on Jan. 30, 1861.

**Alabama preparing for revolt (1860).** Herschell V. Johnson, the candidate for Vice-President on the Douglas ticket, declared, in a speech at the Cooper Institute, New York, so early as Oct. 24, 1860, that Alabama was ripe for revolt in case Mr. Lincoln should be elected; that it was pledged to withdraw from the Union, and had appropriated \$200,000 for military contingencies. The governor suggested secession at the beginning of November; and in December, 1860, the conference of the "Methodist Church South," sitting at Montgomery, declared "African slavery, as it existed in the Southern States of the Republic, a wise, beneficent, humane, and righteous institution, approved of God, and calculated to promote, to the highest possible degree, the welfare of the slave; that the election of a sectional President of the United States was evidence of the hostility of the majority to the people of the South, and which in fact, if not in form, dissolves the compact of union between the states." Northern Alabama was opposed to the movement.

**Alarçon, FRANCISCO.** (See *Coronado*.)

**Alarm at New York.** When Sir Henry Clinton, at New York, heard of the arrival of D'Estaing's fleet off the Southern coasts, in the fall of 1779, he feared that city might be attacked; so he ordered the evacuation of Rhode Island and the forts on the Hudson, and the concentration of the forces around the headquarters of the

army. He had held Rhode Island about three years. An expedition about to sail for the West Indies was also detained for the defence of New York. As soon as Clinton was assured of the departure of D'Estaing for France (see *Siege of Savannah*), Clinton embarked for Georgia (Dec. 24, 1779) with 7000 troops. About that time there were embodied about 5000 American loyalists. Of these, 1000 were already at Savannah, 2000 more sailed with Clinton, and the remainder were left at New York, with Knypphausen, who held that city with a strong garrison.

**Alarm in New England.** Early in September, 1774, a rumor spread over New England that British ships were cannonading Boston. Wherever the rumor reached there was a cry to arms. Men of all ages immediately responded; and within two days full 30,000 minute-men were under arms and hastening towards the suffering town. The rumor was false, and they returned to their homes; but this demonstration of the patriotism of the people, of their determination to sustain Boston in its defiant attitude, and of their amazing moral and physical strength, alarmed Gage and made him more circumspect and conciliating. It induced him to call a meeting of the Massachusetts Assembly. (See *Provincial Congress of Massachusetts*.) This great uprising of the people was the beginning of mighty movements towards the grand end, independence.

**Alarming Order from the War Department (1814).** At the beginning of August, 1814, Armstrong, the Secretary of War, ordered General Izard, in command of a large body of troops at Plattsburg, to march a larger portion of them to co-operate with the army on the Niagara frontier. This order produced amazement and indignation in the mind of Izard and his officers, for they knew the imminent peril of immediate invasion, from the region of the St. Lawrence, of a large body of Wellington's veterans, who had lately arrived in Canada. (See *Downfall of Napoleon*.) Both the army and people were expecting an occasion for a great battle near the foot of Lake Champlain very soon, and this order produced consternation among the inhabitants. Izard wrote to the War Department in a tone of remonstrance, Aug. 11, "I will make the movement you direct, if possible; but I shall do it with the apprehension of risking the force under my command, and with the certainty that everything in this vicinity but the lately erected works at Plattsburg and Cumberland Head will, in less than three days after my departure, be in the possession of the enemy." Nine days afterwards Izard wrote to the Secretary: "I must not be responsible for the consequences of abandoning my present strong position. I will obey orders, and execute them as well as I know how." The removal of this force invited the invasion of Prevost immediately afterwards, which was checked by the American army and navy at Plattsburg, where, with great diligence, General Macomb concentrated troops for defence immediately after Izard left.

**Alaska,** formerly known as "Russian Amer-

ica," is a region in the extreme northwestern portion of North America, lying north of the parallel of 50° 40' N. latitude, and west of the meridian of 140° W. longitude, including many islands lying off the coast. The Russians acquired possession of this territory by right of discovery by Vitus Behring (which see), in 1741. He discovered the crowning peak of the Alaska mountains, Mount St. Elias, on July 18. That mountain rises to a height of between 16,000 and 17,000 feet above the sea. In the same chain is Mount Fairweather, 14,000 feet in height. The mountain country has now ten volcanoes that are active. The entire coast-line of Alaska measures about 4000 miles, taking into account the smaller indentations. The climate in some parts is most agreeable. In the interior are said to be numerous lakes. Its valleys are fertile; its streams abound with fish and its forests with game; and its islands afford the most extensive and richest fur-seal fishing in the world. (See *Fur-trade*.) Sitka, or New Archangel, the capital of Alaska, is the oldest settlement. It was founded by Russian fur-traders, in the last century. The country was a sort of independent province, under the rule of the Russian-American Fur Company, to whom it was granted by the Emperor Paul in 1799. It was invested with the exclusive right of hunting and fishing in the American waters of the Czar. The charter of the company expired in 1867, when the government declined to renew it. In 1865-67, the country was explored by a scientific corps sent out by the United States to select a route for the Russo-American telegraph line, a project which was abandoned in consequence of the successful laying of the Atlantic cable (which see). Early in 1867, negotiations were begun for the purchase of the territory by the United States, and a treaty to that effect was ratified by the U. S. Senate May 20th, the same year. The price paid was \$7,200,000. In October General Lovell H. Rousseau (which see), a commissioner for the purpose, formally took possession of the region. Alaska promises to be one of the most valuable of the territories of the Republic. It is a military and collection district, with headquarters at Sitka. A district government for Alaska was established on May 17, 1884.

**Albany, FIRST COLONIAL CONVENTION AT (1689).** Thoroughly alarmed by the opening hostilities of the French and Indians on the frontiers, the colonies of Massachusetts, Plymouth, and Connecticut sent commissioners to Albany to hold a conference with the chiefs of the Five Nations, all of whom, excepting the Mohawks, had renewed their covenant of friendship with the English. This covenant was renewed June 27, 1689, previous to the arrival of Count Frontenac in Canada. The commissioners held the conference in September following. They tried to persuade the Five Nations to engage in the war against the Eastern Indians. They would not agree to do so, but ratified the existing friendship with the English colonies. "We promise," they said, "to preserve the chain inviolably, and wish that the sun may always

shine in peace over all our heads that are comprehended in the chain."

**Albany, SECOND COLONIAL CONVENTION AT (1748).** In the summer of 1748, when news of the preliminary treaty of peace reached the colonies, a convention or congress of colonial governors was called at Albany for a twofold purpose: (1) to secure a colonial revenue, and (2) to strengthen the bond of friendship between the Six Nations and their neighbors in the West, and the English. Only Governors Clinton and Shirley, two able commissioners from Massachusetts, and one (William Bull) from South Carolina, were present. With the latter came the Grand Sachem and some chiefs of the Catawbas, a nation which had long waged war with the Iroquois. (See *Catawbas*.) There was an immense number of the Six Nations present. The royal governors failed to gain anything for themselves in the way of a revenue, but satisfactory arrangements with the Indians, including the tribes along the southern borders of Lake Erie, were made. At that conference the commissioners from Massachusetts (Andrew Oliver and Thomas Hutchinson) presented a memorial for adoption, praying the king so far to interpose as that, while the French remained in Canada, the more southern colonies, which were not immediately exposed to hostilities, might be obliged to contribute in a just proportion towards the expense of protecting the inland portions of New York and New England. Clinton and Shirley signed and approved of the memorial, which was sent with it to the Board of Trade and Plantations (which see).

**Albany, THIRD COLONIAL CONVENTION AT (1751).** The kindly attitude manifested towards the French by the Six Nations excited the jealousy and alarm of the English, especially of Governor Clinton, of New York. As yet, the Iroquois had never recognized the claim of the English to dominion over their land, and they were free to act as they pleased. Clinton called a convention of representatives of the several English-American colonies, at Albany, and invited the Six Nations to send representatives to meet with them. Only Massachusetts, Connecticut, and South Carolina chose to incur the expense. Delegates from these colonies met the chiefs of the Six Nations (July 5, 1751) and made a treaty of friendship. The "King" of the Catawbas and several chiefs accompanied the South Carolina delegate (William Bull), and a peace between that Southern nation and the Iroquois was settled at the same time. (See *Catawbas* and *Iroquois*.)

**Albany, FOURTH COLONIAL CONVENTION AT (1754).** There were indications that the Six Nations, influenced by French emissaries, were becoming alienated from the English. The colonists were uneasy, and the British government, acting upon the advice of the royal governors in America, sent a circular letter to all the colonial assemblies, proposing the holding of a convention at Albany, to be composed of committees from the several legislatures and representatives of the Six Nations. Seven of the assem-

blies responded, and on June 19, 1754, twenty-five delegates assembled in the old City Hall at Albany. James De Lancey, acting Governor of New York, presided, and he was authorized by the Virginia Legislature to represent that colony in the convention. The chiefs of the Six Nations were there in great numbers, of whom "King Hendrick," of the Mohawks, was leader. To the Indians De Lancey first spoke, and Hendrick responded in words of bitter reproof of the English for their neglect of preparations for danger. "Look at the French," he said; "they are men; they are fortifying everywhere; but, we are ashamed to say it, you are like women, bare and open, without any fortifications. It is but one step from Canada hither, and the French may easily come and turn you out of doors." But the business with the Six Nations was closed amicably and satisfactorily by a treaty of friendship. The Massachusetts delegation was authorized to propose a measure quite as important as a treaty with the Indians. It was an invitation for the convention to consider the question whether a union of the colonies for mutual defence was not desirable; and they were empowered to agree to articles of union or confederation. The proposition was favorably received, and a committee, composed of one delegate from each colony, was appointed to draw up a plan. The fertile brain of Dr. Benjamin Franklin, a delegate from Pennsylvania, had conceived a plan before he went to the convention. It was reported by the committee and adopted by the convention, the Connecticut delegates alone dissenting. It proposed a grand council of forty-eight members, to be chosen by the several assemblies, the representatives of each colony to be, in number, in proportion to the contribution of each to the general treasury. No colony was to have more than seven nor less than two members. This congress was to choose its own speaker and have the general management of all civil and military affairs, and to enact general laws in conformity to the British Constitution. It proposed to have a president-general, appointed and paid by the crown, who should have a negative or veto power on all acts of the congress, and to have, with the advice and consent of the congress, the appointment of all military officers, and the entire management of Indian affairs; the civil officers to be appointed by the congress with the approval of the president-general. This plan of government bore a strong resemblance to our national constitution, which Franklin assisted in framing more than thirty years afterwards. (See *National Constitution*). This plan was submitted to the Lords of Trade and Plantations (which see). They did not approve of it, nor recommend it to the king for consideration. They thought there was too much *democracy* in it. The assemblies did not favor it, because they thought there was too much *prerogative* in it. So it was rejected.

**Albany Regency.** A name popularly given to a few active and able men of the Democratic

Party more than fifty years ago, of whom Martin Van Buren was a leader, having their headquarters at Albany, the political capital of the State of New York, and who, in a great degree, controlled the action of their party throughout the Union. Their first great trial of strength was seen in an effort to elect William H. Crawford President of the United States in 1824, instead of John Quincy Adams.

**Albemarle, DESTRUCTION OF THE (1864).** The *Albemarle* was a powerful Confederate "ram" that patrolled the waters off the coast of

RAM ALBEMARLE.

North Carolina. It was a frightful bugbear to the national blockading vessels. Late in October, 1864, Lieutenant W. B. Cushing, a daring young officer of the United States Navy, undertook to destroy it. It was lying at Plymouth, behind a barricade of logs thirty feet in width. With a small steam-launch equipped as a torpedo-boat, Cushing moved in towards Plymouth on a dark night (Oct. 27, 1864) with a crew of thirteen officers and men, part of whom had volunteered for this service. The launch had a center in tow. They were within twenty yards of the "ram" before they were discovered, when its pickets began firing. In the face of a severe discharge of musketry, Cushing pressed to the attack. He drove his launch far into the log barricade, lowered his torpedo boom, and drove it directly under the overhang of the "ram." The mine was exploded, and at the same moment one of the guns of the *Albemarle* hurled a heavy bolt that went crashing through and destroying the launch. Cushing and his companions leaped into the water, but only one besides the commander escaped drowning or capture. Cushing swam ashore, crept into a swamp, and was found and cared for by some negroes. The torpedo had destroyed the *Albemarle*, and she settled down in the mud in Plymouth harbor. Plymouth was recaptured (Oct. 31) by a squadron under Commodore Macomb, with some prisoners and valuable stores.

**Albemarle Sound, NAVAL BATTLE IN.** The Confederate general Hoke, after capturing Plymouth (which see), proceeded to Newbern and demanded its surrender. The commander of the *Albemarle*, a powerful "ram," started out on Albemarle Sound to assist Hoke, when his vessel encountered (May 5, 1864) the *Sassacus*, Lieutenant-commander F. A. Rose, one of Captain Melancthon Smith's blockading squadron in the Sound. The *Albemarle* was heavily armed with Brooks and Whitworth guns. After a brief cannonade the *Sassacus* struck the monster a

blow which pushed it partly under water and nearly sunk it. When the "ram" recovered, the two vessels harled 100-pound shot at each other at a distance of a few paces. Most of those from the *Sassacus* glanced off from the *Albemarle* like hail from granite. Three of the shots from the *Sassacus* entered a part of the "ram" with destructive effect, and at the same moment the *Albemarle* sent a 100-pound Brooks bolt through one of the boilers of the *Sassacus*, killing three men and wounding six. The vessel was filled with scalding steam and was unmanageable for a few minutes. When the smoke and vapor passed away, the *Albemarle* was seen moving towards Plymouth, firing as she fled. The *Sassacus* slowly followed, but finally desisted for want of steam. The victorious *Sassacus* had captured another Confederate vessel with valuable guns. Hoke fell back from Newbern.

**Alcott, AMOS BRONSON**, an American educator; was born at Wolcott, Conn., Nov. 27, 1799. He became a successful teacher of an infant school in his native state. Removing to Boston, he soon became conspicuous as a teacher of the very young. He finally settled in Concord, Mass., where he studied natural theology and the best methods for producing reforms in diet, education, and civil and social institutions. By invitation, he went to England in 1842, to teach at "Alcott House," a name given to a school at Ham, near London. Returning to America, with two English friends, he attempted the founding of a new community, calling the farm "Fruit Lands." It was a failure, and he again went to Concord, where he has since resided, living the life of a peripatetic philosopher, conversing in cities and in villages, wherever invited, on divinity, human nature, ethics, as well as on a great variety of practical questions. His daughter, Louisa May, is a pleasing writer of fiction.

**Alden, JAMES**, Rear-admiral of the United States Navy, was born in Portland, Maine, March 31, 1810; died in San Francisco, Cal., Feb. 6, 1877. He became a midshipman in 1828; lieutenant in 1841; commander in 1855; captain, Jan. 2, 1863; and commodore, July 25, 1866. He was a participant in the South Sea Exploring Expedition (which see) under Lieutenant Wilkes, and served under Commodore Conner on the Gulf coast of Mexico during the war with that country. He was active in the reinforcement of Fort Pickens; in the expedition against Galveston; as commander of the *Richmond* in the passage of Forts Jackson and St. Philip; in the capture of New Orleans; and at Vicksburg, Port Hudson, Mobile Bay, and Fort Fisher. Admiral Alden was appointed Chief of the Bureau of Navigation and Detail in 1869.

**Aldrich, THOMAS BAILEY**, was born in Portsmouth, N. H., in 1836. He entered upon mercantile life at an early age, and at the same time engaged in writing verses for the New York journals. The first collection of his poems was published, under the name of "The Bells," in 1855, when he was nineteen years of age. His most successful poem, "Babie Bell," was published in 1856, and soon afterwards he abandoned

mercantile for literary pursuits. In 1856 he joined the staff of the *Home Journal*, published by Morris and Willis. Mr. Aldrich is also a pleasing writer of fiction in prose. He edited *Every Saturday* from its foundation, and has contributed largely to periodical publications. Now (1887) he is editor of the *Atlantic Monthly*.

**Alexander and Philip, Indian kings.** Massasoit (which see) died in 1660. Three or four years before his death he took his two sons, Wausutta and Metacomet, to Plymouth, and asked that both should receive English names. The first (and the oldest) was named Alexander, and the second Philip. Alexander succeeded his father as chief sachem of the Wampanoags. In 1661 he was compelled to go to Plymouth a prisoner, on suspicion of being leagued with the Narragansets in hostile designs against the English. The suspicion was not sustained by evidence. On his way to Plymouth the chief was taken suddenly ill, and in a few hours died, it was said of a fever brought on by rage and mortification. His young wife, who became the squaw sachem Witamo (which see), believed he had been poisoned by the English. This event soured the minds of Philip and his followers towards the English, and was one of the indirect causes which led to King Philip's War (which see).

**Alexander, ARCHIBALD, D.D.**, was born in Augusta (now Rockbridge) County, Va., April 17, 1772; died in Princeton, N. J., Oct. 22, 1851. He was of Scotch descent, and became teacher in a Virginia family at the age of seventeen years. In 1791 he entered the ministry as an itinerant missionary in his native state. In 1789 he became President of Hampden-Sidney College; left it in 1801; married a daughter of Rev. Mr. Waddell, the celebrated "blind preacher" in Virginia, and afterwards (1807) became pastor of a Presbyterian church in Philadelphia. In 1810 he was elected President of Union College, Georgia, but did not accept it. On the establishment of the Theological Seminary at Princeton, in 1811, Dr. Alexander was chosen its first professor, which position he held until his death, a period of forty years. Among his numerous writings his *Outlines of the Evidences of Christianity*, used as a text-book in several colleges, is most extensively known. It has passed through many editions in various languages.

**Alexander, BARTON STONE**, a brevet Brigadier-General U. S. Army, was born in Kentucky in 1819, and graduated at the Military Academy at West Point in 1842. He was made Second Lieutenant of Engineers in 1843, and captain in 1856. For services at the battle of Bull's Run, July, 1861, he was breveted major, and in March, 1863, was commissioned Major of the Engineer Corps. For meritorious services during the Civil War, he was breveted brigadier-general in March, 1865. Active during the war, he was consulting engineer in Sheridan's army in the Shenandoah Valley, and was at the battle of Cedar Creek, Oct. 19, 1864.

**Alexander, JAMES**, an active public man in the province of New York, to which he emigrated

from Scotland in 1715, where he was born. He died in New York City, April 2, 1756. He had fled from Scotland because of his peril there as an adherent of the "Young Pretender." He was accompanied by William Smith, afterwards chief-justice of the province and its historian. He was made Surveyor-general of New Jersey and New York, was secretary of the latter colony, and attained eminence in the profession of the law. As attorney-general of the province and occupant of other important positions, he became distinguished. He was one of the able counsel who defended the freedom of the press in the person of John Peter Zenger in 1735. (See *Zenger, J. P.*) Because of the part which he took in that famous trial he was arbitrarily excluded from the bar, but was reinstated in 1737. Mr. Alexander was associated with Franklin and others in founding the American Philosophical Society. He was the father of William Alexander, known as Lord Stirling, a general in the Continental army.

**Alexander, SIR WILLIAM**, patentee of Nova Scotia, was a poet and court favorite, to whom James I. and Charles I. were much attached. He was born at Menstrie, Scotland, in 1580; died in 1640. He became the author of verses when he was fourteen years old, and was cherished by Scotchmen as a descendant of the Macdonalds. His *Aurora* contained more than one hundred sonnets, songs, and elegies which displayed the effects of ill-requited love. When the Council for New England (see *Plymouth Company*) perceived the intention of the French beyond the St. Croix to push their settlements westward, they granted to Sir William (who had been knighted in 1614) all of the territory now known as New Brunswick and Nova Scotia, excepting a part of Acadia proper; and the king confirmed it, and issued a patent Sept. 10, 1621. The territory granted was called Nova Scotia—New Scotland—and it was given to Sir William and his heirs in fee without conditions. It was erected into a royal palatinate, the proprietor being invested with the rights and powers of a count-palatine. It was designed to settle the territory with Scotch emigrants, who should form a barrier against French encroachments. A colony was accordingly planted, and Sir William held possession ten years before he was displaced by the French. In 1625, Charles I. (who had just succeeded his deceased father), in order to help Sir William plant a successful colony or sell the domain in parcels, created the order of "Baronets of Nova Scotia," the title to be conferred upon purchasers of large tracts of land there. He also gave the proprietor the privilege of coining base copper money. In 1626 Sir William was appointed Secretary of State for Scotland, Keeper of the Signet in 1627, Commissioner of the Exchequer in 1628, also Lord of Canada. In 1630 he was created Viscount Stirling, and in 1633 Earl of Stirling and Viscount of Canada. In 1628 the Council for New England gave him a grant of territory, which included a part of Long Island, opposite Connecticut; but he was not able to manage his colonization schemes in Nova Scotia, and he sold his

domain to the French. Lord Stirling's title expired with the fifth earl (1739), but other claimants appeared afterwards. (See *Alexander, William, Lord Stirling.*)

**Alexander, WILLIAM (LORD STIRLING)**, was born in New York City in 1726; he died January 15, 1783. He was a son of Secretary Alexander of New Jersey.

LORD STIRLING.

Hismother was the widow of David Provoost, a wealthy merchant of the city of New York. Attached to the commissariat of the army, he attracted the notice of General Shirley, and was for three years his aid-de-

camp and private secretary. He went to England and Scotland in 1755, and before his return he prosecuted his claim to the earldom of Stirling, but was unsuccessful. He spent much of his fortune in the matter. It was generally believed that he was the rightful heir to the title and estates, and he assumed the title of Lord Stirling, by which he was ever afterwards known in America. When the quarrel with Great Britain began in the colonies Lord Stirling espoused the cause of the patriots. In 1775 he was appointed a colonel, and in March, 1776, was commissioned a brigadier-general in the Continental army. When General Lee went south, Lord Stirling was placed in command of the troops in and around the city of New York. After conspicuous service in the battle of Long Island (Aug. 27, 1776) he was made a prisoner, but was soon exchanged; and in 1777 he was commissioned by Congress a major-general. He fought with Washington on the Brandywine on Sept. 11, 1777, and was specially distinguished at Germantown and Monmouth, commanding the left wing of the American army in the last-named engagement. He was one of the most faithful of Washington's soldiers during the war. William Alexander (Lord Stirling) married a daughter of William Livingstone, of New Jersey, and had been, like his father, surveyor-general. He was an excellent mathematician and astronomer. Lord Stirling was one of the founders of the "New York Society Library," and also of King's (now Columbia) College. Alexander Humphreys, born in Birmingham, England, in 1783, claimed the earldom of Stirling. In 1824 he obtained the royal license to assume the name of Alexander, because he had a maternal grandfather of that name, and his deceased mother was a great-great-granddaughter of John Alexander, fourth son of William Alexander, the last earl of Stirling, and all intermediate heirs had become extinct. For a short time he exercised the privileges of an earl, and he even claimed vast possessions in Nova Scotia. (See *Sir William Alexander.*) But after a legal investigation he was stripped of his titles

and pretensions, and in 1839 he sank into oblivion.

**Alexander VI, POPE.** Rodrigo Lenzuola, a native of Valencia, Spain, was elected Pope, and assumed the name of Alexander VI. He was born in 1431; made Pope Aug. 11, 1492; and died Aug. 8, 1503. His mother was a Borgia, and Cæsar and Lucretia Borgia were two of his five illegitimate children by his mistress, Rosa Vanozza. His death, some historians say, was caused by his accidentally taking a poisoned draught intended for a large party of cardinals whom he had invited to a banquet. (See *Pope's Gift*.)

**Alexandria plundered.** While the British forces were making their way across Maryland towards Washington (August, 1814), a portion of the British fleet, consisting of two frigates of 36 and 38 guns, two rocket-ships of 18 guns, two bomb-vessels of 8 guns, and one schooner of 2 guns, sailed up the Potomac under the charge of Commodore Gordon of the *Sea Horse* (see *Rodgers's Long Cruise*), and easily passed the guns of Fort Washington, the defences of which

invader contented himself with burning one vessel and loading several others with plunder, for he became in too great a hurry to depart to wait for the hidden merchandise and the raising of the scuttled vessels. The squadron sailed down the Potomac, annoyed all the way by batteries and the militia on the shore, the former quickly constructed and armed with heavy guns from vessels sent by Commodore Rodgers from Baltimore, and also others sent down from Washington. The British squadron, having an aggregate of 173 guns, passed out safely into Chesapeake Bay on Sept. 5.

**Algiers, TRIBUTE TO.** Stretching along the southern shores of the Mediterranean Sea, from the western frontier of Egypt to the Atlantic Ocean, are four provinces—Tunis, Tripoli, Algeria, and Morocco—called Barbary States, from the Berbers, the ancient inhabitants. From their ports, especially from Algiers, went out piratical vessels to depredate upon the commerce of other peoples. So early as 1785 two American vessels had been captured by these corsairs, and their crews (twenty-one persons) had been held

FORT WASHINGTON.

the government had neglected. The British squadron appeared before the fort (Aug. 27), when the commander blew up the magazine and fled. The squadron passed and anchored in front of Alexandria, nine miles below Washington, on the 28th, prepared to lay the city in ashes with bombs and rockets if demands were not complied with. There was no effective force at Alexandria to oppose the invaders, for the able-bodied men and heavy guns had been called to the defence of Washington. The citizens sent a deputation to ask Commodore Gordon upon what terms he would consent to spare the town. He replied that all naval stores and ordnance, all the shipping and its furniture, merchandise of every description in the city or which had been carried out of it to a place of safety, and refreshments of every kind, must be immediately given up to him. Also, the vessels which had been scuttled to save them from capture must be raised and delivered to him. "Do all this," he said, "and the town of Alexandria, with the exception of the public works, shall be spared and the inhabitants shall be unmolested." The inhabitants were allowed only one hour to consider these harsh terms. They were powerless, and were compelled to submit. The

in slavery for ransom. The Dey, or ruler, of Algiers demanded sixty thousand dollars for their redemption. As this sum would be a precedent, other means were sought to obtain the release of the captives. In a message, in 1790, President Washington called the attention of Congress to the matter, but the United States were without a navy to protect their commerce. For what protection American vessels enjoyed they were indebted to Portugal, then at war with Algiers. In 1793 the British government made a secret arrangement with that of Portugal, whereby peace with Algiers was obtained. In that arrangement it was stipulated that for the space of a year Portugal should not afford protection to the vessels of any nation against Algerine corsairs. This was for the purpose of injuring France. The pirates were immediately let loose upon commerce. David Humphreys, who had been sent to Algiers by the government of the United States to make arrangements for the release of American commerce there from danger, was insulted by the Dey. Humphreys wrote, "If we mean to have commerce, we must have a navy." Meanwhile the United States were compelled to pay tribute to the Dey to keep his corsairs from American commerce.

From 1785 until the autumn of 1793, when Washington called the attention of Congress to the necessity of a navy, the Algerine pirates had captured fifteen American vessels and made one hundred and eighty officers and seamen slaves of the most revolting kind. To redeem the survivors of these captives, and others taken more recently, the United States government paid about one million dollars in ransom-money. In the autumn of 1795 the government was compelled to agree, by treaty, to pay to the Dey of Algiers an annual tribute for the relief of captured seamen, according to long usage among European nations. It was humiliating, but nothing better could then be done, and humanity demanded it. In 1812, the Dey, offended because he had not received from the American government the annual tribute in precisely such articles as he wanted, dismissed the American consul, declared war, and his corsairs captured American vessels and reduced the crews to slavery. The American consul—Mr. Lear—was compelled to pay the Dey twenty-seven thousand dollars for the security of himself and family and a few other Americans there from horrid slavery. Determined to pay tribute no longer to the inselent semi-barbarian, the American government accepted the Dey's challenge for war, and in May, 1815, sent Commodore Decatur to the Mediterranean with a squadron to humble the Dey. Decatur found the Algerine pirate-fleet cruising for American vessels. He played havoc with the corsairs, entered the Bay of Algiers (June 28), demanded the instant surrender of all American prisoners, full indemnification for all property destroyed, and absolute relinquishment of all claims to tribute from the United States thereafter. The terrified Dey complied with the demand. (See *Barbary Powers, Humbling of the.*)

**Algonquins.** The most powerful of the eight distinct Indian nations found in North America by the Europeans in the 17th century was the Algonquin. (See *Indians.*) It was composed of several powerful tribes, the most important of which were the Ottawas, Chippewas, Sacs and Foxes, Menomonees, Miamis, Pottawattomies, Kickapoos, Illinois, Shawnoese, Powhatans, Corees, Nanticookes, Lenni-Lenapes or Delawares, Mohegans, the New England Indians, the Abenakes, and Miamees. There were smaller independent tribes, the principal of which were the Susquehannas in Pennsylvania; the Mannahoacs in the hill-country between the York and Potomac rivers; and the Menacans, on the headwaters of the James River, Virginia. All of these tribes were divided into cantons or clans, sometimes so small as to afford a war-party of only forty men. The domain of the Algonquins covered a vast region, bounded on the north and northeast by the Esquimaux; on the northwest by the Kuistenaux and Athabascas; on the west by the Dakotas; on the south by the Catawbas, Cherokees, Mobilians, and Natchez; and on the east by Nova Scotia. West of the Mississippi, the Blackfeet and Cheyennes are regarded as a family of the Algonquins. The original land of the *Ottawas* was on the west side of Lake

Huron; but they were seated upon the *Ottawa* River, in Canada, when the French discovered them, and claimed sovereignty over that region. (See *Ottawas.*) The *Chippewas* and *Pottawattomies* were closely allied by language and friendship. The former were on the southern shores of Lake Superior; the latter occupied the islands and mainland on the western shores of Green Bay when first discovered by the French. In 1701 they seated themselves on the southern shores of Lake Michigan. (See *Chippewas* and *Pottawattomies.*) The *Sacs* and *Foxes* are really one tribe. They were found by the French, in 1680, at the southern extremity of Green Bay. (See *Sacs* and *Foxes.*) The *Menomonees* are among the few Indian tribes who occupy the same domain as when they were discovered by Europeans in 1699. That domain is upon the shores of Green Bay, and there the tribe remains. (See *Menomonees.*) The *Miamis* and *Piankeshaws* inhabited that portion of Ohio lying between the Miami or Mannee, on Lake Erie, and the watershed between the Wabash and Kaskia rivers. The English and the Five Nations called them the *Twightwees*. (See *Miamis*, *Piankeshaws*, and *Twightwees.*) The *Kickapoos* were on the Wisconsin River when discovered by the French. (See *Kickapoos.*) The *Illinois* formed a numerous tribe, twelve thousand strong, when discovered by the French. They were seated on the Illinois River, and composed a confederation of five families, namely, *Kaskaskias*, *Cahokias*, *Tamaronas*, *Michigamies*, and *Peorias*. (See *Illinois* and *Kickapoos.*) The *Shawnoese* occupied a vast region west of the Alleghany Mountains, and their great council-house was in the basin of the Cumberland River. (See *Shawnoese.*) The *Powhatans* constituted a confederacy of more than twenty tribes, including the *Accolhannocks* and *Accomacs*, on the eastern shore of Chesapeake Bay. The confederacy occupied the region in Virginia consisting of the navigable portion of the James and York rivers, with their tributaries. (See *Powhatans.*) The *Corees* were south of the *Powhatans*, on the Atlantic coast, in Northern North Carolina. The *Cheraws* and other small tribes occupied the land of the once powerful *Hatteras* family, below the *Corees*. (See *Corees*, *Cheraws*, and *Hatteras.*) The *Nanticookes* were upon the peninsula between the Chesapeake and Delaware bays. (See *Nanticookes.*) The *Lenni-Lenapes*, or *Delawares*, comprised powerful families—namely, the *Minsis* and *Delawares* proper. The former occupied the northern part of New Jersey and a portion of Pennsylvania, and the latter inhabited lower New Jersey, the banks of the Delaware River below Trenton, and the whole valley of the Schuylkill. (See *Lenni-Lenapes* or *Delawares.*) The *Mohegans* were a distinct tribe on the east side of the Hudson River, and under that name were included several independent families on Long Island and the country between the *Lenni-Lenapes* and the New England Indians. (See *Mohegans.*) The *New England Indians* inhabited the country from the Connecticut River eastward to the Saco, in Maine. The principal tribes were the *Narragansets* on

Rhode Island; the Pokanokets and Wampanoags on the eastern shore of Narraganset Bay and in a portion of Massachusetts; the Massachusetts in the vicinity of Boston and the shores southward; and the Pawtuckets in the north-eastern part of Massachusetts, embracing the Pennacooks of New Hampshire. (See *Narragansets, Pokanokets, Wampanoags, Massachusetts, Pawtuckets, and Pennacooks.*) The *Abenakes* were eastward of the *Saco*. Their chief tribes were the *Penobscots, Norridgewocks, Androscoggins, and Passamaquoddies.* (See *Penobscots, Norridgewocks, Androscoggins, and Passamaquoddies.*)

**Alien and Sedition Laws (1798).** The greater part of the emigrants to the United States since the adoption of the National Constitution had been either Frenchmen, driven into exile by political troubles at home, or Englishmen, Scotchmen, and Irishmen, who had espoused ultra-republican principles, and who, flying from the severe measures of repression adopted against them at home, brought to America a fierce hatred of the government of Great Britain and warm admiration of republican France. Among these were some men of pure lives and noble aims, but many were desperate political intriguers, ready to engage in any scheme of mischief. It was estimated that at the beginning of 1798 there were 30,000 Frenchmen in the United States organized in clubs, and at least 50,000 who had been subjects of Great Britain. These were regarded as dangerous to the Commonwealth, and in 1798, when war with France seemed inevitable, Congress passed acts for the security of the government against internal foes. By an act (June 18, 1798), the naturalization laws were made more stringent, and alien enemies could not become citizens at all. By a second act (June 25), which was limited to two years, the President was authorized to order out of the country all aliens whom he might judge to be dangerous to the peace and safety of the United States. By a third act (July 6), in case of war declared against the United States, or an actual invasion, all resident aliens, natives or citizens of the hostile nation, might, upon proclamation of the President, issued according to his discretion, be apprehended and secured or removed. These were known as *Alien Laws*. The President never had occasion to put them in force, but several prominent Frenchmen, who felt that the laws were aimed at them, speedily left the United States. Among these was M. Volney, who, in the preface to his work *A View of the Soil and Climate of the United States*, complained bitterly of "the public and violent attacks made upon his character, with the connivance or instigation of a certain eminent personage," meaning President Adams. On July 14, 1798, an act was passed for the punishment of sedition. It made it a high misdemeanor, punishable by a fine not to exceed \$5000, imprisonment from six months to five years, and binding to good behavior at the discretion of the court, for any person unlawfully to combine in opposing measures of the government properly directed by authority, or attempting to prevent government officers executing their trusts, or inciting to riot

and insurrection. It also provided for the fining and imprisoning of any person guilty of printing or publishing "any false, scandalous, and malicious writings against the government of the United States, or either House of Congress, or the President, with intent to defame them, or to bring them into contempt or disrepute." This was called the *Sedition Law*. These laws were assailed with great vigor by the Opposition, and were deplored by some of the best friends of the administration. Hamilton deprecated them. He wrote a hurried note of warning against the Sedition Act (June 29, 1798) to Wolcott, while the bill was pending, saying, "Let us not establish a tyranny. Energy is a very different thing from violence. If we take no false step, we shall be essentially united; but if we push things to the extreme, we shall then give to parties *body and solidity.*" Nothing contributed more powerfully to the defeat of the Federal party two years later than these extreme measures.

**Alison, FRANCIS, D.D.,** was born in Donegal County, Ireland, in 1705; died in Philadelphia, Nov. 28, 1779. He came to America in 1735, and in 1752 he took charge of an academy in Philadelphia. From 1755 until his death he was Vice-provost and Professor of Moral Philosophy of the College of Pennsylvania. His chief claim to honor among men is that he was the tutor of a large number of Americans who were conspicuous actors in the events of the revolution that accomplished the independence of the United States of America.

**Allatoona Pass and Marietta, EVENTS BETWEEN (1864.)** The Confederates, retreating from Resaca, took a position at Allatoona Pass. Sherman, after resting his army, proceeded to flank them out of their new position. J. C. Davis's division of Thomas's army had moved down the Oostenanla to Rome, where he destroyed important mills and founderies, and captured nearly a dozen guns. He left a garrison there. Meanwhile Sherman had destroyed the Georgia State Arsenal, near Adairsville. The Nationals proceeded to gather in force at and near Dallas. Johnston was on the alert, and tried to prevent this formidable flank movement. Hooker's corps met Confederate cavalry near Pumpkiuvine Creek, whom he pushed across that stream and saved a bridge they had fired. Following them eastward two miles, he (Hooker) found the Confederates in strong force and in battle order. A sharp conflict ensued, and at 4 o'clock P.M. he made a bold push, by Sherman's order, to secure possession of a point near New Hope Church, where roads from Ackworth, Marietta, and Dallas met. A stormy night ensued, and Hooker could not drive the Confederates from their position. On the following morning Sherman found the Confederates strongly entrenched, with lines extending from Dallas to Marietta. The approach to their intrenchments must be made over rough, wooded, and broken ground. For several days, constantly skirmishing, Sherman tried to break through their lines to the railway east of the Allatoona

Pass. McPherson's troops moved to Dallas, and Thomas's deployed against New Hope Church, in the vicinity of which there were many severe encounters, while Schofield was directed to turn and strike Johnston's right. On May 28 the Confederates struck McPherson a severe blow at Dallas; but the assailants were repulsed with heavy loss. At the same time, Howard, nearer the centre, was repulsed. Sherman, by skilful movements, compelled Johnston to evacuate his strong position at Allatoona Pass (June 1, 1864). The National cavalry, under Garrard and Stoneman, were pushed on to occupy it, and there Sherman, planting a garrison, made a secondary base of supplies for his army. Johnston made a stand at the Kenesaw Mountains, near Marietta; but Sherman, who had been reinforced by two divisions under General Frank P. Blair (June 8), very soon caused him to abandon that position, cross the Chattahoochee River, and finally to rest at Atlanta. (See *Kenesaw*.)

**Allatoona Pass, BATTLE AT.** After the evacuation of Atlanta (Sept. 2, 1864), Sherman and Hood reorganized their armies in preparation for a vigorous fall campaign. Satisfied that Hood intended to assume the offensive and probably attempt the seizure of Tennessee, Sherman sent Thomas, his second in command, to Nashville, to organize the new troops expected to gather there, and to make arrangements to meet such an emergency. Thomas arrived there Oct. 3. Meanwhile the Confederates had crossed the Chattahoochee, and by a rapid movement had struck the railway at Big Shanty, north of Marietta, and destroyed it for several miles. A di-

forcement, and in command. The Confederates were vastly superior in numbers, and invested the place. After cannonading the fort two hours, their leader (General French) demanded its surrender. Then he assailed it furiously, but his columns were continually driven back. The conflict raged with great fierceness; and Sherman, from the top of Kenesaw, heard the roar of cannon and saw the smoke of battle, though eighteen miles distant. He had pushed forward a corps (Twenty-third) to menace the Confederate rear, and by signal-flags on Kenesaw he said to the commander at Allatoona, "Hold out, for relief is approaching." And when Sherman was assured that Corse was there, he said, "He will hold out; I know the man." And so he did. He repulsed the Confederates several times; and when they heard of the approach of the Twenty-third corps, they hastily withdrew, leaving behind them two hundred and thirty dead and four hundred prisoners, with about eight hundred small arms. The Nationals lost seven hundred and seven men.

**Allen, ETHAN,** born at Litchfield, Conn., Jan. 10, 1737; died at Burlington, Vt., Feb. 12, 1789. In 1762 he was one of the proprietors of the iron-works at Salisbury, Conn. In 1766 he went to the then almost unsettled domain between the Green Mountains and Lake Champlain, where he was a bold leader of the settlers on the New Hampshire Grants (which see) in their bitter controversy with the authorities of New York. During the controversy several pamphlets were written by Allen, in his peculiar style, which forcibly illustrated the injus-

ALLATOONA PASS.

vision of infantry pushed northward and appeared before Allatoona, where Colonel Tourtellotte was guarding one million National rations with only three thin regiments. Sherman made efforts at once for the defence of these and his communications. Leaving Sloum to hold Atlanta and the railway bridge across the Chattahoochee, he started on a swift pursuit of Hood with five army corps and two divisions of cavalry. He established a signal station on the summit of Great Kenesaw Mountain, and telegraphed to General Corse, at Rome, to hasten to the assistance of Tourtellotte. Corse instantly obeyed; and when the Confederates appeared before Allatoona, at dawn (Oct. 5), he was there with rein-

forcement of the action of the New York authorities. The latter declared Allen an outlaw, and offered a reward of £150 for his arrest. He defied his enemies, and persisted in his course. Early in May, 1775, he led a few men and took the fortress of Ticonderoga by surprise. His followers were called "Green Mountain Boys." His success as a partisan caused him to be sent twice into Canada, during the latter half of 1775, to win the people over to the republican cause. In the last of these expeditious he attempted, with Colonel Brown, to capture Montreal (Sept. 25, 1775), but was made a prisoner himself and sent to England in irons, whence, after a confinement of some weeks, he was sent to Halifax.

Five months later he was removed to New York. On the 6th of May, 1778, he was exchanged, after a captivity of about two years, for Colonel Campbell, and returned home, where he was received with joy and honors. He was invested with the chief command of the state militia. Congress immediately gave him the commission of lieutenant-colonel in the Continental army. When, in the course of the war, Vermont (see *New Hampshire Grants*) assumed and maintained an independent position, a fruitless attempt was made by Beverly Robinson to bribe Allen to lend his support to a union of that province with Canada. He was supposed to be disaffected towards the revolted colonies, and he fostered that impression in order to secure the neutrality of the British towards his mountain state until the close of the war. As a member of the legislature of Vermont, and as a delegate in Congress, he secured the great object of his efforts—namely, the ultimate recognition of Vermont as an independent state. He removed to Bennington before the close of the war, thence to Arlington, and finally died in Burlington.

**Allen, ETHAN, CAPTURE OF (1775).** With less than one hundred recruits, mostly Canadians, Colonel Allen crossed the St. Lawrence (Sept. 25, 1775) to attack Montreal. This was done at the suggestion of Colonel John Brown, who was also recruiting in the vicinity, and who agreed to cross the river at the same time a little above the city, the attack to be made simultaneously by both parties. For causes never satisfactorily explained, Brown did not cross, and disaster ensued. General Robert Prescott was in command in the city. He sallied out with a considerable force of regulars, Canadians and Indians, and after a short skirmish made Allen and his followers prisoners. When Prescott learned that Allen was the man who captured Ticonderoga, he treated him very harshly. He was bound hand and foot with irons, and these shackles were fastened to a bar of iron eight feet in length. In this plight he was thrust into the hold of a vessel to be sent to England, and in that condition he was kept five weeks; but when she sailed from Quebec the humane captain struck off his irons. He was confined seven weeks in Pendennis Castle in England, when he was sent to Halifax, and thence to New York, where he was exchanged in the spring of 1778.

**Allen, HENRY WATKINS,** was born in Prince Edward County, Va., April 29, 1820; died in the city of Mexico, April 22, 1866. He became a lawyer in Mississippi; and in 1842 raised a company to fight in Texas. He settled at West Baton Rouge, Louisiana, in 1850; served in the State Legislature; was in the Law School at Cambridge in 1854; and visited Europe in 1859. He took an active part with the Confederates in the Civil War, and was at one time military governor of Jackson, Mississippi. In the battles of Shiloh and at Baton Rouge he was wounded. He was commissioned a brigadier-general in 1864, but was almost immediately elected governor of Louisiana, the duties of which he performed with great ability and wisdom. At the

close of the war he made his residence in Mexico, where he established the *Mexican Times*, which he edited until his death.

**Allen, IRA,** a younger brother of Ethan, was born in Cornwall, Conn., April 21, 1751; died in Philadelphia, Jan. 7, 1814. He was an active patriot, and took a distinguished part in public affairs in Vermont, his adopted state, where he served in the Legislature, and was Secretary of State, Surveyor-General, and Member of the Council. He was a military leader in the war for independence, and was one of the commissioners sent to Congress to oppose the claims of neighboring provinces to jurisdiction in Vermont. He effected an armistice with the British in Canada in 1781, and by so doing brought about a settlement of the controversy with New York. (See *New Hampshire Grants*.) A senior major-general of the state militia in 1795, he went to Europe to purchase arms for his commonwealth, and on his way homeward with muskets and cannon he was captured, taken to England, and charged with being an emissary of the French, and intending to supply the Irish malcontents with arms. After long litigation the matter was settled in Allen's favor. He wrote a *National and Political History of Vermont*, published in London in 1798.

**Allen, ROBERT,** a native of Ohio, graduated at West Point in 1836, and served with distinction in the war with Mexico. He was a very useful officer in the Civil War, and attained the rank of brigadier-general of volunteers, and brevet major-general. He was stationed at St. Louis, where his services were of great value during the war. At its close he was made assistant quartermaster-general (1866), and afterwards chief-quartermaster of the division of the Pacific.

**Allen, WILLIAM,** Chief-justice of Pennsylvania, died in England in September, 1780. He married a daughter of Andrew Hamilton, a distinguished lawyer of Pennsylvania, whom he succeeded as Recorder of Philadelphia in 1741. He assisted Benjamin West, the painter, in his early struggles, and co-operated with Benjamin Franklin in establishing the College of Pennsylvania. Mr. Allen was chief-justice of that state from 1750 to 1774. A strong loyalist, he withdrew to England in 1774. In London he published a pamphlet entitled, *The American Crisis*, containing a plan for restoring American dependence upon Great Britain.

**Allen, WILLIAM HENRY,** was born at Providence, R. I., Oct. 21, 1784; died at Plymouth, England, Aug. 15, 1813. He entered the navy as a midshipman in April, 1800, and sailed in the frigate *George Washington* to Algiers. He afterwards went to the Mediterranean in the *Philadelphia*, under Barron; then in the *John Adams*, under Rodgers; and in 1804 as sailing-master to the *Congress*. He was in the *Constitution* frigate in 1805; and in 1807 he was third lieutenant of the *Chesapeake* when she was attacked by the *Leopard*. It was Lieutenant Allen who drew up the memorial of the officers of the *Chesapeake* to the Secretary of the Navy, urging the arrest and

trial of Barron for neglect of duty. (See *Chesapeake and Leopard*.) In 1809 he was made first lieutenant of the frigate *United States*, under Decatur. He behaved bravely in the conflict with the *Macdonian*; and after her capture took her safely

WILLIAM HENRY ALLEN.

into New York harbor, Jan. 1, 1813. In July, 1813, he was promoted to master commandant while he was on his voyage in the brig *Argus* that took W. H. Crawford, American minister, to France. That voyage ended in a remarkable and successful cruise among the British shipping in British waters. After capturing and destroying more than twenty British merchantmen (see *Argus*), his own vessel was captured; and he was mortally wounded by a round shot (Aug. 14), and died the next day at Plymouth, England, whither he was conveyed a prisoner.

**Allibone, SAMUEL AUSTIN, LL.D.**, bibliographer and author, was born in Philadelphia, April 17, 1816. He is the author of *A Critical Dictionary of English Literature and British and American Authors, Living and Deceased, from the Earliest Accounts to the Latter Half of the Nineteenth Century*. This work is in three volumes royal octavo, and exhibits evidence of great care, industry, good judgment, most extensive research, and immense labor in its preparation. Dr. Allibone spent many years in gathering and arranging his materials. The volumes were published in 1858, 1870, and 1871. The work contains notices of 47,000 authors, with forty classified indexes of subjects. Dr. Allibone has contributed articles to the *North American Review*, the *Evangelical Review*, and other periodicals, and is the author of some religious controversial essays. He has also privately printed and circulated a number of tracts. He is now (1883) Librarian of the Lenox Library, New York.

**Allied Armies, THE, IN VIRGINIA.** In August, 1781, a French frigate, from the fleet of De Grasse in the West Indies, brought word that he

would sail directly for the Chesapeake Bay. Already Washington had had his thoughts turned towards a campaign of the allies against Cornwallis in Virginia by a letter from Lafayette, who had taken a position only eight miles from Yorktown. The marquis had plainly perceived the mistake of Clinton in ordering Cornwallis to take a defensive position in Virginia. So early as July he wrote to Washington from Randolph's, on Malvern Hill, urging him to march into Virginia in force, saying, "Should a French fleet enter Hampton Roads, the British army would be compelled to surrender." Foiled in his plan of attacking New York, Washington anxiously contemplated the chance of success in Virginia, when his determination was fixed by a letter from Admiral de Barras (the successor of Admiral Ternay, who had died at Newport), which contained the joyful news that De Grasse was to sail for the Chesapeake at the close of August with a powerful fleet and more than three thousand land troops. De Barras wrote: "M. de Grasse is my junior; yet, as soon as he is within reach, I will go to sea to put myself under his orders." Washington at once made ample preparations for marching into Virginia. To prevent any interference from Clinton, he wrote deceptive letters to be intercepted, by which the baronet was made to believe that the Americans still contemplated an attack upon New York City. So satisfied was Clinton that such was Washington's design, that, for nearly ten days after the allied armies had crossed the Hudson (Aug. 23 and 24), and were marching through New Jersey, he believed the movement to be only a feint to cover a sudden descent upon the city with an overwhelming force. It was not until Sept. 2 that he was satisfied that the allies were marching against Cornwallis. On the arrival of a body of Hessians at New York, he had countermanded an order for the earl to send him troops, and for this he was now thankful. On Sept. 5, while the allies were encamped at Chester, Pennsylvania, Washington was informed that De Grasse had entered Chesapeake Bay. In that event he saw a sure prophecy of success, and of the independence of his country. De Grasse had moored his fleet in Lynn Haven Bay, and so barred the entrance to the York River against reinforcements for Cornwallis. He had landed three thousand troops on the peninsula, near old Jamestown. Meanwhile De Barras had sailed for Newport with a fleet conveying ten transports laden with ordnance for the siege of Yorktown. The British admiral, Graves, on hearing of the approach of the French fleet, had sailed for the Chesapeake. De Grasse went out to meet him, and on Sept. 5 they had a sharp engagement. The British fleet was so shattered that it retired to New York, leaving De Grasse master of the Chesapeake. When Clinton was assured that the allies were bound for Virginia, he tried by military movements to call them back. He menaced New Jersey; threatened to attack the works in the Hudson Highlands; and sent Arnold on a marauding expedition into New England. (See *Arnold at New London*.) But neither Clinton's menaces nor Ar-

nold's atrocities stayed the onward march of the allies. They made their way to Annapolis, and thence by water to the James River in transports furnished by De Barras. From Baltimore Washington, accompanied by Rochambeau and the Marquis de Chastellux, visited his home at Mount Vernon, from which he had been absent since June, 1775. There they remained two days, and then journeyed to Williamsburg, where they arrived on the 14th. There the allies rendezvoused, and prepared for the siege of Yorktown.

**Allied Armies, THE, ON THE HUDSON.** Count de Rochambeau received intelligence at the close of May, 1781, that the Count de Grasse might be expected on the coast of the United States with a powerful French fleet in July or August. This news caused the French forces, which had lain idle at Newport many months, to move immediately for the Hudson River, to form a junction with the Continental army there under Washington. A part of them moved on June 10, and the remainder immediately afterwards. They formed a junction with the American army, near Dobb's Ferry, on the Hudson, July 6. The Americans were encamped on Valentine's Hill, in two lines, with the right wing resting on the Hudson River near the ferry. The French army were stationed on the hills at the left, in a single line, reaching from the Hudson to the Broox River. There was a valley of considerable extent between the two armies. The American army had been encamped at Peekskill, and marched down to Valentine's Hill on the morning of the 2d of July.

**Allied Forces, THE (1782).** At the beginning of 1782 the American army encamped in the vicinity of New York; their French allies, who had assisted in the capture of Cornwallis, remained in Virginia, and De Grasse took his fleet to the West Indies.

**Allies, JUSTICE TO.** Much of the earlier part of the session of Congress of 1797-98 was devoted to the consideration of private matters, particularly to Revolutionary claims. An act was passed authorizing grants of land to refugees from Canada and Nova Scotia who had joined and adhered to the American cause during the Revolution. At a former session, in spite of violent opposition, based on the alleged want of power in Congress for that purpose, a sum of money had been granted to the daughters of the Count de Grasse, who had been reduced to poverty by the death of their father. He had been guillotined during the Reign of Terror in France. (See *Grasse, de.*) That sum had been exhausted, and a new act was now passed, in further acknowledgment of De Grasse's services in the war for independence, granting to his four daughters \$400 a year each for five years. At this time many banished Frenchmen arrived in America. Among them were the young Duke of Orleans (afterwards King Louis Philippe), and two of his younger brothers. The hearts of Americans were gladdened at the same time by news of the release of Lafayette from an Austrian dungeon, in which he had long been confined. For the purpose of affording pecuniary

relief to his family, Congress had already appropriated to their use the full amount of the pay of a major-general in the American service to that time.

**Allouez, CLAUDE JEAN,** was one of the earliest French missionaries and explorers of the country near the Great Lakes. He was born in 1620, and died in 1690. After laboring among the Indians on the St. Lawrence several years, he penetrated the Western wilds and established a mission on the western shores of Lake Michigan, where he heard much of the Mississippi River, and made notes of what he learned concerning it. He explored Green Bay, and founded a mission among the Foxes, Miamis, and other tribes there. A mission begun by Marquette at Kaskaskia, Illinois (see *Marquette*), Allouez sought to make his permanent field of labor; but when La Salle, the bitter opponent of the Jesuits, approached in 1679, he retired. Returning to the Miamis on the St. Joseph's River, he labored for a while, and died. The contributions of Father Allouez to the *Jesuit Relations* are most valuable records of the ideas and manners of the Indians.

**Allston, WASHINGTON,** was a distinguished American painter, born at Wacomaco, S. C., Nov. 5, 1779; died at Cambridge, Mass., July 9, 1843. He graduated at Harvard University in 1800,

WASHINGTON ALLSTON.

went to Europe the next year to study art, and became a student in the Royal Academy of England. He remained eight years abroad, and, returning to Cambridge, married a sister of Dr. William Ellery Channing. He was a poet as well as a painter. His numerous works of art exhibit great power in delineating the pictures of a fertile imagination. His skill as a colorist earned him the title of "The American Titian."

**Almagro, DREGO DE,** one of the Spanish conquerors of Peru, and principal associate of Pizarro. He was a founding, born about 1464; died July, 1538. Almagro, Pizarro, and a priest named Luque undertook the conquest of Peru, and effected it, with a small force, in 1533. Al-

magro was appointed governor of what is now Chili, in 1534, extending his conquests into that region in 1535. He and Pizarro became bitter enemies. He conquered Cuzco, the ancient capital of Peru. In a decisive battle near that place, in 1538, Almagro was defeated, made prisoner, and put to death by order of Pizarro. Almagro was profligate, perfidious, and cruel. His barbarous treatment of the Inca, Atahualpa, covered his name and fame with infamy. The Inca's son rallied men, who assassinated Pizarro, July 26, 1541, and these were executed by order of the Viceroy of Peru, in 1542.

Alsop, RICHARD, a witty poet and essayist, was born at Middletown, Conn., Jan. 23, 1761; died at Flatbusb, L. I., Aug. 29, 1815. He is best known in literature as the principal author of a series of burlesque pieces, begun in 1791 and ended in 1805, entitled, in collective form, *The Echo*. They were thus published in 1807. Dwight, Hopkins, and Trumbull were associated with Alsop in the production of *The Echo*, which, from a work provocative of mirth, became a bitter political satirist of the Democratic Party. He wrote a "Monody on the Death of Washington," in heroic verse, which was published in 1800. Alsop ranked among the "Hartford Wits" at the close of the last century.

Alvarado, PEDRO DE, a Spanish conqueror in America, was born at Badajoz, Spain, and died in 1541. Sailing from Spain to Cuba, in 1518, he accompanied Grijalva on his exploring expedition along the Gulf coasts. He took an important part in the expedition of Cortez in 1519, which resulted in the conquest of Mexico. Left in charge of the city of Mexico, Alvarado's cruelty and rapacity caused an insurrection, and he narrowly escaped with his life. On his return to Spain the king made him Governor of Guatemala (a province which, in 1523, he had conquered) and Honduras. Going to South America with some troops, he marched over the Andes with the design of seizing Quito, but, meeting Pizarro's troops, he peaceably returned after receiving an enormous indemnity for his expenses. Alvarado made explorations and discoveries on the coast of California, and was killed in a skirmish with the natives.

Alvarez, JUAN, a Mexican leader, was born in 1790. He was popular among the republicans of Mexico, and, by energy and courage in leadership, put an end to the dictatorship of Santa Aña by a decisive battle at Saltillo, July 22-23, 1855. He was then proclaimed President, and entered the city of Mexico attended by an Indian body-guard. He found his position uncomfortable, so he resigned in less than a month; and placing Comonfort, his Minister of War, in power, he took \$200,000 from the treasury, and a quantity of arms and ammunition, and returned, with his Indians, to their homes in Southern Mexico. Alvarez died in 1867.

Amelia Island and Galveston. In the summer of 1817, Gregor McGregor, styling himself "Brigadier-general of the armies of New Granada and Venezuela, and general-in-chief employed to liberate the provinces of both the Flor-

idas," commissioned by the supreme councils of Mexico and South America, took possession of Amelia Island, at the mouth of the St. Mary's River, near the boundary of the State of Georgia. His followers were a band of adventurers which he had collected in Charleston and Savannah; and when he took possession of Amelia Island, he proclaimed a blockade of St. Augustine. In the hands of these desperadoes the island was soon converted into a resort of uncanoeing privateers under the Spanish-American flag, and a depot for smuggling slaves into the United States. Another similar establishment had been set up on Galveston Island, off the coast of Texas, under a leader named Aury. This establishment was more important than that on Amelia Island, as well on account of numbers as for the greater facilities afforded for smuggling. An adventurer named Louis Aury was at the head of this establishment, and had organized a sort of civil government. It was a second Barataria, and to it several of the old privateers and smugglers of Lafitte's band of Baratarians resorted. (See *Lafitte and the Baratarians*.) Under a secret act, passed in 1811, now (1817) first made public, the President took the responsibility of suppressing both these establishments. Aury had joined McGregor with the Galveston desperadoes, and their force was formidable. The President sent Captain Henly, in the ship *John Adams*, with smaller vessels, and a battalion of Charleston artillery under Major Bankhead, to take possession of Amelia Island. McGregor was then on the main, leaving Aury in command of the island. He was summoned to evacuate it; and on Dec. 23 the naval and military commanders took quiet possession. Aury left it in February, and so both nests of pirates and smugglers were broken up. At the same time there was much sympathy felt in the United States for the revolted Spanish-American colonies, and, in spite of the neutrality laws, ernisers were fitted out in American ports under their flags.

America and Ireland. The bold stand taken by the Americans early in 1775 made the British ministry sore afraid of like movements in Ireland, where the Protestant minority had hitherto been employed to keep the majority, who were Roman Catholics, in subjection. That majority, amounting to seven eighths of the entire population, were not only deprived of all political privileges, but were subjected to a great many rigorous and cruel restraints, designed to keep them ignorant, poor, and helpless. Even the Protestants in Ireland were not allowed an equality with their fellow subjects in England. Their parliament did not possess the rights enjoyed by the American colonial assemblies; and Ireland, in matters of trade, was treated very much like a foreign country. The ideas of political liberty aroused in the colonies was already sowing the seeds of revolution in Ireland, and it was judged expedient to conciliate the Irish by just legislation that should relax the harsh commercial restrictions. This, however, was done so sparingly that it fell far short of accomplishing permanent good. Indeed, it was

regarded as a delusive, temporizing policy, and the attitude of the Irish people, encouraged by that of the Americans, even became more threatening than ever. The Catholic Relief Bill of 1778 had made the Irish, for the first time in their history, one people; "all sects, all ranks, all races—the nobleman and the merchant, the Catholic and the Protestant, the Churchman and the Dissenter, he who boasted of his pure native lineage, and he who was as proud of the Saxon or Norman blood that flowed in his veins—rushed together to the vindication of the liberties of their common country;" and, at the beginning of the year, beheld them embodied to the number of eighty thousand volunteers. (See *Ireland and the United States*, and *Ireland, Revolutionary Movements in*.) The British government dared not refuse the arms which they demanded to repel a threatened invasion from France. The fiery Grattan was then leader in the Irish parliament. "I never will be satisfied," he exclaimed in debate, "so long as the meanest cottager in Ireland has a link of the British chain clanking to his rags: he may be naked—he shall not be in irons." The Irish parliament acted in accordance with this spirit, and adopted a resolution which made the country virtually free.

**America, DISCOVERERS OF.** There are unquestioned historical records of America for the space of about five hundred years. It was undoubtedly discovered by Northern navigators (see *Northmen*) early in the eleventh century, and the colony of the son of a Welsh prince (see *Madoc*) probably landed on the North American continent about the year 1170. There is no evidence that the Northmen saw more than the coasts of Labrador and New England—possibly Newfoundland; and the landing-place of Madoc is wholly conjectural. On the 11th of October, 1492, Christopher Columbus discovered one of the Bahama Islands, east of Florida, but not the continent. (See *Columbus*.) In the summer of 1498, Sebastian Cabot (commissioned by King Henry VII. of England), who sailed from Bristol in May with two caravels, discovered the North American continent at Labrador. He was seeking a northwest passage to "Cathay" (which see), and being barred from the Polar Sea by pack-ice, sailed southward, discovered Labrador, and possibly went along the coast as far as the Carolinas. He discovered and named Newfoundland, and found the treasures of cod-fishes in the waters near it. (See *Cabot*.) On the 1st of August, the same summer, Columbus discovered the continent of South America, near the mouth of the Orinoco River. Americus Vesputius, a Florentine, and an agent of the De' Medici family of Florence, was in Spain when the great discovery of Columbus was made. In May, 1499, Vesputius sailed from Spain with Alonso de Ojeda as an adventurer and self-constituted geographer for the new-found world. They followed the southern track of Columbus in his third voyage, and off the coast of Surinam, South America, they saw the mountains of the continent. That was a year after Columbus first saw the continent of America. On his return, in 1500, Ves-

putius revealed these discoveries in a letter to the Medici, and by afterwards antedating it 1497, either intentionally or accidentally, made it appear that his claim to the honor of being the first discoverer of the Western Continent was well founded. It was called *America* in his honor. (See *Vesputius*; also *America, Origin of Name of*.) In the year 1499, Vincent Yañez Pinzon sailed from Palos with his brother and four caravels, and, reaching the coast of South America, discovered the great river Amazon in the spring of 1500. Before Pinzon's return, Pedro Alvarez Cabral, sent by Emanuel, King of Portugal, while on an exploring expedition discovered Brazil, and took possession of it in the name of the crown of Portugal. It was within the territory donated by the Pope to the Spanish monarchs. (See *Pope's Gift*.) A friendly arrangement was made, and it was ultimately agreed that the King of Portugal should hold all the country he had discovered from the river Amazon to the river Platte. On the announcement of the discoveries of Cabot in the Northwest, King Emanuel of Portugal sent Gaspard Cortereal, a skilful navigator, with two caravels on a voyage of discovery towards the same region. He saw Labrador, and possibly Newfoundland, and went up the coast almost to Hudson's Bay; and it is believed that he discovered the Gulf of St. Lawrence. (See *Cortereal*.) In 1504 Columbus, in a fourth voyage to America, sailed with four caravels through the Gulf of Mexico, in search of a passage to India, and discovered Central America. (See *Columbus*.) Eight years later, Juan Ponce de Leon, an old Spanish nobleman, sailed from Porto Rico, in the West Indies, of which he was governor, in search of an island containing a fabled fountain of youth. He did not find the spring, but discovered a beautiful land covered with exquisite flowers, and named it Florida. (See *Florida* and *Ponce de Leon*.) In 1520, Lucas Vasquez D'Allyon, a wealthy Spaniard, who owned mines in Santo Domingo, voyaged northwesterly from that island, and discovered the coast of South Carolina. (See *D'Allyon*.) Meanwhile the Spaniards had been pushing discoveries westward from Hispaniola, or Santo Domingo. (See *Hayti*.) Ojeda also discovered Central America. In 1513 Vasco Nuñez de Balboa discovered the Pacific Ocean from a mountain summit on the Isthmus of Darien. (See *Nuñez*.) Francisco Fernandez de Cordova discovered Mexico in 1517. (See *Mexico*.) Pamphila de Narvaez and Ferdinand de Soto traversed the country bordering on the Gulf of Mexico, the former in 1528, and the latter in 1539-41. In the latter year De Soto discovered and crossed the Mississippi, and penetrated the country beyond. (See *De Soto*.) This was the last attempt of the Spaniards to make discoveries in North America before the English appeared upon the same field. (See *Narvaez* and *De Soto*.) It is claimed for Juan Verazzani, a Florentine navigator, that he sailed from France with four ships, in 1524, on a voyage of discovery, and that he traversed the shores of America from Florida to Nova Scotia. He is supposed to have entered Delaware Bay and the harbors of New York, Newport, and Bos-

ton, and named the country he had discovered New France. (See *Verazzani*.) Jacques Cartier discovered the gulf and river St. Lawrence in 1534, and, revisiting them the next year, gave them that name, because the day when he entered their waters was dedicated to St. Lawrence. In 1576, Sir Martin Frobisher went to Greenland and Labrador, and coasting northward discovered the bay that bears his name. (See *Frobisher*.) Huguenot adventurers from South Carolina, floating on the ocean helplessly, were picked up, taken to England, and by the stories which they told of the beautiful land they had left, caused Queen Elizabeth to encourage voyages of discovery in that direction. Sir Walter Raleigh, favored by the queen, sent two ships, commanded by Philip Amidas and Arthur Barlow, to the middle regions of the North American coast. (See *Raleigh*.) They discovered Roanoke Island and the main near (see *Roanoke*), and in honor of the unmarried queen the whole country was named Virginia. In 1602 Bartholomew Gosnold, sailing from England directly across the Atlantic, discovered the continent on the 14th of May, near Nahant, Mass., and sailing southward also discovered a long, sandy point, which he named Cape Cod, because of the great number of that fish found there. He also discovered Nantucket, Martha's Vineyard, and the Elizabeth Islands. (See *Gosnold*.) In 1604 Martin Pring discovered the coast of Maine. Again the French had turned their attention to North America. M. de Chastes, Governor of Dieppe, having received a charter from the King of France to form a settlement in New France (which see), he employed Samuel Champlain, an eminent navigator, to explore that region. He sailed from Honfleur in March, 1603, went up the St. Lawrence in May to Quebec, and, returning to France, found De Chastes dead, and the concession granted to him transferred by the king to Pierre du Gast, Sieur de Monts, a wealthy Huguenot, who accompanied Champlain on another voyage to the St. Lawrence the next year. In 1608 he went up the St. Lawrence again; and the following summer, while engaged in war with some Hurons and Algonquins against the Iroquois, he discovered the lake that bears his name in Northern New York. (See *Champlain*.) At the same time, Henry Hudson, a navigator in the employ of the Dutch East India Company, entered the harbor of New York (Sept., 1609) and ascended the river that bears his name as far as Albany. (See *Hudson*.) The region of the Great Lakes and the upper valley of the Mississippi was discovered and explored by French traders and Jesuit missionaries in the seventeenth century. So early as 1640 the former penetrated the western wilds from Quebec. Father Allouez set up a cross and the arms of France westward of the lakes in 1665. (See *Allouez*.) Father Marquette, another Jesuit missionary, pushed farther in 1673, and discovered the upper waters of the Mississippi. (See *Marquette*.) Father Hennepin, who accompanied La Salle, explored the Mississippi in a canoe from the mouth of the Illinois River, northward, in 1680, and discovered and named the Falls of St. Anthony. (See

*Hennepin*.) A little later Robert, Cavalier de La Salle, an enterprising young trader, penetrated to the Mississippi, and afterwards visited the coast of Texas from the sea and planted the germ of a colony in Louisiana. (See *La Salle*.)

**AMERICA, ORIGIN OF THE NAME OF.** Americus Vesputius sailed from Spain with Alonzo de Ojeda, in May, 1499. They followed the track of Columbus to South America, and saw the continent off the coast of Surinam. Vesputius, after his return to Spain, gave an account of the voyage in a letter to Lorenzo de' Medici. He made other voyages, and in a letter to René, Duke of Lorraine, written in 1504, he gave an account of his four voyages, in which he erroneously dated the time of his departure on his first voyage May 29, 1497, or a year or more before Columbus and Cabot severally discovered the continent of North and South America. In 1505 a narrative of his voyages to America was published at Strasburg, entitled *Americus Vesputius de Orbe Antartico per Regum Portugallie Pridem Juventa*. From that publication, bearing the untrue date of his first voyage, Vesputius acquired the reputation of being the first discoverer of America. Alluding to that false date and the statements under it, the learned and conscientious Charlevoix wrote that "Ojeda, when judicially interrogated, gave the lie direct to the statement." And Herrera, an early Spanish historian, accuses Vesputius of purposely falsifying the date of two of his voyages, and of confounding one with the other, "in order that he might arrogate to himself the glory of having discovered the continent." Finally, when Columbus was dead, and no voice of accusation or denial could escape his lips, the narratives of Vesputius were published at St. Diey, in Lorraine, then, as now, a German frontier province. At that time Vesputius was in correspondence with a learned German school-master named Waldseemüller (Wood-lake-miller), who was a correspondent of the Academy of Cosmography at Strasburg, founded by the Duke of Lorraine. Waldseemüller suggested to the members of that institution, under whose auspices the narrative of Vesputius had been published, the name of "America" for the Western Continent, in compliment to the reputed discoverer. This proposition was published, with approval, in a work entitled *Cosmographie Rudimenta*, in 1507. It is believed that this action was taken at the request or suggestion of Vesputius; at any rate, he is responsible for the fraud, for it was published seven years before the death of the Florentine, and he never repudiated it. "Considering the intimacy of the two parties," says the learned Viscount Santerem, "there is no doubt that the geographer was guided by the navigator in what he did." The name of *America* was given in honor of Americus Vesputius, for whom a fraudulent claim to be the first discoverer of the Western Hemisphere was made, and it was done at the suggestion of a German school-master. Both Columbus and Cabot were deprived of the rightful honor. (See *Columbus* and *Cabot*.)

**American Ambassador AT THE FRENCH**

**COURT, THE FIRST.** After the treaty of alliance with France was promulgated, Dr. Franklin, Silas Deane, and Arthur Lee were admitted to a public audience with the king on March 20, 1778. Franklin, on that occasion, tried somewhat to comply with the customs of the court by wearing a wig, but he could not find one in Paris large enough to fit his head; so he "wore his own hair"—venerable, long, white locks. He was dressed in a simple but elegant suit of black velvet, contrasting most conspicuously with the brilliant dress of the courtiers. Here was a novelty for Paris! and this, with the fame of Franklin as a philosopher, created a social sensation in the French capital. The beautiful young queen (Marie Antoinette) kept him near her person at levees and in the *salons*; the women gathered about him, and some of the more enthusiastic ones imprinted kisses on his forehead. Franklin was then seventy-two years of age. Deane and Lee were soon afterwards recalled, and Franklin was left sole ambassador at the French court.

**American Antiquities.** A greater portion of objects which constitute American antiquities consist of the architectural and other remains of the handiwork of the aborigines who inhabited the continent before any of the present races appeared here and subjugated or displaced them; also the ruins occasioned by the Spanish conquest. These are chiefly, in Central and South America, ruined temples, and, in North America, rude earth-works, now overgrown with venerable forest trees which attest their antiquity. In connection with those in the more southern regions, there are remains of elaborate carvings and ornamented pottery. There are many features in common between the temples and other works of art in Mexico, Central America, and Peru. The explorations of Stephens and Catherwood (1840-43) revealed to the world vast remains of cities in Central America, which were doubtless inhabited at the period of the conquest, three hundred and fifty years ago. There they found carved monoliths and the remains of highly ornamented temples. The monoliths at Copan (see the following page) some antiquaries are disposed to rank, as to use, with those ruder ones at Stonehenge, in England, and older ones in Arabia. The remains of Aztec art in Mexico attest the existence of a high degree of civilization there at the period of their structure. So, also, the ruins of the Temple of the Sun, at Cuzco, in Peru, tell of great advancement in the arts under the empire of the Incas. These remains occupy a living place on the borders of the historic period, but the mounds in North America, showing much mathematical skill in their construction and ingenuity in their contents, have hitherto eluded the keen skill of antiquaries, who have sought in vain among prehistoric mysteries for a clew to the origin of the people who fashioned them. (See *Mound-builders*.) European civilization on our continent is of too recent introduction to supply anything to a collection of real American antiquities originating with itself.

**American Association, THE.** On the 20th

of October, 1774, the first Continental Congress adopted a "non-impertation, non-consumption, and non-exportation agreement," applied to Great Britain, Ireland, the West Indies, and Madeira, by which the inhabitants of all the colonies were bound to act in good faith as those of certain cities and towns had already done, under the penalty of the displeasure of faithful ones. The agreement was embodied in fourteen articles, and was to go into effect on the first of December next ensuing. In the second article, the congress struck a blow at slavery, in the name of their constituents, declaring that, after the first day of December next ensuing, they would neither import nor purchase any slave imported after that date, and they would in no way be concerned in or abet the slave-trade. Committees were to be appointed in every county, city, and town to enforce compliance with the terms of the association. They also resolved that they would hold no commercial intercourse with any colony in North America that did not accede to these terms, or that should thereafter violate them, but hold such recusants as enemies to their common country. The several articles of the association were adopted unanimously, except the one concerning exportations. The South Carolinians objected to it, because it would operate unequally, and insisted upon rice being exempted from the requirement concerning non-exportation. When the article was adopted, all but two of the South Carolina delegation seceded. Gadsden and another, in the spirit of Henry, declared they were not "South Carolinians," but "Americans." The seceders were brought back and signed the articles of association after a compromise was agreed to, which allowed their colony to bear no part of the burden of sacrifice imposed by the association. Short letters were addressed to the colonies of St. John (now Prince Edward's), Nova Scotia, Georgia, and the two Floridas, asking them to join the association.

**American Camp at Cambridge (1775), THE.** The camp of the Continental Army at Cambridge, when Washington took command of it (July, 1775), presented a curious and somewhat picturesque spectacle. There was no conformity in dress. The volunteers from Rhode Island were lodged in tents, and had more the appearance of regular troops than any of the others; others were quartered in Harvard College buildings, the Episcopal church, and private dwellings; and the fields were dotted with lodges of almost every description, varying with the tastes of their occupants. Some of them were constructed of boards, some of sail-cloth, and some partly of both. There were huts of stone and sods, others of bushes, while a few had regular doors and windows, constructed of withes and reeds. To these the feminine relatives of the soldiers—mothers, sisters, wives—were continually repairing with supplies of clothing and gifts for comfort. With them came flocks of boys and girls from the surrounding country, to gratify their curiosity and behold some of the mysteries of war. Among the soldiers in the camp might be seen eminent and eloquent min-

isters of the Gospel, acting as chaplains, keeping alive the habit of daily prayer and of public worship on the Sabbath. There was among the soldiers a spirit of insubordination, which grew out of the familiarity that existed between the officers and men. This greatly annoyed the commander-in-chief, who had been accustomed to wide distinctions between the governors and the governed.

**American Capital** (1815). At the close of the War of 1812-15—the second war for independence—the real and personal capital of the people of the United States was as follows: *Real property*—public lands, 500,000,000 acres, at \$2 an acre, \$1,000,000,000; cultivated lands, 300,000,000 acres, at \$10 an acre, \$3,000,000,000; dwelling-houses of all kinds,

ping of all kinds, \$225,000,000; money, farming stock and utensils, manufactures, household furniture and plate, carriages, and every species of personal property not above estimated, \$1,550,000,000. Total of personal property, \$2,200,000,000. Grand total of American capital, in real and personal property, \$7,200,000,000.

**American Civil List** (1764). The crown officers in America had long urged the establishment of a parliamentary revenue for their support. Their whole political system seemed to be but methods for the increase and security of the emoluments of office. To meet their views, they advised a thorough revision of the American governments—a parliamentary regulation of colonial charters, and a certain and sufficient civil list. This latter measure

STONE IDOL AT COPAN, THIRTEEN FEET IN HEIGHT.

\$1,000,000,000. Total of real property, \$5,000,000,000. *Personal property*—capital of the holders of government stocks, who were American citizens, \$100,000,000; banking stocks, \$100,000,000; slaves, 1,500,000, at \$150 each, \$225,000,000; ship-

Grenville opposed (1764), refusing to become the attorney for American office-holders, or the founder of a stupendous system of colonial patronage and corruption. His policy in all his financial measures was to improve the finances

of his country and replenish its exhausted treasury. When the Earl of Halifax proposed the payment of the salaries of colonial crown-officers directly from England, Greouville so strenuously opposed it that the dangerous experiment was postponed. The rapacity of crown-officers in America for place, money, and power was a chief cause of public discontent at all times.

#### American Conditions for Peace (1782).

Dr. Franklin, who well knew the condition of parties in England, and how precarious was the hold of Lord Shelburne on the premiership, hastened to promote immediate negotiations for peace, for which he had been appointed. Ten days after Shelburne's accession (July, 1782), he invited Oswald, the British agent in Paris to prepare for negotiations, to come to his own house. Oswald went there, when Franklin laid before him the articles for a treaty which the Americans would never depart from. They were: Independence absolute and complete in every sense to the whole thirteen states, and all British troops to be withdrawn from them; for boundaries, the Mississippi on the west, and on the side of Canada as they were before the Quebec Act of 1774 (which see); and the freedom of fishing off the Banks of Newfoundland. Franklin explained that nothing could be done for the loyalists in the United States, the separate states having confiscated their property, and the United States having no control in the matter; and he showed that Great Britain had forfeited any right to intercede for them by its conduct and example. He gave Oswald, as an example, the orders of the British in the Carolinas for confiscating the lands and other property of all patriots, under the direction of the military; and declared that, whatever the separate states might do in compassion for the loyalists, the United States commissioners for peace could not make the compensation of refugees a part of the treaty. Franklin recommended—but not as an ultimatum—a perfect reciprocity in regard to ships and trade; and he called Oswald's attention to the reckless destruction of property by the British forces, which might furnish a claim for indemnity. These negotiations were carried on with the knowledge and approval of Vergennes, but everything relating to their conditions was concealed from him. Oswald was given to understand that the American commissioners were ready to sign a preliminary treaty whenever one should be negotiated. (See *Preliminary Treaty of Peace*.) Oswald reported the result of this interview to Shelburne. The minister accepted Franklin's ultimatum as just, and sent full powers to Oswald to negotiate a treaty on that basis.

**American Flag, FIRST BRITISH ASSAULT UPON THE.** The American ship *Baltimore*, Captain Phillips, sailed out of the harbor of Havana on the morning of Nov. 16, 1798, in charge of a convoy, bound for Charleston, S. C. In sight of Morro Castle she met a British squadron, and Phillips bore up to the *Carnatic*, the British flag-ship, to speak to the captain, when

three of the convoys were cut off from the rest and were captured by the British vessels. Captain Phillips, by invitation, went on board the *Carnatic*, when he was informed that every man on the *Baltimore* not having an American protection should be transferred to the British flag-ship. Phillips protested against the outrage, and declared that he would formally surrender his vessel and refer the matter to his government. On returning to the *Baltimore*, he found a British officer mustering his men. Fifty-five of them were transferred to the *Carnatic*, and the colors of the *Baltimore* were lowered. Five of the men were pressed into the British service; the remainder were sent back, and the *Baltimore* was released. The case was laid before the government of the United States. This outrage upon the sovereignty of the nation—the practical application of the claim of the British government to the right of search and impressment (see *Impressment*) without leave—aroused fierce indignation throughout the Union; yet the American government, influenced, if not controlled, by the mercantile interest (the trade with Great Britain was then very profitable), not only submitted meekly, but committed an act of the most flagrant injustice. Captain Phillips was dismissed from the navy, without a trial, because he surrendered his vessel without a show of resistance; and no notice was taken of the British outrage. The administration, in obsequious deference to Great Britain, had instructed the American naval commanders not to molest the cruisers of any nation (the French excepted) on any account—not even to save their own vessels; and Phillips, because of his strict adherence to this order, was cashiered.

**American Fleet on Lake Erie (1813).** Who shall be masters of Lake Erie? was an important question to be solved in 1813. The government did not fulfil its promise to Hull to provide means for securing the naval supremacy on Lake Erie. The necessity for such an attainment was so obvious before the close of 1812 that the government took vigorous action in the matter. Isaac Chauncey was in command of a little squadron on Lake Ontario late in 1812, and Captain Oliver Hazard Perry, a zealous young naval officer, of Rhode Island, who was in command of a flotilla of gunboats on the Newport station, offered his services on the lakes. Chauncey desired his services, and on Feb. 17 Perry received orders from the Secretary of the Navy to report to Chauncey with all possible despatch, and to take with him to Sackett's Harbor all of the best men of the flotilla at Newport. He sent them forward, in companies of fifty, under sailing-masters Almy, Champlin, and Taylor. He met Chauncey at Albany, and they journeyed together in a sleigh through the then wilderness to Sackett's Harbor. In March, Perry went to Presque Isle (now Erie, Pa.) to hasten the construction and equipment of a little navy there designed to cooperate with General Harrison in attempts to recover Michigan. Four vessels were speedily built at Erie, and five others were taken to that

well-sheltered harbor from Black Rock, near Buffalo, where Henry Eckford had converted merchant-vessels into war-ships. The vessels at Erie were constructed under the immediate supervision of Sailing-master Daniel Dobbins, at the mouth of Cascade Creek. Early in May

MOUTH OF CASCADE CREEK, WHERE PERRY'S FLEET WAS BUILT.

(1813) the three smaller vessels were launched, and on the 24th of the same month two brigs were put afloat. The whole fleet was finished on the 10th of July, and consisted of the brig *Lawrence*, 20 guns; brig *Niagara*, 20 guns; brig *Caledonia*, 3 guns; schooner *Ariel*, 4 guns; schooner *Scorpion*, 2 guns and 2 swivels; sloop *Trippe*, 1 gun; schooner *Tigress*, 1 gun; and schooner *Porcupine*, 1 gun. The command of the fleet was given to Perry, and the *Lawrence*, so named in honor of the slain commander of the *Chesapeake*, was his flag-ship. But men and supplies were wanting. A British squadron on the lake seriously menaced the fleet at Erie, and Perry pleaded for materials to put his vessels in proper order to meet danger. "Think of my situation," he wrote to Chauncey—"the enemy in sight, the vessels under my command more than sufficient and ready to make sail, and yet obliged to bite my fingers with vexation for want of men."

**American Fort on the Mississippi (1780).** Clarke designed to extend his invasion to Detroit (see *George R. Clarke*), but troops to reinforce him had been added to the force of another bold leader (see *Shelby, Evan*), and he had to abandon the undertaking. Jefferson, then Governor of Virginia, gave instructions for the occupation of a station on the Mississippi River between the mouth of the Ohio and the parallel of 36° 30'; and in the spring of 1780 Clarke chose a strong position five miles below the mouth of the Ohio, whereon he built Fort Jefferson. Here the Americans planted their first sentinel to watch over the freedom of the navigation of the "Father of Waters."

**American Forts.** The following is a list of forts in existence when war was declared in 1812, and their location: Fort Sumner, Portland, Me.; Fort William and Mary, Portsmouth, N. H.; Fort Lily, Gloucester, Cape Anne; Fort Pickering, Salem, Mass.; Fort Sewall, Marble-

head, Mass.; Fort Independence, Boston Harbor; Fort Wolcott, near Newport, R. I.; Fort Adams, Newport Harbor; Fort Hamilton, near Newport; North Battery, a mile northwest of Fort Wolcott; Dumplings Fort, entrance to Narraganset Bay, R. I.; Tonomy Hill, a mile east of North Battery, R. I.; Fort Trumbull, New London, Conn.; Fort Jay, Governor's Island, New York Harbor; Works on Ellis and Bedlow's Islands, New York Harbor; Fort Mifflin, Delaware River, below Philadelphia; Fort McHenry, Baltimore; Fort Severn, Annapolis; Forts Norfolk and Nelson, on Elizabeth River, below Norfolk, Va.; Forts Pinckney, Moultrie,

and Mechanic, for the protection of Charleston, S. C.; Fort Mackinaw, island of Mackinaw; Fort Dearborn, Chicago; Fort Wayne, at the forks of the Maumee, Ind.; Fort Detroit, Michigau; Fort Niagara, mouth of the Niagara River; Fort Ontario, Oswego; Fort Tompkins, Sackett's Harbor, N. Y. Some of these were unfinished, and others were strengthened.

**American Influence in Great Britain (1770).** The influence of political agitation in the colonies began to be sensibly felt in Great Britain at the beginning of 1770. The friends of liberty in England were the friends of the colonists. The cause was the same in all places. There was a violent struggle for relief from thralls everywhere. America responded to calls for help from England, as well as calls for help in America had been responded to in England. In December, 1769, South Carolina sent £10,500 currency to London for the society for supporting the Bill of Rights, "that the liberties of Great Britain and America might alike be protected," wrote members of the South Carolina Assembly. In Ireland, the dispute with America aroused Grattan, and he began his splendid career at about this time. The English toilers in the manufacturing districts longed to enjoy the abundance and freedom which they heard of in America; and 1769 is marked by the establishment, in England, of the system of public meetings to discuss subjects of importance to free-horn Englishmen. The press, too, spoke out boldly at that time. "Can you conceive," wrote the yet mysterious Junius (which see) to the king, "that the people of this country will long submit to be governed by so flexible a

House of Commons? The oppressed people of Ireland give you every day fresh marks of their resentment. The colonists left their native land for freedom and found it in a desert. Looking forward to independence, they equally detest the pageantry of a king and the supercilious hypocrisy of a bishop."

**American Literature**, from the beginning of the old war for independence (1775), gradually assumed a distinct type, spirit, and substance. During the earlier colonial period there were a considerable number of works written and published in the English-American colonies, chiefly of a religious and controversial character. The first literary work produced in America was a translation into English of *Ovid's Metamorphoses*, by George Sandys, Treasurer of Virginia, in 1724, and published, in folio (with illustrations), in London in 1726. The first original work published in New England was a volume of poems by Mrs. Anne Bradstreet, a daughter of Governor Dudley of Massachusetts, and published in 1640. Eliot's translation of the Bible into the Indian tongue, issued in 1663, was the first publication of the Scriptures in America. This was followed by translations of other works into the language of the barbarians near Boston. Religious writers monopolized the colonial press—Williams, Hooker, Davenport, Norton, and the Mathers. Finally, late in the colonial period, Jonathan Edwards appeared as a brilliant writer on theology and metaphysics, with Dr. Franklin on morals, politics, and science. The papers of the latter were read with avidity by all classes of cultivated people, for the spirit of his writings was catholic, large-hearted, and humane. At the Revolution politics naturally took possession of the public mind and expelled from it polemical theology, and the ardent theologian became a sharp political combatant. The state papers put forth by the Continental Congress, in style and expression, won the applause of European statesmen. Edwards did not live to hear more than the distant rumblings of the tempest; Franklin was a colossus of strength when the storm of the Revolution burst. There were ready writers, younger in years, to aid him. Franklin and Washington, Jefferson and Adams, Hamilton, Madison, and Jay, laid the foundation of American literature upon which our writers have built a noble structure. From 1776 until 1812 the most eminent writers were its earnest statesmen. The *Federalist*, written by Hamilton, Jay, and Madison, will ever remain a monument of literary excellence and political sagacity. There were some poets at that period—Trumbull, Dwight, Humphreys, Barlow, and Hopkins—who grasped the political and historical subjects of the time; but after the second war for independence the field of American authorship widened, and the question asked by Sidney Smith, in the *Edinburgh Review* in 1820—"Who reads an American book?"—may now be answered by a host of English readers. Our American authors have since then boldly traversed every field of literature, whether historic, scientific, or æsthetic. America now

has a distinct and notable literature of its own.

**American Loyalists.** There was a great diversity of sentiment in the English-American colonies during the disputes with the mother country before war commenced in 1775 and during its progress. Probably every American citizen desired the freedom which the most zealous patriot sought; they differed only in their opinions as to the best method to be employed for obtaining it. The Whigs, or the popular party, were radicals; the Tories, or the adherents of the crown and Parliament, were conservatives. The latter defuded or condoned the oppressive measures of Parliament; the former denounced them as absolutely tyrannical and not to be endured. The question, Which party is right? was a vital one. The imperial government settled it in favor of the Whigs by rescinding their oppressive measures one after another; and this decision has been ratified by the judgment of posterity on both sides of the Atlantic. The Declaration of Independence compelled men of opposite opinions to avow them publicly. Then the important question arose concerning the policy of tolerating the Tories, or loyalists—their acts must be restrained as a prudential measure against injury to the patriot cause. Having the power, and believing themselves to be in the right, the Whigs took decisive measures to that end. Imprisonment or other odious restraint at home, or banishment, was the alternative presented. To a large proportion of the loyalists the latter horn of the dilemma appeared the least affliction, and many hundreds abandoned their country and fled to Nova Scotia or to England; while a considerable number, especially of the young men, were embodied in military corps, and took up arms against their Whig countrymen. This embodiment was undertaken by the deposed Governor Tryon of New York. He was ably seconded by Oliver De Lancey, brother of a lieutenant-governor of the province of New York, and Courlandt Skinner, of New Jersey. But these loyalist corps numbered far less, for a long time, than the ministry or their partisans in America anticipated. The greatest exertions of the three leaders above named had not caused an enrollment of over twelve hundred of them so late as the spring of 1777. Afterwards the number greatly increased, though there were not a great many in the field at one time. Sabine (*Lives of the American Loyalists*) estimates the whole number enrolled during the war at twenty thousand. The first organization was under Lord Dunmore in Virginia (see *Dunmore*), and Martin in North Carolina, in 1775 (see *Martin, Josiah*). Later there were loyalists under Sir John Johnson and Colonel Butler in New York; also under Tryon and De Lancey in the same state, and Skinner of New Jersey. Later still the loyalists of the Carolinas, who were numerous in the western districts, were embodied under Major Patrick Ferguson, killed at King's Mountain in 1781. Altogether, there were twenty-nine or thirty regiments, regularly officered and enrolled. The most noted loyalist corps in the war

was that of the Queen's Rangers, led by Major Simcoe, afterwards Governor of Canada. The loyalists were of two kinds. Some were honorable, conscientious men, governed by principle, and friends of the British government by conviction; others were selfish and unscrupulous, siding with the supposed stronger side for purposes of gain, spite, or opportunities for plunder and rapine under legal sanction. The majority of the latter class filled the military ranks, and their oppressions and cruelties excited the fiercest animosities of the Whigs, who suffered dreadfully. They were made to hate the name of Tory, and in many instances the aversion was felt for at least two generations in Whig families towards the descendants of Tories. Banishments and confiscations by the Whig authorities were popular; but when peace came and animosities subsided, mercy and justice combined to do right. In the negotiation of the treaty of peace (1782), the British commissioners claimed indemnity for the losses of the loyalists. It was denied on the ground that the Whigs during the war had really suffered greater losses through the acts of the Tories, and the claim was not allowed. At the close of the war the military organizations of the loyalists were disbanded, and some of the officers were transferred to the royal army and continued in service for life. Others, less fortunate, went with a host of civil and military companions into exile, the northern ones chiefly to Nova Scotia, New Brunswick, and Canada, and the southern ones to the Bahamas, Florida, and the British West Indies. Many also went to England, and for years were importunate petitioners for relief from the British government. The officers generally received half pay. Towards the close of 1782 the British Parliament appointed a committee to attend to the claims of the loyalists. By their decision (June, 1783) the sum of \$216,000 was to be distributed annually among 687 loyalist pensioners. The claimants finally became so numerous that a permanent board of commissioners was appointed, which continued about seven years. On March 25, 1784, the number of claimants was 2063, and the aggregate amount of property claimed to have been destroyed or confiscated, besides debts which they had lost, was about \$35,000,000. In 1790 the Parliament settled the whole matter by enactment. Altogether, nearly \$15,000,000 were distributed among the American loyalists by the British government. It was regarded as a most generous act in a nation which had expended nearly \$100,000,000 in the war, and by it lost a vast and valuable domain.

**American Loyalists, EXPATRIATION OF.** In consequence of laws still in force against the loyalists, several thousand Americans found it necessary to abandon their country when the British army left. A considerable portion of these exiles belonged to the wealthier class—officials, merchants, large land-holders, and conspicuous members of the colonial aristocracy. Many of them still retained much wealth, though suffering from confiscations of lands. Those from the North settled principally in

Nova Scotia or Canada. To the former places about one thousand had fled on the British evacuation of Boston. Those from the South found refuge in the Bahamas and other West India islands. The evacuation of New York City by the British troops was delayed by the necessity and difficulty of providing transportation for the numerous loyalists assembled there where the remaining troops of Burgoyne and Cornwallis had been collected.

**American Navigation Acts (1816-18).** Nearly all the nations of Europe, since the downfall of Napoleon and the return of peace, had adopted a very discriminating policy in favor of their own shipping. Of the effect of this policy the navigating interest of the United States loudly complained; and, finally, by an act (March 1, 1816), copied from the famous English Navigation Act (which see), the Americans retaliated. Importations by foreign ships were to be limited to the produce of their respective countries—a provision not to apply except to nations having a similar regulation. The coasting-trade, hitherto open to foreign vessels, was now restricted to those American built and owned. To promote the increase of American seamee, all coasting and fishing vessels were required to have crews three fourths of whom were Americans, and all registered vessels crews of whom two fifths were Americans, under penalty of an additional tonnage duty, and, in case of fishing-vessels, forfeiture of the fishing bounties. In April, 1818, an act was passed closing the ports of the United States against British vessels from any British colonial port into which American vessels were not admitted. This policy, which totally failed of its object, was kept up for twelve years, and then abandoned.

**American, or Know-nothing, Party, THE,** originated in 1853, and was so anti-American that it soon disappeared from the arena of politics. The members of the "American Party" were called "Know-nothings," because in their endeavors to preserve the secrecy of their movements they were instructed to reply "I don't know" to any question asked in reference to the party. It was at first a secret political organization, the chief object of which was the proscription of foreigners by the repeal of the naturalization laws of the United States, and the exclusive choice of Americans for office. The more radical members of the party advocated a purely American school system, and uncompromising opposition to the Roman Catholics. Such narrow views were incompatible with the generosity and catholic spirit of enlightened American citizens. In 1856 they nominated ex-President Fillmore for the presidency of the U. S.

**American Petitions rejected (1769):** When it became evident, late in 1768, that the British government meant to bring the Americans to submission by military force, each assembly, as it convened, denied the assumed right of Parliament to tax the Americans without their consent, and embodied that denial in petitions to the king. The monarch disapproved and re-

jected them because the ministry were pledged to enforce the absolute supremacy of Parliament. He assured the assemblies, through the proper officers, in more or less soothing or harsh words, that he would never listen to "the views of wicked men" who questioned the supreme authority of Parliament. This unwise treatment of the sacred right of petition by the king did much towards alienating the affections of his American subjects.

**American Prisoners in England (1778).** When it was ascertained that there were hundreds of American prisoners of war in England, enduring great sufferings for want of the necessaries of life, a subscription was made by the friends of the Americans in Great Britain, which speedily gave them relief. At that time there were nine hundred of them suffering in British prisons. A subscription started in London soon procured about two thousand dollars, which was more than sufficient to relieve the immediate wants of the captives. These wants consisted chiefly in a lack of sufficient clothing.

**American Privateers in Spanish Ports (1778).** While the Spanish court was opposed to the establishment of a republic in America, as being dangerous to the colonial interests of Spain, American merchant-ships and privateers were allowed free entrance to Spanish ports. Every remonstrance from England was met by the plea that they hoisted English colors, and that their real character could not be known. Spain was willing to hurt England, if it could be done with safety.

**American Property, SEIZURE OF, IN EUROPE (1810).** Bonaparte declared, in 1810, that no trade would be allowed with the allies of France in which France herself was forbidden to participate. In the ports of Spain under French control, of Holland, and at Naples, a large number of American vessels and a great amount of American property were seized; also at Hamburg, in Denmark, and in the Baltic ports, it being alleged that many American and many British vessels were employed in bringing British produce from British ports under forged papers seeming to show that the property and vessels were American, directly from the United States. The seizures were, therefore, made indiscriminately, and a vast amount of *bona fide* American property was thus lost. The seizures at Naples were particularly piratical, for the ships were lured into that port by a special proclamation of King Joachim Murat. These spoliations constituted the basis of claims subsequently made upon, and settled by, France and Naples. (See *French and Neapolitan Spoliations, Claims for.*) The only country in Europe into whose ports American vessels might enter with safety was Russia.

**American Society for the Promotion of National Union.** Early in 1861 there seemed to be concerted action all over the State of New York to discountenance anti-slavery movements, and to silence the men whose agency, it was alleged, had caused "the public senti-

ment of the North to have the appearance of hostility to the Union." Anti-slavery meetings were broken up by violence, and the Democratic State Committee called a convention at Albany of four delegates from each assembly district in January, 1861. That convention declared, by a series of resolutions, as expressive of the sense of the party, that a "conflict of sectional passions had produced the present convulsions; that war could not restore the Union, but would defeat forever its reconstruction," and that the Union could only be preserved by the adoption of a border-state policy, embodied in the Crittenden Compromise (which see). They appointed a committee to prepare a memorial to the Legislature, urging it to submit that compromise to a vote of the electors of the state. Early in March (1861) an association was formed in the city of New York called the "American Society for the Promotion of National Union," of which Professor Samuel F. B. Morse was chosen president. Its proposed object was "to promote the union and welfare of our common country by addresses, publications, and all other suitable means adapted to elucidate and inculcate, in accordance with the Word of God, the duties of American citizens, especially in relation to slavery. In its "Programme" this society denounced the seminal doctrine of the Declaration of Independence, saying: "The popular declaration that all men are created equal, and entitled to liberty, intended to embody the sentiments of our ancestors respecting the doctrine of the divine right of kings and nobles, and perhaps, also, the more doubtful sentiment of the French school, may be understood to indicate both a sublime truth and a pernicious error." In its numerous publications scattered broadcast over the land, this society advocated the righteousness of slavery in the United States, saying: "Four millions of immortal beings, incapable of self-care, and indisposed to industry and foresight, are providentially committed to the care of our Southern friends. This stupendous trust they cannot put from them if they would. Emancipation, were it possible, would be rebellion against Providence and destruction to the colored race in our land." The political publications of this society were all in favor of the confederated citizens of the republic who were trying to destroy the Union. This society was the germ of that powerful Peace Party which, like the Peace Faction (which see) in the war of 1812-15, embarrassed the government in every way in its efforts to save the liberties and free institutions of our country.

**American Squadrons in the West Indies.** Late in 1798 the United States had four squadrons among the West Indian islands: one of nine vessels, commanded by Commodore Barry (the senior officer of the navy), cruised to the eastward as far south as Tobago; a second, of five vessels, under Commodore Truxton, had its rendezvous at St. Christopher's (St. Kitts), its business being to watch the island of Guadeloupe; and two smaller squadrons guarded,

one the passage between Cuba and Santo Domingo; the other the neighborhood of Havana, whence privateers were accustomed to issue under French colors. Each of these squadrons had captured French privateers. War with France was considered inevitable at that time.

**American System, THE.** To Henry Clay is due the credit of originating the system of tariffs for the protection of American manufactures known as the "American System." In this effort he was associated with John C. Calhoun, W. J. Lowndes, and others; and, in 1816, a new tariff of duties was laid, but it proved inadequate to sustain many domestic manufactures which, in consequence of embargo acts and the restrictions upon commerce by the war, had been brought into existence. When commerce was made free at the close of the war, excessive importations of manufactured goods prostrated that industry in the United States. In 1818 a heavier tariff was laid in order to protect American manufactures, there being a large majority in Congress in favor of the American System. The duties laid by the tariff of 1816 were continued for seven years; and in 1824 much heavier duties were laid on cotton and woollen manufactures imported from abroad, with a view to encourage the yet feeble American manufacturing interest. But the cotton-growers of the South soon began to perceive that this tariff was injurious to their business, as it was calculated to lessen the demand for that product in the British markets which had become important to them. In a convention held at Harrisburg, Pa., in July, 1827, to discuss the matter, delegates from only four of the slave-labor states appeared. The result of the deliberations at that convention was a memorial to Congress asking an augmentation of the duties on several articles then manufactured in the United States. In the report of the Secretary of the Treasury, in December following, he called attention to the subject; and, during the session of 1827-28, Congress enacted a very stringent tariff law (May 15, 1828), and the American System became very popular among the manufacturers of the North. At the same time it was denounced by the cotton-growers of the South as both oppressive and unconstitutional. The opposition to this tariff led to open opposition to the laws. (See *Nullification*.)

**Americans excluded from New Orleans.** On Oct. 18, 1802, the French Intendant, or governor, of New Orleans issued a decree by which the Americans were no longer permitted to deposit their merchandise in New Orleans. That port was also shut, on the same day, against all foreign commerce, which could be carried on, thereafter, only by Spanish subjects in Spanish vessels. This virtual shutting-up of the Mississippi as a highway of commerce led to negotiations with France, which resulted, early in 1803, in the purchase of Louisiana from the latter-named country by the United States. (See *Louisiana, Purchase of*.)

**Americus Vespucius**, born in Florence, March 9, 1451; died in Seville, Feb. 22, 1512. When Columbus was in Seville preparing for his second voyage, Vespucius was there as a commercial agent of the Medici family of Florence, and he became personally acquainted with the discoverer. That acquaintance

AMERICUS VESPUCIUS.

inspired the Florentine with an ardent desire to make a voyage to the newly found continent, and he was gratified when, in 1499, he sailed from Spain with Alonzo de Ojeda as an adventurer and self-constituted geographer of the expedition. Ojeda followed the track of Columbus in his third voyage, and discovered mountains in South America when off the coast of Surinam. He ran up the coast to the mouth of the Orinoco River (where Columbus had discovered the continent the year before), passed along the coast of Venezuela, crossed the Caribbean Sea to Santo Domingo, kidnapped some natives of the Antilles, and returned to Spain in June, 1500, and sold his victims for slaves to Spanish grandees. In May, 1501, Vespucius, then in the service of the King of Portugal, sailed on his second voyage to America, exploring the coast of Brazil. In 1503 he commanded a caravel in a squadron destined for America, but parted company with the other vessels, and off the coast of Brazil discovered the Bay of All-saints. He then ran along the coast two hundred and sixty leagues, and, taking in a cargo of Brazil wood, returned to Lisbon in 1504. He entered the Spanish service again in 1505, was made chief pilot of the realm, and again voyaged to America. In 1504, Vespucius, in a letter to the Duke of Lorraine, gave an account of his four voyages to the New World, in which was given the date of May 29, 1497, as the time when he sailed on his first voyage. That was a year earlier than the discovery of the continent of South America by Columbus and of North America by Cabot (see *Columbus* and *Cabot*), and made it appear that Vespucius was the first discoverer. After the death of Columbus

in 1506, a friend of Vespucius proposed to the Academy of Cosmography at Strasburg, upon the authority of the falsely dated letter, to give the name *America* to the Western Continent in compliment to its "first discoverer." It was done, and so Columbus and Cabot were both deprived of the honor of having their names associated with the title of this continent by fraud. (See *America, Origin of Name of.*)

**Americus Vespucius, VOYAGE OF, TO BRAZIL.** (See *Cabral.*)

**Ames, ADELBERT,** was born in Maine, and graduated at West Point in 1861. He entered the military service, and for his gallant conduct in the battle of Bull's Run (1861) he was breveted major. He served in the conflicts on the Peninsula in 1862. At Chancellorsville he led a brigade, also at Gettysburg, in 1863, and before Petersburg, in 1864, he commanded a division. In the expedition against Fort Fisher, near the close of that year, he commanded a division of colored troops, and afterwards led the same in North Carolina. In the spring of 1865, he was breveted Major-general of Volunteers and Brigadier-general in the U. S. Army. In 1871 he was a representative of Mississippi in the U. S. Senate, and was governor in 1874.

**Ames, FISHER, LL.D.,** was born in Dedham, Mass., April 9, 1758; died there July 4, 1808. He graduated at Harvard University in 1774, which he entered at the age of thirteen years. He taught school until 1781, when he began the successful practice of law, and soon displayed rare oratorical powers. Mr. Ames wrote political essays for Boston newspapers, over the signatures of "Brutus" and "Caniilus." In Congress from 1789 until 1797 he was always distinguished for his great business talent, exalted patriotism, and

FISHER AMES.

brilliant oratory. Ardently devoted to Washington, personally and politically, he was chosen by his colleagues to write the address to the first President on his retiring from office in 1797. After leaving Congress he devoted himself to the practice of his profession; but finally, on account of declining health, gave it up to engage exclusively in agricultural pursuits. In 1804 he was chosen President of Harvard University, but

declined the honor. He received the degree of LL.D. from that institution. His orations, essays, and letters were collected and published in one volume, with a biographical sketch by Rev. Dr. Kirkland, in 1809. So powerful was his great speech in Congress in favor of Jay's Treaty (which see), on April 28, 1795, that an opposition member moved to postpone the decision of the question that they might not "vote under the influence of a sensibility which their calm judgment might condemn."

**Amherst, SIR JEFFREY,** was born in Kent, England, Jan. 29, 1717; died Aug. 3, 1797. He became an ensign in the army in 1731, and was

SIR JEFFREY AMHERST.

aid to Lord Ligonier and the Duke of Cumberland. In 1756 he was promoted to major-general, and given the command of the expedition against Louisburg in 1758, which resulted in its capture, with other French strongholds in that vicinity. In September that year

he was appointed commander-in-chief in America, and led the troops in person, in 1759, that drove the French from Lake Champlain. The next year he captured Montreal, and completed the conquest of Canada. For these acts he was rewarded with the thanks of Parliament and the Order of the Bath. In 1763 he was appointed governor of Virginia. He was made governor of the island of Guernsey in 1771; created a baron in 1776; was commander-in-chief of the forces from 1778 until 1795; and field-marshal in July, 1796.

**Amherst and Pontiac.** The atrocities of the Indians in May and June, 1763 (see *Pontiac's War*), aroused the anger and the energies of Sir Jeffrey Amherst, commander of the British forces in America, and he contemplated hurling swift destruction upon the barbarians. He denounced Pontiac as the "chief ringleader of mischief;" and, in a proclamation, said, "Whoever kills Pontiac shall receive from me a reward of £100" (\$500). He bade the commander at Detroit to make public proclamation for an assassin to pursue him. He regarded the Indians as "the vilest race of creatures on the face of the earth; and whose riddance from it must be esteemed a meritorious act, for the good of mankind." He instructed his officers engaged in war against them to "take no prisoners, but put to death all that should fall into their hands."

**Amidas, PHILIP,** was of a Breton family in France, but was born at Hull, England, in 1550. When Raleigh sent two ships to America in 1584, the chief command was given to Arthur Barlow, who commanded one of the vessels, and Philip Amidas the other. They were directed to explore the coasts within the parallels of N. latitude 32° and 38°. They touched at the Canary Islands, the West Indies, and Florida, and made

their way northward along the coast. On the 13th of July, 1584, they entered Ocrakoek Inlet, and landed on Wocoken Island. There Barlow set up a small column with the British arms rudely carved upon it, and took formal possession of the whole region in the name of Queen Elizabeth, as he waved the English banner over it in the presence of the wondrous natives. They spent several weeks in exploring Roanoke Island and Pamlico and Albemarle Sounds. (See *Roanoke*.) On Roanoke Island the Englishmen were entertained by the mother of King Wingini, who was absent, and were hospitably received everywhere. After getting what information they could about the neighboring main, and inspired by the beauties of nature around them, the navigators returned to England, attended by Manteo and Wanchese, two Indian chiefs. The former was afterwards created "Lord of Roanoke," and was the first and last American peer of England created. The glowing accounts given by Amidas and Barlow of the country they had discovered captivated the queen, and she named the region, as some say, in allusion to her unmarried state, Virginia; others say it was in allusion to the virgin country. Amidas was in the maritime service of England long afterwards; and a few years after his voyage to Virginia, he commanded an expedition to Newfoundland. He died in England in 1618, a short time before Raleigh was beheaded. (See *Raleigh*.)

**Amnesty and Pardon.** On Dec. 25, 1868, President Johnson issued a proclamation of unconditional amnesty, which reinstated all persons, "without reservation," "who, directly or indirectly, participated in the late insurrection or rebellion." He granted "full pardon and amnesty for the offence of treason against the United States." This embraced Jefferson Davis, the head of the league formed for the destruction of the Union, who had been released from prison on bail. His trial had been commenced at Richmond, Va., on the 3d of December, before Chief-justice Chase and Judge Underwood. His counsel moved that the indictment should be quashed, on the ground that the 14th Amendment had punished him by disfranchisement. The court was divided in opinion, Chief-justice Chase favoring the idea of Davis's counsel. The President's proclamation of amnesty and pardon, twenty-two days afterwards, seemed to remove all occasion for further action, and Davis was never tried. On May 22, 1872, Congress passed an amnesty bill for removing the political disabilities imposed by the 14th Amendment from all persons excepting members of the 36th and 37th Congress, heads of departments, members of diplomatic corps, and officers of the army and navy who had engaged in the rebellion. About six hundred persons were denied the privileges of the act. Mr. Davis was among the exceptions.

**Amphibious Engagement on the James River, 1864.** While a greater part of the national naval force on the James River was on the expedition against Fort Fisher (which see), the Confederates sent down from the shelter of

Fort Darling, on Drewry's Bluff, a squadron of vessels for the purpose of breaking the obstructions at the lower end of the Dutch Gap Canal (which see), and destroying the poutoon bridges below, so as to separate the national troops lying on both sides of the James. The squadron moved silently under cover of darkness, but was observed and fired upon when passing Fort Brady. The vessels responded, and dismounted a 100-pounder Parrott gun in the fort. The *Fredricksburg* broke the obstructions at Dutch Gap and passed through, but two other iron-clads and an unarmored gunboat grounded. At dawn the gunboat (*Drewry*) had been abandoned, and a shell from a national battery exploded her magazine, when she was blown to a wreck. So hot was the fire from the shore that the voyage of the Confederate vessels was checked, and all but the ruined *Drewry* fled up the river.

**Amphibious Warfare.** During the spring and summer of 1813 a most distressing warfare was carried on upon land and water by a British squadron, under the command of Admiral Cockburn, along the coasts between Delaware Bay and Charleston Harbor. It was marked by many acts of cruelty. "Chastise the Americans into submission" was the substance of the order given to Cockburn by the British cabinet, and he seemed to be a willing servant of the will of his government. An Order in Council, issued on Dec. 20, 1812, declared the ports and harbors of much of the American coast in a state of blockade. (See *Blockade*.) Cockburn entered between the capes of Virginia early in February, 1813, with a squadron, of which his flagship was the *Marlborough*, 74. This squadron bore a land force of about eighteen hundred men, a part of them captive Frenchmen from British prisons, who preferred active life in the British service to indefinite confinement in jails. The appearance of this force alarmed all Lower Virginia; and the militia of the Peninsula and about Norfolk were soon in motion after the squadron had entered Hampton Roads. The Secretary of the Treasury ordered the extinguishment of all the beacon-lights on the Chesapeake coast. At the same time the frigate *Constellation*, 38, lying at Norfolk, was making ready to attack the British vessels. A part of the squadron went into Delaware Bay, but the forward militia were ready for the marauders, who only attacked the village of Lewiston. Cockburn, in person, led marauding expeditions along the coasts of Chesapeake Bay, plundering and burning; and he even contemplated attacking Baltimore, Annapolis, and the national capital. He fell upon Frenchtown, Georgetown, Frederick, and Havre-de-Grace on the Chesapeake. Finally, on June 1, Admiral Warren entered the Chesapeake with a naval reinforcement for the marauders, which made the force within the capes of Virginia to consist of eight ships of the line, twelve frigates, and a considerable number of smaller vessels. They attempted to penetrate to Norfolk. The British were repulsed by troops on Craney Island, and gunboats on the water. Then the troops attacked Hampton, and committed many outrages there.

Leaving Hampton, Cockburn sailed down the coast of North Carolina, plundering the inhabitants wherever opportunity offered, and carrying away a large number of slaves, whom he sold in the West Indies on his private account. (See *Harre-de-Grace, Craney Island, and Norfolk.*)

**Ancestors of the Pilgrims.** At the middle of the sixteenth century the social condition of the people of England was very primitive, and their wants were few. The common people lived in cottages built of wooden frames filled in with clay; their houses were without wooden floors, and in many of them the fireplaces were constructed in the middle of the rooms without chimneys, a hole being left in the roof for the escape of the smoke. The windows were not glazed, and were closed against the weather, and the light allowed to enter by means of oiled paper. Such was the plain condition of the houses of the Puritans of New England. In England in the early part of Queen Elizabeth's reign pallets of straw served for beds of the common people, who had coverings made of rough mats, and their pillows were logs. This was regarded as a good bed, for many slept in straw alone. Very few vegetables were then cultivated, for gardening had not yet been generally introduced from Holland, and gardens were cultivated only for the rich, and these chiefly for ornament. The common material for bread was the unbolted flour of oats, rye, and barley; and sometimes, when these were scarce (afterwards in New England), they were mixed with ground acorns. Even this black bread was sometimes denied them, and flesh was the principal diet. Their forks and ploughs were made of wood, and these, with a hoe and spade, constituted the bulk of their agricultural implements. Their spoons and platters were made chiefly of wood, and table-forks were unknown. It is said that glazed windows were so scarce, and regarded as so much of a luxury, that noblemen, when they left their country-houses to go to court, had their glazed windows packed away carefully with other precious furniture. Chimneys had been introduced into England early in the sixteenth century.

**Anderson, ALEXANDER, M.D.**, the first engraver on wood in America, was born in the city of New York, April 21, 1775; died in Jersey City, N. J., Jan. 6, 1870. His father was a Scotchman, who printed a Whig newspaper in New York, called *The Constitutional Gazette*, until he was driven from the city by the British in 1776. At the age of twelve years young Anderson made quite successful attempts at engraving on copper and type-metal, and two or three years later he began the study of medicine. In 1796 he received the degree of M.D. from Columbia College, writing for the occasion an able thesis on "Chronic Mania." He practised the profession for a few years, and engraved at the same time, liking that employment better. After the yellow-fever in 1798 had swept away nearly his whole family, he abandoned the practice of medicine and made engraving his life profession. Having seen an edition of Bewick's

*History of Quadrupeds*, illustrated with wood-engravings by that master, Anderson first learned that wood was used for such a purpose. He

ALEXANDER ANDERSON.

tried it successfully; and from that time (1795) he used it almost continuously until a few months before his death, a period of seventy-five years. A vast number of American books illustrated by Anderson attest the skill and industry of this pioneer of the art of wood-engraving in America. The writer possesses the last work from his hand—an unfinished engraving on wood, executed when he lacked only a few months of being ninety-five years of age.

**Anderson and Pickens (1860).** Major Anderson, in Fort Sumter, keenly felt the insult to his country's flag in the firing upon the *Star of the West* (which see). He accepted it as an act of war, and sent a letter, under a flag of truce, to Governor Pickens, as to a belligerent enemy, asking him for an explanation of the outrage. Pickens replied that it was an act authorized by the State of South Carolina, and that any attempt to reinforce Sumter would be resisted. Anderson referred the whole subject to his government, and wrote to Pickens to that effect, expressing a hope that he would not prevent the bearer of his despatches (Lieutenant Talbot) from proceeding at once to Washington. No objection was interposed, and Talbot carried to the North the first full tidings of the failure of the expedition of the *Star of the West*. Two days after the attack on that vessel, Pickens sent his Secretary of State (Magrath) and Secretary of War (Jamieson) as commissioners to Anderson to make a formal demand for the immediate surrender of Fort Sumter to the authorities of South Carolina. They tried every art to persuade and alarm him, but in vain. He assured them that sooner than suffer such a humiliation he would fire the magazine and blow fort and garrison into the air. They perceived that the only hope of gaining possession of the fort was in an assault or the starvation of the

garrison. That afternoon the authorities had four old hulks, filled with stones, towed into the ship-channel and sunk, to prevent reinforcements reaching Fort Sumter.

**Anderson in Fort Sumter (1860).** Anderson had long urged his government, but in vain, to strengthen the military works in Charleston harbor. The burden of the few replies was, "Be prudent; be kind; do nothing to excite the South Carolinians. It will not do to send you reinforcements, for that might bring on hostilities." At length he was satisfied that the Secessionists of South Carolina were about to attempt to seize Fort Sumter. This would in-

signal guns were fired. The voyage was short and successful; and the little garrison of seventy men, with the women and children, and several weeks' provisions, were soon safe within the strong granite walls of Fort Sumter. A few officers and men had been left at Fort Moultrie to spike the guns, destroy their carriages, and cut down the flag-staff, when they were to follow to Sumter. The tidings of this movement fell among the Secessionists at Washington like a thunderbolt. Floyd was dismayed. Anderson was cool. The next day (Dec. 27, 1860), at noon, the stars and stripes were seen floating from the flag-staff of Sumter. The garrison wanted

FORT SUMTER IN 1860.

sure the capture of all the other forts and his garrison, and he resolved to take position in Sumter before it should be too late. He was commander of all the defences of the harbor, and, in the absence of orders to the contrary, he might occupy any one he chose. Vigilant eyes were watching him. He revealed his secret to only three or four officers, for he did not know whom he might trust. He first removed the women and children, with a supply of provisions, to Fort Sumter. This was done by deceptive movements. They were sent first to Fort Johnson (December 26) in vessels, with an ample supply of provisions, where they were detained on board until evening, under the pretext of preparing accommodations for them. The firing of three guns at Moultrie was to be the signal for them to be conveyed to Sumter. In the edge of the evening the greater part of the garrison at Moultrie embarked for Sumter. The people of Charleston were aware of the women and children of the garrison being before Fort Johnson, and concluded Anderson was going there also with his troops. Then three

Anderson to hoist it at dawn. He would not do it until his chaplain, who had gone to the city, had returned. Around the flag-staff, not far from a great columbiad, the inmates of the fort were gathered. The commander, with the halliards in his hand, knelt at the foot of the staff. The chaplain prayed reverently for encouragement, support, and mercy; and when he ceased, an impressive "Amen" fell from many lips. Anderson then hoisted the flag to the head of the staff. It was greeted with cheer after cheer, and the band struck up "Hail Columbia!" Governor Pickens sent a message to Anderson demanding his immediate withdrawal from Fort Sumter. The demand was politely refused, and the Major was denounced in the Secession Convention, in the Legislature, in public and private assemblies, as a "traitor to the South," because he was a native of a slave-labor state. The Secessionists in Charleston and Washington were filled with rage. Floyd declared the "solemn pledges of the government" had been violated by Anderson, and he demanded of the President permission to with-

draw the garrison from Charleston harbor. The President refused; a disruption of the Cabinet followed. (Floyd fled; and Anderson received (December 31) from Secretary of War Holt—a Kentuckian like himself—an assurance of his approval of what he had done. (See *Disruption of Buchanan's Cabinet.*) Earlier than this words of approval had reached Anderson. From the Legislature of Nebraska, two thousand miles away, a telegram said to him, "A happy New-Year!" Other greetings from the outside world came speedily; and a poet, in a parody on the dear old Scotch song of "John Anderson, my Jo," made "Miss Columbia" sing:

"Bob Anderson, my beau, Bob, when we were first aquent,  
You were in Mex-i-co, Bob, because by order sent;  
But now you are in Sumter, Bob, because you chose to go;  
And blessings on you anyhow, Bob Anderson, my beau!"

"Bob Anderson, my beau, Bob, I really don't know whether  
I ought to like you so, Bob, considering that feather;  
I don't like standing armies, Bob, as very well you know,  
But I love a man that dares to act, Bob Anderson, my beau."

reduced to a heap of ruins, as seen in the following engraving, and has not been rebuilt. Anderson, MAJOR ROBERT, IN COMMAND IN CHARLESTON HARBOR. In October, 1860, Secretary Floyd removed Colonel Gardiner from the command of the defences of Charleston harbor because he attempted to increase his supply of ammunition, and Major Robert Anderson, a native of Kentucky, was appointed to succeed him. He arrived there on the 20th, and was satisfied, by the tone of conversation and feeling in Charleston, and by the military drills going on, that a revolution was to be inaugurated there. He communicated his suspicions to Adjutant-general Cooper, a native of Dutchess County, N. Y., who had married Senator Mason's sister. In that letter Anderson announced to the government the weakness of the forts in Charleston harbor, and urged the necessity of immediately strengthening them. He told the Secretary of War that Fort Moultrie, his head-

FORT SUMTER IN 1864.

Governor Pickens, nettled by Anderson's refusal to give up Sumter, treated him as a public enemy within the domain of South Carolina. Armed South Carolinians had been sent to take possession of Fort Moultrie, where they found the works dismantled. When, the next morning, Anderson sent to inquire by what authority they were there, the commander replied, "By the authority of the sovereign State of South Carolina, and by command of her Governor." From that time until the close of President Buchanan's administration, and even longer, Major Anderson was compelled, by government policy, to see the insurgents gathering by thousands around Charleston, erecting fortifications within reach of his guns, and making every needful preparation for the destruction of Fort Sumter, without being allowed to fire a shot. Fort Sumter, then in perfect order, experienced some sad changes before the war was over. During the siege (see *Fall of Fort Sumter*) the barracks were all destroyed. By heavy cannonades and bombardments in 1863-64 it was

quarters, was so weak as to invite attack. "Fort Sumter and Castle Pinckney," he said, "must be garrisoned immediately, if the government determines to keep command of this harbor." Fort Sumter, he said, had forty thousand pounds of cannon powder and other ammunition, but was lying completely at the mercy of insurgents. He informed the secretary of evident preparations for a speedy seizure of the defences of the harbor by South Carolinians. Anderson continued his appeals, not suspecting that the chief of the War Department was plotting for the destruction of his government, or that Adjutant-general Cooper, his medium of communication with the department, was in secret league with his chief. Rumors of this condition of things in Charleston caused loyal members of Congress to ask for information; but all such inquiries were suppressed by Floyd's friends in both Houses, and no correct information could be obtained about affairs connected with the War Department until that officer withdrew and Joseph Holt, a loyal man, occupied his

place. The Secessionists discovered Anderson to be too loyal for their purpose, and they began to fear he might reveal some startling things to General Scott, to whom all subordinate officers had to report. Scott, aware of the weakness of the Southern forts, urged the government from time to time, from October until the close of December, to reinforce those on the coasts of the slave-labor states. But nothing was done, and Anderson, left to his own resources, was compelled to assume grave responsibilities. He began to strengthen Castle Pinckney, near the city, and Fort Moultrie. When the South Carolina Ordinance of Secession had passed, menaces became more frequent and alarming. He knew that the convention had appointed commissioners to repair to Washington and demand the surrender of the forts in Charleston harbor, and he was conscious that the latter were liable to be attacked at any moment. He knew, too, that if he should remain in Fort Moultrie, their efforts would be successful. Watch-boats were out continually spying his movements. He had applied to government for instructions, but received none, and he determined to leave Fort Moultrie with his garrison and take post in stronger Fort Sumter. This he did on the evening of December 26. (See *Anderson in Fort Sumter*.) The vigilance of the Secessionists had been eluded. They, amazed, telegraphed to Floyd. The latter, by telegraph, ordered Anderson to explain his conduct in acting without orders. Anderson calmly replied that it was done to save the government works. In Sumter, he was a thorn in the flesh of the Secessionists. Finally they attacked him, and, after a furious bombardment, the fort was evacuated by Major Anderson in April, 1861. (See *Fall of Fort Sumter*.)

Anderson, RICHARD H., was born in South Carolina about 1822, and graduated at West Point in 1842. He served in the war with Mexico; and in March, 1861, he left the army and became a brigadier-general in the Confederate service. He was wounded at Antietam; commanded a division at Gettysburg; and was made lieutenant-general in May, 1864.

Anderson, ROBERT, defender of Fort Sumter in 1861, was born near Louisville, Ky., June 14, 1805; died at Nice, France, Oct. 26, 1871. He was a graduate of West Point Military Academy, and entered the artillery. He was instructor for a while at West Point. He served in the Black Hawk War (1832), and in Florida. In May, 1838, he became assistant adjutant-general on the staff of General Scott, and accompanied that officer in his campaign in Mexico, where he was severely wounded in the battle of Molino del Rey (which see). In 1857 he was commissioned major of artillery, and assumed command of the fortifications of Charleston harbor in November, 1860. As a precautionary measure of safety, he transferred the garrison of Fort Moultrie to Fort Sumter on the night of Dec. 26, 1860. (See *Anderson in Fort Sumter*.) There he was besieged by South Carolina insurgents until near the middle of April, 1861, when he and the garrison evacuated the fort.

(See *Sumter, Evacuation of*.) In May, 1861, he was appointed brigadier-general in the U. S. Army, and commander of the Department of the Cumberland, but failing health caused him to retire from the service. In 1868 he went to Europe for the benefit of his health, where he died in 1871. His remains are buried at West Point.

ROBERT ANDERSON.

Andersonville and other Confederate Prisons. Libby, Belle Isle, and Danville prisons, in Virginia; Salisbury prison in North Carolina; Andersonville and Millen prisons in Georgia; and Charleston, in South Carolina, were the principal places of confinement of Union prisoners during the Civil War. In these prisons the captives sometimes endured the most terrible sufferings from cold, hunger, filth, and cruel personal treatment. Libby prison had six rooms, each one hundred feet in length and forty in breadth. (See *Libby Prison*.) At one time these held twelve hundred Union officers of every grade, from a lieutenant to a brigadier-general. They were allowed no other place in which to cook, eat, wash and dry their clothes and their persons, sleep, and take exercise. Ten feet by two feet was all the space each man might claim. Their money, watches, and sometimes part of their clothing were taken from them when they went in. For a long time they were not allowed a seat of any kind to sit upon. The board floors, on which they slept, were washed every afternoon, and were damp at night, causing many to become consumptive and die. The glasses in the numerous windows were mostly broken, and they suffered intensely from cold in winter, for they were allowed only one blanket each, and these in time became ragged, filthy, and filled with vermin. Turner, a lieutenant of General Wiuder, the commissary of prisoners, seemed to make cruelty his study. He ordered that no one should go within three feet of a window. A violation of the rule gave license to the guard to shoot the offender. Sometimes an officer would accidentally break the rule, and he would be shot, for the guard seemed to take pleasure in the sport of "shooting Yankees." The prisoners were also deliberately starved. The process of slow starvation began in the fall of 1863, and was so general and uniform in all the prisons that, according to a report of a committee

of the Sanitary Commission, there can be no doubt of its having been done by direct orders from the Confederate leaders at Richmond. This starvation was done when, as has been proved, there was abundance of food at the command of their jailers. Boxes of food and clothing, sent to the prisoners from their friends at the North, were denied them after the beginning of January, 1864, because, it is alleged, these interfered with the starvation scheme. (See *Prisoners, Exchange of.*) "Three hundred boxes," said the report, "arrived every week, and were received by Ould, the commissioner of exchange, but, instead of being distributed, were retained, and piled up in a warehouse near by. . . . The officers were permitted to send out and buy articles at extravagant prices, and would find the clothes, stationery, hams, and butter, which they had purchased, bearing the marks of the Sanitary Commission." Over three thousand boxes were sent to the captives in Libby prison, and on Belle Isle, in the James River near by, which were withheld from the sufferers. The writer saw a large number of them stored near the prison immediately after the evacuation of Richmond. The treatment of the prisoners in the Libby was no worse than in other prisons, nor nearly so bad as on Belle Isle and at Andersonville. That island is in the James River, in front of Richmond, containing a few acres. A part of it was a grassy bluff, with a few trees, and a part was a low sandy barren, a few feet above the surface of the river, which there flows swiftly. In the scorching summer sun the prisoners were kept on the open sand-barren, and never allowed to touch the cool grass or feel the grateful shade of the trees—a spot a few yards off—which appeared to them like heaven, in comparison with the spot on which they were suffering. The barren spot, about five acres, was surrounded by earthworks, and guarded by Confederate soldiers. There, without shelter, though lumber was plentiful, near eleven thousand captives were, at one time, crowded into that bleak space of five acres. The winter of 1863-64 was one of the severest ever experienced in the South, but no shelter was provided for the captives. The mercury sank to zero, and snow lay deep on the ground around Richmond. Ice formed in the river, and water left in buckets on the island froze two or three inches in thickness in a single night. To keep from perishing, the captives lay in the ditches on top of each other, taking turns as to who should have the outside. The report of the committee informs us, that "in the morning the row of the previous night could be marked by the motionless forms of those who were sleeping on in their last sleep—*frozen to death!*" There, likewise, the prisoners were starved. "The cold froze them," said the report, "because they were hungry; the hunger consumed them, because they were cold." Hundreds of benevolent women nursed the Confederate sick and wounded in Northern prisons and hospitals; *not one was ever seen upon Belle Isle while the Union captives were there.* At Andersonville, Ga., the sufferings of the captives were still more acute and dreadful, and the

cruelties practised upon them were more fearful. The prison was one open pen, in an unhealthy locality, near Anderson Station, about sixty miles from Macon, and surrounded by the most fertile region of the state. The site was selected, it is said, at the suggestion of Howell Cobb, the commander of the district. It comprised twenty-seven acres of land, with a swamp in the centre. A sluggish and choked stream crawled through it, while within rifle-shot distance flowed a brook of pure, delicious water, fifteen feet wide and three feet deep. Had that stream been included in the pen, the prisoners might have drunk and bathed. The spot selected for the pen was covered with pine-trees. These were cut down. When some one suggested that the shade would alleviate the sufferings of the prisoners, Captain M. S. Winder, son of the commissary of prisoners at Richmond, declared that they were to be intentionally deprived of that comfort. The pen was a quadrangle, with two rows of stockades from twelve to eighteen feet in height; and seventeen feet from the inner stockade was the "dead-line," over which no captive could pass and live. It is unnecessary to detail the cruelties suffered here by Union prisoners. Suffice it to say that unimpeachable testimony proves that they were far more malignant and intense than at Libby or Belle Isle. They were worse after the elder Winder arrived. (See *Prisoners, Exchange of.*) At one time more than thirty thousand human beings were crowded into that awful prison-pen, sometimes smitten by the hot sun, at other times flooded with filthy water; exposed to frost and heat; to the bullets of guards in wanton sport; beaten, bruised, and cursed; driven to madness and idiocy; starved into skeletons; and worse than all, tortured by the false declaration of their jailers that their government had forsaken them, leaving them no other relief from misery but in death. To almost 13,000 of these sufferers that everlasting relief came. The graves of 12,462 of the victims tell the dreadful tale. Of these, only about 450 are unknown. (See *Report of a Committee of the United States Sanitary Commission.*)

The prison records show that the

Total number of prisoners received at Andersonville was . . . . .	49,435
Largest number in prison at one time, Aug. 9, 1864. . . . .	33,006
Total number of deaths as shown by hospital register. . . . .	12,462
" " " in hospital. . . . .	8,735
" " " in a stockade near. . . . .	3,727
Percentage of deaths to whole number received. . . . .	26
" " " to whole number admitted to hospital. . . . .	69 12-17
Average number of deaths for each of the thirteen months. . . . .	958
Largest number of deaths in one day, Aug. 23, 1864. . . . .	97
Cases returned from hospital to stockade. . . . .	3,469
Total number of escapes. . . . .	328

The method of burial in the graveyard, a short distance from the stockade and prison-pen, was by digging trenches varying in length from fifty to one hundred yards, in which the bodies were laid in rows of one hundred to three hundred, without coffins or the ordinary clothing, with an allowance of space for each body of not more than twelve inches in width, and then covered with earth. Henry Wirz, a Swiss by birth, was

appointed by General Winder as superintendent of the prison and prisoners. In the summer of 1865, he was tried on numerous charges of the most horrid cruelties towards the prisoners at Andersonville. He was found guilty of all the charges, and hanged in November. It was proved that in a small hut between the stockade and the graveyard he kept nine bloodhounds to hunt down prisoners who should attempt to escape.

**André, JOHN**, born in London, in 1751; died in Rockland County, N. Y., Oct. 2, 1780. He was the son of a Genevan, who was a merchant in London. After receiving an education at Geneva, young André returned, and entered a mercantile house in London when he was eighteen years of age. He was a youth of great genius—painted well and wrote poetry with fluency. His literary tastes brought to him the acquaintance of literary people. Among these was the poetess Anna Seward, of Lichfield, to whose cousin, Honora Sneyd, André became warmly attached. They were betrothed, but their youth caused a postponement of their nuptials, and André entered the army and came to America, in 1774, as lieutenant of the Royal Fusileers. With them, in Canada, he was taken prisoner by Montgomery, at St. Johns (Nov. 2, 1775), and was sent to Lancaster, Penn. In December, 1776, he was exchanged, and promoted to captain in the British army. He was appointed aid to General Grey in the summer of 1777, and on the departure of that officer he was placed on the staff of Sir Henry Clinton, by whom he was promoted (1780) to the rank of major, and appointed adjutant-general of the British forces in America. His talents were appreciated, and whenever taste was to be displayed in any arrangements, the matter was left to André. He was the chief actor in promoting and arranging the *Mischiianza* (which see), and took a principal part in all private

JOHN ANDRÉ.

theatrical performances. Sir Henry employed him to carry on the correspondence with Arnold respecting the betrayal of his country. Having held a personal interview with the traitor (see *Treason of Arnold*), he was returning to New York on horseback, when he was arrested, near Tarrytown, conveyed to Tappan, in Rock-

land County, nearly opposite, tried as a spy, and was condemned and executed, Oct. 2, 1780. André carried in his bosom, it is said, through all his vicissitudes in America, a miniature of his "beloved Honora," which he had painted at Lichfield during their wooing. She had married the father of Maria Edgeworth, the novelist, and died before the death of André occurred.

ANDRÉ'S MONUMENT IN WESTMINSTER ABBEY.

The latter wrote poems for the loyal papers in America. One of these—"The Cow-Chace" (which see)—has become famous in history. The king caused a handsome monument to be placed in Westminster Abbey to the memory of André. It seems to be quite out of place among the "worthlies" of England, for he was hung as a spy, and was a plotter for the ruin of a people struggling for justice. Nor did he have the prestige of a spotless private character. But his monarch honored him for an attempted State service, knighted his brother, and pensioned his family. His remains were at first interred at the place of his execution, and in 1821 were exhumed and conveyed to England. A monument has been erected at the place of his execution to commemorate the event.

**André, MAJOR, FATE OF.** The story of Major John André's career, in connection with the plot of Sir Henry Clinton and General Benedict Arnold, occupies a conspicuous place in our history, and sympathy for the offender, not unmixed with denunciations of the court of inquiry that condemned him, have been abundant, and not always wise or just. The court that condemned him saw clearly, by his own confession, that he deserved the fate of a spy; and if they had been swayed by other motives than those of justice and the promotion of the public good, they had full justification in the course of the British officers in pursuit of the British policy towards the Americans. Scores of good men, not guilty of any offence but love of country and defence

of their rights, had been hanged by the positive orders of Cornwallis in the South; and Sir Henry Clinton himself, who ungenerously attributed the act of the board of inquiry in condemning André, and of Washington in approving the sentence, to "personal rancor," for which no cause existed, had approved of tenfold more "inhumanity" in the acts of his subordinates. One of them wrote to Clinton, "I have ordered, in the most positive manner, that every militiaman who has borne arms with us, and afterwards joined the enemy, shall be immediately hanged." This included all officers and men, even those, as in South Carolina, where this subaltern was serving, who had been *forced* into the royal service. This order Clinton approved, and sent it to Secretary Germain. That secretary answered Clinton's letter, saying, "The most disaffected will now be convinced that we are not afraid to punish." The order was rigorously executed. Men of great worth and purity were hanged, without the forms of a trial, for bearing arms in defence of their liberties; André was hanged, after an impartial trial, for the crime of plotting and abetting a scheme for the enslavement of three million people. He deserved his fate according to the laws of war. It was just towards him and merciful to a nation. Cicero justly said, in regard to Catiline, "Mercy towards a traitor is an injury to the State." André was treated with great consideration by Washington, whose headquarters at Tappan (yet standing in 1879) were near the place of his trial. The commander-in-chief sup-

plied the former with all needed refreshments for his table. Washington did not have a personal interview with André, but treated him as leniently as the rules of war would allow.

within a week after the President's call for troops, he sent five regiments of infantry, a battalion of riflemen, and a battery of artillery to the assistance of the government. He was active in raising troops during the war and providing for their comfort. An eloquent orator, his voice was very efficacious. He was re-elected in 1862, and declined to be a candidate in 1864.

**Andrews, GEORGE L.**, was born at Bridgewater, Mass., in 1827, and graduated at West Point in 1851, entering the engineer corps. He resigned in 1855. He was first lieutenant-colonel and then colonel of the Second Massachusetts regiment, and led it with distinction, first in the Shenandoah Valley, and then under Pope in his campaign in August, 1862. He was made brigadier-general in November of that year, and led a brigade in Banks's expedition in Louisiana and against Port Hudson in 1863. From July, 1863, to February, 1865, he commanded the "Corps d'Afrique," and assisted in the capture of Mobile, for which he was breveted major-general of volunteers. He was appointed professor of French at West Point early in 1871.

**Andros, RECEPTION OF, IN NEW YORK.** In the spring of 1688 the clear-headed and right-minded Governor Dongan, of New York, was superseded by Sir Edmund Andros, who was called "the tyrant of New England." He entered New York City early in August, with a viceregal commission to rule that province in connection with all New England. He had journeyed from Boston, and was received by Colonel Bayard's regiment of foot and horse. He was entertained by the loyal aristocracy. In the midst of the rejoicings, news came that the queen, the second wife of James II., had given birth to a son, who became heir to the throne. The event was celebrated, on the evening of the day of the arrival of the intelligence, by bonfires in the streets and a feast at the City Hall. At the latter, Mayor Van Cortlandt became so hilarious that he made a notable display of his loyalty to the Stuarts by setting fire to his hat and perwig, and waving the burning coverings of his head over the banquet on the point of his straight-sword. A few months later James and Andros were both driven from power, and a great political change came over New York. (See *English Revolution*).

**Andros, SIR EDMUND**, born in London, Dec. 6, 1637; died there Feb. 24, 1714. His father was an officer of the royal household, and Edmund was reared amidst the corruptions of a court. He accompanied the royal family in exile. He was commissioned a Major in Prince Rupert's dragoons when quite young, and in 1674 succeeded his father as bailiff of Gnersey Island. In the same year he was appointed governor of the province of New York, and received the surrender of it by the Dutch in fulfilment of a treaty. Andros was destined to play an important part in our history. He was a favorite of the Duke of York, an excellent Dutch and French

WASHINGTON'S HEADQUARTERS AT TAPPAN.

scholar, a thorough royalist, and an obedient servant of his superiors. He administered public affairs wholly in the interest of his master. His private life was unblemished; but such was his public career that he acquired the title of "tyrant." The duke, his master, was a strange compound of wickedness and goodness—slow to perceive right from wrong, and seldom seeing the truth in its purity—and the public career of Andros reflected that of his employer. Sometimes he exceeded his instructions, and became involved in serious disputes with the colonists. In 1680 he deposed Philip Carteret, and seized the government of East Jersey. The next year he was recalled, and retired to Guernsey, after having cleared himself of several charges preferred against him. The New England governments were consolidated in 1686, and Andros was appointed governor-general. Under instructions, he forbade all printing in those colonies. He was authorized to appoint and remove his own council, and with their consent to enact laws, levy taxes, and control the militia. These privileges were exercised in a despotic manner, and his government became odious. He attempted to seize the Charter of Connecticut, but failed. (See *Charter of Connecticut*.) New York and New Jersey were added to his jurisdiction in 1688, but his rule over them was brief. He appointed Francis Nicholson lieutenant-governor over the two latter provinces. When news of the successful revolution in England reached Boston, the people seized Andros and several of his officers (April 18, 1689), and imprisoned them, and the New England colonies resumed their former governments under their charters. (See *Revolution in England*.) In July following he was sent to England by royal order, with a committee of his accusers, but was acquitted without a formal trial. Andros was appointed governor of Virginia in 1692, where he became popular; but, through the influence of Commissary Blair, he was removed in 1698. In 1704-6 he was Governor of Guernsey. (See *Downfall of Andros*.)

**Anglican Church ESTABLISHED IN MARYLAND.** (See *Revolution in Maryland*.)

**Anglican Church Establishment ABOLISHED IN VIRGINIA, 1776.** When the state government of Virginia was organized, the Presbytery of Hanover demanded the abolition of the Anglican Church Establishment in Virginia, and the civil equality of every denomination. In this demand the Quakers and Baptists joined. There was a contest over the question for eight weeks in the Legislature, when the measure was carried, largely by the activity and influence of Jefferson. In that assembly there was a majority of Protestant Episcopals.

**Annapolis (Maryland).** Puritan refugees from Massachusetts, led by Durand, a ruling elder, settled on the site of Annapolis in 1649, and, in imitation of Roger Williams, called the place Providence. The next year a commissioner of Lord Baltimore organized there the county of Anne Arundel, so named in compliment to Lady Baltimore, and Providence was called Anne Arun-

del Town. A few years later it again bore the name of Providence, and became the seat of Protestant influence and of a Protestant government, disputing the legislative authority with the Roman Catholic government at the ancient capitol, St. Mary's. In 1694 the latter was abandoned as the capital of the province, and the seat of government was established on the Severn. The village was finally incorporated a city, and named Annapolis, in honor of Queen Anne. It has remained the permanent political capital of Maryland. It was distinguished for the refinement and wealth of its inhabitants and extensive commerce, being a port of entry long before the foundations of Baltimore were laid. It is the seat of the U. S. Naval Academy, established there in 1845. The only remaining traces of the ancient capital (St. Mary's) are the ruins of a brick church.

**Annapolis, CONGRESS AT.** On April 14, 1755, General Braddock and Commodore Keppel, with governors Shirley of Massachusetts, De Lancey of New York, Morris of Pennsylvania, Sharpe of Maryland, and Dinwiddie of Virginia, held a Congress at Annapolis. Braddock had lately arrived as commander-in-chief of the British forces in America. Under his instructions, he first of all directed the attention of the government to the necessity of raising a revenue in America. He expressed astonishment that no such fund was already established. The governors told him of their strifes with their respective assemblies, and assured Braddock that no such fund could ever be established in the colonies without the aid of Parliament. The Congress then resolved unanimously that it was the opinion of its members that it should be proposed to his majesty's ministers to "find out some method of compelling" the colonists to establish such a public fund, and for assessing the several governments in proportion to their respective abilities. At once all the crown officers in America sent voluminous letters to England, urging such a measure upon the government. (See *Crown Officers' Clamor for Taxes*.)

**Annapolis, CONVENTION AT.** On July 26, 1775, a convention assembled at Annapolis, in Maryland, and formed a temporary government, which, recognizing the Continental Congress as invested with a general supervision of public affairs, managed its own internal affairs through a provincial Committee of Safety and subordinate executive committees, appointed in every county, parish, or hundred. It directed the enrollment of forty companies of minutemen, authorized the emission of over \$500,000 in bills of credit, and extended the franchise to all freemen having a visible estate of £210, without any distinction as to religious belief. The convention fully resolved to sustain Massachusetts, and meet force by force if necessary.

**Annapolis, DESTRUCTION OF TEA AT.** No tea-ship had ever entered the port of Annapolis, in Maryland, but the Republicans there felt and expressed strong sympathy with the acts of the Sons of Liberty in Boston. On the morning of Oct. 15, 1774, a vessel owned by Anthony Stew-

art, of Annapolis, entered the port with seventeen packages of tea among her cargo, assigned to Stewart. When this became known, and that Stewart had paid the duty on the tea, the people gathered, and resolved that the plant should not be landed. Another meeting was appointed, and the people declared that the ship and her cargo should be burned. Stewart disclaimed all intention to violate non-importation agreements, but the people were inexorable. They had gathered in large numbers from the surrounding country. Charles Carroll and others, fearing mob violence, advised Stewart to burn the vessel and cargo with his own hands, which he did. The vessel was run ashore and destroyed, when the people cheered and dispersed. This was the last attempt at importation of tea into the English-American colonies.

ANNÉ, QUEEN, second daughter of James II. of England, born at Twickenham, near London, Feb. 6, 1664; died Aug. 1, 1714. Her parents became Roman Catholics; but she, educated in the principles of the Church of England, remained a Protestant. In 1683 she was married to Prince

QUEEN ANNÉ

George of Denmark. She took the side of her sister Mary and her husband in the revolution that drove her father from the throne. She had intended to accompany her father in his exile to France, but was dissuaded by Sarah Churchill, chief lady of the bed-chamber (afterwards the imperious Duchess of Marlborough), for whom she always had a romantic attachment. By the act of settlement at the accession of William and Mary, the crown was guaranteed to her in default of issue to these sovereigns. This exigency happening, ANNÉ was proclaimed queen (March 8, 1702) on the death of William. Of her seventeen children, only one lived beyond infancy—Duke of Gloucester—who died at the age of eleven years. Feeble in character, but very amiable, ANNÉ's reign became a conspicuous one in English history, for she was governed by some able ministers, and she was surrounded by eminent literary men. Her reign has been

called the "Augustan age of English literature." The Duke of Marlborough, the husband of her bosom friend, was one of her greatest military leaders. A greater part of her reign was occupied in the prosecution of the *War of the Spanish Succession*, known in America as "Queen ANNÉ's War." It was ended by the Treaty of Utrecht, in 1713. (See *Queen ANNÉ's War*.) She died childless at the age of fifty years.

**Annexation of Plymouth to Massachusetts.** In 1691 the people of Plymouth sent an agent to England to solicit a separate patent; but, to their mortification, they were included under the new royal charter for Massachusetts (which see). The Plymouth colony had been an independent commonwealth then for seventy-one years.

**Annexation of Texas.** The Southern people were anxious to have the State of Texas annexed to the United States, and such a desire was a prevailing feeling in that sovereign state. The proposition, when formally made, was opposed by the people of the North, because the annexation would increase the area and political strength of the slave-power, and lead to a war with Mexico. But the matter was persisted in by the South, and, with the approbation of President Tyler, a treaty to that effect was signed at Washington City, April 12, 1844, by Mr. Calhoun, Secretary of State, and Messrs. Van Zandt and Henderson on the part of Texas. It was rejected by the Senate in June following. The project was presented at the next session of Congress in the form of a joint resolution. It had been made a leading political question at the presidential election in the autumn of 1844. James K. Polk had been nominated over Mr. Van Buren, because he was in favor of the annexation. The joint resolution was adopted March 1, 1845, and received the assent of President Tyler the next day. On the last day of his term of office he sent a message to the Texas government, with a copy of the joint resolutions of Congress in favor of annexation. These were considered by a convention in Texas, called for the purpose of forming a state constitution. That body approved the measure (July 4, 1845), and on that day Texas became one of the states of the Union.

**Annexation of Virginia to the Confederate States.** The Virginia Convention appointed ex-President John Tyler, W. Ballard Preston, S. M. D. Moore, James P. Helcombe, James C. Bruce, and Levi E. Harvie, commissioners to treat with Alexander H. Stephens, Vice-President of the Confederate States of America, for the annexation of Virginia to that Southern league. Mr. Stephens was clothed with full power to make a treaty to that effect. It was then a capital plan of the Secessionists to seize the national capital; and at several places on his way towards Richmond, where he harangued the people, he raised the cry of "On to Washington!" Troops were pressing towards that goal from the South. He was received in Richmond, by the authorities of every kind, with assurances that his mission would be successful. The Virginia leaders

were eager for the consummation of the treaty before the people should vote on the Ordinance of Secession (see *Virginia, Ordinance of Secession*); and on Stephens's arrival he and the Virginia commissioners entered upon their prescribed duties. On April 24, 1861, they agreed to and signed a "Convention between the Commonwealth of Virginia and the Confederate States of America," which provided that, until the union of Virginia with the league should be perfected, "the whole military force and military operations, offensive and defensive, of said commonwealth in the impending conflict with the United States, should be under the chief control and direction of the President of the Confederate States." On the fol-

mond its headquarters. The proclamation of the annexation was immediately put forth by John Letcher, the governor of Virginia. All this was done almost a month before the people of Virginia were allowed to vote on secession.

Anthon, CHARLES, LL.D., was born in New York, 1797; died there, July 29, 1867. His father, a surgeon-general in the British army, settled in New York soon after the Revolution. Charles graduated at Columbia College in 1815, was admitted to the bar, and in 1820 was made professor of languages in his alma mater. Professor Anthon was the author of many books connected with classical studies. He was made the head of the classical department of the col-

Committee of the  
Convention.

lowing day (April 25) the convention passed an ordinance ratifying the treaty, and adopting and ratifying the "Provisional Constitution of the Confederate States of America." On the same day, John Tyler telegraphed to Governor Pickens of South Carolina, "We are fellow-citizens once more. By an ordinance passed this day Virginia has adopted the Provisional Government of the Confederate States." They also proceeded to appoint delegates to the Confederate Congress; authorized the banks of the state to suspend specie payment; made provision for the establishment of a navy for Virginia, and for enlistments for the state army, and adopted other preparations for war. They also invited the "Confederate States" government to make Rich-

lege as successor of Professor Moore in 1835, having served as rector of the grammar-school of the college for five years. Professor Anthon was very methodical in his habits. He retired at ten o'clock and rose at four, and performed much of his appointed day's work before breakfast. By industry he produced about fifty volumes, consisting chiefly of the Latin classics and aids to classical study. All of his works were republished in England. His larger works are a *Classical Dictionary*, and a *Dictionary of Greek and Roman Antiquities*. When he was made rector of the grammar-school he conferred on the public schools of his native city six free scholarships.

Anti-blockade Proclamation (1814). On April 25, 1814, Admiral Cochrane declared the

whole coast of the United States in a state of blockade. On June 29 the President of the United States issued a proclamation declaring the blockade proclaimed by the British of the whole coast of the United States, nearly two thousand miles in extent, to be incapable of being carried into effect by any adequate force actually stationed for the purpose. It declared that it formed no lawful prohibition or obstacle to such neutral or friendly vessels as might desire to visit and trade with the United States; and all pirates, armed vessels, or letters-of-marque and reprisal (which see), were warned not to interfere with or molest any vessels, belonging to neutral powers, bound to any port or place within the jurisdiction of the United States.

**Anti-Masonic Party.** In 1826 William Morgan, a citizen of western New York, announced his intention to publish a book in which the secrets of Freemasonry were to be disclosed. It was printed at Batavia, N. Y. On Sept. 11 Morgan was seized at Batavia, upon a criminal charge, by a company of men who came from Canandaigua. He was taken to that place, tried, and acquitted on the criminal charge, but was immediately arrested on a civil process for a trifling debt. He was cast into jail there, and the next night was discharged by those who procured his arrest, taken from prison at nine o'clock at night, and at the door was seized and thrust into a carriage in waiting, which was driven rapidly towards Rochester. He was taken by relays of horses, by the agency of several individuals, to Fort Niagara, at the mouth of the Niagara River, and deposited in the powder magazine there. It was known that the Freemasons had made violent attempts to suppress Morgan's announced book, and this outrage was charged upon the fraternity. A committee was appointed, at a public meeting held at Batavia, to endeavor to ferret out the perpetrators of the outrage. They found evidences of the existence of what they believed to be an extended conspiracy, with many agents and powerful motives. Similar meetings were held elsewhere. Public excitement became very great and widespread; and a strong feeling soon pervaded the public mind that the masonic institution was responsible for the crime. The profound mystery in which the affair was involved gave wings to a thousand absurd rumors. Mutual criminalations and recriminations became very violent, and entered into all the religions, social, and political relations. A very strong anti-masonic party was soon created, at first only social in its character, but soon it became political. This feature of the party first appeared at town-meetings in the spring of 1827, where it was resolved that no mason was worthy to receive the votes of freemen. A political party for the exclusion of masons from public offices was soon spread over the State of New York and into several other states, and ran its course for several years. In 1832 a National Anti-masonic Convention was held at Philadelphia, in which several states were repre-

sented, and William Wirt, of Virginia, was nominated for the office of President of the United States. Although the party polled a considerable vote, it soon afterwards disappeared. The fate of Morgan after he reached the magazine at Fort Niagara was never positively revealed, but circumstances seemed to indicate that he was taken to the mouth of the river, cast into the water and drowned. More recent revelations seem to make it certain that Morgan was living some years after these events.

**Anti-Rentism.** After the old war for independence, when the laws of primogeniture were abolished, a large portion of the lands of the settled parts of the State of New York was held by the patroons, and the cultivators of the estates occupied farms on leases for one or more lives, or from year to year, stipulating for the payment of rents, dues, and services, somewhat after the manner of the old feudal tenures in England and Holland. (See *Patroons*.) These feudal tenures having been abolished, the proprietors of manor grants contrived a form of deed by which the grantees agreed to pay rents and dues almost precisely as before. This tenure became burdensome and odious to the tillers; and in 1839 associations of farmers were formed for the purpose of devising a scheme of relief from the burdens. The movement was soon known as *anti-rentism*, and speedily manifested itself in open resistance to the service of legal processes for the collecting of manorial rents. The first overt act of lawlessness that attracted public attention was in the town of Grafton, Rensselaer County, where a band of anti-renters, disguised, killed a man, yet the criminal was never discovered. In 1841 and 1842 Governor Seward in his messages recommended the reference of the alleged grievances and matters in dispute on both sides to arbitrators, and appointed three men to investigate and report to the Legislature. Nothing was accomplished, and the disaffection increased. So rampant was the insubordination to law in Delaware County that Governor Wright, in 1845, recommended legislation for its suppression, and he declared the county in a state of insurrection. Finally, the trial and conviction of a few persons for conspiracy and resistance to law, and their confinement in the state prison, caused a cessation of all operations by masked bands. There was so much public sympathy manifested for the cause of the anti-renters that the associations determined to form a political party favorable to their cause. It succeeded in 1842, and several years afterwards, in electing one eighth of the Legislature who favored the anti-renters; and in 1846 a clause was inserted in the revised constitution of the state abolishing all feudal tenures and incidents, and forbidding the leasing of agricultural lands for a longer term than twelve years. The same year Governor Wright, who was a candidate for reelection as chief magistrate, was defeated by ten thousand majority given to John Young, the anti-rent candidate, who afterwards released all offenders of the law who were in

prison. The excitement gradually subsided, and only in courts of law were the anti-rent associations actively seen. The last proprietor of the Van Rensselaer manor sold his interests in his lands a few years ago to a judicious person who made amicable arrangements with all the tenants for the rent, sale, and purchase of the farms.

**Anti-Slavery Champions in Massachusetts (1766).** While the public mind was agitated and absorbed by the political questions of the day at the time of the repeal of the Stamp Act (which see), some reflecting persons had been struck with the inconsistency of contending for one's own liberty while depriving others of theirs. A controversy arose in 1766 as to the justice and legality of negro slavery, in which Nathaniel Appleton and James Swan, merchants of Boston, distinguished themselves as writers on the side of human liberty. Opposing writers generally concealed their names, but were promptly answered. This controversy was renewed from time to time until 1773, when it became so warm that it was a subject for disputations at Harvard College. The Assembly of Massachusetts made repeated attempts to restrict the further importation of negroes into the province, but the governors interposed their vetoes. The question whether any person could be held as a slave in Massachusetts was carried before the Supreme Court in a suit by a negro to recover wages from his alleged master. The negroes collected money among themselves to carry on the suit, and it was decided in favor of the alleged slave. Other suits were instituted between that time and the Revolution, and the jurors invariably gave their verdicts in favor of freedom. The colored people placed their arguments on the broad basis of the royal charter of the province, which expressly declared "all persons born or residing in the province to be as free as the subjects of the king in Great Britain," and the declaration of Judge Holt, that a "slave cannot breathe in England"—in other words, that as soon as a slave should set his foot on English soil he is free by the law which makes it impossible for slavery to exist there. (See *Slaves in England*).

**Anti-Slavery Resolutions, FIRST, IN CONGRESS.** Rufus King, delegate in Congress from Massachusetts, proposed (March 16, 1787) to modify the report on the Western Territory, already accepted, by inserting in it a total and immediate prohibition of slavery. This was the first proposition for the abolition of slavery laid before Congress. The motion was referred to a committee by a vote of eight states. (See *Northwestern Territory*.)

**Anti-Slavery Societies.** The system of slavery was opposed by many of the best men and women at the beginning of the Revolution on economic and moral grounds, particularly in the Northern and Eastern States, where it was not so prevalent and apparently indispensable as in the Southern States. The first

society established for promoting a public sentiment in favor of the abolition of slavery was formed in Philadelphia on April 14, 1775, with Dr. Franklin as president, and Dr. Benjamin Rush as secretary. John Jay was the first president of a society for the same purpose formed in New York, Jan. 25, 1785, and called the "New York Manumission Society." The Society of Friends or Quakers always opposed slavery, and were a perpetual and active abolition society, presenting to the National Congress the first petition on the subject. Other abolition societies followed in other parts of the Union. A society was formed in Ohio in 1815 by a zealous citizen named Luudy (see *First Abolition Newspaper*); and in 1831 the subject was vehemently revived by the publication, begun in Boston that year, of the *Liberator*, by William Lloyd Garrison. It denounced slave-holding as "a sin against God and a crime against humanity." With such sentiments Arnold Buffum (a Quaker) and eleven others formed an anti-slavery society in Boston in 1832. This was followed in 1833 by the formation in Philadelphia of the "American Anti-Slavery Society," which existed until after the civil war that destroyed the institution of slavery.

**Antietam Creek, BATTLE OF.** After the surrender of Harper's Ferry, Sept. 15, 1862 (see *Harper's Ferry, Surrender of*), Lee felt himself in a perilous position, for General Franklin had entered Pleasant Valley that very morning and threatened the severance of his army. Lee at once took measures to concentrate his forces. He withdrew his troops from South Mountain and took position in the Antietam valley, near Sharpsburg, Md. Jackson, by swift marches, had recrossed the Potomac and joined Lee on Antietam Creek. When the Confederates left South Mountain, McClellan's troops followed them. Lee's plans were thwarted, and he found himself compelled to fight. McClellan was very cautious, for he believed the Confederates were on his front in overwhelming numbers. It was ascertained that Lee's army did not number more than sixty thousand. McClellan's effective force was eighty-seven thousand. McClellan's army was well in hand (Sept. 16), and Lee's was well posted on the heights near Sharpsburg, on the western side of Antietam Creek, a sluggish stream with few fords, spanned by four stone bridges. On the right of the National line were the corps of Hooker and Sumner. In the advance, and near the Antietam, General Richardson's division of Sumner's corps was posted. On a line with this was Sykes's (regular) division of Porter's corps. Farther down the stream was Burnside's corps. In front of Sumner and Hooker were batteries of 24-pounder Parrot guns. Franklin's corps and Couch's division were farther down the valley, and the divisions of Morrell and Humphrey, of Porter's corps, were approaching from Frederick. A detachment of the signal corps, under Major Myer, was on a spur of South Mountain. As McClellan prudently hesitated to attack, the Confederates put him on the defensive by opening an artillery fire upon the Nationals at dawn

(Sept. 16, 1862). He was ready for response in the course of the afternoon, when Hooker crossed the Antietam with a part of his corps, commanded by Generals Ricketts, Meade, and Doubleday. Hooker at once attacked the Confederate left, commanded by "Stonewall Jackson," who was soon reinforced by General Hood. Sumner was directed to send over Mansfield's corps during the night, and to hold his own in readiness to pass over the next morning. Hooker's first movement was successful. He drove back the Confederates, and his army rested on their arms that night on the ground they had won. Mansfield's corps crossed in the evening, and at dawn (Sept. 17) the contest was renewed by Hooker. It was obstinate and severe. The National batteries on the east side of the creek greatly assisted in driving the Confederates away, with heavy loss, beyond a line of woods. It was at this time, when Hooker advanced, that Jackson was reinforced. The Confederates swarmed out of the woods and fell heavily upon Meade, when Hooker called upon Doubleday for help. A brigade under General Hartsuff pressed forward against a heavy storm of missiles, and its leader was severely wounded. Meanwhile Mansfield's corps had been ordered up, and before it became engaged the veteran leader was mortally wounded. The command then devolved on General Williams, who left his division in the care of General Crawford, and the latter seized a piece of woods near by. Hooker had lost heavily; Doubleday's guns had silenced a Confederate battery; Ricketts was struggling against constantly increasing numbers on his front; and the National line began to waver, when Hooker, in the van, was wounded and taken from the field. Sumner sent Sedgwick to the support of Crawford, and Gordon and Richardson and French bore down upon the Confederates more to the left. The Nationals now held position at the Dunker Church, and seemed about to grasp the palm of victory (for Jackson and Hood were falling back), when

fresh Confederate troops, under McLaws and Walker, supported by Early, came up. They penetrated the National line and drove it back, when the unflinching Doubleday gave them such a storm of artillery that they, in turn, fell back to their original position. Sedgwick, twice wounded, was carried from the field, and the command of his division devolved on General O. O. Howard. Generals Crawford and Dana were also wounded. Franklin was sent over to assist the hard-pressed Nationals. Forming on Howard's left, he sent Slocum with his division towards the centre. At the same time General Smith was ordered to retake the ground on which there had been so much fighting, and it was done within fifteen minutes. The Confederates were driven far back. Meanwhile the divisions of French and Richardson had been busy. The former received orders from Sumner to press on and make a diversion in favor of the right. Richardson's division, composed of the brigades of Meagher, Caldwell, and Brooks (who had crossed the Antietam at ten o'clock), gained a good position. The Confederates, reinforced by fresh troops, fought desperately. Finally Richardson was mortally wounded, and General W. S. Hancock succeeded him in command, when a charge was made that drove the Confederates in great confusion. Night soon closed the action on the National right and centre. General Meagher had been wounded and carried from the field, when the command of his troops devolved on Colonel Burke. During the fierce strifes of the day Porter's corps, with artillery and Pleasanton's cavalry, had remained on the east side of the stream, as a reserve, until late in the afternoon, when McClellan sent over some brigades. On the morning of the 17th the left, under Burnside, engaged in a desperate struggle for the possession of a bridge just below Sharpsburg. That commander had been ordered to cross it and attack the Confederates. It was a difficult task, and Burnside, exposed to a raking fire from the Confederate batteries and an enfilading fire from sharpshooters, was several times repulsed. Finally, at a little past noon, two regiments charged across the bridge and drove its defenders away. The divisions of Sturgis, Wilcox, and Rodman, and Scammon's brigade, with four batteries, passed the bridge and drove the Confederates almost to Sharpsburg. A. P. Hill, with fresh troops, fell upon Burnside's left, mortally wounding General Rodman and driving the Nationals nearly back to the bridge. General O'B. Branch, of North Carolina, was also killed in this encounter. The Confederates were checked by National artillery on the eastern side of the stream, and, reserves advancing under Sturgis, there was no further attempt to retake "the Burnside Bridge," as it was called. Hill came up just in time to save Lee's

"BURNSIDE BRIDGE," ANTIETAM CREEK.

army from destruction. Darkness ended the memorable struggle known as the Battle of Antietam. The losses were very severe. McClellan reported his losses at 12,460 men, of whom 2010 were killed. He estimated Lee's loss as much greater. The losses fell heavily upon certain brigades. That of Duryée retired from the field with not more than twenty men and four colors. Of the brigades of Lawton and Hays, on the Confederate side, more than one half were lost. On the morning of the 18th both parties seemed more willing to rest than to fight; and that night Lee and his shattered army stole away in the darkness, recrossed the Potomac at Williamsport, and planted eight batteries on the high Virginia bank that menaced pursuers. There had been a very tardy pursuit. At dark on the evening of the 19th Porter, who was on the left bank of the river, ordered Griffin to cross the stream with two brigades and carry Lee's batteries. He captured four of the guns. On the next morning (Sept. 20) a part of Porter's division made a reconnaissance in force on the Virginia side, and were assailed by Hill in ambush, who drove them across the Potomac and captured two hundred of the Nationals. Maryland Heights and Harper's Ferry were retaken by the Union troops.

**Apaches.** These are a fierce people of the Athabasca nation. (See *Athabascas*.) They are mostly wanderers, and have roamed as marauders over portions of Texas, New Mexico, and Arizona, in the United States, and several of the northern provinces of Mexico. Wanderers, they do not cultivate the soil, and have only temporary chiefs to lead them. Civil government they have none. Divided into many roving bands, they resisted all attempts by the Spaniards to civilize and Christianize them, but constantly attacked these Europeans. So early as 1762, it was estimated that the Apaches had desolated and depopulated one hundred and seventy-four mining-towns, stations, and missions in the province of Sonora alone. For fifty years a bold chief—Mangas Colorado—led powerful bands to war; and since the annexation of their territory to the United States, they have given its government more trouble than any of the Western Indians. Colorado was killed in 1863. Whether they can be civilized is an unsolved problem. The estimated number of the Apaches is about ten thousand. Though fierce in war, they never scalp or torture their enemies. A Great Spirit is the central figure in their simple system of theology, and they reverence as sacred certain animals, especially a pure white bird.

**Apostle of the Indians.** A name given to Rev. John Eliot, a missionary among the Indians of Massachusetts. Born in Essex, England, in 1603, he died at Roxbury, Mass., May 20, 1690. He came to Boston in 1631, and was appointed minister at Roxbury. Among the twenty Indian tribes that surrounded the English plantation he labored almost fifty years with zeal and success, learning their language and translating the Scriptures and other good writings into their

native tongue. He is supposed to have been the first Protestant minister who preached to the Indians. In 1651 an Indian village was built at Natick, on the Charles River, and there the first Indian church was established. His humane efforts in behalf of the "praying Indians," as his converts were called, during King Philip's war were successful. Four of his sons, educated at Harvard University, were classed with "the best preachers of their generation." (See *Eliot, John*.)

**Appeals from Colonial Courts.** In 1697 the right of appeal from the colonial courts to the king in council was sustained by the highest legal authority. By this means, and the establishment of courts of admiralty (which see), Great Britain at length acquired a judicial control over the colonies, and with it a power (afterwards imitated in our National Constitution) of bringing her supreme authority to bear not alone upon the colonies as political corporations, but, what was much more effectual, upon the colonists as individuals.

**Appeals to the States (1783).** Under the Articles of Confederation (which see) the Congress had no power to levy taxes without the consent of the several state legislatures. These were always tardy in responding to appeals for money to support the general government. On April 26, 1783, an eloquent address in the form of an appeal, prepared by Hamilton, Madison, and Ellsworth, was sent forth to the several states, in which the necessity of providing for the Federal debt was strongly urged not only as a matter of justice, but of policy in sustaining the public credit. "Let it be remembered," said the address, "that it has ever been the pride and the boast of America that the rights for which she contended were the rights of human nature. By the blessing of the Author of these rights on the means exerted for their defence they prevailed against all opposition, and form the basis of thirteen independent states." They urged that an opportunity was then offered of trying a great experiment of republicanism under more favorable circumstances than ever before. On May 7, another urgent appeal was made to the states to provide means for three months' pay for the furloughed soldiers, which was to be advanced in treasury notes—a new species of paper currency—payable six months after date, and receivable for all Continental taxes, and redeemable at sight by all Continental receivers having money. The preparations then making for disbanding the army, while their dues remained unpaid, had produced symptoms of discontent again among the soldiers at Newburgh; but the judicious course of Washington pacified them. (See *Newburgh Addresses and Disbanding of the Continental Army*.)

**Appomattox Court-house, SURRENDER OF LEE AT.** The Army of Northern Virginia was reduced by famine, disease, death, wounds, and capture to a feeble few. These struggled against enormous odds with almost unexampled fortitude, but were compelled to yield to overwhelming numbers and strength. On April

8, a portion of Sheridan's cavalry, under General Custer, supported by Devin, captured four Confederate supply-trains at Appomattox Station, on the Lynchburg Railroad. Lee's vanguard approaching, were pushed back to Appomattox Court-house, five miles northward—near which was Lee's main army—losing twenty-five guns and many wagons and prisoners. Sheridan hurried forward the remainder of his command, and on that evening he stood directly across Lee's pathway of retreat. Lee's last avenue of escape was closed, and on the following day he met General Grant at the residence of Wilmer McLean, at Appomattox Court-house, to consummate an act of surrender. The two

for a month afterwards he and his family were kindly furnished with daily rations from the National commissariat at Richmond. Lee had lost, during the movements of his army from March 26 to April 9, about 14,000 men, killed and wounded, and 25,000 made prisoners. The number of men paroled was about 26,000, of whom not more than 9000 had arms in their hands. About 16,000 small-arms were surrendered, 150 cannon, 71 colors, about 1100 wagons and caissons, and 4000 horses and mules.

**Apportionment of Representatives, THE FIRST.** In the matter of apportionment there was considerable disagreement when the subject was brought before the House of Representatives, in 1791. A bill

was passed (Nov. 24) giving to every 30,000 inhabitants one member of the House of Representatives. A distribution was agreed upon giving a total of 113 members, but leaving large unrepresented fractions in several of the Northern States. The Senate sent back the bill so amended as to raise the ratio of apportionment to 33,000, with the avowed purpose of diminishing the fractions. Long and warm debates ensued, and threats of dissolving the Union were freely uttered. The Senate amendment was disagreed to. A committee of conference was appointed (March, 1792), but produced no result. The House finally agreed to the amendment, 31 to 29, the North in favor of concession, the South opposed to it. When the bill was sent to the President, he asked the opinion of his cabinet as to its constitutionality. The cabinet were divided in opinion, and Washington vetoed the bill. Another bill passed, making the ratio 33,000. (See *United States, Apportionment of Representatives in Congress.*)

**Aqueduct, THE CROTON.** This is the greatest work of the kind constructed in modern times in its extent and magnificence. It was completed in 1842, after continued labor upon it for five years, under the superintendence of John B. Jervis, at an expense of \$10,375,000, including \$1,800,000 for distributing-pipes and amounts paid for right of way and other incidental charges. The entire cost, including commission and interest, was \$12,500,000. Its whole length, from the Croton River to the distributing reservoir at Fifth Avenue and Fortieth Street, is forty and a half miles. There are sixteen tunnels on the line, cut mainly through gneiss rock; and much of the open cutting is also through rock. Croton Lake was made by casting up a dam across the Croton River, and raising the water forty feet. This is the source of the aqueduct. It is built of stone, brick,

MCLEAN'S HOUSE, THE PLACE OF LEE'S SURRENDER.

commanders met, with courteous recognition, at two o'clock P.M., on Palm Sunday (April 9). Grant was accompanied by his chief of staff, Colonel Parker; Lee by Colonel Marshall, his adjutant-general. The terms of surrender were discussed and settled, in the form of a written proposition by Grant, and a written acceptance by Lee, and at half-past three o'clock they were signed. The terms prescribed by Grant were extraordinary, under the circumstances, in their leniency and magnanimity, and Lee professed to be touched by them. They simply required Lee and his men to give their parole of honor that they would not take up arms against the government of the United States until regularly exchanged; gave to the officers their side-arms, baggage, and private horses; and pledged the faith of the government that they should not be punished for their treason and rebellion so long as they should respect that parole and be obedient to law. Grant, at the suggestion of Lee, actually allowed such cavalrymen of the Confederate army as owned their own horses to retain them, as they would, he said, need them for tilling their farms. Lee now returned to Richmond, where his family resided. He had started on that campaign with 65,000 men, and he returned alone; and

and cement, arched over and under, six feet nine inches wide at the bottom (the chord of an arc), seven feet five inches at the springing-line of the arch, and eight feet five and a half inches high. It crosses the Harlem River over a high bridge, under the arches of which sailing-vessels may pass.

**Aquia Creek, ENGAGEMENT AT.** Alarmed by the gathering of troops at Washington, Governor Letcher, of Virginia, by command of the Confederate government, called out the militia of that state, appointing no less than twenty places as points of rendezvous, one fourth of which were west of the mountains, for the insurgents were threatened by Ohio and Indiana volunteers. His proclamation was issued May 3, 1861. Batteries were erected on the Virginia branch of the Potomac, below Washington, for the purpose of obstructing the navigation of that stream and preventing supplies reaching Washington that way. At the middle of May, Captain J. H. Ward, a veteran officer of the navy, was placed in command of a flotilla on the Potomac, which he had organized, composed of four armed propellers. On his way to Washington from Hampton Roads, he had captured two schooners filled with armed insurgents. He then patrolled that river, reconnoitring the banks in search of batteries which the Virginians had constructed. On the heights at Aquia Creek (the terminus of a railway from Richmond), fifty-five miles below Washington, he found formidable works, and attacked them, May 31, with his flag-ship, *Thomas Freeborn*, and the gunboats *Anacosta* and *Resolute*. For two hours a sharp conflict was kept up, and the batteries were silenced. Ward's ammunition for long-range was exhausted, and on the slackening of his fire the batteries opened again. Unable to reply at that distance, Ward withdrew, but resumed the conflict the following day, in company with the *Pawnee*, Captain S. C. Rowan. The struggle lasted more than five hours. Twice the batteries on shore were silenced, but their fire was renewed each time. The *Pawnee* was badly bruised, but no person on board of her nor on Ward's flotilla was killed or seriously injured.

**Arapahoes.** This is one of the five tribes constituting the Blackfeet confederacy, residing near the head-waters of the Arkansas and Platte rivers. They were great hunters, and fifty years ago numbered 10,000 souls. With the disappearance of the buffalo they have rapidly decreased, and are now less than 1000.

**Arbitrary Measures towards the Colonies.** In the session of Parliament in 1756, that body attempted to extend its authority in a signal manner over the colonies. They passed laws to regulate the internal policy of the colonies, as well as their acts for the common good. The law in Pennsylvania, under which Franklin's militia (which see) were raised, was repealed by the king in council; the commissions of all officers elected under it were cancelled, and the companies were dispersed. Volunteers were forbidden to organize for their defence; and the arrangements made by the Quakers (see *Friendly*

*Association*) with the Delawares, to secure peace and friendship with the Indians, were censured by Lord Halifax at the head of the Board of Trade and Plantations, as "the most daring violation of the royal prerogative." Each northern province was also forbidden to negotiate with the Indians. But the spirit of the colonists could not be brought into subjection to arbitrary royal authority. A person who had long resided in America, and had just returned to England, declared prophetically, "In a few years the colonies in America will be independent of Great Britain;" and it was actually proposed to send over William, Duke of Cumberland, to be their sovereign, and to emancipate them at once.

**Arbuthnot, MARRIOTT**, a British admiral, was born about 1711; died in London, Jan. 31, 1794. He became a post-captain in 1747. From 1775

MARRIOTT ARBUTHNOT.

to 1778 he was naval commissioner resident at Halifax, Nova Scotia. Having been raised to the rank of vice-admiral in 1779, he obtained the chief command on the American station, and was blockaded by the Count D'Estaing in the harbor of New York. In the spring of 1780 he co-operated with Sir Henry Clinton in the siege of Charleston, S. C. In February, 1793, he became admiral of the blue.

**Archdale (JOHN) and his Administration.** Faction was postponing the era of real prosperity in Carolina, and the unwise conduct of its governors was fanning the flame, when John Archdale, a Quaker, and a native of Buckinghamshire, England, was sent to govern the province. The proprietors had abandoned (1693) their absurd scheme of government (see *Fundamental Constitutions*), and Archdale was sent to soothe the irritation by persuasive and mild measures. He had taken great interest in colonial schemes, and was one of the Carolina proprietors. In their scheme he had been a great helper. His eldest sister, Mary, had married Ferdinando Gorges, grandson of Sir Ferdinando (which see), who was Governor of Maine, and in 1659 published *America Painted from Life*. Archdale had been in Maine as Gorges's agent in 1664, was in North Carolina in 1686, and was commissioner for Gorges in Maine in 1687-88. On his arrival

in South Carolina as governor, in 1694, Archdale formed a commission of sensible and moderate men, to whom he said, at their first meeting, "I believe I may appeal to your serious and rational observations whether I have not already so allayed your heats as that the distinguishing titles thereof are so much withered away; and I hope this meeting with you will wholly extinguish them, so that a solid settlement of this hopeful colony may ensue; and by so doing, your posterity will bless God for so happy a conjunction." He told them why he had been sent, and said, "And now you have heard of the proprietors' intentions of sending me hither, I doubt not but the proprietors' intentions of choosing you were much of the same nature; I advise you, therefore, to proceed soberly and mildly in this weighty concern; and I question not but we shall answer you in all things that are reasonable and honorable for us to do. And now, friends, I have given you the reason of my coming, I shall give you the reasons of my calling you so soon, which was the consideration of my own mortality [he was then nearly seventy years of age], and that such a considerable trust might not expire needless to you; and I hope the God of peace will prosper your counsels herein." Archdale was one of the proprietors of North Carolina, and, arriving there in the summer of 1695, had a very successful though brief administration. Elected to Parliament in 1698, he would only *affirm*, instead of taking the required oath, and was not allowed to take his seat in consequence.

**Arctic Explorations.** During almost four hundred years efforts have been made by European navigators to discover a passage for vessels through the Arctic seas to India. The stories of Marco Polo of the magnificent countries in Eastern Asia and adjacent islands—Cathay and Zipangi, China and Japan—stimulated desires to accomplish such a passage. The Cabots went in the direction of the pole, northwestward, at or near the close of the fifteenth century, and penetrated as far north as  $67^{\circ} 30'$ , or half-way up to (present) Davis Strait. The next explorers were the brothers Corteereal, who made three voyages in that direction, 1500–2. In 1553 Sir Hugh Wiloughby set out to find a northeast passage to India, but was driven back from Nova Zembla, and perished on the shore of Lapland. In 1576–78 Martin Frobisher made three voyages to find a northwest passage into the Pacific Ocean, and discovered the entrance to Hudson's Bay. Between 1585 and 1587 John Davis discovered the strait that bears his name. The Dutch made strenuous efforts to discover a north-east passage. William Barentz made three voyages in that direction in 1594–96, and perished on his third voyage. Henry Hudson tried to round the north of Europe and Asia in 1607–8, but failed, and, pushing for the lower latitudes of the American coast, discovered the river that bears his name. While on an expedition to discover a northwest passage, he found Hudson's Bay, and perished (1610) on its bosom. In 1616 Baffin explored the bay called by his name, and entered the mouth of Lancaster Sound. After

that, for fifty years, no navigator went so far north in that direction. In 1720 the Hudson's Bay Company (which see) sent captains Knight and Barlow to search for a northwest passage to India. They sailed with a ship and sloop, and were never heard of afterwards. In 1741 Vitus Behring discovered the strait that bears his name, having set sail from a port in Kamtschatka. In that region Behring perished. Russian navigators tried in vain to solve the problem. Between 1769 and 1772 Samuel Hearne made three overland journeys in America to the Arctic Ocean. The British government having, in 1743, offered \$100,000 to the crew who should accomplish a northwest passage, stimulated efforts in that direction. Captain Phipps (Lord Mulgrave) attempted to reach the north pole in 1773; and before setting out on his last voyage (1776), Captain Cook was instructed to attempt to penetrate the Polar Sea by Behring's Strait. He went only as far as  $70^{\circ} 45'$ . In 1817 Captain Ross and Lieutenant Parry sailed for the Polar Sea from England; and the same year Captain Buchan and Lieutenant (Sir John) Franklin went in an easterly direction on a similar errand, namely, to reach the north pole. At this time the chief object of these explorations was scientific, and not commercial. Buchan and Franklin went by way of Spitzbergen; but they only penetrated to  $80^{\circ} 34'$ . Ross and Parry entered Lancaster Sound, explored its coasts, and Ross returned with the impression that it was a bay. Parry did not agree with him in this opinion, and he sailed on a further exploration in 1819. He advanced farther in that direction than any mariner before him, and approached the magnetic pole, finding the compass of little use. On Sept. 4, 1819, Parry announced to his crew that they were entitled to \$20,000 offered by Parliament for reaching so westerly a point in that region, for they had passed the one hundred and tenth meridian. There they were frozen in for about a year. Parry sailed again in 1821. Meanwhile an overland expedition, led by Franklin, had gone to co-operate with Parry. They were absent from home about three years, travelled over five thousand miles, and accomplished nothing. They had endured great suffering. Parry, also, accomplished nothing, and returned in October, 1823. Other English expeditions followed in the same direction, by land and water. Sir John Franklin and others went overland, and Parry by sea, on a joint expedition, and Captain Beechey was sent around Cape Horn to enter Behring's Strait and push eastward to meet Parry. Franklin explored the North American coast, but nothing else was accomplished by these expeditions. Mr. Scoresby, a whaler, and his son, had penetrated to  $81^{\circ}$  north latitude in 1806. His experience led him to advise an expedition with boats fixed on sledges, to be easily dragged on the ice. With an expedition so fitted out, Captain Parry sailed for the polar waters in 1827. This expedition was a failure. Captain Ross was in the polar waters again from May, 1829, until the midsummer of 1833. The party had been given up as lost. Another party had started in search of Ross, ex-

plored the north coast of America, and discovered Victoria Land. Other land expeditions followed; and one, under Dr. John Rae, completed a survey of the north coast of the American continent in the spring of 1847. Sir John Franklin yet believed a northwest passage possible. With two vessels—the *Erebus* and *Terror*—each fitted with a small steam-engine and screw-propeller, he sailed from England May 19, 1845. They were seen by a whale-ship, in July, about to enter Lancaster Sound, and were never heard of afterwards. The British government despatched three expeditions in search of them in 1848. One of them was an overland expedition under Sir John Richardson, who traversed the northern coast of America eight hundred miles, in 1848, without finding Franklin. The sea expedition was equally unfortunate. Dr. Rae failed in an overland search in 1850. Three more expeditions were sent out by the British government in search in 1850; and from Great Britain five others were fitted out by private means. One was also sent by the United States government, chiefly at the cost of Henry Grinnell, a New York merchant. It was commanded by Lieutenant De Haven, of the U. S. Navy. There were two ships, the *Advance* and *Rescue*. Dr. E. K. Kane was surgeon and naturalist of the expedition. It was unsuccessful, and returned in 1851. Lady Franklin, meanwhile, had been sending out expeditions in search of her husband, and the British government and British navigators made untiring efforts to find the lost explorers, but in vain. Another American expedition, under Dr. Kane, made an unsuccessful search, and finally the search was given up. In a scientific point of view, Dr. Kane's expedition obtained the most important results. It is believed that he saw an open polar sea; and to find that sea other American expeditions sailed under Dr. I. I. Hayes, a member of Kane's expedition, and Captain Charles F. Hall. The latter returned to the United States in 1860, and Dr. Hayes in 1861. Hall sailed again in 1864, and returned in 1869. The Germans and Swedes now sent expeditions in that direction. In 1869 Dr. Hayes again visited the polar waters. The same year, and for some time afterwards, several expeditions were sent out from the continent of Europe. Finally, by the help of Congress, Captain Hall was enabled to sail, with a well-furnished company, in the ship *Polaris*, for the polar seas, in June, 1871. In October Hall left the vessel, and started northward on a sledge expedition. On his return he suddenly sickened and died, and the *Polaris* returned without accomplishing much. The passage from the coast of Western Europe, around the north of that continent and of Asia, into the Pacific Ocean, was first accomplished in the summer of 1879, by Professor Nordenskjöld, an accomplished Swedish explorer, in the steamship *Vega*. She passed through Behring's Strait into the Pacific Ocean, and reached Japan in the first week in September. Thus the great problem has been solved. The *Jeannette*, Lieut. De Long, an American exploring vessel, was lost on the coast of Siberia, in 1881.

Argall, SAMUEL, first appears in history in a

nefarious transaction in Virginia, in 1612, when he was forty years of age. He was born at Bristol, England, in 1572, and died in 1639. Argall was one of the early adventurers to Virginia. He commanded a vessel, and was a sort of buccaneer. He was in Virginia at a time when Powhatan was particularly hostile to the English settlers. He and his nearest neighbors would not allow the people to carry food to the English at Jamestown, and provisions became very scarce. Argall was sent with a vessel on a foraging expedition up the York River. Being near the dwelling of Powhatan, he bribed a savage by a gift of a copper kettle to entice Pocahontas on board his vessel, where he detained her a prisoner, hoping to get a large quantity of corn from her father as a ransom, and to recover some arms and implements of labor which the Indians had stolen. Powhatan rejected Argall's proposal for a ransom with scorn, and would not hold intercourse with the pirate; but he sent word to the authorities at Jamestown that, if his daughter should be released, he would forget the injury and be the friend of the English. They would not trust him, and the maiden was taken to Jamestown and detained several months, always treated with great respect as a princess. There she became the object of a young Englishman's affections; and the crime of Argall led to peace and happiness (see *Pocahontas*). The next year (1613) Argall went, with the sanction of the Governor of Virginia (see *Thomas Dale*) to expel the French from Acadia as intruders upon the domain of the North and South Virginia Company. He stopped on his way at Mount Desert Island, and broke up the Jesuit settlement there. (See *Acadia*.) The priests, it is said, feeling an enmity towards the authorities at Port Royal, in Acadia, willingly accompanied Argall as pilots thither in order to be revenged. Argall plundered the settlement, and laid the village in ashes, driving the people to the woods, and breaking up the colony. In 1617 Argall became deputy governor of Virginia. On going to Jamestown he found it fallen into decay, the storehouse used as a church; the market-place, streets, and other spots in the town planted with tobacco; the people dispersed according to every man's convenience for planting; and the number of the settlers there reduced. Argall's rule was so despotic that, in 1619, he was recalled, and Sir George Yeardly was put in his place. He returned to England with much wealth. After the death of Lord Delaware Captain Argall took charge of his estate, and Lady Delaware charged him with gross fraud and peculation.

"Argus," CAPTURE OF THE (1813). The American brig *Argus*, Captain W. H. Allen, bore to France William H. Crawford, United States minister to that government. She afterwards cruised in British waters, and by the celerity of her movements and destructive energy she spread consternation throughout commercial England. She carried 32 pound carronades and two bow-guns; and her commander, who had served under Decatur, was one of the most gallant men of the navy. He roamed the "chops of

the Channel" successfully; and, sailing around Land's End, in the space of thirty days he captured no less than twenty valuable British merchantmen, with cargoes valued at \$2,000,000. Too far away from friendly ports into which he might send his prizes, he burned all the vessels. Every non-combatant captive he allowed to remove his private property, and for this generosity he was thanked by them. The British government, alarmed by the exploits of the *Argus*, sent out several cruisers after her. Just before the dawn of the 14th of August (1813), the British brig *Pelican*, 18, Captain J. F. Maples, appeared; and at six o'clock the *Argus* wore round and delivered a broadside upon her at grape-shot distance. The fire was immediately returned, and a round shot carried away Allen's left leg. He refused to be taken from the deck; but soon becoming unconscious from loss of blood, he was taken to the cockpit, and died the next day. The men of the *Argus*, weakened by too free use of captured wine the night before, did not fight with their usual vigor, yet they handled the vessel admirably. Lieutenant W. Howard Allen was left in chief command. Very soon the *Argus* became so badly injured that she began to reel. All her braces were shot away, and she could not be kept in position. The *Pelican* at length crossed her stern, and raked her dreadfully; and at the end of twenty-five minutes from the beginning of the action the *Argus* became unmanageable. Yet she fought on feebly twenty minutes longer, when she was compelled to surrender, the *Sea-horse*, the *Pelican's* consort, having hove in sight. The *Argus* lost, in killed and wounded, 23 men; the *Pelican* lost 7 men.

**Arista**, MARIANO, a Mexican general, was born at San Luis Potosi, July 16, 1802; died in Spain, Aug. 9, 1855. Receiving a military education, he served in the Spanish army until June, 1821, when he joined the Mexican revolutionists. He rose rapidly to the rank of brigadier-general; and in June, 1833, he was made, by Santa Aña, second in command of the Mexican army. Joining another leader in an unsuccessful revolt, he was expelled from Mexico, and came to the United States. In 1835 he returned, and was restored to his rank in the army, and made Judge of the Supreme Tribunal of War. He was taken prisoner by the French at Vera Cruz (Dec. 5, 1838), but was soon released on parole. In 1839 he became general-in-chief of the northern division of the army, and received the "Cross of Honor" for defeating insurgents. Though only a military commander, he was for some time the real ruler of Mexico when Herrera was President in 1844. Commanding at the battles of Palo Alto and Resaca de la Palma (which see), in May, 1848, he was appointed Minister of War a month later. Within two years he suppressed seventeen revolts in Mexico; and in 1850 he was elected President of his native country. He resigned the government in July, 1853. Banished from his country by his enemies, he made a voyage to Europe; and died there on the day when Santa Aña, who had usurped his seat, was compelled to fly from the city of Mexico.

**Arizona and California, Jesuit Missions in.** So early as 1658 Eusebio Francisco Kino, a member of the order of Jesuits, was engaged in the exploration of the (present) Territory of Arizona; and in 1670, in pursuance of a vow made when he supposed he was dying, he undertook single-handed the spiritual regeneration of the peninsula of California. To Kino is due the honor of founding the first settlements in California and Arizona, which now belong to the United States. In 1670 he set out, with other priests, on a mission in the valley of the Gila. They established five missions in that region during the next eight years; and in 1697 his efforts to establish permanent missions in California were gratified when a station was planted in that country. Salvatierra, who was personally engaged in founding the mission, and in the introduction of civilization into that region, discovered, by the aid of the "Holy Virgin of Loretto," he said, that California was really a peninsula, for he passed around the head of the Bay of California. These Jesuit missionaries made many converts among the Indians, who were provided with food from the stores of the mission-house. The Indian parishioners of the priests were clothed by the good father with warm cloth from Spain; and he furnished them with cloaks and blankets. They were taught the art of agriculture; but as they would not save the crops, they were taken for the common use at the mission. Wine was thus early produced at the missions in California. Missions became quite numerous, though most of them were small, one priest and one soldier constituting the whole of the white population. A semi-theocratic government was established at each mission village. The priest appointed one Indian as governor, one to the charge of the church, and the third to be the catechist of those who were learners. In the absence of the priest, the soldier acted as his vicegerent. At some stations the Indians were taught to spin wool and weave it; also to make sail-cloth from hemp, in violation of the navigation laws of Spain. Pueblos containing semi-civilized barbarians were soon formed in many places in Arizona and California, where men and women were trained by the Jesuits in the elements of Christian civilization; but their progress was frequently interrupted by inroads from the wild tribes around them. The decline in the power of Spain hindered aid to Spanish missions, and the Indian converts began to relapse into the habits of savage life. Revolts ensued. The power of the Jesuits at the Spanish court waned and disappeared; and on June 26, 1767, the king (Charles III.) issued a decree for the expulsion of the Jesuits from California. Choiseul, the able French minister, and the equally able Arauda, convinced Charles that the Jesuits had circulated slanders in regard to his own birth; and the monarch eagerly gave the sudden and unexpected blow to their power in the Spanish dominions.

**Arizona, LEGEND OF.** To one of the pioneer explorers of the Arizona region the Zunia Indians gave the following account of their origin as preserved in their traditions. Their legend

relates that in the beginning a race of men sprang up out of the earth, as plants arise and come forth in the spring. This race increased until they spread over the whole earth, and, after continuing through countless ages, passed away. The earth then remained without people a great length of time, until at length the sun had compassion on the earth, and sent a celestial maiden to repeople the globe. This young goddess was called Arizona, the name signifying "Maiden Queen." This Arizona dwelt upon the earth a great length of time in lonely solitude, until at a certain time, while basking in the sunbeams, a drop of dew fell from heaven and rested upon Arizona, who in due time blessed the world with twins, a son and daughter, and these became the father and mother of the Zunia Indians, and from this tribe arose all other races of men; the black, white, olive, and all other clay-colored men being merely apostate off-shoots from this original tribe, and the Zunias being the only pure, original stock, children of the sun, now upon the earth.

Arizona, TERRITORY OF, is in the extreme southwestern portion of the republic, lying on the border of Mexico. The region was early known to Spanish explorers. So early as 1526, Don José de Vasconcellos, a follower of Cortez, crossed the centre of this territory towards the Great Cañon, and the region was afterwards visited by other Spanish explorers. They then, as we do now, found on the river banks ruins of cities which seemed to have existed for centuries. These, with regular fortifications, reservoirs, and canals, show that the country was once inhabited by an enterprising and cultivated people. There are found walls of solid masonry, usually two stories in height. It is estimated that full one hundred thousand people must have inhabited the valley of the Gila alone. Arizona was settled by Spanish missionaries from Mexico as early as 1687. These missions were principally seated on the Lower Colorado and Gila rivers. The territory formed a part of Mexico until its purchase by the United States in 1850. It was organized into a territory by act of Congress, Feb. 24, 1863, with its area described as comprising all the "United States lands west of longitude 109° to the California line." Since then the northwest corner has been ceded to Nevada. It is a mountainous region, and much of the northern portion remains unexplored. Population in 1880, 40,440.

Arkansas was discovered by De Soto in 1541, who crossed the Mississippi near the site of Helena. (See *De Soto*.) It was next visited by Father Marquette (which see) in 1673. It was originally a part of Louisiana, purchased from the French in 1803, and so remained until 1812, when it formed a part of Missouri Territory (which see). It was erected into a territory in 1819, with its present name, and remained under a territorial government until 1836, when a convention at Little Rock, its present capital, formed a state constitution. Its first territorial legislature met at Arkansas Post in 1820. On June 15, 1836, Arkansas was admitted into

the Union as a state. At the beginning of the Civil War a state convention was held at Little Rock, and on May 6, 1861, adopted an ordinance of secession, when the state became a member

STATE SEAL OF ARKANSAS.

of the Southern Confederacy. Meanwhile the state authorities had seized the national property in the state. During almost the whole period of the war, National or Confederate troops occupied the state; and one of the most hotly contested battles of the war was fought on its soil. (See *Pea Ridge*.) On Oct. 30, 1863, a meeting of loyal citizens, representing about twenty counties, was held at Fort Smith, to take measures for reorganizing the state government. In January following, a convention, composed of representatives of forty-two counties, assembled at Little Rock, and framed a loyal constitution, which was ratified by the people in March, 1864. Members of the Legislature were elected, and in April a state government was organized. In 1867 military rule was established in Arkansas, which, with Mississippi, constituted a military district. A new constitution was framed by a convention at Little Rock, Jan. 7, 1868, and was ratified by a small majority in March. On June 22, Congress declared Arkansas entitled to representation in that body, and the administration of the government was transferred to the civil authority. Population in 1880, 802,525.

**Arkansas Post, CAPTURE OF.** General W. T. Sherman and Commodore Porter, near Vicksburg, had planned an attack upon Arkansas Post, or Fort Hindman, on the Arkansas River, fifty miles from the Mississippi. General McClelland, who had arrived and taken the chief command, accompanied the expedition. The troops landed, about twenty-five thousand strong, three miles below the fort, on June 9, and were led by Generals McClelland, Sherman, Morgan, Steele, Stewart, A. J. Smith, and Osterhaus. Porter had a strong flotilla of armored and unarmored gunboats. The latter, moving on, shelled the Confederates out of their rifle pits; and on the 11th the army moved against Fort Hindman. When the gunboats opened fire upon it, Morgan's artillery covered the advance. After a short fight for about two hours, the Confederates raised a white flag, while troops, which had stormed the works, were swarming over them. Arkansas Post was surrendered. The Nationals lost 977 men, of whom 129 were killed. The spoils were about 5000 prisoners, 7 cannons, 3000 small-arms, and a large quantity of stores. The fort was blown up, and property which could not be carried away was destroyed.

**Arkansas Secession Ordinance.** The people of Arkansas were attached to the Union, but, unfortunately, the governor and most of the leading politicians of the state were dis-

loyal, and no effort was spared by them to obtain the passage of an ordinance of secession. For this purpose a state convention of delegates assembled at the capital (Little Rock) on March 4, 1861. It was composed of seventy-five members, of whom forty were such staunch Unionists that it was evident no ordinance of secession could be passed. The friends of secession then proposed a plan that seemed fair. A self-constituted committee reported to the convention an ordinance providing for an election to be held on the first Monday in August, at which the legal voters of the state should decide, by ballot, for "secession" or "co-operation." If a majority should appear for "secession," that fact would be considered in the light of instructions to the convention to pass an ordinance to that effect; if for "co-operation," then measures were to be used, in conjunction with the border slave-labor states "yet in the Union," for the settlement of existing difficulties. The next session of the convention was fixed for August 17. The proposition seemed so fair that it was adopted by unanimous vote, and the convention adjourned, subject to the call of its president, who was known as a Union man. Taking advantage of the excitement incident to the attack on Fort Sumter and the President's call for troops, the governor (Rector) and his disloyal associates adopted measures for arraying Arkansas among the "seceded states." In violation of the pledge of the convention that the whole matter should be determined by the people in August, the governor induced the president of the convention to call that body together on May 6. It met on that day. Seventy delegates were present. An ordinance of secession, previously prepared, was presented to it at three o'clock in the afternoon, when the hall in which the delegates met was crowded by an excited multitude. It was moved that the "yeas" and "nays" on the question should be taken without debate. Though the motion was rejected by a considerable majority, the president declared it carried. Then a vote on the ordinance was taken. There seemed to be a majority against it; but the president arose and earnestly exhorted the Unionists to change their votes, which they did, as they perceived a determination on the part of the crowd of spectators to compel them to do so. The place (the hall of the House of Representatives) was densely packed with human beings. As each vote was given there was a solemn stillness, and one Union man after another prefaced his vote by some stirring sentiment in favor of the South. When the result was announced—sixty-nine for the ordinance, to one against it—there was tremendous cheering. The negative vote was given by Isaac Murphy, who was the Union governor of Arkansas in 1864.

"Arkansas," THE RAM. The Confederates had a powerful "ram," named *Arkansas*, on the Yazoo River, above Vicksburg. Farragut sent three armored vessels, about the middle of July, 1862, to attack her. Six miles up the stream they found and assailed her; but she repulsed the attack, and took shelter under the batteries at Vicksburg. Another attempt to capture her

was made on July 22 by the *Essex* (Captain Porter) and the *Queen of the West*. Again the attempt was unsuccessful. After the repulse of the Confederates at Baton Rouge, early in August (see *Baton Rouge*), Porter, with the *Essex* and two other gunboats, went in search of the *Arkansas*, and found her five miles above that city. A sharp engagement ensued. The *Arkansas* became unmaneuverable, when her crew ran her against the river bank, set her on fire, and she was blown up.

Armand, CHARLES TUFIN, MARQUIS DE LA ROUARIE, was born near Rennes, France, in 1756; died Jan. 30, 1793. He was in the French army, when, fighting a duel in Paris, to which his passion for an actress had led him, he fled, came to America, and on May 10, 1777, he entered the Continental army as a volunteer. He received the commission of colonel, and commanded a small corps, to which was attached a company of cavalry, who acted as the police of camps. He was an exceedingly active officer, and was highly esteemed by Washington. In February, 1780, his corps was incorporated with that of Pulaski, who was killed at Savannah a few months before. In March, 1783, his services throughout the war from 1777 were recognized, and he was created a brigadier-general. Returning to France, he took part in the Revolution there, and was for a time a prisoner in the Bastille. He espoused the cause of the royalists of La Vendée, Brittany, Anjou, and Poitou. The execution of Louis XVI. gave such a shock to his nervous system that he sank under it and died.

Armed Neutrality (1780), THE. A movement in Europe, known as the "Armed Neutrality," threatened to seriously cripple the power of Great Britain and incidentally aid the Americans in their struggle for independence. It was a league of the leading nations of Europe against the pretensions of Great Britain as "Mistress of the Seas." It was conceived in the summer of 1778, when British cruisers seized American vessels in the Baltic Sea engaged in commerce with Russia. The latter nation was then assuming colossal proportions, and all the others courted the friendship of its empress, Catherine II., who was able and powerful. Great Britain tried to induce her to become an ally against France. Catherine coquetted a long time with King George, while her sympathies were with Sweden, Denmark, and Holland, whose neutral ships were continually interfered with by British sea-rovers, whose acts were justified by their government. France had gained the good-will of the Northern powers by a proclamation (July, 1778) of protection to all neutral vessels going to or from a hostile port with contraband goods whose value did not exceed three fourths of the whole cargo. From that time until the beginning of 1780 the insolence of British cruisers and the tone of the British ministers offended the Northern powers. The tone was often insulting. "When the Dutch," said Lord North, "say 'We maritime powers,' it reminds me of the cobbler who lived next door to the lord mayor, and used to say 'My neighbor and I.'" Official language was

often equally offensive. The British Minister at the Hague said, "For the present, treaty or no treaty, England will not suffer materials for ship-building to be taken by the Dutch to any French port." A similar tone was indulged towards the other powers, excepting Russia. The shrewd Catherine, perceiving the commercial interests of her realm to be involved in the maintenance of the neutral rights of others, after long coquetting with Great Britain, assumed the attitude of defender of those rights before all the world. Early in March, 1780, she issued a declaration, in substance, (1) that neutral ships shall enjoy free navigation from port to port, and on the coasts of belligerent powers; (2) that free ships free all goods except contraband; (3) that contraband are arms and munitions of war, and nothing else; (4) that no port is blockaded unless the enemy's ships in adequate number are near enough to make the entry dangerous. "In manifesting these principles before all Europe," that state paper said, "Her Imperial Majesty is firmly resolved to maintain them. She has therefore given an order to fit out a considerable portion of her naval forces to act as her honor, her interest, and necessity may require." The empress invited Sweden, Denmark, Portugal, and the Netherlands to join in support of her declaration. These, with Prussia and Russia, entered into a league in the course of the year. France and Spain acquiesced in the new maritime code; and at one time a general war between Great Britain and the Continental nations seemed inevitable. The United States approved the measure, and towards the close of 1780 sent Francis Dana as Ambassador to the Court of St. Petersburg, to negotiate a treaty of amity and commerce. The alliance neither awed nor in any sensible way affected England. The known fickleness and faithlessness of Catherine made other powers hesitate in going to war, and the league resulted in inaction.

**Arming Indians and Negroes (1775).** Having no sufficient force at home to send for the subjugation of the colonies, and as mercenaries from the Continent could not be immediately procured, the British king ordered Dunmore, Governor of Virginia, to arm negroes and Indians, if necessary, to crush the rebellion in that colony. To Dunmore three thousand stand of arms, with two hundred rounds of powder and ball for each musket, together with four pieces of light artillery, were instantly shipped. An order was also sent directly, in the king's name, to the unscrupulous Guy Johnson, agent among the Six Nations, to seek immediate assistance from the Iroquois Confederacy. "Lose no time," so ran the order; "induce them to take up the hatchet against his majesty's rebellious subjects in America. It is a service of very great importance; fail not to exert every effort that may tend to accomplish it; use the utmost diligence and activity." Johnson was promised an ample supply of arms and ammunition from Quebec.

**Armistead, GEORGE,** was born at New Mar-

ket, Caroline Co., Va., April 10, 1780; died in Baltimore, April 25, 1819. He entered the army as second lieutenant in 1799; was appointed assistant military agent at Fort Niagara in 1802, and assistant paymaster in 1806. In 1813 he held

GEORGE ARMISTEAD.

the rank of major in the Third Artillery, and was distinguished at the capture of Fort George in May. He had married (1810) a sister of the eminent Christopher Hngles (which see), and before that had served much among the Indians. His gallant defence of Fort McHenry in September, 1814, won for him immortal honors. He had five brothers in the military service in the second war for independence—three in the regular army and two in the militia service. Because of his bravery in defending Baltimore, he was breveted a lieutenant-colonel; and the citizens presented him with an elegant silver service in the form of a vase fashioned like a bombshell, with goblets and salver. After his death a fine marble monument was erected in the city of Baltimore to his memory. The grateful citizens also erected a large monument, designed by Maximilian Godefroy, and wrought in white marble, in memory of all the defenders of Baltimore. It is a cenotaph, and was erected in 1815, at a cost of sixty thousand dollars. It bears the names, in bronze letters, of the officers who perished in defence of the city.

**Armistice (1783).** On the day when the Preliminary Treaty of Peace between the United States and Great Britain was concluded (Jan. 20, 1783), the respective commissioners of the two powers signed an armistice declaring a cessation of hostilities between the two nations. It was signed by Alleyne Fitzherbert on the part of Great Britain, and John Adams and Benjamin Franklin on the part of the United States.

**Armistice (1812).** In consequence of negotiations for a suspension of hostilities between the American and British armies then proposed,

General Dearborn agreed with Sir George Prevost, Governor-general of Canada, for a provisional armistice, confined to the American troops on the northern frontier and the armies of the British along the opposite and corresponding line. To effect this armistice Sir George's adjutant-general, Edward Baynes, repaired to Dearborn's headquarters at Greenbush, opposite Albany, and there the armistice was signed, Aug. 9, 1812. This armistice was rejected by the government of the United States, and Dearborn was directed to put an end to it immediately. But he continued it until August 29, for the purpose, as he alleged, of forwarding stores to Sackett's Harbor. It released the British troops on the Niagara frontier, and Sir Isaac Brock, Governor of Upper Canada, was enabled to hasten to the Detroit River and effect the capture of the army of General Hull. Dearborn gave that commander no intimation of the armistice; and it was during its unwarranted continuance for twenty days that the forced surrender of Hull to overwhelming numbers (Aug. 16) took place. Dearborn's excuse for his silence was that he did not consider Hull within the limits of his command.

**Arms and Military Stores, EXPORTATION OF, PROHIBITED (1774).** Towards the close of 1774 the king issued a proclamation prohibiting the exportation, from Great Britain, of military stores. As soon as the proclamation reached America it created great excitement. Preparations were made for the manufacture of gunpowder and of cannons. The Assembly of Rhode Island passed resolutions for obtaining arms and military stores and for arming the inhabitants. From the public battery at Newport about forty cannons were removed, that they might not be used by the government authorities. At Portsmouth, N. H., a similar movement had taken place. Paul Revere had been sent there expressly, by a committee at Boston, with the king's order and an account of the proceedings of a meeting in the New England capital. On the following day about four hundred men proceeded to Castle William and Mary, at the entrance to Boston harbor, seized it, broke open the powder-house, and carried away more than one hundred barrels of gunpowder.

**Arms for the National Troops.** One of the most serious difficulties encountered at the beginning of the Civil War was a lack of arms. The arsenals and armories of the free-labor states had been stripped by Secretary Floyd. (See *Floyd's Dialogal Acts*.) The armory at Harper's Ferry had been destroyed, and that at Springfield, Mass., was the only one upon which the government could rely for the manufacture of arms. To supply this lack Colonel G. L. Schuyler was sent to Europe to buy arms for the government. He bought 116,000 rifles, 10,000 revolvers, 10,000 cavalry carbines, and 21,000 sabres, at an aggregate cost of \$2,044,931. It was not long before the private and national armories of the United States were able to meet all demands. The loss of over 2000 cannon at the Gosport Navy-yard was a se-

rious one, but very soon the founderies of the country supplied all that were required.

**Armstrong, JOHN**, was born at Carlisle, Pa., Nov. 25, 1758; died at Red Hook, N. Y., April 1, 1843. While a student at Princeton, in 1775, he became a volunteer in Potter's Pennsylvania regiment, and was soon afterwards made an aide-de-camp to General Mercer. He was

JOHN ARMSTRONG.

afterwards placed on the staff of General Gates, and remained so from the beginning of that officer's campaign against Burgoyne until the end of the war, having the rank of major. Holding a facile pen, he was employed to write the famous *Newburgh Addresses* (which see). They were powerfully and eloquently written. After the war he was successively Secretary of State and Adjutant-general of Pennsylvania; and in 1784 he conducted operations against the settlers in the Wyoming Valley. The Continental Congress in 1787 appointed him one of the judges for the Northwestern Territory, but he declined. Two years later he married a sister of Chancellor Livingston, removed to New York, purchased a farm within the precincts of the old Livingston manor on the Hudson, and devoted himself to agriculture. He was a member of the national Senate from 1800 to 1804, and became United States Minister at the French court in the latter year, succeeding his brother-in-law Chancellor Livingston. He was commissioned a brigadier-general in July, 1812, and in January, 1813, became Secretary of War in the cabinet of President Madison. His lack of success in the operations against Canada, and at the attack upon and capture of Washington in 1814, made him so unpopular that he resigned and retired to private life. General Armstrong wrote *Notes on the War of 1812*, and *Lives of Generals Montgomery and Wayne* for "Sparks's American Biography;" also a *Review of Wilkinson's Memoirs*, and treatises on agriculture and gardening.

**Army Changes at Atlanta (1864).** The Confederate government became dissatisfied with

General Johnston's steady retrograde movements before Sherman's advancing forces, and suddenly relieved him of his command, and put General J. B. Hood in his place. Johnston had cared more for the salvation of his army than for the possession of forts; Hood's feeling was the reverse, and in a very short time, by recklessness, he lost nearly one half of his troops. When Hood assumed command his army numbered about fifty-one thousand effective men, of whom ten thousand were cavalry. There were changes also of commanders in Sherman's army. By order of the President, O. O. Howard was made successor of McPherson in command of the Army of the Tennessee. This gave dissatisfaction to Hooker, who resigned the command of the tenth corps, and it was assigned to General H. W. Slocum; General Palmer resigned the command of the fourteenth corps, and was succeeded by General Jefferson C. Davis; General Stanley succeeded Howard as commander of the fourth corps.

**Army, NEW, AUTHORIZED (1808).** Jefferson's policy had always been to keep the army and navy as small and inexpensive as possible. The army was reduced to a mere frontier guard against the Indians. In 1808 the aspect of international affairs was such as to demand an increase of the military strength of the republic, and the President asked Congress to augment the number and efficiency of the regular army. They did so, though the measure was strongly opposed by the Federalists. There was a rising war-spirit in the land. A bill to raise seven new regiments was passed by a vote in the House of ninety-eight to sixteen. Other provisions for war followed. The sum of \$1,000,000 was placed at the disposal of the President for the erection of coast and harbor defences. Another sum of \$300,000 was appropriated for the purchase of arms, and \$150,000 for saltpetre to make gunpowder. The President was also authorized to call upon the governors of the several states to form an army, in the aggregate, of one hundred thousand militia, to be immediately organized, equipped, and "held in readiness to march at a moment's warning" when called for by the chief magistrate—in other words, one hundred thousand minute-men. The President was authorized to construct arsenals and armories at his discretion; and \$200,000 were placed at his disposal for providing equipments for the whole body of the militia of the republic. About \$1,000,000 were appropriated to pay the first year's expenses of the seven new regiments. Altogether the government appropriated in 1808 about \$5,000,000 for war purposes. Efforts to increase the navy failed. Men were needed for the additional one hundred and eighty-eight gunboats, the construction of which was authorized in December, 1807. Nothing was done until January, 1809, when the President was authorized to equip three frigates and a sloop of war.

**Army Officers (1812).** In organizing the military forces for war in 1812 the following

appointments were made: Henry Dearborn, a soldier of the Revolution, collector of the port of Boston, late Secretary of War, and then sixty years of age, was appointed (February, 1812) first major-general, or acting commander-in-chief of the armies in the field, having the Northern Department under his immediate control. Thomas Pinckney, of South Carolina, also a soldier of the Revolution, was appointed (March, 1812) second major-general, and placed in command of the Southern Department. Joseph Bloomfield (Governor of New Jersey), James Winchester (of Tennessee), John P. Boyd (of Massachusetts), and William Hull (then Governor of the Territory of Michigan), were commissioned (April 8, 1812) brigadiers. The same commission was given (June) to Thomas Flournoy, of Georgia. John Armstrong, of New York (see *Armstrong*), was also commissioned (July 4) a brigadier, to fill a vacancy caused by the recent death of General Peter Gansevoort. This was soon followed (July 8) by a like commission for John Chandler, of Maine. Morgan Lewis, of New York, was appointed quartermaster-general (April 3), and Alexander Smyth, of Virginia, was made inspector-general (March 30)—each bearing the commission of a brigadier. Thomas Cushing, of Massachusetts, was appointed adjutant-general with the rank of brigadier. James Wilkinson, of Maryland, the senior brigadier in the army, was sent to New Orleans to relieve Wade Hampton (now a brigadier), who was a meritorious subaltern officer in South Carolina during the Revolution. Alexander Macomb of the engineers—one of the first graduates of the United States Military Academy at West Point (which see)—was promoted to colonel, and Winfield Scott, Edward Pendleton Gaines, and Eleazer W. Ripley were commissioned colonels. Scott and Gaines were of Virginia; Ripley, of Maine.

**Army of Liberation in Missouri.** By invitation of Governor Jackson, of Missouri, General Gideon J. Pillow, in command of Tennessee troops, entered Missouri at or near the close of July, 1861, and took post at New Madrid. He had suggested this movement at an earlier day as a part of a plan for securing possession of Bird's Point (which see) to the Confederacy. He was empowered to make and enforce such civil police regulations as he might deem necessary for the security of his forces, the preservation of order and discipline in his camp, and the protection of the lives and property of the citizens—in other words, to establish martial law. Jackson clothed one of his brigadiers (M. J. Thompson) with similar authority, and he and Pillow, with W. J. Hardee, who was commissioned a brigadier in the Confederate service, held military possession of the southeastern districts of the commonwealth, and made vigorous preparations to co-operate with General Price and his associates in "expelling the enemy" from the state. Pillow assumed the pompous title of "Liberator of Missouri," and his orders and despatches were headed, "Headquarters Army of Liberation."

**Army of Occupation (1845-46).** When the annexation of Texas caused warlike preparations in Mexico, General Zachary Taylor was ordered to proceed to a point near the frontier between the two countries to defend Texas from invasion. Taylor was then in command of the Department of the Southwest. In a letter of instructions from the War Department, he was told, "Texas must be protected from hostile invasion; and for that purpose you will, of course, employ to the utmost extent all the means you possess or can command." He at once repaired to New Orleans with fifteen hundred men (July, 1845), where he embarked, and early in August arrived at the island of St. Joseph on the Texan coast, whence he sailed for Corpus Christi, near the mouth of the Nueces, where he established his headquarters. There he was soon afterwards reinforced by seven companies of infantry under Major Brown and two volunteer companies under Major Gally. With these forces he remained at Corpus Christi until the next spring, when the camp at that place was broken up (March 8, 1846), and the Army of Occupation proceeded to Point Isabel, nearer the Rio Grande. When approaching Point Isabel, Taylor was met by a deputation of citizens, and presented with a protest, signed by the Prefect of the Northern District of the Department of Tamaulipas, against the presence of his army. But he pressed forward to Point Isabel, from whence, with a larger portion of his army, he proceeded to the Rio Grande opposite Matamoras, arriving there on March 29. There he began the erection of defensive works; and so the Army of Occupation in Texas assumed a hostile attitude towards the Mexicans. (See *Mexico, War with.*)

**Army of the James, ON THE APPOMATTOX.** When General Grant began his march against Richmond (May, 1864), General Benjamin F. Butler was in command of the Army of the James, and was directed to co-operate with the Army of the Potomac. Butler prepared to make a vigorous movement against Richmond from the south, while Grant moved down from the north. Butler's effective force was about forty thousand men when he was ordered to advance. It was composed chiefly of the eighteenth army corps, commanded by General W. F. Smith, and the tenth corps under General Q. A. Gillmore, who arrived at Fortress Monroe May 3. Butler successfully deceived the Confederates as to his real intentions by making a demonstration towards Richmond by way of the York River and the Peninsula, along McClellan's line of march. On the night of May 4, Butler's army was embarked on transports and conveyed around to Hampton Roads; and at dawn the next morning thirty-five thousand troops, accompanied by a squadron of war vessels under Admiral Lee, were rapidly ascending the James towards City Point, at the mouth of the Appomattox. At the same time, General A. V. Kautz, with three thousand cavalry, moving swiftly from Suffolk, south of the James,

struck the Weldon railway south of Petersburg, and burned a bridge over Stony Creek, while Colonel R. M. West, with eighteen hundred cavalry (mostly colored men), moved from Williamsburg up the north bank of the James, keeping abreast of the grand flotilla. The bewildered Confederates made no serious opposition to these movements. A division of National troops took quiet possession of City Point (May 5) and the war vessels took a position above the mouth of the Appomattox. At the same time a heavy force landed on a triangular piece of land between the James and Appomattox, called Bermuda Hundred, and there established an intrenched camp. In the space of twenty-four hours, Butler gained an important foothold within fifteen miles of Richmond in a straight line, and only about eight miles from Petersburg. This movement produced great consternation at Richmond; but before Petersburg could be seriously threatened by Butler, Beauregard was there with troops from Charleston.

**Army of the North, OPERATIONS OF THE (1813).** In the summer of 1812, General Joseph Bloomfield was sent to Lake Champlain with several regiments, and on September 1 he had gathered at Plattsburg about eight thousand men—regulars, volunteers, and militia—besides small advanced parties at Chazy and Champlain. General Dearborn took direct command of this army soon afterwards, and about the middle of November he made an unsuccessful attempt to invade Canada. No other special military movements occurred in that quarter until the next year. General Wade Hampton succeeded Bloomfield in command on Lake Champlain, and in the summer of 1813 he was at the head of four thousand men, with his headquarters at Burlington, Vt. This force composed the right wing of the Army of the North, of which General Wilkinson was commander-in-chief. There was such personal enmity between these two commanders that the public service was greatly injured thereby. The Secretary of War (Armstrong) was preparing to invade Canada by way of the St. Lawrence, and, fearing the effects of this enmity, transferred the headquarters of the War Department to Sackett's Harbor, at the east end of Lake Ontario, that he might promote harmony between these testy old generals. In arranging for the expedition down the St. Lawrence (which see), Armstrong directed Hampton to penetrate Canada towards Montreal by way of the Sorel River. Instead of obeying the order, Hampton marched his troops to the Chateaugay River, and at Chateaugay Four Corners he tarried twenty-six days awaiting orders. Finally he was ordered to descend the Chateaugay and meet Wilkinson at its mouth. He moved forward late in October, when he was confronted by Lieutenant-colonel De Salaberry, near the junction of Outard Creek and the Chateaugay, where Hampton encamped and was overtaken by his artillery. De Salaberry was encamped with a force about one thousand

strong, and Sir George Prevost and General De Watteville were within bugle-call. Hampton resolved to dislodge De Salaberry, and sent a force under Colonel Robert Purdy on the evening of Oct. 25 to force a ford and fall upon the British rear. Purdy lost his way in a hemlock swamp. Meanwhile Hampton put three thousand five hundred of his men in motion under General George Izard, who moved to the attack at two o'clock in the afternoon. De Salaberry came out with a few Canadians and Indians, but fusing overwhelming numbers in front of him he fell back to his intrenched camp. Firing was now heard on the other side of the river. Purdy, who had neglected to post pickets, had been surprised, his troops flying to the river. Several of his officers and men swam across, and bore alarming news of a heavy force approaching. Instead of such a force approaching, those who attacked Purdy had fled at the first fire; and so the belligerents were in the ridiculous predicament of running away from each other. De Salaberry now tried a clever trick. He posted buglers at some distance from each other, and when some concealed provincial militia opened fire almost upon Hampton's flanks, the buglers sounded a charge. Hampton was alarmed, for the position of the buglers indicated an extensive British line, and he supposed a heavy force was about to fall upon his front and flank. He immediately sounded a retreat and withdrawal to his old quarters at Chateaugay Four Corners, annoyed all the way by the fire of Canadian militia. There this inglorious campaign ended. The Americans lost in this affair fifteen killed and twenty-three wounded. The British lost in killed, wounded, and missing, twenty-five. "No officer," said a distinguished general of the United States army, "who had any regard for his reputation, would voluntarily acknowledge himself as having been engaged in it." Hampton refused to meet Wilkinson at St. Regis, as the latter had requested after the battle at Chrysler's Field. Wilkinson directed Hampton to join the camp at French Mills. This order, also, he disobeyed, and retired to Plattsburg with his army of four thousand men. He had accomplished the defeat of efforts to take Canada, by which he gratified his wish to thwart Armstrong and Wilkinson, whom, in his supreme egotism, he despised. Leaving General Izard, of South Carolina, in command at Plattsburg, Hampton abandoned the service, to the great relief of the Army of the North and the people. The Army of the North especially, and the cause generally, were greatly injured by the appointment of Armstrong, Wilkinson, and Hampton to high office. The services entrusted to them, and in which they all signally failed, would, undoubtedly, have been successfully performed by younger officers.

**Army of the Potomac (1863).** When the battle of Fredericksburg (which see) had ended, there was much feeling against General Burnside on the part of the officers of the Army of

the Potomac who had participated in it. An order received by Burnside, just as he was preparing for other active operations, from the President of the United States (Dec. 30, 1862), directing him not to enter upon further operations without his (the President's) knowledge, satisfied him that enemies in his own army were at work against him. Burnside hastened to Washington for an explanation, when he learned that general officers of his army had declared that such was the feeling among the troops against him that the safety of the army would be imperilled by a movement under his direction. He believed there was a secret conspiracy among the officers for his removal. He returned to the army, determined to do what he might to retrieve the disaster at Fredericksburg, but was soon induced to return to Washington, bearing a general order for the instant dismissal or relief from duty of several of the generals of the Army of the Potomac, whom he charged with "fomenting discontent in the army." Generals Hooker, Brooks, and Newton were designated for instant dismissal; and Generals Franklin, W. F. Smith, Cochran, and Ferro, and Lieutenant-colonel J. H. Taylor, were to be relieved from duty in that army. Generals Franklin and Smith had written a joint letter to the President (Dec. 21) expressing their opinion that Burnside's plan of operations could not succeed, and substantially recommending that McClellan should be reinstated in command. Burnside was competent to issue the order for such dismissal and relief on his own responsibility, but he submitted it to the President. The latter was perplexed. He talked with Burnside as a friend and brother, and it was finally arranged that the general should be relieved of the command of the Army of the Potomac and await orders for further service. Major-general Joseph Hooker was appointed Burnside's successor. In making this appointment the President wrote a fatherly letter to Hooker, in which, after speaking of his many excellent qualities as a soldier, he referred to his (Hooker) having been, with others, to blame for too freely criticising the military conduct of Burnside, and so doing a great wrong to him. He reminded Hooker that he would now be open to such criticism, but that he (Lincoln) would do what he might to suppress it, for little good could be got out of an army in which such a spirit prevailed. The army was then lying, weak and demoralized, at Falmouth, opposite Fredericksburg. From January until April (1863) Hooker was engaged in preparing for a vigorous summer campaign. His forces remained in comparative quiet for about three months, during which time they were reorganized and well disciplined, and at the close of April his army numbered one hundred thousand effective men. General Lee's army, on the other side of the river, had been divided, a large force, under General Longstreet, having been required to watch the movements of the Nationals under General Peck in the vicinity of Norfolk. Lee had in hand about sixty thousand well-drilled troops, lying behind strong intrenchments ex-

tending twenty-five miles along the line of the Rappahannock River. Hooker had made important changes in the organization of the army, and in the various staff departments; and the cavalry, hitherto scattered among the three grand divisions into which the six corps of the army had been consolidated—two corps in each—and without organization as a corps, were now consolidated and soon placed in a state of greater efficiency. To improve them he had sent them out upon raids within the Confederate lines, and for several weeks the region between Bull's Run and the Rapid Anna was the theatre of many daring cavalry exploits.

**Army of the Potomac Created (1861).** On the day after the battle of Bull's Run (which see) General McClellan, then in Western Virginia, was summoned to Washington and placed in command of the shattered army there. The Departments of Washington and of Northeastern Virginia were created and placed under the command of McClellan. The Department of the Shenandoah was also created, and General N. P. Banks was placed in command of it, relieving Major-general Patterson. McClellan turned over the command of the troops in Western Virginia to General Rosecrans, and on July 27 he entered with zeal upon the duty of reorganizing the army in the vicinity of the national capital. He brought to the service youth, a spotless moral character, robust health, untiring industry, a good theoretical military education, the prestige of recent success, and the unlimited confidence of the loyal people. Having laid a broad moral foundation for an efficient army organization, he proceeded with skill and vigor to mould his material into perfect symmetry. So energetically was this done that at the end of fifty days an army of at least 100,000 men, well organized, officered, equipped, and disciplined, were in and around Washington. At that time the entire force in his department included 152,000 soldiers. By the 1st of March, 1862, that number was so increased that when, at that time, the forces were put in motion, having been thoroughly drilled and disciplined, the grand total of the army was 222,000, of which number about 30,000 were sick or absent. It was called the "Grand Army of the Potomac."

**Army of the Potomac on the Peninsula (1862).** General McClellan left Washington for Fortress Monroe, April 1, 1862, with the greater part of the Army of the Potomac, leaving for the defence of the capital and other service more remote 75,000. Very soon there were 120,000 men at Fortress Monroe, exclusive of the forces of General Wool, the commander there. A large portion of these moved up the Peninsula in two columns, one under General S. P. Heintzelman, marching near the York River; the other under General Keyes, near the James River. A comparatively small Confederate force, under General J. B. Magruder, formed a fortified line across the Peninsula in the pathway of the Nationals. The left of this line was at Yorktown, and the right on the Warwick River, that falls into the James. In front of this line McClellan's con-

tinually augmenting army remained a month, engaged in the tedious operations of a regular siege, under the direction of General Fitz John Porter, skirmishing frequently, and, on one occasion, making a reconnoissance in force that was disastrous to the Nationals. On the 3d of May, Magruder, who had resorted to all sorts of tricks to deceive and mislead the Nationals, wrote to Cooper, of the Confederate War Department: "Thus, with five thousand men, exclusive of the garrison, we stopped and held in check over one hundred thousand of the enemy." McClellan now began those approaches toward Richmond which resulted in the Seven Days' battles near that city.

**Army of the United States.** The military system of the United States is based upon volunteer armies, raised as occasion may require. A small standing army is kept up for the support of good order and for safety against incursions of barbarians on the borders of expanding settlements; and a well-regulated militia, under the control of the respective states, forms an ample body of citizen soldiery. The first act for the enrolment in the militia of all able-bodied white men of eighteen and under forty-five years of age was passed by Congress in 1792. The act provided that in the organization there should be infantry, cavalry, and artillery. An act was passed early in 1795 which empowered the President, in case of invasion, or imminent danger thereof, to call forth the militia of the state or states most convenient to the place of danger. He was also empowered, in case of insurrection, or when the laws of the United States should be opposed by a combination too powerful to be suppressed by the ordinary course of judicial proceedings, to call out the militia. The late Civil War gave full examples of the working of our military system. When combinations in the slave-labor states became too powerful for the civil authorities to oppose, the President of the United States called for 75,000 militia (designating the number required from each state) to suppress them. (See *President Lincoln's Call for Troops*.) As soon as the various regiments from the states were mustered into the service of the United States they were no longer under the control of their respective state governments, but of that of the national government, and were assigned to brigades, divisions, corps, and armies, according to the requirements of the service. They were then entirely supported by the national government. All their general and staff officers were commissioned by the President, and no officers, after having been mustered into the service of the United States, could be dismissed by the state authorities. During the Civil War, from first to last, 2,690,401 men, including reinforcements, were enrolled, equipped, and organized into armies. The regular army during that war was raised to something over 50,000 men, but was reduced, at its close, to 30,000 men. The standing army now (1876) numbers 25,000, and is mainly used in garrisoning the permanent fortifications, protecting the routes of travel and commerce across the continent, and preserving or-

der among the Indian tribes west of the Mississippi River.

**Army of Virginia (1862).** To give more efficiency to the troops covering Washington in 1862, they were formed into an organization called the "Army of Virginia," and placed under the command of Major-general John Pope. General Halleck was then general-in-chief of all the armies, with his headquarters at Washington. The corps of the new army were commanded, respectively, by Generals McDowell, Banks, and Sigel. When McClellan had retreated to Harrison's Landing (which see), and the Confederate leaders were satisfied that no further attempts would then be made to take Richmond, they ordered Lee to make a dash on Washington. Hearing of this, Halleck ordered Pope, in the middle of July, to meet the intended invaders at the outset of their raid. General Rufus King led a troop of cavalry that destroyed railroads and bridges to within thirty or forty miles of Richmond. Pope's troops were posted along a line from Fredericksburg to Winchester and Harper's Ferry, and were charged with the threefold duty of covering the national capital, guarding the valley entrance into Maryland in the rear of Washington, and threatening Richmond from the north as a diversion in favor of McClellan.

**Army, THE (1861).** When Mr. Lincoln entered upon the duties of President of the Republic (March 4, 1861) the total regular force of the army was 16,000 men, and these were principally in the Western states and territories, guarding the frontier settlers against the Indians. The forts and arsenals on the seaboard, especially within the slave-labor states, were so weakly manned, or not manned at all, that they became an easy prey to the insurgents. The consequence was that they were seized; and when the new administration came into power, of all the fortifications within the slave-labor states only Fortress Monroe, in Virginia, and Forts Jefferson, Taylor, and Pickens, on the Gulf coast, remained in possession of the government. The seized forts were sixteen in number. They had cost the government about \$6,000,000, and had an aggregate of 1226 guns. All the arsenals in the cotton-growing states had been seized. Twiggs had surrendered a portion of the National army in Texas. (See *Twiggs's Treacherous Conduct*.) The army had been put so far out of reach, and the forts and arsenals in the North had been so stripped of defenders, by the treacherous Floyd, Buchanan's secretary of war, in preparation for the assault on the Union (see *Floyd's Disloyal Acts*), that the government was threatened with sudden paralysis.

**Arnold at New London (1781).** When Sir Henry Clinton found that the allied armies were actually going to Virginia, he tried to alarm Washington by threats and marauding expeditions. He sent the traitor, Arnold, with a band of regulars and Tories to commit atrocities in Connecticut. Arnold crossed the Sound, from Loug Island, and on Sept. 6, 1781, landed

his troops on each side of the Thames, below New London. He plundered and burned that town, and a part of his force took Fort Griswold, opposite, by storm. It was gallantly defended by Colonel Ledyard and a garrison of one hundred and fifty poorly-armed militiamen. Only six of the garrison were killed in the conflict, but after the surrender the British officer in command (Colonel Eyre) murdered Ledyard with his sword, and, refusing to give quarter to the garrison, seventy-three were massacred. Then the wounded were placed in a baggage-wagon and sent down the slope towards the river, with the intention of drowning them in the stream at its foot, but the vehicle was caught by an apple-tree. The cries of the sufferers could be heard above the crackling of the burning town by persons across the river. With this atrocious expedition the name of Benedict Arnold disappears from the records of our history.

**Arnold at Richmond.** Virginia had generously sent her best defenders to help Greene in the Carolinas, when Arnold, the traitor, invaded the state, by way of the James River, with a band of British and Tories. (See *Arnold in Virginia*.) Only militia remained to protect the state. These were called out, but they were insufficient for the emergency. Arnold penetrated to Richmond, hoping to catch Governor Jefferson there, but the latter had left. Many of the inhabitants fled into the country, followed by the militia. After taking possession of Richmond, destroying the cannon-foundry there, and casting the powder that he could not carry away into the river, Arnold promised to spare the town if his vessels might be permitted to carry off the tobacco in the warehouses unmolested. The proposition was rejected, when he applied the torch. A great number of public and private buildings were burned, with a large quantity of tobacco. He then retreated down the river, for he found dangers rapidly gathering around him. This was in the winter of 1781.

**Arnold, BENEDICT,** born at Norwich, Conn., Jan. 3, 1741. As a boy he was bold, mischievous,

BIRTH-PLACE OF BENEDICT ARNOLD.

and quarrelsome. Apprenticed to an apothecary, he ran away, enlisted as a soldier, but deserted. For four years (1763-67) he was a bookseller and druggist in New Haven, Conn., and

was afterwards master and supercargo of a vessel trading to the West Indies. Immediately after the affair at Lexington, he raised a company of volunteers and marched to Cambridge. There he proposed to the Massachusetts Committee of Safety an expedition against Fort Ticonderoga, and was commissioned a colonel. Finding a small force, under Colonels Easton, Brown, and Allen, on the same errand when he reached Western Massachusetts, he joined them without command. (See *Ticonderoga*.) Returning to Cambridge, he was placed at the head of an expedition for the capture of Quebec, which went by the way of the Kennebec, the Wilderness, and the Chaudière River, and, after terrible sufferings, reached the St. Lawrence and boldly demanded the surrender of the city. (See *Arnold's Expedition*.) He assisted Montgomery in the siege of Quebec, and was there severely wounded in the leg. Montgomery was killed, and Arnold was promoted to brigadier-general (Jan. 10, 1776) and took command of the remnant of the American troops in the vicinity of Quebec. Succeeded by Wooster, he went up Lake Champlain to Ticonderoga, where he was placed in command of an armed flotilla on the lake. With these vessels he had disastrous battles (Oct. 11 and 13, 1776) with British vessels built at St. Johns. Arnold was deeply offended by the appointment, by Congress, early in 1777, of five of his juniors to the rank of major-general. He received the same appointment soon afterwards (Feb. 7, 1777), but the affront left an irritating thorn in his bosom, and he was continually in trouble with his fellow-officers, for his temper was violent and he was not upright in pecuniary transactions. General Schuyler admired him for his bravery, and was his abiding friend until his treason. He successfully went to the relief of Fort Schuyler on the upper Mohawk (August, 1777), with eight hundred volunteers; and in September and October following he was chiefly instrumental in the defeat of Burgoyne, in spite of General Gates. (See *Bemis's Heights, Battles on*.) There he was again severely wounded in the same leg, and was disabled several months. When the British evacuated Philadelphia (June, 1778) Arnold was appointed commander at Philadelphia, where he married the beautiful young daughter of a leading Tory (Edward Shippen), lived extravagantly, became involved in debt, was accused of dishonest official conduct, plotted treason against his country, and, when his scheme had failed, fled to the British lines and obtained his promised reward. (See *Treason of Arnold*.) Arnold led a British marauding expedition into Virginia early in 1781, when he ascended the James River and inflicted great injury by burning and pillaging property. In September (1781) he led a force of British and Tories to the coasts of Connecticut, who massacred the garrison at Fort Griswold, opposite New London, and burned the latter place. Arnold went to England at the close of the war, where he was despised and shunned by all honorable men. He was afterwards a resident of St. Johns, New Brunswick, engaged chiefly in trade and navigation, but was very unpopular. He was there hung in effigy.

His son, James Robertson (an infant at the time of his father's treason), became a lieutenant-general in the British army. Arnold's second wife (daughter of Chief-justice Shippen, of Pennsylvania), whom he married when she was not quite eighteen years of age, survived him just three years. Arnold died in obscurity, but in comfortable pecuniary circumstances, in Gloucester Place, London, June 14, 1804.

**Arnold in Virginia.** With great generosity Virginia had sent her best troops to assist the Carolinians in their attempt to throw off the yoke laid upon their necks by Cornwallis. To call these troops back from Greene's army, the British, at the close of 1780, sent Arnold, the newly-bought traitor, into Virginia with a marauding party of British and Tories, about sixteen hundred in number, with seven armed vessels, to plunder, distress, and alarm the people of that state. In no other way could Arnold be employed by his master, for respectable British officers refused to serve with him in the army. He arrived at Hampton Roads on Dec. 30, 1780. Anxious to distinguish himself, he immediately pushed up the James River as far as Richmond, when, after destroying a large quantity of public and private stores there and in the vicinity (Jan. 5, 1781), he withdrew to Portsmouth, opposite Norfolk, and made that place his headquarters for a while. Earnest efforts were made to capture the marauder, but in vain. Jefferson offered \$25,000 for his arrest, and Washington detached Lafayette, with twelve hundred men, drawn from the New England and New Jersey levies, who marched to Virginia for that purpose and to protect the state. A portion of the French fleet went from Rhode Island (March 8) to shut Arnold up in the Elizabeth River and assist in capturing him. Stenben, who was recruiting for Greene's army in Virginia, also watched him. The effort failed, for Arnold was vigilant and extremely cautious. He knew what would be his fate if caught. "What would the Americans do with me, if they should catch me?" Arnold inquired of a young prisoner. "They would cut off and bury with military honors your leg that was wounded at Saratoga, and hang the rest of you," replied the young American soldier. General Phillips joined Arnold (March 26) with more than two thousand men, and took the chief command. The traitor accompanied him on another expedition up the James River, in April, and then returned to New York, for Cornwallis, who came into Virginia from North Carolina, refused to serve with him.

**Arnold, RICHARD**, was born in Providence, R. I., April 12, 1823, and graduated at West Point in 1850. Entering the artillery, he served in Florida, and was aid to General Wool in California. He was at the battle of Bull's Run, served on the Peninsula, and was made chief of artillery of Banks's expedition in November, 1862, when he was commissioned brigadier-general of volunteers. At Fort Hudson (which see) and in the Red River campaign (which see) he rendered important service; also in the capture of Fort Fisher, and of Fort Morgan, near Mobile.

He was breveted major-general U. S. Army in 1866.

**Arnold, SAMUEL GREENE,** was born in Providence, R. I., April 12, 1821. He graduated at Brown University in 1841, and the Cambridge Law School in 1845. After extensive travel in Europe, the East, and South America, he became, in 1852, lieutenant-governor of Rhode Island, and in 1861 a delegate to the Peace Convention (which see). He took the field a little later in command of a battery of artillery, and as aide-de-camp to Governor Sprague. He was lieutenant-governor, 1861-62, and United States Senator in 1863. He was the author of a valuable *History of Rhode Island*, published in 1859-60. Mr. Arnold died Feb. 14, 1880.

**Arnold's attempt at Corruption.** Soon after his flight to the British army, Arnold, the traitor, published an "Address to the Inhabitants of America," in which he attempted to gloss over his treason by abusing the Congress and the French alliance. He also published a "Proclamation to the Officers and Soldiers of the Continental Army," in which he contrasted the wretchedness of their condition with the prompt pay and abundant supplies of the British service. To induce them to desert he offered fifteen dollars to every private soldier, and to the officers commissions in the British army according to their rank and the number of men they might bring with them. This effort by a traitor to corrupt those whom he had sought to betray produced no result except to excite the contempt and scorn of the American soldiers.

**Arnold's Expedition to Quebec.** While Montgomery was successfully invading Canada by way of Lake Champlain, Colonel Benedict Arnold was making his way to the St. Lawrence and Quebec by the Kennebec and Chaudière rivers, through a terrible wilderness. Arnold, commissioned a colonel in the Continental Army, left Cambridge with a little more than one thousand men, composed of New England musketeers and riflemen from Virginia and Pennsylvania, the latter under Captain Daniel Morgan. He sailed from Newburyport for the Kennebec in the middle of September, 1775. They rendezvoused at Fort Western, on the Kennebec River, opposite the site of the present city of Augusta, Maine, and on the verge of a wilderness uninhabited except by a few Indian hunters. At Norridgewock Falls (see *Rale*) their severe labors began. Their bateaux were drawn by oxen, and their provisions were carried on their backs around the falls—a wearisome task often repeated as they pressed towards the headwaters of the Kennebec, often wading and pushing their bateaux against swift currents. At length they left that stream and traversed tangled ravines, craggy knolls, and deep morasses, until they reached the Dead River. That stream flowed placidly on the summit of the water-shed between the St. Lawrence and the Atlantic, and they moved pleasantly over its bosom until they encamped at the foot of a high mountain capped with snow. Sickness and desertion now began to reduce the number of effective men. October

ARNOLD'S ROUTE THROUGH THE WILDERNESS.

was passing away. Keen blasts came from the north. A heavy rain fell, and the water, rushing from the hills, suddenly filled the Dead River to its brim and overflowed its banks. Some of the boats were overturned and much provision was lost or spoiled. Food for only twelve days remained. A detachment was sent to get a supply, but did not return. The floods began to freeze and the morasses became almost impassable. Through ice-cold water they were frequently compelled to wade; even two women, wives of soldiers, endured this hardship. At length they reached the Chaudière River, that empties into the St. Lawrence. Starvation threatened. Seventy miles lay between them and Sertigan, the nearest French settlement. Leaving his troops on the banks of the upper

Chaudière, Arnold and fifty-five men started down the river for Sertigan to obtain food. Two or three boats had been wrecked just before their departure, and much of their scanty supply of food was lost. Arnold and his party reached the settlement. Indians were sent back with provisions and as guides for the rest of the troops to the settlement. When the forces were joined they moved towards the St. Lawrence; and on the 9th of November, in a heavy snow-storm, they suddenly appeared at Point Levi, opposite Quebec, only seven hundred and fifty in number. It was almost two months after they left Cambridge before they reached the St. Lawrence. Their sufferings from cold and hunger had been extreme. At one time they had attempted to make broth of boiled deerskin moccasins to sustain life, and a dog belonging to Heury (afterwards General Dearborn) made savory food for them. In this expedition were men who afterwards became famous in American history—Aaron Burr, R. J. Meigs, Henry Dearborn, Daniel Morgan, and others.

**Arsenal at St. Louis, ATTEMPTED SEIZURE OF.** Under the inspiration of a disloyal graduate of the West Point Academy (Daniel M. Frost), a native of New York, and under the lead of the Governor of Missouri (C. F. Jackson), an attempt was made in May, 1861, to seize the U. S. Arsenal at St. Louis. The Secessionists had already seized one unguarded arsenal at Liberty, Clay County, under the direction of the governor, but the one at St. Louis was guarded by five hundred regular troops, under Captain Nathaniel Lyou, who had been appointed commander of

the post in place of Major Bell, a Secessionist. The governor had sent orders to the militia officers of the state to assemble their respective commands and go into encampment for a week, the avowed object being "to attain a greater degree of efficiency and perfection in discipline." For weeks before the President's call for troops the Secessionists of St. Louis were drilled in the use of fire-arms in a building in that city; were furnished with state arms by the governor; received commissions from him, and were sworn into the military service of the state. They

UNITED STATES ARSENAL AT ST. LOUIS.

were closely watched by a few Unionists, and finally the latter class in St. Louis (who were largely of the German population) were formed into military companies, and drilled in the use of fire-arms. When the President's call for troops came, they openly drilled, made their place of meeting a citadel, established a perpetual guard, and kept up constant communication with the arsenal. They were denounced by the Secessionists as "outlaws, incendiaries, and miscreants," preparing to make war on Missouri. They were relieved by an order from the President (April 30, 1861) for Captain Lyon to enroll into the military service of the United States the loyal citizens of St. Louis, in number not exceeding one thousand. This order was procured chiefly through the influence of Colonel (afterwards Major-general) Frank P. Blair, who had already raised and organized a regiment of Missourians, and assisted in the primary formation of four others. Meanwhile, in accordance with an order from General Wool (see *Wool, Major-General J. E.*), a large portion of the arms at the arsenal were removed (April 26) secretly to Alton, Illinois, in a steamboat, and thence by railway to Springfield. Frost, the New York Secessionist, whom the governor had commissioned a brigadier-general, formed a militia camp in the suburbs of St. Louis, and, to deceive the people, kept the national flag flying over it. Captain Lyon had enrolled a large number of volunteers, who occupied the arsenal grounds. Some of them, for want of room, occupied ground outside. The St. Louis police demanded their return to the government grounds, because they were "Federal soldiers, violating the rights of the sovereign state of Missouri." No attention was paid to this demand. To make his little force appear large, Lyon sent out squads at night to distant points, to return in the morning with drums beating and flags flying. Finally word

came to Lyon that cannons and mortars, in boxes marked "marble," had been landed from a steamboat and sent to Frost's Secession camp. Disguised as a woman, closely veiled, Lyon rode around that camp, and was satisfied that it was time for him to act with vigor. Early in the afternoon of May 9, Lyon, by a quick movement, surrounded Frost's camp with six thousand troops and heavy cannon, and placing guards so as to prevent any communication with the city, demanded of the commander the immediate surrender of men and munitions of war under him, giving him only thirty minutes for deliberation. Intelligence of this movement had reached the city, and an armed mob of Secessionists rushed out to assist their friends. They were too late. Frost surrendered his twelve hundred militia, twelve hundred new rifles, twenty cannons, several chests of muskets, and a large quantity of ammunition. Most of these materials of war had been stolen from the arsenal at Baton Rouge. The arsenal was saved.

**Arthur, CHESTER A.**, was born in Fairfield, Vt., Oct. 5, 1830. He was graduated at Union College in 1848, studied law, was admitted to the bar in 1854, and became a very successful practitioner. He gained much celebrity in a suit which involved the freedom of some slaves, known as the "Lenmon case." He procured the admission of colored persons to the street cars of New York City by gaining a suit against a railway company in 1856. Mr. Arthur did efficient service during the Civil War as Quartermaster-General of the State of New York. He resumed the practice of law after the war. In 1872 he was appointed Collector of the Port of New York, and was removed in 1878. In 1880, he was elected Vice-President of the United States, and on the death of President Garfield, Sept. 19, 1881, he became President. He died Nov. 18, 1886.

**Articles of Confederation.** In July, 1775, Dr. Franklin submitted to the Continental Congress a plan of government for the colonies, to exist until the war then begun with Great Britain should cease. It was not acted upon. On July 12, 1776, a committee, appointed on July 11, reported, through John Dickenson, of Pennsylvania, a draft of "Articles of Confederation." Almost daily debates upon it continued until August 20, when the report was laid aside, and was not called up for consideration until April 8, 1777. Meanwhile several of the states had adopted constitutions for their respective governments, and the Congress was practically acknowledged the supreme head in all matters appertaining to war, public finances, etc., and was exercising the functions of sovereignty. From April 8 until Nov. 15 ensuing, the subject was debated two or three times a week, and several amendments were made. On Nov. 15, 1777, after a spirited debate, daily, for a fortnight, a plan of government, known as "Articles of Confed-

eration," was adopted, the substance of which was, that the thirteen confederated states should be known as the "United States of America;" that all engage in a reciprocal treaty of alliance and friendship for mutual advantage; each to assist the other when help should be needed; that each state should have the right to regulate its own internal affairs; that no state should separately send or receive embassies, begin any negotiations, contract engagements or alliances, or conclude treaties with any foreign power, without the consent of the general Congress; that no public officer should be allowed to accept any presents, emoluments, office, or title from any foreign power; and that neither Congress nor state governments should possess the power to confer any title of nobility; that none of the states should have the right to form alliances among themselves without the consent of Congress; that they should not have the power to levy duties contrary to the enactments of the Congress; that no state should keep up a standing army or ships of war in time of peace, beyond the amount stipulated by Congress; that when any of the states should raise troops for the common defence, all officers of the rank of colonel or under should be appointed by the legislature of the state, and the superior officers by Congress; that all expenses of the war should be paid out of the public treasury; that Congress alone should have the power to coin money; and that Canada might at any time be admitted into the confederacy when she felt disposed. The last clauses of the "Articles of Confederation" were explanatory of the powers of certain governmental operations, and contained details of the same. Under this weak government, without a sovereign head anywhere, its whole being subject to the caprices of thirteen distinct legislative bodies, the inchoate nation existed about seven years, when this form of government was superseded by one under a constitution plethoric with national life, and by which the republic has become one of the leading members of the family of nations. The "Articles of Confederation" were submitted to the several state legislatures, and if approved by them they were advised to authorize their delegates to ratify the same by affixing their signatures thereto. Slowly the states ratified them, some of them pointing out serious defects, and all taking time to discuss them. The work was finally accomplished, March 1, 1781, by the signatures of the delegates from all the colonies. (See *Articles of Confederation, Signing of the.*)

**Articles of Confederation, SIGNING OF THE.** Congress again assembled, in Philadelphia, on July 2, 1778, and on the 9th the "Articles of Confederation" (which see), engrossed on parchment, were signed by the delegates of eight states. A circular was sent to the other states, urging them "to conclude the glorious compact which was to unite the strength and councils of the whole." North Carolina acceded to the Confederation on the 21st of July; Georgia on the 24th, and New Jersey on the 26th of November following. On May 5, 1779, the delegates from Delaware agreed to the compact; but Maryland steadily refused

to assent without a compliance with its demands that the public lands northwest of the Ohio should first be recognized as the common property of all the states, and held as a common resource for the discharge of the debts contracted by Congress for the expense of the war. Maryland alone stood in the way of the consummation of the union at that time. This point was finally settled by the cession, by claiming states, to the United States, of all unsettled and unappropriated lands, for the benefit of the whole Union. This action having removed all objections, the delegates from Maryland signed the "Articles of Confederation" March 1, 1781, and the league of states was perfected.

**Artillery, THE ANCIENT AND HONORABLE,** was organized in Boston, Mass., in 1638, and is still (1876) in existence. It is the oldest military organization in the United States. On the occasion of its annual election of officers it has a sermon preached. The first one was by the Rev. Uriah Oakee, in 1672. On the top of the Bunker Hill Monument are two cannons, named respectively "Hancock" and "Adams," which formerly belonged to this artillery company. The "Adams" was burst by them in firing a salute. Each gun bears the following inscription: "SACRED TO LIBERTY. This is one of four cannons which constituted the whole train of field-artillery possessed by the British colonies of North America at the commencement of the war, on the 19th of April, 1775. This cannon and its fellow, belonging to a number of citizens of Boston, were used in many engagements during the war. The other two, the property of the government of Massachusetts, were taken by the enemy."

**Arts, FINE, INTRODUCTION OF THE.** The earlier settlers in our country were compelled to battle with privations of every kind, and for long years were struggling to overcome the wilderness and to procure food and clothing. This condition did not admit of the cultivation of aesthetic tastes. Their architecture was at first little superior in form to the log-hut, and painting and sculpture were strangers to most of the inhabitants. Music, for use in public worship only, was cultivated to the extent of the ability of the common singing-master, and only occasionally poetry was attempted. Engraving was wholly unknown before the middle of the last century. At about that time Horace Walpole wrote, "As our disputes and politics have travelled to America, it is probable that poetry and painting, too, will revive amidst those extensive tracts, as they increase in opulence and empire, and where the stores of nature are so various, so magnificent, and so new." That was written fourteen years before the Declaration of Independence. Little could he comprehend the value of freedom, such as the Americans were then about to struggle for, in the development of every department of the fine arts, of which Dean Berkeley had a prophetic glimpse when he wrote:

"There shall be sung another Golden Age,  
The rise of empires and of arts,  
The good and great, inspiring epic rage,  
The wisest heads and noblest hearts."

The first painter who found his way to America professionally was John Watson, a Scotchman, who was born in 1685. He began the practice of his art at Perth Amboy, then the capital of New Jersey, in 1715, where he purchased land and built houses. He lived long, and died at an old age. John Smybert (which see) came with Dean Berkeley in 1728, and began portrait-painting in Newport, R. I. Nathan Smybert, "an amiable youth," began the practice of painting, but died young in 1757. During John Smybert's time there were Blackburn in Boston and Williams of Philadelphia who painted portraits. These were all Englishmen. The first American painter was Benjamin West, who spent a greater part of his life in England, where he attained to a high reputation. (See *West*.) John Singleton Copley was his contemporary, and painted portraits so early as 1760. At the same time Woollaston, who painted the portraits of Mrs. Custis (afterwards Mrs. Washington) and her husband, about 1756. He was an Englishman. At the period of the Revolution, Charles Wilson Peale, who had learned the manipulation of the art from Hesselius, a portrait painter, was the only American, if we except young Trumbull, who might be called a good artist, for Copley had gone to England. So it was that the fine art of painting was introduced. At that time there were no professional architects in the United States. Plans for churches, other than the ordinary buildings, were procured from abroad. The "meeting-house" of that day was only the shell of a dwelling-house, with very little decoration, and with a small bell-tower rising a few feet above the roof. The dwelling-houses were extremely plain, generally. When a fine one was to be built, plans, and even materials sometimes, were procured from Europe. But from the beginning of the present century there have been competent American architects, who have carried the people through the various styles—the Greek, Gothic, and Mansard—of architecture. Sculpture waited long for a practitioner in America, and very little of the sculptor's art was known in this country. Within forty or fifty years it has become appreciated, and now the demand for statuary promises a fair future for the sculptor. Among the earlier of good American sculptors were Horatio Greenough and Hiram Powers. They may be said to have introduced the art. Greenough was the first American who produced a marble group—"The Chauting Chernob," for J. Fenimore Cooper. Until within the last forty years there was a prudish feeling in this country that made nude figures an abomination. So sensitive were the ladies of Philadelphia concerning the antique figures displayed at the exhibitions of the Academy of Fine Arts, that one day in the week was set apart for the visits of the gentler sex. Crawford gave to American sculpture a fame that widened that of Greenough and Powers. Now (1833) we have as able sculptors as any in the world. Music has had a habitation here, first in the form of psalm-singing, from the earliest settlements. Now its excellent professors and practitioners are legion in number. The

graphic art in our country is only a little more than a century old. Nathaniel Hurd, of Boston, engraved on copper portraits and caricatures as early as 1762. Paul Revere, also, engraved at the period of the Revolution. He engraved the plates for the Continental money. Amos Doolittle was one of the earliest of our better engravers on copper. The late Dr. Alexander Anderson (which see) was the first man who engraved on wood in this country—an art now brought to the highest perfection here. The earliest and best engraver on steel was Asher B. Durand, now (1880) living, who became one of the first line-engravers in the world, but abandoned the profession for the art of painting. The art of lithography was introduced into the United States, in 1821, by Messrs. Burnet and Doolittle, and steadily gained favor as a cheap method of producing pictures. It is now extensively employed in producing chromo-lithographic pictures. Photography, the child of the daguerreotype, was first produced in England by Mr. Talbot, and was introduced here chiefly by the labors in science of Dr. J. W. Draper of New York. Indeed, the discovery of the process of making pictures by employing sunlight as the artist was the result of the previous experiments and writings concerning the chemical action of light by Dr. Draper. The "American Academy of Fine Arts" was incorporated in 1808, and the first public exhibition of works of art followed. It did not prosper. At the suggestion of S. F. B. Morse, younger painters associated, and in 1826 organized the "National Academy of the Arts of Design in the United States." Mr. Morse was the first president. Only one of the original officers, Gen. T. S. Cummings, now (1887) survives.

**Asboth, ALEXANDER SANDOR**, a native of Hungary, where he was born Dec. 18, 1811, died in Buenos Ayres, Jan. 21, 1868. He had served in the Austrian army, and at the outbreak of the European revolution in 1848 he entered the insurgent army of Hungary, struggling for Hungarian independence. He accompanied Kossuth in exile in Turkey. In the autumn of 1851 he came to the United States in the frigate *Mississippi*, and became a citizen. When the Civil War broke out in 1861 he offered his services to the government, and in July he went as chief of Fremont's staff to Missouri, where he was soon promoted to brigadier-general. He performed faithful services until wounded in the face and one arm, in Florida, in a battle on Sept. 27, 1864. For his services there he was breveted a major-general in the spring of 1865, and in August following he resigned, and was appointed Minister to the Argentine Republic. The wound in his face caused his death.

**Asbury, FRANCIS, D.D.**, was the first bishop of the Methodist Episcopal Church in America. He was born at Handsworth, Staffordshire, England, Aug. 26, 1745; died at Spottsylvania, Va., March 31, 1816. In his twenty-third year he became an itinerant preacher under the guidance of John Wesley, and came to the United States in 1771. The next year Wesley appoint-

ed him general superintendent of the Methodist churches in America, and he held that office until the close of the Revolution, when the Methodists here organized as a body separate from the church in England. Mr. Asbury was consecrated bishop by Dr. Coke in 1784. After that, for thirty-two years, he travelled yearly through the United States, ordaining not less than 3000 ministers, and preaching not less than 17,000 sermons.

**Asgill, SIR CHARLES**, held for retaliation by Washington. (See *Huddy and Asgill*.) He was born in England in 1762; died a baronet and British general in July, 1823. He was a son of Sir Charles Asgill, Alderman of London. He was among the troops under Cornwallis surrendered at Yorktown, where he held the position of captain. After his narrow escape from death under the law of retaliation, he returned home, and served with the troops engaged in suppressing a rebellion in Ireland. He was commissioned a major-general in 1814.

**Ashby, TURNER**, was born in Fauquier County, Va., in 1824; killed in the battle of Cross Keys (which see), June 6, 1862. When the Civil War began he raised a regiment of insurgent cavalry, which soon became celebrated. He covered the retreat of "Stonewall Jackson" from attacks by General Banks and General Fremont, skirmishing with the vanguard of each; and he was made a brigadier-general in the Confederate army in 1862.

**Ashe, JOHN**, a general of the Revolution. He was born in England in 1721; died in Duplin County, N. C., Oct. 24, 1781. He came to America with his father while yet a small child. He was in the North Carolina Legislature for several years, and was speaker in 1762-65. He warmly opposed the Stamp Act (which see); assisted Governor Tryon in suppressing the Regulator movement in 1771 (see *Regulators*), but soon afterwards became a zealous Whig. He was an active patriot, and because he led five hundred men to destroy Fort Johnson (which see) he was denounced as a rebel. Raising and equipping a regiment at his own expense, he was appointed brigadier of the Wilmington district in April, 1776. He joined Lincoln in South Carolina in 1778; and after he was defeated at Brier Creek (which see), in March, 1779, he returned home. General Ashe suffered much at the hands of the British at Wilmington after the battle at Guilford (which see), and died of small-pox, which he had contracted in prison.

**Ashmun, JEHUDI**, Agent of the Colonization Society, was born at Champlain, N. Y., in April, 1794; died Aug. 25, 1828. He graduated at Bowdoin College in 1816, and prepared for the ministry. He was sent with a reinforcement to the colony of Liberia (which see) in 1822, where he acted as legislator, soldier, and engineer in constructing fortifications. He had a force of only thirty-five men and boys, with which he repulsed the attacks of eight hundred natives. His wife died, and he, attacked by fevers, was compelled, by broken health, to sail for America. A fortnight after his arrival at New Haven,

Conn., he died. He had made the settlement in Africa orderly and permanent during the six years he was there.

**"Asia," THE, AT NEW YORK.** This British man-of-war brought Governor Tryon to New York (June, 1775), and anchored off the Grand Battery, foot of Broadway. A party led by John Lamb, a captain of artillery, proceeded, on the evening of Aug. 23, to remove the cannons from that battery and the fort (for war seemed inevitable) and take them to a place of safety. There was, also, an independent corps, under Colonel Lasher, and a body of citizens, guided by Isaac Sears. The captain of the *Asia*, informed of the intended movement, sent a barge filled with armed men to watch the patriots. The latter, indiscreetly, sent a musket-ball among the men in the barge, killing and wounding several. It was answered by a volley. The *Asia* hurled three round shot ashore in quick succession. Lamb ordered the drums to beat to arms; the church-bells in the city were rung, and, while all was confusion and alarm, the war-ship fired a broadside. Others rapidly followed. Several houses were injured by the grape and round shot, and three of Sears's party were killed. Terror seized the inhabitants as the rumor spread that the city was to be sacked and burned. Hundreds of men, women, and children were seen, at midoight, hurrying from the town to places of safety. The exasperation of the citizens was intense; and Tryon, taking counsel of his fears, took refuge on another vessel of war in the harbor, whence, like Dunmore, he attempted to exercise authority as governor. Among the citizens led by Sears was Alexander Hamilton, then a student in King's (Columbia) College, eighteen years of age. The cannon were removed from the battery and fort, and were hidden on the college grounds. These did good service in the patriot cause afterwards.

**Aspirations for Political Independence, THE FIRST IN AMERICA.** With the dawn of 1766, there were, here and there, almost whispered expressions of a desire for political independence of Great Britain. Samuel Adams had talked of it in private; but in Virginia, where the flame of resistance to the Stamp Act burned with vehemence, Richard Bland, in a printed "Inquiry into the Rights of the British Colonies," etc., claimed freedom from all parliamentary legislation; and he pointed to independence as a remedy in case of a refusal of redress. He appealed to the "law of nature and those rights of mankind which flow from it," and pleaded that the people of the English colonies ought to be as free in the exercise of privileges as the people of England—freedom from taxation, customs, and impositions, excepting with the consent of their general assemblies. He denounced the navigation laws (which see) as unjust towards the colonies, because the latter were not represented in Parliament. This was but an expression of sentiments then rapidly spreading, and which soon grew into strong desires for political independence.

**Assassination of President Lincoln.** On

the morning of April 14, 1865, General Grant arrived in Washington, and attended a meeting of the Cabinet at eleven o'clock. An arrangement was made, at the close of the meeting, for the President and the General to attend Ford's Theatre in the evening, and a box was engaged. The General was called to New York, and did not attend. The President, with Mrs. Lincoln and a little party, was there. Mr. Lincoln was seated in a high-back chair. The play was *Our American Cousin*; and just before its close, at a little past ten o'clock, John Wilkes Booth, an actor by profession, entered the President's box, closed and fastened the door behind him, and with a Derringer pistol in one hand and a dagger in the other, he rested the former on the back of the chair and shot the President. The ball entered behind the ear, passed through his brain, and lodged near one of his eyes. The President lived nine hours afterwards, but in an insensible state. The assassin was seized by Major Rathbone, who was in the box. Booth dropped his pistol, struck Rathbone on the arm with his dagger, tore away from his grasp, rushed to the front of the box with the gleaming weapon in his hand, and shouting "Sic semper tyrannus" (So may it always be with tyrants—the motto on the seal of Virginia), leaped upon the stage. He was booted and spurred for a night ride. One of his spurs caught in the flag, and he fell. Rising, he turned to the audience and said, "The South is avenged!" and then escaped by a back door. There he mounted a horse which a boy had held for him, fled across the Anacosta, and found temporary refuge among sympathizing friends in Maryland. The President died the next morning, April 15. Booth was pursued and overtaken in Virginia, concealed in a barn. He refused to surrender. The barn was set on fire, and the assassin was shot by a sergeant. The President's body was embalmed and taken back to his home in Springfield by almost the same route as he went to the capital more than four years before. Everywhere funeral honors were performed, and the loyal people of the land were his sincere mourners. Foreign governments and distinguished men expressed their grief and sympathy, and forty thousand French Democrats testified their appreciation of his character and services by causing a magnificent gold medal to be struck and presented to the President's widow. (See *Lincoln Medals*.) Mr. Lincoln's remains repose at Springfield, Ill.

**Assiniboinis**, a branch of the Dakota family, inhabiting each side of the boundary-line between the United States and British America in Montana and Manitoba. They were originally a part of the Yankton Sioux, but, after a bitter quarrel about women, they separated from the main body at the beginning of the seventeenth century, and the two bands have ever remained hostile. The French discovered them as early as 1640. In 1871 the number of Assiniboinis in the United States was estimated at four thousand eight hundred and fifty.

**Assistants, COURT OF.** (See *Court of Assistants*.)

**Associated Loyalists, BOARD OF.** This board, formed in the winter of 1779-80, was organized for the purpose of embodying such American loyalists as did not desire to enter military life as a profession, but were anxious to serve the king. William Franklin, only son of Dr. Franklin, and the last royal governor of New Jersey, was made president of the board; and in the course of 1780-81 they collected a considerable navy of small vessels in Long Island Sound for predatory expeditions, making Oyster Bay its general rendezvous. They established their headquarters at Lloyd's Neck, an elevated promontory between Oyster Bay and Huntington harbor, where the Tories had erected a small fort. The chief operations of the association were directed against the Whig inhabitants on Long Island and the neighboring shores. There were branches in New Jersey and elsewhere. Their depredations aroused a fierce spirit of retaliation, and the manifest mischief to the royal cause which the association was working caused its dissolution at the close of 1781.

**Astor, JOHN JACOB**, founder of the Astor Library, New York, was born at Waldorf, Germany, July 17, 1763; died in New York city, March 29, 1848. Joining his brother, a dealer in musical instruments in London, at the age of sixteen, he remained until he was twenty, when, with a small stock of furs, he began business in New York. He built up a vast fur-trade with the Indians, extending his business to the mouth of Columbia River, on the Pacific coast, where he founded the trading station of Astoria in 1811. By this and other operations in trade, and by investments in real estate, he accumulated vast wealth. He appropriated four hundred thousand dollars for establishing a library in the city of New York, and afterwards added an endowment fund.

**Astor Library, THE**, was founded under the provisions of the will of John Jacob Astor (which see), who bequeathed \$400,000 "for the establishment of a public library in the city of New York." It was placed under the care of eleven trustees. At the head of the first board of managers was Washington Irving; and the mayor of New York and the chancellor of the university of the state for the time being are *ex officio* members of the board of trustees. Aided by Dr. J. G. Cogswell, one of the trustees, Mr. Astor had, so early as 1839, purchased a number of volumes with the ultimate intention expressed in his will. The first meeting of the trustees was in May, 1848, when Dr. Cogswell was appointed superintendent. He went to Europe in the fall of 1848, authorized to purchase books to the amount of \$20,000. He was absent four months, and collected 20,000 volumes. During other visits to Europe the number of volumes was increased to 70,000, with which the library was first opened, Jan. 9, 1854. The library building is in Lafayette Place. In January, 1856, the first building (the library room one hundred feet in length and fifty-four in width) having become filled, William B. Astor, eldest son of the founder, gave a lot of land adjoining to the trustees, on which

another library building was erected in 1859. Both buildings may contain 200,000 volumes, and are rapidly filling up. In December, 1866, William B. Astor made a further donation to the library of \$50,000, and at his death, in 1877, he made, by his will, further provision for the enlargement of the library, which has been done.

**Athabascas.** A nation of North American Indians divided into two great families, one bordering on the Esquimaux in the northwest, and the other stretching along the Mexican frontier from Texas to the Gulf of California. The domain of the northern family extends across the continent from Hudson's Bay to the Pacific Ocean. There are some smaller bands of the same nation, scattered along the Pacific coast from Cook's Inlet to Umpqua River, in Oregon. The northern family is divided into a large number of tribes, none of them particularly distinguished. The population of the northern family is estimated at 32,000, that of the scattered bands at 25,000, and the southern family at 17,000. The latter includes the Navajos and those fierce rovers, the Apaches, with which the government of the United States has had much to do. (See *Navajos* and *Apaches*.) The southern family also includes the Lipans on the borders of Texas. (See *Lipans*.) The Athabascas are distinguished for their heavy beards, short hands and feet, and square, massive heads. They derive their name from Lake Athabasca, in British North America, in latitude 59° north, and half-way between Hudson's Bay and the Rocky Mountains. They claim to have come from the West, over a series of islands, and from a land covered with snow. Some observers trace in their language and features a resemblance to the Tartar race.

**Atlanta, EVACUATION OF.** Hood, flanked out of Atlanta, was joined by Hardee near Jonesborough. He left the city half in ruins by incendiary fires. The Nationals marched in (Sept. 2, 1864) with drums beating and flags flying. Two days afterwards, Sherman issued an order for the inhabitants to leave the town within five days, that the place might be appropriated to military purposes. He deemed the measure humane, under the circumstances, for he expected the Confederates to attack him there. To a remonstrance by Hood, he replied, "God will judge me in good time, and he will pronounce whether it be more humane to fight with a town full of women and the families of a brave people at our backs, or to remove them in time to places of safety among their own friends." In a few days Atlanta was thoroughly evacuated by the civilians.

**Atlanta (GEORGIA), SIEGE AND CAPTURE OF (1864).** The main National and Confederate armies remained quiet in their camps after their ar-

rival at the Chattahoochee (which see) until the middle of July. Sherman was eight miles from the city. On the 17th he resumed offensive and active operations, by throwing Thomas's army across the Chattahoochee, close to Schofield's right, with directions to move forward. McPherson moved against the railway east of Decatur, and destroyed (July 18) four miles of the track. Schofield seized Decatur. At the same time Thomas crossed Peach-tree Creek, on the 19th, in the face of the Confederate intrenchments, skirmishing heavily at every step. At this juncture, General Rousseau, who had swept through Alabama and Northern Georgia, joined Sherman with 2000 cavalry. On the 20th the National armies had all closed in, converging towards Atlanta, and at 4 o'clock P.M. the Confederates, under Hood (see *Army Changes at Atlanta*), made a sortie, and struck Hooker's corps with great strength. The Confederates were repulsed and driven back to their intrenchments. The entire National loss in this conflict was 1500 men; Sherman estimated that of the Confederates at not less than 5000 men. Hood left on the field 5000 dead, 1000 severely wounded, and many prisoners. On the morning of the 21st, the Confederates had abandoned their position on the south side of Peach-tree Creek, and Sherman believed they were evacuating Atlanta. He pressed on towards the town in a narrow semicircle, when, at the average distance of two miles from it, the Nationals were confronted by an inner line of intrenchments much stronger than the one just abandoned. Behind these swarmed a Confederate host. On

THE FORTIFICATIONS AROUND ATLANTA.

the 22d, McPherson moved from Decatur to assail this strong line; Logan's corps formed his centre, Dodge's his right, and Blair's his left. The latter had driven the Confederates from a commanding eminence the evening before, and the Nationals proceeded to plant a battery upon it. Hood had left a sufficient number of troops in front of Sherman to hold them, and, by a night march to the flank and rear of the Nationals, struck them a severe and unexpected blow. It fell with heaviest force on the division of General G. A. Smith, of Blair's corps. McPherson had ridden from Sherman to Dodge's moving column, and had entered a wood almost alone, for observation, in the rear of Smith's column. At that moment Hardee charged upon the Nationals, and his men were pouring into a gap between Blair and Dodge. McPherson had just given an order from his place in the wood for a brigade to fill that gap, when the bullet of a sharp-shooter killed him. His body was recovered during the heat of the battle that ensued. Logan immediately took command of the Army of the Tennessee. At that moment the battle was general all along the line, and raged fiercely for several hours. At 4 o'clock P.M. there was a brief lull in the contest. Then a charge of the Confederates broke Logan's line, pushed back a brigade in much disorder, and took possession of two important batteries. Sherman ordered up reinforcements, and Logan soon recovered the ground lost. Very soon the Confederates gave way and fell back to their defences. The losses on both sides were heavy. That of the Nationals was 3722, of whom about 1000 were prisoners. Generals Thomas and Schofield having well closed up, Hood was firmly held behind his inner line of intrenchments. Sherman concluded to make a flank movement, and sent Stoneman with about 5000 cavalry, and McCook with another mounted force, including Rousseau's cavalry, to destroy the railways in Hood's rear. McCook performed his part well (see *McCook's Raid*); but Stoneman, departing from Sherman's instructions, did not accomplish much. Simultaneously with these raids, Slocum began (July 27) a flanking movement from Atlanta. Hood had penetrated Sherman's design, knew of changes in his army, and acted promptly. Under cover of an artillery fire, he moved out with the larger part of his army (July 28), with the expectation of finding Howard's forces in confusion. He was mistaken, and disastrous consequences followed. He threw heavy masses of his troops upon Logan's corps on Howard's right, and was met by a fire that made fearful havoc in their ranks. They recoiled, but returned to the attack again and again. The battle raged fearfully from noon until about 4 o'clock, when the Confederates retired to their intrenchments, leaving several hundred of their dead on the field. Hood's entire loss in this struggle was about 5000 men; that of the Nationals did not exceed 600. Logan captured 2000 muskets, and took 233 prisoners. Sherman extended his right along an intrenched line to the junction of two railways at East Point, over which came the supplies for

Atlanta and Hood's army; and the latter, extending a parallel line of works, stood on the defensive. Sherman's long-range guns kindled destructive fires in Atlanta. At length Hood, who had lost half his infantry in rash encounters, in sheer desperation sent out Wheeler with his cavalry to break up Sherman's communications and capture supplies. Kilpatrick made a successful counter-movement. On the 25th all of Sherman's munitions of war, supplies, and sick and wounded men were sent to his intrenched position on the Chattahoochee, the siege of Atlanta was raised, and the Nationals began a grand flanking movement, which events had delayed, and which finally caused Hood to abandon the coveted post, cross the Chattahoochee, and make a formidable raid upon Sherman's communications. The Nationals entered Atlanta as victors on Sept. 2, 1864, and the national flag was unfurled over the courthouse.

**Atlanta to the Sea.** When General Sherman had resolved to march through the heart of Georgia from Atlanta to the sea, he delegated to General Thomas full power over all the troops under his (Sherman's) command excepting four corps. He also gave him command of two divisions of A. J. Smith's, then returning from the expulsion of Price from Missouri, also of all the garrisons in Tennessee, and all the cavalry of the Military Division excepting a division under Kilpatrick, which he reserved for operations in Georgia. General Wilson had just arrived from Petersburg to take command of the cavalry of the army. He was sent to Nashville to gather up all the Union cavalry in Kentucky and Tennessee, and report to Thomas. It was believed that Thomas now had strength sufficient to keep Hood out of Tennessee, whose force then was about thirty-five thousand infantry and ten thousand cavalry. When, on Nov. 1, Hood was laying a pontoon bridge over the Tennessee at Florence for the invasion of Tennessee, Sherman, who had pursued him, turned his forces towards Atlanta, his troops destroying all the mills and foundries at Rome, and dismantling the railway from the Etowah River to the Chattahoochee. The railways around Atlanta were destroyed, and on Nov. 14 the forces destined for the great march were concentrated around that doomed city. Those forces were composed of four army corps, the right wing commanded by General O. O. Howard, and the left wing by General H. W. Slocum. Howard's right was composed of the corps of Generals Osterhans and Blair, and the left of the corps of Generals J. C. Davis and A. S. Williams. General Kilpatrick commanded the cavalry, consisting of one division. Sherman's entire force numbered sixty thousand infantry and artillery and five thousand five hundred cavalry. On Nov. 11, Sherman cut the telegraph wires that connected Atlanta with Washington, and his army became an isolated column in the heart of an enemy's country. It began its march for the sea on the morning of the 14th, when the entire city of Atlanta—excepting its court-

house, churches, and dwellings — was committed to the flames. The buildings in the heart of the city, covering two hundred acres of ground, formed a great conflagration; and, while the fire was raging, the bands played, and the soldiers chanted the stirring air and words, "John Brown's soul goes marching on!" (See *Brown's Raid*.) For thirty-six days that army moved through Georgia, with very little opposition, subsisting off the country. It was a sort of military promenade, requiring very little military skill in the performance, and as little personal prowess. It was grand in conception, and easily executed. Yet on that march there were many deeds that tested the prowess and daring of the soldiers on both sides. Kilpatrick's first dash across the Flint River and against Wheeler's cavalry, and then towards Macon, burning a train of cars and tearing up the railway, gave the Confederates a suspicion of Sherman's intentions. There was wide-spread consternation in Georgia and South Carolina, for the invader's destination was uncertain. Beauregard was sent from the Appomattox to the Savannah to confront the Nationals. He sent before him a manifesto in which he said, "Destroy all the roads in Sher-

soldiers. But the people did none of these things, and only about one hundred convicts accepted the offer. All confidence in "President Davis" and the Confederate government had disappeared in Georgia, and a great portion of the people were satisfied that it was, as they expressed it, "the rich man's war, and the poor man's fight," and would no longer lend themselves to the authorities at Richmond. The National army moved steadily forward. At Griswoldville there was a sharp engagement (Nov. 22, 1864) with a portion of Hardee's troops sent up from Savannah, and several brigades of militia. The Confederates were repulsed with a loss of twenty-five hundred men. Howard could have taken Macon after this blow upon its defenders, but such was not a part of Sherman's plan. The Nationals were attacked at the Oconee River while laying a pontoon bridge, but the assailants, largely composed of Wheeler's cavalry, were defeated. Kilpatrick made a feint towards Augusta to mislead the Confederates as to Sherman's destination, also to cover the passage of the army over the Ogeechee River, and, if possible, to release Union captives in the prison-pen at Millen. Kilpatrick and

THE PRISON-PEN AT MILLEN.

man's front, flank, and rear," and, "be trustful in Providence." Benjamin H. Hill, of Georgia, in the Confederate Congress at Richmond, wrote to the people of his state, "Every citizen with his gun and every negro with his spade and axe can do the work of a soldier. You can destroy the enemy by retarding his march. Be firm!" The representatives of Georgia in the Confederate Congress called upon their people to fly to arms. "Remove your negroes, horses, cattle, and provisions from Sherman's army," they said, "and burn what you cannot carry away. Burn all bridges and block up the roads in his route. Assail the invader in front, flank, and rear, by night and by day. Let him have no rest." And Governor Brown, before he fled from Milledgeville on the approach of the Nationals, issued a proclamation ordering a levy *en masse* of the whole white population of the state between the ages of sixteen and forty-five, and offering pardon to prisoners in the penitentiary if they would volunteer and prove themselves good

Wheeler had several skirmishes, but no severe battles. On Nov. 30, Sherman's whole army, excepting one corps, had passed the Ogeechee. This was a most skilful manoeuvre; and now, having destroyed the principal railways in Georgia over long distances, Sherman was prepared to make a final conquest of the state. Moving on seaward, the division of Hazen had a severe skirmish (Dec. 4) at Statesburg, south of the Ogeechee. The Confederates were dispersed. On the same day Kilpatrick fought Wheeler on the railway between Millen and Augusta, drove him from his barricades through Waynesborough, and pushed him eight miles, while a supporting column of Union infantry under Baird were tearing up the railway and destroying bridges. When Sherman reached Millen, the Union prisoners had been removed; and he pushed on, amid swamps and sands, with the city of Savannah, where Hardee was in command, as his chief object. Kilpatrick and Baird covered the rear of the wing columns

between the Ogeechee and Savannah rivers. There was some skirmishing, but no Confederates in force were seen until within fifteen miles of the city of Savannah. All the roads leading into that city were obstructed by felled trees, earthworks, and artillery. These were turned, and by Dec. 10 the Confederates were all driven within their lines, and Savannah was completely beleaguered; but the only approaches to it were by five narrow causeways. They had broken communications, so that no supplies could be received in Savannah. Sherman sought to make the Ogeechee an avenue of supply, oceanward, for his army, and to communicate with the Union fleet outside. The latter was soon effected. Fort McAllister, near the mouth of the Ogeechee, was in the way, and, on the 13th, Slocum ordered General Hazen to carry it by assault. It was a strong enclosed redoubt, garrisoned by two hundred men. It was carried (see *McAllister, Fort*); and this was the brilliant ending of the march from Atlanta to the sea. It opened to Sherman's army a new base of supplies. Sherman communicated with the officers of the fleet, and, on Dec. 17, he summoned Hardee to surrender. Hardee refused. Perceiving the arrangements made to cut off his retreat to Charleston, Hardee secretly withdrew on the dark and stormy night of Dec. 20, and, with fifteen thousand men, escaped to that city. The National army took possession of Savannah on Dec. 22, 1864. On the 26th Sherman wrote to President Lincoln: "I beg to present to you, as a Christmas gift, the city of Savannah, with one hundred and fifty heavy guns and plenty of ammunition, and also about twenty-five thousand bales of cotton." On his march Sherman had lived generously off the country, which was abundantly filled with provisions. He appropriated to the use of the army 13,000 beehives, 160,000 bushels of corn, more than 5000 tons of fodder, besides a large number of sheep, swine, fowls, and quantities of potatoes and rice. He forced into the service 5000 horses and 4000 mules. He captured 1328 prisoners and 167 guns; burned 20,000 bales of cotton, and captured and secured to the government 25,000 bales. Full 10,000 negroes followed the flag to Savannah, and many thousands more, chiefly women and children, had been turned back at the crossings of rivers. So families were separated.

**Atlantic Telegraph.** In 1843 (Aug. 10), Professor Samuel F. B. Morse, who had endowed the electro-magnetic telegraph (which see) with intellectual power, in a letter to the Secretary of the Treasury of the United States, remarked, after alluding to recent experiments, "The practical inference from this law is, that a telegraphic communication on my plan may, with certainty, be established across the Atlantic. Startling as this may now seem, the time will come when this project will be realized." Almost eleven years afterwards an attempt was made to establish telegraphic communication between America and Europe by means of an insulated metallic cable un-

der the sea. Mr. Cyrus W. Field, a New York merchant, was applied to for aid in completing a land line of telegraph on the Morse plan, then in the course of construction across Newfoundland—about four hundred miles. The question occurred to him, Why not carry the line across the ocean? and with his usual pluck and energy he proceeded to the accomplishment of such an enterprise. On March 10, 1854, five gentlemen met at the house of Mr. Field, on Gramerey Park, New York, and signed an agreement for an association called "The New York, Newfoundland, and London Telegraph Company." They obtained from the Legislature of Newfoundland a charter guaranteeing an exclusive right, for fifty years, to establish a telegraph from the American continent to that island, and thence to Europe. These gentlemen were Peter Cooper, Moses Taylor, Marshall O. Roberts, Chandler White, and Cyrus W. Field. Twenty-five years afterwards, all but one (Mr. White) were living, and again met in the same room, and around the same table whereon that association was signed, with the same attorney of the association, then engaged, David Dudley Field. Mr. Cooper was chosen president of the company. Mr. Field procured a cable in England to span the waters between Cape Ray and Cape Breton Island. It was sent out in 1855, and was lost in an attempt to lay it. It was recovered, and was successfully laid in 1856. The same year Mr. Field organized in London the "Atlantic Telegraph Company" to carry the line across the ocean. Mr. Field subscribed for one fourth of the stock of the company. The American and British governments gave them aid in ships, and during 1857 and 1858 expeditions were at sea laying a cable across the ocean to Valentia on the western coast of Ireland. Twice, in 1857, the attempt failed, but was successful the following year. Two vessels, with portions of the cable, met in mid-ocean, July 23, 1858. The portions were spliced, and they sailed for Ireland and Newfoundland respectively, and succeeded in laying a continuous line across the Atlantic. It was nineteen hundred and fifty miles in length, and traversed water two thirds of the distance over two miles in depth. These wonderful facts were communicated by Mr. Field, by telegram, from Trinity Bay, Newfoundland, on Aug. 5, 1858, and created intense interest all over the country. The first public messages across the Atlantic were transmitted, Aug. 16, 1858, by Queen Victoria to President Buchanan, and by him in an immediate reply, in which they congratulated each other on the success of the enterprise by which the two countries were connected by such a mysterious tie. The queen hoped that it would "prove an additional link between the nations, whose friendship is founded upon their common interest and reciprocal esteem." To this the President cordially responded, and asked: "Will not all nations of Christendom spontaneously unite in the declaration that it shall be forever neutral, and that its communications shall

be held sacred in passing to their places of destination even in the midst of hostilities." Bonfires and illuminations throughout the Union followed these communications. The *London Times* said (Aug. 6, 1858), "Since the discovery of Columbus, nothing has been done in any degree comparable to the vast enlargement which has thus been given to the sphere of human activity." In a very short time the cable ceased to work, and it was pronounced a failure. It was even intimated that the reputed despatches were only part of a huge fraud. Mr. Field's faith never faltered, though discouragements that would have paralyzed the energies of most men were encountered. He crossed the Atlantic several times to resuscitate the company. The cable had cost \$1,256,250, and the expenses of the company up to Dec. 1, 1858, amounted to \$1,834,500. The civil war in America broke out in 1861, and it was not until 1865 that another expedition to lay a cable was fitted out. The *Great Eastern* then carried an improved cable. While laying it, a sudden lurch of the ship snapped the line, and it was lost. The company was discouraged. Mr. Field went to Thomas Brassey, a great and liberal English capitalist, and told him that the Atlantic Telegraph Company had suddenly come to a standstill. "Mr. Field," said Mr. Brassey, "don't be discouraged; go down to the company and tell them to go ahead, and, whatever the cost, I will bear one tenth of the whole." That company and the "Telegraph Construction and Maintenance Company" joined in forming a new association known as the "Anglo-American Telegraph Company," with a capital of \$3,000,000. Another cable was laid, and permanent electric communication between Europe and America was established July 27, 1866. After twelve years of hard and anxious labor, during which time Mr. Field crossed the ocean nearly fifty times, he saw the great work accomplished. He had been nobly aided by men in Europe and America. Congress voted him the thanks of the nation and a gold medal, while the Prime-minister of England declared that it was only the fact that he was a citizen of another country that prevented his receiving high honors from the British government. The glory of his achievement transcends all that man could bestow.

At Lee, SAMUEL JOHN, a colonel in the Continental army, was born in Pennsylvania, in 1738; died in Philadelphia, November, 1786. He commanded a company of Pennsylvanians in the French and Indian War. Entering the Continental army, Pennsylvania line, he commanded a battalion in the battle of Long Island, Aug. 27, 1776, where he was made prisoner and remained some time in the hands of the British. Afterwards he was appointed a commissioner to treat with the Indians. He was a member of the Continental Congress from 1778 to 1782.

Atlixco, BATTLE AT. General Lane marched from Puebla (Mexico) in October, 1847, to attack the Mexican general Rea, of Santa Aña's army, at Atlixco, thirty miles from that place. Lane's

cavalry first encountered Rea's advanced guard, and skirmished until the arrival of his infantry, when the Mexicans fell back towards Atlixco, keeping up a running fight. Less than two miles from that place their main body was discovered (Oct. 13, 1847). Lane's cavalry dashed in among them and drove them into a thick chaparral, which the horses could not enter. The cavalry dismounted, entered the thicket, and there a long and fierce hand-to-hand encounter ensued. The rest of the Americans coming up, the Mexicans were forced into the town, when Lane's artillery, posted on a hill, cannonaded the place most severely by the light of the moon. The Mexicans were driven away with much loss. At Atlixco Santa Aña's troops finally deserted him, and he fled alone towards the coast. So ended the active hostilities of the war.

Attakappas. This was a tribe of Indians found on the borders of the Gulf of Mexico, west of the Mississippi River in Southern Louisiana and Eastern Texas. The Choctaws named them Attakappas, or Man-eaters. The French were the first Europeans who discovered them; and the Attakappas aided the latter in a war with the Natchez and Chickasaws. When Louisiana was ceded to the United States in 1803, there were only about one hundred of this nation on their ancient domain, near Vermilion Bayou, and they had almost wholly disappeared about fifty years ago. What their real name was, or whence they came, may never be known. Their language was peculiar, composed of harsh monosyllables.

Attiwandaronk, Indians of the family of the Hurons and Iroquois, named by the French the Neutral Nation. In early times they inhabited both banks of the Niagara River, but were mostly in Canada. They were first visited in 1627 by the Recollect father Dailloo, and by Brébeuf and Chanmonot in 1642. The Iroquois attacked them in 1651-53, when a part of them submitted and joined the Senecas, and the remainder fled westward and joined the remnant of the fallen Hurons on the borders of Lake Superior.

Audubon, JOHN JAMES, ornithologist, was born in New Orleans, May 4, 1780; died in New York city, Jan. 27, 1851. He was the son of a French admiral. Educated at Paris, he acquired much skill as an artist under the instruction of the celebrated David. At the age of seventeen years he began to make a collection of drawings of the birds of America, and became a most devoted student of the feathered tribes of our country. So early as 1810 he went down the Ohio River with his wife and child, in an open boat, to a congenial spot for a forest home. He visited almost every region of the United States. In some of his Western excursions, Wilson, the ornithologist, was his companion. In 1826 he went to Europe to secure subscriptions to his great work, *The Birds of America*. It was issued in numbers, each containing five plates, the subjects drawn and colored the size and tints of life. It was completed in

four volumes, in 1838. Of the one hundred and seventy subscribers to the work, at \$1000 each, nearly one half came from England and France. He also prepared a work entitled *Ornithological Diographies*, and had partly completed a work entitled *Quadrupeds of America*, when he died. His two sons, who inherited his tastes and much of his genius, finished this work, which was pub-

JOHN JAMES AUDUBON.

lished in 1850. His residence, in the latter years of his life, was on the banks of the Hudson, on Manhattan or New York Island, not far from Washington Heights.

**Auger, CHRISTOPHER COLON**, was born in New York about 1821, and graduated at West Point in 1843. He served as aide-de-camp to Generals Hopping and Cushing in the war with Mexico, and in 1861 was made a brigadier-general of volunteers, after serving under McDowell. He took command of a division under Banks, and was wounded at the battle of Cedar Mountain (which see). In November, 1862, he reported to General Banks for service in a Southern expedition, and was made major-general of volunteers in August, 1862. General Auger was very active in the siege and capture of Port Hudson. From October, 1863, to August, 1866, he had command of the Department of Washington, and in 1867 he was assigned to the Department of the Platte. In 1869 he was made brigadier-general U. S. Army.

**Angusta, SIEGE AND CAPTURE OF (1781).** When Cornwallis proceeded to subjugate South Carolina, he sent Lieutenant-colonel Brown, a Tory leader, to hold Augusta. Over this garrison Pickens and Clarke had kept watch, and when, on May 20, 1781, they were joined by Lee and his legion, they proceeded to invest the fort there. They took Fort Galphin, twelve miles below, on the 21st, and then an officer was sent to demand the surrender of Augusta. Lieutenant-colonel Brown was one of the most cruel of the Tories in that region, and the partisans were anxious to make him a prisoner. He refused to surrender. A regular siege began May 23, and continued until June 4, when a general assault was agreed upon. Hearing of this, Brown proposed to surrender, and the town was given up.

I.—6

the next day. In this siege the Americans lost fifty-one men killed and wounded; and the British lost fifty-two killed, and three hundred and thirty-four, including the wounded, were made prisoners.

**Austin, STEPHEN F.**, founder of the first colony in Texas. His father, Moses Austin, of Connecticut, was at Bexar, Texas, in 1820, and applied to the Mexican commander at Monterey for permission to colonize three hundred families in the province. His son Stephen successfully carried out the scheme. The latter went to the city of Mexico in 1821, and the grant given to his father was confirmed in February, 1823. By it he was invested with almost absolute power over the colonists, whom he seated where the city of Austin now is, the site selected by him for the capital of Texas. In March, 1833, a convention formed a state constitution, which Austin took to the central government of Mexico to obtain its ratification. There were delays; and he recommended a union of all the municipalities, and the organization of a state under a Mexican law of 1824. He was arrested, taken back to Mexico, and detained until September, 1835. On his return he found the country in confusion, and he took part with the revolutionary party. He attempted, with a small force, to drive the Mexicans out of Texas, but failed. In November (1835) General Sam. Houston was chosen to command the little Texan army, and Austin was made commissioner to the United States. In July, 1836, he returned to Texas and was engaged in negotiations to obtain the official recognition of independence, when death closed his career. (See *Texas*.)

**Authority of Parliament.** Four great wars had burdened Great Britain with a debt of about \$700,000,000 in 1763. Her treasury was low, and she looked to the colonies for contributions to her revenues. At the beginning of the French and Indian War, the Board of Trade had contemplated a scheme of colonial taxation, and Pitt had intimated to more than one colonial governor that at the end of the war the government would look to the colonies for a revenue; yet he dared not undertake a scheme which the great Walpole had timidly evaded. Pitt's successors, more reckless, entered upon a scheme of taxation under the authority of Parliament, boldly asserting the absolute right and power of that body over the colonies in "all cases whatsoever." Then began the resistance to that claim on the part of the colonies which aroused the government to a more vigorous and varied practical assertion of it. For more than ten years the quarrel raged before the contestants came to blows. The great question involved was the extent of the authority of the British Parliament over the English American colonies, which had no representative in that legislative body—a question in the settlement of which the British empire was dismembered. The colonies took the broad ground that "taxation without representation is tyranny."

**Autclose, BATTLE OF.** Late in November, 1813, the Creek country was invaded by troops

from Georgia. A cry for help from the settlers among the Creeks had come to the ears of the Georgians, when General John Floyd, at the head of 950 militia of that state and 450 friendly Indians, guided by Mordecai, a Jew trader, entered the region of the hostiles from the east. Crossing the Chattahoochee, he pushed on towards the Tallapoosa, where he was informed that a large number of hostile Indians had gathered at the village of Anttose, on the "Holy Ground," on which the prophets had made the barbarians believe no white man could set foot and live. It was on the left bank of the Tallapoosa, about twenty miles above its confluence with the Coosa. Floyd encamped unobserved near the town on the evening of Nov. 28, and at dawn he appeared before the village with his troops arrayed for battle in three columns. He also had two or three field-pieces. There were two towns, one below the other. The towns were simultaneously attacked, and a general battle ensued. After a brief contest, the roar of artillery and a furious bayonet-charge made the Indians fall back in terror to whatever shelter they could find. Their dwellings, about four hundred in number, were burned, and the smitten and dismayed barbarians were hunted and butchered with fiendish cruelty. It was estimated that full 200 of the Indians were murdered. Floyd lost 11 men killed and 54 wounded. He had marched 120 miles, laid waste the town, and destroyed the inhabitants in the space of seven days.

**Autumn Elections (1863).** To the apprehensions of reflecting men the Civil War, in the fall of 1863, had assumed the grander feature of a war for free institutions. There was ample evidence that the government would not recede from the position taken by the President in his Emancipation Proclamation; and the great majority of the people seemed ready to sustain it. Thousands of the opposition party refused longer to follow the leadings of the peace faction, and at the elections in the autumn of 1863 they voted with the friends of the government. There were overwhelming majorities in favor of government measures everywhere. The State of Ohio gave over one hundred thousand majority against C. L. Vallandigham, the Democratic candidate for governor; and in the State of New York Governor Seymour's majority of ten thousand in 1862 was annihilated, and a majority of nearly thirty thousand appeared on the opposite side of the political balance-sheet. Even in Maryland, where the emancipation of the slaves was made a distinct issue in the canvass, there was given at the polls a very large Union majority. This political reaction and the recent successes of the National arms encouraged the government; and appended to the President's first message (Dec. 8, 1863) to the Thirty-eighth Congress was a proclamation in which he offered full pardon and restoration of all rights of property, excepting as to slaves, to all persons (with specified exceptions) who had participated in the rebellion who should take a prescribed oath of allegiance to the government. It also offered a prescription for reorganizing civil gov-

ernments in states in which rebellion existed; by which the people might be restored to all the political privileges guaranteed by the National Constitution. This proclamation effected nothing.

**Averashorough, BATTLE OF.** On his march from Fayetteville to Goldsborough, Sherman's forces were menaced by the Confederates, and Kilpatrick had several skirmishes with Wheeler and Hampton. He had struck the rear of Hardee's column (March 8, 1865) in its retreat towards Fayetteville. He had fought Hampton, and was defeated, losing many men (who were made prisoners) and guns. Kilpatrick barely escaped on foot in a swamp, where he rallied his men. They fell upon Hampton, who was plundering their camp, routed him, and retook the guns. Hampton had captured 103 Nationals and killed or wounded 80. At Fayetteville, Sherman utterly destroyed the arsenal, with all the valuable public property of the Confederates there. Moving on, Sherman, in accordance with his usual plan, made movements to distract his adversary. He sent Slocum with four divisions of the left wing, preceded by cavalry, towards Averashorough and the main road to Raleigh; while two divisions of that wing, with the train, took the direct road to Goldsborough. Howard moved with four divisions on the right, ready to assist the left if necessary. It was a terrible march over quagmire roads, made so by incessant rain. They had to be corduroyed continually. Slocum found Hardee entrenched near Averashorough with about 20,000 men. General Williams, with the 20th corps, took the lead in making an attack, and very soon he broke the Confederate left wing into fragments and drove it back upon a second and stronger line. Ward's division pushed the fugitives and captured 3 guns and 217 men; and the Confederates left 108 of their dead on the field. Kilpatrick was just securing a footing on the road to Bentonville (which see) when he was furiously attacked by McLaws's division, and, after a hard fight, was pushed back. Then the whole of Slocum's line advanced, drove Hardee within his intrenchments, and pressed him so heavily that on the dark and stormy night of March 16, 1865, he retreated to Smithfield. Slocum lost in the battle 77 killed and 477 wounded. Hardee's loss was estimated at about the same. Ward pursued the fugitives through Averashorough, but soon gave up the chase.

**Averill, WILLIAM W.**, is a native of New York, and was born in 1830. He graduated at West Point in 1855. Entering the mounted rifles, he distinguished himself in New Mexico by the surprise and capture of a body of Indians. In that warfare he was severely wounded. Soon after the breaking out of the Civil War he was chosen colonel of a regiment of Pennsylvania cavalry, and became brigadier-general of volunteers in September, 1862. He had taken an active part in the battles on the Peninsula and in Pope's campaign in July and August, 1862. He reinforced Pleasanton in the advance after the battle of Antietam, and was afterwards very ac-

tive in Virginia, especially in the mountain regions, in 1863. (See *Averill's Raids*.) He performed gallant service under Hunter, Sigel, and Sheridan in the Shenandoah Valley in 1864; and

WILLIAM W. AVERILL.

he was breveted major-general in March, 1865. After the war he became consul-general in Canada.

**Averill's Raids in Western Virginia (1863).** There had been comparative quiet in that region after the close of 1861 until the summer and fall of 1863, when General W. W. Averill, with a cavalry force, made extensive raids in that mountainous country. Before the close of that year he had nearly purged Western Virginia of armed Confederates, and seriously interrupted railway communication between the armies of Lee and Bragg. Colonel John Tolland had led a cavalry raid in these mountain regions in July, 1863. He made a descent upon Wytheville, on the Virginia and Tennessee Railway, where his force was roughly handled by Confederates. Tolland was killed, and his command returned to the Kanawha. In a ride of about four hundred miles, during eight days, they had suffered much, and lost 82 men and 300 horses. A little later General Averill started from Tygart's Valley; passed through several counties southward; drove Confederates over Warm Spring Mountains; destroyed saltpetre-works; menaced Staunton; and was confronted by a large force of General S. Jones's command, near White Sulphur Springs, where a conflict for Rock Gap occurred, and lasted a greater part of August 26 and 27. Averill was repulsed, and made his way back to Tygart's Valley, having lost 207 men and a Parrott gun, which burst during the fight. The Confederates lost 156 men. Much later in the year Averill made another aggressive movement. He left Beverly early in November with 5000 men of all arms, and moved southward, driving Confederates under General "Mudwall" (W. S.) Jackson to a post on the top of Droop Mountain, in Greenbrier County; stormed them (Nov. 6, 1863), and drove them into Monroe County, with a loss of over 300 men, 3 guns, and 700 small-arms. Averill's loss was about 100 men. West Virginia was

now nearly free of armed Confederates, and Averill started, in December, with a strong force of Virginia mounted infantry, Pennsylvania cavalry, and Ewing's battery, to destroy railway communications between the armies of Lee in Virginia and Bragg in Tennessee. He crossed the mountains amid ice and snow, and first struck the Virginia and Tennessee Railway at Salem, on the headwaters of the Roanoke River, where he destroyed the station-house, rolling-stock, and Confederate supplies. Also, in the course of six hours his troops tore up the track, heated and ruined the rails, burned five bridges, and destroyed several culverts over the space of fifteen miles. This raid aroused all the Confederates of the mountain region, and seven separate commands were arranged in a line extending from Staunton to Newport to intercept the raider. He dashed through this line at Covington in the face of some opposition; destroyed the bridges behind him, and one of his regiments, which had been cut off from the rest, swam the stream and joined the others, with the loss of four men drowned. Averill captured during the raid about 200 men. "My command," he said in his report (Dec. 21, 1863), "has marched, climbed, slid, and swam three hundred and forty miles since the 8th inst." He reported a loss of 6 men drowned, 5 wounded, and 90 missing.

**Avery, Waightstill,** was born at Groton, Conn., May 3, 1745; died in Burke County, N. C., March 15, 1821. He studied law in Maryland, and began its practice in Mecklenburg County, N. C., in 1769. He was prominent there among the opposers of the obnoxious measures of the British Parliament bearing on the colonies, and was one of the promoters and signers of the famous "Mecklenburg Declaration of Independence" (which see). He was a delegate to the Provincial Congress at Hillsborough in 1775 which organized the military forces of the state; and in the summer of 1776 he joined the army, under General Rutherford, in the Cherokee country. He was a commissioner in framing the treaty of Holston, which effected peace on the Western frontier. Mr. Avery was active in civil affairs; and in 1779 was colonel of the county militia, serving with great zeal during the British invasion of North Carolina. He removed to Burke County in 1781, which he represented in the State Legislature many years. Mr. Avery was the first state attorney-general of North Carolina.

**Ayres, Romeyn B.,** was born in New York, and graduated at West Point in 1847. He served in the artillery in the war with Mexico, and commanded a battery in the battle of Bull's Run. In October, 1861, he became chief of artillery of W. F. Smith's division, and soon afterwards of the sixth corps. He was in the campaign on the Peninsula, and the chief battles afterwards in Virginia and Maryland. He served with distinction through the Richmond campaign of 1864-65; and he was breveted major-general of volunteers in March, 1865.

## B.

**Babbitt, ISAAC**, inventor of the "Babbitt metal" used on railway cars, axle-boxes, etc., was born at Taunton, Mass., July 26, 1799; died in McLean Asylum, Mass., May 26, 1862. About 1831 he made, in Taunton, the first Britannia-ware manufactured in this country; and in 1839 he invented the anti-friction metal which bears his name. Congress gave him \$20,000 for his invention; and he took out patents in England (1844) and Russia (1847). A few years before his death he became deranged.

**Bache, ALEXANDER DALLAS**, Superintendent of the Coast Survey, was born in Philadelphia, July 19, 1806; died at Newport, R. I., Feb. 17, 1867. He was a great-grandson of Dr. Franklin.

ALEXANDER DALLAS BACHE.

Graduating at the West Point Military Academy with high honor in 1825, and receiving the appointment of lieutenant of engineers, he remained in the academy a while as assistant professor. Two years he was under Colonel Totten in the construction of military works at Newport, where he married Miss Fowler, who, as his wife, was his great assistant in astronomical observations. He resigned in 1827, and from that time until 1832 he was a professor in the University of Pennsylvania. Ardently devoted to scientific pursuits, he made important discoveries. In 1836 he was chosen President of the Board of Trustees of Girard College, and he was very efficient in the organization of that institution. He visited Europe to study various institutions of learning there; and in 1839 he published a *Report on the European System of Education*. In 1841 he became the first principal of the Philadelphia High School; and in 1843 he was appointed Superintendent of the United States Coast Survey (which see). His services in this field were of the highest importance. Various

universities conferred upon him the honorary degree of LL.D. He published several scientific essays; was a member of the Light-house Board; a regent of the Smithsonian Institution, and active in various public labors. Dr. Bache bequeathed \$42,000 to the Academy of Natural Science in Philadelphia, for the promotion of researches in physical and natural science, by assisting experimenters and observers.

**Backwoodsmen of the Carolinas, GATHERING OF THE (1781)**. Fugitives from their dwellings in the Carolinas, east of the mountains, the backwoodsmen there, aroused by the cry of distress that came from the region of their homes, resolved to aid their brethren in driving out the British invaders. They formed themselves into regiments, under Isaac Shelby and John Sevier. The former sent a messenger to William Campbell, on the Holston River; and it was resolved that he, with four hundred men, should join an expedition against Major Ferguson, who was embodying the Tory militia in the western part of the Carolinas. An express was also sent to Colonel Cleaveland, of North Carolina. The volunteers all met on the Watauga, Sept. 25; and on the following day all, mounted on their own horses and carrying rifles and provisions, began a ride over the lofty mountains, where there was not even a bridle-path, nor a house for the space of forty miles between the Watauga and the Catawba. They asked Gates to furnish them with a general officer. Meanwhile Ferguson, who had pursued a party of patriots to the foot of the mountains, had moved eastward towards Cornwallis, and reached King's Mountain, where he formed a strong encampment. There he was attacked, defeated, and killed. (See *King's Mountain, Battle of*.)

**Bacon, NATHANIEL**, a Virginia patriot, was born in Suffolk, England, about 1630; died October, 1677. He was educated at the Inns of Court, London; came to America with a considerable fortune; settled in Gloucester County, Va., and owned a large estate high up on the James River. A lawyer by profession and eloquent in speech, he easily exercised great influence over the people. He became a member of the council in 1672. He was a republican in sentiment; and, strongly opposing the views and public conduct of Governor Berkeley, the staunch loyalist, he stirred up the people to rebellion. (See *Bacon's Rebellion*.) He died from malarial fever, while conducting military operations against the governor, at Accoonac.

**Bacon's Rebellion**. In 1670 Nathaniel Bacon, a wealthy English lawyer, about forty years of age, emigrated to Virginia. He was popular in his manners, eloquent and persuasive in speech, and well-informed in legal science. Bacon wielded great influence in the colony immediately, and was, very soon after his arrival, chosen a member of the governor's council. Discouragements were then rife in the colony. Berkeley,

who was very popular at first, had become tyrannical and oppressive as an uncompromising royalist and rigorous executor of his royal master's will. At the same time republicanism had begun a vigorous growth among the people of Virginia; but it was repressed somewhat by a majority of royalists in the House of Burgesses; and the council were as pliant tools of Berkeley as any courtiers who paid homage to the king. The governor rigidly enforced navigation laws oppressive to colonial commerce; and the marriage laws, and the elective and other franchises were modified, abridged, or abolished. The Church of England was made supreme, and was an instrument of persecution in the hands of the dominant party, in attempts to drive Baptists, Quakers, and Puritans out of Virginia. (See *Berkeley*.) Stimulated by these oppressions, republicanism grew vigorously in Virginia, and the toilers and righteous men of the aristocracy soon formed a powerful republican party that threatened ere long to fill the House of Burgesses with men of their creed. Berkeley, having a pliant majority of the cavalier class in the Assembly, sanctioned unjust and arbitrary decrees of the king, who gave to profligate court favorites, first large tracts of land, some of it cultivated, in Virginia; and, finally, in 1673, he gave to two of them (Lord Culpepper and Earl of Arlington), "all the dominion of land and water called Virginia" for thirty years. The best men in the colony of both parties, alarmed by this proceeding, sent a committee with a remonstrance to the king, but the mission was fruitless. The republicans were very indignant. Rebellious murmurs were heard everywhere in the colony; and the toiling people were taught to regard the aristocracy as their enemies, and so the majority of them were. Having a majority in the Legislature of the colony, they ruled without any regard for the happiness of the people. Everything for the public good was neglected. There were no roads or bridges in Virginia; and the people were compelled to travel along bridle-paths on land, and to ford or swim the streams. They journeyed on the water in canoes or boats, and endured many hardships. The working people lived in log-cabins with unglazed windows. There were no villages. At the time we are considering, Jamestown, the capital, consisted of only a church, a state-house, and eighteen dwellings; and, until lately, the Assembly had met in the hall of an ale-house. This was about seventy years after the founding of the colony, when it contained fifty thousand inhabitants. The large land-owners—the aristocracy—meanwhile were living in luxury in fine mansions, in sight of some beautiful river, surrounded by negro slaves and other dependents, and enjoying a sort of patriarchal life. The governor was clamoring for an increase of his salary, while his stables and fields had seventy horses in them, and flocks of sheep were on his great plantation, called "Green Spring." The tendency of such a state of society was obvious to every reflecting mind. It was at this juncture that Bacon arrived in Virginia, and espoused the cause of the Republicans. In the summer of 1675, the Indians, seeing

their domain gradually absorbed by the encroaching white people, in their despair struck a heavy blow. As they swept from the North through Maryland, John Washington, grandfather of the first President of the United States, opposed them with a force of Virginians, and a fierce border war ensued. Berkeley, who had the monopoly of the fur-trade with the barbarians, treated the latter leniently. Six chiefs, who had come to camp to treat for peace, were treacherously slain by Englishmen. The wrathful savages strewed their pathway, in the country between the Rappahannock and James rivers, with the dead bodies of ten Englishmen for every chief that was treacherously murdered, and blackened its face with fire. The supineness of the governor increased the sense of insecurity among the people, and a deputation headed by Bacon petitioned him for leave to arm and protect themselves. Berkeley, having reason, as he thought, to suspect Bacon of ambitions rather than patriotic motives (for he had been engaged in an insurrection before), refused to grant this prayer. At this Bacon took fire. He knew the hidden cause of the refusal, and he at once proclaimed that he was ready to lead the people against the approaching invaders without permission, if another white person should be murdered by them. Very soon news reached him that some on his own plantation, near (present) Richmond, had been slain. He summoned the people to a consultation. Mounting a stump, he addressed them with impassioned eloquence, denounced the governor, and advised his hearers to take up arms in their own defence. They were soon embodied in military force, and chose Bacon as their general. He asked the governor to give him a commission as such, but was refused; and Bacon marched against the Indians without it. Before he had reached York River, the governor proclaimed him a rebel, and ordered his followers to disperse. A greater portion of them followed Bacon's standard, and the expedition pushed forward; while the lower settlements arose in insurrection, and demanded an immediate dissolution of the aristocratic Assembly. The Indians were driven back to the Rappahannock, a new assembly was chosen, and Bacon was elected to a seat in the House of Burgesses from Henrico County. The new House represented the popular will. They gave Bacon a commission as general, but Berkeley refused to sign it. Some of the Assembly supported the governor in the matter, when Bacon, fearing treachery, retired to the "Middle Plantation" (now Williamsburg), where five hundred followers proclaimed him commander-in-chief of the Virginia forces. With these he appeared at Jamestown, and demanded his commission. Regarding the movement as revolutionary, the governor again refused to sign it. The sturdy old cavalier went out in great anger before the insurgent chief, and baring his bosom, exclaimed, "Shoot! shoot! it is a fair mark!" Bacon said, respectfully, "Not a hair of your head shall be hurt; we have come for our commissions to save our lives from the Indians." The governor, influenced by his judgment when his anger had

cooled, or by his fears, not only signed the commission, but joined his council in commending Bacon to the king as a zealous, loyal, and patriotic citizen. That was done on July 4, 1676, just one hundred years before the famous Declaration of Independence, written by a Virginia "rebel" (Thomas Jefferson), proclaimed the English-American colonies "free and independent states." Bacon, so encouraged, immediately marched against the Indians. The faithless governor, relieved of his presence, crossed the York River, called a convention of the inhabitants of Gloucester County, and proposed to proclaim Bacon a traitor. The convention refused to do so, when the haughty baronet issued such a proclamation on his own responsibility, in spite of their remonstrances. The news of this perfidy reached Bacon at his camp on the Pamunkey River. He addressed his followers with much warmth, saying, "It vexes me to the heart that, while I am hunting the wolves and tigers that destroy our lands, I should myself be pursued as a savage. Shall persons wholly devoted to their king and country — men who hazard their lives against the public enemy, deserve the appellation of 'rebels' and 'traitors'? The whole country is witness to our peaceable behavior. But those in authority, how have they obtained their estates? Have they not devoured the common treasury? What arts, what sciences, what learning have they promoted? I appeal to the king and Parliament, where the cause of the people will be heard impartially." Under the circumstances, Bacon felt compelled to lead in a revolution. He invited the Virginians to meet in convention at the Middle Plantation. The best men in the colony were there. They debated and deliberated on a warm August day from noon until midnight. Bacon's eloquence and logic led them to take an oath to support their leader in subduing the Indians and in preventing civil war; and again he went against the barbarians. The governor, alarmed by the proceedings at the Middle Plantation, fled, with his council, to the eastern shore of Chesapeake Bay, where, by promises of booty, he tried to raise an army among the inhabitants and the seamen of English vessels there. William Drummond, who had been the first governor of North Carolina, with his brave and patriotic wife, Sarah, was then with Bacon. (See *North Carolina*.) Mrs. Drummond did much to incite the Virginians to go on in the path of revolution, and she was denounced as "a notorious, wicked rebel." Her husband proposed to Bacon to proclaim government in the colony abdicated by Berkeley on account of his act. It was suggested that a power would come from England that would ruin the republicans in the colony. Sarah snatched up a small stick from the ground, and exclaimed, "I fear the power of England no more than a broken straw. The child that is unborn shall have cause to rejoice for the good that will come

by the rising of the country." The proclamation of abdication was made, on the ground that the governor was fomenting civil war; and writs were issued for a representative convention. Meanwhile Berkeley had gathered a motley host of followers incited by promises of plunder; proclaimed the freedom of the slaves of "rebels;" was joined by some Indians from the eastern shore, and the English ships were placed at his service. With this army, commanded by Major Beverly, the governor sailed with five ships and ten sloops, and landed at Jamestown early in September, 1676, where, after piously offering thanksgiving in the church, he proclaimed Bacon a traitor. Bacon was surprised, for he had then few followers in camp; but his ranks swelled rapidly as the news went from plantation to plantation. At the head of a considerable host of patriotic Virginians, he marched towards Jamestown, seizing by the way as hostages the wives of loyalists who were with Berkeley. The republicans appeared before the capital on a moonlit evening, and cast up intrenchments. In vain the governor urged his motley troops to

THE OLD CHURCH TOWER AT JAMESTOWN, IN 1850.

attack them; they were not made of stuff for soldiers. Finally, the royalists stole away in the night, and compelled the indignant governor to follow them, when Bacon entered Jamestown, and assumed the reins of civil power. Very soon he was startled by a rumor that the royalists of the upper counties were coming down upon him. In a council of war it was agreed to burn the capital. The torch was applied at the twilight of a soft September day, and the next morning nothing was left but the brick tower of the church and a few chimneys. (See *Jamestown*.) Then Bacon hastened to meet the approaching royalists, who, not disposed to fight, deserted their leader and joined the "rebels." At the same time the royalists of Gloucester

yielded their allegiance to Bacon, and he resolved to cross the Chesapeake and drive the loyalists and Berkeley from Virginia. His plans were suddenly frustrated by a foe deadlier than the malignity of the royalists who opposed him. The malaria from the marshes around Jamestown in September, had poisoned his blood, and on the 11th of October (1676) he died of malignant fever. His followers made but feeble resistance thereafter; and before November Berkeley returned to the Peninsula and resumed the functions of government at the Middle Plantation, which was made the capital of Virginia. (See *Williamsburg*.) Bacon had failed; yet those "do not fail who die in a good cause." His name is embalmed in history as a *rebel*; had he succeeded, he would have been immortalized as a *patriot*. His principal followers were very harshly treated by the sordid governor, and for a while terror reigned in Virginia. (See *Berkeley*.) The rebellion cost the colony \$500,000.

**Badeau, ADAM**, was born in New York, and served on the staff of General Sherman early in the Civil War. He was severely wounded at Port Hudson. In January, 1864, he joined General Grant, and became his military secretary, with the rank of lieutenant-colonel. In March, 1865, he was made aide-de-camp to the general of the army, with the title of colonel, and retired in 1869, when he was made secretary of the American Legation at the British court.

**Badge Designations IN THE ARMY OF THE POTOMAC.** These were introduced by General Hooker in the spring of 1863. The idea originated with General Kearney at the battle of Seven Pines, or Fair Oaks (which see). At that time it was impossible for the common volunteer soldiers to renew their clothing except by drawing from the quartermaster the same as that used by enlisted men. Officers and men were thus dressed alike. To distinguish them apart, Kearney issued an order that the field and staff officers of his division should wear a red patch on the top of their caps, and the line-officers the same in front. Kearney's successor (General Birney), after his death, ordered this habit to be continued, in memory of their old commander; and also, for the same purpose, the rank and file should wear a red patch on the side of their caps. When General Hooker took command of the army, he ordered each of the seven corps of the Army of the Potomac to be distinguished by a badge, as follows: The first

by colors. The badge of the first division of each corps was made of *scarlet* cloth, of the second of *white*, and the third of *blue*. These were all placed on the top of the cap. Those who wore hats placed them on the left side.

**Badge of Military Merit.** In 1782 Washington established a badge of military merit, to be conferred upon non-commissioned officers and soldiers who had served three years with bravery, fidelity, and good conduct, and upon every one who should perform any singularly meritorious action. The badge entitled the recipient "to pass and re-pass all guards and military posts as fully and amply as any commissioned officer whatever." A board of officers for making such award was established, and upon their recommendation the commander-in-chief presented the badge. It was the American order of the "Legion of Honor."

**Badger State**, a name popularly given to the State of Wisconsin, on account of the number of badgers found there by the early settlers.

**Baffin, WILLIAM**, an English Arctic explorer, was born in 1584; died in 1622. He made voyages to West Greenland in 1612-15, and to Spitzbergen in 1614. In 1616 he commanded a vessel which reached, it is said, eighty-one and a half degrees north latitude. He was killed at the siege of Ormuz, on the Persian Gulf. He is supposed to have ascertained the limits of the great bay that bears his name.

**Bahama Islands, THE**, were granted by Charles II. (1667) to the eight courtiers to whom he granted the Carolinas. (See *Grantees of Carolina*.) They had sent William Sayle to bring them some account of the Carolina coast. His vessel was driven by a storm among the Bahama islands, lying eastward of Florida. There he gained much knowledge of them, especially of New Providence, the chief among them. On his return to England, King Charles gave a patent for the Bahamas to the proprietors of Carolina, and they were annexed. At that time these islands were uninhabited, and the group was a favorite resort for the buccaneers (which see), thus becoming notorious. The island of New Providence had a good harbor, but the arid soil did not invite cultivation. It is now a favorite resort for invalids.

**Bailey, GUILFORD DUDLEY**, was born at Martinsburg, Lewis Co., N. Y., June 4, 1834; killed in battle, May 31, 1862. He graduated at West

BADGES.

Point in 1856, and entered, as lieutenant, the Second Artillery, then stationed at Fort Ontario, Oswego, N. Y., where, in 1858, he married a daughter of Colonel G. W. Patten, U. S. A. He was afterwards stationed at Fort Leavenworth, Kansas; and when the Civil War began he was

by a disk; the second by a trefoil; the third by a lozenge; the fifth by a Maltese cross; the sixth by a plain cross; the eleventh by a crescent; and the twelfth by a star. Each corps had three divisions, and the badges, whose form determined the corps, also designated the divisions

acting-adjutant of the post at Fort Brown, Texas, whose commander, Captain Stoneman, refused to surrender to the insurgents of Texas in obedience to the orders of the recreant General Twiggs (which see). Captain Stoneman chartered a steamboat, and, after securing the most valuable public property there, evacuated the fort, and sailed for New York, where he arrived March 15, 1861. Soon afterwards Lieutenant Bailey was sent with reinforcements for Fort Pickens (which see). His mission was successful. Sickness finally compelled him to return to New York to recruit his strength. Soon afterwards he was requested by Governor Morgan to organize a state regiment of light artillery, of which he was made colonel. With these troops, which he had well disciplined at Elmira, he went to Washington, and in the spring of 1862 he joined the Army of the Potomac at Fortress Monroe. At the battle of Fair Oaks, or Seven Pines (which see), Colonel Bailey was in General Casey's division. When the sudden and furious attack was made, the infantry fell back, leaving Colonel Bailey's battery exposed. Instead of retreating and leaving his guns in the hands of the Confederates, he determined to make their spoils useless to them. Leaping from his horse, he was in the act of spiking one of the guns with his own hand, when the bullet of a sharp-shooter penetrated his brain, and he fell dead. His remains repose, under a monument erected by his widow, in the beautiful rural cemetery of Poughkeepsie, N. Y.

Bailey, JOSEPH, acquired great fame by his skill in damming the Red River at Alexandria (May, 1864), by which the squadron of iron-clad gunboats, under Admiral Porter, were enabled to pass down the rapids there when the water was low. He had been a lumberman in Wisconsin, and in that business had learned the practical part which he used in his engineering at Alexandria, where he was acting chief-engineer of the Nineteenth Army Corps. Other engineers said his proposition to dam the river was absurd, but in eleven days the boats, by his method, passed safely down. (See *Red River Dam*.) For this achievement he was made brigadier-general. He settled in Missouri after the war, where he was a formidable enemy of the "hush-whackers," and was shot by them in Nevada, in that state, on March 21, 1867.

Bailey, THEODORUS, rear-admiral U. S. Navy, was born at Chateaugay, Franklin Co., N. Y., April 13, 1805; died in Washington, D. C., Feb. 10, 1877. He entered the navy as midshipman in January, 1818, and was captain in 1855. In July, 1862, he was made commodore, and in July, 1866, rear-admiral on the retired list. In 1861 Captain Bailey was in command of the *Colorado*, in the Western Gulf squadron, and was second in command of the expedition under Butler and Farragut up the Mississippi to capture New Orleans, in the spring of 1862. His vessel was too large to pass the bar, and taking what men and guns he could spare, he went up the river in his boats as a volunteer, and assumed the command of the first division. He led in the desperate

attack on Fort St. Philip, Fort Jackson, and the Confederate flotilla. It was one of the most gallant naval operations of the war; and Admiral Farragut specially commended Captain Bailey as the leader in that attack. In 1862 he was

THEODORUS BAILEY.

in command of the Eastern Gulf squadron, and was successful in breaking up blockade-running on the Florida coast. He captured about one hundred and fifty of those violators of the neutrality laws of his country in the space of a year and a half. In 1865-67 he was in command of the navy-yard at Portsmouth.

Bainbridge, WILLIAM, an American commodore, was born at Princeton, N. J., May 7, 1774; died in Philadelphia, July 23, 1833. At the age of sixteen years he went to sea, and commanded a ship at nineteen. On the reorganization of the navy in 1798 he was appointed a lieutenant.

WILLIAM BAINBRIDGE.

He and his vessel and crew were captured in the West Indies by a French cruiser in September of that year, but were released in December, when, returning home, he was promoted to the command of a brig. In May, 1800, he was commis-

sioned a captain, and in the ship *Washington* he carried tribute from the United States to the Dey of Algiers, by whom he was treated with much insolence. By threats of capture and a declaration of war by the Algerine ruler, he was compelled to take an embassy to Constantinople for that petty despot. On his return, with power given him by the Sultan, Bainbridge frigh-

on a rock near Tripoli, and was captured, with her commander and crew. At Tripoli, Bainbridge and three hundred and fifteen of his men remained prisoners about nineteen months. On his return to the United States, he was received with great respect, and in the reorganization of the navy, in 1806, he became the seventh in the list of captains. Having obtained the rank

BAINBRIDGE MEDAL.

ened the insolent Dey, compelling him to release all Christian prisoners then in his possession. He returned to the United States in 1801, and he was again sent to the Mediterranean with the frigate *Essex*. Upon the declaration of war

of commodore, Bainbridge was appointed to the command of a squadron (September, 1812) composed of the *Constitution* (flag-ship), *Essex*, and *Hornet*, and sailed from Boston in October. Off the coast of Brazil the *Constitution* captured the British frigate *Java* (Dec. 26); and for this exploit the commodore received the thanks of Congress and a gold medal. (See *Constitution* and *Java*.) Other honors were bestowed upon him. In 1815 he was appointed to the command of a squadron of twenty sail, destined for Algiers (see *Algiers*, *Tribute to*), but peace was concluded before it reached the Mediterranean. He settled disputes with the Barbary Powers (which see); and he again commanded in the Mediterranean in 1819-21. From that time he was almost constantly employed in service on shore, being at one time President of the Board of Navy Commissioners. Commodore Bainbridge was buried in Christ-church-yard, Philadelphia, and over his grave is a plain white marble obelisk. His wife's remains were buried near.

Baird, ABSALOM, was born at Washington, Penn., Aug. 20, 1824, and graduated at West Point in 1849, having studied law before he entered the Military Academy. He was ordered to Washington, D. C., in March, 1861, and in May was made assistant adjutant-general. He became aid to General Tyler in the battle of Bull's Run, and in November was made assistant inspector-general, with the rank of major. In March, 1862, he became General Keys's chief of staff; and in April he was made brigadier-general of volunteers, and sent to Kentucky. He commanded a division under General Granger in April, 1863, and was afterwards active in northern Georgia and in the Atlanta campaign. In Sherman's march to the sea (which see) he commanded a division

against the United States by Tripoli, in 1803 (see *Tripoli*, *War with*), Bainbridge was put in command of the *Philadelphia*, one of Preble's squadron. On October 11 the *Philadelphia* struck

of the 14th Army Corps, and also in the advance through the Carolinas. He was breveted major-general in March, 1865.

**Baker.** EDWARD DICKINSON, soldier and statesman, was born in London, Feb. 24, 1811; killed at Ball's Bluff, on the Potomac, Oct. 21, 1861. His family came to America when he was a young

EDWARD DICKINSON BAKER.

child, and settled first in Philadelphia and afterwards (1825) in Illinois. Young Baker chose the law for a vocation, and entered upon its practice in Green County, Ill. In 1837, while residing in Springfield, he was elected to the Legislature. He was state senator in 1840-44, and then a member of Congress until the beginning of the war with Mexico. In that war (1846-47) he served as colonel of Illinois volunteers, and was elected to Congress in 1848. He settled in California in 1852, where he became distinguished in his profession, and as an orator in the ranks of the Republicans. In 1859 he removed to Oregon, where he was elected United States senator in 1860. He was in that service when the Civil War broke out, in 1861, when he raised a body of troops in New York and Philadelphia. Those of Pennsylvania were called the "First California Regiment." Declining to be appointed general, he went into the field as colonel at the head of his regiment. While fighting at Ball's Bluff, in Virginia, he was shot dead. (See *Ball's Bluff*.)

**Baker, REMEMBER,** a captain of "Green Mountain Boys" (which see), was born at Woodbury, Conn., about 1740; killed by Indians on the Sorel, the outlet of Lake Champlain, in August, 1775. He went to the New Hampshire Grants in 1764, before the Allens took up their abode there. (See *New Hampshire Grants*.) He was a soldier in the French and Indian War, and was in the fierce battle at Ticonderoga in 1758. He settled at Arlington, on "the Grants," and was very active with Ethan Allen in resisting the claims of New York to Vermont territory. Baker was arrested, and was cruelly treated while a prisoner, by the New-Yorkers. The government of that province had outlawed him and set a price upon his head. Captain Baker was with Allen when he took Ticonde-

roga, in May, 1775. He was killed while on a scout in the Continental service.

**Balboa.** (See *Núñez, Vasco de*.)

**Balcarras (EARL), ALEXANDER LINDSAY,** was born in Scotland in 1752; died in London, March 27, 1825. He served three years in America under Carleton and Burgoyne, and was captured with the latter at Saratoga. At the battle of Hubbardton (which see), where he was wounded, thirteen balls passed through his clothes. He was made major-general in 1793, and was lieutenant-governor of Jamaica in 1794. He was made general in 1803, and was one of the representative peers from Scotland.

**Balch, GEORGE B.,** U. S. Navy, was born in Tennessee, Dec. 30, 1821. He entered the navy in 1837; engaged in the war against Mexico, and was wounded in a naval engagement at Shanghai, China. He was engaged actively and successfully in the South Atlantic blockading squadron and in other naval operations on the Southern coasts during the Civil War.

**Balfour, NISBET,** a British officer who served in America, was born in Edinburgh in 1743; died at Denbigh, Fifeshire, Scotland, Oct. 10, 1823. He was a son of an auctioneer and bookseller in Edinburgh; entered the British army as an ensign in 1761; commanded a company in 1770; was wounded at the battle of Bunker's Hill in June, 1775, and again in the battle of Long Island. He was sent home with despatches after the capture of New York in 1776, and was breveted major in November following. Served under Lord Cornwallis in Pennsylvania and the Carolinas; and was in command at Charleston in 1781, when he reluctantly obeyed the command of Lord Rawdon to execute Isaac Hayne (which see). He was then lieutenant-colonel. He was made colonel and aide-de-camp to his king in 1782, a major-general in 1793, lieutenant-general in 1798, and general in 1803. (See *Elliot, Mrs.*)

**Balloons in War.** At the beginning of the Civil War the telegraphic operations of the army were intrusted to Major Thomas T. Eckert. In this connection, T. S. C. Lowe, a distinguished aeronaut, was employed, and for some time balloons were used with great efficiency in

WAR BALLOON.

reconnoitring, but later in the progress of the war they fell into disuse. At the height of five hundred feet above Arlington House, opposite Washington City, Mr. Lowe telegraphed to President Lincoln as follows, in June, 1861: "Sir, from this point of observation we command an extent of country nearly fifty miles in diameter. I have pleasure in sending you the first telegram ever despatched from an aerial station, and acknowledging indebtedness to your encouragement for the opportunity of demonstrating the availability of the science of aeronautics in the service of the country." After sending the above despatch, Mr. Lowe was invited to the Executive mansion and introduced to General Scott; and he was soon afterwards employed in the military service. When in use, the balloon was kept under control by strong cords in the hands of men on the ground, who, when the reconnaissance was ended, drew it down to the place of departure.

**Ballou, HOSEA**, a leading clergyman of the denomination of Universalists, was born at Richmond, N. H., April 30, 1771; died in Boston, June 7, 1852. He was one of six sons of a Baptist clergyman, of whom three became Universalist ministers. Self-taught to read and write at the age of sixteen, he began to preach at the age of twenty-one, laboring principally in Rhode Island and for a while, and afterwards in various parts of New England. About 1804 he wrote and published *Notes on the Parables* and *Treatise on the Atonement*. He was made pastor of a congregation in Portsmouth, N. H., in 1817, where he became distinguished as a controversialist writer, and in 1819 he began the publication of the *Universalist Magazine*. In 1831 he began, with his nephew (Hosea Ballou, Jr.), a quarterly publication entitled the *Universalist Expositor*.

**Ball's Bluff, BATTLE AT.** In October, 1861, a National force, commanded by General Charles P. Stone, was encamped between Edwards's and Conrad's ferries, on the Maryland side of the Upper Potomac, while the left wing of the Confederate army, under General Evans, lay at Leesburg, in Virginia. Misinformation had caused a belief that the Confederates had left Leesburg at a little past the middle of October, when General McClellan ordered General McCall, who commanded the advance of the right of the National forces in Virginia, to move forward and occupy Drainesville. At the same time he ordered General Stone to co-operate with General McCall, which he did by making a feint of crossing the river at the two ferries above named on the afternoon of Sunday, Oct. 20. At the same time part of a Massachusetts regiment, under Colonel Devens, was ordered to take post upon Harrison's Island, in the Potomac, abreast of Ball's Bluff. Devens went to the island with four companies in flat-boats taken from the Chesapeake and Ohio Canal. About 3000 men, under Colonel Edward D. Baker, of the National Senate, acting as brigadier, were held in readiness as a reserve in case of a battle. With that reserve was a fine body of Pennsylvanians known as the "First California Regiment."

These movements of the Nationals caused an opposing one on the part of the Confederates, who had watched their antagonists with keen vigilance at a point of concealment not far off. Misinformed as to the position of the insurgents, and supposing McCall to be near enough to give aid if necessary, Stone, on the morning of the 21st, ordered some Massachusetts troops under Colonels Lee and Devens to cross to the Virginia shore from Harrison's Island to reconnoitre. They did not find the foe in the neighborhood. General Evans, unperceived, lay not far off; and riflemen and cavalry were hovering near and waiting a favorable opportunity to strike Devens, who, leaving a part of Lee's command near the Bluff, had advanced to near Leesburg. After a skirmish, in which he lost one man killed and nine wounded, he fell back towards the Bluff. While halting in an open field, he received orders from Stone to remain there until support could be sent to him. His entire force consisted of only 600 men. They were very soon attacked by the Confederates. It was a little past noon. Pressed by overwhelming numbers, Devens fell back to avoid being flanked. Meanwhile Colonel Baker had been pressing forward from Conrad's Ferry to the relief of the assailed troops. Ranking Devens, he had been ordered to Harrison's Island, with discretionary powers to reinforce the party on the Virginia main or to withdraw all the troops to the Maryland side of the river. He concluded to go forward, supposing the forces of McCall and others to be near. He was ignorant of the fact that General McClellan had ordered McCall to fall back from Drainesville. On reaching the field of conflict, Baker took the chief command of all the forces on the Bluff, about 1700 strong. Very soon afterwards, while he was in the thickest of the fight encouraging his men, a bullet pierced his brain and he fell dead. The battle had lasted two hours. His troops, unsupported by others, were crushed by superior numbers. Pressed back to the verge of the Bluff, which there rises more than one hundred feet above the river, they fought desperately for a while at twilight, for they had no means for crossing the swollen flood. They were soon overpowered. Some had been pushed down the declivity. Many were made prisoners, and many perished in trying to escape by swimming in the dark. Some were shot in the water, and others were drowned. A flat-boat laden with the wounded was riddled with bullets and sank. In this affair the Nationals lost, in killed, wounded, and prisoners, full 1000 men. The Confederates lost 153 killed. The number of their wounded is unknown.

**Baltimore, ADJOURNMENT OF CONGRESS TO (1776).** When the British army approached the Delaware River (December, 1776), and it was feared that they would cross into Pennsylvania and march on Philadelphia, there was much anxiety among the patriots. The Continental Congress, of the courage and patriotism of which there was a growing distrust, were uneasy. Leading Republicans hesitated to go further, and only Washington and a few other

choice spirits were hopeful. When the commander-in-chief was asked what he would do if Philadelphia should be taken, he replied, "We will retreat beyond the Susquehanna River, and thence, if necessary, to the Allegheny Mountains." The great body of Quakers, numerous and influential in Pennsylvania, were opposed to the war, and loyalists abounded everywhere. Mifflin, who was a disowned member of the Society of Friends, and had witnessed the sudden growing lukewarmness of the Congress, fearing the effect of Howe's proclamation (which see) upon both, strongly recommended the removal of that body from Philadelphia. General Putnam, who had been sent to that city to fortify it, earnestly seconded Mifflin's proposition; and the Congress, trembling for their personal safety, gladly complied, and adjourned (Dec. 12, 1776) to meet at Baltimore, December 20. Putnam was invested with almost absolute control of military affairs in Philadelphia, and the Congress

MEETING-PLACE OF CONGRESS IN BALTIMORE IN 1776.

delegated its executive powers to a resident committee composed of Robert Morris, George Clymer, and George Walton, to act in their behalf during their absence. In Baltimore, the Congress reassembled (Dec. 20, 1776) in a spacious brick building that stood until within a few years, with fronts on Baltimore, Sharpe, and Liberty streets, and where, on the 23d, Rev. Patrick Allison, first minister of the Presbyterian Church in Baltimore, and Rev. William White, of the Episcopal Church in Philadelphia, were appointed chaplains.

**Baltimore Convention (1860).** On June 18 the adjourned convention of Democratic delegates who had assembled in the Front Street Theatre at Charleston met at Baltimore, with Mr. Cushing in the chair. (See *Charleston Convention*.) The seceders from the Charleston Convention, who had been in session at Richmond (see *Seceders' Convention at Richmond*), had adjourned to Baltimore, and claimed the right to sit in the convention from which they had withdrawn. Mr. Cushing declined to decide the delicate question which arose, and referred the

whole matter to the convention. It was debated for some time, when it was proposed that no delegate should be admitted unless he would pledge himself to abide by the action of a majority of the convention and support its nominees. The debates were hot and acrimonious, and at evening there were two mass-meetings of the Democracy in Baltimore, attended by tens of thousands of citizens and strangers. On the morning of June 19 the subject of contesting delegates was referred to the committee on credentials, and on the 21st, the committee not agreeing, two reports were submitted. Then a very warm debate was had, in which free rein was given to the expression of opinion, and the reopening of the slave-trade was advocated. Finally, on Friday, the 22d, the majority report was adopted, and the places of most of the seceders, who were unseated, were filled by Douglas men. Then there was another secession of delegates from the slave-labor states, and on the following morning Mr. Cushing and a majority of the Massachusetts delegation also withdrew. "We put our withdrawal before you," said Mr. Butler (Benjamin F.), of that delegation, "upon the simple ground, among others, that there has been a withdrawal, in part, of a majority of the states, and, further (and that, perhaps, more personal to myself), upon the ground that I will not sit in a convention where the African slave-trade — which is piracy by the laws of my country — is approvingly advocated." Governor David Tod, of Ohio, was then called to the chair in place of retired Cushing, and the convention proceeded to ballot for a Presidential candidate.

Some of the Southern members remained in the convention; and the speech of a delegate from Arkansas (Mr. Flournoy), a slaveholder and friend of the system, was so liberal that it had a powerful effect upon delegates from the free-labor states in favor of Mr. Douglas. Of 194 votes cast on the second ballot, Mr. Douglas received 181, and he was declared duly nominated. Mr. Fitzpatrick, of Alabama, nominated for Vice-President, declined two days afterwards, and Herschel V. Johnson, of Georgia, was substituted. The convention adjourned June 23, 1860.

**Baltimore Deputations in Washington.** Governor Hicks passed the night of April 19, 1861, at the house of Mayor Brown in Baltimore. It was the night after the attack on the Massachusetts troops there. At 11 o'clock the mayor, with the concurrence of the governor, sent a committee of three persons to President Lincoln with a letter in which he assured the chief magistrate that the people of Baltimore were exasperated to the highest degree by the passage of troops through that city, and that the citizens were "universally decided in the opinion that no more should be ordered to come." He gave

notice of the fearful riot the day before, and he requested the President not to order or permit any more troops to pass through the city, adding, "If they should attempt it the responsibility for the bloodshed will not rest on me." The committee saw the President early in the morning (April 20, 1861). The President told them that no more should come *through* the city if they could pass peaceably *around* it. This answer did not satisfy the Secessionists, and they pushed forward military preparations, making the capital more isolated from the loyal people every hour. The excitement in Washington was now becoming fearful, and at 3 o'clock on Sunday morning (April 21) the President sent for Governor Hicks and Mayor Brown. The former, with two others, hastened to Washington. At an interview with the President and General Scott, the latter proposed to bring troops by water to Annapolis, and march them across Maryland to the capital, a distance of about forty miles. The Baltimore Secessionists were not satisfied. The "soil of Maryland must not be polluted by the feet of National troops *anywhere*." On the 22d, Governor Hicks was induced to send a message to the President, advising him not to order any more troops across the soil of Maryland, and to send away some who were already at Annapolis. The President replied kindly but firmly. He reminded his Excellency that the route of the troops across that state chosen by the general-in-chief was farthest removed from populous towns, and said, "The President cannot but remember that there has been a time in the history of our country [1814] when a general [Wieder, of Maryland] of the American Union, with forces designed for the defence of the capital, was not unwelcome anywhere in the State of Maryland, and certainly not at Annapolis, then, as now, the capital of that patriotic state; and then, also, one of the capitals of the Union." Governor Hicks had also unwisely recommended the President to refer the matter in dispute between the National Government and Maryland to Lord Lyons, the British Minister at Washington. To this proposition Mr. Lincoln replied: "If eighty years could have obliterated all other noble sentiments of that age from Maryland, the President would be hopeful, nevertheless, that there is one that would ever remain there, as elsewhere. That sentiment is, that no domestic contention whatever that may arise among the parties of this republic ought, in any case, to be referred to any foreign arbitration, least of all to the arbitration of a European monarchy." This rebuke was keenly felt. Yet still another embassy in the interest of the Baltimore Secessionists visited the President. Five members of the Young Men's Christian Association of Baltimore, with Rev. Dr. Fulton, of the Baptist Church, at their head, waited on the President, and assured him that if he would let the country know that he was disposed "to recognize the independence of the Southern States, that they had formed a government of their own, and that they would never again unite with the North," he could produce peace. When the Doctor expressed a

hope that no more troops would be allowed to cross Maryland, the President replied, substantially, "I must have troops for the defence of the capital. The Carolinians are now marching across Virginia to seize the capital and hang me: What am I to do? I *must* have troops, I say; and, as they can neither crawl under Maryland nor fly over it, they must come across it." With this significant intimation of the President that he should take measures to defend the Republic without asking the consent of the authorities or inhabitants of any state, the deputation retired, and none other was afterwards sent by the enemies of the Union in Baltimore.

**Baltimore Excited.** When news of the "Secession of Virginia" reached Baltimore, the disunionists in that city ventured to take a cannon to Federal Hill, raise a Secession flag, and fire a salute on April 18, 1861. The workmen in the iron-foundries near turned out, captured the gun, and cast it into the Patapsco River; and they tore the Secession flag into shreds, and dispersed the disunionists. On the same day some leading Virginians from Winchester came down to Baltimore, and demanded from the managers of the Baltimore and Ohio railway guarantees that no National troops or munitions of war should be permitted to pass over it. This demand was accompanied with a threat that if it was not complied with, the Virginians would destroy the bridge of the road at Harper's Ferry. In the afternoon, after the Pennsylvanians had passed through the city (see *Pennsylvania Troops at the Capital*), the "National Volunteer Association," which had attempted to fire a salute on Federal Hill, held a meeting in Monument Square. T. P. Scott presided. The excited citizens were gathered there by thousands, and were harangued in vehement language. "Coercion" was denounced, and the people were exhorted to drill and prepare for conflict. "I do not care," said one of the speakers, "how many Federal troops are sent to Washington, they will soon find themselves surrounded by such an army from Virginia and Maryland that escape to their homes will be impossible; and when the seventy-five thousand [called for by the President] who are intended to invade the South shall have polluted that soil with their touch, the South will exterminate and sweep them from the earth." This meeting prepared the mob that attacked the Massachusetts troops the next day. (See *Massachusetts Troops in Baltimore*.) After the events of that day, when the troops from Massachusetts and Philadelphia had passed on to Washington, a meeting was convened at Monument Square, by the dominant party. George H. Stuart (afterwards a leader of Confederate troops) had the First Light Division there with ball-cartridges, and over the platform waved the flag of Maryland. Mayor Brown, S. Teakle Wallis, W. P. Preston, and others addressed the excited multitude, and assured them that no more National troops should pass through the city. The populace were requested to disperse quietly to their homes. Governor Hicks, moved by the caution which old age brings, yielded to the storm. He and the mayor joined

in a despatch to President Lincoln, telling him of the fearful excitement, and saying, "Send no more troops here." (See *Baltimore Deputations in Washington*.) A committee of the meeting invited Hicks to the stand. After Mayor Brown had said to the people, "It is folly and madness for one portion of the nation to attempt the subjugation of another portion; it can never be done," Hicks arose and declared that he coincided in the sentiment of the mayor. "I bow in submission to the people," he said. "I am a Marylander; I love my state, and I love the Union; but I will suffer my right arm to be torn from my body before I will raise it to strike a sister state." The populace were not quieted. They paraded the streets threatening violence to Union men. That evening (April 19, 1861) Marshal Kane, at the head of the Baltimore police, and an earnest disunionist, received an offer of troops from Frederick, which he accepted, and urged them to come immediately. "Send expresses over the mountains and valleys of Maryland and Virginia," he said, "for the riflemen to come without delay." The events of the two days in Baltimore (April 18 and 19) filled the loyal people of the country with indignation, and they determined that that city should not present a barrier to troops hastening to the relief of the menaced capital.

**Baltimore in Possession of National Troops (1861).** The authorities of Baltimore, civil and military, took measures to prevent any more National troops from passing through the city. Armed men flocked into the town from the country with all sorts of weapons. Cannons were exercised openly in the streets. Marshal Kane, under the direction of the city authorities, forbade the display of the national flag for thirty days, that it might not "disturb the public peace." The exasperated people of the free-labor states could hardly be restrained from marching on Baltimore and laying it in ashes. Measures were soon used to subdue that city by force. Steps were taken to repair the buried railway bridges, and a singular railway battery was constructed in Philadelphia for the protection of the men engaged in the work—a car made of boiler-iron, musket-proof, with a 24-pound cannon mounted at one end to fire grape and chain shot. General Scott planned a grand campaign against Baltimore. He proposed to move simultaneously upon the city four columns of troops of three thousand men each—one from Washington, a second from New York, a third from Perryville, or Elkton, by land or water, or both, and a fourth from Annapolis. It was thought twelve thousand men would be needed for the enterprise. They were not at hand, for ten thousand troops were yet needed at the capital for its perfect security. The time for the execution of the plan seemed somewhat remote. General B. F. Butler conceived a more expeditious and less cumbersome plan. He was satisfied that the Secessionists in Baltimore were numerically weak, and that the Unionists, with a little help, could easily reverse the order of things there. He hastened to Washington to consult with General Scott, and simply asked

permission to take a regiment or two from Annapolis, march them to the Relay House on the Baltimore and Ohio railway (nine miles from Baltimore) and hold it, so as to cut the Secessionists off from facile communication with Harper's Ferry. The permission was granted. "What are the powers of a general commanding a Department?" asked Butler. "Absolute," responded Scott. Butler ascertained that Baltimore was in his "Department," and he went back to Annapolis to execute a bold plan which he had conceived. At the close of April, 1861, he had full ten thousand men under his command, and an equal number were guarding the seat of government. The Unionists of Maryland were already asserting their rights openly. Governor Hicks had just cast a damper on the Secessionists by recommending, in a message to the Legislature, a neutral policy for Maryland. On the evening of May 4, an immense Union meeting was held in Baltimore. These proofs of the latent force of the Unionists of Maryland gave Butler every encouragement. He had proposed to do himself, with a few men, at once, what Scott proposed to do with twelve thousand men in an indefinite time. On the afternoon of May 4, he issued orders for the Eighth New York and Sixth Massachusetts regiments, with a battery of the Boston Light Artillery, to proceed from Washington City to the Relay House on the morning of the 5th. They did so, in thirty cars. They seized the railway station at the Relay House. Butler accompanied them, and remained there a little more than a week. From Unionists of Baltimore he obtained all desired information. Through Colonel Schnyler Hamilton, on Scott's staff, he received permission to arrest Secessionists in and out of Baltimore, to prevent armed insurgents joining those at Harper's Ferry, and to look after a quantity of gunpowder said to be stored in a church in Baltimore. Towards the evening of the 13th, the entire Sixth Massachusetts regiment, a part of the New York Eighth, with the Boston Light Artillery with two cannons—about one thousand men in all—were put on cars headed towards Harper's Ferry. The train moved up the Patapsco Valley about two miles, and then backed slowly to the Relay House and past it. At dark it was in the Camden Street Station in Baltimore. A heavy thunder-storm was about to burst upon the city, and, few persons being about, little was known of this portentous arrival. Butler marched his troops from the station to Federal Hill in a drenching shower. He sat down in his wet garments at past midnight and wrote a proclamation, dated "Federal Hill, Baltimore, May 14, 1861," in which it was announced that troops under his command occupied the city for the purpose of enforcing respect and obedience to the laws, as well of the state as of the United States, which were being "violated within its limits by some malignant and traitorous men." This proclamation, published in the *Baltimore Clipper* in the morning, was the first intimation to the citizens that National troops were in possession of their town. The conquest was complete, and the hold thus taken on Baltimore was

never relinquished. General Scott was offended because of Butler's unauthorized act, and requested President Lincoln to remove him from the Department. The President did so, but gave Butler the commission of a major-general and the command of a much more extended military district—the "Department of Virginia," which included Fortress Mouroe.

**Baltimore, LORDS.** I. George Calvert, born about 1580, at Kipling, Yorkshire, Eng.; died in London April 15, 1632. He was graduated at Oxford; travelled on the Continent; became secretary of Robert Cecil; married Anne Minne in 1604; was a clerk of the privy council; was knighted in 1617; became a secretary of state soon afterwards, and in 1620 was granted a pension of \$5000 a year. When, in 1624, he publicly avowed himself a Roman Catholic, he resigned his office, but King James retained him in the privy council; and a few days before that monarch's death he was created Baron of Baltimore in the Irish peerage. Calvert had already entered upon a colonizing scheme. In 1620 he purchased a part of Newfoundland, and was invested with the privileges and honors of a Count-Palatine. He called his new domain *Avalon*, and, after spending about \$100,000 in building warehouses there, and a mansion for himself, he went thither in 1627. He returned to England the following spring. In the spring of 1629 he went again to Avalon, taking with him his wife and unmarried children. The following winter was a severe one, and he began to contemplate a desertion of the domain on account of the rigorous climate. He sent his children home. In the autumn he actually abandoned Newfoundland, and with his wife and retainers sailed to Virginia, where, because he refused to take the oath of allegiance, he was ordered away by Governor Harvey. His wife and retainers remained there during the winter. Going from there in the spring, it is supposed he explored the shores of Chesapeake Bay, and chose that region for a settlement. In 1632, Lord Baltimore obtained a charter from Charles I. of the territory on the Chesapeake now forming the State of Maryland. "What will you call the country?" asked the king. Baltimore referred the matter to his majesty. "Then let us name it after the queen" (*Henrietta Maria*), said Charles, "and call it *Mariana*." The expert courtier dissented, because that was the name of a Spanish historian who taught that "the will of the people is higher than the law of tyrants." Still disposed to compliment the queen, the king said, "Let it be *Terra Maria—Mary's Land*." And it was named Maryland. Before the great seal of England was affixed to the charter, Lord Baltimore died, and was succeeded by his son Cecil II. **CECILIUS** or **CECIL CALVERT**, second Lord Baltimore, was born about 1605. Very little is known of his early life. When he was about twenty years of age he married Anne, the beautiful daughter of the Earl of Arundel, who was one of the most influential Roman Catholics in the realm. On the death of his father, the charter for Maryland was issued to Cecilus, his eldest son and heir, June,

1632; and he immediately prepared to sail for the Chesapeake with a colony. When he was about ready to depart, he changed his mind, and sent his brother Leonard, as governor, with his brother George, and two assistants and counselors, Jeremy Hawley and Thomas Cornwallis, both Protestants. The whole company, who sailed in two vessels—the *Ark* and *Dore*—numbered over three hundred, according to Lord Baltimore, who wrote to his friend Wentworth (afterwards the unfortunate Earl of Strafford),

CECIL, LORD BALTIMORE.

"By the help of some of your lordship's good friends and mine, I have sent a hopeful colony into Maryland, with a fair and favorable expectation of good success, without any great prejudice to myself, in respect that many others are joined with me in the adventure. There are two of my brothers, with very near twenty other gentlemen of very good fashion, and three hundred laboring men." As most of the latter took the oath of allegiance before sailing, they were probably Protestants. Father Andrew White, a Jesuit priest, accompanied the expedition. They sailed from the Isle of Wight, and took the tedious southern route by way of the Canaries. The vessels were separated by a furious gale, but met at Bermuda, whence the emigrants went to the Chesapeake, founded a settlement, and established a government under the charter, which was nearly the same in form as all charters then granted. (See *Maryland*.) It conferred on the proprietor absolute ownership of the territory, and also the civil and ecclesiastical power of a feudal nature. Entire exemption from taxation was conceded to the colonists. As an acknowledgment that the original title to the land was still in the possession of the crown, the proprietor was required to pay to the king the tribute of two Indian arrows. Cecil was a member of Parliament in 1634, but mingled very little in public affairs afterwards. He never came to America, but managed his province by deputies forty-three years. His course towards the

colouists was generally wise and conciliatory, because it was profitable to be so. In religion and politics he was very flexible, being quite indifferent to either, and he did very little for the religions and intellectual cultivation of the colonists. Negatively good, he was regarded with great respect by all parties, even by the Indians. He died in London, Nov. 30, 1675. III. CHARLES CALVERT, third Lord Baltimore, succeeded his father as Lord-proprietor of Maryland in 1675. He was born in London in 1629; died there Feb. 24, 1714. He was appointed governor of Maryland in 1661, and married the daughter of Hon. Henry Sewall, whose seat was on the Patuxent River. After the death of his father he visited England, but soon returned. In 1684 he again went to England, and never came back. He was suspected of favoring King James II. after the Revolution, and was outlawed for treason in Ireland, although he was never in that country. The outlawry was reversed by William and Mary in 1691. Charles Lord Baltimore was thrice married. IV. BENEDICT LEONARD CALVERT, fourth Lord Baltimore, succeeded his father, Charles, in 1714. In 1698 he married Lady Charlotte Lee, daughter of the Earl of Lichtfield (granddaughter of the notorious Duchess of Cleveland, the favorite mistress of Charles II.), from whom he was divorced in 1705. Benedict publicly abjured the Roman Catholic faith in 1713, and died in 1715, only thirteen months after the death of his father. V. CHARLES CALVERT II., son of Benedict, and the fifth Lord Baltimore, was born Sept. 29, 1699, and was an infant in law when he succeeded to his father's title. In July, 1730, he married the widow Mary Janssen, youngest daughter of General Theodore Janssen. His life was spent chiefly in England. In 1731 he was appointed Gentleman of the Bedchamber to the Prince of Wales, and soon afterwards was elected Fellow of the Royal Society. He was in Parliament in 1734, and in 1741 was appointed Junior Lord of the Admiralty. In the spring of 1741 he was appointed offerer to the Prince of Wales and Surveyor-general of the Duchy lands in Cornwall. After having ruled Maryland in person and by deputy more than thirty years, he died April 24, 1751, at his home in London. VI. FREDERICK CALVERT, sixth and last Lord Baltimore, was born in 1731, and succeeded to the title of his father, Charles II., in 1751. He married Lady Diana Egerton, youngest daughter of the Duke of Bridgewater, in 1753. He led a disreputable life, and died at the age of forty, at Naples, Sept. 14, 1771. Yet he was a patron of literature and a friend and companion of the Earl of Chatham (Pitt). In 1767 he published an account of his "Tour in the East." He was a pretentious author of several other works, mostly of a weak character. Lord Frederick bequeathed the province of Maryland in *tail male*, to Henry Harford, then a child, and the remainder, in fee, to his sister, the Hon. Mrs. Norton. He left an estate valued at \$5000. The last representative of the Baltimore family was found in a debtor's prison in England, in 1860, by Colonel Angus McDonald, of Virginia, where he had been confined for twenty years.

Henry Harford was the last proprietor of Maryland.

**Baltimore, ORIGIN OF THE CITY OF.** David Jones, the first settler on the site of Baltimore, in 1682, gave his name to a small stream that runs through the city. In January, 1730, a town was laid out on the west of this stream, contained in a plot of sixty acres, and was called Baltimore, in honor of Cecil, Lord Baltimore. In the same year William Fell, a ship-carpenter, purchased a tract east of the stream and called it Fell's Point, on the extremity of which Fort McHenry now stands. In 1732 a new town of ten acres was laid out on the east side of the stream, and called Jonestown. It was united to Baltimore in 1745, dropping its own name. In 1767 Baltimore became the county town.

**Baltimore, PATRIOTIC MOVEMENTS IN (1774).** The inhabitants of Baltimore warmly seconded the recommendation of the New York committee for a general congress, and, after adopting a non-importation agreement (May, 1774), appointed delegates to a Continental Congress, and chose a numerous committee of correspondence. This example kindled new life in New York, where the Tory element was then making the spirit of the colony appear lukewarm.

**Baltimore Police (1861).** The Chief of Police in Baltimore was George P. Kane, with the title of "Marshal." He was a leading Secessionist in that city and an active opposer of the government in Maryland. In Baltimore he was the head of the Secession movements in Maryland; and early in June, 1861, the National government was satisfied that a powerful combination was forming there, whose purpose was to assist the army of insurgents at Manassas, under Beauregard, to seize the National capital, by preventing loyal soldiers passing through that state, and aiding Marylanders to cross into Virginia and swell the ranks of the Confederate forces. The government took energetic steps to avert this threatened danger. N. P. Banks, ex-Governor of Massachusetts, lately commissioned major-general of volunteers, was assigned to the command of the Department of Annapolis, as Butler's successor, with his headquarters at Baltimore. It was evident to Banks that the Board of Police and Marshal Kane were in active sympathy, if not in actual league, with the leading Secessionists of Maryland. After satisfying himself of the complicity of certain officials in the movement, he ordered a large body of soldiers, armed and equipped with ball cartridges, to march into Baltimore from Fort McHenry before daybreak on June 27, and to arrest Marshal Kane and place him a prisoner in that fortress. At the same time Banks issued a proclamation, giving his reasons for the act. He did not intend to interfere with the lawful acts of the civil authority, he said, but as it was well known that a disloyal combination existed in his Department, and that the chief of police, "in contravention of his duty and in violation of law," was "by direction or indirection both witness and protector in the transactions of armed parties engaged therein," the government could not "re-

gard him otherwise than as the head of an armed force hostile to its authority, and acting in concert with its avowed enemies." He appointed Brigadier John R. Kenly, a citizen of Baltimore, provost-marshal in and for that city, to "superintend and cause to be executed the police laws" of Baltimore, "with the aid and assistance of the subordinate officers of the police department," assuring the citizens that when a loyal man should be appointed chief of police the military would at once yield to the civil authority. The police commissioners met and protested against this act as illegal, and disbanded the police. Banks soon regulated the matter so as to quiet the citizens; and Kenly, organizing a police force of loyal men, whom he could trust, two hundred and fifty strong, took possession of the quarters of the late marshal and police commissioners. There he found ample evidence of treacherous designs. Concealed beneath the floors in several rooms he found a large number of small-arms, of every description; and in a wood-yard in the rear, in a position to command an alley, were four iron cannon with suitable cartridges and balls. The old police commissioners continuing to hold meetings, they were arrested and sent to Fort Warren, in Boston Harbor, as prisoners of state. At the suggestion of many Union citizens of Baltimore, George R. Dodge, a civilian and citizen, was appointed chief of police, and Colonel Kenly joined his regiment—the First Maryland Volunteers.

Bancroft, EDWARD, a political and philosophical writer, was born at Westfield, Mass., Jan. 9, 1744; died in England, Sept. 8, 1820. He was a pupil of Silas Deane (which see), when the latter was a schoolmaster. His early education was not extensive. Apprenticed to a mechanic, he ran away, in debt to his master, and went to sea; but returning with means, he compensated his employer. Again he went to sea; settled in Guiana, South America, as a physician, in 1763, and afterwards made his residence in London, where, in 1769, he published a *Natural History of Guiana*. He became a Fellow of the Royal College of Physicians, and Fellow of the Royal Society. While Franklin was in England on a diplomatic mission, Dr. Bancroft became intimate with him; and through the influence of the philosopher became a contributor to the *Monthly Review*. He was suspected by the British government of participation in the attempt to burn the Portsmouth dock-yards (see *John the Painter*), and he fled to Passy, France. Soon afterwards he met Silas Deane, his old teacher, in Paris, and offered to assist him in his labors as agent of the Continental Congress. His ways were sometimes devious, and Mr. Bancroft, the historian, accuses him of being a spy in the pay of the British government, and of making a dupe of Deane. After the peace, Dr. Bancroft obtained, in France, a patent for the exclusive importation of the bark of the yellow oak, for the dyers, and afterwards he obtained a similar patent in England. Dr. Bancroft never returned to America.

Bancroft, GEORGE, LL.D., historian, was born at Worcester, Mass., Oct. 3, 1800; son of Rev.

Aaron Bancroft, a distinguished Unitarian clergyman and pioneer in "liberal Christianity." He graduated at Harvard in 1817; studied at the German universities, and received, at Göttingen, the honorary degree of Doctor of Philosophy when he was only twenty years of age.

GEORGE BANCROFT, LL.D.

He resided some time in Berlin in the society of distinguished scholars, and on his return home, in 1822, he became a tutor of Greek in Harvard University. He published a volume of poems in 1823, and in 1824 a translation of Heeren's *Politics of Ancient Greece*. In 1823, in conjunction with J. G. Cogswell, he established the celebrated "Round Hill School," at Northampton, Mass. While in the German universities, Mr. Bancroft studied with avidity whatever was taught in them, but made history a specialty. His chief tutors there were Heeren, Eichhorn, and Blumenbach. At Berlin he became intimate with Wilhelm von Humboldt and other eminent scholars and philosophers. At Heidelberg he spent some time in the study of history with Schlosser; and in Paris he made the acquaintance of Alexander von Humboldt, Cousin, and others. At Rome he formed a friendship with Chevalier Blinzen; he also knew Niebuhr. While engaged in the Round Hill School, Mr. Bancroft completed the first volume of his *History of the United States*, which was published in 1834. Ten volumes of this great work were completed and published in 1874, or forty years from the commencement of the work. The tenth volume brings the narrative down to the conclusion of the Preliminary Treaty of Peace in 1782. In 1838 President Van Buren appointed Mr. Bancroft collector of the port of Boston. He was then engaged in delivering frequent political addresses, and took a deep interest in the philosophical movement now known as "transcendentalism." He was a Democrat

in 'politics,' and in 1840 received the nomination for governor of Massachusetts, but was not elected. In 1845 President Polk called Mr. Bancroft to his cabinet as Secretary of the Navy, and he signalized his administration by the establishment of the Naval Academy at Annapolis. While Secretary of the Navy he gave the order to take possession of California, which was done by the navy; and while acting temporarily as Secretary of War he gave the order for General Taylor to cross the Rio Grande and invade the territory of Mexico. In 1846 Mr. Bancroft was sent as U. S. Minister-plenipotentiary to England, and in 1849 the University of Oxford conferred upon him the honorary degree of Doctor of Civil Law. During this residence in Europe he perfected his collection of materials for his history, visiting the public archives and libraries at Paris. Returning to America in 1849, he made his residence in New York city, where he prosecuted his historical labors. He was engaged in these labors until 1867, when he was appointed, by President Johnson (May 14), Minister to Prussia, and accepted the office. In 1868 he was accredited to the North German Confederation, and in 1871 to the German empire. In August, 1868, Mr. Bancroft received from the University of Bonn the honorary degree of "Doctor Juris;" and in 1870 he celebrated the fiftieth anniversary of the reception of his first degree at Göttingen, receiving the congratulations of many German faculties and societies. Mr. Bancroft has been a contributor of numerous essays to the *North American Review*. His *History of the United States* has been translated into several languages. In 1882, he published a *History of the Formation of the Constitution*. This completed his great work, in accordance with his original plan.

**Banishment of Quakers.** The "Testimony" of Friends, or Quakers, at their yearly meeting in Philadelphia in May, 1775, against the movements of the American patriots attracted special attention to that body. The papers and records of their yearly meeting in New Jersey, captured by Sullivan in his expedition against the loyalist regiments on Staten Island, gave Congress the first proof of the general disaffection of the society. The Congress recommended the executives of the several colonies or states to watch their movements; and the Executive Council of Pennsylvania were earnestly exhorted to arrest and secure the persons of eleven of the leading men of that society in Philadelphia, whose names were given. It was done (Aug. 28, 1777), and John Fisher, Abel James, James Pemberton, Henry Drinker, Israel Pemberton, John Pemberton, John James, Samuel Pleasants, Thomas Wharton, Sr., Thomas Fisher, and Samuel Fisher, leading members, were banished to Fredericksburg, Va. The reason given by Congress for this act was that when the enemy were pressing on towards Philadelphia in December, 1777, a certain seditious publication, addressed "To our Friends and Brethren in Religious Profession in these and the adjacent Provinces," signed John Pemberton, in and on behalf of the "Meeting of Sufferings," held in Philadel-

phia, Dec. 26, 1776, had been widely circulated among Friends throughout the states. At the same time the Congress instructed the Board of War to send to Fredericksburg John Penn, the governor, and Benjamin Chew, chief-justice of Pennsylvania, for safe custody.

**Bank in Pennsylvania, First.** In the great emergency of the half-starved Continental army in the spring of 1780, the Congress resorted to the expedient of selling bills on John Jay, who had been sent to the Spanish court to negotiate for a subsidy or a loan. These bills, amounting in the aggregate to more than \$500,000, were made payable in six months after eight, in the hope that before they should mature Mr. Jay would obtain the desired subsidy. This proceeding shows the desperate situation of the finances of Congress. At this time of need on the part of the army, Robert Morris, George Clymer, and other leading citizens of Philadelphia, having received on deposit some of the bills drawn on Jay as a support to their credit and an indemnity in case of loss, established a joint-stock company, or bank, the object of which was to transport to the camp a supply of provisions without any profit to themselves. There were, at that time, two political parties in Pennsylvania—one, calling themselves "Republicans," were radical; the other, called the "Constitutional party," were conservative. Those concerned in the establishment of the bank were of the Republican party; and the Constitutional party, not to be outdone by the other in zeal for the cause, obtained, by their majority in the Assembly, authority for President Reed to proclaim martial law, should such a step become necessary in order to carry out the requisitions of Congress.

**Bank of North America.** It was soon perceived that under the new government (*Articles of Confederation*, which see) the Congress had no power, independent of the several states, to enforce taxation. Robert Morris, then Superintendent of Finance (Secretary of the Treasury), proposed the establishment of a bank at Philadelphia, to supply the government with money, with a capital of \$400,000. The promissory notes of the bank were to be a legal-tender currency, to be received in payment of all taxes, duties, and debts due the United States. The plan was approved by the Congress (May 26, 1781), and this financial agent of the government was chartered by the Congress Dec. 31. The capital stock was divided into shares of \$400 each, in money of gold and silver, to be procured by subscriptions. Twelve directors were appointed to manage the affairs of the bank, which was entitled by the Congress "The President, Directors, and Company of the Bank of North America." That corporation furnished adequate means for saving the Continental army from disbanding.

**Bank of the United States.** (See *United States Bank*.)

**Banking in the United States.** (See *United States Bank*.) With the expiration of the charter of the U. S. Bank in 1811, and of the ex-

istence of the institution, a large number of state banks were created. In the course of four years (1811-15) one hundred and twenty-three state banks were created, with an aggregate capital of \$40,000,000, and an estimated emission of notes to the amount of \$200,000,000, a large portion of which, in the Middle States, were issued as loans to the government. The re-creation of the Bank of the United States in 1816 compelled the state banks to resume specie payment (which had been suspended during the war) or wind up. Of the 446 state banks then in existence, with an aggregate capital of about \$90,000,000, a very large number were compelled to liquidate. From 1811 to 1830 165 banks, with a capital of \$30,000,000, closed business, with a loss to government and individuals of about \$5,000,000. The United States Bank became a powerful financial machine, and the state banks complained loudly of the tyranny exercised over them by it and its branches. It ceased to exist in 1836. The number of state banks had then largely increased, being 634 in 1837, with a capital of nearly \$291,000,000. This number was increased in 1840 to 901, with a capital of over \$358,000,000. In 1860 the number of banks in the Union was 1562, with an aggregate capital of about \$422,000,000 and a circulation of about \$207,000,000. At that time they held \$83,594,537 in specie, and their deposits were nearly \$254,000,000. A national bank currency system of the United States was organized by act of Congress early in 1863; and under an act of June 3, 1864, national banks were organized and a uniform national currency was established. (See *National Currency*.) Early in the late Civil War all the banks in the United States suspended specie payments. In January, 1875, Congress passed an act providing for their resumption of specie payments on the first of January, 1879. As that time approached there were preliminary movements towards that end, such as redeeming the fractional currency with silver (1876), by which a large amount of the latter coin was put into circulation. There was very strong opposition to resumption at that time, and prophets of evil foretold infinite disasters to the business of the country. It was declared that the demand for gold would be greater than the supply; but when the day came, and the clerical force of the Subtreasury in New York was increased in order to facilitate the paying out of gold for "greenbacks" (which see) presented, they had nothing to do. There was actually more gold paid in than was paid out. From that hour the business of the country permanently revived for the first time since the great revulsion of 1873.

**Banking Schemes in Massachusetts.** In 1740 the colonies were called upon to furnish men and means in a war against the Spanish-American colonies. The call found the people of Massachusetts engaged in bitter strife with Governor Belcher. The laws authorizing the circulation of a paper currency would soon expire. The rapid withdrawal of that paper would act like a bank contraction in our day, but with more stringency. Belcher resolutely

refused to sanction laws for the extension of the period of redemption, and schemes for joint-stock banking were revived. Two companies were organized—one, known as the "Silver Schemes," proposed to issue £150,000 in notes redeemable in silver at the end of fifteen years; another, called the "Manufactory Scheme," or "Land Bank," undertook to circulate double that amount, to be redeemed, at the end of twenty years, in colonial produce. The Silver Scheme was patronized by the merchants and traders, the Land Bank by the farmers and mechanics. Belcher opposed both, and took away the commissions of all officers of the militia and justices of the peace who had anything to do with either. The people, in spite of him, established the "Land Bank," with eight hundred stockholders, who controlled the Assembly. The governor issued a proclamation against the scheme. The leaders in the scheme retaliated by plotting for his removal. This was accomplished by downright lying; and William Shirley was appointed his successor. The bank was speedily wound up by an act of Parliament which prohibited the formation of unincorporated stock companies with more than six partners. This act was denounced in Massachusetts and South Carolina as an illegal interference with the chartered rights of the people.

**Banks, NATHANIEL PRENTISS,** was born at Waltham, Mass., Jan. 30, 1816. His early education was obtained at a common school. He became a lawyer and Democratic orator; edited a newspaper in Waltham and Lowell; and during the administration of President Polk he held office in the Boston Custom-house. In 1849 he

NATHANIEL PRENTISS BANKS.

was a member of the Massachusetts Legislature, and Speaker of the Lower House in 1851-52. He was President of the State Constitutional Convention in 1853, and a member of Congress in 1853-57, separating from the Democratic party on the question of slavery; and, after a long contest, was elected Speaker of the House of Representatives in 1855. Mr. Banks was chosen Governor of Massachusetts in 1858, and served until 1861. When the Civil War broke out he was President of the Illinois Central Railroad.

Offering his services to President Lincoln, he was made a major-general of volunteers May 16, 1861, and appointed to command the Annapolis military district. General Banks was an active and skilful leader in various battles during the war in Virginia and in the region of the Lower Mississippi and Red rivers. In 1865 he was elected to Congress.

**Banneker, BENJAMIN**, a negro mathematician, was born in Maryland, Nov. 9, 1731; died in Baltimore, October, 1806. His maternal grandmother, who had charge of him in his early childhood, taught him to read and write. He taught himself mathematics and astronomy; and for many years, while engaged in daily labor, made the necessary calculations for and published an almanac for Maryland and the adjoining states. Mr. Jefferson presented one of his almanacs to the French Academy of Sciences, where it excited wonder and admiration, and the "African Almanac" became well known to the scientific circles of Europe. In 1790 he was employed by the commissioners in the survey of the boundaries of the District of Columbia. Banneker was also a poet. His grandmother was an Englishwoman, who purchased a small plantation in Maryland, bought two slaves from a ship just from Africa, and married one of them.

**Banquets to Naval Heroes.** On Dec. 29, 1812, a banquet was given by the corporation and citizens of New York to Hull, Jones, and Decatur, who had gained naval victories. Hull and Decatur were present; Jones was absent. The corporation of New York also gave a banquet to the gallant crew of the frigate *United States*, Decatur's victorious vessel, which captured the *Macedonian*. It was given at the City Hotel, Jan. 7, 1813. The sailors present numbered about four hundred; and as they marched to the hotel they were greeted by crowds of men, women, and children in the streets, and the waving of handkerchiefs from the windows. In the evening they went to the Park Theatre, by invitation of the manager. The drop-curtain had on it a representation of the fight between the *United States* and *Macedonian*. Children dancing on the stage bore letters of the alphabet in their hands, which, being joined in the course of the dance, produced in transparency the names of HULL, JONES, and DECATUR. McFarland, an Irish clown, then sang a comic song of seven stanzas written for the occasion, beginning:

"No more of your blatheriog nonsense  
 'Bout Nelsons of old Johnny Bull;  
 I'll sing you a soog, by my conscience,  
 'Bout Jones and Decatur and Hull.  
 Dad Neptune has long, with vexation,  
 Beheld with what insolent pride  
 The turbulent, hillow-washed nation,  
 Has aimed to control the salt tide.

"CHORUS.—Sing lather away, genteel and aisy,  
 By my soul, at the game, hob-or-nob,  
 In a very few minutes we'll please ye,  
 Because we take work by the job."

Such banquets occurred several times during the Second War for Independence—1812-15—in honor of the unexpected and complete victories of the American ships and seamen over those of Great Britain. For these occasions songs were

composed, and became very popular; and they continued to be sung at social gatherings for ten years afterwards.

**Baptist Church, THE FIRST, IN AMERICA.** Roger Williams, before he left England, had been under the teachings of Baptists there, some of whom had been refugees from persecution in Holland. These had instituted baptism among themselves by authorizing certain of their members to be administrators of the rite. Cast out from the Congregational churches in Massachusetts, Williams conceived the idea of forming a Baptist church in his new home at Providence, R. I., after the manner of the refugees in Holland, but in a more simple form. In March, 1639, Ezekiel Holliman, a layman, first baptized Williams, and then Williams baptized Holliman and "some ten more." These men then formed a Baptist church at Providence. But Williams did not remain a Baptist long. He very early doubted the validity of Holliman's baptism, and consequently of his own. He believed "a visible succession of authorized administrators of baptism" to be necessary to insure its validity, and in the course of two months he withdrew from the church, and never rejoined it; but that first Baptist church in America still exists in Providence.

**Baptists in the United States:** a flourishing denomination of evangelical Christians who differ from others in respect to the mode of administering the rite of baptism. They reject sprinkling, and hold that immersion of the whole body is the only valid mode of baptism, and essential to its specific spiritual purpose; a mode, they claim, that was universally practised throughout Christendom for thirteen hundred years. Their Church government is democratic. Their writers trace their origin to the third century; and they have ever been the champions of civil and religious liberty. Until the Quakers arose, at the middle of the seventeenth century, they stood alone in the advocacy of "soul-liberty." (See *Quakers*.) There were none in America when Roger Williams founded Providence. That earnest man of unstable ecclesiastical views, believing the Anabaptists—those who believe in adult baptism only—were right in their view, caused one of the settlers to immerse him (Williams), when the latter immersed the layman and others in return, and they established a church at Providence, the first Baptist church in America. Within two months Williams, doubting the validity of the baptism he had received and given, for lack of constituted authority, left the Baptist church forever. But the Church and its principles remained, and the colony embodied in its first code of laws (1637) a provision for perfect toleration in matters of religion. In 1764, when numbering only about 5000 members in all America, the Baptists established their first college in Rhode Island. (See *Brown University*.) With one exception, the Baptists are the largest denomination of evangelical Christians in the United States, having (1876) about 1,600,000 members. It is said that the first article of the Amendments to our National Constitution,

guaranteeing religious liberty (offered in 1789), was introduced chiefly through the influence of the Baptist denomination.

**Barbarian Monarch, RECEPTION AT THE COURT OF A.** The authorities at Plymouth had made a treaty of friendship with Massasoit, King of the Wampanoags. (See *Massasoit*.) In the summer of 1621, Governor Bradford sent two envoys (Winslow and Hopkins) to the court of that monarch, at Pokanoket, near Narraganset Bay, forty miles from Plymouth. They were kindly received by the king, who renewed the covenant with the English. When he had taken the ambassadors into his dwelling, heard their message, and received presents from them, he put on the horseman's scarlet coat which they had given him, and a chain about his neck, which made his people "proud to behold their king so bravely attired." Having given a friendly answer to their message, he addressed his people who had gathered around him, saying, "Am not I Massasoit, commander of the country around you? Is not such a town mine, and the people of it? Will you not bring your skins to the English?" After this manner he named at least thirty places, and all gave their assent and applause. At the close of his speech he lighted tobacco for the envoys, and proceeded to discourse about England, declaring that he was "King James's man," and expressing his wonder how the king could live without a wife (for the queen was then dead). Massasoit had just returned home, and had no food to offer the envoys, who craved rest by sleep. "He laid us," wrote one of them, "on a bed with himself and his wife—they at the one end and we at the other; it being only plaunks laid a foot from the ground, and a thin mat upon them. Two more of his chief men, for want of room, pressed by and upon us, so that we were more wearied of our lodging than of our journey."

**Barbary Powers, HUMBLING OF THE.** On the southern shore of the Mediterranean Sea, in Northern Africa, were the independent states of Algiers, Tunis, Tripoli, and Morocco, known as the "Barbary Powers," a name derived from the Berbers, an ancient race who peopled the whole northern part of Africa. They employed piratical vessels in plundering those of other nations engaged in commerce in the Mediterranean. To secure immunity from these depredators, the United States and other nations paid tribute to their rulers. Just as the war with Great Britain broke out, in 1812, the Dey of Algiers, taking offence at not having received from the United States the precise articles in the way of tribute demanded, unceremoniously dismissed Tobias Lear, the American consul, declared war, and captured an American vessel and reduced her crew to slavery. Mr. Lear was compelled to pay the Dey \$27,000 for the safety of himself and family and a few Americans who were there, to save them all from being made slaves. Believing that Great Britain had almost annihilated the American navy, this African robber renewed his depredations upon American commerce, in violation of treaty obligations. Determined no

longer to submit to the demands and hostile conduct of this insolent ruler, the United States accepted his war-challenge, and in May, 1815, sent Commodore Decatur to the Mediterranean with a squadron to humble the Dey. As soon as Decatur had passed through the Strait of Gibraltar he found the Algerine corsairs cruising in search of American shipping. On June 17 the commodore met the Algerine flag-ship, of forty-four guns (the largest in the Algerine navy), and after a brief engagement captured her. He also captured another vessel of the Dey, with about six hundred men. With these prizes Decatur sailed with all his vessels for Algiers. His squadron consisted of the frigates *Guerriere*, *Macedonian*, and *Constellation*, the *Ontario* sloop of war, four brigs, and one schooner. On June 28 Decatur demanded of the Dey the instant surrender of all the American prisoners, full indemnification for all property destroyed, and absolute relinquishment of all claims to tribute from the United States thereafter. When the Dey was assured of the fate of a part of his fleet, the terrified robber hastened to comply with Decatur's demands. The commodore ordered the Algerine ruler to appear before him on the quarter-deck of his flag-ship, the *Guerriere*, to make his submission and restitution. He appeared with some of his officers of state and the captives to be released. There, on June 30, he signed a treaty, in accordance with Decatur's demands, and departed deeply humiliated. After this triumph at Algiers, Decatur sailed for Tunis, and demanded and received from the Bashaw, or ruler of that state, \$46,000, in payment for American vessels which he had allowed the British to capture in his harbor. Then the commodore proceeded to Tripoli, the capital of another of the Barbary States, and demanded (August, 1815) from the Bey, its ruler, \$25,000, for the same kind of injury to property, and the release of prisoners. The treasury of the Bey being nearly empty, Decatur accepted, in lieu of cash, the release from captivity of eight Danish and two Neapolitan seamen. This cruise gave full security to American commerce in the Mediterranean. It elevated the American character in the opinion of Europeans, for in the course of two months Decatur had accomplished, with a small squadron, in the way of humbling the pirates of Northern Africa, what the combined powers of the Christian world had not dared to attempt.

**Barber, FRANCIS**, a soldier of the Revolution, was born at Princeton, N. J., in 1751; died April 19, 1783. He graduated at the College of New Jersey (Princeton) in 1767, and in 1769 became rector of an academy at Elizabeth, N. J., and pastor of the Presbyterian church there. Leaving these positions, he joined the New Jersey line in the Continental army as major, in February, 1776. In November he was made a lieutenant-colonel, and was afterwards assistant-inspector-general under Baron Steuben. He was active in several battles until 1779, when he was adjutant-general in Sullivan's campaign, and was wounded in the battle at Newtown. (See *Sullivan's Campaign*.) In 1781 he was suc-

cessful in quelling the mutiny of Pennsylvania and New Jersey troops. He was with the army at Newburgh, in 1783, and on the day when Washington announced to the troops the preliminary treaty of peace he was killed by the falling of a tree while he was riding in the edge of a wood.

Barclay, ROBERT, of Ury, was born at Gordonston, Scotland, Dec. 23, 1648; died at Ury, Oct. 13, 1690. Entering a Scotch college in Paris, efforts were made to convert him to Roman Catholicism, when he returned home (1664), and three years afterwards, at the age of nineteen, he embraced the principles of the Society of Friends, or Quakers. In 1670 he vindicated them from false charges in a pamphlet entitled *Truth Cleared of Calumnies*. He also published, in Latin and English, *An Apology for the True Christian Divinity, as the same is held forth and preached by the people called, in scorn, Quakers*. Barclay dedicated it to King Charles, with great modesty and independence, and it was one of the ablest defences of the doctrines of his sect. His writings attracted public sympathy to his co-religionists. The first remonstrance of Friends against war was put forth by Barclay, in 1677, entitled a *Treatise on Universal Love*. Barclay made many religious journeys in England, Holland, and Germauy with William Penn, and was several times imprisoned on account of the promulgation of his doctrines. Charles II. was Barclay's friend through the influence of Penn, and made his estate at Ury a free barony in 1679, with the privilege of criminal jurisdiction. He was one of the proprietors of East Jersey, and in 1682 he was appointed its governor (see *New Jersey*); but he exercised the office by a deputy.

Bard, JOHN, M.D., was born at Burlington, N. J., Feb. 1, 1716; died at Hyde Park, N. Y., March 30, 1799. He was of a Huguenot family, and was for seven years a surgeon's apprentice in Philadelphia. Establishing himself in New York, he soon ranked among the first physicians and surgeons in America. In 1750 he assisted Dr. Middleton in the first recorded dissection in America. In 1788 he became the first president of the New York Medical Society; and when, in 1795, the yellow fever raged in New York, he remained at his post, though then nearly eighty years of age. Died in 1782.

Bard, SAMUEL, M.D., LL.D., son of Dr. John, was born in Philadelphia, April 1, 1742; died May 24, 1821. He studied at the University of Edinburgh, where he passed about three years, and was an inmate of the family of Dr. Robertson, the historian. Having graduated as M.D. in 1765, he returned home, and began the practice of medicine in New York city with his father. He organized a medical school, which was connected with King's (Columbia) College, in which he took the chair of Physic in 1769. In 1772 he purchased his father's business. He caused the establishment of a public hospital in the city of New York in 1791, and, while the seat of the National government was at New York, he was the physician of President Washington. He was also appointed President of the College of Physicians and

Surgeons in 1813. While combating yellow fever in New York in 1798, he took the disease, but by the faithful nursing of his wife he recovered. Dr. Bard was a skilful horticulturist as well as an eminent physician.

Barker, JACOB, financier, was born in Kennebuc County, Me., Dec. 7, 1779; died in Philadelphia, Dec. 27, 1871. He was of a Quaker family, and related by blood to the mother of Dr. Franklin. He began trade in New York

JACOB BARKER.

when quite young, and at twenty-one he owned four ships and a brig, and was largely engaged in commercial transactions. As a state senator, and while sitting in the Court of Errors, he gave an opinion in an insurance case in opposition to Judge Kent, and was sustained by the court. During the war of 1812 his ships were all captured. Being in Washington city during its sack by the British (August, 1814) he assisted Mrs. Madison in saving Stuart's portrait of Washington then hanging in the President's house, which was set on fire a few hours later. (See *Madison, Mrs.*) Barker was a banker, a dealer in stocks, and a general and shrewd financier for many years. He finally established himself in New Orleans in 1834, where he was admitted to the bar as a lawyer, and soon became a political and business leader there. He made and lost several fortunes during his long life. The Civil War wrought his financial ruin, and late in 1867 he was again in bankruptcy at the age of eighty-eight years.

Barlow, FRANCIS CHANNING, was born in Brooklyn, N. Y., Oct. 19, 1834, and graduated at Harvard University in 1855. After serving as a three months' man, he became lieutenant-colonel of a New York regiment, and as colonel distinguished himself in the campaign on the Peninsula in 1862. In the battle of Antietam he captured two stands of colors and three hundred men, and was soon afterwards wound-

ed and carried off the field for dead. He was made brigadier-general in September, and he commanded a division in the battle of Chancellorsville in May, 1863. He was wounded at Gettysburg, and was also distinguished in the Richmond campaign in 1864. He rendered essential service in the final struggle that ended with the surrender of Lee.

Barlow, JOEL, poet, was born at Reading, Conn., March 24, 1755; died near Cracow, Poland, Dec. 22, 1812. He graduated at Yale College in 1778; studied theology and was li-

JOEL BARLOW.

censed a Congregational minister; and from 1778 to 1783 was a chaplain in the army, writing patriotic songs and addresses to keep up the spirits of the soldiers. When the army was disbanded (1783) he settled at Hartford, where he began to study law, and was admitted to the bar in 1785. He had tried book-selling; and, in 1783, he established a weekly newspaper, entitled the *American Mercury*, published at Westford. His poetic talents becoming widely known, he was requested by several Congregational ministers to revise the phraseology of Watts's Hymns. He also attempted to revise the Bible in the same way. A cousin of Benedict Arnold, who would talk in doggerel rhyme, was asked by Barlow to give him a specimen of his poetic talent. Arnold looked the poet sharply in the face, and said, instantly,

"You've proved yourself a sinful cretor,  
You've murdered Watts and spiled the metre,  
You've tried the Word of God to alter,  
And for your pains deserve a halter."

With Trumbull, Dwight, Humphreys, and others, Barlow published a satirical poem entitled *The Anarchiad*. In 1787 he published his *Vision of Columbus*, a poem which obtained great popularity. Visiting Europe in 1788 as agent for the "Scioto Land Company" (which see), he published, in aid of the French Revolution, *Advice to the Privileged Orders*. To this he added, in 1791, a *Letter to the National Convention*, and the *Conspiracy of Kings*. As deputy of the London Constitutional Society, he presented an address to the French National Convention, and took up his abode in Paris, where he became a French citizen. Barlow

was given employment in Savoy, where he wrote his mock-heroic poem, *Hasty Pudding*. He was United States consul at Algiers in 1795-97, where he negotiated treaties with the ruler of that state, and also with the Bey of Tunis. He took sides with the French Directory in their controversy with the American envoys. (See *Directory, The French*.) Having made a large fortune by speculations in France, Mr. Barlow returned to the United States in 1805, and built himself an elegant mansion in the vicinity of Washington, and called his seat there "Kalorama." (See *Decatur*.) In 1807 he published the *Columbiad*, an epic poem. It was illustrated with engravings, some of them from designs by Robert Fulton, and published in a quarto volume in a style more sumptuous than any book that had then been issued in the United States. It was an enlargement of his *Vision of Columbus*. In 1811 he commenced the preparation of a *History of the United States*, when President Madison appointed him minister plenipotentiary to the French court. The next year he was invited to a conference with Napoleon at Wilna. His journey into Poland was fatal to his life. It was made in such haste and with so much exposure to cold and fatigue that he perished before reaching Wilna. (See *Song of the Guillotine*.)

**Barlow's Journey to Wilna.** Joel Barlow, who, as American minister in France, had labored incessantly to induce Napoleon to establish a good understanding with the United States, suddenly received a request from the emperor, through the Duke of Bassano (October, 1812), to come to his camp at Wilna in Poland for the nominal object of completing a commercial treaty with the United States. It was believed by the war party that some arrangements would be made by which French ships, manned by Americans, might be employed against Great Britain. But such hopes were soon extinguished. Barlow set out from Paris immediately, and, as the call was urgent, he travelled day and night, without rest. The fatigue and exposure brought on a disease of the lungs, and, in the cottage of a Polish Jew at Zarnowice, near Cracow, he suddenly expired (Dec. 4, 1812), from the effects of a violent congestion of the pulmonary organs. What the real object of Napoleon's call was may never be known.

**Barnard, HENRY, LL.D.**, promoter of education, was born at Hartford, Conn., Jan. 24, 1811. He graduated at Yale College in 1830; was admitted to the bar in 1835, and in 1837 was elected to a seat in the state Legislature. He was twice re-elected. In that body he effected a reorganization of the Connecticut State School System, and was for four years secretary of the Board of School Commissioners, during which he wrote a number of able reports on the public schools. His first report (1839) was pronounced by Chancellor Kent a "bold and startling document, founded on the most painstaking and critical inquiry." He edited and published the *Connecticut School*

*Journal.* From 1843 to 1849 he had charge of the public schools of Rhode Island, where he established a model system of popular education. Mr. Barnard took great interest in the subject of school-house architecture; and from 1850 to 1854 he was state superintendent of public schools of Connecticut. In 1855 he began the publication of the *American Journal of Education*. The same year he became president of the "American Association for the Advancement of Education," and was offered the presidency of two state universities. When the Bureau of Education was established at Washington, he was appointed the first commissioner (March, 1867). Dr. Barnard has written much and well on the subject of popular education. A London review, speaking of his work on *National Education in Europe* (1854), said, "He has collected and arranged more valuable information and statistics than can be found in any one volume in the English language." Mr. Barnard received the degree of LL.D. from Harvard, Yale, and Union colleges.

Barnard, JOHN GROSS, LL.D., was born in Essex County, Mass., May 19, 1815. He graduated at the West Point Military Academy in 1833, and entered the engineer corps. He was made captain in 1838; major in 1858; brevet brigadier-general of volunteers in 1861; lieutenant-colonel of regulars in 1863; brevet major-general of volunteers in 1864; brevet brigadier-general and brevet major-general of regulars, March, 1865; and colonel of the corps of engineers, regular army, Dec. 28, the same year. During the war with Mexico he fortified Tampico, and made surveys of the battlefields around the capital. In 1850-51 he was chief-engineer of the projected Tehuantepec railroad; and in 1855-56 he was superintendent of the West Point Military Academy. He was chief-engineer of the Army of the Potomac, 1861-62; also chief-engineer of the construction of the defences of the national capital from September, 1862, to May, 1864. He was chief-engineer of the "armies in the field," on General Grant's staff, from May, 1864, until Lee's surrender at Appomattox (which see) in April, 1865. General Barnard was mustered out of the volunteer service in 1866. He has published *The Gyroscope* and *Problems in Rotary Motions*, which evince profound mathematical investigation; also other works concerning the Civil War and its operations. The degree of LL.D. was conferred upon him by Yale College. Died in 1882.

**Barnburners**, a name given to radical or progressive politicians in the United States, and opposed to Hunkers (which see). It was given to the anti-slavery section of the Democratic party, especially in New York, which separated from the rest of the Democratic National Convention in 1846. They were opposed to certain corporations, and they desired to do away with *all* corporations. They received their name from the story of the man whose house was infested with rats, and who burned

it to the ground to get rid of the vermin. At about that time anti-rent outrages were committed, such as burning barns, etc. The radical Democrats sympathized with the Anti-renters, and the Hunkers called them "barn-burners." (See *Free-soil Party*.)

Barnes, ALBERT, Rev., was born at Rome, N. Y., Dec. 1, 1798; died in Philadelphia, Dec. 24, 1870. He graduated at Hamilton College in 1820; studied theology at Princeton; and was pastor of a Presbyterian church at Morristown, N. J., from 1823 to 1830. He then settled as pastor of a church of the New School Presbyterians in Philadelphia, which connection continued more than thirty years. He early took a decided stand against slavery. As a commentator on the Scriptures, Mr. Barnes has a high reputation, and his writings are greatly prized by the religious world on both sides of the Atlantic. It is estimated that the circulation of his *Notes on the New Testament*, in eleven volumes, up to 1876, was about 1,500,000 volumes. He published two works on slavery, entitled, respectively, *Inquiry into the Scriptural Views of Slavery* and *The Church and Slavery*. His contributions to periodicals, chiefly on religious subjects, were many and highly esteemed.

Barnes, JAMES, was born in Boston, Mass.; died at Springfield, Mass., Feb. 12, 1869. He graduated at West Point in 1829, and resigned in 1836. He became colonel of a Massachusetts volunteer regiment in 1861, and in November of that year was made brigadier-general in the Army of the Potomac, participating in its most exciting operations. He commanded a division at the battle of Gettysburg, and was severely wounded. General Barnes was breveted major-general in March, 1865.

Barney, JOSHUA, was born in Baltimore, Md., July 6, 1759; died at Pittsburgh, Penn., Dec. 1, 1818. Inclined to a seafaring life, he went to sea in his early youth; and when he was only sixteen years of age, an accident caused the care of his ship to devolve upon him. He met the exigency with courage and skill. He entered the Continental navy, at its first organization in 1775, as master's mate, in the sloop *Hornet*, and joined Commodore Hopkins. In an action between the Continental schooner *Wasp* and British brig *Tender*, in Delaware Bay, before he was seventeen years of age, his conduct was so gallant that he was made a lieutenant. In that capacity he served in the *Sachem* (Captain I. Robinson), and after a severe action with a British brig, in which his commander was wounded, young Barney brought her into port. Soon afterwards he was made a prisoner, but was speedily released, and in the *Andrea Doria* he was engaged in the defence of the Delaware River in 1777. He was again made prisoner, and was exchanged in August, 1778. A third time he was made captive (1779), and after his exchange was a fourth time made a prisoner, while serving in the *Saratoga*, 16, was sent to England, and confined in the famous Mill prison, from which he escaped in May, 1781. He was

retaken, and again escaped, and arrived in Philadelphia in March, 1782, where he took command of the *Hyder Ali*, 16, in which he captured the *General Monk*, of heavier force and metal. For this exploit the Legislature of Maryland presented him with a sword. At the close of the war he engaged in business on shore, but very soon took to the sea again. At Cape François, W. I., he received on his ship (1792) a large number of women and children who had escaped massacre by the blacks. His vessel was captured by an English cruiser, but Barney recaptured her from the prize crew. He was again captured by an English cruiser (1793), and imprisoned as a pirate. His ship and cargo were condemned. In 1794 he went with Monroe to France, and bore the American flag to the National Convention. (See *Monroe, Reception of*.) He was a warm partisan of the French, and entered their navy as commander of a squadron, but resigned his commission in 1802. When the war of 1812-15 broke out, he engaged in privateering with much success. He was appointed captain in the U. S. Navy in April, 1814, and placed in command of a flotilla of small vessels for the defence of the coasts of the Chesapeake. Driven up the Patuxent by a British fleet, he destroyed his vessels, and with over five hundred men he joined General Winder in the defence of Washington. (See *Bladensburg, Battle at*.) Barney was severely wounded (Aug. 24, 1814) near Bladensburg, and made a prisoner. Too much hurt to be removed as a prisoner, he was paroled and sent to Bladensburg, near by, on a litter. There he was joined by his wife and son and his own surgeon, and was con-

JOSHUA BARNEY.

veyed to his farm at Elkridge, Md. The bullet that gave him the wound, from which he never fairly recovered, is preserved in the Navy Department. The Corporation of Washington

voted him a sword, and the Legislature of Georgia their thanks. In May, 1815, Barney was sent on a mission to Europe, but suffering from his wound caused him to return in the fall. The bullet was never extracted during his life. Just as he was about to depart from Pittsburgh, Penn., with his family, to Kentucky, where he had bought land, he died. His remains repose in the Allegheny Cemetery.

Barré, COLONEL ISAAC, was born in Dublin, Ireland, 1726; died in London, July 20, 1802. His parents were French, his father being a

COLONEL BARRÉ.

small tradesman in Dublin. Isaac entered the British army at the age of twenty-one, and participated in the expedition against Louisburg in 1758. Wolfe was his friend, and appointed him major of brigade; and in May, 1759, he was made adjutant-general of Wolfe's army that assailed Quebec. He was severely wounded in the battle on the Plains of Abraham (which see), by which he lost the sight of one eye. Barré served under Amherst in 1760; and was the official bearer of the news of the surrender of Montreal to England. In 1761 he was promoted to lieutenant-colonel, and the same year he obtained a seat in Parliament, where he found himself in opposition to the ministry. For this offence he was deprived of his offices, given him as a reward for his services in America. He was the warm friend of the colonies, and made able speeches in Parliament in their favor. Barré was one of the supposed authors of the *Letters of Junius*. Strong in person, vigorous in mind, independent in thought and action, he was a dreaded opponent. During the last twenty years of his life he was blind.

Barré (M. DE LA), Expedition of. In 1684 M. de la Barré prepared for an expedition from Canada to the country of the Five Nations (which see). His forces consisted of 700 Canadians, 130 regular soldiers, and 200 Indians. Detained, by an epidemic disease among the French soldiers, at Fort Frontenac for six weeks,

he was compelled to conclude the campaign with a treaty. He crossed Lake Ontario for that purpose, and at a designated place was met by Oneidas, Onondagas, and Cayugas, the Mohawks and Senecas refusing to attend. Barré assumed much dignity. Seated on a chair of state, with his French and Indian officers forming a circle around him, he addressed himself to Garangula, the Onondaga chief, in a very haughty speech, which he concluded with a threat of burning the castles of the Five Nations, and destroying the Indians themselves, unless the satisfaction which he demanded was given. To this address Garangula made a cool but bold and decisive speech in reply. It made the haughty Barré very angry, and he retired to his tent, where, after deliberation, he prudently suspended his menaces. A treaty of peace was concluded; and two days afterwards Barré and his retinue departed for Canada. Garangula had said, while holding a calumet in his hand, as he answered the arrogant speech of the Frenchman, "Onnunteeo, I honor you, and all the warriors who are with me honor you. Your interpreter has finished your speech; I now begin mine. My words make haste to reach your ears; hearken to them, Onnunteeo. In setting out from Quebec you must have imagined that the scorching beams of the sun had burned down the forests which render our country inaccessible to the French, or that the inundations of the lakes had shut us up in our castles. But now you are undeceived; for I and my warriors have come to assure you that the Senecas, Cayugas, Onondagas, Oneidas, and Mohawks are yet alive." After ascribing Barré's pacific overtures to the impotency of the French, and repelling the charges brought against his countrymen, he added, "We are born free; we have no dependence on the Onnunteeo or the Corlear." (These names signify respectively the governors of Canada and of New York.) Garangula concluded his defiant speech by saying his voice was that of the Five Nations; and that when they buried the hatchet at a former treaty, in the presence of his predecessors, they planted a tree of peace in the same place, and that peaceful relations were then pledged to each other. "I do assure you," he said, "that our warriors shall dance to the calumet of peace under its branches, and that we shall never dig up the axe to cut it down until the Onnunteeo (the French) or the Corlear (the English) shall either jointly or separately endeavor to invade the country which the Great Spirit has given to our ancestors."

**Barron, JAMES**, commodore U. S. Navy, was born in Virginia in 1763; died at Norfolk, Va., April 21, 1851. On the formation of the U. S. Navy in 1798, Barron (who had begun his naval career under his father, commander of the Virginia Navy during the war for independence) was made a lieutenant, and served under Barry in the brief naval war with France. In 1799 he was made a captain and sent to the Mediterranean, under the command of his elder brother, Commodore Samuel Barron, one of the best disciplinarians in the service. James was in com-

mand of the frigate *Chesapeake* in 1807, and surrendered her to the *Leopard*, a British ship of war, for which he was court-martialled and sentenced to be suspended from service for five years without pay or emoluments. (See *Chesapeake and Leopard*.) During that suspension he entered the merchant service, and remained abroad until 1818, when an attempt was made to restore

JAMES BARRON.

him to duty in the naval service. Commodore Decatur and other officers resisted this, and a bitter correspondence between Barron and Decatur ensued. Barron challenged his antagonist to fight a duel. They met near Bladensburg (March 22, 1820), and Decatur was mortally wounded. Barron was severely hurt, but recovered after several months of suffering. During the latter years of his long life Barron held several important commands on shore.

**Barron, SAMUEL**, was a brother of Commodore James Barron, and was born at Hampton, Va., about 1763; died Oct. 29, 1810. He, like his brother, had a training in the navy under his father. In 1798 he commanded the *Augusta*, prepared by the citizens of Norfolk to resist the aggressions of the French. He took a conspicuous part in the war with Tripoli (which see); and in 1805 he commanded a squadron of ten vessels, with the *President* as the flag-ship. He assisted in the capture of the Tripolitan town of Derné, April 27, 1805. Barron soon afterwards relinquished his command to Captain John Rodgers, and on account of ill-health returned to the United States.

**Barry, JOHN**, a commodore of the U. S. Navy, was born at Tacumshane, Wexford Co., Ireland, in 1745; died in Philadelphia, Sept. 13, 1803. He went to sea while he was very young, became the commander of a ship, and gained considerable wealth. In February, 1776, he was appointed by Congress to command the *Lexington*, fourteen guns, which, after a sharp action, capt-

ured the tender *Edward*. This was the first vessel captured by a commissioned officer of the U. S. Navy. Barry was transferred to the frigate *Effingham*; and in the Delaware, at the head of four boats, he captured an English schooner, in

JOHN BARRY.

1777, without the loss of a man. He was publicly thanked by Washington. When Howe took Philadelphia, late in 1777, Barry took the *Effingham* up the Delaware with the hope of saving her, but she was burned by the British. Howe had offered him a large bribe if he would deliver the ship to him at Philadelphia, but it was scornfully rejected. Barry took command of the *Raleigh*, 32, in September, 1778, but British cruisers compelled him to run her ashore in Penobscot Bay. In the frigate *Alliance*, in 1781, he sailed for France with Colonel John Laurens, who was sent on a special mission; and afterwards he cruised successfully with that ship.

COMMODORE BARRY'S MONUMENT.

At the close of May he captured the *Atlanta* and *Trespass*, after a severe fight. Returning in October, the *Alliance* was refitted, and, after taking Lafayette and the Count de Noailles to France, Barry cruised in the West Indies very

successfully until May, 1782. After the reorganization of the U. S. Navy in 1794, Barry was named the senior officer. He superintended the building of the frigate *United States*, to the command of which he was assigned, but never entered upon the duty. Commodore Barry was buried in the cemetery of St. Mary's Roman Catholic Church on Fourth Street, Philadelphia. The large recumbent slab of white marble over his grave contains a long inscription.

Bartlett, JOHN RUSSELL, author, was born in Providence, R. I., Oct. 23, 1805. He was for six years of his early manhood cashier of the Globe Bank in Providence, and an active member of the "Franklin Society for the Cultivation of Science." He was also one of the projectors of the *Athenaeum* at Providence. In 1837 he engaged in business in New York City, and was for some time an efficient corresponding secretary of the New York Historical Society. Mr. Bartlett was associated with Albert Gallatin as a projector and founder of the American Ethnological Society. In 1850, in company with Mr. Welford, he established a foreign book-store in New York; and in that year he was appointed by President Taylor a commissioner, under the treaty of peace with Mexico in 1848, to settle the boundary-line between that country and the United States. He was engaged in that service until Jan. 7, 1853, making extensive surveys and explorations, with elaborate scientific observations; but, owing to a failure of Congress to make the necessary appropriations, he did not complete his work. He published a personal narrative of his experience in that region in 1854. In May, 1855, he was chosen Secretary of State of Rhode Island, which office he held until 1872, a period of seventeen years. He edited and published the *Records of the Colony of Rhode Island and Providence Plantations*, in ten volumes; also an *Index to the Acts and Resolves of the General Assembly of Rhode Island from 1758 to 1862*. In 1847 Mr. Bartlett published a little volume on the *Progress of Ethnology*; and in 1848 a *Dictionary of Americanisms*, since revised and enlarged. He also published a *Bibliography of Rhode Island, Literature of the Rebellion, Memoirs of Rhode Island Men, Primeval Man*, and several other works. Died May 28, 1886.

Bartlett, JOSIAH, M.D., a signer of the Declaration of Independence, was born at Amesbury, Mass., Nov. 21, 1729; died May 19, 1795. Educated in a common school and taught the science of medicine by a practitioner in his native town, young Bartlett began the business of a healer at Kingston, N. H., in 1750, and soon became quite eminent by his success. He was a member of the New Hampshire Legislature from 1765 until the breaking out of the war of the Revolution. In 1770 he was appointed by the royal governor lieutenant-colonel of the militia, but on account of his patriotic tendencies he was deprived of the office in 1775. He was a member of the Committee of Safety, upon whom for a time devolved the whole executive power of the government of the state. A delegate to Congress in 1775-76, he was the first to give his

vote for the Declaration of Independence, and its first signer after the President of Congress. He was with Stark in the Bennington campaign (see *Bennington, Battle of*), in 1777, as agent of the state to provide medicine and other necessities for the New Hampshire troops. In Congress again in 1778, he was very active in committee duties; and in 1779 he was appointed chief-justice of the Common Pleas in his state. In 1782 he was a judge of the Superior Court of New Hampshire, and chief-justice in 1788. Judge Bartlett retired from public life in 1794, on account of feeble health, having been president of the state from 1790 to 1793, and, under the new constitution, governor in 1793. He was the chief founder and the president of the New Hampshire Medical Society, and received the honorary degree of M.D. from Dartmouth College.

Bartlett, WILLIAM FRANCIS, was born at Haverhill, Mass., June 6, 1840, and graduated at Harvard in 1862. He entered the army of volunteers as captain in the summer of 1861; was engaged in the battle of Ball's Bluff (which see), and lost a leg in the siege of Yorktown in 1862. He was made colonel of a Massachusetts regiment in November, 1862, and took part in the capture of Port Hudson in 1863. In the siege of Petersburg (1864) he commanded a division of the Ninth Corps, and at the explosion of the mine there he was made prisoner, but exchanged in September. In 1865 he was breveted major-general of volunteers.

Barton, WILLIAM, was born in Providence, R. I., in 1747; died there Oct. 22, 1831. Holding the rank of lieutenant-colonel in the Rhode Island militia, he, with a small party, crossed

WILLIAM BARTON.

Narraganset Bay in the night (July 10, 1777) and seized and carried away the British general, Prescott. (See *Prescott, Capture of*.) For this service Congress gave him a sword and a commission of colonel in the Continental army. He was wounded in an action at Bristol Ferry in August, 1778, and was disabled from further ser-

vice in the war. Colonel Barton was a member of the Rhode Island Convention which finally adopted the National Constitution.

Bartram, WILLIAM, naturalist, was born at Kingsessing, Penn., Feb. 9, 1739; died July 22, 1823. He began business in North Carolina in 1761, and became a devoted student of natural history. His father, John, a native of Chester County, Penn., was the founder of the first botanical garden in America. It was on the banks of the Schuylkill. William accompanied his father, when the latter was seventy years of age, in a botanical excursion and exploration of East Florida, and resided some time on the banks of the St. John's River, returning home in 1771. He was employed by Dr. Fothergill of London, in 1773-78, in botanical explorations and collections in Florida, Georgia, and South Carolina. Mr. Bartram was a member of the American Philosophical Society and other scientific associations in the United States and Europe. In 1790 he published an account of his travels in the Gulf region, in which he gave an account of the Creek, Choctaw, and Cherokee Indians. Mr. Bartram made the most complete table of American Ornithology previous to the work of Wilson, and to him we are indebted for a knowledge of many curious and beautiful plants peculiar to North America.

Bastidas, RODERIGO DE, with Juan de la Cosa, sailed towards the Western Continent with two ships in 1502, and discovered the coast of South America from Cape de Vela to the Gulf of Darien. Ojeda, with Amerigo Vesputius, went in the same course soon afterwards, ignorant of this expedition of Bastidas, touched at the same places, and proceeded to Hispaniola, or Santo Domingo.

Baton Rouge, BATTLE AT. General Williams was in command at Baton Rouge in August, 1862. General Van Dorn sent General J. C. Breckinridge to seize the post. He expected to be aided by the "ram" *Arkansas* (which see). He attacked the Nationals vigorously on the morning of Aug. 5. Williams had only about 2500 men to oppose the assailants; Breckinridge had 5000. The first blow struck fell upon Maine, Indiana, and Michigan troops, who were pushed back; when others from Connecticut, Massachusetts, and Wisconsin, with two sections of a battery, hastened to their relief. The battle raged about two hours. The Twenty-first Indiana lost all its field officers. General Williams then took command of the regiment, and was leading them on, when he was killed by a bullet that passed through his breast. The Nationals fell back. The Confederates, dreadfully smitten, did likewise, and retreated. Baton Rouge was soon afterwards evacuated by the Nationals.

Battle of the Kegs. In January, 1778, while the channel of the Delaware River was nearly free of ice, some Whigs at Bordentown, N. J., sent floating down the stream some torpedoes in the form of kegs filled with gunpowder, and so arranged with machinery that on rubbing against an object they would explode. It was hoped

that some of these torpedoes might touch a British war-vessel, explode, and sink her. One of them, touching a piece of floating ice in front of the city, blew up, and created intense alarm. For twenty-four hours afterwards not a thing was seen floating on the bosom of the river without being fired at by musket or cannon. This event greatly amused the Americans, and Francis Hopkinson, one of the signers of the Declaration of Independence, wrote a satirical poem entitled the "Battle of the Kegs." The following is a copy of this famous poem :

BATTLE OF THE KEGS.

Gallants attend, and hear a friend  
Trill forth harmonious ditty;  
Strange things I'll tell, which late befell  
In Philadelphia city.

'Twas early day, as poets say,  
Just when the sun was rising,  
A soldier stood on log of wood,  
And saw a thing surprising.

As in amaze he stood to gaze  
(The truth can't be denied, sir),  
He spied a score of kegs, or more,  
Come floating down the tide, sir.

A sailer, too, in jerkin blue,  
The strange appearance viewing,  
First d—d his eyes, in great surprise,  
Then said, "Some mischief's brewing.

"These kegs, I'm told, the rebels hold,  
Pack'd up like pickled herring;  
And they've come down t' attack the town  
In this new way of ferry'ng."

The soldier flew, the sailor too,  
And, scared almost to death, sir,  
Wore out their shoes to spread the news,  
And ran till out of breath, sir.

Now up and down, throughout the town,  
Most frantic scenes were acted;  
And some ran here, and others there,  
Like men almost distracted.

Some fire cried, which some denied,  
But said the earth had quaked;  
And girls and boys, with hideous noise,  
Ran through the streets half naked.

Sir William\* he snog as a flea,  
Lay all this time a snoring;  
Nor dream'd of harm as he lay warm  
In bed with Mrs. L—ng †

Now, in a fright, he starts upright,  
Awaked by such a clatter;  
He rubs both eyes, and boldly cries,  
"For God's sake, what's the matter?"

At his bedside he then espied  
Sir Erskine, ‡ at command, sir;  
Upon one foot he had one boot,  
And t'other in his hand, sir.

"Arise! arise!" Sir Erskiee cries;  
"The rebels—more's the pity—  
Without a boat, are all afloat,  
And ranged before the city.

"The motley crew, in vessels new,  
With Satan for their guide, sir,  
Pack'd up in bags, or wooden kegs,  
Come driving down the tide, sir.

"Therefore prepare for bloody war;  
These kegs must all be routed;  
Or surely we despised shall be,  
And British courage doubted."

The royal band now ready stand,  
All ranged in dread array, sir,  
With stomach stout to see it out,  
And make a bloody day, sir.

\* Sir William Howe.

† The wife of a Boston refugee, who was then a commissary of prisoners in Philadelphia. He is represented by some as being second only to Cunningham in cruelty, while others speak of him as an honorable man.

‡ Sir William Erskine.

The cannons roar from shore to shore,  
The small-arms loud did rattle;  
Since wars began I'm sure no man  
E'er saw so strange a battle.

The rebel dales, the rebel vales,  
With rebel trees surrounded,  
The distant woods, the hills and floods,  
With rebel echoes sounded.

The fish below awam to and fro,  
Attack'd from every quarter;  
Why sure (thought they), the devil's to pay  
'Mong folks above the water.

The kegs, 'tis said, though strongly made  
Of rebel staves and hoops, sir,  
Could not oppose their powerful foe,  
The cou'ring British troops, sir.

From morn to night these men of might  
Display'd amazing courage,  
And when the sun was fairly down,  
Retired to sup their porridge.

A hundred men, with each a pen,  
Or more, upon my word, sir,  
It is most true, would be too few,  
Their valor to record, sir.

Such feats did they perform that day  
Against these wicked kegs, sir,  
That, years to come, if they get home,  
They'll make their boasts and brags, sir.

Battles. The principal battles in which the people of the United States have been engaged, as colouists and as a nation, are as follows:

FRENCH AND INDIAN WAR.

Great Meadows,	May 28, 1754
Fort Necessity,	July 4, "
Fort Beau Sejour,	June 16, 1755
Fort Gaspereaux,	" 17, "
Monongahela,	July 9, "
Bloody Pond (near Lake George),	Sept. 8, "
Head of Lake George,	" 8, "
Oswego,	Aug. 14, 1756
Fort William Henry,	July 6, 1757
Near Ticonderoga,	" 6, 1758
Ticonderoga,	" 8, "
Loansburg,	" 26, "
Fort Frontenac,	Aug. 27, "
Allegheny Mountains,	Sept. 21, "
Fort Niagara,	July 25, 1759
Montmorenci,	" 31, "
Plains of Abraham,	Sept. 13, "
Sillery,	April 28, 1760

OLD WAR FOR INDEPENDENCE.

Lexington,	April 19, 1775
Bunker's (Breed's) Hill,	June 17, "
Near Montreal (Ethan Allen captured),	Sept. 25, "
St. John's, Siege and Capture of,	Oct. & Nov. "
Great Bridge,	Dec. 8, "
Quebec,	" 31, "
Moore's Creek Bridge,	Feb. 27, 1776
Boston (Evacuation of),	Mar. 17, "
Cedar Rapids,	May 9, "
Three Rivers,	June 8, "
Fort Sullivan (Charleston harbor),	" 28, "
Long Island,	Aug. 27, "
Barlem Plains,	Sept. 16, "
White Plains,	Oct. 28, "
Fort Washington,	Nov. 16, "
Trenton,	Dec. 26, "
Princeton,	Jan. 3, 1777
Hubbardtoo,	July 7, "
Oriskany,	Aug. 6, "
Bennington,	" 16, "
Brandywine,	Sept. 11, "
Bemis's Heights (first), Sept. 19; (second),	Oct. 7, "
Paoli,	Sept. 20, "
Germantown,	Oct. 4, "
Fort Clinton and Montgomery,	" 6, "
Fort Mercer,	" 22, "
Fort Mifflin,	Nov. 16, "
Moumouth,	June 28, 1778
Wyoming,	July 4, "
Quaker Hill (R. I.),	Aug. 29, "
Savannah,	Dec. 29, "
Kettle Creek,	Feb. 14, 1779
Erier Creek,	Mar. 3, "
Stone Ferry,	June 20, "
Stony Point,	July 16, "

Paulse's Hook, . . . . .	Aug. 19, 1779
Chemung (near Elmira, N. Y.), . . . . .	" 29, "
Savannah, . . . . .	Oct. 9, "
Charleston (Siege and Surrender of), . . . . .	May 12, 1780
Springfield (N. J.), . . . . .	June 23, "
Rocky Mount (N. C.), . . . . .	July 30, "
Hanging Rock (N. C.), . . . . .	Aug. 6, "
Sanders's Creek (near Camden, S. C.), . . . . .	" 16, "
King's Mountain (S. C.), . . . . .	Oct. 7, "
Fish Dam Ford, . . . . .	Nov. 18, "
Blackstocks, . . . . .	" 20, "
Cowpens, . . . . .	Jan. 17, 1781
Guilford, . . . . .	Mar. 15, "
Hobkirk's Hill, . . . . .	April 25, "
Ninety-six (Siege of), . . . . .	May & June, "
Augusta (Siege of), . . . . .	" " " " " "
Jamestown, . . . . .	July 9, "
Eutaw Spring, . . . . .	Sept. 8, "
Yorktown (Siege of), . . . . .	Sept. & Oct. "

WAR WITH THE INDIANS.

Miami River, . . . . .	Oct. 19 & 22, 1790
St. Clair's Defeat, . . . . .	Nov. 4, 1791
Fort St. Clair, . . . . .	" 6, 1792
Near Fort St. Clair, . . . . .	Oct. 17, 1793
Fort Recovery, . . . . .	Jan. 30, 1794
Maumee Rapids (Fallen Timber), . . . . .	Aug. 20, "
Tippecanoe, . . . . .	Nov. 7, 1811

SECOND WAR FOR INDEPENDENCE—1812-15.

Fort Mackinaw, . . . . .	July 17, 1812
Brownstown, . . . . .	Aug. 4, "
Maguaga, . . . . .	" 9, "
Chicago (Massacre at), . . . . .	" 16, "
Detroit (Surrendered), . . . . .	" 16, "
Fort Harrison, . . . . .	Sept. 4 & 5, "
Fort Madison, . . . . .	Sept. 4-6, "
Gananoqui, . . . . .	Sept. 21, "
Queenstown Heights, . . . . .	Oct. 13, "
St. Regis, . . . . .	" 23, "
Fort Niagara, . . . . .	Nov. 21, "
Black Rock, . . . . .	" 28, "
French Town (River Raisin), . . . . .	Jan. 18-22, 1813
Elizabethtown (Canada), . . . . .	Feb. 7, "
Ogdensburg, . . . . .	" 22, "
York (Toronto), . . . . .	April 27, "
Fort Meigs, . . . . .	May 5, "
Fort George, . . . . .	" 27, "
Sackett's Harbor, . . . . .	" 29, "
Stony Creek, . . . . .	June 6, "
Hampton (Deceuse of), . . . . .	" 13, "
Crane Island, . . . . .	" 22, "
Beaver Dams, . . . . .	" 23, "
Near Fort George, . . . . .	July 8, "
Black Rock, . . . . .	" 11, "
Fort George (Defence of Outworks), . . . . .	" 17, "
Fort Stephenson, . . . . .	Aug. 2, "
Stonington (Bombardment of), . . . . .	Aug. 9-11, "
Fort Mims, . . . . .	Aug. 30, "
Thames, . . . . .	Oct. 5, "
French Creek, . . . . .	Nov. 1 & 2, "
Tallasehatche, . . . . .	Nov. 3, "
Talladega, . . . . .	" 9, "
Chrysler's Field, . . . . .	" 11, "
Hillabee Town, . . . . .	" 18, "
Autlose, . . . . .	" 29, "
Fort Niagara, . . . . .	Dec. 19, "
Econochaca, . . . . .	" 23, "
Black Rock, . . . . .	" 30, "
Emucfau (Ala.), . . . . .	Jan. 22, 1814
Enotochopco (Ala.), . . . . .	" 24, "
Camp Defiance, . . . . .	" 27, "
Longwoods, . . . . .	Mar. 4, "
Horseshoe Bend, . . . . .	" 27, "
La Colle Mills, . . . . .	" 30, "
Fort Oswego, . . . . .	May 4 & 6, "
Sandy Creek, . . . . .	May 30, "
Odell Town, . . . . .	June 28, "
Fort Erie, . . . . .	July 3, "
Chippewa, . . . . .	" 5, "
Champlain, . . . . .	July 18 & 19, "
Lundy's Lane (Niagara Falls), . . . . .	July 25, "
Fort Mackinack (Mackinaw), . . . . .	Aug. 4, "
Fort Erie, . . . . .	Aug. 13-15, "
Bladensburg, . . . . .	Aug. 24, "
Plattsburg, . . . . .	Sept. 11, "
North Point, . . . . .	" 12, "
Fort McHenry (Bombardment of), . . . . .	" 13, "
Fort Bower, . . . . .	" 15, "
Fort Erie (Sortie from), . . . . .	" 17, "
Chippewa, . . . . .	Oct. 16, "
Lyon's Creek, . . . . .	" 19, "
Pensacola, . . . . .	Nov. 7, "
Villier's Plantation (New Orleans), . . . . .	Dec. 23, "
Rodriguez's Canal (New Orleans), . . . . .	Jan. 1, 1815

New Orleans, . . . . .	Jan. 8, 1815
Fort St. Philip, . . . . .	" 9, "
Point Petre (Ga.), . . . . .	" 13, "

BLACK HAWK WAR (which see).

May to August, 1832.

SEMINOLE WAR—1835-42.

Micanopy, . . . . .	June 9, 1836
Fort Drauc, . . . . .	Aug. 21, "
Wahoo Swamp, . . . . .	Nov. 17, 18, & 21, "
Okechobee Lake, . . . . .	Dec. 26, 1837
Carlooshatchee, . . . . .	July 23, 1839
Fort King, . . . . .	April 28, 1840
Near Fort Brooke, . . . . .	Mar. 2, 1841
Big Hammock, . . . . .	April 19, 1842

WAR AGAINST MEXICO.

Fort Brown, . . . . .	May 3, 1846

Hatcher's Run (Va.)	Feb. 5, "
Five Forks (Va.)	Mar. 31 & Apr. 1, "
Averasborough (N. C.)	Mar. 16, "
Bentonville (N. C.)	" 18, "
Petersburg (Carried by Assault)	April 2, "
Appomattox Court-house (near)	" 9, "
Mobile (Capture of)	" 8-12, "

There has been, from colonial times, desultory warfare quite frequently between the English-American colonists and the Indian tribes. The most formidable of these encounters were the Pequot war, the Esopus war, King Philip's war, Poutiac's war, the Creek and Seminole war, and wars with the Sioux. (See all of these under the respective titles.)

Bayard, GEORGE D., was born in New York in 1835; killed at Fredericksburg, Va., Dec. 14, 1862. He graduated at West Point in 1856, and entered the cavalry corps. Early in April, 1861, he was made brigadier-general of volunteer cavalry, and was attached to the Pennsylvania Reserves (which see). He participated in the battles fought by that eminent body of soldiers. General Bayard served under McDowell and Pope in Virginia; and, after the battle of Antietam Creek, he commanded a cavalry brigade, making frequent attacks on the retreating Confederates, and driving them from the gaps of the Blue Ridge. He was chief of cavalry of the Third Army Corps, and was engaged in the battles of Cedar Mountain, Mauassas, and in the defection of Washington City. In the battle of Fredericksburg, where he fell, he was attached to Franklin's corps.

Bayard, JAMES ASHTON, statesman, was born

in Philadelphia, July 23, 1767; died in Wilmington, Del., Aug. 6, 1815. He was of Huguenot descent; graduated at Princeton in 1784; studied law under General Joseph Reed; was admitted to the bar in 1787, and, settling in Delaware, soon acquired a high reputation as a lawyer. Mr. Bayard was a member of Congress from 1797 to 1803, and a conspicuous leader of the Federal party. In 1804 he was elected to the United

JAMES ASHTON BAYARD.

States Senate, in which he distinguished himself in conducting the impeachment of Senator Blount. He was chiefly instrumental in securing the election of Jefferson over Burr in 1800; and made, in the House of Representatives, in 1802, a powerful defence of the existing judiciary system, but which was overthrown. He was in the Senate when war was declared against Great Britain in 1812. In May, 1813, he left the United States on a mission to St. Petersburg, to treat for peace with Great Britain under Russian mediation (which see). The mission was fruitless. In January, 1814, he went to Holland, and thence to England. At Ghent, during that year, he, with J. Q. Adams, Clay, Gallatin, and Russell, negotiated a treaty of peace with England (which see). He was preparing to go to England as a commissioner under the treaty, when an alarming illness seized him, and he returned home early in 1815. He died soon after his arrival.

Baylis's Creek, BATTLE AT (1864). General Hancock proceeded to attack the Confederates in front of Deep Bottom on the James River Aug. 12, 1864. His whole force was placed on transports at City Point, and its destination reported to be Washington. This was to deceive the Confederates. That night it went up the James River; but so tardy was the debarkation that the intended surprise of the Confederates was not effected. Hancock pushed some of his troops by Malvern Hill to flank the Confeder-

ates' defence behind Baylis's Creek, while ten thousand men were sent, under General Barlow, to assail their flank and rear. There were other dispositions for attack; but the delay had allowed Lee to send reinforcements, for the movement seemed to threaten Richmond. On the morning of the 16th, General Birney, with General Terry's division, attacked and carried the Confederate lines, and captured three hundred men. The Confederates soon rallied and drove him back. Another part of the attacking force was driven back, and the attempt failed.

**Baylor, GEORGE**, a cavalry officer in the Revolution, was born in Hanover County, Va.; died in Barbadoes in 1784. Soon after Washington's arrival at Cambridge in 1778, he appointed (Aug. 15) young Baylor as his aid. He was a participant in the battle at Trenton (which see), and carried the news of the victory to Congress, when that body presented him with a horse caparisoned for service, and made him colonel of dragoons (Jan. 8, 1777). A portion of his command were taken by surprise and massacred (see *Baylor's Regiment Surprised*) in September, 1778. Colonel Baylor served until the close of the war.

**Baylor's Regiment Surprised.** On the night of Sept. 27, 1778, Lieutenant-colonel Baylor's troop of horse, lying in barus, unarmed, near old Tappan, were surprised at midnight by the British general Grey, while asleep. The British had silently cut off a sergeant's patrol and fell suddenly upon the sleeping troopers. The latter, without arms and powerless, asked for quarter. Grey had given special orders not to grant quarter, and out of one hundred and four prisoners sixty-seven were killed or wounded. Some of the men were bayoneted in cold blood. Lieutenant-colonel Baylor was wounded and made prisoner, and seventy horses were butchered.

**Bayonne Decree.** Bonaparte's response to the Embargo Act of 1807 (which see) was issued from Bayonne, April 17, 1808. He was there to dethrone his Spanish ally to make place for one of his own family. His decree authorized the seizure and confiscation of all American vessels in France, or which might arrive in France. It was craftily answered, when Armstrong remonstrated that, as no American vessels could be lawfully abroad after the passage of the Embargo Act, those pretending to be such must be British vessels in disguise.

**Bayous in the Yazoo River.** After the repulse of Sherman at Chickasaw Bayou (which see), other efforts were made by troops and gunboats to gain the rear of Vicksburg. About five hundred troops under General Ross, with two of Porter's gunboats and two mortars, made an expedition for the purpose. Passing through bayous, they got into the Tallahatchie, and not far from its junction with the Yalabusha, near the village of Greenwood, they encountered a strong work called Fort Pemberton (March 11, 1863). After a severe struggle for several days the Nationals were compelled to withdraw. Other expeditions were undertaken in the same

region; and the story of the campaign among these side waters of the Mississippi, for some time in the spring of 1863, forms one of the most stirring and romantic chapters in the history of the Civil War.

**Bay State**, the popular name of Massachusetts, the colonial corporate title of which was "The Massachusetts Bay." This name it bore until the adoption of the National Constitution in 1788.

**Beatty, JOHN, M.D.**, was born in Bucks County, Penn., Dec. 10, 1749; died at Trenton, N. J., May 30, 1826. He graduated at Princeton in 1769; studied medicine with Dr. Rush; took up arms, and became a colonel in the Pennsylvania line. He was made prisoner at Fort Mifflin (which see), and suffered much. In 1778 he succeeded Elias Boudinot as commissary-general of prisoners, but resigned in 1780. He was a delegate in the Congress of the Confederation, 1783-85, and of the National Congress, 1793-95. He was Secretary of State for New Jersey for ten years—1795-1805.

**Beauharnais, CHARLES, MARQUIS DE**, a natural son of Louis XIV. He was governor of New France (Canada) from 1726 to 1746, and held the rank of commodore in the French navy. On the breaking-out of war with England (1745), he built the fortress of Crown Point, which was afterwards enlarged and strengthened by Amherst. (See *Crown Point*.)

**Beaumarchais, PIERRE AUGUSTIN CARON DE**, born in Paris, Jan. 24, 1732; died May 19, 1799. In his extreme youth he evinced great mechanical and musical talents. He assisted his father in watch-making, and afterwards became teacher of the harp to the daughters of Louis XV. By a marriage with the young widow of an old government officer, Caron obtained a profitable situation. She soon died. In 1761 he purchased a commission as secretary to the king, a sinecure which conferred noble rank on its possessor, and the name of Beaumarchais, which he had assumed, was legally confirmed. Entering into mercantile speculations, he soon acquired a large fortune and lucrative offices. In April, 1768, having acquired some fame as a dramatic critic, he married a rich widow. His literary ventures did not succeed at first. In 1770 a wealthy financier, with whom he had made a valuable contract, died. His heirs contested the contract, and for seven years Beaumarchais carried on the suit, and won, after making wonderful displays of oratorical powers. Just afterwards appeared his famous play, the *Barber of Seville*. He was engaged in some scandalous trials. In September, 1775, he submitted a memorial to the French monarch, in which he insisted upon the necessity of the French government's secretly aiding the English-American colonies; and as agent of his government he passed some time in England, where he became acquainted with Arthur Lee, which acquaintance led to diplomatic and commercial relations with the Continental Congress. (See *France, Relations with*.) He conducted the business of supplying the Americans with munitions

of war with great ability, and afterwards became involved in a lawsuit with them. In 1784 he produced his *Marriage of Figaro*, which was violently opposed by the court. His political tendencies were republican, and he sympathized with the French revolutionists, but did not enter with his usual enthusiasm into their measures. Suspected by the Jacobins, he was compelled to leave the country, and his property was confiscated. He was finally permitted to return to France, but could not recover his wealth. Beaumarchais lived in comparative poverty until May, 1799, when he was found dead in his bed, having died of apoplexy. A suit which he had commenced against the United States for payment for supplies furnished to the Continental Congress, between 1776 and 1779, under the mercantile firm name of Roderique Hortales, & Co., continued about fifty years, and resulted in 1835 in the payment to his heirs by the United States of the sum of about two hundred thousand dollars.

Beaumont, WILLIAM, M.D., was born at Lebanon, Conn., in 1785; died in St. Louis, April 25, 1853. In 1812 he was made assistant-engineer in the United States Army, and served until 1837. While stationed at Michilimackinac (Mackinaw) in 1825, he treated Alexis St. Martin, a Canadian, who had a gunshot wound in his side; the wound healed without closing up, exposing to view the operations of the stomach in its digestive functions. Dr. Beaumont made careful experiments with this man, for several years, upon the process of digestion, and published the result of his researches. St. Martin was yet living in July, 1879, or fifty-four years after the accident. The orifice exposing the stomach had never closed. He was living in Canada, at the age of eighty-seven years, too poor, it was said, to permit him to join his aged wife in Massachusetts, by whom he had had fourteen children.

Beauregard, PETER GUSTAVUS TOUTANT, a Confederate general, was born on a plantation near New Orleans in 1817. He graduated at

P. G. T. BEAUREGARD.

West Point Military Academy in 1838, and entered the artillery service, but was transferred to the engineer corps. He won the brevets of captain and major in the war with Mexico, and

was wounded at Chapultepec (which see); also at the taking of the city of Mexico. He left the service of the United States in 1861, and joined the Confederates in February. He conducted the siege of Fort Sumter, and was afterwards active as a leader in Virginia and other parts of the late slave-labor states. Beauregard was made brigadier-general in the insurgent army Feb. 20, 1861, and major-general after the battle of Bull's Run (which see) in July. He took command of the Army of the Mississippi, under General A. S. Johnston, and directed the battle of Shiloh in April, 1862, after the death of Johnston. (See *Shiloh*.) He successfully defended Charleston in 1862-63, and in May, 1864, he joined Lee in defence of Petersburg and Richmond. As commander of the forces in the Carolinas in 1865, he joined them with those of General J. E. Johnston, and surrendered them to Sherman. At the close of the war, with the full rank of general in the Confederate service, he took up his abode in New Orleans.

**Beauregard's Proclamation.** P. G. T. Beauregard, a native of Louisiana, who was commissioned a brigadier-general by President Davis, was placed in command of the gathering army of Confederates at Manassas Junction—the "Department of Alexandria." He took the command at the beginning of June, 1861, and issued a proclamation which was calculated and intended to "fire the Southern heart." He said: "A reckless and unprincipled tyrant has invaded your soil. Abraham Lincoln, regardless of all moral, legal, and constitutional restraints, has thrown his abolition hosts among us, who are murdering and imprisoning your citizens, confiscating and destroying your property, and committing other acts of violence and outrage too shocking and revolting to humanity to be enumerated. All rules of civilized warfare are abandoned, and they proclaim by their acts, if not on their banners, that their war-cry is 'Beauty and Booty.' All that is dear to man—your honor, and that of your wives and daughters, your fortunes, and your lives—are involved in this monstrous contest." He then, as "General of the Confederate States, commanding at Camp Pickens, Manassas Junction," invited the people of Virginia to a vindication of their patriotism, "by the name and memory of their revolutionary fathers, and by the purity and sanctity of their domestic firesides, to rally to the standard of their state and country," and by every means in their power "compatible with honorable warfare, to drive back and expel the invaders from the land." The speech of President Davis at Richmond (see *Davis, Reception of, at Richmond*) and this proclamation of Beauregard's were lauded by the Secessionists at Washington and Baltimore as having the ring of true metal.

**Beaver Dams, AFFAIR AT THE.** After leaving Fort George (see *Fort George, Capture of*) the British established a strong post and depot of supplies at the Beaver Dams, among the hills eighteen miles west of Queenstown, and made a stone house belonging to De Con a sort of citadel for the garrison. Dearborn determined to at-

tempt the capture of this post and its stores, and for that purpose he detached five hundred and seventy infantry, some cavalry under Major Chapin, a few artillerymen, and two field-pieces, all under the command of Lieutenant-colonel Charles G. Børstler. They marched up the Niagara River to Queenstown (June 23, 1813), and the next morning pushed off westward. Their march appears to have been discovered by the British, for while Chapin's mounted men were in the advance and marching among the hills, Børstler's rear was attacked by John Brant, at the head of four hundred and fifty Mohawk and Caughnawaga Indians, who lay in ambush. Chapin was instantly called back, and the Americans in a body charged upon the Indians and drove them almost a mile. Then Børstler hesitated, and the Indians, rallying, bore upon his flank and rear, and kept up a galling fire at every exposed situation. The Americans pushed forward over the Beaver Dam Creek, fighting the dusky foe at a great disadvantage, and made conscious that they were almost surrounded by them. After keeping up this contest for about three hours, Børstler determined to abandon the expedition, when he found himself confronted by an unexpected force. Mrs. Laura Secord, a slight and delicate woman, living at Queenstown, became acquainted with Dearborn's plans, and at the time when Børstler and his forces left Fort George—a hot summer evening—she made a circuitous journey of nineteen miles on foot to the quarters of Lieutenant-colonel Fitzgibbon (who was in command of some regulars at the Beaver Dams) and warned him of his danger. Thus forewarned, he had ordered the Indian ambush, and, displaying his men to the best advantage after Børstler had crossed the creek, he boldly demanded the surrender of the Americans to Major De Haven, commander of the district. For this purpose Fitzgibbon bore a flag himself. He falsely assured Børstler that his party was only the advance of fifteen hundred British troops and seven hundred Indians, under Lieutenant-colonel Bishopp, and that the barbarians were so exasperated that it would be difficult to restrain them from massacring the Americans. Børstler, deceived and alarmed, agreed to surrender on certain conditions. De Haven, whom Fitzgibbon had sent for, came up with two hundred men, and Børstler and five hundred soldiers were made prisoners. It had been agreed that the captives should be protected and sent back on parole. This promise was broken. The Indians plundered the captive troops, and the latter were sent to Burlington Heights and kept prisoners of war. When Børstler was first attacked by the Indians, he sent a courier back to Dearborn for aid, and that commander sent Colonel Christie with three hundred men to reinforce him. When they reached Queenstown, they heard of the surrender, and hastened back to camp with the sad intelligence. The British advanced upon Queenstown, and, occupying that place, soon invested Fort George.

Beck, THEODORIC ROMEYN, was born at Schenectady, N. Y., Aug. 11, 1791; died at Utica,

N. Y., Nov. 19, 1855. He was graduated at Union College in 1807; studied medicine under Dr. Hosack, and began the practice of it in Albany. In 1813 he prepared a report of American minerals (believed to be the first public systematic account of the mineral deposits of the United States) for the Albany Society of Arts. In 1815 he was appointed Professor of the Institutes of Medicine in the College of Physicians and Surgeons in western New York, and from 1826 to 1836 he was Professor of Medical Jurisprudence at Fairfield Medical College. From 1836 to 1840 he was Professor of *Materia Medica* there, and held the same professorship in the Albany Medical College from 1840 to 1854. Dr. Beck was President of the State Medical Society in 1829, a manager of the New York State Lunatic Asylum, and a founder and active supporter of the Albany Institute. Dr. Beck gave such statistics of the deaf and dumb that the Legislature of New York adopted measures for their education. For many years he edited the *American Journal of Insanity*. So early as 1823 he published his famous work on *Medical Jurisprudence*—a standard book in America and Europe.

Bedel, TIMOTHY, was a native of New Hampshire. He was a brave and faithful officer in the war for independence, and died at Haverhill, N. H., in February, 1787. He was attached to the Northern Army, and had the full confidence and esteem of General Schuyler, its commander. He was captain of rangers in 1775, and early in 1776 was made colonel of a New Hampshire regiment. He was with Montgomery at the capture of St. John's on the Sorel, and was afterwards in command at the Cedars (which see), not far from Montreal, where a cowardly surrender by a subordinate, in Bedel's absence, caused the latter to be tried by a court-martial, on a false charge, made by General Arnold. He was deprived of command for a while, but was reinstated.

Beecher, HENRY WARD, son of Rev. Lyman Beecher, was born at Litchfield, Conn., June 24, 1813, and graduated at Amherst College in 1834. He afterwards studied theology in Lane Seminary. For a few years he was pastor of a Presbyterian Church in Indiana, first at Lawrenceburg and then at Indianaapolis. In 1847 he was called to the pastorate of a new Congregationalist organization in Brooklyn, called Plymouth Church, over which he still presides as pastor. From the beginning of his ministry Mr. Beecher held a high rank as a public teacher and pulpit orator, with a constantly increasing reputation. Laying aside the conventionalities of his sacred profession, and regarding the Gospel minister as peculiarly a leader in social life, his sermons were always marked by practical good sense, and embraced in their topics the whole field of human society. They were largely made up of illustrations drawn from every phase of life and the instructions of nature. He had an abiding love of music, the fine arts, flowers, and animals; and believing Christianity to be, not a philosophical system, but an exalted rule of conduct, he never hesitated to discuss in

the pulpit the great problems of the times in politics and social life — slavery, temperance, social evils, and the lust for power and gain. Mr. Beecher led a most active life as preacher, editor, lyceum lecturer, and author of numerous books. He began editorial labors before he began to preach, conducting for a year (1836) *The Cincinnati Journal*; and for nearly twenty years he was an editorial contributor to the *New York Independent*, a weekly newspaper. From 1870 he was editor several years of the *Christian Union*, a weekly paper published in New York, and was a constant contributor to other publications. The intellectual labors of Mr. Beecher were marvellous. He died March 8, 1887.

**Behring**, VITUS, a Danish navigator, was born at Horsen, in Jutland, in 1680; died Dec. 8, 1741. In his youth he made several voyages to the East and West Indies. He entered the Russian navy, and served with distinction against the Swedes; and in 1725 he commanded a scientific expedition to the Sea of Kamtschatka. He ascertained that Asia and America were separated by water—a strait which now bears his name. This problem Peter the Great had been very desirous of having solved. Behring was appointed captain commandant in 1732, and in 1741 set out on a second voyage to the same region, when he discovered a part of the North American continent supposed to have been New Norfolk. He and his crew, being disabled by sickness, attempted to return to Kamtschatka, but were wrecked on an island that now bears his name, where Behring died soon afterwards. His discoveries were the foundation of the claim of Russia to a large region in the far northwest of the American continent. (See *Alaska*.)

**Belcher and the General Court of Massachusetts.** Governor Belcher was authorized to accept from the Legislature of Massachusetts a standing salary of \$5000 a year, to be paid first out of the annual grants. When he first met the Legislature (September, 1730), he tried to bring about a settlement for a standing salary, but could not, and the Assembly was dissolved. To secure a majority in the next House, the governor tried to gain the influence of certain leaders by gifts of office; but their acceptance diminished their popularity, and he gained nothing. The people had been encouraged by the English press, which had commended the Bostonians for their "noble stand" against the demands of Burnet, which had "endeared them to all lovers and asserters of liberty." The new court was unmanageable by the governor, and he accepted of a grant of a salary for one year. This was a popular and significant triumph.

**Belcher, JONATHAN**, a colonial governor, was born at Cambridge, Mass., in January, 1682; died at Elizabethtown, N. J., Aug. 31, 1757. He graduated at Harvard University in 1699. He visited Europe, where he became acquainted with the Princess Sophia and her son (afterwards George I. of England), which led to his future honors. After a six-years' sojourn he returned to America, engaged in mercantile business in Boston, became a member of the Provin-

cial Assembly, and in 1729 was sent as agent of the provinces to England. In 1730 he was appointed governor of Massachusetts and New Hampshire, which office he held eleven years. In consequence of a clamor against him, he was superseded in 1741, but succeeded in vindicating himself before the British court. Belcher was made governor of New Jersey, and arrived in 1747, where he passed the remainder of his life. He extended the charter of the College of New Jersey, and was its chief patron and benefactor.

**Belknap, JEREMY, D.D.**, was born in Boston, June 4, 1744; died there June 20, 1798. He graduated at Harvard University in 1762; studied theology; taught school four years; was pastor of a church in Dover, N. H., from 1767 to 1786, and of the Federal Street Church, in Boston, from April 4, 1787, until his death. He founded the Massachusetts Historical Society; was an overseer of Harvard University; was a patriot during the war for independence, an opponent of African slavery, and a promoter of literature and science. He published a *History of New Hampshire*, 3 vols. (1784-92); a collection of *Psalms and Hymns* (1795); *The Foresters*, a work of wit and humor (1792); *American Biography*, 2 vols. (1794-98), besides sermons and other religious writings.

**Bell and Breckinridge.** John Bell was the candidate of the "National Constitutional Union Party" (which see) for President of the United States, in 1860. John C. Breckinridge was the candidate of the Secessionists of the Charleston Convention (which see) for the same office, in 1860. The former was a native of Tennessee; the latter of Kentucky—both slave-labor states. On April 23, 1861, Bell, in a speech at Nashville, declared that Tennessee was virtually "out of the Union," and urged the people of his state to prepare for vigorous war upon the government. On April 17, Breckinridge wrote to a friend at Louisville, saying, "Kentucky should call a convention without delay, and Lincoln's extra session of Congress should be confronted by fifteen states." In that Congress Breckinridge, as a professed Unionist, took his seat as senator in July ensuing, where he remained some time, and then joined the Confederates in making war upon the Republic. He held the commission of a brigadier-general in the Confederate Army.

**Bell, CHARLES H.**, was born in New York, Aug. 15, 1798; died at New Brunswick, N. J., Feb. 19, 1875. He entered the naval service in June, 1812; served with Decatur in 1813-14; with Chauncey, on Lake Ontario, in 1814, and with Decatur again, in the Mediterranean, in 1815. He was with the squadron in the West Indies (1824-29) operating against the pirates there. In 1860 he was in command of the Norfolk navy-yard; commanded the Pacific squadron in 1862-64, and the navy-yard at Brooklyn 1865-68. In July, 1866, he was made rear-admiral.

**Belligerent Act towards France.** On July 8, 1798, Congress passed an act authorizing the President to give instructions to the command-

ers of American public armed vessels, and to grant commissions to the commanders of private armed vessels, to capture any French armed vessel anywhere met with, but not unarmed vessels. The three vessels so long building—the *Constitution*, *Constellation*, and *United States*—were now completed and sent to sea.

**Bellingham**, RICHARD, Governor of Massachusetts, was born in England in 1592; died Dec. 7, 1672. Bred a lawyer, he came to America in 1634, and was chosen deputy-governor the next year. He was elected governor, in opposition to Winthrop, in 1641. He was rechosen in 1654, and in 1666, after the death of Governor Endicott, continuing in office the rest of his life. His administration was a somewhat stormy one. Bellingham was so opposed to all innovations in religious matters, that he was severe in his conduct towards the Friends, or Quakers.

**Bellomont** (RICHARD COOTE), EARL OF, was born in 1636; died in New York, March 5, 1701. He was of the Irish peerage, and was among the first to espouse the cause of the Prince of Orange when he invaded England. (See *English Revolution*.) He was created earl in 1689, and made treasurer and receiver-general of Queen Mary. In May, 1695, he was appointed Governor of New York, but did not arrive there until May, 1698. Meanwhile he had been commissioned Governor of Massachusetts, including New Hampshire; and on going to Boston, in 1699, he was well received, and his administration was popular. Bellomont had been one of the Parliamentary committee appointed to investigate the affair of Leisler's trial and execution, and had taken a warm interest in the reversal of the attainder of that unfortunate leader. On his arrival in New York, he naturally connected himself with the Leisler party, whom Governor Fletcher had strongly opposed. Bellomont came with power to inquire into the conduct of Governor Fletcher, and he was so well satisfied of his malfeasance in office that he sent him to England under arrest. (See *Fletcher*.) The remains of Leisler and Milbore were taken up, and after lying in state several days were reburied in the Dutch Church. (See *Leisler*.) Bellomont chose for his council a majority of "Leislerians;" and that party soon obtained a majority in the Assembly also. One of their first acts was to vote an indemnity to the heirs of Leisler. Bellomont used every means to gain the goodwill of the people in both provinces, and succeeded. The earl was a shareholder in the private ship commanded by Captain Kidd; and when that seaman was accused of piracy (see *Kidd*) Bellomont procured his arrest in Boston, and sent him to England for trial. The Bellomont earldom finally expired in the year 1800.

**Bellows**, HENRY WHITNEY, D.D., a Unitarian clergyman, was born in Boston, June 11, 1814. Educated at Harvard and the Divinity School at Cambridge, he was ordained pastor of the first Unitarian Church in New York city in January, 1838. It was and still is called "All-Souls' Church." He remained its pastor until his death. He was the projector of the *Christian Inquirer*, in

1846, and he occupied from the beginning a conspicuous place in the pulpit, in letters, and in social life, wielding great influence for good. Dr. Bellows was one of the originators of the "United States Sanitary Commission," which performed such prodigious benevolent work during the late civil war. He was president

HENRY WHITNEY BELLOWES, D.D.

of the Commission from the beginning. (See *United States Sanitary Commission*.) Besides numerous pamphlets and published discourses, Dr. Bellows was the author of a thoughtful work—a collection of sermons—on *Christian Doctrine*, published in 1869; and later he gave a picturesque account of a European tour in 1868-69, in two volumes, entitled *The Old World in its New Face*. He died Jan. 30, 1882.

**Belmont**, BATTLE AT (1861). Just before Fremont was deprived of his command (see *Fremont's Embarrassments*) he ordered General Grant to move a co-operative force along the line of the Mississippi River. It was promptly done. A column about three thousand strong, chiefly Illinois volunteers, under General John A. McClernand, went down from Cairo in transports and wooden gunboats (*Tyler* and *Lexington*) to menace Columbus by attacking Belmont, opposite. At the same time another column, under General C. F. Smith, marched from Paducah to menace Columbus in the rear. Grant went with McClernand. The troops landed three miles above Belmont, Nov. 7, 1861, and while they were pushing on the gunboats opened fire upon Columbus. General (Bishop) Polk, the commander, sent General Pillow over the river to reinforce the little garrison at Belmont. A sharp battle ensued, and the Nationals were victorious; but, exposed to the heavy artillery at Columbus, the post was untenable. Giving three cheers for the Union, the Nationals set fire to the Confederate camp, and hastened back towards their boats with captured men, horses, and artillery. Polk opened seven of his heaviest guns upon them, and at the same time sent over some fresh troops under General Cheatnam. Then he crossed over himself, with two regiments, making the whole Confederate force about five thousand men. They fell upon Grant, and a desperate struggle ensued. Grant fought

his way back to the transports under cover of a fire from the gunboats, and escaped. The Nationals lost about five hundred men, and the Confederates over six hundred, killed, wounded, and missing.

**Bemis's Heights, FIRST BATTLE OF (1777).** General Schuyler, with his feeble army, had so successfully opposed the march of Burgoyne down the valley of the Hudson that he had not passed Saratoga the first week in August, 1777. When the expedition of St. Leger from the Mohawk and the defeat of the Germans at Hoosick, near Bennington, had crippled and discouraged the invaders, and Schuyler was about to turn upon them, and strike for the victory for which he had so well prepared, he was superseded by General Gates in the command of the Northern Army. Yet his patriotism was not cooled by the ungenerous act, the result of intrigue, and he offered Gates every assistance in his power. Had the latter acted promptly, he might have gained a victory at once; but he did not. At the end of twenty days he moved the army to a strong position on Bemis's Heights,

with the immense artillery train, commanded by Generals Phillips and Riedesel, kept upon the plain near the river. The centre, composed largely of German troops, led by Burgoyne in person, extended to a range of hills that were touched by the American left, and upon these hills General Fraser and Lieutenant-colonel Breyman, with grenadiers and infantry, were posted. The front and flank of Burgoyne's army were covered by the Canadians, Tories, and Indians who yet remained in camp. General Gates, who lacked personal courage and the skill of a good commander, resolved to act on the defensive. General Arnold and others, who observed the movements of the British, urged Gates to attack them, but he would give no order to fight. Even at eleven o'clock, when the booming of a cannon gave the signal for the general advance of Burgoyne's army, he remained in his tent, apparently indifferent. Arnold, as well as others, became extremely impatient as peril drew near. He was finally permitted to order Colonel Daniel Morgan with his riflemen, and Dearborn with infantry, to attack the Cana-

NEILSON HOUSE ON BEMIS'S HEIGHTS.\*

where his camp was fortified by Kosciusko, a Polish patriot and engineer. Burgoyne called in his outposts, and with his shattered forces and splendid train of artillery he crossed the Hudson on a bridge of boats (Sept. 13, 1777), and encamped on the Heights of Saratoga, now Schuylerville. New courage had been infused into the hearts of the Americans by the events near Bennington and on the Upper Mohawk, and Gates's army was rapidly increasing in numbers. Burgoyne felt compelled to move forward speedily. Some American troops, under Colonel John Brown, had got in his rear, and surprised a British post at the foot of Lake George (Sept. 18). They also attempted to capture Ticonderoga. Burgoyne had moved slowly southward, and on the morning of September 19 he offered battle to Gates. His left

dians and Indians, who were swarming on the hills in advance of Burgoyne's right. These were driven back and pursued. Morgan's troops, becoming scattered, were recalled, and with New England troops, under Dearborn, Scammel, and Cilley, another furious charge was made. After a sharp engagement, in which Morgan's horse was shot under him, the combatants withdrew to their respective lines. Meanwhile Burgoyne had moved rapidly upon the American centre and left. At the same time the vigilant Arnold attempted to turn the British right. Gates denied him reinforcements, and restrained him in every way in his power, and he failed. Masked by thick woods, neither party was now certain of the movements of the other, and they suddenly and unexpectedly met in a ravine at Freeman's farm, at which Burgoyne had halted. There they fought desperately for a while. Arnold was pressed back, when Fraser, by a quick movement, called up some German troops from the British centre to his aid. Arnold rallied his men, and with New England troops, led by Colo-

\* The mansion of Mr. Neilson, an active Whig at the time of the battle. It was the headquarters of General Poor and Colonel Morgan. To it the wounded Major Acland was conveyed, and there was joined by his wife. (See *Lady Acland*.)

nels Brooks, Dearborn, Scammel, Cilléy, and Major Hull, he struck the enemy such heavy blows that his line began to waver and fall into confusion. General Phillips, below the Heights, heard through the woods the din of battle, and hurried over the hills with fresh English troops and some artillery, followed by a portion of the Germans under Riedesel, and appeared on the battle-field just as victory seemed about to be yielded to the Americans. The battle continued. The British ranks were becoming fearfully thinned, when Riedesel fell heavily upon the American flank with infantry and artillery, and they gave way. The Germans saved the British army from ruin. A lull in the battle succeeded, but at the middle of the afternoon the contest was renewed with greater fury. At length the British, fearfully assailed by bullet and bayonet, recoiled and fell back. At that moment Arnold was at headquarters, seated upon a powerful black horse, and in vain urging Gates to give him reinforcements. Hearing the roar of the renewed battle, he could no longer brook delay, and turning his horse's head towards the field of strife, and exclaiming, "I'll soon put an end to it!" went off on a full gallop, followed by one of Gates's staff, with directions to order him back. The subaltern could not overtake the general, who, by words and acts, animated the Americans. For three hours the battle raged. Like an ocean-tide the warriors surged backwards and forwards, winning and losing victory alternately. When it was too late, Gates sent out the New York regiments of Livingston and Van Cortlandt and the whole brigade of General Learned. Had Gates complied with Arnold's wishes, the capture of Burgoyne's army might have been easily accomplished. Night closed the contest, and both parties slept on their arms until morning. But for Arnold and Morgan, no doubt Burgoyne would have been marching triumphantly on Albany before noon that day. So jealous was Gates because the army praised those gallant leaders, that he omitted their names in his official report. The number of Americans killed and wounded in this action was about three hundred; of the British about six hundred.

**Bemis's Heights, SECOND BATTLE OF.** Burgoyne found his broken army utterly dispirited on the morning after the first battle, on Sept. 19, 1777, and he withdrew to a point two miles from the American lines. Arnold urged Gates to attack him at dawn, but that officer would not consent. Burgoyne was hoping to receive good news from Sir Henry Clinton, who was preparing to ascend the Hudson with a strong force. So he entrenched his camp, put his troops in better spirits by a cheerful harangue, and resolved to wait for Clinton. The next morning he was himself cheered by a message from Clinton, who promised to make a diversion in his favor immediately; also by a despatch from Howe, announcing a victory over Washington on the Brandywine. (See *Brandywine, Battle of.*) Burgoyne gave the glad tidings to his army, and wrote to Clinton that he could sustain his

position until Oct. 12. But his condition rapidly grew worse. The American army hourly increased in numbers, and the militia were swarming on his flanks and rear. His foraging-parties could get very little food for the starving horses, the militia so annoyed them. In his hospitals were eight hundred sick and wounded men, and his effective soldiers were fed on diminished rations. His Indian allies deserted him, while, through the exertions of Schnyler, Oneida warriors joined the forces of Gates. Lincoln, with two thousand men, also joined him on the 22d; still Gates remained inactive. His officers were impatient, and Arnold plainly told him that the army was clamorous for action, and the militia were threatening to go home. He told him that he had reason to think that if they had "improved the 20th of September it might have ruined the enemy. That is past," he said; "let me entreat you to improve the present time." Gates was offended, and, treating the brave Arnold with silent contempt, sat still. A long time Burgoyne waited for further tidings from Clinton. On Oct. 4, he called a council of officers. It was decided to fight their way through the American lines, and, on the morning of Oct. 7, 1777, the whole army moved. Towards the American left wing Burgoyne pressed with fifteen hundred picked men, eight brass cannons, and two howitzers, leaving the main army on the heights in command of Brigadiers Specht and Hamilton, and the redoubts near the river with Brigadier-general Gall. Phillips, Fraser, and Riedesel were with Burgoyne. Canadian rangers, loyalists, and Indians were sent to hang on the American rear, while Burgoyne should attack their front. This movement was discerned before the British were ready for battle. The drums of the American advanced guard beat to arms. The alarm ran all along the lines. Gates had ten thousand troops—enough to have crushed the weakened foe if properly handled. He inquired the cause of the disturbance, and then permitted Colonel Morgan to "begin the game." Morgan soon gained a good position on the British right, while General Poor, with his New Hampshire brigade, followed by General Ten Broeck, with New-Yorkers, advanced against their left. Meanwhile, the Canadian rangers and their companions had gained the American rear, and attacked their pickets. They were soon joined by grenadiers. The Americans were driven back to their lines, when a sharp fight ensued. By this time the whole British line was in battle order, the grenadiers under Major Acland, with artillery under Major Williams, forming the left; the centre composed of British and grenadiers under Phillips and Riedesel, and the right of infantry under Earl Balcarras. General Fraser, with five hundred picked men, was in advance of the British right ready to fall upon the left flank of the Americans when the action should begin on the front. It was now between three and four o'clock in the afternoon. As Burgoyne was about to advance, he was astonished by the

thunder of cannon on his left, and the crack of rifles on his right. Poor had pressed upon the thick-wooded slope on which Majors Acland and Williams were posted, unobserved, until he was near the batteries, which were captured after a desperate struggle, in which the leader of the British grenadiers was severely wounded, and Major Williams, of the artillery, was made prisoner. Five times one of the cannons was taken and retaken. When the British fell back, and the gun remained with the Americans, Colonel Cilley leaped upon it, waved his sword over his head, dedicated the piece to the "American cause," and, turning it upon the foe, he opened its destructive energies upon them with their own ammunition. Sir Francis Clarke, Burgoyne's chief aid, who was sent to secure the cannons, was mortally wounded, made a prisoner, and sent to Gates's tent. The whole eight cannons and the possession of the field remained with the Americans. Meanwhile Colonel Morgan had assailed Fraser's flanking corps so furiously that they were driven back to their lines. There Morgan fell upon the British right so fiercely that it was thrown into confusion. A panic prevailed. It was followed by an onslaught in front by Dearborn, with fresh troops, when the British broke and fled in terror. Balcar-

sued by a subaltern to call him back. He dashed into the vortex of danger, where the pursuer dared not follow. He was received with cheers by his old troops, and he led them against the British centre. With the desperation of a madman he rushed into the thickest of the fight. When, at the head of his men, he dashed into the firm German lines, they broke and fled in dismay. The battle was now general. Arnold and Morgan were the ruling spirits on the American side. Fraser was the soul that directed the most potent energies of the British. One of Morgan's riflemen singled him out by his brilliant uniform, and shot him through the body, wounding him mortally. Then a panic ran along the British line. At the sight of three thousand fresh New York militia, under General Ten Broeck, approaching, the wavering line gave way, and the troops retreated to their intrenchments, leaving their artillery behind. Up to their intrenchments, the Americans, with Arnold at their head, eagerly pressed, in the face of a terrible storm of grapeshot and bullets. The works were assailed with small arms. Balcarras defended them bravely until he could resist no longer. The voice of Arnold was heard above the din of battle, and his form was seen, in the midst of the smoke, dashing from point to point. With the troops first of Generals Paterson and Glover, and then of Learned, he assailed the enemy's right, which was defended by Canadians and loyalists. The English gave way, leaving the Germans exposed. Then Arnold ordered up the troops of Livingston and Wesson, with Morgan's riflemen, to make a general assault, while Colonel Brooks, with his Massachusetts regiment, accompanied by Arnold, attacked the troops commanded by Lieutenant-colonel Breyman. Arnold rushed into the sally-port on his powerful black horse, and spread such terror among the Germans that they fled, giving a parting volley of bullets, one of which gave Arnold a severe wound in the same leg that was badly hurt at Quebec. At that moment he was overtaken by the subaltern, who had been sent by Gates to recall him, "lest he should do some rash thing." He had done it. He had achieved a victory for which Gates received the honor. The Germans had thrown down their weapons. Breyman was mortally wounded. The fight ended at twilight, and before the dawn, Burgoyne, who had resolved to retreat, removed his whole army a mile or two

PLAN OF BATTLES ON BEMIS'S HEIGHTS.

ras soon rallied them, while the centre, composed chiefly of Germans, though convulsed, stood firm. Now Arnold came upon the scene. Gates, offended by what he called Arnold's "impertinence," had deprived him of all command, and he was an impatient spectator of the battle. When he could no longer restrain himself, he sprang upon his charger and started on full gallop for the field of action, pur-

north of his intrenchments. In this remarkable battle—won by an officer who had been deprived of his command—the Americans lost, in killed and wounded, one hundred and fifty men; that of the British, including prisoners, was about seven hundred. Arnold was the only American commanding officer who received a wound. It is said that Gates did not leave his tent all that day, not having recovered from a debauch in

which he had indulged the night before. (See *Surrender of Burgoyne*.)

**Benedict, LEWIS**, was born in Albany, N. Y., Sept. 2, 1817; killed in the battle of Pleasant Hill, La., April 9, 1864. He was a graduate of Williams College; was admitted to the bar in 1841; was surrogate of Albany County in 1848, and member of Assembly in 1861. He entered the military service as lieutenant-colonel of volunteers in 1861; served in the campaign on the Peninsula in 1862; was captured, and confined in Libby and Salisbury prisons several months, and when exchanged was sent to the Department of the Gulf, where he was distinguished for his wisdom and bravery. He served as brigadier-general in the Red River campaign, in which he lost his life. (See *Pleasant Hill, Battle of*.)

**Benezet, ANTHONY**, was born in France, Jan. 31, 1713; died in Philadelphia, May 3, 1784. He emigrated to Philadelphia in 1731, and taught school there nearly all his life. He became a member of the Society of Friends; and his life was conspicuous for acts of benevolence. He wrote much against war and African slavery, and bequeathed his estate, on the death of his wife, to the African school in Philadelphia.

**Benham, HENRY W.**, was born at Cheshire, Conn., in 1816, and graduated at West Point, first in his class, in 1837, entering the engineer corps. He served under General Taylor in the war with Mexico, and was wounded in the battle of Buena Vista (which see). Early in the Civil War he was active in Western Virginia, and afterwards on the South Carolina coast. He assisted in the capture of Fort Pulaski; and in 1863-64 he commanded an engineer brigade in the Army of the Potomac. He was breveted brigadier-general for services in the campaigns ending with the surrender of Lee, and major-general (March, 1865) for "meritorious services in the rebellion."

**Benjamin, JUDAH PETER**, was born in St. Domingo, of Jewish parents, in 1812, and in 1816 his family settled in Savannah, Ga. Ju-

JUDAH PETER BENJAMIN.

dah entered Yale College, but left it, in 1827, without graduating, and became a lawyer in New Orleans. He taught school for a while, married one of his pupils, and became a leader

of his profession in Louisiana. From 1853 to 1861, he was United States Senator. Mr. Benjamin was regarded, for several years, as one of the leaders of the Southern wing of the Democratic party; and, when the question of secession divided the people, he withdrew from the Senate, and, with his coadjutor, John Slidell, he promoted the great insurrection. He became Attorney-general of the Southern Confederacy, acting Secretary of War, and Secretary of State. After the war he went to London, where he practised his profession with success. He died in Paris, May 7, 1864.

**Bennett, JAMES GORDON**, founder of the *New York Herald*, was born in Banffshire, Scotland, in 1795; died in New York, June 1, 1872. Intending to enter upon the ministry in the Roman Catholic Church, he studied theology in Aberdeen some time, but, abandoning the intention, he came to British America, arriving at Halifax, N. S., in 1819, where he taught school. He made his way to Boston, where he became a proof-reader, and in 1822 he went to New York, and thence to Charleston, where he made translations from the Spanish for the *Charleston Courier*. Returning to New York, he became proprietor (1825) of the *New York (Sunday) Courier*, but did not succeed. After various editorial and journalistic adventures in New York and Pennsylvania, Mr. Bennett, in May, 1835, began the publication of the *New York Herald*. His method was a "new departure" in journalism. The *Herald* obtained an immense circulation and advertising patronage. The profits of the establishment, at the time of Mr. Bennett's death, were estimated at from \$500,000 to \$700,000 a year. He died in the Roman Catholic faith, and bequeathed the *Herald* to his only son, James Gordon Bennett, Jr.

**Bennington, BATTLE NEAR (1777)**. Falling short of provisions, Burgoyne sent out an expedition from his camp on the Hudson River to procure cattle, horses to mount Riedesel's dragoons, to "try the affections of the country," and to complete a corps of loyalists. Colonel Baume led the expedition, which consisted of eight hundred men, comprising German dragoons and British marksmen, a body of Canadians and Indians, some loyalists as guides, and two pieces of artillery. They penetrated the country eastward of the Hudson towards Bennington, Vt., where the Americans had gathered a considerable quantity of supplies. At that time (August, 1777), General Stark, disgusted because he had not been made a Continental brigadier, had resigned his colonelcy, taken the leadership of the New Hampshire militia, with the stipulation that he was to have an independent command, and was at Bennington with part of a brigade. He had lately refused to obey a command of General Lincoln to join the main army opposing Burgoyne. It was a fortunate circumstance, for he did better service when Baume approached and began to cast up intrenchments (Aug. 14, 1777) in the township of Hoosick, N. Y.,

within about five miles of Bennington. Informed of that approach, Stark had sent expresses for Warner's shattered regiment, and for militia, and he soon gathered many fugitives from the disaster at Hubbardton. (See *Hubbardton, Battle at.*) The 15th was rainy. Baume had sent back to Burgoyne for reinforcements, and Stark was waiting for the arrival of more expected troops from Berkshire. Warner joined Stark on the morning of the 15th—he and his men drenched during a night march in the rain. The 16th dawned bright and hot, and Stark proceeded to execute a plan of attack on Baume's entrenched position by dividing his force, and making a simultaneous attack at different points. The frightened Indians with Baume dashed through the encircling lines of the Americans, and fled to the shelter of the woods. After a severe contest of two hours' duration, the ammunition of the Germans failed, and they attempted to break through the line of besiegers with bayonets and sabres. In that attempt Baume was slain and his veterans were made prisoners. At that moment Lieutenant-colonel Breyman appeared with the jaded reinforcements which Burgoyne had sent, and Stark was joined by some fresh troops furnished by Warner. The battle was instantly renewed. The cannons which had been taken from the Germans were immediately turned upon Breyman's men. A fierce battle continued until sunset, when Breyman retreated, leaving all his artillery, and nearly all of his wounded, behind. The Germans lost, in killed, wounded, and prisoners, nearly one thousand men. Over seven hundred were prisoners. The Americans lost less than one hundred.

Benson, EGBERT, LL.D., was born in New York city, June 21, 1746; died at Jamaica, L. I., Aug. 24, 1833. He graduated at King's (now Columbia) College in 1765; took an active part in political events preliminary to the war for independence; was a member of the Committee of Safety, and, in 1777, was appointed the first attorney-general of the State of New York. He was also a member of the first State Legislature; and was one of the three commissioners appointed to superintend the embarkation of the Tories for Nova Scotia from New York in June, 1783. He was a member of the Continental Congress from 1784 to 1789, and of the new Congress from 1789 to 1793, also from 1813 to 1815. From 1789 to 1802, he was a regent of the New York University, judge of the Supreme Court of New York (1794-1801), and of the United States Circuit Court. He was the first president of the New York Historical Society. Judge Benson was the author of a *Findication of the Captors of Major André*, and a *Memoir on Dutch Names of Places*.

Benton, THOMAS HART, statesman, was born near Hillsboro', N. C., March 14, 1782; died in Washington, April 10, 1858. Before finishing his studies at Chapel Hill University, North Carolina, he removed to Tennessee, studied law, and obtained great eminence in his profession. In the Legislature of that state he procured the

enactment of a law giving to slaves the benefit of a jury trial. He had been on intimate terms with General Jackson at Nashville (1813), when a quarrel ensued, and in a personal encounter in that town with deadly weapons both parties gave and received severe wounds. He was colo-

THOMAS HART BENTON.

nel of a Tennessee regiment from December, 1812, to April, 1813, and lieutenant-colonel of regulars from 1813 to 1815. Removing to St. Louis in 1813, he established the *Missouri Inquirer* there, and practised his profession. He took an active part in favoring the admission of Missouri as a state of the Union, and was one of its first representatives in the United States Senate, which position he held thirty consecutive years, where he was ever the peculiar exponent and guardian of "The West." He was an early and untiring advocate of a railway from the Mississippi to the Pacific Ocean. He warmly opposed the repeal of the Missouri Compromise (which see) in 1854. His free-labor sentiments caused his defeat as a candidate for the Senate by the ultra-slavery men of his party in 1850, and in 1852 he was elected to the House of Representatives. By a combination of his old opponents with the American party (which see), he was defeated in 1854, and failed of an election for governor in 1856. He had then begun to devote himself to literary pursuits; and he completed his *Thirty Years' View* of the United States Senate in 1854. He prepared an *Abridgment of the Debates of Congress*, from 1789 to 1856, in sixteen volumes 8vo. They contain a complete political history of the country during that period, so far as the National Legislature is concerned.

**Benton's Prophecy.** Not long before his death, in 1857, Senator Benton said to Senator Wilson, "So long as the people of the North shall be content to attend to commerce and manufactures, and accept the policy and rule of the disunionists, they will condescend to remain in the Union; but should the Northern people attempt to exercise their just influence in the nation, they will attempt to seize the government or disrupt the Union; but," he said, with great emphasis, "God and their own crimes will put them in the hands of the people!" Benton

was a senator from a slave-labor state, and knew the plans of the diemionists, for they had long endeavored to enlist him in their schemes.

**Bentonville, BATTLE OF.** After the defeat of Hardee at Averasborough (which see), Sherman believed he would meet with no more serious opposition in his march to Goldsborough. He issued orders accordingly. This sense of security proved almost fatal to Sherman's army, for at that moment, Johnston, who had come down from Smithfield (N. C.), on a rapid but stealthy march, under cover of night, was hovering near in full force. He found the Nationals in a favorable position for him to attack them. General J. C. Davis's corps was encamped (March 18, 1865) on the Goldsborough road, at a point where it was crossed by one from Clinton to Smithfield. Two divisions of Williams's were encamped ten or twelve miles in the rear of this, in charge of Slocum's wagon-trains. The remainder of the forces were scattered to the south and east, in fancied security. On the morning of the 16th, Sherman left Slocum, nearest the Confederates, to join Howard's troops, which were scattered and moving on over the wretched, muddy road. On March 19, Sherman, while on his way to Howard, heard cannonading on his left wing, but did not think there was anything serious in it. It proved, however, to be a complete surprise. The Confederates, in overwhelming numbers, were found pressing Slocum. A very severe battle ensued, in a densely wooded swamp, dark and wet and dismal. In this encounter, General J. C. Davis conducted much of the battle with great skill and courage, continually cheering his men with assurances of victory. Johnston had assured *his* men that he was confident of victory, and the troops on both sides fought desperately. Davis had formed General Fearing's brigade to the left and hurled them upon the flank of the Confederates. The latter were staggered and paralyzed by this unexpected and stunning blow from a force hitherto unseen by them, for Fearing's troops were in reserve. They reeled and fell back in amazement, and the attack was not renewed on that part of the field for more than an hour afterwards. The army was saved. The young general (Fearing) was disabled by a bullet, and hundreds of his brigade, dead and wounded, strewed the field of conflict. Davis re-formed the disordered left and centre of his line in open fields half a mile in the rear of the old line. The artillery was moved to a commanding knoll, and Kilpatrick massed his cavalry on the left. Meanwhile an attack upon Morgan's division of the Fourteenth Corps had been very severe and unceasing. The National forces received six distinct assaults by the combined troops of Hardee, Hoke, and Cheat-ham, under the immediate command of General Johnston, without yielding an inch of ground, and all the while doing much execution on the Confederate ranks, especially with the artillery. With darkness this conflict, known as the battle of Bentonville, ended. "Soldiers of that command," writes Brevet Brigadier-general McClurg, to the writer, "will tell you they never saw anything like the fighting at Bentonville."

It was one of the most notable battles of the Civil War. The main forces of the Union and of its enemies were then concentrating at one point for a desperate last struggle—Sherman and Johnston in North Carolina, and Grant and Lee in Virginia. Had Johnston won at that time the consequence probably would have been the loss of the whole of Sherman's army and the quick and fatal dispersion or capture of Grant's before Petersburg and Richmond. On the night after the battle reinforcements came to the left of the Nationals. The Confederates prepared for another onset, but when Johnston heard of the actual connection of three National armies in the vicinity of Goldsborough (which see), he perceived that all chance for success against Sherman had vanished. There had been hard fighting all day (March 20, 1865), and that night, after having his only line of retreat severely menaced by a flank movement under General Mower, Johnston withdrew and went towards Smithfield in such haste that he left his pickets, wounded in hospitals, and dead behind. The aggregate loss of the Nationals near Bentonville was 1648. The loss of the Confederates was never reported. The Nationals captured 1625 of their men, and buried 267 of their dead.

**Berkeley, ADMIRAL, CIRCULAR OF (1807).** Berkeley, in command of the British North American naval station, issued a circular (June 1, 1807) at Halifax, addressed to all commanders on his station, reciting that many seamen, subjects of his Britannic Majesty, and serving in vessels of the royal fleet (naming them), had deserted those vessels, enlisted on board the American frigate *Chesapeake*, and had openly paraded the streets of New York, in sight of their officers, under American colors, and protected by the magistrates of the town and the recruiting officer, who refused to give them up on demand of the commanders of the ships to which they belonged, or on that of the British consul. The commanders to whom this circular was addressed were directed, in case of meeting the *Chesapeake* at sea, without the limits of the United States, to show this order and to search the vessel for deserters. It was done, and four deserters were seized and carried to Halifax. (See *Chesapeake and Leopard*.)

**Berkeley, GEORGE,** Bishop of Cloyne, was born in Kilkenny County, Ireland, March 12, 1684; died at Oxford, Jan. 14, 1753. Educated at Trinity College, Dublin, he became a Fellow there, and at an early age wrote on scientific subjects. Between 1710 and 1713, his two famous works appeared, in which he denies the existence of matter, and argues that it is not without the mind, but within it, and that that which is called matter is only an impression produced by divine power on the mind by the invariable laws of nature. On a tour in France he visited the French philosopher Malebranche, who became so excited by a discussion with Berkeley on the non-existence of matter, that, being ill at the time, he died a few days afterwards. Miss Vanhomrigh (Swift's "Vanessa") bequeathed to Berkeley \$20,000; and in 1723 his

income was increased \$5500 a year by being made Dean of Derry. Berkeley conceived a plan for establishing a college in the Bermudas for the instruction of pastors for the colonial churches and missionaries for the Indians. He resigned his offices to become rector of the projected college at a salary of \$500 a year. The House of Commons authorized the appropriation of a portion of the money to be obtained from the sale of lands in St. Kitt's (St. Christopher's), which had been ceded to England for the establishment of the institution. With these assurances Berkeley went to Newport, R. I. (1729), bought a farm and built a house, intending to invest the college funds, when received, in American lands, and then to make arrangements for a supply of pupils. He had just married, and brought his bride with him. The scheme for the college failed for lack of government co-operation after the death of the king, who favored it. In 1734 he was made Bishop of Cloyne, which place he held for almost twenty years. He gave to Yale College his estate in Rhode Island, known as "White Hall," and also eight hundred and eighty volumes for its library. Wishing to be near his son, who was in college at Oxford, he removed thither in 1752, where he died. Pope ascribed to him "every virtue under the sun." It was in view of the establishment of the college that he wrote his famous lines "On the Prospect of Planting Arts and Learning in America," in which occurs this often-quoted line,

"Westward the course of empire takes its way."

**Berkeley, SIR JOHN**, was born in 1607, and was in the military service of Charles I. when the king knighted him at Berwick on the Tweed. In the civil war that afterwards ensued, he bore a conspicuous part, and he remained in exile with the royal family many years. In 1653 Berkeley was placed at the head of the Duke of York's establishment; and two years before the Restoration (1660), of that of the Prince of Wales, who, when crowned king (Charles II.), raised Berkeley to the peerage as Baron Berkeley of Stratton, in the county of Somerset. On the Restoration he became one of the privy council, and late in 1669 he was appointed Lord-lieutenant of Ireland. He was then one of the proprietors of New Jersey (see *New Jersey*), and was not above suspicion of engaging in the corrupt practice of selling offices. Samuel Pepys, who was Secretary of the Admiralty (1664), speaks of him in his *Diary* as "the most hot, fiery man in his discourse, without any cause," he ever saw. Lord Berkeley was appointed Ambassador Extraordinary to the Court of Versailles in 1675, and died Aug. 28, 1678.

**Berkeley, SIR WILLIAM**, was born near London; died at Twickenham, England, July 13, 1677. He was brother of Lord John Berkeley, one of the early English proprietors of New Jersey. Appointed governor of Virginia, he arrived there in February, 1642. Berkeley was a fine specimen of a young English courtier. He was then thirty-two years of age, well educated at Oxford, handsome in person, polished

by foreign travel, and possessing exquisite taste in dress. He was one of the most accomplished cavaliers of the day. He adopted some salutary measures in Virginia which made him popular; and at his mansion at "Green Sprig," not far from Jamestown, he dispensed generous hospitality for many years. Berkeley was a staunch but not a bigoted royalist at first; and during the civil war in England he managed public affairs in Virginia with so much prudence that a greater proportion of the colonists were in sympathy with him. In religious matters there was soon perceived the spirit of persecution in the character of the governor. The Puritans were then not only tolerated in Virginia, but had been invited to settle there. The civil war drew a line of clear demarcation between churchmen and non-conformists. A large majority of the people of Virginia were attached to the Church of England; so was the governor. In England the Puritans were identified with the republicans, and Berkeley thought it to be his duty to suppress them in his colony as enemies to royalty. So he first decreed that no Puritan minister should preach except in conformity to the rules of the Church of England; and, finally, all non-conformists were banished from Virginia. In the war with the Indians in 1644, in which Opechancanough led the savages, the governor behaved with promptness and efficiency, and soon crushed the invaders. (See *Opechancanough*.) Then the colonists had peace and prosperity for some years. In 1648 they numbered twenty thousand. "The cottages were filled with children, as the ports with ships and emigrants." The people were loyal to the king; and when the latter lost his head, and royalty was abolished in England, they opened wide their arms to receive the cavaliers (many of them of the gentry, nobility, and clergy of the realm) who fled in horror from the wrath of republicans. They brought refinement in manners and intellectual culture to Virginia, and strengthened the loyalty of the colonists. When the king was slain they recognized his exiled son as their sovereign, and Berkeley proclaimed him King of Virginia. Sir William administered the government under a commission sent by Charles from his place of exile (Breda, in Flanders). Virginia was the last country belonging to England that submitted to the government of the republicans on the downfall of monarchy. This persistent attachment to the Stuarts offended the republican Parliament, and they sent Sir George Ayscough with a strong fleet, early in the spring of 1652, to reduce the Virginians to submission. The fleet bore commissioners authorized to use harsh or conciliatory measures—to make a compromise, or to declare the freedom of the slaves of the royalists, put arms in their hands, and make war. The commissioners were met with firmness by Berkeley. Astonished by the boldness of the governor and his adherents, they deemed it more prudent to compromise than to attempt coercion. The result was, the political freedom of the colonists was guaranteed. Berkeley regarding those whom the commissioners repre-

sented as usurpers, he would make no stipulations with them for himself, and he withdrew from the governorship and lived in retirement on his plantation at Green Spring until the restoration of monarchy in England in 1660, when the loyalty of the Virginians was not forgotten by the new monarch. (See *Old Dominion*.) The people elected Richard Bennett governor; and he was succeeded by two others—Edward Diggs (1655) and Samuel Matthews (1656), the latter appointed by Oliver Cromwell. At his death (1660) the people elected Berkeley, but he refused to serve excepting under a royal commission, and he went to England to congratulate Charles II. on his restoration to the throne. Charles gave Berkeley a commission, and he returned to Virginia to execute his master's will with vigor. He enforced various oppressive laws, for he was less tolerant than when he was younger and politically weaker, and, with the cavaliers around him, he hated everything that marked the character of the Puritans. These cavaliers despised the "common people" of New England, and opposed the ideas of popular education. Berkeley wrote to his government in 1665, "I thank God there are no free schools nor printing in Virginia, and I hope we shall not have them these hundred years; for learning has brought heresy and disobedience and sects into the world, and printing hath divulged them, and libels against the best government; God keep us from both!" Oppression of the people finally produced civil war in 1676, the events of which soured Berkeley, who had then grown old (see *Bacon's Rebellion*); and after it was over, and he was firmly seated in power, he treated the principal abettors of the insurrection with harshness and cruelty. His king had proclaimed Bacon (the leader of the insurrection) a traitor, and sent an armament under Sir John Berry to assist in crushing the rebellion. This was the first time royal troops were sent to America to suppress the aspirations of the people for freedom. The act was repeated one hundred years afterwards without success. (See *Independence, War for*.) Feeling strong, Berkeley pursued the adherents of Bacon with malignant severity until twenty-two of them were hanged. The first martyr was Thomas Hauford, a gallant young native of Virginia. Standing before the governor, he boldly avowed his republicanism; and when sentenced to be hanged, he said, "I ask no favor but that I may be shot like a soldier, and not hanged like a dog." At the gallows he said, "Take notice that I die a loyal subject and a lover of my country." Edmund Cheeseman, when arraigned before the governor, was asked why he engaged in the wicked rebellion, and before he could answer his young wife stepped forward and said, "My provocations made my husband join in the cause for which Bacon contended; but for me, he had never done what he has done. Since what is done," she said, as she knelt before the governor, with her bowed head covered with her hands, "was done by my means, I am most guilty; let me bear the punishment; let me be hanged; let my husband be pardoned." The

governor cried out angrily, "Away with you!" and brutally added a coarse insinuation against her chastity. The poor young wife swooned, and her husband was led to the gallows. When the brave Drummond was brought before the governor, Berkeley, with wicked satire, made a low bow and said, "You are very welcome; I am more glad to see you than any man in Virginia; you shall be hanged in half an hour." Drummond replied, with dignity, "I expect no mercy from you. I have followed the lead of my conscience, and done what I might to free my country from oppression." He was condemned at one o'clock and hanged at four; and his brave wife, Sarah, was denounced as a "traitor" and banished, with her children, to the wilderness, there to subsist on the bounty of friends. (See *Bacon's Rebellion*.) When these things were brought to the notice of the profligate monarch, even he was disgusted with Berkeley's cruelties, and said, "The old fool has taken more lives in that naked country than I have taken for the murder of my father;" and Berkeley was ordered to desist. But he continued to fine and imprison the followers of Bacon until he was recalled in the spring of 1677, and went to England with the returning fleet of Sir John Berry. The colonists fired great guns and lighted bonfires in token of their joy at his departure. In England his cruelties were severely censured, and he died of grief and mortified pride before he had a chance to stand before his king.

Berlin Decree. (See *Orders and Decrees*.)

**Bermuda Hundred, OPERATIONS NEAR (1864).** General Butler had intrenched a greater portion of the Army of the James at Bermuda Hundred, at the junction of the James and Appomattox rivers, early in May, 1864, to co-operate with the Army of the Potomac, approaching from the north. His chief care at first was to prevent reinforcements being sent to Lee from Petersburg and the South. For this purpose Butler proceeded to destroy the railway between Petersburg and Richmond, and so to cut off direct communication between the Confederate capital and the South. When it was known that General Gillmore had withdrawn his troops from before Charleston to join Butler, Beauregard was ordered to hasten northward to confront the Army of the James. He had arrived at Petersburg, and was hourly reinforced. Some of these troops he massed in front of Butler, under General D. H. Hill; and finally, on the morning of May 16, under cover of a dense fog, they attempted to turn Butler's right flank. A sharp conflict ensued between about four thousand Nationals and three thousand Confederates, which resulted in the retirement of Butler's forces within their intrenchments. For several days afterwards there was much skirmishing in front of Butler's lines, when he received orders to send nearly two thirds of his effective force to the north side of the James to assist the Army of the Potomac, then contending with Lee's Army of Northern Virginia. Butler complied with the requisition, which deprived him of all power to make any further offensive movements. "The

necessities of the Army of the Potomac," he said, "have bottled me up at Bermuda Hundred." This expression was afterwards used to his disadvantage.

**Bermudas, FIRST ENGLISH IN THE.** Henry May, an English mariner, returning from a voyage to the West Indies in a French ship, was wrecked (Dec. 17, 1593) on one of the islands. He and his companions in distress remained there five months, when they rigged a small vessel of eighteen tons from the material of the ship, put in thirteen live turtles for provisions, sailed to Newfoundland, and thence returned to England. These islands were named in honor of Juan Bermudez, a Spaniard who was wrecked there in 1522. May was the first Englishman who set foot upon them. (See *Somers's Isles*.)

**Bernard, FRANCIS,** was born in Liucoln County, England, in 1714; died in London, June 16, 1769. He was educated at Oxford, where he graduated in 1736. The law was his chosen profession. In 1758 he was appointed governor of New Jersey; and in 1760 he was transferred to the chief magistracy of Massachusetts, where he was a most obedient servant of the crown and ministry in the support of measures obnoxious to the colonists. After a stormy administration of nearly nine years Bernard was recalled, when he was created a baronet, chiefly because of his recommendation to transfer the right of selecting the governor's council from the Colonial Legislature to the crown. Bernard was a friend of learning, and gave a part of his library to Harvard College. He had become so thoroughly unpopular that when he left Boston the bells were rung, caucou were fired, and "Liberty-tree" was hung with flags, in token of the joy of the people.

**Berry, HIRAM GEORGE,** was born at Thomaston, Me., Aug. 27, 1824; killed in battle at Chancellorsville, Va., May 3, 1863. He was first a carpenter, then a navigator, and finally became a state legislator and mayor of Rockland, Me. He was colonel of Maine volunteers in the battle of Bull's Run; became brigadier-general in May, 1862; and was active in the Army of the Potomac throughout the campaign on the Peninsula in 1862 and until the battle of Chancellorsville in 1863, where he perished. His brigade was especially distinguished in the battle of Fredericksburg, in December, 1862. In March, 1863, he was made major-general of volunteers, and commanded a division in the Third Corps at Chancellorsville when he fell. (See *Chancellorsville*.)

**Beyond the Penobscot.** (See *Castine, Capture of*.) In the country beyond the Penobscot, which the British held in 1814, the inhabitants, forty thousand strong, rather enjoyed the change; for, while few of their privileges were abridged, they were relieved from drafts for military service, alarms, and taxes. They had access to good markets, and enjoyed freedom of trade. The national government was anxious for the reconquest of that territory, which had one hundred miles of sea-coast full of harbors and inlets easily accessible to British ships, and where naval stores abounded. It offered,

if Massachusetts would undertake to furnish, feed, and pay a corps of five thousand men, to undertake the reconquest. But Governor Strong declined the offer; for he saw in the proposed movement, without the aid of a strong naval force, another evidence of the military folly of the administration. He feared the now comfortable inhabitants would, in case of such an attempt, meet the fiery fate of the Niagara frontiersmen. (See *Niagara Frontier, Desolation of*.)

**Bible, FIRST EDITIONS OF THE, PRINTED IN THE UNITED STATES.** A German edition of the Bible, in quarto, was printed at Germantown, near Philadelphia, in 1743, by Christopher Sauer. In 1782 Robert Aitkin, printer and bookseller in Philadelphia, published the first American edition of the Bible in English, also in quarto form; and in 1791 Isaiah Thomas printed the Bible in English, in folio form, at Worcester, Mass. This was the first in that form issued from the press in the United States. The same year Isaac Collins printed the English version, in quarto form, at Trenton, N. J.

**Bible Society, THE AMERICAN.** The first Bible Society in the United States was formed in Philadelphia in 1802. When, in 1816, the American Bible Society was organized, there were between fifty and sixty societies in the Union. Delegates from these met in New York in May, 1816, and founded the "American Bible Society." Elias Boudinot (which see) was chosen president, and thirty-six managers were appointed, all of whom were laymen of seven different denominations. The avowed object of the society was to "encourage a wider circulation of the Holy Scriptures without note or comment." In the first year of its existence it issued 6410 copies of the Scriptures. It has since issued, in one year, 1,900,000 copies. It has printed the Bible in twenty-seven new translations, and printed and published the entire Scriptures in raised letters for the use of the blind. In 1836 the Baptists seceded from the American Bible Society, and founded the "American and Foreign Bible Society," conducted entirely by that denomination. In 1870 it had published the Scriptures in forty different languages and circulated over 4,000,000 copies in foreign lands. A secession from this Baptist Bible Society occurred in 1850, when the "American Bible Union" was formed.

**Biddle, CLEMENT,** was born in Philadelphia, May 10, 1740; died there July 14, 1814. He was descended from one of the early Quaker settlers in Western New Jersey, and when the war for independence broke out he assisted in raising a company of soldiers in Philadelphia. He was deputy quartermaster-general of Pennsylvania militia in 1776, and commissary of forage under General Greene. On the organization of the national government, he was appointed United States marshal for Pennsylvania.

**Biddle, JAMES,** naval commander, was born in Philadelphia, Feb. 29, 1783; died there Oct. 1, 1848. He was educated at the University of Pennsylvania (which see), and entered the navy, as midshipman, Feb. 12, 1800. He was wrecked

in the frigate *Philadelphia* (which see), off Tripoli, in October, 1803, and was a prisoner nineteen months. As first lieutenant of the *Wasp*, he led the boarders in the action with the *Frolic*

Biddle, NICHOLAS, naval commander, was born in Philadelphia, Sept. 10, 1750; killed March 7, 1778. He made a voyage to Quebec before he was fourteen years of age. In a voy-

JAMES BIDDLE.

(see *Wasp and Frolic*), Oct. 18, 1812. Captured by the *Poictiers*, he was exchanged in March, 1813; and was made master commander in charge of a flotilla of gunboats in the Delaware River soon afterwards. In command of the *Hornet* he captured the *Penguin* (see *Hornet and Penguin*), March 23, 1813. For this victory Congress voted him a gold medal, and other honors were bestowed upon him. Made captain in February, 1815, he held important commands in different parts of the world. While in command of a squadron in the Mediterranean (1830-32), he was given a commission to negotiate a commercial treaty with the Turkish government. In 1845 he performed diplomatic service in China, and visited Japan.

NICHOLAS BIDDLE.

age to the West Indies he was cast away on an uninhabited island, where he remained two months. He entered the British navy in 1770. While a midshipman, he absconded, and became a sailor before the mast in *The Carcass*, in the exploring expedition of Captain Phipps in which Horatio Nelson served. Returning to Philadelphia after the commencement of the Revolution, he was appointed to the command of the brig *Andrea Doria*, under Commodore Hopkins. In 1776 he captured two transports from Scotland, with four hundred Highland troops bound for America. In February, 1777, he sailed from Philadelphia in the frigate *Randolph*, and soon carried four valuable prizes into Charleston. Then he cruised in the West India waters with a small squadron; and in an action with a British 64-gun ship, in March, 1778, Biddle was wounded. A few minutes afterwards the *Randolph* was blown up; and of the entire crew, consisting of three hundred and fifteen men, only four escaped to tell the dreadful tale.

Bienville, JEAN BAPTIST LE MOYNE, brother

BIDDLE'S MEDAL.

of Le Moyne Iberville, who founded a French settlement at Biloxi, near the mouth of the Mississippi, in 1698. (See *Louisiana*.) He was born in Montreal, Feb. 23, 1680; died in France in 1768. For several years he was in the French naval service with Iberville, and accompanied him, with his brother Sauville, to Louisiana. In 1699 Bienville explored the country around Biloxi. Sauville was appointed governor of Louisiana in 1699, and the next year Bienville constructed a fort fifty-four miles above the mouth of the river. Sauville died in 1701, when Bienville took charge of the colony, transferring the seat of government to Mobile. In 1704 he was joined by his brother Chateaugay, who brought seventeen settlers from France. Soon afterwards a ship brought twenty young women as wives for settlers at Mobile. Iberville soon afterwards died, and Bienville, charged with misconduct, was dismissed from office in 1707. His successor dying on his way from France, Bienville retained the office. Having tried unsuccessfully to cultivate the land by Indian labor, Bienville proposed to the government to exchange Indians for negroes in the West Indies, at the rate of three Indians for one negro. Bienville remained at the head of the colony until 1713, when Codillac arrived, as governor, with a commission for the former as lieutenant-governor. Quarrels between them ensued. Codillac was superseded in 1717 by Epinay, and Bienville received the decoration of the Cross of St. Louis. In 1718 he founded the city of New Orleans; and war breaking out between France and Spain, he seized Pensacola and put his brother, Chateaugay, in command there. He was summoned to France in 1724 to answer charges, where he remained until 1733, when he was sent back to Louisiana as governor, with the rank of lieutenant-general. Having made unsuccessful expeditions against the Chickasaws (which see), he was superseded in 1743, and returned to France.

**Big Bethel, BATTLE AT.** When General Butler arrived at his headquarters at Fortress Monroe (May, 1861), he first established Camp Hamilton, near the fort, as a rendezvous for troops gathering there. There were first gathered Phelps's Vermont regiment, and another from Troy, N. Y.; and soon afterwards they were joined by a well-disciplined regiment of Zouaves, under Colonel Abraham Duryée, of New York city. Duryée was assigned to the command of the camp as acting brigadier-general. Butler conceived a plan of taking possession of the country between Suffolk and Petersburg and Norfolk, and so threatening the Weldon Railroad, the great highway between Virginia and the Carolinas. But, lacking troops, he contented himself with taking possession of and fortifying the important strategic point of Newport-News. He sent (May 27, 1861) Colonel Phelps thither in a steamer with a detachment to fortify that promontory. He was accompanied by Lieutenant John Trout Greble, an accomplished young graduate of West Point, whom he appointed master of ordnance, to superintend the construction of fortifications there which commanded the

ship-channel of the James River and the mouth of the Nausemond. The forced inaction of the National troops at Fortress Monroe, and the threatening aspect of affairs at Newport-News, made the armed insurgents under Colonel J. B. Magruder bold, active, and vigilant. Their principal rendezvous was at Yorktown (see *Surrender of Cornwallis*), on the York River, which they were fortifying. They pushed down the Peninsula to impress slaves into their service, and to force Union men into their ranks. At Big and Little Bethel (two churches on the road between Yorktown and Hampton) they made fortified outposts. It was evident that Magruder was preparing to seize Newport-News and Hampton, and confine Butler to Fortress Monroe. The latter determined on a countervailing movement by an attack on these outposts. General E. W. Pearce, of Massachusetts, was placed in command of an expedition for that purpose, composed of Duryée's Zouaves and the Troy troops at Camp Hamilton, Vermont and Massachusetts troops, some German New York troops, under Colonel Bendix, and two 6-pounders (field-pieces), under Lieutenant Greble, from Newport-News. The latter had under him eleven regular artillerymen. The troops from the two points of departure were to be joined, in the night, near Little Bethel. The soldiers wore on their left arms a white rag or handkerchief, so that they might recognize each other in the dark. Their watchword was "Boston." Lieutenant-colonel Washburne led the column from Newport-News, followed by Bendix with his Germans. Duryée pushed forward, followed by Colonel Townsend with the Troy troops. The latter and Bendix approached each other in the gloom, near Little Bethel, the appointed place of junction. Bendix and his men, ignorant of the order to wear a white badge, were without it, and the two columns mistook each other for enemies. The Germans opened fire on Townsend's column. After a short skirmish, in which two men were killed and several wounded, the mistake was discovered. Duryée and Washburne, hearing the firing, hastened their march, and soon joined the confused regiments. The insurgents had been warned of the approaching troops by the firing, and Brigadier-general Pearce, in chief command, sent back for reinforcements, as a surprise was then out of the question. The insurgents at Little Bethel fell back to Big Bethel, four or five miles distant, and all of them at the latter place were on the alert. There were about eighteen hundred insurgents behind works, with several pieces of cannon in battery. The Nationals, about two thousand five hundred strong, attacked them between nine and ten o'clock on the morning of June 10, 1861. Troops under Captains Kilpatrick, Bartlett, and Winslow (all of which were under Lieutenant-colonel G. K. Warren, of the Zouaves) were thrown out on each side of the road, while Lieutenant Greble, with his two little field-pieces, kept the road. The troops on each side of the road were finally driven to the shelter of the woods by a storm of shot and shell; but Greble continued advancing, and poured a rapid and effective storm of grape

and canister shot from his battery. He held his position while the rest of the army was preparing for a general assault. At about noon a charge was sounded, with instructions to dash across a morass, flank the works of the insurgents, and drive out the occupants at the point of the bayonet. The Nationals were nearly successful, when a portion of them were driven back by a murderous fire from the insurgents. This and other adverse circumstances caused Pearce to order a retreat. All of Greble's men had been disabled but five, and he could only work one gun. He was just limbering them up, when a shot from the insurgents struck a glancing blow on his head, and he fell dead. Major Theodore Winthrop, one of General Butler's aids, was also instantly killed by a bullet from a North Carolina drummer-boy. Young Greble's body was taken to Philadelphia, where it lay in state in Independence Hall, and was buried by a public funeral under the direction of the councils of the corporation. Lieutenant Greble was the first officer of the regular army of the United States who fell in the Civil War. The result of the expedition to Big Bethel was national exasperation and mortification. The Unionists lost sixteen killed, thirty-four wounded, and five missing. The loss of the insurgents was trifling.

**Big Black River, BATTLE AT (1863).** From Champion Hill's (which see) the Confederates were pursued, and bivouacked that night on the hill overlooking Edwards's Station and the fertile plain between it and the Big Black River. The pursuit was renewed in the morning (May 17, 1863), but the Confederates were soon

Iowa and Wisconsin troops, to charge. They sprang forward with cheers, and drove the Confederates to their intrenchments, but suffered fearfully from an enfilading fire from a curtain of the insurgents' breastworks, which prostrated one hundred and fifty of their number. The assailants waded a shallow bayou, and charged on the works before the Confederates had time to reload. Meanwhile, many of those within fled across the river, and communicated their own panic to the troops there. They expected the Nationals would immediately cross the stream; so they burned both bridges—cutting off the retreat of their comrades, who were yet fighting. They fled pell-mell towards the defences around Vicksburg. The assailed garrison, about fifteen hundred strong, was captured, with seventeen guns, several thousand small-arms, and a large quantity of stores. They lost, in killed and wounded, two hundred and sixty-two men. General Osterhaus of the Nationals was wounded, and the command of his troops devolved upon Brigadier-general A. L. Lee. Sharpshooters in the works on the high banks across the river covered the retreat of the Confederates, and for hours kept the Nationals from constructing floating bridges. Grant's pontoon train was with Sherman, who had been making his way from Jackson to another point (above) on the Big Black River. The Confederates at the bridge fled to Vicksburg. A floating bridge was constructed, and at the same time (May 18, 1863) the three corps crossed the river, and began the siege of Vicksburg (which see).

THE PASSAGE OF THE BIG BLACK RIVER.

found well posted on both sides of the river, near the railway bridge, and were strongly fortified. Behind their defences on the eastern side of the river were several brigades; and above the bridge Pemberton had constructed a passage-way for troops, composed of the hulks of steamboats. General Carr's division led the Nationals, and first engaged in battle; and very soon there was a fierce struggle between the two armies in the thick forest for about three hours, when General Lawler, commanding Carr's extreme right, gave an order for his brigade, composed of

**Big Blue Lick, BATTLE AT (1782).** Parties of Indians and Tories, from north of the Ohio, continued to harass the settlements in Kentucky. A large body of these, headed by Simon Girty, a cruel white miscreant, entered these settlements in August, 1782. They were pursued by about one hundred and eighty men under Colonels Todd, Trigg, and Boone, who rashly attacked them (Aug. 19) at the Big Blue Lick, where the road from Maysville to Lexington crosses the Licking River in Nicholas County. One of the most sanguinary battles ever fought in Kentucky then and there

occurred. The Kentuckians lost sixty-seven men, killed, wounded, and prisoners; and, after a severe struggle, the rest escaped. The slaughter in the river was great, the ford being crowded with white people and Indians, all fighting in horrid confusion. The fugitives were keenly pursued for twenty miles. This was the last incursion south of the Ohio by any large body of barbarians.

Bigelow, ERASTUS BRIGHAM, inventor, was born at West Boylston, Mass., April, 1814. His father was a cotton manufacturer; and this son, before he was eighteen years of age, had invented a hand-loom for weaving suspender webbing. In 1838 he obtained a patent for an automatic loom for weaving knotted counterpanes, but soon made great improvements. In 1839 he entered into a contract with a Lowell manufacturing company to construct a power-loom for weaving two-ply ingrain carpets (that were before woven exclusively by the hand-loom, which could produce only eight yards a day). The new power-

loom first produced ten or twelve yards a day. Its capacity has since been doubled by improvements. Mr. Bigelow died Dec. 6, 1879.

Bigelow, TIMOTHY, was born at Worcester, Mass., Aug. 12, 1739; died there, March 31, 1790. He was a blacksmith and a zealous patriot; member of the Provincial Congress; led minute-men to Cambridge; and accompanied Arnold in his notable expedition to Quebec in 1775, where he was made a prisoner. As colonel, he assisted in the capture of Burgoyne, and was active in some of the stirring scenes of the war afterwards. Colonel Bigelow was in charge of the Springfield Arsenal after the war, and was one of the original grantees of Montpelier, Vt.

Bill of Rights. (See *Colonial Policy of William III.*)

Bills of Credit, FIRST, IN AMERICA. The first bills of credit, or paper-money, issued in the English American colonies were put forth by Massachusetts, in 1690, to pay the troops who

went on an expedition against Quebec, under Sir William Phipps. The expedition was unsuccessful. The men had suffered from sickness; had not gained expected plunder; and when they arrived at Boston (Dec., 1690), disgusted and out of temper, the treasury of the colony had become exhausted, and there was no money to pay them. They threatened a riot. The General Court resolved to issue bills of credit, or treasury notes, varying from five shillings to five pounds, receivable in payment of taxes, and redeemable out of any money in the treasury. The total amount of this paper currency issued was a little more than \$133,000; but long before that limit was reached the bills depreciated one half. The General Court revived their credit in 1691, by making them a legal tender in all payments. The first issue was in February, 1691, though

Comite

the bills were dated 1690—the year, according to the calendar then in use, not beginning until March. (See *Style, Old and New.*)

**Bills of Credit, FIRST, IN VIRGINIA.** In 1755, the Virginia Assembly voted \$100,000 towards the support of the colonial service in the impending French and Indian War. In anticipation of the taxes imposed to meet this amount, the Assembly authorized the issue of treasury notes—the first paper-money put forth in Virginia.

**Bills of Credit, IN MASSACHUSETTS.** When an expedition for the conquest of Canada was determined on in 1711, the credit of the English treasury, exhausted by costly wars, was so low at Boston that nobody would purchase bills upon it without an endorsement, which Massachusetts furnished in the form of bills of credit to the amount of about \$200,000, ad-

a legal tender, the back of which is shown in the engraving. The literal translation of the words is, "He seeks by the sword calm repose under the auspices of freedom."

**Bills of Credit, INDIAN.** During the war in 1763 (see *Pontiac's War*), Pontiac established a commissary department with a careful head; and during the siege of Detroit (1763–64) he issued promissory notes, or bills of credit, to purchase food for his warriors. These bills were written upon birch bark, and signed with his totem—the figure of an otter; and so highly was that chief esteemed by the French inhabitants for his integrity that these bills were received by them without hesitation. Unlike our Continental bills of credit, these Indian notes were all redeemed.

**Bird's Point, opposite Cairo (which see),** was early fortified by the National troops. It

was on the west side of the Mississippi River, a few feet higher than Cairo, so that a battery upon it would completely command the latter-named place. The Confederates were anxious to secure this point, and to that end General Pillow, who was collecting Confederate troops in western Tennessee, worked with great energy. When Governor Jackson, of Missouri, raised the standard of revolt at Jefferson City, with Sterling Price as military commander, General Lyoo, in command of the department, moved more vigorously in the work already begun in the fortification of Bird's Point. His attention had been called to the importance of the spot by Captain Benham of the engineers, who constructed the works. They were made so strong that they might defy any force the insurgents might bring against them. With these opposite points so fortified, the Nationals controlled a great portion of the navigation of the Mississippi River.

**Birge, HENRY W.,** was born at Norwich, Conn., and was one of Governor Buckingham's aids when the Civil War began. He entered the service in June, 1861, as major, and early in 1862 was made colonel. For services on the Lower Mississippi he was made brigadier-general, Sept. 19, 1863. He was in the Red River campaign and in Sheridan's campaign in the Shenandoah Valley in 1864.

In June, 1865, he was appointed to command the military district of Savannah.

**Birney, JAMES G.,** an earnest advocate of anti-slavery views, was born at Danville, Ky., Feb. 4, 1792; died at Englewood, N. J., Nov. 24, 1857. He graduated at the College of New Jersey (Princeton) in 1812; studied law with A. J. Dallas, of Philadelphia; and began its practice in Kentucky in 1814. He was a member of the State Legislature at the age of twenty-two; became a planter in Alabama; served in the Alabama Legislature; and practised law in Huntsville. Removing to Kentucky in 1834, he emancipated his slaves, and proposed to print there

REVERSE OF A MASSACHUSETTS TREASURY NOTE.

vanced to the merchants who supplied the fleet with provisions. The province issued paper-money to the amount of about \$50,000 to meet its share of the expenses of the proposed expedition. After the affair at Lexington and Concord, the patriots of Massachusetts made vigorous preparations for war. On May 5, 1775, the Provincial Congress formally renounced allegiance to the British power, and prepared for the payment of an army to resist all encroachments upon their liberties. They also authorized (in August) the issue of bills of credit, or paper-money, in the form of treasury notes, to the amount of \$375,000, making them

an anti-slavery paper. He could not find a printer to undertake it; so he went to Ohio and established one, at great personal risk, the opposition to "abolitionists" then being very vehement everywhere. About 1836 he was in New York as Secretary of the American Anti-Slavery Society, and tried to build up a political party upon that sole issue. He went to England in 1840, and took part in the anti-slavery movements there. In 1844 he was the candidate of the "Liberty Party" (which see) for the Presidency of the Republic, the result of which was not only his own defeat, but that of Henry Clay, the candidate of the Whig party for the same office. Mr. Birney was the father of the meritorious general David Bell Birney, who did excellent service for the Union in the Civil War, and died in Philadelphia, Oct. 8, 1864.

**Black Cockade, THE.** Ever since Minister Adef's proclamation the Democrats, or friends of the French, had worn the tri-colored cockade. (See *Cockade Proclamation*.) When, in the spring of 1793, President Adams took strong ground against France, a decided war spirit was aroused throughout the country; addresses poured in on the President; and everywhere were seen evidences of a reflex of opinion which sustained the President. In Philadelphia, an "Address to the President," signed by five thousand citizens, was presented to Adams; and this was followed by an address by the young men of the city, who went in a body to deliver it, many of them wearing black cockades—the same which were worn in the American army during the Revolution. This was done in the way of defiance to the tri-colored cockades. From this circumstance was derived the term, so familiar to politicians three fourths of a century ago, of "Black Cockade Federalists." It became, in time, a term of reproach, and the wearers were exposed to personal attacks.

**Black Hawk** (Ma-ka-tae-mish-kia-kiah) was born at Kaskaskia, Ill., in 1767. He was a Potawatomie by birth, but became a noted chief of the Sacs and Foxes. He was accounted a brave when he was fifteen years of age, and soon afterwards led expeditions of war-parties against the Osage Indians in Missouri and the Cherokees in Georgia. He became head chief of the Sacs when he was twenty-one years old (1788). Inflamed by Tecumtha and presents from the British agents, he joined the British in the war of 1812–15, with the commission of brigadier-general, leading about five hundred warriors. He again reappears in history in hostilities against the white people on the northwestern frontier settlements in 1832. (See *Black Hawk War*.) He opposed the removal of the Sacs and Foxes to lands west of the Mississippi after they had ceded those east of that stream; and this was the origin of the war. He did not long survive that conflict. He died at his camp on the River Des Moines, Oct. 3, 1838.

**Black Hawk War, THE.** In 1832 eight of a party of Chippewas, on a visit to Fort Snelling, on the west bank of the Upper Mississippi, were killed or wounded by a party of Sioux.

Four of the latter were afterwards captured by the commander of the garrison at Fort Snelling and delivered up to the Chippewas, who immediately shot them. The chief of the Sioux (Red Bird) resolved to be revenged, and he and some companions killed several white people. General Atkinson, in command in the northwest, finally captured Red Bird and a party of Winnebagoes. Red Bird died in prison soon afterwards, when Black Hawk, a fiery chief of the Sacs and Foxes and an ally of the Sioux, having been released from confinement, at once began hostilities against the white people on the frontier. General Gaines marched to the village of the Sacs, when they humbly sued for peace. At the same time Black Hawk and a band of followers were murdering the Menomonees, who were friendly to the white inhabitants. Black Hawk crossed the Mississippi, and General Atkinson took the field against him; but in July the cholera broke out among the troops, and whole companies were almost destroyed. In one instance only nine survived out of a corps of 208. Atkinson was reinforced, and, with a command greatly superior to that of Black Hawk, pressed him so closely that the latter sent the women and children of his band down the Mississippi in canoes and prepared for a final struggle. A severe fight occurred (Aug. 1, 1832) on Bad Axe River, in which twenty-three Indians were killed without loss to the troops. The contest was between four hundred Indians and some United States troops on board the steamboat *Warrior*, which had been sent up the river. After the fight the *Warrior* returned to Prairie du Chien. The contest was renewed the next morning between Black Hawk and troops led by General Atkinson, when the Indians were defeated and dispersed, with a considerable loss in killed and wounded, and thirty-six of their women and children made prisoners. There were eight of the troops killed and seventy-seven wounded. Black Hawk was pursued over the Wisconsin River, and at a strong position the fugitive chief made a stand with about three hundred men. After a severe battle for three hours, he fled, and barely escaped, with the loss of one hundred and fifty of his bravest warriors and his second in command. The chief himself was finally captured by a party of friendly Winnebagoes and given up to General Steele at Prairie du Chien. Treaties were then made with the hostile tribes by which the United States acquired valuable lands on favorable terms. Black Hawk, his two sons, and six principal chiefs were retained as hostages. The chief and his sons were taken to Washington to visit the President; and then they were shown some of the principal cities of the North and East to impress them with the greatness of the American people. The hostages, after confinement in Fortress Monroe, were liberated at Fort Armstrong, Rock Island, Ill., in August, 1833. Black Hawk being deposed, Keokuk was made chief of the Sacs and Foxes, when the former settled on the Des Moines River, where he died in 1838.

**Black Republican** was the name applied in derision to the Republican party formed in 1856,

because of their friendship for the black bondsmen in the Southern States and their efforts for the restriction of the slave system of labor. For several years it was used as a term of reproach.

**Black Rock, SURPRISE OF (1813).** On the 11th of July, 1813, Lieutenant-colonel Cecil Bisshopp, with a motley party of regulars, Canadians, and Indians, about four hundred in number, crossed the Niagara River and lauded a little below Black Rock (which was a naval station, two miles below Buffalo), just before daylight. His object was to surprise and capture the garrison, and especially the large quantity of stores collected there by the Americans; also the ship-yard. These were defended by only about two hundred militia and a dozen men in a block-house. There were some infantry and dragoon recruits from the South on their way to Fort George, besides a little more than one hundred Indians under the young Cornplanter, who had been educated at Philadelphia, and had gone back to his blanket and feather head-dress. The former were under the command of General Peter B. Porter, then at his home near Black Rock. Bisshopp surprised the camp at Black Rock, when the militia fled to Buffalo, leaving their artillery behind. Porter narrowly escaped capture in his own house. He hastened towards Buffalo, rallied a part of the militia, and, with fifty volunteer citizens, proceeded to attack the invaders. At the same time forty Indians rose from an ambush in a ravine and rushed upon the invaders with the appalling war-whoop. The frightened British, after a very brief contest, fled in confusion to their boats, and, with their commander, hastily departed for the Canada shore, followed by volleys from American muskets. In the flight Bisshopp was mortally wounded. He was a gallant young man, only thirty years of age. He was taken to his quarters at Lundy's Lane, where he died five days after he received his wound.

BISSHOPP'S MONUMENT.

Over his remains, in a small cemetery on the south side of Lundy's Lane, more than thirty years afterwards, the sister of the young soldier erected a handsome monument.

**Black Warrior, AFFAIR OF THE.** There had been, for some time, causes for irritation between the Spanish authorities of Cuba and the United States, on account of invasions of the territory of the former from that of the latter.

Under cover of a shallow pretence, the steamship *Black Warrior*, belonging to citizens of the United States, was seized (Feb. 23, 1854) at Havana, by order of the Spanish authorities in Cuba, and the vessel and cargo were declared confiscated. This flagrant outrage aroused a bitter feeling against those authorities; and a motion was made in the House of Representatives to suspend the neutrality laws and compel those officials to act more justly. A better measure was adopted. A special messenger was sent to Madrid, with instructions to the American minister there, Mr. Soulé, to demand from the Spanish government immediate redress in the form of indemnification to the owners of the vessel in the amount of \$300,000. The Spanish government justified the outrage, and this justification, operating with other causes for irritation, led to the famous consultation of American ministers in Europe known as the "Ostend Conference." (See *Ostend Manifesto*.) Meanwhile the perpetrators of the outrage became alarmed, and the Captaiu-general of Cuba, with pretended generosity, offered to give up the vessel and cargo on the payment, by the owners, of a fine of \$6000. They complied, but under protest. The governments of the United States and Spain finally made an amicable settlement.

**Blackburn's Ford, BATTLE AT (1861).** Preliminary to the severe conflict at Bull's Run (July 21, 1861) was a sharp fight on the same stream, at Blackburn's Ford. This ford was guarded by a Confederate force under General James Longstreet. Some National troops under General D. Tyler—a part of McDowell's advancing army (see *Bull's Run*)—went out towards this ford on a reconnoissance on the 18th. The troops consisted of Richardson's brigade, a squadron of cavalry, and Ayres's battery. Sherman's brigade was held in reserve. He found the Confederates there in strong force, partly concealed by woods. Hoping to draw their fire and discover their exact position, a 20-pound cannon of Ayres's battery fired a shot at random among them. A battery in view only responded with grape-shot. Richardson sent forward the Second Michigan regiment as skirmishers, who were soon engaged in a hot contest on low ground. The Third Michigan, First Massachusetts, and Twelfth New York pushed forward, and were soon fighting severely. Cavalry and two howitzers were fiercely assailed by musketry and a concealed battery, when the Nationals, greatly outnumbered, recoiled and withdrew behind Ayres's battery on a hill. Just then Sherman came up with his brigade, when Ayres's battery again opened fire, and for an hour an artillery duel was kept up, the Confederates responding, gun for gun. Satisfied that he could not flank the Confederates, McDowell ordered the whole body to fall back to Centreville. The Confederates called this the "Battle of Bull's Run," and that which the Nationals designate by that name they called the "Battle of Manassas." The loss of the combatants at Blackburn's Ford was nearly equal—that of the Nationals seventy-three, and of the Confederates seventy.

**Blackstock's, BATTLE AT (1780).** General Sumter had collected a small force near Charlotte, N. C., and with these returned to South Carolina. (See *Fishing Creek*.) For many weeks he annoyed the British and Tories very much. Cornwallis, who called him the "Carolina Gamecock," tried hard to catch him. Tarleton, Wemyss, and others were sent out for the purpose. On the night of Nov. 12, 1780, Major Wemyss, at the head of a British detachment, fell upon him near the Broad River, but was repulsed. Eight days afterwards he was encamped at Blackstock's plantation, on the Tyger River, in Union District, where he was joined by some Georgians under Colonels Clarke and Twiggs. There he was attacked by Tarleton, when a severe battle ensued (Nov. 20). The British were repulsed with a loss in killed and wounded of about three hundred, while the Americans lost only three killed and five wounded. General Sumter was among the latter, and was detained from the field several months.

**Blackstone in Rhode Island.** Governor Windrop found on the Shawmut (the peninsula of Boston) a solitary settler there named Blackstone. Soon afterwards he received a grant of fifty acres of land from the new town of Boston planted there, which he sold, and then went into the wilderness with some cattle. He had left England because he could not endure the "lords bishops," and he liked the "lords brethren" no better. Blackstone seated himself on the upper waters of the Pawtucket River, where Roger Williams found him when, on his banishment from Massachusetts, he went into the Narraganset country. Blackstone did not sympathize with Williams, and always acknowledged his allegiance to Massachusetts. He was the first white settler in Rhode Island, but did nothing towards founding the colony.

**Blackwater, BATTLE AT THE.** Late in 1861 the department of Missouri was enlarged, and General Henry W. Halleck was placed in command of it. General Price had been there rapidly gathering Confederate forces in Missouri; and General John Pope was placed in command of a considerable body of troops to oppose him. Pope acted with great vigor and skill. He made a short, sharp, and decisive campaign. Detachments from his camp struck telling blows here and there. One was inflicted by General Jefferson C. Davis on the Blackwater, near Milford, which much disheartened the Secessionists of that state. Davis found the insurgents in a wooded bottom opposite his own forces. He carried a well-guarded bridge by storm, and fell upon the Confederates with such vigor that they retreated in confusion, and were so closely pursued that they surrendered, in number about 1300, cavalry and infantry. The spoils of victory were 800 horses and mules, 1000 stand of arms, and over 70 wagons loaded with tents, baggage, ammunition, and supplies of every kind. In a brief space of time the power of the insurgents in that quarter was paralyzed, and Halleck complimented Pope on his "brilliant campaign."

**Bladensburg, BATTLE AT (1814).** General Winder had continually warned the President, and his cabinet of the danger to the national capital from a contemplated invasion by the British. The obstinate and opinionated Secretary of War (Armstrong) would not listen; but when Admiral Cochrane appeared in Chesapeake Bay with a powerful land and naval force, the alarmed secretary gave Winder a *carte blanche*, almost, to do as he pleased in defending the capital. Commodore Joshua Barney was in command of a flotilla in the bay, composed of an armed schooner and thirteen barges. These were driven into the Patuxent River, up which the flotilla was taken to a point beyond the reach of the British vessels, and where it might assist in the defence of either Washington or Baltimore, whichever city the British might attack. To destroy this flotilla, more than five thousand regulars, marines, and negroes were landed at Benedict, with three cannons; and the British commander, General Robert Ross, boasted that he would wipe out Barney's fleet, and dine in Washington the next Sunday. The boast being known, great exertions were made for the defence of the capital. General Winder, relieved from restraint, called upon the veteran general Samuel Smith (see *Fort Mifflin*) of Baltimore, to bring out his division of militia, and General Van Ness, of Washington, was requested to station two brigades of the militia of the District of Columbia at Alexandria. Winder also called for volunteers from all the militia districts of Maryland. General Smith promptly responded, but the call for volunteers was not very effectual. Meanwhile the British, who had pursued Barney up the Patuxent in barges, were disappointed. Seeing no chance for escape, the Commodore blew up his flotilla at Pig Point (Aug. 22, 1814), and with his men hastened to join Winder at his headquarters. When General Ross arrived, perceiving Barney's flotilla to be a smoking ruin, he passed on to Upper Marlborough, where a road led directly to Washington city, leaving Admiral Cockburn (see *Amphibious Warfare*) in charge of the British flotilla of barges. To oppose this formidable force, Winder had less than three thousand effective men, most of them undisciplined; and he prudently retreated towards Washington, followed by Ross, who had been joined by Cockburn and his sailors ready for plunder. That night (Aug. 23) the British encamped within ten miles of the capital. At the latter place there was great excitement, and there were sleepless vigils kept by soldiers and civilians. Uncertain whether Washington city or Fort Washington was the intended destination of the invaders, Winder left a force near Bladensburg (four miles from the capital), and with other troops closely watched the highways leading in other directions. The anxious President and his cabinet were awake that night, and at dawn the next morning (Aug. 24), while Winder was in consultation with them at his headquarters, a courier came in hot haste to tell them that the British were marching on Bladensburg. Winder sent troops immediately to reinforce those already there, and soon followed

in person. The overwhelming number of the invaders put his little army in great peril. He was compelled to fight or surrender; he chose to fight, and at a little past noon a severe contest began. The troops under General Winder, including those from Baltimore (about 2200) and detachments at various points watching the movements of the British, with the men of Barney's flotilla, were about 7000 strong, of whom 900 were enlisted men. But many of these were at distant points of observation. The cavalry did not exceed 400. The little army had twenty-six pieces of cannon, of which twenty were only six-pounders. With these troops and weapons Winder might have driven back the invaders, had he been untrammelled by the Secretary of War and the rest of the seemingly bewildered cabinet. As the British descended the hills and pressed towards the bridge at Bladensburg, they commenced hurl-

ing rockets at the exposed Americans. They were repulsed at first by the American artillery, but, being continually reinforced, they pushed across the stream (east branch of the Potomac) in the face of a deadly fire. A terrible conflict ensued, when another shower of rockets made the regiments of militia break and flee in the wildest disorder. Winder tried in vain to rally them. Another corps held its position gallantly for a while, when it, too, fled in disorder, covered by riflemen. The first and second lines of the Americans were now dispersed. The British still pressed on and encountered Commodore Barney and his gallant flotilla-men. After a desperate struggle, in which the Commodore was severely wounded, Winder ordered a general retreat. Barney was too badly hurt to be removed, and was taken prisoner. He was immediately paroled. The great body of the Americans who were not dispersed retreated towards Montgomery Court-house, Mary-

land, leaving the battle-field in full possession of the British. The Americans lost 26 killed and 50 wounded. The British loss was more than 500 killed and wounded, among them several officers of rank and distinction. The battle lasted about four hours. The principal troops engaged were militia and volunteers of the District of Columbia; militia from Baltimore, under the command of General Stansbury; various detachments of Maryland militia; a regiment of Virginia militia, under Colonel George Minor, 600 strong, with 100 cavalry. The regular army contributed 300 men; Barney's flotilla 400. There were 120 marines from the Washington navy-yard, with two eighteen-pound and three twelve-pound cannons. There were also various companies of volunteer cavalry from the District, Maryland, and Virginia, 300 in number, under Lieutenant-colonel Tilghman and Majors O. H. Williams and C. Sterrett.

There was also a squadron of United States dragoons, commanded by Major Laval.

Blair, JOHN, jurist, was born at Williamsburg, Va., in 1732; died there in August, 1800. He was educated at the College of William and Mary (which see); studied law at the Temple, London; soon rose to the first rank as a lawyer; was a member of the House of Burgesses so early as 1765, and was one of the dissolved Virginia Assembly who met at the Raleigh Tavern, in the summer of 1774, and drafted the Virginia non-importation agreement. He was one of the committee who, in June, 1776, drew up the plan for the Virginia State government, and in 1777 was elected a judge of the

THE BRIDGE AT BLADENSBURG IN 1861.

ing rockets at the exposed Americans. They were repulsed at first by the American artillery, but, being continually reinforced, they pushed across the stream (east branch of the Potomac) in the face of a deadly fire. A terrible conflict ensued, when another shower of rockets made the regiments of militia break and flee in the wildest disorder. Winder tried in vain to rally them. Another corps held its position gallantly for a while, when it, too, fled in disorder, covered by riflemen. The first and second lines of the Americans were now dispersed. The British still pressed on and encountered Commodore Barney and his gallant flotilla-men. After a desperate struggle, in which the Commodore was severely wounded, Winder ordered a general retreat. Barney was too badly hurt to be removed, and was taken prisoner. He was immediately paroled. The great body of the Americans who were not dispersed retreated towards Montgomery Court-house, Mary-

Court of Appeals; then chief-justice, and, in 1780, a judge of the High Court of Chancery. He was one of the framers of the National Constitution; and, in 1789, Washington appointed him a judge of the United States Supreme Court. He resigned his seat on the bench of that court in 1796.

Blakeley, JOHNSTON, Captain, United States Navy, was born at Seaford, Down, Ireland, October, 1771; was lost at sea in 1814. He was graduated at the University of North Carolina in 1800, and entered the navy, as midshipman, Feb. 5, 1800. He was made lieutenant in 1807, master-commander in 1813, and captain in 1814. He commanded the brig *Enterprise* in protecting the American coast-trade. In August, 1814, he was appointed to the command of the *Wasp*, which captured the *Reindeer*. (See *Wasp and Reindeer*.) For this exploit Congress voted him a gold medal. Capturing the brig *Atlanta* on Sept. 21, that vessel was sent to Savannah,

and brought the last intelligence of the *Wasp*. It is supposed she foundered in a gale, and no tidings were ever heard of her afterwards.

JOHNSTON BLAKELY.

**Blakely, BATTLE OF.** Ever since Steele's arrival from Pensacola (see *Mobile, Capture of*), Blakely had been held in a state of siege. By the fall of Spanish Fort (which see), water communication between Blakely and Mobile had been cut off. It was defended by abatis, chevaux-de-frise, and terra-torpedoes, and had a ditch in the rear of these. In front of these Canby formed a strong line of battle, Hawkins's negro troops being on the right, the division of Veatch and Andrews in the centre, and Garrard's division on the left. On Sunday afternoon, April 8, 1865, when the assault began, a heavy thunder-storm was gathering. There was a fierce struggle with obstacles in front of the fort. They were finally cleared, and while the colored troops climbed the face of the works, other soldiers turned their right, entered the fort, and captured the commander (General Thomas) and 1000 men. Instantly loud cheers announced the victory, and several National flags appeared on the parapets. At the same time the whole National line participated in the assault. Great guns were making fearful lanes through their ranks. Tempests of grape and canister from the armament of the fort made dreadful havoc. At length the colored brigade were ordered to carry the works. They sprang forward with a shout, "Remember Fort Pillow!" They went over the Confederate embankments scattering everything before them. The victory for the Nationals was complete. The struggle had been brief but very severe. The Nationals lost about 1000 men; the Confederates 500. The spoils were nearly 40 pieces of artillery, 4000 small-arms, 16 battle-flags, and a vast quantity of ammunition.

**Bland, RICHARD,** statesman, born in Virginia, 1708; died at Williamsburg, Va., Oct. 28, 1776. Educated at the College of William and Mary,

he became a fine classical scholar, and was an oracle touching the rights of the colonies. He was a member of the House of Burgesses from 1745 until his death—a period of thirty-one years; and he was one of the most active of its patriotic members. In 1774 he was a delegate in the Continental Congress, but declined to serve the next year. In 1766 he published one of the ablest tracts of the time, entitled *An Inquiry into the Rights of the British Colonies*.

**Bland, THEODORIC,** statesman and soldier, was born in Prince George's County, Va., in 1742; died in New York, June 1, 1790. He was, by his maternal side, fourth in descent from Pocahontas (which see), his mother being Jane Rolfe. John Randolph was his nephew. He received the degree of M.D. at Edinburgh, returned home in 1764, and practised medicine. Bland led volunteers in opposing Governor Dunmore, and published some bitter letters against that officer over the signature of "Cassius." He became captain of the first troop of Virginia cavalry, and joined the main Continental army as lieutenant-colonel in 1777. Brave, vigilant, and judicious, he was intrusted with the command of Burgoyne's captive troops at Albemarle Barracks in Virginia; and was member of the Continental Congress in 1780-83. In the Legislature and in the Convention of his state he opposed the adoption of the National Constitution; but represented Virginia in the first congress held under it, dying while in attendance there in New York. Colonel Bland was a poet as well as a soldier and patriot. The *Bland Papers*, containing many valuable memorials of the Revolution, were edited and published by Charles Campbell in 1840-43.

**Blenker, LEWIS,** was born at Worms, Hesse-Darmstadt, in 1812; died in New Jersey, Oct. 31, 1863. He was one of the Bavarian Legion, raised to accompany King Otho to Greece. In 1848-49, he became a leader of the revolutionists, and finally fled to Switzerland. Ordered to leave that country (September, 1849), he came to the United States. At the beginning of the Civil War he raised a regiment, and, early in July, 1861, was put at the head of a brigade, chiefly of Germans. In the Army of the Potomac he commanded a division for a while, which was sent to Western Virginia, and participated in the battle of Cross Keys (which see).

**Blennerhassett, HARMAN,** born in Hampshire, England, in 1767; died in the island of Guernsey in 1831. He was of Irish descent; was educated at the University of Dublin; studied law and practised there; and in 1796 married the beautiful Adelaide Agnew, daughter of General Agnew, who was killed in the battle at Germantown, 1777. (See *Agnew*.) Being a republican in principle, he became involved in the political troubles in Ireland in 1798, when he sold his estates in England, and came to America with an ample fortune. He purchased an island in the Ohio River, nearly opposite Marietta, built an elegant mansion,

furnished it luxuriously, and there he and his accomplished wife were living in happiness and contentment, surrounded by books, philosophical apparatus, pictures, and other means for intellectual culture, when Aaron Burr entered that paradise, and tempted and ruined its dwellers. (See *Burr's Mysterious Expedition*.) A mob of militia-men laid the island waste, in

ured the vessel—the first naval fight on the New England coast. They found the dead body of Oldham on the deck, yet bleeding. The Block Island Indians were allies of the Pequods, and were protected by the latter. The murder of Oldham was a signal for war. In August, five small vessels, carrying about one hundred men, under John Endicott, sailed

BLANNERHASSETT'S ISLAND RESIDENCE.

a degree, and Blennerhassett and his wife became fugitives in 1807. He was prosecuted as an accomplice of Burr, but was discharged. Then he became a cotton-planter near Port Gibson, in Mississippi, but finally lost his fortune, and, in 1819, went to Montreal, and there began the practice of law. In 1822, he and his wife went to the West Indies. Thence they returned to England, where Blennerhassett died, at the age of sixty-four years. His widow came back to America to seek, from Congress, remuneration for their losses; but, while the matter was pending, she, also, died (1842), in poverty, in the city of New York, and was buried by the Sisters of Charity.

**Blind, THE,** in our country, receive a full share of public sympathy. In 1870 there were about twenty thousand blind persons in the United States. The first public asylum for the blind established in our country was the Perkins Institute and Massachusetts Asylum for the Blind, founded in 1829, and opened in 1832, with the late Dr. Samuel Gridley Howe at its head. Similar ones were founded in New York and Philadelphia at about the same time. In 1876 there were twenty-seven institutions in the United States for the instruction of the blind, with an aggregate of about two thousand pupils.

**Block Island, EVENTS AT.** In 1636, John Oldham (which see) was trading in a vessel of his own along the shores of Connecticut, and near Block Island (so named from Adrian Block, the Dutch navigator, who discovered it) he was attacked by Indians of that island, and he and his crew were murdered. Filled with the barbarians, who did not know how to manage rudder or sail, the vessel was found drifting by John Gallop, a Massachusetts fisherman, who had only a man and two boys with him. They gallantly attacked the Indians, killed or drove them into the sea, and recapt-

ured the vessel—the first naval fight on the New England coast. They found the dead body of Oldham on the deck, yet bleeding. The Block Island Indians were allies of the Pequods, and were protected by the latter. The murder of Oldham was a signal for war. In August, five small vessels, carrying about one hundred men, under John Endicott, sailed from Boston to punish the Block Island savages. His orders from the magistrates were to kill all the men, but to spare the women and children. There were four captains in the company, because the Indians in fighting usually divided into small squads, and it was necessary to attack them in like detachments. One of these captains was the famous John Underhill. (See *Pequod War*.)

Endicott's party landed in a heavy surf, and in the face of a shower of arrows, but only one Englishman was wounded. The Indians fled into the interior of the island. Everything—dwellings, crops, and the simple furniture of the Indians—was destroyed. The island was completely desolated. Endicott could not find the Indians to kill them, but he left them in a condition to starve to death. Endicott attacked the Pequods at the mouth of the Pequod River (now the Thames), but was unsuccessful; then, coasting along the shores of the Narraganset country, he burned the wigwams, destroyed the crops, and so aroused the fiercest indignation among the native inhabitants.

**Blockade, ACTUAL AND PROCLAIMED.** In May, 1813, the British proclaimed a formal blockade of New York, the Delaware, Chesapeake Bay, Charleston, Savannah, and the mouth of the Mississippi. On June 11, the *United States*, *Macedonian*, and *Hornet*, under the command of Decatur, blockaded in the harbor of New York, attempted to get to sea through the East River and Long Island Sound, but off the Connecticut shore they were intercepted by a British squadron and driven into the harbor of New London. The militia were called out to protect these vessels, and the neighborhood was kept in constant alarm. The British blockading squadron, commanded by Sir Thomas Hardy, consisted of the flag-ship *Ramilles*, of the *Orpheus*, *Valiant*, *Acasta*, and smaller vessels. The commander-in-chief had won the respect of the inhabitants along the coast because of his honorable treatment of them. The blockade of New London harbor continued twenty months, or during the remainder of the war. In the spring of 1814, all hopes of their being able to escape having faded, the *United States* and *Macedonian* were dismantled, and laid up just below Norwich, while the *Hornet*, after remaining in the Thames about a year, slipped out of the harbor and escaped to New York.

**Blockade of the Potomac.** By batteries on the Virginia shore a blockade of the Potomac River against the passage of vessels with supplies for the troops at Washington was kept up for some time. In September, 1861, General McClellan, in command of the rapidly increasing Army of the Potomac, was ordered to cooperate with the naval force on the river in removing the blockade, but he failed to do so; and it was kept up until the Confederates voluntarily abandoned their position in front of Washington in 1862.

**Blockade of the Potomac Removed.** The insurgents platted cannons on the Virginia shores of the Potomac River, at various points, to interrupt the navigation. One of these redoubts was at Matthias Point, a bold promontory in King George's County, Va., and commanded the river a short time. The Point was heavily wooded. Captain J. H. Ward, with his flag-ship *Freeborn*, of the Potomac flotilla, was below this point when he heard of the insurgents being busy in erecting a battery there. He procured from Commodore Rowan, of the *Pawnee*, then lying off Aquia Creek (which see), two companies of marines, in charge of Lieutenant Chaplin. Ward had determined to land there, denude the Point of trees, and leave no shelter for the insurgents. On the morning of June 27, 1861, Chaplin and the marines, under cover of a fire from the vessels, landed, and soon encountered the pickets of the insurgents. Captain Ward accompanied Chaplin. A body of about four hundred insurgents were seen approaching, when Ward hastened back to the *Freeborn*, and the marines took to their boats. They returned, but were called off because the number of the insurgents was overwhelming. A spirited skirmish ensued between the insurgents on shore and the Nationals on their vessels. While Captain Ward was managing one of his cannons, he was mortally wounded in the abdomen by a well-aimed Minié bullet from the shore. He lived only forty-five minutes, the bullet having passed through the intestines and the liver. His was the only life lost on the Union side on that occasion. Captain Ward was the first naval officer killed during the war. His body was conveyed to the navy-yard at Brooklyn, where, on the *North Carolina*, it lay in state, and was then taken to Hartford, where imposing funeral ceremonies were performed in the Roman Catholic cathedral.

**Blockade-Runners.** The British government professed to be neutral when the Civil War in the United States broke out, but the Confederates were permitted to have privateer vessels built and supplied in Great Britain, while swift-sailing British merchant steam-vessels, built for the purpose, were permitted to carry on an extensive trade with the insurgents by running the blockade of Southern ports. These vessels carried arms, ammunition, and other supplies to the insurgents, and received in exchange cotton

and tobacco. Enormous profits were made for the owners of these vessels when a successful voyage was accomplished; but so many of them were captured by the blockading fleets, destroyed or wrecked, that it is believed their losses were greater in amount than their gains. The number of blockade-runners captured or destroyed during the war by the national navy

A BLOCKADE-RUNNER.

was 1504. The gross proceeds of the property captured and condemned as lawful prize, before the first of November following the close of the war, amounted to nearly \$22,000,000. This sum was subsequently increased by new decisions. The value of the vessels captured and destroyed (1149 captured and 355 destroyed) was not less than \$7,000,000, making a total loss, chiefly to British owners, of at least \$30,000,000. Besides, in consequence of the remissness in duty of the British government in permitting piratical vessels to be built and furnished in the realm for the Confederates, that government was compelled to pay, in the form of damages to American property on the seas, \$15,500,000 in gold. (See *Tribunal of Arbitration*.)

**Blockading Squadrons on the New England Coast.** From the spring of 1813 until the close of the war, British blockading squadrons were hovering along the whole American coast; and these, with embargo acts (which see), double-barred its seaports against commerce, and threatened its sea-coast cities and villages with destruction. The year 1814 was a peculiarly trying one for New England. The blockade of New London, begun in 1813, was kept up strictly until the close of the war. Early in June, 1814, British blockading vessels began depredations on the coast of Massachusetts, under an order issued by Admiral Cochrane to "destroy the seaport towns and devastate the country." At Wareham, on Buzzard's Bay, they destroyed vessels and other property valued at \$40,000. In the same month fifty armed men in five large barges entered the Saco River, Maine, and destroyed property to the amount of about \$20,000. New Bedford, and Fair Haven opposite, were threatened by British cruisers. Eastport and Castine, in Maine, were captured by the British. In July (1814) Sir Thomas M. Hardy sailed from Halifax with a considerable land and naval force, to execute the order of Cochrane. The country

from Passamaquoddy Bay to the Penobscot River speedily passed under British rule, and remained so until the close of the war. After capturing Eastport Hardy sailed westward, and threatened Portsmouth and other places. An attack on Boston was confidently expected. It was almost defenceless, and offered a rich prize for plunder. There ships were built for the war; but when real danger appeared, the inhabitants were aroused to intense action in preparing defences. All classes of citizens might be seen with implements of labor working daily in casting up fortifications on Noddle's Island (now East Boston). Informed of these preparations and the enthusiasm of the people, Hardy passed by and took a position off the coast of Connecticut, where he proceeded, with reluctance, to execute Cochran's cruel order. He bombarded Stonington, but was repulsed. (See *Stonington, Bombardment of*.) His squadron lay off the mouth of the Thames (Conn.) when the news of peace came. (See *New London*.)

**Bloody Marsh, BATTLE OF.** (See *Georgia, Invasion of*.)

**Bloomfield, JOSEPH**, was born at Woodbridge, N. J.; died at Burlington, N. J., Oct. 3, 1823. He was a law student when the war for independence broke out, when he was made a captain, and entered the service of the patriots, serving until the end of the war. Then he had attained the rank of major. After the war he was attorney-general of New Jersey; governor in 1801-12; brigadier-general during the war of 1812-15; member of Congress 1817-21; and was always esteemed a sound legislator and a judicial leader.

**Blooming Gap, SKIRMISH AT (1862).** General F. W. Lander was sent, early in January, 1862, to protect the Baltimore and Ohio Railway. He had a wily and energetic opponent in "Stonewall Jackson," who was endeavoring to gain what the Confederates had lost in Western Virginia, and to hold possession of the Shenandoah Valley. With about four thousand men Lander struck Jackson at Blooming Gap (Feb. 14), captured seventeen of his commissioned officers, nearly sixty of his rank and file, and compelled him to retire.

**Blount, WILLIAM**, was born in North Carolina in 1744; died at Knoxville, Tenn., March 21, 1800. He was a delegate to the Continental Congress in 1782-83, 1786, and 1787; and was a member of the convention that framed the National Constitution. In 1790 he was appointed governor of the territory south of the Ohio. (See *Northwestern Territory*.) He was president of the convention that formed the State of Tennessee in 1796, and was chosen the first United States Senator from the new state. Blount was impeached in 1797 by the House of Representatives, charged with having intrigued, while territorial governor, to transfer New Orleans and neighboring districts (then belonging to Spain) to Great Britain by means of a joint expedition of Englishmen and Creek and Cherokee Indians. He was expelled from the Senate, and the process was discontinued in the House. His popu-

larity in Tennessee was increased by these proceedings, and he became, by the voice of the people, a state senator and president of that body.

**Blue Hen**, a cant or popular name for the State of Delaware. Captain Caldwell, of the First Delaware regiment in the Revolution, was a brave and very popular officer, and noted for his fondness for cock-fighting. When officers were sent to his state to get recruits for the regiment, it was a common remark that they had gone for more of Captain Caldwell's game-cocks. The captain insisted that no cock could be truly game unless the mother was a blue hen; and the expression "Blue Hen's Chickens" was substituted for game-cocks, and finally applied to the whole Delaware line.

**Blue Laws**, the name given to the first collection of laws framed for the government of the Connecticut colony. They were published, in collected form, in 1650, and issued in blue-paper covers. From this fact they derived the name of Blue Laws. They contained rigid enactments against every social vice, as well as for social regulations, and revealed the sternness of the Puritan character and morals. Copies of these laws found their way to England, where they first received the name of "Blue Laws." After the restoration of Charles II. the word *blue* was applied to rigid moralists of every kind, especially to the Presbyterians. Butler, in *Hudibras*, says:

"For his religion it was writ,  
To match his learning and his wit,  
'Twas Presbyterian true blue."

To ridicule the Puritans of New England, a series of ridiculous enactments, falsely purporting to be a selection from the Blue Laws, were promulgated, and gained general belief.

**Blue Lights.** The *Macedonian* and *Hornet* were blockaded in New London harbor. Decatur was anxious to run the blockade, and might have accomplished it but for the mischievous, if not treasonable, conduct of a section of the ultra-Federalists known as the "Peace Party" (which see). He had fixed on Sunday evening, Dec. 12, 1813, for making an attempt to run the blockade. The night was very dark, the wind was favorable, and the tide served at a convenient hour. When all things were in readiness and he was about to weigh anchor, word came from the "row-guard" of the blockaded vessels that signal-lights were burning on both sides of the river, near its mouth. The lights were *blue*, and placed in position by treasonable men to warn the British blockaders of Decatur's final movements. There were "Peace-men" in almost every place in New England, who did all they could to embarrass their government in its prosecution of the war. So betrayed, Decatur gave up the design, and tried every means to discover the betrayers, but without success. The Federalists denied the fact, but the blue signal-lights had been seen by too many to make the denial of any effect. In a letter to the Secretary of the Navy, Decatur wrote: "Notwithstanding these signals have been re-

peated, and have been seen by at least twenty persons in this squadron, there are men in New London who have the hardihood to affect to disbelieve it and the effrontery to deny it." The whole Federal party, traditionally opposed to the war, were often compelled to bear the odium of the bad conduct of the Peace faction. They had to do so in this case and for more than a generation; and long after that organization was dissolved members of that party were stigmatized with the epithet of "Blue Light Federalists."

**Blue Springs, BATTLE AT.** While Burnside's forces in East Tennessee were concentrating at Knoxville (see *Knoxville, Siege of*) they had many encounters with the Confederates. One of these occurred at Blue Springs, not far from Bull's Gap. There the Confederates had gathered in considerable force. A brigade of National cavalry, supported by a small force of infantry, was then at Bull's Gap. The cavalry pressed forward to Blue Springs, where the Confederates were commanded by General S. Jones. After a desultory fight for about twenty-four hours (Oct. 10 and 11, 1863) the Confederates broke and fled, leaving their dead on the field. They were pursued and struck from time to time by General Shackelford and his cavalry, and driven out of the state. The pursuers penetrated Virginia ten miles beyond Bristol. In the battle of Blue Springs the Nationals lost about one hundred men in killed and wounded. The Confederate loss was a little greater.

**Board of Trade and Plantations.** This commission was first suggested by Charles Davenant, son of the eminent Sir William Davenant, and an English author of note. He proposed, in an essay, that the care of the American colonies should be made "the province of a select number of lords and gentlemen of reputation both for parts and fortunes;" and suggested that it would be in their power "to put things into a form and order of government that should always preserve these countries in obedience to the crown and dependence upon the kingdom." At the same time, he advocated the keeping of the conditions of their charters sacred and inviolate. A standing council of commerce had been established, but in 1673 it was dropped. From that time until 1696 all disputes and regulations relating to commerce and the colonies were usually referred to a committee of the privy council. The Board of Trade and Plantations was established by King William III. in that year. It consisted of a first lord commissioner, who was a peer of the realm, and seven other commissioners, with a salary of \$5000 each. The members of the board were styled the "Lord Commissioners for Trade and Plantations." With this board the governors of the English-American colonies held continual correspondence concerning their respective governments; and to this board they transmitted the journals of their councils and assemblies, the accounts of the collectors of customs and naval officers, and similar articles of official intelligence. On the death

of Queen Anne, in 1714, George, Elector of Hanover, ascended the English throne. The new ministry reduced the powerful Board of Trade to a subordinate position—a mere committee for reference and report, and a dependent upon the Secretary of State for the colonies. In March, 1749, Horace Walpole, at the instigation of the Board of Trade and Plantations, reported a bill to overrule all charters, and to make the orders of the king, or under his authority, the supreme law in America. This seemed to be consistent with the high claim of legislative authority for Parliament. Onslow, Speaker of the House of Commons, believed the Parliament had power to tax America, but not to delegate it. He ordered the objections to the measure to be spread at length on the journals of the House, and the Board of Trade dropped the matter.

**Board of War.** On the 13th of June, 1776, the Congress appointed John Adams, Roger Sherman, Benjamin Harrison, James Wilson, and John Rutledge commissioners constituting a "Board of War and Ordnance," and appointed Richard Peters their secretary. This was the germ of the War Department of our government. It had a general supervision of all military affairs; kept exact records of all transactions, with the names of officers and soldiers; and had charge of all prisoners of war and of all correspondence on the subject of the army. The secretary and clerks were required to take an oath of secrecy before entering upon their duties. The salary of the secretary was fixed at \$300 a year; of the clerks, \$266.66. A

SEAL OF THE BOARD OF WAR.

seal was adopted. Owing to the extent of the field of war, subordinate boards were authorized in 1778. In November, 1777, a new board was organized, consisting of three persons not members of Congress, to sit in the place where that body should be in session, each member to be paid a salary of \$4000 a year. In 1778 another organization of the board occurred. It then consisted of two members of Congress and three who were not members, any three to constitute a quorum. Then the salary of the secretary of the board was increased to \$2000. On the new organization of the government in 1781 (see *Articles of Confederation*), the Congress resolved to create a Secretary of War, and General Lincoln

was chosen. His salary was \$5000 a year. He held the office until the close of the war. After that military affairs were managed by a board of war until the organization of the government under the National Constitution, when they were placed under the supreme control of a Secretary of War.

**Bobadilla, FRANCISCO**, a Spanish magistrate, was sent to Santo Domingo by Queen Isabella in 1500 to ascertain the condition of the Spanish colony there, so many complaints of the administration of Columbus having reached her. Coveting the place of Columbus, Bobadilla made many unjust charges against him. He arrested the illustrious man and sent him to Spain in chains. But the sovereigns, satisfied that he was innocent, reinstated Columbus, recalled Bobadilla, and sent Ovando to take his place. (See *Ovando*.) On his return homeward, Bobadilla was lost at sea in a furious tempest with many others of the enemies of Columbus, together with the immense wealth which they were carrying away with them.

**Bogardus, EVERARDUS**, was the first clergyman in New Netherland. He and Adam Roelandson, school-master, came from Holland with Governor Van Twiller in 1633. He was a bold, outspoken man, and did not shrink from giving "a piece of his mind" to men in authority. Provoked by what he considered maladministration of public affairs, he wrote a letter to Governor Van Twiller, in which he called him "a child of the devil," and threatened to give him "such a shake from the pulpit" the next Sunday as would "make him shudder." About the year 1638 Bogardus married Annetje, widow of Roeloff Jansen, to whose husband Van Twiller had granted sixty-two acres of land on Manhattan Island, now in possession of Trinity Church, New York. This is the estate which the "heirs of Annetje Jansen Bogardus" have been seeking to recover. Being charged before the Classis of Amsterdam with conduct unbecoming a clergyman, Bogardus was about to go thither to defend himself on the arrival of Kieft, but the governor and council determined to retain him for the "good of souls." A daughter of Mr. Bogardus by his first wife was married in 1642; and it was on that occasion that Governor Kieft procured generous subscriptions for building a new church. At the wedding feast, "after the fourth or fifth round of drinking," he made a liberal subscription himself to the church fund, and requested the other guests to do the same. All the company, with "light heads and glad hearts," vied with each other in "subscribing richly;" and some of them, after they returned home, "well repented it," but were not excused. John and Richard Ogden, of Stamford, Conn., were employed to build the church, in which Bogardus officiated about four years. When Kieft, in 1643, was about to make war on the Indians (see *Kieft*), Bogardus, who had been invited to the council, warned him in warm words against his rashness. Two years later he shared with the people in disgust of the governor; and he boldly denounced him, as

he had Van Twiller, from the pulpit, charging him with drunkenness and rapacity, and said, "What are the great men of the country but vessels of wrath and fountains of woe and trouble? They think of nothing but to plunder the property of others, to dismiss, to banish, to transport to Holland." Kieft and some of the provincial officers absented themselves from church to avoid further clerical lashings. Kieft encouraged unruly fellows to keep up a noise around the church during the preaching. On one occasion a drum was beaten, a cannon was fired several times during the service, and the communicants were insulted. The plucky dominie denounced the authorities more fiercely than ever, and the governor brought the contumacious clergyman to trial. The excitement ran high, but mutual friends finally brought about a cessation of hostilities, if not peace. There were then two other clergymen in the province—Samuel Megapolensis and Francis Doughty—the latter preaching to the English residents there. The conduct of Bogardus had become a subject of remark in the Classis of Amsterdam, and after the arrival of Stuyvesant (1647) he resigned, and sailed for Holland in the same vessel with Kieft. He, too, was drowned when the vessel was wrecked. (See *Kieft*.)

**Boggs, CHARLES STEWART**, was born at New Brunswick, N. J., Jan. 28, 1811; entered the navy in 1826; served on stations in the Mediterranean, West Indies, the coast of Africa, the Gulf of Mexico, and the Pacific Ocean. He was made lieutenant in 1837; was promoted to the rank of commander in 1855; and in 1858 was appointed light-house inspector on the Pacific coast. Placed in command of the gunboat *Varuna*, when the Civil War broke out, he was with Admiral Farragut in the desperate fight on the Mississippi, near Forts Jackson and St. Philip. (See *New Orleans, Capture of*.) In that contest his conduct was admirable for bravery and fortitude. He has since been in command of various vessels on American and European stations. Captain Boggs was commissioned rear-admiral in the United States Navy in July, 1870.

**Bogus Proclamation, THE.** Early in the campaign of 1864, a proclamation, bearing the names of the President of the United States and of the Secretary of State, appeared in the *New York World* and *New York Journal of Commerce* (newspapers opposed to the administration), in which defeats and disasters to the National armies were narrated, a day of fasting and prayer recommended, and a call made for five hundred thousand more troops to suppress the great insurrection. This proclamation was calculated to cause great depression among all loyal people, discourage enlistments, and give encouragement to the insurgents. The government regarded it as the work of an enemy of the Republic. The two newspapers that published the proclamation were promptly suppressed by military power, and the author of the proclamation, when discovered, was sent, a state prisoner, to Fort Lafayette. The au-

thor was Joseph Howard, one of the editorial staff of the *Brooklyn Eagle*, an opposition newspaper. Howard declared that it was intended only as a joke—a burlesque of the method of conducting the war. The government regarded it as a serious misdemeanor, and acted accordingly.

**Boldness of the Colonial Press.** When, early in January, 1766, the speech of the king at the opening of Parliament was published in the *Boston Gazette*, its editors (Edes and Gill) said to the monarch, "Great Sir, retreat, or you are ruined." A Philadelphia newspaper said: "None in this day of liberty will say that duty binds us to yield obedience to any man, or body of men, forming part of the British Constitution, when they exceed the limits prescribed by that Constitution. The Stamp Act is unconstitutional, and no more obligatory than a decree of the Divan of Turkey." Defiant essays upon the rights of the colonies were issued in pamphlet form, and the newspapers teemed with squibs and epigrams aimed at the authority of Parliament and even of the crown.

**Bollan, WILLIAM**, an English lawyer, came to America about 1740, settled in Boston, and died in England in 1776. He married a daughter of Governor Shirley, of Massachusetts, and was appointed Collector of Customs at Salem and Marblehead. In 1745 he was sent to England to solicit the reimbursement of more than \$800,000 advanced by Massachusetts for the expedition against Cape Breton. He was successful; and was agent for Massachusetts in 1762, but was dismissed. Being in England in 1769, he obtained copies of thirty-three letters written by Governor Bernard and General Gage, calumniating the colonists, and sent them to Boston. For this act he was denounced in Parliament. He strongly recommended the British government to pursue conciliatory measures towards the colonists in 1775; and in various ways, in person and in writing, he showed his warm friendship for the Americans. Mr. Bollan wrote several political pamphlets relating to American affairs; and in 1774 he presented, as colonial agent, a petition to the king in council.

**Bonaparte and Peace.** While war with France seemed inevitable, and was actually occurring on the ocean, a change in the government of that country occurred, which averted from the United States the calamity of war. For a long time the quarrels of political factions had distracted France. The Directory (which see) had become very unpopular, and the excitable people were ripe for another revolution. Napoleon Bonaparte was then at the head of an army in the East. His brothers informed him of the state of affairs at home, and he suddenly appeared in Paris with a few followers, where he was hailed as the good genius of the republic. With his brother Lucien, then President of the Council of Five Hundred, and the Abbé Sieyès, one of the Directory, and of great influence in the Council

of the Ancients, he conspired for the overthrow of the government and the establishment of a new one. Sieyès induced the Council of the Ancients to place Bonaparte in command of the military of Paris, Nov. 9, 1799. Then Sieyès and two other members of the Directory resigned, leaving France without an executive authority, and Bonaparte with its strong arm—the military—firmly in his grasp. The Council of the Ancients, deceived by a trick, assembled at St. Cloud the next day. Bonaparte appeared before them to justify his conduct. Perceiving their enmity, he threatened them with arrest by the military if they should decide against him. Meanwhile Lucien had read the letters of resignation of the three Directors to the Council of Five Hundred. A scene of terrible excitement occurred. There were shouts of "No Cromwell! no dictator! the constitution forever!" Bonaparte entered that chamber with four grenadiers, and attempted to speak, but was interrupted by cries and execrations. The members seemed about to offer personal violence to the bold soldier, when a body of troops rushed in and bore him off. A motion was made for his outlawry, which Lucien refused to put, and left the chair. He went out and addressed the soldiers. At the conclusion of his speech, Murat entered with a body of armed men, and ordered the Council to disperse. The members replied with defiant shouts and execrations. The drums were ordered to be beaten; the soldiers levelled their muskets, when all but about fifty of the Council escaped by the windows. These, with the Ancients, passed a decree making Sieyès, Bonaparte, and Ducros Provisional Consuls. In December, Bonaparte was made First Consul, or supreme ruler, for life. New American envoys had just reached Paris at this crisis, and very soon Bonaparte concluded an amicable settlement of all difficulties between the two nations. Peace was established; the envoys returned home; and the Provisional Army of the United States which had been organized was disbanded.

**Bonhomme Richard and Serapis, ACTION BETWEEN.** During the spring and summer of 1779, American cruisers were very active, both in American and European waters. At the middle of August, John Paul Jones was sent out from the French port of L'Orient, with five vessels, to the coast of Scotland. His flag-ship was the *Bonhomme Richard*. As he was about to strike some armed British vessels in the harbor of Leith, a storm arose, which drove him into the North Sea. When it ceased, he cruised along the Scottish coast, capturing many prizes, and producing great alarm. Late in September, while Jones's squadron lay a few leagues north of the mouth of the Humber, he discovered the Baltic fleet of forty merchantmen (convoyed by the *Serapis*, a forty-four-gun ship, and the *Countess of Scarborough*, of twenty-two guns), stretching out from Flamborough Head. Jones signalled for a chase, and all but the *Alliance*, Captain

Laudais, obeyed. While the opposing warships were manoeuvring for advantage, night fell upon the scene. At seven o'clock in the evening (Sept. 23, 1779), one of the most desperate of recorded sea-fights began. The *Bonhomme Richard* and *Serapis*, Captain Pearson, came so close to each other that their spars and rigging became entangled, and Jones attempted to board his antagonist. A short contest with pike, pistol, and cutlass ensued, and Jones was repulsed. The vessels separated, and were soon placed broadside to broadside, so close that the muzzles of their guns touched each other. Both vessels were dreadfully shattered; and, at one time, the *Serapis* was on fire in a dozen places. Just as the moon rose, at half-past nine o'clock, the *Richard*, too, caught fire. A terrific hand-to-hand fight now ensued. Jones's ship, terribly damaged, could not float much longer. The flames were creeping up the rigging of the *Serapis*, and, by their light, Jones saw that his double-headed shot had cut the mainmast of the *Serapis* almost in two. He hurled another, and the tall mast fell. Pearson saw his great peril, hauled down his flag, and surrendered. As he handed his sword to Jones, he said, in a surly tone, "It is painful to deliver up my sword to a man who has fought with a rope around his neck!" (Jones had been declared a pirate by the British government.) The king knighted Pearson. "Well," observed Jones, when informed of this, "he deserves it; and if I fall on him again, I'll make a lord of him." The battle ceased, after raging three hours. The vessels were disengaged, and the *Richard* soon went to the bottom of the North Sea. For this victory Congress gave Jones the thanks of the nation and a gold medal.

explore the forests of Kentucky. There he was captured by some Indians, but escaped, and returned home in 1771. In 1773 he led a party of settlers to the wilds he had explored;

DANIEL BOONE.

and in 1774 he conducted a party of surveyors to the Falls of the Ohio (now Louisville). He had taken his family with the other families to Kentucky in 1773, where they were in perpetual danger from the barbarians of the forest. He had several fights with the Indians; and in 1775 he built a fort on the Kentucky River on the present site of Boonesborough. In 1777 several attacks were made on this fort by the Indians. They were repulsed, but in February, 1778, Boone was captured by them, and taken to Chillicothe, beyond the Ohio, and thence

GOLD MEDAL PRESENTED TO PAUL JONES.

Boone, DANIEL, an American pioneer and explorer, was born in Bucks County, Pa., Feb. 11, 1735; died at Charette, Mo., Sept. 26, 1820. From his youth he was a famous hunter, and, while yet a minor, he emigrated, with his father, to North Carolina, where he married. In May, 1759, Boone and five others went to

Detroit. Adopted as a son in an Indian family, he became a favorite, but managed to escape in June following, and returned to his fort and kindred. In August, about four hundred and fifty Indians attacked his fort, which he bravely defended with about fifty men. At different times two of his sons were killed by

the Indians. Boone accompanied General Clarke on his expedition against the Indians on the Scioto, in Ohio, in 1782, soon after a battle at the Blue Licks. Having lost his

BOONE'S FORT.

lands in Kentucky in consequence of a defective title, he went to the Missouri country in 1795, and settled on the Osage Woman River, where he continued the occupations of hunter and trapper. Again he was deprived of a large tract of land in Missouri, obtained under the Spanish authority, by the title being declared invalid. Boone's remains, with those of his wife, rest in the beautiful public cemetery near Frankfort, Ky., on the banks of the Kentucky River.

**Booth, EDWIN**, son of Junius Brutus Booth, was born in Maryland in 1833; was educated for the stage by his father, and made his first public appearance in Boston, in 1849. In 1851 he supplied his father's place as "Richard III." at the Chatham Theatre, New York. He made a professional tour to California and the Sandwich Islands, and, in 1860, played Shakesperian parts in New York. On returning from England, in 1869, "Booth's Theatre" was built. In 1882 and early in 1883 his professional career abroad won for him unbounded admiration. He is regarded as the leading American tragedian. His private life is spotless.

**Booth, JUNIUS BRUTUS**, a great tragedian, was born in London, May 1, 1796; died on the Mississippi River while on a passage towards Cincinnati from New Orleans, Dec. 1, 1852. He was a lineal descendant of John Wilkes (which see). He joined a company of strolling players in England, rose rapidly in that profession, and soon competed successfully with Edmund Kean in tragedy. He came to the United States in 1821, and from that time until near the close of his life he was a popular actor everywhere. His irregular habits shortened his life. His son Edwin has risen to the highest position as an actor in tragedy.

**Border State Convention.** At the suggestion of Virginia, a Border State Convention was held at Frankfort, Ky., on March 27, 1861. The Unionists in Kentucky had elected nine of their representatives and the Secessionists one. The convention was a failure. No delegates from

Virginia appeared, and only five besides those from Kentucky. The venerable John J. Crittenden presided. Four of the five outside of Kentucky were from Missouri, and one from Tennessee. The "wrongs of the South" and the "sectionalism of the North" were spoken of as the principal cause of the trouble at hand. It condemned rebellion, but did not ask the loyal people to put it down. Its chief panacea for existing evils was, in substance, the Crittenden Compromise (which see); and the convention regarded the national protection and fostering of the slave system as "essential to the best hopes of our country."

**Borgne, LAKE, NAVAL BATTLE ON.** The revelations made by Lafitte caused everybody to be vigilant at New Orleans. (See *Lafitte and the Baratarians*.) Early in December, 1812, Commodore D. T. Patterson, in command of the naval station there, was warned, by a letter from Pensacola, of a powerful British land and naval armament in the Gulf. He immediately sent Lieutenant Thomas Ap Catesby Jones with five gunboats, a tender, and a despatch-boat, to watch for their enemy. Jones sent Lieutenant McKeever with two gunboats to the entrance of Mobile Bay for intelligence. McKeever discovered the British fleet on Dec. 10, and hastened back with the news. In the afternoon of the same day the fleet appeared near the entrance to Lake Borgne, and Jones hastened with his flotilla towards Pass Christian, where he anchored, and waited the approach of the invaders to dispute their passage into the lake. He was discovered by the astonished Britons on the 13th, when Admiral Cochrane, in command of the fleet, gave orders for a change in the plan of operations against New Orleans. It would not do to attempt to land troops while the waters of the lake were patrolled by American gunboats. A flotilla of about sixty barges was prepared, the most of them carrying a carronade in the bow, and an ample number of armed volunteers from the fleet were sent, under the command of Captain Lockyer, to capture or destroy the American vessels. Perceiving his danger, Jones, in obedience to orders, proceeded with his flotilla towards the Rigolets, between Lakes Borgne and Pontchartrain. Calm and currents prevented his passing a channel, and he anchored at two in the morning of the 14th. Jones's flagship was a little schooner of eighty tons. The total number of men in his squadron was 182, and of guns 23. At daylight the British barges, containing 1200 men, bore down upon Jones's little squadron. They had six oars on each side, and formed in a long, straight line. Jones reserved his fire until the invaders were within close rifle range. Then McKeever hurled a 32-pound ball over the water and a shower of grapeshot, which broke the British line and made great confusion. But the invaders pushed forward, and at half-past eleven o'clock the engagement became general and desperate. At one time Jones's schooner was attacked by fifteen barges. The British captured the tender *Alligator* early in the contest; and finally, by the force of overwhelming numbers, they gained a victory, which

gave them undisputed command of Lake Borgue. The triumph cost them about 300 men killed and wounded. The Americans lost 6 men killed and 35 wounded. Among the latter were Lieutenants Jones, McKeever, Parker, and Speddon. The British commander, Lockyer, was severely wounded; so, also, was Lieutenant Pratt, the officer who, under the direction of Admiral Cockburn, set fire to the public buildings in Washington city. Several of the British barges were shattered and sunk. The lighter transports, filled with troops, immediately entered Lake Borgue. Ship after ship got aground, until at length the troops were all placed in small boats and conveyed about thirty miles to Pea Island, at the mouth of the Pearl River, where General Keane organized his forces for future action. (See *Louisiana, Invasion of*.)

**Boscawen, EDWARD**, a British admiral, son of Viscount Falmouth, was born in England, Aug. 14, 1711; died, Jan. 10, 1761. He was made a captain in the Royal Navy in March, 1737. Distinguished at Porto Bello and Cartagena, he was promoted to the command of a sixty-gun ship in 1744, in which he took the *Media*. He signaled himself under Anson in the battle off Cape Finisterre in 1747, and against the French in the Indies as rear-admiral the next year. He made himself master of Madras, and returned to England in 1751. Admiral of the Blue, he commanded an expedition against Louisburg, Cape Breton, in 1758, with General Amherst. In 1759 he defeated the French fleet in the Mediterranean—capturing two thousand prisoners. For these services he was made General of the Marines and Member of the Privy Council (which see). Parliament also granted him a pension of \$15,000 a year.

**Boston and Illicit Trade.** From the beginning of the war of 1812–15 there was a mischievous peace faction (which see), composed largely of selfish and unpatriotic politicians, and confined almost exclusively to New England, whose commercial interests had been ruined by the war. Boston was their headquarters. Embargo acts had closed all American ports against the legal admission of goods from abroad, and these could only be obtained through contraband or illicit trade. Such a trade was carried on extensively at Boston, where the magistrates were not zealous in the enforcement of laws restricting commerce. Smuggling was so prevalent that it became almost respectable. That distinguished citizen of Boston, Harrison Gray Otis, charged the administration at Washington and the war with the authorship of that "monstrous depreciation of morals" and "execrable course of smuggling and fraud," and said that a class of citizens, "encouraged by the just odium against the war, sneer at the restraints of conscience, laugh at perjury, mock at legal restraints, and acquire ill-gotten wealth at the expense of public morals and the more sober, conscientious part of the community." Foreign goods, shut out from other seaports, found their way into Boston.

Into that port many valuable British prizes were taken; and from these sources and from extensive smuggling that city became so plethoric with foreign goods that the merchants of other cities of the Union looked to Boston for their regular supplies. Boston became the financial centre of the Republic, and held that position during a greater part of the war.

**Boston Boys, TEMPER OF.** The boys of Boston were in the habit of building mounds of snow on the "Common" in winter. The British soldiers, who, under General Gage, took possession of Boston in 1768, battered down these snow structures merely to annoy the boys. This had been repeated several times, when a meeting of the larger boys was held, and a representation was sent to General Gage to remonstrate. "We come, sir," said the tallest boy, "to demand satisfaction." "What?" exclaimed Gage, "have your fathers been teaching you rebellion and sent you here to exhibit it?" "Nobody sent us here, sir," said the boy, while his eyes flashed with indignation. "We have never insulted nor injured your soldiers, but they have trodden down our snow-hills and broken the ice in our skating-grounds. We complained, and they, calling us young rebels, told us to help ourselves if we could. We told the captain of this, and he laughed at us. Yesterday our works were destroyed for the third time, and we will bear it no longer." Gage admired the spirit of the boys, promised them redress, and, turning to an officer, he said, "The very children here draw in a love of liberty with the air they breathe."

**Boston First Incorporated a City.** In 1822 Boston was first incorporated a city, and John Phillips was elected the first mayor. It then contained about fifty thousand inhabitants. The first of May was appointed by the charter the beginning of its municipal year, and the ceremonies of inducting the mayor and other officers into their official places were attended at Faneuil Hall. After an introductory prayer by Rev. Dr. Baldwin, senior minister of the city, Chief-justice Parker administered the oaths of allegiance and office to the mayor-elect, who administered similar oaths to other officers. The chairman of the selectmen then arose, and, after an address to the mayor, delivered to him the city charter, contained in a superb silver case, with the ancient act incorporating the town nearly two hundred years before. Boston is now (1887) the fifth city in the Union in population, which, in 1880, was 362,839.

**Boston, FIRST SETTLEMENT OF.** On a peninsula on the south side of the mouth of the Charles River (which the natives called Shawmut, but which the English named Trimountain, because of its three hills) lived William Blackstone, a supposed Episcopal minister, who went there from Plymouth about 1623. (See *Blackstone*.) He went over to Charlestown to pay his respects to Governor Winthrop, and informed him that upon Shawmut was a spring of excellent water. He invited Winthrop to come over. The governor with others, crossed the river, and finding the situation there delightful,

began a settlement by the erection of a few small cottages. At a court held at Charlestown in September, 1630, it was ordered that Tri-mountain should be called Boston. This name was given in honor of Rev. John Cotton, vicar of St. Botolph's Church at Boston, in Lincolnshire, England, from which place many of the settlers came. The governor, with most of his assistants, removed their families to Boston, and it soon became the capital of New England.

**Boston Instructs its Representatives.** As soon as intelligence of the introduction of the Stamp Act into Parliament reached Boston, a town-meeting was called (May, 1764), and the representatives of that municipality were instructed to stand by the chartered rights of the colonists; to oppose every encroachment upon them; to oppose all taxation then in contemplation; and concluded by saying, "As his Majesty's other Northern American colonies are embarked with us in this most important bottom, we further desire you to use your best endeavors that their weight may be added to that of this province, and that, by the united applications of all who are aggrieved, all may happily obtain redress."

**Boston Massacre, FIFTH ANNIVERSARY OF THE.** On the 5th of March each year the "Boston massacre" was commemorated by a public meeting and an oration. In 1775 the orator was young Dr. Joseph Warren. Gage regarded the commemoration, and especially the subject of the oration, as an affront to himself and his officers, for it was on the baleful effects of standing armies in times of peace. The offence was heightened because it was delivered to the town in a town-meeting, contrary to an act of Parliament which Gage was there to enforce. Among the crowd that overflowed the South Meeting-house were about forty British officers of the army and navy. Samuel Adams presided, and, with studied courtesy, placed these officers near the orator, some of them on the platform. Warren drew a vivid picture of the horrid scenes on the night of the massacre. He inveighed against the attempt of Parliament to tax the Americans without their consent. He alluded to the "malice of the Port Bill." He declared that the sending of troops to Boston had been, in one respect, beneficial to the colony; for their discipline showed the youth of America how to use arms effectively. "Charles the Invincible," he said, "taught Peter the Great the art of war; the battle of Pultowa convinced Charles of the proficienccy Peter had made." The whole oration was a stinging commentary on the errand of the British troops in Boston. When, at the conclusion, a motion was made for the appointment of an orator for the ensuing year, the British officers began to hiss. The audience became greatly excited and threatened vengeance for the insult, but at the command of Adams order was soon restored. The army was maddened, and officers and soldiers thirsted for revenge. They really seemed to try to provoke the people into some act that would give them a pretext for slaughter.

**Boston Massacre, THE (1770).** The British troops in Boston were a continual source of irritation. Daily occurrences exasperated the people against the soldiers. The words "tyrant" and "rebel" frequently passed between them. Finally an occurrence apparently trifling in itself led to riot and bloodshed in the streets of Boston. A rope-maker quarrelled with a soldier and struck him. Out of this grew a fight between several soldiers and rope-makers, when the latter were beaten; and the event aroused the more excitable portion of the citizens. A few evenings afterwards (March 5, 1770) about seven hundred of them assembled in the streets for the avowed purpose of attacking the troops. Near the Custom-house a sentinel was assaulted with missiles, when Captain Preston, commander of the guard, went to his rescue with eight men. The mob attacked these soldiers with stones, pieces of ice, and other missiles, daring them to fire. One of the soldiers who received a blow fired, and his companions, mistaking an order, fired also. Three of the populace were killed and five were dangerously wounded. The leader of the mob (who was killed) was a powerful mulatto or Indian named Crispus Attucks. The mob instantly retreated, when all the bells of the city rang out an alarm, and in less than an hour several thousands of exasperated citizens were in the streets. A terrible scene of bloodshed might have ensued had not Governor Hutchinson assured the people that justice should be vindicated in the morning. They retired, but were firmly resolved not to endure military despotism any longer. The governor was called upon at an early hour to fulfil his promise. The people demanded the instant removal of the troops from Boston and the trial of Captain Preston and his men for murder. Their demands were complied with. The troops were removed to Castle William (March 12), and Preston, ably defended by John Adams and Josiah Quincy, two of the popular leaders in Boston, was tried and acquitted, with six of his men, by a Boston jury. This loyalty to justice and truth, in the midst of unreasoning public excitement, gave the friends of the Americans in England a powerful argument in favor of being just towards the colonists.

**Boston Neck Fortified (1774).** Alarmed by warlike preparations everywhere, General Gage began to fortify Boston Neck, for the purpose of defence only, as he declared. The Neck was a narrow isthmus that connected the peninsula of Shawmut, on which Boston stood, with the mainland at Roxbury. He also removed the seat of government from Salem back to Boston. The work of fortifying went slowly on, for British gold could not buy the labor of Boston carpenters, though suffering from the dreadful depression, and workmen had to be procured elsewhere. Workmen and timber shipped at New York for Boston for carrying on the fortifications were detained by the "Sons of Liberty" in the latter city. Finally the fortifications were completed, and became the source of great irritation among the people. They stretched entirely across the isthmus, and intercourse be-

tween the town and country was narrowed to a passage guarded by a military sentinel. The fortifications consisted of a line of works of timber and earth, with port-holes for cannon, a strongly built sally-port in the centre, and pickets extending into the water at each end.

governor was to receive his salary from the crown. They regarded it as an infraction of their charter, declaring that it provided for the support of all the civil officers of the colonial government by the colony itself, independent of the crown. The governor opposed them. The

VIEW OF THE LINES ON BOSTON NECK.

**Boston Port Bill.** When intelligence reached London of the destruction of tea in Boston harbor there was almost universal indignation, and the friends of the Americans were abashed. Ministerial anger rose to a high pitch, and Lord North introduced into Parliament (March 14, 1774) a bill providing for the shutting-up of the port of Boston and removing the seat of government to Salem. The measure was popular. Even Barré and Conway gave it their approval, and the Bostonians removed their portraits from Faneuil Hall. Violent language was used in Parliament against the people of Boston. "They ought to have their town knocked about their ears and destroyed," said a member, and concluded his tirade of abuse by quoting the factious cry of the Romans, "Delenda est Carthago." Burke denounced the bill as unjust, as it would punish the innocent for the sins of the guilty. The bill was passed by an almost unanimous vote, and became a law March 31, 1774.

**Boston Port Bill IN BOSTON.** The king believed that the torture which the closing of the port of Boston (see *Boston Port Bill*) would inflict upon the inhabitants of that town would make them speedily cry for mercy and procure unconditional obedience. Not so. When the act was received at Boston, its committee of correspondence invited eight of the neighboring towns to a conference "on the critical state of public affairs." At three o'clock on the afternoon of May 12, 1774, the committees of Dorchester, Roxbury, Brookline, Newtown, Cambridge, Charlestown, Lynn, and Lexington joined them in Faneuil Hall. Samuel Adams was chosen chairman. They denounced the Boston Port Act as cruel and unjust, by accusing, trying, and condemning the town of Boston without a hearing, contrary to natural right as well as the laws of civilized nations. The delegates from the eight towns were told that if Boston should pay for the tea (see *Boston Tea Party*), the port would not be closed; but their neighbors held such a measure to be uncalled for under the circumstances, and the humiliating offer not worthy to be thought of. They nobly promised to join "their suffering brethren in every measure of relief."

**Boston Report and Address ON SALARIES OF CROWN OFFICERS.** In July, 1772, the General Assembly of Massachusetts expressed their dissatisfaction at the new regulation, by which the

inhabitants of Boston took up the matter in town meeting. They appointed a committee who were instructed to inquire whether the regulation complained of had actually taken place. The governor chose not to tell them. They then requested him to allow the General Court to meet at the time to which it was adjourned. The governor refused. At another town meeting (Nov. 2, 1772) a large committee of the most respectable citizens was chosen to state the rights of the colonists, and of those of Massachusetts in particular; to communicate the same to the several towns in the province; and to request each town to communicate to the committee their sentiments on the subject. This was the origin of the Massachusetts Committee of Correspondence (which see). The towns heartily approved the report and address.

**Boston Tea Party,** a popular name given to an occurrence in Boston Harbor in December, 1773. To compel Great Britain to be just towards her American colonies, in the matter of enforced taxation in the form of duties upon articles imported into the colonies, imposed by English navigation laws, the merchants of the latter entered into agreements not to import anything from Great Britain while such oppressive laws existed. The consequence was, British manufacturers and shipping-merchants felt the loss of the American trade severely. The Parliament had declared their *right* to tax the colonists without their consent; the latter took the position that "taxation without representation is tyranny," and resisted. The quarrel had grown hotter and hotter. Some of the duties were removed under pressure; but several articles, among them tea, were still burdened by duties in 1773. The English East India Company felt the loss of their American customers for tea, of which they had the monopoly, most severely, and offered to pay the government, as an export duty, more than the threepence a pound exacted in America, if they might deliver it there free of duty. The government considered itself in honor bound to enforce its laws, just or unjust, instead of conciliating the Americans by compliance. It allowed the East India Company to take their tea to America on their own account free of export duty. As this arrangement would enable the Americans to procure their tea as cheaply as if it were duty free, the ministry supposed they would submit. But there was a *principle* which the colonists would

not yield. However small the tax, if levied without their consent, they regarded it as oppressive. They refused to allow any cargo of tea even to be landed in some of their ports. Vessels were sent immediately back with their cargoes untouched. Two ships laden with tea were moored at a wharf in Boston, and the royal governor and his friends attempted to have their cargoes landed in defiance of the popular will. An immense indignation meeting of the citizens was held in the Old South Meeting-house (see p. 10); and, at twilight, on a cold moonlit evening, on the 16th of December, 1773, about sixty men, disguised as Indians, rushed, by preconcert, to the wharf, boarded the vessels, tore open the hatches, and cast three hundred and forty chests of tea into the waters of the harbor. The citi-

zens of Boston offered to pay for the tea. The government punished them by closing their port the next year against all commerce and navigation. (See *Boston Port Bill*.)

zens of Boston offered to pay for the tea. The government punished them by closing their port the next year against all commerce and navigation. (See *Boston Port Bill*.)

**Bostonians, SLANDERS AGAINST.** After the destruction of the tea in Boston harbor, the most extravagant stories were told in England and believed about the barbarism and perfect unruliness of the people of that town. Ministers actually made the king believe that they had a regular committee for tarring and feathering crown officers and their friends in the colony. The press was employed to rouse the indignation of the people against the Americans, until their zeal for the maintenance of England's supremacy in the colonies became a passion. The merchants and manufacturers were made to believe that their command of the American market depended on the enforcement of the claim of parliamentary authority in all things whatsoever. For a moment Americans seemed hardly to have a friend in England; and it was under this cloud that the Boston Port Bill (which see) became a law, and was eagerly

enforced by the king—the act that dissevered the realm.

**Botetourt (NORBORNE BERKELEY), BARON,** Governor of Virginia, was born in Gloucestershire, England, about 1717; died at Williamsburg, Va., Oct. 15, 1770. But little is known of his career in his earlier life. He was colonel of the Gloucestershire militia, and was summoned to Parliament as Baron Botetourt (the title having been in abeyance since 1406) in April, 1764. He succeeded Sir Jeffrey Amherst as governor-in-chief of Virginia, and arrived there in November, 1768. Having been instructed to assume great dignity, he appeared in the streets of Williamsburg in a coach, with guards and other insignia of vice-regal pomp; and entered upon his duties with a determination to

CASTING TEA OVERBOARD IN BOSTON HARBOR.

enforce submission to parliamentary authority. With a generous mind he perceived the righteousness of colonial indignation because of the taxation schemes of the ministry, and he forwarded to England remonstrances of the representatives of the people, with his own opinion against the wisdom and justice of parliamentary measures. In interfering with the wishes of the people, he obeyed instructions rather than the promptings of his own will. A malarial fever which attacked him was so aggravated by chagrin because of the aspect of political affairs that he died at his post. The colony erected his statue in front of the Capitol in 1774, for he was generally beloved by the people. In 1797 it was removed to the front of William and Mary College, of which he was a benefactor; and thence it was taken to the enclosure of the Asylum for the Insane in Williamsburg during the late Civil War.

**Boudinot, ELIAS, LL.D.,** of Huguenot descent, was born in Philadelphia, May 2, 1740; died at Burlington, N. J., Oct. 24, 1821. He began the practice of law in New Jersey, and was an early

advocate of freedom for the American colonies. Congress appointed him commissary-general of prisoners, in 1777; and during the same year he was elected a member of that body. He became its president in 1782, and as such he signed the ratification of the treaty of peace. Mr. Boudinot resumed the practice of law in 1789. In 1796 Washington appointed him superintendent of the mint, which position he held until 1805, when he resigned all public employments, and retired to Burlington. On becoming trustee of the college at Princeton in 1805, he endowed it with a valuable cabinet of natural history. Mr. Boudinot took great interest in foreign missions, and became a member of the board of commissioners in 1812; and in 1816 he was chosen the first president of the American Bible Society (which see), to both of which and to benevolent institutions he made munificent donations. Dr. Boudinot was the author of *The Age of Revelation; Second Advent of the Messiah; and Star in the West, or an Attempt to Discover the Long-lost Tribes of Israel*.

**Boundaries, THE**, between Connecticut and New Netherland settled. On Sept. 19, 1650, Peter Stuyvesant, Governor of New Netherland, arrived at Hartford, and demanded of the commissioner of the Connecticut colony a full surrender of the lands on the Connecticut River. After a consultation for several days, it was agreed to leave the matter to arbitrators. The commissioner chose Simon Bradstreet, of Massachusetts, and Thomas Prince, of Plymouth; Stuyvesant chose Thomas Willett and George Baxter, both Englishmen. It was agreed that on Long Island a line should be drawn from the westernmost part of Oyster Bay straight to the sea; the easterly part to belong to the English, the remainder to the Dutch. On the mainland a line should begin at the west side of Greenwich Bay, about four miles from Stamford, and run northerly twenty miles; and beyond that distance, as it should be agreed by the two governments of the Dutch and New Haven, provided that line should not come within ten miles of Hudson's River. It was also agreed that the Dutch should not build a house within six miles of the dividing line.

**Boundary, THE**, between New Netherlands and Maryland. In 1659 a deputation arrived at New Amsterdam from Maryland to present the claim of Lord Baltimore to the whole territory of the "South River," or Delaware, to forty degrees north latitude. The Dutch resorted to negotiation instead of a hopeless open resistance by arms, though the courageous Stuyvesant was disposed to do so. After much discussion the Baltimore patent was shown to the commissioners, in which was a clause limiting the proprietor's grant to lands hitherto uncultivated and inhabited only by Indians. The Dutch commissioners rested their case on this clause. They argued that the South River (Delaware) region was distinctly excluded from Lord Baltimore's patent by its own terms, inasmuch as when the grant was made that country had been purchased of the Indians by the Dutch

some time before. The argument was unanswerable. Here the controversy about jurisdiction ceased, but the matter was never adjusted between the Dutch and English.

**Boundary, THE**, between New York and Connecticut was long a subject of dispute, and has not been definitely settled with exactness. On the surrender of New Netherland to the English (1664) and the change of its name to New York, the commissioners to whom the conquest of the Dutch province and the settlement of troubles in New England had been intrusted, proceeded to define the boundary between the two colonies. It was decided that the boundary should be twenty miles east of the Hudson River and run parallel to it. It was determined that the line should run N.N.W. from tide-water on the Mamaroneck to the southern limits of Massachusetts; but it was found that this line would cross the Hudson in the Highlands and not run parallel with it—certainly not twenty miles east of it. The commissioners reversed their decision, and the controversy was renewed. In 1683 another boundary commission was appointed. It was finally agreed to allow New York the whole of Long Island and all the islands in the Sound to within a few rods of the Connecticut shore, and Connecticut to extend her boundaries west along the Sound to a point within about fifteen miles of the Hudson, the strip extending an average of about eight miles north of the Sound; New York to receive a compensation in the north by the surrender of a narrow tract of 61,440 acres, called "The Oblong," by Connecticut. The lines were established in 1731; but the exact line remaining a subject of dispute, commissioners were appointed in 1856 to fix it, but they failed to agree. (See *New York*.)

**Boundary, THE**, between Pennsylvania and Maryland. In 1733 the proprietary of Maryland agreed with the heirs of Penn that the boundary-line between their respective provinces and Delaware should be as follows: For the southern boundary of Delaware, a line commencing at Cape Henlopen, to be drawn due west from Delaware Bay to the Chesapeake. The west boundary of Delaware was to be a tangent drawn from the middle point of this line to a circle of twelve miles radius around New Castle. A due west line, continued northward to a parallel of latitude fifteen miles south of Philadelphia, was to be the southern boundary of Pennsylvania. On his arrival in Maryland, the proprietary, on the plea of misrepresentation, refused to be bound by this agreement. He petitioned the king to be confirmed in possession of the whole peninsula between the Chesapeake and Delaware Bays. The boundary was finally determined (see *Mason and Dixon's Line*) substantially in accordance with the original agreement.

**Boundary, THE**, between the provinces of New York and Massachusetts was a subject of long dispute. It was finally settled in 1773 by commissioners respectively appointed by Governors Tryon of New York and Hutchinson of Massachusetts. These magistrates attended the

convention held for the purpose at Hartford in May, 1773, and, with the commissiouers, signed the agreement.

**Boundbrook, ACTION AT.** A considerable force under General Lincoln, detached to guard the upper valley of the Raritan River, in New Jersey, was stationed at Boundbrook in April, 1777. It was not far from a British post at New Brunswick. Owing to the negligence of a militia guard, Lincoln came near being surprised by a detachment under Cornwallis, which marched out of New Brunswick (April 13) and fell suddenly upon the Americans. The latter, after a sharp action, escaped with the loss of twenty men, two pieces of artillery, and some baggage.

**Bouquet, HENRY,** was born at Ralle, Switzerland, in 1719; died at Pensacola, Fla., in February, 1766. In 1748 he was lieutenant-colonel of the Swiss Guard in the service of Holland; and he entered the English service with the same rank in 1756. In 1762 he was made colonel, and in 1765 brigadier-general. Bouquet was active in Western Pennsylvania in connection with operations against Fort Duquesne (which see); also in relieving Fort Pitt in 1763. (See *Pontiac's War*.) In 1764 he subdued the Ohio Indians, and compelled the Shawnoese and Delawares to make peace. (See *Bouquet's Expedition*.) Dr. William Smith, of Philadelphia, wrote a history of this expedition, and published it in 1765, with plates and a map.

**Bouquet River, BURGUYNE AT.** Burgoyne, on his way up Lake Champlain, landed some of his troops, encamped (June 21, 1777) at the falls of the Bouquet River (now Willsborough, Essex Co., N. Y.), and there gave a war-feast to about four hundred Indians (Algonquins, Iroquois, and Ottawas), who were accompanied by Roman Catholic priests. They had come to join the British army in the campaign. Burgoyne made a speech to them, in which he tried to soften their savagism and restrain their ferocious thirst for blood. At the same time he exhorted them to fight valiantly for the king. These Indians promised much, but performed little.

**Bouquet's Expedition.** During Pontiac's War (which see), Fort Pitt (now Pittsburgh, Penn.) was in imminent danger, and Colonel Bouquet was sent to its relief. He arrived at Fort Bedford, in Western Pennsylvania, on July 25, 1763, in the neighborhood of which eighteen persons had been made prisoners or scalped by the Indians. The barbarians were then besieging Fort Pitt. So soon as they heard of the approach of Bouquet, they raised the siege with the intention of meeting and attacking him. Uncertain of their strength and motives, Bouquet left Fort Bedford and went to Fort Ligonier, where he left his wagons and stores, and pushed on towards Fort Pitt, with the troops in light marching order, and 340 pack-horses carrying flour. On Aug. 5 his advanced guard was attacked near Bushy Run by Indians in ambuscade, who were driven some distance by the troops. The barbarians returned to the attack, and a general action ensued, the Indians being continually repulsed and then returning

to the fight. They were finally driven from their posts with fixed bayonets and dispersed. They rallied, and the next morning surrounded Bouquet's camp. After a severe conflict, they were again dispersed. In these engagements the English lost fifty killed and sixty wounded. Colonel Bouquet reached Fort Pitt four days afterwards, and the campaign was closed.

**Bowditch, NATHANIEL, LL.D., F.R.S.,** mathematician and astronomer, was born at Salem, Mass., March 26, 1773; died in Boston March 16, 1838. With meagre education, he learned the

NATHANIEL BOWDITCH.

business of a ship-chandler, and then spent nine years on the sea, attaining the rank of master. With great native talent and equal industry, he became one of the greatest men of science of his time. While he was yet on the sea he published (1800) his *Practical Navigator*. He made the first entire translation into English of La Place's *Mécanique Céleste*, and published it, in four volumes, in 1829, with most valuable commentaries, in which were recorded the more recent discoveries in astronomy. It was estimated that there were at that time only two or three persons in America, and not more than twelve in Great Britain, who were able to read the original work critically. La Place added much to his work many years after it was published. Bowditch translated this supplement; and it has been published, as a fifth volume, under the editorial care of Professor Benjamin Peirce, with an elaborate commentary. Bowditch had acquired a knowledge of various languages, and drew his great store of knowledge from many sources. He became a member of the principal scientific societies in Europe.

**Bowdoin, JAMES,** was Governor of Massachusetts at the time of Shays's Insurrection (which see). He was a descendant of Pierre Bowdoin, a Huguenot who fled to America from persecution in France. He was born in Boston, Aug. 8, 1727; died Nov. 6, 1790. He graduated at Harvard in 1745, and became a member of the General Court, a senator of Massachusetts, and a councillor. He espoused the cause of the colonists, was President of the Massachusetts Council in 1775, and was chosen president of the convention that framed the state constitution. He succeeded Hancock as governor of the state. By vigorous measures he soon suppressed the

rebellion led by Daniel Shays. His son James, born Sept. 22, 1752, and died Oct. 11, 1811, also graduated at Harvard (1771), and afterwards spent a year at Oxford. He was minister to Spain from 1805 to 1808; and while in Paris he purchased an extensive library, philosophical apparatus, and a collection of paintings, which, with a fine cabinet of minerals, he left at his death to Bowdoin College, Maine, so named in honor of his father. He had before made a donation to the college of one thousand acres of land and more than \$5000 in money. By his will he also gave the college six thousand acres of land and the reversion of the Island of Nauchon, one of the Elizabeth Islands (which see), in Buzzard's Bay, where he died.

**Bowyer, FORT, ATTACK UPON (1814).** At the entrance to Mobile Bay, thirty miles from the village of Mobile, was Fort Bowyer (now Fort Morgan), occupying the extremity of a narrow cape on the eastern side of that entrance, and commanding the channel between it and Fort Dauphin opposite. It was a small work, in semicircular form towards the channel, without bomb-proofs, and mounting only twenty guns, nearly all of them 12-pounders. It was the chief defence of Mobile; and in it Jackson, on his return from Pensacola, placed Major William Lawrence and 130 men. On Sept. 12, 1814, a British squadron appeared off Mobile Point with land troops, and very soon Lieutenant-colonel Nichols appeared in rear of the fort with a few marines and 600 Indians. The squadron consisted of the *Hermes*, 22 guns; *Sophia*, 18; *Caron*, 20; and *Anacanda*, 18—the whole under Captain Percy, the commander of a squadron of nine vessels which Jackson drove from Pensacola Bay. (See *Pensacola*, 1814.) By a skilful use of his twenty cannon, Lawrence dispersed parties who tried to cast up intrenchments and sound the channel. Early in the afternoon of the 15th the British began an attack on land and water. The garrison adopted as the signal for the day "Don't give up the fort." A fierce and general battle ensued, and continued until half-past five o'clock, when the flag of the *Hermes* was shot away. Lawrence ceased firing to ascertain whether she had surrendered. This humane act was answered by a broadside from another vessel. A raking fire soon disabled the *Hermes*. At length the flagstaff of the fort was shot away, when the ships redoubled their fire. Supposing the fort had surrendered, the British leader on land assailed it with his Indians. He was soon undeceived. They were driven back by a terrible storm of grape-shot, and fled in terror. The battered ships withdrew, all but the *Hermes*. She was set on fire by her friends, and at midnight her magazine exploded. The British, who had brought to bear upon Fort Bowyer 92 pieces of artillery, and arrayed over 1300 men against a garrison of 130, were repulsed with a loss of 232 men, of whom 162 were killed. The loss of the Americans was four men killed and four wounded.

**Bowyer, FORT, SURRENDER OF.** When the British left the vicinity of New Orleans (Jan.

19, 1815) they proceeded to attack Fort Bowyer, yet commanded by Major Lawrence. They besieged it nearly two days, when the commander was compelled, by a superior force, to surrender it. The British were about to attack defenceless Mobile, when news of peace caused the arrest of further attempt at conquest.

**Boyd, JOHN PARKER,** was born at Newburyport, Mass., Dec. 21, 1768; died in Boston Oct. 4, 1830. He entered the military service of the United States in 1786, but soon afterwards went

JOHN PARKER BOYD.

to the East Indies and entered the Mahratta service, in which he rose to the rank of commander, and at one time led ten thousand men. He first raised three battalions of five hundred men each, with a few English officers, whom, as well as his men, he hired, at a certain amount a month, to any of the Indian princes who needed their services. Their equipment, including guns and elephants, was at his own expense. He was at one time in the pay of Holkar, in the Peishawa's service, and afterwards in that of Neham Ali Khan. Arriving at Madras in July, 1789, he was given, by the ruler, the command of ten thousand men. When demands for his services almost ceased, he sold out and went to Paris. In 1808 he returned to the United States, and re-entered the army as colonel of the Fourth Infantry on Oct. 7 of that year. In that capacity he was distinguished in the battle at Tippecanoe (which see), Nov. 7, 1811. Boyd was commissioned brigadier-general Aug. 26, 1812. He was in command of fifteen hundred men in the expedition down the St. Lawrence in 1813; and fought bravely at Chrysler's Field, in Canada, Nov. 11, 1813. (See *Chrysler's Field*.) He led his brigade in the capture of Fort George, Upper Canada. General Boyd was Naval Officer at the port of Boston in 1830.

**Boydton Plank-road, BATTLE OF (1864).** Since the possession of the Weldon road (which see) by the Nationals, the Boydton plank-road

had become the chief channel of communication for Lee in that quarter, and he had extended his intrenchments along its line to the vicinity of Hatcher's Run. The corps of Warren and Parke were sent to assail the extreme right of these intrenchments, while Hancock's corps and Gregg's cavalry, well towards its left, should swing around to the west side of Hatcher's Run, sweep across the Boydton road, and seize the Southside Railway. The Boydton road was a few miles west of the Weldon Railway. The movement began on the morning of Oct. 27, 1864, and at nine o'clock the Confederate line was struck, but it was not broken. Warren's corps made its way to the west of Hatcher's Run to gain the Confederate rear. Crawford's division got entangled and broken in an almost impassable swamp. An attempt of a part of Howard's corps to form a junction with Crawford's troops was defeated by the tangled swamp. These movements had been eagerly watched by the Confederates. Heth was sent by Hill to strike Hancock. It was done at four o'clock, P.M. The blow first fell upon Pierce's brigade, and it gave way, leaving two guns behind. The Confederates were pursuing, when they, in turn, were struck by the Nationals, driven back, and the two guns recaptured. Full one thousand Confederates were made prisoners. Others, in their flight, rushed into Crawford's lines, and two hundred of them were made prisoners. Meanwhile Hancock had been sorely pressed on his left and rear by five brigades under Wade Hampton. Gregg fought them, and with infantry supports maintained his ground until dark. In these encounters Hancock lost about fifteen hundred men, and the Confederates about an equal number. Hancock withdrew at midnight, and the whole National force retired behind their intrenchments at Petersburg. The movement was intended to favor Butler's operations on the north side of the James River. (See *Fort Harrison*.)

Braceti, or Brazito, BATTLE OF (1846). Colonel Alexander W. Doniphan, in command of one thousand mounted volunteers from Missouri, was detached from General Kearney's command for independent service. In November, 1846, he marched towards Chihuahua, Mexico, after forcing the Navajo Indians to make a treaty of peace. His object was to join the forces under General Wool. At Braceti, or Brazito, in the valley of the Rio del Norte, not far from El Paso, he was attacked, in his camp, by a large Mexican force (Dec. 22) under General Ponce de Leon, who sent a black flag, bearing the device of a skull and crossbones, to the American commander, with the message, "We will neither take nor give quarter." Doniphan was surprised, and his men had not time to saddle their horses before the foe—infantry, cavalry, and artillery—assailed them. Doniphan hastily drew up his men in front of his camp. The Mexicans fired three rounds in quick succession, and the Missourians all fell upon their faces. The Mexicans, supposing them all to be slain, rushed forward

to plunder the dead, when the Americans suddenly arose, poured deadly volleys from their rifles, killed about two hundred of the foe, seized their cannon, and dispersed the whole body of the assailants.

**Braddock, DEATH OF.** Competent testimony seems to prove that General Braddock, who was mortally wounded in the battle of the Monongahela (July 9, 1755) was shot by Thomas Faucett, one of the provincial soldiers. His plea in extenuation of the crime was self-preservation. Braddock, who had spurned the advice of Washington about the method of fighting Indians, had issued a positive order that none of the English should protect themselves behind trees, as the French and Indians did. Faucett's brother had taken such a position, and when Braddock perceived it, he struck him to the earth with his sword. Thomas, on seeing his brother fall, shot Braddock in the back, and then the provincials, fighting as they pleased, were saved from utter destruction.

**Braddock, GENERAL EDWARD,** born in Perthshire, Scotland; died July 13, 1755. Entered the army as ensign in the Coldstream Guards. He served in the wars in Flanders, received a

GENERAL EDWARD BRADDOCK.

commission as brigadier-general in 1746, and major-general in March, 1754. He arrived in Virginia in February, 1755; conducted an expedition against Fort Duquesne, and was mortally wounded in battle (it is believed by one of his own men) in July. (See *Braddock's Defeat*.) General Braddock was haughty and egotistical, and his private character was not good, he being known as a gambler and spendthrift.

**Braddock's Defeat.** General Edward Braddock, in command of an expedition against Fort Duquesne, commenced his march from

Will's Creek (Cumberland, Md.), June 10, 1755, with about two thousand men, regulars and provincials. Anxious to reach his destination before Fort Duquesne should receive reinforcements, he made forced marches with twelve hundred men, leaving Colonel Dunbar, his second in command, to follow with the remainder and the wagon-train. On the morning of July 9 the little army forded the Monongahela River, and advanced in solid platoons along the southern shores of that stream. Washington saw the perilous arrangement of the troops after the fashion of European tactics, and he ventured to advise Braddock to disperse his army in open order and employ the Indian mode of fighting in the forests. The haughty general angrily replied, "What! a provincial colonel teach a British general how to fight!" The army moved on, recrossed the river to the north side, and were marching in fancied security at about noon, when they were suddenly assailed by volleys of bullets and clouds of arrows on their front and flanks. They had fallen into an ambush, against which Washington had vainly warned Braddock. The assailants were French regulars, Canadians, and Indians, less than one thousand in number, under De Beaujeu, who had been sent from Fort Duquesne by Contrecoeur (see *Duquesne, Fort*), and who fell at the first onslaught. The suddenness of the attack and the horrid war-whoop of the Indians, which the British regulars had never heard before, disconcerted them, and they fell into great confusion. Braddock, seeing the peril, took the front of the fight, and by voice and example encouraged his men. For more than two hours the battle raged fearfully. Of eighty-six English officers sixty-three were killed or wounded; so, also, were one half the private soldiers. All of Braddock's aids were disabled excepting Washington, who, alone unhurt, distributed the general's orders. Braddock had five horses shot under him, and finally he, too, fell, mortally wounded. (See *Braddock, Death of*.) The provincials fought bravely, and nearly all were killed. The remnant of the regulars broke and fled when Braddock fell. Washington, who was left in chief command, perceiving the day was lost, rallied the few provincial troops, and, carrying with him his dying general, gallantly covered the retreat. The enemy did not pursue. The British left their cannons and their dead on the battle-field. Three days after the battle, Braddock died, and was buried in the forest more than fifty miles from Cumberland. Washington, surrounded by sorrowing officers, read the funeral service of the Church of England by torch-light at his grave. (See *French and Indian War*.)

**Bradford, WILLIAM**, first printer in Pennsylvania and New York, was born at Leicester, England, in 1659; died in New York, May 23, 1752. A Friend, or Quaker, he came to America with Penn's early colonists in 1682, and landed near the spot where Philadelphia was afterwards built. He had learned the printer's trade in London, and, in 1686, he printed an almanac

in Philadelphia. Mixed up in a political and social dispute in Pennsylvania, and suffering thereby, he removed to New York in 1693, and in that year printed the laws of that colony. He began the first newspaper in New York, Oct. 16, 1725—the *New York Gazette*. He was printer to the government of New York more than fifty years, and for thirty years the only one in the province.

**Bradford, WILLIAM**, Governor of Plymouth Colony, was a passenger in the *Mayflower*. He was born at Ansterfield, Yorkshire, England, in March, 1588; died at Plymouth, New England, May 9, 1657. At the early age of seventeen years he made an attempt to leave England with dissenters, for Holland (see *Pilgrim Fathers*), and suffered imprisonment. He finally joined his dissenting brethren at Amsterdam, learned the art of silk-dyeing, and, coming into the possession of a considerable estate at the age of twenty-one years, he engaged successfully in commerce. One of Mr. Robinson's congregation at Leyden, he accompanied the "Pilgrims" to America, and was one of the foremost in selecting a site for the colony. Before the "Pilgrims" landed, his wife fell into the sea from the *Mayflower*, and was drowned. He succeeded John Carver (April 5, 1621) as Governor of Plymouth Colony. He cultivated friendly relations with the Indians; and he was annually rechosen governor as long as he lived, excepting in five years. He wrote a history of Plymouth colony from 1620 to 1647, which was published by the Massachusetts Historical Society in 1856.

**Bradstreet, JOHN**, was born in 1711; died in New York city, Sept. 25, 1774. He was lieutenant-colonel of Pepperell's regiment in the expedition against Louisburg in 1745; and in September, the same year, he was made a captain of a regular regiment. The following year he was appointed Lieutenant-governor of St. John, Newfoundland—a sinecure place. Braddock ordered him to accompany Shirley to Oswego, in 1755, as his adjutant; and in 1756 he was charged with conveying supplies to Oswego. In 1757 he was appointed captain of a company in the regiment of Royal Americans; and late in the same year he was promoted to lieutenant-colonel of the same regiment, and deputy quartermaster-general, with the rank of colonel. He was quartermaster-general of Abercrombie's forces, with the rank of colonel, in the expedition against Ticonderoga in July, 1758; and in August he led an expedition which captured Fort Frontenac. Bradstreet was with Amherst in his expedition against Ticonderoga and Crown Point in 1759. In May, 1762, he was commissioned a major-general, and in 1764 he commanded an expedition against the western Indians.

**Bradstreet, SIMON**, Governor of Massachusetts, was born in Lincolnshire, England, in March, 1603; died at Salem, Mass., March 27, 1697. After studying one year in college, young Bradstreet became steward to the Countess of Warwick. He married Anne, a daugh-

ter of Thomas Dudley, and was persuaded to engage in the settlement of Massachusetts. Invested with the office of judge, he arrived at Salem in the summer of 1630. The next year he was among the founders of Cambridge, and was one of the first settlers at Andover. Very active, he was almost continually in public life, and lived at Salem, Ipswich, and Boston. He was Secretary, Agent, and Commissioner of the United Colonies of New England (see *New England Confederacy*); and in 1662 he was despatched to congratulate Charles II. on his restoration. He was assistant (see *Court of Assistants*) from 1630 to 1679, and deputy-governor from 1673 to 1679. From that time till 1686 (when the charter was annulled) he was governor. When, in 1689, Andros was imprisoned, he was restored to the office, which he held until the arrival of Governor Phipps, in 1692, with the new charter. His wife, Anne Bradstreet, was a poetess of considerable merit. Her poems were published in London in 1650, and a second edition was published in Boston in 1678.

**Bradstreet's Expedition.** Pontiac's War had filled the settlements on the western frontiers with dire alarm, and they sent piteous calls for help. In July, 1764, a little army of eleven hundred men, composed chiefly of provincial battalions from New Jersey, New York, and Connecticut, led by the gallant John Bradstreet (see *Frontenac, Fort*), reached Fort Niagara on its way farther westward. Bradstreet found a large concourse of Indians there, of various nations, ready to renew friendship with the English, and expecting presents. The Senecas, to placate the English, brought in prisoners, and ratified a treaty of peace. On his march along the southern shores of Lake Erie, Bradstreet was met by dusky deputations from the Ohio country, who desired to have the chain of friendship brightened; and he made a treaty with the nations dwelling between Lake Erie and the Ohio. He was welcomed at Detroit with expressions of great respect and satisfaction; and from that post he sent a detachment to take possession of Mackinaw (which see). On Sept. 7, the Ottawas and Chippewas met Bradstreet in council, and, cashiering their old chiefs, the young warriors made a covenant of friendship with the English, as brothers, and asked for peace in the name of their wives and children. Pontiac did not appear, but was included in the treaty of peace then made. By that treaty the Indian country became a part of the royal domain; its tribes were bound to render aid to the English troops; and, in return, were promised English protection. (See *Pacification of Indian Tribes*.)

Bragg, BRAXTON, was born in Warren County, N. C., about 1815; died at Galveston, Tex., Sept. 27, 1876. He graduated at West Point Military Academy in 1837; entered the artillery; and served in the Seminole War and in the war with Mexico, receiving for good conduct in the latter several brevets and promotions. The last brevet was that of lieutenant-colonel, for Buena

Vista, Feb. 23, 1847. He was made major in 1855; resigned the next year, and lived (an extensive planter) in Louisiana until the breaking out of the Civil War, when (March, 1861) he was made a brigadier-general in the Confederate army. Made major-general in February, 1862, he took an important part in the battle of Shiloh (which see) in April. He was made general in place of A. S. Johnston, killed; and in May succeeded Beauregard in command. Early in the fall he invaded Kentucky, but was driven out with much plunder. (See *Perryville*.) He fought Rosecrans with great spirit at Murfreesborough (December, 1862); was driven into Georgia in the summer of 1863; defeated Rosecrans at Chickamauga (which see) in September; and was defeated by Grant at Missionaries' Ridge late in November. A few weeks later he was relieved of command, but led a small force from North Carolina to Georgia in 1864. He lost favor with the Confederate leader.

**Bragg's (CONFEDERATE) Army Expelled from Tennessee.** The armies of Rosecrans and Bragg confronted each other for several months in Tennessee after the battle of Stone's River (which see). Rosecrans remained on the scene of the battle; Bragg was below the Duck River. Finally the Army of the Cumberland, in three divisions, commanded respectively by Generals Thomas, McCook, and Crittenden, began its march (June 23, 1863) from Murfreesborough to Chattanooga. General Burnside, in Kentucky, was ordered to move through the mountains into East Tennessee to co-operate with Rosecrans. At that time Bragg's left wing, under General (Bishop) Polk, lay at Shelbyville, behind formidable intrenchments about five miles in length, cast up by legally emancipated slaves drawn from Northern Georgia and Alabama. General Hardee, with 12,000 men, was at War Trace, on the railway between Murfreesborough and Chattanooga, and holding the front of rugged hills, behind which was a strongly intrenched camp at Tullahoma. Bragg had about 40,000 men, and Rosecrans 60,000. By skilful movements he manœuvred Bragg out of his strong position. The latter was pressed back to Tullahoma. Rosecrans meanwhile had seized mountain passes on Bragg's front and seriously menaced his flank. Perceiving this, Bragg turned and fled without giving a blow, the Nationals pressing hard upon his rear. Having the advantage of railway communication, the retreating forces very easily kept ahead of their pursuers; and passing rapidly over the Cumberland Mountains towards the Tennessee River, they crossed that stream at Bridgeport, destroying the bridge behind them, and made a rapid march to Chattanooga. The expulsion of Bragg from Tennessee alarmed and disheartened the Confederates, and they felt that everything depended upon their holding Chattanooga, the key to East Tennessee and Northern Georgia. Towards that point the Army of the Cumberland pressed on slowly; and late in August it had crossed the mountains, and was stretched along the Tennessee River from above Chattanooga many a league westward.

**Bragg's Invasion of Kentucky.** John Morgan, of Alabama, a famous guerilla chief, and N. B. Forrest, the leader of a strong cavalry force, had for some time (in 1862) roamed, with very little serious opposition, over Kentucky and Tennessee, preparatory to the invasion of the former by a large Confederate force under General Braxton Bragg. E. Kirby Smith, a native of Connecticut, led Bragg's advance. He entered Kentucky from East Tennessee, pushed rapidly to Lexington, after defeating a National force near Richmond, in that state, and was warmly welcomed by the Secessionists. The alarmed Legislature, sitting at Frankfort, fled to Louisville; while Smith pressed on towards the Ohio, where he was confronted by strong fortifications opposite Cincinnati. The invader recoiled, and falling back to Frankfort, awaited the arrival of Bragg, who entered Kentucky (Sept. 5) with forty regiments and as many cannons. His advance, 8000 strong, under General Chalmers, encountered a National force under Colonel Wilder at Mumfordsville, on the line of the Nashville and Louisville Railway. The Confederates were repulsed; but Wilder was compelled to yield to General Polk a few days later. Bragg joined Smith at Frankfort, where the combined armies numbered about 65,000 effective men. He now expected to make an easy march to Louisville, but was confronted by General Buell, who had been marching abreast of Bragg. Buell suddenly turned upon Bragg with about 60,000 troops, and a fierce battle ensued near Perryville (Oct. 8, 1862), in which the invaders were so roughly handled that they fled in haste towards East Tennessee, followed by their marauding bands, who had plundered the inhabitants in every direction. Indeed, the whole expedition seemed to be a plundering raid. It was disastrous to Bragg, who soon afterwards abandoned Kentucky.

**Brandy Station, SKIRMISH NEAR.** While Meade, with the Army of the Potomac, was halting on the north side of the Rappahannock River, in the summer of 1863, his cavalry were not idle. On Aug. 1, General Buford, with his troopers, dashed across that river, struck Stuart's cavalry, and pushed them back almost to Culpepper Court-house. So vigorous and sudden was the assault that the daring Confederate leader and his staff came near being captured at a house near Brandy Station, where they were about to dine. They left their dinner untouched and immediately decamped, leaving the viands to be eaten by the Union officers. Buford pursued, and from Auburn (the residence of the staunch Virginia Unionist, John Minor Botts) there was a running fight back towards Brandy Station; for, strongly confronted there by Stuart, Buford became a fugitive in turn. In that engagement he lost one hundred and forty men, of whom sixteen were killed.

**Brandywine, BATTLE ON THE.** When Washington learned that Howe was ascending Chesapeake Bay in the fleet of his brother, he marched (Aug. 24, 1777) from Philadelphia to meet him. At about the time he reached Wilming-

ton Howe was landing his army, 18,000 strong, at the head of the Elk River, fifty-four miles from Philadelphia. Washington's effective force did not exceed 11,000 men, including 1800 Pennsylvania militia. Howe's objective was Philadelphia, and he began his march (Sept. 3) in that direction through a country swarming with Tories. One division was led by Earl

WASHINGTON'S HEADQUARTERS.

Cornwallis, and the other by General Knyphausen. Washington had advanced almost to Red Clay Creek, and sent General Maxwell with his brigade to form an ambuscade in the direction of the enemy. In a skirmish the British were checked, but moved forward (Sept. 8) to attack Washington and turn his flank. By a dexterous movement in the night, the latter fell back to Chad's Ford, on the Brandywine Creek, above Wilmington, and took post in a strong position on the hills that skirt the eastern borders of that stream. The astonished Britons gave chase the next morning, but found Washington standing in their pathway to Philadelphia. The two divisions of Howe's army met at Kennet Square (Sept. 10), and the next morning Cornwallis led a large portion of them up the Lancaster Road towards the forks of the Brandywine, leaving all their baggage—even their knapsacks—with the other division. The latter moved for Chad's Ford a few hours later in a dense fog. Washington's left wing, composed of the brigades of Muhlenberg and Weedon, of Greene's division, and Wayne's division, with Proctor's artillery, were on the hills east of Chad's Ford. The brigades of Sullivan, Stirling, and Stephen, composing the right wing, extended along the Brandywine Creek to a point above the forks; and 1000 Pennsylvania militia under General Armstrong were at Pyle's Ford, two miles below Chad's. General Maxwell, with 1000 light troops, was posted on the west side of the creek to dispute the passage of Knyphausen. The latter attempted to dislodge Maxwell, who, after a severe fight, was pushed to the edge of the Brandywine, where he was reinforced. Then he turned upon his pursuers and drove them back to the main line. Perceiving danger of being flanked, Maxwell fled across the stream,

leaving its western banks in possession of the enemy. Knyphausen now brought his great guns to bear upon the Americans at Chad's Ford. It was to divert Washington's attention from Cornwallis, who was pushing forward to cross the Brandywine and gain the rear of the Americans. This accomplished, Knyphausen was to cross over, when a simultaneous attack

so, Cornwallis, with his rested troops, fell upon Sullivan, and a severe conflict ensued. For a while the result was doubtful. Finally the right wing of the Americans, under General Dehorre, gave way; then the left, under Sullivan; but the centre, under Stirling, remained firm for a while. Then it, too, broke and fled in confusion. Lafayette, who was with this corps, fight-

VIEW AT CHAD'S FORD, ON THE BRANDYWINE.

by both parties was to be made. Washington resolved to strike a blow at once. He directed Sullivan to cross the Brandywine above and attack Cornwallis, while he (Washington) should cross the stream and assail Knyphausen. Through misinformation, Sullivan failed to perform his part. A message which he sent to Washington kept the latter in suspense a long time. Greene, who had crossed at Chad's Ford with his advanced guard, was recalled; and Cornwallis, in the meantime, had made a wide circuit, crossed the Brandywine, and gained a hill near Birmingham Meeting-house, not far

ing as a volunteer on foot, was badly wounded in his leg. The scattered troops could not be rallied, excepting a few who made a stand at Dilworth. They, too, soon joined the fugitives in the flight towards the main army, closely pursued by the victors, Cornwallis's cannons having made dreadful havoc in the ranks of the Americans. Meanwhile Washington, with Greene and two brigades, had hastened to the aid of the right wing. They met the fugitives, opened their ranks to receive them, and, by a constant cannonade, checked their pursuers; and at a narrow defile the regiments of Stephen and Stewart held the British back until night, when the latter encamped. In the meantime Knyphausen had crossed at Chad's Ford and attacked the left wing under Wayne. After a gallant fight, the latter, seeing the British gaining his rear, abandoned his cannons and munitions of war and made a disorderly retreat behind the division of Greene. At twilight there was a skirmish near Dilworth between Maxwell and his light troops, lying in ambush to cover the retreat of the Americans, and some British grenadiers. The contest was brief, for darkness put an end to it. The Americans, defeated, marched leisurely to Chester; for the British, who held the field, did not pursue. The next morning (Sept. 12, 1777) Washington gathered his broken army, marched towards Philadelphia, and encamped near Germantown. It was estimated that the Americans lost, in killed, wounded, and prisoners, about 1200; the British, about 800.

BIRMINGHAM MEETING-HOUSE.

from Sullivan's right, before that officer discovered him. The surprised general informed Washington of his peril, and immediately prepared to attack the enemy. Before he could do

Brant, JOHN, son of Joseph Brant, was born at the Mohawk village on the Grand River, in Canada, Sept. 27, 1794; and died there at the age of forty-eight years. He took up arms for the British when the War of 1812-15 broke out, and led a party of Indians at the battle of Queenston (which see). He was then only eighteen years of age, and was conspicuous for his bravery. He had received a good English education at Ancaster and Niagara, and was a diligent student of English authors. Young Brant was an ardent lover of nature, was manly and amiable, and was in every respect an accomplished gentleman. On the death of his father, in 1807, he became the principal chief of the Six Nations, although he was the fourth and youngest son. Brant was engaged in most of the military events on the Niagara frontier during the war; and at its close he and his young sister Elizabeth occupied the homestead at the head of Lake Ontario, and there dispensed a generous hospitality. He went to England in 1821 on business for the Six Nations, and there took occasion to defend the character of his father from the aspersions contained in Campbell's *Gertrude of Wyoming*. He proved that his father was not present at the massacre in Wyoming; but the poet had not the generosity or manliness to strike out of the poem the calumnious words, and so it remains until this day. In 1827 Gov-

JOHN BRANT.

ernor Dalhousie gave him the commission of captain, and as such he appeared as in the engraving. In 1832 he was elected a member of the Provincial Parliament for the County of Haldimand.

Brant, JOSEPH (Thay-en-da-ne-gea), a noted Mohawk chief, was born about 1742; died on his estate at the head of Lake Ontario, Canada, Nov. 24, 1807. In 1761 Sir William Johnson sent

him to Dr. Wheelock's school at Hanover, N. H., where he translated portions of the New Testament into the Mohawk language. Brant engaged in the war against Pontiac in 1763 (see

JOSEPH BRANT.

*Pontiac's War*); and at the beginning of the war for independence he was secretary to Guy Johnson, the Indian Superintendent. In the spring of 1776 he was in England; and to the ministry he expressed his willingness, and that of his people, to join in the chastisement of the rebellious colonists. It was an unfavorable time for him to make such an offer with an expectation of securing very favorable arrangements for his people, for the ministry were elated with the news of the disasters to the "rebels" at Quebec. Besides, they had completed the bargain for a host of German mercenaries (which see), a part of whom were then on their way to America to crush the rebellion. They concluded the next ship would bring news that the Americans were willing to agree to unconditional submission, the only terms which the imperial government would grant. Brant returned, but to find the Americans successful in many places, and determined to persevere. He took up arms for the British; and in the raids of Tories and Indians in Central New York upon the patriotic inhabitants he was often a leader, holding the commission of colonel from the King of England. He prevailed on the Six Nations to make a permanent peace after the war; and in 1786 he went to England the second time, but then for the purpose of collecting funds to build a church on the Indian reservation on the Grand River, in Canada. This was the first church erected in the Upper Province. Brant did much to induce his people to engage in the arts of peace. The remains of Brant rest beneath a handsome mausoleum near the church on the reservation on the Grand River, Canada. It was erected by the inhabitants of the vicinity in 1850. It is composed of light-brown sandstone. On the slab that surmounts it is an appropriate inscription in commemoration of the chief,

and of his accomplished son John, who was conspicuous on the Niagara frontier in the War of 1812-15.

THE BRANT MONUMENT.

**Brashear City, MILITARY OPERATIONS NEAR (1863).** This town was in a singular country, composed of fertile plantations, extensive forests, sluggish lagoons and bayous, passable and impassable swamps, made dark by umbrageous cypress-trees draped with Spanish-moss and festooned with interlacing vines, the earth in many places matted and miry, and the waters abounding in alligators. At that time the whole country was half submerged by the superabundant waters of the Mississippi and its tributaries. A single railway passed through this country from New Orleans to Brashear City, on the Atchafalaya, a distance of eighty miles, at which point the waters of the great bayou Teche meet those of the Atchafalaya and others. Near Pattersonville, on the Teche, the Confederates had erected fortifications, and gathered troops to dispute the passage of these important waters by National gunboats. Banks, in command of the Department of the Gulf, determined to expel the armed Confederates from Brashear City and its vicinity. An expedition for that purpose was led by General Godfrey Weitzel, accompanied by a squadron of gunboats, under Commodore McKean Buchanan, brother of the commander of the *Merrimac* (which see). They penetrated to Brashear City, and then proceeded (Jan. 11, 1863) to attack the works near Pattersonville. Weitzel's infantry were placed in the gunboats, and his cavalry and artillery proceeded by land. They encountered formidable river obstructions—torpedoes, an armored steamboat, and batteries well manned by eleven hundred men, on each side of the bayou. These were attacked on the 15th, and in that engagement Buchanan was killed by a rifle-ball that passed through his head. The Confederates were driven from their works, and their monster steamer was abandoned and burned. In this affair the Nationals lost thirty-four men killed and wounded.

**Braxton, CARTER**, a signer of the Declaration

of Independence, was born at Newington, Va., Sept. 10, 1736; died Oct. 10, 1797. He was educated at the College of William and Mary in 1756, and resided in England until 1760. He was a distinguished member and patriot in the Virginia House of Burgesses in supporting the resolutions of Patrick Henry in 1765, and in subsequent assemblies dissolved by the governor. He remained in the Virginia Assembly until royal rule ceased in that colony, and was active in measures for defeating the schemes of Lord Dunmore. Braxton was in the Convention at Richmond in 1775, for devising measures for the defence of the colony and the public good; and in December he became the successor of Peyton Randolph in Congress. He remained in that body to vote for and sign the Declaration of Independence. In 1786, after serving in the Virginia Legislature, he became one of the executive council.

**Breckinridge, JOHN CABELL**, was born near Lexington, Ky., Jan. 21, 1821; died at Lexington, May 17, 1875. Studying law at the Transylvania Institute, he began its practice at Lexington. He served as major in the war with

\* JOHN CABELL BRECKINRIDGE.

Mexico; was a member of his State Legislature; and from 1851 to 1855 was in Congress. President Pierce tendered him the mission to Spain, which he declined. In March, 1857, he became Vice-President, under Buchanan, and succeeded John J. Crittenden in the Senate of the United States in 1861. He was then a defeated candidate for the Presidency. His friendship for the insurgents caused his expulsion from the Senate in December, 1861, when he joined the Secessionists, and was made a Confederate major-general, Aug. 5, 1862. He was active at various points during the remainder of the war. Breckinridge was Secretary of War of the Confederacy when it fell (1865), and soon afterwards departed for Europe, returning to his native state in a short time.

**Brevard, EPHRAIM**, was a native of Mecklenburg County, N. C., and was secretary of the famous "Mecklenburg Convention" (which see) that issued a declaration of independence in 1775. He died at Charlotte, N. C., near the close of the Revolution. Mr. Brevard, one of seven sons of a widow, graduated at the College

of New Jersey in 1768; was educated for a physician, and practised the profession in Charlotte. When the British invaded the Carolinas, Dr. Brevard entered the Continental army as a surgeon, and was made a prisoner at Charleston in 1780. Broken with disease, he returned to Charlotte after his release, and soon afterwards died.

Brevet implies (in French) a royal act, conferring some privilege or distinction; in England it is applied to a commission giving nominal rank higher than that for which pay is received. Thus, a brevet-major serves and draws pay as captain. The first time it was used in the United States Army was in 1812, when Captain Zachary Taylor was promoted to major by brevet for his defence of Fort Harrison (which see). It was sometimes used in the Continental army after the arrival of the French troops in 1780.

Brewster, WILLIAM, born at Scrooby, England, in 1566; died at Plymouth, Mass., April 16, 1644. Educated at Cambridge, he entered the service of William Davidson, ambassador of Queen Elizabeth in Holland. The ambassador was much attached to Brewster, and procured for him the office of postmaster at Scrooby. When his mind was turned very seriously towards religious subjects, he withdrew from the Church of England, and established a dissenting society, or rather a society of Separatists. This new society worshipped on Sabbath days at Mr. Brewster's house until persecution began to interrupt them. He, with Mr. Bradford and others, was among those who attempted to fly to Holland in 1607. (See *Robinson, John*.) They were arrested and imprisoned at Boston in Lincolnshire. As Mr. Brewster had the most property, he was the greater sufferer. At much expense he gained his liberty, and then he assisted the poorer members of the church to escape, following them himself soon afterwards. At Leyden he opened a school for teaching the English language, to replenish his exhausted funds. He had then been an elder and teacher for some time. By the assistance of some friends he procured a printing-press, and published several books against the English hierarchy. In Mr. Robinson's church in Leyden Brewster was a ruling elder, and was so highly esteemed that

ELDER BREWSTER'S CHEST AND DINNER-POT.

he was chosen the spiritual guide of the "Pilgrims" who emigrated to America. He took with him to the wilderness his wife and numerous children. It was upon the lid of his chest

that the political compact was signed on board the *Mayflower*. At New Plymouth he supplied the vacant pulpit most of the time for nine years, preaching very impressive sermons; but he could never be persuaded to administer the Lord's Supper, though he had the care of the church. Some of Elder Brewster's descendants were very long-lived. Mrs. Polly (Brewster) Buckingham, who died in Poughkeepsie, N. Y., in January, 1873, aged ninety-five years and seven months, was sixth in descent from the elder. She had heard her grandmother, who died at the age of ninety-eight years, say that she had conversed with persons who came over in the *Mayflower*.

Bridgman, LAURA, was born at Hanover, N. H., Dec. 21, 1829. Severe illness deprived her of sight and hearing, and consequently of speech, when she was two years of age. Her sense of smell was also destroyed, and that of touch much impaired. On the recovery of her health, none of her senses were restored. The late Dr. S. G. Howe took great interest in her case, and she became an inmate of the "Perkins Institute" for the blind, in Boston, of which he was the founder, where she was taught the names and qualities of objects and how to write. She also acquired the rudiments of arithmetic; became quite a skilful pianist; and acquired a practical knowledge of some household duties, as well as needlework. The case of Laura Bridgman is the most remarkable on record in all its phases. She is yet (1887) an inmate of the Perkins Institute.

Brier Creek, BATTLE OF (1779). Colonel Ashe, of North Carolina, was sent by General Lincoln, with two thousand men, to drive the British from Augusta. The latter fled when Ashe appeared on the opposite side of the river, and pushed towards the sea, led by Lieutenant-colonel Campbell. Ashe crossed and pursued as far as Brier Creek, forty miles below Augusta, on the Georgia side of the Savannah River, where he encamped. He was surprised (March 3, 1779) and utterly defeated by General Prevost, who was marching up from Savannah to support Campbell. Ashe lost almost his entire army by death, captivity, and dispersion. Some were killed, others perished in the morasses, and many were drowned in attempting to pass the Savannah River. This blow deprived Lincoln of about one fourth of his army and led to the temporary re-establishment of royal authority in Georgia.

Bristow Station, BATTLE OF (1863). In the third race for Washington (which see), the struggle to first pass Bristow Station, on the Central Virginia Railway, was very hot. Lee pushed Hill and Ewell forward to gain that point before the Nationals should reach it. When they approached it the entire Army of the Potomac had passed it, excepting General Warren's corps, which was then not in sight of the Confederates. Hill was about to attack the Third Corps, when, at about noon (Oct. 15), he was startled by the appearance of Warren's troops approaching his rear. They had outstrip-

ped Ewell's, and were expecting to meet Sykes's at Bristow Station. Hill instantly turned and opened his batteries upon Warren, who was surprised for a moment; but in the space of ten minutes the batteries of Arnold and Brown, assisted by the infantry divisions of Hayes and Webb, drove back the Confederates and captured six of their guns. These were instantly turned upon the fugitives. A flank attack by the Confederates was repulsed with a loss to them of 450 men made prisoners. This was an effectual check upon Hill's march. Just at sunset Ewell came up, and Warren's corps (Fifth) was confronted by a greater portion of Lee's army. Seeing his peril, Warren skilfully withdrew under cover of the approaching darkness, and joined the main army in the morning on the heights of Centreville. Warren's loss in the battle of Bristow Station was about two hundred in killed and wounded.

**British Aid to the Confederates.** The amount of aid given to the Confederates by British sympathizers through the agency of blockade-runners may be approximately estimated by the fact that from Oct. 26 to Dec. 31, 1864—only thirty-five days—there were carried into the single port of Wilmington, N. C., for their use, 8,320,000 pounds of meat, 1,500,000 pounds of lead, 1,993,000 pounds of saltpetre, 546,000 pairs of shoes, 316,000 pairs of blankets, 520,000 pounds of coffee, 69,000 rifles, 97 packages of revolvers, 2639 packages of medicine, 48 cannons, and many miscellaneous articles.

**British Alliance with Indians Urged (1813).** The news of Perry's victory on Lake Erie (which see) startled the British public, and strange confessions of weakness were made in the English and provincial newspapers. "We have been conquered on the Lake," said a Halifax paper, "and so we shall be on every other lake, if we take as little care to protect them." Others urged the necessity of an alliance with the Indians to secure the possession of Canada. "We dare assert," said a writer in one of the leading British reviews, "and recent events have gone far in establishing the truth of the proposition, that the Canadas cannot be effectually and durably defended without the friendship of the Indians and command of the Lakes and River St. Lawrence." He urged his countrymen to consider the interests of the Indians as their own; "for men," he said, "whose very name is so formidable to an American, and whose friendship has recently been shown to be of such great importance to us, we cannot do too much."

**British and American Fleets at Charleston (1780).** On March 21, 1780, the British marine force, under Admiral Arbuthnot, crossed the bar at Charleston. It consisted of one 54-gun ship, two 44-gun ships, four of 32 guns, and the *Sandwich*, also an armed ship. Commodore Whipple was in the Charleston outer harbor with a flotilla of small vessels. Finding he could not prevent the British ships from passing the bar, he fell back to the waters immediately in front of Charleston and transferred all the crews and guns of his vessels, excepting one, to the hatter-

ies on the shore. The commodore sunk most of his own and some merchant vessels near Shute's Folly, at the mouth of the Cooper River, to prevent British vessels from entering it.

**British Cantonments in New Jersey.** After chasing Washington and his shattered army to the banks of the Delaware (1776), the British did not attempt to cross, but were established in a line of cantonments at Trenton, Pennington, Bordentown, and Burlington. Other corps were quartered in the rear of these, at Princeton, Brunswick, and Elizabethtown.

**British Denial of the Right of Search.** At the Treaty of Utrecht (1713) Spain gave to England the privilege of transporting to the Spanish-American colonies a certain number of negro slaves. This was a special favor, for all but Spaniards were rigidly excluded from those colonies. Taking an unfair advantage of this privilege, the English, under cover of the slave-trade, carried on extensive smuggling. The British government, in assuming this illicit trade, did not seem to consider the blow they were giving at the very principles on which their own colonial policy was founded. The Spaniards, to guard against this systematic violation of their laws, maintained a numerous fleet of vessels in the preventive service, called a *guarda costa*, or coast-guard. This guard were sometimes pretty severe in their treatment of English smugglers, and they very frequently made thorough searches of English vessels suspected of the crime. These acts were greatly exaggerated in England, and the old hatred of the Spaniards was renewed. There was a loud clamor against this assumed right of search. Despising the Spaniards as weak, and envying them for their riches, the merchants loudly opposed an amicable settlement of the difficulty, and forced Walpole into a war with Spain, hoping to have the Spanish-American ports thereby opened free to English commerce. (See *Spanish West India Settlements, War upon.*)

**British Flag at New York.** On the day when the British evacuated the city of New York (Nov. 25, 1783) they nailed their colors to the flag-staff at Fort George ("the Battery"), knocked off the cleats, and "slushed" the pole from top to bottom to prevent its being climbed. John Van Arsdale, a sailor-boy, sixteen years old (who died in 1836), ascended the pole by nailing on cleats and applying sand to the greased flag-staff. In this way he reached the top, hauled down the British colors, and placed the flag of the United States in their place before the fleet was out of sight. It is believed that the nailing of the flag of Great Britain to the staff at that time had a higher significance than was visible in the outward act—namely, a compliance with secret orders from the imperial government not to strike the flag, as in a formal surrender, but to leave it flying, in token of the claim of Great Britain to the absolute proprietorship of this country, then abandoned. It was generally believed in England, on the misrepresentation of the Tory refugees, that the absence of British authority in America would be only temporary.

**British Interference with the Rights of Neutrals.** Under the pressure of war, the French Convention, by decree (1793), allowed neutral vessels the privileges of French ships. A rich commerce was at once created for American shipping. The jealous British government revived the Rule of 1756 (which see), and British cruisers claimed the right to seize French property on board of American vessels. At that time there was much trade between America and the West Indies, and American vessels were carrying away many people, besides much property belonging to them, who were fleeing to the United States from the horrors of insurrection in Santo Domingo. Much of the property of these wretched people was seized on American vessels. The British government refused to recognize as neutral the trade between France and her West India colonies, which nothing but the pressure of war had caused to be opened to other than French vessels. The British government also issued an order to British cruisers to seize and bring in all vessels loaded with breadstuffs and bound for France, even though both vessel and cargo should be neutral property. Such vessel and cargo, on proof of neutrality, were not to be forfeited; but the cargo was to be paid for, and the vessel released on bonds being given to land in countries friendly to Great Britain.

**British Marauding Expeditions (1778).** Sir Henry Clinton, before he returned to New York from Rhode Island, sent out General Grey (see *Paoli*) to land with troops at New Bedford. They proceeded to destroy the shipping in the harbor there. About seventy vessels were burned. Many of them had been captured by the American privateers. They also burned the stores, wharves, warehouses, vessels on the stocks, and the mills and barns at Fairhaven, opposite. The value of property destroyed was estimated at \$323,000. Then they went to Martha's Vineyard, where they destroyed several vessels and made a successful requisition for the militia arms, the public money, three hundred oxen, and ten thousand sheep. Clinton also sent out an expedition from New York to attack Colonel Baylor's troop of horse, quartered at Tappan. Grey was sent on this errand also. He took them by surprise, as they lay asleep, and bayoneted nearly seventy, some of them while they begged for quarter. (See *Baylor*.) Another expedition, under Captain Patrick Ferguson, burned Little Egg Harbor, on the New Jersey coast, with vessels there, and ravaged the surrounding country. A picket-guard of infantry, thirty in number, with Pulaski's Legion, on their way from Trenton to Little Egg Harbor, were surprised by these marauders, and all of them were butchered.

**British Minister, A STUPID.** In the last century there were two secretaries of state charged with the foreign relations of the British empire. The officer in charge of the executive power relating to the American colonies had the care of what was called the Southern Department. Sir Robert Walpole, the able Pre-

mier of England, endeavored to shape the cabinet so that men of superior talents might not become his rivals. In 1724 he managed to have the Duke of Newcastle made the keeper of the seals of the "Southern Department." He had high rank, wealth, personal influence over the boroughs, and was stupid in intellect; and he was kept in that responsible station for nearly twenty-four years. While he could give full statistics of every election, he had very little idea of the country or people of whose interests he was the official guardian. He was frivolous and shallow, and during his long administration vast numbers of memorials and letters from the colonies were left unnoticed in his office. Perhaps his imbecility left the Americans more liberty than they would have enjoyed under an able and energetic statesman. It is said the duke was so deficient in his geographical knowledge that he once inquired whether America could not be reached easier by land than by water; and he used to address letters to the "Island of New England." He could not tell whether Jamaica was in the Mediterranean Sea or in the Atlantic Ocean. Newcastle was insincere, deceptive, and fond of rewarding incompetent friends with important offices. It was written of him:

"He makes no promise but to break it,  
Faithful to naught but his own ends,  
The bitterest enemy to his friends;  
But to his fixed, undaunted foe,  
Obsequious, base, complying, low,  
Cunning supplies his want of parts;  
Treason and lies are all his arts."

In 1748 Newcastle was succeeded by the Duke of Bedford, a man of inflexible honesty, unsullied honor, not brilliant, but sound, patriotic, and sincere.

**British Minister Dismissed.** Early in 1855 enlistments for the British army, then employed in the war in the Crimea, were undertaken in the United States under the sanction of British officials and in violation of neutrality laws. In this business the British Minister at Washington (Craughton) was implicated. The United States government demanded his recall. The British government refused compliance. After waiting several months while diplomatic correspondence was going on, the President (Pierce) dismissed the offending minister; also the British consuls at New York, Philadelphia, and Cincinnati, who had been guilty of a similar offense. Mutual national irritation followed; but law and equity were so clearly on the side of the United States that a new minister was sent to Washington, and friendly relations were restored.

**British Minister, FIRST, IN THE UNITED STATES.** When Great Britain observed that the National Constitution was the foundation of a compact nation, and that the United States were no longer a mere league of commonwealths, she condescended to send a minister plenipotentiary to reside at the seat of the government of the new republic. George Hammond was that minister, who delivered his letters of credence soon after Washington's return from his Southern tour (which see). With Mr.

Hammond, Mr. Jefferson, Secretary of State, entered into an elaborate correspondence on several unsettled questions which were still open between the two governments—the inexecution of the treaty as to the evacuation of the frontier posts; the slaves carried away by the departing British troops at the close of the Revolution; the disputed eastern boundary; and the stipulations concerning British creditors of the Americans and of the loyalists.

**British Ministry, BLINDNESS OF THE.** When Parliament assembled on Nov. 8, 1768, the king, in his speech, alluded with much warmth to the "spirit of faction breaking out afresh in some of the colonies. Boston," he said, "appears to be in a state of disobedience to all law and government, and has proceeded to measures subversive of the constitution, and attended with circumstances that might manifest a disposition to throw off its dependence on Great Britain." He asked for the assistance of Parliament to "defeat the mischievous designs of those turbulent and seditious persons" who had deluded, by false pretences, numbers of his subjects in America. An address was moved promising ample support to the king, and providing for the subjection of the rebellious spirit of the Americans. Vehement debates ensued. The Opposition were very severe. Lord North, the recognized leader of the ministry, replied, saying: "America must fear you before she can love you. If America is to be the judge, you may tax in no instance; you may regulate in no instance. . . . We shall go through with our plan, now that we have brought it so near success. I am against repealing the last act of Parliament, securing to us a revenue out of America; I will never think of repealing it until I see America prostrate at my feet." This was a fair expression of the sentiments of the ministry and of Parliament. The address was carried by an overwhelming majority—in the House of Lords by unanimous vote. (See *Lord Hillsborough and Colonial Agents.*)

**British Offers to Treat for Peace.** On Jan. 6, 1814, the United States Government received from that of Great Britain an offer to treat for peace directly at London, that city being preferred because it would afford greater facilities for negotiation. It was proposed, in case there should be insuperable objections to London, to hold the conference at Gottenburg, in Sweden. This offer, with the selection of Gottenburg, was accepted by President Madison, who, at the same time, complained of the rejection of Russia's mediation, which had been offered three separate times. He nominated as commissioners to negotiate for peace, John Quincy Adams and James A. Bayard, to whom Henry Clay and Jonathan Russell were added as special representatives of the war party. At the same time, Russell was nominated and confirmed as minister to Sweden.

**British Plan of Conquest in America.** So early as the summer of 1776, intimations reached the Americans that the British minis-

try had devised a grand scheme for dividing the colonies, and so to effect their positive weakness and easy conquest. It contemplated the seizure of the valleys of the Hudson River and Lake Champlain, and the establishment of a line of military posts between the mouth of the Hudson and the River St. Lawrence, and so, separating New England from the rest of the union, easily accomplish the subjugation of the whole. To effect this, English and German troops were sent both to the St. Lawrence and to New York in the spring and summer of 1775. It was the grand aim of the expedition of Burgoyne southward from the St. Lawrence in 1777. To counteract this movement, the Americans cast up strong fortifications in the Hudson Highlands, and kept their passes guarded. It was in anticipation of such a scheme that the colonists made the unsuccessful attempt to win Canada either by persuasion or conquest. (See *Canada, Invasion of; Burgoyne's Campaign.*)

**British Power Vanishing in the South** (1781) General Greene was yet on the High Hills of Santee when news of the surrender of Cornwallis reached him. The day of its arrival was kept by his army as one of great rejoicing. The event seemed to be a sure prophecy that peace and independence were near. So felt the patriots throughout the State of South Carolina. Governor Rutledge called a legislative assembly at Jacksonborough, S. C., to re-establish civil authority. An offer of pardon brought hundreds of Tories from the British lines at Charleston to accept clemency. The North Carolina Tories were dismayed, for, immediately after the surrender of Cornwallis, St. Clair had marched upon Wilmington. The alarmed British troops there, under Major Craig, immediately abandoned that post, and the Tories in his ranks left him, and returned to their homes. With a few followers Craig took post upon St. John's Island, near Charleston. The vigilance of the Republicans was not allowed to slumber. Marion and his men kept "watch and ward" over the region between the Cooper and Santee rivers, while Greene's main army advanced to, and lay along, the Edisto River, and Wayne's forces imprisoned the British in Savanuah.

**British Slave-Trade.** By the treaty of Utrecht, in 1713, provision was made for England to supply America with kidnapped negroes. The queen (Anné) undertook to carry to the Spanish West Indies, in the space of thirty years, 144,000 negro slaves, at the rate of 4800 each year, paying a duty on each of them of thirty-three and one third dollars a head. The British might introduce as many more as they pleased at a less rate of duty, only no scandal was to be offered to the Roman Catholic religion. Great care was taken to secure a monopoly of the business. As great profits were expected from the trade, Philip V. of Spain took one quarter of the common stock; Queen Anné reserved another quarter to herself, and the remaining half

was to be divided among her subjects. So the monarchs of England and Spain, a century and a half ago, figure as the largest slave merchants in the world.

**British Spy in Congress (1774).** It is asserted that Joseph Galloway (which see), who was a member of the First Continental Congress, was a voluntary spy for the British government. His conduct throughout the session, viewed in the light of subsequent history, appears insincere and disingenuous. He was one of the most bitter Tories who misrepresented the colonies in England, to which he fled when his principles were discovered and denounced. He quailed before Samuel Adams, the stern Puritan and patriot, and cordially hated him because he feared him. "Though by no means remarkable for brilliant abilities," wrote Galloway, "he is equal to most men in popular intrigue and the management of a faction. He eats little, drinks little, sleeps little, and thinks much; and is most decisive and indefatigable in the pursuit of his objects. He was the man who, by his superior application, managed at once the faction in Congress at Philadelphia and the factions in New England." And it may be added that he was the man who so well read Galloway's character in that Congress that he thwarted the schemes of the British spy. (See *Galloway's Plan*.)

**British Tampering with the Slaves (1813).** Admiral Cochrane had succeeded Admiral Warren in command on the American station, and, on April 2, he issued a proclamation, dated at Bermuda, the rendezvous of the more southern blockading fleet. That proclamation was addressed to slaves under the denomination of "persons desirous to emigrate from the United States." Owing to the inability of nearly all the slaves to read, the proclamation had very little effect. It is said that a project had been suggested by British officers for taking possession of the peninsula between the Delaware and Chesapeake bays, and there training for British service an army of negro slaves. The project was rejected only because the British, being then slave-holders themselves, did not like to encourage insurrection elsewhere.

**British Troops in Boston (1768).** Before news of the riot in Boston (June, 1768) reached England, two regiments of troops had been ordered to that town from Halifax. That news caused two others to be ordered from Ireland. General Gage sent an officer from New York to provide quarters for them. This occasioned a town-meeting in Boston, and a request for the governor to call a meeting of the Assembly. He refused. The troops from Halifax came to the number of one thousand (September, 1768), and, though there was room in the barracks at Castle William, they were ordered to be quartered in the town. The governor declared that the barracks were reserved for the two regiments expected from Ireland. His council was now opposed to him, and they refused to provide quarters for the troops in

Boston. One of the regiments encamped on the Common. The Sons of Liberty (which see), having compassion on the exposed troops, allowed part of the other regiment to occupy Fanueil Hall temporarily, and the remainder went into the Town-house. Cannons were planted in front of the latter, sentinels were posted in the streets, the inhabitants were challenged as they passed, and the Sabbath stillness was disturbed by the tread of marching soldiers and the beating of drums. Boston had the appearance of a garrisoned town, and great irritations ensued. In October, General Gage appeared in Boston to urge the provision of quarters for the troops. The council referred him to the selectmen. The latter declined to take any steps in the matter. The governor organized what he called a Board of Justice to find quarters, but the members appointed refused to serve. Gage was compelled to hire buildings for the purpose, and to procure, out of his own military chest, various articles for their comfort.

**British War Party.** In Great Britain, at the time of the first downfall of Napoleon, there was a furious war party in England, with the *London Times* as its leader. They demanded that the released troops should be sent to America to punish, with severity, a nation of insolent democrats, which had taken advantage of Great Britain's greatest pressure to make an unnatural war upon her. The naval successes of the Americans, they said, had made them insolent, and, unless they received a signal check, they might become a rival for the mastery of the seas. The government sent over (1814) thousands of Wellington's veterans, who, in northern New York, at Baltimore, and at New Orleans, found themselves overmatched by the sturdy defenders of the rights of the Republic.

**Brock and the Canada Legislature.** General Brock, Governor of Upper Canada, heard of Hull's invasion from Detroit on July 20, 1812, and took immediate measures to resist it. He knew the weakness of Fort Malden, below Detroit, and felt anxious. The Legislature was about to assemble at York (Toronto), and he could not personally conduct affairs in the west. Divided duties perplexed him. Leaving the military which he had gathered along the Niagara frontier in charge of Lieutenant-colonel Myers, he hastened to York, and, with much parade, opened the session of the Legislature. His address was warmly received, but he found that either disloyalty or timidity prevailed in the Legislature. Some were decidedly in favor of the Americans, and most of them were lukewarm. Perceiving this, Brock prorogued the Assembly so soon as they had passed the necessary supply-bills. But a change soon came. News of the seizure of Mackinaw and reverses to the Americans on the Detroit frontier, together with Brock's continually confident tone in public expressions, gave the people courage, and he was enabled to write to Sir George Prevost (July 29, 1812), "The militia stationed here have volunteered their services this morn-

ing to any part of the province." He soon led quite a large body of them, and captured Detroit. (See *Detroit, Surrender of*.)

**Brock, SIR ISAAC**, was born in Guernsey, Oct. 6, 1769; killed at Queenston, Canada, Oct. 13,

MEDAL IN MEMORY OF GENERAL BROCK.

1812. He entered the British army as an ensign in 1783; saw service in Holland, and was in the attack on Copenhagen in 1801. Rising by degrees, he became a major-general, and was appointed president and administrator of the government of Upper Canada, Oct. 9, 1811. When war was declared by the United States, he took prompt measures for the defence of the province, and led the military in person at the capture of Detroit and in the battle of Queenston. At the latter place he was killed while rallying his troops to attack the Americans on the Heights. (See *Queenston, Battle at*.) His body was pierced by three bullets. The British government caused a fine monument to be erected to his memory in St. Paul's Cathedral, London, bearing the following inscription: "Erected at

MONUMENT WHERE BROCK FELL.

the public expense to the memory of Major-general Sir Isaac Brock, who gloriously fell on the 13th of October, MDCCCXII, in resisting an

attack on Queenstown, Upper Canada." To the four surviving brothers of Brock 12,000 acres of land in Canada were given, and a pension of \$1000 a year each for life. In 1816 the Canadians struck a medal to his memory; and on the Heights of Queenstown they raised a beautiful Tuscan column 135 feet in height. In the base of the monument a tomb was formed, in which the general's remains repose. They were taken to this last resting-place from Fort George on Oct. 13, 1824. A small monument marks the place where he fell.

**Brodhead, JOHN ROMEYN**, historian, was born in Philadelphia, Jan. 2, 1814; died in New York, May 6, 1873. He graduated at Rutgers College

SIR PHILIP BOWES VERE BROKE.

in 1831; admitted to the bar in 1835; was attached to the American legation at the Hague in 1839, and was appointed by the Legislature of New York its agent to procure and transcribe original documents concerning the history of the state. He spent three years in searching the archives of Holland, England, and France, and obtained copies of more than five thousand separate papers, comprising the reports of home and colonial authorities. They have been published in eleven quarto volumes by the State of New York, edited by E. B. O'Callaghan, LL.D. Mr. Brodhead was secretary of the American legation in London from 1846 till 1849. On his return he began the preparation of a *History of the State of New York*. The first volume was published in 1853, and the second in 1871. He was naval officer of New York from 1853 till 1857. Mr. Brodhead left his *History of the State of New York* unfinished.

**Broke, SIR PHILIP BOWES VERE**, an English admiral, born Sept. 9, 1776; died Jan. 2, 1841. He entered the British navy in 1792, and became post-captain in 1801. His most conspicuous ex-

loit was his capture of the American frigate *Chesapeake* in June, 1813. (See *Chesapeake and Shannon*.) This affair caused him to receive knighthood; and at the time of his death he held the commission of rear-admiral of the Red. In the action with the *Chesapeake* he was so badly wounded that he was never fit for service afterwards. His son, Sir Philip Broke, was born on Jan. 15, 1804; was educated at the Royal Naval College at Portsmouth; and entered the navy in 1819, rising to the rank of post-captain, when he left the service and became high-sheriff of the county of Suffolk.

**Brookfield, ENCOUNTER WITH INDIANS AT.** In August, 1675, a conference with the Nipmucs at Brookfield, Mass., was proposed. But no Indians were there. Captain Wheeler, with twenty horsemen, went in search of them, and fell into an ambush not far away, when eight of the white men were killed. The survivors hastened to Brookfield, and had just gathered the men, women, and children of the village—seventy in number—into a strong house, when three hundred savages, glowing with war-paint, filled the street, yelling and brandishing torches, with which they fired every house excepting the one in which the English had taken refuge. Upon that the Indians made a furious attack, and the siege continued two days. Every effort was made, by fire and weapons, to dislodge the garrison. On the third day, when the savages had contrived a successful method for burning the building, a heavy shower of rain extinguished the flames; and soon afterwards Major Simon Willard, of Boston, arrived with about sixty men and drove off the besiegers, who lost eighty of their warriors in the fight. (See *King Philip's War*.)

**Brooks, JOHN, M.D., LL.D.,** soldier and statesman, was born at Medford, Mass., May 3, 1752; died March 1, 1825. He received a common-school education, studied medicine, and settled

JOHN BROOKS.

in its practice at Reading, where he commanded a company of minute-men (which see) when the Revolution began. With his men he was engaged in the affairs of April 19, 1775, at Lexington and Concord. Brooks was active in intrenching Breed's Hill (see *Bunker's Hill*) on the night

of June 16, 1775, and was major of a regiment that assisted in fortifying Dorchester Heights. Early in 1776 he accompanied it to Long Island, and fought there. The battle of White Plains tested his capacity as a disciplinarian and leader; and early in 1777 he was promoted to lieutenant-colonel of the Eighth Massachusetts Regiment, which was chiefly recruited by himself. He became colonel of the Seventh Massachusetts Regiment late in 1778; and he accompanied Arnold on his expedition to relieve Fort Mifflin in 1777. (See *Fort Mifflin*.) He led his regiment in battle with great prowess and success at Saratoga (see *Bemis's Heights*), Oct. 7, 1777; and in the battle of Monmouth (which see) he was acting-adjutant-general. Colonel Brooks resumed the practice of medicine at Medford after the war, and was for many years major-general of militia. He served cheerfully and efficiently in any civil or military duty to which his countrymen called him; was adjutant-general of Massachusetts during the War of 1812-15, and was governor of that commonwealth from 1816 to 1823, when he retired to private life. In 1816 Harvard University conferred upon him the degrees of M.D. and LL.D. From 1817 until his death he was president of the Massachusetts Medical Society; of the State Society of the Cincinnati from 1787; and of the Massachusetts Bible Society.

**Brooks, WILLIAM T. H.,** was born in Ohio in 1815; died at Huntsville, Ala., July 19, 1870. He graduated at West Point in 1841, served under Scott in the war against Mexico, and became brigadier-general of Volunteers in 1861, serving in the Army of the Potomac through all its operations and vicissitudes. In July, 1864, he was temporarily in command of the Tenth Army Corps, and resigned the same month.

**Brother Jonathan, ORIGIN OF THE PHRASE.** When Washington took command of the Continental army at Cambridge, he found it in want of ammunition and other supplies, and this want continued, more or less, for months. Jonathan Trumbull was then the popular, efficient, and patriotic governor of Connecticut, and Washington had frequent occasion to rely upon his judgment and aid. On one occasion, at a council of war, when there seemed to be no way to make provision against an expected attack of the enemy, the commander-in-chief said, "We must consult brother Jonathan on the subject." He did so, and the governor was successful in supplying many of the wants of the army. When the army was afterwards spread over the country and difficulties arose, it was a common saying among the officers, as a by-word, "We must consult brother Jonathan." The origin of these words were soon lost sight of, and "Brother Jonathan" became the title of our nationality, like that of "John Bull" of England.

**Brotherly Love, CITY OF.** This is the meaning of *Philadelphia*, the name given by William Penn to the city which he founded (1682) between the Delaware and Schuylkill rivers. He bought the land of the Swedes, and, with the

assistance of Thomas Holme, the surveyor of his colony, he laid out the city at the close of 1682. He caused the boundaries of the streets to be marked on the trunks of chestnut, walnut, locust, spruce, pine, and other forest trees, and several of the streets bear the names of those trees. The new city grew rapidly. Within a year after the surveyor had finished his work almost a hundred houses were erected there, and Indians came almost daily with the spoils of the forest as gifts for "Father Penn," as they delighted to call the proprietor. In March following (1683), the city was honored as the gathering-place of the representatives of the people to consider a constitution of government which Penn had prepared. It constituted a representative republican government, with free religious toleration and justice for its foundation; and the proprietor, unlike those of other provinces, surrendered his charter-rights to the people on the appointment of public officers. Wise and beneficent laws were enacted under the charter. To prevent lawsuits, it was decreed that three arbitrators, called peace-makers, should be appointed by the county courts to hear and determine differences among the people; that children should be taught some useful trade; that factors wronging their employés should make satisfaction and one third over; that all causes for irreligion and vulgarity should be repressed; and that no man should be molested for his religious opinions. They also decreed that the days of the week and the months of the year should be called, as in Scripture, first, second, etc. The settlers lived in huts before houses could be built, also in caves in the river-banks, arched over with boughs. The chimneys were built of clay, strengthened by grass. A man named Guest built the first house, it is believed, which was the Blue Anchor Tavern afterwards, and Guest was its first keeper. Ten other houses were soon built near of frames filled in with clay. Before Penn's arrival a little cottage had been built on the site of the new city by a man named Drinker, and this was the first habitation of a white man there. The name of Philadelphia—city of brotherly love—was given by Penn to the town to impress the people with an idea of the disposition which he hoped would prevail there. Liberty in the colony caused a great influx of emigrants, and in the space of two years Philadelphia had grown so rapidly that there were six hundred houses. There had arrived in 1682 twenty-eight ships. A large emigration, chiefly of Friends, arrived there from Holland, Germany, England, and Wales in 1683-84; and the population was estimated, at the close of the latter year, at twenty-five hundred. Schools were established; and in 1687 William Bradford set up a printing-press in Philadelphia. A city charter was given by Penn, Oct. 28, 1701, and a court-house was built in 1707. During the whole colonial period Philadelphia was the most important city in the country, and remained so for more than a quarter

of a century after the establishment of state government in Pennsylvania in 1776. Writing to Lord Halifax from Philadelphia, Penn said, with righteous exultation, "I must, without vanity, say I have led the greatest colony into America that ever any man did upon private credit, and the most prosperous beginnings that ever were in it are to be found among us."

**Brown, JACOB**, was born in Bucks County, Penn., May 9, 1775, of Quaker parentage; died in Washington city, Feb. 24, 1823. From his eighteenth to his twenty-first year he taught

JACOB BROWN.

school at Crosswicks, N. J., and passed the next two years in surveying lands in Ohio. In 1798 he opened a select school in the city of New York, and studied law. Some of his newspaper essays attracted the notice of General Alexander Hamilton, to whom he became secretary while that officer was acting general-in-chief of the army raised to fight the French. On leaving that service he went to northern New York, purchased lands on the banks of the Black River, not many miles from Sackett's Harbor, and founded the flourishing settlement of Brownsville, where he erected the first building within thirty miles of Lake Ontario. There he became county judge; colonel of the militia in 1809; brigadier-general in 1810; and, in 1812, received the appointment of commander of the frontier from Oswego to Lake St. Francis, a line two hundred miles in extent. He performed excellent service on that frontier and that of the Niagara during the War of 1812-15, receiving two severe wounds in battle. For his services he received the thanks of Congress and a gold medal. At the close of the war, General Brown was retained in command of the northern division of the army, and was made general-in-chief of the Army of the United States, March 10, 1821.

General Brown's remains were interred in the Congressional burying-ground, and over them is a truncated column of white marble upon an inscribed pedestal.

GENERAL BROWN'S MONUMENT.

**Brown, JOHN**, a patriot of the Revolution, was born at Sandisfield, Mass., Oct. 19, 1744; killed by Indians in the Mohawk Valley, Oct. 19, 1780. He graduated at Yale College in 1761; became a lawyer and active patriot; entered Canada in disguise (1774-75) to obtain information and secure the co-operation of the Canadians with the other colonists, and aided Ethan Allen in the capture of Ticonderoga. He was active with

Montgomery in the siege of Quebec. In August, 1776, he was made lieutenant-colonel, and, on the morning of Sept. 18, 1776, he surprised the outposts of Ticonderoga, set free one hundred American prisoners, captured four companies of British regulars, a quantity of stores and cannons, and destroyed a number of boats and an armed sloop. He left the service because of his detestation of Benedict Arnold, but continued to act with the militia.

**Brown, JOHN** (Ossawatimie), was born at Torrington, Conn., May 9, 1800; hanged at Charlestown, Va., Dec. 2, 1859. He was a descendant of Peter Brown of the *Mayflower*. His grandfather was a soldier of the Revolution, and perished in that war. When John was five years of age, his father moved to Ohio; and in 1815-20 he worked at the trade of a tanner. He became a dealer in wool; visited Europe on business; and in 1855 he emigrated to Kansas, where, as an anti-slavery champion, he took an active part against the pro-slavery party, engaging in some of the conflicts of the short civil war in that territory. Devout, moral, courageous, and intensely earnest, he sought to be an instrument for the abolition of African slavery from the Republic. The idea that he might become a liberator was conceived so early as 1839. In May, 1859, he made his first movement in an attempt to liberate the slaves in Virginia, which ended so disastrously to himself at Harper's Ferry. (See *John Brown's Raid*.) That movement precipitated the secession measures which led to the Civil War and the destruction of the institution of slavery in the United States.

**Brown, JOHN CARTER**, was born in Providence, R. I., Aug. 28, 1797; died there, June 10, 1874. He was a second son of Nicholas Brown, the patron of Brown University, at which he graduated in 1816. He engaged largely in the business of manufactures and merchandise. He travelled much in the United States, and resided in Europe, at different times, for several years. In 1828 he was chosen a trustee, and in 1842 a fellow, of Brown University, and so remained until his death, bestowing many munificent gifts upon that institution. Together they amounted to \$70,000. In his will he made liberal provision for a new library building, which has since been erected. His entire benefactions to the university amount to nearly \$160,000. Mr. Brown never took any prominent part in public affairs; but he was an active friend of the bondsmen, and did much, in his quiet way, in aid of the cause of freedom in the struggle in Kansas (which see), giving money liberally for the promotion of emigration thither from New England. During almost his whole life Mr. Brown was engaged in the collection of a library of American history, in which his friend Hon. J. Russell Bartlett materially aided him. He aimed to gather early, rare, and valuable books, which, by proper classification, would show the methods of American colonization and subsequent development of its civilization. For full forty years before his death he pursued this object with zeal, and has left one of the rarest and grandest collections of the kind ever made. It comprises about ten thousand volumes; and it gives to John Carter Brown a foremost place among the distinguished historical collectors of the world.

**Brown, NICHOLAS**, a munificent patron of Brown University, from whom it derives its name. (See *College of Rhode Island*.) He was born in Providence, R. I., April 4, 1769; died there, Sept. 27, 1841. He graduated at Rhode Island College (Brown University) in 1786, became a very successful merchant in 1791, was a member of the Rhode Island Legislature, and giving money liberally to his *alma mater*, the name of Brown University was given to it. He gave in all about \$100,000 to that college, and liberally patronized other institutions of learning. He gave nearly \$10,000 to the Providence Athenæum, and bequeathed \$30,000 for an insane asylum in Providence.

**Brownists.** The Puritans who went to Holland, and afterwards emigrated to New England, were of the sect called "Brownists," so named from their leader, Robert Brown. The sect sprang up towards the close of the sixteenth century. So early as 1580, Brown began to inveigh against the ceremonies of the Church of England. Being opposed by the bishops, he and his congregation left England, and settled in Zealand, where they formed a church upon a model to suit themselves. The seed he had planted in England grew so abundantly that at the close of the century there were about twenty thousand

Brownists in the realm. Of that sect were Rev. Mr. Robinson, Elder Brewster, and the congregation at Leyden in 1620. The founder of this sect was born about the year 1550, and died about 1630. His family were closely connected with Cecil, afterwards Lord Burleigh. Educated at Cambridge, as soon as he left college he began a vigorous opposition to the whole discipline and liturgy of the Established Church. He taught that all the members of a church were equal, and that the pastor should be chosen by the congregation.

**Brownlow, WILLIAM GANNAWAY**, clergyman and journalist, was born in Wythe County, Va., Aug. 29, 1805; died at Knoxville, Tenn., April 29, 1877. He was left an orphan at eleven

WILLIAM GANNAWAY BROWNLOW.

years of age, and, by means of wages as a carpenter in his youth, he acquired a fair English education. At the age of twenty-four years he entered the ministry of the Methodist Episcopal Church, and was an itinerant for ten years. While on his circuit in South Carolina he opposed the nullification movement in that state (see *Nullification*), which excited strong opposition to him. About 1837 he began the publication of the *Knoxville Whig*, a political newspaper, which soon circulated widely, and, for its vigorous polemics, obtained for Brownlow the name of the "Fighting Parson." In 1858 he engaged in a public debate in Philadelphia on the question, "Ought American Slavery to be Perpetuated?" in which he took the affirmative. When the secession movement began, he boldly opposed it, taking the ground that the preservation of the Union would furnish the best safeguard of Southern institutions, and especially of slavery. So outspoken and influential was Mr. Brownlow that, in December, 1861, he was arrested, by order of the Confederate authorities, on a charge of treason against the Confederacy, and confined in Knoxville jail, where he suffered much until released in March, 1862. Then he was sent within the Union lines at Nashville. Afterwards he made a tour in the Northern States, delivering speeches in the principal cities. At Philadelphia he was joined by his family, who had been expelled from Knoxville, where he

published *Sketches of the Rise, Progress, and Decline of Secession, with a Narrative of Personal Adventures among the Rebels*. Brownlow was Governor of Tennessee in 1865-69, and United States Senator from 1869 until his death. He was a man of fearless spirit, held such a caustic pen, and maintained such influential social and political relations that he was intensely hated and feared by the Secessionists. The latter longed for an occasion to silence him, and finally they made the false charge that he was accessory to the firing of several railway bridges in East Tennessee to cut off communication between Virginia and that region. His life had been frequently menaced by Confederate soldiers, and, at the urgent solicitation of his family, he left home in the autumn (1861), and went into another district. While he was absent several bridges were burned. Believing him to have been concerned in the burning, the Confederate colonel Wood—a Methodist preacher from Alabama—was sent out, with some cavalry, with orders, publicly given at Knoxville, not to take him prisoner, but to shoot him at once. Informed of his peril, Brownlow, with other loyal men, secreted himself in the Smoky Mountains, on the borders of North Carolina, where they were fed by loyalists. The Confederates finally resolved to get rid of this "dangerous citizen" by giving him a pass to go into Kentucky under a military escort. He received such a pass at Knoxville, and was about to depart for the Union lines, when he was arrested for treason. By the assurance of safety he had come to Knoxville for his pass, and so put himself in the hands of his enemies. He and some of the best men in East Tennessee were cast into the county jail, where they suffered intensely. Deprived of every comfort, they were subjected to the vile ribaldry of the guards, and constantly threatened with death by hanging. Acting upon the suggestions of Benjamin (see *Solid South*), men charged with bridge-burning, and confined with Brownlow, were hanged, and their bodies were left suspended as a warning. In the midst of these fiery trials, Parson Brownlow (as he was familiarly called) remained firm, and exercised great boldness of speech. They dared not hang him without a legal trial and conviction. They offered him life and liberty if he would take the oath of allegiance to the Confederacy. He refused with scorn. To Benjamin he wrote: "You are reported to have said to a gentleman in Richmond that I am a bad man, and dangerous to the Confederacy, and that you desire me out of it. Just give me my passport, and I will do for your Confederacy more than the devil has ever done—I will quit the country." Benjamin soon afterwards indicated a wish that Brownlow should be sent out of the Confederacy, "only," he said, "because color is given to the suspicion that he has been entrapped." He was finally released, and sent to Nashville (then in possession of National troops) early in March, 1862.

**Brown's Ferry, SEIZURE OF, 1863.** General G. W. F. Smith undertook to open a more direct way for supplies for the National troops at Chattanooga (which see). In co-operation with Hooker's advance on Wauhatchie (which see), he sent General Hazen from Chattanooga, with eighteen hundred men in batteaux, to construct a pontoon bridge below. These floated noiselessly and undiscerned in the night (Oct. 26, 27, 1863) down the Tennessee River, past the point of Lookout Mountain, along a line of Confederate pickets seven miles in length. They landed at Brown's Ferry, on the south side, captured the pickets there, and seized a low range of hills that commanded Lookout Valley. Another force, twelve hundred strong, under General Turchin, had moved down the north bank of the river to the ferry at about the same time; and by ten o'clock a pontoon bridge was laid, and a strong *abatis* for defence was constructed. The Confederates, bewildered, withdrew up the valley. Before night the left of Hooker's line rested on Smith's at the pontoon bridge. By this operation the railway from Bridgeport well up towards Chattanooga was put in possession of the Nationals, and the route for supplies for the troops at the latter place was reduced by land from sixty to twenty-eight miles along a safe road; and by using the river to Kelly's Ferry, to eight miles.

**Brownstown.** (See *Van Horne's Surrender.*)

**Bryant on the Embargo.** Among the political writers of the day who attacked the first embargo act (which see) was the late poet William Cullen Bryant, being a lad only thirteen years of age. In a poetical satire, entitled *The Embargo; or, Sketches of the Times*, the boy-politician gave evidence of those powers which afterwards elevated him to the front rank among the literary men of the nation. Young Bryant called the embargo act a "terrapiu policy"—the policy designed by it of shutting up the nation in its own shell, as it were, like the terrapiu with its head. In that poem he violently assailed the President (Mr. Jefferson), and revealed the intensity of the opposition to him and his policy in New England, which made even boys bitter politicians. Alluding to Jefferson's narrow escape from capture by Tarleton in 1781 (see *Cornwallis, Invasion by*), his zeal for the French, and his scientific researches, young Bryant wrote:

"And thou, the scorn of every patriot name,  
Thy country's ruin, and her council's shame!  
Poor, servile thiog! derision of the brave!  
Who erst from Tarleton fled to Carrier's cave;  
Thou, who, when menaced by perfidious Gaul,  
Didst prostrate to her whisker'd minion fall;  
And when our cash his empty bags supplied,  
Did meanly strive the foul disgrace to hide.  
Go, wretch, resign the Presidential chair,  
Disclose thy secret measures, foul or fair;  
Go, search with curious eye for horned frogs  
'Mid the wild wastes of Louisiana bogs;  
Or, where Ohio rolls his turbid stream,  
Dig for huge bones, thy glory and thy theme."

**Bryant, WILLIAM CULLEN**, poet, was born at Cummington, Mass., Nov. 3, 1794; died in New York city, June 12, 1878. He communicated rhymes to the county newspaper before he was ten years of age. His father was a distinguished physician and man of letters, and took great

pains in the instruction of his boy. His poem on *The Embargo*, written at the age of thirteen, evinced great precocity of intellect. (See *Bryant on the Embargo.*) He wrote his most remarkable poem (*Thanatopsis*) when he was in his nineteenth year. In 1810 he entered Williams Col-

WILLIAM CULLEN BRYANT.

lege, but did not graduate. He was admitted to the bar in 1815, and practised some time in western Massachusetts. His first collection of poems was published in 1821, and this volume caused his immediate recognition as a poet of great merit. In 1825 Mr. Bryant became an associate editor of the *New York Review*. In 1826 he became connected with the *New York Evening Post*, and continued its editor until his death. Meanwhile he contributed to literary publications. He made four visits to Europe (1834, 1845, 1849, and 1858-59), and in the intervals had visited much of his own country from Maine to Florida. On the completion of his seventieth year, in 1864, his birthday was celebrated by a festival at the "Century Club" by prominent literary men. His translations of Homer into English blank verse were commended as the best rendering of the Epics in his native tongue ever made. His occasional speeches and more formal orations are models of stately style, sometimes enlivened by quiet humor. In prose composition Mr. Bryant was equally happy as in poetry in the choice of pure and elegant English words, with great delicacy of fancy pervading the whole. His last poem was published in the *Sunday-School Times*, Philadelphia, Feb. 22, 1878, on the subject of Washington, and written at the request of the editor of that paper. At the time of his death he was engaged with Mr. S. H. Gay in the preparation of a *History of the United States*. He had also just completed, with the assistance of the late Evart A. Duyckinck, a new and carefully annotated edition of *Shakespeare's Works*, yet (1887) unpublished. Parke Godwin has published his biography.

**Buccaneers, THE**, were daring adventurers who first combined for the spoliation of the Spaniards in the West Indies and the islands of the Caribbean Sea. The first of these were mostly French, who attempted to introduce themselves into the West Indies not long after the

conquests of the Spaniards there, and were called *flibustiers*, or freebooters. Their depredations among the islands were extensive and alarming. They made settlements in Santo Domingo, where the Spaniards attempted to expel them. Retaliation followed. In 1630 they made the little island of Tortugas, west of the Florida Keys, their stronghold, where, in armed bands in row-boats, they attacked Spanish vessels, lying in wait for them on their passage from America to Europe. The richly laden treasure-ships were boarded by them, plundered, and their crews cast into the sea. They extended their operations. The French buccaneers made their headquarters in Santo Domingo, and the English in Jamaica, during the long war between France and Spain (1635-60) and afterwards; and they were so numerous and bold that Spanish commerce soon declined, and Spanish ships dared not venture to America. Finding their own gains diminishing from want of richly laden vessels to plunder, they ceased pillaging vessels, and attacked and plundered Spanish towns on the coasts of Central and South America. A number of these were seized, and immense treasures were carried away in the form of plunder or ransom. At Carthagea, in 1697, they procured \$8,000,000. Their operations were finally broken up by an alliance against them of the English, Dutch, and Spanish governments. Exasperated by the conduct of the Spaniards in Florida, the Carolinas were disposed to give the buccaneers assistance in plundering them; and in 1684-93 they were sheltered in the harbor of Charleston.

Buchanan, FRANKLIN, of the United States Navy, was born in Baltimore, Md., about 1800. He entered the navy in 1815, became lieutenant in 1825, and master-commander in 1841. He was the first superintendent of the Naval Academy at Annapolis. Sympathizing with the Secession movement, and believing his state would "secede," he sent in his resignation. Finding that Maryland did not "secede," he petitioned for restoration, but was refused, when he entered the Confederate service, and superintended the fitting-out of the *Merrimac* at Norfolk. In her he fought the *Monitor* (see *Monitor and Merrimac*), and was severely wounded. He afterwards blew up his vessel to save her from capture. (See *Evacuation of Norfolk*.) In command of the iron-clad *Tennessee*, in Mobile Bay, he was defeated and made prisoner.

Buchanan, JAMES, fifteenth President of the United States, was born in Franklin County, Penn., April 23, 1791; died at "Wheatland," near Lancaster, Penn., June 1, 1868. He graduated at Dickinson College, Penn., at the age of eighteen years, and in 1814, when he was only twenty-three years old, he was elected to a seat in the Pennsylvania Legislature. He had studied law, and was admitted to the bar at Lancaster in 1812. His father was a native of Ireland, and his mother was Elizabeth Spear, daughter of a farmer. Mr. Buchanan's career as a lawyer was so successful that, at the age of forty years, he retired from the profession with a handsome fort-

une. He was a Federalist in politics at first, and as such entered Congress as a member in 1821, where he held a seat ten successive years. The Federal party disappeared (see *Federalists*), and he took sides with the Democrats. He supported Jackson for the Presidency in 1828, when the present Democratic party was organized.

JAMES BUCHANAN.

In 1832-34, Mr. Buchanan was United States minister at St. Petersburg, and from 1834 to 1845 was a member of the United States Senate. He was Secretary of State in the cabinet of President Polk, 1845-49, where he arrayed himself on the side of the pro-slavery men, opposing the Wilnot Proviso (which see), and the anti-slavery movements generally. In 1853 President Pierce sent him as United States minister to England, where he remained until 1856; during which time he became a party in the conference of United States ministers at Ostend, and was a signer of the famous manifesto, or consular letter. (See *Ostend Manifesto*.) In the fall of 1856 Mr. Buchanan was elected, by the Democratic party, President of the United States, receiving 174 electoral votes to 129 given for Frémont (Republican) and Fillmore ("American"). His cabinet was composed of four members from slave-labor states, and three from free-labor states. Those from the former became the active enemies of the republic, and assisted in attempts to destroy the Union. In the first year of his administration great excitement existed concerning the political and social position of Kansas. Mr. Buchanan favored the pro-slavery party; and when, in 1860, the Republican party triumphed, and elected Abraham Lincoln President of the United States, and the Southern politicians threatened the destruction of the Union, the weight of Buchanan's influence was in favor of the disunionists. In his last annual message to Congress he cast the blame for the disruption of the Union, if it should occur, on the Northern people; and, supported by the legal opinion of his attorney-general (Jeremiah S. Black, of Pennsylvania), he declared that neither Congress nor the Executive of the nation possessed power, under the Constitution, to prevent the secession of a state. General Case, his Secretary of State, differed with him in opin-

ion respecting executive power in the premises, and resigned (Dec. 12, 1860) because the President declined to reinforce Fort Sumter, or do anything with the strong arm of power to save the Union. Mr. Buchanan's secretaries of the Treasury, War, and Interior became openly disloyal; and, when a dissolution of the cabinet occurred, and a preponderance of loyal men appeared in it, the President was enabled, thus relieved from pressure, to act more patriotically. He retired to private life March 4, 1861, and took up his abode at "Wheatland," where he died. Mr. Buchanan lived a bachelor. He was an able lawyer, a good debater, and in private life, from his boyhood, his moral character was without reproach. He lived in troublous times, and his political career, towards the last, seems to have been shaped more by persistent politicians than by his own better impulses and judgment.

**Buchanan, ROBERT CHRISTIE,** was born in Maryland, and graduated at West Point in 1830; served in the Seminole War and the war with Mexico; and was made a lieutenant-colonel in 1861. He served in the Army of the Potomac continually during the Civil War, and was brevetted major-general U. S. Army in 1865.

**Buchanan's Cabinet.** On Friday, March 6, 1857, President Buchanan sent to the Senate the names of the following gentlemen as his cabinet ministers, which were immediately confirmed: Lewis Cass, of Michigan, Secretary of State; Howell Cobb, of Georgia, Secretary of the Treasury; John B. Floyd, of Virginia, Secretary of War; Isaac Toucey, of Connecticut, Secretary of the Navy; Jacob Thompson, of Mississippi, Secretary of the Interior; Aaron V. Brown, of Tennessee, Postmaster-general; Jeremiah S. Black, of Pennsylvania, Attorney-general.

**Buchanan's Fast-day Proclamation.** On Dec. 14, 1860, when the whole country was in confusion and alarm because of the bold avowals of the Secessionists in Congress of their intention to break up the Union, President Buchanan issued a proclamation for the observance of Jan. 4 following as a day for humiliation, fasting, and prayer throughout the Republic. "All classes," he said, "are in a state of confusion and dismay, and the wisest counsels of our best and foremost men are wholly disregarded. In this, the hour of our calamity and peril, to whom shall we resort for relief but to the God of our fathers. His omnipotent arm only can save us from the awful effects of our own crimes and follies—our own ingratitude and guilt towards our Heavenly Father." The proclamation, in sentiment and expression, was all a Christian could wish, of its kind; but some thought a more appropriate formula might have been framed, considering the social condition of the nation, after finding the following words in the fifty-eighth chapter of Isaiah: "Wherefore have we fasted, say they, and thou seest not? wherefore have we afflicted our soul, and thou takest no knowledge? Behold, in the day of your fast ye find pleasure, and exact all your labors. Behold, ye fast for strife and debate,

and to smite with the fist of wickedness: ye shall not fast as ye do this day, to make your voice to be heard on high. Is it such a fast that I have chosen? a day for a man to afflict his soul? is it to bow down his head as a bulrush, and to spread sackcloth and ashes under him? wilt thou call this a fast, and an acceptable day to the Lord? Is not this the fast that I have chosen? to loose the bands of wickedness, to undo the heavy burdens, and to let the oppressed go free, and that ye break every yoke? Is it not to deal thy bread to the hungry, and that thou bring the poor that are cast out to thy house? when thou seest the naked, that thou cover him; and that thou hide not thyself from thine own flesh? . . . Then shalt thou call, and the Lord shall answer; thou shalt cry, and he shall say, Here I am."

**Buchanan's Inaugural Address.** A chief topic of President Buchanan's inaugural address was the decision of the Supreme Court of the United States (not promulgated until two days afterwards) in the Dred Scott case (which see), and its effects. He spoke of that decision, which virtually declared the institution of slavery to be a national one, and that the black man "had no rights which the white man was bound to respect," and said it would "speedily and finally" settle the slavery question. He announced his intention to cheerfully abide by that decision. He declared that the question was wholly a judicial one, which belonged to the Supreme Court of the Republic to settle; and that, as by its decision the admission or rejection of slavery in any territory was to be determined by the legal votes of the people in such territory, the "whole territorial question was thus settled upon the principle of popular sovereignty—a principle as ancient as free government itself;" that "everything of a practical nature" had been settled; and that he seriously hoped the long agitation of the subject of slavery was "approaching its end." It was then only the "beginning of the end." That decision "kindled the fire" spoken of by the Georgian in the debate on the Missouri Compromise (which see), "which only seas of blood could extinguish." A council of priests could not stop the motion of the earth, and Galileo knew it and said so; the opinions of five men could not prevent the great heart of the nation beating with strong desires to have the stain of slavery wiped from its escutcheon. The decision settled nothing "speedily and finally" but the destruction of the institution it was expected to preserve. (See *March of Public Sentiment*.)

**Buckeye State,** the popular name of the State of Ohio, derived from the buckeye, or horsechestnut, tree which abounds there.

**Buckingham, WILLIAM ALFRED, LL.D.,** was known as the "War Governor of Connecticut," he being the patriotic and energetic chief magistrate of that state during the late Civil War. He was born at Lebanon, Conn., May 28, 1804; died at Norwich, Conn., Feb. 4, 1875. He engaged in business in Norwich in 1825, where he became a successful merchant and carpet man-

ufacturer; and his generosity and public spirit endeared him to the people. His patriotism, energy, popularity, and extensive influence were of inestimable service to the National government during its struggle for existence; and he was one of the most active of the "war governors" during the contest. In 1869, Governor Buckingham was chosen to represent Connecti-

WILLIAM ALFRED BUCKINGHAM.

cut in the Senate of the United States. A patron of education and a promoter of religion and public morals, he gave to the Theological School of Yale College \$25,000 for the education of young men for the Gospel ministry.

**Buckner, SIMON BOLIVAR**, was born in Kentucky about the year 1824, and graduated at the West Point Academy in 1844. He was Assistant Professor of Ethics there for two years, and then engaged in the war with Mexico, in which he was wounded, and breveted captain. After that war he was again a tutor at West Point; resigned in 1855; practised law in Kentucky; and became one of the most prominent "Knights of the Golden Circle" (which see) in that state. After the Civil War began he became commander of the "Kentucky State Guard" (which see), and adjutant-general of the state. He soon joined the Confederate army, and surrendered the fort and garrison of Fort Donelson (which see) in February, 1862, when he was sent a prisoner to Fort Warren. After his release, he continued in the Confederate service until the close of the war. He was elected governor of Kentucky in 1887.

**Bucktails.** In the politics of the State of New York the Tammany Society (which see) held a conspicuous place so early as during the War of 1812-15. The Republican, or Democratic, party had been divided into two great factions, known as "Madisonians" and "Clintonians," James Madison and De Witt Clinton being rival candidates for the office of President of the United States. Most of the Federalists voted for Clinton. The Tammany Society adhered to Madison. In the election of 1816 a portion of the members of the Tammany Society wore an emblem in their caps—a deer's tail—and they were called "Bucktails." This soon became the title of the Madisonians; and in 1816, when Clin-

ton was elected governor of New York, the opposing parties in the state were known as "Bucktails" and "Clintonians." To one or the other of these parties portions of the disintegrated Republican, or Democratic, party became attached. Afterwards the Bucktail party was styled by its antagonists the "Albany Regency" (which see).

**Buell, DON CARLOS**, was born near Marietta, O., March 23, 1818; graduated at West Point in 1841; engaged in the war with Mexico, in which he won the brevets of captain and major, and was severely wounded; became lieutenant-colonel in the regular army, and brigadier-general of volunteers in May, 1861; major-general of volunteers in March, 1862; and, with an army, arrived on the battle-field of Shiloh (which see) in time to assist in the defeat of the Confederates. In command of the District of Ohio, he confronted Bragg's invasion of Kentucky (which see), and drove him out of the state. (See *Perryville*.) On Oct. 24 he transferred his command to General Rosecrans; was mustered out of the volunteer service May 23, 1864; and resigned his commission in the army June 1, 1865, when he became president of the Green River Iron Company, in Kentucky.

**Buena Vista, BATTLE OF (1847).** General Taylor received such instructions from the War Department that he declared (Nov. 13, 1846) the armistice granted at Monterey was at an end. General Worth marched, with 900 men, for Saltillo, the capital of Coahuila, and was followed the next day by Taylor, who left General W. O. Butler, with some troops, to hold the conquered city of Monterey. Saltillo was taken possession of on Nov. 15. After several minor movements, and having been deprived of a large number of his troops by an order of General Scott to send them to reinforce an American army that was to attack Vera Cruz, Taylor was forced to stand on the defensive with about 5000 men. Informed that General Santa Aña (who had entered Mexico from his exile in Cuba, and had been elected President of Mexico in December) was gathering an army of 20,000 men at San Luis Potosi, Taylor resolved to form a junction with General Wool (who had entered Mexico with about 3000 troops, crossing the Rio Grande at Presidio), and fight the boastful Mexican leader. He reached Saltillo with his little army on Feb. 2, 1847, joining Wool's forces there, and encamped at Agua Nueva, twenty miles south of that place, on the San Luis road. On hearing of the approach of Santa Aña with his host, Taylor and Wool fell back to Angostura, a narrow defile in the mountains facing the fine estate of Buena Vista, and there encamped, in battle order, to await the coming of their foe. Santa Aña and his army were within two miles of Taylor's camp on the morning of Feb. 22, when the Mexican chief sent a note to Taylor, telling him he was surrounded by 20,000 men, and could not, in all probability, avoid being cut to pieces; but as he held the American commander in special esteem, and wished to save him such a catastrophe, he gave him this notice, that he might surrender at discre-

*Little Belt, Chippewa, and Trippe*—were burned; and so were completed the measures of retaliation for the burning of Newark (which see). Six villages, many isolated country-houses, and four vessels were consumed, and the butchery of many innocent persons attested the fierceness of the revenge of the British.

**Buford, JOHN**, born in Kentucky in 1825; died at Washington, D. C., Dec. 16, 1863. He graduated at West Point in 1848; became captain in 1859; and inspector-general, with the rank of major, November, 1861. He commanded a brigade of cavalry under General Hooker, and was so severely wounded near the Rappahannock (August, 1862) that he was reported dead. In the battle of Antietam he was ou General McClellan's staff. He was conspicuous in many engagements while in command of the reserve cavalry brigade, and he began the battle of Gettysburg (which see). He was chief of Burnside's cavalry, and was assigned to the command of the Army of the Cumberland just before his death. His half-brother, Napoleon Buford (born in 1807), is also a graduate of West Point, and entered the artillery. He was a pupil in the Law School of Harvard University; Professor of Natural Philosophy at West Point; but retired to civil pursuits in 1835. Engaging first as colonel in the Union army in 1861, he served well during the continuance of the strife, and was breveted major-general of volunteers in March, 1865.

**Buford's Defeat (1780).** When a detachment of Americans, under Colonel Abraham Buford, of Virginia, hastening to the relief of Lincoln at Charleston (see *Siege of Charleston*), heard of his surrender, they returned towards North Carolina. Buford's command consisted of nearly four hundred Continental infantry, a small detachment of Colonel Washington's cavalry, and two field-pieces. He had reached Camden in safety, and was retreating leisurely towards Charlotte, when Colonel Tarleton, with seven hundred men, all mounted, sent in pursuit by Cornwallis, overtook Buford upon the Waxhaw Creek. Tarleton had marched one hundred miles in fifty-four hours. With only his cavalry—the remainder were mounted infantry—he almost surrounded Buford before that officer was aware of danger, and demanded an instant surrender upon the terms given to the Americans at Charleston. These were too humiliating, and Buford refused compliance. While flags for the conference were passing and repassing, Tarleton, contrary to the rules of warfare, was making preparations for an attack in case of a refusal. The instant he received Buford's reply, his cavalry made a furious charge upon the American ranks. The assailed troops were dismayed by an attack under such circumstances, and all was confusion. Some fired upon their assailants, others threw down their arms and begged for quarter. None was given, and men without arms were hewn in pieces by the sabres of Tarleton's cavalry. There were one hundred and thirteen slain; and one hundred and fifty were so maimed as

to be unable to travel, and fifty-three were made prisoners to grace the triumphal entry of the conqueror into Camden. Only five of the British were killed and fifteen wounded. All of Buford's artillery, ammunition, and baggage became spoil for the enemy. For this savage feat Cornwallis eulogized Tarleton, and commended him to the ministers as worthy of special favor. Afterwards, "Tarleton's quarter" became a proverbial synonym for cruelty. Stedman, one of Cornwallis's officers, and a historian of the war, wrote, "On this occasion, the virtue of humanity was totally forgotten."

**Bull's Run, BATTLE OF (1861).** The gathering of Confederate troops at Manassas Junction (which see) required prompt and vigorous movements for the defence of Washington city. Beauregard was there with the main Confederate army, and General J. E. Johnston was at Winchester, in the Shenandoah Valley, with a large body of troops, with which he might reinforce the former. General Patterson was at Martinsburg with eighteen thousand Nationals to keep Johnston at Winchester. General Irvin McDowell was in command of the Department of Virginia, with his headquarters at "Arlington House;" and, at about the middle of July, 1861, he was ordered to move against the Confederates. With twenty thousand troops he marched from Arlington Heights (July 16), for the purpose of flanking the Confederate right wing. A part of his troops under General Tyler had a severe battle with them at Blackburn's Ford (July 18), and were repulsed. (See *Blackburn's Ford, Battle at*.) McDowell found he could not flank the Confederates, so he proceeded to make a direct attack upon them, not doubting Patterson would be able to keep Johnston in the valley. On the morning of July 21, McDowell's forces were set in motion in three columns, one under General Tyler on the Warrenton Road, to make a feigned attack, and the other two, commanded respectively by Generals Hunter and Heintzelman, taking a wide circuit more to the left, to cross Bull's Run at different points and make a real attack on Beauregard's left wing, which was to be menaced by Tyler. The Confederate right was to be threatened by troops under Colonels Richardson and Davies, moving from Centreville. These movements were all executed, but with so much delay that it was nearly noon before the battle began. Meanwhile the Confederates had made a movement unknown to McDowell. The Confederate government, just seated at Richmond, hearing of the movements of the Nationals, immediately ordered Johnston to hasten from the valley, and reinforce Beauregard. This was done at noon (July 20), with six thousand fresh troops. (See *Patterson*.) Hunter's column crossed Bull's Run at Sudley Church, led by General Burnside, with Rhode Island, New Hampshire, and Massachusetts troops. Soon after crossing it encountered the Confederates, and a battle ensued in open fields. The batteries of Griffin and Reynolds were brought to bear by the Nationals. Only a small stream in

a little vale separated the combatants. The Confederates were led by Colonel Evans. The contest raged most fiercely. Hard pressed, Evans's line began to waver, when General Bee advanced with fresh troops, and gave it strength. Then the National line began to tremble, when Colonel Andrew Porter sent a battalion of regulars under Major Sykes to strengthen it. More fiercely the battle raged. General Hunter was severely wounded. Colonel Slocum of the Rhode Island troops was killed, when Sprague, the youthful governor of the commonwealth, took command of his troops. The wearied Nationals, who had been on their feet since midnight, began to flag, when they were reinforced by troops under Heintzelman, Sherman, and Corcoran. A charge made by a New York regiment, under Colonel H. W. Slocum, shattered the bending Confederate line, and the troops fled in confusion to a plateau whereon General T. J. Jackson had just arrived with reserves. The flight was checked, and order was brought out of confusion. Alarmed by this show of unsuspected strength in the Nationals, Johnston, who had arrived and taken the chief command, looked anxiously towards the mountain gaps through which he expected more of his troops from the Shenandoah Valley. Without these he had small hopes of success. There had been a lull in the conflict; and, at two o'clock in the afternoon, it was announced they were not in sight. At that time the Confederates had ten thousand soldiers and twenty-two heavy guns in battle order on the plateau. The Nationals proceeded to attempt to drive them from this vantage-ground. To accomplish this, five brigades—namely, Porter's, Howard's, Franklin's, Wilcox's, and Sherman's—with the batteries of Ricketts, Griffin, and Arnold, and cavalry under Major Palmer, advanced to turn the Confederate left, while Keyes's was sent to annoy them on their right. General Heintzelman accompanied McDowell as his lieutenant in the field, and his division began the attack. Ricketts and Griffin advanced with their troops, and planted their batteries on an elevation that commanded the whole plateau, with the immediate support of Ellsworth's Fire Zouaves, commanded by Colonel Farnham. To the left of these batteries, New York, Massachusetts, and Minnesota troops took a position. As the artillery and Zouaves were advancing, they were suddenly attacked on the flank by Alabamians in ambush, and then by Stuart's Black Horse Cavalry in the rear, and the Zouaves recoiled. At that moment Heintzelman ordered up a Minnesota regiment to support the batteries, when the Confederates in overwhelming force delivered a fire on these guns that disabled them by prostrating the men. Both sides suffered dreadfully. When Johnston heard of the slaughter, he exclaimed, "Oh for four regiments!" It was now three o'clock. His wish was more than gratified. Just then he saw a cloud of dust in the direction of the Manassas Gap railway. It was a part of his troops, four thousand strong, from the valley,

under General E. Kirby Smith. They were immediately ordered into action, when the Confederates, so reinforced, struck the Nationals a stunning blow, just as the latter were about to grasp the palm of victory. It was so unexpected, heavy, and overpowering that in fifteen minutes the Nationals were swept from the plateau. As regiment after regiment gave way, and hurried towards the turnpike in confusion, panic seized others, and at four o'clock a greater portion of the National army was flying across Bull's Run towards Centreville—leaving behind them over three thousand men, killed, wounded, or made prisoners. The Confederates lost over two thousand. The Nationals lost twenty-seven cannons, ten of which were captured on the field, and the remainder were abandoned in the flight to Centreville. They only took a single cannon in safety to Centreville. They also lost many small-arms and a large quantity of munitions of war, and medicine and hospital supplies. The Nationals were pursued some distance. Had the Confederates pressed on after the panic-stricken fugitives, the coveted prize of the National capital, with all its treasures, might have been won by them within twenty-four hours. Johnston had escaped from Patterson, reinforced Beauregard at a critical moment, and won a great victory through the forgetfulness of Lieutenant-general Scott, who had given Patterson positive directions not to move until he should receive further orders. These the commanding-general forgot to send! Patterson knew of Johnston's movement, but his orders to wait were imperative. The first he heard of the disaster at Bull's Run was through a morning paper from Philadelphia, on July 22. (See *Bull's Run, Flight from.*)

**Bull's Run, EFFECTS OF THE BATTLE OF.** The result of the battle was published with great exaggeration on both sides. It produced unbounded joy among the Confederates and their friends, and the loyal people were, at first, greatly depressed by it. While the Confederates were elated beyond measure, by the evidence the battle seemed to give of their superior skill and courage, and thousands flocked to the standard of revolt from all parts of the Southern States, the loyalists were stunned by the great disaster, and the seventy-five thousand men, whose three months' term of service was about to expire, were, for the moment, made eager to leave the field, and return home. The President of the Confederacy, who arrived at Manassas just after the victory, made an exultant speech at Richmond, now become its capital, and said to the multitude, when referring to the vanquished, with bitter scorn, "Never be haughty to the humble;" and predicted that the National capital would soon be in their possession. While the streets of Richmond were populous with prisoners from the vanquished army, and eager volunteers pressing forward towards the camp of the victors at Manassas, the streets of Washington were crowded with a discomfited and disheartened soldiery, without leaders, and without organ-

ization—the personification of the crushed hopes of the loyal people. Such was the sad picture of the situation of the Republic, much exaggerated, which was presented to Europe in August, 1861. The intelligence was given first to Europe through the *London Times*—the accredited exponent of the political and social opinions of the ruling class in England—by the pen of Dr. Russell, its war-correspondent in the United States. He did not see the battle, and his account was, in a great degree, a tale of the imagination. It excited among the ruling classes a derision of the government and loyal people of the United States, and gratified the opponents of republicanism. To them the ruin of the Great Republic of the West seemed to be a fact accomplished. English statesmen and journalists dogmatically asserted it, and deplored the folly and wickedness of the President and Congress in “waging war upon sovereign states,” and attempting to hold in union, by force, a people who “had the right and the desire to withdraw from a hated fellowship.” It was declared that “the bubble of democracy had burst.” The *London Times* said (Aug. 13), “It is evident that the whole volunteer army of the Northern States is worthless as a military organization, . . . a screaming crowd;” and spoke of it as a collection of “New York rowdies and Boston abolitionists desolating the villages of Virginia.” The depression of spirits among the loyal people was, however, only momentary. Within a few days they were buoyant with faith and hope. There was a second uprising of the friends of free institutions more marvellous than the first. Volunteers flocked to the standard of the “Stars and Stripes” by thousands. The Confederates were amazed by the spectacle, and did not venture near the capital in force, where loyal regiments were continually arriving. Five days after the battle, Secretary Seward wrote to Minister Adams in London: “Our Army of the Potomac, on Sunday last, met a reverse equally severe and unexpected. For a day or two the panic which had produced the result was followed by a panic that seemed to threaten to demoralize the country. But that evil has ceased entirely. The result is already seen in a vigorous reconstruction upon a scale of greater magnitude and increased enthusiasm.” The Pennsylvania reserves (which see) were transferred to the National army at Washington. The government and people were satisfied that a long and desperate struggle was before them, and they put forth most extraordinary energies to meet the crisis. On the contrary, when, the shouts of victory having died away, and the smoke of battle dissipated, the people of the Confederacy saw their victorious army immovable at Manassas and indisposed to follow up their triumph, they were filled with apprehensions, and a feeling akin to despondency took possession of the hearts of the Southern people.

**Bull's Run, SECOND BATTLE OF.** On the morning after the battle at Groveton (which see) Pope's army was greatly reduced. It had

failed to prevent the unity of Lee's army, and prudence dictated its immediate flight across Bull's Run, and even to the defences of Washington. But Pope determined to resume the battle the next morning. He had received no reinforcements or supplies since the 26th, and had no positive assurance that any would be sent. He confidently expected rations and forage from McClellan at Alexandria (a short distance away), who was to supply them; and it was not until the morning of the 30th (August, 1862), when it was too late to retreat and perilous to stand still, that he received information that rations and forage would be sent as soon as he (Pope) should send a cavalry escort for the train—a thing impossible. He had no alternative but to fight. Both commanders had made dispositions for attack in the morning. Lee's movements gave Pope the impression that the Confederates were retreating, and he ordered McDowell to pursue with a large force, Porter's forces to advance and attack them, and Heintzelman and Reno, supported by Rickett's division, were ordered to assail and turn the Confederate left. This movement, when attempted, revealed a state of affairs fearful to the National army. The latter, as their advance moved forward, were opened upon by a fierce fire of cannons, shot, shell, and bullets, and at the same moment a large number of Lee's troops were making a flank movement that might imperil the whole of Pope's army. A very severe battle soon occurred. Porter's corps, which had recoiled at the unexpected blow, was rallied, and performed special good service; and Jackson's advanced line was steadily pushed back until five o'clock in the afternoon, when Longstreet turned the tide of battle by pouring a destructive artillery fire upon the Nationals. Line after line was swept away, and very soon the whole left was put to flight. Jackson advanced, and Longstreet pushed his heavy columns against Pope's centre, while the Confederate artillery was doing fearful execution. The left of the Nationals, though pushed back, was unbroken, and held the Warrenton pike, by which alone Pope's army might safely retreat. Pope had now no alternative but to fall back towards the defences at Washington. At eight o'clock in the evening he gave orders to that effect. This movement was made during the night, across Bull's Run, to the heights of Centreville, the brigades of Meade and Seymour covering the retreat. The night was very dark, and Lee did not pursue; and in the morning (Aug. 31) Bull's Run again divided the two great armies. So ended the second battle of Bull's Run.

**Bull's Run, THE FLIGHT FROM.** Other fugitives than defeated military men were in the flight from Bull's Run, July 21, 1861. The gravity of the occasion was so little appreciated that when it was known at Washington that McDowell was to attack the Confederates on Sunday, July 21, scores of men, and even women—Congressmen, officials of almost every grade, and plain citizens—went out in carriages to witness the conflict, as to a spectacu-

lar show. Passes from military commanders were like tickets to a Roman circus or a combat in the colosseum, and the vicinity of the battlefield was gay on Sunday morning with civilians, who indulged in wine and cigars at the headquarters of Colonel Miles at Centreville. The heights there were crowded with spectators, and they enjoyed the roar of the battle as it went on. The excitement was delicious while danger was distant. It assumed a different phase before night, and glowing cheeks were made pale with terror when the flying regiments came thundering on with tales of defeat and disaster and of pursuing Confederates. The spectators joined in a pell-mell rush for safety. Soldiers and citizens and well-dressed women were mingled in picturesque confusion in the line of fugitives who crowded the highways. In several places the roads became blockaded with overturned vehicles or abandoned cannons, and horses and human kind seemed equally eager to escape from the whirlwind of destruction that followed in fury behind them for a while. Fortunately, the pursuit of the Confederates was soon abandoned. Among the civilians who were caught by the pursuers was Alfred Ely, member of Congress from Rochester, N. Y., who was confined in the famous tobacco warehouse in Richmond known as the "Libby Prison" (which see). He was a prisoner there four months, when he was exchanged for Charles J. Faulkner, late American Minister to France, who had been imprisoned for suspected disloyalty. Mr. Faulkner's character was afterwards vindicated.

**Bunker's (BREED'S) HILL, BATTLE OF.** By reinforcements from England and Ireland, General Gage's army in Boston, at the close of May, 1775, was 10,000 strong. With the reinforcements came Generals William Howe, Sir Henry Clinton, and John Burgoyne, three officers experienced in the military tactics of Europe, but little prepared for service in America. Thus strengthened, Gage issued a proclamation (June 12) of martial law, and offering pardon to all who should return to their allegiance, excepting Samuel Adams and John Hancock. At that time the New England army before Boston (presently to be adopted as a Continental army) numbered about 16,000 men, divided into thirty-six regiments, of which Massachusetts furnished twenty-seven, and the other three New England colonies three each. John Whitecomb, a colonel in the French and Indian War, and Joseph Warren, President of the Provincial Congress, were appointed (June 15) major-generals of the Massachusetts forces. These provincial troops completely blockaded Boston on the land side, and effectively held the British troops as prisoners on the peninsula. General Artemas Ward, the military head of Massachusetts, was regarded, by common consent, as the commander-in-chief of this New England army. The Americans had thrown up only a few breastworks—a small redoubt at Roxbury, and some breastworks at the foot of Prospect Hill, in Cambridge. The right wing of the besieging army, under General John Thomas, was at Roxbury, consisting of 4000 Mas-

sachusetts troops, four artillery companies, a few field-pieces, and some heavy cannons. The Rhode Island forces were at Jamaica Plain, under General Greene, with a regiment of Connecticut troops under General Spencer. General Ward commanded the left wing at Cambridge. The Connecticut and New Hampshire troops were in the vicinity. It was made known to the Committee of Safety that General Gage had fixed upon the night of the 18th of June to sally out and take possession of and fortify Bunker's Hill (an elevation not far from Charlestown); also Dorchester Heights, south of Boston. Both of these points would command the town. The eager provincials determined to anticipate this movement, and the Massachusetts Committee of Safety ordered Colonel William Prescott to march, on the evening of the 16th, with 1000 men, including a company of artillery, with two field-pieces, to take possession of and fortify Bunker's Hill. This force, after a prayer by President Langdon, of Harvard, passed over Charlestown Neck; but, going by Bunker's Hill, they ascended Breed's Hill (much nearer Boston), where they had a better command of the town and the shipping. They had been joined on the way by Major Brooks and General Putnam, and by wagons laden with intrenching tools. The patriot troops worked incessantly all night under the skilful engineer Gridley, and at dawn a redoubt about eight rods square, flanked on the right by a breastwork which extended northwardly to marshy land, met the bewildered and astonished gaze of the sentinels on the British shipping in the St. Charles River. The guns of their vessels were immediately brought to bear upon the redoubt on Breed's Hill, and the noise of the cannonade aroused the sleepers in Boston. The Americans on Breed's Hill continued their work until eleven o'clock on that very hot June morning, under an incessant shower of shot and shell, with a scanty supply of provisions, after having worked all night. Putnam had removed the intrenching tools at noon to Bunker's Hill for the purpose of casting up intrenchments there, and the right flank of Prescott was strengthened by a few reinforcements thrown into Charlestown at the southern slope of the hill. On the left a fortification against musket-balls, composed of a rail fence and new-mown hay, was hastily constructed, almost at the moment of attack. The British clearly saw their impending danger, and, to thwart it, picked corps of their army, 3000 strong, led by Generals Howe and Pigot, embarked in boats from the wharves in Boston, and landed at the eastern base of Breed's Hill. Meanwhile the troops who had worked all night and half of a hot June day in throwing up intrenchments on Breed's Hill were not relieved by others, as they should have been. Colonel Prescott, at first, did not believe the British would attack his redoubt; and when he saw the movement in the town he felt assured that he could easily repulse any assailants, and it was nine o'clock before he applied to General Ward for reinforcements. Putnam had urged, early in the morning, the sending of troops. Ward, believing Cambridge to

be the point of attack, would not consent to sending more than a part of Stark's New Hampshire regiment at first. Finally the remainder was sent; also, the whole of Colonel Reed's regiment on Charlestown Neck was ordered to reinforce Prescott. General Putnam was on the field, but without troops or command. The same was the case with General Warren, who hastened to the scene of action when the conflict began. Stark's regiment took a position on the left of the unfinished breastwork, but two hundred yards in the rear, and under imperfect cover, made by pulling up a rail fence, making parallel lines with the rails, and filling the intervening spaces with new-mown hay. At a little past three o'clock in the afternoon Howe's great guns moved towards the redoubt and opened fire upon the works. They were followed by the troops in two columns, commanded respectively by Howe and Pigot. The guns on the British ships, and a battery on Copp's Hill, in Boston, hurled random shots in abundance on the Americans on "Breed's Hill. The occupants of the redoubt kept silent until the enemy had approached very near, when, at the word *Fire!* 1500 of the concealed patriots suddenly arose and poured such a destructive storm of bullets upon the climbers of the green slope that whole platoons, and even companies, were prostrated.

BUNKER'S HILL, PLAN OF BATTLE OF, AND MONUMENT.\*

Flags fell to the ground like tall lilies in a meadow. The assailants fell back to the shore, and a shout of triumph went up from the redoubt. Some scattering shots had come from the houses at Charlestown; and Gage, infuriated by the repulse, gave orders to send combustibles into that village and set it on fire. It was done, and soon the town was in flames. This conflagration added new horrors to the scene. The British again advanced, and were again driven back to their landing-place. Then General Clinton passed over from Boston to aid Howe and Pigot, and the troops were led to the assault a third time. The powder of the

\* On the right of the plan of the battle is seen a picture of the granite obelisk erected over the site of the redoubt. The form of the redoubt is seen in the diagram A in the map. The entrance to it was at a, which was on the end towards Charlestown Neck.

provincials, scanty at the beginning, now failed. Some British artillery planted pieces near the breastwork and swept it from end to end, while grenadiers assailed the redoubt on three sides at once and carried it at the point of the bayonet. Stark, meanwhile, had kept the British at bay at the rail fence until the redoubt was carried, after which all of the surviving provincials fled in good order across Charlestown Neck, enfiladed by the fire from the vessels and floating batteries on the Charles River, but received very little hurt. Of the 3000 British troops engaged in the fight, 1054 were killed or wounded—a proportionate loss which few battles can show. The loss of the provincials was 450, killed and wounded. Among the former was General Warren, whose loss was irreparable. He came to the redoubt without command, and did not take it from Prescott. He fell, as he was leaving the redoubt, from the effects of a bullet-wound. The result of the battle was a substantial victory for the Americans. They failed only because their ammunition failed. It tested the

ability of the provincial army to meet a British force in the field; and so unsatisfactory was the battle to the British ministry, that Gage was superseded in command by General Howe. The general impression at the time was that the battle was on Bunker's Hill, and so it figures in history as the "Battle of Bunker's Hill." It was fought on Breed's Hill, some distance from the former. The battle was seen by thousands who were on the neighboring hills and the roofs and balconies in Boston. Many of the spectators were deeply interested, for they had dear relatives and friends in the conflict. The battle lasted about two hours.

**Bunker's Hill Monument.** The corner-stone of this monument was laid on the fiftieth anniversary of the battle (June 17, 1825), in the presence of a vast multitude of people. Lafayette, then on a visit to the United States, was present, and Daniel Webster delivered an oration. The monument is an obelisk, and stands in the centre of the ground, on Breed's Hill, included in the old breastwork. Its sides are precisely parallel with those of the redoubt. It is built of Quincy granite, and is 221 feet in height. The base of the obelisk is 30 feet square, and at the spring of the apex 15 feet. By a flight of 295 stone steps, within the obelisk, its top may be reached. A chamber at the top has four windows, with iron shutters. The monument was not completed until 1843, when, on June 17, it was dedicated in the presence of President Tyler and his cabinet and a vast multitude of citizens. The city of Charlestown, recently annexed to Boston, now surrounds the monument. (See *Bunker's Hill, Battle of.*)

Burgoyne, SIR JOHN, was born in England

about 1730; died in London, Aug. 4, 1792. He was liberally educated, and entered the army at an early age. While a subaltern he clandestinely married a daughter of the Earl of Derby, who subsequently aided him in acquiring military promotion and settled \$1500 a year upon him. He served with distinction in Portugal

SIR JOHN BURGOYNE

in 1762. The year before, he was elected to Parliament, and gained his seat as representative of another borough, in 1768, at an expense of about \$50,000. In the *Letters of Junius* (which see) he was severely handled. Being appointed to a command in America, he arrived at Boston May 25, 1775; and to Lord Stanley he wrote a letter (which was published) giving a graphic account of the battle on Bunker's (Breed's) Hill. In December, 1776, he returned to England, and was commissioned lieutenant-general. Placed in command of the British forces in Canada, he arrived there early in 1777, and in June he began an invasion of the province of New York (see *Burgoyne's Invasion*) by way of Lake Champlain and the Hudson Valley. He captured Ticonderoga (July 5), and pushed on, by way of Fort Edward, to Saratoga (Sept. 13). On the 19th he fought an indecisive battle on Bemis's Heights; and, on the 7th of October, another on nearly the same field, where he was defeated. He surrendered his whole army (Oct. 17), and returned to England, on his parole, May, 1778. Being blamed, he solicited in vain for a court-martial to try his case, but he ably vindicated himself on the floor of Parliament, and published (1780) a narrative of his campaign in America for the same purpose. He joined the opposition, and an ineffectual attempt was made in 1779 to exclude him from Parliament. Then he resigned all his appointments; but in 1782 he was restored to his rank in the army, and appointed privy-councillor and commander-in-chief in Ireland. He retired from public life in 1784. Burgoyne acquired a literary reputation as a dramatist. His plays and poems were published in a collection, in two volumes, in 1808.

**Burgoyne Threatens the Patriots.** In a proclamation issued at Crown Point (July, 1777) Burgoyne said, "Let not people consider their distance from my camp; I have but to give stretch to the Indian forces under my direction—and they amount to thousands—to overtake the banded enemies of Great Britain. If the frenzy of hostility should remain, I trust I shall stand acquitted in the eyes of God and man in executing the vengeance of the state against the wilful outcasts."

**Burgoyne's Campaign.** Lieutenant-general Burgoyne was in command of the British forces in Canada in 1777. He planned an invasion of northern New York to co-operate with British troops ascending the Hudson. (See *Forts Clinton and Montgomery*.) He left St. Johns, on the Sorel (June, 1777), with a brilliant and well-appointed army of eight thousand men, and ascended Lake Champlain in boats. At the falls of the Bouquet River, near the western shore of the lake, he met about four hundred Indians in council, and after a feast (June 21, 1777) he made a stirring speech to them. On the 1st of July he appeared before Ticonderoga, which was inadequately garrisoned. General St. Clair, in command there, was compelled to evacuate the post, with Mount Independence opposite (July 5 and 6), and fly towards Fort Edward, on the Upper Hudson, through a portion of Vermont. In a battle at Hubbardton (which see) the Americans were beaten and dispersed by the pursuing

BURGOYNE ADDRESSING THE INDIANS.

British and Germans. St. Clair had sent stores in boats to Skenesborough (now Whitehall), at the head of the lake. These were overtaken and destroyed by the pursuing British. Burgoyne pressed forward almost unopposed, for the American forces were very weak. The latter retreated first to Fort Edward, and then

gradually down the Hudson almost to Albany. The British advanced but slowly, for the Americans, under the command of General Philip Schuyler, harassed them at every step. An expedition sent by Burgoyne to capture stores and cattle, and procure horses in this region and at Bennington, Vt., was defeated in a battle at Hoosick, N. Y. (Aug. 16), by a force hastily gathered under General Stark. Already another invading force of British regulars, Canadians, Tories, and Indians, under Colonel St. Leger, which was sent by Burgoyne, by way of Oswego, to march down the Mohawk Valley and meet the latter at Albany, had been defeated in a battle at Oriskany (Aug. 6). Schuyler was superseded by Gates (see *Schuyler and Gates*) in command of the northern army. Gates formed a fortified camp on Bemis's Heights to oppose the onward march of Burgoyne down the Hudson Valley. There he was attacked (Sept. 19) by the British; and, after a severe battle, the latter retired to their camp on the heights of Saratoga (now Schuylerville) to await the approach of Sir Henry Clinton from New York. The latter captured forts on the Hudson Highlands, and sent marauding expeditions up the river that burned Kingston. Again Burgoyne advanced to attack Gates. He was defeated (Oct. 7), and again retired to his camp. Finding it impossible to retreat, go forward, or remain quiet, he surrendered his whole army and its splendid appointments, Oct. 17, 1777.

Burke, **ÆDANUS**, was born in Galway, Ireland, in 1743; died in Charleston, S. C., March 3, 1802. He was educated at St. Omers for a priest; emigrated to South Carolina, and there engaged with the patriots in their conflict with Great Britain. He was a lawyer, and in 1778 was made a judge of the Supreme Court of South Carolina. He served two years in the army; was in Congress (1789-91); and after serving in the state Legislature, he became chancellor of the commonwealth awhile before his death. Judge Burke was a thorough Republican, and wrote a famous pamphlet against the "Cincinnati Society" (which see) that was translated into French by Mirabeau, and used by him with much effect during the French Revolution. Burke opposed its aristocratic features. He also opposed the National Constitution, fearing consolidated power.

Burke, **EDMUND**. Born in Dublin, June 1, 1730; died at Beaconsfield, Eng., July 9, 1797. He was one of fifteen children of his father, Richard Burke, an attorney, and was descended from the Norman De Burghs, who early settled in Ireland. He graduated at Trinity College, Dublin (1748); studied law, and in 1756 he published his famous essay on *The Sublime and Beautiful*. In 1758-59 he and Dodsley established the *Annual Register*; and in 1765 he was made secretary to Premier Rockingham. He entered Parliament in 1766. There he took an active and brilliant part in debates on the American question, and always in favor of the Americans, advocating their cause with rare eloquence. In 1771 he was appointed agent for the colony of

New York. He lost some popularity by advocating the claims of the Roman Catholics in 1780, and opposing the policy of repressing the trade of Ireland. During the brief administration of the Rockingham ministry in 1782, he was a member of the privy council and paymaster of the forces. Taking a prominent part in the

EDMUND BURKE.

affairs in India, he began the prosecution of Governor Warren Hastings early in 1786. His labors in behalf of India in that protracted trial were immense, though the conviction of Hastings was not effected. His great work entitled *Reflections on the Revolution in France* appeared in 1790. As a statesman and thinker and clear writer Edmund Burke had few superiors. His conversational powers were remarkable, and he was one of the suspected authors of the *Letters of Junius* (which see).

Burke, **THOMAS**, Governor of North Carolina, was born in Ireland about 1747; died at Hillsborough, N. C., Dec. 2, 1783. He came to Virginia when seventeen years old, and in time engaged in the practice of medicine. Then he studied law, and in 1774 moved to Hillsborough. He had written against the stamp act and other obnoxious measures, and he took a conspicuous part in politics in North Carolina. He was a member of the Provincial Congress in 1776; was engaged a short time in the army, and was a member of Congress from December, 1776, until early in 1781, when he was chosen governor of the state. In September of that year he was seized by Tories, and kept a prisoner on James Island, near Charleston, four months; after which he was regularly exchanged, resumed his duties of governor, but soon retired to private life.

Burlingame, **ANSON**, diplomatist, was born at New Berlin, Chenango Co., N. Y., Nov. 14, 1820; died in St. Petersburg, Russia, Feb. 23, 1870. His father, a farmer, removed to Seneca County, Ohio, when Anson was three years of

age. Ten years later the family were in Michigan. Anson entered the University of Michigan in 1837, and graduated at Harvard in 1846. He began the practice of law in Boston, and subsequently became an active member of the "Free Soil Party" (which see), acquiring a wide reputation as an effective speaker. In 1849-50 he was in Europe. In 1852 he was chosen a member of the Massachusetts Senate, and became an active supporter of the "American Party" in 1854, by which he was elected to Congress the same year. Mr. Burlingame assisted in the formation of the Republican party in 1855-56; and he was regarded as one of the ablest debaters in Congress on that side of the House. Severely criticising Preston S. Brooks for his attack upon Charles Sumner (which see), the South Carolinian challenged him to fight a duel. He promptly accepted the challenge, proposed rifles as the weapons, and Navy Island, just above Niagara Falls, as the place of conflict. Brooks declined to go there, and the matter was dropped. In March, 1861, President Lincoln appointed Mr. Burlingame minister to Austria. He having spoken in favor of Hungarian independence, the Austrian government refused to receive him, and he was sent as ambassador to China. There he carried forward important negotiations; and when, in 1867, he announced to the Chinese government his intention of returning home, Prince Kung, the regent of the empire, offered to appoint him special ambassador to the United States and the great European powers, for the purpose of framing treaties of amity with those nations. This high honor Mr. Burlingame accepted; and at the head of a retinue of Chinese officials, he arrived in the United States in March, 1868. From his own country Mr. Burlingame proceeded on his roving embassy to England, France, Denmark, Sweden, Holland, and Prussia. He was well received, and he negotiated treaties with all but France. He had just entered upon negotiations at St. Petersburg, early in 1870, when he died of pneumonia after an illness of only a few days.

**Burlington Heights and York, EXPEDITION TO (1813).** The British maintained for some time a fortified camp at Burlington Heights, at the western end of Lake Ontario. There they made a depository of stores; and to capture these an expedition, composed of three hundred land troops, under Colonel Winfield Scott, borne by the fleet of Commodore Chauncey, left the mouth of the Niagara River, July 28, 1813. The usual feeble guard over the stores had just been reinforced. Convinced that their forces were insufficient to seize the prizes, Scott and Chauncey concluded to attack York, from which the British reinforcements had just been sent. The fleet bore the troops across the lake, and entered the harbor of York on July 31. Scott landed his troops without opposition; took possession of the place; burned the barracks, public store-houses and stores, and eleven transports; destroyed five pieces of cannon, and bore away as spoils one heavy gun and a considerable quantity of flour. They found in York (Toronto) the sick and wounded of Børstler's

command captured at the Beaver Dams (which see).

**Burnet (GOVERNOR) and Massachusetts.** Governor William Burnet having served as chief magistrate of New York and New Jersey acceptably in general, he went to Boston (July 13, 1728) with the commission of governor of Massachusetts. He was received with unusual pomp. This show he urged in his speech as a proof of their ability to give a liberal support to his government, and acquainted them with the king's instructions to him to insist upon an established salary, and his intention to adhere to it. The Assembly at once took an attitude of opposition to the governor. They voted him £1700 to enable him to manage public affairs, and to defray his expenses in going there. The governor declared himself dissatisfied, and would not consent to their resolve, as it was "contrary to his majesty's instructions." The Assembly appealed to their charter, granted by King William, and refused to vote a fixed salary. A spirited contest in writing ensued. In one of his communications the governor threatened the colony with the loss of their charter. They remained firm, "because," they said, "it is the undoubted right of all Englishmen, by Magna Charta, to raise and dispose of money for the public service of their own free accord, without compulsion." At a town-meeting in Boston, during the controversy, a unanimous declaration was made that the people of that town were opposed to settling a fixed salary on the governor. That official then adjourned the Legislature to Salem, remarking, in his message for that purpose, that the interposition of towns was "a needless and officious step, better adapted to the republic of Holland than to a British constitution." The Assembly adhered to their determination, and the governor was compelled to yield.

**Burnet, WILLIAM,** born at the Hague, Holland, in March, 1688, when William of Orange (afterwards William III. of England) became his godfather at baptism. He was a son of Bishop Burnet. He became engaged in the South Sea speculations (see *Law's Scheme*), which involved him pecuniarily, and, to retrieve his fortune, he received the appointment of governor of the colonies of New York and New Jersey. He arrived in New York in September, 1720. Becoming unpopular there, he was transferred to the governments of Massachusetts and New Hampshire. He arrived at Boston in July, 1728, and soon became involved in disputes with the Assembly about his salary. (See *Burnet and Massachusetts*.) That body was firm, and the governor was compelled to yield. In person he was very commanding; was frank in manner, and of ready wit. Governor Burnet died Sept. 7, 1729.

**Burnside, AMBROSE EVERETT,** was born at Liberty, Ind., May 23, 1824. He graduated at West Point in 1847, and, as a member of a corps of artillery, accompanied General Patterson to Mexico the same year. Afterwards he was in charge of a squadron of cavalry in New Mexico;

was quartermaster of the Mexican Boundary Commission in 1850-51; resigned in 1853; established a manufactory of breech-loading rifles (his own invention) in Rhode Island; and was an officer of the Illinois Central Railroad Company when the Civil War began. He went into

AMBROSE EVERETT BURNSIDE.

that conflict as colonel of the First Rhode Island Volunteers. For good service at the battle of Bull's Run, he was made (August 6, 1861) major-general of volunteers. He commanded the expedition that captured Roanoke Island (which see) in February, 1862; also Newbern and Beaufort. He was called to Virginia after the close of the campaign on the Peninsula, and was active and skilful as a corps commander in many of the most important military events of the war. General Burnside served in the campaign in Maryland under McClellan, and was in the battles at South Mountain and Antietam. On Nov. 7, 1862, he superseded McClellan in command of the Army of the Potomac. Failing of success in his attack upon Lee at Fredericksburg (December, 1862), he resigned, and was succeeded by General Hooker (see *Fredericksburg*) in January, 1863. Assigned to the command of the Department of the Ohio in May, he was active there in suppressing the disloyal elements in that region. In the fall he freed East Tennessee of Confederate domination, where he fought Longstreet. He was in command of his old corps (the Ninth) in Grant's campaign against Richmond in 1864-65, where he performed important work. He resigned April 15, 1865. In 1866 General Burnside was elected governor of Rhode Island, and was twice re-elected. Being in Europe in the fall of 1870, he was admitted within the German and French lines around Paris, and ineffectually endeavored to mediate between the belligerents. He died Sept. 13, 1881.

**Burnt Corn Creek, BATTLE OF.** Peter McQueen, a half-blood Creek Indian of Tallahassee, was a fiery leader among the war party of that nation, wherein civil war was raging in the spring of 1813. This war Tecumtha had stirred up, and the whole Creek nation had become a seething caldron of passion. A British

squadron in the Gulf held friendly intercourse with the Spanish authorities at Pensacola. To that port McQueen and three hundred followers, with pack-horses, went to get supplies and convey them to the war party in the interior. That party was inimical to the white people settled in that nation, and it was the duty of the military in that region to protect the latter. This protection was not furnished, and the white inhabitants and the peace party among the Creeks prepared to defend themselves. Colonel James Caller called on the militia to intercept McQueen. There was a prompt response, and Caller set out with a few followers. He marched towards the Florida frontier, joined on the way by the famous borderer Captain Sam Dale and fifty men, who were engaged in the construction of a fort. He was now joined by others from Tensaw Lake and Little River under various leaders. Caller's command now numbered about one hundred and eighty men, in small companies, well mounted on good frontier horses, and provided with rifles and shot-guns. Setting out on the main route for Pensacola on the morning of July 27 (1813), they found McQueen encamped upon a peninsula formed by the windings of Burnt Corn Creek. It was resolved to attack him. McQueen and his party were surprised, but they fought desperately a few minutes, and then fled towards the creek. The tide then turned. McQueen and his Indians arose from an ambush with horrid yells and fell upon less than one hundred of Caller's men. Dale was severely wounded, but kept on fighting. Overwhelming numbers at length compelled Caller's force to retreat. They fled in disorder, many of them leaving their horses behind them. Victory rested with the hostile Creeks. Only two of Caller's command were killed and fifteen wounded. The battle of Burnt Corn Creek was the first in the Creek war, a conflict which ruined that nation. (See *Creeks*.)

**Burr, AARON**, President of the College of New Jersey, was born at Fairfield, Conn., Jan. 4, 1716; died Sept. 24, 1757. He was of German descent; graduated at Yale College in 1735; and was ordained by the presbytery of East Jersey a minister of the Gospel in 1737. He became a pastor at Newark, N. J., where he was chiefly instrumental in founding the College of New Jersey (now Princeton), and was elected its first president in 1748. In 1752 he married a daughter of Jonathan Edwards, the metaphysician. In 1754 he accompanied Whitefield to Boston.

**Burr, AARON**, was born at Newark, N. J., Feb. 6, 1756; died on Staten Island, Sept. 14, 1836. He was a son of Rev. Aaron Burr, President of the College of New Jersey (Princeton), and of a daughter of the eminent theologian Jonathan Edwards. When nineteen years of age, he entered the Continental army, at Cambridge, as a private soldier, and as such accompanied Arnold in his expedition to Quebec (which see). From the line of that expedition, in the wilderness, Arnold sent him with despatches to General Montgomery, at Montreal, where he entered the

military family of that officer as his aide-de-camp, with the rank of captain. Offended because checked by Montgomery in his officiousness, he left his staff, and joined Arnold's on the night of the assault on Quebec (Dec. 30 and 31, 1775). He was with Arnold when the latter was wounded in that assault, and was his acting brigade major for a while. He left the

AARON BURR.

army in Canada, and joined the military family of Washington, at New York, in May, 1776, with the rank of major. Dissatisfied with that position, he left it in the course of a few weeks and took a similar position on General Putnam's staff. He was active in the events connected with the defence and abandonment of the city of New York in 1776; and in 1777 he became lieutenant-colonel of Malcolm's regiment. Burr distinguished himself in the battle of Monmouth in 1778, where he commanded a brigade in Stirling's division. During the winter of 1778-79 he was stationed in Westchester County, N. Y. For a short time he was in command of the post at West Point, but, on account of ill-health, he left the army in March, 1779. Burr was a born intriguer, and was naturally drawn towards Lee and Gates, and became a partisan in their schemes for injuring the reputation of Washington. (See *Conway's Cabal*.) He had been detected by the commander-in-chief in immoralities, and ever afterwards he affected to despise the military character of Washington. He began to practise law at Albany in 1782, but removed to New York the next year. Entering the arena of politics, he was chosen a member of the New York Legislature in 1784, and again in 1798. In 1789 he was appointed adjutant-general of the state, and commissioner of revolutionary claims in 1791. A member of the United States Senate from 1791 till 1797, Burr was a conspicuous Democratic leader in that body; and in the Presidential election in 1800 he and Thomas Jefferson had an equal number of votes in the electoral college. The House of

Representatives decided the choice in favor of Jefferson on the thirty-sixth ballot, and Burr became Vice-President. In July, 1804, he killed Alexander Hamilton in a duel; and the next year he undertook his mad and mysterious enterprise in the West, which resulted in his trial for treason. (See *Burr's Mysterious Expedition*.) Acquitted, he went to England (1808) and sought to engage that or some other European government in his project for revolutionizing Mexico. Pressed by his creditors, he lived a miserable life, in poverty, in London and Paris. Becoming subject to suspicion in London as a French spy, he was driven from the country, and took refuge in Paris. Finally, after long solicitations, he obtained leave to return, and appeared in New York in 1812, where he resumed the practice of law; but he lived in comparative poverty and obscurity until 1834, when, at the age of seventy-eight, he married Madame Jumel, a wealthy woman in New York, with whom he lived only a short time, when they were separated. Burr's first wife was the widow of General Augustine Prevost, by whom he had a daughter, Theodosia. She became an accomplished woman, and the wife of Governor Allston, of South Carolina. She left Charleston (1812) in a vessel to visit her father in New York, and was never heard of afterwards. Burr was small in stature, of great ability, and fascinating in manners.

**Burr and Eaton.** While engaged in his mysterious scheme of operations beyond the mountains, Aaron Burr tried to enlist the sympathies and co-operation of all the leading malcontents in the country. Among these was General William Eaton, who had returned from the Barbary States (see *Tripoli, War with*) angry with his government. In Washington during the winter of 1805-6, Burr sought and obtained frequent intercourse with Eaton, and tried to increase his ill-will towards the government. He informed him that he was organizing an expedition against Mexico, and asked him to join in it. Under the impression that it was secretly countenanced by the national government, Eaton agreed to close. At length Burr, believing he had the entire confidence of Eaton, told him of a project he entertained of revolutionizing the Western country, separating it from the Union, and establishing a monarchy, of which he was to be sovereign. New Orleans was to be the capital; and to further extend his enterprise, a force was to be organized on the Mississippi that should seize a portion (or the whole) of the Spanish provinces in Mexico. He assured Eaton that Wilkinson, commander-in-chief of the United States Army, was engaged in the enterprise, and would doubtless be able to carry with him the regular troops on the Western waters, where they would be reinforced by ten or twelve thousand volunteers. Burr (so Eaton asserted) said that, if he could secure the marine corps—the only troops stationed at Washington—and gain over the naval commanders, Truxtou, Preble, Decatur, and others, he would turn Congress out of doors, assassinate the President, seize on the Treasury and navy, and de-

clare himself the Protector (like Cromwell) of an energetic government. Eaton, satisfied that Burr was a dangerous man, waited on the President and recommended Jefferson to appoint him to some foreign mission, intimating that if he were not so disposed of there would soon be a revolution in the Western country. But Jefferson would not doubt the attachment of the Western people to the Union.

**Burr and Truxton.** To Commodore Truxton, who was soured by what he deemed to be hard treatment by his government, Burr proposed, in the winter of 1805-6, a naval expedition against the Spanish provinces on our southwestern border. He told Truxton that, in the event of a war with Spain, he intended to establish an independent government in Mexico, and that Wilkinson and greater men than he were engaged in it. He approached Truxton, and also Decatur, on the subject several times; but when the former found that the government did not favor, nor was cognizant of such a movement, he refused to have any further conversation on the subject. Yet Burr represented to Wilkinson that Truxton would co-operate. (See *Burr's Mysterious Expedition.*)

**Burr's Mysterious Expedition.** In March, 1805, Burr's term of office as Vice-President ended, and he descended to private life an utterly ruined man. But his ambition and his love of intrigue were as strong as ever, and he conceived schemes for personal aggrandizement and pecuniary gain. It was the general belief, at that time, in our country that the Spanish inhabitants of Louisiana would not quietly submit to our government. Taking advantage of this belief, and the restlessness of many of the inhabitants of the valley of the Mississippi, he conceived some daring schemes (none fully developed) of military operations in that region, which he attempted to carry out immediately after he left office. With several nominal objects in view, Burr started for the Mississippi Valley in company with General Wilkinson, who went to take possession of his office of governor of the Louisiana Territory, to which he had been appointed. At Pittsburgh Burr started in a vessel called an "ark," in which were fitted up conveniences for a long voyage. Wilkinson was not ready, and the impatient Burr proceeded without him. He stopped at Blennerhassett's Island, nearly opposite Marietta, then inhabited by a wealthy and accomplished Irish gentleman of that name, who had created there a paradise for himself. (See *Blennerhassett.*) He had a pleasant mansion, enriched by books, adorned with paintings, enlivened by music, and presided over by a lovely and accomplished wife. Burr laid before Harman Blennerhassett a brilliant vision of wealth and power, in a scheme of conquest or revolution, which captivated him and fired the ambition that lay in the bosom of his wife. They engaged in Burr's scheme, whatever it may have been, with ardor, and were totally ruined thereby. The story of Paradise and the Fall was repeated. After remaining there some time, Burr pressed forward, and at Louis-

ville overtook Matthew Lyon (which see), with whom he had voyaged in company in the earlier part of the journey. He accompanied Lyon to his home on the Cumberland River, whence he journeyed to Nashville on horseback; had a public reception (May 28, 1805), in which Andrew Jackson participated; and, furnished with a boat by that gentleman, returned to Lyon's. Then he resumed his voyage in his own "ark," and met Wilkinson at Fort Massac, nearly opposite the mouth of the Cumberland. Some soldiers were about to depart thence for New Orleans, and Wilkinson procured a barge from one of the officers for Burr's accommodation in a voyage to that city. There he found the inhabitants in a state of great excitement. The introduction of English forms of law proceedings, and the slight participation of the people in public affairs, had produced much discontent, especially among the Creoles and old settlers. Even the new American immigrants were divided by bitter political and private feuds. Burr remained only a short time, when he reascended the Mississippi to Natchez, whence he travelled through the wilderness, along an Indian trail or bridle-path, four hundred and fifty miles, to Nashville, where he was entertained for a week by Jackson early in August. After spending a few weeks there, Burr made his way through the Indian Territory to St. Louis, where he again met Wilkinson, that being the seat of government of the Louisiana Territory. Then, for the first time, he threw out hints to Wilkinson of his splendid scheme of conquest in the Southwest, which he spoke of as being favored by the United States government. At the same time he complained of the government as imbecile, and the people of the West as ready for revolt. He made no explanation to Wilkinson of the nature of his scheme, and that officer, suspicious of Burr's designs, wrote to his friend Robert Smith, Secretary of the Navy, advising the government to keep a watch upon his movements. Burr went from St. Louis to Vincennes with a letter from Wilkinson to Governor Harrison, in which he urged the latter to use his influence to get Burr elected to Congress from that district. Thence Burr went eastward, stopping at Cincinnati, Chillicothe, and Marietta, everywhere conversing with leading men, to whom he gave only attractive hints of a brilliant scheme in hand. He spent that winter and the following spring and summer in Philadelphia and Washington, engaged in his mysterious projects. (See *Burr and Eaton* and *Burr and Truxton.*) There he more clearly developed his scheme, which seemed to have a twofold character—the conquest of Mexico from the Spaniards and the establishment of an independent monarchy, and the revolutionizing the Mississippi Valley, separating that region from the rest of the Union, and forming an independent republic, with its seat of government at New Orleans. If the first-mentioned scheme should be carried out, Burr aspired to be king; if the latter, he was to be president of his new republic. Towards the end of summer (August, 1806) Burr departed on a second western tour.

For a year a vague suspicion prevailed throughout the country that Burr was engaged in a scheme for revolutionizing Mexico — an idea agreeable to the Western people because of the existing difficulties with Spain. It was believed, too (for so Burr had continually hinted), that such a scheme was secretly favored by the government. Under this impression Burr's project received the countenance of several leading men in the Western country. One of the first things which Burr did after his arrival in Kentucky was to purchase an interest in a claim to a large tract of land on the Washita River, under a Spanish grant to the Barou de Bastrop. The negotiation was carried on through Edward Livingston at New Orleans. The avowal of an intention to settle on these lands might cover up a far different design. Blennerhassett now joined Burr actively in his enterprise. Together they built, with the money of the former, fifteen boats on the Muskingum River; and negotiations were set on foot with an Ohio senator to furnish supplies for an army in the West and the purchase of two gunboats he was building for the government. A mercantile house at Marietta, in which Blennerhassett had been a partner, was authorized to purchase provisions, and a kiln was erected on Blennerhassett Island for drying corn to fit it for shipment. Young men enlisted in considerable numbers for an expedition down the Mississippi, about which only mysterious hints were given. Meanwhile Wilkinson had arrived at Natchitoches to repel, with 500 or 600 troops, a Spanish invasion of the Territory of Orleans (which see) from Texas. There a young man appeared in camp with a letter of introduction from Jonathan Dayton, of New Jersey, to Colonel Cushing, the senior officer next to Wilkinson. He also slipped, unobserved, a letter into Wilkinson's hand, from Burr, which was a formal letter of introduction. It contained a letter from Burr, principally written in cipher. Circumstances seem to show that Wilkinson was at this time privy to, if not actually engaged in, Burr's scheme. The cipher letter informed Wilkinson that he (Burr) had arranged for troops under different pretexes at different points, who would rendezvous on the Ohio by the 1st of November; that the protection of England had been secured; that Truxton had gone to Jamaica to arrange with the English admiral (see *Burr and Truxton*); that an English fleet would meet on the Mississippi; that the navy of the United States was ready to join; that final orders had been given to his friends and followers; that Wilkinson should be second to Burr only; that the people of the country to which they were going were ready to receive them; and that their agents with Burr had stated that, if protected in their religion, and not subjected to a foreign government, all would be settled in three weeks. The plan was to move detachments of volunteers rapidly from Louisville in November, meet Wilkinson at Natchez in December, and then to determine whether to seize Baton Rouge (then in possession of the Spaniards as a part of West Florida) or pass on. Enclosed in the same pack-

et was a letter, also in cipher, from Jonathan Dayton, telling Wilkinson he would surely be displaced at the next meeting of Congress, and added, "You are not a man to despair, or even to despond, especially when such prospects offer in another quarter. Are you ready? Are your numerous associates ready? Wealth and glory! Louisiana and Mexico! — DAYTON." The correspondence, in cipher and otherwise, between Wilkinson and Burr for several months previously leads to the conclusion that the former was, at that time, engaged in Burr's scheme, and that the latter relied upon him. Intimations in the letters of a design to seize newly acquired Louisiana startled Wilkinson, and he resolved to make the best terms he could with the Spanish commander on the Sabine and hasten back to New Orleans to defend it against any scheme of conquest there which Burr might contemplate or attempt. This design he communicated to Cushing, and obtained from the bearer of the letters such information as excited his alarm to a high pitch. The young man (named Swartwout) stated that he and another (named Ogden) had been sent by Burr from Philadelphia; that they had carried despatches from Burr to General Adair, of Kentucky, who was a party to the scheme; that they hastened towards St. Louis in search of Wilkinson, but learned at Kaskaskia that he had descended the river; that they followed to the mouth of the Red River, when Ogden went on to New Orleans with despatches to Burr's friends there, and he (Swartwout) had hastened to Wilkinson's headquarters. He said Burr was supported by a numerous and powerful association, extending from New York to New Orleans; that several thousand men were prepared for an expedition against the Mexican provinces; that the Territory of Orleans would be revolutionized — for which the inhabitants were quite ready; that he supposed some "seizing" would be necessary at New Orleans, and a forced "transfer" of the bank; that an expedition was to land at Vera Cruz and march thence to the Mexican capital; that naval protection would be furnished by Great Britain; and that Truxton and other officers of the navy, disgusted with the conduct of the government, would join in the enterprise. After gathering all the information possible, Wilkinson sent, by express, two letters to President Jefferson — one official, the other confidential, in which, without mentioning any names, he gave a general outline of the proposed expedition; and then pushed forward to the Sabine. He sent orders to the commanding officer at New Orleans to put that place in the best possible condition for defence, and to secure, if possible, by contract, a train of artillery there belonging to the French. Having made a satisfactory arrangement with the Spanish commander, Wilkinson hastened back to Natchitoches, where he received a letter from St. Louis informing him that a plan to revolutionize the Western country was about to explode; and that Ohio, Indiana, Kentucky, Tennessee, and New Orleans Territory had combined to declare themselves independent on the 15th of Novem-

ber. Wilkinson, alarmed, ordered Cushing to hasten down with the troops, while he sped to Natchez; whence he sent a second special messenger to the President with duplicates of his former letters, and another declaring that a conspiracy really existed; and authorized the messenger to mention the names of Burr, Dayton, Trixtou, and others as apparently engaged in the enterprise. He informed Governor Claiborne, of the Orleans Territory, that his government was menaced by a secret plot, and took other measures for its defence. At New Orleans Wilkinson procured a meeting of merchants, to whom he and Governor Claiborne made an exposition of Burr's suspected projects. Bollman, an agent of Burr there, with Swartwout and Ogden, were arrested, and the militia of the territory were placed at Wilkinson's disposal. Great excitement now prevailed on the Lower Mississippi and on the Ohio and its tributaries. A series of articles, inspired, no doubt, if not written, by Burr, had appeared in an Ohio newspaper, signed "Querist," arguing strongly in favor of the separation of the Western States from the Union. Similar articles had appeared in a Democratic paper at Pittsburgh. In Kentucky were many uneasy aspirants for political power, and an old story of Spanish influence there—through pensioners upon the bounty of Spain—was revived. Burr's enterprise became associated in the public mind with the old Spanish plot; and Burr and his confederates, offended by what they deemed Wilkinson's treachery to their cause, associated him with the Spanish intriguers. These hints, reaching the Lower Mississippi, embarrassed Wilkinson; for it was intimated that he was also connected with the schemes of Burr. General Jackson—who had favored Burr's schemes so long as they looked only towards a seizure of Spanish provinces—alarmed by evidences that he had wicked designs against the Union, wrote to Governor Claiborne (with the impression that Wilkinson was associated with Burr), warning him to beware of the designs of that officer and the ex-Vice-President. "I hate the Dons," Jackson wrote (Nov. 12, 1806); "I would delight to see Mexico reduced; but I would die in the last ditch before I would see the Union disunited." Daviess, United States District Attorney for Kentucky, watched Burr, and finally applied to the court for process for his arrest. Burr was summoned before a grand jury (Nov. 25), but, the attorney failing to get such witnesses as he desired, the jury not only failed to find a bill, but declared their belief that Burr intended nothing against the integrity of the Union. This triumph for Burr was celebrated by a ball at Frankfort. Meanwhile the President of the United States had commissioned Graham, Secretary of the Orleans Territory, to investigate the reports about Burr, and, if well founded, to take steps to cut short his career. On Nov. 27 the President issued a proclamation that he had been informed of an unlawful scheme set on foot for invading the Spanish dominions; warning citizens of the United States not to engage in it; and directing all in authority to endeavor

to suppress it. Before this Graham had drawn from Blennerhassett facts of great importance (for the latter took the secretary to be one of Burr's confidants), and applied to the governor of Ohio for the seizure of the boats on the Muskingum. The Legislature, then in session, granted the request. A few days afterwards several boats, in charge of Colonel Tyler, filled with men, descended the Ohio to Blennerhassett's Island. Blennerhassett, informed of the seizure of his boats on the Muskingum, and that a body of militia were coming to seize those at the island, hastily embarked (Dec. 13) with a few of his followers, and descended the river in Tyler's flotilla. The next day a mob of militia took possession of the island, desolated it, and even insulted Mrs. Blennerhassett, who succeeded in obtaining an open boat and following her husband down the river. The Legislature of Kentucky speedily passed a similar act for seizures to that of Ohio. Tyler, however, had already passed Louisville. They were joined by Burr, and the flotilla passed out into the Mississippi and stopped at Chickasaw Bluffs (now Memphis), where Burr attempted to seduce the garrison into his service. Burr now first heard of the action of the Legislature of the Orleans Territory, before which Wilkinson had laid his exposure of the schemes. Perceiving what he might expect at New Orleans, and fearful that the authorities of Mississippi might arrest him at once, Burr passed to the west side of the river, out of their jurisdiction, where he formed a camp, thirty miles above Natchez. Under the proclamation of the President, a militia force was raised to arrest Burr. He made an unconditional surrender to the civil authority, and agreed that his boats should be searched and all arms taken. Before this was accomplished his cases of arms were cast into the river; and as no evidence of any hostile intention was found, a belief prevailed that he was innocent of any of the designs alleged against him. Burr was brought before the Supreme Court of the territory, and was not only not indicted by the grand jury, but they presented charges against the governor for calling out the militia to arrest him. Burr spoke bitterly of Wilkinson as a traitor, and, fearing to fall into his hands, he resolved to disband his men and fly. He told them to sell what provisions they had, and, if they chose, to settle on his Washita lands. They dispersed through the Mississippi Territory, and furnished an abundant supply of school-masters, singing-masters, dancing-masters, and doctors. A reward was offered for the capture of Burr, and he was arrested (Feb. 19, 1807) by the Register of the Land-office, assisted by Lieutenant (afterwards major-general) Edmund P. Gaines, near Fort Stoddard, on the Tombigbee River, in eastern Mississippi. An indictment for high-treason was found against Burr by a grand jury for the District of Virginia. He was charged with levying war, by the collection of armed men at Blennerhassett's Island, within the dominion of Virginia. He was also charged with concocting a scheme for the overthrow of the national authority in the

Western States and Territories. He was tried and acquitted.

**Burritt, ELIHU**, was the son of a shoemaker; was born in New Britain, Conn., Dec. 8, 1811, and died March 7, 1879. At the age of sixteen he was apprenticed to a blacksmith. In order to read the Scriptures in their original language, he learned Greek and Hebrew, and read these with so much ease that he continued his studies and mastered many other languages. He was called "the learned blacksmith." He became a reformer, and went to England in 1846, where he formed "the League of Universal Brotherhood," for the abolition of war, slavery, and other national evils. He was United States Consul at Birmingham some time.

**Burroughs, STEPHEN, FATE OF.** (See *Witch-*

ally convicted and hanged. When the delusion passed by, the people of Salem, disgusted and indignant, drove Parris from the town.

**Burrows, WILLIAM**, was born near Philadelphia, Oct. 6, 1785; died Sept. 5, 1813. He entered the United States Navy, as midshipman, November, 1799; and served under Preble in the war against Tripoli. In March, 1807, he was promoted to lieutenant, and, early in the war of 1812-15, he was placed in command of the sloop-of-war *Enterprise*. On Sunday, Sept. 5, he fought the British brig *Boxer*, with the *Enterprise*, off Portland, Me. The *Boxer* was vanquished, but Burrows was slain. (See *Enterprise and Boxer*.) For this exploit, Congress voted a gold medal to his nearest male relation.

THE BURROWS MEDAL.

*craft, Salem.*) Samnel Parris, minister at Salem, in whose house the delusion of "Salem Witchcraft" began, hated Stephen Burroughs, who had been a minister there, and who had retired to Wells, in Maine, and settled there. In the height of the witch trials, Parris persuaded the authorities of Massachusetts to bring Burroughs to Salem on an accusation of practising witchcraft. He was a powerful man in person and stature. The magistrates sent an elder and two constables to Wells to bring Mr. Burroughs to Salem. They stated their errand, and he cheerfully complied. There was no direct road through the forest, but his wood-craft gave him useful knowledge. The constables objected to traversing a way unknown to them. He told them not to fear, but they became afraid of their prisoner, and followed him "nder a spell," they said. A terrible storm overtook them in the heart of the forest. The blackness of night and the silence of the grave had preceded it. Then came the fierce wind, the drenching rain, and the crash of thunder. The elder and the constables, believing their prisoner was leagued with the powers of darkness, trembled. This commotion of the elements was a part of the count of the indictment against him, for it was believed that he raised the tempest. Mr. Burroughs was tried for witchcraft, and was actu-

**Bute, EARL OF (JOHN STUART)**, was born in Scotland in 1713; died in London, March 10, 1792. He succeeded to his father's titles and estates when he was ten years of age; and, in 1736, he married the only daughter of Lady Mary Wortley Montagu. In February, 1737, he was selected one of the sixteen representative Peers of Scotland, and appointed lord of the bedchamber of the Prince of Wales in 1738. The beautiful Princess of Wales gave him her confidence on the death of her husband in 1751, and made him preceptor of her son, afterwards King George III. Over that youth he gained great influence. When he ascended the throne, in 1760, George promoted Bute to a privy-councillor, and, afterwards, a secretary of state; and, when Pitt and the Duke of Newcastle retired from the cabinet, Bute was made prime-minister. He soon became unpopular, chiefly because the king had discarded the great Pitt, and preferred this Scotch adventurer, whose had advice was misleading his sovereign. Insinuations were rife about the too intimate personal relations of Bute and the young king's mother, who, it was believed, ruled both the king and his minister; and a placard appeared in front of the Royal Exchange, in large letters, "No petticoat government—no Scotch minister—no Lord George Sackville!" Bute

was vigorously attacked by John Wilkes in his *North Britain*. The minister's unpopularity increased. Suspicions of his being bribed by the enemies of England were rife; and, perceiving a rising storm that threatened to overwhelm him with disgrace, Bute suddenly resigned his office (April 7, 1763), but nominated his successor. He retired to private life, passing his time between England and Scotland in the enjoyment of an ample fortune. He published, at his own expense (\$50,000), a work on botany, in nine volumes, and when twelve copies had been printed he had the plates destroyed to make the work scarce.

Butler, BENJAMIN FRANKLIN, was born at Deerfield, N. H., Nov. 5, 1818; and graduated at Waterville College, Me., in 1838. He studied law at Lowell, Mass.; was admitted to the bar in 1841, and continued the practice until 1861, with a high reputation as a criminal lawyer. He was an active politician in

BENJAMIN FRANKLIN BUTLER.

the Democratic party until its disruption at Charleston in 1860 (see *Charleston Convention*); and he had served as a member of both Houses of the Massachusetts Legislature. As brigadier-general of militia he hastened towards Washington, on the call of the President (which see), with troops, in April, 1861, and landed at Annapolis. He was placed in command of the Department of Annapolis, which included Baltimore. (See *Baltimore in Possession of National Troops*.) At the middle of May he was made major-general of volunteers, and put in command of the Department of Virginia, with headquarters at Fortress Monroe, where he held as contraband all fugitive slaves. (See *Contrabands*.) In August (1861), an expedition which he commanded captured forts Hatteras and Clarke (see *Hatteras*); and, in the spring of 1862, he led another expedition for the capture of New Orleans, in which he was successful. (See *New Orleans, Capture of*.) He was succeeded in command there by General Banks, in November. Late in 1863, he was in command of the Department of Virginia and North Carolina, and his force was designated the Army of the James. After an unsuccessful expedition against Fort Fisher, in

December, 1864, General Butler retired to his residence in Massachusetts. He was elected to Congress in 1866, and was one of the principal managers of the House of Representatives in conducting the impeachment of President Johnson (which see). He was again elected to a seat in Congress in 1868, and continued to represent a district of Massachusetts in that body for ten years afterwards. In 1882 he was elected governor of that state.

**Butler in Louisiana.** General Butler was satisfied, at the beginning of September, 1862, that the Confederates had abandoned all ideas of attempting to retake New Orleans, so he proceeded to "repossess" some of the rich districts of Louisiana. He sent General Godfrey Weitzel with a brigade of infantry, with artillery, and Barnett's cavalry, late in October, into the region of the district of La Fourche, west of the Mississippi. On Oct. 27 Weitzel had a sharp fight at Labadieville with Confederates under General McPheeters. They were on both sides of the Bayou La Fourche, with six pieces of cannon. These Weitzel attacked with musketry and cannons. The Confederates were driven and pursued about four miles. Weitzel lost eighteen killed and seventy-four wounded. He captured two hundred and sixty-eight prisoners and one cannon. He now proceeded to open communication with New Orleans by the bayou and the railway connecting Brashear City with it. The whole country was abandoned, and the troops were received with joy by the negroes. All industrial operations there were paralyzed, and General Butler, as a state policy and for humane purposes, confiscated the entire property of the district, appointed a commission to take charge of it, and set the negroes at work, by which they were subsisted and the crops saved. Two congressional districts in Louisiana were thus "repossessed," and the loyal citizens of New Orleans elected to seats in Congress Benjamin F. Flanders and Michael Hahn. Late in the autumn of 1862, General Butler was succeeded by General N. P. Banks in command of the Department of the Gulf.

**Butler in New Orleans** elicited unbounded praise from loyal people because of his vigor and efficiency, and created the most intense hatred of himself personally among the Confederates by his restrictive measures. On his arrival Butler seized the fine St. Charles Hotel, and made it his headquarters. The mayor of the city, John T. Monroe, took an attitude of defiance. He refused to surrender the city, or take down the Louisiana flag from the city hall. The editor of the *True Delta* refused to print Butler's proclamation in hand-bill form. The general invited the city authorities to a conference. The mayor at first refused to go, but finally went to the St. Charles, with Pierre Soulé (formerly member of Congress) and other friends. They persisted in regarding Louisiana as an independent nation, and the National troops as invaders or intruders. An immense and threatening mob had collected in

the streets in front of the St. Charles. Butler had placed troops there and a cannon for the protection of headquarters. The commander sent him word that the mob was pressing hard upon him. "Give my compliments to General Williams" (the commander), said Butler; "and tell him if he finds he cannot control the mob to open upon them with artillery." The mayor and his friends sprang to their feet, exclaiming, "Don't do that, general!" "Why not, gentlemen?" said Butler; "the mob must be controlled. We can't have a disturbance in the street." The mayor went to a balcony, informed the mob of the general's order, and persuaded them to disperse. Butler read a proclamation which he had prepared to Soule, who declared it would give great offence; that the people were not conquered and would never submit, and uttered a threat in smooth terms. To this Butler replied: "I have long been accustomed to hear threats from Southern gentlemen in political conventions; but let me assure the gentlemen present that the time for tactics of that nature has passed, never to return. New Orleans is a conquered city. If not, why are we here? How did we get here? Have you opened your arms, and bid us welcome? Are we here by your consent? Would you or would you not expel us if you could? New Orleans has been conquered by the forces of the United States, and, by the laws of all nations, lies subject to the will of the conqueror." These utterances indicated the course General Butler intended to pursue in New Orleans and in the Department of the Gulf; and, within twenty-four hours after he had taken possession of the city, there was a perfect understanding between him and the people of their mutual relations. Butler, at the same time, took pains to remove all causes for unnecessary irritation, and removed his headquarters from the St. Charles to a private residence.

Butler, JOHN, an able Tory leader in the Revolution, was born in Connecticut, and died at Niagara in 1794. He was in official communication with the Johnsons in the Mohawk Valley before the war, and was colonel of a militia regiment in Tryon County, N. Y. In 1776 he organized a band of motley marauders—white men and Indians, the former painted and behaving like savages. He was in command of them in the battle of Oriskany (which see), and of eleven hundred men who desolated the Wyoming Valley in July, 1778. (See *Wyoming Valley, Invasion of*.) He fought Sullivan in the Indian country, in central New York, in 1779, and accompanied Sir John Johnson in his raid on the Schoharie and Mohawk settlements in 1780. After the war, Butler went to Canada, and was rewarded by the British government with places of emolument and a pension. His son, Walter, was a ferocious Tory, and was killed during the war.

Butler, RICHARD, was born in Ireland, and was killed by Indians in a battle in Ohio, Nov.

4, 1791. He came to America before 1760. He was a lieutenant-colonel in the Pennsylvania line in the Continental army, and also of Morgan's rifle corps in 1777. Butler served throughout the war; was agent for Indian affairs in Ohio in 1787; and was with St. Clair in his expedition against the Indians, late in 1791, commanding the right wing of his army, with the rank of major-general. In that expedition he was slain. (See *St. Clair's Campaign*.)

Butler, THOMAS, was born in Pennsylvania in 1754; died in New Orleans, Sept. 7, 1805. He was in almost every important battle in the Middle States during the Revolution. At Brandywine and at Monmouth he received the thanks of his commanders (Washington and Wayne) for skill and bravery. In 1791 he commanded a battalion under St. Clair, and was twice wounded at the defeat of that leader (see *St. Clair's Campaign*), where his brother, Richard, was killed.

Butler, ZEBULON, was born at Lyme, Conn., in 1731; died at Wilkesbarre, Penn., July 28, 1795. He served in the French and Indian War and in the expedition to Havana in 1762, when he became a captain. He settled in the Wyoming Valley, Penn., in 1769, and was there when the valley was invaded by Tories and Indians under Colonel John Butler, in 1778. In defence of the inhabitants, he commanded the feeble force there, but was unable to prevent the massacre that took place. The next year he accompanied Sullivan in his expedition into the Indian country in central New York, and served during the remainder of the war.

Butler's Assessments in New Orleans. General Butler found, on taking possession of New Orleans, much distress there occasioned by the insurrection, and he resolved to make the leaders in the Secession movement do something for the relief of the distressed. He discovered a list of contributors to the fund for the promotion of secession and insurrection, with the amount of their subscriptions, and he at once assessed each of the subscribers twenty-five per cent. of that amount for the relief of the poor.

Byrd, WILLIAM, was born at Westover, Va., March 28, 1674; died Aug. 26, 1744. Inheriting a large fortune, and acquiring a good education, he became a leader in the promotion of science and literature in Virginia, and was made a fellow of the Royal Society of London. Long receiver-general of the revenue in Virginia, he was also three times made agent of that colony in England, and was for thirty-seven years a member, and, finally, president, of the king's council of the colony. He was one of the commissioners, in 1728, for running the boundary-line between Virginia and North Carolina. He made notes of his operations and the incidents thereof, which form a part of the *Westover Manuscripts*, published by Edmund Ruffin in 1841. In 1733 he laid out the cities of Richmond and Petersburg, Va.

## C.

**Cabeça de Vaca, ALVAR NUÑEZ**, a Spaniard of noble birth, was the treasurer of the expedition to Florida by Narvaez (which see), and was one of the few survivors who left that coast in boats. He wrote, in Spanish, a minute history of the expedition, which was translated, a few years ago, into English by the late Buckingham Smith.

**Cabinet Ministers, FIRST.** The President of the United States chooses ministers, or heads of departments of the government, who are called Secretaries. They are appointed by him with the consent of the Senate. These are his constitutional advisers, whom he may consult on important occasions, and have their opinions given in writing if required. The heads of the several departments who were in charge when Washington became President were continued in office until the first session of the new Congress had adjourned—Sept. 29, 1789. The reason of the delay was that the laws instituting the departments and fixing the salaries of officers were not sooner passed by Congress. Washington appointed Alexander Hamilton Secretary of the Treasury (salary, \$3500); Henry Knox, Secretary of War (salary, \$3000); and Thomas Jefferson, Secretary of State (salary, \$3500). Jefferson was then in France, and did not enter upon his duties until March, 1790. The salary of the President was fixed at \$25,000 a year, and that of the Vice-President at \$5000 a year.

**Cabinet Ministers Killed (1845).** Late in February (28th), 1845, President Tyler lost two of his most trusted cabinet ministers by an accident. The President and all his cabinet, many members of Congress, and other distinguished citizens, with several ladies, were on board the United States steam ship-of-war *Princeton*, on a trial-trip down the Potomac from Washington. When they were opposite Mount Vernon one of the largest guns of the *Princeton*, in firing a salute, burst, scattering its deadly fragments around. The Secretary of State, Abel P. Upshur, and Secretary of the Navy, T. W. Gilmer, and David Gardiner, of New York, were killed. No one else was seriously injured. The daughter of Mr. Gardiner was soon afterwards married to President Tyler.

**Cabinet Officer, IMPEACHMENT OF A.** A few weeks before the opening of the Centennial Exhibition (which see), General W. W. Belknap, the Secretary of War, was charged with having received a bribe from a post-trader to whom he had granted permission to sell goods to army officers or private soldiers. Articles of impeachment were formally presented to the Senate, acting as a High Court of Impeachment, April 4, 1876. A plea of non-jurisdiction was interposed by the secretary's counsel. On May 29 the Senate de-

ecided that it had jurisdiction, and it proceeded with the trial. The arguments of counsel closed July 26, and on the 1st of August the Senate took a vote on the verdict. The result was an acquittal. This was the first impeachment of a cabinet officer in the United States.

**Cabot, JOHN AND SEBASTIAN.** John was a native of Venice, and, at the time of the discovery of Columbus, was a merchant in Bristol, England. That discovery filled mariners in western Europe with desires to make voyages

SEBASTIAN CABOT.

for the same purpose; and Henry VII. of England gave a charter to John Cabot and his sons permitting them to explore any seas with five ships, at their own expense; and to discover and occupy any "isles or countries of the heathen or infidel before unknown to Christians, accounting to the king for a fifth part of the profits." There is no positive evidence that the Cabots took advantage of this charter, or that any one of them sailed on a voyage of discovery until 1498, when John Cabot was dead. His son Sebastian, then very young, received from the king a commission to go on a voyage of discovery, and the monarch fitted out two caravels for him. He sailed from Bristol in May, 1498, in search of a northwest passage to India, but was stopped by the ice-pack in Davis's Strait. Then he sailed southwest, and discovered the shores of Labrador, or, possibly, the northern shore of Newfoundland. Turning northward,

he traversed the coast of the continent almost to latitude 60°, when the ice again barred his way. Then he sailed southward, and discovered a large island, which he called New Found Land (Newfoundland), and perceived the immense number of codfish in the waters surrounding it. Leaving that island, he coasted as far as the shores of Maine, and, some writers think, as far south as the Carolinas. On his return Cabot revealed the secret of the codfish at New Found Land, and within five or six years thereafter fishermen from England, Brittany, and Normandy were gathering treasures there. As Cabot did not bring back gold from America, King Henry paid no more attention to him; and in 1512 he went to Spain, by invitation of King Ferdinand, and enjoyed honors and emoluments until that monarch's death in 1516, when, annoyed by the jealousies of the Spanish nobility, he returned to England. Henry VIII. furnished Cabot with a vessel, in 1517, to seek for a northwest passage to India; but he unsuccessfully fought the ice-pack at Hudson's Bay and was foiled. The successor of Ferdinand invited Cabot to Spain and made him Chief Pilot of the realm. He was employed by Spanish merchants to command an expedition to the Spice Islands by way of the then newly discovered Strait of Magellan; but circumstances prevented his going farther than the southeast coast of South America, where he discovered the rivers De la Plata and Paraguay. His employers were disappointed, and, resigning his office into the hands of the Spanish monarch, he returned to England in his old age and was pensioned by the king. After the death of Henry VIII. the "boy-king," Edward VI., made Cabot Grand Pilot of England; but Queen Mary neglected him, and allowed that eminent navigator and discoverer of the North American continent to die at Bristol in comparative poverty and obscurity at the age of eighty years. His cheerful temperament was manifested by his dancing at an assembly of young seamen the year before his death.

Cabral, PEDRO ALVAREZ, was sent by Emanuel, King of Portugal, with thirteen ships, on a voyage from Lisbon to the East Indies, in the year 1500. In order to avoid the calms on the Guinea shore, he went so far westward as to discover land on the coast of Brazil at latitude 10° south. He erected a cross, and named the country "The Land of the Holy Cross." It was afterwards called Brazil, from *brasil*, a dyewood that abounded there. Cabral took possession of the country in the name of the king. After it was ascertained that it was a part of the American continent, a controversy arose between the crowns of Spain and Portugal concerning the right of possession, but it was settled amicably—Portugal to possess the portion of the continent discovered by Cabral, that is, from the River Amazon to the Plate (De la Plata). This discovery led Emanuel to send out another expedition (three ships), under Amerigo Vesputius, in May, 1501. They touched Brazil at latitude 5° south, and returned home after a voyage of sixteen months.

Cabrillo, RODRIGUEZ DE, was sent by Mendoza, viceroy of Mexico (1542), in search of the "Strait of America," supposed to lead to the Atlantic Ocean, which Alarçon had failed to find. He sailed up the Pacific coast as far as latitude 44° north, off the coast of Oregon. The turbulence of the sea, sickness of his crew, and want of provisions compelled him to return. Cabrillo was a Portuguese, and died at the Island of San Bernardo June 3, 1543.

**Cacique.** The name is derived from the Haytien tongue. It was inaccurately applied by the Spaniards to the native nobles of Mexico. Its true meaning is "lord," or "prince," or "supreme ruler."

**Cadet's Gray.** The uniform of the cadets at the West Point Military Academy is of gray cloth—white pantaloons in summer. It was adopted at the Academy during the War of 1812-15. General Winfield Scott explained to the writer how that color came to be adopted. While at Buffalo, in the late spring of 1813, in command of United States troops (regulars), he wrote to the quartermaster for a supply of new clothing for his soldiers. Word came back that blue cloth, such as was used in the army, could not be obtained, owing to the stringency of the blockade and the embargo, and the lack of woolen manufactures in the country, but that there was a sufficient quantity of gray cloth in Philadelphia. Scott ordered it to be made up for his soldiers; and in these new gray suits they marched down the Niagara shores on the Canada side. So they appeared the day before the battle at Chippewa (which see). The British commander mistook these gray-clad regulars for militia, and regarded them with such contempt that he was not prepared to meet their skill in the battle. Because of the victory won at Chippewa, chiefly by those gray-clad regulars (July 5, 1813), and in honor of Scott and his troops, that style of cloth was adopted at the Military Academy at West Point as the regulation uniform of the cadets. "Cadet's gray" is regarded as the best color for field-service, as it is not conspicuous. (See *Uniforms, United States Army.*)

JOHN CADWALLADER.

Cadwallader, JOHN, was born in Philadelphia in 1743; died at Shrewsbury, Penn., Feb.

10, 1786. He was an active patriot before the war for independence broke out. He was made colonel of one of the city battalions, and as a brigadier-general afterwards he was placed in command of the Pennsylvania militia, co-operating with Washington in the attack on Trenton, and participating in the battle of Princeton. He was in the battles of Brandywine, Germantown, and Monmouth. He challenged General Conway to fight a duel because of offensive words used by the latter towards Washington. (See *Conway's Cabal*.) They fought, and Conway was badly wounded. After the war Cadwallader lived in Maryland, and was in its Legislature.

**Cairo, MILITARY OCCUPATION OF.** The small village of Cairo, Ill., is situated near the extremity of a boat-shaped peninsula, at the confluence of the Ohio and Mississippi Rivers, one hundred and seventy-five miles below St. Louis. It is a point of great importance as the key to a vast extent of navigable waters, and to it National troops were sent at an early period. Both the National government and Governor Yates of Illinois had been apprised of the intention of the Confederates to secure that position, hoping thereby to control the navigation of the Mississippi to St. Louis, and of the Ohio to Cincinnati and beyond. They also hoped that the absolute control of the Mississippi below would cause the Northwestern States to join hands with the insurgents rather than lose the advantages derived from navigating this great outlet of their products. The scheme was foiled. Governor Yates, under the direction of the Secretary of War, sent Illinois troops at an early day to take possession of and occupy Cairo. By the middle of May there were not less than 5000 Union volunteers there, under the command of General B. M. Prentiss, who occupied the extreme point of the peninsula, where they cast up fortifications and gave the post the name of Camp Defiance. Before the close of May it was considered impregnable against any force the Confederates might send. It soon became a post of great importance to the Union cause as the place where some of the land and naval expeditions in the valley of the Mississippi were fitted out.

**Caldwell, JAMES**, was born in Charlotte County, Va., in April, 1734; died at Elizabethtown, N. J., Nov. 24, 1781. Graduating at Princeton in 1759, he became pastor of the Presbyterian Church at Elizabethtown in 1762. Zealously espousing the revolutionary cause, he was much disliked by the Tories. Appointed chaplain of a New Jersey brigade, he was for a time in the Mohawk Valley. In 1780 his church and residence were burned by a party of British and Tories; and the same year a British incursion from Staten Island pillaged the village of Connecticut Farms, where his family were temporarily residing. A soldier shot his wife through a window while she was sitting on a bed with her babe. At that time Mr. Caldwell was in Washington's camp at Morristown. In an altercation at Elizabethtown Point with an American sentinel, he was shot by the latter. The murderer was afterwards hanged. A costly

monument was erected in the church-yard at Elizabethtown sixty-four years afterwards to commemorate both Caldwell and his wife.

**Calef and Mather.** Among the learned dupes of the witchcraft delusion in New England in the seventeenth century was Rev. Cotton Mather, whose writings and preaching were chiefly instrumental in inaugurating that terrible episode in New England history. (See *Witchcraft, Salem*.) Even after the people and magistrates had come to their senses, persecutions had ceased, and the folly of the belief in witchcraft was broadly apparent, Mather continued to write in favor of it and to give instances of the doings of witches in their midst. "Flashy people," wrote Mather, "may burlesque these things, but when hundreds of the most sober people, in a country where they have as much mother wit certainly as the rest of mankind, know them to be true, nothing but the absurd and froward spirit of Sadducism [disbelief in spirits] can question them." They were burlesqued in a most effectual manner. Robert Calef, a merchant of Boston, wrote and published a series of letters, in which he exposed Mather's credulity, and greatly irritated that really good man. Mather retorted by calling Calef a "weaver turned minister." Calef tormented Mather more by other letters in the same vein, when the former, becoming wearied by the fight, called the latter "a coal from hell," and prosecuted him for slander. When these letters of Calef were published in book form, Increase Mather, President of Harvard College, caused copies of the work to be publicly burned on the college green.

**Calhoun, JOHN CALDWELL, LL.D.**, was born in Abbeville District, S. C., March 18, 1782; died in Washington, D. C., March 31, 1850. His father

JOHN CALDWELL CALHOUN.

was a native of Ireland; his mother, formerly Miss Caldwell, was of Scotch-Irish descent. The son graduated, with all the honors, at Yale Col-

lege, in 1804; and studied law at Litchfield, Conn., in a famous law-school there. In 1807 he began the practice of the profession in his native district. Thoughtful, ardent, and persevering, he soon took high rank in his profession and gained a very lucrative practice. Fond of politics, he early entered its arena, and in 1808-10 was a member of the State Legislature. He was sent to Congress in 1811, where he remained, by successive elections, until 1817. Mr. Calhoun was very influential in pressing Madison to make a declaration of war with Great Britain in 1812. President Monroe called him to his cabinet as Secretary of War (Dec. 16, 1817), and he served as such during the Presidential term of eight years. In 1824 he was chosen Vice-President of the United States, and was re-elected with Andrew Jackson in 1828. In 1831 he was elected United States Senator by the Legislature of South Carolina. He was Secretary of State in 1844-45, and from 1845 till 1850 he was again a member of the United States Senate. The doctrine of state sovereignty and supremacy, and that the Union was a compact of states that might be dissolved by the secession of any one of them, independent of all action on the part of others, was honestly held by Mr. Calhoun nearly all his life. His influence in his own state was very great; and his political tenets, practically carried out by acts of nullification (see *Nullification*), brought South Carolina to the verge of civil war in 1832; and it made that state foremost and most conspicuous in inaugurating the late Civil War. His remains lie buried under a neat monument in St. Philip's church-yard at Charleston, S. C. His writings and a biography have been published in six volumes.

**California, ADMISSION OF, INTO THE UNION.** The discovery of gold in California in 1848 caused such an influx of emigrants that in 1849 there were inhabitants enough there to entitle them, so far as numbers were concerned, to admission into the Union as a state. A state govern-

STATE SEAL OF CALIFORNIA.

ment was absolutely necessary, for in such a mixed population as was suddenly gathered there, much crime and disorder prevailed. General Riley, the military governor of the territory, called a convention of delegates to meet at Monterey, Sept. 1, 1849, to frame a state constitution. The convention, after a six weeks' session, adopted a constitution. Before it was held the people of California, in convention at San Francisco, had voted against the admission of the slave-labor system into that country. The constitution adopted at Monterey also had a provision to exclude slavery from that inchoate state. Thus came into political form the crude elements of a state, the birth and maturity of which seems like a strange dream. All had been ac-

complished within twenty months from the time when gold was discovered at Sutter's Mill. Under this constitution John Charles Frémont and William M. Gwynn were chosen by the State Legislature United States Senators. Edward Gilbert and G. H. Wright were elected to the House of Representatives. When Frémont and Gwynn went to Washington, they took the state constitution with them, and presented a petition (February, 1850) asking for the admission of California into the Union as a free and independent state. The article in its constitution which excluded slavery became a cause of violent debates in Congress and of bitter feeling in the South against the people of the North. The Union, so strong in the hearts of the people, was shaken to its centre. Mr. Clay again appeared as a compromiser for the sake of peace and union. It seemed that some compromise was needed to avoid serious difficulty, for already the representatives of the slave interest had taken action, and the Southern members in Congress boldly declared their intention to break up the Union if California should be admitted under such a constitution. A joint resolution was adopted to appoint a committee of thirteen (six Northern and six Southern members, who should choose the thirteenth) to consider the subject of a territorial government for California, New Mexico, and Utah, with instructions to report a plan of compromise embracing all the questions thus arising out of the subject of slavery. Henry Clay was made chairman of that committee. He had already presented (Jan. 25, 1850) a plan of compromise to the South, and spoke eloquently in favor of it (Feb. 5); and on May 8 he reported a plan of compromise in a series of bills, intended to be a pacification. This was called an Omnibus Bill (which see): It made large concessions to the slaveholders, and yet it was not satisfactory to them. For months a violent discussion of the Compromise Act was carried on throughout the country, and it was denounced upon diametrically opposite grounds. It finally became a law. On Sept. 9, 1850, California was admitted into the Union as a state. Population in 1880, 864,694.

**California, NAME OF.** In 1534 Hernando Cortez sent Heruando de Grijalva on an errand of discovery to the Pacific coast, who probably saw the peninsula of California. Twenty-five years before the Spanish leader discovered the country, a romance was published in Spain in which are described the doings of a pagan queen of Amazons, who brought from the "right hand of the Indies" her allies to assist the infidels in their attacks upon Constantinople. The romance was entitled *Esplandian*, the name of an imaginary Greek emperor, living in Stamboul, the ancient name of Constantinople. The Amazonian queen was named Calafia, whose kingdom, rich in gold, diamonds, and pearls, was called California. The author probably derived the name from Calif, the title of a successor of Mohammed. The author says: "Know that on the right hand of the Indies there is an island, called California, very close to the Terrestrial Paradise, and it was peopled by black-

women without any man among them, for they lived in the fashion of the Amazonia. They were of strong and hardy bodies, of ardent courage, and of great force. Their island was the strongest in all the world, with its steep cliffs and rocky shore. Their arms were all of gold, and so was the harness of the wild beasts which they tamed and rode. For in the whole island there was no metal but gold. They lived in caves wrought out of the rocks with much labor. They had many ships with which they sailed out to other countries to obtain booty." Both Cortez and Grijalva believed, as everybody then believed, that they were in the neighborhood of the coast of Asia; and, as the aspect of the country corresponded with the description in the romance, they named the peninsula California. In the Gulf of California were found pearls; so the description of the country of the black Amazons—a country filled with gold and pearls—suited the actual condition of the region explored.

California, STATE OF, was discovered as early as 1534 by a Spanish explorer (see *Cortez*), but settlements in Old or Lower California were first made in 1683 by Jesuit missionaries. New or Upper California was discovered later, and the first mission there (San Diego) was planted in 1768. For many years the government of California, temporal and spiritual, was under the control of monks of the Order of St. Francis. It was not until about 1770 that the Bay of San Francisco was discovered (unless by *Sir Francis Drake*, which see), and in 1776 a mission was established there. At the beginning of this century eighteen missions had been established in California, with over fifteen thousand converts. The Spanish power in California was overthrown by the Mexican revolution in 1822, when the government was permanently secularized. In 1843-46 many thousand emigrants from the United States settled in California; and when the war with Mexico broke out in 1846, the struggle for the mastery in that Pacific-coast province speedily ended in victory for the Americans in 1847. By the treaty of peace at Guadalupe Hidalgo (which see), California and other territory were ceded to the United States. In the month of February, 1848, gold was discovered in California, on the Sacramento River; and as the news spread abroad, thousands of enterprising and energetic men flocked thither to secure the precious metal, not only from the United States, but from South America, Europe, and China. Very soon there was a mixed population of all sorts of characters in California of at least 250,000 persons. The military governor called a convention to meet at Monterey, Sept. 1, 1849, to frame a state constitution. One was formed by which slavery was to be excluded from the proud new state; and this document revived in Congress, in great intensity, debates on the subject of slavery in 1849-50. A compromise was effected (see *Omnibus Bill*); and on Sept. 9, 1850, California was admitted into the Union as a state. So lawless were a large class of the population, that nothing but the swift operations of "Vigilance Committees" could control them and preserve social order. The first vigilance committee of San Francisco was organized in 1851. Finally these committees assumed the functions and powers of judges and executives, but under proper regulations, which guaranteed all accused persons a fair trial. Dangerous men of every kind were arrested, tried, hanged, transported, or acquitted. The tribunal became a "terror to evil-doers." Late in 1856 the vigilance committee in San Francisco surrendered its powers to the regularly constituted civil authority. California did not furnish any troops during the Civil War, owing to its isolated position, there being then no railroad communication between the two oceans. It has become one of the most prolific agricultural states in the Union.

Callender, JAMES THOMPSON, a political writer, born in Scotland; died in Richmond, Va., in July, 1803. He was a vigorous but coarse writer, and was never happier, apparently, than when engaged in a quarrel. He published in Edinburgh, in 1792, a book called *Political Progress of Great Britain*, which so offended the authorities that he was banished from the kingdom, and came to Philadelphia, where he published the *Political Register* in 1794-95, and the *American Annual Register* for 1796-97. He was a violent and unscrupulous opponent of Washington's administration, and delighted in abusing Hamilton and other Federalist leaders. For a season he enjoyed the friendship of Jefferson. The latter became disgusted with Callender, when the former, becoming Jefferson's enemy, calumniated him fearfully. He published a paper called the *Richmond Recorder*, in which he made fierce attacks upon the character of Washington and Adams. Callender was a common scold, and was very mischievous in the use of his pen and printing materials. He was accidentally drowned while bathing in the James River.

Calvert was the family name of the Lords Baltimore—George, Cecilius, Charles I., Benedict Leonard, Charles II., and Frederick. (See *Baltimore, Lords*.)

Calvert, GOVERNOR, RECEPTION OF, IN MARYLAND. When Leonard Calvert and his colony sailed up the Potomac as far as Aquia Creek, they found the natives friendly towards them. Going still farther, to Piscataway, they met Captain Fleet, an Indian trader with the Indians, and a voyager to Jamestown and other places in the way of traffic. He had been a prisoner for some years with the Anacostans on the site of Washington city, and was familiar with the language of the barbarians in the neighborhood. Fleet induced the chief at Piscataway to go on board Calvert's vessel. He was pleased; but when Calvert asked him whether he might sit down with his people in the country, the king answered cautiously, "I will not bid you go, neither will I bid you stay; but you may use your own discretion." Under the guidance of Fleet, the colonists were enabled to find a good place for settlement. (See *Maryland, Colony of*.)

Calvert, LEONARD, second son of the first

Lord Baltimore, and first governor of Maryland. Born about 1606; died June 9, 1647. He sailed from Cowes, Isle of Wight, for Chesapeake Bay, Nov. 22, 1633, as governor of Maryland, with two vessels (*Ark* and *Dove*), and over three hundred emigrants. (See *Baltimore, Lords*.) The *Ark* was a ship of three hundred tons, and the *Dove* a pinnace of fifty tons. Among the company were two Jesuit priests, Andrew White and John Altham. At religious ceremonies performed at the time of departure, the expedition was committed "to the protection of God especially, and of his most Holy Mother, and St. Ignatius, and all the guardian angels of Maryland." The two vessels were convoyed beyond danger from Turkish corsairs. Separated by a furious tempest that swept the sea three days, ending with a hurricane which split the sails of the *Ark*, unshipped her rudder, and left her at the mercy of the waves, the voyagers were in despair, and doubted not the little *Dove* had gone to the bottom of the ocean. Delightful weather ensued, and at Barbadoes the *Dove* joined the *Ark* after a separation of six weeks. Sailing northward, they touched at Point Comfort, at the entrance to the Chesapeake, and then went up to Jamestown, with royal letters borne by Calvert, and received there a kind reception from Governor Harvey. They tarried nine days, and then entered the Potomac River, which delighted them. The colonists sailed up the river to the Heron Islands, and, at a little past the middle of March, landed on one of them, which they named St. Clement's. On the 25th they offered the sacrifice of the mass, set up a huge cross hewn from a tree, and knelt in solemn devotion around it. Going farther up, they entered a river which they called St. George; and on the right bank founded the capital of the new province with military and religious ceremonies, and called it St. Mary's. That scene occurred March 27, 1634. It remained the capital of Maryland until near the close of the century, when it speedily became a ruined town, and now scarcely a trace of it remains. They found the natives friendly, and awed into reverence for the white men by the flash and roar of cannons, which they regarded as lightning and thunder. The successful medical services of Father White in curing a sick Indian king gained the profound respect of these children of the forest. He and his queen and three daughters were baptized by Father White, and became members of the Christian Church. William Clayborne, an earlier settler on Kent Island, in the Chesapeake, gave Calvert much trouble, and was abetted in his course by the Virginia authorities, who regarded the Maryland colonists as intruders. (See *Clayborne*.) He was driven away, and his property was confiscated. But he was a "thorn in the side" of the proprietor for a long time. Governor Calvert tried to carry out the grand design of the proprietor to establish a feudal nobility with hereditary titles and privileges, the domain for the purpose being divided into manorial estates of two thousand and three thousand acres each, but the provisions of the charter fortunately prevented such a consummation

of Lord Baltimore's order. Governor Calvert went to England in 1643, and during his absence for nearly a year much trouble had ensued in the colony, for Clayborne, with Captain Richard Ingle, had harassed the settlement at St. Mary's. Civil war ensued (1645), and Governor Calvert was expelled from Maryland, and took refuge in Virginia. (See *Maryland*.) Finally Calvert returned from Virginia with a military force, took possession of Kent Island, and re-established proprietary rights over all the province of Maryland.

**Cambridge Platform.** The second Synod of Massachusetts met at Cambridge in 1646, and was not dissolved until 1648. The synod composed and adopted a system of church discipline called "The Cambridge Platform," and recommended it, together with the Westminster Confession of Faith, to the general court and to the churches. The latter, in New England, generally complied with the recommendation, and "The Cambridge Platform," with the ecclesiastical laws, formed the theological constitution of the New England colonies.

**Camden.** (See *Sanders's Creek*.)

**Camp Wild-cat.** The invasion of Kentucky by Zollicoffer from Tennessee aroused the loyalists of eastern Kentucky, and they flew to arms. Some of them were organized under Colonel Garrard, a loyal Kentuckian, and among the Rock Castle hills they established Camp Wild-cat. There they were attacked (Oct. 21, 1861) by Zollicoffer. When he appeared, Garrard had only about six hundred men, but was joined by some Indiana and Ohio troops, and some Kentucky cavalry under Colonel Woolford. With the latter came General Schoepf, who took the chief command. Zollicoffer, with his Tennesseans and some Mississippi "Tigers" fell upon them in the morning, and were twice repulsed. The last was in the afternoon. After a sharp battle, Zollicoffer withdrew. Garrard had been reinforced in the afternoon by a portion of Colonel Steadman's Ohio regiment. General Schoepf, deceived by false reports of a force coming from Buckner's camp at Bowling Green, fell back hastily towards the Ohio, making forced marches. (See *Invasion of Kentucky*.)

**Campaign of 1758.** (See *French and Indian War*.) William Pitt was called to the administration of public affairs in England in June, 1757. He recalled Lord Loudoun from America, and appointed General Abercrombie to succeed him. A strong naval armament was placed under the command of Admiral Boscawen, and twelve thousand additional English troops were allotted to the service in America. Pitt addressed a letter to the several colonies, asking them to raise and clothe twenty thousand men, and promised, in the name of Parliament, to furnish arms, tents, and provisions for them; and also to reimburse the several colonies nearly all the money they should expend in raising and clothing the levies. The response was wonderful. New England alone raised nearly fifteen thousand men, and an excess of levies soon appeared; and when, in May, 1758, Abercrombie took charge of

the troops he found nearly fifty thousand men at his disposal. The plan of the campaign contemplated the capture of Louisburg, Ticonderoga, and Fort Duquesne.

**Campaigns against Indians in Indiana and Illinois.** On Oct. 14, 1812, General Samuel Hopkins, with two thousand mounted Kentucky riflemen, crossed the Wabash on an expedition against the Kickapoo and Peoria Indian villages, in the Illinois country, the former eighty miles from his starting-place, the latter one hundred and twenty miles. They traversed magnificent prairies covered with tall grass. The army was a free-and-easy, undisciplined mob, that chafed under restraint. Discontent, seen at the beginning, soon assumed the forms of complaint and murmuring. Finally, when halting on the fourth day's march, a major rode up to the general and insolently ordered him to march the troops back to Fort Harrison. Very soon afterwards the army was scarcely saved from perishing in the burning grass of a prairie, supposed to have been set on fire by the Indians. The troops would march no farther. Hopkins called for five hundred volunteers to follow him into Illinois. Not one responded. They would not submit to his leadership, and he followed his army back to Fort Harrison, where they arrived Oct. 25. This march of eighty or ninety miles into the Indian country had greatly alarmed the barbarians, and so did some good. Towards the same region aimed at by General Hopkins another expedition, under Colonel Russell, composed of two small companies of United States regulars, with a small body of mounted militia under Governor Ninian Edwards (who assumed the chief command), in all four hundred men, penetrated deeply into the Indian country, but, hearing nothing of Hopkins, did not venture to attempt much. They fell suddenly upon the principal Kickapoo towns, twenty miles from Lake Peoria, drove the Indians into a swamp, through which they pursued them, sometimes waist-deep in mud, and made them fly in terror across the Illinois River. Some of the pursuers passed over, and brought back canoes with dead Indians in them. Probably fifty had perished. The expedition returned, after an absence of eighteen days, with eighty horses and the dried scalps of several persons who had been killed by the savages, as trophies. General Hopkins discharged the natiuees and organized another expedition of twelve hundred and fifty men, composed chiefly of foot-soldiers. Its object was the destruction of Prophetstown. The troops were composed of Kentucky militia, some regulars under Captain Zachary Taylor, a company of Rangers, and a company of scouts and spies. They rendezvoused at Vincennes, and marched up the Wabash Valley to Fort Harrison Nov. 5, 1812. They did not reach the vicinity of Prophetstown until the 19th. Then a detachment fell upon and burned a Winnebago town of forty houses, four miles below Prophetstown. The latter and a large Kickapoo village near it were also laid in ashes. The village contained one hundred and sixty huts, with all the winter provisions of corn

and beans, which were totally destroyed. On the 21st a part of the expedition fell into an Indian ambush and lost eighteen men, killed, wounded, and missing. So destitute were the troops, especially the Kentuckians, who were clad in only the remnants of their summer clothing, that the expedition returned without attempting anything more. They suffered dreadfully on their return march. (See *Harnar's Expedition, 1790*, and *Wayne's Indian Wars*.)

**Campaigns of 1864.** General Grant was created lieutenant-general March 2, 1864, under an act of Congress passed the day before. He was appointed to the command of the armies of the United States, and assumed the duties March 17th. He made arrangements for the campaigns of that year, which contemplated two grand objects—the seizure of Richmond and Atlanta, the former the seat of the Confederate government, and the latter the focus of several converging railways. The National forces then in the field numbered about 800,000; those of the Confederates, about 400,000. Both parties were disposed to make the campaign about to be opened a decisive one if possible. To General George G. Meade, as commander of the Army of the Potomac, was assigned the task of conquering Lee and taking Richmond, and to General W. T. Sherman was assigned the task of conquering Johnston and taking Atlanta. Grant made his headquarters thereupon with the Army of the Potomac, and gave to Meade the help of his counsel and the prestige of his name; while Sherman, who was appointed Grant's successor in command of the Military Division of the Tennessee, with General McPherson as commander of the Department and Army of the Tennessee, was left to his own resources, under general but explicit orders from the lieutenant-general.

**Campbell, LORD WILLIAM, FLIGHT OF.** While the Provincial Congress of South Carolina was in session, Lord William Campbell, who had acquired large possessions in South Carolina by marriage, arrived at Charleston (July, 1775) as governor of the province. He was received with courtesy; and he soon summoned a meeting of the Assembly. They came; declined to do business; and adjourned on their own authority. The Committee of Safety proceeded in their preparations for resistance without regard to the presence of the governor. Lord Campbell professed great love for the people. His sincerity was suspected, and the hollowness of his professions was soon proved. Early in September Colonel Moultrie, by order of the Committee of Safety, proceeded to take possession of a small post on Sullivan's Island, in Charleston Harbor. The small garrison fled to the British sloop-of-war *Tamar* and *Cherokee*, lying near. Lord Campbell, seeing the storm of popular indignation against him daily increasing, particularly after it was discovered that he had attempted to incite the Indians to make war for the king, and had tampered with the Tories of the interior of the province, also fled to one of

these vessels for shelter, and never returned. So ended royal authority in South Carolina.

**Campbell, LORD WILLIAM**, Governor of South Carolina (1774-75), and brother of the Duke of Argyle, died Sept. 5, 1778. He became a captain in the British navy in August, 1762; was in Parliament in 1764; and governor of Nova Scotia 1766-73. He began his administration in South Carolina in 1775 by promoting insurrectionary movements favorable to the crown among the border population and the Indians. When detected in this practice, the indignation of the people alarmed him, and he fled on board a British vessel in Charleston Harbor. In the contest of the British fleet with Fort Moultrie, in June, 1776, he was badly hurt, and died from the effects of his wounds two years afterwards. In May, 1763, Lord Campbell married Sarah, sister of Ralph Izard, a revolutionary patriot. She joined her husband on the frigate to which he had fled.

**Campbell, WILLIAM**, born in Augusta County, Va., in 1745; died September, 1781. He was in the battle of Point Pleasant (which see) in 1774, and was captain of a Virginia regiment in 1775. Being colonel of Washington County militia in 1780, he marched, with his regiment, two hundred miles to the attack of Major Ferguson at King's Mountain (which see), where his services gained for him great distinction. So, also, were his prowess and skill conspicuous at Guilford Court-house (which see), and he was made a brigadier. He assisted Lafayette in opposing Cornwallis in Virginia, and received the command of the light infantry and riflemen, but died a few weeks before the surrender of the British at Yorktown.

**Canada**, the northern neighbor of the United States, was discovered by Jacques Cartier (which see), on the borders of the St. Lawrence River, in 1534. Its name is supposed to have been derived from the Huron word *Kan-na-ta*, signifying a collection of cabins, such as Huchelaga (which see). No settlements were made there until the explorations of Champlain about three fourths of a century later. (See *Cartier and Champlain*.) He established a semi-military and semi-religious colony at Quebec, and from it Jesuit and other missions spread over the Lake regions. Then came the civil power of France to lay the foundations of an empire, fighting one nation of Indians and making allies of another, and establishing a feudal system of government, the great land-holders being called *seigneurs*, who were compelled to cede the lands granted to them, when demanded by settlers, on fixed conditions. They were not absolute proprietors of the soil, but had certain valuable privileges, coupled with prescribed duties, such as building mills, etc. In 1629 Quebec fell into the hands of the English, but was restored in 1632. In the early history of the colony the governors, in connection with the Intendant, held the military and civil administration in their hands. Jesuit and other priests became conspicuous in the public service. Finally, when a bishop was appointed for Quebec, vio-

lent dissensions occurred between the civil and ecclesiastical authorities. Until the Treaty of Utrecht (1713), Canada included all of present British America, and more. At that time Hudson's Bay and vicinity was restored to England by Louis XIV. Newfoundland and Acadia (Nova Scotia) were ceded to the English, and all right to the Iroquois country (New York) was renounced, reserving to France only the valleys of the St. Lawrence and the Mississippi. In 1760 Canada was conquered by the English, and by the Treaty of Paris (which see), in 1763, a greater portion of the French dominions in America fell into the possession of the British crown. By an act of the imperial Parliament, in 1791, Canada was divided into two provinces, Upper Canada and Lower Canada, and each had a parliament or legislature of its own. An imperial act was passed in 1840 to unite the two provinces under one administration and one legislature. Antecedent political struggles had taken place, which culminated in open insurrection in 1837-38. (See *Canadian Rebellion*.) In 1841 Upper and Lower Canada were united for purposes of government, the system professedly modified after that of Great Britain. In 1857 Ottawa was selected as the permanent seat of government for Canada, and costly public buildings were erected there. By act of the imperial Parliament, which received the royal assent March 28, 1867, the provinces of Upper and Lower Canada, New Brunswick, and Nova Scotia were connected and made one nation, under the general title of "The Dominion." Upper Canada was named "Ontario," and Lower Canada "Quebec." Provision was made for the future admission of Prince Edward's Island, the Hudson's Bay Territory, British Columbia, and Newfoundland, with its dependency, Labrador. In the new government the executive authority is vested in the Queen, and her representative in the Dominion is the acting governor-general, who is advised and aided by a privy council of fourteen members, constituting the ministry, who must be sustained by a parliamentary majority. There is a parliament composed of two chambers, the Senate and House of Commons. In 1878 the Marquis of Lorne, son-in-law of Queen Victoria, became governor-general of Canada. He was succeeded by Lord Landsdowne in the year 1886.

**Canada, ATTEMPTED CONQUEST OF, IN 1812.** The first important military movement after the declaration of war was an attempt to conquer Canada by an invasion of its western border on the Detroit River. It then consisted of two provinces—Lower Canada, with a population of 300,000, mostly of French origin, and Upper Canada, with a population of 100,000, composed largely of American loyalists and their descendants. The regular military force in both provinces did not exceed 2000 men, scattered over a space of 1200 miles from Quebec to the foot of Lake Superior. Sir George Prevost was then governor-general, with his residence at Montreal. To enter the province from the States, a water-barrier had

to be crossed, while the American frontier was destitute of roads, infected with summer fevers, and sparsely settled. William Hull, a soldier of the Revolution, then governor of Michigan Territory, was consulted about an invasion of Canada, while on a visit at Washington. He insisted that before such an enterprise should be undertaken a naval control of Lake Erie should be acquired, and not less than 3000 troops should be provided for the invasion. He accepted the commission of brigadier-general with the special object in view of protecting his territory from the Indian allies of the British, yet, by orders of the government, he prepared to invade Canada. Governor Meigs, of Ohio, called for troops to assemble at Dayton, and volunteers flocked thither in considerable numbers. There General Hull took command of them (May 25, 1812), and they started off in good spirits for their march through the wilderness. It was a perilous and most fatiguing journey. On the broad morasses of the summit lands of Ohio, Hull received a despatch from the War Department urging him to press on speedily to Detroit, and there await further orders. When he reached the navigable waters of the Maumee, his beasts of burden were so worn down by fatigue that he despatched for Detroit, in a schooner, his own baggage and that of most of his officers; also all of his hospital stores, intrenching tools, and a trunk containing his most valuable military papers. The wives of three of his officers, with thirty soldiers to protect the schooner, also embarked in her. In a smaller vessel the invalids of the army were conveyed. Both vessels arrived at the site of Toledo on the evening of July 1. The next day, when near Frenchtown (now Mon-

nons spirit, when he received orders to "commence operations immediately," and, if possible, take possession of Fort Malden (which see). At dawn on the morning of July 12, the greater part of his troops had crossed the Detroit River, and were on Canadian soil. Hull issued a proclamation to the Canadians, assuring them of protection in case they remained quiet. Many of the Canadian militia deserted the British standard. Hull advanced towards Malden (July 13). After a successful encounter with British and Indians (see *Ta-ra-n-tee, Skirmish at*), Hull fell back to Sandwich, without attacking Malden. His troops were disappointed and mutinous. Then information came of the capture of Mackinaw by the British. (See *Fall of Mackinaw*.) News also came that General Proctor, of the British army, had arrived at Malden with reinforcements. This was followed by an intercepted despatch from the northwest announcing that twelve hundred white men and several hundred Indians were coming down to assist in the defence of Canada. General Brock was approaching from the east, with a force gathered on his way. (See *Van Horne's Defeat, and Maguagua, Battle at*.) These events, and other causes, impelled Hull to recross the river to Detroit with his army, and take shelter in the fort there (Aug. 8, 1812). The British congregated in force at Sandwich, and from that point opened a cannonade upon the fort at Detroit. On Sunday morning, the 16th, the British crossed the river to a point below Detroit, and moved upon the fort. Very little effort was made to defend it, and, on that day, Hull surrendered the fort, army, and Territory of Michigan into the hands of the British. (See *Detroit, Surrender of*.)

BARRACES AT SANDWICH.

roe), Hull received a note from the postmaster at Cleveland announcing the declaration of war. It was the first intimation he had received of that important event. In fact, the British at Fort Malden (now Amherstburg) heard of the declaration before Hull did, and captured his schooner, with all its precious freight. The commander at Malden had been informed of it, by express, as early as June 30—two days before it reached Hull. The latter pressed forward, and encamped near Detroit on July 5. The British were then casting up intrenchments at Sandwich on the opposite side of the Detroit River. There Hull awaited further orders from his government. His troops, impatient to invade Canada, had evinced a muti-

Canada, ATTITUDE OF (1775). When news of the surrender of Ticonderoga (which see) reached Governor Carleton, of Canada, he issued a proclamation (June 9, 1775) in which he declared the captors to be a band of rebellious traitors; established martial law; summoned the French peasantry to serve under the old colonial nobility; and instigated the Indian tribes to take up the hatchet against the people of New York and New England. This proclamation neutralized the effects of the address of Congress to the Canadians. The Quebec Act (which see) had soothed the French nobility and Roman Catholic clergy. The English residents were offended by it, and these, with the Canadian peasantry, were disposed to take sides with

the Americans. They denied the right of the French nobility, as magistrates, or the seigniors, to command their military services. They welcomed invasion, but had not the courage to join the invaders. At the same time, the French peasantry did not obey the order of the Roman Catholic bishop, which was sent to the several parishes, and read by the local clergy, to come out in defence of the British government. It was known that the bishop was a stipendiary of the crown.

**Canada, COMMISSIONERS TO.** (See *Commissioners to Canada.*)

**Canada, CONQUEST OF (1629).** David Kerk (the English write it Kirk), a Huguenot refugee, received a royal commission from King Charles I. to seize the French forts in Acadia (which see) and on the river St. Lawrence. With a dozen ships he overcame the small French force at Port Royal, and took possession of Acadia in 1629. Later in the summer, he entered the St. Lawrence, burned the hamlet of Tadousac, at the mouth of the Saguenay, and sent a summons for the surrender of Quebec. It was refused, and Kirk resolved to starve out the garrison. He cruised in the Gulf of St. Lawrence, and captured the transports conveying winter provisions for Quebec. The sufferings there were intense, but they endured them until August the next year, when, English ships-of-war, under a brother of Admiral Kirk, appearing before Quebec, instead of the expected supply ships, the place was surrendered, and the inhabitants, not more than one hundred in all, were saved from starvation. By a treaty, Canada was restored to the French in 1632.

**Canada, EXPEDITION AGAINST (1746).** The easy conquest of Louisburg revived a hope that Canada might be conquered. Governor Shirley proposed to the ministers to have the task performed by a colonial army alone. They would not comply, for the colonists, thus perceiving their own strength, might claim Canada by right of conquest, and become too independent; so they authorized an expedition for the purpose after the old plan of attacking that province by land and sea. An English fleet was prepared to go against Quebec; a land force, composed of troops from Connecticut, New York, and colonies farther south, gathered at Albany to march against Montreal. Governor Clinton assumed the chief command of the land expedition. His unpopularity thwarted his plans. The corporation of Albany refused to furnish quarters for his troops, and his drafts on the British treasury could not purchase provisions. Meanwhile, Massachusetts and Rhode Island had raised nearly four thousand troops, and were waiting for an English squadron. Instead of a British armament, a French fleet of forty war vessels, with three thousand veteran troops, was coming over the sea. New England was greatly alarmed. It was D'Anville's armament, and it was dispersed by storms. (See *Louisburg.*) Ten thousand troops gathered at Boston for its de-

fence; the fort on Castle Island was made very strong, and the land expedition against Montreal was abandoned. Again the expenses of Massachusetts (\$1,000,000) in making these preparatiuus were reimbursed by Parliament.

**Canada, FINAL CONQUEST OF.** When Quebec fell, in the autumn of 1759, the French held Montreal, and were not dismayed. In the spring of 1760, Vaudreuil, the governor-general of Canada, sent M. Levi, the successor of Montcalm, to recover Quebec. He descended the St. Lawrence with six frigates and a powerful land force. The English, under General Murray, marched out of Quebec, and met him at Sillery, three miles above the city; and there was fought (April 4) one of the most sanguinary battles of the war. Murray was defeated. He lost about one thousand men, and all his artillery, but succeeded in retreating to the city with the remainder of his army. Levi laid siege to Quebec, and Murray's condition was becoming critical, when an English squadron appeared (May 9) with reinforcements and provisions. Supposing it to be the whole British fleet, Levi raised the siege (May 10), and fled to Montreal, after losing most of his shipping. Now came the final struggle. Three armies were soon in motion towards Montreal, where Vaudreuil had gathered all his forces. Amherst, with 10,000 English and provincial troops, and 1000 Indians of the Six Nations, led by Johnson, embarked at Oswego, went down Lake Ontario and the St. Lawrence to Montreal, where he met Murray (Sept. 6), who had come up from Quebec with 4000 men. The next day, Colonel Haviland arrived with 3000 troops from Crown Point, having taken possession of Isle aux Noix on the way. Resistance to such a crushing force would have been in vain, and, on Sept. 8, 1760, Vaudreuil signed a capitulation surrendering Montreal and all French posts in Canada and on the border of the lakes to the English. General Gage was made military governor of Montreal, and General Murray, with 4000 men, garrisoned Quebec. The conquest of Canada was now completed.

**Canada, GRAND PLAN FOR ITS EMANCIPATION.** A grand campaign for liberating Canada from British rule was conceived late in 1778. From Boston, D'Estaing, in the name of Louis XVI., had summoned the Canadians to throw off British rule. Lafayette exhorted (December) the barbarians of Canada to look upon the English as their enemies. The Congress became inflamed with zeal for the projected measure, formed a plan, without consulting a single military officer, for the "Emancipation of Canada," in co-operation with an army from France. One American detachment from Pittsburgh was to capture Detroit; another from Wyoming was to seize Niagara; a third from the Mohawk Valley was to capture Oswego; a fourth from New England was to enter Montreal by way of the St. Francis; a fifth to guard the approaches from Quebec; while to France was assigned the task of reducing Halifax and

Quebec. Lafayette offered to use his influence at the French court in furtherance of this grand scheme; but the cooler judgment and strong common-sense of Washington interposed the objection that the part which the United States had to perform in the scheme was far beyond its resources. It was abandoned, as was another scheme for a like result, early in the year. (See *Canada, Scheme for a Winter Expedition against.*)

**Canada, INVASION OF (1775).** There was a decided war spirit visible in the second Continental Congress, yet it was cautious and prudent. Immediately after the seizure of Ticonderoga and Crown Point (May 10-12, 1775), the Congress was urged to authorize the invasion and seizure of Canada. That body hoped to gain a greater victory by making the Canadians their friends and allies. To this end they sent a loving address to them, and resolved, on the 1st of June, "that no expedition or incursion ought to be undertaken or made by any colony or body of colonists against or into Canada." The Provincial Coun-

tioned at Harlem, was ordered to Albany. The New-Yorkers were joined by "Green Mountain Boys." Schuyler sent into Canada an address to the inhabitants, in the French language, informing them that "the only views of Congress were to restore to them those rights which every subject of the British empire, of whatever religious sentiments he may be, is entitled to;" and that, in the execution of these trusts, he had received the most positive orders to "cherish every Canadian, and every friend to the cause of liberty, and sacredly to guard their property." It was now too late. Had the Congress listened to Allen and Arnold at the middle of May, and moved upon Canada, its conquest would have been easy, for there were very few troops there. When, near the close of August, an expedition against Canada, under Schuyler, was ready to move, preparations had been made to thwart it. The clergy and seigniors of Canada, satisfied with the Quebec Act (which see), were disposed to stand by the British government. The invading army first occupied Isle aux Noix, on

ISLE AUX NOIX, IN THE SOREL.

gress of New York had expressly disclaimed any intention to make war on Canada. But Gage's proclamation (June 10) that all Americans in arms were rebels and traitors, and especially the battle on Bunker's (Breed's) Hill, made a radical change in the feelings of the people and in Congress. It was also ascertained that Guy Carleton, governor of Canada, had received a commission to muster and arm the people of the province, and to march them into any province in America to arrest and put to death, or spare, "rebels" and other offenders. Here was a menace that could not go unheeded. Colonels Ethan Allen, Benedict Arnold, and others renewed their efforts to induce the Congress to send an expedition into Canada. The latter perceived the importance of securing Canada either by alliance or by conquest. At length the Congress prepared for an invasion of Canada. Major-general Philip Schuyler had been appointed to the command of the Northern Department, which included the whole province of New York. General Richard Montgomery was his chief lieutenant. The regiments raised by the province of New York were put in motion, and General Wooster, with Connecticut troops, who were sta-

the Sorel River; but the expedition made little advance beyond until November. Colonel Allen had attempted to take Montreal, without orders, and was made a prisoner and sent to England. A detachment of Schuyler's army captured Fort Chambly, twelve miles from St. Johns, on the Sorel (Nov. 3), and, on the same day, the fort at the latter, which Montgomery had besieged for some time, cut off from supplies, also surrendered. Montreal fell before the patriots on the 13th, and Montgomery, leaving a garrison at both places, prepared to move on Quebec. Meanwhile Colonel Arnold had led an expedition by way of the Kennebec and Chaudière rivers, through a terrible wilderness, to the banks of the St. Lawrence (Nov. 9) opposite Quebec. He crossed the river, ascended to the Plains of Abraham (Nov. 13), and, at the head of only seven hundred and fifty half-naked men—with not more than four hundred muskets—demanded the surrender of the city. Intelligence of an intended sortie caused Arnold to move twenty miles farther up the river, where he was soon joined by Montgomery. The combined forces returned to Quebec, and began a siege. At the close of the year (1775), in an attempt to take the city by storm, the invaders were repulsed, and Montgomery was killed. Arnold took the com-

mand, and was relieved by General Wooster, in April (1776). A month later, General Thomas took the command, and, hearing of the approach of a large armament, land and naval, to Quebec, he retreated up the river. Driven from one post to another, the Americans were finally expelled from Canada, the wretched remnant of the army, reduced by disease, arriving at Crown Point in June, 1776.

**Canada, INVASION OF (1814).** At the opening of the third year of the second war for independence, a favorite project with the United States government was the conquest of Canada. The principal military forces in Upper Canada were under Lieutenant-general Drummond. When the Army of the North, commanded by Major-general Brown, reached the Niagara frontier, Drummond's headquarters were at Burlington Heights, at the western end of Lake Ontario. General Riall was on the Niagara River, at Fort George and Queenstown; but when he heard of the arrival of the Americans at Buffalo, under General Scott, he advanced to Chippewa and established a fortified camp. At the close of June, General Brown arrived at Buffalo, and assumed chief command, and, believing his army to be strong enough, he proceeded to invade Canada. His army consisted of two brigades, commanded respectively by Generals Scott and Ripley, to each of which was attached a train of artillery, commanded by Captain N. Towson and Major J. Hindman. He had also a small corps of cavalry, under Captain S. D. Harris. These regulars were well disciplined and in high spirits. There were also volunteers from Pennsylvania and New York, one hundred of them mounted, and nearly six hundred Seneca Indians—almost the entire military force of the Six Nations remaining in the United States. These had been stirred to action by the venerable Red Jacket, the great Seneca orator. The volunteers and Indians were under the chief command of General Peter B. Porter, then quartermaster-general of the New York militia. Major McRee, of North Carolina, was chief-engineer, assisted by Major E. D. Wood. On the Canada shore, nearly opposite Buffalo, stood Fort Erie, then garrisoned by one hundred and seventy men, under the command of Major Buck. On the 1st of July Brown received orders to cross the Niagara, capture Fort Erie, march on Chippewa, menace Fort George, and, if he could have the co-operation of Chauucey's fleet, to seize and fortify Burlington Heights. Accordingly, Brown arranged for General Scott and his brigade to cross on boats and land a mile below the fort, while Ripley, with his brigade, should be landed a mile above it. This accomplished, the boats were to return and carry the remainder of the army, with its ordnance and stores, to the Canada shore. The order for this movement was given on the 2d of July. It was promptly obeyed by Scott, and tardily by Ripley, on the 3d. When Scott had pressed forward to invest the fort, he found Ripley had not crossed, and no time was lost in crossing the ordnance and selecting positions for batteries. These prepara-

tions alarmed the garrison, and the fort, which was in a weak condition, was surrendered. Nearly two hundred men, including officers, became prisoners of war, and were sent across the river.

**Canada, SCHEME FOR A WINTER INVASION OF.** The Board of War, General Gates president, arranged a plan, late in 1777, for a winter campaign against Canada, and appointed Lafayette to the command. (See *Conspiracy against Washington*.) The Marquis was cordially received at Albany by General Schuyler, then out of the military service. General Conway, who had been appointed inspector-general of the army, was there before him. Lafayette was utterly disappointed and disgusted by the lack of preparation and the delusive statements of Gates. "I do not believe," he wrote to Washington, "I can find twelve hundred men fit for duty—and the quarter part of these are naked—even for a summer campaign." The Marquis soon found the whole affair to be only a trick of Gates to detach him from Washington. General Schuyler had, in a long letter to Congress (Nov. 4, 1777), recommended a winter campaign against Canada, but it was passed unnoticed by the Congress, and Gates appropriated the thoughts as his own in forming the plan, on paper, which he never meant to carry out.

**Canadian Rebellion.** A movement for a separation of the Canadas from the Crown of Great Britain, and their political independence, was begun simultaneously in Upper and Lower Canada in 1837. In the former province, the most conspicuous leader was William Lyon McKenzie, a Scotchman, a journalist of rare ability and a great political agitator; in the Lower Province, the chief leader was Joseph Papineau, a large land-owner, and a very influential man among the French inhabitants. Both leaders were republican in sentiment. The movements of the revolutionary party were well planned, but local jealousies prevented unity of action, and the effort failed. It was esteemed highly patriotic, and elicited the warmest sympathy of the American people, especially of those of the Northern States. Banded companies and individuals joined the "rebels," as they were called by the British government, and "patriots" by their friends; and so general became the active sympathy on the northern frontier, that peaceful relations between the United States and Great Britain were endangered. President Van Buren issued a proclamation, calling upon all persons engaged in the schemes of invasion of the Canadian territory to abandon the design, and warning them to beware of the penalties that must assuredly follow such infringement of international laws. General Winfield Scott was finally sent to the northern frontier to preserve order, and was assisted by a proclamation by the governor of New York. Yet secret associations, known as "Hunters' Lodges," continued quite active for some time. Against the members of these lodges, President Tyler issued an admonitory proclamation, which prevented further aggressive movements. For

four years this ominous cloud hung upon our horizon. It disappeared in 1842, when the leaders of the movement were either dead or in exile.

**Canadians, ADDRESS TO THE.** On May 1, 1775, the Quebec Act (which see) went into operation, and on the 29th the Continental Congress adopted an address to the Canadians, prepared by John Jay. It was deemed highly important to secure their co-operation. The address appealed to their pride, their affection for France, their courage, and the regard for their common welfare, and saying, "By your present form of government, or rather present form of tyranny, you and your wives and your children are made slaves." The Canadians, as Frenchmen, feared the haughty rule of the British, and the Protestant portion of them cherished the exclusive rule of Protestants; but as Congress offered them no hope of a union for independence, or a promise of institutions of their own, nor any adequate motive for rising, they were unmoved by the address. To the French Canadians the Quebec Act was really an improvement on their former condition.

**Canal System (IN THE UNITED STATES).** General Philip Schuyler may justly be regarded as the father of our canal system. So early as 1761, when he was in England settling the accounts of General John Bradstreet with the government, he visited the famous canal which the Duke of Bridgewater had just completed, and he became profoundly impressed with the importance of such aqueous highways in the work of developing the internal resources of our country. On his return, he urged the matter upon the attention of his countrymen. Meanwhile, the active mind of Elkannah Watson (which see) had been deeply interested in the subject. In 1785 he visited Mount Vernon, where he found Washington engaged in a project for connecting the waters of the Potomac with those west of the Alleghany Mountains. He and General Schuyler projected canals between the Hudson River and lakes Champlain and Ontario, and in 1792 the Legislature of New York chartered two companies, known, respectively, as the "Western Inland Lock Navigation Company" and "Northern Inland Lock Navigation Company," of both of which Schuyler was made president, and, at his death, in 1804, he was actively engaged in the promotion of both these projects. The Western Canal was never completed, according to its original conception, but was supplemented by the great Erie Canal, suggested by Gouverneur Morris about the year 1801. In a letter to David Parish, of Philadelphia, that year, he distinctly foreshadowed that great work. So early as 1774 Washington favored the passage of a law by the Legislature of Virginia for the construction of works—canals and good wagon-roads—by which the Potomac and Ohio rivers might be connected by a chain of commerce. After the Revolution, the States of Virginia and Maryland took measures which resulted in the formation of the famous Potomac Company, to carry out Washington's project. In 1784 Washington re-

vived a project for making a canal through the Dismal Swamp, not only for drainage, but for navigation between the Elizabeth River and Albemarle Sound. The oldest work of the kind in the United States is a canal, begun in 1792, five miles in extent, for passing the falls of the Connecticut River at South Hadley. The earliest completed and most important of the great canals of our country is the Erie, connecting the waters of Lake Erie with those of the Hudson River. It was built by the State of New York at a cost of \$9,000,000, from the operation of which untold wealth has been derived by the City and State of New York. It was completed and formally opened by Governor De Witt Clinton, its great advocate, in 1825. The canal changed the whole aspect of commercial affairs in the Lake region. The total area of these five great inland seas is about 90,000 square miles, and their inlets drain a region estimated at about 336,000 square miles. (See *Erie Canal*.)

**Canby, EDWARD RICHARD SPRIGG,** was born in Kentucky, 1819; killed by Indians, April 11, 1873. He graduated at West Point in 1839; served in the Seminole War (which see) and the war with Mexico. He was twice breveted

E. R. S. CANBY.

for eminent services in the latter war. He was promoted to major in 1855, and colonel in 1861. In 1861 he was in command in New Mexico until late in 1862, and, in March of that year, was made brigadier-general of volunteers. He was promoted to major-general of volunteers in May, 1864, and took command of the Department of West Mississippi. He captured Mobile, April 12, 1865 (see *Mobile*), and afterwards received the surrender of the Confederate armies of Generals Taylor and E. Kirby Smith. On July 28, 1866, he was commissioned a brigadier-general in the regular army, and in 1869 took command of the Department of the Columbia, on the Pacific coast. He devoted himself to the settlement of difficulties with the Modoc Indians (which see), and, while so doing, was treacherously murdered by Captain Jack, their leader.

**Canonicus,** sachem or king of the Narragansets, treated the Pilgrims, at first, with much

arrogance. He was born about 1565; died June 4, 1647. His tribe had been exempted from the scourge which swept away Massasoit's people, and the latter stood in awe of him. Canonicus, by way of defiance, sent to Plymouth a bundle of arrows, tied with a rattlesnake's skin. Bradford immediately sent the skin back, stuffed with gunpowder and bullets. The superstitious Indians took it for some fatal charm, and, in terror, passed it from village to village until it returned to Plymouth. The authorities of the latter, however, took the precaution to surround the village with palisades. (See *Plymouth*.) Canonicus became the firm friend of the English, especially of Roger Williams, who found a retreat in his dominions. Before Williams's arrival, there had been war between the Narragansets and Pequods, concerning the ownership of lands, in which a son of Canonicus was slain. In his grief, the king burned his own house and all his goods in it. Roger Williams, who often experienced his kindness, spoke of Canonicus as "a wise and peaceable prince." He was uncle of Miantonomoh, who succeeded him as sachem of the Narragansets in 1638. (See *Miantonomoh*.)

**Canonicus and his Challenge.** The haughty chief of the Narragansets, living on Canonicus Island, opposite the site of Newport, R. I., was at first unwilling to be friendly with the Pilgrims at New Plymouth. To show his contempt and defiance of the English, he sent a message to Governor Bradford with a bundle of arrows in a rattlesnake's skin. That was at the dead of winter, 1622. It was a challenge to engage in war in the spring. Like the venomous serpent that wore the skin, the symbol of hostility gave warning before the blow should be struck—a virtue seldom exercised by the Indians. Bradford acted wisely. He accepted the challenge by sending the significant quiver back filled with gunpowder and shot. "What can these things be?" inquired the ignorant and curious savage mind, as the ammunition was carried from village to village, in superstitious awe, as objects of evil omen. They had heard of the great guns at the sea-side, and they dared not keep the mysterious symbols of the governor's anger, but sent them back to Plymouth as tokens of peace. The chief and his associates honorably sued for the friendship of the white people.

**Cape Ann** (now Gloucester) was chosen as a place of settlement for a fishing colony by Rev. John White (a long time Rector of Trinity Church, Dorchester, Eng.) and several other influential persons. Through the exertions of Mr. White, a joint-stock association was formed, called the "Dorchester Adventurers," with a capital of about \$14,000. Cape Anne was purchased, and fourteen persons, with live-stock, were sent out in 1623, who built a house and made preparations for curing fish. Affairs were not prosperous there. Roger Conant was chosen governor in 1625, but the Adventurers became discouraged and concluded on dissolving the colony. Through the encouragement of Mr. White, some of the colonists remained, but, not liking

their seat, they went to Nannkeag, now Salem, where a permanent colony was settled. (See *Salem*.)

**Cape Fear, CONFEDERATES DRIVEN FROM.** Bragg was in general command in the Cape Fear region at the time of the fall of Fort Fisher, and General Hoke was his most efficient leader. He held Fort Anderson, a large earthwork about half-way between Fort Fisher and Wilmington. Terry did not think it prudent to advance on Wilmington until he should be reinforced. To effect this, General Grant ordered Schofield from Tennessee to the coast of North Carolina, where he arrived, with the Twenty-third Corps, on Feb. 9, 1865, and swelled Terry's force of 8000 to 20,000. Schofield, outranking Terry, took the chief command. The Department of North Carolina had just been created, and he was made its commander. The chief object now was to occupy Goldsborough, in aid of Sherman's march to that place. Terry was pushed forward towards Hoke's right, and, with gunboats, attacked Fort Anderson (Feb. 18) and drove the Confederates from it. The fleeing garrison were pursued, struck, and dispersed, with a loss of 375 men and two guns. The National troops pressed up both sides of the Cape Fear River, pushed Hoke back, while gunboats secured torpedoes in the stream and erected batteries on both banks. Hoke abandoned Wilmington Feb. 22, 1865, after destroying all the steamers and naval stores there. Among the former were the Confederate privateers *Chickamauga* and *Tallahassee*. Wilmington was occupied by National troops, and the Confederates abandoned the Cape Fear region.

**Capital of Maryland, CHANGE OF LOCATION OF.** In 1694 the seat of government in Maryland was removed from St. Mary to Anne Arundel Town (afterwards Annapolis), for the better accommodation of the great majority of the people of Maryland. This was the ostensible motive; the controlling object doubtless was for the punishment of the adherents of Lord Baltimore, who constituted a greater portion of the population of St. Mary. In 1695 the name of Anne Arundel Town was changed to Annapolis, and the naval station of the province was established there. The United States Naval Academy is also located there.

**Capital of Maryland Founded.** In the spring of 1634 Leonard Calvert and his little band of colonists went up a pleasant tributary of the Potomac, called Wiconico, twelve miles, anchored at an Indian village of the same name, and there held a friendly conference with the ruler of the barbarians. The interpreter explained the object of Calvert's visit. The latter, pleased with the situation and the country around, purchased the site of the village, giving in payment English cloth, axes, hoes, rakes, knives, and some trinkets for the women, of little value. The domain thus bought included about thirty square miles of territory, which was named Augusta Carolina, in compliment to King Charles. On March 27 (O. S.) Calvert took formal possession of the land. The emigrants

thought that campaign would end the war, and to whom King George appeared as "the adoration of all the universe," said, with a sigh, "Wretched colonists! if these wild souls are engaged in war." General Gates, at a council of the Mohawks, near the close of May, tried to counteract the influence of Joseph Brant, the young chief, by a speech in which he denounced the leaders who had attempted to lead them into the British service, and declared that "before many moons should pass away the pride of England would be laid low." But the Mohawks generally listened to Brant and took up arms against the American "rebels."

**Carleton, GUY** (Lord Dorchester), was born at Strabane, Ireland, in 1722; died Nov. 10, 1808. He entered the Guards at an early age, and became a lieutenant-colonel in 1748. He was aid

GUY CARLETON.

to the Duke of Cumberland in the German campaign of 1757; was with Amherst in the siege of Louisburg in 1758; was with Wolfe at Quebec (1759) as quartermaster-general; and was a brigadier-general at the siege of Belle Isle, where he was wounded. He was also quartermaster-general in the expedition against Havana in 1762, and in 1767 he was made lieutenant-governor of Quebec. The next year he was appointed governor. In 1772 he was promoted to major-general, and in 1774 was made governor-general of the Province of Quebec. In an expedition against the forts on Lake Champlain in 1775 he narrowly escaped capture; and at the close of the year he successfully resisted a siege of Quebec by Montgomery. (See *Siege of Quebec*.) The next spring and summer he drove the Americans out of Canada, and totally defeated the American flotilla in an engagement on Lake Champlain in October. Burgoyne superseded him as military leader in 1777, when he was created a baronet. He was made lieutenant-general in 1778; was appointed commander-in-chief of the British forces in America in 1781; and sailed for England Nov. 25, 1783.

In 1786 he was created Baron Dorchester, and from that year until 1796 he was governor of British North America.

**Carleton Superseded in Command.** Sir John Burgoyne had been in England during the earlier part of 1777, and managed, by the help of Sir Jeffrey Amherst, to obtain a commission to take command of all the British forces in Canada. To do this he played the sycophant to Germain, and censured Carleton. When Sir John arrived at Quebec (May 6, 1777), Carleton was amazed at despatches brought by him rebuking the governor for his conduct of the last campaign, and ordering him, "for the speedy quelling of the rebellion," to make over to Burgoyne, his inferior officer, the command of the Canadian army as soon as it should leave the boundary of the Province of Quebec. The unjust reproaches and the deprivation of his military command greatly irritated Carleton, but, falling back on his civil dignity as governor, he implicitly obeyed all commands and answered the requisitions of Burgoyne. As a soothing opiate to his wounded pride, Burgoyne conveyed to the governor the patent and the jewel of a baronet, and henceforth he was "Sir Guy Carleton."

**Carleton's Retaliation.** Governor Carleton was a strict disciplinarian, and always obeyed instructions to the letter. When Burgoyne, after the capture of Ticonderoga (July, 1777), pushing on towards the valley of the Hudson, desired Carleton to hold that post with the three thousand troops which had been left in Canada, the governor refused, pleading his instructions, which confined him to his own province. This unexpected refusal was the first of the embarrassments Burgoyne endured after leaving Lake Champlain. He was compelled, he said, to "drain the life-blood of his army" to garrison Ticonderoga and hold Lake George. No doubt this weakening of his army at that time was one of the principal causes of his defeat near Saratoga. If Carleton wished to gratify a spirit of retaliation because of Burgoyne's intrigues against him, the surrender of the latter must have fully satisfied him. (See *Carleton Superseded*.)

**Carlin, WILLIAM P.**, was born in Greene County, Ill., Nov. 24, 1829. He graduated at West Point in 1850, and was in the Sioux expeditions under General Harney in 1855, and under General Sumner against the Cheyennes in 1857. He was in the Utah expedition in 1858; and did efficient service in Missouri for the Union in the early part of the Civil War, where he commanded a district until March, 1862. He commanded a brigade under Generals Steele and Pope, and it bore a prominent part in the battle of Stone River (which see). In the operations in northern Georgia late in 1863, and in the Atlanta campaign the next year, he was very active. In the famous march to the sea he commanded a division in the Fourteenth Corps; and was with Sherman in his progress through the Carolinas, fighting at Bentonville. He was breveted major-general in March, 1865.

**Carlisle (FREDERICK HOWARD), FIFTH EARL OF,** one of the three commissioners sent on a conciliatory errand to America in 1778. (See *Peace Commissioners*.) He was born in May, 1748; died Sept. 4, 1825. He was lord-lieutenant of Ireland in 1780-82. Lord Carlisle was a poet, and was the uncle and guardian of Lord Byron.

**Carmichael, WILLIAM,** diplomatist, born in Maryland, died early in 1795. He was a man of fortune. He was in Europe in 1776, and assisted Silas Deane in his political and commercial operations in France. He also assisted the American commissioners in Paris. In 1778-80 he was in Congress, and was secretary of legation to Jay's mission to Spain. When the latter left Europe (1782) Carmichael remained as *chargé d'affaires*, and retained the office about thirteen years.

**Carnifex Ferry, BATTLE AT.** The troops left by Garnett and Pegram in western Virginia in the summer of 1861 were placed in charge of General Robert E. Lee. (See *Rich Mountain and Carricksford*.) At the beginning of August he was at the head of sixteen thousand fighting men. John B. Floyd, the late Secretary of War, was placed in command of the insurgents in the region of the Gauley River. From him much was expected, for he promised much. He was to drive General Cox out of the Kanawha Valley, while Lee should disperse the army of ten thousand men under Rosecrans at Clarksburg, on the Baltimore and Ohio Railroad, and so open a way for an invading force of Confederates into Maryland, Pennsylvania, and Ohio. Early in September Rosecrans marched southward in search of Floyd. He scaled the Gauley Mountains, and on the 10th found Floyd at Carnifex Ferry, on the Gauley River, eight miles from Summersville, the capital of Nicholas County, Va. Already a detachment of Floyd's men had surprised and dispersed (Aug. 26, 1861) some Nationals, under Colonel E. B. Taylor, not far from Summersville. At the summit of Gauley Mountain Rosecrans encountered Floyd's scouts and drove them before him; and on Sept. 10, Floyd's camp having been reconnoitred by General Benham, Rosecrans fell upon him with his whole force (chiefly Ohio troops), and for three hours a desperate battle raged. It ceased only when the darkness of night came on. Rosecrans intended to renew it in the morning, and his troops lay on their arms that night. Under cover of darkness, Floyd stole away, and did not halt in his flight until he reached Big Sewell Mountain, near New River, thirty miles distant. The battle at Carnifex Ferry was regarded as a substantial victory for the Nationals. The latter lost fifteen killed and seventy wounded; the Confederates lost one killed and ten wounded.

**Carolina, GRANT OF.** Charles I. granted the immense tract south of Virginia to Robert Heath in 1630. (See *North Carolina*.) It remained unsettled, and the charter was declared void in 1663. In March, 1663, the king granted this domain to several of his courtiers. (See

*Grantees of North Carolina*.) The domain was defined as lying between latitude 30° and 36° north. The grantees were made absolute lords and proprietors of the country, the king reserving to himself and his successors sovereign dominion. They were empowered to enact and publish laws, with the advice and consent of the freemen; to erect courts of judicature, and appoint civil judges, magistrates, and other officers; to erect forts, castles, cities, and towns; to make war, and, in cases of necessity, to exercise martial law; to construct harbors, make ports, and enjoy custodies and subsidies on goods loaded and unloaded, by consent of the freemen. The charter granted freedom in religious worship, and so made Carolina an asylum for the persecuted.

**Carolinas, SHERMAN'S MARCH THROUGH THE.** Sherman appointed the 15th of January, 1865, as the day for beginning his march northward from Savannah. The Seventeenth Corps was sent by water to a point on the Charleston and Savannah Railway, where it seriously menaced Charleston. The left wing, under Slocum, accompanied by Kilpatrick's cavalry, was to have crossed the Savannah on a pontoon bridge at that city; but incessant rains had so flooded the swamps and raised the streams that the army was compelled to cross higher up, and did not effect the passage until the first week in February. Savannah and its dependencies were transferred to General Foster, then in command of the Department of the South, with instructions to co-operate with Sherman's inland movements by occupying, in succession, Charleston and other places. Sherman notified General Grant that it was his intention, after leaving Savannah, "to undertake, at one stride," to make Goldsborough an open communication with the sea by the Newbern Railway. Feints of attacks on Charleston kept Hardee from interfering with Sherman's inland march. Wheeler had been putting obstructions in his pathway to Columbia; but the movements of the Nationals were so mysterious that it distracted the Confederates, who could not determine whether Sherman's objective was Charleston or Augusta. His invasion produced widespread alarm. Sherman's army steadily advanced in the face of every obstacle. They drove the Confederates from their position at Orangeburg and began destroying the railway there. On Feb. 18 they began a march directly to Columbia, the capital of South Carolina, driving the Confederates before them wherever they appeared. Sherman's march was so rapid that troops for the defence of the capital could not be gathered in time. He was in front of Columbia before any adequate force for its defence appeared. Beauregard was in command there, and had promised much, but did little. On Feb. 17 the Nationals entered Columbia; and on the same day Charleston, flanked, was evacuated by Hardee. (See *Charleston, Evacuation of*.) The rear-guard of the Confederates, under Wade Hampton, on retiring, set fire to cotton in the streets; and the high wind sent the burning fibre into the air, setting fire to the dwellings,

and in the course of a few hours that beautiful city was in ruins. (See *Columbia*.) Sherman, after destroying the arsenal at Columbia, left the ruined city and pressed on with his forces to Fayetteville, N. C., his cavalry, under Kilpatrick, fighting the Confederate cavalry led by Wheeler many times on the way. He left a black path of desolation through the Carolinas forty miles in width. The army "lived off the country." They crossed the rivers on pontoon bridges. Arriving at Fayetteville, Sherman opened communications with the National troops at Wilmington, and thenceforward they all joined in an effort to crush the great insurrection, which was done early in April, 1865.

**Carr, EUGENE A.**, was born in Erie County, N. Y., March 20, 1830, and graduated at West Point in 1850. As a member of mounted rifles, he was engaged in Indian warfare in New Mexico, Texas, and the West; and in 1861 he served under Lyon, in Missouri, as colonel of Illinois cavalry. He commanded a division in the battle at Pea Ridge (which see), and was severely wounded. He was made a brigadier-general of volunteers. He commanded a division in the battle at Port Gibson (which see) and others preceding the capture of Vicksburg; also in the assaults on that place. He assisted in the capture of Little Rock (Ark.) and the defences of Mobile, and was breveted major-general.

**Carricksford, BATTLE AT.** After the battle on Rich Mountain (which see), Pegram, threatened by McClellan, stole away to Garnett's camp, when the united forces hastened to Carricksford, on a branch of the Cheat River, pursued by the Nationals. After crossing that stream, Garnett made a stand. He was attacked by Ohio and Indiana troops. After a short engagement, the insurgents fled. While Garnett was trying to rally them, he was shot dead. The Confederates fled to the mountains, and were pursued about two miles.

**Carrington, EDWARD**, was born in Virginia, Feb. 11, 1749; died in Richmond, Va., Oct. 28, 1810. Was made lieutenant-colonel of a Virginia artillery regiment in 1776; was sent to the South, and was made a prisoner at Charleston in 1780. He was Gates's quartermaster-general in his brief Southern campaign. Carrington prepared the way for Greene to cross the Dan, and was an active and efficient officer in Greene's famous retreat (which see). He commanded the artillery at Hobkirk's Hill (which see), and also at Yorktown. (See *Siege of Yorktown*.) Colonel Carrington was foreman of the jury in the trial of Burr (which see).—**IL PAUL**, a brother of the preceding, was born Feb. 24, 1733; died in Charlotte County, Va., June 28, 1818. He became an eminent lawyer; was a member of the House of Burgesses, and voted against Henry's Stamp Act resolutions (which see); but was patriotic, and helped along the cause of independence in an efficient manner.

**Carroll, CHARLES, OF CARROLLTON**, was born at Annapolis, Md., Sept. 20, 1737; died in Baltimore Nov. 14, 1832. His family were wealthy Roman Catholics, the first appearing in America

at the close of the seventeenth century. He was educated at St. Omer's and at a Jesuit college at Rheims; and he studied law in France and at the Temple, London. He returned to America in 1764, when he found the colonies somewhat agitated by momentous political

CHARLES CARROLL

questions, into which he soon entered—a writer on the side of the liberties of the people. He inherited a vast estate, and was considered one of the richest men in the colonies. Mr. Carroll was a member of one of the first vigilance committees established at Annapolis, and a member of the Provincial Convention. Early in 1776, he was one of a committee appointed by Congress to visit Canada to persuade the Canadians to join the other colonies in resistance to the measures of Parliament. His colleagues were Dr. Franklin and Samuel Chase. The committee were accompanied by Rev. John Carroll. The mission was fruitless; and when, in June, the Committee returned to Philadelphia, they found the subject of independence under consideration in Congress. Carroll and Chase induced Maryland to change its attitude. (See *Independence*.) Carroll took his seat in Congress in time to vote for the Declaration of Independence. He signed that document, and was the last survivor of that band of fifty-six patriots who bravely took the responsibility of dismembering the British empire. Mr. Carroll served his state in its Assembly, in the National Congress, and in other responsible offices, with fidelity and ability. At the age of over ninety years (July 4, 1828) he laid the corner-stone of the Baltimore and Ohio Railway, attended by an imposing civic procession. The story that he appended "of Carrollton" to his name defiantly, to enable the British crown to identify him, is a fiction. He was accustomed to sign it so to prevent confusion, as there was another Charles Carroll.

**Carroll, JOHN, D.D., LL.D.**, was born at Upper Marlborough, Md., Jan. 8, 1735; died in Baltimore, Dec. 3, 1815. He was educated at St. Omer's, Liege, and Bruges; ordained a priest in 1769, and entered the order of Jesuits soon afterwards. He travelled through Europe with young Lord Stannton in 1770 as private tutor,

and in 1773 became a professor in the college at Bruges. In 1775 he returned to Maryland, and the next year, by desire of Congress, he accompanied a committee of that body on a mission to Canada. That committee was composed of Dr. Franklin, Charles Carroll of Carrolltown, and Samuel Chase. He was appointed the papal

JOHN CARROLL

vicar-general for the United States in 1786, and made Baltimore his fixed residence. In 1790 he was consecrated the first Roman Catholic bishop in the United States, and established the seat of his episcopal see at Baltimore. He founded St. Mary's College in 1791, and in 1804 he obtained a charter for Baltimore College. Liberal in his views, he maintained the friendship of all Protestant sects. A few years before his death he was made archbishop.

**Carronades** were much used, during the War of 1812-15, on the ocean. They are a kind of short iron cannon, which is attached to its carriage by a joint and bolt underneath the piece, instead of trunnions. It is only in this respect and in its dimensions that it differs from other heavy guns and howitzers. The name is derived from Carron, a village in Stirlingshire, Scotland, where this gun was first made.

**Carteret and Andros.** Governor Andros, of New York, claimed political jurisdiction, in the name of the Duke of York, over all New Jersey. Philip Carteret, Governor of East Jersey, denied it, and the two governors were in open opposition. A friendly meeting of the two magistrates, on Staten Island, was proposed. Carteret declined it; and Andros warned him to forbear exercising any jurisdiction in East Jersey, and announced that he should erect a fort to aid him (Andros) in the exercise of his authority. Carteret defied him; and when, a month later, Andros went to New Jersey, seeking a peaceful conference, Carteret met him with a military force. As Andros came without troops, he was permitted to land. The conference was fruitless. A few weeks later Carteret was taken from his bed, in his house at Elizabethtown, at night, by New York soldiers, and carried to that city and placed in the hands of the sheriff. He was tried in May (1678), and though Andros sent the jurors out three times, with instruc-

tions to bring in a verdict of guilty, he was acquitted. But he was compelled to give security that he would not again assume political authority in New Jersey. The Assembly of New Jersey were asked to accept the duke's laws (which see), but they preferred their own. At the same time they accepted the government of Andros, but with reluctance. Carteret went to England with complaints, and the case was laid before the duke by the widow of Sir George Carteret. The Friends of West Jersey, had already presented their complaints against Andros, and the case was referred to the duke's commissioners. These, advised by Sir William Jones, decided that James's grant reserved no jurisdiction, and that none could be rightly claimed. This decided the matter for East Jersey also, and in August and October, 1680, the duke signed documents relinquishing all rights over East and West Jersey (which see).

**Carteret, SIR GEORGE,** was an English naval officer of high repute, of imperious deportment, and "the most passionate man in the world." Charles I. appointed him governor of the Island of Jersey, in the English Channel; and when the civil war broke out he was controller of the navy, and esteemed by all parties. Leaving the sea, he went with his family to Jersey, but soon afterwards returned to help his royal master. In 1645 he was created a baronet, and returned to his government of Jersey, where he received and sheltered the Prince of Wales (afterwards Charles II.) when the royal cause was ruined in England. Other refugees of distinction were there, and he defended the island gallantly against the forces of Cromwell. At the Restoration he rode with the king in his triumphant entry into London. Carteret became one of the privy council, vice-chamberlain, and treasurer of the navy. Being a personal friend of James, Duke of York, to whom Charles II. granted New Netherlands, Carteret and Berkeley (another favorite) easily obtained, for a money consideration, a grant of the territory between the Hudson and Delaware rivers, which, in gratitude for his services in the Island of Jersey, was called New Jersey. Carteret retained his share of the province until his death, which occurred in 1680, leaving his widow, Lady Elizabeth, executrix of his estate. Sir George was one of the grantees of the Carolinas, and a portion of that domain was called Carteret colony.

**Carthage, BATTLE OF (1861).** General Lyon sent Colonel Franz Sigel in pursuit of the Confederates under Governor Price in southeastern Missouri. (See *Early Military Operations in Missouri*.) His force consisted of nearly one thousand loyal Missourians (of his own and Salomon's regiments) with two batteries of artillery of four field-pieces each—in all about fifteen hundred men. Though the insurgents were reported to be more than four thousand in number, Sigel diligently sought them. On the morning of July 5, 1861, he encountered large numbers of mounted riflemen, who seemed to be scouting, and a few miles from Carthage, the capital of Jasper County, he came upon the main body

of the Confederates, under General Jackson, who was assisted by General Rains and three other brigadiers. They were drawn up in battle order on the crown of a gentle hill. A battle commenced at a little past 10 o'clock, by Sigel's field-pieces, and lasted about three hours, when, seeing his baggage in danger and his troops in peril of being outflanked, Sigel fell back and retreated, in perfect order, to the heights near Carthage, having been engaged in a running fight nearly all the way. The Confederates pressed him sorely, and he continued the retreat (being outnumbered three to one) to Springfield, where he was joined by General Lyon (July 13), who took the chief command of the combined forces. This junction was timely, for the combined forces of Generals McCulloch, Rains, and others had joined those of Price, making the number of insurgents in that region about twenty thousand.

**Cartier, JACQUES**, a French navigator, was born at St. Malo, France, Dec. 31, 1494. He was commissioned by Francis I., King of France, to command an expedition to explore the Western Continent. On the 20th of April, 1534, after appropriate ceremonies in the cathedral at St.

and, touching the coast of Labrador, he formally took possession of the country in the name of his king, and erected a cross, upon which he hung the arms of France. Turning southward, he followed the west coast of Newfoundland to Cape Race. Then he explored the Bay of Chaleurs, landed in Gaspé Bay, held friendly intercourse with the natives, and induced a chief to allow two of his sons to go with him to France, promising to return them the next year. There, also, he planted a cross with the French arms upon it, and, sailing thence northeast across the Gulf of St. Lawrence, entered the branch of the St. Lawrence River north of Anticosti Island. Unconscious of having discovered a magnificent river, he turned and sailed for France to avoid the autumn storms, and arrived at St. Malo on the 5th of September, 1534. Encouraged by the success of this voyage, the king placed Cartier in command of three ships, which left St. Malo at the middle of May, 1535, bearing some of the young nobility of France. Separated by storms, they met at the appointed rendezvous, in the Strait of Belle Isle, in July, and sailed up the St. Lawrence to the mouth of a river (now St. Charles) at the site of Quebec,

which they reached on the 14th of September. His squadron consisted of the *Great Hermine*, 120 tons; *Little Hermine*, 60 tons; and *L'Emerillon*, a small craft. On the day after their arrival, they were visited by Donnacona, "King of Canada," who received them with the greatest kindness, and, through the two young men whom Cartier had brought back, they were enabled to converse. Mooring the larger vessels in the St. Croix (as Cartier named the St. Charles), he went up the river in the smaller one, with two or three volunteers, and, with a small boat, they reached the Huron (see *Huron-Iroquois*) village called Hochelega, on the site of Montreal. He called the mountain back of it Mount Real (Royal Mountain), hence the name of Montreal. There he enjoyed the kindest hospitality, and bore away with him a pretty little girl, eight years old, daughter of one of the chiefs, who lent her to him to take to France. Returning to Stadacona (now Québec) early in October, the Frenchmen spent a severe winter there, during which twenty-five of them died of scurvy. Nearly every one of them had the disease. When Cartier was prepared to leave for France, in the spring, the *Little Hermine* was found to be rotten and unseaworthy, and, as the other two vessels could carry his reduced company, she was abandoned. He formally took possession of the country in the

JACQUES CARTIER.

Malo, he sailed from that port with two ships, having each a crew of one hundred and twenty men, and, after a prosperous voyage of twenty days, they arrived at Newfoundland. Sailing northward, he entered the Strait of Belle Isle,

name of his king, and, just before his departure (May 9, 1536), he invited Donnacona and eight chiefs on board the flag-ship to a feast. They came, and Cartier treacherously sailed away with them to France as captives, where they all died of

grief. Cartier reached St. Malo July 16. There was now a pause in this enterprise, but finally Francis de la Roque, Lord of Roberval, Picardy, prevailed upon the king to appoint him viceroy and lieutenant-general of the new territory, and Cartier captain-general and chief-pilot of the royal ships. Five vessels were fitted out, and Cartier, with two of them, sailed from St. Malo in May, 1541. Late in August these reached Stadacona. The people there eagerly pressed to the ships to welcome their monarch, whom Cartier had promised to bring back. They shook their heads incredulously when he told them Donnacona was dead. To show his good faith, he showed them the pretty little Huron maiden whom he was to return to her friends at Hochelaga. But they grew more sullen every hour, and became positively hostile. After visiting Hochelaga, Cartier returned to Stadacona, and, on an island (Orleans) just below, he caused a fort to be built for protection through the ensuing winter, where he waited patiently for the viceroy, but he came not. Towards the end of May the ice moved out of the St. Lawrence, and Cartier departed for France. He ran into the harbor of St. Johns, N. F., where he found De la Roque on his way to the St. Lawrence. Cartier tried to induce him to turn back by giving him most discouraging accounts of the country, but he ordered the navigator to go back with him to the great river. Cartier disobeyed and sailed for France. The viceroy went above the site of Quebec, where he built a fort and spent the next winter in great suffering, returning to France in the autumn of 1543. Cartier had arrived the previous summer, and did not make another voyage. He died in 1555, at the age of about sixty-one years. De la Roque started on another voyage to Canada in 1549, and was never heard of afterwards.

Carver, JOHN, first governor of New Plymouth (which see), was born in England; died at New Plymouth, Mass., April 5, 1621. He spent a considerable estate in forwarding the scheme of the "Pilgrims" (which see) for emigrating to America, and accompanied them in the *Mayflower*. He was a deacon or elder in Robinson's church at Leyden, and was one of the committee sent to London to effect a treaty with the Virginia Company (which see) concern-

GOVERNOR CARVER'S CHAIR.

Carver's chair (the first throne of a chief magistrate set up in New England) is preserved by the Massachusetts Historical Society.

ing colonization in America. When the written instrument for the government of the colony was subscribed on board the *Mayflower*, Mr. Carver was chosen to be governor. His wife died during the succeeding winter, and, in the first warm days of the spring, he, too, departed. Governor

Carver, JONATHAN, traveller, was born at Stillwater, Conn., in 1752; died in London in 1780. He served in the French and Indian War, and afterwards attempted to explore the vast region in America which the English had acquired from the French. He penetrated the country to Lake Superior and its shores and tributaries, and, after travelling about seven thousand miles, he returned to Boston (whence he departed in 1766) and sailed for England, to communicate his discoveries to the government, and to petition the king for a reimbursement of his expenses. His *Travels* were published in 1778. He was badly used in England, and, by utter neglect, was reduced, early in 1780, to a state of extreme destitution, and was prostrated with dysentery.

Casey, SILAS, was born at East Greenwich, R. I., July 12, 1807, and graduated at West Point in 1826. He served with Worth in Florida (1837-41) and under Scott in the war with Mexico (1847-48). He was also in the operations against the Indians on the Pacific coast in 1856. Early in the Civil War he was made brigadier-general of volunteers, and organized and disciplined the volunteers at and near the capital. He was made major-general in May, 1862, and commanded a division in General Keyes's corps on the Peninsula, and received the first attack of the Confederates in the battle of Fair Oaks (which see). General Casey was breveted major-general United States Army in March, 1865, for "meritorious service during the rebellion," and the Legislature of Rhode Island gave him a vote of thanks in 1867. He was the author of a *System of Infantry Tactics* (1861) and *Infantry Tactics for Colored Troops* (1863). Died Jan. 22, 1882.

Cass, LEWIS, was born at Exeter, N. H., Oct. 9, 1782; died in Detroit, June 17, 1866. He entered upon the practice of law about 1802, in Zanesville, Ohio, and at the age of twenty-five

LEWIS CASS.

was a member of the Legislature. He was colonel of an Ohio regiment, under General Hull, in 1812, and was with the troops surrendered at Detroit (which see). In March, 1813, he was made a brigadier-general, and was voluntary aid to General Harrison at the battle of the

Thames (which see), when he was appointed governor of Michigan Territory. As Superintendent of Indian affairs in that region, he negotiated nineteen treaties with the barbarians. In 1829 he organized a scientific expedition to explore the Upper Mississippi. In 1831 he resigned the governorship and became Secretary of War, under President Jackson. From 1836 to 1842 he was United States Minister to France, and from 1845 to 1848 United States Senator. He received the Democratic nomination for President of the United States in 1848, but was defeated, and was again in the United States Senate from 1851 to 1857, when President Buchanan called him to his cabinet as Secretary of State; but when the President refused to reinforce the garrison in Fort Sumter, he resigned. General

information assuring the inhabitants of their intention to take possession of the country between the Penobscot and Passamaquoddy Bay, and offering them protection on condition of their acquiescence. All persons taken in arms were to be punished, and all who should supply the British with provisions were to be paid and protected. General Gosselin was appointed military governor.

**Castine, VINCENT, BARON DE**, was born at Orleans, France, a scion of a noble family. At the age of seventeen years, he was colonel of the king's body-guard, and when the regiment to which he belonged was sent to Canada (1665) he came with it and remained after it was disbanded. In 1667 he established a trading-post and built a fort at or near the mouth of the Pe-

REMAINS OF FORT CASTINE.

Cass favored the compromise of 1850 (which see), and also favored a compromise with the disunionists until they became insurgents, when he favored the supporters of the Union. He was author of a work entitled *France; its King, Court, and Government*.

**Castine, CAPTURE OF.** A British fleet, consisting of four 74-gun ships, 2 frigates, 2 sloops-of-war, and 1 schooner, with 10 transports, sailed from Halifax (Aug. 26, 1814), the latter bearing almost four thousand troops, under the command of Lieutenant-general Sir John Cope Sherbrooke, Governor of Nova Scotia, assisted by Major-general Gerard Gosselin. The fleet was in command of Rear-admiral Edward Griffith. The destination of the armament was the Penobscot River, with a design to take possession of the country between that river and Passamaquoddy Bay. Sherbrooke intended to stop and take possession of Machias, but, learning that the corvette *John Adams*, 24 guns, had entered the Penobscot, he hastened to overtake her. On the morning of the first of September they arrived in the harbor of Castine. There was a small American force there, under Lieutenant Lewis, occupying a little battery. Lewis, finding resistance would be in vain, spiked the guns, blew up the battery, and fled. About six hundred British troops landed and took quiet possession of the place. The *John Adams* had just returned from a long cruise, much crippled by striking on a rock on entering the bay. It was with difficulty that she was kept afloat until she reached Hampden, far up the river, to which she fled. The British immediately detached a land and naval force to seize or destroy her. Sherbrooke and Griffith issued a joint procla-

mination assuring the inhabitants of their intention to take possession of the country between the Penobscot and Passamaquoddy Bay, and offering them protection on condition of their acquiescence. All persons taken in arms were to be punished, and all who should supply the British with provisions were to be paid and protected. General Gosselin was appointed military governor.

**Castine, VINCENT, BARON DE**, was born at Orleans, France, a scion of a noble family. At the age of seventeen years, he was colonel of the king's body-guard, and when the regiment to which he belonged was sent to Canada (1665) he came with it and remained after it was disbanded. In 1667 he established a trading-post and built a fort at or near the mouth of the Penobscot River, and married the daughter of a Penobscot chief. By him Christianity was first introduced among the natives of that region. He gained great influence over them. During his absence in 1688, his establishment was pillaged by the English, and he became their bitter foe. He taught the Indians around him the use of fire-arms, and he frequently co-operated with them in their attacks on the northeastern frontier. In 1696, with two hundred Indians, he assisted Iberville in the capture of the fort at Pemaquid. In 1706-7 he assisted in the defence of Port Royal, and was wounded. He lived in America thirty years, when he returned to France, leaving Fort Castine and the domain around it to his half-breed son and successor in title. The young baron was really a friend to the English, but, being at the head of the Penobscot Indians, and suspected of being an enemy, he was surprised and captured, in 1721, taken to Boston, and imprisoned several months. His name is perpetuated in the town of Castine, at which place slight traces of his fort are yet visible.

**Castle Thunder** was a Confederate prison at Richmond during the Civil War, in which civilians who were suspected or known to be in opposition to the insurgents were confined. It was to the offenders against Confederate authority what Forts Lafayette and Warren were to like offenders against the National government. Castle Thunder was a tobacco warehouse on the corner of Carey and Nineteenth Streets. It was burned early in September, 1879. (See following page.)

**Castle William, SURRENDER OF.** In September, 1770, the harbor of Boston was made the place of rendezvous of all the British war

ships stationed in America, and Hutchinson was ordered by Gage to deliver Castle William, at the entrance of the harbor, to Colonel Dalrymple. This was by order of the king in council, contrary to the provisions of the charter, which

CASTLE THUNDER.

emphatically reserved to the Governor of Massachusetts the command of all the militia of the province and of its forts. The castle had been built and garrisoned at the expense of the colony; and to take it from the governor and place it at the disposal of the military chief was a gross violation of the charter. It was a part of a new system of action to prevent American independence, planned by the king in council in the previous July.

Caswell, RICHARD, was born in Maryland, Aug. 3, 1729; died at Fayetteville, N. C., Nov. 20, 1789. He went to North Carolina in 1746, and practised law there, serving in the Assembly from 1754 to 1771, and being speaker in 1770. In the battle of the Allamance (which see) he commanded Tryon's right wing, but soon afterwards identified himself with the cause of the patriots, and was a member of the Continental Congress (1774-75). For three years he was president of the Provincial Congress of North Carolina, and was governor of the state from 1777 to 1779. In February, 1776, he was in command of the patriot troops in the battle of Moore's Creek Bridge (which see), and received the thanks of Congress and the commission of major-general for the victory there achieved. He led the state troops in the battle near Camden (August, 1780); and was controller-general in 1782. He was again governor in 1784-86; and a member of the Convention that framed the National Constitution. While presiding as speaker in the North Carolina Assembly he was struck with paralysis.

**Catawbas.** One of the eight Indian nations of North America discovered by the Europeans in the seventeenth century, when they had fifteen hundred warriors. They occupied the beautiful region between the Yadkin and Catawba Rivers, on each side of the boundary-line between North and South Carolina. They were southward of the Tuscaroras, and were generally on good terms with them. They were brave, but not warlike, and generally acted on the defensive. In 1672 they expelled the fugitive Shawnoese; but their country was desolated by bands of the Five Nations in 1701.

They assisted the Carolinians against the Tuscaroras and their confederates in 1711; but four years afterwards they joined the powerful league of the Southern Indians in endeavors to extirpate the white people. They were again the active allies of the Carolinians in 1760, when the Cherokees made war upon them, and were friends of the "pale faces" ever afterwards. In the Revolution they joined the Americans, though few in numbers. They have occupied a reservation only a few miles square upon the Catawba River, near the mouth of Fishing Creek, and are now nearly extinct.

**Catawbas and Iroquois, TREATY BETWEEN THE.** A long and virulent war was carried on between the Catawbas in South Carolina and the Iroquois. The English endeavored to bring about peace between them, and succeeded. When, in 1751, William Bull, commissioner for South Carolina, attended a convention at Albany, he was attended by the chief sachem of the Catawbas and several chiefs. The hatred between the two nations was so bitter that the English commissioners deemed it prudent to keep the Catawbas alone in a chamber until the opening of the convention, to prevent violence. In the convention, after a speech by Mr. Bull, attended by the usual presents of wampum, the Catawba "king" and his chiefs approached the grand council, singing a song of peace, and bearing their ensigns—colored feathers carried horizontally. A seat was prepared for them at the right hand of the English company. The singers continued their song, half fronting the old sachems to whom their words were addressed, pointing their feathers, and shaking their musical calabashes, while their "king" was preparing and lighting the calumet, or pipe of peace. The king first smoked, and then presented the pipe to King Hendrick, of the Mohawks, who gracefully accepted and smoked it. Then each sachem smoked it in turn, when the Catawba monarch addressed the Six Nations—the singers having fastened their feathers, calabashes, and pipes to their tent-pole.

**Cathay.** The old name of China, so called by the Venetian traveller Marco Polo, who, in the employ of the Khan of Tartary, visited it early in the 13th century. It was the land Columbus expected to find by sailing westward from Spain. (See *Zipangi*.)

**Cattle, FIRST, IN NEW ENGLAND.** In 1623, Edward Winslow went back to England to obtain a supply of goods for the colony, and, returning in March, 1624, he brought with him a few cattle. The story of John Alden taking his bride home on a bull is a pleasant romance—nothing more.

**Cattle-stealing Governor.** Dr. John Potts was chosen by the Council of Virginia temporary governor, in 1629, which office he held until the arrival of Sir John Harvey. Soon after Harvey came Potts was tried by a jury of thirteen (of whom three were councillors) for cattle-stealing, and found guilty; but, "in regard

of his quality and practice," the record says (he was the only physician at Jamestown), sentençe was respited until the pleasure of the king should be known.

**Caucus.** This word in the vocabulary of the politics of the United States was probably a corruption of the word *calkers*—men who drive oakum or old ropes untwisted into the seams of vessels. These men naturally associated much with rope-makers in seaports. In Boston they had formed an association of which the father of Samuel Adams, and Samuel Adams himself afterwards, were members. After the Boston Massacre (which see), this society at their meetings, in speeches and resolutions, took strong grounds against the British government, its acts, and its instruments in America, and planned schemes for relieving their country of oppression. The Tories, in derision, called these assemblies "*calkers' meetings*," which became corrupted to "*caucus meetings*"—gatherings at which politicians of the same creed meet, consult, and lay plans for political action.

**Cavaliers in Virginia.** The cavaliers were the adherents of the fortunes of the Stuarts—the nobility, and the bitter opposers of the Puritans. On the death of Charles I. (1649), they fled to Virginia by hundreds, where only, in America, their church and their king were respected. They made an undesirable addition to the population, excepting their introduction of more refinement of manner than the ordinary colouist possessed. They were idle, inclined to luxurious living, and haughty in their deportment towards the "common people." It was they who rallied around Berkeley in his struggles with Bacon (see *Bacon's Rebellion*), and gave him all his strength in the Assembly. They were extremely social among their class, and gatherings and feasting and wine-drinking were much indulged in until poverty pinched them. They gave a stimulus to the slave-trade, for, unwilling to work themselves, they desired servile tillers of their broad acres; and so were planted the seeds of a landed oligarchy in Virginia that ruled the colony until the Revolution in 1775, and in a measure until the close of the Civil War in 1865.

**Cavalry Obstructions.** Among the devices used in the old war for independence for obstructing the progress of cavalry was an ugly sharp four-pronged piece of iron, so arranged that whatever way it might fall upon the ground one of the sharp prongs would be erect to penetrate the foot pressed upon it. These were scattered over the ground in the direction of the approach of an enemy's cavalry to attack. It was called a *Caltrop*.

**Cave Life in Vicksburg.** The city is built upon hills of clay, through which streets are cut. At these places, when Grant began the siege of Vicksburg (which see), caves were dug in the steep sides of the streets, in which whole families, bond and free, took shelter from shet

and shell rained upon the city day and night, from land and water, during the long siege. In these, men, women, and children found protection, while their houses were perforated and the streets ploughed by balls and shells. It was a terrible ordeal for the inhabitants. These caves were made large enough to accommodate whole families, and, in several instances, one

CAVE LIFE IN VICKSBURG.

communicated with others by means of a subterranean corridor. In these caves, two or three children were born during the siege. It is a remarkable fact that during that siege only a few people in the city, not in the army, lost their lives.

**Cayugas.** These composed the fourth nation of the Iroquois Confederacy (which see), and called themselves *Goioguen*, or "Men of the Woods." Tradition says that at the formation of the confederacy, *Hi-a-wat-ha* said to the Cayugas: "You, Cayugas, a people whose habitation is the 'Dark Forest,' and whose home is everywhere, shall be the fourth nation, because of your superior cunning in hunting." They

CAVALRY OBSTRUCTIONS.

inhabited the pleasant country about Cayuga Lake in central New York, and numbered about three hundred warriors when first discovered by the French at the middle of the seventeenth century. The nation was composed of the fam-

ilies of the Turtle, Bear, and Wolf, like the other cantons, and also those of the Beaver, Snipe, Heron, and Hawk. They were represented in the congress of the league by ten sachems. Through Jesuit missionaries the French made fruitless attempts to Christianize the Cayugas and win them over to the French interest, but found them uniformly enemies. During the old war for independence the Cayugas were against the colonists. They fought the Virginians at Point Pleasant in 1774. They hung upon the flank and rear of the army under Sullivan that invaded the territory of the Senecas in 1779; but they soon had their own villages destroyed, which greatly annoyed them. After the war they ceded their lands to the State of New York, excepting a small reservation, which they abandoned in the year 1800, when some of them joined the Senecas, some went to the Grand River in Canada, and some to Sandusky, Ohio, when they were removed to the Indian Territory (which see). In 1876 they numbered only a little over two hundred.

**Cedar Creek, BATTLE OF.** In October, 1864, the National army, commanded by General Wright, in the temporary absence of Sheridan (see *Fisher's Hill*) at the capital, were so strong-

of the divisions of Kershaw and Wharton. At dawn these moving columns fell upon the right, left, and rear of the Nationals. It was a surprise. So furious was the assault before the Nationals had time to take battle order, that in fifteen minutes Crook's corps, that held a position in front, and had heard mysterious sounds like the dull, heavy tramp of an army, was broken into fragments, and sent flying back in disorder upon the corps of Emory and Wright. Crook left seven hundred men as prisoners, with many cannons, small-arms, and munitions of war in the hands of the Confederates. Emory tried in vain to stop the fugitives, but very soon his own corps gave way, leaving several guns behind. These, with Crook's, eighteen in all, were turned upon the fugitives with fearful effect, while Early's right column, led by Gordon, continued their flanking advance with vigor, turning the Nationals out of every position where they attempted to make a stand. Seeing the peril of his army, Wright ordered a general retreat, which was covered by the Sixth Corps, under the command of Ricketts, which remained unbroken. The whole army retreated to Middletown, a little village five miles north of Strasburg, where Wright rallied his broken

VIEW AT CEDAR CREEK BATTLE-GROND.

ly posted behind Cedar Creek that they had no expectation of an attack. They were mistaken. Early felt keenly his misfortune, and, having been reinforced by Kershaw's division and six hundred cavalry sent by Lee, he determined to make a bold movement, swiftly and stealthily, against the Nationals. He secretly gathered his forces at Fisher's Hill behind a mask of thick woods, and formed them in two columns to make a simultaneous attack upon both flanks of the Nationals. He moved soon after midnight (Oct. 19, 1864), with horse, foot, and artillery, along rugged paths over the hills, for he shunned the highways for fear of discovery. The divisions of Gordon, Ramseur, and Pegram formed his right column; his left was composed

columns, and, falling back a mile or more, left Early in possession of Middletown. The Nationals had lost since daybreak (it was now ten o'clock) twelve hundred men made captive, besides a large number killed and wounded; also camp equipage, lines of defence, and twenty-four cannons. There being a lull in the pursuit, Wright had re-formed his troops and changed his front, intending to attack or retreat to Winchester as circumstances might dictate. At that critical moment Sheridan appeared on the field. He had returned from Washington, and had slept at Winchester. Early in the morning he heard the booming of cannon up the valley, and supposed it to be only a reconnoissance. After breakfast he mounted his horse—a powerful black

charger—and moved leisurely out of the city southward. He soon met the van of fugitives, who told a dreadful tale of disaster. He immediately ordered the retreating artillery to be parked on each side of the turnpike. Then, ordering his escort to follow, he put his horse on a swinging gallop, and at that pace rode nearly twelve miles to the front. The fugitives became thicker and thicker every moment. He did not stop to chide or coax, but, waving his hat as his horse thundered on over the magnificent stone road, he shouted to the cheering crowds, "Face the other way, boys! face the other way! We are going back to our camp. We are going to lick them out of their boots!" Instantly the tide of retreating troops turned and followed after the young general. As he dashed along the lines and rode in front of forming regiments, he gave a word of cheer to all. He declared they should have all those camps and cannons back again. They believed the prophecy, and fought fiercely for its fulfillment. The re-formed army advanced in full force. Already (ten o'clock A.M.) Emory had quickly repulsed an attack, which inspired the whole corps. A general and severe struggle ensued. The whole Confederate army were soon in full and tumultuous retreat up the valley towards Fisher's Hill, leaving guns, trains, and other hindrances to flight behind. Early's army was virtually destroyed; and, with the exception of two or three skirmishes between cavalry, there was no more fighting in the Shenandoah Valley. That night the Nationals occupied their old position at Cedar Creek. The promise of Sheridan, "We will have all the camps and cannons back again" was fulfilled. Sheridan was rewarded by the commission of a major-general in the regular army, dated Nov. 4, 1864. "Sheridan's Ride" was made the theme of poetry and painting.

**Cedar Mountain, BATTLE OF.** Pope's main army (see *Army of Virginia*) was near Culpepper Court-house, and "Stonewall Jackson" was at Gordonsville, with a heavy force, at the close of July, 1862. Pope had taken command on June 28, and assumed the control in the field on the 29th of July. Both armies advanced early in August. Jackson, reinforced, had thrown his army across the Rapid Anna River on the morning of the 8th, and driven the National cavalry back on Culpepper Court-house. General S. W. Crawford was sent with his brigade to assist the latter in retarding Jackson's march, and to ascertain his real intentions, if possible. The movements of the Confederates were so mysterious that it was difficult to guess where they intended to strike. On the morning of Aug. 9, Pope sent General Banks forward with about eight thousand men to join Crawford near Cedar Mountain, eight miles southward of Culpepper Court-house, and Sigel was ordered to advance from Sperryville at the same time to the support of Banks. Jackson had now gained the commanding heights of Cedar Mountain, and he sent forward General Ewell under the thick mask of the forest. Early's brigade of that division was thrown upon the Culpepper road.

The Confederates planted batteries, and opened fire upon Crawford's batteries. Before Crawford and Banks were about twenty thousand veteran soldiers in line of battle. Against these Banks moved towards evening, and almost simultaneously fell upon Jackson's right and left. The attacking force was composed of the division of General Anger (the advance led by General Geary) and the division of General Williams, of which Crawford's brigade was a part. The battle now became general, and raged for an hour and a half, during which deeds of great valor were performed on both sides. The Nationals, outnumbered, were pushed back after much loss by both parties. At dusk Ricketts's division of McDowell's corps came upon the field, and checked the pursuit. Artillery firing was kept up until near midnight. Later in the evening Sigel's corps arrived, and these reinforcements kept Jackson in check. On the night of the 11th, informed of the approach of National troops from the Rappahannock, and alarmed for the safety of his communications with Richmond, he fled beyond the Rapid Anna, leaving a part of his dead unburied.

**Cedars, AFFAIR AT THE (1776).** There was a small American party posted at the Cedars Rapids of the St. Lawrence River, under Colonel Bedel, of New Hampshire. While the colonel was sick at Lachine, Captain Foster, with some regulars, Canadians, and five hundred Mohawks, under Brant, came down the river and attacked and captured this post without resistance. Arnold went out from Montreal with a force to attack the captors; but, to prevent the Indians murdering the prisoners, he consented to a compromise for an exchange. Congress refused to ratify this agreement, and trouble ensued.

**Céloron's Expedition.** The treaty of peace at Aix-la-Chapelle in 1748 did not touch the subject of boundaries between the French and English colonies in America. The Ohio Company was formed partly for the purpose of planting English settlements in the disputed territory. (See *Ohio Company*.) The French determined to counteract the movement by pre-occupation; and in 1749 the Governor of Canada, the Marquis de la Galissonnière, sent Bienville de Céloron with subordinate officers, cadets, twenty soldiers, one hundred and eighty Canadians, thirty Iroquois, and twenty-five Abenakes, with instructions to go down the Ohio River and take formal possession of the surrounding country in the name of the King of France. Contrecoeur, afterwards in command at Fort Duquesne (see *Duquesne, Fort*), and Coulon de Villiers accompanied him as chief lieutenants. Céloron was provided with a number of leaden tablets, properly inscribed (see *Process Verbal*), to bury at different places as a record of pre-occupation by the French. The expedition left Lachine on the 15th of June, ascended the St. Lawrence, crossed Lake Ontario, arrived at Niagara July 6, coasted some distance along the southern shores of Lake Erie, and then made an overland journey to the head-waters of the Alleghany River. Following that stream to its junction

with the Monongahela, they went down the Ohio to the mouth of the Great Miami, below Cincinnati, proclaiming French sovereignty, and burying six leaden tablets at as many different places. From the mouth of the Miami they made an overland journey to Lake Erie, and reached Fort Niagara Oct. 19, 1749.—*Monograph of O. H. Marshall.*

**Census, THE FIRST.** The Constitution having prescribed that an enumeration of the inhabitants of the United States should be made, and that the representation should be apportioned in the manner specified in Section 2, Article I, the House of Representatives appointed a committee (May 18, 1789) to prepare and bring in a bill for the purpose. That committee never reported. On Jan. 11, 1790, another committee was appointed; and on the 18th Mr. Foster from this committee reported a bill, and it became law, March 1, 1790. The census was taken, and the returns were laid before Congress by the President, Oct. 27, 1791, showing that in the fifteen states (Vermont and Kentucky having been added to the original thirteen), and in the "Northwest" and "Southwest" Territory, there were 3,921,326 persons (excepting Indians not taxed), of whom 697,697 were slaves.

**Centennial Exhibition.** A "World's Fair" was held at Philadelphia for six months in 1876, the centennial year of the political existence of the North American Republic. The first suggestion for such a celebration was made several years before, and the city of Philadelphia, where the Continental Congress adopted the Declaration of Independence (July 4, 1776), and so laid the corner-stone of our national structure, was chosen as the most appropriate place for the exhibition. The Legislature of Pennsylvania asked Congress to take action in favor of a centennial celebration to be held in Philadelphia.

at Philadelphia and organized a "Centennial Commission," with General Joseph R. Hawley, President; Orestes Cleveland, John D. Creigh, Robert Lowrey, Thomas Caldwell, John McNeil, and William Gurney, Vice-Presidents; Alfred T. Gosheru, Director-general; John L. Campbell, Secretary; and John L. Shoemaker, Solicitor. On June 1, 1872, Congress passed an act providing for a Centennial Board of Finance. The members of this board were authorized to procure subscriptions to a capital stock not exceeding \$10,000,000, in shares of \$10 each. William Welsh, of Philadelphia, was chosen president of this board. William Sellers and John S. Barbour were appointed vice-presidents, and Frederick Freleigh treasurer. An official seal was adopted, simple in design. The words UNITED STATES CENTENNIAL COMMISSION were placed in concentric circles around the edge of the seal. In the centre was a view of the old State-house in Philadelphia; and beneath the building were the words (cast on the State-house bell ten years before the Revolution) "PROCLAIM LIBERTY THROUGHOUT THE LAND, AND TO ALL THE INHABITANTS THEREOF." It was soon decided to make the affair international, instead of national—an exhibition of the products of all nations. Fairmount Park, Philadelphia, was chosen as the place to hold the great fair. Suitable buildings were erected, five in number—namely, Main Exhibition Building, Memorial Hall (or Art Gallery), Machinery Hall, Horticultural Hall, and Agricultural Hall. The aggregate cost of these buildings was about \$4,444,000. The space occupied by them was about forty-nine acres of ground, and their annexes covered twenty-six acres more, making a total of seventy-five acres. The main building alone covered over twenty-one acres. The national government issued invitations to the exhibitors of all foreign nations having diplomat-

CENTENNIAL BUILDINGS.

A bill to that effect received the signature of President Grant and became a law March 3, 1871. It was at first proposed to make it a purely national affair—the occasion of a display of the products of the United States only. The bill provided for a national commission, to be composed of one commissioner and one alternate commissioner from every state and territory to the Union. These were appointed by the President. On March 24, 1872, such representatives, from twenty-four states, three territories, and the District of Columbia, assembled

at Philadelphia and organized a "Centennial Commission," with General Joseph R. Hawley, President; Orestes Cleveland, John D. Creigh, Robert Lowrey, Thomas Caldwell, John McNeil, and William Gurney, Vice-Presidents; Alfred T. Gosheru, Director-general; John L. Campbell, Secretary; and John L. Shoemaker, Solicitor. On June 1, 1872, Congress passed an act providing for a Centennial Board of Finance. The members of this board were authorized to procure subscriptions to a capital stock not exceeding \$10,000,000, in shares of \$10 each. William Welsh, of Philadelphia, was chosen president of this board. William Sellers and John S. Barbour were appointed vice-presidents, and Frederick Freleigh treasurer. An official seal was adopted, simple in design. The words UNITED STATES CENTENNIAL COMMISSION were placed in concentric circles around the edge of the seal. In the centre was a view of the old State-house in Philadelphia; and beneath the building were the words (cast on the State-house bell ten years before the Revolution) "PROCLAIM LIBERTY THROUGHOUT THE LAND, AND TO ALL THE INHABITANTS THEREOF." It was soon decided to make the affair international, instead of national—an exhibition of the products of all nations. Fairmount Park, Philadelphia, was chosen as the place to hold the great fair. Suitable buildings were erected, five in number—namely, Main Exhibition Building, Memorial Hall (or Art Gallery), Machinery Hall, Horticultural Hall, and Agricultural Hall. The aggregate cost of these buildings was about \$4,444,000. The space occupied by them was about forty-nine acres of ground, and their annexes covered twenty-six acres more, making a total of seventy-five acres. The main building alone covered over twenty-one acres. The national government issued invitations to the exhibitors of all foreign nations having diplomat-

sia, Santo Domingo, Spain and Spanish colonies, Siam, Sweden, Switzerland, Tunis, Turkey, and Venezuela. A "Woman's Executive Committee" was formed, composed of Philadelphians, who raised money sufficient among the women of the Union for the erection of a building for the exhibition exclusively of women's work—sculpture, painting, engraving, lithography, literature, telegraphy, needlework of all kinds, etc.—at a cost of \$30,000. The women of the republic also contributed to the general fund of the Centennial Commission more than \$100,000. The building was called the "Women's Pavilion." In it were exhibited beautiful needlework from England and etchings from the hand of Queen Victoria. The great exhibition was opened May 10, 1876, and was closed Nov. 10, the same year. The opening ceremonies were grand and imposing. Representatives of many nations were present. Dom Pedro II, Emperor of Brazil (with his empress), was the only crowned head present. The American Congress and foreign diplomats were largely represented. The President of the United States (General Grant), in the presence of full one hundred thousand people, appeared upon the great platform erected for the occasion, accompanied by his wife, when the "Grand Centennial March," composed by Richard Wagner, the great German musical composer, was performed by the orchestra of Theodore Thomas. Then Bishop Simpson, of the Methodist Episcopal Church, uttered a comprehensive prayer, with praise and thanksgiving, and was followed by a thousand voices chanting an impressive "Centennial Hymn," composed by John Greenleaf Whittier, accompanied by a grand organ and the whole orchestra. When the chanting was ended the chairman of the "Centennial Board of Finance" formally presented the building to the "United States Centennial Commission." Then a cantata, composed by Sidney Lanier, of Georgia, was sung; when General Hawley, President of the Commission, in a short speech, presented the exhibition to the President of the United States, after which the latter made a brief response. The American flag was then unfurled over the Main Building, which gave notice to the multitude that the Centennial Exhibition was opened. The government of the United States, separate states, foreign governments, different industries, corporations, and individuals erected buildings on the grounds, making the whole number of structures 190. The exhibition was open for pay admissions 159 days, the pay-gates being closed on Sundays. The total number of cash admissions at fifty cents each was 7,250,620; and at twenty-five cents, 753,654. The number of free admissions was 1,906,692, making the grand total of admissions 9,910,966. The largest number of admissions in a full month was in October, when it reached 2,663,911. The largest number admitted in a single day—"Pennsylvania Day"—was 274,919. The total amount of cash receipts was \$3,813,725.50. The exhibition closed, with imposing ceremonies, on Nov. 10, 1876.

Central America was discovered by Colum-

bus, in his fourth voyage, in 1502. He discovered the bay of Honduras, where he landed, then proceeded along the main shore to Cape Gracias a Dios; and thence to the Isthmus of Darien, hoping, but in vain, to obtain a passage to the Pacific Ocean. At the isthmus he found a harbor, and, on account of its beauty and security, he called it Porto Bello. At another place in that country, on the Dureka River, he began a settlement with sixty-eight men; but they were driven off by a warlike tribe of Indians—the first repulse the Spaniards had ever met with. But for this occurrence, caused by the rapacity and cruelty of the Spaniards, Columbus might have had the honor of planting the first European colony on the continent of America.

**Central America, FIRST ATTEMPT AT SETTLEMENT IN.** In 1509 Alonzo de Ojeda, with three hundred soldiers, began a settlement on the east side of the Gulf of Darien. At the same time Diego Nicuessa, with six vessels and seven hundred and eighty men, began another settlement on the west side. Both were broken up by the fierce natives; and thus the Spaniards, for the first time, were taught to dread the dusky people of the New World. This was the first attempt of Europeans to make a permanent lodgment on the continent of America.

**Cerro Gordo, BATTLE OF.** Cerro Gordo is a difficult mountain pass, at the foot of the eastern slope of the Cordilleras, on the great national road from Vera Cruz to the city of Mexico. Santa Ana, by extraordinary efforts after the battle of Buena Vista (which see), had gathered a force of about 12,000 men from among the sierras of Orizaba, concentrated them upon the heights of Cerro Gordo, and strongly fortified the position. When the capture of Vera Cruz (which see) was completed, General Scott prepared to march upon the Mexican capital, along the national road. He left General Worth as temporary governor of Vera Cruz, with a sufficient garrison for the Castle of San Juan de Ulloa, and moved forward (April 8, 1847) with about 8000 men, the division of General D. A. Twiggs in advance. Twiggs approached Cerro Gordo on the 13th, and found Santa Ana in his path. Scott arrived the next morning and prepared to attack the stronghold. On the 17th he issued a remarkable general order, directing, in detail, the movements of the army in the coming battle. These directions followed, secured a victory. That order appeared almost prophetic. On the 18th the attack commenced, and very severe was the struggle. It was fought in a wild place in the mountains. On one side was a deep, dark river; on the other was a frowning declivity of rock a thousand feet in height, bristling with batteries; while above all arose the strong fortress of Cerro Gordo. The place had to be taken by storm; and the party chosen to do the work was composed of the regulars of Twiggs's division, led by Colonel Harney. Victory followed the efforts of skill and bravery, and strong Cerro Gordo fell. Velasquez, the commander of the fortress, was killed; and

the Mexican standard was hauled down by Sergeant Thomas Henry. Santa Aña, with Almon-te and other generals, and 8000 troops, escaped; the remainder were made prisoners. Santa Aña attempted to fly with his carriage, which contained a large amount of specie; but it was overturned, when, mounting a mule taken from the carriage harness, he fled to the moun-tains, leaving behind him his wooden leg—a substitute for the real one which was am-puted after a wound received in the defence of Vera Cruz in 1837. In the vehicle were found his papers, clothing, and a pair of wom-an's satin slippers. The victory of the Ameri-cans was complete and decisive. The trophies were 3000 prisoners (who were paroled), 43 pieces of bronze artillery (cast in Seville, Spain), 5000 stand of arms (which were destroyed), and a large quantity of munitions of war. The fugi-tives were pursued towards Jalapa with vigor. In that battle the Americans lost 431 men. The loss of the Mexicans was about 1200 killed and wounded and 3000 prisoners. (See *Mexico, War with.*)

**Cession of Territory by South Carolina.**  
In 1787 the Legislature of South Carolina pass-

governor of Maine in 1866-70, was born at Ban-gor, Sept. 8, 1823, and graduated at Bowdoin College in 1852. He had attended a military academy in his boyhood. He was a professor in his *alma mater* from 1855 to 1862, when he was appointed lieutenant-colonel of a Maine regiment, and rose to brigadier-general in the summer of 1864. He was severely wounded in the siege of Petersburg, and again at Quaker Road in March, 1865. In the final operations ending in Lee's surrender he commanded a di- vision of the Fifth Corps. General Chamber-lain was a most active and efficient officer, and was in twenty-four pitched battles. He was six times wounded—three times severely. He was designated to receive the formal surrender of the weapons and colors of Lee's army. He re-sumed his professional duties in the college in 1865; was elected governor of Maine in 1866; and in 1871 was chosen president of Bowdoin College.

**Chambly, FORT, CAPTURE OF (1775).** It was supposed by General Carleton that the fort at Chambly, twelve miles below St. John, at the rapids of the Sorel, the outlet of Lake Cham-plain, could not be reached by the republicans

FORT AT CHAMBLY.

ed an act for ceding to the United States the western territory of that state towards the Mis-sissippi.

**Chain and Boom at Fort Montgomery.**  
In 1776 the Committee of Safety of New York caused a chain and boom, eighteen hundred feet in length, of about half the strength of one which was afterwards placed at West Point, to be stretched across the Hudson between Anthony's Nose, on the eastern side, and Fort Montgomery, on the western shore. Twice the river cur-rents swept away these obstructions; but a third one, constructed in the spring of 1777, en-dured until the capture of forts Clinton and Montgomery, in the autumn of that year, by the British, who destroyed it, thus permitting British vessels to pass up the Hudson bearing the marauders who burned Kingston. (See *Kings-ton, Burning of.*) Most of the obstacles placed in the Hudson were put there under the super-intendance of Captain Thomas Machin.

**Chamberlain, JOSHUA LAWRENCE, LL.D.,**

so long as the British held the post above and kept only a feeble garrison there. Informed of this by Canadian scouts, Montgomery, be-sieging St. John, sent Colonel Bedel, of New Hampshire, with troops to capture the post. He was assisted by Majors Brown and Living-ston. The attack was planned by Canadians familiar with the place. Artillery was placed in batteaux, and, during a dark night, was conveyed past the fort at St. John to the head of Cham-bly Rapids, where the guns were mounted and taken to the place of attack. The garrison sur-rendered after making slight resistance. The spoils were a large quantity of provisions and military stores; also the colors of the Seventh Regiment of British regulars, which were sent to the Continental Congress, and were the first trophies of war received by that body. This disaster hastened the downfall of St. John. (See *St. John, Siege of.*)

**Champion Hills, BATTLE OF.** Grant, at Jack-son (which see), hearing of the arrival of John-

ston and his order for Pemberton to strike his rear, perceived the reason for the sudden evacuation of their post by the troops at the capital. No doubt they had been sent to join Pemberton that the latter might crush Grant by the weight of superior numbers. The latter comprehended his peril, and instantly took measures to meet Pemberton before such junction could take place. He ordered a concentration of his forces at Edwards's Station, two miles from the railway bridge over the Big Black River. While Sherman tarried in Jackson long enough to destroy the railways, military factories, arsenal, bridges, cotton factories, stores, and other public property, the remainder of the army turned their faces towards Vicksburg. Pemberton was at or near Edwards's Station, with about 25,000 troops and ten batteries of artillery. Blair moved towards the station, followed by McClernand and Osterhaus; while McPherson, on another road, kept up communication with McClernand. Pemberton had advanced to Champion Hills, when a note from Johnston caused him to send his trains back to the Big Black River; and he was about to follow with his troops, when Grant, close upon him, compelled him to remain and fight (May 16, 1863). General Hovey's division now held the advance directly in front of Pemberton. At eleven o'clock a battle began, Hovey's division bearing the brunt, and, after a severe contest of an hour and a half, his infantry were compelled to fall back half a mile to the position of his artillery. Reinforced, he renewed the battle with great energy. Finally Pemberton's left began to bend under Logan's severe pressure, and, at five o'clock, gave way. The rest of his army became so confused and disheartened that they began to fly. Seeing this, Pemberton ordered his whole army to retreat towards the Big Black River; when Grant ordered the fresh brigades of Osterhaus and Carr to follow with all speed, and cross the river, if possible. In the retreat Pemberton lost many of his troops, made prisoners. This battle was fought mainly by Hovey's division of McClernand's corps and Logan's and Quincy's divisions (the latter commanded by Crocker) of McPherson's corps. The National loss was 2457, of whom 426 were killed. The loss of the Confederates was estimated to have been quite equal to that of the Nationals in killed and wounded, besides almost 2000 prisoners, 18 guns, and a large quantity of small-arms. Among the killed was General Tilghman, who was captured at Fort Henry (which see) the year before.

**Champlain, SAMUEL DE**, a French navigator, was born at Bronage, France, in 1567; died Dec. 25, 1635. His family had many fishermen and

mariners, and he was carefully educated for a navigator. In early life he was in the cavalry of Brittany, and was with his uncle, pilot-general of the fleets of Spain, when that officer conducted back to that country the troops who had served in France. In 1599 he commanded a vessel of the Spanish fleet that sailed to Mexico, and he drew up a faithful account of the voyage. On his return he received a pension from Henry IV. of France; and he was induced by M. de Chastes, Governor of Dieppe, to explore and prepare the way for a French colony in America. Chastes had received a charter from the king to found settlements in New France (which see), and the monarch commissioned Champlain lieutenant-general of Canada. With this authority, he sailed from Honfleur on the 5th of March, 1603, with a single vessel, commanded by Pont-Grevé, a skilful navigator. In

SAMUEL DE CHAMPLAIN.

May they ascended the St. Lawrence and landed near the site of Quebec, from which place Pont-Grevé and five men ascended the river in a canoe to La Chine Rapids, above Montreal. The Indians at Stadacona yet remembered Cartier's perfidy (see *Cartier*), but were placable. Champlain, on his return to France in the autumn, found Chastes dead and his concessions transferred by the king to Pierre de Gast, the Sieur de Monts, a wealthy Huguenot, who had received the commission of viceroy of New France. (See *De Monts*.) The latter made a new arrangement with Champlain, and in March, 1604, he sailed with the navigator from France with four vessels. They landed in Nova Scotia, and remained there some time planting a settlement and

exploring the neighboring regions; and when De Monts returned to France, he left Champlain to explore the New England coast. (See *New England*.) He went as far south as Cape Cod, and in 1607 returned to France. Having suggested to De Monts that a point on the St. Lawrence would be a more eligible site for the seat of the projected new empire, Champlain was sent to the river in 1608 with Pont-Grevé, and, at Stadacona, founded Quebec, the Indian name for "the narrows," and pronounced *Kebec*. There the colonists built cabins and prepared to plant. In 1609 Champlain, who had made the Montagnais Indians on the St. Lawrence his friends, marched with them against their enemies, the Iroquois. (See *Iroquois Confederacy*.) They were joined by a party of Hurons and Algonquins (see *Algonquins*), and ascended the Sorel to the Chambly Rapids, whence Champlain proceeded in a canoe and discovered a great lake, and gave it his own name. On its borders he fought and defeated the Iroquois, who fled in terror before the fire of his arquebuses. He returned to France, but came back in 1610, and the same year was wounded by an arrow in a fight with the Iroquois. Again returning to France, he, at the age of forty-four years, married a girl of twelve; and in 1612 he went back to Canada, with the title and powers of lieutenant-governor, under the Prince of Condé, who had succeeded De Soissons, the successor of De Monts, as viceroy. He explored the Ottawa River and lakes Huron and Ontario; made good arrangements for carrying on the fur-trade with the Indians; attacked the Onondagas; and, returning to France, organized a fur-company in 1616. He took back with him to Canada some Recollet priests to minister to the colonists and the pagans. The colony languished until 1620, when a more energetic viceroy gave it a start. Champlain got permission to fortify it, and he returned with the title and power of governor, taking with him his child-wife. Jesuit priests were sent to Canada as missionaries (see *Jesuits in America*), and Champlain worked energetically for the cause of religion and the expansion of French dominion. In 1628 Sir David Kertk appeared with an English fleet before Quebec and demanded its surrender. Champlain's bold refusal made Kertk retire, but on his way down the St. Lawrence he captured the French supply-ships. This produced great distress in Quebec; and in July of next year Champlain was compelled to surrender to Kertk's brothers, and was carried to England. By a treaty in 1632, Canada was restored to the French. Champlain was reinstated as governor, and sailed for the St. Lawrence in 1633. He did not long survive, but worked energetically and faithfully until the last. His wife survived him. She was a Protestant when she was married, but died an Ursuline nun. Champlain's zeal for the propagation of Christianity was intense. A college was established at Quebec, in which the children of the savages were taught and trained in the habits of civilization. In 1603 Champlain published an account of his first voyage, and, in 1613 and 1619, a continuation of his narrative. In 1632 they were included in

a work of his then published, which comprised a history of New France from the time of Verrazani's discoveries to 1631, entitled *Les Voyages à la Nouvelle France Occidentale et Canada*. In 1870 a complete collection of his works, including his voyage to Mexico, with fac-similes of his maps, was published in Quebec, edited by Abbés Laverdière and Casgrain.

**Champlain's Expedition to the Onondagas (1615).** Champlain had followed Father Le Caron and his party to Lake Huron (see *First French Missionary in America*), to which he gave the name of Mer Douce. Returning across the great forests, he sailed with several hundred canoes down a stream into the Bay of Quinté, and entered the broad Lake Ontario, which Champlain named Lac St. Louis. With a considerable war party, chiefly Hurons, he crossed the lake into the country of the Iroquois, in (present) New York. Hiding their canoes in the forest, they pressed onward to the Indian post on the shore of Onondaga Lake. It was at the time of the maize harvest, and the Iroquois were attacked in the fields. They retired to their town, which was fortified with four rows of palisades. On the inside of these were galleries furnished with stones and other missiles, and a supply of water to extinguish a fire if kindled beneath these wooden walls. The Hurons were rather insubordinate, and the attack was ineffectual. Champlain had constructed a wooden tower, which was dragged near the palisades, and from the top of which his marksmen swept the galleries filled with naked Iroquois. But he could not control the great body of the Hurons, and, in their furious and tumultuous assault upon the palisades, they were thrown back in confusion, and could not be induced to repeat the onset, but resolved to retreat. Champlain, wounded in the leg, was compelled to acquiesce, and he made his way back to Quebec (1616), after a year's absence.—See *O. H. Marshall's Monograph on this topic*.

**Champlin, STEPHEN**, United States Navy, was born at South Kingston, R. I., Nov. 17, 1789; died at Buffalo, N. Y., Feb. 20, 1870. He went to sea when sixteen years old, and commanded a ship at twenty-two. In May, 1812, he was appointed sailing-master in the navy, and was first in command of a gunboat under Perry, at Newport, R. I., and was in service on Lake Ontario in the attacks on Little York (Toronto) and Fort George, in 1813. He joined Perry on Lake Erie, and commanded the sloop-of-war *Scorpion* in the battle on Sept. 10, 1813, firing the first and last gun in that action. He was the last surviving officer of that engagement. In the following spring, while blockading Mackinaw with the *Tigress*, he was attacked in the night by an overwhelming force, severely wounded, and made prisoner. His wound troubled him until his death, and he was disabled for any active service forever afterwards. From 1834 he was a resident of Buffalo.

**Chancellorsville, BATTLE OF.** Early in April, Hooker, in command of the Army of the Potomac, became impatient, and resolved to put it

in motion towards Richmond, notwithstanding his ranks were not full. Cavalry under Stoneman were sent to destroy railways in Lee's rear, but were foiled by the high water in the streams. After a pause, Hooker determined to attempt to turn Lee's flank, and, for that purpose, sent ten thousand mounted men to raid in his rear. Then he moved thirty-six thousand of the troops of his right wing across the Rappahannock, with orders to halt and intrench at Chancellorsville, between the Confederate army near Fredericksburg and Richmond. This movement was so masked by a demonstration on Lee's front by Hooker's left wing, under General Sedgwick, that the right was well advanced before Lee was aware of his peril. These troops reached Chancellorsville, in a region known as "The Wilderness," on the evening of April 30, 1863, when Hooker expected to see Lee, conscious of danger, fly towards Richmond. He did no such thing, but proceeded to strike the National army a heavy blow, for the twofold purpose of seizing the communications between the two parts of that army and compelling its commander to fight at a disadvantage, with only a part of his troops in hand. Hooker had made his headquarters in the spacious brick house of Mr. Chancellor, and sent out Pleasanton's cavalry to reconnoitre. A part of these encountered the Confederate cavalry, under Stuart, and were defeated. Lee had called "Stouevall" Jackson's large force to come up when he perceived Sedgwick's movements. Lee left General Early with 9000 men and 30 cannons to hold his fortified position at Fredericksburg against Sedgwick, and, at a little past midnight (May 1, 1863), he put Jackson's column in motion towards Chancellorsville. It joined another force under General Anderson at eight o'clock in the morning, and he, in person, led the Confederates to attack the Nationals. Hooker had also disposed the latter in battle order. Aware of the peril of fighting with the Wilderness at his back, he had so disposed his army as to fight in the open country, with a communication open with the Rappahannock towards Fredericksburg. At eleven o'clock, the divisions of Griffin and Humphreys, of Meade's corps, pushed out to the left, in the direction of Banks's Ford, while Sykes's division of the same corps, supported by Hancock's division, and forming the centre column, moved along a turnpike. Slocum's entire corps, with Howard's, and its batteries, massed in its rear, comprising the right column, marched along a plank road. The battle was begun about a mile in advance of the National works at Chancellorsville, by the van of the centre column and Confederate cavalry. Sykes brought up his entire column, with artillery, and, after a severe struggle with McLaws, he gained an advantageous position, at noon, on one of the ridges back of Fredericksburg. Banks's Ford, which Lee had strenuously sought to cover, was now virtually in possession of the Nationals, and the distance between Sedgwick, opposite Fredericksburg, and the army at Chancellorsville was shortened at least twelve miles. Meanwhile, Slocum and Jackson had met

and struggled fiercely on the plank road. Perceiving Jackson endeavoring to flank Slocum, and his strong column overlapping Sykes's flank, Hooker, fearing his army might be beaten in detail before he could successfully resist the furious onslaught of Jackson, ordered its withdrawal behind his works at Chancellorsville, the Confederates following close in the rear of the retreating troops. So ended the movements of the day. Hooker's position was a strong one. The National line extended from the Rappahannock to the Wilderness church, two miles west of Chancellorsville. Meade's corps, with Couch's, formed his left; Slocum's, and a division of Sickles's, his centre, and Howard's his right, with Pleasanton's cavalry near. Lee's forces had the Virginia cavalry of Owen and Wickham on the right, and Stuart's and a part of Fitzhugh Lee's on the left. McLaws's forces occupied the bridge on the east of the Big Meadow Swamp, and Anderson's continued the line to the left of McLaws. Such was the general disposition of the opposing armies on the morning of May 2d. Lee was unwilling to risk a direct attack on Hooker, and Jackson advised a secret flank movement with his entire corps, so as to fall on Hooker's rear. Lee hesitated, but so much did he lean on Jackson as adviser and executor, that he consented. With twenty-five thousand men Jackson made the perilous movement, marching swiftly and steadily through the thick woods, with Stuart's cavalry between his forces and those of the Nationals. But the movement was early discovered; the Nationals, however, believing it to be a retreat of the Confederates towards Richmond. Sickles pushed forward Birney's division to reconnoitre, followed by two brigades of Howard's corps. Birney charged upon the passing column, and captured a Georgia regiment, five hundred strong, but was checked by Confederate artillery. The Nationals now held the road over which Jackson was moving. Disposition was made to pursue the supposed fugitives, when Jackson made a quick and startling movement towards Chancellorsville, concealed by the thick woods, at six o'clock in the evening, suddenly burst from the thickets with his whole force, like an unexpected and terrible tornado, and fell with full force upon Howard's corps (eleventh), with tremendous yells, just as they were preparing for supper and repose. Devens's division, on the extreme right, received the first blow, and, almost instantly, the surprised troops, panic stricken, fled to the rear, communicating their emotions of alarm to the other divisions of the corps. The Confederates captured men and guns and a commanding position, while the fugitives, in evident confusion, rushed towards Chancellorsville, upon the position of General Schurz, whose division had already retreated. The tide of affrighted men rolled back upon General Steinwehr. While the divisions of Devens and Schurz were re-forming, Steinwehr quickly changed front, threw his men behind some works, rallied some of Schurz's men, and checked the pursuit for a brief space. But the overwhelming number of the Confederates

speedily captured the works. These disasters on the right were partially relieved by Hooker, who sent forward troops at the double-quick, under Generals Berry and French, and also a courier to apprise Sickles, who had pushed some distance beyond the National lines, of the disaster to the eleventh corps and his own peril. He was directed to fall back and attack Jackson's left flank. He was in a critical situation, but Pleasanton saved him by a quick and skilful movement, greatly assisting in checking the pursuit. This was done long enough for Pleasanton to bring his own horse-artillery and more than twenty of Sickles's guns to bear upon the Confederates, and to pour into their ranks a destructive storm of grape and canister shot. Generals Warren and Sickles soon came to Pleasanton's assistance, when there was a severe struggle for the possession of cannons. Meanwhile, Lee was making a strong artillery attack upon Hooker's left and centre. Soon a great misfortune befell the Confederate commander, in the loss of "Stonewall" Jackson, the strong right arm of his power. Jackson had sent for Hill, and was anxious to follow up the advantage he had gained, by extending his lines

cellorsville, crush every impediment and join the main army. Each army made disposition for a battle on Sunday morning. Stuart advanced to the attack with Lee's left wing, and when he came in sight of the Nationals he shouted, "Charge, and remember Jackson!" With thirty pieces of artillery presently in position on an elevation, his men made a desperate charge under cover of their fire, and were soon struggling with Sickles's corps and four other divisions. These were pushed back, and a fearful battle ensued, the tide of success ebbing and flowing for more than an hour. During this struggle Hooker had been prostrated, and Couch took command of the army. Almost the whole National army became engaged in the battle, at different points, excepting the troops under Meade and Reynolds. Couch fell back towards the Rappahannock, and, at noon, Hooker, having recovered, resumed chief command. Lee's army was now united, but Hooker's was divided. Sedgwick had seriously menaced Lee's flank, but had not joined Hooker. After a hard conflict and the loss of one thousand men, Sedgwick had captured the Confederate works on the heights back of Fredericksburg, and sent

RUINS OF CHANCELLORSVILLE.

to the left and cutting off Hooker's communication with the United States Ford. While waiting for Hill, he pushed forward with his staff, on a personal reconnoissance, and, when returning, in the gloom of evening, his men, mistaking them for National cavalry, fired upon them and mortally wounded the great leader. No more fighting occurred in that part of the field. Birney's division drove back the Confederates at midnight, recovered some lost ground, and brought back some abandoned guns and caissons. During the night a new line of intrenchments was thrown up by the Nationals; but Hooker's forces were in a very perilous position on Sunday morning, May 3d. When he heard of the movement of Jackson on Saturday morning, he had called from Sedgwick Reynolds's corps, 20,000 strong, and it arrived the same evening. Hooker's force was now 60,000 strong, and Lee's 40,000. The former ordered Sedgwick to cross the river and seize and hold Fredericksburg and the heights behind it, and then, pushing along the roads leading to Chan-

Early, their defender, flying southward with his shattered columns. Intelligence of these events made Lee extremely cautious. Sedgwick, leaving Gibbon in command at Fredericksburg, marched for Chancellorsville, when Lee was compelled to divide his army to meet this new peril. He sent McLaws with four brigades to meet Sedgwick. At Salem church they had a sanguinary conflict. The Confederates won, and the losses of Sedgwick, added to those sustained in the morning, amounted to about five thousand men. Hooker, at the same time, seemed paralyzed in his new position, for his army appeared being beaten in detail. On the following morning, perceiving that Hooker's army had been much strengthened, Lee thought it necessary to drive Sedgwick across the Rappahannock before again attacking the main body. Early was sent to retake the Heights of Fredericksburg, and he cut Sedgwick off from the city. Early was reinforced by Anderson, by which Sedgwick was enclosed on three sides. At six o'clock in the evening the Confederates at-

tacked him. His forces gave way and retreated to Bauks's Ford, and before morning the remains of Sedgwick's corps had crossed the Rappahannock over pontoon bridges. Gibbon also withdrew from Fredericksburg to Falmouth that night, and, on Tuesday, Lee had only Hooker to contend with. He concentrated his forces to strike Hooker a crushing blow before night, but a heavy rain-storm prevented. Hooker prepared to retreat, and did so on the night of May 5th and morning of the 6th, crossing the Rappahannock and returning to the old quarters of the army opposite Fredericksburg. The losses of each army had been very heavy. That of the Confederates was reported at 12,277, including 2000 prisoners, and that of the Nationals was 17,197, including about 5000 prisoners. The latter also lost thirteen heavy guns, about 20,000 small-arms, seventeen colors, and a large amount of ammunition. The Union Generals Berry and Whipple were killed.

**Chancery Jurisdiction.** In all the crown colonies, excepting New Hampshire, the chancery court had been introduced, in spite of the colonists, who dreaded its prolix proceedings and heavy fees. Wherever it had been introduced, it was retained, in the state governments, after the Revolution. In New Jersey and South Carolina the governor was made chancellor, as in colonial times. In New York and Maryland a separate officer was appointed with that title. In Virginia there were several distinct chancellors. In North Carolina and Georgia the administration both of law and equity was intrusted to the same tribunals. In Pennsylvania a limited chancery power was conferred upon the Supreme Court. In Connecticut the Assembly vested the judicial courts with chancery powers in smaller cases, reserving to itself the decision in matters of more importance. In New England there was such a strong prejudice against chancery practice that for many years there was a restriction to the system of common law remedies.

**Chandler, JOHN,** was born at Monmouth, Mass., in 1760; died at Augusta, Me., Sept. 25, 1841. His pursuit was that of blacksmith, and he became wealthy. With much native talent, he rose to the position of councillor and senator (1803-5); member of Congress (1805-8); and, in July, 1812, was commissioned a brigadier-general. Wounded and made prisoner in the battle at Stony Creek, in Canada (which see), he was soon afterwards exchanged. From 1820 to 1829, he was United States Senator from Maine—one of the first appointed from that new state. From 1829 to 1837 he was collector of the port of Portland. He became a major-general of militia, and held several civil local offices.

**Channing, WILLIAM ELLERY,** an eminent divine, was born in Newport, R. I., April 7, 1780; died at Bennington, Vt., Oct. 2, 1842. He graduated at Harvard in 1798 with highest honors; was a teacher in a private family in Richmond, Va., for a year afterwards; and, returning in feeble health in 1802, he studied theology, and

became pastor of the Federal Street Church in Boston, June 1, 1803. All through his laborious life he suffered from ill-health. In 1822 he

WILLIAM ELLERY CHANNING.

sought physical improvement by a voyage to Europe, and in 1830 he went to St. Croix, W. I., for the same purpose. With a colleague he occasionally officiated in the pulpit until 1840, when he resigned. In August, 1842, he delivered his last public address at Lenox, Mass., in commemoration of the abolition of slavery in the West Indies. Mr. Channing, with the purest Christian spirit, did more than any man of his time towards disenthraling the human mind from the bonds of the theological systems as inflexible as cast-iron. Benevolence and love for his fellow-men appear in all his utterances. His writings preach as with a living tongue.

**Chantilly, BATTLE OF.** On the morning after the second battle at Bull's Run (which see), Pope was joined at Centreville by the corps of Franklin and Sumner. The next day (Sept. 1, 1862), Lee, not disposed to make a direct attack upon the Nationals, sent Jackson on another flanking movement, the latter taking with him his own and Ewell's division. With instructions to assail and turn Pope's right, he crossed Bull's Run at Sudley Ford, and, after a while, turning to the right, turned down the Little River pike, and marched towards Fairfax Court-house. Pope had prepared to meet this movement. Heintzelman and Hooker were ordered to different points, and just before sunset Reno met Jackson's advance (Ewell and Hill) near Chantilly. A cold and drenching rain was falling, but it did not prevent an immediate engagement. Very soon McDowell, Hooker, and Kearney came to Reno's assistance. A very severe battle raged for some time, when General Isaac J. Stevens (see *Port Royal Ferry*), leading Reno's second division in person, was shot dead. His command fell back in disorder. Seeing this, General Kearney advanced with his division and renewed the action, sending Birney's brigade to the front. A furious thunder-storm was then raging, which made the use of ammunition very difficult. Unheeding this, Kearney brought forward a battery, and planted it in position himself.

Then, perceiving a gap caused by the retirement of Stevens's men, he pushed forward to reconnoitre, and was shot dead a little within the Confederate lines, just at sunset, and the command of his division devolved on Birney, who instantly made a bayonet charge with his own brigade of New York troops, led by Colonel Eagan. The Confederates were pushed back some distance. Birney held the field that night, and the broken and demoralized army was withdrawn within the lines at Washington the next day. After the battle at Chantilly, the Army of Virginia was merged into the Army of the Potomac, and General Pope returned to service in the west. The loss of Pope's army, from Cedar Mountain (which see) to Chantilly, in killed, wounded, prisoners, and missing, was estimated at 30,000. Lee's losses during the same time amounted to about 15,000. He claimed to have taken 7000 prisoners, with 2000 sick and wounded, thirty pieces of artillery, and 20,000 small-arms. Of the 91,000 veteran troops from the Peninsula, lying near, Pope reported that only 20,500 men had joined him in confronting Lee.

**Chapultepec, BATTLE OF.** The city of Mexico stands on a slight swell of ground, near the centre of an irregular basin, and encircled by a broad and deep navigable canal. The approaches to the city are over elevated causeways, flanked by ditches. From these the capital is entered by arched gateways; and these, when the victorious Americans approached the city (August, 1847), were strongly fortified. When El Molino del Rey and Casa de Mata (which see) had been captured (Sept. 8, 1847), the Castle of Chapultepec alone remained as a defence for the city—this and its outworks. The hill, steep and rocky, rises one hundred and fifty feet above the surrounding country. The castle was built of heavy stone masonry. The whole fortress was nine hundred feet in length, and the *terreplein* and main buildings six hundred feet. The castle was about ten feet in height, and presented a splendid specimen of military architecture. A dome, rising about twenty feet above the walls, gave it a grand appearance. Two strongly built walls surrounded the whole structure, ten feet apart and twelve or fifteen feet high. The works were thoroughly armed, and the garrison, among whom were some expert French gunners, was commanded by General Bravo. The whole hill was spotted with forts and outworks. To carry this strong post with the least loss of men, Scott determined to batter it with heavy cannons. Accordingly, on the night of Sept. 11, four batteries of heavy cannons were erected on a hill between Teacabaya and Chapultepec, commanded respectively by Captains Drew, Haynes, and Brooks, and Lieutenant Stone. They were placed in position by the engineer officers Huger and Lee (the latter afterwards commander-in-chief of the Confederate army). On the morning of the 12th these batteries opened fire, every ball crashing through the castle and every shell tearing up the ramparts. The fire of the Mexicans was not less severe, and this duel of great guns was kept up all day. The next morning

(13th) troops moved to assail the works, at their weakest point, in two columns, one led by General Pillow and the other by General Quitman. Pillow marched to assail the works on the west side, while Quitman made a demonstration on the easterly part. Both columns were preceded by a strong party—that of Pillow by two hundred and fifty of Worth's division, commanded by Captain McKenzie; and that of Quitman by the same number, commanded by Captain Carey. Each storming party was furnished with scaling-ladders. While the troops were advancing the American batteries kept up a continuous fire over their heads upon the works to prevent reinforcements reaching the Mexicans. Pillow's column bore the brunt of the battle. It first carried a redoubt, and drove the Mexicans from shelter to shelter. At length the ditch and wall of the main work were reached; the scaling-ladders and fascines were brought up and planted by the storming parties; and the work was soon taken and the American flag unfurled over the ramparts amid prolonged shouts. Meanwhile Quitman's column had moved along a causeway, captured two batteries, and joined Pillow's column in time to share in the work of accomplishing a final victory. Together they took the strong Castle of Chapultepec and scattered its defenders in every direction. It was literally torn in pieces; and within, a crowd of prisoners of all colors were seized, among them fifty general officers. There were also one hundred cadets of the Military College, the latter "pretty little boys," wrote an American officer, "from ten to sixteen years of age." Several of their little companions had been killed, "fighting like demons." The fugitives fled to the city, along an aqueduct, pursued by General Quitman to the very gates, engaged all the way in a running fight, which was sometimes severe. (See *Mexico, War with.*)

**Character of the Treaty of Peace with Great Britain (1782).** Bancroft says (x. 591): "The treaty was not a compromise, nor a compact imposed by force, but a free and perfect solution and perpetual settlement of all that had been called in question. By doing an act of justice to her former colonies, England rescued her own liberties at home from imminent danger, and opened the way for their slow but certain development."

**Charles I. of England,** son of James I., was born at Dunfermline, Fifeshire, Scotland, Nov. 19, 1600; beheaded in London, Jan. 30, 1649. The death of his elder brother, Henry, in 1612, made him heir apparent to the throne, which he ascended as king in 1625. He sought the hand of the infanta of Spain, but finally married (1625) Henrietta Maria, daughter of Henry IV. of France. She was a Roman Catholic, and had been procured for Charles by the infamous Duke of Buckingham, whose influence over the young king produced disasters to England and to the monarch himself. Charles was naturally a good man, but his education, especially concerning the doctrine of the divine right of kings and the sanctity of the royal

prerogative, led to an outbreak in England, which cost him his life. Civil war began in 1641, and ended with his execution at the beginning of 1649. His reign was at first succeeded by the rule of the "Long Parliament," and then by Cromwell—a half-monarch, called the "Protector." After various vicissitudes during the civil war, he was captured, and imprisoned in Carisbrooke Castle, in the Isle of Wight, from whence he was taken to London at the close of 1648. He was brought to trial before a special high court in Westminster Hall on Jan. 20, 1649, and on the 27th was condemned to death. He was beheaded on a scaffold in front of the banqueting-house at Whitehall on the 30th. Charles had eight children by his queen, Henrietta, six of whom survived him. His family was driven into exile; but a little more than eleven years after his death his eldest son, Charles, ascended the throne as King of Great Britain. The son held much more intimate relations, as monarch, with the English-American colonies than the father.

Charles II., son and successor of Charles I. of England, who was beheaded in 1649. His mother was Henrietta Maria, daughter of Henry IV. of France, and sister of the then reigning king of that realm. As the fortunes of his father waned, his mother returned to France, where he joined her; and, at the Hague, he heard of the death of his parent by the axe, when he assumed the title of king, and was proclaimed such at Edinburgh, Feb. 3, 1649. He was crowned at Scone, Scotland, Jan. 1, 1651. After an unsuccessful warfare with Cromwell for the throne,

CHARLES II.\*

he fled to Paris; and finally he became a resident of Breda, in Belgium, whence he was called to England by a vote of Parliament, and restored to the throne of his father, May 8, 1660. He was a very profligate monarch—indolent, amiable, and unscrupulous. He misgoverned

*Charles II.*

England twenty-five years in an arbitrary manner, and disgraced the nation. He became a Roman Catholic, although professing to be a Protestant; and, when dying from a stroke of apoplexy, Feb. 6, 1685, in the fifty-fifth year of

\* This likeness, in India ink, is at the head of the old charter of Connecticut, given by Charles II. It is said to be from the hand of a celebrated English miniature-painter (Samuel Cooper, a native of Loodoo), who painted likenesses of Oliver Cromwell, John Milton, and other distinguished men. Cooper died in 1672.

his age, he confessed to a Roman Catholic priest, and received extreme unction. The throne descended to his brother James, an avowed Roman Catholic. (See *James II.*)

**Charles II. AND HIS RAPACIOUS COURTIER.**  
In March, 1663, Charles II. granted to several of his courtiers the vast domain of the Carolinas in America. (See *Grantees of North Carolina.*) They were men, most of them past middle life in years, and possessed of the "easy virtues" which distinguished the reign of that profligate monarch. They begged the domain under pretence of a "pious zeal for the propagation of the Gospel among the heathen," while their real object was to rob the "heathen" of these valuable lands, and to accumulate riches and honors for themselves. It is said that when these petitioners appeared before Charles in the gardens at Hampton Court, and presented their memorial so full of pious pretensions, the monarch, after looking each man in the face for a moment, with a merry twinkle in his eyes, burst into loud laughter, in which his audience joined involuntarily. Then taking up a little shaggy spaniel, with large meek eyes, and holding it at arm's-length before them, he said, "Good friends, here is a model of piety and sincerity which it might be wholesome for you to copy." Then, tossing the little pet to Clarendon, he said, "There, Hyde, is a worthy prelate; make him archbishop of the domain I shall give you." With grim satire, Charles introduced into the preamble of their charter that the petitioners, "excited with a laudable and pious zeal for the propagation of the Gospel, have begged a certain country in the parts of America not yet cultivated and planted, and only inhabited by some barbarous people, who have no knowledge of God."

**Charles II., PROCLAMATION OF, AS KING, in Maryland.** When news reached Maryland that Charles I. had been beheaded, and his son Charles proclaimed king in Scotland, Green, acting governor of Maryland, caused him to be proclaimed king by that colony. He was also so proclaimed in Virginia. This act perplexed the time-server Lord Baltimore. He was evidently seconded by the young heir to England's throne, who, disregarding the proprietary rights of his lordship, appointed Sir William Davenant, then an exile in France, where the young monarch soon sought shelter.

**Charleston.** (See *Siege of Charleston, 1780.*)

**CHARLESTON, ATTEMPT TO CAPTURE (1863).** Although Charleston had become a comparatively unimportant point in the grand theatre of war at the beginning of 1863, its possession was coveted by the National government because of the salutary moral effect which such a conquest would produce. A strong effort to accomplish that end was made in the spring of 1863. On April 6 Admiral Dupont crossed Charleston bar with nine "monitors," or turreted iron vessels, leaving five gunboats outside as a reserve, and proceeded to attack Fort Sumter—the most formidable object in the way to the city. At the same time, a land

force near at hand, four thousand strong, under General Truman Seymour, took a masked position on Folly Island, ready to co-operate, if necessary. The military works that defended Charleston were numerous and formidable. Between forts Sumter and Moultrie the sea was strewn with torpedoes, and there were other formidable obstructions. On Morris Island, abreast of Fort Sumter, was a strong work, called Fort Wagner. Dupont's squadron lay quietly within the bar until noon of April 7, when it advanced directly upon Sumter, intending not to reply to any attack from Fort Wagner. The *Weehawken* led. Dupont was ignorant of the torpedoes, but the discovery of these soon explained the ominous silence of Sumter and Fort Wagner as he advanced. Suddenly, when the *Weehawken* had become entangled in a network of cables, the barbette guns of Sumter opened upon her with plunging shot. Then the other "monsters of the deep" commanded by Dupont came forward and delivered tremendous discharges of heavy metal on Sumter, and at the same time that fortress, Fort Wagner, and other batteries, with an aggregate of nearly three hundred guns, poured heavy shot and shell upon the squadron—then within the focus of their concentric fire—at the rate of one hundred and sixty a minute. A greater portion of these missiles glanced off harmlessly from the mailed "monitors." The weaker *Keokuk* was nearly destroyed; all of the other vessels were more or less injured. The flag-ship was in peril, and Fort Sumter was but slightly hurt, when Dupont, after a terrible fight of forty minutes, signalled the squadron to withdraw. In that time it was estimated the Confederates fired thirty-five hundred shells and shots. The attack was a failure, but not a disaster. Dupont lost but a few men, and only one vessel. It was now seen that a land force on Morris Island to keep Fort Wagner employed was necessary to secure a successful attack on Sumter. After this attack, Dupont watched the Confederates on Morris Island, and did not allow them to erect any more works on it. General Quincy A. Gillmore was assigned to the command of the Department of the South June 2, 1863. The government determined to renew the attack on Fort Sumter by a land and naval force. Gillmore was at the head of eighteen thousand men, with a generous supply of great-guns, small-arms, and ordnance stores. He determined to seize Morris Island preliminary to an attack on Sumter and Charleston. That island and the military works in his possession, he might batter down Fort Sumter from Fort Wagner, with the aid of the navy, and lay Charleston in ashes by firing shells, if it should not be surrendered. As Dupont did not approve this plan, Admiral Dahlgren took his place in July. Gillmore had batteries constructed, under the direction of General Vogdes, on the northern end of Folly Island. This

work was completely masked by a pine forest. When all was in readiness, General Alfred H. Terry was sent, with nearly four thousand troops, up the Stone River, to make a demonstration against James Island to mask Gillmore's real intentions, and Colonel T. W. Higginson, with some negro troops, went up the Edisto to cut the railway communication between Charleston and Savannah. Thirty hours after Terry's departure General George C. Strong silently embarked two thousand men in small boats, and crossed over to Morris Island before dawn (July 13), unsuspected by the Confederates. At that hour Vogdes's masked batteries opened a tremendous cannonade, and Dahlgren's four "monitors," at the same time, opened a cross-fire upon the Confederates, who saw the amazing apparition of a strong National force ready to attack them. After a sharp battle, Strong gained possession of the powerful Confederate works on the southern end of Morris Island, with eleven guns. The occupants were driven away, and took shelter in Fort Wagner, the garrison of which had been kept quiet by Dahlgren's guns. Meanwhile, Terry had fought and repulsed Confederate assailants at Secessionville, on James Island, in which he lost about one hundred men, and his adversary two hundred. He then hastened to Morris Island to join in the attack on Fort Wagner. Five batteries were speedily erected across the island to confront Wagner, and at noon (July 13) Gillmore opened a bombardment of that fort. Dahl-

BOMB AND SPLINTER PROOF, FORT WAGNER.

gren, at the same time, moved his "monitors" nearer to it, and poured a continuous stream of shells upon it. From noon until sunset one hundred guns were continually assailing the fort, which replied with only two guns at long intervals. When night fell, a tremendous thunder-storm swept over the harbor and the islands, when General Strong, with a heavy storming party, moved upon the fort. It was composed of a Massachusetts regiment of colored troops, under Colonel R. G. Shaw, and one regiment each from Connecticut, New Hampshire, New York, and Pennsylvania. The storming party advanced against a shower of shot and shell from Wagner, Sumter, and Battery Gregg. When at the fort they were met by a furious tempest of musketry, while howitzers swept the ditch where the assailants were crossing.

Haud-grenades were also thrown upon the Unionists. Colonel Shaw was shot dead, and fell among the slain of his dusky followers. General Strong, and also Colonel Chatfield, of the Connecticut regiment, were mortally wounded. The Nationals were repulsed, when another brigade pushed forward to the assault, led by Colonel H. L. Putnam. It was composed of Ohio and New York troops. Some of Putnam's men actually got into the fort, but were expelled. Finally their leader was killed, and the second storming party was repulsed. The loss on the part of the Nationals was fearful. The Confederates said they buried six hundred of them in front of the fort. Among the bodies of the slain so buried was that of Colonel Shaw, which was cast into a trench, and upon it were piled those of his slain colored troops. He was hated by the Confederates because he commanded negro troops. Gillmore now abandoned the idea of assaults, and began a regular siege. He planted batteries of heavy siege and breaching guns at different points, and mounted a 200-pound Parrott gun upon a battery constructed of timber in a marsh between Morris and James Islands, which might hurl shell upon the city, or, at least, upon the shipping and wharves of Charleston. This gun was named "The Swamp Angel." It was about five miles from Charleston. On the morning of Aug. 17, Gillmore, having completed his arrangements for attack, opened the guns from twelve batteries and from Dahlgren's naval force on Forts Sumter and Wagner and Battery Gregg. Fort Sumter, two miles distant, was the chief object of attack — to make it powerless as an assistant of Fort Wagner. This was continued until the 24th, when Gillmore telegraphed to Washington, "Fort Sumter is to-day a shapeless and harmless mass of ruins." "The Swamp Angel" sent some 150-pound shells that fell in Charleston — one penetrating St. Michael's Church — and greatly alarmed the people. On the fall of Sumter, the attack centred on Fort Wagner; and at two o'clock on the morning of Sept. 7, General Terry, with three thousand troops, in three columns, was about to advance to assail that strong fortification, when it was found that the Confederates had evacuated it and Battery Gregg before midnight. During forty hours no less than one hundred and twenty thousand pounds of iron had been rained upon the fort. Dahlgren, believing the channel to be strewn with torpedoes, did not venture to pass the silent forts with his vessels and appear before Charleston. Indeed, Sumter was not dead, but slumbering. On the night of Sept. 8 a portion of the men of the squadron went in thirty row-boats to take possession of Sumter. They scaled the ruins, where, as they supposed, the decimated garrison were sleeping, but were met by determined men, and repulsed. They were assailed not only by the garrison, but by neighboring batteries, a gunboat, and a "ram," and lost two hundred men, four boats, and three colors. Finally, on Oct. 26, perceiving the garrison mounting cannons on the southeast face

of Sumter, to command Fort Wagner, Gillmore opened heavy rifled cannons on the former, which soon reduced it to an utterly untenable ruin. From that time until near the close of the year Gillmore kept up an irregular fire on Charleston, when, seeing no prospect of the fleet entering the harbor, he kept silent. (See *Charleston, Evacuation of, 1865.*)

**Charleston, DEFENCE OF (1776).** In the spring of 1776 a considerable fleet, under Admiral Sir Peter Parker, sailed from England with troops, under Earl Cornwallis, to operate against the coasts of the Southern provinces. This armament joined that of Sir Henry Clinton at Cape Fear. After some marauding operations in that region, the united forces proceeded to Charleston Harbor, to make a combined attack by land and water upon Fort Sullivan, on Sullivan's Island, and then to seize the city and province. The Southern patriots had cheerfully responded to the call of Governor Rutledge to come to the defence of Charleston, and about six thousand armed men were in the vicinity when the enemy appeared. The city and eligible points near had been fortified. Fort Sullivan was composed of Palmetto logs and earth, armed with twenty-six cannons, and garrisoned by about five hundred men, chiefly militia, under Colonel William Moultrie. It commanded the channel leading to the town. General Charles Lee, who had been ordered by Washington to watch the movements of Clinton, had made his way southward, and arrived at Charleston on the 4th of June, but was of no service whatever. Late in the month Clinton had landed troops on Long Island, which was separated from Sullivan's Island by a shallow creek. There he erected batteries to confront those on Sullivan's Island, and awaited the signal for attack by Parker. It was given on the morning of the 28th (June), and a terrible storm of shot and shell was poured upon the fort, with very little effect, for the spongy Palmetto logs would not fracture, and the balls were embedded in them. The conflict raged for almost ten hours between the fort and the fleet, and the latter was terribly shattered. Meanwhile Clinton had endeavored to pass over to Sullivan's Island with two thousand men, but was kept back by the determined troops under Colonel Thompson with two cannons and deadly rifles. The fire from the fleet slackened at sunset, and ceased at nine o'clock. The admiral's flag-ship (*Bristol*) and another were nearly a wreck. The flag-ship was pierced by not less than seventy balls. All but two of the vessels (which were destroyed) withdrew. The British lost in the engagement two hundred and twenty-five men killed and wounded, while the Americans lost but two killed and twenty-one wounded. Three days afterwards the British all departed for New York; and the fort, so gallantly defended, was called Fort Moultrie in honor of its commander.

**Charleston, EVACUATION OF (1782),** took place on Dec. 14. Leslie had levelled the fortifications around the city, and demolished Fort Johnson, on St. John's Island, near by, on the

morning of the 13th. The American army slowly approached the city that day, and at dawn the next morning the British marched to Gadsden's wharf and embarked. An American detachment took formal possession of the town. At three o'clock P.M. General Greene escorted Governor Mathews and other civil officers to the Town-hall, the troops greeted on their way by cheers from windows and balconies, and even from housetops. Handkerchiefs waved, and thousands of voices exclaimed, "God bless you, gentlemen! Welcome! welcome!" Before night the British squadron (about three hundred vessels) crossed the bar, and the last sail was seen like a white speck just as the sun went down.

**Charleston, EVACUATION OF (1865).** When Hardee, in command of the Confederate troops at Charleston, heard of the fall of Columbia (which see), he perceived the necessity for his immediate flight, by the only railway then left open for his use, and of endeavoring to join Beauregard, with the remnant of Hood's army (see *Nashville, Battle of*), then making their way into North Carolina, where Johnston was gathering all of his available forces in Sherman's path. Hardee at once fired every building, warehouse, or shed in Charleston stored with cotton, and destroyed as much other property that might be useful to the Nationals as possible. The few remaining inhabitants in the city were filled with consternation, for the flames spread through the town. An explosion of gunpowder shook the city to its foundations and killed full two hundred persons. Four whole squares of buildings were consumed. That night (Feb. 17, 1865) the last of Hardee's troops left Charleston. On the following morning Major Hennessy, sent from Morris Island, raised the National flag over ruined Fort Sumter. The mayor surrendered the city, and some National troops, with negroes in Charleston, soon extinguished the flames that threatened to devour the whole town. On that day (Feb. 18, 1865) the city of Charleston was "repossessed" by the National government, with over four hundred and fifty pieces of artillery, a large amount of gunpowder, and eight locomotives and other rolling-stock of a railway. General Gillmore took possession of the city, and appointed Lieutenant-colonel Stewart L. Woodford military governor.

**Charleston Founded.** The first capital of the colony of South Carolina was erected on a bluff of the Ashley River; but in 1680 it was abandoned, and a new city founded on Oyster Point, at the junction of the Ashley and Cooper Rivers, and named Charles Town (now Charleston) in compliment to the king, Charles II.

**Charleston Harbor, INVASION OF, BY SPANIARDS AND FRENCHMEN.** Provoked by the attack on St. Augustine by the South Carolinians, the Spaniards fitted out an expedition to retaliate. It consisted of five vessels of war, under the command of the French admiral Le Feboure, bearing a large body of troops from Havana. It was proposed to conquer the province of South Carolina and attach it to Spanish territory in Florida. The squadron crossed Charleston Bar

(May, 1706), and about eight hundred troops were landed at different points. Then the commander made a peremptory demand for the surrender of the city, threatening to take it by storm in case of refusal. Governor Moore, apprised of the expedition, was prepared for it. When the flag arrived with the demand for a surrender, he had so disposed the provincial militia and a host of Indian warriors that it gave an exaggerated idea of the strength of the Carolinians. Before the messenger had made any extended observations he was dismissed with the defiant reply that the people were ready to meet the promised attack. That night was passed in quiet; but at dawn a strong party of Carolinians on the shore, led by the governor and Colonel Rhett, made a furious assault upon the invaders; killed many, captured more, and drove the remnant back to their ships. Meanwhile the little provincial navy, lying in the harbor, prepared to attack the invading squadron, when the French admiral, amazed by this display of valor, hoisted his anchors and fled to sea. A French war-ship, uninformed of these events, soon afterwards sailed into the harbor with troops, and was captured. The victory was complete, and the Spaniards became circumspect.

**Charlestown (Mass.) Burned.** At the beginning of the battle on Bunker's (Breed's) Hill, Charlestown, a handsome village of about four hundred houses, situated near that eminence, was, by order of the British commander, set on fire. The houses were chiefly of wood, and in a very short time the town was enveloped in flames and smoke.

**Charlestown (Mass.), FOUNDING OF.** Dissatisfied with the situation at Salem, Thomas Graves, with some of the servants of the Massachusetts Bay Company under his charge, removed to Mishawun in 1629, laid out a town in two-acre lots, one of which he assigned to each inhabitant, and called the place Charlestown.

**Charter, NEW ROYAL, FOR MASSACHUSETTS.** (See *Massachusetts*.)

**Charter Oak, THE,** stood upon the northern slope of the Wyllys Hill, in Hartford, a beautiful elevation on the south side of Charter Oak Street, a few rods east from Main Street. When the author visited and made a sketch of the tree in October, 1848, it was a "gnarled oak" indeed. The trunk was twenty-five feet in circumference near the roots. A large cavity, about two feet from the ground, was the place of concealment of the original charter of Connecticut from the summer of 1687 until the spring of 1689, when it was brought forth, and under it Connecticut resumed its charter government. (See *Charter of Connecticut*.) In the year 1800, a daughter of Secretary Wyllys, writing to Dr. Holmes, the annalist, said of this tree: "The first inhabitant of that name [Wyllys] found it standing in the height of its glory. Age seems to have curtailed its branches, yet it is not exceeded in the height of its coloring or the richness of its foliage. The cavity which was the asylum of our

charter was near the roots, and large enough to admit a child. Within the space of eight years that cavity has closed, as if it had fulfilled the divine purpose for which it had been reared."

THE CHARTER OAK.

This tree was blown down by a heavy gale at a little past midnight Aug. 21, 1856. The Wylls Hill has been graded to a terrace, called "Charter Oak Place," fronting on old Charter Oak Street, running east from Main Street, and now called Charter Oak Avenue. On the terrace, a few feet from the entrance to Charter Oak Place, a white-marble slab marks the exact spot where the famous tree stood.

**Charter of Connecticut.** Sir Edmund Andros was appointed governor-general of all New England in 1696, and on his arrival he demanded the surrender of all the colonial charters under his jurisdiction. Connecticut alone resisted the demand. The viceroy proceeded to Hartford in the autumn of 1687 with an armed force to seize the charter and extinguish the government. This movement seems to have been expected for several months. On the 15th of June, 1687, the following entry was made on the journal of the Connecticut Assembly: "Sundry of the court desiring that the patent or charter might be brought into the court, the secretary sent for it, and informed the governor and court that he had the charter, and showed it to the court; and the governor bid him put it into the box again and lay it on the table, and leave the key in the box, which he did forthwith." This was the original charter granted by Charles II. (see *Connecticut*), and was sent over in a neat mahogany box. The records of the Assembly show that a duplicate of that charter was made before Andros came, and this fact offers an explanation of the mysterious action of the Assembly. The box was undoubtedly left on the table, with the key in it, for somebody to take the charter out without the knowledge or apparent connivance of the Connecticut authorities. Somebody did so, and caused a duplicate of the charter to be made on parchment, when, probably, the original charter was concealed in the hollow tree from whence it was taken in 1689, and the duplicate placed in the box, so that if Andros should seize the charter he would

not have the original. Andros arrived at Hartford with sixty armed men, Oct. 31 (O. S.), 1687, and found the Assembly in session in the meeting-house. The members received him with the courtesy due to his rank. He went before that body and demanded the surrender of the charter. Tradition says that it was near sunset when he entered the room. A debate in progress was purposely prolonged until the candles were lighted, when the box containing the charter was brought in and placed on the table. A preconcerted plan was now executed. Captain Joseph Wadsworth, whose train-bands were near to protect the Assembly from violence, was in the room. When Andros put forth his hand to take the charter, the lights were put out, and the box was carried away by Wadsworth. That it was the *duplicate* charter that Wadsworth carried away is attested by the same colonial records. An entry in the journal of the Assembly in 1715 shows that the sum of "twenty shillings" was granted to Captain Wadsworth "out of the colonial treasury" as a token of their grateful remembrance of "such faithful and good service" in "securing the *duplicate* charter of the colony in a very troublesome season." Probably it was Captain Wadsworth who took the original out of the box in June, 1687, caused a duplicate copy to be made of it, and deposited that original in the hollow tree that preserved it. After the accession of William and Mary, and the fall of Andros (see *Andros*), the charter was taken from the hollow oak, and Connecticut resumed its charter government under it. The *duplicate* was in the possession of Captain Wadsworth so late as 1698. Andros, foiled in his attempt to seize the charter, caused Secretary Allyn to enter upon the journal a statement that the viceroy, by order of King James, had on that day (Oct. 31, 1687) taken into his hands the government of Connecticut, annexing it to Massachusetts and other colonies. This record concluded with the word, in bold letters, "FINIS." (See *Charter Oak*.)

**Charter of Massachusetts Vacated.** (See *Randolph, Edward*.)

**Charter of Privileges for New Netherland.** The Dutch wisely took measures to encourage emigration to New Netherland. By a new "Charter of Privileges and Exemptions," adopted July 17, 1640, patroonships were limited, for the future, to four miles of frontage on navigable waters, with a depth of eight miles; and every person transporting himself and five others to the colony was allowed two hundred acres of land; and such villages and towns as might be formed were to have magistrates of their own choosing. A proclamation was issued offering free trade to New Netherland (in the ships of the West India Company) and transportation thither to all who wished to go; and emigrants were offered lands, houses, cattle, and farming tools at a very moderate annual rent, and a supply of clothes and provisions on credit. At that time, of the ten large patroonships originally established, only Reusselaerwick remained. Immigrants, composed chiefly of persecuted persons

or indentured servants who had served out their time (see *Redemptionists*), flocked into New Netherland, where they might enjoy freedom such as existed in Holland. They came from New England and Virginia, and very soon there was a considerable English element in society in New Netherland.

**Chase, Judge, IMPEACHMENT OF.** In the session of Congress in the early part of 1804, it was determined by the leaders of the dominant, or Democratic, party to impeach Judge Samuel Chase, then Associate-justice of the Supreme Court of the United States. He was an ardent Federalist, and warmly attached to the principles of Washington's administration. At the instance of John Randolph, of Virginia, Democratic leader of the House of Representatives, he was impeached for his conduct during the trial of Callender and Fries, solely on political grounds. Eight articles of impeachment were agreed to, most of them by a strict party vote. One was founded on his conduct at the trial of Fries (see *Fries's Insurrection*), five on the trial of Callender (see *Callender, J. T.*), and two on a late charge to a Maryland grand jury. Having been summoned by the Senate to appear for trial, he did so (Jan. 2, 1805), and asked for a delay until the next session. The boon was refused, and he was given a month to prepare for trial. His case excited much sympathy and indignation, even among the better members of the administration party. His age, his Revolutionary services, and his pure judicial character, all pleaded in his favor, and not in vain, for he was acquitted. The Senate—the tribunal before which he was tried—was presided over by Aaron Burr, Vice-President of the United States, who had returned from his flight southward after his duel with Hamilton. He had taken a seat in the Senate, notwithstanding his reputation was permanently blasted and an indictment for murder was impending over him. Chase's trial served to check the overbearing demeanor of the judges on the bench which prevailed in his time.

**Chase, PHILANDER, D.D.**, was born at Cornish, N. H., Dec. 14, 1775; died at Jubilee College, Ill., Sept. 20, 1852. He graduated at Dartmouth College in 1795, and was ordained a minister of the Protestant Episcopal Church, in New York, in 1798. His first charge was at Poughkeepsie, on the Hudson River. He labored zealously in the missionary cause in various parts of the State of New York, and in 1805, on account of his wife's ill-health, he went to New Orleans. Returning to the North in 1811, he became rector of a church in Hartford, Conn. In 1817 he went to Ohio, and entered vigorously upon the work of building up the Church in the West. In 1819 he was consecrated bishop, and, in the midst of many trials and difficulties, he succeeded in founding Kenyon College and Gambier Theological Seminary, in Ohio, collecting, by his individual and personal exertions, in England and this country, about \$30,000 for the purpose. Intent upon missionary labor, he moved farther west, and, in 1835, he was chosen bishop of the diocese of Illinois. He again visited England, and

collected about \$10,000 for educational purposes; and in 1838 he founded Jubilee College, at Robin's Nest, Ill., where he spent the remainder of his life.

**Chase, SALMON PORTLAND**, statesman, was born at Cornish, N. H., Jan. 13, 1808; died in New York city, May 7, 1873. When twelve years of age he was placed in charge of his uncle, Bishop Chase, in Ohio, who superintended his tuition. He entered Cincinnati College; and af-

SALMON PORTLAND CHASE.

ter a year there he returned to New Hampshire and entered Dartmouth College, where he graduated in 1826. He taught school and studied law in Washington, D. C., and was admitted to the bar there in 1829. The next year he went to Cincinnati to practise his profession, where he became eminent. He prepared an edition of the statutes of Ohio, with copious notes, which soon superseded all others. In 1834 he became solicitor of the Bank of the United States in Cincinnati. Acting as counsel for a colored woman who was claimed as a slave (1837), he controverted the authority of Congress to impose any duties or confer any powers, in fugitive-slave cases, on state magistrates. The same year, in his defence of J. G. Birney (which see), prosecuted under a state law for harboring a fugitive slave, Mr. Chase asserted the doctrine that slavery was local, and dependent upon state law for existence, and that the alleged slave, being in Ohio, where slavery did not exist, was free. From that time he was regarded as the great legal champion of the principles of the Anti-slavery party. He entered the political field in 1841, on organizing the "Liberty party" (which see) in Ohio, and was ever afterwards active in its conventions, as well as in the ranks of the opposers of slavery. The Democrats of the Ohio Legislature elected him (1849) to a seat in the United States Senate, where he opposed the Fugitive Slave Bill and other compromise measures, and, on the nomination of Mr. Pierce for the Presidency, he separated from the Democratic party. He opposed the Kansas-Nebraska Bill (which see), and in 1855 was elected governor of Ohio. He was one of the founders of the Republican party in 1856, and was governor until 1859. In 1861 he

became Secretary of the Treasury of the United States, under President Lincoln, and managed the finances of the nation with great ability until October, 1864, when he was appointed Chief-justice of the United States in place of Judge Taney, deceased. In that capacity he presided at the trial of President Johnson in the spring of 1868. Being dissatisfied with the action of the Republican majority in Congress, Mr. Chase was proposed, in 1868, as the Democratic nominee for President. He was willing to accept the nomination, but received only four out of six hundred and sixty-three votes in the convention. He then withdrew from the political field, but in 1872 he opposed the re-election of General Grant to the Presidency.

**Chase, SAMUEL,** was born in Somerset County, Md., April 17, 1741; died June 19, 1811. Admitted to the bar in 1761, he entered upon the practice of law at Annapolis, and he soon rose to distinction. He was twenty years a member of the Colonial Legislature; was a strong opposer of the Stamp Act; a member of the Committee of Correspondence; and a delegate to the Continental Congress (1774-79). In 1776 he was a fellow-commissioner of Franklin and Carroll to seek an alliance with the Canadians, and was efficient in changing the sentiments of Maryland in favor of independence, so as to authorize him and his colleagues to vote for the Declaration, which he signed. In 1783 Mr. Chase was sent to England, as agent for Maryland, to redeem a large sum of money intrusted to the Bank of England, \$650,000 of which was finally recovered. From 1791 to 1796 he was chief-justice of his state, and was a warm supporter of the administrations of Washington and Adams. In 1804 he was, at the instance of John Randolph, his political opponent, impeached for his conduct in the trial of Fries (see *Fries's Insurrection*) and Callender. He was acquitted by the Senate, sitting as a high court of impeachment. Judge Chase possessed a somewhat irascible temper, and was sometimes overbearing as a judge, but was honest, learned, able, and patriotic.

**Chatham, PITT CREATED EARL OF.** When Pitt resigned the seals of office (1761) there was great public discontent. Bute soon felt it, and he said to a friend, "I am no stranger to the language held in this city—'Our darling's resignation is owing to Lord Bute, and he must answer for all the consequences.'" The king, too, felt unpleasant forebodings. He showered kind words upon the retiring statesman, and offered to confer a title of honor upon him, but it was then declined. He accepted for his wife the honorary title of Baroness of Chatham, with a pension for her, her husband, and their eldest son of \$15,000 a year. In 1766 he was created Viscount Pitt and Earl of Chatham, and was then called to the head of public affairs. He formed a cabinet of heterogeneous materials, which Burke wittily described as "a piece of diversified mosaic, a tessellated pavement without cement—here a bit of black stone, there a bit of white—patriots and con-

tiers, king's friends and republicans, Whigs and Tories, treacherous friends and open enemies—a very curious show, but utterly unsafe to touch and unsure to stand upon." Pitt's elevation to the peerage injured his popularity. Chesterfield said, "Pitt has gone to the hospital of incurable statesmen"—the House of Lords.

**Chatham's Conciliation Scheme.** After long absence from Parliament, the Earl of Chatham (William Pitt) appeared early in the year 1775, and proposed an address to the king advising the recall of the troops from Boston. It was rejected; but petitions for conciliation flowed in from all the great trading and manufacturing towns in the kingdom, for they felt the severe pressure of the operations of the American Association (which see). In February, 1775, Chatham brought forward a bill which required a full acknowledgment on the part of the colonists of the supremacy and superintending power of Parliament, but provided that no tax should ever be levied on the Americans except by consent of the colonial assemblies. It also contained a provision for a congress of the colonies to make the required acknowledgment; and to vote, at the same time, a free grant to the king of a certain perpetual revenue, to be placed at the disposal of Parliament. It was rejected, two to one, at the first reading. (See *Peace Commissioners*.)

**Chattahoochee, PASSAGE OF THE.** On the morning of July 3, 1864, General Johnston's Confederate army passed in haste through Marietta, Ga., and on towards the Chattahoochee River, a deep and rapid stream, closely followed by Sherman with the National army, who hoped to strike his antagonist a heavy blow while he was crossing that stream. By quick and skillful movements, Johnston passed the Chattahoochee without much molestation and made a stand behind intrenchments on its left bank. Again Sherman made a successful flanking movement. Howard laid a pontoon bridge two miles above the ferry where the Confederates crossed. Demonstrations by the rest of the Nationals made Johnston abandon his position and retreat to another that covered Atlanta. The left of the Confederates rested on the Chattahoochee and their right on Peach-Tree Creek. There the two armies rested some time. On July 10, or sixty-five days after Sherman put his army in motion southward, he was master of the country north and west of the river on the banks of which he was reposing—nearly one half of Georgia—and had accomplished the chief object of the campaign, namely, the advancement of the National lines from the Tennessee to the Chattahoochee.

**Chattanooga abandoned by the Confederates (1863).** The Army of the Cumberland, under Rosecrans, after crossing the Cumberland Mountains in pursuit of the Confederates under Bragg, was stretched along the Tennessee River from a point above Chattanooga a hundred miles westward. Rosecrans determined to cross that stream at different points and, closing around Chattanooga, attempt to crush or starve the Con-

federate army there. General Hazen was near Harrison's, above Chattanooga (Aug. 20). He had made slow marches, displaying camp-fires at different points, and causing the fifteen regiments of his command to appear like the advance of an immense army. On the morning of Aug. 21 National artillery under Wilder, planted on the mountain-side across the river, opposite Chattanooga, sent screaming shells over that town and among Bragg's troops. The latter was startled by a sense of immediate danger; and when, soon afterwards, Generals Thomas and McCook crossed the Tennessee with their corps and took possession of the passes of Lookout Mountain on Bragg's flank, and Crittenden took post at Wauhatchie, in Lookout Valley, nearer the river, the Confederates abandoned Chattanooga, passed through the gaps of Missionaries Ridge, and encamped on Chickamauga Creek, near Lafayette, in northern Georgia, there to meet expected National forces when pressing through the gaps of Lookout Mountain and threatening their communications with Dalton and Resaca. From the lofty summit of Lookout Mountain Crittenden had seen the retreat of Bragg. He immediately led his forces into the Chattanooga Valley and encamped at Ross's Gap, in Missionaries Ridge, within three miles of the town.

Chauncey, ISAAC, was born at Black Rock, Conn., Feb. 20, 1772; died in Washington, Jan. 27, 1840. In early life he was in the merchant service, and commanded a ship at the age of nineteen years. He made several voyages to the East Indies in the ships of J. J. Astor. In 1798 he was made a lieutenant of the navy, and was acting captain of the *Chesapeake* in 1802. He became master in May, 1804, and captain in 1806. During the War of 1812-15 he was in

ISAAC CHAUNCEY.

command of the American naval force on Lake Ontario, where he performed efficient service. After that war he commanded the Mediterra-

nean squadron, and, with Consul Shaler, negotiated a treaty with Algiers. In 1820 he was naval commissioner at Washington, and the same from 1833 until his death. Commodore Chauncey's remains were interred in the Con-

CHAUNCEY'S MONUMENT.

gressional Burying-ground at Washington, and at the head of his grave stands a fine white-marble monument, suitably inscribed.

**Cherokee Alphabet.** A native Cherokee (Se-quoy-ah), whom the white people called George Guess, and who was ignorant of any language but his own, seeing books in the missionary-schools, and being told that the characters represented the words of the spoken English language, conceived the idea of forming a written language for his people. He first made a separate character for each word. But this made the whole matter too voluminous, and he made a syllabic alphabet of eighty-five characters. It was soon ascertained that this was sufficient, even for the copious language of the Cherokees.

**Cherokee Towns Burned (1781).** The Cherokees having made a hostile incursion into the Ninety-six District, in South Carolina, murdered some families, and burned several houses, General Andrew Pickens, at the head of about four hundred mounted militia, penetrated into their country, and, in fourteen days, burned thirteen towns and villages, killed more than forty barbarians, and took a number of prisoners, without losing a man.

**Cherokee War.** While the Cherokees who accompanied the expedition against Fort Duquesne in 1758 were returning home along the mountains on the western borders of Virginia

and the Carolinas, they quarrelled with the settlers, and several white men and Indians were killed. Some Cherokee chiefs were sent to Charleston to arrange the dispute, when they were treated almost with contempt by the governor of South Carolina. This was soon followed by an invasion of the Cherokee country by Governor Littleton (October, 1759) with 1500 men, contributed by Virginia and the Carolinas, who demanded the surrender of the murderers of the English. He found the Cherokees ready for war, and was glad to make the insubordination of his soldiers and the prevalence of small-pox among them an excuse for leaving the country. He accepted twenty-two Indian hostages as security for peace and the future delivery of the murderers, and retired in haste and confusion (June, 1760). These hostages, which included several chiefs and warriors, were placed in Fort St. George, at the head of the Savannah River. The Cherokees attempted their rescue as soon as Littleton and his army had gone. A soldier was wounded, when his companions, in fiery anger, put all the hostages to death. The Cherokee nation was aroused by the outrage. They beleaguered the fort, and war-parties scourged the frontiers. The Assembly of South Carolina voted 1000 men and offered £25 for every Indian scalp. North Carolina voted a similar provision, and authorized the holding of Indian captives as slaves. General Amherst, petitioned for assistance, detached 1200 men, chiefly Scotch Highlanders, for the purpose, under Colonel Montgomery, with orders to chastise the Cherokees, but to return in time for the next campaign against Canada. Montgomery left Charleston early in April, with regular and provincial troops, and laid waste a portion of the Cherokee country. They were not subdued. The next year Colonel Grant led a stronger force against them, burned their towns, desolated their fields, and killed many of their warriors. Then the Indians humbly sued for peace (June, 1761), and were ever afterwards comparatively quiet.

**Cherokees.** This Indian nation, inhabiting the hilly regions of Georgia, Western Carolina, and Northern Alabama, were called the Mountaineers of the South. They were among high hills and fertile valleys, and have ever been more susceptible of civilization than any of the Indian tribes within the domain of the United States. They were the determined foes of the Shawnoese, and, after many conflicts, drove those fugitives back to the Ohio. They united with the Carolinians and Catawbias against the Tuscaroras in 1711, but joined the great Indian league against the Carolinians in 1715. The Cherokees and the Five Nations had bloody contests for a long time; but the English effected a reconciliation between them about the year 1750, when the Cherokees became the allies of the British against the French, and allowed the former to build forts on their domain. About that time they were at the height of their power, and inhabited sixty-four villages along the streams; but soon afterwards nearly one half the population were swept off

by the small-pox. The Cherokees assisted in the capture of Fort Duquesne in 1758; but their unruly conduct on the borders of Virginia caused collisions between them and the white settlers, and some of the Cherokees were slain. They retaliated by desolating the frontiers of Virginia and the Carolinas, and for three years a war between the races ensued. Peace was permanently established in 1761. During the Revolution the Cherokees adhered to the British, but were afterwards reconciled to the Americans by treaties made in 1785 and 1791. They were friends of the United States in the War of 1812, and helped to subjugate the Creeks. Civilization took root among them and produced contentment, a portion of them wishing to adhere to their former mode of living, while others wished to engage in the industries of civilized life. They were so absolutely divided in sentiment that in 1818 a portion of the nation emigrated to wild land assigned to them west of the Mississippi. The Cherokees, in turn, had ceded large portions of their lands, and their domain was mostly confined to northern Georgia. They were then making rapid progress in civilization; but the Georgians coveted their lands, and insisted upon their removal beyond the Mississippi. Finally, in 1838, they were all (twenty-seven thousand) removed to a reservation (now known as the Indian Territory) west of Arkansas, excepting about one thousand, who remained, undisturbed, in North Carolina. A feud that had long existed among them was healed in 1839, and they lived harmoniously and prospered until a portion of them were seduced by agents of the "Confederates" in the late Civil War to take up arms against the government. It was a disastrous movement. Their country was ravaged, and losses amounting to full two million dollars were incurred. Their slaves were emancipated, and they were required to give a portion of their lands to the freedmen among them. The Cherokees now number about fifteen thousand souls, and their share of the Indian Territory comprises about five million acres, of which two thirds is unfitted for cultivation. The Cherokee nation is divided into seven families, or clans, and, as among the Iroquois, members of the same family are not allowed to intermarry.

**Cherokees and Georgians.** At the beginning of the administration of President Jackson the Georgians renewed their demand for the removal of the Cherokee nation from their state. The Cherokees were yet powerful in numbers, and were then considerably advanced in the arts and customs of civilization. They had churches and schools and a printing-press, issuing a newspaper; and they were disposed to defend their rights against the encroachments of their white neighbors. President Jackson favored the Georgians, and the white people then proceeded to take possession of the lands of the Cherokees. Trouble ensued, and the southern portion of the republic was menaced with civil war for a while. The United States troops had been withdrawn from Geor-

gia, and the national government offered no obstacle to the forcible seizure of the Indian territory by the Georgians. Some missionaries laboring among the Cherokees were arrested and imprisoned for residing in their country contrary to the laws of the state, and for refusing to take an oath of allegiance to Georgia. The Cherokees then numbered between fourteen and fifteen thousand east of the Mississippi. The matter in dispute was adjudicated by the Supreme Court of the United States, and on March 30, 1832, that tribunal decided against the claims of the Georgians. The Georgians, still favored by the President, resented this decision. An amicable settlement was finally arrived at; and, in 1838, under the mild coercion of Major-general W. Scott and several thousand troops, the Cherokees left their beautiful country in Georgia with sorrow, and went to wild lands assigned them, well towards the eastern slopes of the Rocky Mountains, where they yet remain, with Choctaws, Creeks, and others for their neighbors. Again the swelling tide of westward-flowing civilization is beating against their borders. (See *Indian Territory*.)

**Cherokees and the Civil War.** John Ross, the renowned principal chief of the Cherokees, who had led them wisely for almost forty years, took a decided stand against the Secessionists. He issued a proclamation (May 17, 1861), in which he reminded his people of their treaty obligations with the United States, and urged them to be faithful to them, and to take no part in the stirring events of the day. But he and his loyal associates among the Cherokees and Creeks were overborne by the tide of secession and insurrection, and were swept on, powerless, by the current. The betrayal of the United States troops by General Twiggs into the hands of the Texas authorities left their territory on the side of that state open to invasion. False rumors continually disturbed them. Their neighbors, and the wild tribes on their borders, were rallying to the standard of the Confederates. The National troops in Missouri could not check the rising insurrection there. The chief men of the Cherokees held a mass-meeting at Tahlequah in August, when, with great unanimity, they declared their allegiance to the "Confederate States." Ross still held out, but was finally compelled to yield. At a council held on Aug. 20, he recommended the severance of the connection with the National government. Ross's wife, a young and well-educated woman, still held out; and when an attempt was made to raise a Confederate flag over the council-house, she opposed the act with so much spirit that the Secessionists desisted. During the Civil War the Cherokees suffered much. The Confederates would not trust Ross, for his Union feelings were very apparent. When, in 1862, they were about to arrest him, he and his family escaped to the North, and resided in Philadelphia for a while.

**Cherokees, END OF WAR WITH THE.** In 1761 a new expedition was made into the country of the hostile Cherokees by a Highland regiment

under Colonel Grant. The Indians were subdued, and humbly sued for peace. This was granted on the sole condition that they should bring four warriors to be shot at the head of the English army, or furnish four green Indian scalps, within twenty days. An old chief, long known for his attachment to the English, personally applied to Governor Bull and procured a relinquishment of this barbarous demand. Peace was established without further bloodshed.

**Cherokees, TREATY WITH THE (1721).** When, early in 1721, Governor Francis Nicholson arrived in South Carolina, he proceeded to take measures for securing the peace of the colony. He tried to cultivate the good-will of the Spaniards and Indians in Florida. He also held a conference with the chiefs of thirty-seven different cantons of Cherokees. He gave them presents, smoked with them the pipe of peace, marked the boundaries of the lands between them and the English settlers, regulated weights and measures, and appointed an agent to superintend their affairs. He then concluded a treaty of commerce and peace with the Creeks.

**Cherokees, TREATY WITH THE (1730).** About the year 1730 the projects of the French for uniting Canada and Louisiana by a cordon of posts through the Ohio and Mississippi valleys began to be developed. To counteract this scheme, the British wished to convert the Indians on the frontiers into allies or subjects, and, to this end, to make with them treaties of union and alliance. The British government accordingly sent out Sir Alexander Cumming to conclude such a treaty with the powerful Cherokees on the western border of South Carolina. They occupied the region about the head-waters of the Savannah River and back among the mountains; and it was estimated that they could then put six thousand warriors in the field. In April, 1730, Sir Alexander met the chief warriors of all the Cherokee towns in council; informed them by whose authority he was sent; demanded from them an acknowledgment of King George as their sovereign, and a promise of their obedience to his authority. The chiefs, falling on their knees, promised fidelity and obedience. By their consent, Sir Alexander nominated Moytoy, one of their best leaders, commander-in-chief of the Cherokee Nation. They brought a rube crown, five eagles' tails, and four scalps of their enemies to Sir Alexander, and desired him to lay them at the feet of the king when he should return to England. Six of the chiefs went to England with Sir Alexander, and, standing before his majesty, they promised, in the name of their nation, eternal fidelity to the English. A treaty was drawn up and signed by the Secretary to the Lords Commissioners of Trade and Plantations (which see) on one side, and to which the marks and tokens of the chiefs were affixed. The chiefs were amazed at the magnificence of the British court and nation. They said: "We came hither naked and poor as the worms of the earth; but you have everything; and we that have

nothing must love you, and will never break the chain of friendship which is between us." They returned to Carolina with Robert Johnson, who came with a commission as governor.

**Cherokees, TREATY WITH THE (1785).** By a treaty concluded at Hopewell, on the Keowee, between the United States Commissioners and the head men and warriors of all the Cherokees, these barbarian representatives, for themselves and their respective tribes and towns, acknowledged all the Cherokees to be under the protection of the United States. The boundaries of their hunting-grounds were settled; several mutual and pacific conditions were agreed upon; and a solemn pledge was made that "the hatchet should be buried," and that the peace re-established should "be universal."

**Cherokees, WAR WITH THE (1776).** The Cherokees seriously threatened the frontier of South Carolina in 1776. As these Indians were the dread of the frontier settlers of Georgia, North Carolina, and Virginia, these three states joined in the defence of South Carolina. Colonel Andrew Williamson led an expedition into the Cherokee country, destroyed all their settlements eastward of the Appalachian Mountains, and effectually brought the natives to submission. This conquest was effected between July 15 and Oct. 11, 1776. A military work named Fort Rutledge was erected in the Cherokee country and garrisoned by two independent companies.

**Cherry Valley, MASSACRE AT.** During a heavy storm of sleet on Nov. 11, 1778, a band of Indians and Tories—the former led by Brant, and the latter by Walter N. Butler, son of Colonel John Butler—fell upon Cherry Valley, Otsego Co., N. Y., and murdered thirty-two of the inhabitants, mostly women and children, with sixteen soldiers of a little garrison there. Nearly forty men, women, and children were carried away captives. Butler was the archfiend on this occasion, and would listen to no appeals from Brant for mercy on the innocent and helpless. The captives were led away in the darkness and a cold storm; and when they rested they were huddled together, half naked, with no shelter but the leafless trees, and no resting-place but the wet ground.

**Chesapeake and Leopard, THE.** In the spring of 1807 a small British squadron lay (as they had lately) in American waters, near the mouth of Chesapeake Bay, watching some French frigates blockaded at Annapolis. Three of the crew of one of the British vessels (*Melampus*) and one of another (*Halifax*) had deserted, and enlisted on board the United States frigate *Chesapeake*, lying at the Washington navy-yard. The British minister made a formal demand for their surrender. The United States government refused compliance, because it was ascertained that two of them (colored) were natives of the United States, and there was strong presumptive evidence that the third one was, likewise. The commodore of the British squadron took the matter into his own hands. The *Chesapeake*,

going to sea on the morning of June 22, 1807, bearing the pennant of Commodore Barron, was intercepted by the British frigate *Leopard*, whose commander, hailing, informed the commodore that he had a despatch for him. A British boat bearing a lieutenant came alongside the *Chesapeake*. The officer was politely received by Barron, in his cabin, when the former presented a demand from the captain of the *Leopard* to allow the bearer to muster the crew of the *Chesapeake*, that he might select and carry away the alleged deserters. The demand was authorized by instructions received from Vice-admiral Berkeley, at Halifax. Barron refused compliance, the lieutenant withdrew, and the *Chesapeake* moved on. The *Leopard* followed, and her commander called out through his trumpet, "Commodore Barron must be aware that the vice-admiral's commands must be obeyed." This insolent announcement was repeated. The *Chesapeake* moved on, and the *Leopard* sent two shots athwart her bow. These were followed by the remainder of the broadside, poured into the hull of the *Chesapeake*. Though Barron, suspecting mischief, had hastily tried to prepare his ship for action, he was unable to return the shots, for his guns had no priming-powder. After being severely injured by repeated broadsides, the *Chesapeake* struck her colors. The vice-admiral's command was obeyed. The crew of the *Chesapeake* were mustered by British officers, and the deserters were carried away; one of them, who was a British subject, was hung at Halifax, and the lives of the Americans were spared only on condition that they should re-enter the British service. This outrage caused fiery indignation throughout the United States. The President issued a proclamation, at the beginning of July, ordering all British armed vessels to leave the waters of the United States, and forbidding any to enter until ample satisfaction should be given. A British envoy extraordinary was sent to Washington to settle the difficulty. Instructed to do nothing until the President's proclamation should be withdrawn, the matter was left open more than four years. In 1811 the British government disavowed the act. Barron, found guilty of neglect of duty in not being prepared for the attack, was suspended from the service for five years, without pay or emolument.

**Chesapeake and Shannon.** While the *Hornet*, Captain Lawrence, was on her homeward-bound voyage with her large number of prisoners (see *Hornet and Peacock*), the *Chesapeake*, 38 guns, Captain Evans, was out on a long cruise to the Cape de Verd Islands and the coast of South America. She accomplished nothing except the capture of four British merchant vessels; and as she entered Boston harbor in a gale her topmast was carried away, and with it several men who were aloft, three of whom were drowned. Among the superstitious sailors she acquired the character of an "unlucky" ship, and they were loath to embark in her. Evans was compelled to leave her on account of the loss of the sight of one of his eyes; and Lawrence, who had been promoted to captain

for his bravery, was put in command of her, with the *Hornet*, Captain Biddle, as her consort. At the close of May the British frigate *Shannon*, 38 guns, Captain Philip Bowes Vere Broke, appeared off Boston harbor, in the attitude of a challenger. She then carried 52 guns. He wrote to Lawrence, requesting the *Chesapeake* to meet the *Shannon*, "ship to ship, to try the fortunes of their respective flags." He assured Lawrence that the *Chesapeake* could not leave Boston without the risk of being "crushed by the superior force of the British squadron," then abroad, and proposed that they should meet in single combat, without the interference of other vessels. Lawrence accepted the challenge, and, with Lieutenant Augustus Ludlow as second in command, he sailed out of Boston harbor to meet the *Shannon*, at midday, June 1, 1813. The same evening, between five

the dying hero, slightly paraphrased to "Don't give up the ship," became the battle-cry of the Americans, and the formula of an encouraging maxim in morals for those who are struggling in life's contests. Broke's boarders now swarmed upon the deck of the *Chesapeake*, and Lieutenant Ludlow, the second in command, was mortally wounded by a sabre cut. After a severe struggle, in which the Americans lost, in killed and wounded, one hundred and forty-six men, victory remained with the *Shannon*. The British lost eighty-four men. Broke sailed immediately to Halifax with his prize, and the day before his arrival there (June 7) Lawrence expired, wrapped in the flag of the *Chesapeake*. England rang with shouts of exultation because of this victory. An American writer remarked: "Never did any victory—not even of Wellington in Spain, nor those of Nelson—

THE SHANNON AND CHESAPEAKE ENTERING THE HARBOR OF HALIFAX.

and six o'clock, they engaged in a close conflict. After fighting twelve minutes, the *Shannon* so injured the spars and rigging of the *Chesapeake* that she became unmanageable. This misfortune occurred at the moment when the latter was about to take the wind out of the sails of her antagonist, shoot ahead, lay across her bow, rake her, and probably secure a victory. Her mizzen rigging was entangled in the fore-chains of the *Shannon*, in which position the decks of the *Chesapeake* were swept with terrible effect by the balls of her antagonist. Lawrence ordered his boarders to be called up. There was some delay, when a musket-ball mortally wounded the gallant young commander, and he was carried below. As he left the deck he said, "Tell the men to fire faster, and not to give up the ship; fight her till she sinks." These words of

call forth such expressions of joy on the part of the British;" a proof that our naval character had risen in their estimation. Lawrence fought under great disadvantages. He had been in command of the ship only about ten days, and was unacquainted with the abilities of her officers and men; some of the former were sick or absent. His crew were almost mutinous because of disputes concerning prize-money, and many of them had only recently enlisted; besides, the feeling among the sailors that she was an "unlucky" ship was disheartening. The remains of Lawrence and Ludlow were conveyed to Salem, Mass., where funeral honors were paid to them on Aug. 23. Early in September they were conveyed to New York, and were deposited (Sept. 16) in Trinity church-yard. The corporation of the city of New York erected a marble

monument to Lawrence, which, becoming dilapidated, the vestry of Trinity Church erected a handsome mansoleum of brown freestone (1847), near the southeast corner of Trinity Church, close by Broadway, in commemoration of both Lawrence and Ludlow, and eight trophy canons were placed around it. The freedom of the city

taken to England and sold to the government for about \$66,000, and in 1814 was put in commission. In 1820 she was sold to a private gentleman for a very small sum, who broke her up and sold her timbers for building purposes, much of it for making houses in Portsmouth, and a considerable portion for the erection of a

SILVER PLATE PRESENTED TO CAPTAIN BROKE.

of London and a sword were given to Captain Broke by the corporation; the Prince Regent knighted him; and the inhabitants of his native county (Suffolk) presented him with a gorgeous piece of silver as a testimonial of their sense of his eminent services.\* The *Chesapeake* was

mill at Wickham, nine miles from Portsmouth. The mill was standing in 1824. (See sketch of the *Chesapeake and Shannon*, by Rear-admiral Preble, in the *United Service*, October, 1879.)

Chester, JOSEPH LEMUEL, LL.D., was born at Norwich, Conn., April 30, 1821; died May 26, 1882. He began business life as a merchant in

\* The devices on the plate are described as follows: "The centre, enriched with a wreath of palm and laurel leaves, with groups of Nereids and Tritons, presents the spectacle of the battle between the *Shannon* and *Chesapeake*. A deep and highly finished border composes the exterior of the circle, in which are significant devices in four principal divisions. In the first compartment, in the form of an escalop-shell, is seen Neptune receiving the warrior. The farmer is issuing from the sea with his attendants, and presenting to the hero (who is borne in a triumphal car, attended by Britannia and Liberty bearing the British flag) the naval coronet. In the compartment opposite, Britannia is seen on a sea horse, holding the trident of Neptune in one hand, and with the other

hurling the thunder of her power at the American eagle, which is expiring at her feet in the presence of ocean deities. In a third compartment the device represents the triumph of Victory. The winged goddess, bearing a coronal, approaches in her shell-car drawn by ocean steeds, and offers peace to the vanquished. In the fourth compartment are represented the four quarters of the world, in the form of figures assembled under the protection of the British lion, commerce having been secured to the world by British prowess. Besides these are the figures of Fortitude, Justice, Wisdom, and Peace, intended to represent the characteristics of the British nation."

Philadelphia, in which pursuit he was engaged many years. Meanwhile he was a frequent contributor to literary publications, and the newspaper press often contained essays from his pen upon a variety of subjects. In 1843, when he was only twenty-two years of age, he published a small volume entitled *Greenwood Cemetery and other Poems*. His literary contributions were generally over the signature of "Julian Cramer." In 1853 he published *A Preliminary Treatise on the Law of Repulsion*, and, the next year, *Educational Laws of Virginia; the Personal Narrative of Mrs. Margaret Douglas*. The same year he published *John Rogers*, with a genealogy of the family. In 1858 Mr. Chester went to London, where he was soon recognized as an acute genealogist and most industrious antiquary. For ten years he was engaged in editing and annotating *The Marriage, Baptismal, and Burial Registers of the Collegiate Church, or Abbey, of St. Peter, Westminster* (Westminster Abbey). It was undertaken at the suggestion of Dean Stanley. More than one half of the six hundred royal octavo pages of the work is made up of biographical notes and personal identifications by the editor. It was published in 1876. In 1859 Mr. Chester assisted in forming, in London, the "Harleian Society," for the publication of unedited MSS. relating to genealogy, heraldry, etc. In 1870 he was made one of the council of the "Historical Society of Great Britain." In 1877 he received the degree of LL.D. from the faculty of Columbia College, N. Y., and, in 1881, the University of Oxford conferred on him the degree of D.C.L. He was a frequent contributor to various historical and genealogical publications, and an honorary member of several learned societies in England and America. A tablet to his memory has been placed in Westminster Abbey, among the antiquities of which he had so long searched.

**Cheves, LANGDON, LL.D.**, statesman, was born in Abbeville District, S. C., Sept. 17, 1776; died at Columbia, S. C., June 25, 1857. Admitted to the bar in 1800, he became eminent as a lawyer and a leader in the State Legislature, which he entered in 1808. He was attorney-general of the state, and was in Congress from 1811 to 1816, zealously supporting all war measures. When, in 1814, Henry Clay was sent to negotiate a treaty of peace with Great Britain, he succeeded the Kentuckian as Speaker of the House, which position he held for a year, his casting vote defeating a bill for the rechartering of the United States Bank. It was rechartered in 1816; and when in trouble in 1819 Cheves was appointed president of its directors, and by his energy and judgment it was saved from dissolution. He became chief commissioner under the treaty of Ghent for settling some of its provisions. He was a public advocate of disunion as early as 1830, but opposed "nullification" (which see).

**Cheyennes.** This is one of the most westerly tribes of the Algonquin nation. They were seated on the Cheyenne, a branch of the Red River of the North. Driven by the Sioux, they

retreated beyond the Missouri. Near the close of the last century they were driven to or near the Black Hills, where Lewis and Clarke found them in 1804, when they possessed horses and made plundering raids as far as New Mexico. About 1825, when they were at peace with the Sioux, and making war upon the Pawnees, Kansas, and other tribes, a feud occurred in the family. A part of them remained with the Sioux, and the others went south to the Arkansas River and joined the Arrapahoes. Many treaties were made with them by agents of the United States, but broken; and, finally, losing all confidence in the honor of the white race, they began hostilities in 1861. This was the first time that the Cheyennes were at war with the white people. While negotiations for peace and friendship were on foot, Colonel Chivington, of Colorado, fell upon a Cheyenne village (Nov. 29, 1864) and massacred about one hundred men, women, and children. The whole tribe was fired with a desire for revenge, and a fierce war ensued, in which the United States lost many gallant soldiers and wasted between \$30,000,000 and \$40,000,000. The ill-feeling of the Indians towards the white people remained unabated. Some treaties were made and imperfectly carried out; and, after General Hancock burned one of their villages in 1867, they again made war, and slew three hundred United States soldiers and settlers. General Custer defeated them on the Washita, killing their chief, thirty-seven warriors, and two thirds of their women and children. The northern band of the Cheyennes remained peaceable, refusing to join the Sioux against the white people, in 1865, notwithstanding they were grossly insulted. The Cheyennes now are scattered and mixed with the Arrapahoes, and number, in the aggregate, about three thousand five hundred. This is a trifle more than they numbered fifty years ago.

**Chicago.** The site of Chicago (west side of Lake Michigan) was a favorite rendezvous for several tribes of Indians in summer. Its name signifies, in the Pottawatomic tongue, wild onion, or a polecat, both of which abounded in that region. Of the skin of the polecat the Indians made tobacco-pouches. The spot was first visited by Marquette, a French Jesuit missionary, in 1673, who encamped there in the winter of 1674-75. (See *Marquette*.) The French built a fort there, which is marked on a map, in 1683, "Fort Checagou." When Canada was ceded to Great Britain this fort was abandoned. The United States government built a fort there in 1804, and named it Dearborn, in honor of the Secretary of War. It was on the south side of the Chicago River, near its mouth. It was a noted trading station. This fort was evacuated by its garrison in 1812, when the troops and other white inhabitants there were fallen upon by hostile Indians and many people murdered—Aug. 15. (See *Chicago, Massacre at*.) The fort was re-established in 1816, and was occupied until 1837. The last vestige of it—a block-house—was demolished in 1856. A town was laid out near the fort in 1830, which embraced three eighths of a square mile. In 1831 it com-

prised twelve families, besides the little garrison of Fort Dearborn. The town was organized in 1833, with five trustees, when it contained 550 inhabitants. It was incorporated a city March 4, 1837, when it contained a population of 4170. Its growth has since been marvellous; in 1880 it had a population of 503,185.

was 100,000,000 bushels, consisting of wheat, say 15,000,000 bushels; Indian corn, at least 55,000,000 bushels; oats, full 20,000,000 bushels; and rye, barley, and flour. The total amount of breadstuffs shipped from there in 1875 was about 90,000,000 bushels. A vast number of hogs are slaughtered and packed in Chicago.

BLOCK-HOUSE AT CHICAGO.

**Chicago as a Food-Centre.** Chicago was first surveyed for a village in 1829. In 1840 its population was 4853; in 1880 its population was more than 503,000. It is the focus of a vast railway system, and is the greatest food-centre in the world. It connects with fully 12,000 miles

**Chicago, MASSACRE AT.** On the site of the city of Chicago, in 1812, were Fort Dearborn, the dwelling of Mr. Kinzie, an Indian trader from Quebec (on the north side of the river), and the huts of a few settlers. The garrison of the fort was commanded by Captain N. Heald, assisted

KINZIE MANSION AND FORT DEARBORN.

of railroad, all tributary to Chicago, which make an annual profit of over \$40,000,000, out of more than \$100,000,000 of receipts. No less than three hundred and fifty trains enter and leave Chicago daily. The total receipt of breadstuffs in 1870

by Lieutenant Helm. The young wives of both officers were in the fort. The garrison and the family of Mr. Kinzie were on friendly terms with the surrounding Indians, until the spring of 1812, when the hostile feelings created by

British emissaries first became slightly manifest. A scalping party of Winnebagoes made a raid on a settlement near Chicago in April, and during the early part of the ensuing summer the inhabitants saw, with alarm, the continual gathering of Indians near. On Aug. 7 a friendly Pottawatomie chief arrived with a letter from General Hull, notifying Heald of the declaration of war and fall of Mackinaw, and advising him, if expedient, to evacuate the fort and distribute all the United States property there among the neighboring Indians. Heald was advised by this chief and by Kinzie to leave the fort and let the Indians distribute the property themselves. "While they are doing this," they said, "you and the white people may reach Fort Wayne in safety." Heald, soldier-like, resolved to obey his orders. He called them to a council the next day (Aug. 12), told them to come and receive the property, and accepted their offer to escort the white people through the wilderness to Fort Wayne. It was a fatal mistake, soon perceived. Black Partridge, a friendly chief, unable to control his warriors, came quietly to the commander, and said, "Father, I come to deliver to you the medal I wear. It was given

armed with a rifle. They had not gone far when their savage escort, five hundred strong, fell upon them, and a sharp and bloody conflict ensued. Rebecca Heald behaved bravely. She received several wounds, but, though bleeding and faint, she kept her saddle; and when a fierce savage raised his tomahawk to slay her, she said, in a sweet voice, in his own language, and with half a smile, "Surely you'll not kill a squaw!" The appeal saved her life, and she lived until the year 1860. A young savage attempted to tomahawk Mrs. Helm. She sprang to one side, receiving the blow on her shoulder, and at the same instant seized the barbarian around his neck and endeavored to get hold of his scalping-knife. While thus struggling, she was dragged from her antagonist by another Indian, who bore her to the shore of the lake and plunged her in, at the same time saving her from drowning. It was a friendly hand that held her—the Pottawatomie chief Blackbird, who would have saved the white people if he could. He gave Captain Heald such warning as he dared. On the night before the evacuation of the fort he had said to him, "Linden birds have been singing in my ears to-day; be careful on the march

THE BLACK PARTRIDGE MEDAL

me by the Americans, and I have long worn it in token of our mutual friendship. But our young men are resolved to imbrue their hands in the blood of the white people. I cannot restrain them, and I will not wear a token of peace while I am compelled to act as an enemy." This warning was strangely unheeded. The less honorable Indians promised good conduct, but there were unmistakable signs of treachery, and when the morning arrived for the departure of the white people (Aug. 15), it was clearly seen that the barbarians intended to murder them. With that conviction, the garrison and white settlers went out of the gate of the fort in procession, like a funeral march. The band struck up the "Dead March in Saul." The wives of Heald and Helm rode on horseback by the side of their husbands; the former, a good shot, was

you are going to take." On that bloody field, now in the suburbs of the great city of Chicago, other women performed acts of heroism. Meanwhile, Captain Heald had made terms for surrender, and the massacre was stayed. The prisoners were distributed among the captors, and were finally reunited or restored to their friends and families. In this affair, twelve children, who were in a wagon, all the masculine civilians excepting Mr. Kinzie and his sons, three officers, and twenty-six private soldiers were murdered. On the following day the fort was burned by the Indians. Among the slain was Captain Wells, Mrs. Heald's uncle, who came from Fort Wayne with some mounted Miami who were friendly. He knew the danger, and had hastened to attempt to divert it. He was too late, for the fort was abandoned when he

arrived. His cowardly Miamis fled at the first onset of the Pottawatomies, and he was crushed by overwhelming numbers.

**Chickahominy, McCLELLAN ON THE.** The General pressed forward from the "White House," on the Pamunkey, to Cool Arbor, near the Chickahominy River, where he made his headquarters, within nine miles of Richmond. General Casey's division of General Keyes's corps crossed the river, and occupied the heights on the Richmond side of the stream, supported by troops under General Heintzelman. Along the line of the Chickahominy the National and Confederate armies lay, confronting each other, at the close of May, 1862, separated by a narrow, sluggish stream, liable to a sudden overflow of its banks and filling the adjacent swamps. There the two commanders waited for decisive results in the Shenandoah Valley, each expecting reinforcements from that region.

**Chickamauga, BATTLE OF (1863).** Rosecrans, erroneously supposing Bragg had begun a retreat towards Rome when he abandoned Chattanooga and marched southward through the gaps of Missionaries Ridge, pushed his forces through the mountain passes, and was surprised to find his antagonist, instead of retreating, concentrating his forces to attack the attenuated line of the Nationals, the extremities of which were then fifty miles apart. Rosecrans proceeded at once to concentrate his own forces; and very soon the two armies were confronting each other in battle array on each side of Chickamauga Creek, in the vicinity of Crawfish Spring, each line extending towards the slope of Missionaries Ridge. Rosecrans did not know that Lee had sent troops from Virginia, under Longstreet, to reinforce Bragg, and who was then making his way up from Atlanta to swell the Confederate forces to the number of full 70,000. Johnston, in Mississippi, also sent thousands of prisoners, paroled at Vicksburg and Port Hudson, to still further reinforce Bragg. In battle order on Chickamauga Creek (Sept. 19, 1863), the Confederate right was commanded by General Polk, and the left by General Hood until Longstreet should arrive. During the previous night nearly two thirds of the Confederates had crossed to the west side of the creek, and held the fords from Lee and Gordon's mills far towards Missionaries Ridge. Rosecrans's concentrated army did not then number more than 55,000 men. General George H. Thomas, who was on the extreme left of the National line, on the slopes of Missionaries Ridge, by a movement to capture an isolated Confederate brigade, brought on a battle (Sept. 19) at ten o'clock, which raged with great fierceness until dark, when the Nationals seemed to have the advantage. It had been begun by Croxton's brigade of Brannan's division, which struggled sharply with Forrest's cavalry. Thomas sent Baird's division to assist Croxton, when other Confederates became engaged, making the odds against the Nationals, when the latter, having driven the Confederates, were in turn pushed back. The pursuers dashed through the lines of United States

regulars and captured a Michigan battery and about 500 men. In the charge all of the horses and most of the men of the batteries were killed. At that moment a heavy force of Nationals came up and joined in the battle. They now outnumbered and outflanked the Confederates, and, attacking them furiously, drove them back in disorder for a mile and a half on their reserves. The lost battery was recovered, and Brannan and Baird were enabled to re-form their shattered columns. There was a lull, but at five o'clock the Confederates renewed the battle, and were pressing the National line heavily, when Hazen, who was in charge of a park of artillery—twenty guns—hastened to put them in position, with such infantry supports as he could gather, and brought them to bear upon the Confederates, at short range, as they dashed into the road in pursuit of the Nationals. The pursuers recoiled in disorder, and thereby the day was saved on the left. Night closed the combat. There had been some lively artillery work on the National right during the day; and at three o'clock in the afternoon Hood threw two of his divisions upon General Davis's division of McCook's corps, pushing it back and capturing a battery. Davis fought with great pertinacity until near sunset, when a brigade of Sheridan's division came to his aid. Then a successful countercharge was made; the Confederates were driven back, the battery was retaken, and a number of Confederates were made prisoners. That night General Hindman came to the Confederates with his division, and Longstreet arrived with two brigades of McLaws's veterans from Virginia, and took command of the left of Bragg's army. Preparations were made for a renewal of the struggle in the morning. It was begun (Sept. 20), after a dense fog had risen from the earth, between eight and nine o'clock. The conflict was to have been opened by Polk at daylight on the National left, but he failed. Meanwhile, under cover of the fog, Thomas received reinforcements, until nearly one half of the army of the Cumberland present were under his command, and had erected breastworks of logs, rails, and earth. The battle was begun by an attack by Breckinridge. The intention was to interpose an overwhelming force between Rosecrans and Chattanooga, which Thomas had prevented the previous day. An exceedingly fierce struggle ensued, with varying fortunes for the combatants. The carnage on both sides was frightful. Attempts to turn the National flank were not successful, for Thomas and his veterans stood like a wall in the way. The conflict for a while was equally severe at the centre; and the blunder of an incompetent staff officer, sent with orders to General Wood, produced disaster on the National right. A gap was left in the National line, when Hood, with Stewart, charged furiously, while Buckner advanced to their support. The charge, in which Davis and Brannan and Sheridan were struck simultaneously, isolated five brigades, which lost forty per cent. of their number. By this charge the National right wing was so shattered that it began crumbling, and was soon seen fly-

ing in disorder towards Chattanooga, leaving thousands behind, killed, wounded, or prisoners. The tide carried with it the troops led by Rosecrans, Crittenden, and McCook; and the commanding general, unable to join Thomas, and believing the whole army would speedily be hurrying pell-mell to Chattanooga, hastened to that place to provide for rallying them there. Thomas, meanwhile, ignorant of the disaster on the right, was maintaining his position firmly. Sheridan and Davis, who had been driven over to the Dry Valley road, rallying their shattered columns, re-formed them by the way, and, with McCook, halted and changed front at Rossville, with a determination to defend the pass at all hazards against the pursuers. Thomas finally withdrew from his breastworks and concentrated his troops, and formed his line on a slope of Missionaries Ridge. Wood and Brannan had barely time to dispose their troops properly, when they were furiously attacked, the Confederates throwing in fresh troops continually. General Granger, commanding reserves at Rossville, hastened to the assistance of Thomas with Steedman's division. The latter fought his way to the crest of a hill, and then turning his artillery upon his assailants, drove them down the southern slope of the ridge with great slaughter. They returned to the attack with an overwhelming force, determined to drive the Nationals from the ridge, and pressed Thomas most severely. Finally, when they were moving along a ridge and in a gorge, to assail his right flank and rear, Granger formed two brigades (Whittaker's and Mitchell's) into a charging party, and hurled them against the Confederates led by Hindman. Steedman led the charging party, with a regimental flag in his hand, and soon won a victory. In the space of twenty minutes the Confederates disappeared, and the Nationals held both the ridge and gorge. Very soon a greater portion of the Confederate army were swarming around the foot of the ridge, on which stood Thomas with the remnant of seven divisions of the army of the Cumberland. The Confederates were led by Longstreet. There seemed no hope for the Nationals. But Thomas stood like a rock, and his men repulsed assault after assault until the sun went down, when he began the withdrawal of his troops to Rossville, for his ammunition was almost exhausted. General Garfield, Rosecrans's chief of staff, had arrived with orders for Thomas to take the command of all the forces, and, with McCook and Crittenden, to take a strong position at Rossville. It was then that Thomas had the first reliable information of disaster on the right. Confederates seeking to obstruct the movement were driven back, with a loss of 200 men made prisoners. So ended the battle of Chickamauga. The National loss was reported at 16,326, of whom 1687 were killed. The total loss of officers was 974. It is probable the entire Union loss, including the missing, was 19,000. The Confederate loss was reported at 20,500, of whom 2673 were killed. Rosecrans took 2003 prisoners, 36 guns, 20 caissons, and 8450 small-arms, and lost, as prisoners, 7500. Bragg claimed to

have captured over 8000 prisoners (including the wounded), 51 guns, and 15,000 small-arms. The Confederates were victors on the field, but their triumph was not decisive. On the evening of the 20th the whole National army withdrew in good order to a position in front of Chattanooga, and on the following day Bragg advanced and took possession of Lookout Mountain and the whole of Missionaries Ridge.

**Chickasaw Bayou, BATTLE OF.** When General W. T. Sherman came down from Memphis to engage in the siege of Vicksburg, late in 1862, with about twenty thousand men and some heavy siege guns, he was joined by troops from Helena, Ark., and was met by a gun-boat fleet, under Admiral Porter, at the mouth of the Yazoo River, just above the city (Dec. 25). The two commanders arranged a plan for attacking Vicksburg in the rear. They went up the Yazoo to capture some batteries at Chickasaw Bayou and other points. The Yazoo sweeps round in a great bend within a few miles of Vicksburg. The range of hills on which Vicksburg stands extends to the Yazoo, about twelve miles above the city, where they terminate in Haines's Bluff. There is a deep natural ditch extending from the Yazoo below Haines's Bluff to the Mississippi, called Chickasaw Bayou, passing near the bluffs, which were fortified, and along their bases were rifle-pits for sharpshooters. This bayou lay in the path of Sherman's march up the bluffs, which must be carried to gain the rear of Vicksburg. His troops moved in four columns, commanded respectively by Generals Morgan, A. J. Smith, Morgan L. Smith, and F. Steele. They moved on Dec. 27, bivouacked without fire that night, and proceeded to the attack the next morning. The Nationals drove the Confederate pickets across the bayou, and everywhere the ground was so soft that causeways of logs had to be built for the passage of troops and artillery. The Nationals were seriously enfiladed by the Confederate batteries and sharpshooters. The right of the Union troops was commanded by General F. P. Blair, who led the way across the bayou over a bridge his men had built, captured two lines of rifle-pits, and fought desperately to gain the crest of the hill before him. Others followed, and a severe battle ensued. Pemberton, the Confederate chief, had arrived, and so active were the Confederates on the bluffs that the Nationals were repulsed with heavy loss. Blair lost one third of his brigade. Darkness closed the struggle, when Sherman had lost about two thousand men, and his antagonists only two hundred and seven.

**Chickasaws.** This tribe of the Creek confederacy inhabited the country along the Mississippi from the borders of the Choctaw domain to the Ohio River, and eastward beyond the Tennessee to the lauds of the Cherokees and Shawnoese. They were warlike, and were the early friends of the English and the inveterate foes of the French, who twice (1736 and 1740) invaded their country under Bienville and De

Noailles. The Chickasaws said they came from west of the Mississippi, under the guardianship of a great dog, with a pole for a guide. At night they stuck the pole in the ground, and went the way it leaned every morning. Their dog was drowned in crossing the Mississippi, and after a while their pole, in the interior of Alabama, remained upright, and there they settled. De Soto passed a winter among them (1540-41), when they numbered ten thousand warriors. These were reduced to four hundred and fifty when the French seated themselves in Louisiana. Wars with the new-comers and surrounding tribes occurred until the middle of the eighteenth century. They favored the English in the Revolution, when they had about one thousand warriors. They joined the white people against the Creeks in 1795, and always remained the friends of the pale faces; and, in 1818, they had ceded all their lands north of the State of Mississippi. Some of the tribe had already emigrated to Arkansas. In 1834 they ceded all their lands to the United States, amounting to over 6,400,000 acres, for which they received \$3,646,000. Then they joined the Choctaws, who spoke the same language, and became a part of that nation. During their emigration the small-pox destroyed a large number of their tribe. They did not advance in civilization as rapidly as the Choctaws, and had no schools until 1851. They were politically separated from the Choctaws in 1855, and have since been recognized as a distinct tribe. Led by their agents, who were Southerner men, they joined the Confederates, and lost nearly one fourth of their population, much stock, and all their slaves. They gave up 7,000,000 acres of land for four and a half cents an acre, and the money was to go to the freedmen, unless within two years they allowed the negroes to become a part of the tribe. The latter alternative was adopted, Jan. 10, 1873. They are now rapidly advancing in prosperity.

**Chickering, JONAS**, was born at Mason Village, N. H., April 5, 1793; died in Boston, Dec. 8, 1853. He learned the trade of a cabinet-maker. Being fond of music, he repaired and put in good condition an old piano which he found in the town, and in 1818 he became a workman in a pianoforte manufactory in Boston. In 1823 he set up business for himself, which was extended by forming a partnership in 1830. After his partner's death, in 1841, he continued the business alone, with ample means, introducing very important improvements in the construction of pianos. His sons were associated with him, and they were selling, at the time of his death, about fifteen hundred pianos a year, and gave employment to five hundred workmen. The establishment having been destroyed by fire, he began building a more extensive one, just before his death, which was completed by his sons. The establishment occupies an entire square in the city of Boston. One of the first improvements made by Mr. Chickering was the substitution of iron for wood in the construction of the piano, made upon true geometric and acoustic principles. This was put into operation about the year 1837.

**Chief-justice, FIRST, OF NEW JERSEY.** Roger Mompesson, an English lawyer—a "good-tempered, honest, sober gentleman"—was made the first chief-justice of New Jersey in 1702. He was also judge of the admiralty for New York, New Jersey, and Pennsylvania; attorney-general and chief-justice of Pennsylvania, and also of New York. Though highly spoken of as a man and a lawyer, he was a mere tool in the hands of Lord Corubury, the Governor of New York and New Jersey.

**China, TREATY WITH (1868).** (See *International Law, First Acceptance of, by China.*)

**Chinooks.** Among the numerous western tribes, the Chinooks in the northwest formed a distinct and interesting nation, but since their contact with the white people they have rapidly decreased. They formerly inhabited the country on each side of the Columbia River from the Grand Dalles to its mouth. The Chinooks proper were on the north side of that stream, and the other division, called Clatsops, were on the south side and along the Pacific coast. Broken into roving bands, they are fading away, and the nation has become almost extinct; and their language, corrupted by French and English traders, is almost obliterated. It was harsh, at the best. There are a very few of them on a reservation in Washington Territory, but these will soon disappear.

**Chippewa, BATTLE OF.** General Brown took prompt measures to secure the advantages derived from the capture of Fort Erie (see *Canada, Invasion of, 1814*); for it was known that General Riall, who was then in chief command on the Niagara frontier, was moving towards Fort Erie. Early in the morning of July 3 he had sent forward some of the Royal Scots to reinforce the garrison. At Chippewa, at the mouth of Chippewa Creek, they heard of the surrender of the fort, when Riall determined to make an immediate attack upon the Americans on Canadian soil. Hearing that reinforcements were coming from York, he deferred the attack until the next morning. To meet this force, General Brown sent forward General Scott with his brigade, accompanied by Towson's artillery, on the morning of the 4th. Ripley was ordered in the same direction with his brigade, but was not ready to move until the afternoon. Scott went down the Canada side of the Niagara River, skirmishing nearly all the way to Street's Creek, driving back a British advanced detachment. The main portions of Brown's army reached Scott's encampment on the south side of Street's Creek that night, and on the morning of the 5th the opposing armies were only two miles apart. At about noon Scott was joined by General Porter, with his volunteers and Indians. The British had also been reinforced. The two armies were feeling each other for some time, when preliminary skirmishing was begun by Porter with marked success. The Indians behaved gallantly under the leadership of Captain Pollard and the famous Red Jacket. The British advanced corps, severely smitten, fled back in affright towards Chippewa.

Porter pursued, and found himself within a few yards of the entire British force, advancing in battle order. A desperate struggle ensued. Finally the British made a furious charge with bayonets. Hearing nothing from Scott, Porter ordered a retreat. It became a tumultuous rout. It was now towards evening. Brown had been watching Porter's movements with great anxiety, and had ordered Scott to cross Street's Creek, when Porter's flying troops were observed. Riall had sent forward some Royal Scots, part of another regiment of regulars, a regiment of Lincoln militia, and about three hundred Indians. These composed the force that fought Porter. Scott crossed Street's Creek in the face of a heavy cannonade, and

**Chippewas, or Ojibways.** This Algonquin family, living in scattered bands on the shores and islands of the upper lakes, were first discovered by the French in 1640 at the Saut (rapide) de St. Marie, when they numbered about two thousand. They were then at war with the Iroquois, the Foxes, and the Sioux; and they drove the latter from the head-waters of the Mississippi and from the Red River of the North. The French established missionaries among them, and the Chippewas were the firm friends of these Europeans until the conquest of Canada ended French dominion in America. In 1712 they aided the French in repelling an attack of the Foxes on Detroit. In Pontiac's conspiracy (see *Pontiac*) they were his confederates; and they sided with the British in the war of the Revolution and of 1812. Joining the Miamis, they fought Wayne and were defeated, and subscribed to the treaty at Greenville in 1795. (See *Greenville*). In 1816 they took part in the pacification of the northwestern tribes, and in 1817 they gave up all their lands in Ohio. At that time they occupied a vast and undefined territory from Mackinaw along the line of Lake Superior to the Mississippi River. The limits of this territory were defined by a treaty in 1825, after which they gradually ceded their lands to

STREET'S CREEK BRIDGE, IN 1861, LOOKING NORTH.

very soon the battle raged with fury along the entire line of both armies. Several times the British line was broken and closed up again. Finally a flank movement and a furious charge was made by Major McNeill with Colonel Campbell's Eleventh regiment, and a terrific fire from a corps under Major Jesup in the centre made the British line give way. It broke and fled in haste to the intrenchments below Chippewa Creek. The fugitives tore up the bridge over the creek behind them, leaving an impassable chasm between themselves and the Americans. The battle-field (opposite Navy Island) was strewn with the dead and dying. The Americans lost, in killed, wounded, and missing, three hundred and fifty-five men; the British lost, by the same casualties, six hundred and four men, of whom two hundred and thirty-six were killed. On that hot July evening a gentle shower of rain descended, which mitigated the horrors of the battle-field. Scott was eager to pursue, but was compelled to wait for the tardy Ripley, who did not arrive in time to participate in the battle or to join in an instant pursuit. The immediate results of the battle were important. The Indian allies of the British were disheartened, and nearly all of them left the army and returned to their homes. The Americans were greatly inspired.

the United States for equivalent annuities. All but a few bands had gone west of the Mississippi in 1851; and in 1866 the scattered bands in Canada, Michigan, on the borders of Lake Superior, and beyond the Mississippi numbered more than fifteen thousand—about the same as they did sixty years ago. They are now seated on reservations, which embrace in the aggregate five million acres. Their religion is simply a belief in a Good and Evil Spirit, and the deification of the powers of nature. Various denominations have missionaries among the Chippewas.

**Chittenden, THOMAS**, first governor of the State of Vermont, was born at East Guilford, Conn., Jan. 6, 1730; died at Williston, Vt., Aug. 24, 1797. He had held local offices in his native state before 1774, when he emigrated to the New Hampshire Grants (which see), and settled at Williston. During the Revolution he was an active participant in the councils of his state, and was a leader in the convention which (Jan. 16, 1777) declared Vermont an independent state. He was also a leader in the convention (July, 1777) which formed a constitution for that state, and president of the Council of Safety vested with governmental powers. He was elected governor of Vermont in 1778, and, with the exception of one year, filled that office until his

death, during which time the controversy between New York and Vermont was settled and the latter admitted as a state of the Union.

Choate, RUFUS, was born at Essex, Mass., Oct. 1, 1799; died at Halifax, N. S., July 13, 1859. He studied at the Cambridge Law School, and, with William Wirt, became one of the most eminent lawyers and orators of his time. He began the practice of law at Danvers, Mass., in 1824. He was a distinguished member of both branches of his State Legislature, a member of the Lower House of Congress, and United States Senator, succeeding Daniel Webster in 1841. In 1853 he was attorney-general of Massachusetts. After the death of Webster, Mr. Choate was the acknowledged leader of the Massachusetts bar. Impaired health compelled him to retire from business in 1858.

Choctaws, THE, were mostly Mobilians, a peaceful agricultural people. Their domain comprised southern Mississippi and western Alabama. De Soto fought them in 1540. They became allies of the French in Louisiana, where they numbered about two thousand five hundred warriors, and formed forty villages. In the Revolution they were mostly with the English, but were granted peaceable possession of their lands by the United States government. As early as 1800, numbers of them went beyond the Mississippi, and in 1803 it was estimated that five hundred families had emigrated. They were with the United States troops in the war with England and the Creeks, and in 1820 they ceded a part of their lands for a domain in what is now the Indian Territory. In 1830 they ceded the rest of their lands and joined their brethren west of the Mississippi, where the Chickasaws joined them. In 1861 they had a population of twenty-five thousand, with five thousand negro slaves. They were seduced into an alliance with the Confederates in the Civil War, and disaster befell them. They lost an immense amount of property, and their numbers, including the Chickasaws, were reduced to seventeen thousand. Slavery was abolished, and part of their lands was forfeited for the benefit of the freedmen. The Choctaws proper now number about twelve hundred.

Choctaws, TREATY WITH THE (1786). On Jan. 3, 1786, a treaty was made with the leaders of the Choctaw nation of the same purport, and upon the same terms, as that made with the Cherokees the previous year. (See *Cherokees, Treaty with*, 1785.)

Choiseul and the Americans. Duke de Choiseul was at the head of the French ministry in talent, when, in 1761, cabinet changes in England threatened to diminish the power of that government. He was minister of foreign affairs, and in January, 1761, became minister of war, and annexed those departments to the marine. Like Pitt, he was a statesman of consummate ability. He was of high rank and very wealthy, and was virtually sole minister of France. When the British had despoiled France of her American possessions (see *Treaty of Paris*), Choiseul eagerly watched for an opportunity to inflict a retali-

tory blow; and he was delighted when he perceived that a rising quarrel between Great Britain and her American colonies foreshadowed a dismemberment of the British empire. Choiseul determined to foster the quarrel as far as possible. He sent the Baron de Kalb to America in the disguise of a traveller, but really as a French emissary, to ascertain the temper of the people towards the mother country. The report of the baron did not warrant the hope of an immediate rupture. But Choiseul waited and watched, and in the summer of 1768 he saw reasons for expecting an almost immediate outbreak of rebellion in America. He wrote to the French minister in London that facts and not theories must shape French action at that crisis. He proposed to make a commercial treaty with the discontented colonies, both of importation and exportation, at the moment of rupture, the advantages of which might cause them at once to detach themselves from the British government. He believed the separation must come sooner or later, and wished to hasten the hoped-for event. He perceived the difficulties that stood in the way of the consummation of his scheme, weighed their evils, but still persisted. He said to the minister, "I firmly believe and hope this government will so conduct itself as to widen the breach;" and he was sanguine that his plans would result in gratifying the wishes of every Frenchman. But Choiseul had to wait seven years before these wishes were gratified, and then he was dismissed from office by the successor of the old king (Louis XV.) whom he had ruled so long.

Christian Indians, MASSACRE OF (1782). The Moravian missionaries had established three Indian villages of converts on the Tuscarawas River, Ohio—Schönbrunn, Gnadenhütten, and Salem. Gnadenhütten was on the east side of the river, near the (present) village of that name. Here a massacre occurred, March 8, 1782, which has never been surpassed in cool barbarity. These settlements of Christian Indians were situated about half-way between the white settlements near the Ohio River and the warlike Wyandots and Delawares on the Sandusky. The Christian Indians were Delawares. The pagan Wyandots and Delawares were mostly in the British service, or opposed to the colonists. The Christian villagers were between two fires. As Christians, they were friends of peace, and as far as possible maintained a neutral position. Each party in the impending conflict suspected these Indians of complicity in the schemes and conduct of the other. In March, 1782, some murders committed in the vicinity of Pittsburgh by a wandering party of Shawnoese were ascribed to the Christian Indians, or to warriors whom they had entertained, and eighty or ninety men of that neighborhood, under Colonel Williamson, as volunteer militia, marched to take vengeance. Arrived at Gnadenhütten (March 5), they found some Indians who were gathering corn, which they had been compelled to leave standing and flee to Sandusky several months before. The white people sent for the Indians of a neighboring village, when all were confined in two houses,

while a council of war was held to decide their fate. The prisoners were all bound. The men were placed in one house, the women in the other—altogether nearly one hundred. The question was put by Colonel Williamson whether the Moravian Indians should be taken to Fort Pitt (as they had been promised they should be), or put to death. Only sixteen voted for mercy; the remainder, holding the belief on the frontier that "an Indian has no more soul than a buffalo," voted for murder. Then the white furies rushed on the helpless Christian Indians and murdered and scalped the whole of them, and laid the village in ashes. Flushed by this success, four hundred and eighty men, under Colonels Williamson and Crawford, attempted the destruction of all the Christian Indians by assailing Sandusky. They intended to strike a blow at the town of the hostile Wyandots, but were waylaid by the latter with an overwhelming force and compelled to retreat. Crawford, his son and son-in-law, fell into their hands, and were tortured and burned alive in revenge for the cold-blooded murder of their innocent brethren at Gnadenhütten.

"Christian Quakers." In 1692 there was a schism among the Friends, or Quakers, in Pennsylvania, caused by the action of George Keith, a Scotch Friend, formerly surveyor of East Jersey, and at this time master of the Friends' school at Philadelphia. He was a champion of the Quakers against Cotton Mather and the Boston ministers. He pressed the doctrine of non-resistance to its logical conclusion, that this principle was not consistent with the exercise of political authority. He also attacked negro slavery as inconsistent with those principles. So sharply did Keith criticise the shortcomings of his co-religionists that he was disowned by the Yearly Meeting, when he forthwith instituted a meeting of his own, to which he gave the name of "Christian Quakers." A *Testimony of Denial* was put forth against Keith, who replied in a published address, in which he handled his adversaries without mercy. The Quaker magistrates fined him for "insolence," and William Bradford, the only printer in the colony, was called to account for having published Keith's address. He was discharged, but was so annoyed that he removed his printing business to New York.

**Chrysler's Field, BATTLE OF (1813).** When Wilkinson's expedition down the River St. Lawrence (which see) against Montreal, composed of land troops borne by a flotilla of boats, arrived at a point four miles below Ogdensburg, information reached the commander of the expedition that the opposite shore of the river was lined with posts of musketry and artillery, and that a large reinforcement of British troops under Lieutenant-colonel Morrison had arrived at Prescott. Wilkinson had already ordered Colonel Alexander Macomb, with twelve hundred of the best troops of the army, to cross the river to oppose the British detachments on the Canadian side (Nov. 7, 1813), and these were soon followed by riflemen under Lieutenant-

colonel Forsyth, who did excellent service in the rear of Macomb. When news was received of the arrival of reinforcements at Prescott, Wilkinson called a council of war (Nov. 8), and it was decided "to proceed with all possible rapidity to the attack of Montreal." General Brown was at once ordered to cross the river with his brigade and some dragoons. Morrison's troops, full one thousand strong, had come down to Prescott in armed schooners, with several gunboats and bateaux under Captain Mulcaster, and were joined by provincial infantry and dragoons under Lieutenant-colonel Pearson. They pushed forward, and on the morning of the 9th were close upon Wilkinson, and the land troops were debarked to pursue the Americans—two thousand men, including cavalry. General Boyd and his brigade were now detached to reinforce Brown, with orders to cover his march, to attack the pursuing enemy if necessary, and to co-operate with the other commanders. Wilkinson now found himself in a perilous position, for the British armed vessels were close upon his flotilla, and the British land troops were hanging upon the rear of Brown and Boyd. The latter also encountered detachments coming up from below. The British gunboats attacked the flotilla, but Wilkinson made such disposition of his cannons in battery on the shore that they were repulsed, and fled up the river. Brown had captured a British post at the foot of the rapids, and Wilkinson had just issued orders for the flotilla to proceed down these rapids, and Boyd to resume his march, when a British column attacked the rear of the latter. Boyd turned upon his antagonist, and a sharp battle ensued. General Swartwout was detached with his brigade to assail the British vanguard, and General Covington took position at supporting distance from him. Their antagonists were driven back out of the woods on the main line in the open fields of John Chrysler, a British militia captain then in the service. That line was covered by Mulcaster's gunboats, and protected in part by deep ravines. Then General Covington led his brigade against the British left, near the river, and the battle became general. By charge after charge the British were forced back nearly a mile, and the American cannons, under the direction of Colonel J. G. Swift, did excellent execution. At length Covington fell, seriously wounded, and the ammunition of the Americans began to fail. It was soon exhausted, and Swartwout's brigade, hard pushed, slowly fell back, followed by others. The British perceived this retrograde movement, followed up the advantage gained with great vigor, and were endeavoring by a flank movement to capture Boyd's cannons, when a gallant charge of cavalry, led by Adjutant-general Walbach, whom Armstrong had permitted to accompany the expedition, drove them back and saved the pieces. The effort was renewed. Lieutenant Smith, who commanded one of the cannons, was mortally wounded, and the piece was seized by the British. For five hours the conflict had been carried on in the midst of sleet and snow, and victory had swayed between the belligerents like a pendulum. It would

doubtless have rested with the Americans had their ammunition held out. Their retreat was promising to be a rout, when the fugitives were met by six hundred troops under Colonel Upham and Major Malcolm, whom Wilkinson had sent up to the support of Boyd. These checked the flight, drove back the British, and saved the American army. Meanwhile Boyd had re-formed a portion of the army, and then awaited another attack. It was not made. The Americans, under cover of darkness, retired to their boats unmolested. Neither party had gained a victory, but the advantage lay with the British, who held the field. The British army on that occasion was slightly superior in numbers, counting its Indian allies. The Americans lost in the battle, in killed and wounded, three hundred and

ers sent an address to "the rest of the brethren in and of the Church of England," and spoke of that church with affection as their "dear mother." This was to correct a "misreport" that the emigrants intended to separate from the church. Notwithstanding this dutiful address, when they set foot on American soil a sense of freedom overcame their allegiance, and, following the example of the "Plymouthians" and Endicott, they established separate churches, and chose their own officers. Without any express renunciation of the authority of the Church of England, the Plymouth people had laid aside its liturgy and rituals. Endicott followed this example at Salem, and had the sympathy of three "godly ministers" there — Higginson, Skelton, and Bright; also of Smith, a sort of in-

CHRYSLER'S IN 1855.

thirty-nine; the British lost one hundred and eighty-seven. On the morning after the battle the flotilla, with the gunboats and troops, passed safely down the rapids, and three miles above Cornwall they formed a junction with the forces under General Brown. There Wilkinson was informed that Hampton, whom he had invited in Armstrong's name to meet him at St. Regis, had refused to join him. A council of war (Nov. 12, 1813) decided that it was best to abandon the expedition against Montreal, although it was said there were not more than six hundred troops there, and put the army into winter-quarters at French Mills, on the Salmon River, which was done. Thus ended in disaster and disgrace an expedition, conducted by an incompetent leader, which in its inception promised salutary results.

**Church, Anglican, THE EARLY, IN NEW ENGLAND.** In 1630 about one thousand emigrants arrived in Massachusetts from England, under the leadership of John Winthrop, who had been appointed governor under the royal charter. Winthrop brought the charter with him. On the day before they sailed from the Isle of Wight the lead-

terloper. A church was organized there — the first in New England, for that at Plymouth was really in a formative state yet. Skelton was appointed pastor and Higginson teacher. All of the congregation were not prepared to lay aside the liturgy of the Church of England, and two of them (John and Samuel Browne) protested, and set up a separate worship. The energetic Endicott promptly arrested the "malcontents" and sent them to England. Following up the system adopted at Salem, the emigrants, under the charter of 1630, established Nonconformist churches wherever settlements were planted — Charlestown, Watertown, Boston, Dorchester, etc. At Salem the choice of minister and teacher was made as follows: "Every fit member wrote in a note the name whom the Lord moved him to think was fit for pastor," and so likewise for teacher. Skelton was chosen for the first office, Higginson for the second. When they accepted, three or four of the gravest members of the church laid their hands upon Mr. Skelton, using prayer therewith. The same was done to Mr. Higginson. Such was the first New England ordination.

**Church, BENJAMIN**, was born at Plymouth, Mass., in 1639; died at Little Compton, R. I., Jan. 17, 1718. He was a brave military leader in King Philip's War (which see); commanded the party by whom Philip was slain (August, 1676); and with his own sword cut off the head of the dusky monarch. He commanded an expedition against the Eastern Indians in 1689, and afterwards led four other expeditions against the Indians in Maine. He is represented by his contemporaries as distinguished as much for his integrity, justice, and purity as for his military exploits.

**Church, COLONEL, IN THE BAY OF FUNDY.** In retaliation for the capture of the Fort at Pemaquid (which see), the veteran Indian fighter Colonel Church made an amphibious foray up the Bay of Fundy. Iberville's squadron (see *Pemquid*) just escaped capture by that of Church. The latter went on shore, burned the houses of the French settlers at Beau Bassin (the westernmost recess of that bay), and destroyed their cattle, which constituted their chief wealth; but an attempt to dislodge the French at St. John was a failure.

**Church, DR. BENJAMIN.** (See *First Traitor, The.*)

**Church, FREDERICK EDWIN**, artist, was born at Hartford, Conn., May 4, 1826. He was a pupil of Thomas Cole (which see). He was first brought into notice by some pictures of scenery in the Catskill Mountains. In 1853 he went to South America, visiting New Granada and Ecuador, where he obtained materials for many landscapes among the great mountain chains of the Andes. He made a second journey thither in 1857, and, after his return, produced some admirable paintings of scenery there, notably "The Heart of the Andes." His picture of Niagara Falls, afterwards duplicated by chromo-printing, is regarded as his masterpiece. In 1868 he visited the Holy Land, and found materials for some exquisite paintings, made after his return.

**Church of England in New York.** Efforts were early made by the English to supplant the Dutch Church as the prevailing religious organization in New York. The act of the Assembly procured by Governor Fletcher, though broad in its scope, was destined for that purpose. Under that act Trinity Church was organized, and Fletcher tried to obtain authority to appoint all the ministers, but the Assembly successfully resisted his designs. In 1695 Rev. John Miller, in a long letter to the Bishop of London on the condition of religion and morals, drew a gloomy picture of the state of society in the city of New York, and earnestly recommended as a remedy for all these social evils "to send over a bishop to the Province of New York duly qualified as suffragan" to the Bishop of London, and five or six young ministers, with Bibles and prayer-books; to unite New York, New Jersey, Connecticut, and Rhode Island into one province; and the bishop to be appointed governor, at a salary of \$7200, his majesty to give him the King's Farm of thirty

acres, in New York, as a seat for himself and his successors. When Sir Edward Hyde (afterwards Lord Cornbury) became governor of the combined provinces of New York and New Jersey, in 1702, even violent efforts were used to make the liturgy and ritual of the Church of England the State system of worship. He denied the right of preachers or schoolmasters to exercise their functions in the province without a bishop's license; and when the corporation of New York resolved to establish a grammar-school, the Bishop of London was requested to send over a teacher. In violation of his positive instructions, the governor began a systematic persecution of all religious denominations dissenting from the practices of the Church of England. This conduct reacted disastrously to Trinity Church, which, until the province was rid of Cornbury, had a very feeble growth. (See *Cornbury.*)

**Church's Expedition.** In May, 1704, Governor Dudley sent, from Boston, an expedition to the eastern bounds of New England. It consisted of five hundred and fifty soldiers, under Colonel Benjamin Church. The campaign then undertaken against the French and Indians continued all summer, and Church inflicted much damage to the allies at Penobscot and Passamaquoddy.

**Church's Expedition to the Androscoggin.** While Phipps was operating against Quebec in 1690, Colonel Church (which see) was sent on an expedition against the eastern Indians. He went up the Androscoggin River to the site of Lewistown, Me., where he destroyed a large quantity of corn, and, "for example," put to death a number of men, women, and children whom he had captured. The Indians retaliated fearfully.

**Churubusco, BATTLE OF.** After the victory at Contreras (which see), the Americans proceeded to attack the fortresses of San Antonio and Churubusco. The latter is a small village six miles south from the city of Mexico, and connected with it by a spacious causeway. At the head of the causeway, near the village, was erected a strong redoubt, mounted with batteries and heavily garrisoned. This was in front of the bridge over the Churubusco River. The Convent-church of San Pablo, with its massive stone walls, on an eminence, was converted into a fort, and around it was the hamlet, defended by a covering of stone walls and a heavy stone building fortified. The outside walls were pierced for cannons, high enough to fire plunging shot upon an approaching enemy. All the stores and artillery saved from the wreck of Contreras were gathered at Churubusco, with much sent from the city, for Santa Ana had resolved to make a stand at this place. He was at the city with 12,000 troops. When the Americans began to move forward, the garrison of Antonio, perceiving themselves in great danger of being cut off, abandoned the fort and fled towards Churubusco, attacked and divided on the way. The retreat of the Mexicans from San Antonio and the general march of all the Americans upon Churubusco began the grand

movements of the day. The divisions of Twiggs and Pillow were advancing on the west, and on a causeway south the division of Worth was rapidly advancing to storm the redoubt at the bridge. General Scott, at a mile distant from Churubusco, was directing all the movements. The redoubt at the bridge was carried at the point of the bayonet. At the same time Twiggs was assailing the fortified church and hamlet, where a fierce battle raged for some time. There the able Mexican general Riucon commanded, and there three masses of Santa Aña's men opposed General Shields. The veterans of General Persifer F. Smith, who had captured Contreras, were conspicuous in this fearful contest. The most desperate defence at the church was made by one hundred deserters from the American army, led by Thomas Riley. The alarmed Mexicans several times hoisted a white flag, in token of surrender, when these Americans with halts about their necks as often

line of Mexican defences, opening the causeway to the city and leaving it no other resources but its fortified gates and the Castle of Chapultepec. Full 4000 Mexicans had been killed or wounded that day; 3000 were made prisoners. Thirty-seven pieces of fine artillery had been captured, with a vast amount of munitions of war. The Americans lost, in killed and wounded, about 1100 men.

**Cincinnati Defended.** General E. Kirby Smith, invading Kentucky in advance of Bragg (see *Bragg's Invasion*), pushed on towards the Ohio River with the purpose of capturing Cincinnati. The invader was confronted by an unexpected force near that city. General Lew Wallace was at Cincinnati when news of the disaster at Richmond, Ky. (which see), reached that place. He was ordered by General Wright to resume the command of Nelson's shattered forces, but was called back to provide for the defence of Cincinnati. Half an hour after his

VIEW OF CINCINNATI FROM NEWPORT IN 1812. (See page 250.)

tore it down. The battle raged three hours, when the church and the other defences of Churubusco were captured. Meanwhile Generals Shields and Pierce (afterwards President of the United States) were battling furiously with Santa Aña's men, partly in the rear of the defences of Churubusco. The Mexicans were there 7000 strong—4000 infantry and 3000 cavalry—but victory again crowned the Americans. This was the *fifth* victory won on that memorable 20th of August, 1847—Contreras, San Antonio, the redoubt at the bridge, the Church of San Pablo, and with Santa Aña's troops. In fact, the combined events of that day formed one great contest over a considerable extent of territory, and might properly be known in history as the "Battle of the Valley of Mexico." The number engaged on that day was 9000 effective American soldiers and 32,000 Mexicans. The result was the capture by the former of the exterior

arrival he issued a stirring proclamation (Sept. 1, 1862) as commander of that and the cities of Covington and Newport, on the Kentucky side of the river. He officially informed the inhabitants of the swift approach of the invaders in strong force, and called upon the citizens to act promptly and vigorously in preparing defences for the city. He ordered all places of business to be closed, and the citizens of Cincinnati, under the direction of the mayor, to assemble, an hour afterwards, in convenient public places, to be organized for work on intrenchments on the south side of the river. He ordered the ferryboats to cease running, and proclaimed martial law in the three cities. This was a bold, startling, but necessary proceeding. The principle of action embodied in the proclamation was, "Citizens for labor; soldiers for the battle." Wallace demanded the services of all able-bodied people. The response was wonderful. In

a few hours he had an army of workers and fighters forty thousand strong. They streamed across the river on a pontoon bridge and swarmed upon the hills about Covington. Within three days after the proclamation a line of intrenchments ten miles in length, of semicircular form, was constructed. These were just completed, when full fifteen thousand of Smith's troops appeared. Astonished and alarmed, they retreated in great haste. Cincinnati was saved, and the citizens gave public honors to General Wallace as the deliverer of the city.

**Cincinnati, FOUNDING OF.** Ensign Luce, of the United States Army, was charged with the selection of a site for a block-house on Symmes's Purchase (which see). Symmes wished him to build it at North Bend, where he was in command of a detachment of troops; but Luce was led farther up the river, to the site of Cincinnati, on account of his love for the pretty young wife of a settler, who went there to reside because of his attentions to her at the Bend. Luce followed and erected a block-house there; and in 1790 Major Doughty built Fort Washington on the same spot. It was on the eastern boundary of the town as originally laid out, between the present Third and Fourth Streets, east of Broadway. A village grew around it. A pedantic settler named it Losantiville, from the words *l'os anti ville*, which he interpreted "the village opposite the month"—mouth of Licking Creek. It was afterwards called Cincinnati. The name was suggested by General St. Clair in honor of the Society of the Cincinnati. The fort was made of a number of strongly built log cabins, hewn from the timber that grew on the spot. These were a story and a half high, arranged for soldiers' barracks, and occupied a hollow square enclosing about an acre of ground. In the autumn of 1792 Governor St. Clair arrived at the post and organized the county of Hamilton, and the village of Cincinnati, then begun around the fort, was made the county seat of the territory. In 1812 it contained about two thousand inhabitants. (See illustration, p. 249.)

**Cincinnati, SOCIETY OF THE.** A few weeks before the disbanding of the Continental Army (June, 1783) a tie of friendship had been formed among the officers, at the suggestion of General Knox, by the organization, at the headquarters of Baron von Steuben, near Fishkill Landing, N. Y., of an association known as the "Society of the Cincinnati." Its chief objects were to promote a cordial friendship and indissoluble union among themselves, and to extend benevolent aid to such of its members as might need assistance. Washington was chosen the first president of the society, and remained president-general until his death. General Henry Knox was the first secretary-general. State societies were formed, auxiliary to the general society. To perpetuate the association, it was provided in the constitution of the society that the eldest masculine descendant of an original member should be entitled to wear the Order and enjoy the privileges of the society. The

Order, or badge, of the society consists of a golden eagle, with enamelling, suspended upon a ribbon. On the breast of the eagle is a medallion, with a device representing Cincinnatus at his plough receiving the Roman senators who came to offer him the chief magistracy of Rome. The

ORDER OF THE CINCINNATI.

members' certificate is eighteen and a half inches in breadth and twenty inches in length. The general Society of the Cincinnati is still in existence, and also state societies. The president-general in 1876 was Hamilton Fish, then Secretary of State, and son of Colonel Nicholas Fish, one of the original members. The Order worn by the president-general at the meetings of the society is a beautifully jewelled one. It was presented to Washington by the French officers. The society met with much jealous opposition from the earnest republicans of the day. Among the most powerful of these opponents was Judge Ædanns Burke, of Charleston, S. C., who, in an able dissertation, undertook to prove that the society created two distinct orders among the Americans—first, a race of hereditary nobles founded on the military, together with the most influential families and men in the State; and, second, the people, or plebeians. These suspicions were natural, but were not justified.

SOCIETY OF THE CINCINNATI—MEMBERS' CERTIFICATE.

Circular Letter of Massachusetts (1768). The General Court of Massachusetts, which met Dec. 30, 1767, having appointed a large committee to consider the state of the province, adopted (Feb. 11, 1768) a circular letter, which was addressed to the speakers of the various colonial assemblies, inviting co-operation and mutual consultation concerning the defence of colonial rights. This letter embodied the sentiments of a petition to the king adopted at the same session. It gave great offence to the ministry. When it reached them, Lord Hillsborough, Secretary of State for the colonies, sent instructions to the governor (Bernard) of Massachusetts to call upon the Assembly to rescind the letter, and, in the event of non-compliance, to dissolve that body. It was then the most numerous legislature in America, consisting of one hundred and nine members. Instead of complying with the governor's demand, they made the instructions of Hillsborough a fresh cause of complaint against the ministry. "When Lord Hillsborough knows," said Otis in the Assembly, "that we will not rescind our acts, he should apply to Parliament to rescind theirs. Let Britons rescind these measures, or they are lost forever." The House refused to rescind by a vote of ninety-two to seventeen. In a letter to the governor notifying him of their non-compliance, the Assembly said, "If the votes of this House are to be controlled by the directions of a minister, we have left us but a vain semblance of liberty." The governor proceeded to dissolve the Assembly; but before that was accomplished they had prepared a series of accusations against him and a petition to the king to remove him. The answers to the circular letter from other assemblies glowed with sympathy and assurances of co-operation. (See Hillsborough's Instructions.)

Citizens. By a change in the political character of the English-American colonies, the word "citizen" took the place of "subject," and was as comprehensive in its application to the inhabitants of the territories included in the United States of America. In our republic every man, woman, and child is a citizen, with regulations as to the exercise of the rights and privileges of citizenship. In this respect our republic differs from those of Greece and of Italy. In the former, citizenship was confined to a body of kindred families. They formed an hereditary caste—"a multitudinous aristocracy." The system had no permanent vitality, and the Greek and Italian republics died out for want of citizens. In the new American republic every one born on American soil was and is a citizen, by virtue of nativity; and, by the grace of statute law, foreign-born persons become citizens by naturalization laws (which see).

City of Magnificent Distances. A popular designation of the city of Washington, the national capital, said to have been first applied by President Madison. It is so called on account of the wide open spaces caused by the peculiar plan of its streets, and being originally laid out on a large scale. It has two sets of rectangular streets, seventy to one hundred feet wide; and these are intersected obliquely by fifteen avenues, from one hundred and thirty to one hundred and sixty feet wide, forming immense open triangles at each intersection. These triangles have been enclosed and planted with trees within a few years, rendering the place less a city of magnificent distances.

City of Notions. A popular name given to the city of Boston, the capital of Massachusetts.

City of Spindles. A popular name given to

the city of Lowell, Mass., the greatest cotton manufacturing town in the United States.

**City of the Strait.** The popular name of Detroit (the French word for "strait"), situated upon the strait between lakes St. Clair and Erie.

**Civil Rights Bill.** Early in 1866 Congress passed a bill for reducing to statute form the principles of the thirteenth amendment to the Constitution (which see). It guaranteed to every citizen of the United States, without distinction of race or color, equal civil rights. It was passed at the middle of March, by a vote of one hundred and eleven against thirty-eight. It was vetoed by President Johnson on March 27; but this did not prevent its becoming a law by the constitutional vote.

**Civil War in Boston Harbor (1644).** The civil war in England extended across the sea. The vessels of London, the seat of parliamentary power, furnished with privateering commissions, took every opportunity that offered to attack those of Bristol, and other western ports, that adhered to the king. In July, 1644, a London vessel brought a west-of-England prize into Boston harbor. The captain exhibited a commission from Warwick, High Admiral of New England, and they were allowed to retain their prize; but when another London vessel attacked a Dartmouth ship (September), as she entered Boston harbor with a cargo of fine salt, the magistrates sent an armed force to prevent the capture. Because of a defect in the commission of the privateer, the prize was appropriated as a compensation for a Boston ship which had been captured on the high seas by a royalist vessel. Some persons in Boston declared themselves in favor of the king, when (March, 1645) such turbulent practices were strictly forbidden. A law was soon passed assuring protection to all ships that came as friends; and officers were appointed to keep the peace, and to prevent fighting in Boston harbor, except "by authority."

**Civil War in Maryland, THE FIRST.** The irrepressible Clayborne (which see) stirred up a sort of politico-religious civil war in Maryland in 1644. Already hatred between the Roman Catholic and Protestant settlers had been engendered. The civil war was then raging in England, and King Charles had commissioned Lord Baltimore, through his colonial officers, to seize any ships belonging to the Parliament party on which his people might lay hands. The ship of Richard Ingle was captured in Maryland waters, but the commander escaped. He joined Clayborne in stirring up the parliamentary, or Puritan, faction in Maryland against the government of Lord Baltimore. Clayborne was then in possession of Kent Island, and there Ingle joined him with a vessel commissioned by Parliament as a letter of marque (which see). The Protestants were then in open rebellion, and the insurrection flamed out with greater vehemence than the Indian war which had just ended; but it did not last so long. The rebels, assisted by disaffected Indians, immedi-

ately triumphed, and the governor and his council were compelled to fly to Virginia for safety. For about a year and a half the insurgents held the reins of power, and the horrors of civil war brooded over once happy Maryland. During the turmoil many of the records of the province were destroyed, and a larger portion of them were carried to Virginia by Captain Ingle, and lost. Lord Baltimore wisely commissioned William Stone, a Protestant from Virginia, as governor, and so restored peace to the province.—**THE SECOND CIVIL WAR IN MARYLAND** broke out in 1655. The republican Parliament, not trusting Lord Baltimore's professions of republicanism implicitly, appointed a commission, of which Clayborne was a member, to govern Virginia. They entered upon their duties with a high hand. Governor Stone was removed. The commissioners took possession of the records, and abolished the authority of Lord Baltimore. A few months afterwards they reinstated Stone, put Kent and Palmer's islands, in the Chesapeake, in the possession of Clayborne, and enabled the "outlaw" to triumph over his old enemy, Lord Baltimore. Cromwell restored Baltimore's power in 1658, and Stone proclaimed the acts of the commissioners rebellious. He unwisely displaced all the officers appointed by them. The incensed commissioners returned to Maryland, deposed Stone, and placed the government in the hands of ten commissioners. These proceedings aroused the passions of the contending factions in Maryland into fearful intensity. The Protestants (the majority in the Assembly), with the narrow bigotry of the early Puritans in Massachusetts, and unmindful of the lessons of the Toleration Act (which see), disfranchised the Roman Catholics and the members of the Church of England in the province, by passing a law declaring that "Papists and Churchmen" were not entitled to the protection of the laws of Maryland. These zealots flogged and imprisoned Quakers, and emulated the narrowness of the authorities in New England. Hearing of these things, Baltimore obtained an audience with Cromwell, and protested against the injustice of Puritan legislation in Maryland. Cromwell assured Baltimore that he disapproved of these acts, and he ordered the commissioners "not to busy themselves about religion, but civil government." So encouraged, Lord Baltimore returned to vindicate his rights. Upbraiding Stone for his want of firmness, he ordered him to raise an army for the restoration of the authority of the proprietary. Stone acted vigorously. He raised a force, consisting chiefly of Roman Catholics, seized the colonial records, resumed the office of governor, and so inaugurated civil war. Skirmishes occurred; and finally a sharp battle was fought between the Roman Catholics and Puritans, early in April, 1655, near the site of Annapolis, in which Stone was defeated and made prisoner. About fifty of his party were killed or wounded. The governor and his colleagues were tried for treason and convicted. Stone's life was spared, but four of his associates were hanged. For several months afterwards anarchy prevailed in Mary-

land. Then a former insurgent (Fendall) was appointed governor. He was suspected, but by prudent conduct he won the confidence of the Protestant people. On the death of Cromwell there were presages of a change in colonial affairs. The people of Maryland did not wait upon movements in England, but, boldly asserting their supreme authority, dissolved the proprietary portion of the General Assembly in the spring of 1660, and assumed the whole legislative power of the state. The popular representatives gave Fendall a commission as governor.

**Civil War in Rhode Island (1842).** There was a movement in Rhode Island to adopt a state constitution to take the place of the charter given by Charles II. in 1663, under which the people of Rhode Island had been governed about one hundred and eighty years. Disputes arose concerning the proper methods to be pursued in making the change, and these differences of opinion led to serious events. Two political parties were formed, known respectively as the "Suffrage," or radical party, and the "Law and Order," or conservative party. Each adopted a constitution for the state, and elected a governor and legislature under it; and in May and June, 1843, both parties were armed in support of their respective claims. The state was on the verge of civil war, when the interference of the national authority was invoked. The President sent troops to Rhode Island to maintain the public peace. A free constitution, adopted by the "Law and Order" party in November, 1842, to go into operation on the first Tuesday in May, 1843, was sustained, and became the law of the land. The radical party had elected Thomas W. Dorr governor, and the conservatives had chosen Samuel W. King for chief magistrate. After the public peace was secured and the new government had gone into operation, Mr. Dorr was arrested, tried for treason, convicted, and sentenced to imprisonment for life. The excitement having passed away, he was released in June, 1845, but was deprived of all the civil rights of a citizen. These disabilities were removed in the autumn of 1853. (See *Rhode Island*.)

**Civil War in Virginia.** (See *Dunmore's War*, 1775.)

Claiborne, WILLIAM CHARLES COLE, was born in Virginia in 1773; died in New Orleans, Nov. 23, 1817. He was a lawyer, and settled in Tennessee, where he became a territorial judge. In 1796 he assisted in framing a state constitution, and was a member of Congress from 1797 to 1801. In 1802 he was appointed governor of the Mississippi Territory, and was a commissioner, with Wilkinson, to take possession of Louisiana when it was purchased from France. On the establishment of a new government in 1804, he was appointed governor; and when the State of Louisiana was organized he was elected governor, serving from 1812 to 1816. In the latter year he became United States Senator, but was prevented from taking his seat on account of sickness.

**Claiborne's Campaign against the Creeks.** The Southern Creeks, under the direct influence of Weathersford (see *Fort Mimms*) and the British and Spanish officers, were very active and sanguinary in the region of the forks of the Tombigbee and Alabama rivers. General Flournoy ordered (Oct. 12, 1813) General C. C. Claiborne to advance with his army into the heart of the Creek country to defend the white citizens while gathering their crops; to drive the Indians from the frontiers; to follow them to their contiguous towns; and to kill, burn, and destroy all their property—"negroes, horses, and cattle," and other effects—that could not be brought off. This sanguinary order of the Georgia general was instantly obeyed. Claiborne scoured the country on the eastern side of the Tombigbee, dispersing Indian bands here and there. He pushed across to the Alabama with three hundred volunteers, some dragoons and militia, and a band of Choctaw Indians under Pushamataha, and on the east side of the river was joined (Nov. 17) by a regiment of regulars under Colonel Russell. There he constructed a strong stockade, which was named Fort Claiborne, and made it a deposit of supplies. Claiborne apprised Governor Blount and General Jackson of this depot, and also of the arrival at the Spanish fort at Pensacola of English vessels with supplies for the Indians. He determined to push on and share with Jackson and Coffee the danger and honor of bringing the Creeks into submission. With a considerable force, he marched (Dec. 12) in a northeasterly direction eighty miles, and built a stockade for stores, which he called Fort Deposit. Then he

WILLIAM C. C. CLAIBORNE.

pushed on through an almost pathless wilderness thirty miles farther, and approached Econochaca, or Holy Ground, on a bluff on the left bank of the Alabama, the present Powell's Ferry, in Lowndes County. It was a noted place, established by Weathersford (see *Fort Mimms*)

after the visit of Tecumtha and the Prophet. After a severe battle, Claiborne, having defeated the Indians, laid the town in ashes. Soon afterwards the terms of enlistment of most of Claiborne's troops expired, and he was compelled to write to the Secretary of War (June 23, 1814) that he had only sixty men left, and that their time was nearly out.

**Claims of Connecticut (1662).** As soon as Connecticut obtained a royal charter (1662), which embraced also the colony of New Haven (which see), that colony put forth claims under it to territory on Long Island, and all the mainland east of the Hudson. Several Dutch towns on Long Island, peopled chiefly by the English, petitioned Connecticut to receive them. Stuyvesant, alarmed, hastened to Boston to inquire of the commissioners for the united colonies if they considered a former settlement of the boundary binding. Agents were sent on the same errand to Hartford. The New-Englanders all promised fairly; but their actions were suspicious, and Stuyvesant called a convention of deputies to consult upon public affairs. But it was not long before the English claim to New Netherland was enforced by arms.

**Clark, ABRAHAM,** was born at Elizabethtown, N. J., Feb. 15, 1726; died at Rahway, N. J., Sept. 15, 1794. He was a self-taught, strong-minded, and energetic man. Bred a farmer, he taught himself mathematics and a knowledge of law; and from his habit of giving legal advice gratuitously he was called "the poor man's counsellor." Mr. Clark was a member of the Committee of Public Safety in Elizabethtown, and was appointed (June 21, 1776) one of the five representatives of New Jersey in the Continental Congress, where he voted for and signed the Declaration of Independence. He served in Congress (excepting a single session) until near the close of 1783. He was one of the commissioners of New Jersey who met at Annapolis in 1786 for the purpose of arranging national commercial intercourse, which led to the formation of the National Constitution the following year, in which labor he was chosen to be a participant; but ill-health compelled him to decline. In 1790 he was made a member of the Second National Congress, and retained his seat until a short time before his death.

**Clark, ALVAN,** artist and astronomer, was born at Ashfield, Mass., March 8, 1804. Reared on a farm, at twenty-two years of age he became a calico engraver at Lowell. He afterwards became a successful portrait-painter; and when over forty years of age he became deeply interested in astronomy and in the construction of telescopes. With instruments of his own manufacture he made several important discoveries, recorded in the "Proceedings of the Royal Astronomical Society" of London. He is the inventor of a double eye-piece, which facilitates the minute measurements of very small celestial arcs. He has been for many years without a rival in the world as the constructor of telescopes. In 1863 the French Imperial Academy of Sciences awarded him the Lalande prize for

his discovery of the new star near Sirius with the great reflecting telescope made by himself. With his sons, he is still (1883) engaged in the making of telescopes at Cambridge, Mass.

**Clarke, ELIJAH,** was born in North Carolina; died in Wilkes County, Ga., Dec. 15, 1799. He went to Georgia in 1774, where he became a captain in 1776, and fought both British and Indians on the frontiers. He was an active leader in the war for independence, and was largely instrumental in the capture of Augusta, Ga., in 1781. He fought many battles and made several treaties with the Indians; but in 1794 he was accused of a design to establish an independent government among the Creeks, where he had settled in violation of law.

**Clarke, GEORGE ROGERS,** born in Albemarle County, Va., Nov. 19, 1752; died near Louisville, Ky., Feb. 13, 1818. He was a land surveyor, and commanded a company in Dunmore's war against the Indians in 1774. He went to Kentucky in

GEORGE ROGERS CLARKE.

1775, and took command of the armed settlers there. He captured Kaskaskia and other towns in 1778, which, with the surrounding region, were organized into Illinois County, under the jurisdiction of Virginia. Commissioned a colonel, he successfully labored for the pacification of the Indian tribes. Learning that Governor Hamilton, of Detroit, had captured Vincennes, Clarke led an expedition against him (February, 1779), and recaptured it (Feb. 20). He also intercepted a convoy of goods worth ten thousand dollars, and afterwards built Fort Jefferson, on the west side of the Mississippi. The Indians from north of the Ohio, with some British, raided in Kentucky in June, 1780, when Clarke led a force against the Shawnoese on the Great Miami, and defeated them with heavy loss at Pickaway. He served in Virginia during its invasion by Arnold and Cornwallis; and in 1782 he led one thousand mounted riflemen from the mouth of the Licking, and invaded the Scioto Valley, burning five Indian villages and laying waste their plantations. The savages were so awed

that no formidable war party ever afterwards appeared in Kentucky. Clarke made an unsuccessful expedition against the Indians on the Wabash with one thousand men in 1786. His great services to his country in making the frontiers a safe dwelling-place were overlooked by his countrymen, and he died in poverty and obscurity.

**Clarke, JOHN**, one of the founders of Rhode Island, was born in Bedfordshire, Eng., Oct. 8, 1609; died at Newport, R. I., April 20, 1676. He came to Massachusetts, but, espousing the cause of Anne Hutchinson (which see), and claiming full toleration in religious belief, he was obliged to flee. He was welcomed to Providence by Williams. He was one of the company who gained Rhode Island from the Indians, and began a settlement at Pocasset in 1638. A preacher of the Gospel, he founded, at Newport (1644), the second Baptist Church in America. He was treasurer of the colony in 1649. Mr. Clarke was persecuted while visiting friends in Massachusetts, and driven out of the colony. He accompanied Williams to England in 1651 as agent for the colony, where he remained nearly twelve years, and returned (1663) with a second charter for Rhode Island. He resumed his pastorate at Newport, where for three successive years he was deputy-governor of the colony.

**Clarke's Resolutions (1861).** Perceiving that the labors of the Senate Committee of Thirteen (see *Thirty-sixth Congress*) were simply wasted, Senator Daniel Clarke, of New Hampshire, offered (Jan. 9, 1861) two resolutions as an amendment to the Crittenden Compromise (which see). The first declared that the provisions of the Constitution were ample for the preservation of the Union and the protection of all material interests of the country; that it needed to be obeyed rather than amended; and that an extrication from present danger was to be looked for in strenuous efforts to preserve the peace, protect the public property, and enforce the laws, rather than in any new guarantees for particular interests, compromises for particular difficulties, or concessions to unreasonable demands. The second declared that "all attempts to dissolve the Union, or overthrow or abandon the National Constitution, with the hope or expectation of constructing a new one, were dangerous, illusory, and destructive; that, in the opinion of the Senate of the United States, no such reconstruction is practicable, and therefore to the maintenance of the existing Union and Constitution should be devoted all the energies of the government and the efforts of all good citizens." (See *Thirty-sixth Congress*.) This amendment was adopted by a vote of twenty-five against twenty-three. The leading secessionists in the Senate, who might have carried the Crittenden Compromise, did not vote on this amendment, for they had determined to attempt to dissolve the Union at all hazards. When, on March 2, Mason, of Virginia, called up the Crittenden Compromise, Clarke's amendment was reconsidered and rejected, so that there might be a direct vote on the Crittenden plan. The

latter was also rejected (March 3) by a vote of twenty against nineteen.

**Clay, GREEN**, was born in Powhatan County, Va., Aug. 14, 1757; died Oct. 31, 1826. Before he was twenty years old he emigrated to Kentucky, where he became a surgeon, and laid the foundation of a fortune. He represented the Kentucky

GREEN CLAY.

district in the Virginia Legislature, and was a member of the Virginia convention that ratified the National Constitution. He also assisted in framing the Kentucky Constitution in 1799. Mr. Clay served long in the Kentucky Legislature. In the spring of 1813 he led three thousand Kentucky volunteers to the relief of Fort Meigs (which see); and, being left in command of that post, he defended it against an attack by British and Indians under Generals Proctor and Tecumtha.

**Clay, HENRY**, statesman, was born in Hanover County, Va., April 12, 1777; died at Washington, D. C., June 29, 1852. Taught the rudiments of education in a log-cabin school-house, he labored on a farm until he was fifteen years of age, when he entered the office of the High Court of Chancery, in Richmond, at which time his mother, who had married a second time, emigrated to Kentucky. He studied law under the direction of Chancellor Wythe, and was admitted to the bar in 1797, when he opened a law-office in Lexington, Ky., where he obtained an extensive practice. In 1803 he was elected to the Kentucky Legislature, and was speaker in 1807-8. He became United States Senator in 1808, and member of Congress and speaker in 1811-14. Was a commissioner to treat for peace with Great Britain in 1814; and afterwards, in Congress, was five times elected speaker of the House of Representatives. Mr. Clay was Secretary of State in the cabinet of John Quincy Adams (1825-29), and again a member of the United States Senate from 1831 till 1842. He was twice defeated as a candidate for the Pres-

idency (1832 and 1844); and was in the Senate for the last time from 1849 till 1852, taking a leading part in the compromise measures of 1850, as he did in those of 1832. Mr. Clay did

HENRY CLAY AT 40.

much by his eloquence to arouse a war spirit against Great Britain in 1812; and his efforts were effective in securing an acknowledgment of the independence of the Spanish colonies in South America. He always advocated the thoroughly American policy of President Monroe in excluding European influence on this continent. There is a fine monument erected to his memory in the cemetery at Lexington, Ky.

CLAY'S MONUMENT.

**Clayborne and Cornwallis, FIGHT BETWEEN.** William Clayborne (which see) had resolved to maintain his claimed rights to the Isle of Kent, in the waters of Chesapeake Bay. He was sustained by the Virginians, Governor Harvey alone taking sides with Lord Baltimore. In the spring of 1635 Clayborne despatched a vessel for trading, prepared to meet resistance. The Marylanders sent out two armed vessels under Cornwallis, their commissioner, or councillor, to watch for any illegal traders within the bounds of their province. On April 23 they seized Clayborne's vessel. The latter sent an armed boat, under the command of Ratcliffe Warren, a Virginian, to recapture the vessel. Cornwallis met Warren with one of his vessels in a harbor (May 10), and captured it after a sharp fight, in which Warren and two of his men were killed; also, one of Cornwallis's crew. This event caused intense excitement. The first Maryland Assembly, which had convened just before the event, decreed "that offenders in all murders and felonies shall suffer the same pains and forfeitures as for the same crimes in England. A requisition was made upon Governor Harvey for the delivery of Clayborne to the Virginia authorities. That functionary decided that Clayborne might go to England to justify his conduct before the home government. (See *Maryland*.) A court of inquiry—held three years afterwards to investigate the matter—resulted in a formal indictment of Clayborne, and a bill of attainder passed against him. Thomas Smith, next in rank to Warren, was hanged. Clayborne, who was now Treasurer of Virginia, retaliated against Maryland by stirring up civil war there. (See *Civil War in Maryland*.)

**Clayborne, WILLIAM,** one of the early settlers in Virginia, and at one time a member of the council and secretary of the colony. In 1627 the Governor of Virginia gave him authority to explore the head of Chesapeake Bay; and in 1631 Charles I. gave him a license to make discoveries and trade with the Indians in that region. With this authority, he established a trading-post on Kent Island, in Chesapeake Bay, not far from the site of Annapolis. When Lord Baltimore claimed jurisdiction over Kent and other islands in the bay, Clayborne refused to acknowledge his title, having, as he alleged, an earlier one from the king. Baltimore ordered the arrest of Clayborne. Two vessels were sent for the purpose, when a battle ensued between them and one owned by Clayborne. The Marylanders were repulsed, and one of their number was killed. Clayborne was indicted for and found guilty of constructive murder and other high

crimes, and fled to Virginia. Kent Island was seized and confiscated by the Maryland authorities. Sir John Harvey, Governor of Virginia, refused to surrender Clayborne, and he went to England to seek redress. After the king heard his story he severely reprimanded Lord Baltimore for violating royal commands in driving Clayborne from Kent Island. The Lords Commissioners of Plantations, led by Archbishop Laud, made a decision in favor of Lord Baltimore; but Clayborne, assisted by Captain Richard Ingle, stirred up the people to rebellion, and, expelling Governor Leonard Calvert (1645), assumed the reins of government. (See *Calvert, Leonard*.) In 1651 Clayborne was appointed, by the Council of State in England, one of the commissioners for reducing Virginia to obedience to the commonwealth ruled by Parliament; and he also took part in governing Maryland by a commission. (See *Maryland*.) He was soon afterwards made secretary of the colony of Virginia, and held the office until after the restoration of monarchy (1660) in England. Clayborne was one of the court that tried the captured followers of Bacon. (See *Bacon's Rebellion*.) He resided in New Kent County, Va., until his death, and is the chief ancestor of the Claiborne family in the United States.

**Clay's Compromise (1832).** The secret history of Clay's Compromise Bill in 1832, which quieted rampant nullification (which see), seems to be as follows: Mr. Calhoun, as leader of the nullifiers, had proceeded to the verge of treason in his opposition to the national government, and President Jackson had threatened him with arrest if he moved another step forward. Knowing the firmness and decision of the President, he dared not take the fatal step. He could not recede, or even stand still, without compromising his character with his political friends. In this extremity a mutual friend arranged with Clay to propose a measure which would satisfy both sides and save the neck and reputation of Calhoun. In discussing the matter in the Senate, the latter earnestly disclaimed any hostile feelings towards the Union on the part of South Carolina. He declared that the state authorities looked only to a judicial verdict on the question, until the concentration of United States troops at Charleston and Augusta (by order of the President) compelled them to make provision to defend themselves. Clay's compromise only postponed civil war a little less than thirty years.

**Clearing-Houses** were established in the United States about 1853, for the convenience and economy of banking institutions in large cities. This system originated in London. By it the banks of a city become, in certain operations, as an individual in work; for it dispenses with the individual clerical labor of each bank associated, in the matter of the exchange of checks and drafts and bills coming in from abroad. Formerly each bank employed a man to go around every day and collect all checks and drafts drawn upon it by other banks in the city, say sixty of them; therefore sixty men had

to be thus employed. Now, at the clearing-house, a messenger and a clerk from each bank appear every morning, each clerk taking a seat at the desk of his designated bank, arranged in the form of a hollow ellipse. Each messenger brings with him from his bank a sealed package for every other bank, properly marked with the amount enclosed, containing all the checks or drafts on each bank. The messengers take their places near the desks of their respective banks, with tabular statements of the amount sent to each bank and the aggregates. These are exhibited to the respective clerks and noted by them on blank forms. At a prescribed hour the manager of the clearing-house calls to order and gives the word for proceeding, when all the messengers move forward from left to right of the desks, handing in to them the packages addressed to their respective banks, and taking receipts for them on their statements. These clerks make a mutual exchange of all claims, and the balances, if any, are struck, each bank paying in cash the amount of such balance. This operation occupies about one hour, within which time all accounts are adjusted. The balances due to the several banks are paid into the clearing-house within about another hour. And so the work of sixty men for the larger part of each day is performed by the clearing-house, as one individual, in little more than an hour.

**Clem, "LITTLE JOHN,"** was an Ohio volunteer, twelve years of age, in the battle of Chickamauga (which see). He had been in the thickest of the fight, and three bullets had passed through his hat, when, separated from his companions, he was seen running, with a musket

JOHN CLEM.

in his hand, by a mounted Confederate colonel, who called out, "Stop! you little Yankee devil!" The boy halted and brought his musket to an order, when the colonel rode up to make him a prisoner. With a swift movement, young

Clem brought his gun up and fired, killing the colonel instantly. He escaped; and for this exploit on the battle-field he was made a sergeant, put on duty at headquarters of the Army of the Cumberland, and placed on the Roll of Honor. He grew to manhood, married, and was placed in position in one of the departments of government at Washington.

**Clinton, CHARLES**, was born at Longford, Ireland, in 1690; died in Ulster County (now Orange), N. Y., Nov. 19, 1773. With a number of relatives and friends, he sailed from Ireland for America in May, 1729. His destination was Philadelphia; but the captain of the vessel, with a view to their destruction by starvation, so as to obtain their property, landed them on barren Cape Cod, after receiving large sums of money as commutation for their lives. Mr. Clinton and his family and friends made their way to Ulster County, about sixty miles up the Hudson and eight miles from it, in 1731, and there formed a settlement, he pursuing the occupation of farmer and surveyor. Mr. Clinton was justice of the peace, county judge, and lieutenant-colonel of Ulster County, to which he gave its name. Two of his four sons were generals in the war for independence, and his youngest (George) was governor of the State of New York and Vice-President of the United States.

**Clinton, DE WITT**, was born at Little Britain, Orange Co., N. Y., March 2, 1769; died at Albany, Feb. 11, 1828. He graduated at Columbia College in 1786; studied law; and was admitted to the bar in 1788, but practised very little. He

DE WITT CLINTON.

was private secretary to his uncle George, Governor of New York, in 1790-95, in favor of whose administration he wrote much in the newspapers. He was in the Assembly of his state in 1797, and from 1798 to 1802 was a Democratic leader in the State Senate. He was mayor of New York city in 1803-7, 1809-10, and 1811-14. He was an earnest promoter of the establishment of the New York Historical Society and the American Academy of Fine Arts. Opposed to the War of 1812-15, he was the Peace candidate for the Presidency in 1812, but was defeated by James Madison. Mr. Clinton was one of the founders and first president of the Literary

and Philosophical Society in New York, and was one of the most efficient promoters of the construction of the Erie Canal. In 1817-22, and in 1824-27, he was governor of the State of New York. He was the most conspicuous actor in the imposing ceremonies at the opening of the Erie Canal in the fall of 1825, when, outside the Narrows, he poured a vessel of water from Lake Erie into the Atlantic Ocean, as significant of their wedding. (See *Erie Canal*.)

**Clinton, EFFORTS OF, TO RELIEVE CORNWALLIS.** A few days after the surrender of Cornwallis (which see), Sir Henry Clinton appeared at the entrance of Chesapeake Bay with vessels containing seven thousand troops; but he was too late to serve the earl, and he returned to New York, amazed, mortified, and disheartened.

**Clinton, GEORGE**, admiral and colonial governor of New York. He was the youngest son of Francis, sixth Earl of Lincoln, and rose to distinction in the British navy. In 1732 he was commissioned a commodore and governor of Newfoundland. In September, 1743, he was appointed governor of the colony of New York, and retained that office ten years. His administration was a tumultuous one, for his temperament and want of skill in the management of civil affairs unfitted him for the duties. He was unlettered; and being closely connected with the Dukes of Newcastle and Bedford, he was sent to New York to mend his fortune. In his controversies with the Assembly he was ably assisted by the pen of Dr. Cadwallader Colden, afterwards lieutenant-governor of the province. His chief opponent was Daniel Horsmanden, at one time chief-justice of the colony. After violent quarrels with all the political factions in New York, he abandoned the government in disgust, and returned home in 1753. He became governor of Greenwich Hospital—a sinecure. In 1745 he was appointed vice-admiral of the red, and in 1757 admiral of the fleet. He died while governor of Newfoundland, July 10, 1761.

**Clinton, GEORGE**, Vice-President of the United States, was born in Ulster County, N. Y., July 26, 1739; died in Washington, April 20, 1812. He was carefully educated by his father and a Scotch clergyman, a graduate of the University of Aberdeen. In early youth George made a successful cruise in a privateer in the French and Indian War, and soon afterwards joined a militia company, as lieutenant, under his brother James, in the expedition against Fort Frontenac in 1758. He chose the profession of law, studied it under William Smith, and became distinguished in it in his native county. In 1768 he was elected a member of the Provincial Assembly, wherein he soon became the head of a Whig minority. In 1775 he was elected to the Continental Congress, and voted for the resolution for independence in 1776; but the invasion of New York by the British from the sea called him home, and he did not sign the great Declaration. He was appointed a brigadier-general, and as such performed good service in his state.

On the organization of the State of New York, in 1777, he was elected the first governor, and held the office, by successive elections, eighteen years. He was very energetic, both in civil and

GEORGE CLINTON.

military affairs, until the end of the war; and was chiefly instrumental in preventing the consummation of the British plan for separating New England from the rest of the Union by the occupation of a line of military posts, through the Hudson and Champlain valleys, from New York to the St. Lawrence. In 1788 Governor

CLINTON'S MONUMENT.

Clinton presided over the convention held at Poughkeepsie to consider the new National Constitution. To that instrument he was opposed,

because it would be destructive of state supremacy. In 1801 he was again elected governor of the State of New York, and in 1804 he was chosen Vice-President of the United States. In 1808 he was a prominent candidate for the Presidency, but was beaten by Madison, and was re-elected Vice-President. By his casting-vote in the Senate of the United States, the renewal of the charter of the Bank of the United States was refused. While in the performance of his official duties at Washington he died. His remains rest beneath a handsome white marble monument in the Congressional Burying-ground at Washington.

Clinton, JAMES, was born in Orange County, N. Y., Aug. 9, 1736; died Dec. 22, 1812. He was well educated, but he had a strong inclination for military life. Before the beginning of the war for independence he was lieutenant-colo-

JAMES CLINTON.

nel of the militia of Ulster County. He was a captain under Bradstreet in the capture of Fort Frontenac (which see) in 1758; and he afterwards was placed in command of four regiments for the protection of the frontiers of Ulster and Orange counties—a position of difficulty and danger. When the war for independence broke out, he was appointed colonel of the Third New York regiment (June 30, 1775), and accompanied Montgomery to Quebec. Made a brigadier-general in August, 1776, he was active in the service; and was in command of Fort Clinton, in the Hudson Highlands, when it was attacked in October, 1777. (See *Forts Clinton and Montgomery*.) In 1779 he joined in Sullivan's expedition against the Senecas with fifteen hundred men. He was stationed at Albany during a great part of the war; but he was present at the surrender of Cornwallis (which see). General Clinton was a commissioner to adjust the boundary-line between New York and Pennsylvania; and was a member of both the Assembly and Senate of the State of New York.

Clinton, SIR HENRY, was born in 1738; died Dec. 23, 1795. He was a son of Admiral George Clinton, Governor of New York. He entered the

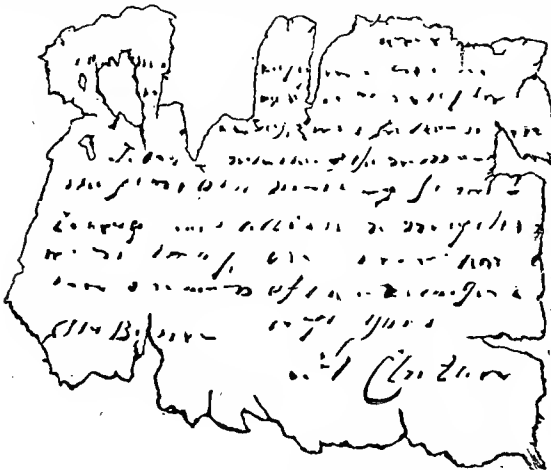

army when quite young, and had risen to the rank of major-general in 1775, when he was sent to America with Howe and Burgoyne. He participated in the battle of Bunker's Hill (June

SIR HENRY CLINTON.

17, 1775), and was thereafter active in service against the oppressed colonists until June, 1782, when he returned to England. He succeeded General Howe as commander-in-chief of the British forces in America in January, 1778.

**Clinton's Despatch.** In October, 1777, Sir Henry Clinton undertook a diversion in favor of General Burgoyne, then making his way towards Albany from Canada, in accordance with the British plan (which see) of conquest.

CLINTON'S DESPATCH AND BULLET.

on a marauding excursion, hoping to draw Gates from Burgoyne's front to protect the country below. On the day after the capture of the forts Sir Henry wrote on a piece of tissue-paper the following despatch to Burgoyne: "*Nous y voici* [here we are], and nothing between us and Gates. I sincerely hope this little success of ours may facilitate your operations. In answer to your letter of the 28th September by C. C., I shall only say I cannot presume to order, or even advise, for reasons obvious. I heartily wish you success. Faithfully yours.—H. CLINTON." This despatch was enclosed in an elliptical silver bullet, made so as to separate at the centre, and of a size (as delineated in the engraving) small enough to be swallowed by a man, if necessary. He intrusted it to a messenger who made his way north on the west side of the river, and, being suspected when in the camp of George Clinton back of New Windsor, was arrested. When brought before General Clinton, he was seen to cast something into his mouth. An emetic was administered to him, which brought the silver bullet from his stomach. The despatch was found in it, and the prisoner was executed as a spy at Hurley, a few miles from Kingston, while that village was in flames lighted by the British marauders.

**Clymer, GEORGE**, a signer of the Declaration of Independence, was born in Philadelphia in 1739; died at Morrisville, Penn., Jan. 23, 1813. Left an orphan at the age of seven years, his maternal uncle educated him, and finally left him a greater portion of his fortune. He was an active patriot during the war for independence, and was a member of the Council of Safety in Philadelphia. In July, 1775, he was made joint treasurer of Pennsylvania with Mr. Hillegas; and when, in December, 1776, Congress fled to Baltimore, Clymer was one of the commissioners left in Philadelphia to attend to the public interests. (See *Baltimore, Adjournment of Congress to*.) In 1777 he was a commissioner to treat with the Indians at Fort Pitt; and in

Clinton, with a strong land and naval force, had captured forts Clinton and Montgomery, in the Hudson Highlands (Oct. 6), and sent forces of both arms of the service up the river

1780 he assisted in organizing the Bank of North America (which see). At the close of the war he made his residence at Princeton, N. J.; and in 1784 he was a member of the Pennsylvania Leg-

ialature. In 1787 he was a member of the convention that framed the National Constitution, and was a member of the first Congress under it. A collector of the excise duties in 1791 which led to the Whiskey Insurrection (which see), and serving on a commission to treat with Southern Indians, Mr. Clymer, after concluding a treaty (in June, 1796), withdrew from public life. He was one of the founders of the Pennsylvania Agricultural Society, the Pennsylvania Academy of Fine Arts, and the Pennsylvania Bank.

**Coal.** The business of coal-mining for commercial purposes has entirely grown up during the last fifty or sixty years. It was known before the Revolution that coal existed in Pennsylvania. So early as 1769, a blacksmith (Obadiah Gore) in the Wyoming Valley used coal found lying on the surface of the ground. Forty years afterwards he tried the successful experiment of burning it in a grate for fuel. During the Revolution anthracite coal was used in the armory at Carlisle, Penn., for blacksmiths' fires. In 1790 an old hunter (Philip Gintner) in the Lehigh Valley discovered coal near the present borough of Mauch Chnuk. In 1792 the "Lehigh Coal-Mining Company" was formed for mining it, but it did little more than purchase lands. In 1806 two or three hundred bushels were taken to Philadelphia, but experiments to use it for ordinary fuel failed. In 1812 Colonel George Shoemaker took nine wagon-loads to Philadelphia, but could not sell it. It was soon afterwards used with success in rolling-mills in Delaware County, and it soon found purchasers elsewhere. But it was not until 1825 that the coal-trade began to assume notable proportions, when anthracite was used in factories and in private houses for fuel. The whole amount of anthracite sent to market in 1820 was 365 tons. The annual product of the coal-fields of Pennsylvania about 1876 was 27,000,000 tons. The entire coal product of the country in 1874 was about 50,000,000 tons—24,000,000 anthracite and over 25,000,000 bituminous.

**Coast Survey, THE UNITED STATES,** a national undertaking for the security of the vast commerce upon the very extended and often dangerous coasts of the United States. It is believed that to Professor Patterson, of Philadelphia, is due the honor of having first suggested to President Jefferson the idea of a geodetic survey of the coast. Mr. Gallatin (which see) was then Secretary of the Treasury, and warmly approved the measure. The first attempt to organize a national coast survey, "for the purpose of making complete charts of our coasts, with the adjacent shoals and soundings," was made in 1807. Congress authorized such a survey, and appropriated \$50,000 for the purpose. Mr. Gallatin, with great assiduity, gathered information for scientific uses. A plan proposed by F. R. Hassler (which see) was adopted, but, on account of political disturbances in Europe and America, nothing was done in the matter until 1811, when Mr. Hassler was sent to Europe for instruments and standards of measure. The war that ensued (1812-15) detained

him abroad. On his return, in 1815, he was formally appointed superintendent, and entered upon the duties in 1816, near the city of New York; but in less than two years it was discontinued. Mr. Hassler resumed it in 1832, and the work has been carried on continually ever since. Mr. Hassler died in 1843, and was succeeded by Alexander Dallas Bache. On his death, in 1867, Professor Benjamin Peirce was made superintendent. Professor Bache greatly extended the scope of the survey, including an investigation of the Gulf Stream, the laws of tides, and their ebb and flow in harbors and rivers, so that navigators might have complete information concerning the tide-waters of the United States. The observations and investigations also include meteorological charts—changes in the weather in different seasons at various points, and the laws of storms. During the Civil War the work ceased on the southern coasts, for the insurgents captured some of the vessels employed in the survey; and officers and pilots engaged in the work were transferred to service in the navy, and, with their minute knowledge of the coasts, greatly assisted in suppressing the insurrection. Professor Peirce still further extended the enterprise, so as to constitute a great national triangulation—a geodetic survey intended to embrace the shores of the Atlantic and Pacific oceans within its limits, and to form, by means of triangulation, a grand chain across the continent. The operations of "field-work" are carried on simultaneously at many points on the coast. The Atlantic and Gulf coasts are divided into nine, and the Pacific coast into two, sections, each having its triangulation, astronomical, topographical, and hydrographical parties, all working independently, but upon the same system, so that the whole will form a connected survey from Maine to Texas and from San Diego to the forty-ninth parallel on the Pacific. The coast of Alaska (which see), since its acquisition, has been added to the field of operations. There are employed in the coast survey ninety-four civilians of different grades and eleven officers of the navy, a number of the latter being required for vessels engaged in hydrography. Besides these, there are nearly one hundred others employed as computers, draughtsmen, engravers, and clerks. The whole work is under the control of the United States Treasury Department, while a superintendent directs all the details of the work, governs the movements of the parties, and controls the expenditures.

**Cobb, HOWELL,** was born in Jefferson County, Ga., Sept. 7, 1815; died in New York city, Oct. 9, 1863. He was a lawyer by profession, and was solicitor-general of the western circuit of Georgia from 1837 to 1841; a member of Congress from 1843 to 1851; speaker of the Thirty-first Congress; and governor of Georgia from 1851 to 1853. He was again in Congress from 1856 to 1857, and was Secretary of the Treasury under Buchanan from 1857 to 1860. He was a zealous promoter of the insurrection against the government in 1860-61, and was chosen president of the convention at Montgomery

(Feb. 4, 1861) that organized the Confederate government. He became a brigadier-general in the Confederate army; and at the close of

HOWELL COBB.

the war he opposed all the measures for the reorganization of the government.

**Cobbett, WILLIAM**, was born at Farnham, Surrey, England, March 9, 1762; died June 18, 1835. He was the self-educated son of a farmer, and in his early manhood was eight years in the army, rising to the rank of sergeant-major. He obtained his discharge in 1791, married, and came to America in 1792, when he became a pamphleteer, bookseller, and journalist, having established *Peter Porcupine's Gazette* (which see) in 1794. Heavily fined for libel on Dr. Rush, in Philadelphia, his business was broken up, and in 1800 he returned to England. In 1802 he began his famous *Weekly Political Register*, which he conducted with ability about thirty years, but which caused him to incur fines and imprisonment because of his libellous utterances. He came to America in 1817, but returned in 1819, taking with him the bones of Thomas Paine. He continued the business of writing and publishing, and many of his books, written in vigorous Anglo-Saxon, are very useful. He entered Parliament in 1832, and was a member several years. His political writings, being an abridgment of one hundred volumes, were collected and published, in twelve volumes, under the title of *Porcupine's Works*.

**Cobbett's Revenge.** That able, unscrupulous, and often coarse pamphleteer and journalist, William Cobbett, issued many libels in his *Peter Porcupine's Gazette*. He attacked Dr. Rush, of Philadelphia, because of his treatment of yellow-fever cases, especially of his blood-letting. Rush prosecuted him for libel, and obtained a verdict for \$5000 damages. That suit had been brought to trial on the day of Washington's death (Dec. 14, 1799), and Cobbett remarked that it was a singular coincidence that while the great patriot was dying in consequence of the too free use of the lancet (see *Washington, Death of*), he should be mulcted in a verdict of \$5000 for exposing and ridiculing the dangerous practice in yellow-fever. In anticipation of the verdict, Cobbett stopped his paper and re-

moved to New York, where he was threatened with imprisonment, but procured bail. There he issued a series of vigorously written pamphlets, called *Rush Lights*, in which he exhibited, in vivid colors, the various phases of character of all engaged in his prosecution. Then he went back to England, and issued *Porcupine's Works*, in twelve octavo volumes, which sold largely on both sides of the Atlantic. In these he exhibited such pictures of his American enemies that he tasted the sweets of revenge.

**Cockade Proclamation.** On Nov. 5, 1796, Adet, the French minister to the United States, issued a proclamation, or order, calling upon all Frenchmen in the United States, in the name of the French Directory, to mount and wear the tricolored cockade, "the symbol of a liberty the fruit of eight years' toils and five years' victories." Adet declared in his proclamation that any Frenchman who might hesitate to give this indication of adherence to the Republic should not be allowed the aid of the French consular chanceries or the national protection. The tricolored cockade was at once mounted, not only by the French residents, but by many American citizens who wished to signify in this marked manner their attachment to the French Republic. This "cockade proclamation," as the Federalists called it in derision, was the origin of the practice, for several years, of wearing a cockade as a badge of party distinction.

**Cockburn in the Chesapeake (1813).** (See *Amphibious Warfare*.) Admiral Sir G. Cockburn had taken his chief position in Lynx Haven Bay for carrying on his marauding expeditions on the coasts of Virginia, Delaware, and Maryland. These plundered and burned farm-houses, carried off negroes and armed them against their masters, and seized live-stock. Sometimes he was engaged in more honorable warfare. On April 3, 1813, a flotilla of a dozen boats filled with armed men from the British fleet, under Lieutenant Polkingthorne of the *St. Domingo*, 74 guns, entered the Rappahannock River and attacked the Baltimore privateer *Dolphin*, 10 guns, Captain Stafford, and three armed schooners prepared to sail for France. The three smaller vessels were soon taken, but the struggle with the *Dolphin* was severe. She was boarded, and for fifteen minutes a contest raged fearfully on her deck, when the *Dolphin* struck her colors. Cockburn now went up the Chesapeake with the brigs *Fantome* and *Mohawk*, and the tenders *Dolphin*, *Racer*, and *Highflyer*, and proceeded to destroy Frenchtown, a hamlet of about a dozen houses, on the western coast of Delaware. Cockburn made the *Fantome* his flag-ship. The only defenders of the hamlet were a few militia who came down from Elkton, and some drivers of stages and transportation-wagons. The former garrisoned a redoubt which had just been erected, upon which lay four iron cannons. They were vanquished and retired. The storehouses were plundered and burned, but the women and children were well treated. Property on land worth \$25,000 was destroyed, and on the water five trading-vessels were consumed. Thence

Cockburn went up the bay to Havre de Grace, near the mouth of the Susquehanna, which he plundered and burned. (See *Havre de Grace*.) Afterwards Cockburn attacked the villages of Fredericktown and Georgetown (May 6, 1813), on the Sassafras River. They contained from forty to fifty houses each. He first visited Fredericktown, on the north shore. The militia, under Colonel Veazy, made a stout resistance, but were compelled to retire. The village was laid in ashes, and the storehouses were plundered and burned. The maranders then crossed over to Georgetown, and served it in the same way. So delighted was Cockburn with his success in plundering and burning defenceless towns that he declared he should not be contented until he had burned every house in Baltimore. Having deprived three villages on the Chesapeake of property worth at least \$70,000, Cockburn returned to the fleet.

**Cockburn on the Coast of the Carolinas.** Early in July, 1813, Admiral Cockburn, with a part of his marauding fleet, went southward from Hampton Roads to plunder and destroy. His vessels were the *Sceptre*, 74 guns (flag-ship), *Romulus*, *Fox*, and *Nemesis*. Off Ocracoke Inlet, he despatched (July 12, 1813) about eight hundred armed men in barges to the waters of Pamlico Sound. There they attacked the *Anaconda* and *Atlas*, two American privateers, and captured both. The crew of one escaped, and gave the alarm at New Berne. The British boats proceeded to attack that place, but found it too well prepared to warrant their doing so. They captured Portsmouth, and plundered the country around. They decamped in haste (July 16), carrying with them cattle and other property, and many slaves, to whom they falsely promised their freedom. These, and others obtained the same way, Cockburn sold in the West Indies on his private account. Leaving Pamlico Sound, the marauder went down the coast, stopping at and plundering Dewees's and Capers's islands, and filling the whole region of the Lower Santee with terror. Informed of these outrages, the citizens of Charleston prepared for the reception of the marauders. Fort Moultrie and other fortifications were strengthened, breast-works were thrown up at exposed places, and a body of militia was gathered at Point Pleasant. In anticipation of the coming of an army of liberation, as they were falsely informed Cockburn's men were, the negroes were prepared to rise and strike for freedom. (See *Servile Insurrection threatened*.) Cockburn did not venture into Charleston harbor, but went down to Hilton Head, from which he carried off slaves and cattle. Then he visited the Georgia coast, and at "Dungeness House," the fine estate of General Nathaniel Greene, on Cumberland Island, he made his headquarters for the winter, sending his maranders out in all directions to plunder the plantations on the neighboring coast.

**Cockburn, SIR GEORGE**, was born in London in 1771; died in August, 1853. He entered the royal navy in 1783, and was rear-admiral in 1812. He was in command of a small squadron on the

North American station in 1813, and made marauding expeditions on the coasts of the Chesapeake Bay and farther south. (See *Amphibious Warfare*.) He was concerned in the sack of Washington in 1814, and in an unsuccessful attempt to capture Baltimore in the same year. He was knighted in 1815, and made a major-general of marines in 1821.

**Coddington, WILLIAM**, a founder of Rhode Island, was born in Lincolnshire, England, in 1601; died Nov. 1, 1678. He came to America in 1630 as a magistrate of Massachusetts appointed by the crown. He was a prosperous merchant in Boston, but, taking the part of Anne Hutchinson (see *Hutchinson Controversy*), he was so persecuted that, with eighteen others, he removed to the island of Aquidneck (now Rhode Island); where, on the organization of a government, he was appointed judge, or chief ruler. In March, 1640, Coddington was elected governor, and held the office seven years. He went to England in 1651, and in 1674-75 he was again governor. He had adopted the tenets of the Quakers.

**Codification of the Laws of Massachusetts** (1648). There was a consultation respecting the laws in 1634, since which time committees, consisting of magistrates and elders, had been appointed every year to prepare a code. Finally, in 1648, the whole of the laws were collected, codified, and printed at Cambridge.

**Coffee, JOHN**, was born in Nottaway County, Va., in 1772; died near Florence, Ala., July 7, 1833. His profession was that of a surveyor. In December, 1812, he was colonel of Tennessee

JOHN COFFEE.

volunteers under Jackson, and was with him in all his wars with the Creek Indians. He was with him also in his expedition to Pensacola (which see), and in the defence of New Orleans. In 1817 he was surveyor of public lands.

**Coffin, SIR ISAAC**, was born in Boston, May 16, 1759; died at Cheltenham, England, July 23, 1839. He was the son of a collector of the customs in Boston, who was a zealous loyalist. He entered the British navy in 1773, became a lieutenant in 1776, and was active on the American coast at different times during the war for independence. He served under Rodney, was made post-captain in 1790, and rear-admiral of the blue in 1804, in which year he was knighted. In June, 1814, he was created admiral of the blue, and in 1820 admiral of the white. He was a member of Parliament in 1818. Having a real attachment for his native country, he endowed a "Coffin School" in Nantucket, where many of his relatives lived, and gave for its support \$12,500.

**Coinage in the United States.** Wampum had depreciated in value as currency in consequence of over-production, and a final blow was given to it as a circulating medium in New England by an order from the authorities of Massachusetts not to receive it in payment of taxes. As fast as coin came to the colony of Massachusetts by trade with the West Indies, it was sent to England to pay for goods purchased there. To stop this drain of specie, Massachusetts set up a mint, and coined silver threepences, sixpences, and shillings, each bearing the figure of a pine-tree on one side, and the words "New England" on the other. The silver was alloyed a quarter below the English standard, with the expectation that the debasement would prevent the coin leaving the country. Thus the pound currency of New England came to be one fourth less than the pound sterling of Great Britain; and this standard was afterwards adopted by the British Parliament for all the English American colonies. The "mint-house" in Boston existed about thirty-four years. All the coins issued from it bore the dates 1652 or 1662, the same dies being used, probably, throughout the thirty-four years of coining. Some coins had been made in Bermuda for the use of the Virginia colony as early as 1644. Copper coins bearing the figure of an elephant were struck in England for the Carolinas and New England in 1694. Coins were also struck for Maryland, bearing the effigy of Lord Baltimore. In 1722-23, William Wood obtained a royal patent for coining small money for the "English plantations in America." He made it of pinchbeck—an alloy of copper and tin. One side of the coin bore the image of George I., and on the other was a large double rose, with the legend *Rosa Americana utilis dulci*. In the coinage of 1724 the rose was crowned. This base coin was vehemently opposed in the colonies. A writer of the day, speaking of the speculation, said Wood had "the conscience to make thirteen shillings out of a pound of brass." The power of coinage was exercised by several of the independent states from 1778 until the adoption of the National Constitution. A mint was established at Rupert, Vt., by legislative authority in 1785, whence copper cents were issued, bearing on one side a plough and a sun rising from behind hills, and on the other a radiated eye surrounded by thirteen

stars. Some half-cents also were issued by the Vermont mint. In the same year the Legislature of Connecticut authorized the establishment of a mint at New Haven, whence copper coins were issued having on one side the figure of a human head, and on the other that of a young woman holding an olive-branch. This mint continued in operation about three years. In 1786 parties obtained authority from the Legislature of New Jersey to coin money, and they established two mints in that state: one not far from Morristown, and the other at Elizabethtown. On one side of this coinage was the head of a horse, with a plough beneath; and on the reverse a shield. The head of a horse and three ploughs now form the chief device of the great seal of New Jersey. Cents and half-cents were issued in Massachusetts in 1788, exhibiting on one side an eagle with a bundle of arrows in the right talon, an olive-branch in the left, and a shield on its breast bearing the word "cent." That device was, and is now, the chief on the great seal of the United States. On the other side of the Massachusetts cent was the figure of an Indian holding a bow and arrow; also a single star. So early as the adoption of the "Articles of Confederation" (1781) the subject of national coinage occupied the attention of statesmen. In 1782, Robert Morris, Superintendent of Finance, submitted to the Continental Congress a plan for a metallic currency for the United States, arranged by Gouverneur Morris, who attempted to harmonize all the moneys of the states. He found that the 1-440th part of the Spanish milled dollar was a common divisor of all the various currencies. Starting with that fraction as a unit, he proposed the following table of moneys: Ten units to be equal to one penny, ten pence to one bill, ten bills to one dollar (about seventy-five cents of our present currency), and ten dollars to one crown. The superintendent reported the plan to Congress in February, 1782, and employed Benjamin Dudley, of Boston, to construct machinery for a mint. The subject was debated from time to time, and on April 22, 1783, some coins were submitted to Congress as patterns. Nothing further was done in the matter (and Mr. Dudley was discharged) until 1784, when Mr. Jefferson, chairman of a committee appointed for the purpose, submitted a report, disagreeing with that of Morris because of the diminutive size of its unit. He proposed to strike four coins upon the basis of the Spanish milled dollar as follows: A golden piece of the value of ten dollars, a dollar in silver, a tenth of a dollar in silver, and a hundredth of a dollar in copper. This report was adopted by Congress in 1785, and was the origin of our copper cent, silver dime and dollar, and golden eagle. The following year (October, 1786) Congress framed an ordinance for the establishment of a mint, but nothing further was done until 1787, when the Board of Treasury, by authority of Congress, contracted with James Jarvis for three hundred tons of copper coins of the prescribed standard, which were coined at a mint in New Haven, Conn. They bore the following devices: On one side thirteen circles linked together; a small

circle in the middle, with the words "American Congress" within it, and, in the centre, the sentence "We are one." On the other side a sundial; with the sun above it, and the word "Fugio;" and around the whole, "Continental Currency, 1776." Below the dial, "Mind your business." A few of these pieces, it is said, were struck in a mint at Rupert, Vt. The national Constitu-

established at New York in 1854; at Denver, Col., in 1864; and at Boise City, Id., in 1872. In 1873 Congress made the mint and assay offices a bureau of the Treasury Department, the title of the chief officer of which is Superintendent of the Mint at Philadelphia. He is under the Secretary of the Treasury, and is appointed by the President for the term of five years. On account of the increased price of copper in 1776 the weight of the cent was reduced to 168 grains, and the half-cent in proportion. An act was passed in June, 1834, changing the weight and fineness of the gold coin, and the relative value of gold and silver. The weight of the eagle was reduced to 258 grains, and the parts in proportion, of which 232 grains must be pure gold, making the fineness twenty-one carats. The silver coinage was not then changed, but in January, 1837, Congress reduced the weight of the silver

FAC-SIMILE OF THE FIRST MONEY COINED BY THE UNITED STATES.

tion, framed in 1787, vested the right of coinage exclusively in the national government. The establishment of a mint was authorized by act of Congress in April, 1792, but it did not go into full operation until 1795. (See *Mint*.) By that act the golden eagle of ten dollars was to weigh 270 grains, the parts in the same proportion; all of the fineness of twenty-two carats. The silver dollar, of one hundred cents, was to weigh 416 grains, the fractions in proportion; the fineness, 892.4 thousandths. The copper cent was to weigh 264 grains; and the half-cent in proportion. In 1793 the weight of the cent was reduced to 208 grains, and the half-cent in the same proportion. Laws were enacted in 1793 for establishing a mint, and David Rittenhouse was appointed first director; but it did not go into full operation before 1795, the intervening time being spent in experimenting. During that time a great variety of silver and copper coins appeared, among them the "Liberty-cap cent," so called because it bore on

dollar to 412½ grains, and the parts in proportion. By act of March 3, 1849, there were added to the series of gold coins the double eagle and the dollar; and in February, 1853, a three-dollar piece. On March 3, 1851, there was added to the silver coins a three-cent piece (a legal tender for sums not exceeding thirty cents), and this piece continued to be coined until April 1, 1853, when its fineness was raised and its weight reduced. By act of Feb. 21, 1853, gold alone was made a legal tender, and the weight of the half-dollar was reduced to 206 grains, and smaller coins in proportion. Silver was made a legal tender only to the amount of five dollars. The silver dollar was not included in the change, but remained a legal tender. The copper cent and half-cent were discontinued in 1857, and a new cent of copper and nickel was coined. In 1864 the coinage of the bronze cent was authorized; also two-cent pieces. By act of March 3, 1865, a three-cent piece was authorized, of three fourths copper and one fourth nickel. May 16, 1866, a coinage of five-cent pieces, three fourths copper and one fourth nickel, was authorized. The coinage act of 1873 prescribes the fineness of all gold and silver coins to be .900. The gold coins are of the same denomination as before; the silver coins are a "trade-dollar," weighing 420 grains; a half-dollar, or fifty-cent piece; a quarter-dollar, and a dime. There were also five-cent and three-cent silver coins issued. The issuing of coins other than those enumerated in the act is prohibited. It is provided that upon the coins of the United States there shall be the following devices and legends: Upon one side an emblem of Liberty, with the word "Liberty" and the year of the coinage; and upon the reverse the figure of an eagle, with the inscriptions "United States of America" and "E pluribus unum," and a designation of the value of the coin; but on the gold dollar and three-dollar pieces, the dime, five-, three-, and one-cent pieces, the figure of the eagle shall be omitted; and on the reverse of the silver trade-dollar the

LIBERTY-CAP CENT.

one side a liberty-cap surrounded by rays of light, and on the other a head of Washington. The subject of a device for the national coins produced warm debates in Congress. The head of the President was objected to because it was an imitation of royalty, and a head of Liberty was adopted. The mint was established at Philadelphia, and it was the only one in the country until 1835, when three branches were erected: one at Charlotte, N. C.; another at Dahlonega, Ga.; and a third in New Orleans. These went into operation in 1837-38. In 1854 a branch mint was established at San Francisco, Cal., and in 1870 another at Carson City, Nev. Assay offices were

weight and the fineness of the coin shall be inscribed, with the motto "In God we trust" added when practicable.

**Coke, EDWARD**, was born at Mileham, Norfolk, Eng., Feb. 1, 1552; died at Stoke Poges, Buckinghamshire, Sept. 3, 1633. He began the profession of law in 1578, and quickly rose to the highest rank. Passing through different grades of judicial office, he became lord chief-justice of England, opposed in his whole course by a powerful rival, Francis Bacon. Coke was a violent and unscrupulous man, and carried his points in court and in politics by sheer audacity, helped by tremendous intellectual force. As attorney-general, he conducted the prosecution of Sir Walter Raleigh with shameful unfairness; and from the beginning of his reign King James I. feared and hated him, but failed to suppress him. Coke was in the Privy Council and in Parliament in 1621 when the question of monopolies by royal grants was brought before the House in the case of the Council of Plymouth and the New England fisheries. Coke took ground against the validity of the patent, and so directly assailed the prerogative of the king. In other cases he took a similar course; and when the king censured the House of Commons, as composed of "fiery, popular, and turbulent spirits," Coke, speaker of the House, invited that body to an assertion of its rights, independent of the king, in the form of a protest entered on its minutes. The angry monarch sent for the book, tore out the record of the protest with his own hands, dissolved Parliament, and caused the arrest and the imprisonment of Coke, Pym, and other members for several months in the Tower. After that he was a thorn in the side of James and his successor. He kept up the contest against the royal prerogative until Charles I. lost his head in support of it. In 1628 Coke retired from public life, and died, five years afterwards, in the eighty-second year of his age. His *Reports* and other writings upon law and jurisprudence were numerous and most important. He published *Coke upon Littleton* in 1628.

**Cold Winter.** In January and February, 1780, the cold was so intense that the harbor of New York was so strongly bridged with ice that the British dragged caissons over it from New York to Staten Island. Knyphausen was in command of the city of New York, and he became alarmed for its safety, because thus deprived of all the advantages of its insular situation. The pickets were doubled and all the people put under arms, so as to prevent a surprise by patriots who might cross the Hudson on the ice. The garrison and inhabitants, cut off from their usual supplies by water, experienced a great scarcity of fuel and fresh provisions.

**Colden, CADWALLADER**, was born at Dunse, Scotland, Feb. 17, 1688; died on Long Island, N. Y., Sept. 28, 1776. He graduated at the University of Edinburgh in 1705, and became a physician and mathematician. In 1708 he emigrated to Pennsylvania, and returned to his native country in 1712. He came again to America in 1716, and in 1718 made his abode in New York,

where he was made first surveyor-general of the colony, became a master in chancery, and, in 1720, obtained a seat in Governor Burnet's council. He received a patent for lands in Orange County, N. Y., nine or ten miles from Newburgh,

CADWALLADER COLDEN.

and there he went to reside in 1755. Becoming president of the council, he administered the government in 1760, and was made lieutenant-governor in 1761, which station he held until his death, being repeatedly placed at the head of affairs by the absence or death of governors. During the Stamp Act excitement the populace hurped his coach. After the return of Governor Tryon in 1775, he retired to his seat on Long Island. Dr. Colden wrote a *History of the Five Indian Nations of Canada* in 1727. He was an ardent student of botany, and introduced the Linnæan system into America. He published scientific works and was a correspondent of the leading men of science in Europe.

**Cole, THOMAS**, painter, was born at Bolton-le-moors, Lancashire, Eng., Feb. 1, 1801; died at Catskill, N. Y., Feb. 11, 1847. His parents, who lived in America, had gone to England previous to his birth, and returned in 1819, settling in Philadelphia, where Thomas practised the art of wood-engraving. He began portrait-painting in Stenbenville, Ohio, in 1820, soon wandered as an itinerant in the profession, and finally became one of the most eminent of American landscape painters. He established himself in New York in 1825. The charming scenery of the Hudson employed his pencil and brush, and orders for his landscapes soon came from all quarters. From 1829 to 1832 he was in Europe, and on his return he made his home at Catskill, where he resided until his death. His two great finished works are "The Course of Empire" and "The Voyage of Life," the former consisting of a series of five, and the latter of four, pictures. He produced many other fine compositions in landscape and figures, which gave him a place at the head of his profession. Mr. Cole left unfinished at his death a series entitled "The Cross and the World." Mr. Cole also wrote a dramatic poem, and was a writer of tales.

**Colfax, SCHUYLER**, grandson of the last commander of Washington's life-guard, was born in New York city, March 23, 1823. He was a

merchant's clerk for three years, and then, with his family, he went to New Carlisle, St. Joseph's Co., Ind., where for five years he was a clerk in a country store. In 1841 his step-father, Mr. Mathews, was elected county auditor, and he re-

SCHUYLER COLFAX.

moved to South Bend and made Schnyler his deputy. There he studied law, and finally established a weekly newspaper. In 1850 he was a member of the Indiana State Constitutional Convention, and the next year was a candidate for Congress, but was not elected. In 1856 the newly formed Republican party elected him to Congress, and he was re-elected for six consecutive terms. In December, 1863, he was elected speaker of the House of Representatives. He was re-elected speaker in 1865 and 1867. On March 4, 1869, Mr. Colfax was made Vice-President, with General Grant as President. He died suddenly January 15, 1885.

Coligni, JASPER DE, was born at Châtillon-sur-Loing, Feb. 16, 1517; died in Paris, Aug. 24, 1572. In 1539 he was introduced to Francis I., of France, entered the military service, was knighted because of his merits as a soldier, and

JASPER DE COLIGNI.

soon became noted as the best officer in the army. He was made colonel in the French infantry, and also admiral, and may be regarded

as the founder of the French military system. Coligni was governor of Picardy in 1557, and while fighting in defence of St. Quentin he was made prisoner by the Spaniards. Endowed with deep religious feelings, he became a devoted Calvinist—a Huguenot—and in 1555 and 1562 he made attempts to secure an asylum in America for his persecuted brethren. In this he was not successful. (See *Huguenots in America*.) With the Prince of Condé, he was a leader of the Protestant army in France in the civil war between 1560 and 1570. In the latter year he appeared at the court of Charles IX., who was ruled by his infamous mother, Catherine de' Medici. His influence aroused the jealousy of the Roman Catholics, and he was deserted by his monarch and the queen mother. She had failed to bring the Duke of Guise, his rival, to the scaffold, and she joined the league against the Huguenots, which found horrid expression in the massacre of the Protestants in France on the eve of the festival of St. Bartholomew. Coligni was selected as one of the first victims on that fatal night. Belme, a German assassin employed by the Duke of Guise, led a band of murderers, with concealed weapons, to the room of the admiral. He held a boar-spear in his hand. The majestic presence of Coligni, and the serenity of his deportment, abashed the leader at first, and he was about to retire, when one of his comrades whispered "coward!" in his ear. Belme instantly plunged the spear in Coligni's heart, and he fell dead at the feet of his murderers. His body was cast out of a window into a court, where the Duke of Guise was waiting for the consummation of the crime. The head of the admiral was severed from his body and taken to Catherine, while his remains were dragged through the streets of Paris, red with the blood of his murdered co-religionists, and hanged on a gibbet at Montfauçon. Catherine had the head of the admiral embalmed and sent to the Pope, Gregory XII., at Rome. The pontiff ordered a Te Deum to be sung over the event and caused a medal to be struck in commemoration of it. Coligni's remains were secretly taken from the gibbet by his servants and buried at Chantilly, and in 1786 Montesquieu transferred them to his estate at Mauperties, where he dedicated a chapel and erected a monument to the memory of the martyr admiral.

College of New Jersey (now Princeton), one of the higher institutions of learning established in the English-American colonies. It was founded under the auspices of the Presbyterian Synod of New York, which then included New Jersey in its jurisdiction. A charter was obtained in 1746, and it was opened for students in May, 1747, at Elizabethtown, N. J. The same year it was removed to Newark, and in 1757 it was transferred to Princeton, where a new college edifice, named Nassau Hall, had just been completed. That name was given in honor of William III., "of the illustrious house of Nassau." The college itself was often called "Nassau Hall," but it is now universally known as Princeton College. It suffered much during

the Revolution, being occupied as barracks and hospital by both armies. (See *Princeton, Battle of*.) The president (Dr. Witherspoon) and two of the alumni (Benjamin Rush and Richard Stockton) were signers of the Declaration of Independence; and several of the leading patriots during the war, and statesmen afterwards, were graduates of the College of New Jersey. General Washington and the Continental Congress were present at the "commencement" in 1783. Other buildings were erected, and it had steady prosperity until the breaking-out of the Civil War in 1861. Nassau Hall was burned in 1855, and speedily rebuilt. The Civil War reduced the number of its students, but it regained them, and more, when peace came. In 1868 Rev. James McCosh, from Belfast, Ireland, was called to the presidency of the college—a man of great energy and activity. During his administration many fine buildings were added to the institution, and more than \$1,000,000 have been given to the college. One gentleman (John C. Green) has given \$750,000 to endow a scientific school, erect a library, and a building for lectures and recitations. The college buildings are mostly of stone; the grounds are well shaded with trees; the library contains nearly sixty thousand volumes, and the various endowments to the college proper amount to about \$600,000. There have been eleven presidents, all of them clergymen. The first was Rev. Jonathan Dickinson. A theological seminary connected with the college was founded in 1812, and occupies similar plain stone buildings. Its library contained about twenty-four thousand volumes in 1876, and its endowments amounted to \$400,000.

**College of Rhode Island** (now Brown University), one of the higher colonial institutions of learning, the charter of which was obtained in February, 1764, was established at Providence, R. I. The associated Baptist churches of Philadelphia moved in the matter in 1763. The subject was laid before the leading Baptists at Newport, R. I., the funds for the purpose were raised, and the charter obtained for "The College of Rhode Island," in which was a provision that "into this liberal and catholic institution shall never be admitted any religious tests; but, on the contrary, all the members hereof shall forever enjoy full, free, absolute, and uninterrupted liberty of conscience; and that the public teaching shall, in general, respect the sciences, and that the sectarian differences of opinion shall not make any part of the public and classical instruction." The government was placed under a board of twelve fellows, of whom eight, including the president, must be Baptists; and thirty-six trustees, of whom twenty-two must be Baptists, five Friends or Quakers, four Congregationalists, and five Episcopalians, this proportion representing the different denominations then in the colony. Rev. James Manning was elected the first president in September, 1765. Nicholas Brown, a wealthy and distinguished citizen of Providence, became a magnificent benefactor of the college, and in 1804 it received the name of Brown University. His gifts amounted to about \$100,000. The university has

established an agricultural college in connection with it, in accordance with the provision of Congress. (See *Agricultural Colleges*.) It has five college buildings, a museum, and a library containing over forty thousand volumes. From 1765 to 1876 the university had six presidents—namely, James Manning, Asa Messer, Francis Wayland, Barnas Sears, Alexis Caswell, and E. G. Robinson. (See *Colonial Colleges*; also *Nicholas and J. Carter Brown*.)

**Colleges in the United States.** The number of universities and colleges in the United States in 1886, was 364, with 4211 instructors and 60,011 students. Of these institutions, 51 were under the control of Roman Catholics. Only 16 of them had libraries containing over 25,000 volumes. Many of them, particularly the younger ones, are open to both sexes. There are several colleges exclusively for women. The first established of these was Vassar College at Poughkeepsie. Few of these colleges were established before the close of the Revolution, in 1783; and only six were organized before 1820. Between 1820 and 1840, forty were established. About sixty are unsectarian.

**Collision between State Authority and the National Judiciary.** In 1808 a case which had been in existence since the Revolution brought the State of Pennsylvania into collision with the Supreme Court of the United States. During the disputes in the case alluded to—about prize-money—David Rittenhouse, as state treasurer of Pennsylvania, had received certain certificates of national debt. Rittenhouse settled his accounts as treasurer in 1788 and resigned his office, but still retained these certificates, having given his bond to the judge of the state court to hold him harmless as to other claimants. The certificates were held by Rittenhouse to indemnify him against the bond he had given. When the public debt was funded he caused these certificates to be funded in his own name, but for the benefit of whom it might concern. Rittenhouse died in 1801, leaving his three daughters executors of his estate. They were called upon by the State Treasurer to deliver the certificates to him and pay over the accrued interest. They refused to do so, on account of a pending suit in the state court by a claimant for the amount. The state court finally declined to interfere, on the technical ground that it was an admiralty matter and was not cognizable in a court of common law. The claimant then applied to the United States District Court for an order to compel the executors of Rittenhouse to pay over to him the certificates and accumulated interest, then amounting to about \$15,000. Such a decree was made in 1803, when the Legislature of Pennsylvania passed a law to compel the executors to pay the funds into the state treasury, pledging the faith of the state to hold them harmless. Finally the Supreme Court of the United States issued a mandamus for the judge of the district court to carry the decree into execution, despite the state law. It was done (March 12, 1809); but the marshal, when he went to serve the process of attachment, found

the houses of the respondents protected by an armed guard, who resisted his entrance by bayonets. These guards were state militia, under General Bright, with the sanction of the governor. The legislature and the governor now receded somewhat. The former made an appropriation of \$18,000 to meet any contingency; and finally, after a show of resistance, which, to some, threatened a sort of civil war in the streets of Philadelphia, the governor paid over the sum to the marshal out of the appropriation. This was a blow to the doctrine of state supremacy, which still held a large place in the political creed of the people of all the states. The supremacy of the national judiciary was fully vindicated.

**Colonial Artillery.** The whole train of artillery possessed by the English-American colonies when the first war for independence broke out (April 19, 1775) was composed of four field-pieces, two belonging to citizens of Boston, and two to the province of Massachusetts. In 1788 the Secretary of War called the attention of Congress to the fact that there were in the arsenals of the United States "two brass cannons, which constituted one moiety of the field artillery with which the late war was commenced on the part of the Americans." Congress by resolution directed the Secretary to have suitable inscriptions placed on them; and as they belonged to Massachusetts, he was instructed to deliver them to the order of the governor of that state. The two pieces belonging to citizens of Boston were inscribed respectively, "The Hancock, Sacred to Liberty," and "The Adams, Sacred to Liberty;" with the additional words on each, "These were used in many engagements during the war." (See *Artillery*.)

**Colonial Colleges.** There were nine higher institutions of learning in the English-American colonies before the breaking-out of the old war for independence — namely, Harvard in Massachusetts; William and Mary in Virginia; Yale in Connecticut; King's in New York; College of New Jersey and Queen's in New Jersey; College of Rhode Island; Dartmouth in New Hampshire; and University of Pennsylvania. (See notices of the respective colleges.) Hampden-Sidney College was founded in 1775, just as the war broke out. In these colonial institutions many of the brightest statesmen of the last century and beginning of this were educated.

**Colonial Concurrence in Virginia's Resolutions.** In 1769 the British Parliament, by resolutions, censured the votes, resolutions, and proceedings of Massachusetts against the Mutiny Act (which see). That portion of them which proposed to bring offenders from that colony to Great Britain for trial highly offended the Americans. The Virginia Assembly passed strong resolutions condemnatory of the proceedings of Parliament; and these were followed by similar resolutions passed by the Assemblies of New York, Delaware, Maryland, and North and South Carolina.

**Colonial Congress, EARLY.** Soon after the attack on Schenectady (1690), the government

of Massachusetts addressed a circular letter to all the colonies as far south as Maryland, inviting them to send commissioners to New York, to agree upon some plan of operations for the defence of the whole. Delegates from Massachusetts, Connecticut, and New York met in the city of New York in May, 1690, and the campaign against Canada was planned. This was the first Colonial Congress. (See *King William's War*.)

**Colonial Currency, REGULATION OF THE.** Complains were made of the diversity which existed in the several colonies in the moneys of account, and of the various rates at which the Spanish coin, which formed the principal circulation, passed current in different places. It was believed that coin might be kept in the country by enhancing its nominal value; and this value was further increased by the depreciation of the circulating bills of credit. A royal proclamation in 1704 established for all the colonies the old New England standard, by fixing the value of the dollar at six shillings (seventy-five cents of our currency); and this proclamation was reinforced in 1707 by an act of Parliament inflicting severe penalties on such as disregarded it. This regulation of the currency was evaded or openly disregarded by some of the colonies; and at length the circulating medium was thrown into still greater confusion by new issues of paper money.

**Colonial Manufactures, RESTRICTIONS UPON.** As soon as the American colonies began to manufacture for themselves, they encountered the jealousy of the English manufacturers. The act of 1663 extended to the "vent of English woollens, and other manufactures and commodities." In 1699 Parliament declared that "no wool, yarn, or woollen manufactures of the American plantations should be shipped there, or even laden, in order to be transported thence to any place whatever." This was the beginning of restrictions on our colonial manufactures. In 1719 the House of Commons said that "the erecting of manufactories in the colonies tended to lessen their dependence upon Great Britain." The colonies continually increased in population and in the products of their industry and economy, and complaints from interested persons were as constantly made to the British government that they were not only carrying on trade but setting up manufactories detrimental to Great Britain. In 1731 the House of Commons directed the Board of Trade to inquire and report respecting the matter. They reported that paper, iron, flax, hats, and leather were manufactured in the colonies; that there were more manufactories set up in the colonies northward of Virginia, "particularly in New England," than in any other of the British colonies; that they were capable of supplying their own wants in manufactured goods, and therefore detrimental to British interests, and made less dependent on the mother country. The company of hatters in London complained that large numbers of hats were manufactured in New England, and exported to foreign countries; and through their influence an act of Parliament was

procured (1732), not only to prevent such exportation, and to prevent their being carried from one colony to another, but to restrain, to a certain extent, the manufacture of them in the colonies. They were forbidden being shipped, or even laden upon a horse or cart, with an intent to be exported to any place whatever. The colonial hatters were forbidden to employ more than two apprentices at the same time; and no negro was permitted to work at the business. In 1750 an act was passed permitting pig and bar iron to be imported from the colonies to London duty free, but prohibited the erection or continuance of any "mill or other engine for slitting and rolling iron, or any plating forge to work with a belt hammer, or any furnace for making steel in the colonies, under the penalty of \$1000." Every such mill, engine, plating forge, and furnace was declared a "nuisance," which, if not abated within thirty days, was subject to a forfeit of \$2500. This was really oppressive; and some of the colonies, regarding these acts as violations of their charters, obeyed them only sufficiently to prevent an open rupture. The narrow views of publicists like Dr. Davenant and Sir Josiah Child, and the greed of English manufacturers, stimulated Parliament to the adoption of such unjust measures. Mr. Child, no doubt, expressed the convictions of the English mind when he wrote, in 1670, that "New England was the most prejudicial plantation to the kingdom." In fact, the people of England from an early period regarded the North American colonies, particularly those of New England, as their rivals in navigation and trade. Child declared that "there is nothing more prejudicial, and in prospect more dangerous to any mother kingdom, than the increase of shipping in her colonies, plantations, and provinces." Dr. Davenant, who wrote later, was in accordance with these narrow views of Child. The proceedings of the British government were generally in accordance with the views of these writers. It is believed that Adam Smith (1770) was the first English writer who dared to deny, not only the policy, but the justice of these features in the British colonial system. In his *Wealth of Nations*, he says, after giving an outline of that system: "To prohibit a great people, however, from making all they can of every part of their own produce, or from employing their stock and industry in the way they judge most advantageous to themselves, is a manifest violation of the most sacred rights of mankind."

**Colonial Peace, TREATY FOR.** On the 16th of November, 1686, a treaty of peace and neutrality was concluded at London between England and France, by which it was agreed that there should be a firm peace, as well in South as in North America, on the continents and islands, by sea and land; that no soldiers or armed men living either in the English or French-American colonies and islands should commit any act of hostility or damage to either party, or give any assistance or supplies of men or victuals "to the wild Indians" with whom either king should have war; that both parties should enjoy the possessions and prerogatives

they then possessed; that the governors and officers of either nation should be strictly enjoined to give no assistance or protection to any pirates of whatever nation, and should punish as pirates all such as should fit out any ship without lawful commission and authority.

**Colonial Policy of William III.** The Convention Parliament that gave the crown of England to William and Mary adopted a Bill of Rights, which the new monarchs confirmed by their signatures. It recited the grievances suffered by the people during the preceding reign, and solemnly asserted the right of subjects to petition; the right of Parliament to freedom of debate; the right of electors to choose representatives freely, and other privileges as rights of the people. This Bill of Rights contained the fundamental principles of political liberty, yet the crown hesitated to apply them to the English people who formed the American colonies. The most renowned jurists of the reign of William seem not to have formed a complete conception of the true connective principle between the parent country and its colonies; of the extent of the royal prerogative as applied to the government of each; while the jurisdiction of Parliament was by all admitted to be coextensive with the boundaries of the empire. When the colonial assemblies, in imitation of the Convention Parliament, hastened to enact bills of rights, William, who seems to have abated nothing of the high ground of his predecessors concerning royal prerogatives, gave decided and repeated negatives. He negatived provincial acts for establishing the writ of habeas corpus; he continued the prohibition of printing in the colonies, introduced by James into his instructions for the royal governors; and statesmen and jurists of liberal views recognized an extent of the royal prerogative in the colonies which they desired at home. Chief-justice Holt advised his sovereign to assume the government of Maryland on a supposed necessity, without any forms of law; and another distinguished jurist doubted how far the Marylanders were entitled to the benefit of Magna Charta. And the wisest cabinet William ever had denied to the New-Englanders the privilege of the writ of habeas corpus because "it had never been conferred on the colonists by any king of England." Mr. Locke, with other philosophers (see *Fundamental Constitutions*) solemnly advised the sovereign to appoint "a captain-general over the English-American colonies, with dictatorial power to levy and command an army without their own consent, or even the approbation of Parliament."

**Colonial Population, INCREASE OF.** From the English Revolution (1688) to the beginning of the French and Indian War in 1754 (which see), a period of sixty-six years, the growth in the population had been rapid. In New England, the increase had been from 75,000 to 425,000; New York, from 20,000 to 85,000; New Jersey, Pennsylvania, Delaware, and Maryland, from 47,000 to 372,000; Virginia, from 50,000 to 168,000; and the Carolinas and Georgia, from 8000 to 135,000.

In 1768 John Dickinson wrote: "We are all tillers of the earth from Nova Scotia to West Florida. We are a people of cultivation, scattered over an immense territory; communicating with each other by means of good roads and navigable rivers; united by the bands of a mild and beneficent government; all respecting the laws without dreading their power, because they are equitable."

**Colonial Usages Perpetuated.** The Revolution made no sudden or violent change in the laws or political institutions of America beyond casting off the superintending power of Great Britain, and even that power was replaced, to a limited extent, by the authority of Congress. The most marked peculiarity of the change was the public recognition of the theory of the equal rights of man. This theory was first publicly promulgated by the First Continental Congress in the Declaration of Colonial Rights. It was reiterated in the Declaration of Independence, and was tacitly recognized as the foundation of all the state governments. Yet, to a great extent, it remained a *theory* only, for human slavery was fostered and defended, by which four millions of the people of the Republic were absolutely deprived of their natural rights, when the proclamation of President Lincoln (Jan. 1, 1863) reduced the theory to practice, and made all men and women within the United States absolutely free. (See *Emancipation Proclamation*.) In civil affairs, colonial usages, in modified forms, were apparent. In Pennsylvania, two persons from each county were to be chosen every seven years to act as a "Council of Censors," with power to investigate all branches of the Constitution. The Constitution of New York established a "Council of Revision," composed of the governor, chancellor, and judges of the Supreme Court, to which were submitted all bills about to pass into laws. If objected to by the council, a majority of two thirds in both branches of the Legislature was required to pass them. A "Council of Appointment" was also provided for, consisting of sixteen senators, to be annually elected by the Assembly, four from each of the four senatorial districts into which the state was at first divided. All nominations to office by the governor required the sanction of this council. By the Constitution of Georgia all mechanics, even though destitute of pecuniary qualifications, were entitled to vote by virtue of their trades; and every person entitled to vote and failing to do so was subjected to a fine of five pounds.

**Colonial War Expenditures.** The English-American colonies, mindful of the importance of their position, and of the necessity for defence against the encroachments of their French neighbors, gave freely of their substance to carry on the contest for the mastery. The Seven Years', or French and Indian, War probably cost the colonies, in the aggregate, full \$20,000,000, besides the flower of their youth. During the contest, from 1756 to 1763, Parliament granted the colonies about \$5,500,000, leaving the latter to suffer the loss of nearly \$15,000,000 by exertions

to maintain the integrity of the British realm and to defend their homes and firesides. Massachusetts alone had expended \$2,500,000, and kept from four to seven thousand men in the field a portion of each year, besides garrisons and recruits to the regular regiments. Connecticut had expended no less than \$2,000,000. The outstanding debt of New York, incurred by the war, was nearly \$1,000,000, and of Virginia \$800,000; and the other Southern colonies had spent money freely. By disease and weapons of war thirty thousand colonial soldiers had fallen in the struggle.

**Colonization of Negroes First Proposed.** The Rev. Samuel Hopkins appears to have been the first to propose a scheme for the colonization of free colored people. He suggested that negroes might be emancipated and a "public provision be made to transport them to Africa, where they might probably live better than in any other country." Out of this suggestion undoubtedly originated the American Colonization Society.

**Colonization Society, AMERICAN.** The idea of restoring Africans in America to their native country occupied the minds of philanthropists at an early period. It seems to have been first suggested by Rev. Samuel Hopkins and Rev. Ezra Stiles, of Newport, R. I., where the African slave-trade was extensively carried on. They issued a circular on the subject in August, 1773, in which they invited subscriptions to a fund for founding a colony of free negroes from America on the western shore of Africa. A contribution was made by ladies of Newport in February, 1774, and aid was received from Massachusetts and Connecticut. After the Revolution the effort was renewed by Dr. Hopkins, and he endeavored to make arrangements by which free blacks from America might join the English colony at Sierra Leone, established in 1787, for a home for destitute Africans from different parts of the world, and for promoting African civilization. He failed. In 1793 he proposed a plan of colonization to be carried on by the several states and by the national government. He persevered in his unavailing efforts until his death, in 1803. The subject continued to be agitated from time to time, and in 1815 a company of thirty-eight colored persons emigrated to Sierra Leone from New Bedford. Steps had been taken as early as 1811 for the organization of a colonization society. A meeting at Princeton, at which Samuel J. Mills, the eminent promoter of missions, R. B. Fieley, E. B. Caldwell, and F. S. Key were conspicuous, considered such a proposition; and on Dec. 23, 1816, the constitution of "The American Colonization Society" was adopted at a meeting in Washington, and the first officers were chosen Jan. 1, 1817. All reference to emancipation, present or future, was especially disclaimed by the society, and in the course of the current session of Congress Henry Clay, John Randolph, Bushrod Washington, and other slaveholders took a leading part in the formation of the society. The same year (1817) Mr. Mills and Ebenezer Burgess were sent to Africa to select a

site for the colony. They chose Sherbro Island and the coast adjoining; but the settlement was finally made at Cape Mesurado, between Sierra Leone and the Ivory Coast. In March, 1819, Congress appropriated \$100,000 for the purpose of sending back to Africa such slaves as should be surreptitiously imported. Provision was made for agents and emigrants to be sent out, and early in 1820 the society appointed an agent, put \$30,000 at his disposal, and sent in a government vessel thirty-eight emigrants, who were to erect tents for the reception of at least three hundred recaptured Africans. The society was represented in the colony by Jehudi Ashmun, who arrived there Aug. 3, 1822. The agents of the United States were instructed not to exercise any authority over the colonists, and the government of the colony was assumed by the society. A constitution for the colony (which was named Liberia) was adopted (Jan. 24, 1820), by which all the powers of the government were vested in the agent for the society. But the colonists demurred, and Ashmun abandoned the undertaking. In 1824 a plan for a civil government in Liberia was adopted, by which the society retained the privilege of ultimate decision. Another constitution was adopted in 1828, by which most of the civil power was secured to the colonists. In 1841 Joseph J. Roberts, a colored man, was appointed governor by the society. Import duties were levied on foreign goods, and out of this grew a temporary difficulty with the British government. British subjects violated the navigation law with impunity, and when the British government was appealed to, the answer was that Liberia had no national existence. In this emergency the society surrendered such governmental power as it had retained, and recommended the colony to proclaim itself a sovereign independent state. It was done, and such a declaration of independence was made July 26, 1847. The next year the independence of Liberia was acknowledged by the United States, Great Britain, and France. So the American Colonization Society became mainly instrumental in the foundation of Liberia, and of having sustained the colony until it became self-supporting. Since that consummation the society has continued to send out emigrants, and to furnish them with provisions and temporary dwellings; and it has materially aided the state in the development of its commerce and agriculture. It has also aided in the dissemination of Christianity in that region, and in the promotion of education and the general welfare of the country. Since the abolition of slavery the number of applicants for passage to Liberia has much increased. The whole amount of receipts of the society from its foundation to 1875 was, in round numbers, \$2,400,000, and those of the auxiliary societies a little more than \$400,000. The whole number of emigrants that had been sent out to that date by the parent society was nearly fourteen thousand, and the Maryland Society had sent about twelve hundred and fifty; also five thousand seven hundred and twenty-two Africans recaptured by the United States government had been returned. The society has

had five presidents—namely, Busbrod Washington, Charles Carroll, James Madison, Henry Clay, and J. H. B. Latrobe—all slaveholders. (See *Liberia*.)

**Colony on the Santilla.** On the banks of the Santilla, in the remote South, below the Altamaha, and on Cumberland Island, on the coast, a band of adventurers seated themselves in 1756, and established a colony, which they called New Hanover. They framed rules for its government, and held possession of the country southward as far as the St. Mary's River, in defiance of any warnings from the government of South Carolina, and from the Spaniards of St. Augustine.

**Colorado, ADMISSION OF THE STATE OF.** On July 4, 1876, Colorado Territory, the inhabitants of which had applied for admission into the Union more than ten years before, was admitted as a state. It was the crowning act of the first century of the political existence of the Republic. That act made the number of states thirty-eight; and the number of territories then remaining, and preparing to become states, was ten. Two bounded domains—namely, Alaska and the Indian Territory (which see)—had not yet secured territorial governments. Colorado received a District Government in May, 1864.

**Colorado, THE STATE OF,** a mountainous and high plateau region, between Kansas and Nebraska on the east, Utah on the west, Wyoming Territory on the north, and New Mexico and Texas on the south, was organized as a territory

STATE SEAL OF COLORADO.

Feb. 28, 1861, from parts of its several contiguous neighbors. The portion north of the Arkansas River, and east of the Rocky Mountains, was included in the Louisiana purchase of 1803 (see *Louisiana*), and the remainder in the Mexican cession of 1848. Francis Vasquez de Coronado (which see) is believed to have been the first European explorer of this region in 1540. In 1806 President Jefferson sent an expedition, under Lieutenant Z. M. Pike, to explore this region, and they nearly crossed the territory from north to south in the mountain region, and discovered the mountain known as Pike's Peak. In 1820 another expedition, under Colonel S. H. Long, visited this region; and in 1842-44 Colonel Frémont crossed it in his famous passage over the Rocky Mountains. Before the beginning of the present century, it is believed that no white inhabitants lived in Colorado, excepting a few Mexicans and Spaniards in the southern portion. Gold was discovered there, near the mouth of Clear Creek, in 1852 by a Cherokee cattle-trader. This and other discoveries of the precious metal had brought about four hundred persons to Colorado in 1858-59; and the first discovery of a gold-bearing lode was by John H. Gregory, May 6, 1859, in what is now known as

the "Gregory Mining District," in Gilpin County. An attempt to organize government among the miners was made by the erection of Arapahoe County, and the election of a representative to the Kansas Legislature, Nov. 6, 1858. He was instructed to urge the separation of the district from Kansas and the organization of a new territory. The first movement for a territorial government was by a convention of one hundred and twenty-eight delegates held at Denver in the autumn of 1859, who decided to memorialize Congress on the subject. Colorado was admitted as a state July 4, 1876. Population in 1880, 194, 327.

**Colors, SURRENDER OF, AT YORKTOWN.** The delivery of the colors of the several British regiments at Yorktown, twenty-eight in number, was performed in this wise: twenty-eight British captains, each bearing a flag in a case, were drawn up in line. Opposite to these were twenty-eight American sergeants in a line to receive them. Colonel Hamilton, who had the direction of the movement, appointed an ensign to conduct the ceremony. When that officer gave the order for the British captains to advance two paces and deliver up their colors, and the American sergeants to advance two paces to receive them, the former hesitated, and gave as a reason that they were unwilling to surrender their flags to non-commissioned officers. Hamilton, who was at a distance, observed the hesitation, and rode up to inquire the cause. On being informed, he willingly spared the feelings of the vanquished captains, and ordered the ensign to receive them himself and hand them to the sergeants.

**Columbia, CAPTURE OF.** There was no adequate military force for the protection of Columbia, the capital of South Carolina, when Sherman's army appeared before it, Feb. 16, 1865. Beauregard was in command of troops there who burned bridges spanning the Congaree and Saluda rivers, but could not keep the Nationals back. Beauregard made a slight show of resistance and withdrew, Wade Hampton, in command of the rear-guard, lingering in the town until the Nationals were about to enter it. Sherman gave orders for the destruction of all arsenals and public property not needed for the use of the army, as well as all railroads, depots, and machinery, but to "spare all dwellings, colleges, schools, asylums, and harmless private property." On the evening of Feb. 17 Sherman and Howard rode into the city. It had been surrendered by the civil authorities to Colonel Stone, who had posted men about the town to protect persons and property. The wind was then blowing a gale. Wade Hampton, regardless of danger to the city, ordered all the cotton in the town to be burned, to prevent its falling into the hands of the invaders. When Sherman entered, the cotton was in the streets, with the cords and bagging cut. Some of the bales were already on fire by Hampton's orders. The wind scattered the burning cotton, which set fire to the roofs of houses in various parts of the city. The National troops partially subdued the flames, but they broke out afresh in the night, and in the course of a few hours the beautiful capital of

South Carolina was a smoking ruin. Hampton ungenerously charged the conflagration to Sherman.

**Columbus and the Courtier.** Mendoza, Grand Cardinal of Spain, after Ferdinand and Isabella had honored Columbus on his return from his first voyage, invited him to a feast, and, giving the navigator the honored seat at table, excited the jealousy of some of the nobility present. A courtier, moved by a narrow feeling of personal and national jealousy—for Columbus was lately only a poor Italian—asked the admiral, in a flippant manner, whether he thought that, in case he had not discovered the Indies (which it was believed he had found), there were not men in Spain who would have been equal to the enterprise? Columbus immediately took an egg that was before him, and invited the courtier to make it stand on one of its ends. He could not. All the company tried in vain to do it. Then Columbus struck the egg upon the table, so as to flatten the end by a fracture, and left it standing. "Any one could do that," said the courtier. "After I have shown the way," replied the admiral. "Gentlemen," he continued, "after I have shown a new way to India, nothing is easier than to follow." The courtier was answered.

**Columbus as a Prophet.** Returning from Central America (1503), Columbus was wrecked on the island of Jamaica. He sent to Saute Domingo for succor, but none came for months afterwards. The Spaniards becoming burdensome to the natives, the latter contemplated the destruction of Columbus and his party. The astronomical knowledge of the latter enabled him to overawe the natives. He told them the anger of God would be manifested on a particular night by withdrawing the light of the moon, and, if they continued to refuse support to the white people—who were the special favorites of the Great Spirit—they would be destroyed. At the time predicted an eclipse of the moon occurred. The barbarians were struck with terror, and instantly brought him an ample supply of provisions, begging him to ask the Great Spirit to spare them. He did so. The eclipse went off, and from that day the natives avoided giving offence to the great navigator and his companions.

**Columbus, BARTHOLOMEW,** elder brother of Christopher Columbus, was born in Genoa about 1432; died in 1514. In 1470, when Christopher went to Lisbon, Bartholomew was there engaged as a mariner and a constructor of maps and charts. It is believed that he visited the Cape of Good Hope with Bartholomew Diaz. Christopher sent him to England to seek the aid of Henry VII. in making a voyage of discovery. He was captured by pirates, and long retained a captive; and, on his return through France, he first heard of his brother's great discovery beyond the Atlantic, and that he had sailed on a second voyage. Bartholomew was cordially received at the Spanish court, and Queen Isabella sent him in command of three store-ships for the colony in Hispaniola, or

Santo Domingo. His brother received him with joy, and made him lieutenant-governor of the Indies. He was uncommonly brave and energetic, and, when his brother was sent to Spain in chains, Bartholomew shared his imprisonment, was released with him, and was made Lord of Mona—an island near Santo Domingo.

Columbus, CHRISTOPHER (Cristoforo Colombo), was born in or near Genoa about the year 1435. At the age of ten years he was placed in the University of Pavia, where he was instructed in the sciences which pertain to navigation. In 1450 he entered the marine service of Genoa, and remained in it twenty years. His brother, Bartholomew, was then in Lisbon, engaged in constructing maps and charts, and making an occasional voyage at sea. Thither Christopher went in 1470. Prince

CHRISTOPHER COLUMBUS.

Henry of Portugal was then engaged in explorations of the west coast of Africa, seeking for a passage to India south of that continent. The merchants of western Europe were then debarred from participation in the rich commerce of the East by way of the Mediterranean Sea by their powerful and jealous rivals the Italians, and this fact stimulated explorations for the circumnavigation of Africa. Prince Henry had persisted in his efforts in the face of opposition of priests and learned professors, and had already, by actual discovery by his navigators, exploded the erroneous belief that the equator was impassable because of the extreme heat of the air and water. Columbus hoped to find employment in the prince's service, but Henry died soon after the Genoese arrived in Lisbon. In the chapel of the Convent of All-Saints at Lisbon, Columbus became acquainted with Felipa, daughter of Palestrello,

an Italian cavalier then dead, who had been one of the most trusted of Prince Henry's navigators. Mutual love led to marriage. The bride's mother placed in the hands of Columbus the papers of her husband, which opened to his mind a new field of contemplation and ambition. The desire for making explorations in the western waters was powerfully stimulated by stories of vegetable productions, timber handsomely carved, and the bodies of two men with dusky skins, which had been washed ashore at the Azores from some unknown land in the west. These had actually been seen by Pedro Correo, a brother of the wife of Columbus. These things confirmed Columbus in his belief that the earth was a sphere, and that Asia might be reached by sailing westward from Europe. He laid plans for explorations, and, in 1474, communicated them to the learned Florentine cosmographer, Paul Toscauelli, who gave him an encouraging answer, and sent him a map constructed partly from Ptolemy's and partly from descriptions of Farther India by Marco Polo, a Venetian traveller who told of Cathay (China) and Zipango (Japan) in the 12th century. In 1477 Columbus sailed northwest from Portugal beyond Iceland to latitude 73°, when pack-ice turned him back; and it is believed that he went southward as far as the coast of Guinea. Unable to fit out a vessel for himself, it is stated that he first applied for aid, but in vain, to the Genoese. With like ill-success he applied to King John of Portugal, who favored his suit, but priests and professors interposed controlling objections. The king, however, sent a caravel ostensibly with provisions for the Cape de Verd Islands, but with secret instructions to the commander to pursue a course westward indicated by Columbus. The fears of the mariners caused them to turn back from the threatenings of the turbulent Atlantic. Disgusted with this pitiful trick, reduced to poverty, and having lost his wife, he determined to leave Portugal and ask aid elsewhere. With his son, Diego, he left Lis-

bon for Spain secretly in 1484, while his brother, Bartholomew, prepared to go to England to ask aid for the projected enterprise from Henry VII. Genoa again declined to help him; so also did Venice; and he applied to the powerful and wealthy Spanish Dukes of Medina-Sidonia and Medina-Celi. They declined, but the latter recommended the project to Queen Isabella (see *Isabella*), then with her court at Cordova, who requested the navigator to be sent to her. In that city he became attached to Donna Beatrice Enriquez, by whom he had a son, Ferdinand, born in 1487, who became the biographer of his father. It was an inauspicious moment for Columbus to lay his projects before the Spanish monarchs, for their courts were moving from place to place, in troublous times, surrounded by the din and pageantry of war. But at Salamanca he was introduced to King Ferdinand by Mendoza, Archbishop of Toledo and Grand Car-

dinal of Spain. A council of astronomers and cosmographers was assembled at Salamanca to consider the project. They decided that the scheme was visionary, unscriptural, and irreligious, and the navigator was in danger of arraignment before the tribunal of the Inquisition. For seven years longer the patient navigator waited, while the Spanish monarchs were engaged with the Moors in Granada, during which time Columbus served in the army as a volunteer. Meanwhile the King of Portugal had invited him (1488) to return, and Henry VII. had also invited him by letter to come to the court of England, giving him encouraging prom-

ises of aid. But Ferdinand and Isabella treated him kindly, and he remained in Spain until 1491, when he set out to lay his projects before Charles VIII. of France. On his way, at the close of a beautiful October day, he stopped at the gate of the Franciscan monastery of Santa Maria de Rabida, near the port of Palos, in Andalusia, and asked for refreshment for his boy, Diego. The prior of the convent, Juan Perez de Marchena became interested in the conversation of the stranger, and he invited him to remain as his guest. To him Columbus unfolded his plans. Alonzo Pinzon and other eminent navigators at Palos, with scientific men, were invited to the convent to confer with Columbus, and Pinzon offered to furnish and command a ship for explorations. Marchena, who had been Queen Isabella's confessor, wrote to her, asking an interview with her for Columbus. It was granted. Marchena rode to the camp of the monarchs at Santa Fé, when the queen sent a little more than two hundred dollars to Columbus to enable him to appear decently at court. He explained his project to the sovereigns. He had already, by the operations of a poetic temperament, regarded himself as a preordained gospel-bearer to the heathen of unknown lands. His

ises of aid. But Ferdinand and Isabella treated him kindly, and he remained in Spain until 1491, when he set out to lay his projects before Charles VIII. of France. On his way, at the close of a beautiful October day, he stopped at the gate of the Franciscan monastery of Santa Maria de Rabida, near the port of Palos, in Andalusia, and asked for refreshment for his boy, Diego. The prior of the convent, Juan Perez de Marchena became interested in the conversation of the stranger, and he invited him to remain as his guest. To him Columbus unfolded his plans. Alonzo Pinzon and other eminent navigators at

Palos, with scientific men, were invited to the convent to confer with Columbus, and Pinzon offered to furnish and command a ship for explorations. Marchena, who had been Queen Isabella's confessor, wrote to her, asking an interview with her for Columbus. It was granted. Marchena rode to the camp of the monarchs at Santa Fé, when the queen sent a little more than two hundred dollars to Columbus to enable him to appear decently at court. He explained his project to the sovereigns. He had already, by the operations of a poetic temperament, regarded himself as a preordained gospel-bearer to the heathen of unknown lands. His

terprise. The queen declared that she would pledge her crown jewels, if necessary, to supply the money, and would undertake the enterprise for her own crown of Castile. (See *Isabella*.) An agreement was signed by their majesties and Columbus at Santa Fé, April 17, 1492, by which he and his heirs should forever have the office of admiral over all lands he might discover, with honors equal to those of Grand Admiral of Castile; that he should be viceroy and governor-general over the same; that he should receive one tenth of all mineral and other products that might be obtained; that he and his lieutenants should be the sole judges in all disputes that might arise between his jurisdiction and Spain, and that he might advance one

nous—some indications of land were discovered late in the night of the 11th of October. Many times they had been deceived by presages of land, and what they thought were actual discoveries of it. The crown had offered a little more than one hundred dollars to the man who should first discover land, and to this Columbus added the prize of a silken doublet. All eyes were continually on the alert. At ten o'clock on the night of the 11th, Columbus was on his deck, eagerly watching for signs of land, when he discovered a light on the verge of the horizon. Early the next morning, Rodrigo Tricena, a sailor of the *Pinta*, first saw land; but the award was given to Columbus, who saw the light on the land. At dawn a wooded shore lay before them; and, after a perilous voyage of seventy-one days, the commander, with the banner of the expedition in his hand, leading his followers, landed, as they supposed, on the shores of Farther India. Columbus, clad in scarlet and gold, first touched the beach. A group of naked natives, with skins of a copper hue, watched their movements with awe, and regarded the strangers as gods. Believing he was in India, Columbus called the inhabitants "Indians." (See *Indians*.) Columbus took possession of the land in the name of the crown of Castile. He soon discovered it to be an island—one of the Bahamas—which he named San Salvador. Sailing southward, he discovered Cuba, Hayti (see *Santo Domingo*), and other islands, and these were denominated the West Indies. He called Hayti Hispaniola, or Little Spain. On its northern shores the *Santa Maria* was wrecked. With her timbers he built a fort, and leaving thirty-nine men there to defend it and the interests of Castile, he sailed in the *Nina* for Spain in January, 1493, taking with him several natives of both sexes. On the voyage he encountered a fearful tempest, but arrived safely in the Tagus early in March, where the King of Portugal kindly received him. On the 15th he reached Palos, and hastened to the court at Barcelona, with his natives, specimens of precious metals, beautiful birds, and other products of the newly found regions. There he was received with great honors; all his dignities were reaffirmed, and on the 25th of September, 1493, he sailed from Cadiz with a fleet of seventeen ships and fifteen hundred men. Most of these were merely adventurers, and by quarrels and mutinies gave the admiral a great deal of trouble. After discovering the Windward Islands, Jamaica, and Porto Rico, founding a colony on Hispaniola, and

eighth in any venture, and receive a corresponding share of the profits. He was also authorized to enjoy the title of Don, or noble. The monarchs fitted out two small vessels—caravels, or undecked ships—and one larger vessel. Leaving Diego as page to Prince Juan, the heir apparent, Columbus sailed from Palos in the decked vessel *Santa Maria*, with Martin Alonso Pinzon as commander of the *Pinta*, and his brother, Vincent Yañez Pinzon, as commander of the *Nina*, the two caravels. They left the port with a complement of officers and crews on Friday morning, Aug. 3, 1492, and after a voyage marked by tempests—the crew in mortal fear most of the time, and at last muti-

pested, but arrived safely in the Tagus early in March, where the King of Portugal kindly received him. On the 15th he reached Palos, and hastened to the court at Barcelona, with his natives, specimens of precious metals, beautiful birds, and other products of the newly found regions. There he was received with great honors; all his dignities were reaffirmed, and on the 25th of September, 1493, he sailed from Cadiz with a fleet of seventeen ships and fifteen hundred men. Most of these were merely adventurers, and by quarrels and mutinies gave the admiral a great deal of trouble. After discovering the Windward Islands, Jamaica, and Porto Rico, founding a colony on Hispaniola, and

leaving his brother, Bartholomew, lieutenant-governor of the island, he returned to Spain, reaching Cadiz July 11, 1494. Jealousy had promulgated many slanders concerning him; these were all swept away in his presence. The nobles were jealous of him, and used every means in their power to thwart his grand purposes and to bring him into disrepute. He calmly met their opposition by reason, and often confused them by simple illustrations. (See *Columbus and the Courtier*.) He had already, by his success, silenced the clamor of the ignorant and superstitious priesthood about the "unscriptural" and "irreligious" character of his proposition, and finally, on May 30, 1498, Columbus sailed from San Lucar de Barrameda, with six ships, on his third voyage of discovery. He took a more southerly course, and discovered the continent of South America on the 1st of August, at the mouth of the river Orinoco, which he supposed to be one of the rivers flowing out of Edeu. Having discovered several islands, and the coast of Pará, he finally went to Hispaniola to recruit his feeble health. The colony was in great disorder, and his efforts to restore order caused him to be made the victim of jealousy and malice. He was misrepresented at the Spanish court, and Francisco de Bobadilla was sent from Spain to inquire into the matter. He was ambitious and unscrupulous, and he sent Columbus and his brother to Spain in chains, usurping the government of the island. The commander of the ship that conveyed him across the sea offered to liberate him while on board his vessel. "No," he proudly replied; "the chains have been put on by command of their majesties, and I will wear them until they shall order them to be taken off. I will preserve them afterwards as relics and memorials of the reward of my services." The monarchs and the people of Spain were indignant at this treatment of the great discoverer. He was released, and Bobadilla was recalled, but, through the influence of the jealous Spanish nobles, Nicolas Ovando was appointed by the king governor of Hispaniola, instead of Columbus. The great admiral was neglected for a while, when the earnest queen, Isabella, caused an expedition to be fitted out for him, and, on May 9, 1502, he sailed from Cadiz with a small fleet, mostly caravels. He was not allowed to refit

A SPANISH CARAVEL.

at his own colony of Hispaniola or Santo Domingo, and he sailed to the western verge of the Gulf of Mexico in search of a passage through

what he always believed to be Zipango (Japan) to Cathay, or China. After great sufferings, he returned to Spain in November, 1504, old and infirm, to find the good queen dead, and to experience the bitterness of neglect from Ferdinand, her husband. His claims were rejected by the ungrateful monarch, and he lived in poverty and obscurity in Valladolid until May 20, 1506, when he died. In a touching letter to a friend just before his death, he wrote, "I have no place to repair to except an inn, and am often with nothing to pay for my sustenance." For seven years his remains lay unnoticed in a convent at Valladolid, when the ashamed Ferdinand had them removed to a monastery in Seville, and erected a monument to his memory on which were inscribed the words, "A CASTILLA Y A LEON NUEVO MUNDO DIO COLON"—"To Castile and Leon Columbus gave a New World." He died in the belief that the continent he had discovered was Asia. His remains were conveyed (with those of his son, Diego), in 1536, to Santo Domingo, where they were deposited in the cathedral, and there they yet remain. A noble monument to his memory has been erected in the city of Genoa, Italy. (See page 278.)

**Columbus, Diego**, son of Christopher, was born about the year 1472, in Lisbon. He accompanied his father to Spain, and was instructed, in his youth, at the Monastery of Santa Maria de Rabida, near Palos, under the care of Father Marchena, the prior of the establishment. He was afterwards nurtured in the bosom of the Spanish court as an attendant upon Prince Juan, and developed, in young manhood, much of the indomitable spirit of his father. After the death of the latter he made unavailing efforts to procure from King Ferdinand the offices and rights secured to his father and his descendants by solemn contract. At the end of two years he sued the king before the Council of the Indies (which see), and obtained a decree in his favor and a confirmation of his title to the vice-royalty of the West Indies. In 1509 he sailed for Santo Domingo with his young wife, and superseded Nicolas Ovando as governor, who had been wrongfully put in that office by the king. (See *Santo Domingo*.) The same year he planted a settlement in Jamaica; and in 1511 he sent Diego Velasquez, with a small number of troops, to conquer Cuba, and the victor was made captain-general of the island. (See *Cuba*.)

**Columbus (KY.), EVACUATION OF.** When Fort Donelson fell, Columbus was no longer tenable. Beanregard was now in command on the borders of the Mississippi, and, pursuant to orders from Richmond, he directed General Polk to evacuate Columbus and transfer his troops and as much of the munitions of war as possible to places of greater safety. New Madrid and New Madrid Bend, in Missouri, and Island No. 10, in the Mississippi, were chosen for this purpose. Meanwhile Commodore Foote had put in motion a fleet of gunboats on the Mississippi, and accompanying transports bore two thousand troops under General W. T. Sherman.

THE COLUMBUS MONUMENT IN GENOA. (See page 277.)

When, on March 4, 1862, this armament approached Columbus, the Union flag was seen floating there. It had been unfurled the previous evening by a scouting-party of Illinois troops from Paducah, who found the place deserted by Confederate soldiers. Sherman left a garrison on the fortifications, and Foote returned to Cairo to prepare for a siege of New Madrid and Island No. 10.

**Columbus, SHIP OF, WRECKED.** After Columbus discovered the island of Cuba (which he named Juanna, in honor of the son of the Spanish monarch), he sailed eastward and discovered Hayti, which he named Hispaniola. It was afterwards called Santo Domingo. There, on shoals, his careless sailors lost one of his ships. The native prince, Guacanagari, showed great sympathy, and placed a guard to protect the property of the ship. The event occurred on Christmas-day, and Columbus called the place *La Navidad*—the nativity. The natives saved

everything from the wreck, treated the crew kindly, and were requited with cruel wrong.

**Column of Marble at Yorktown.** The Continental Congress, sitting at Philadelphia, when the glad news of the capture of Cornwallis and his army reached them, passed a vote of thanks to Washington, Rochambeau, and De Grasse, the corps of artillery under General Knox, and their respective officers and men. Also, on the same day the Congress resolved, "That the United States, in Congress assembled, will cause to be erected at York, in Virginia, a marble column, adorned with emblems of the alliance between the United States and his Christian majesty, and inscribed with a succinct narrative of the surrender of Earl Cornwallis to his excellency General Washington; Commander-in-chief of the combined forces of America and France; to his excellency the Count de Rochambeau, commanding the auxiliary troops of his most Christian majesty in America; and to his excellency the Count de Grasse, commanding the naval forces of France in Chesapeake Bay." The column has never been erected.

**Colyer's Christian Work at New Berne.** Vincent Colyer, a well-known citizen of New York, and originator of the United States Christian Commission (which see), was with Burnside in his expedition to the coast of North Carolina,

for the purpose of administering to the wants of the poor and ignorant colored people. After the capture of New Berne (which see), and his labors in the hospitals were ended, he was placed, by Burnside, in charge of the helpless inhabitants of that town. He began his benevolent work by finding remunerative labor for the able-bodied. He opened evening-schools for the instruction of the colored people, in which over eight hundred most eager pupils were nightly seen, some of the New England soldiers acting as teachers. But this Christian work was suddenly stopped in May, 1862, when Edward Stanley, a North Carolinian, was appointed, by the President, military governor of the state. The closing of these schools was the first administrative act of the new governor, because, he said, the laws of North Carolina made it "a criminal offence to teach the blacks to read." (See *United States Christian Commission*.)

**Comanches.** This is a roving and warlike

tribe of North American Indians of the Shoshone family (see *Shoshones*), who, when first known, inhabited the region from the headwaters of the Brazos and Colorado rivers to those of the Arkansas and Missouri; some of their bands penetrating to Santa Fé, in New Mexico, and to Durango, in Mexico. The Spaniards and the tribes on the Central Plains, like the Pawnees, have felt their power in war from an early period. They called themselves by a name signifying "live people," believed in one supreme Father, and claim to have come from towards the setting sun. The tribe is divided into eight bands, and all are expert horsemen. The French in Louisiana first penetrated their country in 1718, buying horses from them, and in 1724 made a treaty with them. They were then numerous. One village visited by the French had 140 lodges, containing 1500 women, 2000 children, and 800 warriors. Until 1783, they had long and bloody wars with the Spaniards, when, their great war-chief being slain, a peace was established. They numbered 5000 in 1780. In 1816 they lost 4000 of their population by small-pox. So late as 1847 their number was estimated at 10,000, with over 2000 warriors; in 1872, at a little over 4000. They have always been troublesome. Some of them were on a reservation in Texas, but were expelled. The government is now trying the experiment of placing them on a reservation in the western part of the Indian Territory. Many of them continue to roam, and ridicule the idea of settling down.

**Combahee, SKIRMISH NEAR THE (1782).** When General Leslie, the British commander in Charleston, heard of the proceedings in Parliament, he proposed to General Greene a cessation of hostilities. Greene referred the matter to Congress, but did not relax his vigilance. Leslie also requested Greene to allow him to purchase supplies for his army. Unwilling to nourish a viper in his bosom, Greene refused, and Leslie resorted to force to obtain supplies. Late in August (1782) he attempted to ascend the Combahee for the purpose. He was opposed by the Americans under General Gist, of the Maryland line. Colonel John Laurens volunteered in the service, and in a skirmish at daybreak (Aug. 25) he was killed. His was almost the last life sacrificed in the old war for independence.

**Combs, LESLIE,** was born in Kentucky in 1794. His father was an officer in the Revolution and a hunter. Leslie was the youngest of twelve children, and was distinguished for energy and bravery in the War of 1812-15. He commanded a company of scouts, and did admirable service for the salvation of Fort Meigs. (See *Combs's Mission*.) Being made prisoner near Fort Meigs, he was taken by the Indians, his captors, to Fort Miami, below, where he was compelled to run the gauntlet (see *Running the Gauntlet*), in which he was pretty severely wounded. His life was saved by the humanity of Tecumtha. Combs became a general of the militia, and was always a zealous politician and

active citizen. His mind was quite vigorous until his eighty-seventh year. He died at Lexington, Ky., Aug. 22, 1881. He was a Union man during the Civil War.

LESLIE COMBS.

**Combs's Mission.** When General Harrison was about to be closely besieged in Fort Meigs (May, 1813), he sent Captain William Oliver to urge General Green Clay to push forward rapidly with the Kentuckians he was then leading towards the Maumee Rapids. While Colonel Dudley, whom Clay had sent forward, was on his way down the Au Glaize River, Clay heard of the perilous condition of Fort Meigs, and resolved to send word to Harrison of his near approach. He called for a volunteer, when Leslie Combs—then nineteen years of age—promptly responded. "When we reach Fort Defiance," said Combs, "if you will furnish me with a good canoe, I will carry your despatches to General Harrison and return with his orders. I shall only require four or five volunteers and one of my Indian guides to accompany me." Combs was properly equipped, and on May 1 he started on his perilous errand, accompanied by two brothers named Walker and two others (Paxton and Johnson); also by young Black Fish, a Shawnoese warrior. They passed the Rapids in safety, when the roar of the siege met their ears. Great peril was in their way. It was late in the morning. To remain where they were until night or to go on was equally hazardous. "We must go on," said the brave Combs. As they passed the last bend in the stream that kept the fort from view they were greatly rejoiced to see that "the flag was still there," and that the garrison was holding out against a strong besieging force. Suddenly they were assailed by some Indians in the woods, and were compelled to turn their canoe towards the opposite shore, where they abandoned it. One of the party was killed and another badly wounded. Combs and his unhurt companions made their way back to Fort Defiance.

**Commander-in-chief of the Continental**

**Army, APPOINTMENT OF THE.** General Artemas Ward, of Massachusetts, the senior in command of the provincial militia, assumed the chief command of the volunteers who gathered near Boston after the skirmishes at Lexington and Concord. He was good and virtuous, but aged, and not possessed of sufficient military ability or personal activity to make an energetic commander of a large army. The Provincial Congress of Massachusetts apprehended the melting-away of the army gathered at Cambridge unless a more efficient leader might be found, and, to avoid giving offence, they asked the Continental Congress to assume the regulation and direction of that army. Joseph Warren, in a private letter to Samuel Adams, wrote that the request was to be interpreted as a desire for the appointment of a new chief commander of all the troops that might be raised. Just then news arrived of the approach of reinforcements for Gage, under generals Clinton, Howe, and Burgoyne, and Congress felt the importance of acting promptly. At the suggestion of John Adams, the army was adopted as a continental one (see *Continental Army*); and, at the suggestion of the New England delegation, Thomas Johnson, of Maryland, nominated George Washington, of Virginia, for commander-in-chief of the armies of the inchoate republic. He was elected (June 15, 1775) by unanimous vote, and on the following morning John Hancock, President of Congress, officially announced to Washington his appointment. The Virginia colonel arose and, in a brief and modest speech, formally accepted the office. After expressing doubts of his ability to perform the duties satisfactorily, he said, "As to pay, sir, I beg leave to assure the Congress that, as no pecuniary consideration could have tempted me to accept the arduous employment at the expense of my domestic ease and happiness, I do not wish to make any profit from it. I will keep an exact account of my expenses. Those, I doubt not, they will discharge, and that is all I desire." Washington was then a little past forty-three years of age. He left Philadelphia for Cambridge a week later, where he arrived on the 2d of July; and at about nine o'clock on the morning of the 3d, standing in the shade of an elm-tree (yet living) in Cambridge, he formally assumed the command of the army, then numbering about sixteen thousand men, all New-Englanders.

**Commerce Alarmed (1861).** The patriotic action of the New York Legislature (see *New York, Position of*), and the official suggestion of Mayor Wood that the city of New York would do well to "secede" and set itself up as a free and independent city, alarmed the commercial classes of thatemporium, and these and large capitalists hastened to propose conciliation by making any concession to the demands of "the South." A war would sweep thousands of the debtors of New York merchants into absolute ruin, and millions of dollars' worth of bills receivable in the hands of their creditors would be made worthless. On Jan. 12, 1861, a memorial, numerously signed by merchants and capitalists, was sent to

Congress, praying that body to legislate in the interests of peace, and to give assurances, "with any required guarantees," to the slaveholders, that their right to regulate slavery within their respective states should be secured; that the Fugitive Slave Law should be faithfully executed; that Personal Liberty Acts in "possible conflict" with that law should be "readjusted," and that they should have half the territories wherof to organize slave-labor states. They were assured, the memorialists said, that such measures "would restore peace to their agitated country." This was followed by another memorial, adopted Jan. 18, at the rooms of the Chamber of Commerce, similar in tone to the other, and substantially recommending the Crittenden Compromise (which see) as a basis of pacification. It was taken to Washington city early in February, with forty thousand names attached to it. At an immense meeting of citizens at the Cooper Institute, New York, Jan. 24, it was resolved to send three commissioners to six of the "seceded states," instructed to confer with "delegates of the people," in convention assembled, in regard to the "best measures calculated to restore the peace and integrity of the Union."

**Commissioners of Customs.** Parliament in 1767 provided for the establishment of a board of revenue commissioners for America, with its seat at Boston, for the enforcement of the old and new revenue laws. They arrived at Boston in May, and soon became involved in trouble with the people.

**Commissioners of Indian Affairs.** The Congress perceived the importance of cultivating friendly relations with the surrounding Indian tribes, and three boards for the purpose were created (July 11, 1775): One for the Six Nations and other northern tribes; a second for the Cherokees, and a third for the intervening nations. Five hundred dollars were voted for the education of Indian youths at Wheelock's School, then recently established at Hanover, N. H., and efforts were made to engage some of them either as allies in the war or to a strict neutrality. The commissioners were invested with power to make treaties with the Indians and to employ men influential among the Indians to assist them. They were authorized to arrest any agents of the British government who might be found stirring up the Indians to hostilities. A friendly "talk" with the Six Nations was adopted, and measures taken which in a great degree secured the neutrality, at least, of the barbarians on our borders.

**Commissioners to Canada.** In March, 1776, the Continental Congress appointed Dr. Franklin, Samuel Chase, and Charles Carroll a board of commissioners, invested with full authority to proceed to Canada and direct military affairs there; to promise a guarantee of the estates of the clergy; to establish a free press; to offer the Canadians free trade with all nations; to invite them to form a free and independent government for themselves, and to join the confederated colonies. They arrived at Montreal,

where Arnold was in command, at the close of April; but they were too late. A general impression prevailed there that the Republican army would soon be driven out of Canada, for large reinforcements for Carleton were daily expected. Without an army, without hard money, without credit, the commissioners could not ask the Canadians to join them. Perceiving that the chief object of their mission could not be attained, it was determined to withdraw the troops to St. John, and there to so strengthen them and their position that they would form an impassable barrier to an invasion from the north. The commissioners soon returned.

**Commissioners to Foreign Courts.** Soon after the Declaration of Independence, a plan of treaties with foreign governments was reported by a committee on that subject, and Franklin, Deane, and Jefferson were appointed (Sept. 26, 1776) commissioners to the French court. Unwilling to leave his wife, whose health was declining, Jefferson refused the appointment, and Arthur Lee, then in London, was substituted for him; and after the loss of New York these commissioners were urged to press the subject of a treaty of alliance and commerce. Commissioners were also appointed to other European courts in 1777; Arthur Lee to that of Madrid; his brother William (lately one of the sheriffs of London) to Vienna and Berlin, and Ralph Izard, of South Carolina, to Florence. All but the French mission were failures. Arthur Lee was not allowed to enter Madrid, and went on a fruitless errand to Germany; Izard made no attempt to visit Florence, and William Lee visited Berlin without accomplishing anything. There his papers were stolen from him, through the contrivance, it was believed, of the British resident minister.

**Commissioners to urge Secession.** In order to carry out the design of the few leaders of the secession scheme to have the whole fifteen slave-labor states belong to a projected "Southern Confederacy," four of the state conventions which adopted ordinances of secession appointed commissioners to go to these several states as seductive missionaries in the cause of disunion. The names and destinations of these were as follows: *South Carolina* sent to Alabama A. P. Calhoun; to Georgia, James L. Orr; to Florida, L. W. Spratt; to Mississippi, M. L. Bonham; to Louisiana, J. L. Manuig; to Arkansas, A. C. Spain; to Texas, J. B. Kershaw. *Alabama* sent to North Carolina Isham W. Garrett; to Mississippi, E. W. Petters; to South Carolina, J. A. Elmore; to Maryland, A. F. Hopkins; to Virginia, Frank Gilmer; to Tennessee, L. Pope Walker; to Kentucky, Stephen F. Hale; to Arkansas, John A. Winston. *Georgia* sent to Missouri Luther J. Gleun; to Virginia, Henry L. Benning. *Mississippi* sent to South Carolina C. E. Hooker; to Alabama, Joseph W. Matthews; to Georgia, William L. Harris; to Louisiana, Wirt Adams; to Texas, H. H. Miller; to Arkansas, George B. Fall; to Florida, E. M. Yerger; to Tennessee, T. J. Wharton; to Kentucky, W. S. Featherstone; to North Carolina,

Jacob Thompson, the Secretary of the Interior; to Virginia, Fulton Anderson; to Maryland, A. H. Handy; to Delaware, Henry Dickinson; to Missouri, — Russell.

**Committee of Congress at Cambridge.** The seeming apathy of Congress in respect to the army besieging Boston greatly perplexed Washington. The cool season was approaching, and not only powder and artillery were wanting, but fuel, shelter, clothing, provisions, and the wages of the soldiers. Washington, wearied by ineffectual remonstrances, at length wrote a letter to Congress, implying his sense that the neglect of that body had brought matters in his army to a crisis. He submitted to their consideration the wants of the army, a mutinous spirit prevailing among them, and the danger that, when the terms of enlistment of all the troops excepting the regulars should expire in December, it would be difficult to re-enlist them or get new recruits. Congress had really no power to provide an adequate remedy for this state of things; therefore it appointed a committee (Sept. 30, 1775), consisting of Dr. Franklin, Lynch, and Harrison, to repair to the camp, and, with the New England colonies and Washington, devise a plan for renovating the army. They arrived at Cambridge Oct. 15. With such a representative of Congress as Franklin and such a military leader as Washington, the New England commissioners worked harmoniously; and they devised a scheme for forming, governing, and supplying a new army of about twenty-three thousand men, whom the general was authorized to enlist without delay.

**Committee of Fifty-one.** The Conservative Republicans of New York, alarmed by the bold movements of the more radical Sons of Liberty, appointed a grand Committee of Fifty-one, as true "representatives of public sentiment." They repudiated a message sent to Boston (May 14, 1774) by the Sons of Liberty, recommending the revival of non-importation measures, but they heartily approved of a general congress. The radical "Liberty Boys" were offended, and their "Vigilance Committee" called a meeting of citizens (July 6) in The Fields (which see). It was the largest gathering ever before seen in New York. The meeting was addressed by Alexander Hamilton, then a student in King's (now Columbia) College. It was his first speech, and a most remarkable one; and it stirred the people with so much indignation that the alarmed Committee of Fifty-one referred the nomination of deputies to the Continental Congress to their radical brothers called the "Tribunes" (which see). At the same time they offended some of their own more zealous members by denouncing the resolutions adopted by the meeting in the Fields as seditious, and eleven members withdrew from the committee. Not long afterwards this timid committee disappeared. (See *Patricians and Tribunes*.)

**Committee of One Hundred.** When the Provincial Congress had begun its first session, the Sons of Liberty in the city of New York proceeded to organize a provisional municipal gov-

ernment. They called a meeting of citizens (May 5, 1775), at which a Committee of One Hundred was chosen, invested with the charge of city affairs, the people pledging themselves to obey the orders of the committee until other arrangements should be made by the Continental Congress. While the Provincial Congress legislated, the Committee of One Hundred executed the expressed will of the people.

**Committee of Secret Correspondence.** On Sept. 18, 1775, the Continental Congress appointed Messrs. Welling, Franklin, Livingston, Alsop, Deane, Dickinson, Langdon, McKean, and Ward a "Secret Committee" to contract for the importation from Europe of ammunition, small-arms, and cannons, and for such a purpose Silas Deane was soon sent to France. By a resolution of the Congress, April 17, 1777, the name of this committee was changed to "Committee of Foreign Affairs," whose functions were like those of the (present) Secretary of State.

**Committee of Sixty.** After the Provincial Assembly of New York had adjourned, never to meet again (April 3, 1775), a Committee of Sixty was appointed in the city of New York to enforce the regulations of the American Association (which see). Warmly supported by the Sons of Liberty, they took the lead in political matters. By their recommendation the people in the several counties chose representatives for a Provincial Congress, which body first convened on May 22, 1775.

**Committee of States.** The articles of Confederation having provided for the appointment of a committee composed of one delegate from each state, to sit during each annual recess of Congress, such a committee was appointed at the session of 1783-84. They split into irreconcilable parties and abandoned their post (June, 1784), leaving the Confederate government or league of states without any head. The experiment was never tried again.

**Committees of Correspondence.** At a town meeting held in Boston (Oct. 22, 1772) a large committee, composed of the most active popular leaders, was appointed to state in an address the rights of the colonies, more especially those of Massachusetts; to communicate and publish the same to the several towns of the province, to the other colonies, and to the world; stating the infringements and violations of those rights, from time to time, by the British government, and to request an interchange of sentiments. This was done in a masterly manner, and Franklin, in England, caused the address and report to be published in London, with a preface of his own. On the reception of these documents, the Virginia House of Burgesses appointed a committee to obtain authentic accounts of all proceedings of Parliament or the ministry which might affect the rights of the colonies. The committee was also authorized to open a correspondence and communication with the other colonies. This system of committees of correspondence became general, and a powerful aid in producing unanimity of sentiment in the various

colonies. This was the first and most important step towards political union.

**Committees of Inspection.** In many of the now American states the class known as Tories or adherents to the crown were in a minority, and in many places suffered indignities, such as, if offensively active, receiving a covering of tar and feathers, being carted around as a public spectacle, and other abuses which personal and political malignity could inflict. To prevent such disgraceful scenes, which would lead to retaliation and the rule of mob law, the Continental Congress specially committed the oversight of Tories and suspected persons to the regularly appointed committees of inspection and observation for the several counties and districts. The Tories were also exposed to the dangers from the law, for the Whigs (see *Whigs and Tories*) had taken all power into their hands, and required allegiance to state governments from all the inhabitants. The consequence was that many left the states and became refugees in Great Britain or in its American provinces.

**Common Schools, EARLY, IN NEW ENGLAND.** In 1649 provision was made in the Massachusetts Code for the establishing of common schools in that province. By it every township was required to maintain a school for reading and writing; and every town of a hundred householders, a grammar-school, with a teacher qualified to "fit youths for the university" (Harvard). This school-law was re-enacted in Connecticut in the very same terms; and was adopted also by Plymouth and New Haven. The preamble to this law declared that, "it being one chief project of that old deluder, Satan, to keep men from the knowledge of the Scriptures, as in former times keeping them in an unknown tongue, so in these later times persuading men from the use of tongues, so that at the least the true sense and meaning of the original might be clouded with false glossing of saint-seeming deceivers, and that learning may not be buried in the grave of our fathers," therefore this law was enacted.

**"Common Sense."** At the suggestion of Dr. Benjamin Rush, of Philadelphia, it is said, Thomas Paine put forward a powerfully written pamphlet, at the beginning of 1776, in favor of the independence of the colonies. Its terse, sharp, incisive, and vigorous sentences stirred the people with irrepressible aspirations for independence. A single sentence will indicate its character: "The nearer any government approaches to a republic, the less business there is for a king; in England a king hath little more to do than to make war and give away places. Arms must decide the contest [between Great Britain and America]; the appeal was the choice of the king, and the continent hath escaped the challenge. The sun never shone on a cause of greater worth. 'Tis not the affair of a city, a county, a province, or a kingdom, but of a continent—of at least one eighth part of the habitable globe. 'Tis not the concern of a day, a year, or an age; posterity are virtually involved in it, even to the end of time. . . . Freedom hath been

haunted round the globe: Asia and Africa bath long expelled her; Europe regards her like a stranger; and England hath given her warning to depart. O, receive the fugitive, and prepare an asylum for mankind." The effect of *Common Sense* was marvellous. Its trumpet tones awakened the continent, and made every patriot's heart beat with intense emotion. It was read with avidity everywhere; and the public appetite for its solid food was not appeased until one hundred thousand copies had fallen from the press. The Legislature of Pennsylvania voted to the author \$2500. Washington, in a letter written at Cambridge, highly applauded it, and all over the colonies there were immediate movements in favor of absolute independence. (See *Paine, Thomas*.)

**Communitistic Societies in America.** There are but eight of these societies in name. These are the *Shakers*, established in the Eastern States in the closing decade of the last century, and in the West in 1808; the *Rappists*, established in 1805; the *Bäumelers*, or *Zoarites*, established in 1817; the *Eben-Ezers*, or *Amana* communists, established in 1844; the *Bethel Commune*, established in 1844; the *Oneida Perfectionists*, established in 1848, the *Icarians*, who date from 1849, and the *Aurora Commune*, which dates from 1852. These eight societies consist, in fact, of not less than seventy-two communes. The Shakers have fifty-eight of these, the Amana Society seven, and the Perfectionists two. The remaining societies consist of but a single commune each. Of all, only two of the societies remain under the guidance of their founders. These communes numbered in the aggregate, in 1874, about 5000 persons, including children, and were then scattered in thirteen states, in which they own probably one hundred and eighty thousand acres of land. The lowest estimate of their wealth is \$12,000,000, almost the whole of it created by patient industry and frugality. All these communes have as their bond of union some form of religious belief. The Shakers and Rappists are the only celibates among these societies. For a minute account of the communitistic societies in America, see a work on the subject by Charles Nordhoff, 1875.

**Community System in New England.** The lands of the Plymouth Colony were held in common by the "Pilgrims" and their partners, the London merchants. In 1627 the "Pilgrims" sent Isaac Allerton to England to negotiate for the purchase of the shares of the London adventurers, with their stocks, merchandise, lands, and chattels. He did so for \$9000, payable in nine years in equal annual instalments. Some of the principal persons of the colony became bound for the rest, and a partnership was formed, into which was admitted the head of every family, and every young man of age and prudence. It was agreed that every single freeman should have one share; and every father of a family have leave to purchase one share for himself, one for his wife, and one for every child living with him; that every one should pay his part of the public debt according to the number of

his shares. To every share twenty acres of arable land were assigned by lot; to every six shares, one cow and two goats, and swine in the same proportion. This agreement was made in full court, Jan. 3, 1628. The joint-stock or community system was then abandoned, a division of the movable property was made, and twenty acres of land nearest to the town were assigned in fee to each colonist.

**Company of Free-traders.** When the province of Pennsylvania was granted to William Penn, a number of settlements already existed there. A royal proclamation confirming the grant to Penn, and another from Penn himself, were sent to these settlements by the hand of William Markham in the summer of 1681. In his proclamation Penn assured the settlers that they should live free under laws of their own making. Meanwhile adventurers calling themselves the Company of Free-traders made a contract with the proprietor for the purchase of lands at the rate of about ten dollars the hundred acres, subject to a perpetual quit-rent of one shilling for every one-hundred-acre grant; the purchasers also to have lots in a city to be laid out. Three vessels filled with these emigrants soon sailed for the Delaware, with three commissioners, who bore a plan of the city, and a friendly letter from Penn to the Indians, whom he addressed as brethren.

**Compton, LIZZIE.** A sprightly Canadian girl of this name, sixteen years of age, dressed in man's apparel, enlisted in the service of the United States during the Civil War, and served in various regiments for eighteen months. She was in seven different regiments, and participated in several battles. At Fredericksburg she was severely wounded. On account of the discovery of her sex, she was several times mustered out of the service, and then she would re-enlist in another regiment. She was in a sharp fight between Morgan's guerillas and Colonel Moore's Michigan troops at Green River, Ky. (June 4, 1863), where she was again wounded.

**Conciliatory Bills (LORD NORTH'S SECOND):** When Parliament reassembled after the Christmas holidays (January, 1778), the Opposition exposed the losses, expenses, and hopelessness of the war with the colonists; and, to the surprise and disgust of some of his most ardent supporters, Lord North presented a plan for reconciliation (Feb. 17), and declared he had always been in favor of peace, and opposed to taxing the Americans. He introduced two bills: one renouncing, on the part of the British Parliament, any intention to levy taxes in America—conceding, in substance, the whole original ground of dispute; the other authorizing the appointment of five commissioners, the commanders of the naval and military forces to be two, with ample powers to treat for the re-establishment of royal authority. Meanwhile David Hartley, an opponent of the war, was sent to Paris to open negotiations with the American commissioners there. The war had already (1775-78) cost Great Britain more than twenty thousand men, \$100,000,000 of public expenditure, and five hundred and fifty British

vessels, chiefly in the merchant service, captured by American cruisers, worth about \$12,000,000, besides a loss of trade with America, suspension of American debts, and the confiscation of the property of American loyalists. Added to all was the danger of a war with France. Copies of these conciliatory bills arrived in America in the middle of April (1778), and the Congress took immediate action upon them, for the partisans of the crown were very active in circulating them among the people. A committee of that body criticised these bills very keenly, showing their deceptiveness. Fearing the effect of the bills upon the people, they were ordered to be printed in the newspapers, together with the report of the committee, which concluded with a resolution, unanimously adopted, denouncing as open and avowed enemies all who should attempt a separate treaty, and declaring that no conference should be held with any commissioners until the British armies should be first withdrawn, or the independence of the United States acknowledged.

**Conciliatory Proposition, LORD NORTH'S (1775).** In the midst of the hot debate in Parliament on the New England Restraining Bill, Lord North astonished the king, the ministry, and the nation by himself bringing forward a conciliatory proposition, not unlike that offered by Chatham just before (Feb. 1), which required the colonists to acknowledge the supremacy and superintending power of Parliament, but provided that no tax should ever be levied except by the consent of the colonial assemblies. It also contained a provision for a congress of the colonies to vote, at the time of making this acknowledgment, a free grant to the king of a certain perpetual revenue, to be placed at the disposal of Parliament. All the assemblies rejected the proposition. A committee of the Continental Congress, to which the proposition had been referred, made a report (July 31, 1775), in which the generally unsatisfactory character and the unsafe vagueness of the ministerial offer were fully exposed. The Congress accepted the report, and published it to the world.

**Concord.** (See *Lexington and Concord*.)

**Conestoga, MASSACRE OF INDIANS AT.** (See *Paxton Boys*.)

**Confederate Association for the Relief of Maimed Soldiers.** While the loyal people were carrying on the benevolent work of the United States Sanitary and Christian Commissions (which see) for the benefit of the Union soldiers, similar efforts, though not on so grand a scale, were put forth by the benevolent minded in the slave-labor states for the benefit of the Confederate soldiers. They labored in the good work most zealously (especially the women), to the extent of their ability, and conferred vast benefits upon the sick and wounded soldiers of the Confederate Army. We have no special reports of the result of their labors, but we know that they were a great blessing to the recipients of the kindly care of the matrons and maidens of the South. Among the variety of organizations for benevolent purposes was one called *The Confed-*

*erate Association for the Relief of Maimed Soldiers.* The object was to supply artificial limbs gratuitously to soldiers who had lost their natural ones.

**Confederate Commissioners.** The Confederate government at Montgomery (which see) appointed three commissioners to treat with the National government upon various topics of mutual interest, and for the "settlement of all questions of disagreement between the government of the United States and that of the Confederate States upon principles of right, justice, equity, and good faith." Two of these—John Forsyth, of Alabama, and Martin J. Crawford, of Georgia—arrived in Washington March 5, 1861. On the 11th they made a formal application through a senator for an official interview with the Secretary of State. It was declined, and on the 13th they sent to the Secretary a sealed communication, in which they set forth the object of their mission and asked the appointment of an early day when they might present their credentials to the President. This first attempt of the so-called "Confederate States of America" to gain a recognition of sovereignty for the Confederacy failed, for the administration refused to receive them other than as private citizens. The commissioners urged that seven states had exercised "the inherent right of secession," withdrawn from the Union and formed a confederacy, and claimed the right of a foreign power to be treated as equals. To this the President, through the Secretary (Mr. Seward), said that he could not admit that secession was possible, that any states were out of the Union; that the "Confederate States" were not a foreign power; and that he could not "recognize them as diplomatic agents, or hold correspondence or other communication with them." This course at the outset gave the country confidence in the firmness and wisdom of President Lincoln. The commissioners, after giving the Secretary of State a lecture, returned home, April 11, 1861.

**Confederate Congress, ACTS OF (1861).** Jefferson Davis called the Confederate Congress to assemble at Montgomery on April 29, 1861. That body passed (May 9) an act of fifteen sections recognizing the existence of war between the United States and the Confederate States, and concerning the commissioning of privateers. The preamble declared that the Confederate States had made earnest efforts to establish friendly relations between themselves and the United States, but the latter had refused and had prepared to make war upon the former and blockade its ports. Such being the case, they declared that war existed between "the two governments." They authorized the "President of the Confederate States" to use their whole land and naval force to meet "the war thus commenced," and to issue commissions to privateers under the seal of the Confederate States. (See *Confederate Government Seal*.) The tenth section of the act offered a bounty of \$20 for each person who might be on board any armed ship or vessel belonging to the United

States, at the commencement of an engagement, which should be burned, sunk, or destroyed by any vessel commissioned as a privateer, of equal or inferior force. They also offered a bounty of \$25 for every prisoner captured by a privateer and delivered to an agent of the "Confederacy." Davis had not waited for this legal sanction, but issued commissions for privateers immediately after his proclamation, April 17. (See *Davis's Proclamation.*)

**Confederate Conscriptions.** In 1862 the Confederate Congress authorized the President to call out all able-bodied persons between the ages of eighteen and forty-five to serve in the army. After the fall of Vicksburg and the disaster at Gettysburg the volunteer enlistments were few, and Davis found it difficult to recruit his shattered armies, for there was general discouragement, and no bounties were offered. So the Confederate government took measures to force men into the army, and appointed agents in every county to seize supplies, if necessary, for the use of the army; and at about the close of 1863 the Confederate Congress passed an extraordinary act, which declared "every white man in the Confederacy, between the ages of eighteen and forty-five years, to be in the military service and subject to the articles of war and military discipline and penalties; and that upon failure to report for duty at a military station within a certain time, he would be liable to the penalty of death as a deserter."

**Confederate Constitution,** THE, was ratified by a state convention in Alabama March 13, 1861; by the state convention of Georgia on the 16th; by Louisiana on the 21st; by Texas on the 25th; by Mississippi on the 30th, and by South Carolina on April 5th.

**Confederate Diplomatic Agents.** As soon as Jefferson Davis was seated in the presidential chair (see *Inauguration of Davis*) and the league had assumed a national character, he sent commissioners to Europe to secure formal recognition by, and make commercial regulations with, the leading governments there. These commissioners were W. L. Yancey, of Alabama; P. A. Rust, of Louisiana; A. Dudley Mann, of Virginia, and T. Butler King, of Georgia. Yancey, who lacked about every requisite of a statesman, but who could fill with wild passion an excitable populace at home, was sent to England. Rust, a Frenchman, who had emigrated to Louisiana in early life, married a woman of fortune, and reached a seat on the bench of the Supreme Court of that state, was sent to France. Mann, a dull statistician of moderate ability, was sent to Holland; and King, an extensive slaveholder and farmer, was sent to Belgium. They could not inspire the confidence of the rulers and statesmen of Europe, either in the justice or the ultimate success of their cause. They wandered about, seeking in vain for willing listeners to their tales of woe and promise, in diplomatic circles, and finally abandoned the mission, to the relief of those who had become wearied by their importunities.

**Confederate Finances (1861).** The con-

gress at Montgomery found it necessary to have money to carry on a war against the Union. So, abandoning the dream of free-trade in which many had indulged, and which it was believed would bring to their doors the luxuries of the world, they proposed tariff laws, and even went so far as to propose an export duty on the great staple, cotton, on whose supposed regal power they confidently leaned for support. "I apprehend," said Cobb, who proposed the last-named measure, "that we are conscious of the power we hold in our hands, by reason of our producing that staple so necessary to the world. I doubt not that power will exert an influence mightier than armies or navies. We know that by an embargo we could soon place not only the United States, but many of the European powers, under the necessity of electing between such a recognition of our independence as we require, or domestic revolutions at home." They issued bonds in February, 1861, but failed to find customers for them. In May the "Congress" gave the Secretary of the Treasury discretionary power to issue, in lieu of bonds, \$20,000,000 in treasury notes, not bearing interest, in denominations of not less than \$5, to "be receivable in payment of all debts or taxes due to the Confederate States, except the export duty on cotton or in exchange for bonds authorized to be issued." These notes were made payable in specie at the end of two years from the date of their issue. Another scheme was set forth in an act approved May 21, which forbade debtors to individuals or corporations in the free-labor states from making payments of the same "to their respective creditors, or their agents or assignees, during the existing war;" but to pay the amount of their indebtedness "into the treasury of the Confederate States, in specie or treasury notes, and receive for the same the treasurer's certificate," these certificates to be redeemable at the close of the war and the restoration of peace, in specie or its equivalent. It was estimated that the amount due by men in the "Confederate States" to dealers in the free-labor states at that time was about \$200,000,000. All honorable men refused to countenance this scheme of villany, and refrained from reporting their indebtedness, but took every opportunity to liquidate the claims of Northern creditors. This notable scheme failed to put much money in the treasury of the Confederate States. Then another scheme was planned to raise money. Cotton was made the main basis for the credit of bonds issued by the Secretary of the Treasury. They secured very little money from this source, but got from the producers almost everything required for the consumption of their armies, for a while. The plan was for the planters to subscribe for the use of the government a certain sum of money out of the proceeds of a certain number of bales of cotton, when sold, the planter being allowed to retain the custody of his cotton and the right to choose his time for its sale. When sold, he received the amount of his subscription in bonds of the Confederacy. The people had little faith in these bonds, but were willing to invest in them the

of this subscription to the amount of over \$15,000,000 were disposed of in Europe, chiefly in England. (See Co'ton Loan.)

**Confederate Government at Richmond.** Notwithstanding troops were pouring into Washington for the defence of the government, the Confederates felt confident that they would yet be able to seize the capital. Their government was removed from Montgomery to Richmond (May 21, 1861), that it might be near the theatre of operations against the National capital. They then had forty thousand troops in the field, of whom about twenty-five thousand were concentrating in Virginia. They had sent agents abroad to seek aid and recognition from foreign governments; had commissioned numerous privateers to depredate on the commerce of the United States; had extinguished the lights of one hundred and thirty-one light-houses on the coast between Cape Henry, Va., and the Rio Grande, Texas; culled actively in their revolutionary schemes the governors of thirteen states; and insurrection had assumed the character of rebellion. Feeling confident of soon occupying the National capital, the Vice-President of the Confederacy (A. H. Stephens) said in a speech at Atlanta, Ga. (May 23, 1861), after referring to the occupation of the capital by loyal soldiery: "Their filthy spoliation of the public buildings and the works of art at the capital, and their preparations to destroy them, are strong evidences to my mind that they do not intend to hold or defend that place, but to abandon it, after having despoiled and laid it in ruins. Let them destroy it, savage-like, if they will. We will rebuild it; we will make the structures more glorious. Phoenix-like, new and more substantial structures will rise from its ashes. Planted anew, under the auspices of our superior institutions, it will live and flourish throughout all ages."

**Confederate Government, FLIGHT OF (1865).** While the inhabitants of Richmond, the Confederate capital, were at their respective places of worship (Sunday, April 2, 1865), the fearful message from Lee, "My lines are broken in three places; Richmond must be evacuated this evening," reached the doomed city. Jefferson Davis,

surplus of their productions which they could not sell. The Secretary of the Treasury announced in July that subscriptions to the cotton loan amounted to over \$50,000,000. Bonds

reached the doomed city. Jefferson Davis,

President of the Confederacy, was at St. Paul's (Episcopal) Church, when the message was put in his hands by Colonel Taylorwood. He immediately left the church. There was a deep and painful silence for a moment, when the religious services were closed and the rector (Dr. Minnegerode) dismissed the congregation, after giving notice that General Ewell, the commander in Richmond, desired the local forces to assemble at three o'clock P.M. The Secretary of State (Benjamin), being a Jew, was not at church; the Secretary of the Navy (Mallory), a Roman Catholic, was at mass, in St. Peter's Cathedral; the Secretary of the Treasury (Trenholm) was sick; the Postmaster-general (Reagan) was at Dr. Petrie's Baptist Church; and the Secretary of War (Breckinridge) was at Dr. Duncan's Church. The inhabitants of the city were kept in the most painful suspense for hours, for rumor was busy. The government was as silent as the Sphinx. Towards evening wagons were loaded at the departments and driven to the stations of the Danville Railway, preparatory to the flight of the government officers. At eight o'clock in the evening President Davis left the city by railway, taking with him horses and carriages to use in case the road should be interrupted, declaring that he would not give up the struggle, but would make other efforts to sustain the cause. At nine o'clock the Virginia Legislature fled from the city. The Confederate Congress had already departed; and all that remained of the government in Richmond at midnight was the War Department, represented by Major Melton. The gold of the Louisiana banks that had been sent to Richmond for safe-keeping, and that of the Richmond banks, was sent away by the Danville Railway early in the day. The Confederate government halted in its flight at Danville, where an attempt was made at reorganization, to continue the contest "so long as there was a man left in the Confederacy." On hearing of the surrender of Lee, they fled from Danville to Greensborough, N. C., and made their official residence in a railroad carriage, where they remained until the 15th, when, it being seen that the surrender of Johnston was inevitable, they again took flight on horses and in ambulances for Charlotte, for the railway was crippled. (See *Stoneman's Raid*.) There Davis proposed to establish the future capital of the Confederacy. The surrender of Johnston caused the Confederacy to vanish into nothingness. The fugitive leaders of the government now took flight again on horseback, escorted by two thousand cavalry. They turned their faces towards the Gulf of Mexico, for the way to Mississippi and Texas was barred. At Charlotte, George Davis, the Confederate attorney-general, resigned his office; Trenholm gave up the secretaryship of the treasury on the banks of the Catawba, where Postmaster-general Reagan, having no further official business to transact, took Trenholm's place. The flight continued Gulfward, the escort constantly diminishing. At Washington, Ga., the rest of Davis's cabinet deserted him, only Reagan remaining faithful. Mallory, the Secre-

tary of the Navy, doubtful whether his official services would be needed on the Gulf, fled, with Wigfall, to La Grange, where he met his family and was subsequently arrested; and Benjamin fled to England. Davis's family had accompanied him from Danville to Washington; now, for prudential reasons, they separated, but were soon reunited; and near Irwinesville, the capital of Irwin County, Ga., three miles south from Macon, Davis was arrested by National cavalry on the morning of May 11, 1865, and taken a prisoner to Fortress Monroe. (See *Davis, Jefferson, Capture of*.)

**Confederate Government, PREPARATIONS OF FOR FLIGHT.** President Davis and his colleagues were so thoroughly alarmed when the Nationals were approaching Richmond by land and water in May, 1862, that they made preparations to fly into South Carolina. The archives of the government were sent to Lynchburg and Columbia. The railway tracks over the bridges were covered with plank to facilitate the passage of artillery. The Secretary of the Treasury had a special train, the steam of the locomotive continually up, ready for flight. Disgusted and alarmed at this cowardice of the civil leaders of the cause, the Legislature of Virginia, then in session, passed resolutions (May 14, 1862) calling upon the government of the Confederate States to defend Richmond at all hazards, and resolved, with a clearness that deprived the trembling executive and his associates of every excuse but fear, that the "President be assured that whatever destruction or loss of property of the state or individuals shall thereby result, will be cheerfully submitted to." It is believed that this action was inspired by General Joseph E. Johnston. But for this, the members of the civil government would have been seen flying to South Carolina for personal safety.

**Confederate Government Seal.** A seal is a symbol of sovereignty within certain bounds. On April 30, 1863, a joint resolution of the Congress of the "Confederate States of America"

PROPOSED "CONFEDERATE STATES" SEAL

became a law for the establishment of a seal, declaring that it should "consist of a device representing an equestrian portrait of Washington (after the statue which surmounts his monument at Richmond) surrounded with a wreath composed of the principal agricultural

products of the Confederacy—cotton, tobacco, sugar-cane, corn, wheat, and rice—and having around its margin the words, "THE CONFEDERATE STATES OF AMERICA, FEB. 22, 1862" (the date of the establishment of the permanent government), with the motto "Deo Vindice." Soon after the passage of this law, the Confederate Secretary of State (J. P. Benjamin) wrote

Richmond. It was engraved in solid silver. It was sent by the way of Bermuda, but it did not reach Richmond until about the time when the Confederacy was broken up. The writer was informed by the attorney-general of the Confederacy at the time of its dissolution, that the seal was never used—no Confederate commission ever bore this emblem of sovereignty. In

Secretary of the Navy

CONFEDERATE NAVAL COMMISSION.

to the Confederate representative in England (J. M. Mason), directing him to have a seal made by the best artist. Mr. Mason employed Joseph S. Wyon, chief "seal engraver to the queen," to do the work. It was completed early in July, 1864, and placed in charge of Lieutenant Chapman, of the Confederate Army, to convey it to

1876 it was in the possession of T. J. Pickett, who was the commissioner of the Confederacy in Mexico. The engraving on page 287 is about half the size of the original.

Confederate Navy (1861). The "Confederate States" lacked the ingenuity and skill to construct vessels of war, but, by the early seizure

H. G. Cook & Co.

of vessels belonging to the United States and by purchase, they had several armed vessels at sea. They had appropriated to their use six United States revenue cutters, which were fitted up as privateers, and purchased and fitted out about a dozen others. The first of the purchased vessels was named the *Lady Davis*, in honor of the wife of Jefferson Davis. She was armed with 24-pounders and placed under the command of Lieutenant T. B. Huger, of the United States Navy, who had deserted his flag. This was the beginning of the "Confederate States" Navy, which never assumed formidable proportions until ships built, armed, and manned in British ports were permitted to enter the Confederate service. The Confederacy had engraved in England a very fine naval commission, which was given to the commanders of all their vessels. It was much superior in artistic execution to the commissions issued to National naval officers. Our engraving is a perfect fac-simile of it, a little less than one third the size of the original. It was printed on elegant vellum. The space within the wreath covering the trophies at the bottom was the place of the seal.

**Confederate Privateers.** The Confederate Congress resolved (February, 1862) to prosecute the war with vigor. Before the close of July following they had more than twenty vessels afloat as privateers to predate upon American commerce, and had destroyed millions of dollars' worth of property. At the first, the most formidable of these were the *Nashville* and *Sumter*.

PRIVATEER SHIP SUMTER.

The former was a side-wheel steamer, carried a crew of eighty men, and was armed with two long 12-pound rifled cannons. She was destroyed (Feb. 28, 1862) by the *Montauk*, Captain Worden, in the Ogeechee River. The career of the *Sumter* was also short, but much more active and destructive. She had a crew of sixty-five men and twenty-five marines, and was heavily armed. She had run the blockade at the mouth of the Mississippi River (Jan. 30, 1861), ran among the West India Islands, making many prizes of vessels bearing the American flag, and became the terror of the American merchant service, skilfully eluding National vessels of war sent out to capture her. She crossed the Atlantic, and, at the close of 1861, was compelled to seek the shelter of friendly British guns at Gibraltar. There she was watched by

the *Tuscarora*, United States Navy, and was sold early in 1862. Mr. Laird, a ship-builder at Liverpool and a member of the British Parliament, contracted to build sea-rovers for the Confederates. The first of his production that went to sea was the *Oreto*. Mr. Adams, the American Minister, called the attention of the British government to the matter (Feb. 18, 1862), but nothing was done. She went to a British port of the Bahamas, and ran the blockade at Mobile, under British colors, with a valuable cargo. Her name was changed to *Florida*, and she was placed in charge of a late officer of the United States Navy (John Newland Maffit), and again went to sea in December. The *Florida* hovered most of the time off the American coast, closely watched, everywhere leaving a track of desolation behind her. She ran down to the coast of South America, and, alarmed at the presence of a National vessel of war, ran in among the Brazilian fleet in the harbor of Bahia. Captain Collins, of the *Wachusett*, ran in (Oct. 7, 1864), boarded the *Florida*, lashed her to his vessel, and bore her to Hampton Roads, Va., where she was sunk. The most famous of the Anglo-Confederate vessels was the *Alabama*, built by Laird and commanded by Raphael Semmes, who had been captain of the *Sumter*. Her career is elsewhere related. (See *Alabama*.) The career of the *Shenandoah*, another Anglo-Confederate privateer, was largely in the Indian, Southern, and Pacific oceans, plundering and destroying American vessels. On the borders of the Frozen ocean, near Behring's Strait, she attended a convention of American whaling ships (June 28, 1865) without being suspected, as she bore the United States flag. Suddenly she revealed her character, and before evening she had made prizes of ten whalers, of which eight were burned in a group before midnight. It was the last act in the drama of the Civil War. Her commander, informed of the close of the war, sailed for England, gave up the vessel to a British warship as a prize, and made himself rich by pocketing the money that belonged to his companions. His name was James L. Waddell, and he bore a commission from the Confederate Secretary of the Navy. The *Shenandoah* was a Clyde-built steamer, long and rakish, of seven hundred and ninety tons burden. She was manned, says her historian (C. E. Hunt), by "Southern gentlemen." Against the sending out of all these vessels Mr. Adams protested in vain.

**Confederate Rosette and Badge.** The rosette was made of blue

CONFEDERATE ROSETTE AND BADGE.

satin ribbon, surrounding a disk containing two circles, in the centre of which was a portrait of Jefferson Davis. On one were the words, "OUR FIRST PRESIDENT. THE RIGHT MAN IN THE RIGHT PLACE." On the other were seven stars and the name of JEFFERSON DAVIS. Attached to this was a badge of white satin, on which was printed, in proper colors, the "Confederate" flag. Over it were the words, "THE SOUTH FOREVER. SOUTHERN CONFEDERATION." Below it were the words "JEFF. DAVIS, President; A. H. STEPHENS, Vice-President." (See *Palmetto Cockade.*)

**Confederate States Congress, SECOND SESSION OF THE.** The government of the Confederate States was transferred from Montgomery to Richmond, and there the third session was opened at noon, July 20, 1861. The members were called to order by Howell Cobb. President Davis, in his message, congratulated his associates on the accession of states to the league; declared that the National government had revealed its intention to make the war one of subjugation; that the Confederates had not begun the war; that the Confederacy was "a great and powerful nation;" that their nationality had been recognized by the establishment of "blockades by sea and land;" and that the National government had repudiated the idea of the Confederates being citizens of the United States, by making war upon them "with a savage ferocity unknown to modern civilization." He charged that "rapine and plunder" was the rule of the loyal soldiers; that they plundered and destroyed private houses; that they made special war on women and children by depriving them of the means of procuring medicines, and that they had committed outrages on defenceless women. The Congress passed an act (Aug. 8, 1861) which authorized the banishment from the limits of the Confederate States of every masculine citizen of the United States (with some exceptions named) over fourteen years of age who acknowledged its authority. The courts were authorized to arrest all Union men who did not proclaim their allegiance to the Confederacy or leave its limits within forty days, and to treat them as "alien enemies." Another act authorized the confiscation of every species of property of such "alien enemies," or absent citizens of the United States, with exceptions already alluded to (citizens of slave-labor states yet in the Union). Measures for the increase and officering of the army and navy and for extensive financial operations were adopted. It was reported that the Confederates then had 200,000 soldiers in the field, and President Davis was authorized to increase this force by an addition of 400,000 volunteers, to serve for not less than one year nor more than three years. He was also authorized to send additional commissioners to Europe; also, to inflict retaliation upon the persons of prisoners of war.

**Confederate States Government, PERMANENT.** The provisional government of the Confederate States ended on Feb. 8, 1862,

when the permanent government was organized. Jefferson Davis had been unanimously chosen President for a term of six years. He chose for his cabinet Judah P. Benjamin, of Louisiana, Secretary of State; George W. Randolph, of Virginia, Secretary of War; S. R. Mallory, of Florida, Secretary of the Navy; C. G. Memminger, of South Carolina, Secretary of the Treasury; J. H. Reagan, of Texas, Postmaster-general, and T. H. Watts, of Alabama, Attorney-general. Randolph resigned in the autumn, and James A. Seddon, a wealthy citizen of Richmond, was made Secretary of War in his place. On the same day a Congress, professedly elected by the people, assembled at Richmond, in which all of the slave-labor states were represented excepting Maryland and Delaware. Whether the members of Congress had been elected on the following Virginia plan is not recorded: "It being necessary to form a ticket of electors," said a leading newspaper of Richmond, "and the time being too short to call a convention of the people, it was suggested that the Richmond editors should prepare a ticket, thus relieving the people of the trouble of making elections." The ticket was so formed and voted upon. "Every district in the state," said the journalist, "is embraced in this editorial report." Devices for seals of the various departments were adopted, and the seals were made in England. (See *Confederate Government Seal.*)

**"Confederate States of America."** When the convention at Montgomery (which see) adopted a permanent constitution, the name "Confederate States of America" was given to the league. This was a misnomer, for no states, as states, had confederated. No state, as a state, was at any time during the war in insurrection or rebellion; only certain persons in certain states were in a condition of insurrection or rebellion. An ancient poet asked, "What constitutes a state?" and answered his own question, "Men, high-minded men"—in other words, as applied to our free government, the people. The people in the "seceded states" had never been asked to sanction the ordinances of secession; had no voice in the choice of members of the convention at Montgomery, which assumed the powers of a general government; had never spoken concerning the constitution which these men had framed, and had no voice in forming the government called the "Confederate States of America." It was only a confederation of politicians, leagued for the avowed purpose of overturning the government of the United States. Equally misnamed is a history of the war by Alexander H. Stephens, which he called a *War between the States*. There never was a war between the states.

**"Confederate States of America," PERMANENT CONSTITUTION OF THE.** On the 11th of March the "Congress" at Montgomery adopted a permanent constitution for the Confederacy, and gave to the league the title of "Confederate States of America." In its preamble the doctrine of state supremacy was fully recognized in the following words: "We, the people of the

Confederate States, each state acting in its sovereign and independent character," etc. It was the Constitution of the United States, with certain omissions and alterations. It fixed the term of service of the President and Vice-President at six years, and made the former ineligible to reelection.

"Confederate States of America," RATIFICATION OF PERMANENT CONSTITUTION OF THE. The Constitution was submitted to the several revolutionary or secession conventions for ratification. This was done on their reassembling, respectively. The Convention of Alabama ratified it on March 13, 1861; of Georgia on March 14th; of Louisiana, March 21st; of Mississippi, March 26th; of South Carolina, April 3d. In the Mississippi Convention some of the ablest men proposed to submit the Constitution to the people, but this democratic idea was voted down by the voices of seventy-eight against seven. None of the conventions ever ventured to allow the people to vote freely on their own acts, or on the subject of forming a Southern confederacy. The whole authority in the new government was vested, by palpable usurpation, in the hands of the politicians. The revolutionary movements in which the people were so deeply interested were wholly controlled by a few self-constituted leaders.

"Confederate States," STATE DEPARTMENT SEAL OF THE. At Richmond the Congress of the Confederate States devised seals for their several departments. That of the State Department, which would be seen abroad more than any

CONFEDERATE "STATE DEPARTMENT" SEAL

other, had in its centre an escutcheon quartered by a St. Andrew's cross bearing ten stars. In the upper quartering was a ship under full sail, and in each of the other three was an agricultural product of the South. From the top of the escutcheon were emitted rays of light. Under it was a ribbon bearing the motto "NULLA PATRIA AMICTE FIDEI;" meaning, "No country, no fatherland, that does not keep faith;" that is to say, "We reject the National government because it is faithless." Around the whole were the words "DEPARTMENT OF STATE. CONFEDERATE STATES OF AMERICA."

Confederates, CONVENTION OF, AT MONT-

GOMERY (1861). On the same day (Feb. 4, 1861) when the Peace Congress (which see) assembled at Washington to consider measures for preserving the Union, delegates from six states whersein conventions had adopted ordinances of secession assembled at Montgomery, Ala., to form a confederacy for the destruction of the Union. In that convention, South Carolina, Georgia, Alabama, Mississippi, Louisiana, and Florida were represented. They met in the State House at Montgomery, a city then of sixteen thousand inhabitants, situated on the Alabama River, three hundred miles by its course from the Gulf of Mexico. The delegates were forty-two in number.\* The sessions began in the legislative hall, with R. W. Barnwell, of South Carolina, as temporary chairman. Rev. Basil Mauly invoked the blessings of God upon the premeditated labors of the convention. Howell Cobb, of Georgia, was appointed permanent president of the convention, and Johnson F. Hooper, of Montgomery, was chosen clerk. In his speech on taking the chair Cobb declared that they met as "representatives of sovereign states which had dissolved their political connection with the United States;" that the separation was a "fixed, an irrevocable fact—perfect, complete, and perpetual;" counselled his associates to assume the responsibility necessary for the accomplishment of the work they had entered upon; and concluded by saying, "With a consciousness of the justice of our cause, and with confidence in the guidance and blessings of a kind Providence, we will this day inaugurate for the South a new era of peace, security, and prosperity." It was agreed that all votes should be taken by states. It was perceived at the outset that perfect harmony in the convention could not be expected. Nearly all of the delegates, as private letters show, were aspirants for office in the inchoate empire. Each felt himself, like Bottom the Weaver, capable of performing any part in the drama then opening, either as "Lion," "Pyramus," "Wall," or "Moonshine." The South Carolinians were specially willing to bear the burden of public office. Judge McGrath, who laid aside his judicial robes at Charleston, sent word by Memminger that he would like to be made attorney-general. Robert Barnwell Rhett, the "father of secession in South Carolina," thought himself peculiarly fitted for secretary of war, and evinced, in letters to his son, special sensitiveness because his claims to distinction had been overlooked. Memminger aspired to be secretary of the treasury, and James Chesnut, Jr., who had "patriotically" made a sacrifice of his seat in the United States Senate, was spoken of

\* The following are the names of the delegates: *South Carolina*—R. B. Rhett, James Chesnut, Jr., W. P. Miles, T. J. Withers, R. W. Barnwell, C. G. Memminger, L. M. Keitt, W. W. Boyce. *Georgia*—Robert Toombs, Howell Cobb, Benjamin H. Hill, Alexander H. Stephens, Francis Barbour, Martin J. Crawford, E. A. Nisbett, Augustus B. Wright, Thomas R. R. Cobb, Augustus Keesan. *Alabama*—Richard W. Walker, Robert H. Smith, Colho J. McRae, John Gill Shorter, S. F. Hale, David P. Lewis, Thomas Fearo, J. L. M. Curry, W. P. Chilton. *Mississippi*—Willie P. Harris, Walker Brooke, A. M. Clayton, W. S. Barry, J. T. Harrison, J. A. P. Campbell, W. S. Wilson. *Louisiana*—John Perkins, Jr., Duncan F. Kona, C. M. Conrad, E. Spencer, Henry Marshall. *Florida*—Jackson Morton, James Power, W. B. Ochiltree.

as a fitting head of the new nation. Some autograph letters before the writer are rich revelations of disappointed ambition. In the convention, Rhett counselled the same violence that the South Carolinians had practised at Charleston, and when his recommendations were met by calm opposition, he denounced his associates as cowards and imbeciles. "If the people of Charleston should hurl the whole crew in effigy I should not be surprised," he wrote, Feb. 11, 1861. Men like Stephens, Hill, Brooke, and Perkins controlled the fiery spirits like Rhett and Toombs in the convention, and it soon assumed a dignity suited to the gravity of the occasion. The sessions were generally held in secret. On the second day Memminger, of South Carolina, offered resolutions declaring it to be expedient forthwith to form a confederacy of "seceded states," and that a committee of thirteen be appointed to report a plan for a provisional government on the basis of the Constitution of the United States, and that all propositions in reference to a provisional government be referred to that committee. Alexander H. Stephens then moved that the term "congress," instead of "convention," be used when applied to the body then in session, which was agreed to. Commissioners from North Carolina appeared (Feb. 6), and were invited to seats in the convention. They came only as commissioners from a "state yet in the Union," instructed to effect an "honorable and amicable adjustment of all the difficulties that distract the country, upon the basis of the Crittenden Compromise (which see), modified by the Virginia Legislature." Their mission was fruitless, for that "congress" was opposed to any form of conciliation. On the 7th a resolution from the Legislature of Alabama, offering the "Provisional Government of the Confederacy of Seceding States the sum of \$500,000 as a loan," was accepted. On the same day Memminger, chairman of the committee of thirteen, presented a plan of government. It was discussed in secret session, when the Constitution of the United States, with some important modifications, was adopted as the form of government of the new Confederacy. (See *Confederate States of America*.) This provisional Constitution received the unanimous vote of the convention; yet the violent Rhett fulminated, through the *Charleston Mercury*, anathemas against it, especially on account of a tariff clause, the prohibition of the African slave-trade, and the adoption of the three-fifths rule of representation for slaves, as in the National Constitution. "Let your people," he said, "prepare their minds for a failure in the future permanent Southern Constitution, for South Carolina is about to be saddled with almost every grievance, except abolition, against which she so long struggled, and has just withdrawn from the United States Government." On the 9th of February the president of the convention and all the members took the oath of allegiance to the provisional Constitution, and at noon the doors of the hall were thrown open to the public, and the convention proceeded to the election of a President and Vice-President of the

Confederacy. Jefferson Davis, of Mississippi, was chosen President by unanimous vote; and by a like vote Alexander H. Stephens, of Georgia, was chosen Vice-President. (See *Inauguration of Jefferson Davis*.) The chairman of the convention appointed committees on foreign relations, postal affairs, finance, commerce, military and naval affairs, judiciary, patents and copyrights, and printing. All the laws of the United States not incompatible with the new order of things were continued in force temporarily. A committee was appointed to report a constitution of permanent government for the Confederacy. On the 13th a delegate from Texas (John Gregg) took his seat in the convention. The others were on the way. Preparations were made for the organization of an army and navy, and to make provision for deserters of the old flag. On Feb. 18 Davis and Stephens were inaugurated, and the oath of office was administered to Davis by Howell Cobb, president of the congress. The convention authorized him to accept one hundred thousand volunteers, and to assume control of "all military operations between the Confederate States;" and at the middle of March it recommended the several states to cede to the "Confederate States" the forts, arsenals, dock-yards, and other public establishments within their respective domains which they had wrested from the United States.\*

**Confederates on the Line of the Potomac.** Detachments of Confederates from headquarters at Manassas took a position at Munson's Hill, within six miles of the Capitol as the bird flies, and they kept up the blockade of the Potomac below Washington by batteries on the Virginia shore. When the government proposed to remove that blockade, and National troops began to push back the Confederate advance, the latter retired from Munsou's Hill, late in Septem-

\* The proceedings of this convention, and of the "Provisional Government of the Confederate States," have never been printed. The original manuscripts were discovered by some of General Wilson's command at Athens, Ga., after the downfall of the Confederacy. They were in three boxes in one of the recitation-rooms of the University of Georgia. A correspondent of the *New York Herald*, writing from Athens on the 19th of June, 1865, gives the following interesting history of these papers, which consist of journals, correspondence, etc.: "As the Provisional Congress was about to expire, a proposition was made that the journals should be published. This was objected to on the ground of furnishing much valuable information, and a law was passed authorizing and requiring the president of the Congress, Howell Cobb, to have three copies made of all the journals. He was at that time in the army, commanding the Sixteenth Georgia Regiment, and down on the Peninsula, below Richmond. He at once engaged J. D. Hooper, former clerk, to undertake the job. Whatever were his hinderances it is not known; but he did very little, and, after having them on hand for a long time, died. They were then shipped to a gentleman in Georgia, with a request to complete the work. Papers were missing, requiring months to find; materials hard to get, and the work therefore never was completed. They were at one time held in Atlanta, but the Unionists coming too near, were hurried off to West Point, Ga. There a stirring rumor of a raid springing up, they were carried to Tallapoosa County, Ala., on a plantation. In marching from Dadeville to Loachapoka, General Rousseau passed within four miles of the house where they were; and when his men were destroying the railroad at Notasulga, and were having the little fight near Chehaw, the boxes were hid out in the woods two miles off, and were watched by two negro men. They were then removed to Augusta, Ga., and thence, when Sherman came tearing down through Georgia like a wild horse, they were pushed along into the upper part of South Carolina. Thence, in the spring, they were brought over to this place." These journals are among the archives of the "Confederate Government" at Washington city.

ber. After that there were some struggles for the possession of the Upper Potomac. Skirmishes occurred at Lewinsville, Va., and at Darnestown, Md., in which the Nationals were victors. By the middle of October (1861) the Confederates occupied a line from Fairfax Court-house well up towards Leesburg. Meanwhile some National troops had crossed the river at Harper's Ferry (Oct. 8, 1861) to seize some wheat, when a large body of Confederates menaced them. Colonel Geary went over with reinforcements for the Nationals, and on the hills back of the village he had a severe engagement with the insurgents and repulsed them. Then all the Nationals recrossed the river with their spoils. At Lewinsville the Nationals lost two killed and ten wounded. The skirmish at Darnestown, Md., between National pickets and four hundred and fifty Virginians, continued about two hours. The assailants (the Virginians) were repulsed, with a loss of ten killed and many wounded; only one National was killed. At Harper's Ferry Geary lost four killed, seven wounded, and two taken prisoners.

**Confederates, THE, ABANDONED BY GREAT BRITAIN.** In April, 1864, the British minister at Washington was permitted to send to Jefferson Davis a letter from Earl Russell, the British foreign secretary, in which that officer, in the name of "her Majesty's government," protested against the further procuring by the Confederates of vessels within the British dominions to be used for piratical or privateering purposes. He said, "Her Majesty's government protests and remonstrates against any further efforts on the part of the so-called Confederate States to procure vessels in Great Britain for hostile purposes against the United States." And "her Majesty's government further protests and remonstrates against all acts in violation of the neutrality laws of the realm." These words, uttered by one who personally and in the name of his government had given the insurgents all the "aid and comfort" in his power which a wise prudence would allow, kindled the hot indignation of the Confederates. Mr. Davis instructed one of his assistants to reply that it "would be inconsistent with the dignity of the position he [Mr. Davis] fills as chief magistrate of a nation comprising a population of more than twelve millions, occupying a territory many times larger than the United Kingdom, and possessing resources unsurpassed by those of any other country on the face of the globe, to allow the attempt of Earl Russell to ignore the actual existence of the Confederate States, and to contemptuously style them 'so called,' to pass without a protest and a remonstrance. The President therefore does protest and remonstrate against this studied insult; and he instructs me to say that in future any document in which it may be repeated will be returned unanswered and unnoticed."

**Confiscation Act, CONFEDERATE.** From the Confederate "Department of Justice" went out instructions, late in the summer of 1861, to put in force the Confiscation Act of the Confederate Congress at its third session (which see), that all

persons, Americans or Europeans, having a domicile in the "Confederate States, and carrying on business or traffic within the states at war with the Confederacy" were "deemed enemies;" that the property of every kind of these persons should be seized and held, and that the receivers of the same should apply to the clerk of courts for writs of garnishment [a warning or notice to a person to appear in court and give information, such person being called a garnishee], commanding persons suspected of holding in trust the property of an "alien enemy" to appear and answer such questions, under oath, touching such custody, as might be propounded. The authorized persons making the seizures were furnished with a formula of questions for the garnishees, which implied the establishment of a court of inquisition of the most despotic kind. Under this searching sequestration act a vast amount of property belonging to loyal owners in the free-labor states was seized, swelling the entire loss to the inhabitants of those states by the repudiation of or inability to pay honest debts by the business men of the South to about \$300,000,000. Few men had the boldness to oppose this measure. It was a strong arm for producing a solid South (which see). J. L. Pettigrew, of Charleston, however, boldly opposed it in open court, denouncing the law as unknown to the jurisprudence of any civilized nation. He was served with a writ of garnishment, but refused to obey it, telling the court plainly that such proceedings were "no better than those which made the English Star Chamber and Spanish Inquisition odious to every lover of liberty."

**Congregational Church IN SOUTH CAROLINA.** Hearing of spiritual destitution in South Carolina, a church was gathered at Dorchester, Mass., with the design of settling in that Southern colony to encourage and promote the growth of religion there. With its pastor, Joseph Lord, this congregation arrived at Charleston at the close of the year 1695, formed a settlement on the northern bank of the Ashley River, which they called Dorchester, and there, on Feb. 2, 1696, the Lord's Supper was for the first time administered in that colony.

**Congress and the Roman Catholics.** With a singular lack of discretion, the first Continental Congress, while anxious to have the Canadians for their allies in the inevitable struggle then impending, offended the Roman Catholics of that country by expressions in their address to the people of Great Britain. They asserted that the Roman Catholic religion had "dispensed impiety, bigotry, persecution, murder, and rebellion through every part of the world." In the address to the inhabitants of the province of Quebec, drawn up by John Dickinson, all old religious prejudices and jealousies were condemned as unworthy of high-minded men, and the Swiss cantons were cited as examples of a union composed of Roman Catholic and Protestant states. This somewhat soothed the irritation caused by the other address, but the words of the latter were remembered to the injury of the American cause.

**Congress, Apathy of the (1779).** Faction had corrupted or enfeebled patriotism in Congress in 1779, and there prevailed a general apathy in that body concerning public affairs. Washington saw clearly the danger, and frequently warned Congress of it, assuring them that the British ministers plainly intended to prosecute the war vigorously, and make a permanent conquest of the South. But the Congress did not provide for reinforcements for the army, for they believed the war was near its end. In this belief they were confirmed by the action of the French minister at Philadelphia, who had been instructed to ascertain the ultimate demands of the United States, and to mould them into a form acceptable to Spain. (See *French Interest, etc.*, and *Convention between France and Spain.*) The answer of Congress to the British communication in 1778 implied a willingness to treat with Great Britain on her recognition of American independence. But they could not, without violating the treaty with France, make a peace that did not include the latter country. On Jan. 14, 1779, the Congress resolved unanimously "that as neither France nor these United States may of right, so they will not conclude either truce or peace with the common enemy without the formal consent of their ally first obtained."

**Congress at New London.** In 1711 a congress of colonial governors was held at New London, Conn., to concert measures concerning the proposed campaign against Canada.

**Congress for Permanent Independence.** Late in December, 1776, the Continental Congress, which had fled from Philadelphia and reassembled at Baltimore, cast aside its hitherto temporizing policy. Up to this time, the Congress had left on their journal the suggestion that a reunion with Great Britain might be the consequence of a delay in France to declare immediately and explicitly in their favor. Now they voted to "assure foreign courts that the Congress and people of America are determined to maintain their independence at all events." It was resolved to offer treaties of commerce to Prussia, Austria, and Tuscany, and to ask for the intervention of those powers to prevent Russian or German troops from serving against the United States. They also drew up a sketch for an offensive alliance with France and Spain against Great Britain. These measures delighted the more radical members in Congress and, with the victory at Trenton which immediately followed, inspired the people.

**Congress, NATIONAL, CALLED SESSION OF THE (1861).** On Thursday, July 4, 1861, the Thirty-seventh Congress assembled in the Capitol at Washington in extraordinary session, in compliance with the call of President Lincoln, April 15. In the Senate twenty-three states, and in the House of Representatives twenty-two states and one territory, were represented. There were forty senators and one hundred and fifty-four representatives. Ten states, in which the political leaders had adopted ordinances of secession, were not represented. In both Houses

there was a large majority of Unionists. It was the first session of this Congress, and Galusha A. Grow, of Pennsylvania, was chosen speaker of the House of Representatives. The President, in his message, confined his remarks to the special object for which the Congress had been called together. He recited the many and grave offences of the conspirators against the life of the nation, such as the seizure of public property, making preparations for war, and seeking the recognition of foreign powers as an independent nation. In the act of firing on Fort Sumter, "discarding all else," he said, "they have forced upon the country the distinct issue, 'immediate dissolution or blood.'" He reviewed the conduct of the Virginia politicians, condemned the policy of armed neutrality proposed in some of the border states, alluded to the call for soldiers, and the necessity of vindicating the power of the National government. "It is now recommended," he said, "that you give the legal means for making the contest a short and decisive one; that you place at the control of the government for the work at least 400,000 men and \$400,000,000. . . . A right result at this time will be worth more to the world than ten times the men and ten times the money. . . . The people will save the government if the government itself will do its part only indifferently well." He alluded to the preponderance of Union sentiment among the *people* in the South, and stated the remarkable fact that, while large numbers of officers of the army and navy had proved themselves unfaithful, "not one common soldier or sailor is known to have deserted his flag. . . . This is the patriotic instinct of plain people. They understand, without an argument, that the destroying of the government which was made by Washington means no good to them." The President assured the people that the sole object of the exercise of the war-power should be the maintenance of the national authority and the salvation of the life of the republic. After expressing a hope that the views of Congress were coincident with his own, the President said, "Having chosen our course without guile and with pure motives, let us renew our trust in God and go forward without fear and with manly hearts." There were important reports from the departments accompanying the President's message. The Secretary of War (Mr. Cameron) recommended the enlistment of men for three years, with a bounty of \$100, for the additional regiments of the regular army; also, that appropriations be made for the construction, equipment, and current expenses of railroads and telegraphs for the use of the government; for the furnishing of a more liberal supply of approved arms for the militia, and an increase in the clerical force of his department. The Secretary of the Treasury (Mr. Chase) asked for \$240,000,000 for war expenses, and \$80,000,000 to meet the ordinary demands for the fiscal year. He proposed to raise the \$80,000,000, in addition to the sum of nearly \$66,000,000, by levying increased duties on specified articles, and also by certain internal revenues, or by the direct taxa-

tion of real and personal property. For war purposes, he proposed a national loan of not less than \$100,000,000, to be issued in the form of Treasury notes, bearing an annual interest of seven and three tenths per cent., or one cent a day on fifty dollars, in sums from \$50 to \$5000. He proposed to issue bonds or certificates of debt, in the event of the national loan proving insufficient, to an amount not exceeding \$100,000,000, to be made redeemable at the pleasure of the government after a period not exceeding thirty years, and bearing interest not exceeding seven per cent. He also recommended the issue of another class of Treasury notes, not to exceed in amount \$50,000,000, bearing an interest of 3.65 per cent., and exchangeable, at the will of the holder, for Treasury notes. The Secretary of the Navy asked Congress to sanction his acts (see *Navy, the*, 1861), and recommended the appointment of an assistant-secretary in his department. Congress acted promptly on the suggestions of the President. It was found at the outset that there were a few members of Congress who were in thorough sympathy with the Secessionists; but, while these prolonged the debates, the majority of loyal men was so overwhelming that the disloyal ones could not defeat the will of the people. On the first day of the session Senator Wilson, of Massachusetts, Chairman of the Military Committee of the Upper House, gave notice that he should, the next day, submit six bills having for their object the suppression of the rebellion. These were all adopted afterwards. They were, 1. To ratify and confirm certain acts of the President for the suppression of insurrection and rebellion; 2. To authorize the employment of volunteers to aid in enforcing the laws and protecting public property; 3. To increase the present military establishment of the United States; 4. To provide for the better organization of the military establishment; 5. To promote the efficiency of the army; 6. For the organization of a volunteer militia force, to be called the National Guard of the United States. At an early day the Senate took measures to purge itself of disloyal members by expelling the following ten Senators: James M. Mason and R. M. T. Hunter of Virginia, Thomas L. Clingman and Thomas Bragg of North Carolina, James Chesnut, Jr., of South Carolina, A. O. P. Nicholson of Tennessee, W. K. Sebastian and Charles B. Mitchell of Arkansas, and John Hemphill and Louis T. Wigfall of Texas. On July 13 the places of Mason and Hunter were filled by John S. Carlisle and W. J. Willey, appointed by the Legislature of "reorganized (West) Virginia." On the same day John B. Clark, of Missouri, was expelled from the House of Representatives as a traitor to his country. Every measure for the suppression of the rebellion proposed by the President and heads of departments was adopted. On the 19th the venerable J. J. Crittenden (see *Crittenden Compromise*), who was then a member of the House of Representatives, offered a joint resolution, "That the present deplorable civil war has been forced upon the country by the disunionists of the Southern

States, now in revolt against the constitutional government, and in arms around the capital; that in this national emergency, banishing all feelings of mere passion or resentment, we will recollect only our duty to our country; that this war is not waged, on our part, in any spirit of oppression, nor for any purpose of conquest or subjugation, nor for the purpose of overthrowing or interfering with the rights or established institutions of those states, but to defend and maintain the supremacy of the Constitution, and to preserve the Union, with all the dignity, equality, and rights of the several states, unimpaired; and that as soon as these objects are accomplished the war ought to cease." It was laid over until Monday. On Sunday (July 21) the battle of Bull's Run was fought. Notwithstanding the capital was filled with fugitives from the shattered army, and it was believed by many that the seat of government was at the mercy of its enemies, Congress, with sublime faith, debated as calmly as before. By an almost unanimous vote, Mr. Crittenden's resolution was adopted, and a few days afterwards one identical with it passed the Senate by a vote almost as decisive. It was such a solemn refutation of the false charges of the Confederate leaders, that it was a war for subjugation and emancipation of the slaves, that it was not allowed to be published in the Confederacy. On the same day Congress resolved to spare nothing essential for the support of the government, and pledged "to the country and the world the employment of every resource, national and individual, for the suppression, overthrow, and punishment of rebels in arms." They passed a bill providing for the confiscation of property used for insurrectionary purposes, and that the master of a slave who should employ him in any naval or military service against the government of the United States should forfeit all right to his services thereafter. When Congress had finished the business for which it was called, and had made ample provision in men and means for the suppression of the rebellion, it adjourned (Aug. 6), after a session of thirty-three days. The product of its labors consisted in the passage of sixty-one public and seven private bills and five joint resolutions. On the day before its adjournment it requested the President to appoint a general fast-day.

CONGRESS, NATIONAL, EXTRAORDINARY SESSION OF THE (1797). On May 13, there was a full quorum of both houses of Congress assembled at Philadelphia. In the Senate was a decided Federal majority. The object of the session was to consider the relations with France. To these the President alluded in his opening message, and declared his intention to adhere to the neutral policy of the last administration. The answer to the speech was an approval of it; yet sympathy for the French caused much hesitation in deciding upon positive measures. But measures were adopted looking to a possible war with France. In a session of eight weeks acts were passed apportioning to the states a detachment of 80,000 militia, to be ready to

march at a moment's warning; appropriating \$115,000 for the further fortification of harbors; prohibiting the exportation of arms and ammunition, and encouraging their importation; authorizing the equipment of three frigates, and their employment, with an increased number of revenue cutters, for the defence of the coast. And the act imposed a fine of \$10,000 and ten years' imprisonment on any citizen who might be engaged in fitting out any private armed vessel to cruise against nations with whom the United States were at peace, or against the vessels and property of their fellow-citizens. The sum of \$800,000 was appropriated to carry out these measures, and the duties on some imported goods were increased. These measures were violently opposed by the Republicans, but they were finally passed. The administration, willing to try further peaceable measures, sent two envoys extraordinary to France. (See *Envoys to France*.)

**Congress, NATIONAL, EXTRAORDINARY SESSION OF THE (1837).** In consequence of the embarrassments occasioned by the Specie Circular (which see) and the sudden collapse of the credit system (which see), there had been in the city of New York alone mercantile failures to the amount of more than \$100,000,000. Fifteen months before property had been destroyed in that city by a disastrous fire (December, 1835) of the estimated value of over \$20,000,000. The effects of these failures and losses by fire were felt to the remotest parts of the Union, and credit and confidence were destroyed. Early in May (1837) a deputation of merchants and bankers waited upon President Van Buren with a petition praying him to defer the collection of duties, rescind the Specie Circular, and call an extraordinary session of Congress. Their prayer was rejected; and when that fact became known, nearly all the banks in the country suspended specie payment. On May 16 the Legislature of New York passed an act authorizing the suspension of specie payments for one year. The measure embarrassed the national government, for it was unable to obtain silver and gold to discharge its own obligations. The public good demanded legislative relief, and the President called an extraordinary session of Congress to convene Sept. 4. In his message to that body he proposed the establishment of an independent treasury for the public funds, totally distinct from all banking institutions; but during a session of forty-three days Congress did very little for the general relief from commercial depression, excepting the authorizing of an issue of Treasury notes in amount not exceeding \$10,000,000.

**Congress, NATIONAL, EXTRAORDINARY SESSION OF THE (1841).** On March 17, 1841, President Harrison issued a proclamation for the assembling of the Twenty-seventh Congress in extraordinary session on May 31, next ensuing. They convened at the appointed time. President Tyler, in his message, referred to the usefulness of a national bank, so that it was believed he would sanction a bill for the creation of one. The Congress proceeded to adopt measures for

the relief of the business community. They repealed the Sub-Treasury Act, and passed a bankrupt law which untied the energies of thousands of enterprising and honest men, though it bore hard on the creditor class for a while. The Secretary of the Treasury, Mr. Ewing, strongly urged the chartering of another United States Bank. It was known that President Tyler had decided constitutional objections to the old bank, and had assisted Jackson in his war upon it. A bill was proposed, free, it was thought, from his objections. It was passed Aug. 6, as the great Whig measure of the session, and sent to the President. At the end of ten days he vetoed it, giving his objections. The Whigs in Congress were bewildered, and great anxiety was felt throughout the country. It could not be carried over the veto. Another bill was prepared, and by Mr. Webster laid before the President, who approved it. While this was pending, a private letter, written by Mr. Botts, of Virginia, was made public, in which the President was charged with infidelity to the party in power. "He will be an object of execration with both parties," wrote Mr. Botts. This so irritated the President that he resolved not to sanction any law for chartering a national bank that might be passed at that session. The second bill was passed early in September, which he also vetoed. He had expressed a strong desire to have this matter postponed until the regular session, but the friends of the measure were impatient. They now denounced him as a traitor to the party which had elevated him. His act caused the dissolution of the cabinet—Mr. Webster only remaining. He did so because public interests would suffer by his leaving at that juncture. Mr. Webster felt that the bank matter had been pushed with too much haste and persistency, considering the state of the President's mind, and he wrote: "I thought his knowu wishes ought to be complied with. I think so still."

**Congress, PAY OF MEMBERS OF (1814).** The pay of members of Congress (House of Representatives) had been six dollars a day until 1814, when, on account of the increased expense of living, they fixed it at an annual salary of \$1500, without regard to the length of the session. At the same time bills were introduced to increase the salaries of foreign ministers, but these failed to pass. This act of the members of Congress in voting themselves a higher salary produced great excitement throughout the country. It opposed the popular doctrine that all public officers and servants should be kept on short allowance; and so indignant were the frugal people that at the next election many of the offending Congressmen lost their election. Even the popular Henry Clay was driven to a close canvass. The act was repealed.

**Congress, THE RESIDENCE OF.** The question, where shall be the permanent residence of Congress, or seat of the general government, was agitated in the summer of 1783. Philadelphians supposed it would be fixed at that city, but when they adjourned to Princeton (see *Philadel-*

*phia, Riot in*), the question excited much interest and a great deal of local feeling. One party wished the national capital to be at the Delaware River—in other words, at Philadelphia; another wished it to be on the Potomac. Maryland offered to cede Annapolis for the purpose; New York offered Kingston on the Hudson; and the Council of Pennsylvania, anxious to bring Congress back from Princeton, apologized for their timid conduct in the presence of militiamen. It was finally agreed that two federal cities should be erected—one near the Falls of the Delaware, the other near the falls of the Potomac, the sessions to be held alternately in each. Until these cities should be built the sessions were to be held alternately at Annapolis and Trenton. This plan was not carried out. In 1790 a tract of land ten miles square, lying on each side of the Potomac, was ceded to the United States by Maryland and Virginia, and was called the District of Columbia. There the seat of government was fixed, and has remained ever since. The capital city—named Washington in honor of the beloved patriot—was laid out in 1791, and the erection of the Capitol was commenced in 1793, the seat of the national government being removed to Washington city in 1801.

**Congressional Reports.** At the first session of the National Congress, held at New York, reporters had been admitted to the floor of the House, and the debates had not only been published from day to day in the newspapers, but, at the close of the session, were collected in two octavo volumes, called *The Congressional Register*. These reports were not satisfactory to some members, who proposed to withdraw from the reporters the privileges of the floor. The reporters retired to the gallery. At the next session the subject came up, and there was a tacit admission of a discretionary power in the speaker to admit to the floor or galleries such stenographers as he might think proper. The *Congressional Register* did not extend beyond a third volume. After the removal of Congress to Philadelphia the country was mainly indebted to the enterprise of the publisher of the *Philadelphia Gazette*, who employed a stenographer or two for that purpose, and from the columns of which most of the other newspapers copied. In 1796 a scheme was brought forward to employ a reporter as an officer of the House at a salary of \$4000 a year, but it was not adopted.

**Congreve Rocket, THE**, in the military art, is a very destructive species of firework, the best kind of which was invented by Sir William Congreve, and called after his name. The body of the implement is cylindrical, and its head conical. It is filled with very inflammable materials, on the combustion of which, as in the common sky-rocket, the body is impelled forward with an accelerated motion.

**Connecticut, ACTS OF.** Connecticut, in 1774, was second only to Massachusetts in population, wealth, patriotism, and military resources. In 1774 its Legislature provided for organizing an effective militia, prohibited the importation of

slaves, and ordered the several towns to provide double the usual quantity of balls and flints. They also directed the issue of £15,000 in bills of credit of the colony, and made a small increase of the taxes. This was the first issue of paper money in the colonies in preparing for the war for independence.

**Connecticut and New Netherland.** The Charter of Connecticut, given in 1662 (see *Consolidation of Connecticut and New Haven*), included not only the whole of Long Island, but Northern New Netherland, in the Hudson River region. By a treaty which Stuyvesant had made at Hartford in 1650, the English towns on Long Island were allowed the right to accept the protection of Connecticut, if they chose to do so. This right was now questioned, and it complicated matters so far as the claims of the Dutch were concerned. But Stuyvesant would not yield without a struggle to a curtailment of his domains, and for two years the controversy went on. Stuyvesant visited Boston and conferred with the Commissioners of the United New England Colonies, but gained nothing. Commissioners sent to Hartford were equally unsuccessful. Meanwhile, emissaries from New England stirred up the settlers in Westchester County (N. Y.) and all over Long Island with discontent of Dutch rule. Led by two bold men, a considerable armed force went from town to town on Long Island changing the names of places, deposing magistrates, and proclaiming the territory a part of the dominions of Charles II. Stuyvesant, seeing how matters were going, lowered his pretensions, and agreed that the towns on Long Island, Dutch and English, should be free, respectively, from interference from either government. These disputations, and the interference of John Scott, produced stirring events whose records fill a large space in the local and intercolonial history of Long Island, New Netherland, and Connecticut.

**Connecticut and Pennsylvania.** There was civil war in Pennsylvania, at one time, between the settlers from Connecticut in the Wyoming Valley and the Pennsylvanians. Connecticut claimed the soil under its ancient charter. (See *Western Reserve*.) Finally, late in 1781, Pennsylvania applied to a Federal court, established under the Articles of Confederation, to decide the territorial question as to the righteous claimant to Wyoming and the northern half of Pennsylvania, claimed by Connecticut as within her chartered limits. A court of five judges met (November, 1782) at Trenton, N. J., and made, at the close of a six weeks' session, a unanimous decision in favor of Pennsylvania. Connecticut acquiesced when Congress confirmed the decision, and the town and county of Westmoreland, organized by the Connecticut Assembly, ceased to exist. The people of Wyoming continued uneasy, and once or twice were on the point of rebellion, chiefly because the Pennsylvanians refused to recognize the land titles claimed by Connecticut.

**Connecticut, CHARTER OF.** On the restoration of monarchy in England, the Connecticut

colonists had fears regarding their political future, for they had been staunch republicans during the interregnum. The General Assembly therefore resolved to make a formal acknowledgment of their allegiance to the king, and ask him for a charter. A petition to that effect was signed in May, 1661, and Governor Winthrop bore it to the monarch. He was at first coolly received, but by the gift to the king of a precious memento of the sovereign's dead father, the heart of Charles was touched, and, turning to Lord Clarendon, who was present, he said, "Do you advise me to grant a charter to this good man and his people?" "I do, sire," answered Clarendon. "It shall be done," said Charles, and Winthrop was dismissed with a hearty shake of his hand, and a blessing from the royal lips. (See *Winthrop, John*.) A charter was issued May 1, 1662 (N. S.). It confirmed the popular constitution, and contained more liberal provisions than any that had yet been issued by royal hauds. It defined the boundaries so as to include the New Haven Colony and a part of Rhode Island on the east, and westward to the Pacific Ocean. The New Haven Colony reluctantly gave its consent to the union in 1665, but Rhode Island refused. A dispute concerning the boundary-line between Connecticut and Rhode Island lasted more than sixty years. The charter, engrossed on parchment and decorated with a finely executed miniature of Charles II. (done in India-ink by Samuel Cooper, it is supposed, who was an eminent London miniature painter of the time), was brought across the sea in a handsome mahogany box, in which it is still preserved in the State Department of Connecticut. (See *Charles II.*) It was of so general a character, and conferred such large powers, that when Connecticut became an independent state it was considered a good fundamental law for the commonwealth, and was not changed until 1818. It provided for the election of the governor of the colony and the magistrates by the people, substantially as under the previous constitution; allowed the free transportation of colonists and merchandise from England to the colony; guaranteed to the colonists the rights of English citizens; provided for the making of laws and the organization of courts by the General Assembly, and the appointment of all necessary officers for the public good; for the organization of a military force, and for the public defence. Determined to hold absolute rule over New England, King James II. made Andros a sort of viceroy (see *Andros*), with instructions to take away the colonial charters. For the purpose of seizing that of Connecticut, whose General Assembly had refused to surrender it, Andros arrived at Hartford, where the Assembly was in session in their meeting-house, Oct. 31, 1687 (O. S.). He was received by the Assembly with the courtesy due to his rank when he appeared before them, with armed men at his back, and demanded the charter to be put into his hands. It was then near sunset. A debate, upon some unimportant subject was continued until after the candles were lighted. Then the long box containing the charter was

brought in and placed upon the table. A preconcerted plan to save it was now put into operation. Just as the usurper was about to grasp the box with the charter, the candles were snuffed out. When they were relighted the charter was not there, and the members were seated in proper order. The charter had been carried out in the darkness by Captain Wadsworth, and deposited in the trunk of a hollow oak-tree on the outskirts of the village. (See *Charter Oak*.) Andros was compelled to content himself with dissolving the Assembly, and writing in a bold hand "FINIS" in the journal of that body. When the Revolution of 1688 swept the Stuarts from the English throne, the charter was brought from its hiding-place, and under it the colonists of Connecticut flourished for one hundred and twenty-nine years afterwards.

**CONNECTICUT, COLONY OF**, one of the original thirteen English-American colonies, was probably first discovered by a European, Adrian Block, at the mouth of the Connecticut River, in 1613. (See *New York*.) That stream the Dutch called *Versch-water* (fresh-water) River; the Indians called it *Qua-nek-ta-cut*, "long river." The Dutch laid claim to the adjoining territory by right of discovery, while the English made a counter-claim soon afterwards, based upon a patent issued by the king to English subjects. The agent of the Dutch West India Company took formal possession by proclamation of the Connecticut Valley so early as 1623 in the name of the States-General of Holland, and a peaceable and profitable trade with the Indians might have been carried on had not the Dutch exasperated the natives by seizing one of their chiefs and demanding a heavy ransom for his release. A Dutch embassy which visited Plymouth tried to get the Pilgrims to abandon Cape Cod Bay and seat themselves, under the jurisdiction of New Netherland, in the fertile Connecticut Valley (see *Dutch, The, at Plymouth*); and a Mohegan chief, moved by equally strong self-interest, invited them to the same territory, his object being to make the English a barrier between his people and the powerful and warlike Pequods. (See *Pequod War*.) In 1632 Edward Winslow visited the Connecticut Valley, and confirmed the truth of all the pleasant things the Dutch and Indians had said about it. The fame of it had already reached Old England, and two years before Winslow's visit Charles I. had granted the soil of that region to Robert, Earl of Warwick, and he transferred it to William, Viscount Say and Seal; Robert, Lord Brook, and their associates. This was the original grant of Connecticut, and the territory was defined as extending westward from the Atlantic to the Pacific Ocean. The Dutch, having purchased the valley from the Indians, the rightful owners, built a redoubt just below the site of Hartford, called Fort Good Hope, in 1633, and took possession. Governor Winthrop of Massachusetts, wrote to Van Twiller at Manhattan that England had granted the valley to English subjects, and the Dutch must "forbear to build there." Van Twiller courteously replied that the Dutch had already purchased the country from the In-

dians and "set up a house, with intent to plant." The Dutch finally withdrew, and in 1635-36 the first permanent settlement in the valley was made at Hartford by emigrants from Massachusetts. The first church was built there in 1635, and the first court, or legislative assembly, was convened at Hartford in 1636. The next year occurred the distressing war with the Pequods, which resulted in their annihilation. (See *Connecticut Valley, First Settlers in*.) A year later a settlement was begun on the site of New Haven, and a sort of theocratic government for it was established. (See *New Haven Colony*.) Governor Winthrop's son, John, came from England, and assumed the office of governor of the colony in the Connecticut Valley in 1636, with instructions to build a fort and plant a colony at the mouth of the Connecticut River. A dispute with the Plymouth people arose about the right of emigrants from Massachusetts in the valley, but it was soon amicably settled. A constitution for the government of the colony in the valley was approved by a general vote of the people (Jan. 14, 1639). It was a remarkable document, and formed the basis of a charter afterwards obtained from the king. (See *Connecticut, First Constitution of*.) When monarchy was restored in England the people hastened to avow their allegiance to the crown and apply for a charter. One was procured from Charles II. in 1662 embracing the Connecticut and New Haven colonies, and the union was perfected in 1665. It gave the people jurisdiction over the whole lands within its limits; provided for the election of a governor, deputy-governor, twelve assistants, or magistrates, and two deputies from each town; indeed, it substantially agreed with the former constitution. It was so acceptable to the people of Connecticut that it was the only constitution of the province and state until 1818, when the present one was formed. The government was at first a pure democracy, but it became a representative one in 1670. By order of James II. Governor Andros was ordered to take away the charter, but he was outwitted by the political leaders, and it was saved. (See *Charter Oak*.) Andros seized the government, but it resumed its independent functions (May 9, 1689) after the accession of William and Mary. There were some changes in the colonial government, and from the union of the colonies until 1701 the General Assembly had met at Hartford. Thereafter it was ordered that the May session should be held in Hartford, and the October session in New Haven. The laws of the colony were very rigid, and some were severe. (See *Blue Laws*.) In the war for independence no other state, in accordance with its population, furnished so many men for the public service, or so much aid, according to its means; for a most patriotic, energetic, and indefatigable governor (see *Trumbull*) was at the head of its affairs. (See *Brother Jonathan*.) The delegates from Connecticut in Congress were instructed by the unanimous vote of the General Assembly to vote for independence, and after that it took its place with the twelve other colonies as an independent state.

**Connecticut Commission.** The Puritan settlement on the Connecticut River made by the ministers at Newton (Messrs. Hooker and Stone) in 1636, with all their congregations, was so remote from the seat of government that Roger Ludlow and seven others were commissioned by the authorities of Massachusetts to exercise all the powers of government there, legislative and executive. This commission was limited to one year. With the aid of a jury they dispensed civil and criminal justice. Their first court was held April 26, 1636.

**Connecticut Emigrants near Natchez.** Late in the spring of 1781 news reached the Connecticut settlers near Natchez that a British fleet was ascending the Mississippi. This intelligence caused them to attack and capture Fort Passmore, to use it as a defence. The rumor was false; and when the Connecticut people saw their mistake, and heard of the capture of Pensacola by the Spaniards, they so feared Spanish vengeance that they resolved to flee through the woods to Georgia. Men, women, and children set out on horseback, and during a journey of four months they suffered terribly from hunger and the hostility of the Indians. On reaching the frontiers of that state they divided into two companies. One fell among American patriots on the frontier, the other made their way to the British post at Sunbury.

**Connecticut, FIRST CONSTITUTION OF.** A constitution for the colony of Connecticut (in the valley) was adopted by the vote of the people Jan. 14, 1639. It was the first example in history of a written constitution organizing a government and defining its powers; and its leading features have been copied into the constitutions of the several states of our Union. After declaring that the Word of God requires human governments, and that the object of such governments is to protect and preserve the moral and civil welfare of the people, it provided for three departments of government—legislative, judicial, and executive—all to be filled by persons to be appointed by, and to derive their power from, the people. The freemen consisted of those who had been admitted inhabitants by the towns themselves. These were to meet annually in April at a "court of election" for the choice of so many magistrates and other public officers as should be found requisite, one of whom was to be designated as governor. All elections were by ballot. The governor was voted for first, and elected by a plurality vote; then the magistrates or assistants were voted for in a similar manner. The governor sat with the magistrates in their judicial capacity, and both the governor and magistrates sat with the deputies elected by the several towns in a legislative capacity. If the deputies constituted a majority of the General Assembly, the legislative power was substantially in the hands of the people, while the governor and magistrates could advise as to necessary legislation. As there were to be two sessions of the Legislature annually, one in the spring, called "Court of Election," and the other in the fall, for enacting laws and

performing other public services, the towns chose their deputies semi-annually. Under this constitution the Connecticut colony flourished. It recognized no higher human power than the people. Connecticut, under it, was practically an independent government. The constitution formed the basis of the charter granted by Charles II. in 1662. (See *Connecticut, Charter of.*)

**Connecticut, FIRST DIVISION OF THE LEGISLATURE OF, INTO TWO HOUSES.** In 1696 the General Assembly of Connecticut was first divided into two houses. The governor (or, in his absence, the deputy-governor) and assistants composed the upper house, and the deputies regularly returned from the towns in the colony were called the lower house. The governor presided in the upper house; the lower house chose a speaker to preside over their deliberations. All laws became so only by the mutual consent of the two houses.

**Connecticut, FIRST GENERAL COURT IN.** The commission of Ludlow and others having expired, the commissioners' court in the valley of the Connecticut was succeeded in 1637 by a general court, which consisted of eight magistrates chosen by all the freemen, and three deputies from the three towns or settlements, then containing about two hundred and fifty inhabitants. The first session of this court was begun May 1, 1637, at Hartford. They deliberated upon a subject in which the existence of the little colony was concerned. The Pequods, who had killed thirty Englishmen in the valley, and tortured their captives, were attempting to form a confederacy of the tribes to extirpate the English, and the destruction of the colony seemed imminent. That first general court determined that the three towns of Windsor, Hartford, and Wethersfield should carry on an offensive war against these Indians, and voted that ninety men should be immediately raised for the purpose. (See *Pequod War.*)

**Connecticut Mediation.** In hopes that matters might yet be reconciled, notwithstanding British soldiers and armed patriots had come to blows, Governor Trumbull and the Connecticut Legislature sent a deputation to Gage (May 1, 1775) as mediators. Alarmed by this movement, the Provincial Congress of Massachusetts remonstrated against any separate negotiations. They also voted General Gage to be a public enemy, and an instrument in the hands of tyrants, whom there was no further obligation to obey. The Connecticut deputation did nothing.

**Connecticut, ORIGINAL PATENT OF.** Robert, Earl of Warwick, having received in 1630 a grant from the Council of Plymouth of "all that part of the northeast extending from the Narraganset River one hundred and twenty miles in a straight line near the shore towards the southeast, as the coast lies, towards Virginia, and within that breadth from the Atlantic Ocean to the South Sea [Pacific]," made over to William, Viscount Say and Seal, and Robert, Lord Brook, and associates, the whole territory of this grant by a patent issued March 19, 1631. This is the original patent of Connecticut.

**Connecticut Regiments, MUTINY OF.** Pressed down by want—want of clothes, food, and pay—two of the Connecticut regiments in the Continental army at Morristown, in May, 1780, paraded under arms, declaring their intention to return home or to obtain subsistence for themselves. The appeals of Washington (whom they almost adored) to their patriotism brought them back to duty; and on the appearance of the enemy at that time they rallied as one man in defence of the flag. Greene had just written privately to the President of Congress in Pennsylvania: "Should there be a want of provisions, we cannot hold together many days, in the present temper of the army."

**Connecticut River, DEPREDEDATIONS IN THE.** On the first alarm occasioned by the blockade of the New England coast, militia had been called out to guard the more exposed points of the Connecticut shores. Regulars had afterwards been substituted by the War Department, but during the winter of 1813-14 these had been withdrawn. Governor Smith remonstrated, and warned the government of the danger, but his words were unheeded. The consequence was that six boats, with two hundred men from the British blockading squadron, entered the mouth of the Connecticut River (April 8, 1814), ascended that stream several miles, and destroyed full twenty vessels which had collected there as a place of safety. It was this neglect of the New England coast by the national government that formed one of the grounds of complaint by the Hartford Convention (which see).

**Connecticut Sanctions Independence.** On June 14, 1776, the Connecticut Assembly instructed its delegates in Congress in favor of independence, foreign alliance, and a permanent union of the colonies. The plan of a confederation was not to go into effect until it should receive the assent of the several legislatures.

**Connecticut Stamp-master, THE.** Jared Ingersoll, then in England, accepted the office of stamp-master or stamp-distributor, under the provision of the Stamp Act. He arrived at Boston from abroad in August, 1765. He was late agent of the Province of Connecticut. His advent in Connecticut was hailed with scorn, even by former personal friends. Assured of the protection of the governor, Ingersoll proceeded to execute the duties of his office. The people threatened him. The initials of his name were pointed to as those of Judas Iscariot. His house was surrounded and a demand made for him to resign. "I know not," he said, "if I have power to resign." A town meeting in New Haven (September, 1765) earnestly desired Ingersoll "to resign the stamp office immediately." "I shall wait," said Ingersoll, "to see how the General Assembly is inclined." Already the people were moving elsewhere. Several hundred were on horseback, in three divisions, from Norwich, New London, and Windham, and other adjacent towns, with eight days' provisions. The men were armed with newly barked cudgels. Ingersoll proposed to meet them at Hartford. He set out alone, but soon found himself

under a large escort of mounted club-armed men, who conducted him to Wethersfield and there bade Ingersoll resign. He asked leave to go to Hartford. "You shall not," it was answered, "go two rods until you resign." He had sent a messenger to the governor and the Assembly and tried to delay the act until he should hear from them. The people became alarmingly impatient, and Ingersoll, saying "The cause is not worth dying for," publicly resigned, declaring it was his own free act. "Swear to it," said the crowd. He excused himself. "Then shout 'Liberty and property' three times." He did so. After dinner a cavalcade of one thousand horsemen escorted him from Wethersfield to Hartford, and Ingersoll was compelled to read the paper which he had signed in the hearing of the Assembly. This is a fair representative picture of the treatment of the stamp-distributors in all the colonies. They all resigned.

**Connecticut State Army.** The project of invading Canada had drawn off the regulars in garrison on the sea-board towards the inland frontier, even before the declaration of war (June, 1812). On this account a call for militia detachments to do garrison duty was made. The governors of Massachusetts and Connecticut denied the necessity for such a call, and the former urged weighty objections to it. He said the coasts of Massachusetts were thickly populated and its militia well disciplined, and at the first appearance of danger of invasion they could immediately be summoned to the defence of the territory. The Articles of War enacted by Congress gave the command, when the militia and regulars acted together, to the superior officer present, whether of the militia or the regular army; in cases of equal rank the regular officers to take precedence. To secure the command of the New England militia to regular officers, the first calls had been made for detached companies, without the regular quota of field officers. This was complained of as being an irregularity, to which the governors of Massachusetts and Connecticut refused to submit. They even denied the constitutional validity of the Articles of War, in which they were supported by the opinions of the judges of the Supreme Court of Massachusetts. Finally the Legislature of Connecticut passed a law (October, 1812) for raising a provincial army of two thousand six hundred men for special state defence, and made Colonel David Humphreys commander-in-chief of it. The avowed object of the measure was to provide for the defence of the soil of Connecticut by a method less expensive and vexatious than by furnishing detachments of militia.

**CONNECTICUT STATE OF.** Under the charter given by Charles II., in 1662, Connecticut, like Rhode Island, assumed independence in 1776, and did not frame a new constitution of government. Under that charter it was governed until 1818. Connecticut, under its charter, claimed lands in Pennsylvania and Ohio, and in trying to enforce this claim much trouble ensued. (See

*Susquehanna Company, Western Reserve, and Fire Lands.*) During the Revolution that state was lavish in its supply of men and money for the American cause, and while other colonies were at the beginning annoyed by royal governors,

STATE SEAL OF CONNECTICUT.

Connecticut from the beginning was governed by rulers chosen by the people. In 1814 Hartford, Conn., became the theatre of a famous convention which attracted much anxious attention for a while. (See *Hartford Convention.*) In 1818 a

convention of delegates from each town in the state assembled at Hartford and framed a constitution, which was adopted by the people at an election on the 5th of October. During the late Civil War that state furnished to the National army 54,882 soldiers, of whom 1094 men and 97 officers were killed in action, 666 men and 48 officers died from wounds, and 3246 men and 63 officers from disease. There were reported "missing" 389 men and 21 officers. Population in 1880, 622,760.

**CONNECTICUT TOWNS PLUNDERED AND BURNED.** Tryon, the plunderer of Danbury (which see), was employed by Sir Henry Clinton to again visit New England with the torch. On the vessels of Sir George Collier, soon after their return from the King's Ferry (which see), he sailed on the night of July 4, 1779, with two thousand five hundred men (many of them German mercenaries), for the shores of Connecticut. They plundered New Haven on the 5th, laid East Haven in ashes on the 6th, destroyed Fairfield in the same way on the 8th, and plundered and burned Norwalk on the 12th. Not content with this wanton destruction of property, the invaders insulted and cruelly abused the inhabitants. The Hessians were particularly active in the latter capacity. While Norwalk was burning Tryon sat in a rocking-chair on a hill and viewed the scene with apparent pleasure. After devastating these pleasant New England villages, Tryon boasted of his clemency in leaving a single house standing. More villages would have been laid waste had not the marauder been recalled by alarming events on the Hudson.

**CONNECTICUT VALLEY, ENGLISH COLONISTS INVITED TO THE.** Wah-qui-ma-cut, a sachem seated in the Connecticut Valley, solicited (1631) the governors of Plymouth and Massachusetts to make settlements there. The object of the sachem was to secure protection for his people against the warlike Pequods. Governor Bradford and Edward Winslow visited Governor Winthrop and proposed to him and his council to join in a trade to the Connecticut Valley, and to make a plantation there, as the Dutch were making efforts to that end. It was declined, and the Plymouth people resolved to undertake

the enterprise at their own risk. (See *Connecticut, Colony of*.) In October, 1633, the materials for a house, entirely prepared, were put on board a vessel and sent by a chosen company to the Connecticut River. The Dutch had built a light fort just below the site of Hartford, and when the Plymouth vessel approached the commander of the fort forbade the adventurers to pass. The commander of the enterprise (William Helmes) went resolutely forward, and, landing on the west side of the river, set up the house on the site of Windsor and palisaded it. This was the first house built by Europeans in the Valley of the Connecticut. (See *Connecticut Valley, First Settlers in*.)

**Connecticut Valley, FIRST SETTLERS IN.** The Dutch built a redoubt on the river just below the site of Hartford, and called it Fort Good Hope. There they prepared to plant a colony. The Plymouth settlers bought a tract of land above the Dutch fort from the Indians, and sent a wooden house, in pieces, on a small vessel commanded by Captain William Holmes, to be set up in their domain. When the vessel approached the fort the Dutch commander ordered Holmes to heave to; and as he "sailed right on" the Hollaender threatened to open great guns upon him. Holmes passed by unharmed, landed his cargo on the site of Windsor, put up the house, and took formal possession of the country in the name of his king. The few Englishmen with him formed the whole colony; and so the first European settlement was made in the Connecticut Valley. Van Twiller, at Manhattan, blustered, and sent an armed force to expel the intruders; but they remained in spite of the Dutchman. And when the latter finally withdrew, there was an influx of settlers from Massachusetts. In the autumn of 1635 a company of men, women, and children, with oxen and cows, traversed the broken country through tangled morasses, across running streams, and over rugged and lofty hills, more than one hundred miles, until they reached the Valley of the Connecticut, then white with snow. The ice in the river prevented a vessel laden with supplies for them ascending the stream. On the sites of Wethersfield and Hartford they built log huts and a little church edifice in the drifting snow. Some of them, fearing starvation, made their way to the mouth of the river, and thence to Boston in a passing vessel. Those who remained suffered dreadfully, living some of the time upon acorns. Many of the cattle perished for want of food. In 1636 Rev. Thomas Hooker, a zealous dissenting minister who came to Boston from Holland in 1633, led a company of one hundred men, women, and children to the Connecticut Valley. They wisely made the journey in summer, driving before them one hundred and sixty head of cattle, the cows pasturing in grassy savannas and furnishing much wholesome food for the company. The women and children were conveyed in wagons drawn by oxen, while the stalwart men cleared the way with their axes. On the 4th of July the company stood on the banks of the Connecticut, where, under the shadow of trees, they sang

hymns of praise. On the following Sabbath Mr. Hooker preached and administered the communion in the little church built the previous winter. There were now (1636) five feeble settlements in the Connecticut Valley.

**Connecticut Witches.** Historians aver that the Connecticut Colony never had a trial for witchcraft within its borders. There seems to be documentary evidence to the contrary, and there is its existence in Fairfield a record of a trial there of "Mercy Desborough, wife of Thomas Desborough," charged with "familiarity with Satan," and, in a preternatural way, "having afflicted and done harm to the bodies and estates of sundry of their majesties' subjects." This trial occurred in September, 1692. The testimony against her was so absurd and inconclusive that the judges did not deem it sufficient to convict her. Her person was searched for the traditional "witchmarks," and she was subjected to the infallible test of binding the accused person hand and foot and throwing him or her into deep water. If the body floated, guilt was clearly established; if it sank, innocence was as clearly proven. Mrs. Desborough was so bound and cast into the water; and in the proceedings of the trial the following affidavit appears: "Mr. Jehu Wakeman, aged thirty-two years, and Samuel Squiers make oath that they saw Mercy Desborough put into the water and that she swam like a cork. This was done in court, Sept. 15, 1692. Attest, John Allyn, Secretary." The judges were still unsatisfied, and adjourned the court to Oct. 23, when the case was given to the jury, who found the person "guilty, according to the indictment," and she was sentenced to death. Other prisoners, tried on a similar indictment, were acquitted. Her life was spared, a numerously signed petition for a commutation of her sentence having been presented to the court.

**Conner, DAVID,** was born in Harrisburg, Penn., about 1792; died in Philadelphia March 20, 1856. He entered the navy in January, 1809, and as acting-lieutenant was in the action between the *Hornet* and *Peacock* (which see). He was made a lieutenant in 1813, and remained on the *Hornet*. In her action with the *Penguin* Conner was dangerously wounded, and for his brave conduct was presented with a medal by Congress, and by the Legislature of Pennsylvania with a sword. He was promoted to the rank of commander in March, 1825, and to captain in 1835. During the war with Mexico (1846-48) he commanded the American squadron on the Mexican coast, and assisted in the reduction of the fortress of San Juan de Ulloa in the spring of 1847. He captured Tampico in November, 1846. His last service was in command of the Philadelphia Navy-yard.

**Conquest of Jamaica.** When Cromwell had made peace with the Dutch (1654) he declared war against Spain, and sent a fleet under Admiral Penn and an army under General Venables to attack the Spanish West Indies. Edward Winslow went with the fleet as one of Cromwell's commissioners to superintend the

conquered countries. By volunteers from Barbadoes and the Leeward Islands the army was increased to ten thousand. Santo Domingo was first attacked. The English were repulsed, and then proceeded to Jamaica, which they easily took possession of, for it was inhabited by only a few of the enervated descendants of old Spanish colonists and some negro slaves. Winslow died at sea soon after the repulse at Santo Domingo, and Sedgwick, of Massachusetts, was put in his place. He framed an instrument of government for Jamaica, having a supreme executive council, of which he was the head. Cromwell, anxious to retain and people the island with subjects of Great Britain, ordered the enlistment in Ireland of one thousand girls and young men, and sent them over. "Idle, masterless robbers and vagabonds, male and female," were arrested and sent to Jamaica; and to have a due admixture of good morals and religion in the new colony, Cromwell sent agents to New England for emigrants. Many at New Haven, not prospering at home, were disposed to go, but, the magistrates opposing, few went. So was first settled by the English the flourishing island of Jamaica, which they yet retain.

**Conscription.** In October, 1814, the Acting Secretary of War (James Monroe) proposed vigorous measures for increasing the army and giving it material strength. Volunteering had ceased, and he proposed to raise, by conscription or draft, sufficient to fill the existing ranks of the army to the full amount of 62,448 men; also an additional regular force of 40,000 men, to be locally employed for the defence of the frontiers and sea-coast. Bills for this purpose were introduced into Congress (Oct. 27, 1814); and this and other war measures were more favorably received than usual because of the waning prospects of peace with Great Britain, excepting on terms humiliating to the United States. The proposition to raise a large force by conscription brought matters to a crisis in New England. Because of the unpatriotic course of the Peace Faction in New England, the President insisted upon the exclusive control of all military movements there, while states in other portions of the Union were left to act, in the matter of local defences, wholly at the discretion of the local governors. The clamor raised against the measure of conscription became more and more intense; and radical and indiscreet men of the opposition proposed the secession of the New England States from the Union as a cure for existing evils. Thoughtful men pondered the situation of affairs with great anxiety, and the famous gathering of representatives of the New England States known as "The Hartford Convention" was the result.

**Conservatives.** The advocacy of an extensive specie currency, and the proposition for a Sub-Treasury (which see), in 1837, alienated many of the Democratic party, and they formed a powerful faction known as "Conservatives." They finally joined the Whigs, and, in 1840, assisted them materially in electing General Harrison President.

**Consignees of Tea Cargoes.** Those who accepted the office of consignees of the tea cargoes of the East India Company were held in equal disrepute with the stamp-distributors (which see). They were requested to refrain from receiving the proscribed article. The request of a public meeting in Philadelphia (Oct. 2, 1773), that Messrs. Wharton should not act, was complied with, and their answer was received with shouts of applause. Another firm refused, and they were greeted with groans and hisses. A public meeting in Boston (Nov. 5) appointed a committee to wait upon the consignees in that town and request them to resign. These consignees were all friends of Governor Hutchinson—two of them were his sons and a third his nephew. They had been summoned to attend a meeting of the Sons of Liberty (under Liberty Tree) and resign their appointments. They contemptuously refused to comply; now, in the presence of the town committee, they so equivocated that the meeting voted their answer "unsatisfactory and daringly affrontive." Another committee was appointed for the same purpose at a meeting on the 18th, when the consignees replied: "It is out of our power to comply with the request of the town." The meeting broke up with ominous silence. The consignees became alarmed, and asked leave to resign their appointments into the hands of the governor and council. The prayer was refused, and the consignees fled to the protection of the castle. At a meeting held first in Faneuil Hall and then in the South Meeting-house (Nov. 29), a letter was received from the consignees, offering to store the tea until they could write to England and receive instructions. The offer was rejected with disdain. The sheriff then read a proclamation from the governor, ordering the meeting to disperse. It was received with hisses. Then the meeting ordered that two tea vessels hourly expected at Boston should be moored at Griffin's Wharf, where the cargoes were afterwards destroyed. (See *Boston Tea Party*.) At the demand of a popular meeting in New York (Nov. 25) the appointed consignees there declined to act, whereupon Governor Tryon issued an order for the cargo of any tea-ship that might arrive to be deposited in the barracks.

**Consolidation of Connecticut and New Haven.** In 1662 Governor Winthrop procured a charter for the Connecticut colony. (See *Winthrop, John, II.*) It differed from other charters in vesting jurisdiction in a corporation of resident freemen instead of an English corporation or single proprietor with or without a local assembly. The charter included the New Haven colony. (See *New Haven*.) That colony refused to accede to the proposed union, chiefly because Connecticut preferred a property qualification required of freemen instead of the spiritual one of church membership, and the known inclination of the Connecticut people towards the adoption of the "half-way covenant"—that is, a compromise between the rigid discipline, dogmas, and exclusiveness of the early Church in New England and the more liberal views which the grown-up children of those old Puritans had

adopted, and which had been authorized by a synod held in 1659. By degrees these and other objections were removed, and in May, 1665, the consolidation of the colonies of Connecticut and New Haven was accomplished. This was an important event. In October a Court of Assistants for the new colony was established. It was to consist of at least seven assistants; to have original cognizance of all crimes relating to life, liberty, or banishment; and in all other cases to have appellate jurisdiction. (See *Court of Assistants*.) At that time Connecticut and New Haven consisted of nineteen towns. Only one town, in the New Haven jurisdiction (Branford), persisted in opposing the union. Mr. Pierson, the minister of Branford, and almost his whole church and congregation, were so dissatisfied with it that they removed to Newark, N. J.

**Conspiracy against Washington.** In the summer of 1777 Washington began to feel the malign influence of the intrigues of Gates against him, such as Schnyler had endured. The same faction in Congress which favored Gates's pretensions in the case of Schuyler (see *Schuyler and Gates*) also favored his ambitious schemes for his elevation to the position of commander-in-chief of the American armies. After Gates had superseded Schnyler (August, 1777), that faction induced the Congress to lavish all their favors upon the former, the favorite of the New England delegation, and to treat Washington with positive neglect. They did not scruple to slight his advice and to neglect his wants. With unpatrician querulousness some of the friends of Gates in Congress wrote and spoke disparagingly of Washington as a commander while he was on his march to meet Howe (August, 1777). John Adams, warped by his partiality for Gates, wrote, with a singular indifference to facts, concerning the relative strength of the two armies: "I wish the Continental army would prove that anything can be done. I am weary with so much insipidity. I am sick of Fabian systems. My toast is, 'A short and violent war.'" After the defeat of Wayne (see *Paoli Tavern*) that followed the disaster at the Brandywine, the friends of Gates in Congress renewed their censures of Washington, and John Adams exclaimed, "O Heaven, grant us one great soul! One leading mind would extricate the best cause from that ruin which seems to await it." And after the repulse of the British before forts Mercer and Mifflin (October, 1777), Adams exclaimed: "Thank God, the glory is not immediately due to the commander-in-chief, or idolatry and adulation would have been so excessive as to endanger our liberties." After the surrender of Burgoyne the proud Gates insulted Washington by sending his report immediately to Congress instead of to the commander-in-chief, and was not rebuked; and he imitated the treasonable conduct of Lee by disobeying the orders of Washington to send troops (not needed there) from the Northern Department to assist in capturing Howe and his army or expelling them from Philadelphia. The powerful Gates faction in Congress sustained him in this disobedience, and caused legislation by

that body which was calculated to dishonor the commander-in-chief and restrain his military operations. They forbade him to detach more than two thousand five hundred men from the Northern army without first consulting Gates and Governor Clinton, and so making him subservient to his inferiors. The Adamses and Gerry, of Massachusetts, and Marchant, of Rhode Island, actually voted for a resolution forbidding Washington to detach any troops from the Northern Department without the consent of Gates and Clinton. Emboldened by the evident strength of his faction in Congress, Gates pursued his intrigues with more vigor, and his partisans there assured him that he would soon be virtual commander-in-chief, when, late in November, 1777, he was made president of a new Board of War, which was vested with large powers, and by delegated authority assumed to control military affairs which properly belonged to the commander-in-chief. Gates found a fitting instrument in carrying forward the conspiracy in General Conway, who, it was rumored, was about to be appointed a major-general in the Continental army, to which appointment Washington made the most serious opposition, because of Conway's unfitness; also because it was likely to drive from the service some of the best generals. Conway heard of this opposition. His malice was aroused, and his tongue and pen were made so conspicuously active that he was considered the head and front of the conspiracy, which is known in history as "Conway's Cabal." He wrote anonymous letters to members of Congress and to chief magistrates of states, filled with complaints, vile insinuations, and false statements concerning the character of Washington, in which the late disasters to the American arms were charged to the incapacity and timid policy of the commander-in-chief. He also wrote forged letters as if from the pen of Washington. He did his best to sow the seeds of discontent among the officers of the army, and caused some of them to write flattering letters to Gates, and so fed his hopes of having the chief command. Members of Congress joined in this letter-writing in disparagement of the chief. A delegate from Massachusetts (Mr. Lovell) in a letter to Gates said, after threatening Washington with "the mighty torrent of public clamor and vengeance:" "How different your conduct and your fortune! this army will be totally lost unless you come down and collect the virtuous band who wish to fight under your banner." And Dr. Benjamin Rush, of Philadelphia, in an anonymous letter to Patrick Henry, after declaring that the army at Valley Forge had no general at its head, said: "A Gates, a Lee, or a Conway would in a few weeks render them an irresistible body of men. Some of the contents of this letter ought to be made public, in order to awaken, enlighten, and alarm our country." Henry treated the anonymous letter with contemptuous silence, and sent it to Washington. Rush's handwriting betrayed him. Conway had written to Gates concerning Washington: "Heaven has been determined to save your country, or a weak general

and had counsellors would have ruined it." When these words reached Washington, he let Conway know the fact. A personal interview ensued, during which Conway justified his words and offered no apology. He boasted of his defiance of the commander-in-chief, and was commended by Gates, Mifflin, and others. The Gates faction in Congress procured Conway's appointment as inspector-general of the army, with the rank of major-general, and made him independent of the chief. The conspirators hoped these indignities would cause Washington to resign, when his place might be filled by Gates. Then the conspiracy assumed another phase. Without the knowledge of Washington the Board of War devised a winter campaign against Canada, and gave the command to Lafayette. It was a trick of Gates to detach the marquis from Washington. It failed. Lafayette was summoned to York to receive his commission from Congress. There he met Gates, Mifflin, and others, members of the Board of War, at table. Wine circulated freely, and toasts abounded. At length, the marquis, thinking it time to show his colors, said: "Gentlemen, I perceive one toast has been omitted, which I will now propose." They filled their glasses, when he gave, "The commander-in-chief of the American armies." The coldness with which that toast was received confirmed Lafayette's worst opinion respecting the men around him, and he was disgusted. The conspirators, finding they could not use the marquis, abandoned the expedition. So, also, was the conspiracy abandoned soon afterwards. Some of Gates's New England friends became tired of him. Conway, found out, was despised, and left the army. He quarrelled with General Cadwallader and fought a duel with him. Conway was wounded, and, expecting to die, wrote an apologetic letter to Washington, deploring the injury he had attempted to do him. He recovered and returned to France.

**Conspiracy against Washington, How DEFEATED.** When the conspiracy to deprive Washington of the chief command of the army was fully ripe, a day was secretly chosen when a committee of Congress should be appointed to arrest Washington at Valley Forge. At that time there was a majority of the friends of the conspirators in Congress (then sitting at York, Penn.), because of the absence of the New York delegation. Only Francis Lewis and Colonel William Duer were at York. The latter was very ill. Lewis, having been informed of the designs of the conspirators, sent a message to Duer. The latter asked his physician whether he could be removed to the court-house, where Congress was in session. "Yes," said the doctor, "but at the risk of your life." "Do you mean that I would expire before reaching the place?" asked Duer. "No," said the physician, "but I would not answer for your life twenty-four hours afterwards." "Very well," responded Duer, "prepare a litter." It was done, and Duer was carried to the floor of Congress. The arrival of Gouverneur Morris, of the New York delegation, at the same time, satisfied the conspira-

tors that they would be defeated, and they gave up the hazardous undertaking.

**Conspiracy in the West.** As the time for the choice of Mr. Lincoln's successor to the Presidency of the United States in 1864 was approaching, the members of a secret league existing west of the Alleghany Mountains appeared more and more active. The following outline of the conspiracy against the life of the republic is drawn from well-authenticated facts: There was a secret military organization, composed at the time (August, 1864) of the Democratic convention, of about five hundred thousand men, with a commander-in-chief, a general, and subordinate officers, all bound to a blind obedience to the orders of their superiors, and pledged "to take up arms against any government found waging war against a people endeavoring to establish a government of their own choice"—in other words, to assist the insurgents then in arms against the government of the United States. There was to be a general uprising of the members of this league in Missouri, Illinois, Indiana, Ohio, and Kentucky, in co-operation with a Confederate force under Price, who was to invade Missouri. (See *Missouri, Last Invasion of.*) Price (though rather late) performed his part, but the timid leaguers failed to keep their promises. The plot, it is said, originated with the Confederate authorities at Richmond, and was chiefly directed by Jacob Thompson (ex-Secretary of the Interior), in Canada, with the important aid of Vallandigham (which see). Price was the "Grand Commander" of the Missourian and Southern members of the league, and Vallandigham the "Grand Commander" of the Northern members. The first blow—the signal for the uprising—was to have been struck at the time of the meeting of the Democratic convention at Chicago (Aug. 21), when eight thousand Confederate prisoners confined at Camp Douglas, near that city, were to be liberated and armed by the Confederate refugees in Canada there assembled, and five thousand sympathizers with the Confederate cause then residing in Chicago. Then the Confederate prisoners at Indianapolis were to be released and armed, and the hosts of Knights of the Golden Circle (which see)—the secret conspirators—were to gather at appointed rendezvous to the number of full one hundred thousand men. This force, springing out of the earth, as it were, in the rear of Generals Grant and Sherman, would, it was believed, compel the raising of the sieges of Richmond and Atlanta, and secure peace on the basis of the independence of the "Confederate States." Vallandigham was to go boldly from exile in Canada to Chicago to act as circumstances might require. When the convention met he was there. The Confederate refugees in Canada were also there, with a vast number of sympathizers, who were publicly harangued from balconies of hotels and other places in the most incendiary and revolutionary language, not only by professional politicians, but by clergymen. The conspiracy was foiled by the vigilance and activity of Colonel B. J. Sweet, a young officer who was in com-

mand at Chicago. He became acquainted with the secrets of the conspirators. Of this they were timely informed, and they postponed the contemplated uprising by a release of the Confederate prisoners at Camp Douglas until the night of the presidential election. At that time a large number of Confederate officers in disguise were in Chicago. Their plans were all matured when young Colonel Sweet interposed by the arrest of about one hundred of these and Illinois conspirators. Hundreds of their firearms were also seized.

**Conspiracy of Tecumtha.** In 1810 Tecumtha (written also Tecumseh) and his brother, the Prophet (which see), endeavored to confederate the Indian tribes in the Northwest for the extermination of the white settlers north of the Ohio. The cunning Tecumtha made use of the popularity of his brother as a prophet, or medicine man, whose influence had been very great over large portions of the Delawares, Shawoneese, Wyandots, Miamis, Ottawas, Pottawatomies, Kickapoos, Winnebagoes, and Chippewas. It was among the more remote tribes that a greater part of these converts were obtained. In the summer of 1808 the Prophet removed his village to Tippecanoe Creek (a northerly branch of the Upper Wabash), among the Delawares and Miamis. There through 1809 the Prophet attracted large numbers of Indians, when military exercises were interspersed with religious mummeries and warlike sports. These military exercises, and an alleged secret intercourse of the brothers with the British traders and agents, had drawn upon the Prophet and his brother the suspicions of Harrison, the Governor of the Indian Territory and Superintendent of Indian Affairs. With consummate duplicity, the Prophet, visiting Harrison at Vincennes, allayed his suspicions by assuming to be a warm friend of peace, his sole object being to reform the Indians and to put a stop to their use of whiskey. Not long afterwards, a treaty made with several tribes by Harrison was denounced by Tecumtha, and serious threats were made by him. Harrison invited the brothers to an interview at Vincennes (August, 1810), when the latter appeared with many followers and showed so much hostility that the governor ordered him and his people to quit the neighborhood. (See *Harrison and Tecumtha*.) In the summer of 1811 Tecumtha journeyed to the land of the Creeks, Chocktaws, and Chickasaws to engage them to join in his conspiracy, but failed; and a battle that occurred on the Tippecanoe in November following left Tecumtha and his brother without hope of confederating the tribes for their murderous purpose. (See *Tippecanoe, Battle of the*.)

**Constellation and La Vengeance.** Early on the morning of Feb. 1, 1800, Commodore Truxton, cruising off Guadaloupe in the frigate *Constellation*, gave chase to a sail that appeared to the southward, but it was about fifteen hours before he came within hailing distance of the vessel. It proved to be the large French frigate *La Vengeance*, which opened a battle by firing on the *Constellation* at eight

o'clock in the evening. A desperate engagement at pistol-shot distance ensued, which lasted until one o'clock in the morning (Feb. 2), the combatauts all the while running free, side by side, and pouring broadsides into each other. Suddenly *La Vengeance* ceased firing and disappeared in the gloom. Truxton supposed she had gone to the bottom. He found his own ship greatly crippled. Nearly all her shrouds had been cut away. A squall came on and the shattered main-mast fell into the sea, carrying with it a midshipman and several topmen who were aloft. *La Vengeance* (which carried 54 guns and 400 men) was not lost, but had fled, in a crippled condition, to Curaçao, where she arrived on the 6th. Captain Pitot, her commander, said he twice struck his flag during the engagement, which Truxton did not observe. Truxton bore away to Jamaica, and it was some time before he learned the name of his antagonist. This victory gave Truxton great renown at home and abroad. Congress thanked him (March 29) and voted him a gold medal. *La Vengeance* would have been a rich prize. She had on board the governor of Guadaloupe and his family, and two French generals, a full cargo of sugar and coffee, and a large amount of specie. She lost, in killed and wounded, 162. The *Constellation* lost, in killed and wounded, 39.

**Constellation and L'Insurgente.** At noon on Feb. 9, 1799, while the United States frigate *Constellation*, Commodore Truxton, was cruising off the Island of Nevis, W. I., the French frigate *L'Insurgente* appeared to the southward. Truxton gave chase, and at a little past three o'clock in the afternoon brought on an engagement. It lasted an hour and a quarter, when *L'Insurgente* surrendered. Captain Barreault did not yield until his fine ship was dreadfully shattered and he had lost 70 men killed and wounded. The *Constellation* had only three men wounded. This victory produced great exultation in the United States, and the little navy was declared to be equal in prowess to any in the world. The *Constellation* carried 32 guns and 300 men; *L'Insurgente* carried 40 guns and 409 men. Truxton was everywhere eulogized. The merchants of Lloyd's Coffee-house, London, sent him a service of plate worth over three thousand dollars, on which a representation of the action was engraved; and a song called "Truxton's Victory" was everywhere sung, beginning with the words:

"Come all ye Yankee sailors, with swords and pikes advance,  
 'Tis time to try your courage and humble haughty France.  
 The sons of France our seas invade,  
 Destroy our commerce and our trade:  
 'Tis time the reckoning should be paid  
 To brave Yankee boys."

**Consternation in New England.** Rumors spread over New England in 1697 that a French armament from Europe and a land force from Canada were about to fall upon the English colonies. Such an expedition had actually been ordered from France; and it was placed under the command of the Marquis of Nesmond, an officer of great reputation. He was furnished with ten men-of-war, a galiot, and two frigates;

and was instructed to first secure the possessions in the extreme east, then to join fifteen hundred men to be furnished by Count Frontenac, and proceed with his fleet to Boston harbor. After capturing Boston and ravaging New England, he was to proceed to New York, reduce the city, and thence send back the troops to Canada by land, that they might ravage the New York colony. Nesmond started so late that he did not reach Newfoundland until July 24, when a council of war decided not to proceed to Boston. All New England was alarmed, and preparations were made on the seaboard to defend the country. The Peace of Ryswick (which see) was proclaimed at Boston Dec. 10, and the English colonies had repose from war for a while.

**Constituent Convention, PROPOSED.** The difficulty of raising money for the current expenses of the United States government in 1782 alarmed its friends. Robert Morris's scheme for taxation had failed to meet support. (See *Morris's Funding Scheme*.) A part of his plan was to collect the taxes due the general government by its own officers; and by a vote of Congress he was authorized to appoint receivers of taxes at different points. Alexander Hamilton was appointed receiver at New York, and was instructed by Morris to forward the views of Congress respecting an amendment of the Articles of Confederation so as to give more power to the general government in the matter of taxation. Hamilton had perceived the facility with which the Eastern States had met in convention, and he conceived the idea of a constituent convention. He repaired to Poughkeepsie, on the Hudson, where the Legislature of the State of New York was in session (July, 1782), and explained to them his views on the only methods by which the United States could obtain a national constitution. His father-in-law (General Schuyler) seconded his views. He was a State Senator; and on July 19 that gentleman invited the Senate to consider the state of the nation. On his motion it was agreed that the general government ought to have power to provide revenue for itself; and it was resolved "that the foregoing important end can never be attained by partial deliberations of the states separately; but that it is essential to the common welfare that there should be, as soon as possible, a conference of the whole on the subject; and that it would be advisable, for this purpose, to propose to Congress to recommend, and to each state to adopt, the manner of assembling a general convention of the states, specially authorized to revise and amend the confederation, reserving a right to the respective legislatures to ratify their determinations." The resolution proposed by Schuyler was carried unanimously in both branches of the Legislature; and Hamilton, who drafted them, was elected, almost without opposition, one of the delegates to the Congress from New York. Robert Morris was rejoiced by these auspicious events, and, when he welcomed young Hamilton (then only twenty-five years of age) to the national Legislature, said, "A firm, wise, manly system of federal government is what I

once wished, what I now hope, what I dare not expect, but what I will not despair of." Hamilton, of New York, was the first to recommend a general convention to form a national constitution; and the Legislature of the State of New York, through Senator Schuyler, was the first to take official action in favor of the measure.

**Constitution and Guerrière, THE.** The *Constitution*, 44 guns, Captain Isaac Hull, sailed from Boston Aug. 2, 1812, and cruised eastward in search of British vessels. Hull was anxious to find the *Guerrière*, 38 guns, Captain James Richard Dacres, who had boastfully enjoined the Americans to remember that she was not the *Little Belt*. (See *President and Little Belt, The*.) The British newspapers, sneering at the American navy, had spoken of the *Constitution* as "a bundle of pine boards sailing under a bit of striped bunting." They had also declared that "a few broadsides from England's wooden walls would drive the paltry striped bunting from the ocean." Hull was eager to pluck out the sting of these insults. He sailed as far as the Bay of Fundy, and then cruised eastward of Nova Scotia, where he captured a number of British merchant vessels on their way to the St. Lawrence. On the afternoon of Aug. 19 he fell in with the *Guerrière*, in latitude 41° 40', longitude 55° 48'. Some firing began at long range. Perceiving a willingness on the part of his antagonist to have a fair yard-arm to yard-arm fight, Hull pressed sail to get his vessel alongside the *Guerrière*. He was fat, wearing very tight white breeches, and walked the deck watching the movements of the enemy with keen interest; and when the *Guerrière* began to pour shot into the *Constitution*, Lieutenant Morris, Hull's second in command, asked, "Shall I open fire?" Hull quietly replied, "Not yet." The question was repeated when the shots began to tell on the *Constitution*, and Hull again answered, "Not yet." When the vessels were very near each other, Hull, filled with intense excitement, bent himself twice to the deck and shouted, "Now, boys, pour it into them!" The command was instantly obeyed. When the smoke of the broadside cleared away it was discovered that the commander, in his energetic movements, had split his breeches from waistband to knee; but he did not stop to change them during the action. The guns of the *Constitution* were double-shotted with round and grape, and their execution was terrible. The vessels were within pistol-shot of each other. Fifteen minutes after the cutest began the mizzen-mast of the *Guerrière* was shot away, her main-yard was in slings, and her hull, spars, sails, and rigging were torn in pieces. By a skillful movement, the *Constitution* now fell foul of her foe, her bowsprit running into the larboard quarter of her antagonist. The cabin of the *Constitution* was set on fire by the explosion of the forward guns of the *Guerrière*, but the flames were soon extinguished. Both parties attempted to board, while the roar of the great guns was terrific. The sea was rolling heavily, and would not allow a safe passage from one vessel to the other. At length the *Constitution* became disentangled and shot ahead of the *Guer-*

rière, when the main-mast of the latter, shattered into weakness, fell into the sea. The *Guerrière*, shivered and shorn, rolled like a log in the trough of the sea, entirely at the mercy of the billows. Hull sent his compliments to Captain Dacres, and inquired whether he had struck his flag. Dacres, who was a "jolly tar," looking up and down and at the stumps of his masts, coolly and dryly replied, "Well, I don't know; our mizzen-mast is gone; our main-mast is gone; upon the whole, you may say we *have* struck our flag." Too much bruised to be saved, the *Guerrière* was set on fire and blown up after her people were removed. So ended the career of the vessel that "was not the *Little Belt*." This exploit of Hull made him the theme of many toasts, songs, and sonnets. One rhymester wrote concerning the capture of the *Guerrière*:

"Isaac did so maul and rake her,  
That the decks of Captain Dacre  
Were in such a woful pickle,  
As if Death, with scythe and sickle,  
With his sling, or with his shaft,  
Had cut his harvest fore and aft.  
Thus, in thirty minutes, ended  
Mischiefs that could not be mended;  
Masts and yards and ship descended  
All to Davy Jones's locker—  
Such a ship, in such a pucker."

Hull had seven men killed and seven wounded, Dacres lost seventy men killed and wounded. The news of this victory was received with joy throughout the country. The people of Boston gave Hull and his officers a banquet, at which six hundred citizens sat down. The authorities of New York gave him the freedom of the city in a gold box. Congress thanked him and awarded him a gold medal, and appropriated

that it has been taken by a *new enemy*—an enemy *unaccustomed to such triumphs*, and likely to be rendered *insolent and confident* by them." This triumph made the Americans very confident, if not insolent.

**Constitution and Java, Tue.** After his decisive victory over the *Guerrière*, Captain Hull generously retired from the command of the *Constitution* to allow others to win honors with her. Captain William Bainbridge was appointed his immediate successor, and was placed in command of a small squadron—the *Constitution*, 44 guns; *Essex*, 32; and *Hornet*, 18. Bainbridge sailed from Boston late in October, 1812, with the *Constitution* and *Hornet*. The *Essex* was ordered to follow to designated ports, and if the flag-ship was not found at any of them, to go on an independent cruise. After touching at these ports, Bainbridge was off Bahia or San Salvador, Brazil, where the *Hornet* blockaded an English sloop-of-war, and the *Constitution* continued down the coast. On Dec. 29 she fell in with the British frigate *Java*, 38 guns, Captain Henry Lambert, one of the finest vessels in the royal navy. They were then about thirty miles from the shore, southeast of San Salvador. About two o'clock in the afternoon, after running upon the same tack with the *Constitution*, the *Java* bore down upon the latter with the intention of raking her. This calamity was avoided, and very soon a most furious battle at short range was begun. When it had raged about half an hour the wheel of the *Constitution* was shot away, and her antagonist, being the better sailer, had the advantage of her for a time. Bainbridge managed his crippled ship

HULL'S MEDAL.

fifty thousand dollars to be distributed as prize-money among the officers and crew of the *Constitution*. The British public were amazed by the event. Their faith in the impregnability of the "wooden walls of Old England" was shaken. Its bearing on the future of the war was incalculable. The *London Times* regarded it as a serious blow to the British supremacy of the seas. "It is not merely that an English frigate has been taken," said that journal, "but

with so much skill that she was first in coming to the wind on the next tack, and gave her antagonist a terrible raking fire. Both now ran free, with the wind on their quarter, and at three o'clock the *Java* attempted to close by running down the *Constitution's* quarter. She missed her aim, and lost her jib-boom and the head of her bowsprit by shots from the *Constitution*. In a few moments the latter poured a heavy raking broadside into the stem of the *Java*. An-

other followed, when the fore-mast of the *Java* went by the board, crushing in the fore-castle and main-deck in its passage. At that moment the *Constitution* shot ahead, keeping away to avoid being raked, and finally, after manœuvring nearly an hour, she fore-reached her antagonist, wore, passed her, and luffed up under her quarter. Then the two vessels lay broadside to broadside, engaged in deadly conflict yard-arm to yard-arm. Very soon the *Java's* mizzen-mast was shot away, leaving nothing but the main-mast, the yards of which had been carried away. The fire of the *Java* now ceased, and Bainbridge was under the impression that she had struck her colors. He had fought about two hours, and occupied an hour in repairing damages, when he saw an ensign fluttering over the *Java*. Bainbridge was preparing to renew the conflict, when the *Java's* colors were hauled down and she was surrendered. She was bearing as passenger to the East Indies Lieutenant-general Hyslop (just appointed governor-general of Bombay) and his staff, and more than one hundred English officers and men destined for service in the East Indies. The *Java* was a wreck, and the *Constitution* was very much cut in her sails. The commander of the *Java* was mortally wounded. Her officers and crew numbered about 446 persons. Some of the above-named passengers assisted in the contest. How many of the British were lost was never revealed. It was believed their loss was near 100 killed and 200 wounded. The *Constitution* lost 9 killed and 25 wounded. Bainbridge was also wounded. After every living being had been transferred from the *Java* to the *Constitution*, the former was fired and blown up (Dec. 31, 1812). The prisoners were paroled at San Salvador. The news of the victory created great joy in the United States. Bainbridge received honors of the most conspicuous kind—a banquet at Boston (March 2, 1813); thanks of legislatures; the freedom of the city of New York, in a gold box, by its authorities; the same by the authorities of the city of Albany; an elegant service of sil-

ing naval engagement of the first six months of the war. From this time the *Constitution* was ranked among the seamen as a "lucky ship," and she was called "Old Ironsides."

**Constitution, CRUISE OF THE (1814).** When Bainbridge relinquished the command of the *Constitution*, 44 guns, in 1813, she was thoroughly repaired and placed in charge of Captain Charles Stewart. She left Boston harbor, for a cruise, on Dec. 30, 1813, and for seventeen days did not see a sail. At the beginning of February, 1814, she was on the coast of Surinam, and, on the 14th, captured the British war-schooner *Picton*, 16 guns, together with a letter-of-marque which was under her convoy. On her way homeward, she chased the British frigate *La Pique*, 36 guns, off Porto Rico, but she escaped under cover of the night. Early on Sunday morning, April 3, when off Cape Anne, she fell in with two heavy British frigates (the *Junon* and *La Nymphé*); and she was compelled to seek safety in the harbor of Marblehead. She was in great peril there from her pursuers. These were kept at bay by a quickly gathered force of militia, infantry, and artillery, and she was soon afterwards safely anchored in Salem harbor. Thence she went to Boston, where she remained until the close of the year. At the end of December (1814) the *Constitution*, still under the command of Stewart, put to sea. Crossing the Atlantic, she put into the Bay of Biscay, and then cruised off the harbor of Lisbon. Stewart sailed southwards towards Cape St. Vincent, and, on Feb. 20, 1815, he discovered two strange sails, which, towards evening, flung out the British flag. Then Stewart displayed the American flag. By skilful management he obtained an advantageous position, when he began an action with both of them; and, after a severe fight of about fifteen minutes in the moonlight, both vessels became silent, and, as the cloud of smoke cleared away, Stewart perceived that the leading ship of his assailants was under the lee-beam of his own vessel, while the sternmost was luffing up as with the inten-

ver-plate by the citizens of Philadelphia; and the thanks of Congress, with a gold medal for himself and silver ones for his officers, besides fifty thousand dollars in money to Bainbridge and his companions-in-arms as compensation for their loss of prize-money. The conflict between the *Constitution* and the *Java* was the clos-

tion of tacking and crossing the stem of the *Constitution*. The latter delivered a broadside into the ship abreast of her, and then, by skilful management of the sails, backed swiftly astern, compelling the foe to fill again to avoid being raked. For some time both vessels manœuvred admirably, pouring heavy shot into

each other whenever opportunity offered, when, at a quarter before seven o'clock, the British ship struck her flag. She was the frigate *Cyane*, 36 guns, Captain Falcoln, manned by a crew of one hundred and eighty men. Stewart now sought her consort, which had been forced out of the fight by the crippled condition of her running-gear. She was ignorant of the fate of the *Cyane*. About an hour after the latter had surrendered, she met the *Constitution* searching for her. Each delivered a broadside, and, for a while, there was a brisk running fight, the *Constitution* chasing, and her bow guns sending shot that ripped up the planks of her antagonist. The latter was soon compelled to surrender, and proved to be the *Levant*, 18 guns, Captain Douglass. The *Constitution* was then equipped with 52 guns, and her complement of men and boys was about four hundred and seventy. The loss of the *Constitution* in this action was three killed and twelve wounded; of the two captured vessels, seventy-seven. The *Constitution* was so little damaged that three hours after the action she was again ready for conflict. That battle on a moonlit sea lasted only forty-

*tution*, the *Newcastle* firing her chase guns without effect. Meanwhile the *Levant* fell far in the rear. Stewart signalled her to tack, which she did, when the three vessels gave up the chase of the *Constitution*, and pursued the *Levant* into Porto Praya harbor—a Portuguese port. Regardless of neutrality, one hundred and twenty prisoners, whom Stewart had paroled there, seized a battery, and opened upon the *Levant*, which, receiving the fire of her pursuers at the same time, was compelled to surrender. Stewart crossed the Atlantic, landed many of his prisoners in Brazil, and at Porto Rico heard of the proclamation of peace. Then he returned home, taking with him the news of the capture of the *Cyane* and *Levant*. The *Constitution*—"Old Ironsides" as she was called—was hailed with delight, and Stewart received public honors. The Common Council of New York gave him the freedom of the city in a gold box, and a public dinner to him and his officers. The Legislature of Pennsylvania voted him a gold-hilted sword; and Congress voted him and his men the thanks of the nation and directed a medal of gold, commemorative of the capture

STEWART'S MEDAL.

five minutes. Placing Lieutenant Ballard in command of the *Levant*, and Lieutenant Hoffman of the *Cyane*, Stewart proceeded with his prizes to one of the Cape de Verd Islands, where he arrived on March 10, 1815. The next day the *Constitution* and her prizes were in imminent peril by the appearance of English vessels of war coming portward in a thick fog. He knew they would have no respect for the neutrality of the port (Porto Praya), and so he cut the cables of the *Constitution*, and, with his prizes, put to sea. They were chased by the strangers, which were the British frigate *Leander*, 50 guns, Sir George Collier; *Newcastle*, 50 guns, Lord George Stuart; and *Acasta*, 40 guns, Captain Kerr. They pressed hard upon the fugitives. The *Cyane* was falling astern, and must soon have been overtaken. Stewart ordered her commander to tack. He obeyed, and she escaped in the fog, reaching New York in April. The three ships continued to chase the *Consti-*

of the *Cyane* and *Levant*, to be presented to him. The *Constitution* was always fortunate. Her crews were principally New England men; and, from the time of the Tripolitan War (which see) until she left off cruising and became a school-ship, she was always regarded as a "lucky vessel." Stewart was known in his later days as "Old Ironsides."

**Constitution, FAMOUS RETREAT OF THE.** The frigate *Constitution*, 44 guns, Captain Isaac Hull, had just returned from foreign service when war was declared. She sailed from Annapolis (July 12, 1812) on a cruise to the northward. On the 17th she fell in with a small squadron under Captain Broke, when one of the most remarkable naval retreats and pursuits ever recorded occurred. The *Constitution* could not cope with the whole squadron, and her safety depended on successful flight. There was almost a dead calm, and she floated almost independent of her helm. Her boats were

launched, and manned by strong seamen with sweeps. A long 18-pounder was rigged as a stern-chaser, and another of the same calibre was pointed off the fore-castle. Out of her cabin windows, which by sawing were made large enough, two 24-pounders were run, and all the light canvas that would draw was set. A gentle breeze sprang up, and she was just getting under headway, when a shot at long range was fired from the *Shannon*, Broke's flag-ship, but without effect. Calm and breeze succeeded each other, and kedging and sails kept the *Constitution* moving in a manner that puzzled her pursuers. At length the British discovered the secret, and instantly the *Shannon* was urged onward by the same means, and slowly gained on the *Constitution*. The *Guerriere*, 38 guns, Captain Dacres, another of the squadron, had now joined in the chase. All day and all night the pursuit continued; and at dawn of the second day of the chase the whole British squadron were in sight, bent on capturing the plucky American frigate. There were now five vessels in chase, clouded with canvas. Expert seamanship kept the space between the *Constitution* and her pursuers so wide that not a gun was fired. She was four miles ahead of the *Belvidere*, the nearest vessel of the squadron. At sunset (July 19) a squall struck the *Constitution* with great fury, but she was prepared for it. Wind, lightning, and rain made a terrible commotion on the sea for a short time, but the gallant ship outrode the tempest, and at twilight she was flying before her pursuers at the rate of eleven knots an hour. At midnight the British fired two guns, and the next morning gave up the chase, which had lasted sixty-four hours. The newspapers were filled with the praises of Hull and his good ship, and doggerel verse in songs and sonnets, like the following, abounded:

"Neath Hull's command, with a taunt band,  
And naught beside to back her,  
Upon a day, as log-books say,  
A fleet bore down to thwack her.

"A fleet, you know, is odds or so  
Against a single ship, sirs.  
So 'cross the tide her legs she tried,  
And gave the rogues the slip, sirs."

**Constitution, NATIONAL, AMENDMENTS TO THE.** At the first session of Congress under the National Constitution—begun in the city of New York, March 4, 1789—many amendments to that Constitution were offered for consideration. Ten of these Congress proposed to the legislatures of the several states. They were ratified by the requisite number at the middle of December, 1791. Another, the XIth, was proposed March 5, 1794, and was ratified in 1798. Another, the XIIth, was proposed Dec. 12, 1803, and was ratified in 1804. These, with the other ten, became a part of the National Constitution. Another article was proposed by Congress May 1, 1810, but was never ratified. (See the Constitution, art. II., § 9, clause 3.) It was to prohibit citizens of the United States accepting or retaining any title of nobility or honour, pension, or emolument from any "person, king, or foreign power," without the consent of Con-

gress, under the penalty of disfranchisement. Another amendment, the XIIIth, was adopted by Congress Jan. 31, 1865, and its ratification announced Dec. 18. It provides for the abolition of slavery. A XIVth amendment was adopted by Congress June 13, 1866, and its ratification proclaimed July 20, 1868. It guarantees civil rights to freedmen; enforces the payment of the National debt, and prohibits the payment of the Confederate public debt. A XVth amendment was adopted and proclaimed March 30, 1870, which guaranteed the right of suffrage to all citizens without distinction of race or color.

**Constitution, NATIONAL, RATIFICATION OF THE.** The convention that framed the National Constitution was divided by many conflicting opinions. So with the people, after it was adopted in convention and presented to them for consideration. It was violently opposed by extreme "state-supremacy men." Of those who signed the document in convention probably not one approved of every part. Hamilton, one of the most earnest advocates of the paper, when urging all to sign it, said, "No man's ideas are more remote from the plan than my own; but is it possible to deliberate between anarchy and confusion on the one hand and the chance of good on the other?" And when it was submitted to the people, Hamilton, Madison, and Jay wrote a series of powerful papers in favor of the Constitution, which, in collected form, make a volume called *The Federalist*. These appeared in a New York newspaper. The first number was written by Hamilton on board an Albany sloop on her passage down the Hudson River. There was an injunction of secrecy upon the proceedings of the convention; so the public did not know the drift of the debates. But there was much of the same kind of discussion and argument in public halls and in the newspaper press. The friends of the Constitution, who now began to be called "Federalists," were doubtful of the final result. Conventions in the various states were called to consider it. When these assembled there was intense excitement in the public mind everywhere. The convention in Delaware was the first to ratify it, by unanimous vote, Dec. 7, 1787; that of Pennsylvania, 46 to 23, Dec. 12; that of New Jersey, unanimously, Dec. 18. The Georgia convention also ratified it, by unanimous vote, Jan. 2, 1788; that of Connecticut, 128 to 40, Jan. 9; of Massachusetts, 187 to 168, Feb. 6; of Maryland, 63 to 12, April 28; of South Carolina, 149 to 73, May 23; of New Hampshire, 57 to 46, June 21. The consent of the people of nine states was necessary to make the new constitution the supreme law of the land. This was accomplished by the vote of New Hampshire, which spread joy among the Federalists. Virginia followed four days after New Hampshire—89 to 79, July 25; New York, 30 to 28, July 26; and North Carolina, Nov. 21. Rhode Island stood out until May 29, 1790, when the national government had been in operation under the new Constitution more than a year. (See *National Constitution*.)

**Constitution, NATIONAL, RECORDS OF THE**

CONVENTION THAT FRAMED THE. The injunction of secrecy as to the proceedings of the convention was never removed. The journal, at the final adjournment, was intrusted to the custody of Washington, who afterwards deposited it in the Department of State. It was first printed by order of Congress in 1818. Mr. Yates, one of the members from New York, took short notes of the earlier proceedings before he left the convention in disgust. These were published after his death in 1821. Madison's more perfect notes were published in three volumes in 1840. Luther Martin, one of the delegates from Maryland (who was absent at the time of the signing of the instrument), gave a "representation" of the convention to the Legislature of Maryland.

**Constitution, THE FRIGATE, SAVED BY A POEM.** The famous frigate *Constitution*, called "Ironsides," is yet (1880) afloat. Many years ago the Navy Department concluded to break her up and sell her timbers, as she was thought

THE CONSTITUTION IN 1876.

to be a decided "invalid." The order had gone forth, when the execution of it was arrested by the opposition of public sentiment created and called forth largely by the following poetic protest by Dr. Oliver Wendell Holmes :

"Ay, tear her tattered ensign down!  
Lo! has it waved on high,  
And many an eye has danced to see  
That banner in the sky.  
Beneath it rag'd the battle-shout,  
And burst the cannon's roar;  
The meteor of the ocean air  
Shall sweep the clouds no more.

"Her deck once red with heroes' blood,  
Where knelt the vanquished foe,  
When winds were hissing o'er the flood  
And waves were white below,  
No more shall feel the victor's tread,  
Or know the conquered knee:  
The harpies of the shore shall pluck  
The Eagle of the Sea!

"O! better that her shattered hull  
Should sink beneath the wave;  
Her thunders shook the mighty deep,  
And there should be her grave.  
Nail to the mast her holy flag,  
Set every threadbare sail,  
And give her to the God of Storms,  
The lightning, and the gale!"

"Old Ironsides" was saved and created into a school-ship.

"Constitutionalists" and "Friends of the People." In 1805 the conservative portion of the Democratic party in Pennsylvania, who were moderate in their views and gave a firm support to the National Constitution, took the name of "Constitutionalists," and organized what they called the "Constitutional Society." The other section of the party constituted themselves into rival clubs, called the "Friends of the People." The strife between them was bitter, and their deunciations of the leaders of each were greatly enjoyed by the Federalists.

**Consular Convention with France.** A convention of this kind, framed in accordance with a plan agreed to by the Continental Congress in 1782, was signed in Paris by Franklin in 1784. It gave to the consuls of the two nations complete jurisdiction over the merchants and mariners of the nation they represented, and could not fail to produce serious collisions in its exercise. The Continental Congress therefore instructed Jefferson to ask for a modification, and especially for the insertion of a limitation of time. Long negotiations ensued. This modification and others were secured in the summer of 1789, and, being signed anew, the convention was submitted to the Senate for ratification. Mr. Jay, then holding the position (from the old Congress) of Secretary of Foreign Affairs, was called upon for a report upon the subject. He said it was still objectionable; but the United States could not honorably decline ratifying it, and it was done.

**Consuls, AUTHORITY OF.** Early in the first session of the Second Congress the subject of consuls at foreign ports, their authority, fees, etc., was brought up in Congress for the first time. A bill was reported Nov. 14, 1791, and became a law April 10, 1792. It was made their duty to receive and authenticate all protests and declarations made before them by American citizens, or by foreigners in relation of American citizens; copies of which, under their seals, were to have the same validity as the originals. They were to take possession of the property of citizens dying within their consulate having no partner or representative, and to act, in every particular, as a legal representative of the deceased in trust for heirs. In case of the stranding of a vessel within their consulate, they were to take measures, at the expense of the owner, for saving the vessel and cargo. They were to provide for and send home, at the government expense, American seamen left abroad. No salaries were allowed the consuls, except where they acted as diplomatic agents, as in the Barbary States; but they were entitled to certain fees, which were sometimes abundant and sometimes very meagre compensation. With some modifications as to compensation, the same consular system now prevails.

**Continental Army, CONDITION OF THE.** At the beginning of 1781, when the revolt of the Pennsylvania line occurred, the condition of the army was most wretched. A committee of Congress reported that it had been "unpaid for five

months; that it seldom had more than six days' provisions in advance, and was on several occasions, for sundry encessive days, without meat; that the medical department had neither sugar, coffee, tea, chocolate, wine, nor spirituous liquors of any kind; and that every department of the army was without money, and had not even the shadow of credit left." The clothing of the soldiers was in tatters, and distress of mind and body prevailed everywhere in the service. No wonder that some of the soldiers, who believed that their term of service had expired, mutinied, and marched towards Philadelphia to demand redress from the Congress. (See *Revolt of the Pennsylvania Line.*)

**Continental Army, FORMATION OF THE.** On the morning after the affair at Lexington and Concord (April 20, 1775) the Massachusetts Committee of Safety sent a circular letter to all the towns in the province, saying: "We conjure you, by all that is dear, by all that is sacred; we beg and entreat you, as you will answer it to your country, to your consciences, and, above all, to God himself, that you will hasten and arrange, by all possible means, the enlistment of men to form the army, and send them forward to headquarters at Cambridge with that expedition which the vast importance and instant urgency of the affair demands." This call was answered by many people before it reached them. It arose spontaneously out of the depths of their own patriotic hearts. The field, the workshop, the counter, the desk, and even the pulpit, yielded their tenants, who hurried towards Boston. Many did not wait to change their clothes. They took with them neither money nor food, intent only upon having their firelocks in order. The women on the way opened wide their doors and hearts for the refreshment and encouragement of the patriotic volunteers, and very soon all New England was represented at Cambridge in a motley host of full twenty thousand men. On the afternoon of the 20th (April) General Artemas Ward assumed the chief command of the gathering volunteers. The Provincial Congress labored night and day to provide for their organization and support. The second Continental Congress convened at Philadelphia (May 10), and on the 7th of June, in a resolution for a general fast, had spoken for the first time of "the twelve united colonies." To make the bond stronger, they then, at the suggestion of John Adams, adopted the army at Cambridge as a Continental army, and proceeded (June 15, 1775) to appoint George Washington the commander-in-chief of it. They chose for his assistants Artemas Ward, Charles Lee, Philip Schuyler, and Israel Putnam, major-generals; and Seth Pomeroy, Richard Montgomery, David Wooster, William Heath, Joseph Spencer, John Thomas, John Sullivan, and Nathaniel Greene, brigadier-generals. Horatio Gates was appointed adjutant-general. The pay of a major-general was fixed at \$166 a month; of a brigadier-general, \$125; of the adjutant-general, \$125; commissary-general of stores and provisions, \$80; quartermaster-general, \$80; deputy quartermaster-general, \$40;

paymaster-general, \$100; deputy paymaster-general, \$50; chief-engineer, \$60; assistant engineer, \$20; aide-de-camp, \$33; secretary to the general, \$66; secretary to a major-general, \$33; commissary of musters, \$40. Washington refused to receive any pay for his service, and required that only his expenses should be reimbursed. (See *Washington's Acceptance of the Chief Command.*) The pay of all subalterns, commissioned and warrant, was afterwards determined.

**Continental Army, FIRST ORGANIZATION OF THE (1775).** Washington took command of the Continental army at Cambridge in July, 1775. The general officers had already been appointed by Congress. Washington found an undisciplined force, and immediately took measures to bring order out of confusion. Congress had provided for one adjutant-general, one quartermaster-general and a deputy, one commissary-general, one paymaster-general and a deputy, one chief-engineer and two assistants, of the grand army, and an engineer and two assistants for the army in a separate department; three aides-de-camp, a secretary to the general and to the major-generals, and a commissary of musters. Joseph Trumbull, son of the governor of Connecticut, was appointed commissary-general; Thomas Mifflin, quartermaster-general; and Joseph Reed, of Philadelphia, was chosen by Washington to the important post of secretary to the commander-in-chief.

**Continental Army, SECOND ORGANIZATION OF THE (1778).** During the encampment at Valley Forge a committee of Congress spent some time with Washington in arranging a plan for the reorganization of the army. By it each battalion of foot, officers included, was to consist of five hundred and eighty-two men, arranged in nine companies; the battalion of horse and artillery to be one third smaller. This would have given the army sixty thousand men; but, in reality, it never counted more than half that number. General Greene was appointed quartermaster-general; Jeremiah Wadsworth, of Connecticut, commissary-general; Colonel Scammell, of New Hampshire, adjutant-general; and Baron de Steuben, a Prussian officer, inspector-general. To allay discontents in the army because of the great arrearages of the soldiers' pay, auditors were appointed to adjust all accounts; and each soldier who should serve until the end of the war was promised a gratuity of \$80. The officers were promised half-pay for seven years from the conclusion of peace.

**Continental Army, THIRD ORGANIZATION OF THE.** In the spring of 1779, on the report of a committee of Congress, that body proceeded to a new organization of the army. Four regiments of cavalry and artillery, hitherto independent establishments raised at large, were now credited towards the quota of the states in which they had been enlisted. The state quotas were reduced to eighty battalions: Massachusetts to furnish fifteen; Virginia and Pennsylvania, eleven each; Connecticut and Maryland, eight each; the two Carolinas, six each; New York, five; New Hampshire and New Jersey, three each;

Rhode Island, two; and Delaware and Georgia, one each. Congress allowed \$200 bounty for each recruit, and the states made large additional offers; but the real amount was small, for at that time the Continental paper money had greatly depreciated. It was found necessary to replenish the regiments by drafts from the militia. The whole force of the American army, exclusive of a few troops in the Southern department, consisted, late in the spring of 1779, of only about eighty-six thousand effective men. At that time the British had eleven thousand at New York and four or five thousand at Newport, besides a considerable force in the South.

**Continental Army, FOURTH ORGANIZATION OF THE (1780).** A committee of Congress, of which General Schuyler was chairman, were long in camp, maturing, with Washington, a plan for another reorganization of the army. Congress agreed to the plan. The remains of sixteen additional battalions were to be disbanded, and the men distributed to the state lines. The army was to consist of fifty regiments of foot, including Hazen's, four regiments of artillery, and one of artificers, with two partisan corps under Annard and Lee. There were to be four other legionary corps, two thirds horse and one third foot. All new enlistments were to be "for the war." The officers thrown out by this new arrangement were to be entitled to half-pay for life. The same was promised to all officers who should serve to the end of the war. The army, as so arranged, would consist of thirty-six thousand men: never half that number were in the field.

**Continental Army, MUTINOUS SPIRIT IN.** At the beginning of 1781, the sufferings of the Continental soldiers for want of food and clothing was almost unbearable, and there were signs of a prevailing mutinous spirit. (See *Revolt of the Pennsylvania Line*.) Washington well knew their intense suffering and equally intense patriotism, and deeply commiserated their condition. He knew they could be trusted to the last moment, and deprecated the conduct of those who suspected a mutinous spirit in the whole army, and manifested their distrust. When General Heath, with his suspicions alert, employed spies to watch for and report mutinous expressions, Washington wrote to him: "To seem to draw into question the fidelity and firmness of the soldiers, or even to express a doubt of their obedience, may occasion such a relaxation of discipline as would not otherwise exist."

**Continental Army, REORGANIZATION OF THE.** In October, 1775, a committee of Congress visited the camp at Cambridge, and, in consultation with Washington and committees of the New England colonies, agreed upon a plan for the reorganization of the besieging army. It was to consist of twenty-six regiments, besides riflemen and artillery. Massachusetts was to furnish sixteen; Connecticut, five; New Hampshire, three; and Rhode Island, two—in all about twenty thousand men; the officers to be selected out of those already in the service. It was easier to plan an army than to create one.

**Continental Army, THE, ON JULY 4, 1776.** According to a return submitted to Congress, the Continental army, on the day when the Declaration of Independence was adopted, consisted of seven thousand seven hundred and fifty-four men present fit for duty, including one regiment of artillery. Their arms were in a wretched condition. Of nearly fourteen hundred muskets, the firelocks were bad; more than eight hundred had none at all; and three thousand eight hundred and twenty-seven—more than half the whole number of infantry—had no bayonets. Of the militia who had been called for, only eight hundred had joined the camp. With this force Washington was expected to defend an extended line of territory against an army of about thirty thousand men.

Not one of this band of patriots is now (1883) living on the earth. (See *Continental Soldiers, Last Survivors of the*.)

**Continental Bills of Exchange.** On Oct. 3, 1776, the Continental Congress resolved to borrow \$5,000,000 for the use of the United States, at the annual interest of four per cent., and directed certificates to be issued accordingly by the manager of a loan office which was established at the same time. When foreign loans were made, drafts or bills of exchange were used for the payment of interest. On the opposite page is a fac-simile of one of these drafts, slightly reduced in size. It is drawn on the commissioner of Congress, then in Paris, signed by Francis Hopkinson (a signer of the Declaration of Independence), the Treasurer of Loans, and countersigned by Nathaniel Appleton, commissioner of the Continental Loan Office in Massachusetts.

**Continental Congress, APPOINTMENT OF DELEGATES TO THE.** The Assembly of Rhode Island appointed delegates June 15; the Connecticut Assembly had authorized such action on the 3d, and the Committee of Correspondence chose them on the 13th. The New Hampshire Legislature had, after some difficulty with the governor, appointed a Committee of Correspondence, and that committee met at Portsmouth to appoint delegates on June 5, but being dispersed by the governor and sheriff, a convention at Exeter appointed them. Similar conventions were held in Maryland and New Jersey (July 21, 23, 25). In New York a city committee of fifty-one, in connection with a committee of mechanics, nominated delegates. A poll was opened, at which the mayor and aldermen presided, when delegates were chosen (July 28), and were adopted by some of the interior districts. The counties of Orange, Kings, and Suffolk sent separate deputies. Governor Penn, of Pennsylvania, refused to call an Assembly, when the inhabitants

CONTINENTAL DRAFT.

been convened for another purpose) to appoint delegates to the Congress. It was speedily done. The Assembly of Delaware did the same (Aug. 1); and on the same day the Virginia Convention chose delegates from that colony. A like convention held in North Carolina (Aug. 25) took similar action; and at a public meeting of men from all parts of South Carolina, held at Charleston (July 6), delegates were chosen, and the act was ratified by the Assembly. The influence of Governor Wright prevented the selection of delegates from Georgia.

Continental Congress, END OF THE (1789). The Congress was barely kept alive, for several months before it expired, by the occasional attendance of one or two members. Among the last entries in its journals by Charles Thomson, its permanent secretary, was one under date of "Tuesday, Oct. 21, 1788," as follows: "From the day above mentioned there attended occasionally, from New Hampshire, et cetera, many persons from different states. From Nov. 3 to Jan. 1, 1789, only six persons attended altogether. On that day Reed, of Pennsylvania, and Barwell, of South Carolina, were present; and after that only one delegate was present (each time a different one) on nine different days." The very last record was: "Monday, March 2. Mr. Philip Pell, from New York." The history of that Congress has no parallel. At first it was a spontaneous gathering of representative patriots from the different English-American colonies to consult upon the public good. They boldly snatched the sceptre of political rule from their oppressors. and, assuming imperial functions,

of Philadelphia met in town meeting (July 18) and appointed a committee for the city and county. On their invitation a "Committee of the Province," composed of delegates chosen in the several counties, met at Philadelphia (July 6), and requested the Assembly (which had just created armies, issued bills of credit, declared the provinces to be independent states, made treaties with foreign nations, founded an empire, and compelled their king to acknowledge the states which they represented to be independent of the British crown. The brilliant

achievements of that Congress astonished the world. Its career was as short as it was brilliant, and its decadence began long before the war for independence had closed. Its mighty efforts had exhausted its strength. It was smitten with poverty, and made almost powerless by a loss of its credit. Overwhelmed with debt; a pensioner on the bounty of France; unable to fulfil treaties it had made; insulted by mutineers; bearded, encroached upon, and scorned by the state authorities, the Continental Congress sunk fast into decrepitude and contempt. With ungrateful pride, the recipients of its benefits seem not to have felt a pang of sorrow or uttered a word of regret when the once mighty and beneficent Continental Congress expired.

**Continental Congress in 1779.** The moral as well as the numerical strength of the Congress was at a low mark in 1779, and the general distrust of its ability to meet its engagements caused a very rapid depreciation of its paper-money. Many of the ablest members had left that body, and were devoting their energies to the affairs of their respective states. The number in attendance seldom amounted to thirty, and was often less than twenty-five. The commander-in-chief passed five weeks at Philadelphia in the winter of 1778-79 in consultation with the members of Congress. They were weeks of anxiety for him. His letters at that period evince his serious alarm at the state of affairs. In a letter to Colonel Harrison (Dec. 30, 1778) he implored him to endeavor to rescue his country by sending the best and ablest men to Congress. He depicted the sad falling off in morals of men in high places and in general society. "This is not an exaggerated account," he said. "That it is an alarming one, I do not deny; and I confess to you that I feel more real distress on account of the present appearance of things than I have done at any one time since the commencement of the dispute. . . . Providence has heretofore taken us up, when all other means and hope seemed to be departing from us. In this I will confide."

**Continental Congress, PROPOSITION FOR A.** The Boston Port Bill (which see) aroused and united the colonies, and there seemed to be an almost universal desire for a general Congress to consult upon public affairs. Measures were taken in that direction as follows: At a town meeting at Providence, May 17, 1774; a commit-

tee of a town meeting at Philadelphia, May 21; a town meeting in New York city, May 23; the House of Burgesses of Virginia, May 27; a county meeting in Baltimore County, Md., May 31; a town meeting at Norwich, Conn., June 6; a county meeting at Newark, N. J., June 11; the Massachusetts Assembly and a town meeting in Boston, June 17; a county meeting at New Castle, Del., June 29; the Committee of Correspondence at Portsmouth, N. H., July 6; a general provincial meeting at Charleston, S. C., July 6, 7, and 8; a district meeting at Wilmington, N. C., July 21. Within the space of sixty-four days twelve of the thirteen colonies spoke out in favor of a general Congress, Georgia alone remaining silent. The resolution of the Massachusetts Assembly declared that "a meeting of committees from the several colonies on the continent is highly expedient and necessary to consult upon the present state of the country, and the miseries to which we are and must be reduced by the operation of certain acts of Parliament; and to deliberate and determine on wise and proper measures to be recommended to all the other colonies for the recovery and re-establishment of our just rights and liberties, civil and religious, and the restoration of union and harmony between Great Britain and America, which is most ardently desired by all good men." The committee of New York having requested the patriots of Massachusetts to name a day and place for the meeting of the Congress, the 1st of September was appointed the time and Philadelphia the place designated.

**Continental Congress (1777), FLIGHT OF THE.** After the battle of the Brandywine (which see), the necessity for abandoning Philadelphia was perceived. The Congress, which had returned to Philadelphia at the beginning of March (1777), from their exile in Baltimore, now resolved (Sept. 14) to adjourn to Lancaster. After the ordinary adjournment on Thursday, Sept. 18, the president received a letter from Colonel Hamilton, of Washington's staff, which intimated the necessity of removing the Congress immediately from Philadelphia. The members left at once, and reassembled at Lancaster. The public papers had already been removed to Lancaster under the charge of Abraham Clark, one of the members, in wagons guarded by troops. Regarding Lancaster as too much exposed, the Congress adjourned to York, on the other side of the Susquehanna River, on the 27th, where they met on Tuesday, Sept. 30, and continued the sessions there until after Philadelphia was evacuated by the British, June 18, 1778.

**Continental Congress, SESSIONS OF THE,** were commenced at the following times and places: Sept. 5, 1774, Philadelphia; May 10, 1775, ditto; Dec. 20, 1776, Baltimore; March 4, 1777, Philadelphia; Sept. 27, 1777, Lancaster, Penn.; Sept. 30, 1777, York, Penn.; July 2, 1778, Philadelphia; June 30, 1783, Princeton, N. J.; Nov. 26, 1783, Annapolis, Md.; Nov. 1, 1784, Trenton, N. J.; Jan. 11, 1785, New York. This continued to be the place of meeting from that time until the adoption of the Constitution of

the United States in 1788. From 1781 to 1788 Congress met annually on the first Mouday in November, which time was fixed by the Articles of Confederation (which see).

**Continental Congress, SETTLEMENT OF THE ACCOUNTS OF THE.** The extent and intensity of the struggle of the Continental Congress during the fifteen years of its existence to maintain its financial credit and carry on the war may never be known. Enough is known to prove that it involved great personal sacrifices, much financial ability, unwearied patriotism, and abounding faith in the cause and its ultimate triumph. As that Congress approached its demise, it addressed itself to a final settlement of its fiscal accounts. Since the adoption of the peace establishment, commencing with 1784, the liabilities incurred by the general government, including two instalments of the French debt, amounted to a little more than \$6,000,000, over one half of which had been met. Only \$1,800,000 of the balance had been paid in by the states; the remainder had been obtained by three Dutch loans, amounting in the whole to \$1,600,000, a fragment of which remained unexpended. The arrearage of nearly \$8,000,000 consisted of interest on the French debt, and two instalments of over-dues. This indebtedness was passed over to the new government. The accounts of the quartermaster, commissary, clothing, marine, and hospital departments were either settled or about to be settled. The accounts of many of the loan offices were unsettled. There seems to have been much laxity in their management. The papers of the first Virginia loan office were lost. In South Carolina and Georgia, the loan office proceeds had been appropriated to state uses, and from only five states had returns been made. Out of more than \$2,000,000 advanced to the Secret Committee for Foreign Affairs (which see), prior to August, 1777, a considerable part remained unaccounted for. The expenditure of full one third of the money borrowed abroad remained unexplained.

**Continental Congress, THE, BEFORE THE CONFEDERATION,** was a fluctuating body, it being a rare occurrence, after the first three or four years, that all the states were simultaneously represented. The number of members present did not generally exceed thirty, and these had to do a vast amount of business, much of it of an executive character, performed by committees. Unlike the Congress of our day, the time of the Congress was not wasted by long speeches, and the debates generally took the form of animated conversations. The members were paid by the states they represented. The president of the Congress was provided with a house at the public charge; so also were the expenses of his household paid. He was regarded as the representative of the sovereignty of the Union, and on that idea the ceremonial of his household was regulated. From the first Continental Congress (1774) until the ratification of the Articles of Confederation (March 1, 1781) the presidential chair had been filled by Peyton Randolph, John Hancock, Henry Laurens, and Samuel Huntington.

**Continental Congress, THE FIRST,** assembled in Carpenters' Hall, Philadelphia, on the 5th of September, 1774, when eleven of the English-American colonies were represented by forty-four delegates—namely, two from New Hampshire, four from Massachusetts, two from Rhode Island, three from Connecticut, five from New York, five from New Jersey, six from Pennsylvania,

CARPENTERS' HALL.

three from Delaware, three from Maryland, six from Virginia, and five from South Carolina. Three deputies from North Carolina appeared on the 14th. Peyton Randolph, of Virginia, was chosen president of the Congress, and Charles Thomson, of Pennsylvania, was appointed secretary. Other delegates appeared afterwards, making the whole number fifty-four. Each colony had appointed representatives without any rule as to number, and the grave question at once presented itself, How shall we vote? It was decided to vote by colonies, each colony to have one vote, for as yet there were no means for determining the relative population of each colony. Patrick Henry, in a speech at the opening of the business of the Congress, struck the key-note of union by saying, "British oppression has effaced the boundaries of the several colonies; the distinction between Virginians, Pennsylvanians, and New-Englanders is no more. *I am not a Virginian, but an American.*" This was the text of every speech afterwards. It was voted that the session of the Congress should be opened every morning with prayer, and the Rev. Jacob Duché, of the Protestant Episcopal Church, was employed as chaplain. There was much difference of opinion concerning the duties and powers of the Congress, Henry contending that an entirely new government must be founded; Jay, that they had not assembled to form a new government, but as a continental committee of conference, to try to correct abuses in the old. The members were unanimous in their resolves to support Massachusetts in resistance to the unconstitutional change in her charter. They appointed a committee to state the rights

of the colonists in general, the several instances in which those rights had been violated or infringed, and to suggest means for their restoration. Other committees for various duties were appointed, and at about the middle of September the Congress was a theatre of warm debates, which took a wide range. On the 20th of September they adopted a request for the colonies to abstain from commercial intercourse with Great Britain. (See *American Association*.) They tried to avoid the appearance of revolution while making bold propositions. Some were radical, some conservative, and some very timid. The tyranny of Gage in Boston produced much irritation in the Congress; and on the 8th of October, after a short but spicy debate, it passed the most important resolution of the session, in response to the Suffolk resolutions (which see), as follows: "That this

hemispheres. The state papers they put forth commanded the admiration of the leading statesmen of Europe. The king and his ministers were highly offended; and early in January Lord Dartmouth issued a circular letter to all the royal governors in America signifying his majesty's pleasure that they should prevent the appointment of deputies to another Continental Congress within their respective governments, and exhort all persons to desist from such proceedings. The members of the first Continental Congress were cautious concerning the assumption of direct political authority. They had met as a Continental committee of conference. Even the American Association (which see), the nearest approach to it, was opposed by Galloway of Pennsylvania, Duane of New York, and all the South Carolina delegation but two.

ROOM IN WHICH CONGRESS MET IN CARPENTERS' HALL

**Continental Congress, THE SECOND**, met in Philadelphia May 10, 1775. Peyton Randolph was chosen president; Charles Thomson, secretary; Andrew McNeare, door-keeper, and William Shed, messenger. To this Congress all eyes were anxiously turned. Randolph was soon called to Virginia to attend a session of the Assembly as speaker, when his seat was temporarily filled by Thomas Jefferson, and his place as president by John Hancock. On the 25th of

Congress approve the opposition of the inhabitants of Massachusetts Bay to the execution of the late acts of Parliament; and if the same shall be attempted to be carried into execution by force, in such case all Americans ought to support them in their opposition." Thus the united colonies cast down the gauntlet of defiance. On the 14th the Congress adopted a *Declaration of Colonial Rights*. This was followed on the 20th by the adoption of *The American Association*, or general non-importation league. An *Address to the People of Great Britain*, written by John Jay, and a memorial *To the Inhabitants of the Several British-American Colonies*, from the pen of Richard Henry Lee, were adopted on the 21st. On the 26th—the last day of the session—a *Petition to the King* and an *Address to the Inhabitants of the Province of Quebec*, or Canada, both drawn by John Dickinson, were agreed to. A vote of thanks to the friends of the colonists in Parliament was sent to the colonial agents, with the petition to the king. Having already recommended the holding of another Continental Congress at Philadelphia on the 10th of May, 1775, this Congress adjourned in the afternoon of Oct. 26, 1774; and the next day the members started for home, impressed with the belief that war was inevitable. The actual sessions of the Congress occupied only thirty-one days. Their proceedings produced a profound sensation in both

May Georgia was represented in the Continental Congress for the first time, Lyman Hall having been elected special representative from the parish of St. Johns and admitted to a seat, but without a vote. In Committee of the Whole the Congress considered the state of the colonies. A full account of recent events in Massachusetts was laid before them; also a letter from the Congress of that province, asking advice as to the form of government to be adopted there, and requesting the Continental Congress to assume control of the army at Cambridge. (See *Continental Army, Formation of the*.) This second Congress was regarded by the colonists as no longer a committee of conference, but a provisional government. The first Congress claimed no political power, though their signatures to the American Association implied as much. The present Congress, strengthened by the public voice of the colonists, entered at once upon the exercise of comprehensive authority, in which the functions of supreme executive, legislative, and sometimes judicial powers were united. These powers had no fixed limits of action nor formal sanction, except the ready obedience of a large majority in all the colonies. The Committee of the Whole reported and the Congress resolved (May 26) that war had been commenced by Great Britain. The case had been formulated in Massachusetts in an epigram, as follows:

“THE QUARREL WITH AMERICA FAIRLY STATED.

Rudely forced to drink tea, Massachusetts in anger  
Spills the tea on John Bull—John falls on to bang her;  
Massachusetts, enraged, calls her neighbors to aid,  
And gives Master John a severe bastinado.  
Now, good men of the law, pray who is in fault,  
The one who hegao or resents the assant?”

The Congress denied any intention of casting off their allegiance, and expressed an anxious desire for peace; at the same time voted that the colonies ought to be put in a position of defence against any attempt to force them to submit to Parliamentary schemes of taxation. Another petition to the king was adopted; and it was resolved that no provisions ought to be furnished by the colonists to the British army or navy; that no bills of exchange drawn by British officers ought to be negotiated, and that no colonial ships ought to be employed in the transportation of British troops. Committees were appointed to prepare an address to the people of Great Britain and Ireland; also to the Assembly of Jamaica, and an appeal to the “oppressed inhabitants of Canada.” They also issued a proclamation (June 9) for a day (July 20) of general solemn fasting and prayer. They resolved that no obedience was due to the late act of Parliament for subverting the charter of Massachusetts, and advised the Congress of that province to organize a government in as near conformity to the charter as circumstances would admit. The Congress adopted the army at Cambridge as a Continental one; appointed a commander-in-chief (June 15), with four major-generals and eight brigadiers; arranged the rank and pay of officers, and perfected a preliminary organization of the army. They worked industriously in perfecting a national civil organization and for support of the military force, authorizing the issue of bills of credit to the amount of \$2,000,000, at the same time taking pains not to give mortal offence to the British government. But the inefficiency of the executive powers of Congress was continually apparent. The sagacious Franklin, seeing the fu-

Albany twenty-one years before. (See *Albany, Fourth Colonial Convention et.*) It was a virtual declaration of independence, but it was not acted upon at that time. (See *Articles of Confederation.*) The Congress also established a postal system (July 26, 1775) and appointed Dr. Franklin postmaster-general. It also established a general hospital, with Dr. Benjamin Church as chief director. The army before Boston and an expedition for the conquest of Canada engaged much of the attention of the Congress for the rest of the year.

**Continental Congress, WEAKNESS OF THE, AT FIRST.** The first Continental Congress that met in Philadelphia in September, 1774, was only a Committee of Conference from twelve colonies, and not invested with any legislative or executive authority. So with the second Congress that assembled in the same city in May, 1775. It had no civil or military power to legally execute its commands, nor the power to appoint one. “Nor was one soldier enlisted,” says Bancroft, “nor one officer commissioned in its name. They had no treasury; and neither authority to levy a tax or borrow money. Their members had been elected, in part at least, by tumultuary assemblies or bodies which had no recognized legal existence; they were intrusted with no powers but those of counsel; most of them were held back by explicit or implied instructions; and they represented nothing more solid than the unformed opinion of an unformed people. Yet they were encountered by the king’s refusal to act as a mediator, the decision of Parliament to enforce its authority, and the actual outbreak of civil war. The waters had risen, the old roads were obliterated, and they must strike out a new path for themselves and for the continent. The exigency demanded the instant formation of one great commonwealth and the declaration of independence. ‘They are in rebellion,’ said Edmund Burke, ‘and have done so much as to necessitate them to do a great deal more.’”

United States Lottery N. 47188  
CLASS the FIRST

T  
THIS TICKET entitles the Bearer to receive such Prize as may be drawn against its Number, according to a Resolution of CONGRESS, passed at Philadelphia, November 18, 1776. D. Jackson

LOTTERY TICKET.

tility of attempting to carry on the inevitable war with such a feeble instrument, submitted a basis of a form of confederation, similar in some respects to the one he proposed in convention at

**Continental Lottery, THE.** On Nov. 1, 1776, the Congress by resolution authorized the raising of a sum of money by lottery for “defraying the expenses of the next campaign.” A com-

mittee appointed to arrange a plan for the same reported a scheme on the 18th, which contemplated the issue of one hundred thousand tickets, each divided into four billets, and to be drawn in four classes. The total sum to be raised was \$5,000,000, in the form of a loan at four per cent. The drawer of more than a minimum prize in each class—\$20 in the first, \$30 in the second, \$40 in the third, and \$50 in the fourth—was to receive either a treasury note, payable in five years, or the pre-emption of such billets in the next succeeding class. Seven managers were appointed, who were authorized to employ agents in the several states to sell the tickets. The first drawing was appointed March 1, 1777, but purchasers of tickets had been so few that it was postponed from time to time. Various impediments appeared, and the plan that promised so much proved a failure. Many purchasers of tickets were losers; and this, like other financial schemes of that period, was productive of much hard feeling towards the Congress.

**Continental Navy, THE, AT THE CLOSE OF THE REVOLUTION.** The navy was almost annihilated at the close of the war. Of the thirteen frigates ordered to be built by Congress in 1775, two had been destroyed on the Hudson River and three on the Delaware, without getting to sea. The remaining eight, together with most of the purchased vessels, had been captured by the British, some at Charleston, some at Penobscot, and others on the high seas. The only American ship of the line ordered by Congress and finished (the *Alliance*) was presented in 1782 to the King of France, to supply the place of a similar vessel lost in Boston harbor by an accident. (See *Navy of the United States.*)

The second Congress met in Philadelphia May 10, 1775, and on that day, in secret session, the measure was agreed upon, but the resolution was not formed and adopted until June 22, the day on which news of the battle on Breed's Hill was received by the Congress. Then it was resolved "that a sum not exceeding two millions of Spanish milled dollars be emitted by the Congress in bills of credit for the defence of America," and that "the twelve confederated colonies [Georgia was not then represented] be pledged for the redemption of the bills of credit now directed to be emitted." Each colony was required to pay its proportion, in four annual payments, the first by the last of November, 1779, and the fourth by the last of November, 1782. A committee appointed for the occasion reported the following day the annexed resolution:

"Resolved, That the number and denomination of the bills be as follows:

49,000 bills of 8 dollars each.....	\$392,000
49,000 bills of 7 dollars each.....	343,000
49,000 bills of 6 dollars each.....	294,000
49,000 bills of 5 dollars each.....	245,000
49,000 bills of 4 dollars each.....	196,000
49,000 bills of 3 dollars each.....	147,000
49,000 bills of 2 dollars each.....	98,000
49,000 bills of 1 dollar each.....	49,000
11,800 bills of 20 dollars each.....	236,000
Total, 200,000	\$2,000,000

"Resolved, That the form of the bill be as follows:

CONTINENTAL CURRENCY.

No. \_\_\_\_\_ Dollars.

This Bill entitles the Bearer to receive \_\_\_\_\_ Spanish milled Dollars, or the value thereof in Gold or Silver, according to the resolutions of the CONGRESS, held at Philadelphia the 10th of May, A.D. 1775."

A committee was appointed to procure the plates and superintend the printing of the bills.

FAC-SIMILE OF THE CONTINENTAL BILLS.

**Continental Paper-money.** The issue of paper-money or bills of credit, not only by the several colonies, but by the Continental Congress, became a necessity when the war began in 1775.

The plates were engraved by Paul Revere, of Boston. The paper was so thick that the British called it "the pasteboard currency of the rebels." The size of the bills averaged about

three and a half by two and three quarter inches, having a border composed partly of repetitions of the words "CONTINENTAL CURRENCY." On the face of each bill was a device (a separate one for each denomination) significant in design and legend; for example, within a circle a design representing a hand planting a tree, and the legend "POSTERITATE"—for posterity. The lesson to be conveyed was, that the struggle in which the colonists were engaged, in the planting of a new and free nation, would be for the benefit of posterity. Twenty-eight gentlemen were appointed to sign these

ning of the depreciation of the Continental bills of credit caused a convention of the representatives of the New England States, held at Providence, R. I., to consult about the defence of that state, then invaded. They agreed upon a scheme for regulating by law the prices of labor, produce, manufactured articles, and imported goods. It was strenuously opposed by the merchants, but it was presently enacted into a law by the New England States. The Congress resolved that these bills "ought to pass current in all payments, trade, and dealings, and be deemed equal in value to the same

nominal sum in Spanish dollars." It was resolved that all persons refusing to take them ought to be considered "enemies of the United States," on whom "forfeitures and other penalties" ought to be inflicted by the local authorities. The states were called upon to make the bills a legal tender, and they were advised to avoid the further issue of local bills of credit. The Congress approved (Feb. 15, 1777) the action of the New England convention concerning the regulation of prices, and soon afterwards a convention for the Middle States, in which New York, New Jersey, Delaware, Pennsylvania, Maryland, and Virginia were represented, met at York, Penn., and

COUNTERFEIT CONTINENTAL BILL.

bills. New issues were made at various times until the close of 1779, when the aggregate amount was \$242,000,000. Then the bills had so much depreciated that \$100 in specie would purchase \$2600 in paper currency. (See *Depreciation of Continental Paper-money.*) Laws, penalties, entreaties, could not sustain its credit. It had performed a great work in enabling the colonists, without taxes the first three years of the war, to fight and baffle one of the most powerful nations of Europe. And the total loss to the people, by depreciation and failure of redemption, of \$200,000,000, operated as a tax, for that depreciation was gradual. Continental bills of credit are now very rare—only in the collections of antiquaries. Counterfeits of the bills were sent out of New York by the British by the cartload, and put into circulation. The following appeared in *Rivington's Gazette*:

"ADVERTISEMENT.—Persons going into other colonies may be supplied with any number of counterfeit Congress notes for the price of the paper per ream. They are so neatly and exactly executed that there is no risk in getting them off, it being almost impossible to discover that they are not genuine. This has been proven by bills to a very large amount which have already been successfully circulated. Inquire of Q. E. D., at the Coffee-house, from 11 A.M. to 4 P.M., during the present month."

**Continental Paper-money, EFFORTS TO SUSTAIN THE.** Early in January, 1777, the begin-

ning of the depreciation of the Continental bills of credit caused a convention of the representatives of the New England States, held at Providence, R. I., to consult about the defence of that state, then invaded. They agreed upon a scheme for regulating by law the prices of labor, produce, manufactured articles, and imported goods. It was strenuously opposed by the merchants, but it was presently enacted into a law by the New England States. The Congress resolved that these bills "ought to pass current in all payments, trade, and dealings, and be deemed equal in value to the same

nominal sum in Spanish dollars." It was resolved that all persons refusing to take them ought to be considered "enemies of the United States," on whom "forfeitures and other penalties" ought to be inflicted by the local authorities. The states were called upon to make the bills a legal tender, and they were advised to avoid the further issue of local bills of credit. The Congress approved (Feb. 15, 1777) the action of the New England convention concerning the regulation of prices, and soon afterwards a convention for the Middle States, in which New York, New Jersey, Delaware, Pennsylvania, Maryland, and Virginia were represented, met at York, Penn., and

agreed upon a scale of prices. This impracticable scheme was soon abandoned.

**Continental Soldiers, LAST SURVIVORS OF THE.** Lemuel Cook, of New York, and William Hutchings, of Maine, who both died in May,

LEMUEL COOK.

1866, were the last survivors of the Continental soldiers. Lemuel Cook was born at Plymouth, Litchfield Co., Conn., in 1764; died at Clar-

endon, Orleans Co., N. Y., May 20, 1866, at the age of one hundred and two years. He entered the military service of his country in the spring of 1781, and was with the allied armies in the campaign against Cornwallis in Virginia. He was then about seventeen years of age, and was one of the regulars. He enlisted in the Second Light Dragoons, Colonel Sheldon, but was mustered into Captain Stannton's company of infantry, and continued in that company until June, 1783. At the termination of the war that year he was discharged, at Danbury, Conn., which discharge, signed by Washington, he retained until his death. At the close of the war he married Hannah Curtis, of Cheshire, Conn., by whom he had eleven children—seven sons and four daughters. He married a second wife when he was seventy years old. In his earlier married years he lived in the almost wilderness region of Utica, N. Y., and afterwards returned to Connecticut, where most of his children were born. With his young family he moved into Central New York, and had lived at Clarendon for about thirty years previous to his death. He was a farmer all his life, and his pension was his chief means of support the latter part of it. His pension was for many years \$100 a year. It was increased in 1863 to \$200, and the last year of his life it was \$300. (See *Hutchings, William.*)

**Continental Treasurers.** On the 29th of July, 1775, the Congress, having issued bills of credit to the amount of \$2,000,000, appointed Michael Hillegas and George Clymer, of Philadelphia, joint treasurers of the United Colonies. They were required to give bonds, with sureties, for the faithful performance of their duties, in the sum of \$100,000, to the president and other members of the Continental Congress named, in trust for the colonies. They recommended the Provincial Assemblies to each choose a treasurer for their respective colonies.

**"Contrabands."** On the day after his arrival at Fortress Monroe, General Butler sent out Colonel Phelps, of the Vermont troops, to reconnoitre the vicinity of Hampton. The citizens had just fired the bridge. The flames were extinguished by the troops, who crossed the stream, drove armed insurgents out of Hampton, and found the inhabitants in sullen mood; but the negroes were jubilant, regarding the Union troops as their expected deliverers. In the confusion caused by this dash into Hampton, three negroes, held as slaves by Colonel Mallory, of that village, escaped into the Union lines, and declared that many of their race, who were employed in building fortifications for the insurgents, desired to follow. They were taken before General Butler. He needed laborers in field-works which he was about to construct. Regarding these slaves, according to the *laws of Virginia*, as much the property of Colonel Mallory as his horses or his pistols, and as properly seizable as they, as aids in warfare, and which might be used against the National troops, "These men are contraband of war," said Butler; "set them at work." This order was scarcely announced, before Major Carey, as agent of

Colonel Mallory, and "in charge of his property," appeared, wishing to know what the general intended to do with the runaways. "I shall detain them as contraband of war," said the general; and they were held as such. Other slaves speedily came in. General Butler wrote to the Secretary of War, telling him what he had done, on the assumption that they were the property of an enemy of the Republic used in warfare, and asking instructions. His course was approved by his government; and thenceforward all fugitive slaves were considered "contraband of war," and treated as such. That masterly stroke of policy was one of the most effective aimed at the heart of the insurrection; and throughout the war the fugitive slave was known as the "contraband." So emancipation began.

**Contrast, A.** During the siege of Boston by Washington and the Continental army, in the summer of 1775, the British officers were annoyed by the distribution of handbills in their camp, sent in by American sentinels, calculated to seduce the soldiers. After the battle on Bunker's (Breed's) Hill, the principal encampment of the Americans was on Prospect Hill; that of the British, out of Boston, on Bunker's Hill. One of the handbills alluded to contained the following contrast:

Prospect Hill.	Bunker's Hill.
1. Seven dollars a month.	1. Threepence a day.
2. Fresh provisions in plenty.	2. Rotten salt pork.
3. Health.	3. The scurvy.
4. Freedom, ease, affluence, and a good farm.	4. Slavery, beggary, and want.

**Contreras, BATTLE OF.** General Scott resumed his march from Puebla (which see) for the city of Mexico Aug. 7, 1847. The road lay mostly along the line of the march of Cortez, more than three hundred years before. From the lofty summits of the mountains the American army could look down into the magnificent Valley of Mexico and see the capital in the distance. Down into that valley the army cautiously moved, for resistance was expected at the mountain passes. General Twiggs, with his division, led the way; and on Aug. 11 encamped at St. Augustine, with the strong fortress of San Antonio before him. Close upon his right were the heights of Churubusco, crowned with fortifications finished and unfinished, and manned by several thousand Mexicans; and not far off was the strongly fortified camp of Contreras, on a rugged height, containing between 6000 and 7000 men under General Valencia. In the rear of it was Santa Ana with 12,000 men as a reserve. In the afternoon of Aug. 19, Generals Twiggs and Pillow, assisted by Generals Persifer F. Smith and Cadwallader, attacked the camp of Contreras, and a sharp conflict ensued, with almost continual skirmishing around. This indecisive conflict continued about six hours. At the moment when some Mexican cavalry were preparing for a charge, General Scott arrived at the scene of conflict, and ordered up General Shields with reinforcements. The Mexicans everywhere fought bravely and desperately. When night fell, the wearied Americans lay down and slept in the ravines and among the

rocks on the verge of the battle-field, expecting to renew the contest in the morning. Generals Scott and Worth started early the next morning (Aug. 20) from St. Augustine for Contreras, and were met on the way by a courier with the good news that the enemy's camp was captured. The battle had been begun at sunrise by Smith's division. While Generals Shields and Pierce had kept Santa Aña's reserve at bay, Smith's troops had marched towards the works in the darkness and gained a position, unobserved, behind the crest of a hill near the Mexican works. Springing up suddenly from their hiding-place, they delivered deadly volleys in quick succession; dashed pell-mell into the intrenchments; captured the batteries at the point of the bayonet; drove out the army of Valencia; and pursued its flying remnants towards the city of Mexico. The contest, which had lasted only seventeen minutes, was fought by 4500 Americans, against 7000 Mexicans. The trophies of victory were 80 officers and 3000 Mexican troops made prisoners, and 33 pieces of artillery. (See *Mexico, War with.*)

**Convention between the Governor and Assembly of Pennsylvania.** In January, 1757, the Assembly of Pennsylvania passed a bill granting for his majesty's service £100,000, by a tax on all the estates, real and personal, "taxable," within the province. The governor (Deniy) refused to sanction it, because it would heavily tax the proprietaries of the province. He asked them to frame a bill providing supplies for the public service, such as he could, "consistent with his honor and his engagements to the proprietaries," subscribe. The Assembly remonstrated, saying they had framed the bill consistent with their rights as an "English representative body," and, in the name of their sovereign, "and in behalf of the distressed people whom they represented" unanimously demanded of the governor that he would give his assent to the bill they had passed. As it was a money bill, they demanded that it should not be altered or amended, "any instructions whatsoever from the proprietaries notwithstanding," as he would "answer to the crown for all the consequences of his refusal at his peril." The governor persisted in his refusal, grounded upon parliamentary usage in England, and the supposed hardship of taxing the unimproved land of the proprietaries. As the governor would not sign a bill that did not exempt the estates of the proprietaries from taxation, the Assembly sent Benjamin Franklin, as the agent of the province, to petition the king for redress. This was the beginning of protracted disputes between the representatives of the people of Pennsylvania and the agents of the proprietaries. (See *Proprietary Innovations in Pennsylvania.*)

**Convention between France and Spain.** On the evening of April 12, 1779, the representatives of France and Spain signed a convention for an invasion of England, in which the Americans were considered and concerned. By its terms France bound herself to undertake the invasion of Great Britain and Ireland; and if the British could be driven from Newfoundland, the

fisheries were to be shared with Spain. France promised to use every effort to recover for Spain Minorca, Pensacola, and Mobile, the Bay of Honduras, and the coast of Campeachy; and the two courts agreed not to grant peace nor truce, nor suspension of hostilities, until Gibraltar should be restored to Spain. Spain was left free to exact from the United States, as the price of her friendship, a renunciation of every part of the basin of the St. Lawrence and the Lakes, of the navigation of the Mississippi, and of all the territory between that river and the Alleghany Mountains. This modification of the Treaty of France with the United States gave the latter the right to make peace whenever Great Britain should recognize their independence. So these two Bourbon dynasties plotted to exclude the Americans from a region essential to them as members of an independent republic. But a new power appeared in the West to frustrate their designs, which was prefigured by an expedition under a hardy son of Virginia. (See *Clarke, George Rogers.*)

**Convention in Massachusetts (1768).** When it was known that British troops had been ordered to Boston, a town meeting was held and a request sent to Governor Bernard to convene the Provincial Assembly. He refused, and a convention of delegates from all the towns in the province was provided for. Delegates from more than one hundred towns met (Sept. 22) at Boston, ostensibly "in consequence of prevailing apprehensions of a war with France." This was a mere pretext. They ordered all persons not already in possession of fire-arms to procure them at once; and they appointed a day of fasting and prayer to be observed by all congregational societies. The convention petitioned the governor to summon a general court. He refused to receive the petition, and denounced the convention as treasonable. They proceeded cautiously. All pretensions to political authority were expressly disclaimed. They prepared and adopted a petition to the king, and a letter to De Berdt, agent for the provinces in England, charging him to defend the colony against accusations of sedition or a rebellious spirit. Such was the beginning of the system of conventions which, in a few years, assumed the whole political authority of the colonies. The convention adjourned after a four days' session, and the day after the adjournment troops from Halifax arrived.

**Convention Troops.** (See *Surrender of Burgoyne.*) The vanquished troops made prisoners to the Americans by a convention for the surrender of them, made by Gates and Burgoyne, were marched through New England to Cambridge, near Boston, to be embarked for Europe. The Congress had ratified the agreement of Gates that they should depart, on giving their parole not to serve again in arms against the Americans. Circumstances soon occurred that convinced Washington that Burgoyne and his troops intended to violate the agreement at the first opportunity, and it was resolved by the Congress not to allow them to leave the con-

try until the British government should ratify the terms of the capitulation. Here was a dilemma. That government would not recognize the authority of the Congress as a lawful body; so the troops were allowed to remain in idleness in America four or five years. Burgoyne, alone, was allowed to go home on his parole. The British ministry charged the Congress with absolute perfidy; the latter retorted, and justified their acts by charging the ministry with *meditated* perfidy. Owing to the difficulty of finding an adequate supply of food for the captive troops in New England, the Congress finally determined to send them to Virginia. Commissioners sent over, in the spring of 1778, to tender a scheme of reconciliation, offered a ratification of the convention, signed by themselves; but Congress would recognize no authority inferior to the British ministry for such an act. Finally, in pursuance of a resolution of Congress (Oct. 15, 1778), the whole body of the captives (4000 in number), English and German, after the officers had signed a parole of honor respecting their

either by exchange or desertion. Many of the Germans remained in America.

**Convention with Great Britain (1818).** The commission under the Treaty of Ghent (which see) to determine the ownership of the islands in Passamaquoddy Bay had agreed to confirm the possession of them as it existed before the war; the running of the boundary-line through the St. Lawrence and the Lakes had been nearly completed; but the commission on the north-east boundary had not yet been able to arrive at any conclusion, when a new convention decided (Oct. 20, 1818) that the forty-ninth degree of north latitude should be the boundary between the United States and the British possessions from the Lake of the Woods to the Rocky Mountains. The territory west of these mountains (now Oregon) was to remain in the joint occupation of both parties for ten years; in other words, the British Fur Company, which alone had any establishments in that remote region, was not to be disturbed for that period. The commercial convention of 1815 (see *Treaty of*

VIEW OF THE ENCAMPMENT OF THE CONVENTION TROOPS. (From a picture in Anburey's Travels.)

conduct on the way, took up their line of march, early in November, for Charlottesville, in Virginia, under the command of Major-general Phillips. Colonel Theodoric Bland was appointed by Washington to superintend the march. It was a dreary winter's journey of seven hundred miles through New England, New York, New Jersey, Pennsylvania, Maryland, and Virginia. The routes of the two nationalities were sometimes distant from each other, and sometimes the same, until they reached Valley Forge, when they went in the same line until they had crossed the Potomac River. They remained in Virginia until October, 1780, when the danger that the captives might rise upon and overpower their guard caused the British to be removed to Fort Frederick, in Maryland, and the Germans to Winchester, in the Shenandoah Valley. Deaths, desertion, and partial exchanges had then reduced their number to about 2100. Afterwards they were removed to Lancaster, in Pennsylvania, and some to East Windsor, Conn. In the course of 1782 they were all dispersed,

*Peace*) was to continue in force for the same period. The loud complaints of the fishing interest in New England, on account of the British construction of the effects of the late war upon the treaty of 1783, were considered. Concessions were made. Those rights were restored so far as related to the north and east coasts of the Gulf of St. Lawrence, the coast of Labrador, and the Magdalene Islands; but off the coasts of New Brunswick and Nova Scotia, in the Bay of Fundy, and on the western and southern portions of the Gulf of St. Lawrence, American vessels were not to fish within three miles of the shore. As the two governments could not agree upon the interpretation of the article of the Treaty of Ghent concerning slaves carried away, under which a large amount was claimed in the way of indemnity, it was referred to a third power—Russia.

**Conway, THOMAS** (Comte de), was born in Ireland, Feb. 27, 1733; died about 1800. He was taken to France when he was six years old, was educated there, attained the military rank of

colonel, came to America in 1777, and entered the Continental army as brigadier-general. He was engaged in the conspiracy with Gates and others to supplant Washington as commander-in-chief, and, when discovered, he left the service and returned to France. (See *Conway's Cabal*.) In 1784 Conway was made a field-marshal, and appointed governor of all the French settlements in the East Indies. When the French Revolution broke out he was compelled to flee from France.

**Conway's Cabal.** (See *Conspiracy against Washington*.)

**Cook, LEMUEL.** See *Continental Soldiers, Last Survivors of the*, and *William Hutchings*.)

**Cooke, PHILIP ST. GEORGE,** was born in Berkeley County, Va., in 1809, and graduated at West Point in 1827. He served in the war against Mexico, and late in 1861 was made brigadier-general of volunteers. He had seen much service in wars with the Indians, commanded in Kansas during the troubles there, and took part in the Utah expedition in 1858. He commanded all the regular cavalry of the Army of the Potomac, and was distinguished in the campaign on the Peninsula in 1862.

**Cool Arbor, BATTLE OF.** The Army of the Potomac and a large part of the Army of the James formed a junction near Cool Arbor on a part of the old battle-ground of McClellan and Lee the year before. General W. F. Smith and sixteen thousand men of the Army of the James had been taken in transports from Bermuda Hundred around to the White House, whence they had marched towards the Chickahominy. Sheridan had seized the point at Cool Arbor, and the Nationals took a position extending from beyond the Hanover Road to Elder Swamp Creek, not far from the Chickahominy. Burnside's corps composed the right of the line, Warren's and Wright's the centre, and Hancock's the left. The Confederate line, reinforced by troops under Breckinridge, occupied a line in front of the Nationals—Ewell's corps on the left, Longstreet's in the centre, and A. P. Hill's on the right. On the morning of June 1, 1862, Hoke's division attempted to retake Cool Arbor. It was repulsed, but was reinforced by McLaws's division. Wright's Sixth corps came up in time to meet this new danger; and Smith's troops, from the Army of the James, after a march of twenty-five miles, came up and took post on the right of the Sixth, then in front of Cool Arbor, on the road leading to Gaines's Mills (which see). Between the two armies was a broad, open, undulating field and a thin line of woods. Over this field the Nationals advanced to the attack at four o'clock P.M. The veterans of Smith soon captured the first line of rifle-pits and six hundred men. Their attack on the second line was a failure, and with darkness the struggle ceased, the Nationals having lost two thousand men. They held the ground, and bivouacked on the battle-field. During the night the Confederates made desperate but unsuccessful efforts to retake the rifle-pits. General Grant

had ordered a redistribution of his army, making Hancock form the right, to the right of Wright's corps. Burnside was withdrawn entirely from the front and placed on the right and rear of Warren, who connected with Smith. Having made these dispositions on the 2d, it was determined to force the passage of the Chickahominy the next morning, and compel Lee to seek safety in the fortifications around Richmond. The Nationals moved at four o'clock on the morning of the 3d. Wilson's cavalry was on the right flank, and Sheridan's held the lower crossings of the river, and covered the roads to the White House. Orders had been given for a general assault along the whole line. At half-past four, or a little later, the signal for the advance was given, and then opened one of the most sanguinary battles of the war. It was begun on the right by the divisions of Barlow and Gibbon, of Hancock's corps, supported by Birney's. Barlow drove the Confederates from a strong position in front of their works, and captured several hundred men and three guns, when the Confederates rallied and retook the position. General Gibbon, who charged at the same time, was checked by a marsh of the Chickahominy which partly separated and weakened his command, and part of them gained the Confederate works, but could not hold them. There was a severe struggle, and in the assaults Hancock lost three thousand men. The other divisions of the army were hotly engaged at the same time. The battle was "sharp, quick, and decisive." The Nationals were repulsed at nearly every point with great slaughter. It was estimated that within the space of twenty minutes after the struggle began ten thousand Union soldiers lay dead or wounded on the field, while the Confederates, sheltered by their works, had not lost more than one thousand. And so, at one o'clock in the afternoon of June 3, 1864, the battle of Cool Arbor ended. It was one of the most sanguinary struggles of the great Civil War. The Nationals had a fearful loss of life, but firmly held their position, with all their munitions of war. Their loss in this engagement, and in the immediate vicinity of Cool Arbor, was reported at 13,153, of whom 1705 were killed and 2406 were missing. Immediately after the battle Sheridan was sent to destroy the railways in Lee's rear, and so make Washington more secure. This task he effectually performed, fighting much of the time. Grant now resolved to transfer his army to the south side of the James River.

**Cooper, JAMES FENIMORE,** novelist, was born at Burlington, N. J., Sept. 15, 1789; died at Cooperstown, N. Y., Sept. 14, 1851. He studied at Yale College, but did not graduate. He was six years in the naval service, and in 1811 he married Miss De Lancey, of Westchester County, N. Y. Choosing literature as a profession, he took the path of romance, and wrote and published in the course of his life thirty-two volumes of fiction, the most famous of which were his *Leather-stocking Tales*. He wrote a *History of the United States Navy*, in two volumes; *Lives of American Naval Officers*; *Battle of Lake Erie*;

*Gleanings in Europe; Sketches of Switzerland; and a comedy.*

JAMES FENIMORE COOPER.

Cooper, MILES, LL.D., was born in England in 1735; died in Edinburgh, May 1, 1785. He graduated at Oxford University in 1761, and came to America the next year, sent by Archbishop Secker as an assistant to Dr. Samuel Johnson, President of King's (now Columbia) College. He succeeded Johnson as president in 1763. He was an active Tory when the Revolution broke out, and was reputed one of the authors, if not the author, of a tract entitled, *A Friendly Address to all Reasonable Americans*. Alexander Hamilton was then a pupil in the college, seventeen years of age, and he answered the pamphlet with great ability. Cooper became very obnoxious to the Whigs, and a public letter, signed "Three Millions," warned him and his friends that their lives were in danger. On the night of May 10 a mob, led by "Sons of Liberty" (which see), after destroying or carrying away guns on the Battery, proceeded to drive him from the college. He succeeded in escaping to a British vessel, and sailed to England. He commemorated this stirring event by a poem printed in the *Gentleman's Magazine* in 1776.

Cooper, PETER, was born in New York city, Feb. 12, 1791. His life has been one of remarkable activity and enterprise. First, after leaving his father, who was a hatter, he engaged in learning coach-making, then cabinet-making, then in the grocery business, and finally, about 1828, he was in the manufacture of glue and isinglass. In 1830 he engaged quite extensively in iron-works at Canton, near Baltimore, and there he manufactured the first locomotive engine ever made in America, which worked successfully on the Baltimore and Ohio Railroad. Then he erected a rolling-mill and iron-mill in the city of New York, in which he first successfully used anthracite coal in puddling iron. In 1845 he removed the machinery to Trenton, N.J., where he erected the largest rolling-mill then in the United States for manufacturing railroad iron. There were rolled the first wrought-iron beams for fire-proof buildings. He became an alderman in the city of New York about 1840. Prospering greatly in business, fully a quarter of a century ago Mr. Cooper conceived the idea

of establishing in New York a free institute, something after the Polytechnic Institute in Paris. He erected a building, and endowed art-schools and other means for fitting young men and young women of the working-classes for business, at a cost of between \$600,000 and \$700,000, and presented the "Cooper Institute" to the city in 1858. In the spring of 1854 he was one of five gentlemen who met in the house of Cyrus W. Field and formed the "New York, Newfoundland, and London Telegraph Company" (see *Atlantic Telegraph*), and the first cable was laid partly under Mr. Cooper's supervision. He did everything in his power to aid the Union cause in the late Civil War. An outspoken advocate of paper currency to be issued by the national government, he was urged to become a candidate for the Presidency by friends of that financial system. He refused at first, but finally consented, though without any idea of being elected. In the campaign that followed he expended more than \$25,000 in aid of the cause. Mr. Cooper died April 4, 1883.

PETER COOPER.

Copley, JOHN SINGLETON, artist, was born in Boston, July 3, 1737; died in London, Sept. 9, 1813. He was a self-taught artist. He had become an eminent portrait-painter, when in 1774 he went to Rome, and late in 1775 went from there to London, with the intention of settling in that city, where he was joined by his wife and children from his native country. There he devoted himself to portrait-painting, was introduced to West, and his name became so famous as an historical painter that the honorable addition of R.A. was given to it in 1783. His "Death of the Earl of Chatham" was his first historical painting of much pretension, and gave him great fame in England. It was followed by others which increased his reputation; and he left unfinished a picture on the subject of Nelson's death at Trafalgar. His last painting was a portrait of his son, Lord Lyndhurst. His wife was daughter of Richard Clarke, a loyalist of Boston, and one of the consignees of the tea that was destroyed there; and the willingness of his family to leave America on account of political changes, doubtless formed a powerful cause why

Copley determined to make England his permanent home.

**Copper-Mines.** There are evidences that copper-mines were worked in our country by the Mound-builders (which see). The first copper-mines worked in the United States were chiefly in New Jersey and Connecticut. From 1709 until the middle of the last century, a mine at Simsbury, Conn., yielded much ore, when, for about sixty years, the mine was a state prison. The Lake Superior copper-mines (the most considerable in our country) were first-worked, in modern times, in 1845, when traces of ancient mining were found near the Outouagon River. In making excavations, a mass of copper, supported upon blocks of wood, with charred wood under it, was found twenty feet below the surface. When taken out, in 1848, it weighed eight tons. The Jesuit missionaries had noticed copper ore in that region so early as the middle of the seventeenth century, and the Indians revered as sacred large pieces of the ore. One mine (the Calumet and Hecla) yielded in 1872 the enormous amount of eight thousand tons of pure copper, or almost one tenth of the entire product of the globe at that time.

**Copperheads.** A nickname given to a political faction in the free-labor states during the American Civil War, which was generally considered to be in secret sympathy with the enemies of the Republic, and gave them aid and comfort by trying to thwart the measures of the national government. The name is derived from a poisonous serpent called Copperhead, whose bite is as deadly as that of the rattlesnake, but, unlike the latter, gives no warning of its intended attack, and is therefore typical of a concealed foe.

**Copyright Law, THE.** On April 5, 1789, Dr. David Ramsay, of South Carolina, sent a petition to Congress, setting forth that he was the author of two books—a *History of South Carolina* and a *History of the American Revolution*—and praying that body to pass a law giving him and his legal successors the exclusive right to vend and dispose of those works in the United States for a term of years. A general bill to that effect was passed in 1790; and afterwards other bills were passed, incorporating with the copyright bill another for securing patents for mechanical inventions. The term of a copyright was then fixed at fourteen years for books already published, and the same term for unpublished books, with the privilege of a renewal for fourteen years longer. In 1831 a general copyright law was passed, granting copyright for twenty-eight years, and providing for a renewal for fourteen years. In 1856 a law was passed giving to the authors of dramatic compositions the exclusive right of publicly representing them, or causing them to be represented. In 1870 all copyright statutes were repealed by a general copyright law yet (1880) in force, which permits any citizen or resident of the United States who shall be the "author, inventor, designer, or proprietor of any book, map, chart, dramatic or musical composition, engraving, cut,

print, or photograph or negative thereof, or a painting, drawing, chromo, statue or statuary, and of models and designs intended to be perfected as works of the fine arts, to secure a copyright thereof for twenty-eight years, with the privilege of a renewal for himself, his widow, or children, for fourteen years more." Copyright certificates are issued solely by the Librarian of Congress. A copy of the title of a book, or description of a picture, must be deposited with him before the publication thereof; and two copies of a book or picture (the latter by photograph) must be sent to such librarian within ten days after publication. A copy of every new edition must be sent to the librarian. A failure to comply with these conditions is punishable by a fine of \$25.

**Coquetting with the British.** In July, 1780, the mysterious movements of Governor Chittenden, Ethan and Ira Allen, and other leaders in Vermont, excited grave suspicions of their loyalty, because of their secret correspondence with the British. In June the Congress had appointed a committee to visit Vermont, and had declared their disapprobation of the proceedings of the people of that state in setting up an independent government before a decision of Congress should be made concerning their right to separate. The governor of New York suspected a combination against his state, and intimated, in a letter to a member of Congress, that New York might be compelled to use all her resources for the defence of that state. He also called the attention of Washington to the subject; and he especially condemned the conduct of Ethan Allen, whose motives he suspected. General Schuyler, who had been ordered by Washington to arrest Allen, wrote to Governor Chittou at the close of October, saying, "The conduct of some of the people to the eastward is alarmingly mysterious. A flag, under pretext of settling a cartel with Vermont, has been on the Grants. Allen has disbanded his militia, and the enemy, in number upwards of sixteen hundred, are rapidly advancing towards us. . . . Entreat General Washington for more Continental troops; and let me beg of your excellency to hasten up here." There was general alarm concerning the perplexing movements of the Vermonters, which, in the light of subsequent history, was only a piece of coquetry for their benefit. The shrewd diplomats of Vermont were working for a twofold object: namely, to keep back the British from a threatened invasion by a show of friendly feeling, and to so alarm the Congress as to induce them to admit Vermont as a state of the Union. (See *Vermont a Sovereign State*.)

**Corcoran, MICHAEL,** was born in Sligo, Ireland, Sept. 21, 1827; died near Fairfax Courthouse Dec. 22, 1863. He came to America in 1849, and first came into notice as colonel of the Sixty-ninth New York Regiment, when the President called for troops, in 1861. He hastened with his regiment to Washington, and was distinguished for gallantry in the battle of Bull's Run, where he was wounded and made prisoner, suffering confinement in Richmond, Charleston,

Columbia, and Salisbury, while kept for execution, in case the national government put to death the crews of Confederate privateers as pirates. (See *Savannah*.) He was exchanged, and made brigadier-general in 1862. He raised an "Irish Legion," served in Lower Virginia and Upper North Carolina, and checked the advance of the Confederates on Norfolk. He died of injuries received from a fall from his horse.

**Cordova, FRANCIS FERNANDEZ**, discoverer of Yucatan, a part of Mexico, in 1517. He sailed from Havana, Cuba, accompanied by one hundred men. In a battle with the natives, forty-seven of his men were killed, and he was wounded in twelve places. Hastening back to Cuba, he soon afterwards died of his wounds.

**Corees**, a small tribe of Algonquins on the coast of upper North Carolina. These and the Cheraws and other smaller tribes occupied lands once owned by the powerful Hatteras tribe. They were allies of the Tuscaroras in an attack upon the English in 1711, and were defeated; and they have since disappeared from the face of the earth, and their dialect has been forgotten.

**Corinth, BATTLE OF (1862)**. At Ripley, Miss., the troops of Price and Van Dorn were concentrated, forty thousand strong, after the battle at Iuka (which see), and at the close of September they moved on Corinth. They bivouacked within ten miles of Corinth on the night of Oct. 2. On the morning of the 3d Rosecrans was prepared to meet an attack. Hamilton's division formed his right, Davies' his centre, and McKean's his left, on the front of Corinth. A brigade, under Colonel Oliver, with a section of artillery, was then formed, while the cavalry watched every approach. Early in the morning (Oct. 3, 1862) the Confederate advance, under Colonel Lovell, encountered Oliver. The latter being hard pressed, General McArthur was sent to his support, but both were pushed back. To these both McKean and Davies sent help. Very soon afterwards the Confederates made a desperate charge, drove the Nationals, and captured two guns. The Confederates had resolved to capture Corinth, with its immense stores. They now pressed heavily on the National centre. Davies was pushed back, when Stanley sent Colonel Mower with a brigade to his assistance; and Hamilton was pressing through a thick mire on Lovell's left, when darkness fell, and the struggle ceased. The Confederates enveloped Rosecrans's front, and rested on their arms. Van Dorn believed he would have possession of Corinth before sunrise. He had sent a shout of triumph to Richmond by telegraph. The battle was resumed before the dawn. Both parties had prepared for it. The National batteries around Corinth were well-manned, and a new one, mounting five guns, had been constructed during the night. After a considerable cannonading, the Confederates, in heavy force, came out at a little past nine o'clock, advanced rapidly, and fell violently, in wedge-form, upon Davies, intending to break his line and rush into Corinth. The strug-

gle was very severe. Grape and canister shot made fearful laues through the Confederate ranks, yet they pressed on. Davies' forces gave way, but soon rallied. The Confederates captured Fort Powell on Davies' right, and full twenty men penetrated Corinth to the headquarters of Rosecrans, on the public square, which they captured. But the victorious Confederate column was soon pushed back, and Fort Powell was retaken by the Fifty-sixth Illinois. At the same time Hamilton's guns were making fearful havoc in the Confederate ranks. The latter soon fled to the woods. Meanwhile Lovell had fallen upon Fort Robinett and the adjacent lines, and a terrible battle ensued. The fort was stormed by a strong Confederate force, led by Colonel Rogers, of Texas. Within lay prone Colonel Fuller's Ohio brigade, who, aroused, delivered such a murderous fire that the assailants recoiled. In a moment they rallied, and again charged. The Eleventh Missouri and Twenty-seventh Ohio poured a terrific storm of bullets upon them, and at the command "Charge!" the Nationals swarmed over the parapet, and sent the assailants flying in confusion to the forest. By noon the battle at Corinth was ended, and the whole Confederate force was retreating southward, vigorously pursued. (See *Hatchee, Battle of the*.) The National loss in the battle at Corinth and in the pursuit was 2363, of whom 315 were killed. Of the Confederate loss there is no positive record. One of their historians (Pollard) admits a loss of 4500, and Rosecrans estimated it at 9363, of whom 1423 were killed and 2248 made prisoners. The Confederates had 38,000 men in the battle; the Nationals less than 20,000.

**Corinth, EVACUATION OF**. General Halleck arrived on the battle-ground of Shiloh (which see) from his headquarters at St. Louis on April 12, 1862, and, being Grant's superior in rank, took command of the National troops. Grant was preparing to pursue and strike Beauregard while his shattered army was weak; but Halleck restrained Grant, and twenty days after the victory he began a march against Beauregard at Corinth. On May 3d his advance, under General Sherman, was within six or seven miles of Beauregard's lines. His forces had been reorganized, with the title of the Grand Army of the Tennessee, and Grant was made his second in command. His whole force, approaching Corinth with great caution, numbered, with the accession of Buell's army, about one hundred and eight thousand men. Beauregard had been reinforced, by Van Dorn and Price, with Missouri and Arkansas troops, and by the command of General Mansfield Lovell, who had come up from New Orleans. For twenty-seven days the National troops were busy piling up fortifications in the approaches to Corinth, interrupted by frequent sorties from that town. Then the Confederates were driven from their advanced works (May 29), and Halleck prepared for a sanguinary conflict the next day. Although much strengthened, Beauregard was unwilling to risk a battle with the Grand Army of the Tennessee. All the night of May 29 the National sentinels had

heard, unreported, the incessant roar of moving railway-cars at Corinth; and at daybreak, just as Halleck went out skirmishers to "feel the enemy," the earth was shaken with a series of explosions, and dense columns of smoke arose above the town. There was no enemy to "feel;" Beauregard had evacuated Corinth during the night, burned and blown up whatever of stores he could not carry away, and fled in haste to Tupelo, many miles southward from Corinth, where he left General Bragg in command of the Confederate forces (now called the Army of the Mississippi), and repaired to Mineral Springs, in Alabama, for the restoration of his impaired health. Halleck took possession of Corinth, and was soon afterwards called to Washington, to perform the duties of general-in-chief of all the armies of the Republic. He left General Thomas in command at Corinth, and General Grant, of his old army, with enlarged powers.

**Corn a Legal Tender.** On Oct. 13, 1631, Indian corn was made, by act of the Court of Assistants (which see), a legal tender in payment of all debts in the Colony of Massachusetts Bay, at the usual rates for which it was sold, unless money or beaver was expressly named in the contract. At that time corn was worth \$2.20 a "strike" (four bushels), and beaver \$1.32 a pound. A milch cow was then valued at from \$125 to \$150.

**Cornbury, LORD** (Edward Hyde), misgoverned New York and New Jersey a few years, and died in London, April 1, 1723. He came to the province as governor in 1702, when he was Sir Edward Hyde, grandson of the first Earl of Clarendon, and nephew, by marriage, of James II. He was one of the officers of that monarch's household, and was the first to desert him and go over to the Prince of Orange, who became William III. of England. Grateful for this act, William made him governer of the united provinces of New York and New Jersey. He was cordially and generously received. The Assembly, which was largely "Leislerian" in its political composition (see *Bellomont*), and claimed Hyde as a friend, voted him a double salary, a disbursement of the expenses of his voyage, and a reversion of seven years. A public dinner was given him, and the freedom of the city in a gold box. His suite, the soldiers of the garrison, and all citizens unable to purchase their freedom, were made freemen, with rights of suffrage, trade, and of holding office. This generous reception was illy requited. In debt when he came, and rapacious and bigoted, he plundered the public treasury, involved himself in private debts, and opposed every effort on the part of the representatives of the people for the security of their rights and the growth of free institutions. When the yellow fever appeared in New York, in 1703, he retired to Jamaica, L. I., and the best house in the place happening to belong to the Presbyterian minister, he requested to have it vacated for his accommodation. Instead of returning it to the owner, he made it over to the Episcopal party. His conduct as ruler of New Jersey was equally reprehensible,

where there were three religious factions—Quakers, Episcopalians, and Presbyterians and Congregationalists—to either of which the governor seemed willing to sell himself. The Assembly adopted a pungent address, which was read to Cornbury by the speaker, in which he was directly accused, among other things, of being an extortioner and "the merchandise of faction." Finally, such representations went from both provinces to the Board of Trade that Queen Anne removed him (1708), though he was her cousin. Then his creditors threw him into prison, from which he was released by accession to the peerage on the death of his father, when he returned to England and became Earl of Clarendon. His official course here was distinguished for intolerance, licentiousness, dishonesty, and misrule.

**Cornell, EZRA**, founder of the Cornell University, gave for the establishment of that institution \$500,000. He subsequently gave more than two hundred acres of land, with buildings, as a site for the university and as a farm for the use of the institution. He also gave, besides, various donations to the amount of nearly \$120,000. (See *Cornell University*.) Mr. Cornell died at Ithaca, Dec. 9, 1874.

**Cornell University** is at Ithaca, N. Y. The buildings are on an eminence outside of the town, and nearly 400 feet above Cayuga Lake. It is an organic part of the educational system of the state, and is under the supervision of the regents; and, having accepted the bounty of Congress for the encouragement of agriculture, it is bound to teach such branches as are related to agriculture and the mechanical arts, including other scientific studies and military tactics. The faculty is composed of resident and non-resident professors, the latter chosen from among scholars of eminence in particular departments of learning. In addition to the ordinary collegiate course, there are special instructions given in the following studies: 1. Agriculture; 2. Architecture; 3. Chemistry and Physics; 4. Civil Engineering; 5. History and Political Science; 6. Ancient and Asiatic Languages; 7. Northern European Languages; 8. Southern European Languages; 9. Mathematics; 10. Mechanical Arts; 11. Military Science and Tactics; 12. Natural History; 13. Philosophy and Letters. The University has a large and rapidly increasing library.

**Corner-stone of the Confederacy.** Alexander H. Stephens, who was made Vice-President of the Southern Confederacy (February, 1861), assumed the character of expounder of the structure and principles of the new government. In a speech at Savannah, March 21, 1861, he declared that the immediate cause of the war was African slavery; that the fathers of the Republic erroneously believed it to be wrong in principle and practice; that the "new government" was founded upon exactly the opposite idea, and that its foundations were laid, its corner-stone rested, upon the great truth that *the negro is not equal to the white man*. "It is upon this truth," said Stephens, "the actual fabric of

our government is planted. I cannot permit myself to doubt the ultimate success of a full recognition of this principle throughout the civilized world."

**Cornplanter, THE**, an eminent Seneca chief, was born at Conewango, on the Genesee River; died at the Seneca Reservation, Penn., Feb. 17, 1836, aged about one hundred years. He was a half-breed, the son of an Indian trader named John O'Bail. He led Indian allies with the French against the English; was in the sharp battle of Monongahela in 1755; and, joining the British in the war of the Revolution, led destroyers of the settlements in New York and northern Pennsylvania. An inveterate foe of the Americans during the war, he was their firm friend afterwards. He was an earnest promoter of temperance among his people. In his later years he cultivated a farm on the Alleghany River.

**Cornwall County.** Andros, governor of New York in 1674, succeeded in establishing Dutch rule over the country between the Penobscot and the Kennebec. He built a fort there, and a few Dutch settlers established themselves on the coast. He named the district Cornwall County, as a part of the domain of New York.

**Cornwallis abandons the South.** After the battle at Guilford (which see), in which Cornwallis's army was terribly shattered, he hastened for the borders of the sea. At Wilmington, N. C., he was met by a party from Charleston, sent by his orders. He dared not attempt to move back into South Carolina, for the patriots there were fully aroused, and Greene was keenly watching his movements in North Carolina. So he resolved to abandon the Carolinas and penetrate into Virginia, at the same time writing to Germaine, who had given him his entire confidence, "I cannot help expressing my wish that the Chesapeake may become the seat of war, even, if necessary, at the expense of abandoning New York." Without waiting for an answer, he left Wilmington for Virginia, late in April, with 1435 men. In the vicinity of the Chesapeake the army of Cornwallis became prisoners of war. (See *Surrender of Cornwallis*.)

**Cornwallis at Yorktown.** A few days after he reached Williamsburg, Cornwallis received an order from Sir Henry Clinton to send three thousand of his troops to New York, then menaced by the allied (Americans and French) armies. (See *Allied Armies on the Hudson*.) Clinton also directed the earl to take a defensive position in Virginia. Satisfied that after he should send away so large a part of his army he could not cope with Lafayette and his associates, Cornwallis determined to cross the James River and make his way to Portsmouth. This movement was hastened by the boldness of the republican troops, who were pressing close upon him, showing much strength and great activity. On July 6 a detachment sent out by Wayne to capture a British field-piece boldly resisted a large portion of Cornwallis's army, as the former fell back to Lafayette's main army near the

Greene Spring Plantation (see *Berkeley, William*), where a sharp skirmish occurred, in which the marquis had a horse shot under him and each party lost about one hundred men. Cornwallis then hastened across the James (July 9) and marched to Portsmouth. Disliking that situation, the earl proceeded to Yorktown, on the York River, and on a high and healthful plain he established a fortified camp. At Gloucester Point, on the opposite side of the river, he cast up strong military works.

**Cornwallis, CHARLES**, earl and marquis, was born Dec. 31, 1738; died at Ghazipoor, India, Oct. 5, 1805. He was educated at Eton and Cambridge, and entered the army as captain when twenty years of age. In the House of

CHARLES CORNWALLIS. (From an English Print.)

Lords he opposed the measures that caused the war with the Americans; yet he accepted the commission of major-general and the command of an expedition against the Carolinas under Sir Peter Parker in 1776. He commanded the reserves of the British in the battle on Long Island (which see) in August; was outgeneralled by Washington at Princeton (which see); was with Howe on the Brandywine and in the capture of Philadelphia, when he returned to England, but soon came back; was at the capture of Charleston (which see) in May, 1780; was commander of the British troops in the Carolinas that year; defeated Gates near Camden in August; fought Greene at Guilford Court-house early in 1781; invaded Virginia, and finally took post at and fortified Yorktown, on the York River, and there surrendered his army to the American and French forces in October, 1781. (See *Surrender of Cornwallis*.) He was appointed governor-general and commander-in-chief in India in 1786; and was victorious in war there in 1791-92, compelling Tippoo Saib to cede, as the price of peace, half his dominions to the British crown. He returned to England in

1793; was created a marquis; and appointed lord-lieutenant of Ireland in 1798. He negotiated the Treaty of Amiens in 1802, and was governor-general of India in 1805.

**Cornwallis Deceived.** The success of Cornwallis in awing the inhabitants of South Carolina into passive obedience gained him hosts of admirers and flatterers. Secretary Germaine was delighted with his prowess, and Governor Martin, of North Carolina, flattered him with promises that his presence there would produce abject submission everywhere in the state. He accepted the suggestions of Martin and Tarleton that severity, so freely used in South Carolina, was the true method to be employed. He therefore, when he was about to march into North Carolina to crush out republicanism there, issued orders that every militia-man who had borne arms with the British, even under compulsion, and had afterwards joined the Americans, should be instantly hanged. He set up a gallows at Camden for the indiscriminate execution of those among his prisoners who had formerly given their parole, even if it had been faithfully kept until it was cancelled by the proclamation of Clinton. Under these and other cruel orders the destruction of life and property became fearful. With the mistaken idea that this was the best method to put down the rebellion, and with the assurance that loyalty was the rule among the people of North Carolina, Cornwallis penetrated that state, but to soon discover that he had been egregiously deceived. His ruthless administration and bad faith towards the paroled prisoners at Charleston (see *Gadsden, Christopher*) were approved by Germaine in hearty terms.

**Cornwallis, EFFECT OF THE SURRENDER OF, IN ENGLAND.** News of the surrender, which reached England, by way of France, Nov. 25, 1781, gave a stunning blow to the British ministry and the Tory party in Great Britain. It was clearly perceived that final disseverance of the colonies from the mother country was inevitable; that war could no longer serve a useful purpose; and that humanity and sound policy counselled peace. The king and his ministers were astounded. "Lord North received the intelligence," said Lord George Germaine, "as he would have taken a cannon-ball in his breast; for he opened his arms, exclaiming wildly as he paced up and down the apartment a few minutes, 'O God! it is all over.'" In deepest consternation, he repeated these words many times. The stubborn king was amazed and struck dumb for a few minutes; then, recovering his equanimity, he wrote, in view of a proposition in the Parliament to give up the contest and allow the independence of the colonies, "No difficulties can get me to consent to the getting of peace at the expense of a separation from America." The city of London petitioned the king to "put an end to the unnatural and unfortunate war;" and in Parliament a great change in sentiment was immediately visible. Late in February, General Conway moved an address to the king in favor of peace. A warm debate en-

sued. Lord North defended the royal policy, because it maintained British rights and was just. "Good God!" exclaimed Burke, "are we yet to be told of the rights for which we went to war? O excellent rights! O valuable rights! Valuable you should be, for we have paid dear in parting with you. O valuable rights! that have cost Britain thirteen provinces, four islands, one hundred thousand men, and more than £70,000,000 (\$350,000,000) of money." At the beginning of March Conway's proposition was adopted. Lord North, who, under the inspiration of the king, had misled the nation for twelve years, was relieved from office, and he and his fellow-ministers were succeeded by friends of peace. The king stormed, but was compelled to yield. Parliament resolved to end the war, and the king acquiesced with reluctance. Early in May (1782) Sir Guy Carleton arrived in New York, bearing propositions to Congress for reconciliation, and Richard Oswald, a London merchant, was sent to Paris as a diplomatic agent to confer with Franklin on the subject of a treaty of peace.

**Cornwallis, FIRST MILITARY MOVEMENT OF, IN AMERICA.** Sir Henry Clinton waited long on the Cape Fear River for the arrival of Sir Peter Parker's fleet with Cornwallis and a reinforcement of troops. They came early in May (1776), and soon prepared to make an attack on Charleston. Clinton received, by the fleet, instructions from his king to issue a proclamation of pardon to "all but principal instigators and abettors of the rebellion, to dissolve the provincial congresses and committees of safety, to restore the administration of justice, and to arrest the persons and destroy the property of all who should refuse to give satisfactory tests of their obedience." He was expressly ordered to "seize the persons and destroy the property of persistent rebels whenever it could be done with effect." When the British forces were about to leave the North Carolina coast, Clinton sent Lord Cornwallis, at the instigation of Governor Martin, to burn the house of Hooper, a delegate in the Continental Congress, and to burn and ravage the plantation of General Robert Howe. Cornwallis landed in Brunswick County with about nine hundred men, and proceeded to his assigned work. In this ignoble expedition—his first in America—he lost two men killed and one taken prisoner. Clinton, in a proclamation (May 5), invited the people to "appease the vengeance of an incensed nation" by submission, and offered pardon to all, excepting General Howe and Cornelius Harnett.

**Cornwallis in New Jersey.** Howe sent Cornwallis (November, 1777) with a strong body of troops, by way of Chester, to Billingsport to clear the New Jersey banks of the Delaware. Washington immediately sent General Greene with a division across the river to oppose the movement. Cornwallis was reinforced by five British battalions from New York, while expected reinforcements from the northern army were still delayed through the bad conduct

of General Gates. The consequence was the forced abandonment of Fort Mercer, at Red Bank (which see) and the levelling of its ramparts by the British troops. The leaders of both armies recrossed the Delaware, Cornwallis to Philadelphia and Greene to the camp of Washington.

**Cornwallis in South Carolina.** Lord Cornwallis was left in chief command of about four thousand troops when, in the summer of 1780, Sir Henry Clinton departed for New York. The earl, for the purpose of rooting out all signs of rebellion, sought, by cruel acts, to completely subdue the people through fear. He issued proclamations and instructions which encouraged hostility towards every patriot; and under these instructions his agents and the Tories committed many crimes. Tarleton and his legion spread terror in many districts. A quartermaster of his command entered the house of Samuel Wyley, near Camden, and cut him in pieces with his sword, because he had served as a volunteer in defence of Charleston. Because the Presbyterians generally supported the American cause, they were specially singled out for persecution. Huck, a captain of the British militia, burned the library and dwelling of a Presbyterian clergyman in the upper part of South Carolina; and also burned every Bible in which the Scottish translation of the Psalms was found. Prisoners who had been paroled at Charleston were subjects of perpetual persecution under the immediate observation of Cornwallis, unless they would exchange their paroles for oaths of allegiance. An active officer was deputed to visit every district in the state, and procure, on the spot, lists of its militia. Any Carolinian thereafter taken in arms might be sentenced to death for desertion and "bearing arms against his country." Cornwallis never regarded a deserter, or any whom a court-martial sentenced to death, as an object of mercy. His lieutenant, Lord Rawdon, was particularly hard on deserters from his Irish regiment. "I will give the inhabitants," he proclaimed, "ten guineas for the head of any deserter belonging to the volunteers of Ireland, and five guineas only if they bring him in alive." To punish Sumter, who had commanded a Continental regiment, a British detachment turned his wife out of doors and burned his dwelling-house. These proceedings, and others equally atrocious, were approved by Cornwallis, who tried to crush out every vestige of independence in the state by requiring every able-bodied man to join the British army and take an active part in the re-establishment of royal rule. All who refused were treated as "rebels." Then, under instructions from Minister Germaine, he determined to establish a system of terrorism that should wipe out every semblance of revolt in that state. He put military despotism in the place of civil law. He ordered all militia-men who had served in loyalist corps and were afterwards found in arms against the king to be hanged without mercy; and in this way many perished. He gave Tory leaders full license to execute these orders, and instantly murders and plunderings and the

scourge of the torch everywhere prevailed. Property was wantonly destroyed by fire and violence; the chastity of women was set at naught; and Whigs, both men and women, cultivated and tenderly reared, were treated by the ravenous Tory wolves as legitimate prey to their worst passions. These measures created revolt and a thirst for vengeance, and when the partisan leaders appeared they instantly found hundreds of followers. Cornwallis soon found South Carolina too hot for him, and he was driven through North Carolina into Virginia.

**Cornwallis Leaves the Carolinas.** After the battle at Guilford Court-house (which see), Cornwallis marched towards the seaboard, satisfied that he could no longer hold the Carolinas. He arrived at Wilmington April 7, 1781, then garrisoned by a small force under Major Craig, where he remained long enough to rest and recruit his shattered army. Apprised of Greene's march on Camden, and hoping to draw him away from Lord Rawdon, the earl marched into Virginia and joined the forces of Phillips and Arnold at Petersburg. So ended British rule in the Carolinas forever. He left Wilmington April 25, crossed the Roanoke at Halifax, and reached Petersburg May 20. Four days afterwards he entered upon his destructive career in that state. (See *Invasion of Virginia*.)

**Cornwallis, SURRENDER OF, AT YORKTOWN.** Finding escape impossible, and further resistance futile, Cornwallis sent a flag to Washington, with a request that hostilities should be suspended for twenty-four hours, and that commissioners should be appointed on both sides to meet at Mrs. Moore's house, on the right of the

MRS. MOORE'S HOUSE.

American lines, to arrange terms for the surrender of the post and the British army. Commissioners were accordingly appointed, the Americans being Colonel John Laurens and Viscount de Noailles (a kinsman of Lafayette), and the British Lieutenant-colonel DuRoi and Major Ross. The terms agreed upon were honorable to both parties, and were signed on the 19th of October, 1781. They provided for the surrender of Cornwallis as a prisoner of war, with all his troops, and all public property as spoils of vic-

SURRENDER OF BRITISH STANDARDS AT YORKTOWN.

tory. All slaves and plunder found in possession of the British might be reclaimed by their owners; otherwise private property was to be respected. The loyalists were abandoned to the mercy or resentment of their countrymen.

Such were the general terms; but Cornwallis was allowed to send away persons most obnoxious to the Whigs in the vessel that carried despatches to Clinton. Late in the afternoon, Oct. 19, the surrender of the British troops took

place. Washington and Rochambeau were at the head of their respective troops, on horseback. The field of surrender was about half a mile from the British lines. A vast multitude of people, equal in numbers to the troops to be humiliated, was present at the impressive ceremony. Cornwallis, it was said, feigned sickness, and did not appear, but sent his sword by General O'Hara to act as his representative. That officer led the vanquished troops out of their intrenchments, with their colors cased, and marched them between the two columns of the allied forces. When he arrived at their head he approached Washington to hand him the earl's sword, when the commander-in-chief directed him to General Lincoln as his representative. It was a proud moment for Lincoln, who, the previous year, had been compelled to make a humiliating surrender to the royal troops at Charleston. He led the vanquished army to the place chosen for the surrender of their arms, and then received from O'Hara the sword of Cornwallis, which was politely returned to him to be restored to the earl. The surrender of the colors of the vanquished army, twenty-eight in number, now took place. Twenty-eight British captains, each bearing a flag in a case, were drawn up in line. Opposite to them, at a distance of six paces, twenty-eight American sergeants were placed in line to receive the colors. The interesting ceremony was conducted by an ensign (Robert Wilson), then only eighteen years of age. The troops then laid down their arms. The whole number surrendered was about 7000. To these must be added 2000 sailors, 1800 negroes, and 1500 Tories, making the total number of prisoners 12,000. The British lost, in killed, wounded, and missing, during the siege 550 men. The Americans lost about 300. The spoils were nearly 8000 muskets, 75 brass and 160 iron cannons, and a large quantity of munitions of war and military stores. The French furnished for gaining this victory 37 ships of the line and 7000 men. The Americans furnished 9000 troops, of which number 5500 were regulars. On the day after the surrender Washington, in general orders, expressed full approbation of the conduct of the allied armies; and, that every soldier might participate in the general joy and thanksgiving, he ordered every one under arrest or in confinement to be set at liberty; and, as the following day would be the Sabbath, he closed his orders by directing divine service to be performed in the several brigades on the morrow.

**Cornwallis's Complaints Answered.** When Greene was at Charlotte, on his way to take command of the Southern army, he received from Cornwallis a complaint of cruelty on the part of the Americans in hanging ten Tories on a tree after the battle of King's Mountain (which see), and accompanied the complaint with a threat of retaliation. Greene answered the earl by sending him a list of about fifty patriots who had been hanged by Cornwallis himself and by others high in the British service, and called on mankind to sit in judgment on the savage order of the earl to Balfour after the action near Camden, on Lord Rawdon's proclamation, and on the

murderous raids of Tarleton. He showed that no American officer in his department ever initiated the cruelties systematically practised by the British. Sumter and Marion always spared prisoners, although they found the worst of enemies among them in the persons of Tories. Those hanged at King's Mountain were among the worst murderers in that region.

**Coronado, FRANCIS VASQUEZ DE,** set out in 1540, by command of Mendoza, Viceroy of Mexico, from Culiacan, on the southeast coast of the Gulf of California, with 350 Spaniards and 800 Indians, to explore the country northward. He followed the coast nearly to the head of the gulf, and then penetrated to the Gila, in the present Arizona Territory. Following that stream to its head-waters, they crossed the great hills eastward, to the upper waters of the Rio Grande del Norte, which he followed to their sources. Then crossing the Rocky Mountains, he traversed the great desert northeastwardly to the present states of Colorado or Kansas, under latitude 40° north. In all that vast region he found little to tempt or reward a conquest—rugged mountains and plains and a few Indian villages in some of the valleys. At the same time Francisco Alarcon was sent to trace the Pacific coast in search of an imagined gulf or strait ("Strait of America") leading to the Atlantic. He penetrated to latitude 36° north, in the present California. The failure of this expedition caused another, under Rodriguez de Cabrillo. (See *Cabrillo*.)

**Coronation of Powhatan.** In 1608 Captain Newport came to Virginia with presents for the Emperor Powhatan. Among these was a basin, a ewer, some clothes, and a crown for the dusky monarch, with orders for him to be crowned. Captain Smith was then president of the colony, and he, as special ambassador of the King of England, summoned the emperor to Jamestown to undergo the ceremony of coronation. Powhatan, with dignity, refused to go, saying "I also am a king; and if the King of England has sent me gifts, they should be brought to me; I shall not go to receive them." Newport went to Powhatan with the gifts. They were accepted; but no persuasions could induce the barbarian monarch to kneel to receive the crown. Only by two Englishmen bearing down heavily upon his shoulders could he be brought to a position that might be considered as kneeling; and so he had the crown placed upon his head. The act finished, a pistol was fired, and was followed by a volley from the boats in the York River. Powhatan was startled by a fear of treachery, but when assured that all was right, he accepted this acknowledgment of his royal state, and gave a slight present to be conveyed to his brother the King of England.

**Cortereal, GASPHER,** a Portuguese navigator, was born in Lisbon, and died in 1501. He was in the service of the King of Portugal when, in 1500, he left the mouth of the Tagus with two ships well equipped at his own cost and proceeded to make discoveries in the Northwest. Cortereal was a gentleman of enterprising and determined character, who had been reared in

the household of the Portuguese monarch and had an ardent thirst for glory. He first touched, it is believed, the northern shores of Newfoundland, discovered the Gulf of St. Lawrence, and sailed along the coast of the American continent to latitude 60°, and named the neighboring coast Labrador. Cabot had visited that coast two years before (see *Cabot*) but did not land; Cortereal landed in several places, and gave purely Portuguese names to localities. The natives appearing to him rugged and strong and capital material for slaves, he seized fifty of them, and, carrying them to Portugal, made a profitable sale of his captives. The profits of this voyage excited the cupidity of Cortereal and his king (Emanuel the Great), and they prepared to carry on an active slave-trade with Labrador. Cortereal went on a second voyage in 1501, but was supposed to have been lost at sea; and his brother Michael, who went in search of him, was never heard of afterwards. An expedition sent by the king in 1503 found no trace of him. The commander of one of the vessels seized fifty-seven natives as slaves, but most of them were lost in the ships. The king declared that Cortereal was the first discoverer of the American continent, and he caused a map to be published in 1508, in which the coast of Labrador is called Terra Corterealis, or Cortereal's Land.

**Cortez and Narvaez.** Velasquez, Governor of Cuba, sent Pamphila de Narvaez against Cortez, in Mexico, who was acting independently of his superior. Narvaez, with a fleet and army, attempted to take Vera Cruz, but failed. Leaving a part of his forces, under Alvarado, in Mexico, Cortez marched against Narvaez, attacked and defeated him, and compelled his men to serve under the banner of the conqueror of Mexico.

**Cortez, HERNANDO**, was born at Medellin, Estremadura, Spain, in 1485, of a good family; died near Seville, Dec. 2, 1547. He studied law two years in Salamanca, and in 1504 sailed from San Lúcar for Santo Domingo in a merchant vessel. The governor received him kindly, and he was soon employed, under Diego Velasquez, in quelling a revolt. In 1511 Diego Columbus (see *Columbus*), governor of Santo Domingo, sent Velasquez to conquer and colonize Cuba. Cortez accompanied him. Santiago was founded, and Cortez was made alcalde, or mayor. He married a Spanish lady and employed the natives in mining gold, treating them most cruelly. Velasquez placed him at the head of an expedition to conquer and colonize Mexico, portions of which Cordova and Grijalva had just discovered. Before he sailed Velasquez countermanded the order, but the ambitious Cortez, disobedient, sailed for Mexico, in 1519, with ten vessels, bearing 550 Spaniards, over 200 Indians, a few negroes and horses, and some brass cannons. He landed at Tobasco, where he fought the natives and heard of Montezuma, emperor of a vast domain, possessor of great treasures, and living in a city called Mexico. After founding Vera Cruz, Cortez set out for Montezuma's capital. Fighting his way, he made the conquered natives own their vassalage to Spain and become his follow-

ers, and in November, 1519, he entered the city of Mexico with a handful of Spaniards who had survived the battles, and six thousand native followers. Montezuma received him kindly. Cortez took a strong position in the city and put on the airs of a conqueror instead of a guest. Some of the irritated Mexicans attacked the invaders, when Cortez, making that a pretext, seized the monarch in his palace, conveyed him to the headquarters of the troops, and threatened him with instant death if he did not quietly submit. Placing the emperor in irons, Cortez caused seventeen of the men who had made the attack to be burned to death in front of the palace. Then Montezuma was compelled to acknowledge himself and his subjects vassals of Charles V., and Cortez forced the fallen monarch to give him gold to the value of \$10,000. Suddenly startled by the news that Narvaez (see *Narvaez*), whom Velasquez had sent to displace him, had landed on the shores of Mexico with 900 men, 80 horses, and a dozen cannons, Cortez, leaving 200 men in Mexico, hastened to confront his rival with a few followers. In a battle Narvaez was defeated. The vanquished troops joined the standard of Cortez, who hastened back to Mexico. The people had revolted against the Spaniards. The captive Montezuma tried to pacify them, but, endeavoring to address them, he was assailed by a mob and mortally wounded. The Spaniards were driven out of the city; their rear-guard was cut in pieces, and they were terribly harassed in a flight for six days before the exasperated Mexicans. On the plain of Otompan a sharp battle was fought (July 7, 1520), and Cortez was victor. Marching to Tlascala, he collected reinforcements of natives, marched upon Mexico, and captured the city after a gallant defence of seventy-seven days, Aug. 13, 1521. His exploits wiped out the stain of his disobedience, and he was made civil and military ruler of Mexico, and a marquis, with a handsome revenue. The natives, however, were terribly embittered by his cruelties and his zeal in destroying their idols, for he resolved to force the pagans to become Christians. Cortez went to Spain, where he was cordially received by the monarch. Returning to Mexico, he explored the country northward and discovered the Gulf and Peninsula of California. (See *California*.)

**Corwin, THOMAS**, was born in Bourbon Co., Ky., July 29, 1794; died in Washington, D. C., Dec. 18, 1855. He was reared to manhood on a farm, attending a common-school in winter. He began the study of law in 1815; was admitted to the bar in 1818; became a member of the Ohio Legislature in 1822, and was elected to Congress in 1830. He remained in the House until elected Governor of Ohio in 1840. In 1845 he was chosen U. S. Senator, and was called to the cabinet of President Fillmore in 1850, as Secretary of the Treasury. He was again elected to Congress in 1859. In 1861, President Lincoln sent him as minister to Mexico. Mr. Corwin was an eloquent, witty, and effective speaker.

**Cost of Wars with the Indians.** It was

estimated in 1876 that the potentially hostile tribes numbered about sixty-four thousand souls, widely scattered over a vast territory, making war with them extremely costly in men and money. War with the Cuyennes in 1864 caused about eight thousand troops to be taken from the armies engaged in suppressing the great insurrection to fight the Indians. The result of the year's campaign was the killing of fifteen or twenty of the barbarians, at a cost of about \$1,000,000 apiece, while hundreds of soldiers lost their lives and many border settlers were butchered. This and subsequent wars with the Indians have cost our government over \$100,000,000. Methods to civilize them, founded on justice and right, would have been far less costly.

**Cotton in the United States.** Mention is made of cotton "planted as an experiment" in the region of the Carolinas so early as 1621, and its limited growth there is noted in 1666. In 1736 it was cultivated in gardens as far north as latitude 36°, on the eastern shore of Maryland. Forty years later it was cultivated on Cape May, N. J.; but it was almost unknown, except as a garden plant, until after the old war for independence. At the beginning of that conflict General Delagall had thirty acres under cultivation near Savannah, Ga. In 1748 seven bags of cotton-wool were exported to England from Charleston, S. C., valued at £3 11s. 5d. a bag. There were two or three other small shipments afterwards, before the war. At Liverpool eight bags shipped from the United States in 1784 were seized, on the ground that so much cotton could not be produced in the United States. In 1786 the first Sea Island cotton was raised, off the coast of Georgia, and its exportation began in 1788 by Alexander Bissell, of St. Simon's Island. The seeds were obtained from the Bahama Islands. The first successful crop of this variety was raised by William Elliott on Hilton Head Island, in 1790. It has always commanded a higher price on account of its being more staple than any other variety. In 1791 the cotton crop in the United States was 2,000,000 pounds. The invention and introduction of Whitney's cotton-gin (which see) caused a sudden and enormous increase in the production of cotton. In 1801 the cotton crop in the United States was 48,000,000 pounds, of which 20,000,000 pounds were exported. The increase in its production was greatly accelerated, and the product of the year ending in June, 1860, on a surface of little less than 11,000 square miles, was over 5,387,000 bales, or over 2,500,000,000 pounds. The value of the cotton crop in 1791 was about \$30,000; of that of 1859-60—the largest crop ever gathered—over \$220,000,000. The annual production of cotton in the United States was less after 1860. The Civil War interfered with it; but in 1876 it was nearly 4,000,000 bales, or about 1,800,000,000 pounds. (The bales vary much in weight in different years.) The cotton-plant holds a conspicuous place in our social, commercial, and political history.

**Cotton, JOHN,** was one of the first ministers in Boston, and was born at Derby, Eng., Dec. 4,

1585; died in Boston, Dec. 23, 1652. About the year 1612 he became minister of St. Botolph's Church, Boston, Lincolnshire, where he remained, a noted preacher and controversialist for twenty years, constantly leaning towards Puritanism (which see). For his non-conformity he was cited to appear before Archbishop Land, when he fled to America, arriving at Boston in September, 1633. He was soon afterwards ordained a colleague with Mr. Wilson in the Boston Church. His ministry there for nineteen years was so influential that he has been called "The Patriarch of New England." He was a firm opponent of Roger Williams, and defended the authority of ministers and magistrates. He and Davenport were invited to assist in the assembly of divines at Westminster (which see), but were dissuaded from going by Hooker.

**Cotton Loan.** The government of the "Confederate States of America" issued bonds for money loaned, with pledges of cotton as security. Alexander H. Stephens assumed the office of expounding the principles, intentions, and effects of this Cotton Loan. The object was, he said, to avoid taxing the people. "If we do not raise money by loans," he said, in a speech to a convention of cotton-growers at Augusta, Ga., July 11, 1861, "if the people do not contribute, I tell you we intend to have the money, and taxation will be resorted to if nothing else will raise it. Every life and dollar in the country will be demanded rather than you and every one of us shall be overrun by the enemy. On that you may count." The planters well knew what his demand implied; to refuse to subscribe to the loan would be held to be constructive treason to the Confederacy. Late in July the Confederate Secretary of the Treasury reported that \$50,000,000 had been subscribed to the Cotton Loan. The bonds bore eight per cent. interest, payable semi-annually. Stephens declared that they would be the best government bonds in the world, and would "doubtless command fifteen to twenty per cent. premium!" Yet he frankly told them, what came to pass, that if the great insurrection should fail, "these bonds will not be worth a dollar." Cotton Loan bonds, with cotton as a basis of security, were sold in Europe (mostly in England) to the amount of \$15,000,000.

**Couch, DARIUS NASH,** was born in Putnam County, N. Y., July 23, 1822; graduated at West Point, served in the war with Mexico, aided in suppressing the last outbreak of the Seminoles, and resigned in 1855. In January, 1861, while residing at Taunton, Mass., he was commissioned colonel of a Massachusetts regiment, and made a major-general of volunteers in August. He commanded a division in General Keyes's corps in the battle of Fair Oaks, or Seven Pines (which see). He also distinguished himself at Williamsburg and at Malvern Hills, and on July 4, 1862, was promoted to major-general. Soon after his good service at Antietam he was put in command of Sumner's corps, and took a prominent part in battles under Burnside and Hooker; also under Thomas, in the defeat of

Hood at Nashville (which see), and in North Carolina early in 1865.

**Council of Plymouth, THE.** After the departure of the "Pilgrims" for America, a new patent was granted (Nov. 3, 1620) to the North Virginia Company, the Duke of Lennox, the Marquises of Buckingham and Hamilton, the Earls of Arundel and Warwick, Sir Ferdinando Gorges, with thirty-four associates, and their successors, styling them "The Council established at Plymouth, in the county of Devon, for the planting, ruling, ordering, and governing of New England, in America." The domain embraced in the terms of this patent was between the parallels of 40° and 49° north latitude, and "in length by all the breadth aforesaid throughout the mainland from sea to sea." That domain was given to the company as absolute property, and they were empowered to exclude all from trading within the boundaries of their jurisdiction, and from fishing in the neighboring seas. This patent was the only civil basis of all the subsequent patents, which divided this country into specified domains.

**Council of the Indies, THE.** A body of men appointed by the Spanish monarch, who, after the discovery of America, and during the existence of Spain's immense colonial empire, governed colonial affairs.

**Countervailing Measures (1861).** In retaliation for an order issued by Chase, the United States Secretary of the Treasury (May 2, 1861), directing all officers in the revenue service on the northern and northwestern waters of the United States to seize and detain all arms, munitions of war, provisions, and other supplies on the way towards states in which insurrection existed—in other words, establishing blockades of the Mississippi and the railways leading south from Kentucky—the Confederates forbade the exportation of raw cotton or cotton yarn, excepting through seaports of the Confederate States, under heavy penalties. They expected thus to strike a withering blow at manufactures in the free-labor states. By order of John H. Reagan, the Confederate Postmaster-general, and as an offset to the order of the National Postmaster-general for the arrest of the United States postal service, in states where insurrection existed, after May 31, the postmasters in those states were ordered to retain in their possession, after June 1, "for the benefit of the Confederate States, all mail-bags, locks and keys, marking and other stamps," and "all property connected with the postal service."

**Counties.** The several United States are divided into political districts, which are called counties. Several hundred years ago there were large districts of country in England and on the Continent governed by earls, who were, however, subject to the crown. These districts were called *counties*, and the name is still retained even in the United States, and indicates certain judicial and other jurisdiction. The Saxon equivalent for county was *shire*, which simply means division, and was not applied to such counties as were originally distinct sovereignties, such as

Kent, Norfolk, etc. Thus we have Lancashire and Yorkshire. New Netherland (New York) was constituted a county of Holland, having all the individual privileges appertaining to an earldom, or separate government. On its seal appears as a crest to the arms a kind of cap called a coronet, which is the armorial distinction of a count or earl.

**County Courts first established in America.** The extent of settlements had become so great in Virginia in 1622 that it was inconvenient to bring all legal causes to the capital at Jamestown, and inferior courts were appointed in convenient places to relieve the governor and council (who constituted the superior judiciary) of a heavy burden of business, and to render justice more accessible and less expensive.

**County Courts in Connecticut.** In May, 1666, the General Assembly of Connecticut divided the colony into four counties—namely, Hartford, New Haven, New London, and Fairfield, and established a county court in each.

**Courcelles, M. D.,** appointed governor of Canada, arrived in 1665 with a regiment of soldiers and many families, with horses (the first ever seen in Canada), cattle, and sheep. To prevent the irruptions of the Five Nations by way of Lake Champlain, he built three forts between that lake and the mouth of the Richelieu, or Sorel, its outlet.

**Court of Assistants, THE.** This was composed of a prescribed number of persons, by whom monthly courts were held, and who, with the governor and deputy-governor, managed the affairs of the government, at least those of executive routine. The assistants were magistrates, and were elected annually.

**Court of Chancery, THE FIRST, IN NEW YORK.** Under the authority of the Board of Trade and Plantations (which see), the Earl of Bellmont, governor of New York, set up a court of chancery in that province in 1693, himself acting as judge.

**Courting the Indians.** The British, as hostilities threatened early in 1775, endeavored to secure the co-operation of the Indians against the American colonists. Canadian emissaries were sent among the northwestern tribes around the upper lakes and in the Ohio Valley. Gny Johnson, Indian agent in New York, carefully proceeded to remove American missionaries from the Six Nations. The colonists took immediate countervailing measures. The good Eleazar Wheelock (see *Dartmouth College*) sent, as the first envoy from New England, the ardent young preacher James Dean, who was a master of the language of the Iroquois, to "itinerate as a missionary among the tribes in Canada, and brighten the chain of friendship." The Provincial Congress of Massachusetts sent the thoughtful and pious Kirkland to the Mohawks. He had lived among them as a missionary, and was much esteemed by them. He was instructed to persuade them to either join the Americans or remain neutral. The same Congress voted a blanket and a ribbon to each of the Indians liv-

ing at Stockbridge, and these promised to intercede with the Six Nations.

**Covenhoven, ROBERT**, a soldier and pioneer in Pennsylvania, was born in Monmouth County, N. J., Dec. 17, 1755; died at Northumberland, Penn., Oct. 29, 1846. His ancestors were from Holland, and among the earlier settlers in New Jersey. About the beginning of the Revolution they moved to the region near the west branch of the Susquehanna River. He joined the Continental army under Washington in 1776, participated in the battles of Trenton and Princeton, and then returned to northern Pennsylvania, where he was employed in the defence of the frontier against the Indians. An incident of his life furnishes a glimpse of the state of society at that time. In February, 1778, Covenhoven was married to Mercy Kelsey in New Jersey. While the nuptial ceremony was in progress, it was interrupted by the sudden arrival of a troop of Hessian soldiers. The groom escaped through a window, but, returning at night, he carried away his bride to his Pennsylvania home. From that time until the close of the war he participated as watcher, guide, and soldier in opposing the forays of the barbarians; and was in the desperate engagement of Wyalusing. He ranks in tradition among the genuine heroes of America. In 1796-97 he superintended the construction of a wagon-road through the wilderness from the mouth of Lycoming Creek to Painted Post, Steuben Co., N. Y.

**Covington, LEONARD**, was born at Acquasco, Prince George's Co., Md., Oct. 30, 1768; died at Freuch Mills, N. Y., Nov. 14, 1813. He was commissioned lieutenant of dragoons March 14, 1792; joined the army under General Wayne, and behaved so gallantly in the war with the Indians in 1794 that his general made honorable mention of his services. He was promoted to captain, and soon afterwards retired from the military service. After occupying a seat in the Legislature of Maryland, he was a member of Congress from 1805 to 1807. In the latter year he was appointed lieutenant-colonel of cavalry, and was made a brigadier in 1813, and ordered to the northern frontier. In the battle at Chrysler's Field (Nov. 11, 1813) he was mortally wounded, and died three days afterwards.

**Cow-boys.** During the Revolution a band of marauders, consisting mostly of Tory refugees who adhered to the British interests, infested the neutral ground in Westchester County, N. Y., between the American and British lines, and because they stole many cattle were called Cow-boys. They generally plundered the Whigs, or adherents of the Continental Congress; but, like their opponents the Skinners, they were not always scrupulous in the choice of their victims. (See *Skinners*.)

**"Cow Chace, The."** In the summer of 1780 Washington sent General Wayne, with a considerable force, to storm a British block-house at Bull's Ferry, on the Hudson, near Fort Lee, and to drive into the American camp a large number of cattle on Bergen Neck exposed to British foragers, who might go out from Pawlus's Hook

(now Jersey City). Wayne was repulsed at the block-house, with a loss of sixty-four men, but returned to camp with a large number of cattle driven by his dragoons. This event inspired Major André, Sir Henry Clinton's adjutant-general, to write a satirical poem, which he called "The Cow Chace," in which Wayne and his fellow-"rebels" were severely ridiculed. It was written in the style of the English ballad of *Chey Chace*, in three cantos. The following is a copy of the poem, with a fac-simile of its title from André's autograph; also of the concluding verse of the original:

The Cow Chace  
By  
Major André

ELIZABETHTOWN, Aug. 1, 1780.

CANTO I

To drive the kine one summer's morn,  
The tanner took his way,  
The calf shall rue that is unborn  
The jumbling of that day.

And Wayne descending steers shall know,  
And tauntingly deride,  
And call to mind, in ev'ry low,  
The taunting of his hide.

Yet Bergen cows still ruminate  
Unconscious in the stall,  
What mighty means were used to get,  
And lose them after all.

For many heroes bold and brave  
From New Bridge and Tappan,  
And those that drink Passaic's wave,  
And those that eat soupnan.

And sons of distant Delaware,  
And still remoter Shannon,  
And Major Lee with horses rare,  
And Proctor with his cannon.

All wondrous proud in arms they came—  
What hero could refuse,  
To tread the rugged path to fame,  
Who had a pair of shoes?

At six the host, with sweating buff,  
Arrived at Freedom's Pole,  
When Wayne, who thought he'd time enough,  
Thus specified the whole:

"O ye whom glory doth unite,  
Who Freedom's cause espouse,  
Whether the wig that'a doom'd to fight,  
Or that to drive the cows;

Ere yet you tempt your further way,  
Or into action come,  
Hear, soldiers, what I have to say,  
And tako a pint of rum.

Intemp'rate valor then will atring  
Each nervous arm the better,  
So all the land shall 10! sing,  
And read the gen'ral's letter.

Know that some paltry refugees,  
Whom I've a mind to fight,  
Are playing h—l among the trees  
That grow on yonder height.

Their fort and block-house we will level,  
And deal a horrid slaughter;  
We'll drive the scoundrels to the dev'l,  
And ravish wife and daughter.

I under cover of th' attack,  
While you are all at blows,  
From English Neighbourhood and Timack  
Will drive away the cows.

For well you know the latter is  
The serious operation,  
And fighting with the refugees  
Is only demonstration."

H's daring words from all the crowd  
Such great applause did gain,  
That every man declared aloud  
For serious work with Wayne.

Then from the cask of rum once more  
They took a heady gill,  
When one and all they loudly swore  
They'd fight upon the hill.

But here—the Muse has not a strain  
Befitting such great deeds,  
Hurra, they cried, hurra for Wayne!  
And, shouting, did their needs.

## CANTO II.

Near his meridian pomp, the sun  
Had journeyed from the horizon,  
When fierce the dusky tribe moved on,  
Of heroes druck as poison.

The sounds confused of boasting oaths  
Re-echoed through the wood,  
Some vow'd to sleep in dead men's clothes,  
And some to swim in blood.

At Irvine's nod, 'twas fine to see  
The left prepared to fight,  
The white the drovers, Wayne and Lee,  
Drew off upon the right.

Which Irvine 'twas Fame don't relate,  
Nor can the Muse assist her,  
Whether 'twas he that cocks a hat,  
Or he that gives a glister.

For greatly one was signal'ed  
That fought at Chestnut Hill,  
And Cacoada immortalized  
The vender of the pill.

Yet the attendance upon Proctor  
They both might have to boast of,  
For there was business for the doctor,  
And hats to be disposed of.

Let none uncaut'dly infer  
That Stirling wanted sunk;  
The self-made peer had sure been there,  
But that the peer was drunk.

But turo we to the Hudson's hanks,  
Where stood the modest train,  
With purpose firm, though slender ranks,  
Nor cared a pin for Wayne.

For then the unrelenting hand  
Of rebel fury drove,  
And tore from ev'ry gen'ral hand  
Of friendship and of love.

And some with'n a duogeon's gloom,  
By mock tribunals laid,  
Had waited long a cruel doom,  
Impending o'er their heads.

Here one bewails a brother's fate,  
There one a sire demands,  
Cut off, alas! before their date,  
By ignominious hands.

And silvered grandsires here appeared  
In deep distress serene,  
Of reverend manners that declared  
The better days they'd seen.

Oh! cursed rebellion, these are thine,  
Thine are these tales of woe;  
Shall at thy dire insatiate shrine  
Blood never cease to flow?

And now the foe began to lead  
His forces to th' attack;  
Balls whistling unto balls succeed,  
And make the block-house crack.

No shot could pass, if you will take  
The gen'ral's word for true;  
But 'tis a d—ble mistake,  
For ev'ry shot went through.

The firmer as the rebels pressed,  
The loyal heroes stand;  
Virtue had nerved each honest breast,  
And industry each hand.

In\* valor's frenzy, Hamilton  
Rode like a soldier b g,  
And secretary Harrison,  
With pen stuck in his wig.

But, lest chieftain Washington  
Should mourn them in the mumps,†  
The fate of Withrington to shun,  
They fought behind the stumps.

But ah! Thaddeus Posset, why  
Should thy poor soul elope?  
And why should Titus Hooper die,  
Ah! die—without a rope?

Apostate Murphy, thou to whom  
Fair Sheila ne'er was cruel;  
In death shalt hear her mourn thy doom,  
Och! would ye die, my jewel?

Thee, Nathan Pumpkin, I lament,  
Of melancholy fate,  
The gray goose, stolen as he went,  
In his heart's blood was wet.

Now as the fight was further fought  
And balls began to thicken,  
The fray assumed, the gen'ral's thought,  
The color of a licking.

Yet undismayed the chiefs command,  
And, to redeem the day,  
Cry, "Soldiers, charge!" they hear, they stand,  
They turn and run away.

## CANTO III.

Not all delights the bloody spear,  
Or horrid din of battle,  
There are, I'm sure, who'd like to hear  
A word about the rattle.

The chief whom we beheld of late,  
Near Schralenberg haranguing,  
At Yan Van Poop's unconscious sat  
Of Irvine's hearty bang'ing.

While valiant Lee, with courage wild,  
Most bravely did oppose  
The tears of women and of child,  
Who begged he'd leave the cows.

But Wayne, of sympathizing heart,  
Required a relief,  
Not all the blessings could impart,  
Of battle or of beef.

For now a prey to female charms,  
His soul took more delight in  
A lovely Hamadryad's arms  
Than cow driving or fighting.

A nymph, the refugees had drove  
Far from her native tree,  
Just happen'd to be on the move,  
When up came Wayne and Lee.

She in mad Anthony's fierce eye  
The hero saw portrayed,  
And, all in tears, she took him by  
— the bridle of his jade.

Hear, said the nymph, O great commander,  
No human lamentations,  
The trees you see them cutting yonder  
Are all my near relations.

And I, forlorn, implore thine aid  
To free the sacred grove:  
So shall thy prowess be repaid  
With an immortal's love.

\* See Lee's trial.

† A disorder prevalent in the rebel lines.

‡ A deity of the woods.

Now some, to prove she was a goddess!  
Said this enchanting fair,  
Had late retired from the *Bodies*,\*  
In all the pomp of war.

That drama and merry fifes had played  
To honor her retreat,  
And Cunningham himself conveyed  
The lady through the street.

Great Wayne, by soft compassion awayed,  
To no inquiry stoops,  
But takes the fair, afflicted maid  
Right into Yan Van Poop's.

So Romeo Antony, they say,  
Disgraced th' imperial banner,  
And for a gypsy lost a day,  
Like Anthony the tanner.

The Hamadryad had but half  
Received redress from Wayne,  
When drums and colors, cow and calf,  
Came down the road amain.

All in a cloud of dust were seen,  
The sheep, the horse, the goat,  
The gentle heifer, ass obscene,  
The yearling and the shoat.

And pack-horses with fowls came by,  
Befeathered on each side,  
Like Pegasus, the horse that I  
And other poets ride.

Soblime upon the stirrups rose  
The mighty Lee behind,  
And drove the terror-smitten cows,  
Like chaff before the wind.

But sudden see the woods above  
Pour down another corps,  
All helter-skelter in a drove,  
Like that I sung before.

Irvine and terror in the van  
Came flying all abroad,  
And cannon, colors, horse, and man  
Ran tumbling to the road.

Still as he fled, 'twas Irvine's cry,  
And his example too,  
"Run on, my merry men all—  
The shot will not go through.†

As when two kennels in the street,  
Swell'd with a recent rain,  
In gushing streams together meet,  
And seek the neighbor'og drain,

So meet these dung-born tribes in one,  
As swift in their career,  
And so to New Bridge they ran oo—  
But all the cows got clear.

Poor Parson Caldwell, all in wonder,  
Saw the returning train,  
And mourned to Wayne the lack of plunder,  
For them to steal again.

For 'twas his right to seize the spoil, and  
To share with each commander,  
As he had done at Staten Island  
With frost-bit Alexander.

In his dismay, the frantic priest  
Began to grow prophetic,  
You had sworn, to see his lab'ring breast,  
He'd taken an emetic.

"I view a future day," said he,  
"Brighter than this day dark is.  
And you shall see what you shall see,  
Ha! ha! one pretty marquis;

And he shall come to Paulus' Hook,  
And great achievements think on,  
And make a bow and take a look,  
Like Satan over Lincoln.

And all the land around shall glory  
To see the Frenchman caper,  
And pretty Susan tell the story  
In the next Chatham paper."

This solemn prophecy, of course,  
Gave all much consolation,  
Except to Wayne, who lost his horse  
Upon the great occasion.

His horse that carried all his prog,  
His military speeches,  
His corn-stalk whiskey for his grog—  
Blue stockings and brown breeches.

And now I've clos'd my epic strain,  
I tremble as I show it,  
Lest this same warrior-drover, Wayne,  
Should ever catch the poet.

*And now I've clos'd my Epic strain,  
I tremble as I shew it,  
Lest this same warrior-drover Wayne  
Should ever catch the poet.*

*F. M. S.*

The last canto was published on the day when André was captured at Tarrytown. At the end of the autograph copy was written the following stanza, in a neat hand:

"When the epic strain was song,  
The poet by the neck was hung;  
And to his cost he finds too late,  
The dung-born tribe decides his fate."

Wayne was in command of the troops from whom the guard was drawn that attended André's execution.

\* A cant appellation given among the soldiery to the corps that has the honor to guard his majesty's person.

† Five refugees ('tis true) were found  
Stiff on the black-house floor,  
But then 'tis thought the shot went round,  
And in at the back-door.

Cowpens, BATTLE OF THE. From his camp, eastward of the Pedee, Greene sent Morgan, with the Maryland regiment and Washington's dragoons of Lee's corps, across the Broad River, to operate on the British left and rear. Observing this, Cornwallis left his camp at Willsborough, and pushed northward between the Broad River and the Catawba, for the purpose of interposing his force between Greene and Morgan. Against the latter he had detached Tarleton with about one thousand light troops. Aware of Tarleton's approach, Morgan retired behind the Pacolet, intending to defend the ford; but Tarleton crossed six miles above, when Morgan made a precipitate retreat. If he could cross the Broad River, he

would be safe. On his right was a hilly district, which might afford him protection; but, rather than be overtaken in his flight, he prepared to fight on the ground of his own selection. He chose for that purpose a place known as "The Cowpens," about thirty miles west of King's Mountain (which see). He arranged about four hundred of his best men in battle order on a little rising ground. There were the Maryland light infantry, under Lieutenant-colonel John Eager Howard, composing the centre, and Virginia riflemen forming the wings. Lieutenant-colonel William Washington, with eighty dragoons, were placed out of sight, as a reserve, and about four hundred Carolinians and Georgians, under Colonel Andrew Pickens, were in the advance, to defend the approaches to the camp. North Carolina and Georgia sharpshooters acted as skirmishers on each flank. At eight o'clock on a winter's morning (Jan. 17, 1781), Tarleton, with eleven hundred troops, foot and horse, with two pieces of cannon, rushed upon the Republicans with loud shouts. A furious battle ensued. In a skilful movement, in the form of a feigned retreat, Morgan turned so suddenly upon his pursuers, who believed the victory was secured to them, that they wavered. Seeing this, Howard charged the British lines with bayonets, broke their ranks, and sent them flying in confusion. At that moment Washington's cavalry broke from their concealment, and made a successful charge upon Tarleton's horsemen. The British were completely routed, and were pursued about twenty miles. The Americans lost seventy-two killed and wounded. The British lost over three hundred killed and wounded, and near five hundred made prisoners. The spoils were two caucions, eight hundred muskets, horses, and two standards. The caucions had been taken from the British at Saratoga, and retaken from Gates at Camden. The Congress gave Morgan the thanks of the nation and a gold medal, and to Howard and Washington each a silver medal.

(Tree) employed two men to go up to the Thicketty Mountain, and in the grassy intervals among the hills raise cattle. As a compensation, they were allowed the entire use of the cows during the summer, for making butter and cheese, and the steers in tillage. In the fall large numbers of the fatted cattle would be driven down to Camden to be slaughtered for beef on account of the owners. This region, on account of its grass and fine springs, was peculiarly favorable for the rearing and use of cows, and consequently was called "The Cow Pens."

**COX, JACOB DOLSON**, was born in Montreal, Canada, Oct. 27, 1828. His mother was a lineal descendant of Elder William Brewster, of the *Mayflower*. He was admitted to the bar in 1852, and practised his profession in Warren, Ohio, until elected state senator, in 1859. He was created brigadier-general of state militia, and commanded a camp of instruction, in April, 1861, and in May was made brigadier-general of volunteers, doing good service in western Virginia. In August, 1862, he was assigned to the Army of Virginia, under General Pope, and in the fall was ordered to the district of the Kanawha. After the death of Reno, at South Mountain (which see), he commanded the Ninth Corps. He was in command of the district of Ohio in 1863; served in the Atlanta campaign in 1864; and was promoted to major-general in December of that year. He joined Sherman's army early in 1865, was governor of Ohio in 1866-68, and was called to the cabinet of President Grant, as Secretary of the Interior, in March, 1869.

**Cradle of American Liberty.** This name was given to Faneuil Hall, in Boston, because it was the usual meeting-place of the patriots during the long contest with royal power, before the kindling of the old war for independence. It was erected in 1742, at the sole expense of Peter Faneuil, of Boston, who generously gave it to the town. The lower story was

GOLD MEDAL AWARDED TO MORGAN.

**Cowpens, THE.** This name was derived from the circumstance that, some years before the Revolution, before that section was settled, some persons in Camden (then called Pine

used for a market, and in the upper story was an elegant and spacious hall, with convenient rooms for the public use. It was burned in 1761, when the town immediately rebuilt it. The en-

graving shows it as it was during the Revolution. The hall is about eighty feet square, and contains some fine paintings of distinguished men. The original vane, in the form of a grasshopper, copied from that of the Royal Exchange of London, still does duty there. In 1805 another story was added to the original building.

FANEUIL HALL. (From an English print of the time.)

The name of Cradle of Liberty was also given to the "Apollo Room," a large apartment in the Raleigh Tavern at Williamsburg, Va., where the members of the House of Burgesses met after its dissolution by Governor Lord Dunmore in 1774. There they adopted non-importation resolutions, appointed a fast-day, and chose delegates to the First Continental Congress, which assembled at Philadelphia in September.

THE APOLLO ROOM.

Craddock, MATTHEW, an opulent London merchant, was the first governor of the Massachusetts Company, who founded the Massachusetts Bay Colony. He never came to America, but was a munificent supporter of the colony during its early struggles. He was a member of the

celebrated Long Parliament (which see), and died May 27, 1641.

Craig, SIR JAMES HENRY, was born at Gibraltar, 1749; died Jan. 12, 1812. He entered the British army as ensign in 1763, was aide-de-camp to General Boyd at Gibraltar in 1770, and came to America in 1774. He remained in service

here from the battle of Bunker's Hill until the evacuation of Charleston, in 1781, where he held the rank of lieutenant-colonel. He was made a major-general in 1794, lieutenant-general in 1801, and governor-general and commander-in-chief of Canada in 1807. Totally unfit for civil rule, he was a petty oppressor as governor; his administration was short, and he returned to England in 1811.

Craig, JAMES, M.D., was born in Scotland in 1731; died in Fairfax County, Va., Feb.

6, 1814. Educated for a physician, he came to America in early life, and practised his profession in Fairfax County. He was the intimate friend and family physician of Washington. He was with him in his expedition against the French in 1754, and in Braddock's campaign in 1755. In 1775 he was placed in the medical department of the Continental Army, and rose to the first rank. He unearthed many of the secrets of the Conway Cabal (which see), and did much to defeat the conspiracy. He was director of the army hospital at Yorktown in the siege of that place, in 1781, and after the Revolution settled near Mount Vernon, where he was the principal attendant of Washington in his last illness.

Crane Island, REPULSE OF THE BRITISH AT (1813). On the 1st of June, 1813, Admiral Sir J. B. Borlase Warren entered the Chesapeake with a considerable reinforcement for the marauding squadron of Sir George Cockburn, bearing a large number of land-troops and marines. There were twenty ships of the line and frigates and several smaller British war-vessels within the capes of Virginia. The citizens of Baltimore, Annapolis, and Norfolk were equally menaced. Norfolk was the first point of attack. For its defence on the waters were the frigate *Constellation*, 38 guns, and a flotilla of gunboats; on the land were forts Norfolk and

Nelson (one on each side of the Elizabeth River) and forts Tar and Barbour, and the fortifications on Craney Island, five miles below the city. Towards midnight of June 19 Captain Tarbell, by order of Commodore Cassin, commanding the station, went down the Elizabeth River with fifteen gunboats, to attempt the capture of the frigate *Junon*, 38 guns, Captain Sanders, which lay about three miles from the rest of the British fleet. Fifteen sharpshooters from Craney Island were added to the crews of the boats. At half-past three in the morning the flotilla approached the *Junon*, and, under cover of the darkness and a thick fog, the American vessels approached her to within easy range without being discovered. She was taken by surprise. After a conflict of half an hour, and when victory seemed within the grasp of the Americans, a wind sprung up from the northeast, and two vessels lying becalmed below came to the *Junon's* assistance, and by a severe cannonade repulsed them. In this affair the Americans lost one man killed and two slightly wounded. This attack brought matters to a crisis. The firing had been distinctly heard by the fleet, and with the next tide, on a warm Sunday morning in June, fourteen of the British vessels entered Hampton Roads, and took position at the mouth of the Nansemond River. They bore land-troops, under General Sir Sidney Beckwith. The whole British force, including the sailors, was about five thousand men. Governor Barbour of Virginia had assembled several thousand militia, in anticipation of invasion. Craney Island, then in shape like a painter's pallet, was separated from the main by a shallow strait, fordable at low tide, and contained about thirty acres of land. On the side commanding the ship-channel were intrenchments armed with eighteen and twenty-four pound cannons.

THE BLOCK-HOUSE ON CRANEY ISLAND, 1813.

A successful defence of this island would save Norfolk and the navy-yard there, and to that end efforts were made. General Robert B. Taylor was the commanding officer of the district. The whole available force of the island, when the British entered Hampton Roads, were two companies of artillery, under the general command of Major James Faulkner; Captain

Robertson's company of riflemen; and four hundred and sixteen militia infantry of the line, commanded by Lieutenant-colonel Henry Beatty. If attacked and overpowered, these troops had no means of escape. These were reinforced by thirty regulars under Captain Richard Pollard, and thirty volunteers under Lieutenant-colonel Johnson, and were joined by about one hundred and fifty seamen under Lieutenants B. J. Neale, W. B. Shubrick, and J. Sanders, and fifty marines under Lieutenant Breckinridge. The whole force on Craney Island on the 21 of June (1813) numbered seven hundred and thirty-seven men. At midnight the camp was alarmed by the crack of a sentinels' rifle. It was a false alarm; but before it was fairly daylight a trooper came dashing across the fordable strait with the startling information that the British were landing in force on the main, only about two miles distant. The drum beat the long-roll, and Major Faulkner ordered his guns to be transferred so as to command the strait. At the same time, fifty large barges, filled with fifteen hundred sailors and marines, were seen approaching from the British ships. They were led by Admiral Warren's beautiful barge *Centipede* (so called because of her numerous oars), and made for the narrow strait between Craney Island and the main. Faulkner had his artillery in position, and when the invaders were within proper distance his great guns were opened upon them with terrible effect. The British were repulsed, and hastened back to their ships. Warren's barge, which had a three-pound swivel-gun at the bow, with four others, was sunk in the shallow water, when some American seamen, under the direction of Lieutenant Tattnell, waded out, secured the vessels, and dragged them ashore, securing many prisoners. The British loss, in killed, wounded, and missing, was one hundred and forty-four; the Americans lost none. The invaders now abandoned all hope of seizing Norfolk, the *Constellation*, and the navy-yard, and never attempted it afterwards.

Craven, TEUNIS A. M., was born in Portsmouth, N. H., and entered the U. S. Navy as midshipman in February, 1829. He was commissioned lieutenant in 1841, and was made commander in 1861. In command of the ironclad *Tecumseh*, he perished when she was blown up by a torpedo in Mobile Bay, in August, 1864. (See *Mobile Bay*.)

Craven, THOMAS T., was born in the District of Columbia, entered the United States Navy as midshipman in 1822, and was made captain June 7, 1861. A year later he became commodore. He materially assisted in the reduction of the forts on the Mississippi below New Orleans (May, 1862) and the destruction of the Confederate flotilla there. He had been lieutenant-commander of the flag-ship *Vincennes* in Wilkes's exploring expedition in 1838-42 (see *South Sea Exploring Expedition*), and was instructor of the United States Naval Academy, at Annapolis, 1851-55. In 1866 (Oct. 10) he was made a rear-admiral, and was in command of the North Pacific Squadron in 1869.

**Crawford, SAMUEL WYLIE**, was born in Franklin County, Penn., Nov. 8, 1829, and graduated at the University of Pennsylvania in 1847. He studied medicine, and in 1851 was made assistant-surgeon in the United States Army. He was in

SAMUEL WYLIE CRAWFORD.

Texas and New Mexico on duty, and in 1856 went to Mexico, where he pursued scientific researches. Dr. Crawford was surgeon of the garrison of Fort Sumter during its siege in 1861, and performed valuable military service there. In May he was made major of infantry and inspector-general in eastern Virginia. With Banks, he bore a conspicuous part in the Shenandoah Valley and in the battle of Cedar Mountain as brigadier-general. At the battle of Antietam he commanded the division of Mansfield after that general's death. He was breveted colonel in the United States Army for his conduct at Gettysburg. In Grant's campaign (1864-65) against Richmond General Crawford bore a conspicuous part from the Wilderness to Appomattox Court-house. In March, 1865, he was created major-general of volunteers.

**Crawford, THOMAS**, sculptor, was born in New York, March 22, 1814; died in London, Oct. 10, 1857. Manifesting at an early age a talent and taste for art, he went to Italy and profited by the instruction of Thorwaldsen at Rome. There he established a studio, soon rose to eminence, and had abundant employment. His works of superior character, are quite numerous. Those widest known are the bronze equestrian statue of Washington for the monument at Richmond, ordered by the State of Virginia; the colossal bronze statue of the Genius of America that surmounts the dome of the Capitol at Washington; and the historical designs for the bronze doors in the new Capitol. Mr. Crawford was exceedingly industrious, and worked with great facility. During his life of forty-three years, or less than twenty-five of artistic labor, he finished more than sixty works, some of them colossal, and left about fifty sketches in plaster, besides designs of various kinds. Two of the finest of his works in marble are "The Last of his Race" (colossal), and "The Peri," both in the New York Historical Society.

**Crawford, WILLIAM HARRIS**, was born in Nel-

son County, Va., Feb. 24, 1772; died near Elberton, Ga., Sept. 18, 1834. After teaching school several years, he became a lawyer, beginning the practice of his profession in Lexington, Ga., in 1799. He compiled the first digest of the laws of Georgia, published in 1802; was a member of his State Legislature from 1803 to 1807; was United States Senator from 1807 to 1813, in which body he was regarded as its ablest member. In 1813 he was sent as United States Minister to France, and on his return (1815) was appointed Secretary of War; but in October, 1816, he was transferred to the Treasury Department, which position he held until 1825, when he was a defeated Democratic candidate for the Presidency, having been nominated the previous year by a Congressional caucus. He had four other candidates to oppose—Adams, Calhoun, Jackson, and Clay. At about that time his health failed, and he never fully recovered it. He became a circuit judge in Georgia, and was warmly opposed to "nullification" (which see).

#### Credit System and its Collapse (1836-37).

The removal of the deposits of the public money to the amount of \$10,000,000 from the Bank of the United States (October, 1833), when its line of discounts, or loans, was over \$60,000,000, produced a terrible panic. But when these funds were distributed over the country by deposits in the state banks, thereby increasing their power to lend largely, the panic ceased. A course of credit then began which proved ruinous. The deposit banks loaned freely, and very soon speculation became rife. A season of apparent prosperity was enjoyed, which most people believed to be real. It was deceptive. The credit system was simply enormously expanded. Trade was brisk, the shipping interest was prosperous, prices ruled high, luxury abounded, and nobody seemed to perceive the under-current of disaster that was surely wasting the foundations of the absurd credit system and the real prosperity of the nation. It collapsed at the touch of the Ithuriel spear of Necessity. A failure of the grain crop of England caused a large demand from abroad for coin to pay for food products. The Bank of England, seeing exchanges running higher and higher against that country, contracted its loans, and admonished houses who were giving long and extensive credits to the Americans, by the use of money borrowed from the bank, to curtail that hazardous business. At about the same time the famous "Specie Circular" from the United States Treasury Department was issued (July, 1836). (See *Specie Circular*.) From the parlor of the Bank of England and from the Treasury of the United States went forth the unwelcome fiat, *Pay up!* American houses in London failed for many millions of dollars; and every bank in the United States suspended specie payments in 1837, but resumed in 1839. It was then that the United States Bank, rechartered by the Legislature of Pennsylvania, fell into hopeless ruin (see *United States Bank*), and with it went down a very large number of the state banks of the country. A general bankrupt law, passed in 1841, relieved of debt almost forty thou-

sand persons, whose liabilities amounted, in the aggregate, to about \$441,000,000.

**Creek Confederacy.** The domain of the Creek Confederacy extended from the Atlantic westward to the high lands which separate the waters of the Alabama and Tombigbee rivers, including a greater portion of the States of Alabama and Georgia and the whole of Florida. It was with the people of this confederacy that Oglethorpe held his first interview with the natives on the site of Savannah. They called themselves Muscogeeks, but, the domain abounding in creeks, it was called the Creek country by the Europeans. Evidently the kindred in origin and language of the Chickasaws and Choctaws, they claimed to have sprung from the earth, emigrated from the Northwest, and reached Florida, when they fell back to the more fertile regions of the Ocmulgee, Coosa, and Tallapoosa rivers. Some of them remained in Florida, and these are the Seminoles of our day. De Soto penetrated their country so early as 1540, and twenty years later De Luna formed an alliance with the tribe of the Coosas. When the Carolinas and Louisiana began to be settled by the English, Spaniards, and French, they all courted the Creek nation. The English won the Lower Creeks, the French the Upper Creeks, while the Spaniards, through their presents, gained an influence over a portion of them. In 1710 some of these (the Cowetas) made war on the Carolinas, and were petted by the Spaniards at St. Augustine; but in 1718 they joined the French, who built a fort at Mobile. In 1732 eight Creek tribes made a treaty with Oglethorpe at Savannah; and in 1739 he made a treaty with the Cowetas, and they joined him in his expedition against St. Augustine. When the French power in North America was overthrown, the entire Creek nation became subject to English influence. At that time they had fifty towns, and numbered nearly six thousand warriors. They were the allies of the British during the American Revolution. Many Tories fled to the Creek towns from the Carolinas and Georgia at the close of the war, and excited the barbarians to ravage the frontiers of those states. A peace was concluded with the Creeks by Washington in 1790; yet some of them joined the Cherokees in incursions into Tennessee in 1792. Another treaty was made in 1796, and in 1802 they began to cede lands to the United States. But when the War of 1812 broke out they joined their old friends, the English; and by an awful massacre at Fort Mims, in August, 1813, they aroused the Western people to vengeance. Troops led by General Jackson and others entered the Creek country; and in 1813 they ravaged the finest portion of it, destroyed the towns, slew or captured two thousand of the Creek warriors, thoroughly subdued them, and, in fact, destroyed the nation. Their last stand against the United States troops was made at Horseshoe Bend in March, 1814. Some of them had already settled in Louisiana, and finally in Texas, where they remained until 1872, when the government took steps to renite the nation in the Indian Territory, west of Arkau-

sas. They had ceded all their lands east of the Mississippi. With those who had removed there was trouble at times. Some favored removal west of the Mississippi; others opposed it. In 1825 they put one of their chiefs (William McIntosh) to death for signing a treaty for the cession of lands. In 1836 some of the Creeks joined their kindred, the Seminoles, in Florida in attacks upon the white people, and others joined the United States troops against them. (See *Seminole War*.) They were finally nearly all removed beyond the Mississippi, where they numbered about twenty-five thousand souls in 1876. Unsuccessful attempts to Christianize them were made. They refused missions and schools for a long time. Their nation declined, and in 1857 numbered less than fifteen thousand. During the Civil War the tribe was divided in sentiment, six thousand of them joining the Confederates. Their alliance with the Confederates was disastrous to their nation. In 1866 they ceded three million acres of their domain in the Indian Territory to the United States for thirty cents an acre. They are among the most peaceable and order-loving of the banished tribes. The men of the Creek Confederacy were well-proportioned, active, and graceful; the women were smaller, exquisitely formed, and some of them were very beautiful. In summer both sexes went without clothing, excepting a drape of Spanish moss that was fastened at the waist and fell to the thighs. The principal people painted their faces and bodies in fanciful colors, and fops sometimes appeared in beautiful mantles of feathers or deer-skins, and on their heads were lofty plumes of the eagle and the flamingo. The houses of the chiefs stood upon mounds, sometimes in the form of a great pavilion, and the inside of their winter dwellings was daubed with clay. Hunting, fishing, and cultivating their fertile lands were their employments, for they seldom made aggressive war. They were skilful artisans in making arms, houses, barges, canoes, and various ornaments. They made pottery for kitchen service, and some of it was very ornamental. Fortifications were constructed with moats, and walled towns and grand and beautiful temples abounded. They made mats of split cane, with which they covered their houses and upon which they sat. These resembled the rush carpeting of the Moors. In their temples, dedicated to the worship of the sun, were votive offerings of pearls and rich furs. They regarded the sun as the superior deity, and in all their invocations they appealed to it as to God. To it they made sacrifices of grain and animals. The chief, while he was alive, was held in the greatest veneration as priest and king. As a symbol of devotion to him of the entire strength of the nation, the sacrifice of the first-born male child was required, while the young mother was compelled to witness the slaughter of her child. Their marriages were attended with great displays of ornaments and flowers, and at the setting of the sun the bride and groom and their friends prostrated themselves before that luminary and implored his blessing. Like the Iro-

quois, the civil power in their government was widely distributed; and, like the Iroquois, the Creeks were an exception, in their approach to civilization, to all the Indian tribes of North America. Such were the Creek (or Muscogee) Indians when first seen by Europeans.

**Creek Indians in New York.** The Continental Congress had ordered (1788) renewed negotiations with the southern tribes looking to complete pacification. The National Congress in 1789 made an appropriation for the purpose, and Washington appointed General Lincoln, Colonel Humphreys, and Cyrus Griffin (late President of Congress) commissioners to treat. They were instructed to try and induce the Indians to comply with three treaties already made with Georgia, if they were just, and to secure, by a new treaty, the tract west of the Oconee River, whereon settlers were already seated. The commissioners met Creek representatives at Rock Landing, Sept. 20 (1789). They were led by McGillivray, a half-breed, the head chief of the Creeks, who received the commissioners with respect and friendship such as had been extended to the British. They determined not to yield to the claims of the Georgians; and as the commissioners did not propose to restore their lands, they broke off the treaty abruptly. McGillivray was the son of a Scotch trader, who had married a Creek maiden. Washington despatched Colonel Willett on a new mission to the Creeks. He succeeded in persuading McGillivray to proceed to New York (then the seat of the national government) with some of his principal chiefs to renew negotiations. Accompanied by twenty-eight of these braves, McGillivray was received with much ceremony at Philadelphia and New York. He arrived at the latter city (June 23, 1790) when Congress was in session. In the reception there the Tammany Society, or Columbian Order, took a conspicuous part. That society had been lately established. (See *Tammany*.) Arrayed in their Indian costume, the society escorted the Creek chiefs into the city, and afterwards entertained them at a public dinner. McGillivray, as the son of a Scotchman, was chosen an honorary member of the St. Andrew's Society. Washington appointed the Secretary of War (Knox), on the part of the United States, to negotiate a treaty. It was done satisfactorily to all parties, and was ratified Aug. 13, 1790. The treaty was signed (Aug. 7) by Knox, and by McGillivray and twenty-three of his chiefs on behalf of the Creek nation. After some simple ceremonies, the conference was concluded by a song of peace, sung by the whole Indian deputation.

**Creeks, THE, SUE FOR PEACE.** After the battle at the Horseshoe Bend (see *Tohopeka*) Jackson pushed on to the "Hickory Ground," at the confluence of the Coosa and Tallapoosa rivers, and there, on the site of Fort Toulouse (built by the French one hundred years before), he raised the national standard over a fortification there erected and named Fort Jackson. Thither deputation after deputation of humiliated Creek

chiefs made their way to sue for peace on behalf of themselves and their people. "Give proof of your submission," said Jackson, "by going and staying above Fort Williams, where you will be treated with, and the demands of my government will be made known to you. But you must first bring in Weathersford, the leader at Fort Mims, who, on no account, can be forgiven." On the 20th of April, 1814, General Pinckney arrived at Fort Jackson, when, informed of the general submission of the Creeks, and considering the war with them at an end, he issued an order (April 21) for the West Tennesseeans to march home. They were discharged at Fayetteville, Tenn. Jackson then retired to his own home at the Hermitage.

**Creeks, THE, TREAT FOR REMOVAL.** A treaty was concluded with the Creek nation, Feb. 12, 1825, for their removal to lands west of the Mississippi River, it having become the policy of the United States to plant all of the barbarian tribes east of the Mississippi on reservations west of that stream.

**Creeks, TREATY WITH THE.** A treaty of peace and friendship between the United States and the Creek nation was concluded at Colerain, Ga., Jan. 29, 1796. It did not satisfy the Georgians, as no new cessions of land were obtained; but it put an end to the mutual depredations which had prevailed on that frontier and provided for the restoration of prisoners and property captured by the Indians. It settled the mutual boundaries of the Creeks, Chickasaws, and Choctaws; and in consideration of an additional annuity of six thousand dollars and the providing of the Creeks with two blacksmiths, the right was obtained for the President to establish such posts and trading-stations within the territory as he might deem expedient.

**Crele, JOSEPH,** the oldest man who ever lived in America, was born in Detroit in 1725; died at Caledonia, Wis., Jan. 27, 1866. It is said that the date of his birth is established by the record of baptisms in the French Roman Catholic Church at Detroit. In 1755 he married his first wife, and was twice married afterwards. He bore arms against Braddock at the time of his defeat, and was a letter-carrier on the frontier several years before the Revolution. At the time of his death he lived with a daughter by his third wife, born when he was sixty-nine years of age. Towards the close of his life he would sometimes say, despondingly, "I fear Death has forgotten me."

**Creole State.** A name sometimes given to Louisiana, in which a large portion of the inhabitants are descendants of the French and Spanish settlers.

**Crescent City.** A name given to New Orleans. Its older portion was built around a bend of the Mississippi of crescent form.

**"Crisis, The."** During the old war for independence a series of political pamphlets written by Thomas Paine, an English emigrant, was published in Philadelphia. The first number, beginning with the often-quoted line, "These

are the times that try men's souls," was published in December, 1776. The last number was published at the attainment of peace, April 19, 1783. So useful in encouraging the Americans to persevere in their struggle were these essays considered, that, early in 1782, when Paine had laid aside his pen for several months, he was induced by Robert Morris to resume it, with a promise that he should have pecuniary reward for his services. The series and the title were suggested by a similar series published in London (1775-76), on the first number of which it was announced "to be continued weekly during the present bloody civil war in America." (See "*Common Sense*.")

**Crittenden Compromise, THE.** In the United States Senate in December, 1860, when civil war was threatened, the venerable John J. Crittenden, then seventy-five years of age, a senator from Kentucky, offered a series of amendments to the National Constitution, and joint resolutions, for the protection of slavery, to satisfy the slaveholders and to secure peace, which, embodied, are known in history as the "Crittenden Compromise." The amendments substantially proposed: 1. To re-establish the line fixed in the Missouri Compromise (which see) as the boundary-line between free and slave territory; that Congress should by statute law protect slave property from interference by all the departments of the territorial governments during their continuance as such; that such territories should be admitted as states with or without slavery, as the state constitutions should determine. 2. That Congress should not abolish slavery at any place within the limits of any slave-labor state, or wherein slavery might thereafter be established. 3. That Congress should not abolish slavery in the District of Columbia so long as it should exist in the adjoining states of Maryland and Virginia, without the consent of the inhabitants thereof, nor without just compensation made to the owners of slaves who should not consent to the abolishment; that Congress should not prevent government officers sojourning in the district on business bringing their slaves with them, and taking them with them when they should depart. 4. That Congress should have no power to prohibit or hinder the transportation of slaves from one state to another, or into territories where slavery should be allowed. 5. That the National Government should pay to the owner of a fugitive slave, who might be rescued from the officers of the law, upon attempting to take him back to bondage, the full value of such "property" so lost; and that the amount should be refunded by the county in which the rescue might occur, that municipality having the power to sue for and recover the amount from the individual actors in the offence. 6. That no future amendments to the Constitution should be made that might have an effect on the previous amendments, or on any sections of the Constitution on the subject already existing; nor should any amendment be made that should give to the Congress the right to abolish or interfere with slavery in any of the states where it existed by

law, or might hereafter be allowed. In addition to these amendments Senator Crittenden offered four joint resolutions, declaring substantially as follows: 1. That the Fugitive Slave Act was constitutional and must be enforced, and that laws ought to be made for the punishment of those who should interfere with its due execution. 2. That all state laws (see *Personal Liberty Laws*) which impeded the execution of the Fugitive Slave Act were null and void; that such laws had been mischievous in producing discord and commotion, and therefore the Congress should respectfully and earnestly recommend the repeal of them, or by legislation make them harmless. 3. This resolution referred to the fees of commissioners acting under the Fugitive Slave Law, and the modification of the section which required all citizens, when called upon, to aid the owner in capturing his runaway property. 4. This resolution declared that strong measures ought to be adopted for the suppression of the African slave-trade. On the 2d of March—two days before the close of the session—Mason, of Virginia, the author of the Fugitive Slave Law, called up the Crittenden propositions and resolutions, when Clarke's resolutions (which see) were reconsidered and rejected, for the purpose of obtaining a direct vote on the original proposition. After a long debate, continued into the "small hours" of Sunday morning (March 3, 1861), the Crittenden Compromise was rejected by a vote of twenty against nineteen. Had the Secessionists retained their seats, it might have been carried. A resolution of the House of Representatives was then adopted, to amend the Constitution so as to prohibit forever any amendment of that instrument interfering with slavery in any state.

**Crittenden, GEORGE B.** was born in Kentucky, and graduated at West Point in 1832. He resigned the next year, served in the war against Mexico (1846-48) under General Scott, joined the insurgents, and became a Confederate major-general, and, with Zollicoffer, was defeated in the battle at Mill Spring (which see) in January, 1862. He was a son of Senator J. J. Crittenden.

**Crittenden, JOHN JORDON,** was born in Woodford County, Ky., Sept. 10, 1786; died at Frankfort, Ky., July 26, 1863. He was aide-de-camp to Governor Shelby at the battle of the Thames (which see); became a lawyer; entered the Kentucky Legislature in 1816, and was speaker several years, and was first a member of the United States Senate in 1817-19. From 1835 to 1841 he was again in the Senate, when President Harrison called him to his cabinet as attorney-general. He was again in the Senate from 1842 to 1848, when he was elected governor of his state, which position he held when President Fillmore appointed him attorney-general in 1850. Mr. Crittenden was one of the most useful and trustworthy of the members of the national legislature, and was regarded as the "patriarch of the Senate." In the session of 1860-61 he introduced the "Crittenden Compromise" (which see). His term in the Senate ex-

piring in March, 1861, he entered the Lower House as a representative in July following, in which he was a very ardent but conservative Union man, but was opposed to the emancipation of the slaves.

JOHN JORDAN CRITTENDEN.

**Crittenden, THOMAS LEONIDAS**, second son of Senator J. J. Crittenden, was born at Russellville, Ky., in 1819. He served under General Taylor in the war against Mexico, and when the latter became President of the United States he sent Crittenden to Liverpool as United States Consul. He returned in 1853, and in September, 1861, was made a brigadier-general and assigned a command under General Buell. For gallantry in the battle of Shiloh he was promoted to major-general of volunteers and assigned a division in the Army of the Tennessee. He afterwards commanded the left wing of the Army of the Ohio under General Buell. Then he served under Rosecrans, taking part in the battles at Stone River and Chickamauga. His corps was among the routed of the army in the last-named battle. He commanded a division of the ninth corps in the campaign against Richmond in 1864. In March, 1865, he was breveted major-general United States army.

**Crockett, DAVID**, was born in Greene County, Tenn., Aug. 17, 1786; died at San Antonio, Bexar Co., Texas, March, 1836. With little education, he became a noted hunter in his early life; served under Jackson in the Creek War; was a member of Congress from 1828 to 1834, and removed to Texas in the latter year, where he became zealously engaged in the war for Texas independence. While fighting for the defence of the Alamo he was captured and put to death by order of Santa Aña.

**Croghan, GEORGE**, Indian agent, was born in Ireland; died at Passyunk, Penn., in the summer of 1782. Educated in Dublin, he emigrated to Pennsylvania, and in 1746 was engaged in trade with the Indians. Acquiring their language and friendship, Pennsylvania made him Indian agent. Captain in Braddock's expedition in 1755, he showed such excellence in military matters that in 1756 he was intrusted with the defence of the western frontier of Pennsyl-

vania, and was made by Sir William Johnson his deputy, who, in 1763, sent him to England to confer with the ministry about an Indian boundary-line. On that voyage he was wrecked on the coast of France. In May, 1776, Croghan founded a settlement four miles above Fort Pitt (now Pittsburgh). He was active in securing the attachment of the Indians to the British interest until 1776, but took no active part in the events of the Revolution.

**Croghan, GEORGE**, was born near Louisville, Ky., Nov. 15, 1791; died in New Orleans, Jan. 8, 1849. He was educated at the College of William and Mary, which he left in 1810; was aide to Colonel Boyd in the battle of Tippecanoe (which see) in 1811, and made captain of infantry in March, 1812. In March, 1813, he became an aide of General Harrison, and in August of the same year sustained the siege of Fort Stephenson (which see) against a force of British and Indians, for which he was breveted a captain and awarded a gold medal by Congress. He was made lieutenant-colonel early in 1814, and resigned in 1817. Colonel Croghan was postmaster at New Orleans in 1824, and late in the next year was appointed inspector-general of the army, with the rank of colonel. He served under Taylor in Mexico at the beginning of the war with that power.

**Cromwell, OLIVER**, Lord Protector of England, was born at Huntingdon, April 25, 1599; died at the Palace of Whitehall, Sept. 3, 1658. His social position was thus described by himself: "I was by birth a gentleman, neither living in any considerable height nor yet in obscurity." His family was connected with the St. Johns, Hampdens, and other English historical families. It is a curious fact that when he was five years of age he had a fight with Prince Charles, who, as king, was beheaded and succeeded by Cromwell as the ruler of England. He flogged the young prince, who was then with his family visiting Cromwell's uncle. As a boy he was much given to robbing orchards and playing unpleasant pranks. He lived a wild life at Sidney-Sussex College, Cambridge, whither he was sent in 1616. He left college after his father's death next year, and in 1620 married a daughter of Sir James Bourchier, when his manner of life changed, and he became an earnest Christian worker for good, praying, preaching, and exhorting among the Puritans. He became a member of Parliament in 1628, and always exercised much influence in that body. He was a radical in opposition to royalty in the famous Long Parliament. When the Civil War commenced he became one of the most active of the men in the field, and was made a colonel in 1643 under the Earl of Essex, the parliamentary lord-general. He raised a cavalry regiment, and excited in them and other troops which he afterwards led the religious zeal of the Puritans, and directed it with force against royalty. That regiment became the most famous in the revolutionary army. After the death of the king he resolved to become sole ruler of England. He had effected the prostration of the monarchy,

not from ambitious, but from patriotic motives; but in his efforts for power after the execution he was a bold operator. When the Scotch partisans of the son of the king (afterwards Charles II.) invaded England and penetrated to Worcester, Cromwell, with thirty thousand English troops, gained a decisive victory over them. Grateful to the victor, the government gave him an estate worth \$20,000 a year and assigned him Hampton Court as his abode. He now sought supreme rule. On April 20, 1653, he boldly drove the remnant of the Long Parliament which ruled England, out of the House of Commons by military force. The same day the Council of State was broken up, and for weeks anarchy prevailed in England. Cromwell issued a summons for one hundred and fifty-six persons named to meet at Westminster as a Parliament. They met (all but two) in July. This was the famous "Barebones' Parliament," so called after one of its Puritan members named Praise God Barebones. It was a weak body, and in December, 1653, Cromwell was declared Lord Protector of Great Britain, and the executive and legislative powers were vested in him and a Parliament. In his administration of affairs he exerted considerable influence in the English-American colonies. His administration was a stormy one, for plots for his assassination were frequently discovered, and he was constantly harassed by the opposition of men who had acted with him but were honest Republicans, which he was not. With shattered body and distracted mind, he sank into the grave from the effects of a tertian fever. He died on the anniversary of the battle of Worcester.

**Cromwell, the Buccaneer.** One of the earliest of the famous buccaneers was Captain Cromwell, who had been a common sailor in New England. In 1646 he was in command of three fast-sailing brigantines, filled with armed men, and was driven into the harbor of New Plymouth by a storm. Cromwell, under the authority of a sort of second-hand commission from High-admiral (Earl of) Warwick, had captured in the West Indies several richly laden Spanish vessels. These freebooters spent money freely at Plymouth. Cromwell and his men soon afterwards went to Boston, where he lodged with a poor man who had helped him when he was poor, and gave him generous compensation. Winthrop, who had lately been re-elected governor, received from this freebooter an elegant sedan chair captured in one of his prizes, designed as a gift by the Viceroy of Mexico to his sister.

**Crook, GEORGE,** was born near Dayton, Ohio, Sept. 8, 1828, and graduated at West Point in 1852. In May, 1861, he was promoted to captain. He did good service in western Virginia, and in September was made brigadier-general and took command of the Kanawha District. In command of a division of cavalry in the Army of the Cumberland, he was at Chickamauga (which see) and drove Wheeler across the Tennessee. (See *Wheeler's Raid*.) Brevetted major-general (July, 1864), he was put in command of the Army of West Virginia, and took part in Sheridan's oper-

ations in the Shenandoah Valley. He was made major-general of volunteers in October, and late in February, 1865, was captured by guerrillas, but exchanged the next month. Besides other brevets he was brevetted brigadier-general of the regular army March 13, 1865.

**Cross Keys.** When Banks was expelled from the Shenandoah Valley (see *Winchester*), the city of Washington was in real danger, and it could only be relieved from peril by the retreat or capture of the Confederates. For this purpose McDowell sent a force over the Blue Ridge, to intercept them if they should retreat, and Frémont pressed on from the west towards Strasburg with the same object in view. Perceiving the threatened danger, Jackson fled up the valley with his whole force, hotly pursued by the Nationals, and at Cross Keys, beyond Harrisonburg, Frémont overtook Ewell, when a sharp but indecisive battle occurred. Ewell had about five thousand men, strongly posted. There he was attacked (on Sunday morning, June 7, 1862) by Frémont with the force with which he had moved out of Harrisonburg. General Schenck led the right, General Milroy the centre, and General Stahl the left. Between the extremes was a force under Colonel Clincher. At eleven o'clock the conflict was general and severe, and continued several hours, Milroy and Schenck all the while gaining ground, the former with heavy loss. At four o'clock the whole National line was ordered to fall back at the moment when Milroy had pierced Ewell's centre, and was almost up to his guns. Milroy obeyed the order, but with great reluctance, for he felt sure of victory. The Confederates occupied the battlefield that night, and the Nationals rested without their first line until morning, when Ewell was called to aid Jackson beyond the Shenandoah River. The National loss in the battle was six hundred and sixty-four, of which two thirds fell in Stahl's brigade.

**Crown Officers Clamor for Taxing the Colonies.** After the Congress at Annapolis (which see), every crown officer in the colonies urged upon the British government the necessity of devising some plan for deriving a revenue from taxation of the colonies. Their recommendations put forth the idea that "a common fund must be either voluntarily raised or assessed some other way." Even the moderate Sharpe, of Maryland, recommended that the governor and council of each colony should be vested with power, independent of the Assembly, to levy money "after any manner that may be deemed most ready and convenient."

**Crown Officers, SELECTION OF.** On the 28th of March, 1774, a bill passed Parliament, by the overwhelming majority of two hundred and thirty-nine against sixty-four, which was tantamount to an abrogation of the Charter of Massachusetts. It gave to the crown the appointment of counsellors and judges of the supreme court; and the nomination of all other officers, military, executive, and judicial, was given to the governor, independent of any approval by the Council. To the sheriffs, instead

of the selectmen of the towns, was given the selection of jurors; and all town-meetings, except for elections, were prohibited. It was a direct blow at the liberties of the people.

**Crown Point**, in Essex County, N. Y., was quite an important trading-station between the English and the Indians until 1731, when the French took possession of this cape, projecting into Lake Champlain on its western side, and built a military work there, which they called Fort Frederick. It remained in possession of the French until 1759, when the approach of a large English force, under General Amherst, caused the garrison there to join that at Ticonderoga, in their flight down the lake to its outlet. (See *Ticonderoga, Capture of, 1759.*) Amherst remained at Crown Point long enough to construct a sufficient number of rude boats to con-

CROWN POINT.

vey his troops, artillery, and baggage, and then started to drive the enemy before him across the St. Lawrence. The delay prevented his joining Wolfe at Quebec. When ready to move, it was mid-autumn (October 11), and heavy storms compelled him to return to Crown Point, after going a short distance down the lake. There he placed his troops in winter-quarters, where they constructed a fortress, whose picturesque ruins, after the lapse of more than a century, still attest its original strength. The whole circuit, measuring along the ramparts, was a trifle less than half a mile; and it was surrounded by a broad ditch, cut out of the solid limestone, with the fragments taken out of which massive stone barracks were constructed. In it was a well, eight feet in diameter and ninety feet deep, also cut out of the limestone. The fortress was never entirely finished, although the British government spent nearly \$10,000,000 upon it and its outworks. Crown Point was an important place during the old war for independence.

**Crown Point, CAMPAIGN AGAINST (1756).**

The conduct of the second campaign against Crown Point was intrusted to General John Winslow (a great-grandson of Edward Winslow, governor of Plymouth), who led the expedition against the Acadians in 1755. (See *Acadians, Expulsion of.*) The Earl of Loudoun was commander-in-chief of the British forces in America, and General James Abercrombie was his lieutenant. General Winslow had collected seven thousand men at Albany before Abercrombie's arrival, with several British regiments, in June. Difficulties immediately occurred respecting military rank. These, unadjusted when Loudoun arrived, were made worse by his arrogant assumption of supreme rank for the royal officers, and the troops were not ready to move until August. Vigorous measures were meanwhile taken to supply and reinforce the forts at

Oswego. John Bradstreet, appointed commissary-general, employed for this purpose forty companies of boatmen, of fifty men each. Before this could be accomplished, the French, under Montcalm, captured the post at Oswego, which event so alarmed the inefficient Loudoun that he abandoned all other plans of the campaign for the year. A regiment of British regulars, under Colonel Webb, on their march to reinforce Oswego, on hearing of the disaster, fell back to Albany with terror and precipitation; and other troops, moving towards Ticonderoga, were ordered to halt, and devote their efforts

towards strengthening forts Edward and William Henry.

**Crown Point, EXPEDITION AGAINST (1755).** The plan of the campaign for 1755 (see *French and Indian War*) contemplated an expedition against the French at Crown Point, on Lake Champlain, to be commanded by William Johnson. He accomplished more than Braddock or Shirley, yet failed to achieve the main object of the expedition. The Assembly of New York had voted £8000 towards the enlistment in Connecticut of two thousand men for the Niagara and Crown Point expedition; and after hearing of Braddock's defeat, they raised four hundred men of their own, in addition to eight hundred which they had already in the field. The troops destined for the northern expedition, about six thousand in number, were drawn from New England, New Jersey, and New York. They were led by General Phineas Lyman, of Connecticut, to the head of boat navigation on the Hudson, where they built Fort Lyman, afterwards called Fort Edward. There Johnson joined them (An-

gust) with stores, took the chief command, and advanced to Lake George. The Baron Dieskau had, meanwhile, ascended Lake Champlain with two thousand men, whom he brought from Montreal. Landing at South Bay, at the southern extremity of Lake Champlain, Dieskau marched against Fort Lyman, but suddenly changed his route, and led his troops against Johnson, at the head of Lake George, where his camp was protected on two sides by an impassable swamp. Informed of this movement of the French and Indian allies (Sept. 7), Johnson sent forward (Sept. 8) one thousand Massachusetts troops, under the command of Colonel Ephraim Williams, and two hundred Mohawk Indians, under King Hendrick, to intercept the enemy. The English fell into an ambushade. Williams and Hendrick were both killed, and their followers fell back in great confusion to Johnson's camp, hotly pursued. The latter had heard of the disaster before the fugitives appeared, cast up breastworks of logs and limbs, and placed two cannons upon them, and was prepared to receive the pursuers of the English. Dieskau and his victorious troops came rushing on, without suspicion of being confronted with artillery. They came, a motley host, with swords, pikes, muskets, and tomahawks, and made a spirited attack, but at the discharge of cannon the Indians fled in terror to the forests. So, also, did the Canadian militia. Johnson had been wounded early in the fight, and it was carried through victoriously by General Lyman, who, hearing the din of battle, had come from Fort Lyman with troops. The battle continued several hours, when, Dieskau being severely wounded and made a prisoner, the French withdrew, and hastened to Crown Point. Their baggage was captured by some New Hampshire troops. The French loss was estimated at one thousand men; that of the English at three hundred. Johnson did not follow the discomfited enemy, but built a strong military work on the site of his camp, which he called Fort William Henry. He also changed the name of Fort Lyman to Fort Edward, in compliment to the royal family; and he was rewarded for the success achieved by Lyman with a baronetcy and \$20,000 to support the new title. The French strengthened their works at Crown Point, and fortified Ticonderoga.

**Crown Point, FRENCH AT (1731).** The Canadian authorities at Montreal sent a party to occupy Crown Point, on the west shore of Lake Champlain, within one hundred miles of Albany. This movement startled New York and New England. The Assembly of the former resolved that "this encroachment, if not prevented, would prove of the most pernicious consequence to this and other colonies." They sent notice of the encroachment to Pennsylvania, Connecticut, and Massachusetts, and applied to the Board of Trade and Plantations for aid. That body supported their complaints, but Robert Walpole judiciously counselled peace. The last two wars of England with France had laid upon England the burden of a national debt of \$250,000,000; and, in spite of the remonstrances of New York and

New England, the French quietly occupied the shores of the lake, built a fort at Crown Point, and made a settlement on the east side of the water.

**Crozat and Louisiana.** The first settlement in Louisiana was made at Biloxi (now in Mississippi) in 1699. In 1702 there were settlements begun on Dauphin Island and at Mobile, now in Alabama. The French government, wishing to promote more rapid settlements in that region, granted (1712) the whole province, with a monopoly of trade, to Anthony Crozat, a wealthy French merchant, who expected large profits from mines and trade with Mexico. Crozat contracted to send ships from France, with goods and emigrants, every year; and he was entitled to import a cargo of negro slaves annually. The French government also agreed to pay \$10,000 a year for the civil and military establishments. Crozat established a trading-house on the site of Montgomery, on the Alabama River, and another at Natchitoches, on the Red River. Fort Rosalie was built on the site of Natchez, about which a town soon grew up, the oldest on the Lower Mississippi. Crozat made ineffectual attempts to open a trade with Mexico, and the intercourse by sea was prohibited after the war. After five years of large outlay and small returns, Crozat resigned his patent (1717); but other speculators soon filled his place. The Mississippi Company (see *Law's Bubble*) was granted the monopoly of all trade with Louisiana for twenty-five years. They attempted to introduce six thousand white people and half as many negroes, and private individuals to whom grants of land had been made, also sent out colonists. Law, having twelve square miles of land in Arkansas, undertook to settle the domain with 1500 Germans. The Mississippi Company resigned Louisiana to the crown in 1732.

**Cruger and Brown.** Colonel Brown, who was in command at Augusta, Ga., had been defeated by Colonel Clarke, who captured costly presents designed for the Cherokees, which the British had intrusted to the active loyalist commander. With a corps of one hundred provincials and one thousand Cherokees, Brown maintained a position on Garden Hill against the Americans for nearly a week, when he was rescued (September, 1780) by Colonel Cruger, the loyalist commander at Fort Ninety-six. At Cruger's approach the Americans retired, and were pursued. Some were killed and scalped, and some were made prisoners. Of the latter, Captain Ashby and twelve others were hanged under the immediate direction of Brown; thirteen were delivered to the Cherokees, and perished by tortures or the tomahawk, or were thrown into fires. By Brown's orders thirty of the prisoners were put to death. Cruger, accompanied by Major Patrick Ferguson (see *King's Mountain*), attempted to waylay the retreating party, but did not succeed. (See *Augusta, Siege of*.)

**Cruger, HENRY, JR.,** was born in New York city, in 1739; died there, April 24, 1827. His father became a merchant in Bristol, Eng., where

he died in 1780. Henry was associated with him in trade, and succeeded him as Mayor of Bristol in 1781. He had been elected to Parliament as the colleague of Edmund Burke in 1774, and was re-elected in 1784, and on all occasions advocated conciliatory measures towards his countrymen. After the war he became a merchant in New York, and, while yet a member of the British Parliament, was elected to the Senate of the State of New York.

**Cruger, JOHN HARRIS**, loyalist, was born in New York city in 1738; died in Loudon, Jan. 3, 1807. He was brother of Henry Cruger, and succeeded his father as member of the governor's council. He married a daughter of Colonel Oliver De Lancey, and commanded a battalion of his loyalist corps. He served under Cornwallis in South Carolina, and was in command of Fort Ninety-six (which see) when besieged by Greene in May, 1781, and was praised for his successful defence of the post until relieved by Lord Rawdon. In the battle of Eutaw Spring, in September, he commanded the British centre. At the close of the war he went to England, and his property was confiscated.

**Cuba**, one of the Spanish West India Islands, and the largest of the group. Early in the 16th century it was a conspicuous point of departure for discoverers, explorers, and conquerors of the American continent. The island was discovered by Columbus on the 28th of October, 1492, when, it is believed, he entered a bay near Nuevas, on the north coast. He gave it the name of Juana, in honor of Prince Juan, or John, son of Isabella. Other names were afterwards given to it, but that of the natives—Cuba—is retained. It was very thickly populated by a docile and loving copper-colored race, who were rightfully called by themselves *The Good*. When, in the winter of 1509–10, Ojeda was sailing from Central America to Santo Domingo (see *Ojeda*) with some of his followers, his vessel was stranded on the southern shores of Cuba. He and his crew suffered dreadfully in the morasses, and more than half of them perished. They feared the natives, to whose protection persecuted ones in Santo Domingo had fled, but hunger compelled the Spaniards to seek for food among them. These suffering Christians were treated most kindly by the pagans, and through their good offices Ojeda was enabled to reach Jamaica, then settled by his countrymen. He had built a chapel in Cuba, and over its altar-piece he placed a small Flemish painting of the Virgin, and taught the natives to worship her as the "Mother of God." Then Ojeda, on reaching Santo Domingo, told his countrymen of the abundance of precious metals in Cuba, when Diego Velasquez, appointed governor of Cuba by Diego Columbus, went with three hundred men and made an easy conquest of it. The natives had kept Ojeda's chapel swept clean, made votive offerings to the Virgin, composed couplets to her, and sung them with accompaniments of instrumental music as they danced in the surrounding groves, and tried to convince their pious conquerors that they were fellow-Christians, but in vain. The conquerors

made slaves of them, and so cruelly worked and treated them, men and women, in the fields and mines, that in less than fifty years only a few natives were left, and their places were partially supplied by negro slaves. Cruelty was the rule with the conquerors. Velasquez found there a rich and potent cacique, who had fled from Hispaniola to avoid slavery or death, and he condemned the fugitive to the flames. When he was fastened to the stake, a Franciscan friar, laboring to convert him, promised him immediate admittance to the joys of heaven if he would embrace the Christian faith, and threatened him with eternal torment if he should continue in his unbelief. The cacique asked whether there were any Spaniards in that region of bliss, and being answered in the affirmative, replied, "I will not go to a place where I may meet one of that accursed race." De Soto was made captain-general of Cuba in 1537, and from that island he sailed to make a conquest of Florida. From it Cordova also sailed, and Grijalva, when they went and discovered Mexico; and from it Velasquez sent Cortez to make a conquest of the empire of Montezuma. Cuba has remained in the possession of the Spaniards ever since the conquest. The introduction of negroes for slaves was gradual; and towards the close of the 16th century monastic institutions and a delegate of the Inquisition were introduced there. Cuba has experienced revolts, but no successful revolution. Since the beginning of this century there has been much discontent on the island, especially among the Creole population. During the last thirty years there has been manifested a strong desire among a portion of the people of the United States to annex Cuba to our republic. In 1848, President Polk authorized the American minister at Madrid to offer \$100,000,000 for Cuba, but it was rejected. Soon after that, fruitless expeditions from our shores to create a revolution there in favor of Cuban independence have occurred; and in the summer of 1854, three American ministers in Europe held a conference at Ostend, in Belgium, and issued a statement (see *Ostend Manifesto*) that Cuba ought to belong to the United States, and that, in case the slaves of Cuba should be emancipated, the United States ought to take Cuba from Spain by force; and John Slidell, of Louisiana, offered a resolution in the United States Senate, in the session of 1858–59, to place \$30,000,000 in the hands of President Buchanan, with a view to the acquisition of the island. A revolt broke out in 1868, which was not quelled until early in 1878, at which time nearly 100,000 soldiers had been sent from Spain, one seventh of whom had died or been killed.

**Cullum, GEORGE WASHINGTON**, was born Feb. 25, 1812, and graduated at West Point in 1833, entering the engineer corps, and becoming captain in July, 1838. He was made major in August, 1861, lieutenant-colonel in March, 1863, and colonel, March, 1867, which rank in the United States Army he still holds. He is one of the most accomplished and useful officers of engineers in the United States Army, as the military works he has superintended the construction

of attest. From 1845 to 1848 he was instructor of practical engineering in the West Point Military Academy, during which time he spent two years in Europe. He served as aide-de-camp to General Scott in 1861, and in November was made brigadier of volunteers, serving on the staff of General Halleck in 1862, and accompanying him to Washington. He was an efficient member of the United States Sanitary Commission (which see), superintendent of West Point Academy from 1864 to 1866, and in 1865 was breveted major-general in the United States Army. General Cullum has published several books on military affairs, and a *Biographical Register of the Officers and Graduates of West Point*.

**Culpepper and Arlington.** In 1673 King Charles gave to two of his profligate courtiers, Lord Culpepper and the Earl of Arlington, "all the domain of land and water called Virginia" for thirty years. A commission was given to Culpepper as governor for life, to take effect whenever Berkeley (which see) should vacate the office. He purchased the interest of Arlington in the royal grant. Preferring to engage in the profligate enjoyments of London and a court life, he did not go to Virginia until 1680, or three years after Berkeley had left the province. His profligacy and rapacity there disgusted the people, and discontent ripened into open insurrection. By the king's order, the governor caused several of the insurgents, who were men of influence, to be hanged. A reign of terror, mis-called tranquillity, followed. At length the king himself became incensed against Culpepper, revoked his grant in 1684, and deprived him of office.

**Culpepper, JOHN,** was surveyor-general in the Carolinas, and in 1678 headed an insurrection in the Albemarle or North Colony in favor of popular liberty. Led by him, the people deposed the officers appointed by the proprietaries, seized the public funds, appointed new officers, and organized a new government. Sent to England to effect a compromise, Culpepper was indicted for high-treason, but through the influence of the Earl of Shaftesbury he was acquitted. He returned to the Carolinas, and in 1680 laid the foundations of the city of Charleston.

**Culpepper, THOMAS (Lord),** was governor of Virginia from 1680 to 1683, and died in 1719. He was one of the parasites of Charles II., to whom the territory of Virginia was granted. From co-grantees in 1669, he purchased the domain between the Potomac and Rappahannock rivers. His daughter, Lady Fairfax, inherited his estate. As one of the Commissioners for American Plantations he was deprived of his office in 1683, in consequence of irregularities in relation to colonial affairs.

**Cumberland, DUKE OF.** At the opening of the French and Indian War (which see), in 1754, the Duke of Cumberland, commander-in-chief of the British Army, was intrusted with the direction and conduct of American affairs. He was fond of war, and cruel and sanguinary in disposition. He was thoroughly brave, and ambitious of military renown. A thorough disci-

plinarian, he never forgave neglect in the service. The duke entered heartily into the war with France, but, misunderstanding the character and temper of the American colonists, he made many blunders in his management of colonial affairs at that crisis.

**Cumberland Mountains, NAMED AND PASSED.** In 1747, Dr. Thomas Walker, of the Council of Virginia, penetrated the mountainous districts in the southwestern portion of that province, and crossed the great range of hills that separates the valley of the Tennessee from the head-waters of the more northerly tributaries of the Ohio. He named the ridge "Cumberland Mountains," in honor of the Duke of Cumberland, who had lately gained a victory over the "Young Pretender" at the battle of Culloden. He gave the same name to one of the rivers that flowed from the western slopes of these mountains. The more northerly one he called Louisa, but it retains its Indian title, *Kain-tuck-ee'*, giving the accent on the middle syllable, *Kentuck'y*. So the fertile regions of Tennessee and Kentucky were first revealed to the English.

**Cumberland Road, THE.** (See *Internal Improvements*.)

**Cunningham, WILLIAM,** a brutal provost-marshal of the British Army in America, in the war for independence, was executed in England for forgery, Aug. 10, 1791. He starved, persecuted, and murdered American prisoners in the city of New York. Of such captives under his care, nearly two thousand were starved to death (whose rations he sold), and more than two hundred and fifty were privately hanged, without trial, to gratify his brutal appetite.

**Cunningham's Raid.** During the winter of 1780-81, William Cunningham, a notorious Tory leader, under orders from Colonel Balfour, at Charleston, led one hundred and fifty white men and negroes into the interior of South Carolina, to "distress the inhabitants." On his march he killed every person he met whom he suspected of being friendly to the United States, and burned their dwellings. In this way about fifty persons perished. A house which sheltered thirty-five Americans, commanded by Colonel Hayes, was fired upon because the inmates refused to surrender at discretion. At length the marauding party set fire to the house, when the garrison capitulated. An agreement was made and signed, in which it was stipulated that the Americans should be treated as prisoners of war until exchanged. No sooner had they given up their arms than Cunningham hanged Colonel Hayes to the limb of a tree. In like manner his second in command was treated; and with his own hand Cunningham slew some of the other prisoners, and requested his men to follow his example. These facts were proven before a judicial tribunal. The name of "Bill Cunningham" became a cause for terror over large districts in South Carolina.

**Curtin, ANDREW GREGG,** "war-governor" of Pennsylvania, born at Bellefonte, Penn., April 28, 1817, was an active lawyer and politician, and

governor of his native state when the Civil War broke out. He had been Secretary of State from 1855 to 1858, and Superintendent of Common Schools in 1860. He was re-elected governor in

ANDREW GREGG CURTIN.

1863, and was sent by President Grant as minister to Russia in 1869.

**Curtis, GEORGE WILLIAM**, born in Providence, R. I., Feb. 24, 1824. Until his twenty-second year he was engaged in acquiring knowledge and skill for the literary career he has pursued. In 1846 he went abroad, and, after spending a year in Italy, entered the University of Berlin, where he saw the revolutionary movements of 1848. He spent two years in travelling in Europe, Egypt, and Syria, returning to the United States in 1850, in which year he published *Nile Notes of a Howadji*. He joined the editorial staff of the *New York Tribune*, and was one of the original editors of *Putnam's Monthly*. He was for many years an eloquent and successful lyceum lecturer, and is still (1880) regarded as one of the most accomplished orators in the United States. In 1867 he became editor of *Harper's Weekly*, and still holds that position. In his writings and speeches he has been an efficient supporter of the Republican party since its organization, and has contributed a vast number of very able short essays through *Harper's Monthly*, in the department of "The Easy Chair." In 1871 President Grant appointed Mr. Curtis one of a commission to draw up rules for the regulation of the Civil Service. He was one of the members of the Constitutional Convention of the State of New York in 1868, in which he was Chairman of the Committee on Education. Since 1864 he has been one of the regents of the University of the State of New York.

**Curtis, SAMUEL RYAN**, born in Ohio, Feb. 3, 1807; died at Council Bluffs, Io., Dec. 25, 1866. Graduated at West Point in 1831, and the following year left the army and studied law; served under General Taylor in the war with Mexico, and was General Wool's assistant adjutant-general in that war. He was for a while governor of Saltillo. He became a member of Congress in 1857, retaining that position until 1861, and was a member of the Peace Congress

(which see). In May, 1861, he was appointed brigadier-general of volunteers, and major-general in March, 1862. Commanding the army in Missouri, he gained the battle of Pea Ridge

SAMUEL RYAN CURTIS.

(which see). After the war he was appointed United States Commissioner to treat with Indian tribes—Sioux, Cheyennes, and others.

**Cushing, CALEB, LL.D.**, was born at Salisbury, Mass., Jan. 17, 1800; died at Newburyport, Mass., Jan. 2, 1879. Graduated at Harvard University in 1817. He became a distinguished lawyer, in which profession he began practice at Newburyport, Mass. Mr. Cushing served in the State Legislature, and was in Congress from 1835 to 1843, as a Whig representative, when, with Mr. Tyler, he became an active member of the Democratic party. President Tyler sent him as Commissioner to China, where, in 1844,

CALEB CUSHING.

he negotiated an important treaty. He advocated the policy of war with Mexico, and led a regiment to the field. In 1853 President Pierce called Mr. Cushing to his cabinet as Attorney-general. As president of the Democratic convention at Charleston (1860), he took part with the Secessionists. In 1866 he was one of three commissioners appointed to codify the laws of the United States.

**Cushing, THOMAS, LL.D.**, was born in Boston March 24, 1725; died Feb. 28, 1788. He graduated at Harvard in 1744, and for many years represented his native city in the General Court, of which body he became speaker in 1763, and held that position until 1774. His signature was affixed, during all that time, to all public documents of the province, which made his name so conspicuous that, in his pamphlet, *Taxation no Tyranny*, Dr. Johnson said, "One object of the Americans is said to be, to adorn the brows of Cushing with a diadem." He was a member of the first and second Continental Congress; was commissary-general in 1775; was a judge; and in 1779 was elected lieutenant-governor of Massachusetts, which office he held until his death.

**Cushing, WILLIAM B.**, U. S. Navy, was born in Wisconsin, Nov. 24, 1842; died in Washington, D. C., Dec. 17, 1874. He entered the navy in 1857, resigned, and was reappointed in 1861. He performed exploits remarkable for coolness and courage during the war, the most notable of which was the destruction of the Confederate ram *Albatross*, at Plymouth, N. C. (See *Albatross*.) For this he received a vote of thanks from Congress. In 1868-69 he commanded (as lieutenant-commander) the steamer *Maumee*, in the Asiatic squadron.

**Cushing, WILLIAM, LL.D.**, born at Scituate, Mass., March 1, 1732; died there, Sept. 13, 1810. Graduated at Harvard University in 1751. He studied law, became eminent in his profession, was attorney-general of Massachusetts, a judge of probate in 1768, judge of the Superior Court in 1772, and in 1777 succeeded his father as chief-justice of that court. Under the Massachusetts Constitution of 1788 he was made chief-justice of the state; and in 1789 President Washington appointed him a justice of the Supreme Court of the United States. He offered him the chief-justiceship in 1796, as the successor of Jay, but he declined it. He administered the oath of office to Washington in his second inauguration.

**Cushman, CHARLOTTE SAUNDERS**, an eminent actress, was born in Boston, Mass., July 23, 1816; died there, Feb. 18, 1876. At the age of nineteen years she made her first appearance on the stage, at the Tremont Theatre, Boston, as a singer, the pecuniary misfortunes of her father rendering it necessary for her to assist in the support of the family. She was soon engaged to sing in English opera in New Orleans, but almost immediately after her arrival there her voice failed. She then became an actress, making her first appearance, as *Lady Macbeth*, with great success. From that time forward her professional life was a constant success, her last appearance on the stage being in 1871. For some time she gave choice dramatic readings. In social life she held a high position, for her character was marked by purity and dignity, and she honored the profession which she was compelled to embrace by the force of circumstances.

**Cushman, ROBERT**, one of the founders of the

Plymouth Colony, was born in England about the year 1580, and died in 1625. He joined the Society of the "Pilgrims" in Holland, and became very active. He and John Carver were appointed agents to make arrangements for the emigration of the church to America, and he was one of the number who sailed in the *Speedwell*, and were compelled to return on account of her unseaworthiness. Mr. Cushman remained with those who did not go in the *Mayflower*. He went to New Plymouth in the autumn of 1621, taking with him thirty-five other persons, and there delivered the charter to the colonists. He preached the first sermon by an ordained minister in New England on Dec. 12. On the following day he sailed for England. The vessel and cargo were captured by the French, and plundered of everything, and Cushman was detained two weeks on the French coast. On his return to London he published his sermon in New England *On the Sin and Danger of Self-love*, and also an eloquent vindication of the colonial enterprise. He made a strong appeal for missions to be sent to the American Indians. Mr. Cushman continued the agent of the Plymouth Colony in London until his death.

**Custer, GEORGE A.**, was born at New Rumley, O., Dec. 5, 1839; was killed by Indians June 25, 1876. He graduated at West Point in 1861, and was an active and daring cavalry officer during the Civil War, distinguishing himself on many occasions. He never lost a gun nor a color. In June, 1863, he was made brigadier-general of volunteers, and was breveted major-general in 1864. He was particularly distinguished in the battles immediately preceding the surrender of Lee at Appomattox Court-house. He was exceptionally fortunate in his military career during the Civil War, and was made lieutenant-colonel of the Seventh cavalry in 1866, receiving the brevet of major-general in the United States Army for services ending in Lee's surrender. He afterwards commanded expeditions against the Indians in the far West. In 1879 a statue of General Custer was erected at West Point.

**Custer's Raid.** General Custer, with fifteen hundred cavalry, crossed the Rapid Anna (Feb. 27, 1864) for the purpose chiefly of diverting the attention of the Confederates from Kilpatrick's raid (which see). Custer flanked Lee's army on the west, and pushed on to within four miles of Charlottesville, where he was checked by a superior Confederate force with a battery. Turning northward, Custer had several skirmishes, and then returned to camp, followed by a large number of refugees from slavery.

**Custis, GEORGE WASHINGTON PARKE**, adopted son of General Washington, was born April 30, 1781; died at Arlington House, opposite Georgetown, D. C., Oct. 10, 1857. He was a grandson of Mrs. Washington. His father was John Parke Custis, and his mother was Eleanor Calvert, of Maryland. At the siege of Yorktown (1781) his father was aide-de-camp to Washington; was seized with camp fever; retired to Eltham, and there died before Washington (who

hastened thither immediately after the surrender) could reach his bedside. Washington afterwards adopted his two children—Eleanor Parke and George Washington Parke Custis—as his own. Their early home was at Mount Vernon. George was educated partly at Princeton, and was eighteen years of age at the time of Washington's death, who made him an executor of his will and left him a handsome estate, on which he lived, until his death, in literary, artistic, and agricultural pursuits. In his early days Mr. Custis was an eloquent speaker; and in his later years he produced a series of historical pictures, valuable, not as works of art, but for the truthfulness of the costume and equipment of the soldiers delineated in them. His *Personal Recollections of Washington* were arranged and fully annotated by Benson J. Lossing, and published in 1859, with a memoir by his daughter, Mrs. Robert E. Lee.

**Custom-house, A**, was first established at Charleston, S. C., for the enforcement of the acts of trade in 1685. The colonists there cast every obstacle in the way of the enforcement of those

acts. They were as obstinate as those of Massachusetts.

**Custom-house, FIRST IN NEW ENGLAND**, was established in Boston in 1680, with Edward Randolph as commissioner. His authority was superseded by the creation, by the General Court, of a colonial naval office. (See *Randolph, Edward*.)

**Cutler, MANASSEH, LL.D.**, was born at Killingly, Conn., May 3, 1742; died at Hamilton, Mass., July 28, 1823. He graduated at Yale College in 1765; studied theology; was ordained in 1771; was a chaplain of a regiment in the army in 1776; became an excellent botanist; and gave the first scientific description of the plants of New England. As agent for the Ohio Company in 1787, he bought one million five hundred thousand acres of land northwest of the Ohio, and started the first company of emigrants to that region, who founded the town of Marietta in April, 1787. He travelled thither in a "sulky" (a two-wheeled, one-seated carriage), seven hundred and fifty miles, in twenty-nine days. He was a member of Congress from 1800 to 1804.

## D.

**Dablon, CLAUDE**, a French Jesuit missionary, who labored in Canada, New York, and in the present states of Michigan and Wisconsin. He was born in 1618, and died in Quebec, Sept. 20, 1697. He began a mission at Onondaga, in New York, in 1655, and in 1661 he set out for Hudson's Bay by land. He accompanied Marquette (which see) to Lake Superior in 1668, and established the mission at the Falls of St. Mary; also one among the Fox tribe of Indians. In 1670 he became superior of the Canada Jesuit missions, and prepared the *Relations* concerning New France for 1671-72, which was printed in New York in 1861; also that for 1675. An account of Marquette's discovery of the Mississippi River was edited by him.

**Dacres, JAMES RICHARD**, a British admiral. His father was a commander in the battle with Arnold on Lake Champlain in 1776. The son entered the royal navy in 1796, and, being placed in command of the frigate *Guerriere* in 1811, was sent to fight the Americans. He proudly boasted that he would "send the *Constitution* to Davy Jones's locker" when he should be so fortunate as to meet her. She had escaped him in her famous retreat (see *Constitution, Retreat of*), but willingly met and fought the *Guerriere* afterwards. (See *Constitution and Guerriere*.) Dacres was then captain. He attained the rank of flag-officer in 1838, and in 1845 was vice-admiral and commander-in-chief of the fleet at the Cape of Good Hope. He was presented with a gratuity from the "Patriotic Fund" at Lloyd's, in consideration of his wound. He was married, in 1810, to Arabella Boyd, who died in 1828. Vice-admiral Dacres died in England, Dec. 4, 1853.

**Daggett, NAPHTHALI**, was born at Attleborough, Mass., Sept. 8, 1727; died at New Haven,

Conn., Nov. 25, 1780. He graduated at Yale College in 1748, was ordained pastor of a Presbyterian church at Smithtown, Long Island, in 1751, and in 1755 was chosen professor of divinity at Yale, which position he held until his death. In 1766, on the resignation of President Clap, he was chosen president of the college *pro tempore*, and officiated in that capacity more than a year. He was an active patriot when the War of the

JAMES RICHARD DACRES.

Revolution broke out; and when the British attacked New Haven, in 1779, he took part in the resistance made by the citizens and surrounding militia. Dr. Daggett was made a

prisoner, and the severe treatment to which he was subjected so shattered his constitution that he never recovered his health. After the famous "Dark Day" (which see), in 1780, he published an account of it.

**Dahlgren, JOHN A.**, U. S. Navy, was born in Philadelphia in November, 1809; died in Washington, D. C., July 12, 1870. He entered the navy in 1826, and was made rear-admiral in 1863. He was the inventor of the Dahlgren

JOHN A. DAHLGREN.

gun, which he perfected at the navy-yard at Washington, and in 1862 he was made Chief of the Bureau of Ordnance. In July, 1863, he took command of the South Atlantic Squadron, and, with the land-forces of General Gillmore, captured Morris Island and Fort Wagner, and reduced Fort Sumter to a heap of ruins. He conducted a successful expedition up the St. John's River, in Florida, in 1864, and co-operated with General Sherman in the capture of Savannah. After the evacuation of Charleston (which see) he moved his vessels up to that city. Admiral Dahlgren, besides being the inventor of a cannon, introduced into the navy the highly esteemed light boat-howitzer.

Dakota originally formed a part of Minnesota Territory. It was a portion of the great Louisiana purchase in 1803. The Nebraska Territory was formed in 1854, and comprised a part of what is now Dakota. The latter territory was organized by act of Congress, approved March 2, 1861, and included the present territories of Montana and Washington (which see). In 1863 a part of the territory was included in Idaho, of which the northeastern part was organized as Montana in 1864, and the southern part was transferred to Dakota. In 1868 a large area was taken from Dakota to form Wyoming Territory (which see). The first permanent settlements of Europeans in Dakota were made in 1859, in what are now Clay, Union, and Yankton counties. The first Legislature convened March 17, 1862. Emigration was limited until 1866, when settlers began to flock in, and popu-

lation has rapidly increased. Yankton, situated on the left bank of the Missouri River, is its capital. The mineral resources already developed indicate that Dakota is a territory rich in these products, and its agricultural resources are very great. Population in 1880, 135,177.

**Dakotas, or Sioux.** This is a large and powerful tribe of Indians, who were found by the French, in 1640, near the head-waters of the Mississippi River. The Algonquians called them *Nadowessiou*, whence they came to be called Sioux, and they were also called by the collective name of Dakotas. They occupied the vast domain extending from the Arkansas River, in the south, to the western tributary of Lake Winnipeg in the north, and westward to the eastern slopes of the Rocky Mountains. They have been classed into four grand divisions—namely, the Winnebagoes, who inhabited the country between Lake Michigan and the Mississippi, among the Algonquians; the Assiniboin, or Sioux proper (the most northerly of the nation); the Minnaterree group, in Minnesota, and the Southern Sioux, who dwelt in the country between the Arkansas and Platte rivers, and whose hunting-grounds extended to the Rocky Mountains. (See *Winnebagoes, Assiniboin, Minnaterrees, and Southern Sioux.*) In 1679 Jean DuLuth, a French officer, set up the Gallic standard among them near Lake St. Peter, and the next year he rescued from them Father Hennepin, who first explored the Upper Mississippi. The French took formal possession of the country in 1685, when they were divided into seven eastern and nine western tribes. In wars with the French and other Indians, they were pushed down the Mississippi, and, driving off the inhabitants of the buffalo plains, took possession. Others remained on the shores of the St. Peter. Some of them wandered into the plains of Missouri, and there joined the Southern Sioux. In the War of 1812 the Dakotas took sides with the British. In 1822 the population of the two divisions of the Dakotas was estimated at nearly thirteen thousand. In 1837 they ceded to the United States all their lands east of the Mississippi, and in 1851 they ceded thirty-five million acres west of the Mississippi for \$3,000,000. The neglect of the government to carry out all the provisions of the treaties for these cessions caused much bitter feeling, and a series of hostilities by some of the Sioux ensued; but after being defeated by General Harney, in 1855, a treaty of peace was concluded. Enraged by the failure of the government to perform its part of the bargain and the frauds practised upon them, there was a general uprising of the Upper Sioux, or Dakotas, in 1862, and nearly a thousand settlers were killed. The Lower Sioux, of the plains, also became hostile, but all were finally subdued. Full one thousand were held captive, and thirty-nine were hanged. Many bands fled into Dakota Territory, and the strength of the nation was greatly reduced. The most guilty bands fled into the British dominions, while others, from time to time, have attacked settlements and menaced forts. Loosely made treaties were violated on both sides. By one of these

the Black Hills were made part of a reservation, but gold having been discovered there, the United States wished to purchase the tract, and induce the Indians to abandon that region and emigrate to the Indian Territory. They showed great reluctance to treat. Sitting Bull, Spotted Tail, and Red Cloud visited the national capital in 1875, but President Grant could not induce them to sign a treaty. Commissioners met an immense number of them at the Red Cloud Agency, in September, but the Indians set such an enormous value on their lands that nothing was done. The sending of surveyors under a military escort to the Black Hills excited the jealousy of the Sioux, and they prepared for war. In the spring of 1876 a military force was sent against them, and in June a severe battle was fought, in which General Custer and a large portion of his immediate command were slain. Sitting Bull, who led the Indians, then fled, with a large number of his followers, into the British dominions.

Dale, RICHARD, born near Norfolk, Va., Nov. 6, 1756; died in Philadelphia, Feb. 24, 1826. He went to sea at twelve years of age, and at nineteen commanded a merchant-vessel. He was first a lieutenant in the Virginia navy, and entered the Continental navy, as midshipman, in 1776. He was captured in 1777, and confined in Mill Prison, England, from which he escaped, but was recaptured in London, and taken back.

RICHARD DALE.

The next year he escaped, reached France, joined Paul Jones, and soon became lieutenant of the *Bonhomme Richard*, receiving a wound in the famous battle with the *Serapis*. (See *Bonhomme Richard and Serapis*.) He continued to do good service to the end of the war, and in 1794 was made captain. He commanded the squadron ordered to the Mediterranean in 1801, and in April, 1802, returning home, he resigned his commission. He spent the latter years of his life in ease in Philadelphia. The remains of Commodore Dale were buried in Christ Church-

yard, Philadelphia, and over the grave is a white marble slab with a long inscription.

DALE'S MONUMENT.

Dale, SIR THOMAS, governor of Virginia, died near Bantam, East Indies, early in 1620. He was a distinguished soldier in the Low Countries, and was knighted by King James in 1606. Appointed chief magistrate of Virginia, he administered the government on the basis of martial law; planted new settlements on the James, towards the Falls (now Richmond); and introduced salutary changes in the land laws of the colony. He conquered the Appomattox Indians. In 1611 Sir Thomas Gates succeeded him, but he resumed the office in 1614. In 1616 he returned to England; went to Holland; and in 1619 was made commander of the East India fleet, when, near Bantam, he fought the Dutch.

Dallas, ALEXANDER JAMES, was born in the island of Jamaica, June 21, 1759; died at Trenton, N. J., Jan. 16, 1817. He was the son of a Scotch physician, and his mother becoming a widow and marrying again, by which he was deprived of any share in his father's estate, he left home in 1783, settled in Philadelphia, and was admitted to the practice of law in that state. He soon became a practitioner in the Supreme Court of the United States. He wrote for the newspapers, and at one time was the editor of the *Columbian Magazine*. He was appointed Secretary of State of Pennsylvania in 1791, and was engaged as paymaster of a force to quell the Whiskey Insurrection (which see). In 1801 he was appointed United States Attorney for the Eastern Department of Pennsylvania, and he held that position until called to the cabinet of Madison as Secretary of the Treasury in October, 1814. In 1815 he also performed the duties of the War Office, and was earnest in his efforts to re-establish a national bank. He resigned in November, 1816, and resumed the practice of law, in which profession he was always eminently successful.

Dallas, GEORGE MIFFLIN, LL.D., was born in Philadelphia, July 10, 1792; died there Dec. 31, 1864. He graduated at the College of New Jersey in 1810, and was admitted to the bar in 1813. He went with Mr. Gallatin to Russia as private

secretary, and returned in 1814, when he assisted his father in the Treasury Department. In 1828 he was Mayor of Philadelphia; United States Senator from 1832 to 1833, and declined a re-election. He was ambassador to Russia from 1837 to 1839, and Vice-President of the United States from 1845 to 1849. From 1856 to 1861 he was American minister in London. Mr. Dallas was an able lawyer and statesman.

**Dana, FRANCIS, LL.D.**, was born at Charlestown, Mass., June 13, 1743; died at Cambridge, Mass., April 25, 1811. Graduated at Harvard in 1762. He was admitted to the bar in 1767; was an active patriot; a delegate to the Provincial Congress in 1774; went to England in 1775 with confidential letters to Franklin; was a member of the Executive Council from 1776 to 1780; member of the Continental Congress from 1776 to 1778, and again in 1784; member of the Board of War, Nov. 17, 1777; and was at the head of a committee charged with the entire reorganization of the army. (See *Continental Army, Second Organization of*.) When Mr. Adams went on an embassy to negotiate a treaty of peace and commerce with Great Britain, Mr. Dana was secretary of the legation. At Paris, early in 1781, he received the appointment from Congress of minister to Russia, clothed with power to make the accession of the United States to the "Armed Neutrality" (which see). He resided two years at St. Petersburg, and returned to Berlin in 1783. He was again in Congress in the spring of 1784, and the next year was made a justice of the Supreme Court of Massachusetts. In 1791 he was appointed chief justice of Massachusetts, which position he held fifteen years, keeping aloof from political life, except in 1792 and 1806, when he was presidential elector. He retired from the bench and public life in 1806.

**Dana, JAMES DWIGHT, LL.D.**, born at Utica, N. Y., Feb. 12, 1813. Graduated at Yale College in 1833. He went to the Mediterranean in the *Delaware* as teacher of mathematics in the United States Navy, and was mineralogist and geologist of Wilkes's exploring expedition, 1838-42. (See *South Sea Exploring Expedition*.) For thirteen years afterwards Mr. Dana was engaged preparing the reports of this expedition and other scientific labors. These reports were published by the government, with atlases of drawings made by Mr. Dana's own hand. He was elected to the chair of Silliman Professor of Natural History and Geology in Yale College in 1850, and entered upon his duties in 1855, a position which he yet (1880) retains; and has for many years been associated with his brother-in-law, Benjamin Silliman, Jr., in the editing and publishing of the *American Journal of Science and Art*, founded by the elder Silliman in 1819. Professor Dana has contributed much to scientific journals, and is a member of many learned societies at home and abroad. In 1872 the Wollaston gold medal, in charge of the London Geological Society, was conferred upon him.

**Dana, NAPOLEON JACKSON TECUMSEH**, was born in Fort Sullivan, Eastport, Me., April 10,

1822, and graduated at West Point in 1842. He served in the war with Mexico; resigned in 1855; and in October, 1861, became colonel of the First Minnesota regiment of volunteers. He was in the battle at Ball's Bluff (which see); was made brigadier-general early in 1862; was active throughout the whole campaign on the Peninsula, participating in all the battles; and at Antietam commanded a brigade, and was wounded. A few weeks later he was made major-general of volunteers; was with the Army of the Gulf in 1863; commanded the Thirteenth Army Corps a while; and had charge of the District of Vicksburg and West Tennessee in 1864. From December, 1864, to May, 1865, he was in command of the Department of the Mississippi.

**Dana, RICHARD HENRY**, poet and essayist, was born at Cambridge, Mass., Nov. 15, 1787; died in Boston, Feb. 2, 1879. He chose the profession of law, but his tastes led him into literary pursuits. In 1814 he and others (the "North American Club") founded the *North American Review*, yet (1880) published, of which he was sole conductor for a while. He closed his connection with it in 1820. It was while Dana was editor of the *Review* that Bryant's *Thanatopsis* was published in its pages, the author being then unknown. In 1821 the first volume of *The Idle Man* was published. It was unprofitable, and Mr. Dana dropped it. In it he published stories and essays from his own pen. In the same year he contributed to the *New York Review* (then under the care of Mr. Bryant) his first poem of much pretension, *The Dying Raven*. In 1827 his most celebrated poetical production, *The Buccaneer*, was published, with some minor poems. Of that production Wilson, of *Blackwood's Magazine*, wrote, "It is by far the most powerful and original of American poetical compositions." Mr. Dana's writings were always marked by great delicacy and grace and strong individuality. Among his most valuable prose compositions were a series of lectures upon Shakespeare, ten in number, delivered in the winter of 1839-40 in the cities of Boston, New York, and Philadelphia. After 1833 Mr. Dana wrote but little, though his life was extended about forty-five years longer.

**Danbury, DESTRUCTION OF.** Governor Tryon was one of the most malignant foes of the American patriots. He delighted, apparently, in conspicuously cruel acts; and when anything of that nature was to be done he was employed to do it by the more respectable British officers. He was chosen to lead a marauding expedition into Connecticut from New York in the spring of 1777. At the head of two thousand men, he left that city (April 23), and landed at Compo, between Norwalk and Fairfield, two days later. They pushed on towards Danbury, an inland town, where the Americans had gathered a large quantity of provisions for the army. The marauders reached the town unmolested (April 25) by some militia that had retired, and, not contented with destroying a large quantity of stores gathered there, they laid eighteen houses

in the village in ashes and cruelly treated some of the inhabitants. General Silliman, of the Connecticut militia, was at his home in Fairfield when the enemy landed. He immediately sent out expresses to alarm the country and call the militia to the field. The call was nobly responded to. Hearing of this gathering from a Tory scout, Tryon made a hasty retreat by way of Ridgefield, near which place he was confronted by the militia under Generals Wooster, Arnold, and Silliman. A sharp skirmish ensued, in which Wooster was killed, and Arnold had a narrow escape from capture, after his horse had been shot under him. For his gallantry on that occasion the Congress presented him with a horse richly caparisoned. Tryon spent the night in the neighborhood for his troops to rest, and early the next morning he hurried to his ships, terribly smitten on the way by the gathering militia, and at the landing by cannon-shot directed by Lieutenant-colonel Oswald. They escaped capture only through the gallant services of some marines led by General Erskine. About sunset the fleet departed, the British having lost about three hundred men, including prisoners, during the invasion. The Americans lost about one hundred men. The private losses of property at Danbury amounted to about eighty thousand dollars.

**Dane, NATHAN, LL.D.**, was born at Ipswich, Mass., Dec. 27, 1752; died at Beverly, Feb. 15, 1835. He was a graduate of Harvard in 1778. An able lawyer and an influential member of Congress (1785-88), he was the framer of the celebrated ordinance of 1787 (which see). He was a member of the Massachusetts Legislature several years, and was engaged to revise the laws of the state (1799), and revise and publish the charters (1811) which had been granted therein. Mr. Dane was a member of the Hartford Convention (which see) in 1814. His work entitled *A General Abridgment and Digest of American Law*, in nine large volumes (1823-29), is a monument of his learning and industry. By his munificence he founded the Dane professorship of law in Harvard University.

**D'Anville's Expedition (1746).** While the eastern colonies were preparing to attempt the conquest of Canada (see *Canada, Expedition against*), they were alarmed by the intelligence that a powerful French fleet, under command of the Duke D'Anville, was crossing the Atlantic from France. It consisted of forty ships-of-war, besides transports, and bore nearly four thousand regular land-troops, under experienced officers, with all kinds of military stores. This was the most powerful armament ever sent to North America from Europe. It came to recover Louisburg (which see), and to distress, if not to conquer, all New England. D'Anville had been instructed to dismantle Louisburg, retake Annapolis, N. S., destroy Boston, ravage along the North American coast, and to visit the British sugar-islands. The troops destined for Canada were recalled, and six thousand four hundred of the inland militia marched into Boston (September, 1746). To their assistance six thousand more

were prepared to march from Connecticut at the first notice. The old forts on the sea-coasts were strengthened, and great anxiety everywhere prevailed. This was relieved when intelligence came of disasters to the French fleet as they approached the American coast. In a terrible gale several ships were wrecked; the expected junction with some vessels from Santo Domingo had failed; a pestilent fever among the French land-troops had carried off many; and intercepted letters, opened in a council of war on the admiral's ship, which indicated the speedy arrival of an English fleet, caused a division among the officers. Mortified by the result of his great expedition, D'Anville died suddenly, either by apoplexy, brought on by anxiety and mortification, or by self-administered poison. His successor, D'Estounerelle, proposed to abandon the expedition. The rejection of his proposition so agitated him that a fever was brought on, and, in delirium, he fell on his sword. The remains of the shattered fleet proceeded to attempt the capture of Annapolis, but when off Cape Sable (Oct. 13) another violent tempest scattered them, and they returned singly to France. They had buried two thousand four hundred men in American soil.

**Dare, VIRGINIA.** In 1587 John White went to Roanoke Island as governor of an agricultural colony sent out by Sir Walter Raleigh. He was accompanied by his son-in-law, William Dare, and his young wife. It was intended to plant the colony on the mainland, but White went no farther than Roanoke. There he found the melancholy remains, in the form of whitened skeletons and a broken fort, which told the sad fate of the "protectors of the rights of England" which Grenville had left there. (See *Grenville*.) The new colonists wisely determined to cultivate the friendship of the Indians. Manteo—the chief who accompanied Amidas and Barlow (see *Amidas*) to England—living with his mother and relatives on Croatan Island, invited the colonists to settle on his domain. White persuaded him to receive the rite of Christian baptism, and bestowed upon him the title of baron, as Lord of Roanoke—the first and last peerage ever created on the soil of our Republic. It became necessary for the ships to return to England for supplies, and, to hasten them, White went with them, leaving behind eighty-nine men, seventeen women, and two children. Among the women was his married daughter, Eleanor Dare, who had given birth to a daughter since her arrival, to whom they gave the name of Virginia. On his way home, White touched at Ireland, where he left some potatoes which he took from Virginia—the first of that kind ever seen in Europe. He started back with two ships laden with supplies; but his greed made him neglect his duty to the colonists, and, instead of going directly to Virginia, he pursued Spanish ships in search of plunder. His vessels were so battered that he was obliged to return to England, and Spanish war-vessels in British waters prevented his sailing for America again until 1590. He found Roanoke a desolation, and no trace of the colony was ever

found. It is believed that they became mingled with the natives, for long years afterwards families of the Hatteras tribe exhibited unmistakable specimens of blood mixed with that of Europeans. It is supposed the friendly "Lord of Roanoke" had saved their lives, for an inscription on bark indicated that they had gone from Roanoke to Croatan. Perhaps when Jamestown was founded (1607), on the Roanoke River (see *Jamestown*), little Virginia Dare, then twenty years of age, was a beautiful young Indian queen on the banks of the Roanoke.

**Darien Ship Canal.** (See *Interoceanic Canal*.) One of the great canal projects which have attracted the nations is yet (1887) under consideration by the United States government. It is the construction of a ship canal to connect the waters of the Atlantic and Pacific oceans. In 1849 an Irish adventurer published a book in which he said he had crossed and recrossed the Isthmus of Darien, and that in the construction of a canal there only "three or four miles of deep rock cutting" would be required. Believing this, an English company was formed for the purpose, with a capital of seventy-five million dollars, and an engineer was sent to survey a route, who reported that the distance between "tidal effects" was only thirty miles, and the summit level only one hundred and fifty feet. The governments of England, France, the United States, and New Granada joined, late in 1853, in an exploration of the best route for a canal. It was soon ascertained that the English engineer had never crossed the isthmus at all. The summit level to which he directed the expedition was one thousand feet above tide-water, instead of one hundred and fifty feet. The expedition effected nothing. In 1854 Lieutenant Isaac Strain led an American expedition for the same purpose. They followed the route pointed out by the English engineer, and, after intense suffering, returned and reported the proposed route wholly impracticable. The success of the Suez Canal revived the project, and in 1870 two expeditions were sent out by the United States government—one, under Commander T. O. Selfridge, of the United States Navy, to the Isthmus of Darien; and the other, under Captain Shufeldt, of the navy, to the Isthmus of Tehuantepec. Three routes were surveyed across the narrow part of the Isthmus of Darien by Selfridge, and he reported all three as having obstacles that made the construction of a canal impracticable. He reported a route by the Atrato and Napipi rivers as perfectly feasible. It would include one hundred and fifty miles of river navigation and a canal less than forty miles in extent. It would call for three miles of rock-cutting one hundred and twenty-five feet deep, and a tunnel of five miles, with a roof sufficiently high to admit the tallest-masted ships. Selfridge estimated the entire cost at one hundred and twenty-four million dollars. The whole matter was referred in 1872 to a commission to continue investigations. The vast importance of such a work is conceded, and the commercial interests of the world demand its speedy completion. It will undoubtedly be ac-

complished by the joint efforts of Americans and Europeans.

**Daring Raid in Northern Georgia.** While General Mitchel was holding the Charleston and Memphis Railway in Northern Alabama (see *Mitchel's Expedition*), he set on foot one of the most daring enterprises attempted during the war. It was an effort to break up railway communication between Chattanooga and Atlanta, in Georgia. For this purpose J. J. Andrews, who had been engaged in the secret service by General Buell, was employed. In April, 1862, with twenty picked men, in the guise of Secessionists from Kentucky seeking Georgia's freedom, Andrews walked to Marietta. At that place they took the cars for a station not far from the foot of Great Kenesaw Mountain, and there, while the engineer and conductor were at breakfast, they uncoupled the engine, tender, and box-car from the passenger train and started up the road at full speed. They told inquirers where they were compelled to stop that they were conveying powder to Beauregard's army. They passed several trains before they began to destroy the road. The first train that came to a broken spot had its engine reversed and became a pursuer of the raiders. Onward they dashed with the speed of a gale, passing other trains, when, at an important curve of the road, after destroying the track a considerable distance, Andrews said, "Only one more train to pass, boys, and then we will put our engine at full speed, burn the bridges after us, dash through Chattanooga, and on to Mitchel, at Huntsville." The exciting chase continued many miles. The raiders cut telegraph wires and tore up tracks. The pursuers gained upon them. Finally their lubricating-oil became exhausted, and such was the speed of the engine that the brass journals in which the axles revolved were melted. Fuel failing, the raiders were compelled to leave their conveyance, fifteen miles from Chattanooga, and take refuge in the tangled woods on Chickamauga Creek. A great man-hunt was organized. The mountain passes were picketed, and thousands of horse and foot soldiers, with several bloodhounds, scoured the country in all directions. The whole party were finally captured, and Andrews and seven of his companions were hanged. To each of the survivors the Secretary of War gave a bronze medal in token of approval.

**Dark and Bloody Ground.** Two sections of our country have received this appellation. First it was applied to Kentucky, the great battle-field between the Northern and Southern Indians, and afterwards to the portion of that state wherein Daniel Boone and his companions were compelled to carry on a warfare with the savages. It was also applied to the Valley of the Mohawk, in New York, and its vicinity, known as Tryon County, wherein the Six Nations and their Tory allies made fearful forays during the Revolution.

**Dark Day, THE.** On the 12th of May, 1780, a remarkable darkness overspread all New England, varying in intensity at different places. In

some sections persons could not read common printed matter in the open air. Birds became silent and went to rest; barn-yard fowls went to roost, and cattle sought their accustomed evening resorts. Houses were lighted with candles, and nearly all out-of-doors' work was suspended. The obscuration began at ten o'clock in the morning and continued until night. The cause of the darkness has never been revealed. The air was unclouded.

Darley, FELIX O. C., an eminent American designer and painter, was born in Philadelphia June 23, 1822. He evinced a taste for drawing at an early age. While a lad in a mercantile house he spent his leisure time in sketching. For some of these he was offered a handsome sum, and this induced him to choose art as a life pursuit. He spent several years in Philadelphia, always living by his pencil, and in 1848 he went to New York, where he made admirable illustrations for some of Irving's humorous works. Among these were *The Legend of Sleepy Hollow* and *Rip Van Winkle*. These works procured for him the reputation, at home and abroad, as a leader in the art of outline illustrations. Mr. Darley has illustrated a great many books and made numerous admirable designs for banknotes. For Cooper's works he made five hundred illustrations. More than sixty of them were engraved on steel. He executed four large works ordered by Prince Napoleon while in this country. These were, "Emigrants attacked by Indians on the Prairies," "The Village Blacksmith," "The Unwilling Laborer," and "The Repose." He illustrated several of Dickens's

beautiful design of the certificate of stock given as evidence of subscription for the Centennial Exhibition in 1876. Among the later works of Mr. Darley in book illustrations were five hundred beautiful designs for Lossing's *Our Country*. Mr. Darley went to Europe near the close of the war, studied models in Rome, and returned with a portfolio full of personal sketches.

Darlington, WILLIAM, LL.D., was born of Quaker parents at Birmingham, Penn., April 28, 1782; died at West Chester, Penn., April 23, 1863. Having studied medicine and also languages and botany, he went to Calcutta as surgeon of a ship. Returning in 1807, he practised medicine at West Chester with success; was a Madisonian in politics, and when the war broke out in 1812 he assisted in raising a corps for the service in his neighborhood. He was chosen major of a volunteer regiment, but did not see any active service. He was a member of Congress from 1815 to 1817 and from 1819 to 1823. In his town he founded an academy, an Athenæum, and a society of natural history. Dr. Darlington was an eminent botanist, and a new and remarkable variety of the Pitcher plant, found in California in 1853, was named, in his honor, "Darlingtonia California." He wrote and published works on botany, medicine, biography, and history. Dr. Darlington was a member of about forty learned societies in America and Europe.

Dartmoor Prison. At the close of the War of 1812-15 prisoners held by both parties were released as soon as proper arrangements for their

DARTMOOR PRISON IN 1815.

works, and during the Civil War he delineated many characteristic scenes. Some of the more elaborate pictures on the United States government bonds were made by Darley; and also the

enlargement could be made. At the conclusion of peace there were about six thousand American captives confined in Dartmoor Prison, including two thousand five hundred American

seamen impressed by British cruisers, who had refused to fight in the British navy against their countrymen, and were there when the war began. Some had been captives ten or eleven years. The prison was situated on Dart Moor, a desolate region in Devonshire, where it had been constructed for the confinement of French prisoners of war. It comprised about thirty acres, enclosed within double walls, with seven distinct prison-houses, with enclosures. The place, at the time in question, was in charge of Captain T. G. Shortland, with a military guard. He was accused of cruelty towards the captives. It was nearly three months after the treaty of peace was signed before they were permitted to know the fact. From that time they were in daily expectation of release. Delay caused uneasiness and impatience, and symptoms of a determination to escape soon appeared. On April 4 the prisoners demanded bread instead of hard biscuit, and refused to receive the latter. On the 6th, so reluctantly did the prisoners obey orders to retire to their quarters, that when some of them, with the appearance of unctuous intentions, not only refused to retire, but passed beyond the prescribed limits of their confinement, they were fired upon by order of Captain Shortland, for the purpose of intimidating all. The firing was followed up by the soldiers, without excuse. Five prisoners were killed and thirty-three were wounded. This act was regarded by the Americans as a wanton massacre, and when the British authorities pronounced it "justifiable" the hottest indignation was excited throughout the Republic.

**Dartmoor Prisoners.** The last survivor of the Dartmoor prisoners was Lewis P. Clover, who died in Brooklyn, Long Island, N. Y., in February, 1879, at the age of eighty-nine years.

**Dartmouth College,** one of the higher institutions of learning in the English-American colonies, was chartered in 1769. It grew out of an earlier school established by Rev. Dr. Wheelock at Lebanon, Conn., designed for the education of Indian children, he being encouraged by his success in educating a young Mohegan, Samson Occom, who became a remarkable preacher. (See *Occom, S.*) Pupils from the Delaware tribe were received, and the school soon attracted public attention. James Moor, a farmer, gave two acres of land and a house for the use of the school, and from that time it was known as Moor's Indian Charity School. Occom accompanied Rev. N. Whittaker to England to raise funds for the increase of the usefulness of the school, and about \$50,000 were subscribed. A board of trustees was organized, of which Lord Dartmouth, one of the subscribers, was elected president. The children of the New England Indians came to the school in large numbers, and Dr. Wheelock resolved to transfer it to a place nearer the heart of the Indian population in that region. He selected Hanover, on the Connecticut River, in the western part of New Hampshire, and grants of about forty-four thousand acres of land were made. Governor Wentworth gave it a charter (1769), under the

title of Dartmouth College, so named in honor of Lord Dartmouth. The institution was removed, with the pupils, to Hanover, in 1770, where President Wheelock and all others lived in log cabins, for it was an almost untrodden wilderness. Dr. Wheelock held the presidency until his death, in 1779 (see *Wheelock, E.*), and was succeeded by his son John, who was sent to Europe to procure funds for the support of the college. He obtained considerable sums, and philosophical implements. In 1816 a religious controversy led to a conflict with the Legislature, and the latter created a new corporation, called Dartmouth University, in which the property of the old corporation was vested. A lawsuit ensued, carried on for the college by Daniel Webster, which resulted (1819), finally, in the establishment of the inviolability of chartered rights and the restoration of the old charter. Wheelock was raised to the presidency in 1817, by the new board, but died a few months afterwards. He was succeeded by William Allen.

**Davenant (D'Avenant), SIR WILLIAM, AND HIS PROJECTED COLONY.** Davenant was an English dramatist, son of an innkeeper, at whose house Shakespeare often stopped while on his journeys between Stratford and London, and who noticed the boy. Young Davenant left college without a degree. Showing much literary talent, he was encouraged in writing plays by persons of distinction, and on the death of Ben Jonson in 1637 he was made poet-laureate. He adhered to the royal cause during the civil war in England, and escaped to France, where he became a Roman Catholic. After the death of his king he projected (1651) a colony of French people in Virginia, the only American province that adhered to royalty, and, with a vessel filled with French men, women, and children, he sailed for Virginia. The ship was captured by a parliamentary cruiser, and the passengers were landed in England, where the life of Sir William was spared, it is believed, by the intervention of John Milton, the poet, who was Cromwell's Latin secretary. Sir William had a strong personal resemblance to Shakespeare, and it was currently believed that he was a natural son of the great dramatist. This idea Sir William encouraged. He died in April, 1668, at the age of sixty-three years.

**Davenport, JOHN,** one of the founders of the New Haven colony, was born at Coventry, Eng., 1597; died in Boston, March 15, 1670. Educated at Oxford, he entered the ministry of the Established Church. He finally became a non-conformist, was persecuted, and retired to Holland, where he engaged in secular teaching in a private school. He returned to London and came to America in June, 1637, where he was received with great respect. The next year he assisted in founding the New Haven colony, and was one of the chosen "seven pillars." (See *New Haven.*) He concealed Goffe and Whalley, two of the "regicides," in his house, and by his preaching induced the people to protect them from the king's commissioners, sent over to arrest them. (See *Regicides.*) In 1668 Mr. Davenport was ordained minister of the first church in

Boston, and left New Haven. He was the author of several controversial pamphlets.

**Davidson, JOHN WYNN**, was born in Fairfax County, Va., Aug. 18, 1824, and graduated at West Point in 1845, entering the dragoons. Accompanying Kearney to California in 1846, he was in the several battles during the war with Mexico. He was also active in New Mexico, afterwards, against the Indians. In 1861 he was made major of cavalry, and early in 1862 brigadier-general of volunteers, commanding a brigade in the Army of the Potomac. After serving in the campaign on the Peninsula, he was transferred (August, 1862) to the Department of the Mississippi, and co-operated with General Steele in the capture of Little Rock, Ark. He was breveted major-general of volunteers in March, 1865.

**Davie, WILLIAM RICHARDSON**, was born near Whitehaven, Eng., June 20, 1756; died at Camden, S. C., Nov. 8, 1820. He came to America in 1764 with his father, and settled in South Carolina with his uncle, who educated him at the

WILLIAM RICHARDSON DAVIE.

College of New Jersey (where he graduated in 1776), and adopted him as his heir. He prepared himself for the law as a profession, but became an active soldier in the Revolution in a troop of dragoons. When he was in command of the troop he annexed it to Pulaski's legion. He fought at Stono, Hanging Rock, and Rocky Mount; and at the head of a legionary corps, with the rank of major, he opposed the advance of Cornwallis into North Carolina. After the overthrow of the American army at Camden he saved the remnant of it; and he was a most efficient commissary under General Greene in the Southern Department. He rose to great eminence as a lawyer after the war, and was a delegate to the convention that framed the National Constitution, but sickness at home compelled him to leave before the work was accomplished. In the convention of North Carolina he was its most earnest and able supporter. In 1799 he was governor of North Carolina, but

was soon afterwards sent as one of the envoys to the French Directory. Very soon after his return he withdrew from public life. In March, 1813, he was appointed a major-general, but declined the service on account of bodily infirmities.

**Davis, ANDREW JACKSON**, the subject of remarkable psychological phenomena, was born at Blooming Grove, Orange Co., N. Y., Aug. 11, 1826. While a shoemaker's apprentice in Poughkeepsie, early in 1843, remarkable clairvoyant powers were developed in him by the manipulation of mesmeric influences by William Levingston. He was quite uneducated, yet while under the influence of mesmerism or animal magnetism he would discourse fluently and in proper language on medical, psychological, and general scientific subjects. While in a magnetic or trance state he made medical diagnoses and gave prescriptions. In March, 1844, he fell into a trance state without any previous manipulations, during which he conversed for sixteen hours, as he alleged, with invisible beings, and received intimations and instructions concerning the position he was afterwards to occupy as a teacher from the interior state. In 1845, while in this state, he dictated to Rev. William Fishbough his first and most considerable work, *The Principles of Nature, her Divine Revelations, and a Voice to Mankind*, which embraces a wide range of subjects. He has since put forth several works, all of which he claims to have been the production of his mind under divine illumination and the influence of disembodied spirits. Among his most considerable works are *The Great Harmony*, in four volumes; *The Penetralia*; *History and Philosophy of Evil*; *The Harbinger of Health*, and *Stellar Key to the Summer Land*. Mr. Davis may be considered as the pioneer of modern spiritualism.

**Davis, JEFFERSON**, born in Christian County, Ky., June 3, 1808; graduated at West Point in 1828; served as lieutenant in the Black Hawk War (which see) in 1831-32, and resigned in 1835

JEFFERSON DAVIS.

to become a cotton-planter in Mississippi. He was a member of Congress in 1845-46, and served as colonel of a Mississippi regiment in the war with Mexico. He was United States Senator

from 1847 to 1851, and from 1857 to 1861. He was called to the cabinet of President Pierce as Secretary of War in 1853, and remained four years. He abdicated his seat in the Senate to join the insurrection against the life of the Republic in January, 1861, and was chosen provisional President of the Southern Confederacy in February. In November, 1861, he was elected permanent President for six years. Early in April, 1865, he and his associates in the government fled from Richmond, first to Danville, Va., and then towards the Gulf of Mexico. He was arrested by Union cavalry in Georgia, taken to Fortress Monroe, and confined on a charge of treason for about two years, when he was released on bail, and was never brought to trial.

**Davis, JEFFERSON, CAPTURE OF.** (See *Confederate Government, Flight of the.*) Mr. Davis's wife and children, and his wife's sister, had accompanied him from Danville to Washington, Ga., where, for prudential reasons, the father separated from the others. He soon learned that some Confederate soldiers, believing that the treasure that was carried away from Richmond was with Mrs. Davis, had formed a plot to seize all her trunks in search of it. He hastened to the rescue of his family and property, riding rapidly eighteen miles. They were near Irwinesville, south of Macon, Ga. The tents were pitched at night, and the wearied ones retired to rest, intending to resume their flight in the morning. General Wilson, at Macon, hearing of Davis's flight towards the Gulf, had sent out Michigan and Wisconsin cavalry, whose vigilance was quickened by the offered reward of \$100,000 for the arrest of the fugitive. Simultaneously, from opposite points, these two parties approached the camp of Davis and his little party just at dawn, May 11, 1865. Mistaking each other for foes, they exchanged shots with such precision that two men were killed and several wounded before the error was discovered. The sleepers were aroused. The camp was surrounded, and Davis, while attempting to escape in disguise, was captured and conveyed to General Wilson's headquarters. Davis had slept in a wrapper, and when aroused hastily pulled on his boots and went to the tent-door. He observed the National cavalry. "Then you are captured!" exclaimed his wife. In an instant she fastened the wrapper around him before he was aware, and then, bidding him adieu, urged him to go to a spring near by, where his horse and arms were. He complied, and as he was leaving the tent-door, followed by a servant with a water-bucket, his sister-in-law flung a shawl over his head. It was in this disguise that he was captured. Such is the story as told by C. E. L. Stuart of Davis's staff. The Confederate chieftain was taken to Fortress Monroe by way of Savannah and the sea, where he was confined about two years under a charge of treason, and finally released on bail. He was never tried for his offence. (See *Amnesty and Pardon*, and *Davis, J.*) Reagan, who was captured with Davis, and Alexander H. Stephens, the Vice-President of the Confederacy, were sent to Fort Warren, in Boston Harbor.

**Davis, JEFFERSON C., U. S. Army,** was born in Clarke County, Ind., March 2, 1828; died in Chicago, Nov. 29, 1879. He served in the war with Mexico, and was made lieutenant in 1852. He was one of the garrison of Fort Sumter during the bombardment in April, 1861. The same year he was made captain, and became colonel of an Indiana regiment of volunteers. In December he was promoted to brigadier-general of volunteers, and commanded a division in the

JEFFERSON C. DAVIS.

battle of Pea Ridge early in 1862. He participated in the battle of Corinth in 1862; commanded a division in the battles of Stope River, Murfreesborough, and Chickamauga in 1862-63; and in 1864 commanded the Fourteenth Army Corps in the Atlanta campaign and in the march through Georgia and the Carolinas. He was brevetted major-general in 1865, and the next year (July 28) was commissioned a colonel of infantry in the army of the United States. He was afterwards on the Pacific coast, and commanded troops in Alaska. He commanded the forces that subdued the Modocs (which see) in 1873.

**Davis Medal.** The only medal bestowed as a token of grateful recognition of valuable services by the Confederates during the Civil War was given to a company, mostly Irishmen, known as the "Davis Guards," for gallantly repulsing the attack of the Nationals at Sabine Pass (which see), Sept. 8, 1863. Jefferson Davis presented each of the men with a small silver medal—not struck in a die, but cut out of sheet silver.

**Davis, PRESIDENT, RECEPTION OF, AT RICHMOND, VA.** The Confederate Congress adjourned May 21, 1861, to meet at Richmond on July 20. On May 26 President Davis started for that city, intending, it is said, to take command of the Confederate troops in Virginia in person. He was accompanied by his favorite aid, Wigfall of Texas (see *Wigfall at Fort Sumter*), and his Secretary of State, Robert Toombs of Georgia. His journey was a continuous ovation. At every railway station men, women, and children greeted him with cheers and waving of handker-

chiefs. A reporter for the *Richmond Examiner*, who accompanied him, said: "Never were a people more enraptured with their chief magistrate than ours are with President Davis; and the trip from Montgomery to Richmond will ever be remembered with delight by all who witnessed it." At Petersburg, Davis and his party were met by Governor Letcher and the mayor of Richmond, and he was escorted into his future "capital" by soldiers and civilians. He was taken to the Fair Grounds, where he addressed (May 23) a great multitude. On the 31st he was serenaded, when he uttered a memorable speech that foreshadowed the policy of his administration and evinced the spirit of his associates. "Those with whom we have lately associated," he said, "have shown themselves so incapable of appreciating the blessings of the glorious institutions they inherited that they are to-day stripped of the liberty to which they were born. They have allowed an ignorant usurper [President Lincoln] to trample upon all the prerogatives of citizenship, and to exercise power never delegated to him; and it has been reserved to your state, so lately one of the original thirteen, but now, thank God! fully separated from them, to become the theatre of a great central camp, from which will pour forth thousands of brave hearts to roll back the tide of this despotism. . . . To the remotest limits of the Confederacy, every proud heart beats high with indignation at the thought that the foot of the invader has been set upon the soil of Old Virginia. There is not one true son of the South who is not ready to shoulder his musket, to bleed, to die, or to conquer, in the cause of liberty here." Davis's reference to Virginia having become "the theatre of a great central camp," and the battle-field in defence of the South, recalled to thoughtful minds the assurance of Governor Pickens of South Carolina, so early as the close of December, 1860, that the people of that state would not suffer the horrors of war—"You may plant your seed in peace, for Old Virginia will have to bear the brunt of battle." A caricature of the day, printed on envelopes, represents the "Old Dominion" as a decrepit old woman, much bent and leaning upon a short staff, while armies are contending upon her back—horse, foot, and artillery. Under the figure are the words "Poor old simple Virginia." To a remark from a spectator—"Tell us something about Buena Vista" (which see)—Davis said, "We will make the battle-fields in Virginia another Buena Vista, and drench them with blood more precious than any that flowed there." The citizens of Richmond purchased from James A. Seddon (see *Peace Congress*) his elegant mansion, and presented it, sumptuously furnished, to President Davis as a residence.

**Davis's Cabinet.** Jefferson Davis, President of the Southern Confederacy, chose for his constitutional advisers a cabinet modelled after that of the United States. He appointed Robert Toombs, of Georgia, Secretary of State; Charles G. Memminger, of South Carolina, Secretary of the Treasury; Le Roy Pope Walker, of Alabama, Secretary of War; Stephen R. Mal-

lory, of Florida, Secretary of the Navy; and John H. Reagan, of Texas, Postmaster-general. Afterwards, Judah P. Benjamin was made Attorney-general.

**Davis's Proclamation.** Two days after President Lincoln's call for troops (which see) by proclamation, Jefferson Davis issued an intended countervailing one, in the preamble of which he said the President of the United States had "announced the intention of invading the Confederacy with an armed force for the purpose of capturing its fortresses (see *Public Seizure of Property*), and thereby subverting its independence, and subjecting the free people thereof to the dominion of a foreign power." He said it was the duty of his government to repel this threatened invasion, and "defend the rights and liberties of the people by all the means which the laws of nations and usages of civilized warfare placed at its disposal." He invited the people of the Confederacy to engage in privateering (see *Privateering*); and he exhorted those who had "felt the wrongs of the past" from those whose enmity was "more implacable, because unprovoked," to exert themselves in preserving order and maintaining the authority of the Confederate laws. This proclamation was met by President Lincoln by a public notice that he should immediately order a blockade of all the Southern ports claimed as belonging to the Confederacy; and also that if any person, under the pretended authority of such states, or under any other pretence, should molest a vessel of the United States, or the persons or cargo on board of her, such person would be held amenable to the laws of the United States for the prevention and punishment of piracy. With this opposing proclamation the great Civil War was actively begun.

**Day, STEPHEN,** was the first printer in the English-American colonies. He was born in London in 1611; died at Cambridge, Mass., Dec. 22, 1662. He came to Massachusetts in 1638, and was employed to manage the printing-press sent out by Rev. Mr. Glover. He began printing at Cambridge in March, 1639. He was not a skilful workman, and was succeeded in the management, about 1648, by Samuel Green, who employed Day as a journeyman.

**Day's Work in Congress, A (1774).** The most momentous act of the first Continental Congress during its whole session occupied the entire business on Oct. 8, 1774. After a short and spicy debate, the great council "*Resolved*, That this Congress approve the opposition of the inhabitants of Massachusetts Bay to the execution of the late acts of Parliament; and if the same shall be attempted to be carried into execution by force, in such case all America ought to support them in their opposition." This is all that appears on the journal for that day. It was enough. From that day the crystallization of the British-American colonies into an independent nation went rapidly on. It was like the luminous handwriting on Belshazzar's wall, and wise men interpreted it as a prophecy of the dismemberment of the British empire. George

III. responded to this resolution by denouncing his American subjects as *rebels*.

**Dayton, ELIAS**, was born at Elizabethtown, N. J., in 1735; died there in July, 1807. He fought with the Jersey Blues under Wolfe at Quebec; was a member of the Committee of Safety at the beginning of the Revolution, and became colonel of a New Jersey regiment. He served in New York and New Jersey; fought in several battles, the last at Yorktown, and in January, 1783, was made a brigadier-general. He was a member of Congress in 1787-88, and was afterwards in the New Jersey Legislature.

**Dayton, JONATHAN, LL.D.**, son of Elias, was born at Elizabethtown, N. J., Oct. 16, 1760; died there, Oct. 9, 1824. He graduated at the College of New Jersey in 1776; entered the army as paymaster of his father's regiment in August; aided in storming a redoubt at Yorktown, which was taken by Lafayette; and served faithfully until the close of the war. He was a member of the convention that framed the National Constitution in 1787, and was a representative in Congress from 1791 to 1799. He was speaker in 1795, and was made United States Senator in 1799. He held the seat until 1805. He served in both branches of his state Legislature. Suspected of complicity in Burr's conspiracy, he was arrested, but was never proceeded against.

**Deaf and Dumb.** In 1870 the whole number of deaf and dumb persons in the United States and territories was sixteen thousand two hundred and five. Much has been done in our country for their instruction. So early as 1793, Dr. W. Thornton published an essay in Philadelphia on *Teaching the Dumb to Speak*, but no attempt was made to establish a school for the purpose here until 1811, when the effort was unsuccessful. A school for the instruction of the silent that proved successful was opened in Hartford, Conn., by Rev. T. H. Gallaudet (which see) in 1817, and was chartered under the name of the "New England Asylum for the Deaf and Dumb." Congress granted for its support a township of land in Alabama, the proceeds of which formed a fund of about \$340,000. Other asylums have since been established, numbering thirty-six in 1870, and a National Deaf-mute College was established at Washington in 1864. In 1876 there were about four thousand four hundred pupils in these institutions.

**Dean Tucker's Proposition.** The British ministry knew more of the differences of opinion in the Continental Congress than did the Americans, for Galloway had let out the secret to friends of the crown. This fact encouraged Lord North and his colleagues to believe that a little firmness on the part of Great Britain would shake the resolution and break up the apparent union of the colonists. It was known that a large portion of the most respectable and influential of the inhabitants of the colonies were warmly attached to the mother country. In several colonies there was a strong prejudice felt towards New England, where the most violent proceedings had occurred. The Quakers, as a body, were opposed to violent measures.

The governor of Pennsylvania was indifferent, and Scotch Highlanders settled in New York and the Carolinas and Georgia were very loyal. Even should the union remain perfect, it was believed the limited resources of the colonists would be wholly inadequate to any obstinate or lengthened resistance. Military officers boasted that, at the head of a few regiments, they would "march from one end of America to the other." All British writers and speakers exercised their pens and tongues in the same strain. Only one had the good sense to recommend a peaceful separation. That was Dean Tucker, author of the *Light of Nature*, and a prolific pamphleteer of the day. He proposed that Parliament, by a solemn act declaring them to have forfeited all the privileges of British subjects by sea and land, should cut off the rebellious provinces from the British empire; with provision, however, for granting pardon and restoration to either or all of them on their humble petition to that effect. Had this proposition been then adopted, Great Britain would have still retained a large and influential party in the colonies, the hatreds engendered by war would have been avoided, and, at the worst, the colonies would have been lost to Great Britain, as they finally were, without the loss of blood and treasure on both sides which the war caused. But vulgar expedients were preferred, and this wise proposition was denounced as the height of folly, and even the wise Burke called it "childish."

**Deane, JAMES**, was a missionary to the Six Nations (which see). He was born in Connecticut, Aug. 20, 1748; died at Westmoreland, N. Y., Sept. 10, 1823. Graduated at Dartmouth College in 1773. From the age of twelve years he was with a missionary in the Oneida tribe of Indians, and mastered their language. After his graduation he went as a missionary to the Canguawagas and St. Francis tribes for two years; and when the Revolution broke out, Congress employed him to conciliate the tribes along the northern frontier. He was made Indian agent and interpreter at Fort Stanwix (now Rome, Oneida Co.), with the rank of major. He was many years a judge in Oneida County, and twice a member of the New York Assembly. Mr. Deane wrote an Indian mythology.

**Deane, SILAS**, was born at Groton, Conn., Dec. 24, 1737; died at Deal, Eng., Aug. 23, 1789. He graduated at Yale College in 1758, became a merchant in Wethersfield, Conn., and was a delegate to the first Continental Congress. He was very active in Congress, in 1775, in fitting out a naval force for the colonies, and in the spring of 1776 he was sent to France as a secret political and financial agent, with authority to operate in Holland and elsewhere. He was to ascertain the feeling of the French government towards the revolted colonies and Great Britain, and to obtain military supplies. He made arrangements with Beaumarchais (which see) for substantial aid from France, and, with Dr. Franklin and Arthur Lee, negotiated treaties of amity, commerce, and alliance in February, 1778. (See *Treaties with France*.) Complaints were made of

his extravagance in making contracts, especially with French officers to serve in the Continental Army, and he was recalled by order of Congress (Nov. 21, 1777), and returned home.

SILAS DEANE.

John Adams took his place abroad. Deane arrived at Philadelphia Aug. 10, 1778, and on the 13th reported to Congress. In that body he found false reports operating against him; and finally, exasperated by the treatment which he received at their hands, he engaged in a controversy with influential members. He was required to give a full statement of his financial transactions in France, and was compelled to return to that country for his papers, which he did. Owing to some strictures which he had made upon the conduct of the French government, he became obnoxious to the authorities there, and retired to the Netherlands. Arthur Lee (whose enmity to Deane was created by jealousy) was the author of the misrepresentations that gave Deane all his trouble. He charged him with appropriating public funds to his private use. Dr. Franklin testified to Deane's strict honesty and private worth, but Lee had the ear of Congress, and Deane had to suffer. He died in obscurity and poverty in England. He has since been vindicated, and all unjust suspicions have been removed from intelligent minds.

**Dearborn, HENRY**, was born at Northampton, N. H., Feb. 23, 1751; died at Roxbury, Mass., June 6, 1829. He became a physician, and employed his leisure time in the study of military science. At the head of sixty volunteers he hastened to Cambridge on the day after the affair at Lexington, a distance of sixty-five miles. He was appointed a captain in Stark's regiment, participated in the battle of Bunker's Hill, and in September following (1775) accompanied Arnold in his wonderful expedition to Quebec. (See *Arnold's Expedition*.) He participated in the siege of Quebec, and was made prisoner, but was paroled in May, 1776, when he became major of Scammell's New Hampshire regiment. He was in the battles of Stillwater and Saratoga in the fall of 1777, and led troops in those engagements—in the latter as lieutenant-colonel. He was in the battle of Monmouth, was in Sullivan's campaign (which see) against the Indians in 1779, and in 1781 was attached to Washington's staff as deputy quartermaster-general,

with the rank of colonel. In that capacity he served in the siege of Yorktown. In 1784 he settled in Maine, and became general of militia. He was marshal of Maine, by the appointment of Washington, in 1789, member of Congress from 1793 to 1797, and was Secretary of War under Jefferson from 1801 to 1809. From 1809 till 1812 he was collector of the port of Boston, when he was appointed as senior major-general in the United States Army, and commander-in-chief of the Northern Department. He was not very successful in that position, and was superseded July 6, 1813, in consequence of being charged

HENRY DEARBORN.

with political intrigue. He asked in vain for a court of inquiry. In 1822-24 he was the American minister in Portugal, and in the latter year returned to his farm at Roxbury, near Boston, where he died.

**Dearborn's Invasion of Canada.** On the first of September, 1812, Brigadier-general Bloomfield had collected about eight thousand men—regulars, volunteers, and militia—at Plattsburg, on Lake Champlain, besides some small advanced parties at Chazy and Champlain. On the arrival of General Dearborn, he assumed direct command of all the troops, and on Nov. 16 he moved towards the Canada line with three thousand regulars and two thousand militia. He moved on to the La Colle, a small tributary of the Sorel, where he was met by a considerable force of mixed British and Canadian troops and Indians, under Lieutenant-colonel De Salaberry, an active British commander. Just at dawn, on the morning of the 20th, Colonel Zebulon M. Pike crossed the La Colle and surrounded a block-house. Some New York militia approaching were mistaken, in the dim light, for British soldiers. Pike's men opened fire upon them, and for nearly half an hour a sharp conflict was maintained. When they discovered their mistake, they found De Salaberry approaching with an overwhelming force. These were fiercely attacked, but the Americans were soon forced to retreat so precipitately that they left five of their number dead and five wounded on the field. The army, disheartened, returned to Plattsburg.

**Death and Burial of De Soto.** On May 21, 1542, De Soto (which see) died on the banks of

the Mississippi, which he had discovered. As he had declared to the Indians, who were sun-worshippers, that he was a son of the sun, and that Christians could not die, it was thought wise to conceal his death from the pagans. He was secretly buried in the gateway of the Spanish camp. The Indians knew he was sick. He was not to be seen, and they saw a new-made grave. They looked upon it, and pondered. Moscoso, whom De Soto had appointed his successor, ordered the body to be taken up at the dead of night. It was wrapped in mantles in which sand had been sewed up, taken in a boat to the middle of the great river, and there dropped to the bottom in nineteen fathoms of water. Herrera says it was sunk in a hollow live-oak log. When the Indian chief asked Moscoso for De Soto, that leader replied, "He has ascended to heaven, but will return soon."

**Death of King Philip.** Captain Church (which see) surprised Philip at Mount Hope (Aug. 2, 1676), killed about one hundred and thirty of his followers, and captured his wife and son. Philip barely escaped. Ten days afterwards an Indian deserter told Church that Philip was on Mount Hope Neck, and offered to guide him to the place and help to kill him, for Philip had killed the deserter's brother because he had proposed peace with the English. Church immediately went in search of Philip with a small number of men, English and Indians, following his volunteer guide. On his arrival at a swamp where Philip was concealed, he disposed his men around it in ambuscade. Philip's shelter was soon discovered on the edge of the swamp, and the English and Indians opened fire upon it. At that instant Philip seized his gun and fled for the thicket, where he was confronted by an Englishman and an Indian in covert. When he was within fair musket-shot distance the Englishman snapped his gun. It missed fire, when he bade the Indian to shoot. He did so, and the bullet pierced King Philip's heart.

**Death of President Harrison.** On Saturday, March 27, 1841, President Harrison, who had been inaugurated twenty-three days before, after suffering much from a cold for a week previous, was taken with a chill and other symptoms of fever. This attack was followed by pneumonia, which baffled medical skill, and terminated his life on Sunday morning, just one month from the day when he took the chair of the Presidency. He was seriously ill only eight days. About three hours before his death, after his physician had just administered something for his comfort, and while his mind seemed wandering, he spoke out as if to his successor, saying, "Sir, I wish you to understand the principles of the government. I wish them carried out. I ask nothing more." These were his last words. The members of his family who were in Washington, the members of his cabinet, Colonels Chambers and Todd, who were his aides in the battle of the Thames (which see), and a number of relatives and friends were near his bedside when he expired. His funeral took place from the presidential mansion on April 7, attended by

an immense multitude of people. The body was interred in the Congressional burying-ground, and was afterwards conveyed to North Bend, Ohio, and placed in the family vault.

**Death of President Taylor.** While the hot debates in Congress were going on concerning the slavery question, the country was called to mourn the death of the President. He was seized by a malady similar in its effects to cholera, which assumed the form of bilious fever, and terminated his life (July 9, 1850) in five days. He died at the presidential mansion, in the sixty-sixth year of his age. He was attended in his last moments by his wife; his daughter (Mrs. Colonel Bliss) and her husband; his son, Colonel Taylor, and family; his son-in-law, Jefferson Davis, and family; and by Vice-President Fillmore, other officers of the government, members of the diplomatic corps, etc. His last audible words were: "I am about to die. I expect the summons soon. I have endeavored to discharge all my official duties faithfully. I regret nothing, but am sorry that I am about to leave my friends." The funeral occurred on Saturday, July 13, and was attended by a vast concourse of citizens and strangers. The pageant exceeded everything of the kind, in order and magnificence, that had ever taken place at the national capital.

**Decatur, STEPHEN,** was born at Sinepuxent, Md., Jan. 5, 1779; died near Washington, D. C., March 22, 1820. He entered the United States Navy as midshipman April 30, 1798, and rose to captain in 1804. His first notable exploit was

STEPHEN DECATUR.

the destruction of the *Philadelphia* in the harbor of Tripoli (see *Philadelphia*), for which Congress gave him thanks, a sword, and promotion. He commanded a division of gunboats in the attack on Tripoli, Aug. 3, 1804. In command of the frigate *United States*, he captured the frigate *Macedonian*, Oct. 25, 1812, for which Congress gave him a gold medal. In January, 1815, after a running fight, the *President*, his flag-ship, was captured by a British squadron; and a few months later he was sent to the Mediterranean, and compelled the government of Algiers to relinquish its barbarous conduct towards other powers, and to pay for American property de-

stroyed. (See *Algiers*.) He was appointed a navy commissioner in November, 1815, and made his residence in the fine mansion of Kalorama, about a mile from Georgetown, built by Joel Barlow. Decatur had opposed the reinstatement of Barron to his former position in the navy, and a duel was the consequence. (See *Barron*.) They fought at the famous dueling ground near Bladensburg, when Decatur was mortally wounded, and was taken to Washington. General Solomon Van Rensselaer wrote to his wife from that city, on March 20, 1820, as follows: "I have only time, after writing to several, to say that an affair of honor took place this morning between Commodores Decatur and Barron, in which both fell at the first fire. The ball entered Decatur's body two inches above the hip and lodged against the opposite side. I just came from his house. He yet lives, but will never see another sun. Barron's wound is severe, but not dangerous. The ball struck the upper part of his hip and turned to the rear. He is ruined in public estimation. The excitement is very great." On the following day Van Rensselaer wrote of his death, and said, "His poor wife (they have no children) is dis-

KALORAMA.

was present when he died. Mrs. Decatur survived her husband about forty years, dying at Georgetown, in 1860. Decatur's remains were taken from the house in Washington, at four o'clock in the afternoon, and borne to Kalorama by the following officers: Commodores Tingey, Macdonough, Rodgers, and Porter, Captains Cassin, Ballard, and Chauncey, Generals Brown and Jesup, and Lieutenant McPherson. The funeral was attended by nearly all the public functionaries in Washington, American and foreign, and a great number of citizens. While the procession was moving minute-guns were fired at the navy-yard. His remains were deposited in Joel Barlow's vault at Kalorama, where they remained until 1846, when they were taken to Philadelphia and reinterred, with appropriate ceremonies, in St. Peter's Burying-ground. Over them a beautiful monument, delineated in the engraving, was erected.

DECATUR'S MONUMENT.

**Declaration of Colonial Rights.** In the First Continental Congress (1774) a committee of two from each colony framed and reported, in the form of a series of ten resolves, a declaration of the rights of the colonies: 1. Their natural rights; 2. That from their ancestry they were entitled to all the rights, liberties, and immunities of free and natural-born subjects of England; 3. That by the emigration to America by their ancestors they never lost any of those rights, and that their descendants were entitled to the exercise of those rights; 4. That the foundation of all free governments is in the right of the people to participate in their legislative council; and as the American colonists could not exercise such right in the British Parliament, they were entitled to a free and exclusive power of legislation in their several provincial legislatures, where the right of representation could alone be preserved. (They conceded the right of Parliament to regulate external commerce, but denied its right to tax them in any way, without their consent, for raising an internal or external revenue.) 5. That they

tressed beyond expression. She would suffer no one to be in her room, and, strange to say, she did not see him until after his death." General Van Rensselaer was misinformed, for she
