were entitled to the common law of England, and more especially the great privilege of being tried by their peers of the vicinage according to the course of law; 6. That they were entitled to the benefit of English statutes at the time of the emigration of their ancestors; 7. That they were entitled to all the immunities and privileges conferred upon them by royal charters or secured to them by provincial laws; 8. That they had a right peaceably to assemble, state their grievances, and petition the king without interference of ministers; 9. That the keeping of a standing army in any colony, without the consent of the Legislature, was unlawful; 10. That the exercise of legislative power in several colonies by a council appointed during pleasure by the crown was unconstitutional, dangerous, and destructive to the freedom of American legislation. The report of the committee designated the various acts of Parliament which were infringements and violations of the rights of the colonists, and that the repeal of them was essentially necessary in order to restore harmony between Great Britain and the American colonies. The acts enumerated were eleven in number—namely, Sugar Act, Stamp Act, two quartering acts, Tea Act, Act suspending the New York Legislature, two acts for the trial in Great Britain of offences committed in America, Boston Port Bill, the Act for Regulating [subverting] the Government of Massachusetts, and the Quebec Act. (See *Quebec Act*.)

**Declaration of Independence.** It was very important to have Lee's resolution for independence, offered June 7, 1776, prefaced by a preamble that should clearly declare the causes which impelled the representatives of the people to adopt it. To avoid loss of time, a committee was then appointed to prepare such declaration. The committee was composed of Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, and Robert R. Livingston. Mr. Lee having been called home before the appointment of the committee, Mr. Jefferson was put in his place. He was requested by the committee, after discussing the topics, to make a draft of a declaration of independence. It was discussed in committee, amended very slightly, and finally reported. Debates upon it were long and animated. There was some opposition to voting for independence at all, and it was considerably amended. It was evident from the beginning that a majority of the colonies would vote for independence (the vote in Congress was by colonies), but it was important that the vote should be unanimous. The declaration was warmly debated on the day (July 2) when the resolution was passed, and also on the 3d. Meanwhile news came of the arrival of a large British armament, under the brothers Howe, at Sandy Hook. Immediate and united action was essential. McKean, one of the two representatives of Delaware present, burning with a desire to have the vote of his colony recorded in the affirmative, sent an express after the third delegate, Cæsar Rodney. He was eighty miles from Philadelphia. Ten minutes after receiving McKean's message Rodney was in the sad-

dle, and, riding all night, he reached the floor of Congress (July 4) just in time to secure the vote of Delaware in favor of independence. All three of the delegates from Delaware voted for the declaration. The vote of Pennsylvania was also secured, a majority of its seven delegates being in favor of the measure; and on the 4th of July, 1776, the Declaration of Independence was adopted by the unanimous vote of the thirteen colonies. (See *New York on Independence*.) In that document, after reciting the causes and the reasons for making it, in a series of definite charges against King George III., the Congress said, "We, therefore, the representatives of the United States in general Congress assembled, appealing to the Supreme Judge of the world for the rectitude of our intentions, do, in the name and by the authority of the good people of these colonies, solemnly publish and declare that the united colonies are, and of right ought to be, free and independent states; that they are absolved from all allegiance to the British crown; and that all political connection between them and the State of Great Britain is, and ought to be, totally dissolved; and that, as free and independent states, they have full power to levy war, conclude peace, contract alliances, establish commerce, and do all other acts and things which independent states may of right do. And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor." This declaration was signed on the day of its adoption by every member present who voted for it, to show that a majority of the colonies approved the measure. These signatures were attached to a copy on paper. It was engrossed on parchment and again signed on the 2d of August. Two others afterwards signed it— one in September, and the other later in autumn. Immediately after it was adopted it was printed and sent throughout the colonies, with only the names of John Hancock, President of Congress, and Charles Thomson, the Secretary, attached to it. In January, 1777, it was printed on a "broadside," with the names of all the signers, and sent to the several assemblies and to the several commanding officers of the Continental troops. (See fac-simile on following page.)

**Declaration of Independence, THE, IN FRANCE.** Vergennes, the French minister for foreign affairs, was not a man of high-toned morality, but was a keen diplomat, and never scrupulous in regard to measures that would favorably affect the interests of France. He was eager to promote and prolong the quarrel of Great Britain with her colonies and push it to a separation, for it would weaken the power of the "natural enemy of France." He favored secret aid to the struggling colonists (see *Beaumarçais*), and when the Declaration of Independence reached Versailles (August, 1776) he read to the king, in cabinet council, considerations on the part which France should then take towards England. He showed the advantages of war with that nation. "The war will

form," he said, "between France and North America a connection which will not grow up and vanish with the need of the moment. No interest can divide the two nations. Commerce will form between them a very durable, if not

young king, whose decision in the matter was invoked, too weak to lead in affairs of such magnitude, hating republicanism and fearing revolution, resolved that peace with England should not be broken during his reign. That

Nor have we been wanting in attentions to our British brethren: we have

an eternal chain; vivifying industry, it will bring into our harbors the commodities which America formerly poured into those of England, with a double benefit, for the augmentation of our national labor lessens that of a rival." The

broken peace was only delayed less than two years, not prevented.

Declaration of Rebellion in the Colonies. In an address to the throne (Feb. 7, 1775), proposed by the ministry, they declared that a re-

bellion existed in Massachusetts, countenanced and fomented by unlawful combinations in other colonies, and recommended energetic measures for suppressing it. The address was adopted, after a long debate, by a large majority; and Parliament pledged its support to the king in the maintenance of the just authority of the crown and nation.

**Declaration of Rights by Virginia.** George Mason drafted for Virginia a declaration of rights, and on May 27, 1776, Archibald Carey presented it to the Virginia convention. On the 12th of June it was adopted. It declared that all men are by nature equally free, and are invested with inalienable rights — namely, the enjoyment of life, liberty, property, and the pursuit of happiness and safety; that all power is vested in, and consequently derived from, the people; that government is, or ought to be, instituted for the common benefit and security of the people, nation, or community, and that when government shall fail to perform its required functions, a majority of the people have an inalienable right to reform or abolish it; that, public services not being descendible, the office of magistrate, legislator, or judge ought not to be hereditary; that the legislative and executive powers of the state should be distinct from the judiciary, and that the members of the first two should, at fixed periods, return unto the body from which they were originally taken, and the vacancies be supplied by frequent elections; that elections ought to be free; that all men having a permanent interest in and attachment to the country have the right of suffrage, and cannot be taxed or deprived of their property for public uses without their own consent or that of their representatives freely elected, nor bound by any law to which they have not, in like manner, assented; that there ought to be no arbitrary power for suspending laws, for requiring excessive bail, or for granting of general warrants; that no man ought to be deprived of liberty except by the law of the land or the judgment of his peers, holding sacred the ancient trial by jury; that the freedom of the press is one of the greatest bulwarks of liberty, and can never be restrained but by despotic governments; that a well-regulated militia, composed of the body of the people, trained to arms, is the proper, natural, and safe defence of a free state; that standing armies in times of peace should be avoided as dangerous to liberty, and in all cases the military should be under strict subordination to the civil power; that the people have a right to uniform government; that no free government can be preserved but by a firm adherence to justice, moderation, temperance, frugality, and virtue, and by frequent recurrences to fundamental principles; and that religion can be directed only by reason and conviction, not by force or violence; therefore all men are equally entitled to the free exercise of it according to the dictates of conscience. The unanimous voice of the convention approved of this declaration of rights.

**Declaration of War against Great Britain**

(1812). The British Orders in Council and French Decrees remained unrepealed. Forbearance on the part of the United States no longer seemed a virtue. British newspapers had declared that the United States could not "be kicked into a war." The indignation of the American people was at fever heat; and on June 1, 1812, President Madison submitted to Congress a confidential war message, in which he recapitulated all the causes of complaint against Great Britain, and asking the National Legislature to consider and decide whether their country should longer remain passive "under these progressive and accumulated wrongs." He also made grave charges against France. The message was referred to the Committee on Foreign Relations, which, on June 3, reported an echo to the sentiments of the message. As a part of the report, Calhoun, the chairman, presented a bill declaring war against Great Britain. A motion was made, and lost, to include France in the same declaration. While the matter was pending in Congress the people throughout the country were fearfully excited by contending emotions. After much debate in Congress, it finally passed both houses, June 18, and became a law on receiving the signature of the President. The bill had been debated in secret session; now the seal of secrecy was removed, and on the 19th the President issued a proclamation announcing the fact, and calling upon the people of the United States to sustain the public authorities in measures for obtaining a speedy, just, and honorable peace. In the House of Representatives the members from Pennsylvania and the states south and west gave sixty-two votes for the measure to seventeen against it. In the Senate the same states gave fourteen for it to five against it. "Thus," said a late writer, "the war may be said to have been a measure of the South and West to take care of the interests of the North, much against the will of the latter." The minority in Congress soon issued an able protest against the war, which was chiefly written by Josiah Quincy, who was at the head of the opposition, not only in Congress, but throughout the country.

**Declaration of War between England and France.** On March 15, 1744, the King of France, at Versailles, declared war against England; and on the 29th King George, at St. James's Palace, declared war against France. Before these declarations were made known in Boston the governor of Cape Breton sent about nine hundred men under Duvier, who surprised and took Canso, burned the place, and sent the prisoners (eighty in number) to Boston. Annapolis (Port Royal) was kept in alarm for a month by the French and Indians, and two hundred men were sent from Boston to reinforce the English garrison there. Massachusetts took vigorous measures for defence against the French and Indians everywhere. Full five hundred men were impressed, of which three hundred were for the eastern frontier, and two hundred for the western. The garrisons in the East were reinforced. Fortunately, twenty cannons (42-pounders) and two 13-inch mortars had

just been sent to Castle William, in Boston harbor, a gift from the king, with all stores excepting gunpowder. The Legislature also ordered a chain of forts to be built between the Connecticut River and the New York boundary-line.

**Declaratory Act, THE.** Pitt concluded his speech in the Commons against the Stamp Act by a proposition for its absolute and immediate repeal, at the same time recommending an act, to accompany the repeal, declaring, in the most unqualified terms, the sovereign authority of Great Britain over her colonies. This was intended as a salve for the national honor, necessary, as Pitt knew, to secure the repeal of the act. But Lord Camden, who was the principal supporter of the repeal bill in the Upper House, was opposed to the declaratory act, and vehemently declared that "taxation and representation are inseparable." The declaratory act became a law, but it was distasteful to thinking Americans, for it involved the kernel of royal prerogative, which the colonists rejected. But it was overlooked. Pitt had the honor of the repeal. The London merchants lauded him as a benefactor, and there was a burst of gratitude towards him in America. New York voted a statue to Pitt and the king; Virginia voted a statue to the monarch; Maryland passed a similar vote, and ordered a portrait of Lord Camden; and the authorities of Boston ordered full-length portraits of Barré and Conway, friends of the Americans, for Faneuil Hall.

**Decorum, FIRST BREACH OF, IN CONGRESS.** Matthew Lyon was a rough, energetic member of Congress from Vermont from 1797 to 1801. A native of Ireland, he possessed much of the excitability of his people. Roger Griswold was also a member of Congress from Connecticut at the same time. Lyon was a democrat, Griswold a federalist. In his maiden speech Lyon ridiculed the formality exercised towards the President in waiting upon him, and challenged the ill-will of the Federalists and the dislike of his own partisans, for he assumed to be a leader of the democracy. During the balloting in the house (Jan. 30, 1798), in the case of the impeachment of Senator Blount, Lyon began a conversation with the speaker in a loud tone, as if he desired to attract the attention of the other members, in which he made disparaging and insulting remarks about the Connecticut members, saying the people of that state were misrepresented by their members of Congress. He said he knew the people well, for he had had occasion to fight them when they came to visit their relations. "Did you fight them with your wooden sword?" asked Griswold, in jocular allusion to the dismissal of Lyon from a company of Green Mountain Boys (which see) in 1775 for cowardice. This taunt was repeated in another form when Lyon declared that if he could only go to Connecticut and manage a newspaper there he would enlighten the people. "You couldn't change the opinion of the meanest hostler in the state," said Griswold, good-naturedly. Lyon declared he could, and that he

had serious thoughts of moving into the state and fighting them on their own ground. Griswold laid his hand on Lyon's arm, and said, smiling, "If you go, Mr. Lyon, I suppose you will wear your wooden sword?" At this Lyon took fire, and, turning suddenly round, spat in Griswold's face. There was some commotion for a moment, and a motion was made for Lyon's expulsion from the house. Lyon's party friends rallied, and defeated the motion for expulsion. Soon afterwards Griswold attacked Lyon with a cane as he sat in his seat in the House, and seriously beat him over the head. Lyon rushed to the fireplace, and, seizing a pair of tongs, approached Griswold, who struck him a violent blow in the face, threw him down, and beat him on the floor. Griswold dragged him by the legs, when a call to order from the speaker stopped the disgraceful affray. A motion was made for the expulsion of both Lyon and Griswold, but it was lost; so also was a motion for a vote of censure. This was the first of those undignified personal encounters on the floor of Congress which have occasionally disgraced that body. A caricature representing the fight with cane and tongs was published soon after the occurrence.

Deerfield, on the west bank of the Connecticut River, Franklin County, Mass., was twice the victim of a foray by French and Indians. During King Philip's War a terrible slaughter occurred a mile from the town, Sept. 18 (O. S.), 1675. The Indians had burned Deerfield and murdered some of the inhabitants. The survivors fled, leaving about three thousand bushels of wheat in stacks in the field. Captain Thomas Lothrop, commanding part of a force at Hadley, was sent with eighty men to secure this grain. They were young soldiers, the "flower of Essex County." As they approached Deerfield they fell into an Indian ambush, and the captain and seventy-six of his men were slain. They sold their lives dearly, for ninety-six of their assailants perished in the fight. The stream near which the scene occurred has been called Bloody Brook to this day. A rude monument was erected on the spot forty years afterwards, and in 1838 another—an obelisk of white marble—was put up there. Late in February, 1704, a party of French and Indians, under Major Hertel de Rouville, who had travelled on snowshoes from Canada, approached Deerfield. The chief object of the expedition was to procure a little bell hung over the meeting-house in that village. It had been bought in France for the church in the Indian village of Caughnawaga, ten miles above Montreal. The vessel that bore it to America was captured by a New England privateer and taken into Boston harbor. The bell was sold to the Deerfield congregation. Father Nicolas, the priest at Caughnawaga, persuaded the Indians to accompany him, under De Rouville, to get the bell. When the invaders approached Deerfield, the snow lay four feet deep in that region, and was covered by a hard crust that bore the men. Upon drifts that lay by the palisades they were able to crawl over these defences in the gloom of night, while the inhabitants were slumbering. The first intima-

FIRST FIGHT IN CONGRESS.

tion the villagers had of danger was the bursting in of the doors before the dawn (March 1, 1704), and the terrible sound of the war-whoop. The people were dragged from their beds and murdered, without regard to age or sex, or carried into captivity. The village was set on fire, and every building, excepting the chapel and one dwelling-house, was laid in ashes. Forty-seven of the inhabitants were killed, and one hundred and twenty were captives on their way through the wilderness towards Canada an hour after sunrise. Under the direction of Father Nicolas, the bell was carried away, and finally found its destined place in the belfry of the church at Caughnawaga, where it still hangs. Among the victims of this foray were Rev. John Williams, pastor of the church at Deerfield, and his family, who were carried into captivity, excepting two children, who were murdered. (See *Williams, John.*)

**Defection in Pennsylvania.** The gloomy outlook after the fall of Fort Mifflin (which see) and the flight of Washington and his melting army across New Jersey in 1776 caused many persons of influence in Pennsylvania, as well as in New Jersey, to waver and fall away from the patriot cause. The most conspicuous of these in Pennsylvania were Joseph Galloway, who had been a member of the first Continental Congress, and Andrew Allen, also a member of that Congress, and two of his brothers. The brothers Howe having issued a new proclama-

tion of pardon and amnesty to all who should within sixty days promise not to take up arms against the king, these men availed themselves of it, not doubting their speedy restoration to their former fortunes and political importance. They went over to Howe; so did Samuel Tucker, a leader in the movements against British oppression in New Jersey, and a host of Jerseymen, who signed a pledge of fidelity to the British crown. Even John Dickinson, whose fidelity as a patriot may not be questioned, was so thoroughly convinced of the folly of the Declaration of Independence and the probability of a return to the British fold that he discredited the Continental bills of credit, and refused to accept an appointment from Delaware as a delegate in Congress. The State of Maryland also showed a willingness at this juncture to renounce the Declaration of Independence for the sake of peace. Amidst this falling away of civilians and the rapid melting of his army, Washington's faith and courage never faltered. From Newark, when he was flying with his shattered and rapidly diminishing forces towards the Delaware River before pursuing Cornwallis, he applied to the patriotic and energetic William Livingston, governor of New Jersey, for aid. To expressions of sympathy from the governor, he replied (Nov. 30, 1776), "I will not despair."

**Defence, GENERAL PREPARATIONS FOR.** On May 26, 1775, the Continental Congress unanimously determined that, as hostilities had actu-

ally commenced in Massachusetts, and large reinforcements were expected for the British troops in Boston, the several provinces should be immediately put in a state of defence. The necessary committees were speedily appointed to prepare reports. One of them was to designate the posts to be occupied in New York; another to recommend methods for raising ammunition and military stores; a third to estimate the amount of money necessary to be raised for purposes of defence; and a fourth to prepare rules and regulations for the government of the army. Washington's good judgment had been so conspicuous in the past that he was named chairman of all these committees.

**Defences of the Delaware.** When Howe entered Philadelphia (September, 1777) the Americans still held control of the Delaware River below that city. On Mud Island (consisting of mud and sand), near the confluence of the Schuylkill and Delaware, was built Fort Mifflin. On the New Jersey shore, opposite, at Red Bank, was Fort Mercer, a strong redoubt, well furnished with heavy artillery. At Billingsport, on the same shore, three miles lower down, were extensive but unfinished works designed to guard some obstructions in the river there. Other formidable obstructions were placed in the river below forts Mifflin and Mercer, in the form of *chevaux-de-frise*—sunken crates of stones, with heavy spears of iron-pointed timber, to receive and pierce the bows of vessels. Besides these, there were floating batteries on the river. (See *Fort Mercer* and *Fort Mifflin*.)

**Defences of Washington.** Immediately after the battle at Bull's Run (which see) energetic measures were taken to place defences around the city of Washington that should make it absolutely secure from attack. General George B. McClellan had been called to the chief command of the forces at and near Washington. With the assistance of Majors Barry and Barnard he projected a series of fortifications at prominent elevated points, and the two officers named were detailed to construct them. Not an eminence near the capital was long without a fortification upon it. So vigorously was the enterprise prosecuted that in the course of a few months not less than fifty-two of these military works were completed.\* At no time afterwards during the war did the Confederates ever seriously attempt to assail them. At no time was the capital in danger from external foes. (See map on opposite page.)

**Definitive Treaty of Peace.** (See *Treaty of Peace, 1783*.)

**De Gourgues HANGS SPANIARDS IN FLORIDA.** (See *Huguenots in Florida*.)

**De Grasse, COUNT, DEFEATED.** On April 12, 1782, a fierce naval engagement occurred in the West Indies between Admiral the Count de Grasse and Admiral Sir George Rodney. The

count's flag-ship was the *Ville de Paris*, the same as when he assisted in the capture of Cornwallis at Yorktown. She was a magnificent vessel, which the city of Paris had presented to the

COUNT DE GRASSE.

king (Louis XV.). The count fought his antagonist with such desperation that when he was compelled to strike his colors only two men besides himself were left standing on the upper deck. By this defeat and capture there fell into the hands of the English thirty-six chests of money and the whole train of artillery intended for an attack on Jamaica. The French lost in the engagement, in killed and wounded, about three thousand men; the British lost eleven hundred. For more than a century the French had not, in any naval engagement, been so completely beaten. The fleet was nearly ruined. (See *Grasse, Count de*.)

**De Haas, JOHN PHILIP,** was born in Holland about 1735; died in Philadelphia about 1794. He was descended from an ancient family in northern France; came to America in 1750; was an ensign in the French and Indian War; participated in a sharp conflict with Indians near Pittsburgh; and was colonel of the First Pennsylvania regiment in 1776. He served in the American army in Canada, and afterwards at Ticonderoga. He led his regiment from Lake Champlain to New York, and participated in the battle on Long Island in August, 1776. In February, 1777, he was promoted to brigadier-general. General De Haas was a good disciplinarian, and served in various capacities during the entire war with credit to himself and benefit to his adopted country. The latter years of his life were passed in Philadelphia.

**De Haven, EDWIN J.,** an arctic explorer, was born in Philadelphia in 1819; died there May 9, 1865. He entered the navy as midshipman, rose to lieutenant in 1841, and resigned in 1857. He was with Wilkes in his great exploring expedition in 1838-42, and commanded the first exploring expedition fitted out at New York to search for Sir John Franklin in the Arctic seas. The expedition consisted of the *Advance*, one hundred and forty tons, and the *Rescue*, ninety tons. Dr. Kane, who accompanied the expedition, published a full account of it.

\* According to general orders issued by McClellan on Sept. 30, 1861, in which the names and locations of these forts were designated, thirty-two of them were then completed. At the beginning of December forty-eight were finished.

loyal. Its Legislature convened at Dover, the capital of the state, on June 3, 1861, when the governor, in his message, charged the impending troubles upon the Abolitionists of the North, who, from "pulpits, rostrums, and schools, by press and people," had waged a "persistent war upon more than \$2,000,000,000 of property." On the following day Henry Dickinson, a commissioner from Mississippi, addressed the Legislature, and urged the right and duty of secession from the free-labor states. The House, by unanimous vote (concurrent in by a majority of the Senate), adopted a resolution that they deemed it proper, and due to themselves and the people of Delaware, to express their unqualified disapproval of the remedy for existing evils proposed by the commissioner from Mississippi. This ended his mission. Delaware maintained this position during the war that ensued; and it is a noteworthy fact that it was the only slave-labor state whose soil was not moistened with the blood of the slain in battle.

Delaware, THE COLONY AND STATE OF, takes its name from Lord De la Warr (Delaware), who entered the bay of that name in 1610, when he was governor of Virginia. It had been discovered by Hudson in 1609. In 1629 Samuel Godyn,

STATE SEAL OF DELAWARE.

a director of the Dutch West India Company, bought of the Indians a tract of land near the mouth of the Delaware; and the next year De Vries, with twenty colonists from Holland, settled near the site of Lewes. (See *Vries, De.*) The colony was destroyed

by the natives three years afterwards, and the red men had sole possession of that district until 1638, when a colony of Swedes and Finns landed on Cape Henlopen, and purchased the lands along the bay and river as far north as the falls at Trenton. (See *New Sweden.*) They built Fort Christina near the site of Wilmington. Their settlements were mostly planted within the present limits of Pennsylvania. The Swedes were conquered by the Dutch of New Netherland in 1655, and from that time until 1664, when New Netherland was conquered by the English, the territory was claimed by the Dutch, and controlled by them. Then Lord Baltimore, proprietor of Maryland, claimed all the territory on the west side of Delaware Bay, and even to latitude 40°; and settlers from Maryland attempted to drive away the settlers in the present State of Delaware. When William Penn obtained a grant of Pennsylvania, he was very desirous of owning the land on Delaware Bay to the sea, and procured from the Duke of York a release of all his title and claim to New Castle and twelve miles around it, and to the land between that tract and the sea; and in the presence of all the settlers he produced his deeds (October, 1682), and formally accepted the sur-

render of the territory. Lord Baltimore pressed his claim, but in 1685 the Lords of Trade and Plantations made a decision in Penn's favor. A compromise afterwards adjusted all conflicting claims. The tracts which now constitute the State of Delaware, Penn called "The Territories," or "Three Lower Counties on the Delaware." They were governed as a part of Pennsylvania for about twenty years afterwards, and each county had six delegates in the Legislature. Then Penn allowed them a separate Legislature; but the colony was under the governor of Pennsylvania until 1776, when the inhabitants declared it an independent state. A constitution was adopted by a convention of the people of the three counties—New Castle, Kent, and Sussex—Sept. 20, 1776. A state government was organized, and John McKinley was elected its first governor. In 1792 a second constitution was framed and adopted. Delaware was the first state that adopted the National Constitution. This was done by a convention on Dec. 7, 1787, or less than three months after it was signed by the members of the convention who framed it. Although Delaware was a slave-labor state, it refused to secede at the outbreak of the Civil War; and, though it assumed a sort of neutrality, that little state furnished several regiments of volunteers for the National army. In all the wars Delaware patriotically furnished its share of men and money for the public defence. Population in 1880, 146,608.

Delawares, an important family of the Algonquin nation, who are also called Lemmi-Lemnapes, or "men." When the Europeans found them, they were dwelling in detached bands, under separate sachems, on the Delaware River. The Dutch traded with them as early as 1613, and held friendly relations with them; but in 1632 the Dutch settlement of Swanendael was destroyed by them. The Swedes found them peaceful when they settled on the Delaware. This family claim to have come from the west with the Minquas, to whom they became vassals. They also claimed to be the source of all the Algonquins, and were styled "grand fathers." The Delawares comprised three powerful families (viz., Turtle, Turkey, and Wolf), and were known as Minseys, or Munsees, and Delawares proper. The former occupied the northern part of New Jersey and a portion of Pennsylvania, and the latter inhabited lower New Jersey, the banks of the Delaware below Trenton, and the whole valley of the Schuylkill. After the conquest of New Netherland, the English kept up trade with the Delawares, and William Penn and his followers bought large tracts of land from them. They were parties on the Indian side to the famous treaty with Penn. At that time the Indians within the limits of his domain were estimated at six thousand in number. The Five Nations conquered the Delawares, and called them "women" in contempt; and when, at the middle of the last century, the latter, dissatisfied with the interpretation of a treaty, refused to leave their land, the Five Nations haughtily ordered them to go. Commingling with warlike tribes, the Delawares became

warlike themselves, and developed great energy on the war-path. They fought the Cherokees, and in 1773 some of them went over the mountains and settled in Ohio. So early as 1741 the Moravians had begun missionary work among them on the Lehigh, near Bethlehem and Nazareth, and a little church was soon filled with Indian converts. At the beginning of the French and Indian War the Delawares were opposed to the English, excepting a portion who were led by the Moravians; but in treaties held at Easton, in Pennsylvania, at different times, from 1756 until 1761, they made peace with the English, and redeemed themselves from their vassalage to the Six Nations. They settled on the Susquehanna, the Christian Indians apart. Then another emigration over the mountains occurred, and they planted a settlement at Muskingum, Ohio. These joined Pontiac, and besieged Fort Pitt (Pittsburgh) and other frontier posts, but were defeated in August, 1763, by Colonel Bouquet, and their great chief, Teedyuscung, was killed. Their towns were ravaged, and the Moravian converts, who were innocent, fled for refuge to Philadelphia. These returned to the Susquehanna in 1764, and the Ohio portion made peace at Muskingum the same year, and at Fort Pitt in 1765. The remainder in Pennsylvania emigrated to Ohio, and in 1786 not a Delaware was left east of the Alleghany Mountains. Moravian missionaries went with their flocks, and the Christian Indians increased. The pagans kept upon the war-path until they were severely smitten in a drawn battle at Point Pleasant, in 1774. The Delawares joined the English when the Revolutionary War broke out, but made peace with the Americans in 1778, when a massacre of ninety of the Christian Indians in Ohio by the Americans aroused the fury of the tribe. Being almost powerless, they fled to the Huron River and Canada. Under the provisions of a treaty in 1787, a small band of Delawares returned to the Muskingum, the remainder being hostile. These fought Wayne, and were parties to the treaty at Greenville in 1795. (See *Greenville*.) The scattered tribes in Ohio refused to join Tecumtha in the War of 1812, and in 1818 they ceded all their lands to the United States, and settled on the White River, in Illinois, to the number of eighteen hundred, leaving a small remnant behind. They finally settled in Kansas, where missions were established among them, and they rapidly increased in the arts of civilized life. In the late Civil War, the Delawares furnished one hundred and seventy soldiers for the National army. Having acquired land from the Cherokees in the Indian Territory, they are now there, about one thousand strong, and still keep up their totemic distinction of Turtle, Turkey, and Wolf families.

**Democracy, EARLY, IN NEW YORK.** We have observed (see *Keith* and *Stuyvesant*) how the first germ of democracy or republicanism appeared in New Amsterdam, and was checked in its visible growth by the heel of power. It grew, nevertheless. It was stimulated by the kind acts of Governor Dongan (see *Dongan*); and when the English revolution of 1688 had developed

the strength of the people's will, and their just aspirations were formulated in the Bill of Rights, it sprang up into a vigorous fruit-bearing plant. Its power was manifested in the choice and administration of Leisler as ruler until a royal governor was appointed (see *Leisler*), and his death caused the line of separation between democracy and aristocracy—republicanism and monarchy—"Leislerians" and "Anti-Leislerians"—to be distinctly drawn. During the exciting period of Leisler's rule, the aristocratic or royalist party were led by Nicholas Bayard, a wealthy and influential citizen, who was warmly seconded by Robert Livingston. These two men were chiefly instrumental in bringing Leisler to the scaffold and treating his family and friends in a shameful manner. This conduct was continued until the Earl of Bellomont succeeded Fletcher as governor (see *Bellomont*), when the "Anti-Leislerians" were reduced to a minority, and kept quiet for a while. After the death of Bellomont (March 5, 1701), John Nufan, his lieutenant, ruled for a while. Nufan favored the democratic party. So soon as it was known that Lord Cornbury, a thorough aristocrat and royalist, had been appointed governor, Bayard and his party heaped abuse not only upon the dead Bellomont, but upon Nufan. The latter saw that Bayard was on the verge of a pit which he had digged himself, and he pushed him into it. Bayard had procured an act, in 1691, aimed at Leisler and his supporters, providing that any person who should in any manner endeavor to disturb the government of the colony should be deemed "rebels and traitors unto their majesties," and should incur the pains and penalties of the laws of England for such offence. Bayard was arrested on a charge of treason, tried, convicted, and received the horrid sentence then imposed by the English law upon traitors—to be hanged, quartered, etc. Bayard applied for a reprieve until his majesty's pleasure should be known. It was granted, and in the meantime Cornbury arrived, when all was reversed. Bayard was released and reinstated. The democrats were placed under the lash of the aristocrats, which Bayard and Livingston used without mercy by the hand of the wretched ruler to whom they offered libations of flattery. The chief justice who tried Bayard, and the advocate who opposed him, were compelled to fly to England. From that time onward there was a continuous conflict by the democracy of New York with the aristocracy as represented by the royal governors and their official parasites. It fought bravely, and won many victories, the greatest of which was in a fierce battle for the freedom of the press, in the case of John Peter Zenger. (See *Zenger's Trial*.)

**Democracy in New Netherland.** Governor Kieft (which see) had resolved to chasten the Raritan Indians for a grave offence. He called upon the people to shoulder their muskets for a fight. They knew his avarice and greed, and withal his cowardice, and boldly charged these things upon him. "It is all well for you," they said, "who have not slept out of the fort a single night since you came, to endanger our lives

and our homes in undefended places," and they refused to obey. This attitude of the people transformed the governor. He invited (Aug. 23, 1641) the heads of families of New Amsterdam to meet him in consultation on public affairs. They assembled at the fort, and promptly chose twelve citizens to represent them. So appeared the first popular assembly, and so was chosen the first representative congress in New Netherland. It was a spontaneous outgrowth of the innate spirit of democracy that animated the people. The twelve were the vigorous seeds of that representative democracy which bore fruit in all the colonies more than a century later. Again, when the colony was threatened with destruction by the Indians, Kieft summoned the people into council (September, 1643), who chose eight men as the popular representatives, to act with the governor in public affairs. Again, when Governor Stuyvesant (which see) found the finances of the colony of New Netherland in such a wretched condition that taxation was necessary, he dared not tax the people without their consent, for fear of offending the States-General, so he called a convention of citizens, and directed them to choose eighteen of their best men, of whom he might select nine as representatives of the tax-payers, and who should form a co-ordinate branch of the local government. He tried to hedge them around with restrictions, but the nine proved to be more potent in promoting popular liberty than had Kieft's twelve. They nourished the prolific seed of democracy, which burst into vigorous life in the time of Jacob Leisler (which see). Stuyvesant tried to stifle its growth. The more it was opposed, the more vigorous it grew. Late in the autumn of 1653 a convention of nineteen delegates, who represented eight villages or communities, assembled at the town-hall in New Amsterdam, ostensibly to take measures to secure themselves from the depredations of the barbarians around them and sea-rovers. The governor tried in vain to control their action; they paid very little attention to his wishes or his commands. He stormed and threatened, but prudently yielded to the demands of the people that he should issue a call for another convention, and give legal sanction for the election of delegates thereto. These met in New Amsterdam on Dec. 10, 1653. Of the eight districts represented, four were Dutch and four English. Of the nineteen delegates, ten were of Dutch and nine were of English nativity. This was the first really representative assembly in the great State of New York chosen by the people. The names of the delegates were as follows: From New Amsterdam, Van Hattem, Kregier, and Van de Grist; from Breucklen (Brooklyn), Lubbertsen, Van der Beeck, and Beekman; from Flushing, Hicks and Flake; from Newtown, Coe and Hazard; from Heenstede (Hempstead), Washburn and Somers; from Amersfort (Flatlands), Wolfertsen, Strycker, and Swartwout; from Midwout (Flatbush), Elbertsen and Spicer; and from Gravesend, Baxter and Hubbard. Baxter was then the English secretary of the colony, and led the English

delegates. The object of this convention was to form and adopt a remonstrance against the tyrannous rule of the governor. It was drawn by Baxter, signed by all the delegates present, and sent to the governor, with a demand that he should give a "categorical answer." In it the grievances of the people were stated under six heads. Stuyvesant met this severe document with his usual pluck. He denied the right of some of the delegates to seats in the convention. He denounced the whole thing as the wicked work of Englishmen, and doubted whether George Baxter knew what he was about. He wanted to know whether there was no one among the Dutch in New Netherland "sagacious and expert enough to draw up a remonstrance to the Director-general and his council," and severely reprimanded the new city government of New Amsterdam (New York) for "seizing this dangerous opportunity for conspiring with the English [with whom Holland was then at war], who were ever hatching mischief, but never performing their promises, and who might tomorrow ally themselves with the North"—meaning Sweden and Denmark. The convention was not to be intimidated by bluster. They informed Stuyvesant, by the mouth of Beekman, that unless he answered their complaints, they would appeal to the States-General. At this the governor took fire, and, seizing his cane, ordered Beekman to leave his presence. The plucky ambassador coolly folded his arms, and silently defied the magistrate. When Stuyvesant's anger had abated, he asked Beekman's pardon for his rudeness. He was not so complaisant with the convention. He ordered them to disperse on pain of his "high displeasure." The convention executed their threat by sending an advocate to Holland to lay their grievances before the States-General.

**Democratic Convention at Charleston (1860).** On April 23, 1860, about six hundred chosen representatives of the Democratic party assembled in convention in the hall of the South Carolina Institute in Charleston, and chose Caleb Cushing, of Massachusetts, their chairman. From the first hour of the session knowing ones discovered omens of an impending tempest, which might topple from its foundations the political organization, founded in 1828, known as the Democratic party. Mr. Cushing was a statesman of great experience, and then sixty years of age. He was a scholar of wide and varied culture, and a sagacious observer of men. Having joined the Democratic party at the time of the defection of President Tyler, he became conspicuous among the advocates of the war with Mexico and other measures for the extension of slave territory and the perpetuation of the system, and was regarded with great favor by the Southern politicians in the convention as their fast political friend. His opening address to the convention pleased them. In it he declared it to be the mission of the Democratic party "to reconcile popular freedom with constituted order," and to maintain "the sacred reserved rights of the sovereign states." He charged the Republicans with "laboring to over-

throw the Constitution." He declared that the Republicans were aiming to produce "a perpetual sectional conspiracy," which would hurry the country on to civil war," and that it was "the high and noble part of the Democratic party of the Union to withstand—to strike down and conquer—these banded enemies of the Constitution." This speech was applauded by all but the extreme pro-slavery wing of the convention; who, it is said, desired rather to "strike down" the Democratic party, to obtain more important advantages for themselves. They had come instructed to demand from the convention a candidate and an avowal of principles which should promise a guarantee for the speedy recognition by the national government and the people, in a political way, of the system of slavery as a national institution. The most prominent candidate for the presidency in the convention was Stephen A. Douglas, who was committed to an opposite policy concerning slavery, and whose friends would never vote for the demands of the extreme pro-slavery men. This the latter well knew. They also

cratic party to recognize slavery as a sacred, permanent, and national institution. The minority, composed wholly of delegates from the free-labor states, resolved that the limit of concession to the demands of the Southern politicians was reached, and they would yield no further. They represented a majority of the presidential electors—one hundred and seventy-two against one hundred and twenty-seven. They offered to adopt a resolution expressive of their willingness to abide by any decision of the Supreme Court of the United States. To this concession Butler objected, and three reports from the committee went into the convention—a majority and minority report, and one from Mr. Butler. A warm debate ensued, and Avery, from North Carolina, declared that the doctrine of popular sovereignty—the authority of the people concerning slavery—was as dangerous as that of Congressional interference with the institution. The debate continued until the 29th, and the next morning a vote was taken. The minority report, in favor of popular sovereignty, was adopted by a decided majority,

when Walker, of Alabama, afterwards the Confederate Secretary of War, announced that the delegates from his state would secede from the convention. The movement was preconcerted. This delegation was followed by those of other slave-labor states, and the seceders assembled in St. Andrew's Hall, to prepare for an independent political organization. The disruption of the Democratic party, as represented in the convention, was now complete. When D. C. Glenn, of Mississippi, announced the secession of the delegation from his state, he said: "I tell Southern members, and for them I tell the North, that in less than sixty days you will find a united South standing side by side with us."

There was great rejoicing in Charleston that night because of this secession, for the politicians were aware that the scheme for disunion was ripe for execution. The seceders organized a "Constitutional Convention," with James A. Bayard, of Delaware, as chairman. They called the body they had left the "Rump Convention." On May 3d they adjourned, to meet in Richmond, Va., in June. (See *Seceders' Convention*.) The regular convention also adjourned, to meet in Baltimore June 18. (See *Baltimore Convention*.)

**Democratic Revolution in England.** Upon the changes in the policy of Great Britain the English-American colonies were always affected; and of each phase of the imperial government, admirers and supporters would always be found in the colonies. The revolt against Charles I. (1641) was an active protest of growing democracy against the absurd doctrine of the divine right of kings and the almost illimitable royal prerogative. The revolution, which was for a while successful, and swept monarchy from the land, was the effort of the people to lead in the progress of humanity, and to contend for that equality which the law of nature

THE SOUTH CAROLINA INSTITUTE.

knew that the rejection of Mr. Douglas by the representatives of the slaveholders would split the Democratic party, and they resolved to act, it is said, in accordance with their convictions. They held the dissevering wedge in their own hands, and they determined to use it with effect. (See *Impending Crisis*.) A committee of one delegate from each state was appointed to prepare a platform of principles for the action of the convention. Mr. Butler, of Massachusetts, proposed in that committee to adopt the doctrine of the right of the people in any state or territory to decide whether slavery should or should not exist within its borders. This was rejected by seventeen states (only two of them free-labor states) against fifteen. This was the entering of the dissevering wedge. The majority now offered to accept that doctrine, with an additional resolution declaring that, in the spirit of Judge Taney's opinion (see *Dred Scott Case*), neither Congress nor any other legislative body had a right to interfere with slavery anywhere, or to impair or destroy the right of property in slaves by any legislation. This was a demand for the Demo-

gave them. They failed to secure permanent success because they attempted too much at once. Their energy in detaching the decaying institutions of the past from the living issues of the hour was too heroic, and a little more than eleven years after they decapitated their monarch the old order of things was restored in the person of his son. In these changes society in America felt the shocks, but with far less intensity than they were felt in England.

**Democratic Societies.** In imitation of the Jacobin clubs in Paris, members of the Republican party, at about the time when Genet arrived from France, formed secret associations, which they called "Democratic societies." Their ideas and feelings were almost wholly French, and a large proportion of their membership consisted of French people. They were disloyal to the government of the United States, and sought to control the politics of the Union. They seem to have been inspired with the fanaticism which at that time controlled France. They vigorously denounced and opposed Washington's proclamation of neutrality. The societies existed in various states, and first introduced the word "Democrat" into American politics. Many of the Republican party would not adopt the word, preferring the old name, until the combined opposition became known as the Democratic-Republican party. The Democratic societies flourished for a while with great vigor. Their members were pledged to secrecy. Each society had a distinct seal of its own, which was attached to the certificate of every member, in which he was commended to the good offices of every similar society in the Union. The informed and thoughtful citizens saw scarcely any resemblance between French and American democracy. The former assumed the aspect of violence in every form, while the latter was calm, just, and peaceful. A pamphlet was published in 1796 in which the difference is delineated by

in the political societies which played a conspicuous part in national politics during the administration of President Washington ran as follows: "To all other societies established on principles of LIBERTY, EQUALITY, UNION, PATRIOTIC VIRTUE, AND PERSEVERANCE: We, the members of the Republican Society of Baltimore, certify and declare to all Republican or Democratic societies, and to all Republicans individually, that citizen — hath been admitted, and now is a member of our society, and that, from his known zeal to promote Republican principles and the rights of humanity, we have granted him this our certificate (which he

SEAL

has signed in the margin), and do recommend him to all Republicans, that they may receive him with fraternity, which we offer to all those who may come to us with similar credentials. In witness whereof, etc. Alexander McKim, President; George Sears, Secretary." The seal of the Baltimore Society, which issued the above certificate,

is composed of a figure of Liberty, with pilens, Phrygian cap, and fasces, with the name of the society.

**De Monts, SIEUR** (Pierre de Gast), a wealthy Huguenot (see *Huguenots*), who was commissioned viceroy of New France (see *Ferrazani*), with full powers to settle and rule in a region extending over six degrees of latitude, from Cape May to Quebec. The domain was named Cadié in the charter. (See *Acadia*.) Vested with the monopoly of the fur-trade in the region of the River and Gulf of St. Lawrence, they at-

THE CONTRAST.

an engraving called *The Contrast*. It was soon after that these societies began to dwindle in numbers and soon disappeared.

**Democratic Societies, CERTIFICATE OF MEMBERSHIP IN.** The certificate of membership

tempted to make a settlement on the former. Making arrangements with Champlain as chief navigator, De Monts sailed from France in March, 1604, with four ships, well manned, accompanied by his bosom friend, the Baron de Pou-

trincourt, and Pont-Grevé as his lieutenants; and finding the St. Lawrence ice-bound, on his arrival early in April, he determined to make a settlement farther to the southward. The ships also bore a goodly company of Protestant and Roman Catholic emigrants, with soldiers, artisans and convicts. There were several Jesuits in the company. Passing around Cape Breton and the peninsula of Nova Scotia into the Bay of Fundy, they anchored in a fine harbor on the northern shore of that peninsula early in May. Pontreincourt was charmed with the country, and was allowed to remain with a part of the company, while De Monts, with the remainder,

SIEUR DE MONTS.

seventy in number, went to Passamaquoddy Bay, and, on an island near the mouth of the St. Croix, built a fort, and there spent a terribly severe winter, that killed half of them. In the spring they returned to Pontreincourt's settlement, which he had named Port Royal — now Annapolis, N. S. Early the next autumn De Monts and Pontreincourt returned to France, leaving Champlain and Pont-Grevé to make further explorations. (See *Champlain*.) There was a struggle for rule and existence at Port Royal for a few years. Pontreincourt returned to France for recruits for his colony. Jesuit priests who accompanied him on his return to Acadie (Nova Scotia) claimed

the right to supreme rule by virtue of their holy office. Pontreincourt resisted their claim stoutly, saying, "It is my part to rule you on earth; it is your part to guide me to heaven." When he finally left Port Royal (1612) in charge of his son, the Jesuit priests made the same claim on the fiery young Pontreincourt, who threatened them with corporal punishment, when they withdrew to Mount Desert Island (now a summer resort) and set up a cross in token of sovereignty. They were there in 1613, when Samuel Argall, a freebouter of the seas, went, under the sanction of the governor of Virginia, to drive the French from Acadie as intruders on the soil of a powerful English company. The Jesuits at Mount Desert, it is said, thirsting for vengeance, piloted Argall to Port Royal. He plundered and burned the town, drove the inhabitants to the woods, and broke up the settlement. (See *Acadia*.) Unable to contend with the English company, De Monts abandoned Acadie and proposed to plant a colony on the St. Lawrence River, under the direction of Champlain and Pont-Grevé. But his monopoly was partially revoked in 1608. Under the auspices of a company of merchants at Dieppe and St. Malo, settlements were begun at Quebec and Montreal. (See *Champlain*.) Soon afterwards the fortune of De Monts was so much reduced that he could not pursue his scheme of colonization, and it was abandoned.

#### Denmark, and American Cruisers.

Near the close of September, 1779, an American frigate entered the port of Bergen, with two rich prizes. The British envoy at Copenhagen complained, and the Danish minister published an ordinance forbidding the sale of the prizes until they should have been condemned in an American court of admiralty. In the same ordinance he declared that as the King of Denmark had recognized neither the independence nor the flag of the United States, its vessels could not be permitted to bring their prizes into Danish harbors. The two prizes were set free.

Dennie, JOSEPH, author and journalist, was born in Boston, Aug. 30, 1768; died in Philadelphia, Jan. 7, 1812. He

graduated at Harvard in 1790, became a lawyer, but abandoned his profession for the pursuit of literature. He contributed articles to various newspapers, while yet practising law, over the signature of "Farrago." In 1795 he became connected with a Boston weekly newspaper called *The Tablet*. It survived only three months, when Dennie became the editor of the *Farmer's Weekly Museum*, at Walpole, N. H., which acquired an extensive circulation. To it he contributed a series of attractive essays under the title of *The Lay Preacher*. These gave their author a high reputation and were extensively copied into the newspapers of the

country. He went to Philadelphia in 1799, where he was confidential secretary to Timothy Pickering, then Secretary of State. In that position he remained for a few months, and after editing for a short time the *United States Gazette*, he commenced, in conjunction with Asbury Dickens, the *Portfolio*, at first a weekly, but afterwards a monthly periodical, which acquired a high reputation. In that publication he adopted the literary name of "Oliver Oldschool." The *Portfolio* became the recognized leader in periodical literature, and was enriched by the contributions of some of the foremost writers in the country. Mr. Dennie continued his connection with it until his death.

**Dennison, WILLIAM**, known as the "war-governor" of Ohio, was born in Cincinnati, Nov. 23, 1815. He was educated at the Miami University, and graduated in 1835. Admitted to the bar in 1840, he became an eminent practi-

WILLIAM DENNISON.

tioner. In 1848-50 he was a member of the Ohio Legislature; and he took an active part in financial and railroad matters. Mr. Dennison was one of the founders of the Republican party in 1856. In 1860 he was chosen governor of Ohio, which office he held two years, during which time he performed most important official service in putting troops into the field for the defence of the life of the Republic. From October, 1864, to July, 1866, Mr. Dennison was Postmaster-general, when he withdrew from the cabinet of President Johnson. Died June 15, 1882.

**De Nonville, THE EXPEDITION OF.** In 1685 the Marquis de Nonville, a colonel in the French army, brave and sagacious, was appointed governor of Canada, with instructions to "humble the pride of the Iroquois," who were the friends of the English and had rejected overtures from the French. He took post at Fort Frontenac (see *La Salle*), on the site of Kingston, Canada, and there prepared for an expedition against a portion of the Five Nations. He declared to his sovereign that the Indians sustained themselves only by the aid of the English, who were "the chief promoters of the insolence and arrogance of the Iroquois." He tried to induce them to meet him in council, to seduce them from the influence of the English, and a few went to Fron-

tenac; but when Dongan heard of the designs of the French he invited representatives of the Five Nations to a council in New York city. They came, and Dongan told them the King of England would be their "loving father," and conjured them not to listen to the persuasions of the French. Finally, in May, 1687, De Nonville was joined by eight hundred French regulars from France, and soon afterwards assembling more than two thousand French regulars, Canadians, and Indians, he proceeded, at their head, to attack the Senecas. (See *Iroquois Confederacy*.) He coasted along the southern shores of Lake Ontario to Irondequoit Bay, in Monroe County, where he landed and was joined by some French and Indians coming from the West. Thence he penetrated to Ontario County, where he was attacked by a party of Senecas in ambush, but he repulsed his assailants. The next day two old Seneca prisoners, after having been confessed by the Jesuit priests, were cooked and eaten by the savages and the French. Withdrawing to a point in Monroe County, De Nonville proceeded to take possession of the whole Seneca country (July, 1687) in the name of King Louis, with pompous ceremonies. After destroying all the stored corn (more than one million bushels), the growing crops, cabins, and a vast number of swine belonging to the natives whose country he had invaded, De Nonville returned to Irondequoit Bay and thence to Montreal. An act of gross treachery committed by him before he undertook the expedition, in seizing deputies from those nations and sending them to France, gave the death-blow to Jesuit missions among the Five Nations. Lamberville, a faithful missionary, barely escaped with his life, through the generosity of the Onondagas.

**De Peyster, ABRAHAM**, was one of the most eminent merchants and citizens of New York in the days of early English rule there. He was born in New Amsterdam (afterwards New York), July 8, 1658; died there, Aug. 10, 1728. Between 1691 and 1695 he was mayor of the city of New York; was first assistant justice and then chief-justice of New York, and was one of the king's council under Governor Hyde (afterwards Lord Cornbury), and as its president was acting-governor for a time in 1701. Mr. De Peyster was colonel of the forces in New York and treasurer of that province and New Jersey. He was a personal friend and correspondent of William Penn. Having amassed considerable wealth, he built a fine mansion, which stood, until 1856, in Pearl Street. It was used by Washington as his headquarters for a while in 1776. His father, John, was born in Huerlem, was of Huguenot descent, and was one of the earlier settlers of New Amsterdam.

**Depreciation of the Continental Paper-money.** The issue of bills of credit had been of vast benefit to the colonies at the beginning of the armed contest with Great Britain, and their value was kept up remarkably through the patriotism of the people. At the end of eighteen months from the first issue, \$20,000,000 had been emitted, besides large issues by the several col-

onies, and no depreciation had been observed. It was soon obvious, however, that depreciation could only be prevented by stopping the issue, and Congress, as a substitute, proposed to raise a loan and to establish a lottery for the same purpose. But at the beginning of 1777, owing to reverses to the American arms, depreciation began. On the 1st of January, 1777, the value of \$100 in specie was \$105 in Continental money. The scale of depreciation was as follows:

	1777.	1778.	1779.	1780.	1781.
January.....	\$105	\$325	\$742	\$2934	\$7400
February.....	107	350	888	3322	7500
March.....	109	370	1000	3756	—
April.....	112	400	1104	4000	—
May.....	115	400	1215	4600	—
June.....	120	400	1342	6400	—
July.....	125	425	1477	8900	—
August.....	150	450	1620	7000	—
September.....	175	475	1800	7100	—
October.....	275	500	2050	7200	—
November.....	300	545	2303	7300	—
December.....	310	634	2593	7400	—

The credit of Congress was so low that loans came in slowly. The rate of interest was raised from four to six per cent., with very little effect, and Congress was compelled to resume the issue of bills of credit. The result was a very rapid depreciation in their nominal value. (See *Continental Paper-money*.)

**Dermer, THOMAS**, an active friend of colonization schemes, and a man of prudence and industry, was employed by the Plymouth Company after his return from Newfoundland, in 1618, to bring about, if possible, reconciliation with the barbarians of New England, and to make further explorations. He sailed from Plymouth with two vessels (one a small open pinnace) in February, 1619, touched at Mohegan Island, and then visited the coast. Dermer was accompanied from England by Squanto (see *New England*); also by Samoset, a native of Sagadahock, whom John Mason, Governor of Newfoundland, had lately sent home, he having been one of Hunt's captives. Dermer succeeded, in a degree, and proceeded to explore the coast to Virginia. He sent home his ship from Mohegan Island, laden with fish and furs, and, leaving Squanto at Saco, sailed southward. Near Cape Cod he was captured by Indians, but ransomed himself by a gift of some hatchets. Passing Martin's (Martha's) Vineyard, he navigated Long Island Sound by the help of an Indian pilot, the first Englishman who had sailed upon these waters, and passed out to sea at Sandy Hook. Going through Hell Gate he lost an anchor in "the dangerous cataract," and the current was so swift that he did not stop at Manhattan; but on his return from Virginia (1620) he touched there and held a conference with some Dutch traders "on Hudson's River." Dermer took occasion to warn the Dutch that they were on English territory, when they replied that they found no Englishmen there, understood no such thing, and "hoped they had not offended." Dermer sent a journal of his proceedings to Gorges, and thus, no doubt, hastened the procurement of the new charter for the Plymouth Company. (See *Plymouth Company*.)

**Des Barres, JOSEPH FREDERICK WALLEY**, born

in 1722; died at Halifax, N. S., Oct. 24, 1824, aged one hundred and two years. He was educated for the army at the Royal Military College at Woolwich, and, as lieutenant, came to America in 1756, and raising three hundred recruits in Pennsylvania and Maryland, formed them into a corps of field-artillery. He distinguished himself as an engineer in the siege of Louisburg (which see), and was aide-de-camp to Wolfe when he fell at Quebec, that general dying in Des Barres's arms. He was active in the retaking of Newfoundland in 1762, and for ten years afterwards he was employed in a coast survey of Nova Scotia. He prepared charts of the North American coasts in 1775 for Earl Howe, and in 1777 he published *The Atlantic Neptune*, in two large folios. He was made governor of Cape Breton, with the military command of Prince Edward's Island, in 1784, and in 1804, being then about eighty-two years of age, he was made lieutenant-governor of Prince Edward's Island.

**Desolation of the Niagara Frontier (1813).** Early in October, 1813, General McClure, of the New York militia, was left in command of Fort George, on the Niagara River. In November the startling intelligence reached him from the westward that Lieutenant-general Drummond was approaching with a heavy force of white men and Indians. McClure's garrison was then reduced to sixty effective men, and he determined to abandon the post and cross over to Fort Niagara. The weather became extremely cold, and on Dec. 10 he attempted to blow up the fort while his troops were crossing the river. He also wantonly set on fire the village of Newark, near, and one hundred and fifty houses were speedily laid in ashes. McClure had barely escaped with his troops, leaving Fort George unharmed and tents that would shelter fifteen hundred men, when Colonel Maunig arrived with his regulars and Indians. Retaliation immediately began. The British seized Fort Niagara, and massacred a part of the garrison; and every village and hamlet along the New York side of the river between the lake and Buffalo was plundered and burned. Buffalo, also, was given to the flames; only four buildings were left. Hundreds of innocent inhabitants at Newark and on the American side suffered intensely in consequence of the cruel acts of McClure.

**De Soto, FERNANDO**, was born at Xeres, Estremadura, Spain, about the year 1500. His family was noble but impoverished. Davila, Governor of Darien (see *Nuñez*), was his kind patron, through whose generosity he received a good education, and who took him to Central America, where he engaged in exploring the coast of the Pacific Ocean hundreds of miles in search of a supposed strait connecting the two oceans. When Pizarro went to Peru, De Soto accompanied him, and was his chief lieutenant in achieving the conquest of that country. Brave and judicious, De Soto was the chief hero in the battle that resulted in the capture of Cuzco, the capital of the Incas (Peruvian

kings), and the destruction of their empire. (See *Incas.*) Soon after that event he returned to Spain with large wealth, and was received by the king (Charles V.) with great consideration. He married Isabella Bobadilla, a scion of one of the most renowned of the Castilian families, and his influence at court was thereby strengthened. Longing to rival Cortez and Pizarro in the brilliancy of his deeds, and believing Florida to be richer in the precious metals than Mexico or Peru, De Soto offered to con-

FERNANDO DE SOTO.

quer it at his own expense. Permission was readily given him by his king (Charles V.), who commissioned him governor of Cuba, from which island he would set out on his conquering expedition. Elegant in deportment, winning in all his ways, an expert horseman, rich and influential, and then thirty-seven years of age, hundreds of young men, the flower of the Spanish and Portuguese nobility, flocked to his standard, the wealthier ones dressed in suits of gorgeous armor and followed by trains of servants. With these and his beautiful young wife and other noble ladies De Soto sailed from Spain early in April, 1538, with seven large and three small vessels, the *San Christoval*, of eight hundred tons, being his flag-ship. Amply supplied and full of joy in the anticipation of entering an earthly paradise, gayety and feasting, music and dancing, prevailed on board the flag-ship during that sunny voyage, in which richly dressed ladies, with handsome pages to do their bidding, were conspicuous, especially on warm moonlit nights within the tropic of Cancer. At near the close of May the fleet entered Cuban waters. De Soto occupied a whole year preparing for the expedition, and at the middle of May, 1539, he sailed from Cuba with nine vessels, bearing a thousand followers, and cattle, horses, mules, and swine, the first of the latter seen on the American continent. He left public affairs in Cuba in the hands of his wife and the lieutenant-governor. The voyage to Florida was pleasant, and the armament landed on the shores of Tampa Bay on the 25th of May, near where Narvaez had first anchored. (See

*Narvaez.*) Instead of treating the natives kindly and winning their friendship, De Soto unwisely sent armed men to capture some of them, in order to learn something about the country he was to conquer. The savages, cruelly treated by Narvaez, and fearing the same usage by De Soto, were cautious. They were also wily, expert with the bow, revengeful, and fiercely hostile. With cavaliers clad in steel and riding one hundred and thirteen horses, with many footmen armed with arquebuses, cross-bows, swords, shields, and lances, and a single cannon, and supplied with savage bloodhounds from Cuba, and handcuffs, iron neck-collars, and chains for the captives, De Soto began his march in June, 1539. He was accompanied by mechanics, priests, inferior clergy, and monks in sacerdotal robes bearing images of the Virgin, holy relics, and sacramental bread and wine, wherewith to make Christians of the captured pagans. At the very outset the expedition met with determined opposition from the dusky inhabitants, but De Soto pressed forward towards the interior of the faucied land of gold. He wintered east of the Flint River, near Tallahassee, on the borders of Georgia. The next year he went northward to the head-waters of the Savannah River, crossed the beautiful country of the Cherokees (see *Cherokees*), and penetrated the fertile Coosa region, where the Spaniards practised the most cruel treachery towards the friendly natives. De Soto was rewarded in kind not long afterwards, and in a terrible battle with the Mobilians (see *Maubila*), on the site of Mobile, the expedition was nearly ruined. Turning northward with the remnant of his forces, he fought his way through the Chickasaw country (see *Chickasaws*), and reached the upper waters of the Yazoo River late in December, where he wintered, in great distress. Moving westward in the spring, he discovered the Mississippi River, in all its grandeur, full to the brim, in May, 1541. (See *Mississippi*.) It was near the Lower Chickasaw Bluff, in Tunica Co., Miss. Crossing the mighty stream, De Soto went westward in his yet fruitless search for gold, and spent a year in the country towards the eastern slopes of the Rocky Mountains. Returning to the Mississippi in May, 1542, he died of a fever on its banks in May or June, at the age of forty-two, and was buried in its turbid waters, encased in a trough made of the trunk of a live-oak. It was sunk in the waters at midnight, to prevent its being desecrated by the Indians. Before his death he had conferred the leadership of the expedition upon Moscoso, his lieutenant, who, with the wretched remnant of the expedition, wandered another year in the region west of the Mississippi; and returning to that river in May, 1543, they built rude vessels, and, with a number of beautiful Alabama girls whom they had carried away captive after the battle at Maubila (which see), they made their way to Mexico, where the elegant Castilian ladies at the court of the viceroy were enraptured by the beauty of the dusky Mobilian girls. The news of De Soto's death cast a gloom over Havana, and poor Doña Isabella, wife of

the great leader, who had so long waited for his return, died of a broken heart.

**De Soto's Perfidy towards an Indian Queen.** The Spaniards in Florida wintered at Tallahassee. In March, 1540, De Soto broke up his encampment and marched northward, having been told that gold would be found in that direction. He reached the Savannah River, at Silver Bluff. On the opposite side of the stream, in (present) Barnwell County, lived an Indian queen, young, beautiful, and a maiden, who ruled over a large extent of country. In a richly wrought canoe filled with shawls and skins and other things for presents, the dusky *cacica* glided across the river, and with kind words welcomed the Spaniards and offered them her services. Presents were exchanged. A magnificent string of pearls was upon her neck. This she drew over her head and hung it around the neck of De Soto as a token of her regard. Then she invited him and his followers to cross over to her village. In canoes and on log-rafts they passed the stream, and, encamping in the shadows of mulberry-trees, they soon received a bountiful supply of venison and wild turkeys. There they enjoyed the young queen's hospitality until May, and when they departed De Soto requited the kindness of the royal maiden with foul treachery. He carried her away a prisoner, and kept her near his person as a hostage for the good behavior of her people towards the Spaniards. She finally escaped, and returned home a bitter enemy of the perfidious white people. (See *Maiden Indian Queen*.)

**Destruction of the Pequod Nation.** Sassacus and his warriors crossed the Pequod (now Thames) River and fled westward, pursued by the English. They took refuge in Sasco swamp, near the site of Fairfield, Conn., where they were nearly all either killed or captured. Sassacus and a few followers escaped to the Mohawks. Those who were yet free in the forests were hunted like wild beasts, and the scalps of Pequods were almost daily brought into Hartford or Windsor. Sachem's Head, a point on Long Island Sound, in Guilford, was so named because there two Pequod sachems who had been made prisoners were executed. Those of the nation who were made prisoners were divided among the Mohegans and Narragansets and incorporated with those people. Literally, "a nation had perished in a day." The result was relief to the colonies from Indian wars for nearly forty years. The Puritans, who believed themselves to be under the peculiar care of Divine Providence, and the Indians to be the children of the devil, exulted in this signal instance of the favor of Heaven. "The Lord was pleased," wrote Captain Mason, "to smite our enemies in the hinder parts and give us their land for an inheritance." (See *Pequod War*.)

**Detroit, SIEGE OF (1763-64).** The tragedy of Pontiac's war was to open at Detroit. Under pretext of holding a friendly council with Major Gladwin, commander of the fort, the wily chief entered it in May (1763) with about three

hundred warriors, each carrying a knife, tomahawk, and short gun under his blanket. When Pontiac should rise and present the green side of a belt, the massacre of the garrison was to begin. Gladwin was warned of the plot the day before by a friendly Indian, and the calamity was averted by the appointment of another day for the council. When the Indians retired, the gates of the fort were closed upon them, and, knowing the reason, Pontiac began a siege that lasted full a year. General Amherst hastily collected a small body in the East for the relief of Detroit and reinforcement of Fort Niagara, and sent them under the command of Captain Dalzell, one of his aides. Dalzell left reinforcements at Niagara, and proceeded to Detroit with the remainder of his troops and provisions in a vessel that arrived on the evening of July 30. They succeeded in entering the fort with provisions. Pontiac had already summoned Gladwin to surrender; now Dalzell proposed to make a sortie and attack the besieging Indians. Gladwin thought it would be imprudent, but Dalzell persisted, and before daylight on the morning of July 31 he sallied out with two hundred and forty chosen men to attack the barbarians, who lay about a mile up the river. Pontiac was on the alert, and at a small stream on the northern verge of the city of Detroit the English, furiously assailed by the Indians, were forced to make a precipitate retreat in the darkness, leaving twenty of their comrades killed and forty-two wounded on the borders of the brook, which has ever since been called "Bloody Run." Dalzell was slain while trying to carry off some of the wounded, and his scalp became an Indian's trophy. Pontiac continued the siege of Detroit until the arrival of Colonel Bradstreet in May, 1764.

**Detroit, SURRENDER OF (1812).** General Brock, Governor of Upper Canada, with a few regulars and three hundred militia, hastened to Amherstburg to assist in turning back the invaders of Canada. He arrived there on the night of Aug. 13. Tecumtha and his Indian warriors were on an island opposite Fort Malden. On the following morning Brock held a conference with the Indians (of whom about one thousand were present), telling them he had come to assist in driving the Americans from their rightful hunting-grounds north of the Ohio. The barbarians were pleased, and at a subsequent interview with Tecumtha and other chiefs they assured him that the Indians would give him all their strength in the undertaking. Then Brock marched from Malden to Sandwich, which the Americans had deserted, and a battery was planted opposite Detroit, which commanded the fort there. The American artillerists begged permission to open fire upon it, and Captain Snelling asked the privilege of going over in the night to capture the British works. Hull would not allow any demonstrations against the enemy, and the latter prepared for assault without any molestation. It is evident that Hull had determined to surrender his post, under certain contingencies, and did not wish to exasperate the British and Indians. The truth is, he was much deceived

by letters intended to be intercepted, showing preparations for large and immediate reinforcements to Brock's army; and he had also been deceived into the belief that a large portion of the followers of the latter, who were only militia, were regulars. The militia had been dressed in scarlet uniforms, and were paraded so as to show treble their real number. Hull was hemmed in on every side; his provisions were scarce, and he saw no chance of receiving any from Ohio. He knew that if the barbarians were exasperated and the fort should be taken there would be a general massacre of the garrison and the inhabitants, and his kindness of heart and growing caution, incident to old age, made him really timid and fearful. When Brock's preparations for attack were completed (on the 15th), he sent a summons to Hull for an unconditional surrender of the post. In that demand was a covert threat of letting loose the bloodthirsty barbarians in case of resistance. Hull's whole effective force at that time did not exceed one thousand men. The fort was thronged with trembling women and children and decrepit old men of the village and surrounding country, who had fled to it for protection from the Indians. He kept the flag that bore the summons waiting full two hours, for his innate bravery and patriotism bade him refuse and fight, while his fear of dreadful consequences to his army and the people bade him surrender. His troops were confident in their ability to successfully confront the enemy, and he finally refused compliance with the demand. Active preparations were then made for defence. The British opened a cannonade and bombardment from their battery, which was kept up until near midnight. The firing was returned with spirit; but Hull would listen to no suggestions for the erection of a battery at Spring Wells to oppose the enemy if they should attempt to cross the river. Early on the morning of the 16th they crossed and landed unmolested; and as they moved towards the fort, in single column, Tecumtha and his Indians, seven hundred strong, who had crossed two miles below during the night, took position in the woods on their left as flankers, while the right was protected by the guns of the *Queen Charlotte*, in the river. They had approached to a point within five hundred yards of the American line, when Hull sent a peremptory order for the soldiers to retreat within the already overcrowded fort. The infuriated soldiers reluctantly obeyed; and while the enemy were preparing to storm the fort, Hull, without consulting any of his officers, hoisted a white flag, and a capitulation for a surrender was soon agreed upon. The surrender took place at noon, Aug. 16, 1812. The fort, garrison, army, and the Territory of Michigan were included in the terms of surrender. The spoils of victory for the British were twenty-five hundred stand of arms, twenty-five iron and eight brass pieces of ordnance, forty barrels of gunpowder, a stand of colors, a great quantity of military stores, and the armed brig *John Adams*. One of the brass cannons bore the following inscription: "Taken at Saratoga

on the 17th of October, 1777." General Hull and his fellow-captives were sent first to Fort George and then to Montreal, where they arrived Sept. 6, when they were paroled, and returned to their homes. Hull was tried for treason and cowardice, and sentenced to be shot, but was pardoned by the President. His character has since been fully vindicated. (See *Hull's Trial*.)

**Devens, CHARLES, JR.**, was born at Charlestown, Mass., April 4, 1820, and graduated at Harvard University in 1838. He studied at the Cambridge Law School, and practised the profession of law several years. In 1848 he was a State Senator, and was United States Marshal for Massachusetts from 1849 to 1853. He was engaged in his profession at Worcester, Mass., when the Civil War began, and was one of the earliest Union volunteers, becoming major of a rifle battalion April 16, 1861, and colonel of a regiment in July following. Before the arrival of Colonel Baker, he commanded at Ball's Bluff (which see), and again after that officer's death. In April, 1862, he was made brigadier-general; served on the Peninsula; was wounded at Fair Oaks; was in the battles of South Mountain and Antietam; and commanded a division in the Eleventh Corps at Chancellorsville. In the Richmond campaign of 1864-65 he was continually engaged, and in December, 1864, he was in temporary command of the Twenty-fourth Army Corps. In April, 1865, he was breveted major-general of volunteers, and in 1867 was appointed a justice of the Superior Court of Massachusetts. In March, 1877, he was called to the cabinet of President Hayes as Attorney-general of the United States.

**De Witt, SIMEON**, was born in Ulster County, N. Y., Dec. 26, 1756; died at Albany, Dec. 3, 1834. He graduated at Queen's (now Rutgers) College in 1776; joined the army under Gates; and was made assistant geographer to the army in 1778, and chief geographer in 1780. He was surveyor-general of New York fifty years (1784-1834). In 1796 he declined the appointment of surveyor-general of the United States. He was regent, vice-chancellor, and chancellor of the State of New York, and member of many learned societies.

**Dexter, SAMUEL, LL.D.**, was born in Boston, May 14, 1761; died at Athens, N. Y., May 4, 1816. He graduated at Harvard in 1781; studied law at Worcester; and became a state legislator, in which position he became distinguished for intellectual ability and oratory. President Adams appointed him, successively, Secretary of War (1800) and of the Treasury (1801), and for a while he had charge of the State Department. On the accession of Jefferson (1801) he resumed the practice of law. He declined foreign embassies offered by Adams and Madison. Mr. Dexter was a Federalist until the War of 1812, when, being in favor of that measure, he separated himself from his party. He was the first president of the first temperance society formed in Massachusetts.

**Dey of Algiers, INSOLENT OF THE.** In May,

1800, Captain Bainbridge, in command of the *George Washington*, 24 guns, went to Algiers with the usual tribute to its ruler. (See *Algiers, Tribute to*.) He arrived in September, performed with courtesy the duties enjoined upon him, and was about to leave port, when the dey commanded him to carry an Algerine ambassador to the court of the sultan at Constantinople. Bainbridge politely refused compliance, when the haughty and offended dey said sternly, "You pay me tribute, by which you become my slaves, and therefore I have a right to order you as I think proper." The guns of the Algerine castle, he was assured, would open upon his vessel if he attempted to leave the harbor without the ambassador, and he was compelled to submit. Assured also that if he did not accede to the Algerine ruler's demands his vessel would be seized, he was compelled to submit to the further humiliation of displaying the Algerine flag at the

the French consul and fifty or sixty of his countrymen who had lately been imprisoned by the dey; and when Bainbridge left he carried away all the French in Algiers.

**Diamond State.** A name sometimes applied to the State of Delaware because of its small size, wealth, and supposed importance.

**Diaz del Castillo, BERNAL,** was born at Medina del Caorpo, Spain, about 1500, and came to America as an adventurer in extreme youth in 1514, joining the expedition of Cordova in 1517, and of Grijalva in 1518. He served Cortez faithfully and valiantly. During his adventurous career he was engaged in one hundred and nineteen battles and skirmishes, and was wounded several times. He wrote a history of the conquest of New Spain, which he completed in 1568, intended to correct the misstatements of Gomara's *Chronicle of New Spain*, in which nearly all the glory of its conquest was given to Cortez.

Diaz was a rough, unlettered soldier, and his history has been pronounced a "collection of fables."

**Dickinson, JOHN,** LL.D., was born in Maryland, Nov. 13, 1732; died at Wilmington, Del., Feb. 14, 1808. He studied law in Philadelphia and at the Temple in London, and practised his profession in Philadelphia. In the Pennsylvania Assembly, to which he was elected in 1764, he showed great legislative ability, and was a ready and vehement debater. At the same time, he wrote much on the subject of British infringement on the liberties of the colonies. The most

ALGIERS IN 1800.

main and that of the United States at the fore. He sailed out of the port, transposed the flags, and bore the ambassador to Constantinople. "I hope," he wrote to the Secretary of the Navy, "I shall never again be sent to Algiers with tribute unless I am authorized to deliver it from the mouth of our cannon." The sultan had never heard of the United States; but he drew a good omen from the fact that its flag was related to his own, for it bore stars, while his displayed a crescent moon. He believed the two nations would always be friends, and so they have been. On his return to Algiers, Bainbridge bore a *firman* from the Turkish authorities for his protection. The dey requested him to go on another errand to Constantinople. He refused. The dey flew into a rage, threatened war, and finally menaced the captain with personal violence. Bainbridge produced the *firman*, and the haughty dey became as obsequious as a slave. Then Bainbridge assumed the air of a dictator. He demanded the instant release of

noted of these writings were papers (twelve in number) entitled *Letters from a Pennsylvania Farmer, etc.* (see *Letters, etc.*), published in the *Pennsylvania Chronicle* in 1767. Mr. Dickinson was a member of the first Continental Congress, and wrote several of the state papers put forth by that body (see *Continental Congress*). Considering the resolution of independence unwise, he voted against it and the Declaration, and did not sign the latter document. This made him unpopular. In 1777 he was made a brigadier-general of the Pennsylvania militia. He was elected a representative in Congress from Delaware in 1779, and wrote the *Address to the States* put forth by that body in May of that year. He was successively president of the states of Delaware and Pennsylvania (1781-85), and a member of the convention that framed the National Constitution (1787). Letters from his pen, over the signature of "Fabius," advocating the adoption of the National Constitution, appeared in 1783; and another series,

over the same signature, on our relations with France, appeared in 1797. Mr. Dickinson assisted in framing the Constitution of Delaware in 1792. His monument is Dickinson College,

JOHN DICKINSON.

at Carlisle, Penn., which he founded and liberally endowed.

Dictatorship conferred on Washington. On Dec. 27, 1776, the Congress, sitting in Baltimore, alarmed at the dangerous aspect of affairs, "Resolved, That General Washington shall be, and he is hereby, invested with full, ample, and complete powers to raise and collect together, in the most speedy and effectual manner, from any or all of these United States, seventy-six battalions of infantry, in addition to those already voted by Congress (see *Continental Army, First Organization of the*); to appoint officers for the said battalions of infantry; to raise, officer, and equip three thousand light horse, three regiments of artillery, and a corps of engineers, and to establish their pay; to apply to any of the states for such aid of the militia as he shall judge necessary; to form such magazines of provisions, and in such places, as he shall think proper; to displace and appoint all officers under the rank of brigadier-general, and to fill up all vacancies in every other department in the American armies; to take, wherever he may be, whatever he may want for the use of the army, if the inhabitants will not sell it, allowing a reasonable price for the same; to arrest and confine persons who refuse to take the Continental currency [not then beginning to depreciate], or are otherwise disaffected to the American cause; and return to the states of which they are citizens their names and the nature of their offences, together with the witnesses to prove them." The foregoing powers were vested in Washington for the term of six months ensuing the date of the resolution, unless sooner determined by Congress. These powers were almost equal to those of a Roman dictator. They were conferred before the Congress could possibly have heard of the brilliant victory at Trenton on the morning of the previous day.

Dieskau, LUDWIG AUGUST, BARON, was born in Saxony in 1701; died at Suresnes, near Paris, Sept. 8, 1757. He was lieutenant-colonel of cavalry under Marshal Saxe, and was made brigadier-general of infantry in 1748, and commander of Brest. In 1755 he was sent to Canada with the rank of major-general; and in an attack upon the fortified encampment of General William Johnson at the head of Lake George (Sept. 8, 1755), he was so severely wounded that he died from the effects exactly two years afterwards.

Dinwiddie and the French. The revelations made to Washington at Fort Le Boeuf, the evident preparations of the French to make a concerted movement to secure the occupation of the Ohio region, and the tenor of St. Pierre's answer to Dinwiddie's letter, convinced the latter of the necessity of quick and energetic countervailing measures. St. Pierre declared that he was acting under the instructions of his superior, the Marquis Duquesne, at Montreal, and refused to withdraw his troops from the disputed territory. Dinwiddie immediately prepared for an expedition against the French, and asked the other colonies to co-operate with Virginia. This was the first call for a general colonial union against the common enemy. All hesitated excepting North Carolina. The Legislature of that province promptly voted four hundred men, who were soon on the march for Winchester, the place of rendezvous; but they eventually proved of little worth, for, doubtful of being paid for their services, a great part of them were disbanded before they reached the Shenandoah Valley. Some volunteers from South Carolina and New York hastened to the gathering-place. Virginia responded to the call to arms by organizing a regiment of six hundred men, of which Joshua Fry was appointed colonel and Major Washington lieutenant-colonel. The Virginians assembled at Alexandria, on the Potomac, whence Lieutenant-colonel Washington, with the advance, marched (April 2, 1754) at their head for the Ohio. Meanwhile Captain Trent had recruited a company among the traders west of the mountains, and had begun the erection of a fort at the forks of the Ohio, the site of Pittsburgh. They were attacked (April 18) by a party of French and Indians, who expelled Trent and his men, completed the fort, and named it Duquesne, in honor of the captain-general of Canada. News of this event reached Washington at Will's Creek (now Cumberland). He pushed forward with one hundred and fifty men to a point on the Monongahela less than forty miles from Fort Duquesne. There he was informed that a strong force of French and Indians was marching to intercept him. He wisely fell back to the Great Meadows, where he erected a stockade, and called it Fort Necessity. Before it was completed, a few of his troops attacked an advanced party of the enemy under Jumonville in the night, and the commander and several of his men were killed. Some of his captured men were sent to Governor Dinwiddie. Reinforced, Washington marched for Fort Duquesne again, but was driven back to Fort Ne-

cessity, which he was obliged to surrender on the 3d of July. (See *Fort Necessity*.)

**Dinwiddie and the Virginia Assembly.** Robert Dinwiddie, born in Scotland about 1690; died at Clifton, England, Aug. 1, 1770, was lieutenant-governor of Virginia from 1752 to 1757. He was rapacious, and unscrupulous in the accumulation of wealth. Owing to his exaction of enormous fees authorized by the Board of Trade for the issue of patents for lands, he gained the ill-will of the people of Virginia, and when he called for money to enable him to oppose the encroachments of the French, the House of Burgesses paid no attention to his expressed wishes. (See *Dinwiddie and the French*.) Dinwiddie, unmindful of this conduct, enlisted a captain's command, and sent them to build a fort at the forks of the Ohio (now Pittsburgh), and called on neighboring colonies for aid in the work. On the return of Washington, the governor called the Virginia Assembly together. They now saw impending danger, and granted \$50,000 towards the defence of the frontiers. A committee of the burgesses was appointed to act in concert with the governor in the expenditure of this money, for Dinwiddie could not be trusted. He submitted with a bad grace to this "encroachment on the prerogative" of a royal governor.

**Dinwiddie, ROBERT,** was born in Scotland about 1690; died at Clifton, England, Aug. 1, 1770. While acting as clerk to a collector of customs in the West Indies he discovered and exposed enormous frauds practised by his principal, and was rewarded with the office of surveyor of the customs, and afterwards with that of lieutenant-governor of Virginia. He arrived in the colony in 1752, and returned to England in 1758. He attempted to expel the French from the Ohio region, after sending Washington to their commander on a mission of observation. Washington proved himself to be a zealous officer; and Dinwiddie, discovering his capacity, made him adjutant-general of a military district. Dinwiddie was the first to suggest to the British Board of Trade the taxing of the colonies (1754) for funds to carry on the war with the French and Indians; and he was one of the five colonial governors who memorialized Parliament (1755) in favor of the measure. He had much clashing and vexation with the House of Burgesses; and, worn out with trouble and age, he left Virginia under a cloud caused by a charge made by his enemies that he had appropriated to his own use £20,000 transmitted to him for compensation to the Virginians for money expended by them in the public service.

**Diplomacy of the Revolution.** So soon as the idea of independence had taken the practical shape of a resolution and declaration adopted by Congress, the Americans began to contemplate the necessity of foreign aid, material and moral. The Congress appointed a Secret Committee of Correspondence (which see) for the purpose, and sent Silas Deane upon a half-commercial, half-diplomatic mission to France. Franklin was at first opposed to seeking foreign alliances. "A virgin state," he said, "should

preserve the virgin character, and not go about suitoring for alliances, but wait with decent dignity for the application of others." But Franklin soon became the chief suitor in Europe, for in the autumn of 1776 he was sent as "commissioner"—a real "ambassador"—to France to seek an alliance and material aid. The aid was furnished through Beaumarchais, at first secretly, and afterwards by the government openly. (See *Beaumarchais*.) The American commissioners proposed a treaty of alliance with France, but the French government hesitated, for it did not then desire an open rupture with England; but when the news of the defeat and capture of Burgoyne's army, late in 1777, reached France, the king no longer hesitated, and a treaty of amity, commerce, and alliance was consummated in February, 1778. (See *Treaties with France*.) The recognition of the independence of the United States involved France in war with England, and the latter sent commissioners to negotiate with the Americans for peace. The terms were not satisfactory, and the mission failed. The French government pressed Spain to join in espousing the cause of the Americans, but that power hesitated, because a support of such a republican system in America might be dangerous to the integrity of her own colonial system in that part of the world. In this feeling France had been alike cautious, and for the same reasons. They had agreed that while it would not be politic to invade the rights of the British crown, they would evade the obligations of treaties, for both had a mischievous intent to foment the disturbances between England and her American colonies. While doing this secretly, they held the language of honest neutrality. When, therefore, France had determined openly to espouse the cause of the Americans, Spain was urged to do likewise; but the Spanish court could not be persuaded to go beyond a certain point. The French minister, with keen prescience, saw ultimate independence for America, while the Spanish court dreaded such a result. Meanwhile the Continental Congress had sent Mr. Jay as ambassador to Spain, to win the active friendship of that power. He could effect nothing; and it was well he did not, as subsequent events manifested. From the time of the treaty of alliance with France, the action of Spain towards the United States was selfish, hypocritical, and often sullen. She declared war against England for her own selfish purpose, but it worked in favor of the Americans by keeping British troops employed elsewhere than in America. The Count d'Aranda, the Spanish minister in France, who had watched the course of events with keen vision from the beginning to the end of the American war for independence, suggested to his sovereign, as an antidote to American independence, the formation of the Spanish-American colonies into independent Spanish monarchies. He said, in reference to the treaty of peace in 1783: "The independence of the English colonies has been, then, recognized. It is for me a subject of grief and fear. France has but few possessions in America; but she was bound to consider that Spain,

her most intimate ally, had many, and that she now stands exposed to terrible reverses. From the beginning France has acted against her true interests in encouraging and supporting this independence, and so I have often declared to the ministers of this nation." When the Armed Neutrality (which see) was proposed in 1780, the Americans gladly joined the European powers with their moral influence (all they could then give), for it would aid themselves by weakening England. Its results were disappointing to the other powers, but it added to the open enemies of England. The Congress, in instructions to Dana at St. Petersburg, had said: "You will readily perceive that it must be a leading and capital point, if these United States shall be formally admitted as a party to the convention of the neutral maritime powers for maintaining the freedom of commerce." Thus early, while yet fighting for independence, the American statesmen assumed the dignity and used the language of the representatives of a powerful nation, which they certainly expected to form. The Americans had opened negotiations with the States-General of Holland for a treaty so early as 1778. William, brother of Richard Henry and Arthur Lee, had begun the discussion of such a treaty with Van Berkel, the pensionary of Amsterdam. This negotiation with a single province was made in secret. Lee had no authority to sign a treaty, nor could the expression of a single province bind the Dutch Republic. Finally, Henry Laurens was sent by Congress to negotiate a treaty with the States-General, but was captured while crossing the Atlantic, and imprisoned in England. Then John Adams was sent for the purpose to the Hague. Early in 1782, through the joint exertions of Mr. Adams and the French minister at the Hague, the provinces, one after another, consented to the public recognition of Mr. Adams, and so openly recognized the independence of the United States. He was publicly introduced to the Prince of Orange on April 22, 1782. In October following he had completed the negotiation of a treaty with Holland, and signed it with great satisfaction. It was a "Treaty of Alliance between their High Mightinesses the States-General of the United Netherlands and the United States of America." This treaty was not altogether dependent upon the alliance of the United States with France, and was a step forward in the march of the former towards independent national existence. The final great act in the diplomacy of the Revolution was the negotiation of a treaty of peace with England, the chief points of which will be found under the title of *Treaty of Peace*. In their foreign diplomacy the Congress had been greatly aided at almost every step by the enlightened wisdom, prudence, and firmness of Count Gravier de Vergennes, who was a faithful servant of his king, while he earnestly desired the boon of the enjoyment of rational liberty for all peoples. He died soon after the peace. (See *Vergennes*.)

**Diplomatic Troubles (1778).** To Silas Deane, who was first sent to France as a diplomatic and commercial agent of the Congress, were in-

trusted the receipts and expenditures of money by the commissioners. Dr. Franklin had deserved confidence in his ability and honesty. The jealous, querulous Arthur Lee, who became associated with him and Franklin, soon made trouble. He wrote letters to his brother in Congress (Richard Henry Lee), in which he made many insinuations against the probity of both his colleagues. Ralph Izard, commissioner to the Tuscan court, offended because he was not consulted about the treaty with France, had written home similar letters; and William Carmichael, a secretary of the commissioners, who had returned to America, insinuated in Congress that Deane had appropriated the public money to his own use. Deane was recalled, and out of this affair sprang two violent parties, Robert Morris and other members of Congress who were commercial experts taking the side of Deane, and Richard Henry Lee, then chairman of the Committee on Foreign Affairs, being against him. Deane published in the *Philadelphia Gazette* an "Address to the People of the United States," in which he referred to the brothers Lee with much severity, and claiming for himself the credit of obtaining supplies from France through Beaumarchais. Thomas Paine, then secretary of the Committee on Foreign Affairs, replied to Deane (Jan. 2, 1779), availing himself of public documents in his charge. In that reply he declared that the arrangement had been made by Arthur Lee, in London, and revealed the secret that the supplies, though nominally furnished by a commercial house (see *Beaumarchais*), really came from the French government. This statement called out loud complaints from the French minister (Gerard), for it exposed the duplicity of his government, and to soothe the feelings of their allies, Congress, by resolution, expressly denied that any gratuity had been received from the French court previous to the treaty of alliance. This resolution gave Beaumarchais a valid claim upon Congress for payment for supplies which he, under the firm name of Hurtals & Co., had sent to America. (See *Beaumarchais*.) Paine's indiscretion cost him his place. He was compelled to resign his secretaryship. The discussion among diplomatic agents soon led to the recall of all of them excepting Dr. Franklin, who remained sole minister at the French court. Deane, who was undoubtedly an able, honest man, preferred claims for services and private expenditures abroad, but, under the malign influence of the Lees, he was treated with neglect and fairly driven into poverty and exile. In 1842 Deane's long-disputed claim was adjusted by Congress, a large sum of money being paid over to his heirs. (See *France, Relations with*.)

**Directory, THE FRENCH EXECUTIVE.** This name was given to the government of the French Republic, established by a constitution in August, 1795, framed by the moderate Republican party after the fall of Robespierre and the end of the Reign of Terror. The Executive Directory consisted of five persons, who promulgated the laws, appointed the ministers, and had

the management of military and naval affairs. They decided questions by a majority vote, and presided, by turns, three months each, the presiding member having the signature and the seal. During their terms of office none of them could have a personal command, or absent himself for more than five days from the place where the council held its sessions without its permission. The legislative power, under the constitution, was vested in two assemblies, the Council of Five Hundred and the Council of the Ancients, the former having the exclusive right of preparing laws for the consideration of the latter. The judicial authority was committed to elective judges. The first directors chosen (Nov. 1, 1795) were MM. Barras, Revellière-Lépeaux, Rewbell, Letourneur, and Carnot. The latter organized the armies with great skill and wisdom.

**Disaffection in New York.** During the winter of 1775-76 disaffection to the Republican cause, especially among the older and wealthier families, became conspicuous and alarming to the patriots, and there were fears of the loss of the city of New York to the Republican cause. In Queens County, on Long Island, the people began to arm in favor of the crown. Hearing of this, General Howe, in Boston, sent General Sir Henry Clinton on a secret expedition. Washington suspected New York was his destination, where Governor Tryon was sowing the seeds of disaffection from his "seat of government" on board the *Duchess of Gordon* in the harbor. The Committee of Safety and the Provincial Convention of New York were strongly tinctured with Toryism. General Lee, then in Connecticut, had heard of disaffection there and asked permission of Washington to raise volunteers to go there and suppress it. The privilege was granted, and, with the aid of Governor Trumbull, he embodied about twelve hundred volunteers and pressed on towards New York, with the bold "King Seals" as his adjutant-general. His approach (February, 1776) produced great alarm. Many Tories fled with their families to Long Island and New Jersey; and the timid Committee of Safety protested against his entering the city, for the captain of the *Asia* (which see) had declared that if "rebel troops" were permitted to enter the town, he would cannonade and burn it. Lee pressed forward and encamped in the Fields, and in a proclamation he said he had come to prevent the occupation of Long Island and New York by the enemies of liberty. "If the ships of war are quiet," he said, "I shall be quiet; if they make my presence a pretext for firing on the town, the first house set in flames by their guns shall be a funeral pile of some of their best friends." Before this manifesto the Tories shrank into inactivity. A glow of patriotism warmed the Provincial Congress, and that body speedily adopted measures for fortifying the city and its approaches and garrisoning it with two thousand men. On the day when Lee entered New York Sir Henry Clinton arrived at Sandy Hook, but did not deem it prudent to enter the harbor of New York. He sailed on to the coast of North Carolina.

**Disaffection in Pennsylvania.** When General Howe lauded at the head of Elk River (August, 1777) and marched on Philadelphia, he found the country swarming with Tories. A large part of the Quakers, a wealthy and influential class, were enemies of the patriots, or at least neutral, while the German population (which was large) were indifferent, except as to means to avoid the burdens of war. The Pennsylvania militia, which had been recently organized, numbered thirty thousand men; but owing to the prevalence of Toryism, the loudest call could not bring out at any one time more than three thousand. Delaware, also, was largely disaffected towards the American cause, but her sons were more largely represented in the Continental army than those of any other state in proportion to the population.

**Disappointment of the British in New York.** Having driven Washington and his little army beyond the Delaware, and seeing the alacrity with which the people of New Jersey, under the influence of his proclamation, seemed to return to their allegiance, Howe believed the rebellion was broken, and he and his officers prepared for a winter's enjoyment in New York. Cornwallis had leave to return home. The young officers were preparing to have theatrical performances, and other indoor amusements. The fighting being over, as was supposed, Cornwallis had sent his baggage on board a packet about to sail for England, and the loyalists of that city were feeling jubilant, when the news of Washington's fatal blow at Trenton (see *Trenton, Battle of*) dispelled the pleasant dream. Cornwallis recalled his baggage and was compelled to take the field for a winter campaign, and he did not leave the country for nearly five years afterwards.

**Disarmament of Tories.** On March 14, 1776, Congress by resolution recommended to the several assemblies, conventions, and committees and councils of safety of the united colonies immediately to cause all persons to be disarmed in their respective colonies who were notoriously disaffected to the patriot cause, or who had not associated, or refused to associate, to defend by arms the liberties of the united colonies.

**Disbanding of the Continental Army (1783).** It was expected that the immediate disbanding of the army would follow the proclamation of peace. A definitive treaty had not yet been negotiated, and British troops still held New York city. It would not be safe, under such circumstances, to actually disband the army. The Congress therefore decided that the engagements of men enlisted for the war were binding till the treaty of peace was definitively ratified. On the recommendation of Washington orders were issued for granting furloughs or discharges at the discretion of the commander-in-chief. Greene was authorized to grant furloughs for North Carolina troops; and the lines of Maryland and Pennsylvania serving under him were ordered to march for their respective states. Three months' pay was to be furnished the furloughed soldiers. They were also to keep their arms and

accoutrements as an extra allowance. These furloughs amounted to discharges. Few of the recipients ever returned, and so a great portion of the army was gradually disbanded before the definitive treaty was concluded in September. A remnant of the Continental army remained at West Point under Knox until the British evacuated New York (Nov. 25, 1783). After that event they all received their discharge.

**Disbanding of the Union Armies (1865).** The soldiers of the great armies that confronted Lee and Johnston in Virginia and North Carolina, and conquered them, were marched to the vicinity of the National capital, and during two memorable days (May 22 and 23, 1865) moved through that city, with tens of thousands of moistened eyes gazing upon them, and passed in review before the chief magistrate of the nation and his ministers. Then began the work of disbanding the armies by mustering out of service officers and men. On the 2d of June Lieutenant-general Grant, the general-in-chief of the National armies, issued the following address to them: "Soldiers of the Armies of the United States: By your patriotic devotion to your country in the hour of danger and alarm, your magnificent fighting, bravery, and endurance, you have maintained the supremacy of the Union and the Constitution, overthrown all armed opposition to the enforcement of the laws and of the proclamation forever abolishing slavery—the cause and pretext of the rebellion—and opened the way to the rightful authorities to restore order and inaugurate peace on a permanent and enduring basis on every foot of American soil. Your marches, sieges, and battles, in distance, duration, resolution, and brilliancy of results, dim the lustre of the world's past military achievements, and will be the patriot's precedent in defence of liberty and right in all time to come. In obedience to your country's call, you left your homes and families, and volunteered in her defence. Victory has crowned your valor and secured the purpose of your patriotic hearts; and with the gratitude of your countrymen and the highest honors a great and free nation can accord, you will soon be permitted to return to your homes and families, conscious of having discharged the highest duty of American citizens. To achieve these glorious triumphs, and secure to yourselves, your fellow-countrymen, and posterity the blessings of free institutions, tens of thousands of your gallant comrades have fallen, and sealed the priceless legacy with their blood. The graves of these a grateful nation bedews with tears, honors their memory, and will ever cherish and support their stricken families." (See *Lee's Farewell to his Army*.) On March 1, 1865, there was an aggregate force on the muster-rolls of the army of 965,591 men, of whom 602,593 were present for duty and 132,538 were on detached service. The aggregate force was increased by the 1st of May, by enlistments, to 1,000,516, of all arms, officers and men. The disbanding of this army went steadily on from June 1, and by the middle of autumn 786,000 officers and men were mustered out of the service. The wonderful

spectacle was exhibited of vast armies of men, surrounded by all the paraphernalia of war, transformed in the space of one hundred and fifty days into a vast army of citizens, engaged in the blessed pursuits of peace.

**Discovery, RIGHTS CONFERRED BY.** It early became a law among European nations that the country which each should first explore should be deemed absolute property of the discoverer, from which all others should be entirely excluded. The English, in turn, adopted the law that a nation, a citizen or subject of which should discover the mouth of a great river, became owner of the region drained by that river and its tributaries.

**Disinterested Patriotism.** In arranging new regiments at Cambridge late in 1775, Colonel Asa Whitcombe, a meritorious officer, who had served in the late French and Indian war, was left out on account of his age. His men were indignant, and refused to re-enlist. The colonel, to set them an example, himself enlisted as a private soldier. One of the other colonels gave up his regiment to Whitcombe; and these examples of disinterested patriotism were noticed by Washington in general orders.

**Disloyalty at the National Capital.** At the close of 1860, when South Carolina had passed an ordinance of secession, the enemies of the government were bold and defiant at the National capital. Secession cockades (which see) appeared in the streets. The newspapers there were generally filled with seditious matter. Virginia newspapers had already suggested (what the conspirators had planned) the capture of Fortress Mouroe, the Gosport navy-yard, and the arsenal at Harper's Ferry, preparatory to the seizure of the National capital and its archives. (See "*On to Washington*.") The disunionists were so confident of the success of their scheme that a leading Virginian said openly: "Mr. Lincoln will not dare to come to Washington after the expiration of the term of Mr. Buchanan. The city will be seized and occupied as the capital of the Southern Confederacy, and Mr. Lincoln will be compelled to take his oath of office in Philadelphia or New York." The veteran journalist Duff Green, the warm co-worker with Calhoun, said to Joseph C. Lewis, of Washington: "We intend to take possession of the army and navy and of the archives of the government; not allow the electoral vote to be counted; proclaim Buchanan provisional President, if he will do as we wish—and if not, choose another; seize the Harper's Ferry arsenal and the Gosport navy-yard simultaneously, and, sending armed men down from the former and armed vessels up from the latter, seize Washington and establish a new government." The Secessionists believed the President was pledged not to interfere, and that the seat of government of a "Southern Confederacy" might be established there without governmental resistance. But all were not satisfied of the co-operation of the President. Some South Carolina spies in Washington could not trust him. One of them, writing to the *Charleston Mercury*, said: "I know all

that has been done here, but dépend upon nothing that Mr. Buchanan promises. He will cheat us unless we are too quick for him." Nor would they confide implicitly in each other. The same writer said: "Further let me warn you of the danger of Governor Pickens making Trescott his channel of communication with the President, for the latter will be informed of everything that transpires, and that to our injury." (See *Unfaithful Cabinet Ministers*.) And R. B. Rhett began a letter to his son, of the *Mercury*, by saying, "Jefferson Davis is not only a dishonest man, but a liar." (From an autograph letter.) Washington society was at that time thoroughly permeated with the views of secessionism, and the Southern members of Congress, in both houses, formed the focus of the disunion movements in the slave-labor states which soon created insurrection, rebellion, and civil war. Yet with all this tide of open disloyalty surging around the National capitol, the President, seemingly bound hand and foot in the toils of the enemies of his country, sat with folded hands, and did not lift a finger to stay the fury of the rising tempest. Of him a writer at the capital [J. W. Forney] said: "His confidants are disunionists; his leaders in the Senate and in the House are disunionists, and while he drives into exile the oldest statesman in America [General Cass] simply and only because he dares to raise his voice in favor of the country, he consults daily with men who publicly avow in their seats in Congress that the Union is dissolved and that the laws are standing still."

**Dismemberment of Rhode Island.** Attempted in 1653. While extending her domain northward by the annexation of Maine and Louisiana, Massachusetts was eager to dismember the commonwealth of Rhode Island. Coddington had obtained from the English Council of State a commission for a separate government for Aquidday, or Rhode Island proper, and this favored the scheme of Massachusetts. The latter claimed Warwick as a part of its territory by virtue of the submission of two sachems to whom it formerly belonged, backed by an alleged grant from Plymouth of any claim she might have under her patent. The Plymouth people denied both the fact and the legality of any such claim. The people of Warwick were hostile in feeling towards Massachusetts. Hearing that two persons had lately been hung for witchcraft, one at Hartford and one at Charlestown (two women), they said that "there were no other witches upon earth, nor devils, but the ministers of New England and such as they." This caused the quarrel to wax warm, and the people of Providence, Warwick, and Newport, apprehending danger to their independence, appealed to England for a confirmation of their charter, protection from the Indian vassals of Massachusetts, and the recall of Coddington's commission. This matter produced a quarrel among the commissioners or congressmen of the united colonies, and came near breaking up the confederacy at that time. The charter was confirmed. (See *Coddington, W.*)

**Disputes between Royal Governors and**

**the People.** These disputes, which continued about seventy years, were begun in Massachusetts when, in 1702, Joseph Dudley arrived from England with a commission from Queen Anne to be captain-general and governor of the province. In his first speech he demanded a "fit and convenient house" for the governor, and a settled and stated salary for him. The House, in their answer the next day, observed that they would proceed to the consideration of these propositions "with all convenient speed." They resolved to present, out of the public treasury, the sum of £500, and said, "as to settling a salary for the governor, it is altogether new to us, nor can we think it agreeable to our present Constitution, but we shall be ready to do, according to our ability, what may be proper on our part for the support of the government." The governor sent for the speaker and the representatives to come to his chamber, when he declared his disappointment because of their procedure, and expressed a hope that they would think better of the matter. So began those disputes which were one of the causes of the final dismemberment of the British empire.

**Disruption of Buchanan's Cabinet.** On Dec. 27, 1860, news of the occupation of Fort Sumter by Major Anderson reached Washington. (See *Anderson in Fort Sumter*.) The cabinet assembled at noon. They had a stormy session. Floyd demanded of the President an order for Anderson's return to Fort Moultrie, urging that the President, if he should withhold it, would "violate the solemn pledges of the government." The President was inclined to give the order, but the warning voices of law and duty, as well as public opinion, made him hesitate, and the cabinet adjourned without definite action. The position of the President was painful. He had evidently made pledges to the Secessionists, without suspecting their disloyal schemes when he made them, and had filled his cabinet with disloyal men, supposing them to be honest. It is said that at that time he was in continual fear of assassination. On the morning after the cabinet meeting just referred to, news came of the seizure of Fort Moultrie and Castle Pinckney. The President breathed more freely. The Secessionists had committed the first act of war, and he felt relieved from his pledges. He peremptorily refused to order the withdrawal of Anderson from Sumter, and on the following day Floyd resigned the seals of Secretary of War and fled to Richmond. In his letter of resignation he said, respecting the secretaryship, "I can no longer hold office, under my convictions of patriotism, nor with honor, subjected as I am to a violation of solemn pledges." Joseph Holt, of Kentucky, a thoroughly loyal man, took Floyd's place, and a load of anxiety was lifted from the minds of the loyal people of the Republic. The disruption of Buchanan's cabinet went on. Attorney-general Black had taken the place of General Cass as Secretary of State, and Edwin M. Stanton filled the office of Attorney-general. Philip F. Thompson, of Maryland, had succeeded Orr as Secretary of the Treasury, but, unwilling to assist the gov-

erument in enforcing the laws, he was succeeded by John A. Dix, a staunch patriot of New York. Thompson left the Interior Department Jan. 8, 1861.

**Dissensions in Washington's Cabinet.** Mr. Jefferson returned from France in the autumn of 1789, to take a seat in Washington's cabinet. He was filled with the French enthusiasm for republican ideas and hatred of monarchy, and he was chilled by the coldness of Washington, Adams, Hamilton, and others towards the cause of the French revolutionists. He became morbidly sensitive and suspicious, especially of Hamilton, regarding him as still a champion of a limited monarchy, for which he had expressed his preference in the convention that framed the Constitution. The consequence was, that bitter animosity grew up between them which gave Washington great uneasiness, and they became the acknowledged leaders of two violently opposing parties—Federalists and Republicans. When Washington thought of retiring from the presidency, at the close of his first term, Jefferson, who knew and valued his sterling patriotism, urged him to accept the office a second time. In a letter to him, he boldly avowed his belief that there was a conspiracy on foot to establish a monarchy in this country on the ruins of the Republic, and pointed to the measures advocated by Hamilton as indicative of a scheme to corrupt legislators and people. Washington plainly told Jefferson that his suspicions about a monarchical conspiracy were unfounded, and that the people, especially of the great cities, were thoroughly attached to republican principles. But Jefferson was firm in his belief in a conspiracy, and, finally, criminations and recriminations having taken place in the public prints between the two secretaries, Hamilton charged Freneau's *Gazette*, which continually attacked the administration, with being the organ of Jefferson, edited by a clerk in his office. The whole article was courteous in words, but extremely bitter in allusions. It produced an open rupture between the two secretaries, which Washington tried in vain to heal in a letter to Jefferson. Jefferson, not long afterwards, left the cabinet, which Washington regretted, for he was able and thoroughly patriotic.

**Dissolution of Non-importation Leagues.** Towards the close of 1770 the merchants began to be lax in the observance of non-importation agreements, and at a meeting in Boston in October it was resolved to import everything but tea. Merchants in other cities followed their example. These associations, while having a powerful political effect, brought about many salutary social reforms among the people of the colonies, by causing the discontinuance of many extravagant customs which involved large expenditures of money, and needed lessons of strict economy were learned.

**Dissolution of the Union long Contemplated.** State pride, the mother of the doctrine of state supremacy, was conspicuously manifested in the formation of the League of States under the Articles of Confederation (which see).

It was also conspicuous in the convention that framed the National Constitution, and especially so in the state conventions called to ratify that document. It was so strong in New York that the ratification was effected by only one majority in the convention. Whenever the imperious will of politicians became thwarted by a public policy opposed to their wishes, they were in the habit of speaking of a dissolution of the Union as the remedy for the provocation. Such was eminently the case with the opposers of Jay's treaty in 1795 (which see). Such was the tone of the famous Virginia resolutions of 1798 (which see). So threatening to the peace of the Union had the expression of such threats become during the administration of President Washington, that the chief burden of his Farewell Address was a plea for union. The purchase of Louisiana and its creation as a state called forth this sentiment from New England politicians (see *Secession in New England*), and the positive declarations of Calhoun to Commodore Stewart, in 1812, of the intention of the Southern politicians to dissolve the Union in case of a certain contingency, showed the alarming prevalence of this idea in the slave-labor states. (See *Ruling Class in the South*.) It was put forth conspicuously in the debates on the admission of Missouri. (See *Missouri Compromise*.) After the tariff act of 1828, so obnoxious to the cotton-growers, became a law, the citizens of St. John's parish, in South Carolina, said in convention: "We have sworn that Congress shall, at our demand, repeal the tariff. If she does not, our state Legislature will dissolve our connection with the Union, and we will take our stand among the nations; and it behooves every true Carolinian 'to stand by his arms,' and to keep the halls of our Legislature pure from foreign intruders." When, in the autumn of 1832, the famous Nullification Ordinance was passed (which see), so positive were the politicians of South Carolina that the dissolution of the Union was nigh, that they caused a medal to be struck with this inscription, "JOHN C. CALHOUN, FIRST PRESIDENT OF THE SOUTHERN CONFEDERACY." In 1836 a novel was written by Beverly Tucker, of Virginia, called *The Partisan Leader*, in which the doctrine of state supremacy and sectional feeling was inculcated in the seductive form of a romance, which was widely circulated at the South, and made the people familiar with the idea of secession as a great good for that section. "Southern Rights Associations" were founded, having for their object the dissolution of the Union. These were active at the time of the excitement about the admission of California into the Union. One of the most active of the Virginians in disunion movements at that time was M. R. H. Garnett (who was in Congress when the Civil War broke out). In a letter to W. H. Trescott, a leader in the "Southern Rights Association" of South Carolina (May, 1851), Garnett mourned over the action of Virginia in hesitating to enter into the scheme of revolution then. "I do not believe," he wrote, "that the course of the Legislature is a fair expression of the popular feeling. In the East, at least, the great major-

ity believe in the right of secession, and feel the deepest sympathy with Carolina in opposition to measures which they regard as she does. But the West—Western Virginia—here is the rub! *Only 60,000 slaves to 494,000 whites!* When I consider this fact, and the kind of argument which we have heard in this body, I cannot but regard with the greatest fear the question, whether Virginia would assist Carolina in such an issue. . . . You will object to the word Democrat. Democracy, in its original philosophical sense, is, indeed, incompatible with slavery and the whole system of Southern society." Mr. Garnett expressed a fear that, if the question was raised between Carolina and the National government, and the latter prevailed, the last hope of Southern civilization would expire. Preston S. Brooks, who assaulted Senator Sumner of Massachusetts, when alone at his desk in the Senate (see *Sumner, Charles*), with a heavy cane, said, in an harangue before an excited populace in South Carolina, "I tell you that the only mode which I think available for meeting the issue is, just to tear in twain the Constitution of the United States, trample it under foot, and form a Southern Confederacy, every state of which shall be a slave-holding state. . . . I have been a disunionist from the time I could think. If I were commander of an army, I never would post a sentinel who would not swear slavery was right. . . . If Frémont be elected President of the United States, I am for the people, in their majesty, rising above the laws and leaders, taking the power into their own hands, going, by concert or not by concert, and laying the strong arm of Southern power upon the treasury and archives of the government." This was attempted in 1861. (See *On to Washington*.)

**Distribution of Arms in the South.** Secretary Floyd stripped Northern arsenals of arms and sent them to Southern arsenals, in preparation for the insurrection that broke out in 1861. (See *Floyd's Disloyal Acts*.) These arms were distributed as follows:

	<i>Percussion Muskets.</i>	<i>Altered Muskets.</i>	<i>Rifles.</i>
To Charleston Arsenal . . . . .	9,280	5,720	2,000
To Fayetteville Arsenal . . . . .	15,480	9,620	2,000
To Augusta Arsenal . . . . .	12,380	7,620	2,000
To Mount Vernon Arsenal . . . . .	9,280	5,720	2,000
To Baton Rouge Arsenal . . . . .	18,560	11,420	2,000
	65,000	40,000	10,000

**District of Columbia, ORGANIZATION OF THE (1791).** The District was erected into two counties, as divided by the Potomac, and was placed under the jurisdiction of a circuit court, composed of a chief-justice and two assessors; the judgment of this court to be final in criminal cases, but in civil cases, where the amount in dispute exceeded \$100 in value, a writ of error to lie in the Supreme Court of the United States. This arrangement was afterwards modified. Instead of providing a homogeneous code of laws for the District, those of Maryland and Virginia were continued. Population in 1880, 177,624. (See *National Capital*.)

**District of Columbia, SLAVERY IN THE, ABOLISHED.** A bill for this purpose was passed by

the National Congress (April 11, 1862), and became a law by the signature of the President April 16. It provided for the payment, out of the treasury of the United States, of an average compensation of \$300 to the master or mistress of each slave thus emancipated. Thus emancipation began at the national capital. In connection with this event was a curious proceeding. A free negro of the district, who had bought and paid for his slave wife; she and her children being, by the slave code, his lawful slaves, claimed and received compensation for her and her half-dozen children.

**District of Louisiana.** All the region west of the Mississippi and north of Orleans Territory (which see) was constituted the District of Louisiana in 1804. It included a little village on the Arkansas River, and several on or near the Mississippi, the principal of which was St. Louis. (See *Fur-trade*.) The white population was less than four thousand, and it was proposed to reserve this region for the Indians. The President was authorized to propose to the tribes east of the Mississippi an exchange of their lands for other territory out of the reserve, and their migration thither. This policy has since been extensively carried out. The District of Louisiana was placed under the charge of Indiana, and was erected into a separate territory of the second class in 1805, the power of legislation being vested in the governor and judges.

**Disunion, PROPOSITION FOR (1804).** The purchase of Louisiana was deprecated and violently opposed by the Federalist leaders, because it would strengthen the Southern political influence then controlling the national government. They professed to regard the measure as inimical to the Northern and Eastern sections of the Union. The Southern politicians had made them familiar with the prescription of disunion as a remedy for incurable political evils, and they resolved to try its efficacy in the case in question. All through the years 1803 and 1804 desires for and fears of a dissolution of the Union were freely expressed in what were free-labor states in 1861. East of the Alleghanies, early in 1804, a select convention of Federalists, to be held in Boston, was contemplated, in the ensuing autumn, to consider the question of disunion. Alexander Hamilton was invited to attend it, but his emphatic condemnation of the whole plan, only a short time before his death, seems to have disconcerted the leaders and dissipated the scheme. The Rev. Jedidiah Morse, then very influential in the Church and in politics in New England, advocated the severance of the Eastern States from the Union, so as to get rid of the evils of the slave system; and, later, Josiah Quincy, in a debate in the House of Representatives, expressed his opinion that it might become necessary to divide the Union as a cure of evils that seemed to be already chronic.

**Disunion threatened in 1779.** In angry debates in Congress on the subject of the fisheries, in 1779, threats of disunion were made by deputies of the North and the South. It was shown that the prosperity of New England de-

pended on the fisheries; but in this the Southern States had no common interest. Indeed, in all the states the doctrine of state supremacy was so universally prevalent that the deputies in Congress, instead of willingly legislating for the whole, legislated for their respective states. When appeals had been made in Congress for a favorable consideration of New England in relation to the fisheries without effect, Samuel Adams said that "it would become more and more necessary for the two empires [meaning the Northern and Southern States divided by "Mason and Dixon's Line" (which see)] to separate." When the North offered a preliminary resolution that the country, even if deserted by France and Spain, would continue the war for the sake of the fisheries, four states drew up a protest, declaring peremptorily that if the resolution should be adopted they would withdraw from the confederation. These sectional interests continually stood in the way of a perfect union of the struggling colonists. The inflexible tenacity with which each state asserted its title to complete sovereignty often menaced the Union with destruction, and independence became, in the minds of some, an idle dream. When, in August, 1781, envoys from Vermont were in Philadelphia, entreating for the admission of their state into the Union, the measure was opposed by the Southern delegates, because it would "destroy the balance of power" between the two sections of the confederacy, and give the preponderance to the North.

**Dix, DOROTHEA LYNDE**, was born at Worcester, Mass. After her father's death she supported herself by teaching a school for young girls in Boston. Becoming interested in the welfare of the convicts in the state prison at Charlestown, her philanthropic spirit expanded and embraced all of the unfortunate and suffering classes. Having inherited from a relative property sufficient to render her independent, she went to Europe for her health. Returning to Boston in 1837, she devoted her life to the investigation and alleviation of the condition of paupers, lunatics, and prisoners, encouraged by her friend and pastor, Dr. Chauning. In this work she visited every state in the Union east of the Rocky Mountains, endeavoring to persuade legislatures to aid the unfortunate, and was instrumental in bringing about the foundation of several state asylums. At the breaking out of the Civil War she was placed in a responsible position in relation to public hospitals by the Secretary of War (see *United States Sanitary Commission*.) Miss Dix died at Trenton, Aug. 2, 1887.

**Dix, JOHN ADAMS**, was born at Boscawen, N. H., July 24, 1798; died April 21, 1879. He graduated at Brown University in 1830, and completed his studies in a French college at Montreal. He entered the army as a cadet in 1812, when the war with England began. While his father, Lieutenant-colonel Dix, was at Fort McHenry, Baltimore, young Dix pursued his studies at St. Mary's College. In the spring of 1813 he was appointed an ensign in the army,

and was soon promoted to third lieutenant, and made adjutant of an independent battalion of nine companies. He was commissioned a captain in 1825, and having continued in the army sixteen years, in 1828 he left the military service. His father had been mortally hurt at Chrysler's Field (which see), and the care of extricating the paternal estate from difficulties, for the benefit of his mother and her nine children, had devolved upon him. He had studied

JOHN ADAMS DIX.

law while in the army. After visiting Europe for his health, Captain Dix settled as a lawyer in Cooperstown, N. Y. He became warmly engaged in politics, and in 1830 Governor Throop appointed him adjutant-general of the state. In 1833 he was elected Secretary of State of New York, which office made him a member of the Board of Regents of the University and other important positions. Chiefly through his exertions public libraries were introduced into the school districts of the state and the school laws systematized. In 1842 he was a member of the New York Assembly, and of the United States Senate from 1845 to 1849. In the discussion of the question of the annexation of Texas and of slavery he expressed the views of the small Free Soil Party whose candidate for governor he was in 1848. In 1859 he was appointed Postmaster of New York city; and when, early in 1861, Buchanan's cabinet was dissolved, he was called to the position of Secretary of the Treasury. In that capacity he issued the famous order. (See *Dix, Order of*.) He was appointed major-general of volunteers May 16, 1861; commander at Baltimore, and then at Fortress Monroe and on the Virginia peninsula; and in September, 1862, he was placed in command of the Seventh Army Corps. He was also chosen President of the Pacific Railway Company. In 1866 he was appointed minister to France, which position he filled until 1869. He was elected Governor of the State of New York in 1872, and retired to private life at the end of the term of two years, at which time he performed rare services for the good name of the State of New York. General Dix was a fine classical scholar, and translated several passages from Catullus, Virgil, and others into polished English verse. He made a most conscientious and beautiful translation of the *Dies Irae*.

Dix's Famous Order. Early in January, 1861, John A. Dix was made Secretary of the Treasury. He found the department in a wretched condition, and proceeded with energy in the administration of it. Hearing of the Mobile and New Orleans. He found the *Lewis Cass* in the hands of the insurgents at Mobile. The *Robert McClelland*, at New Orleans, was in command of Captain J. G. Breshwood, of the navy. Jones gave the captain an order from

Treasury Department  
Jan. 29, 1861

Lieut. Caldwell to arrest  
Capt. Breshwood, assume command  
of the cutter and obey the order I gave  
through you. If Capt. Breshwood  
after arrest undisturbedly re-enters  
with the command of the cutter, tell  
Lieut. Caldwell to consider him  
as a mutineer & treat him accord-  
ingly. If any one attempts to haul  
down the American flag shoot  
him on the spot. -

John A. Dix  
Secretary of the Treasury.

GENERAL DIX'S FAMOUS ORDER.

tendency in the slave-labor states to seize United States property within their borders, he sent a special agent of his department (Hemphill Jones) to secure for service revenue cutters at Dix to sail to the North. Breshwood absolutely refused to obey the order. This fact Jones made known, by telegraph, to Dix, and added that the collector at New Orleans (Hatch) sus-

fained the rebellions captain. Dix instantly telegraphed back, "Tell Lieut. Caldwell to arrest Capt. Breshwood, assume command of the cutter, and obey the order I gave through you. If Capt. Breshwood, after arrest, undertakes to interfere with the command of the cutter, tell Lieut. Caldwell to consider him as a mutineer and treat him accordingly. *If anyone attempts to haul down the American flag, shoot him on the spot.*" The Secessionists in New Orleans had possession of the telegraph, and did not allow this despatch to pass, and the *McClelland* was handed over to the authorities of Louisiana. As Secretary Dix's order was flashed over the land it thrilled every heart with hope that the temporizing policy of the administration had ended. The loyal people rejoiced, and a small medal was struck by private hands commemo-

DIX MEDAL.

rative of the event, on one side of which was the Union flag, and around it the words, "THE FLAG OF OUR UNION, 1862;" on the other, in two circles, the last clause of Dix's famous order. After the war the authorship of the famous order was claimed for different persons, and it was asserted that General Dix was only the medium for its official communication. In reply to an inquiry addressed by the writer to General Dix at the close of August, 1873, he responded as follows from his country residence:

"SEAFIELD, WEST HAVEN, N. Y., Sept. 21, 1873.

"Your favor is received. The 'order' alluded to was written by myself, without any suggestion from any one, and it was sent off three days before it was communicated to the President or cabinet. Mr. Stanton's letter to Mr. Booner, of the *Ledger*, stating that it was wholly mine, was published in the *New York Times* last October or late in September, to silence forever the misrepresentations in regard to it. After writing it (about seven o'clock in the evening), I gave it to Mr. Hardy, a clerk in the Treasury Department, to copy. The copy was signed by me, and sent to the telegraph office the same evening, and the original was kept, like all other original despatches. It is now, as you state, in possession of my son, Rev. Dr. Dix, No 27 West Twenty-fifth Street, New York. It was photographed in 1863 or 1864, and you, no doubt, have the fac-simile thus made.

"Very truly yours, JOHN A. DIX."

**Dixie.** A supposed imaginary land of luxurious enjoyment somewhere in the Southern States, and during the Civil War it became a collective designation for the slave-labor states. "Dixie" songs and "Dixie" music prevailed all over those states and in the Confederate army. It had no such significance. It is a simple refrain that originated among negro emigrants to the South from Manhattan, or New York, island about eighty years ago. A man named Dixy owned a large tract of land on that island and many slaves. They became unprofitable, and the growth of the abolition sentiment made Dixy's slaves uncertain property. He sent quite a large number of them to

Southern planters and sold them. The heavier burdens imposed upon them there, and the memories of their birthplace and its comforts on Manhattan, made them sigh for Dixy's. It became with them synonymous with an earthly paradise, and the exiles sang a simple refrain in a pathetic manner about the joys at Dixy's. Additions to it elevated it into the dignity of a song, and it was chanted by the negroes all over the South, which, in the Civil War, was called the "Land of Dixie."

**Dodge, GRENVILLE M.**, was born at Danvers, Mass., April 12, 1831. He was educated at Partridge's Military Academy, Conn., and became a railroad surveyor in Illinois and Iowa and westward to the Rocky Mountains. He was sent to Washington in 1861 to procure arms and equipments for Iowa volunteers, and became colonel of a regiment in July. He commanded a brigade on the extreme right at the battle of Pea Ridge (which see), and was wounded. For his services there he was made brigadier-general. He was appointed to the command of the District of the Mississippi in June, 1862. He was with Sherman in his Georgia campaign, and was promoted to major-general. He finally commanded the Sixteenth Corps in that campaign, and in December, 1864, he succeeded Rosecrans in command of the Department of Missouri. In 1867-69 he was a member of Congress from Iowa.

**Dodge, HENRY**, was born at Vincennes, Ind., Oct. 12, 1782; died at Burlington, N. J., Jan. 19, 1867. He commanded a company of volunteers in the War of 1812-15, and rose to the position of lieutenant-colonel of mounted infantry in 1814. He fought the Indians from 1832 to 1834, when he made peace on the frontiers, and in 1835 commanded an expedition to the Rocky Mountains. He was Governor of Wisconsin and Superintendent of Indian Affairs from 1836 to 1841; a delegate in Congress from 1841 to 1845; and United States Senator from 1849 to 1857.

**Domestic Manufactures.** (See *Home Manufactures*.)

**Domestic Slave-trade.** The rapid extension of settlements in the southwest after the War of 1812-15, and the great profits derived there from the cultivation of cotton, had not only caused the revival of the African slave-trade, in spite of prohibitory laws, but it had given occasion to a rival domestic slave-trade, of which the national capital had become one of the centres, where it was carried on by professional traffickers in human beings. They bought up the slaves of impoverished planters of Maryland and Virginia, and sold them at large profits in the cotton-growing districts of the South and West. This new traffic, which included many of the worst features of the African slave-trade, was severely denounced by John Randolph, of Virginia, as "heinous and abominable, inhuman and illegal." This opinion was founded on facts reported by a committee of inquiry. Governor D. R. Williams, of South Carolina, denounced the traffic as "remorseless and cruel;" a "ceaseless dragging

along the streets and highways of a crowd of suffering victims to minister to insatiable avarice," condemned alike by "enlightened humanity, wise policy, and the prayers of the just." The governor urged that it had a tendency to introduce slaves of all descriptions from other states, "defiling the delightful avocations of private life" "by the presence of convicts and malefactors." The Legislature of South Carolina passed an act forbidding the introduction of slaves from other states. A similar act was passed by the Georgia Legislature. This legislation was frequently resorted to on occasions of alarm, but the profitable extension of cotton cultivation and the demand for slave labor overcame all scruples. Within two years after its passage, the prohibitory act of South Carolina was repealed. The interstate slave-traffic was carried on extensively until slavery was abolished in 1863. A Richmond newspaper, in 1861, urging Virginia to join the Southern Confederacy, which had prohibited the traffic between them and states that would not join them, gave as a most urgent reason for such an act, that if it were not accomplished the "Old Dominion" would lose this trade, amounting annually to from thirteen to twenty million dollars.

**Dominion in America, FRENCH AND ENGLISH CLAIMS FOR.** The Treaty of Aix-la-Chapelle (which see) was only a truce between France and England, contending for dominion in America. The former, excluded from all the frontier coasts of North America, aimed to repair this disadvantage by possessing the river St. Lawrence on the north and the Mississippi on the west and south, and a connection of the colonies of Louisiana and Canada through the intermediate lakes and waters. This design, which the English frustrated, was regarded by the latter as not only prejudicial to them in its operation, but unjust in principle. The French claim rested upon a prior settlement in New France. The English claim rested upon the grant to the Plymouth Company (1620) of all the lands between the parallels of forty and forty-eight degrees north latitude to the Pacific Ocean (see *Council of Plymouth*), and on treaties made with the native inhabitants of the continent. They insisted, moreover, that the country of the Six Nations was ceded to them by the French in the treaties at Utrecht (1713) and Aix-la-Chapelle (1748). The English, therefore, regarded as encroachments by the French the erection by the latter of about twenty forts, besides block-houses and trading-posts, within claimed English domain. So, while Acadia furnished one field for hostilities between the two nations, the country along the lakes and in the Ohio and Mississippi valleys furnished another. The dispute was settled by the arbitrament of arms.

**Dongan, THOMAS**, was a younger son of an Irish baronet, born in 1634. He was a colonel in the royal army, and served under the French king. In 1678 he was appointed Lieutenant-governor of Tangier, Africa, whence he was recalled in 1680. The relations between England

and France were then delicate, and Dongan being a Roman Catholic, like the proprietor of New York, he was chosen by Duke James governor of that province (1683), as it was thought his experience in France might make it easier to keep up friendly relations with the French on the borders. Dongan caused a company of merchants in New York to be formed for the management of the fisheries at Pemaquid, a part of the duke's domain (see *Pemaquid*), and he took measures to protect the territory from encroachments. Dongan managed the relations between the English, French, and Indians with dexterity. He was not deceived by the false professions of the French rulers or the wiles of the Jesuit priests; and when De Nonville invaded the country of the Five Nations (1686) he showed himself as bold as this leader in defence of the rights of Englishmen. Dongan sympathized with the people of his province in their aspirations for liberty, which his predecessor (Andros) had denied; and he was instrumental in the formation of the first General Assembly of New York, and in obtaining a popular form of government. (See *Liberties and Franchises, Charter of*.) When the perfidious king violated his promises while he was duke, Dongan was grieved, and protested; and when the monarch ordered him to introduce French priests among the Five Nations, the enlightened governor resisted the measure as dangerous to English power on the continent. His firmness in defence of the rights of the people and the safety of the English colonies in America against what he could not but regard as the treachery of the king finally offended his sovereign, and he was dismissed from office in the spring of 1688, when Andros took his place, bearing a vice-regal commission to rule all New England besides. Dongan remained in the province until persecuted by Leisler in 1690, when he withdrew to Boston.

**Doolittle, AMOS**, one of the earliest engravers on copper in the United States. While a volunteer in the camp at Cambridge (1775) he visited the scene of the skirmish at Lexington and made a drawing and engraving of the affair, which furnishes the historian with the only correct representation of the buildings around the "Green" at that time. He afterwards made other historical prints of the time.

**Dorr, THOMAS WILSON**, was born in Providence, R. I., in 1805; died there, Dec. 27, 1854. He graduated at Harvard in 1823. He studied law with Chancellor Kent, and began his practice in 1827. He is chiefly conspicuous in our history as the chosen governor of what was called the "Suffrage party," and attempted to take the place of what was deemed to be the legal state government. (See *Rhode Island*.) He was tried for and convicted of high-treason, and sentenced to imprisonment for life in 1842, but was pardoned in 1847; and in 1853 the Legislature restored to him his civil rights and ordered the record of his sentence to be expunged. He lived to see his party triumph.

**Doubleday, ARNER**, was born at Ballston

Spa, N. Y., June 26, 1819, and graduated at West Point in 1842. He served in the artillery in the war with Mexico; rose to captain in 1855; and served against the Seminole Indians in 1856-58. Captain Doubleday was an efficient officer in

a vigorous promoter of the war with Mexico, and was United States Senator from 1847 to 1861. He advanced and supported the doctrine of popular sovereignty (which see) in relation to slavery in the territories, and was the author of the

ARNER DOUBLEDAY.

Fort Sumter with Major Anderson during its siege. He fired the first gun (April 12, 1861) upon the insurgents from that fort. On May 14 he was promoted to major, and on Feb. 3, 1862, to brigadier-general of volunteers. In Hooker's corps, at the battle of Antietam, he commanded a division; and when Reynolds fell at Gettysburg, Doubleday took command of his corps. He had been made major-general in November, 1862, and had been conspicuously engaged in the battles of Fredericksburg and Chancellorsville. He was breveted brigadier and major-general of the United States Army in March, 1865, and was commissioned colonel of infantry in September, 1867.

**Doughfaces.** During the great debate on the slavery question in 1820, elicited by proceedings in relation to the admission of Missouri as a free-labor or slave-labor state, eighteen Northern men were induced to vote for a sort of compromise, by which the striking prohibition of slavery out of the Missouri Bill was carried by ninety to eighty-seven. John Randolph, who denounced the compromise as a "dirty bargain," also denounced these eighteen Northern representatives as "doughfaces"—plastic in the hands of expert demagogues. The epithet was at once adopted into the political vocabulary of the Republic, where it remains.

**Douglas, STEPHEN ARNOLD,** was born at Brandon, Vt., April 23, 1813; died in Chicago, June 3, 1861. He learned the business of cabinet-making, studied law, became an auctioneer's clerk in Jacksonville, Ill., and taught school until admitted to the bar, when he soon became an active politician. Because of his small stature and power of intellect and speech he was called "The Little Giant." He was Attorney-general of Illinois in 1835; was in the Legislature; was chosen Secretary of State in 1840; judge in 1841; and was in Congress in 1843-47. He was

STEPHEN ARNOLD DOUGLAS.

Kansas-Nebraska Bill (which see); and in 1856 was a rival candidate of Buchanan for the nomination for the Presidency. He took sides in favor of freedom in Kansas, and so became involved in controversy with President Buchanan. He was a candidate of the Democratic party in 1860 for President of the United States, but was defeated by Abraham Lincoln.

**Douglass, FREDERICK,** was born near Easton, Md., about 1817. He is a mulatto, the son of a slave mother. He lived in Baltimore after he was ten years of age, and secretly taught himself to read and write. Endowed with great

FREDERICK DOUGLASS.

natural moral and intellectual ability, he fled from slavery at the age of twenty-one years, and, going to New Bedford, married, and supported himself by day-labor on the wharves and in workshops. In 1841 he spoke at an anti-slavery convention at Nantucket, and soon afterwards was made the agent of the Massachusetts Anti-slavery Society. He lectured extensively in New England, and, going to Great Britain, spoke in nearly all the large towns in

that country on the subject of slavery. On his return to the United States, in 1847, he began the publication, at Rochester, N. Y., of the *North Star* (afterwards *Frederick Douglass's Paper*), a weekly newspaper. He had published his autobiography. In 1870 he became editor of the *National Era* at Washington city, and in 1876 was appointed marshal of the District of Columbia.

**Downfall of Andros.** When news came to Boston of the revolution in England, Governor Andros affected to disbelieve it, and imprisoned those who brought it. With the people the "wish was father to the thought," and they gave credence to the rumor and arranged a popular insurrection. A mob gathered in the streets of Boston. The sheriff who attempted to disperse them was made a prisoner; so also was the commander of the frigate *Rose* as he landed from his boat. The militia assembled in arms at the town-house under their old officers. Andros and his council withdrew in alarm to a fort which crowned an eminence still known as Fort Hill. Simon Bradstreet, a former governor, then eighty-seven years of age, was seen in the crowd by the militia, and immediately proclaimed the chief magistrate of the redeemed colony. The magistrates and other citizens formed themselves into a council of safety. The ready pen of Cotton Mather wrote a proclamation, and Andros was summoned to surrender. A barge sent from the *Rose* to take off the governor and his council was intercepted and captured. Andros yielded, and, with the royal ex-President Dudley, Randolph, and his other chief partisans, was imprisoned (April 18, 1689). Andros, by the connivance of a sentinel, escaped to Rhode Island, but was brought back. In July following he was sent to England. (See *Andros*.)

**Draft Riots in New York.** A draft or conscription of men for the National army had been authorized (April, 1862) by Congress. The President refrained from resorting to this extreme measure as long as possible, but, owing to the great discouragement to volunteering produced by the unpatriotic Peace Faction (which see) and the Knights of the Golden Circle (which see), he issued a proclamation (May 8, 1863) for a draft, to begin in July, and caused the appointment in every Congressional district of an enrolling board. This was made the occasion for inaugurating a counter-revolution in the free-labor states. Organized resistance to the measure instantly appeared. The leaders of the peace faction denounced the law and all acts under it as despotic and unconstitutional, and an obscure lawyer of New York city, named McCunn, who had been elected a judge, so decided. He was sustained by three judges of the Supreme Court of Pennsylvania—Lowrie, Woodward, and Thompson—and, supported by these legal decisions, the politicians antagonistic to the administration opposed the draft with a high hand. The public mind was greatly excited by the harangues of public speakers and the utterance of the opposition newspapers when the draft was ordered. The national anniversary (July 4) was

made the special occasion for these utterances, and distinguished members of the peace faction exhorted the people to stand firmly in opposition to what they called the "usurpations of the government." Smeers were uttered on that day because Vicksburg had not been taken, and the President had made "a midnight cry for help" because of Lee's invasion in Maryland; when at that very moment Vicksburg, with thirty-seven thousand prisoners, was in the possession of General Grant, and Lee and his legions, discomfited at Gettysburg, were preparing to flee back to Virginia. A leading opposition journal in New York city counselled its readers to provide themselves with a "good rifled musket, a few pounds of powder, and a hundred or so of shot," to resist the draft. On the evening of July 3 an incendiary handbill, calculated to incite to insurrection, was scattered broadcast over the city; and it is believed that an organized outbreak had been planned, and would have been executed, but for the defeat of Lee that very day at Gettysburg, and Grant's success at Vicksburg. When, on Monday (July 13), the draft began in New York, in a building on Third Avenue, at Forty-sixth Street, a large crowd (who had cut the telegraph-wires leading out of the city) suddenly appeared, attacked the building, drove out the clerks, tore up the papers, poured a can of kerosene over the floor, and very soon that and an adjoining building were in flames. The firemen were not allowed to extinguish them, and the police who came were overpowered, and the superintendent (Kennedy) was severely beaten by the mob. So began a tumult in which thousands of disorderly persons, chiefly natives of Ireland, were engaged for full three days and nights. The disorders broke out simultaneously at different points, evidently having a central head somewhere. The cry against the draft soon ceased, and those of "Down with the abolitionists!" "Down with the niggers!" "Hurrah for Jeff Davis!" succeeded. The mob compelled hundreds of citizens—driven out of manufacturing establishments which they had closed, or in the streets—to join them; and, under the influence of strong drink, arson and plunder became the business of the rioters. The special objects of their wrath were the innocent colored people. They laid in ashes the Colored Orphan Asylum, and the terrified inmates, who fled in every direction, were pursued and cruelly beaten. Men and women were beaten to death in the streets, and the colored people in the city were hunted as if they were noxious wild beasts. Finally, the police, aided by the military, suppressed the insurrection in the city, but not until one thousand persons had been killed or wounded, and property to the amount of \$2,000,000 destroyed. Over fifty buildings had been destroyed by the mob, and a large number of stores and dwellings, not burned, were sacked and plundered. This riot was undoubtedly an irregular outbreak of a vast conspiracy against the life of the Republic.

**Drainville, Skirmish At.** The loyal people of the country became impatient because the Army of the Potomac, full two hundred thousand

strong, at near Christmas, 1861, was seemingly kept at bay by sixty thousand Confederates—a little more than their number at Manassas. There was a sense of relief when, on Dec. 20, General E. O. C. Ord had a sharp skirmish with Confederate cavalry near Drainsville, led by Colonel J. E. B. Stuart. Ord had gone out to capture insurgent foragers, and to gather forage from the farms of secessionists. He was attacked by Stuart, who had come up from Centreville. A severe fight occurred, and the Confederates were beaten and fled. The Nationals lost seven killed and sixteen wounded; the Confederates lost forty-three killed and one hundred and forty-three wounded. The Nationals returned to camp with sixteen wagon-loads of hay and twenty-two of corn.

**Drake, SAMUEL GARDINER**, was born at Pittsfield, N. H., Oct. 11, 1798; died in Boston, June 14, 1875. He received a common-school education, and taught in a district school for several years. Settling in Boston, he there established the first antiquarian book-store in the United States, in 1828. He was one of the founders of the New England Historical Genealogical Society, of which he was at one time president, and in 1847 began the publication of the *New England Genealogical Register*, continuing it many years as editor and publisher, making large contributions of biography to its pages. Mr. Drake resided in London about two years (1858-60). He prepared many valuable books on biographical and historical subjects. His *Book of the Indians* is a standard work on Indian history and biography. He prepared an excellent illustrated *History of Boston*, and his illustrative annotations of very old American books and pamphlets are of exceeding value.

**Drake, SIR FRANCIS**, was born near Tavistock, Devonshire, England, about 1542; died near Puerto Bello, Dec. 27, 1595. Becoming a seaman in early youth, he was owner and master of a ship at the age of eighteen years. After making commercial voyages to Guinea, Africa, he sold her, and invested the proceeds in an expedition to Mexico, under Captain Hawkins, in 1567. The fleet was nearly destroyed in an attack by the Spaniards at San Juan de Ulloa (near Vera Cruz), and Drake returned to England stripped of all his property. The Spanish government refused to indemnify him for his losses, and he sought revenge and found it. Queen Elizabeth gave him a commission in the royal navy, and in 1572 he sailed from Plymouth with two ships for the avowed purpose of plundering the Spaniards. He did so successfully on the coasts of South America, and returned in 1573 with greater wealth than he ever possessed before. Drake was welcomed as a hero; he soon won the title honorably by circumnavigating the globe. He had seen from a mountain on Darien the waters of the Pacific Ocean, and resolved to explore them. Under the patronage of the queen, he sailed from Plymouth in December, 1577; passed through the Strait of Magellan into the Pacific Ocean; pillaged the Spanish settlements on the coasts of Peru and Chili, and a Spanish galleon

laden with gold and silver bullion; and, pushing northward, discovered the bay of San Francisco, took possession of California in the name of his queen, and named the country New Albion, or New England. (See *New England*.) Fearing encounters with the Spaniards on his return with his treasure-laden vessels, Drake sought a north-east passage to England. Met by severe cold, he turned back, crossed the Pacific to the Spice Islands, thence over the Indian Ocean, and, doubling the Cape of Good Hope, reached England in November, 1580. The delighted queen knighted Drake, who afterwards plundered Spanish towns on the Atlantic coasts of America; and, returning, took a distressed English colony from Roanoke Island (see *Roanoke*), and carried them to England. In command of a fleet of thirty vessels, in 1587, he destroyed one hundred Spanish vessels in the harbor of Cadiz; and from a captured vessel in the East India trade the English learned the immense value of that trade and how to carry it on. As vice-admiral, Drake materially assisted in defeating the Spanish Armada in 1588; and the next year he ravaged the coasts of the Spanish peninsula. After various other exploits of a similar kind, he accompanied Hawkins to the West Indies in 1595. Hawkins died at Porto Rico, and Drake, in supreme command, gained victory after victory over the Spaniards. Late in the year a fatal malady destroyed his life, and he was buried at sea.

**Drake, SIR FRANCIS, IN CALIFORNIA.** After Drake had made his plundering raid along the coasts of Spanish South America in 1579, he sailed northward as high, probably, as latitude 46°, or near the boundary between Oregon and the British possessions. He possibly went farther north, for he encountered very cold weather in June, and turned back. Drake entered a fine bay and landed his stores, preparatory to repairing his ship; and he remained on the coast full a month, hospitably treated by the natives. Late in June he was visited by the king of the country and his official attendants. The former was dressed in rabbit-skins—a peculiar mark of distinction. His officers were clad in feathers, and his other followers were almost naked. Drake received them cordially. The sceptre-bearer and another officer made speeches, after which the natives indulged in a wild dance, in which the women joined. Then Drake was asked to sit down, when the king and his people desired him to "become the king and governor of the country." Then the king, singing with all the rest, set a crown upon Drake's head, and saluted him as *Hioh*, or sovereign. Drake accepted the honor in the name of Queen Elizabeth. He took formal possession of the country, named it New Albion (see *New England*), and, erecting a wooden post, placed upon it a copper plate, with an inscription, on which was asserted the right of Queen Elizabeth and her successors to the kingdom, with the time of his arrival there, and a statement of the voluntary resignation of the country to the English by the king and people. On the same plate were engraved the portrait and arms of the queen and

the navigator. Then he sailed for the Molucca Islands. It is believed that Sir Francis Drake entered the "Golden Gate" of San Francisco Bay, and that near its shores the ceremony of his coronation took place.

**Draper, JOHN WILLIAM, M.D., LL.D.**, scientist, was born at St. Helen's, near Liverpool, Eng., May 5, 1811, and was educated in scientific studies at the University of London. He came to America in 1833, and continued his

JOHN WILLIAM DRAPER.

medical and chemical studies in the University of Pennsylvania, where he took the degree of M.D. He became (1836-39) professor of chemistry, natural philosophy, and physiology in Hampden-Sidney College, Virginia. From 1839 Dr. Draper was connected, as professor, with the University of the City of New York, and aided in establishing the University Medical College, of which he was appointed (1841) professor of chemistry. In 1850 physiology was added to the chair of chemistry. From that year he was the president of the medical faculty of the institution, and in 1874 he was also president of the scientific department of the university. Dr. Draper was one of the most patient, careful, and acute of scientific investigators. His industry in experimental researches was marvellous, and his publications on scientific subjects are voluminous. He contributed much to other departments of learning. His *History of the Intellectual Development of Europe* appeared in 1862; his *Thoughts on the Future Civil Policy of America*, in 1865; and his *History of the American Civil War*, in three volumes, appeared between 1867 and 1870. To Dr. Draper are due many fundamental facts concerning the phenomena of the spectrum—of light and heat. Among his later productions are reports of experimental examinations of the distribution of heat and of chemical force in the spectrum. Dr. Draper's researches materially aided in perfecting Daguerre's great discovery. In 1876 the Rumford gold medal (see *Count Rumford*) was bestowed upon Dr. Draper by the American Academy of Sciences. He died January 4, 1882.

**Drayton, CHARGE OF JUDGE.** The first charge to the grand jury at Camden, S. C., in 1774,

by Judge William H. Drayton, is conspicuous in American history. "In order to stimulate your exertions in favor of your civil liberties, which protect your religious rights," he said, "instead of discoursing to you on the laws of other states and comparing them to our own, allow me to tell you what your civil liberties are, and to charge you, which I do in the most solemn manner, to hold them dearer than your lives—a lesson and charge at all times proper from a judge, but particularly so at this crisis, when America is in one general and grievous commotion touching this truly important point." The judge then discoursed on the origin of the colony, the nature of the constitution, and their civil rights under it, and concluded by saying that some might think his charge inconsistent with his duty to the king who had just placed him on the bench; "but, for my part," he said, "in my judicial character I know no master but the law. I am a servant, not to the king, but to the constitution; and, in my estimation, I shall best discharge my duty as a good servant to the king and a trusty officer under the constitution when I boldly declare the laws to the people and instruct them in their civil rights." This charge, scattered broadcast by the press, had a powerful influence in the colonies, and, with other patriotic acts, cost Judge Drayton his office, for he was soon suspended.

**Drayton, WILLIAM HENRY**, was born in South Carolina, September, 1742; died in Philadelphia, Sept. 3, 1779. He was educated in England, and on his return he became a political writer. In 1771 he was appointed privy-councillor for the

WILLIAM HENRY DRAYTON.

province of South Carolina, but he soon espoused the cause of the patriots and protested against the proceedings of his colleagues. In 1774 he addressed a pamphlet to the Continental Congress, in which he stated the grievances of the Americans, and drew up a bill of rights, and substantially marked out the line of conduct adopted by the Congress. He was appointed a judge in 1774, but was suspended from the office when he became a member of the Committee of Safety at Charleston. In 1775 he was president of the Provincial Congress of South Carolina. In 1776 he became chief-justice of

the state; and his published charge to a grand jury in April, that year, displayed great wisdom and energy, and was widely circulated and admired. Mr. Drayton was chosen President, or Governor, of South Carolina in 1777, and in 1778-79 was a member of the Continental Congress. He wrote a history of the Revolution to the end of the year 1778, which was published by his son in 1821.

**Dred Scott Case, THE.** At about the time that Mr. Buchanan became President-elect of the Republic a case of much moment was adjudicated by the Supreme Court of the United States. A negro named Dred Scott had been the slave of a United States army officer living in Missouri. He was taken by his master to a military post in Illinois, to which the latter had been ordered in the year 1834. There Scott married the female slave of another officer, with the consent of their respective masters. They had two children born in that free-labor territory. The mother was bought by the master of Scott, and parents and children were taken by that officer back to Missouri and there sold. Scott sued for his freedom on the plea of his involuntary residence in a free-labor territory and estate for several years. The case was tried in the circuit court of St. Louis, and the decision was in Scott's favor. The Supreme Court of the state reversed the decision, and the case was carried to the Supreme Court of the United States, Chief-justice Roger B. Taney presiding. The chief-justice and a majority of the court were friends of the slave system, and their decision, which, for prudential reasons, was withheld until after the Presidential election in the fall of 1856, was against Scott. The chief-justice declared that any person "whose ancestors were imported into this country and held as slaves" had no right to sue in a court in the United States; in other words, he denied the right of citizenship to any person who had been a slave or was a descendant of a slave. The chief-justice, with the sanction of a majority of the court, further declared that the framers and supporters of the Declaration of American Independence did not include the negro race in our country in the great proclamation that "all men are created equal;" that the patriots of the Revolution and their progenitors "for more than a century before" regarded the negro race as so far inferior that they had no rights which the white man was bound to respect, and that they were never spoken of except as property. He also declared that the framers of the National Constitution held the same views. The chief-justice went further in his extra-judicial declarations, saying that the Missouri Compromise (which see), and all other acts restricting slavery, were unconstitutional, and that neither Congress nor local legislatures had any authority for restricting the spread over the whole Union of the institution of slavery. The dominant party assumed that the decision was final—that slavery was a national institution, having the right to exist anywhere in the Union, and that the boast of a Georgia politician that he should yet "count his slaves on Bunker's Hill" might

be legally carried out. President Buchanan, who had been informed of this decision before its promulgation, foreshadowed his course in the matter in his inaugural address (March 4, 1857), in which he spoke of the measure as one which would "speedily and finally" settle the slavery question; and he announced his determination to cheerfully submit to it. The decision, or opinion, was promulgated March 6, 1857. (See *March of Public Sentiment*.)

**Drewry's Bluff, COMMODORE RODGERS AT.** When Huger fled from Norfolk (see *Norfolk, Evacuation of*) the Confederate flotilla went up the James River, pursued by National gunboats under Commodore Rodgers, whose flag-ship was the *Galena*, the round-top of which was iron-clad, so as to make it a safe lookout. The pur-

AN ARMORED LOOKOUT.

suers met with no obstructions until they approached Drewry's Bluff, a bank on the right side of the James, nearly two hundred feet in height, about eight miles below Richmond. Below this point were two rows of obstructions in the river, formed by spiles and sunken vessels, and the shores were lined with rifle-pits filled with sharpshooters. The *Galena* anchored within six hundred yards of the battery, and opened fire upon it on the morning of May 15. A sharp fight was kept up until after eleven o'clock, when the ammunition of the *Galena* was nearly expended, and the flotilla withdrew. Rodgers lost in the attack twenty-seven men and a 100-pound rifled cannon, which burst on board the gunboat *Naugatuck*, disabling her. The Confederate loss in the battery was ten. Rodgers fell back to City Point.

**Drummond, SIR GEORGE GORDON,** was born in Quebec in 1771; died in London, Oct. 10, 1854. He entered the British army in 1789; served in Holland and Egypt; and in 1811 was made lieutenant-general. In 1813 he was second in command to Sir George Prevost; planned the capture of Fort Niagara in December of that year; took the villages of Black Rock and Buffalo; captured Oswego in May, 1814; and was in chief command of the British forces at the battle of Lundy's Lane (which see) in July. In August he was repulsed at Fort Erie, with heavy loss, and was severely wounded. He succeeded Prevost in 1814, and returned to England in 1816.

The next year he received the grand cross of the Bath.

**Duane, JAMES**, was born in New York city, Feb. 6, 1733; died at Duanesburg, N. Y., Feb. 1, 1797. He inherited a large estate at the site of Duanesburg, which he began to settle in 1765. In 1759 he married a daughter of Colonel Robert Livingston. He became an active patriot in the Revolution; was a member of the First Continental Congress (1774); also in Congress from 1780 to 1782; was in the Provincial Convention of New York in 1776-77; and was on the committee to draft the first constitution of that state. He returned to New York city in 1783, after the evacuation, and was the first mayor of that city after the Revolution. In 1783-84 he was a member of the Council and State Senator, and in 1788 was a member of the convention of New York that adopted the National Constitution. From 1789 to 1794 Mr. Duane was United States District Judge.

**Duane's Proposition.** Late in May, 1775, James Duane, a delegate from New York in the Continental Congress, moved, in Committee of the Whole, the "opening of negotiations in order to accommodate the unhappy disputes subsisting between Great Britain and the colonies, and that this be made a part of the [second] petition to the king" prepared by John Jay. It was a dangerous proposal at that time, as it was calculated to cool the ardor of resistance which then animated the people. Duane was a stanch patriot, but was anxious for peace, if it could be procured with honor and for the good of his country.

**Duché, JACOB, D.D.**, was born in Philadelphia in 1739; died there, Jan. 3, 1798. Educated at the University of Pennsylvania, he became an eloquent Episcopalian. A descendant of a Huguenot, he naturally loved freedom. Assist-

JACOB DUCHE.

ant minister of Christ Church, Philadelphia, he was invited by the Continental Congress of 1774 to open their proceedings with prayer, and received their public thanks. In 1775 he became rector of Christ Church, and espoused the patriot cause. Of a timid nature, Duché, when the British took possession of Philadelphia (1777),

alarmed by the gloomy outlook, forsook the Americans, and, in a letter to Washington, urged him to do likewise. This letter was transmitted to Congress, and Duché fled to England, where he became a popular preacher. His estate was confiscated, and he was banished as a traitor. In 1790 Duché returned to Philadelphia, and his sins were forgiven him.

**Ducking-stool.** The English colonies in America continued for a long time the manners and customs of their native land: among others, that of the use of the ducking-stool for the punishment of inveterate scolding women. Bishop Meade, in *Old Churches, Ministers, and Families in Virginia*, says, "If a woman was convicted of slander, her husband was made to pay five hundred-weight of tobacco;" but the law proving insufficient, the penalty was changed to ducking. Places for ducking were prepared at court-houses. An instance is mentioned of a woman who was ordered to be ducked three times from a vessel lying in the James River. The woman was tied to a chair at the longer end of a lever, controlled at the shorter end by men with a rope. The stool being planted firmly, the woman was raised on the lever, and then lowered so as to be plunged under the water.

**Dudley, JOSEPH**, Governor of Massachusetts, was born at Roxbury, July 23, 1647; died there, April 2, 1720. Graduated at Harvard in 1665. He prepared for the ministry, but, preferring politics, he became a representative in the General Court and a magistrate. From 1677 to 1681 he was one of the commissioners for the united colonies of New England. He was in the battle with the Narragansets in 1675, and was one of the commissioners who dictated the terms of a treaty with that tribe. In September, 1685, King James commissioned him President of New England, and in 1687 he was made chief-justice of the Supreme Court. Dudley was sent to England with Andros in 1689, and the next year was made chief-justice of New York. He went to England in 1693, and was deputy-governor of the Isle of Wight. He entered Parliament in 1701, and from 1702 to 1715 he was captain-general and governor of Massachusetts. Then he retired to his quiet home at Roxbury.

**Dudley, THOMAS**, Governor of Massachusetts in 1634, and also in 1640, 1645, and 1650. He was born in Northampton, England, in 1576; died at Roxbury, Mass., July 31, 1653. He was an officer of Queen Elizabeth, serving in Holland; and afterwards he became a Puritan, and retrieved the fortunes of the Earl of Lincoln by a faithful care of his estate as his steward. He came to Boston in 1630, as deputy-governor, with his son-in-law, Simon Bradstreet, and held the office ten years. He was appointed major-general of the colony in 1644.

**Dudley's Defeat.** (See *Fort Meigs and its Defence*.)

**Duer, WILLIAM**, was born in England, March 18, 1747; died May 7, 1799. In 1767 he was aid to Lord Clive in India. He came to America,

and in 1768 he purchased a tract of land in Washington County, N. Y.; became colonel of the militia, judge of the county court, member of the New York Provincial Congress, and of the Committee of Safety. He was one of the committee that drafted the first constitution of the State of New York (1777), and was a delegate in Congress in 1777-78; and he was Secretary of the Treasury Board until the reorganization of the finance department under the National Constitution. He was Assistant Secretary of the Treasury under Hamilton until 1790. Colonel Duer married (1779) Catharine, daughter of Lord Stirling.

**Dug Springs, BATTLE AT (1861).** General Lyon was eighty miles from Springfield when he heard of the perils of Sigel after the fight at Carthage (which see). He pushed on to the relief of the latter, and on July 13 he and Sigel joined their forces, when the general took the chief command. The combined armies numbered, at that time, about six thousand men, horse and foot, with eighteen pieces of artillery. There Lyon remained in a defensive attitude for some time, waiting for reinforcements which had been called for, but which did not come. The Confederates had been largely reinforced; and at the close of July Lyon was informed that they were marching upon Springfield in two columns—twenty thousand—under the respective commands of Generals Price, McCulloch (of Texas), Pearce, McBride, and Rains. Lyon went out to meet them with about six thousand men, foot and horse, and eighteen cannons, leaving a small force to guard Springfield. At Dug Springs, nineteen miles southwest of Springfield, in a broken, oblong valley, they encountered a large Confederate force under General Rains. While the National vanguard of infantry and cavalry, under Steele and Stanley, were leading, they were unexpectedly attacked by Confederate infantry who suddenly emerged from the woods. A sudden charge of twenty-five of Stauloy's horsemen scattered the Confederates in every direction. The charge was fearful, and the slaughter was dreadful. "Are these men or devils, they fight so?" asked some of the wounded. Confederate cavalry now appeared emerging from the woods, when some of Lyon's cannons, managed by Captain Totten, threw shells that frightened the horses, and the Confederates were scattered. They then withdrew, leaving the valley in possession of the Nationals. Lyon's loss was eight men killed and thirty wounded; that of Rains was about forty killed and as many wounded.

**Duke of York's Patent.** This grant, given by King Charles II. to his brother James, included all the country between the Hudson and Connecticut rivers, which was also covered by the charter of Connecticut, and in many places, especially near the Sound, was settled by the English Puritans. This grant produced alarm, and commissioners were appointed on both sides to consider the matter. (See *Duke's Charter*.)

**Duke's Charter, THE.** On the 12th of March, 1664 (O. S.), King Charles II. granted to his

brother James, Duke of York and Albany, under a patent bearing the royal seal, a territory in America which included all the lands and rivers from the west side of the Connecticut River to the east side of the Delaware River. Its inland boundary was a line from the head of the Connecticut River to the source of the Hudson, thence to the head of the Mohawk branch of the Hudson, and thence to the east of Delaware Bay. It also embraced Long Island and the adjacent islands, including Martha's Vineyard and Nantucket; also the "territory of Pemaquid," in Maine. This granted territory embraced all of New Netherland and a part of Connecticut, which had been affirmed to other English proprietors by the charter of 1662. (See *Winthrop*.) The duke (then Lord High Admiral of England) detached four ships from the royal navy, bearing four hundred and fifty regular troops, for the service of taking possession of his domain. Colonel Richard Nicolls commanded the expedition. Stuyvesant was compelled to surrender (see *Stuyvesant*), and the name of the territory was changed to New York. Very soon commissioners appointed by the governments of New York and Connecticut to confer about the boundary between the two colonies agreed, for the sake of peace and good-fellowship, that the territory of New York should not extend farther eastward than along a line twenty miles from the Hudson River, and that remains the boundary to this day. In 1673 the Dutch (partly through treachery, it is believed) again became possessors of New York, but the following year it was returned to England by treaty. It was decided that these political changes had cancelled the Duke of York's title to the domain, and a new one, with boundaries defined as in the first grant, was issued (June 29, 1674), but the line agreed upon—twenty miles eastward of the Hudson—was fixed upon as the eastern limit of the Province of New York.

**Duke's County.** In the grant of New Netherland by Charles II. to his brother James, Duke of York (1664), Long Island, Nantucket, Martha's Vineyard, and the Elizabeth Islands (see *Gosnold*) were included, they having been purchased of Henry, grandson of William, Earl of Stirling, and previously assigned to the duke. In 1683, when the Province of New York was parcelled into counties, these islands off the coast of Massachusetts were constituted a shire by the name of Duke's County. By the authority of William and Mary this county was taken from New York and annexed to Massachusetts.

**Duke's Laws, THE.** In 1665, a meeting was held at Hempstead, L. I. (Feb. 28), at which thirty-four delegates assembled—two representatives of each of the English and Dutch towns on Long Island and two in Westchester. Some of them had been members of Stuyvesant's last General Assembly of New Netherland the previous year. (See *New Netherland*.) The meeting had been called by Governor Nicolls to "settle good and known laws" in their government for the future and receive their "best advice and information." The governor laid before the

delegates a body of general laws, which had been chiefly compiled from statutes then in force in New England, with more toleration in matters of religion. The delegates were not satisfied with many of them, and several amendments were made; but when they asked to be allowed to choose their own magistrates, the governor exhibited instructions from the Duke of York, his master, wherein the choice of "officers of justice was solely to be made by the governor;" and he told them decidedly that if they would have a greater share in the government than he could give them, they must go to the king for it. The delegates found that they were not popular representatives to make laws, but were mere agents to accept those already prepared for them. They had merely exchanged the despotism of Stuyvesant for English despotism. (See *Stuyvesant*.) The New York code adopted by that meeting was arranged in alphabetical order of subjects and published, and is generally known as the Duke's Laws.

Dunlap, WILLIAM, was a painter, dramatist, theatrical manager, and historian. He was born at Perth Amboy, N. J., Feb. 19, 1766; died in New York city, Sept. 28, 1839. His father, being a loyalist, went to New York city in 1777, where William began to paint. He made a portrait of Washington at Rocky Hill, N. J., in 1783. The next year he went to England and received instructions from Benjamin West. He became an actor for a short time, and in 1796 was one of the managers of the John Street Theatre, New York. He took the Park Theatre in 1798. From 1814 to 1816 he was paymaster-general of the New York State militia. He began a series of paintings in 1816. In 1833 he published a *History of the American Theatres*, and in 1834 a *History of the Arts of Design*. His *History of New Netherland and the State of New York* was published in 1840. Mr. Dunlap was one of the founders of the National Academy of Design.

Dunmore and Patrick Henry. The bold movements in the Virginia Convention (March, 1775) excited the official wrath of Governor Dunmore, who stormed in proclamations; and to frighten the Virginians (or, probably, with a more mischievous intent), he caused a rumor to be circulated that he intended to excite an insurrection among the slaves. Finally, late in April, he caused marines to come secretly at night from the *Fowey*, a sloop-of-war in the York River, and carry to her the powder in the old magazine at Williamsburg. The movement was discovered. The minute-men assembled at dawn, and were with difficulty restrained from seizing the governor. The assembled people sent a respectful remonstrance to Dunmore, complaining of the act as specially cruel at that time, when a servile insurrection was apprehended. The governor replied evasively, and the people demanded the return of the powder. When Patrick Henry heard of the act, he gathered a corps of volunteers and marched towards the capital. The frightened governor sent a deputation to meet him. One of them was the

receiver-general of the province. They met sixteen miles from Williamsburg, where the matter was compromised by the receiver-general paying the full value of the powder. Henry

THE OLD MAGAZINE.

sent the money to the public treasury and returned home.

Dunmore captures a Printing-office. John Holt, a Whig, published a newspaper at Norfolk, Va., at the time when British vessels, with Governor Dunmore, appeared before that town. Dunmore, offended with Holt for "favoring sedition and rebellion," sent a small armed party ashore to seize the printing-office. They met with no resistance, and the press and other printing materials were carried on board the man-of-war *Fowey*, with two printers, and there used in publishing a gazette that favored the royal side.

Dunmore (John Murray), FOURTH EARL OF, Governor of Virginia (1771-75), was born in 1732; died at Ramsgate, Eng., May, 1809. He was a Scotch nobleman, descended in the feminine line from the house of Stuart. He was made governor of New York in January, 1770, and of Virginia July, 1771, arriving there early in 1772. When the Virginia Assembly recommended a committee of correspondence (March, 1773), he immediately dissolved them; and from that time until he fled for safety on board a ship-of-war in the York River

SEAL OF LORD DUNMORE.

(June 6, 1775), he was in continual collision with the people. He set fire to and destroyed Norfolk, Va., on the 1st of January, 1776, having been defeated in a battle at the Great Bridge (Dec. 9, 1775) ten days before. In an engagement in the Chesapeake (July 8) he was wounded, and soon afterwards returned to England. In 1786 Dunmore was made governor of Bermuda.

Dunmore's Call, RESPONSE TO. (See *Dunmore's War*.) When Governor Dunmore called

for the militia of the southwest to fight the Ohio Indians, the settlers in the region of the Greenbrier, New River, and Holston responded cheerfully. The Republicans of Watauga (which see), led by Evan Shelby, about fifty in number, with James Robertson and Valentine Sevier as subalterns, left home in August and joined the camp of the Virginians on the Great Levels of the Greenbrier, at (present) Lewisburg. Then these militiamen traversed the pathless mountains with their pack-horses and droves of cattle, and reached the mouth of the Kanawha on Oct. 6. (See *Point Pleasant Battle*.)

**Dunmore's Conspiracy.** John Murray, Earl of Dunmore, succeeded Lord Botetourt as governor of Virginia in 1771, but did not arrive there from his governorship of New York until the summer of 1772. He acted independently of the people, and soon there was a quarrel between them. In 1775, finding the people of his colony committed to the cause of freedom, he engaged in a conspiracy to bring the Indians in hostile array against the Virginia frontier. He employed Dr. John Connelly, whom he had commissioned in 1774 to lead in a movement for sustaining the claims of Virginia to the whole district of Pennsylvania west of the Alleghany Mountains. He was a native of Pennsylvania, and lived at Pittsburgh; and it is believed that he suggested to Dunmore the plan of combining the western Indians against the colonists. He visited General Gage at Boston early in the autumn of 1775, and immediately after his return to Williamsburg he left Dunmore and departed for the Ohio country, with two companions. They were stopped near Hagerstown as suspicious persons, sent back to Frederick, and there an examination of Connelly's papers revealed the whole nefarious plot. He bore Dunmore's commission of colonel, and was directed to raise a regiment in the western country and Canada, the rendezvous to be at Detroit, where hostilities against the white people might be more easily fomented among the Indians. Thence he was to march in the spring, enter Virginia with a motley force, and meet Dunmore at Alexandria, on the Potomac, who would be there with a military and naval force. The arrest of Connelly frustrated the design. He was put in jail and his papers were sent to the Continental Congress. He was kept a prisoner until about the end of the war.

**Dunmore's War.** A war with Ohio Indians in 1774 by Governor Dunmore, of Virginia, was so called. The cold-blooded murder of the family of Logan, an eminent Mingo chief, and other atrocities, had caused fearful retaliation on the part of the barbarians. While Pennsylvanians and the agents of the Six Nations were making efforts for peace, Governor Dunmore, bent on war, called for volunteers, and four hundred of these were gathered on the banks of the Ohio, a little below Wheeling. This force marched against and destroyed (Aug. 7, 1774) a Shawnoese town on the Maskingum. They were followed by Dunmore, with one thousand five hundred Virginians, who pressed forward against an Indian

village on the Scioto, while Colonel Andrew Lewis, with one thousand two hundred men, encountered a force of Indians at Point Pleasant, at the mouth of the Great Kanawha River (Oct. 10), where a bloody battle ensued. The Indians were led by Logan, Cornstalk, and other braves. The Virginians were victorious, but lost seventy men killed and wounded. Dunmore was charged with inciting the Indian war and arranging the campaign so as to carry out his political plans. It was charged that he arranged the expedition so as to have the force under Lewis annihilated by the barbarians, and thereby weaken the physical strength and break down the spirits of the Virginians, for they were defying royal power. His efforts afterwards to incite a servile insurrection in Virginia for the same purpose show that he was capable of exercising almost any means to accomplish his ends. The Indians in the Ohio country, alarmed at the approach of Dunmore, had hastened to make peace. Logan refused to attend the conference for the purpose, but sent a speech which became famous in history. (See *Logan's Speech*.) Dunmore's officers in that expedition, having heard of the movements in New England, and of the Continental Congress, held a meeting at Fort Gover (mouth of the Hockhocking River), and after complimenting the governor and declaring their allegiance to the king, resolved to maintain the rights of the colonists by every means in their power.

**Dunmore's War on the Virginians.** In November, 1775, Lord Dunmore proceeded in the war-ship *Forcey* to Norfolk, where he proclaimed freedom to all slaves who should join the royal standard, which he had unfurled, and take up arms against the "rebels." He declared martial law throughout Virginia, and made Norfolk the rendezvous for a British fleet. He sent marauding parties on the shores of the Elizabeth and James rivers to distress the Whig inhabitants. Being repelled with spirit, he resolved to strike a severe blow that should produce terror. He began to lay waste the country around. The people were aroused and the militia were rapidly gathering for the defence of the people, when Dunmore, becoming alarmed, constructed batteries at Norfolk, armed the Tories and negroes, and fortified a passage over the Elizabeth River, known as the Great Bridge, a point where he expected the militiamen to march to attack him. Being repulsed in a battle there (Dec. 9, 1775), Dunmore abandoned his intrenchments at Norfolk and repaired to his ships, when, menaced by famine—for the people would not furnish supplies—and annoyed by shots from some of the houses, he cannonaded the town (Jan. 1, 1776) and sent sailors and marines ashore to set it on fire. The greater portion of the compact part of the city was burned while the cannonade was kept up. After committing other depredations on the Virginia coast, he landed on Gwynn's Island, in Chesapeake Bay, with five hundred men, black and white, cast up some intrenchments, and built a stockade fort. Virginia militia, under General Andrew Lewis, attacked and drove him from the island. Burning several of

his vessels that were aground, Dunmore sailed away with the remainder, with a large amount of booty, among which were about one thousand slaves. After more plundering on the coast the vessels were dispersed, some to the West Indies, some to the Bermudas and St. Augustine, and Dunmore himself proceeded to join the naval force at New York, and soon afterwards went to England.

Duponceau, PETER STEPHEN, LL.D., philologist, was born in the Isle of Rhé, France, June 3, 1760; died in Philadelphia, April 2, 1844. He went to Paris in 1775, where he became acquainted with the Baron de Stenbeau, and accompanied him to America as his secretary. He was breveted a captain (February, 1778), and assisted Stenbeau in the preparation of his system of military tactics for the use of the United States troops. From 1781 to 1783 he was secretary to Robert R. Livingston, then at the head of the Foreign Office of the government; and then studying law, was admitted to practice in 1785, becoming eminent in the profession on questions of civil and international law. He finally devoted himself to literature and science, and made many valuable researches into the language and literature of the North American Indians. In 1819 he published a *Memoir on the Structure of the Indian Languages*. When seventy-eight years of age (1838) he published a *Dissertation on the Chinese Language*; also a translation of a *Description of New Sweden*. In 1835 the French Institute awarded him a prize for a disquisition on the Indian languages of North America. Mr. Duponceau opened a law academy in Philadelphia in 1821, and wrote several essays on the subject of law.

Dupont, SAMUEL FRANCIS, was born at Bergen Point, N. J., Sept. 27, 1803; died in Philadelphia, June 23, 1865. He entered the United States Navy as midshipman at twelve years of age, and became commander Oct. 28, 1842. He

SAMUEL FRANCIS DUPONT.

saw much active service on the California coast during the war with Mexico, clearing the Gulf of California of Mexican vessels. He was raised to captain in 1855; and in October, 1861, he proceeded, in command of the South Atlantic

squadron, to capture Port Royal Island, on the South Carolina coast, to secure a central harbor and depot of supplies on the Southern shores. (See *Port Royal*.) In July Commodore Dupont was made a rear-admiral on the active list, and in April, 1863, he commanded the fleet which made an unsuccessful effort to capture Charleston. Admiral Dupont assisted in organizing the naval school at Annapolis, and was the author of a highly commended report on the use of floating batteries for coast defence.

Duportail, LEBEGUE, chevalier, a French general, who came to America during the old war for independence, and was appointed brigadier-general in the Continental Army in November, 1777, and major-general November, 1781. He was directing-engineer at the siege of Yorktown, in the fall of 1781. Returning to France, he was named *maréchal-de-camp*; and in November, 1790, was made minister of war. In December, 1791, he resigned; and when engaged in military service in Lorraine, he received a warning of the designs of the Jacobins, and sought safety in America. He died at sea in 1802, when returning to France.

Duquesne, EXPEDITION AGAINST (1758). The expedition against Fort Duquesne was commanded by General John Forbes, who had about nine thousand men at his disposal at Fort Cumberland and Raystown. These included Virginia troops under Colonel Washington, the Royal Americans from South Carolina, and an auxiliary force of Cherokee Indians. Sickness and perversity of will and judgment on the part of Forbes caused delays almost fatal to the expedition. He was induced, by the advice of some Pennsylvania land speculators, to use the army in constructing a military road farther north than the one made by Braddock. Washington, who knew the country well, strongly advised against this measure, but he was unheeded, and so slow was the progress of the troops towards their destination, that in September, when it was known there were not more than eight hundred men at Duquesne, Forbes, with six thousand troops, was yet east of the Alleghany Mountains. Major Grant, with a scouting-party of Colonel Bouquet's advance corps, was attacked (Sept. 21), defeated, and made a prisoner. Still Forbes went creeping on, wasting precious time, and exhausting the patience and respect of Washington and other energetic officers; and when Bouquet joined the army it was fifty miles from Fort Duquesne. The winter was approaching, the troops were discontented, and a council of war was called, to which Forbes intended to propose an abandonment of the enterprise, when three prisoners gave information of the extreme weakness of the French garrison. Washington was immediately sent forward, and the whole army prepared to follow. When the Virginians were within a day's march of the fort, they were discovered by some Indians, who so alarmed the garrison by an exaggerated account of the number of the approaching troops that the guardians of Fort Duquesne, reduced to five hundred,

set it on fire (Nov. 24), and fled down the Ohio in boats with such haste and confusion that they left everything behind them. The Virginians took possession the next day, and the name of the fortress was changed to Fort Pitt, in honor of the great English statesman.

**Duquesne, FORT.** While Captain Trent and his company were building a fort on the site of Pittsburgh, Captain Contrecoeur, with one thousand Frenchmen and eighteen cannons, went down the Alleghany River in sixty bateaux and three hundred canoes, took possession of the unfinished fortification, and named it Fort Duquesne, in compliment to the captain-general of Canada Lieutenant-colonel Washington, with a small force, hurried from Cumberland to recapture it, but was made a prisoner, with about four hundred men, at Fort Necessity. (See *Dinwiddie*.) In 1755 an expedition for the recapture of Fort Duquesne, commanded by General Edward Braddock, marched from Will's Creek (Cumberland) on June 10th, about two thousand strong, British and Provincials. On the banks of the Monongahela Braddock was defeated and killed on July 9, and the expedition was ruined. (See *Braddock's Defeat*.)

**Duquesne, FORT, WASHINGTON IN THE EXPEDITION AGAINST.** Washington was a lieutenant-colonel under Braddock in the expedition against Fort Duquesne; also in 1755, and in that of 1758, under Forbes. In the former he was chiefly instrumental in saving a portion of the British and Provincial troops from utter destruction. (See *Braddock's Defeat*.) At the battle near the Monongahela, where Braddock was killed, every officer but Washington was slain or wounded; and he, alone, led the survivors on a safe retreat. He was not injured during the battle. To his mother, he wrote: "I luckily escaped unhurt, though I had four bullets through my coat, and two horses shot under me." To his brother, he wrote: "By the all-powerful dispensation of Providence, I have been protected beyond all human probability or expectation. Death was levelling my companions on every side." An Indian chief, who, fifteen years afterwards, travelled a long way to see Washington when he was in Ohio, said he had singled him out for death, and directed his fellows to do the same. He fired more than a dozen fair shots at him, but could not hit him. "We felt," said the chief, "that some Manitou guarded your life, and that you could not be killed." Washington was chiefly instrumental in the capture of Fort Duquesne, in 1758. He never received a wound in battle. (See *Duquesne, Expedition against in 1758*.)

**Durand, ASHER BROWN,** painter and engraver, was born at Jefferson, N. J., Aug. 21, 1796. His paternal ancestors were Huguenots. His father was a watch-maker, and in his shop he learned engraving. In 1812 he became an apprentice to Peter Maverick, an engraver on copper-plate, and became his partner in 1817. Mr. Durand's first large work was his engraving on copper of Trumbull's "Declaration of Independence." He was engaged upon it a year, and it

gave him a great reputation. His engravings of "Musidora" and "Ariadne" (the latter from Vanderlyn's painting) place him among the first line-engravers of his time. In 1835 he abandoned that art for painting, and became one of the best of American landscape painters. His pictures are always well selected as subjects, pleasing in tone, and exquisite in coloring. Mr. Durand was one of the first officers of the National Academy of Design, and was its president for several years. He died Sept. 17, 1886, leaving Gen. Thomas S. Cummings, its first treasurer, the sole survivor of the founders of the institution.

**Dustin, HANNAH, BRAVERY OF.** When, in the spring of 1697, the French and Indians devastated the New England frontier settlements, Haverhill, within thirty miles of Boston, suffered severely, forty of its inhabitants being killed or carried into captivity. Among the latter were a part of the family of Thomas Dustin, who was in the field when the savages first appeared. Mounting his horse, he hastened to his house to bear away his wife, eight children, and nurse to a place of safety. His youngest child was only a week old. He ordered his other children to fly. While he was lifting his wife and her babe from the bed the Indians attacked his house. "Leave me," cried the mother, "and fly to the protection of the other children." Remounting his horse, he soon overtook the precious flock, and placing himself between them and the pursuing Indians, he defended them so valiantly with his gun that he pressed back the foe. Meanwhile the savages had entered the house, ordered the feeble mother to rise and follow them, killed the infant, and set fire to the dwelling. Half dressed, she was compelled to go with her captors through melting snow in their hasty retreat, accompanied by her nurse. They walked twelve miles the first day without shoes, and were compelled to lie on the wet ground at night, with no covering but the cold gray sky. This was repeated day after day, until they reached an island in the Merrimac six miles above Concord, N. H., the home of the leader of the savages, who claimed Mrs. Dustin and her nurse as his captives. They were lodged with his family, which consisted of two men, three women, seven children, and a captive English boy, who had been with them more than a year. They were told that they would soon start for an Indian village where they would be compelled to "run the gantlet;" that is, be stripped naked, and run for their lives between two files of Indian men, women, and children, who would have the privilege of scoffing at them, beating them, and wounding them with hatchets. The two women resolved not to endure the indignity. Mrs. Dustin planned a means of escape, and leagued the nurse and the English boy with her in the execution of it. Believing in the faithfulness of the lad and the timidity of the women, the Indians did not keep watch at night. Through inquiries made by the lad, Mrs. Dustin learned how to kill a man instantly, and to take off his scalp. Before daylight one morning, when the whole family were asleep, Mrs.

Dustin and her colleagues instantly killed ten of the slumberers, she killing her captor, and the boy despatching the man who told him how to do it. A squaw and a child fled to the woods and escaped. After scuttling all the boats but one, they fled in it down the river, with provisions from the wigwam. Mrs. Dustin remembered they had not scalped the victims, so, returning, they scalped the slain savages, and bore their trophies away in a bag, as evidence of the truth of the story they might relate to their friends. At Haverhill they were received as persons risen from the dead. Mrs. Dustin found her husband and children safe. Soon afterwards she bore to the governor, at Boston, the gun, tomahawk, and ten scalps, and the General Court gave these two women \$250 each, as a reward for their heroism. They received other tokens of regard. The island where the scene occurred is called Dustin's Island. On its highest point citizens of Massachusetts and New Hampshire erected a commemorative monument in 1874. On it are inscribed the names of Hannah Dustin, Mary Neff, and Samuel Leonardson, the latter the English lad.

**Dutch and German Branch of the Washington Family.** The same political causes which impelled the grandfather of Washington and his brother to emigrate to America in Cromwell's time induced their brother James to go to Holland. He settled in Rotterdam, where, in 1650, he married Clara Van der Lanen, daughter of the burgomaster. From them have descended a long line, some of them belonging to noble families—some Roman Catholics, some Protestants. A genealogical register of this branch of the family, from 1650 to 1861, is in the archives of the New York Historical Society, part of it in Dutch and part in the German language. A copy of it was printed in the number of *The Magazine of American History* for February, 1879. The latest recorded births are as follows: "1856—2 Aug. Born, George Baron of Washington. 1858—June. Born, Stephen Baron Van Washington." On Aug. 15, 1855, was recorded the marriage of "Maximilian Baron Van Washington to Frederica, Duchess of Oldenburg."

**Dutch and Indian Plot.** Uncas, the Mohogau sachem, always bent on mischief, spread a report, in the spring of 1653, that Niuegret, a Niantic sachem, uncle of Miantonomo, had visited New Amsterdam during the preceding winter, and had arranged with the Dutch governor (Stuyvesant) a plot for a general insurrection of the natives and the murder of the New England settlers. The story caused such alarm (England had just declared war against Holland) that the commissioners of the New England Confederacy (which see) assembled in special session at Boston in May. They sent messengers to Niuegret and Pessacus to inquire into the matter, and envoys and a letter to Governor Stuyvesant. They also ordered five hundred men to be raised, to be ready in case "God called the colonists to war." The sachems totally denied any knowledge of such a plot, and Stuyvesant indignantly repelled even a suspicion, and sent

back a declaration of the grievances of the Dutch. These denials were rebutted by the testimony of English and Indian malcontents in New Amsterdam. On the report of the envoys, the commissioners at Boston determined on war; but the General Court of Massachusetts desired, the opinions of the clergy. The latter thought they saw plain evidence of "an execrable plot tending to the destruction of many dear saints of God," but were opposed to going to war. Other ministers urged war, and so did a majority of the commissioners, but the General Court denied the power to make "offensive war" without unanimous consent. Meanwhile Connecticut and New Haven, bent on war, united in a solicitation to Cromwell to fit out an expedition to conquer New Netherland, and the towns of Stamford and Fairfield, on the Dutch frontier, attempted to raise volunteers to make war against the Dutch on their own account. At another meeting (September, 1653) the commissioners, believing they were "called by God to make present war on Niuegret," ordered two hundred and fifty men to be raised for that purpose. The Massachusetts court again interfered, and prevented war. Cromwell, however, sent three ships and a few troops to attack New Netherland, but before they reached America the war with Holland was over, and the expedition, under John Leverett and Robert Sedgwick, proceeded to capture Acadia from La Tour, who laid claim to it because of a grant made to his father by Sir William Alexander. (See *Alexander*; also, *La Tour's Expedition*.)

**Dutch Authority at Manhattan defied.** While the absurd Walter Van Twiller was governor of New Netherland, Jacob Eelkins, the Dutch West India Company's former commandant at Fort Orange, entered the mouth of the Hudson in an English vessel (April 13, 1633), and avowed his determination to ascend the river and trade with the Indians. He was in the English service, and claimed that the country belonged to the English, because it had been discovered by a subject of England, Hudson. Van Twiller ordered the Orange flag to be raised over Fort Amsterdam as the best defiance of the intruder. Eelkins as promptly ran up the English flag above his vessel (the *William*), weighed anchor, and sailed up the river. This audacity enraged Van Twiller. He gathered the people, opened a barrel of wine, drank glassful after glassful, and cried, "Yon who love the Prince of Orange and me do this, and assist me in repelling the insult committed by that Englishman." Having thus unburdened his soul, the governor retired within the fort. Later in the day the energetic De Vries (which see) dined with the governor, and reproved him for his show of impotence. After a few days of hesitation, some small craft with some soldiers were sent after Eelkins, and after the lapse of about a month the *William* was expelled from the harbor.

**Dutch Colonists in South Carolina.** After the conquest of New Netherland by the English, many of the Dutch colonists emigrated to South Carolina, where they were not only offered lands

by the proprietors, but two ships were sent to transport them thither. The surveyor of the colony marked out lands for them on the south side of the Ashley River. They drew lots for a division, and founded a town, which they called James Town.

**Dutch Element in New York Society.** The Dutch-Americans formed the basis of the population of New York, and were almost to a man in favor of liberty in America, and they formed the bulwark of that liberty in the colony when it was threatened. The supporters of the crown were mostly of British descent, and a large proportion of the members of the Church of England in America were loyalists. The middling classes, too, were generally patriotic, and the mechanics in the city of New York were, almost to a man, enthusiastic advocates of decisive measures against the pretensions of Parliament.

**Dutch Gap Canal.** There is a sharp bend in the James River between the Appomattox and Richmond, where the stream, after flowing several miles, approaches itself within five hundred yards. To flank Confederate works and to shorten the passage of the river six or seven miles, General Butler set a large force of colored troops at work, in the summer of 1864, in cutting a canal for the passage of vessels across this peninsula. This canal was completed, with the exception of blowing out the bulkhead, at the close of December, 1864. It was five hundred yards in length, sixty feet in width at top, and sixty-five below the surface of the bluff. It was excavated fifteen feet below high-water mark. On New-year's Day, 1865, a mine of twelve thousand pounds of gunpowder was exploded under the bulkhead, and the water rushed through, but not in sufficient depth for practical purposes, for the mass of the bulkhead (left to keep out the water) fell back into the opening after the explosion. The canal was now swept by Confederate cannons, and could not be dredged. As a military operation, it was a failure. It was excavated in one hundred and forty days, and has since been made navigable.

**Dutch, THE, AT NEW PLYMOUTH.** In the spring of 1627 the colony at New Plymouth was officially informed that the Dutch had planted settlements at Manhattan and elsewhere. Governor Bradford wrote a friendly letter to Governor Minuits, but warned him not to traffic with the Indians north of latitude 40°, as the country belonged to the English. Minuits appointed a commission to visit Plymouth to confer upon subjects of mutual interest. Rasieres, Secretary of New Netherland, was at the head of the commission. They landed at one of the outposts of the Plymouth colony, and, with the blare of trumpets, announced their approach. With the same noise, the Dutch entered the village, where they were hospitably entertained several days at Governor Bradford's table. They also attended public worship with the Pilgrims on the Sabbath. Nothing decisive was done. The Dutch, with an eye to self-interest, advised the Pilgrims to leave their sterile seat and make their home in the beautiful and fertile Valley

of the Connecticut, under the jurisdiction of New Netherland. They would not consent to become subjects of the Dutch.

**Dutch, THE, IN CONNECTICUT.** Governor Stuyvesant steadily asserted the jurisdiction of the Dutch over the country to Narraganset Bay, until a settlement was made in 1650. In 1647 he heard that a Dutch ship was at New Haven, taking in a cargo without a permit from the government at Manhattan. It happened at about that time that the deputy-governor of the New Haven colony had purchased the ship *Zwool* from the Dutch, to be delivered at that settlement. Stuyvesant took advantage of this opportunity to assert, in a forcible manner, the right of Dutch jurisdiction in Connecticut. The Dutch vessel at New Haven (the *St. Benino*) was regarded as a smuggler; and when the *Zwool* sailed for that port she bore, under her hatches, a company of soldiers, led by Captain Van der Geist, to seize the offending vessel and take her to New Amsterdam. Suddenly, on Sunday morning, Van der Geist, with his soldiers, boarded the *St. Benino*, made prisoners of all on board, and sailed for New Amsterdam. Governor Eaton, ruler of the New Haven colony, sent an angry protest to the Dutch governor because of this high-handed act. "We have protested, and by these presents do protest, against you, Peter Stuyvesant, Governor of the Dutch at Manhattan," wrote Eaton, "for disturbing the peace between the English and Dutch in these parts;" and he specified the particular acts of which he complained. Stuyvesant paid no heed to this protest, but confiscated the ship and cargo, and extended his claims to territory in New England. A hot correspondence ensued, Eaton complaining that Stuyvesant wrote to him in Low Dutch, of which he understood but little, and could not get an interpretation from Stuyvesant's messenger. At length Stuyvesant refused to hold any further correspondence with Eaton on that subject, but did so another in an offensive way. Three servants of the Dutch governor escaped to the New Haven colony. Stuyvesant demanded of Eaton their return, addressing his letter to the English governor at "New Haven in the Netherlands." Eaton refused, and Stuyvesant retaliated by issuing a proclamation that any servant fleeing from New Haven to Manhattan should be free on his arrival. His servants, assured of pardon, returned to Manhattan and their master.

**Dutch West India Company.** The Dutch East India Company was a great monopoly, the profits of the trade of which were enormous. Their ships whitened the Indian seas, and in one year the shareholders received in dividends the amount of three fourths of their invested capital. It was believed that trade with the Western Continent might be made equally profitable, and so early as 1607 William Usselinx suggested a similar association to trade in the West Indies. The States-General of Holland were asked to incorporate such an association. The government, then engaged in negotiations for a truce with Spain, refused;

but when that truce expired, in 1621, a charter was granted to a company of merchants, which gave the association almost regal powers to "colonize, govern, and protect" New Netherland for the term of twenty-four years. (See *New Netherland*.) It was ordained that during that time none of the inhabitants of the United Provinces (the Dutch Republic) should be permitted to sail thence to the coasts of Africa between the tropic of Cancer and the Cape of Good Hope; nor to the coasts of America or the West Indies between Newfoundland and the Strait of Magellan, except with the permission of the company. It was vested with sovereign powers, to be exercised in the name of the States-General, and to report to that body, from time to time, all their transactions. The government of the company was vested in five separate chambers of managers, the principal one at Amsterdam, and the other four in as many separate cities. General executive powers were intrusted to a board of nineteen delegates, called the "College of Nineteen," in which one delegate represented the States-General, by whom the company were guaranteed protection, and received assistance to the amount of one million guilders (\$380,000). The company was organized on the 21st of June, 1623; and with such a charter, such powers, and such privileges, they began the settlement and development of New Netherland. The English claimed the domain, and the Dutch hastened to acquire eminent domain, according to the policy of England, by planting permanent settlements there; and the same year (1623) they sent over thirty families, chiefly Walloons, to Manhattan. (See *Walloons*.) The management of New Netherland was intrusted to the Amsterdam chamber. Their traffic was successful. In 1624 the exports from Amsterdam, in two ships, were worth almost \$10,000, and the returns from New Netherland were considerably more. The company established a trading-post, called Fort Orange, on the site of Albany, and traffic was extended eastward to the Connecticut River, and even to Narraganset Bay; northward to the Mohawk Valley, and southward and westward to the Delaware River and beyond. To induce private capitalists to engage in the settlement of the country, the company gave lands and special privileges to such as would guarantee settlement and cultivation. (See *Patroons*.) These became troublesome landholders, and in 1638 the rights of the company, it was claimed, were interfered with by a settlement of Swedes on the Delaware. (See *New Sweden*.) In 1640 the company established the doctrines and rituals of the "Reformed Church in the United Provinces" as the only theological formula to be allowed in public worship in New Netherland. The spirit of popular freedom which the Dutch brought with them from Holland asserted its rights under the tyranny of Kieft, and a sort of popular assembly was organized at New Amsterdam. (See *Kieft*.) Its affairs in New Netherland were necessarily under the direct management of a director-general or governor, whose powers, as in the case of Kieft and Stuy-

vesant, were sometimes so arbitrarily exercised that much popular discontent was manifested, and their dealings with their neighbors were not always satisfactory to the company and the States-General; yet, on the whole, when we consider the spirit of the age, the colony, which, before it was taken possession of by the English in 1664, was of a mixed population, was managed wisely and well; and the Dutch West India Company was one of the most important instruments in planting the good seed from which our nation has sprung.

**Dutch West India Company, GOVERNMENT OF THE.** The government was vested in five separate chambers of managers—one at Amsterdam, managing four ninth parts; one at Middelburg, in Zealand, two ninth parts; one at Dordrecht, on the Maese, one ninth part; one in North Holland, one ninth part; and one in Friesland and Groningen, one ninth part. Executive powers for all purposes, except that in case of a declaration of war the approbation of the States-General was to be asked, were intrusted to a board of nineteen delegates, called the "College of Nineteen," eight of whom came from the chamber at Amsterdam, four from Zealand, two from the Maese, two from North Holland, and two from Friesland and Groningen; while one delegate was to represent the States-General. (See *Dutch West India Company*.)

**Duty on Negroes.** A duty of £4 was laid, in 1703, upon every negro imported into the colony of Massachusetts.

**Duyckinck, EVART AUGUSTUS,** was born in New York city, Nov. 23, 1816; died there, Aug. 13, 1878. He graduated at Columbia College in 1835. His father was a successful publisher, and Evert early showed a love for books and a taste for literary pursuits. In December, 1840, he commenced the publication of *Arcturus*; a *Journal of Books and Opinions*, in connection with Cornelius Matthews, which was continued about a year and a half. He contributed to the early numbers of the *New York Review*. In 1847, in connection with his brother George, he commenced the *Literary World*, a periodical which continued (with an interval of a year and five months) until the close of 1853. In 1856 the brothers completed the *Cyclopaedia of American Literature*, in two volumes, a work of great research and value. To this Evert added a supplement in 1865. His other important works are, *Wit and Wisdom of Sidney Smith*; *National Portrait-gallery of Eminent Americans*; *History of the War for the Union*; *History of the World from the Earliest Period to the Present Time*; and *Portrait-gallery of Eminent Men and Women of Europe and America* (two volumes). Mr. Duyckinck's latest important literary labor was in the preparation, in connection with the late Mr. Bryant, of a new and thoroughly annotated edition of Shakespeare's writings, yet (1880) unpublished. His brother, GEORGE LONG, was born in New York city, Oct. 17, 1823; died there, March 30, 1863. He graduated at the University of the City of New York in 1843. Besides his assistance in the conduct of the *Literary World* and the prep-

aration of the *Cyclopædia of American Literature*, he published biographies of George Herbert (1858), Bishop Thomas Ken (1859), Jeremy Taylor (1860), and Bishop Latimer (1861).

Dwight, THEODORE, was born at Northampton, Mass., Dec. 16, 1764; died in New York city, Jan. 11, 1846. He was a grandson of the eminent theologian Jonathan Edwards. He became eminent as a lawyer and political writer; was for many years in the Senate of Connecticut; and in 1806-7 was in Congress, where he became a prominent advocate for the suppression of the slave-trade. During the War of 1812-15 he edited the *Mirror*, at Hartford, the leading Federal newspaper in Connecticut; and was secretary of the Hartford Convention (which see) in 1814, the proceedings of which he published in 1833. He published the *Albany Daily Advertiser* in 1815, and was the founder, in 1817, of the *New York Daily Advertiser*, with which he was connected until the great fire in 1835, when he retired, with his family, to Hartford. Mr. Dwight was one of the founders of the American Bible Society. He was one of the writers of the poetical essays of the "Echo" in the *Hartford Mercury*. (See *Alsop*.) He was also the author of a *Dictionary of Roots and Derivations*. President Dwight, of Yale College, was his brother.

Dwight, TIMOTHY, D.D., LL.D., was born at Northampton, Mass., May 14, 1752; died in New Haven, Conn., Jan. 11, 1817. He graduated at Yale College in 1769, and was a tutor there from 1771 to 1777, when he became an army chaplain, and served until October, 1778. During that time he wrote many popular patriotic songs. He labored on a farm for a few years, preaching occasionally, and in 1781 and 1786 was a member of the Connecticut Legislature. In 1783 he was a settled minister at Greenfield and principal of an academy there; and from 1795 until his death he was President of Yale College. In 1796 he began travelling in the New England States and in New York during his college vacations, and in 1821 he published his *Travels in New England and New York*, in four volumes. Dr. Dwight wrote some excellent poetry, revised Watts's version of the Psalms, and published many occasional sermons.

Dyer, ELIPHALET, LL.D., was born at Windham, Conn., Sept. 23, 1721; died there, May 13, 1807. He graduated at Yale College in 1740; became a lawyer; and was a member of the Connecticut Legislature from 1745 to 1762. He

commanded a regiment in the French and Indian War; was made a member of the Council in 1762; and, as an active member of the Susquehanna Company (which see), went to England as its agent in 1763. Mr. Dyer was a member of the Stamp Act Congress (which see) in 1765, and was a member of the First Continental Congress in 1774. He remained in that body during the entire war excepting in 1779. He was Judge of the Supreme Court of Connecticut in 1766, and was chief-justice from 1789 to 1793. Colonel Dyer is alluded to in the famous doggerel poem entitled *Lawyers and Bullfrogs*, the introduction to which avers that at Old Windam, in Connecticut, after a long drought, a frog-pond became almost dry, and a terrible battle was fought one night by the frogs to decide which should keep possession of the remaining water. Many "thousands were defunct in the morning." There was an uncommon silence for hours before the battle commenced, when, as if by a preconcerted agreement, every frog on one side of the ditch raised the war-cry *Colonel Dyer! Colonel Dyer!* and at the same instant, from the opposite side, rebounded the adverse shout of *Elderkin too! Elderkin too!* Owing to some peculiarity in the state of the atmosphere, the sounds seemed to be overhead, and the people of Windham were greatly frightened. The poet says:

"This terrible night the parson did fright  
His people almost in despair;  
For poor Windham souls among the bean-poles  
He made a most wonderful prayer.  
Lawyer Lucifer called up his crew;  
Dyer and Elderkin, you must come, too:  
Old Colonel Dyer you know well enough,  
He had an old negro, his name was Cuff."

Dyer, MARY, one of the early Quaker martyrs in Massachusetts. She was the wife of a leading citizen of Rhode Island. Having embraced the doctrines and discipline of the sect called Friends, or Quakers (which see), she became an enthusiast, and went to Boston, whence some of her sect had been banished, to give her "testimony to the truth." In that colony the death penalty menaced those who should return after banishment. Mary was sent away and returned, and was released while going to the gallows with Marmaduke Stevenson with a rope around her neck. She unwillingly returned to her family in Rhode Island; but she went back to Boston again for the purpose of offering up her life to the cause she advocated, and she was hanged in 1660. Mary had once been whipped on her bare back through the streets of Boston, tied behind a cart.

## E.

Earle, PLINY, an American inventor, was born at Leicester, Mass., Dec. 17, 1762; died there, Nov. 19, 1832. He became connected with Edward Snow in 1785 in the manufacture of machine and hand cards for carding wool and cotton. Mr. Earle had first made them by hand, but afterwards by a machine of his own invention. Oliver Evans (which see) had already invented a machine for making card-teeth, which pro-

duced three hundred a minute. In 1784 Mr. Crittenden, of New Haven, Conn., invented a machine which produced eighty-six thousand card-teeth, cut and bent, in an hour. These card-teeth were put up in bags and distributed among families, in which the women and children stuck them in the leather. Leicester was the chief seat of this industry, and to that place Samuel Slater (which see), of Rhode Island,

went for card clothing for the machines in his cottou-mill. Hearing that Pliny Earle was an expert card-maker, he went to him and told him what he wanted. Mr. Earle invented a machine for pricking the holes in the leather—a tedious process by hand—and it worked admirably. A few years afterwards Eleazer Smith (see *Whittemore, Amos*) made a great improvement by inventing a machine that not only pricked the holes, but set the teeth more expertly than human fingers could do. About 1843 William B. Earle, son of Pliny, improved Smith's invention, and the machine thus produced for making card clothing is now (1876) the best ever made, and is in exclusive use by T. K. Earle & Co., Worcester, Mass. By Mr. Earle's first invention the labor of a man for fifteen hours could be performed in fifteen minutes. Mr. Earle possessed extensive attainments in science and literature.

**Early French Discoveries on the American Coast.** In 1506 John Denys, of Honfleur, explored the Gulf of St. Lawrence. Two years later Thomas Aubert, a pilot of Dieppe, visited, it is believed, the island of Cape Breton, and gave it its name. He carried some of the natives with him to France. In 1518 the Baron de Leri, preparatory to the settlement of a colony on Sable Island, left some cattle there, whose progeny, fourscore years afterwards, gave food to unfortunate persons left on the island by the Marquis de la Roche (which see).

**Early Jesuit Missions in Virginia.** Menendez, who desolated the Huguenot settlement in Florida (see *Huguenots in America*), believing Chesapeake Bay to be an open passage to the Pacific Ocean, and wishing to have that gate guarded by the faithful of his church, sent a vessel carrying soldiers in 1556, with a number of Jesuit priests, to establish a post somewhere on its shores, or on one of its tributary rivers. This party was guided by an Indian convert, brother of the sachem of Axacan, as a particular portion of Virginia was called, whence he had been taken some years before to Mexico. The expedition was unsuccessful, but Menendez urged his project, and in 1570, the Indian convert, being in Spain, was sent, under the direction of the general of the order of Jesuits, with a priest and two *religieux*, to plant a mission station near the Chesapeake. At Port Royal they were joined by the head of the Jesuit mission in Florida, another priest, and four Indian boys, novices from the mission-school in Havana. This party landed on the shores of the Potomac in September, 1570, and were left there in the wilderness with a few stores. They travelled across the country to the Rappahannock, and near its banks they constructed a log-cabin as a shelter and chapel, which they called the "Chapel of the Mother of God at Axacan." There they suffered in the ensuing winter, and were chiefly dependent upon the converted Indian for a time. He soon forgot that he was a Christian, and became the most dangerous enemy of the missionaries. The expostulations and the threats of the Jesuit priest sent to him were of no avail. The priest, and two Indian boys who went with

him, were killed. Their companions left behind waited anxiously in the chapel for their return. On the fourth day of their vigils the Indian convert, dressed in the cassock of the murdered priest, and followed by painted savages, surrounded the chapel and slaughtered all the inmates but one of the Indian boys. The next spring Menendez sailed up the Potomac in a small vessel to punish the murderers. He captured a number of the Indians, and eight of them whom the saved boy pointed out as of the party of murderers were instantly hanged by Menendez to the yard-arm.

**Early, JUBAL A.**, was born in Virginia about 1818, and graduated at West Point in 1837. He served in the Florida War, left the army in 1838 to study law, and became state attorney in 1843. He served as major in a Virginia regi-

JUBAL A. EARLY.

ment in the war with Mexico, and from 1848 to 1852 was again state attorney. He entered the Confederate service as colonel in 1861, commanded a brigade in the battle of Bull's Run, and a division at Gettysburg. He was active in the Shenandoah Valley in 1864.

**Early Martyrs in Virginia.** (See *Berkeley, Sir William*.)

**Early Military Operations in Missouri (1861).** General Nathaniel Lyon, in command of the Department of Missouri, moved against Governor Jackson so soon as the latter had raised the standard of revolt at Jefferson City. He sent (July 12, 1861) a regiment of Missouri volunteers, under Colonel Franz Sigel, to occupy and protect the Pacific Railway from St. Louis to the Gasconade River, preparatory to a movement southward to oppose an invasion of Ben McCulloch, a Texan ranger, who had crossed the Arkansas frontier with about eight hundred men, and was marching on Springfield. Lyon left St. Louis (June 13) with two thousand men, on two steamboats, for Jefferson City, to drive Jackson and Price out of it. The Missouri troops were commanded by Colonels Blair and Boernstein, the regulars by Captain Lathrop, and the artillery by Captain J. Totten. The insurgents fled westward to a point near Booneville.

Leaving Boernstein to hold the capital, Lyon followed (June 16). He overtook the fugitives not far from Booneville. Lyon landed his men and attacked the camp of the insurgents, commanded by Colonel Marmaduke, of the state forces. Some of his troops had made a citadel of a brick house. The camp was on an eminence. Lyon ascended this, and opened a battle by firing into the midst of the insurgents. A sharp fight ensued. Two of Lyon's shells entered the brick house and drove out the inmates. Finally the insurgents fled. They lost a battery, twenty prisoners, several horses, and a considerable amount of military stores. Leaving a company to hold the deserted camp of the insurgents, Lyon pushed on to Booneville. The fugitives scattered, some going westward and some southward. With the latter went Governor Jackson. At Warsaw, on the Osage, he was joined (June 20) by four hundred men under Colonel O'Kane, who had just captured and dispersed about the same number of the loyal Missouri Home Guards. The governor and his followers continued their flight to the extreme southwestern corner of Missouri, where he was joined by General Price, when the whole insurgent force amounted to full three thousand men. At the same time, General J. G. Rains, a graduate of West Point, was hurrying forward to join Jackson with a considerable force of insurgents, closely pursued by Major Sturgis with a body of Kansas volunteers. Jackson was now satisfied that the whole of northern Missouri was lost to the cause of secession, and he endeavored to concentrate all the armed disloyal citizens, with McCulloch's men, in the southwestern part of the commonwealth, preparatory to "the speedy deliverance of the state from Federal rule." Assured by the aspect of affairs, and conciliatory and assuring proclamations from both General Lyon and Colonel Boernstein, the people became quieted, and the loyal state convention was called to assemble at Jefferson City on July 22, 1861. General Lyon remained at Booneville about a fortnight, preparing for a vigorous campaign against the insurgents in the southwest. He then held military control over the whole region northward of the Missouri River, and on July 1 there were at least ten thousand loyal troops in Missouri, and ten thousand more might have been there within forty-eight hours from camps in neighboring states. Sigel was pushing forward towards the borders of Kansas and Arkansas to open the campaign.

**Early New England Laws.** The magistrates and ministers, in the early days of the New England colonies, undertook to regulate by law the morals and manners of the people, and made statutes which to-day appear absurd, but were then regarded as essential to the well-being of society. The Puritans were not only rigid moralists, but inflexible bigots and absurd egotists. They must be judged by the age and the circumstances in which they lived. (See *Puritans*.) Among many excellent laws were scattered some of equivocal utility, like the following: They doomed to banishment, and, in case of return, to death, Jesuite, Romish priests,

and Quakers. All persons were forbidden to run, or even to walk, "except reverently to and from church," on Sunday, or to profane the day by sweeping their houses, cooking their food, or shaving their beards. Mothers were commanded not to kiss their children on that holy day. Burglars and robbers suffered the extra punishment of having an ear cut off if their crime was committed on Sunday. Blasphemy and idolatry were punishable by death; so also were witchcraft and perjury directed against human life. All gaming was prohibited. The importation of cards and dice was forbidden. Assemblies for dancing were proscribed. A Massachusetts law, passed in 1646, made kissing a woman in the street, even in the way of honest salutation, punishable by flogging. No one was allowed to keep a tavern unless possessed of a good character and competent estate. Persons wearing apparel which a grand jury should account disproportionate to their positions were to be first admonished, and, if contumacious, fined. Every woman who should cut her hair like a man's, or suffer it to hang loosely upon her face, was fined. Idleness, swearing, and drunkenness were visited with restraining penalties. In the earlier records of Massachusetts it is revealed that John Wedgewood, for being in the company of drunkards, was to be set in the stocks. Catharine, wife of Richard Cornish, was suspected of incontinence, and seriously admonished to take heed. Thomas Petit, on suspicion of slander, idleness, and stubbornness, was sentenced to be severely whipped. Captain Lovell was admonished to take heed of light carriage. Josias Plaistowe, for stealing four baskets of corn from the Indians, was ordered to "return them eight baskets, to be fined five pounds, and thereafter to be called by the name of Josias, and not Mr., as formerly he used to be."

**Early Non-importation Acts.** In 1687 an excise duty on tobacco was laid in England, which alarmed the Virginia planters, and they attempted to retaliate by procuring acts of the Assembly for the encouragement of domestic manufactures, that they might import less from the mother country. King James disallowed these acts as hostile to English interests. A similar attempt failed in Maryland.

**Earthquakes in North America.** On the 1st day of June, 1638, between the hours of three and four P.M., the weather clear and warm, and the wind westerly, all New England was violently shaken by some internal convulsion of the earth. It came on with a noise like continued thunder, and the shock lasted about four minutes. The earth shook with such violence that in some places the people could not stand upright without difficulty, and many movable articles in the houses were thrown down. The earth was unquiet for twenty days afterwards. On Jan. 26, 1663, a heavy shock of earthquake was felt in New England and in New York, and was particularly severe in Canada, where it was recorded that "the doors opened and shut of themselves with a fearful clattering. The bells rang without being touched. The walls were

split asunder. The floors separated and fell down. The fields put on the appearance of precipices, and the mountains seemed to be moving out of their places." Small rivers were dried up; some mountains appeared to be much broken and moved, and half-way between Quebec and Tadousac two mountains were shaken down, and formed a point of land extending some distance into the St. Lawrence. On Oct. 29, 1727, there was a severe earthquake in New England, lasting about two minutes. Its course seemed to be from the River Delaware, in the southwest, to the Kennebec, in the northeast, a distance of about seven hundred miles. It occurred at about twenty minutes before eleven o'clock in the morning, and the sky was serene. Pewter and china were cast from their shelves, and stone walls and chimney-tops were shaken down. In some places doors were burst open, and people could hardly keep their feet. There had been an interval of fifty-seven years since the last earthquake in New England. On the same day the island of Martinique, in the West Indies, was threatened with total destruction by an earthquake which lasted eleven hours. On the 18th of November, 1755, an earthquake shock was felt from Chesapeake Bay along the coast to Halifax, Nova Scotia, about eight hundred miles; and in the interior it seems to have extended, from northwest to southeast, more than one thousand miles. In Boston one hundred chimneys were levelled with the roofs of the houses, and fifteen hundred more or less shattered. The ends of several brick buildings were thrown down with the chimneys. The vane on the public market was thrown to the earth. At New Haven, Conn., the ground moved like waves of the sea; the houses shook and cracked, and many chimneys were thrown down. It occurred at four o'clock in the morning, and lasted four and a half minutes. At the same time there was a great tidal-wave in the West Indies. In April, the same year, Quito, in South America, was destroyed by an earthquake; and eighteen days before the earthquake in North America there was an awful and extensive one in Southern Europe that extended into Africa. The earth was violently shaken for five thousand miles—even to Scotland. In eight minutes the city of Lisbon, with fifty thousand inhabitants, was swallowed up. Other cities in Portugal and Spain were partially destroyed. One half of Fez, in northern Africa, was destroyed, and more than twelve thousand Arabs perished. In the island of Mitylene, in the Grecian Archipelago, two thousand houses were overthrown; and half of the island of Madeira, six hundred and sixty miles southwest from Portugal, became a waste.

**East and West Jersey.** Disputes had arisen between the purchasers of a portion of New Jersey. Among these purchasers were John Fenwick and Edward Billinge, both of the Society of Friends. These men quarrelled with regard to their respective rights. The tenets of their sect would not allow them to go to law, so they referred the matter to William Penn, whose decision satisfied both parties. Fenwick sailed for America to found a colony, but Billinge was

too much in debt to come, and made an assignment for the benefit of his creditors. The greater part of his right and title in New Jersey fell into the hands of Penn, Gawen Lawrie, and Nicholas Lucas. The matter was now complicated. Berkeley had disposed of his undivided half of the colony. Finally, on the 1st of July, 1676 (O. S.), after much preliminary negotiation, a deed was completed and signed by Carteret on the one side, and Penn, Lawrie, Lucas, and Billinge on the other, which divided the province of New Jersey into two great portions—East Jersey, including all that part lying northeast of a line drawn from Little Egg Harbor to a point on the most northerly branch of the Delaware River, in north latitude  $41^{\circ} 40'$ ; and West Jersey, comprehending all the rest of the province originally granted by the Duke of York. East Jersey was the property of Sir George Carteret; West Jersey passed into the hands of the associates of the Society of Friends. West Jersey was now divided into one hundred parts, setting aside ten for Fenwick, who had made the first settlement, at Salem, on the Delaware, and arranged to dispose of the other ninety parts for the benefit of Billinge's creditors. (See *New Jersey, Colony of.*)

**East Florida, LEE'S EXPEDITION AGAINST.** A citizen of Georgia visited General Charles Lee at Charleston and persuaded him that St. Augustine could be easily taken. The man was a stranger, but, without further inquiry, Lee announced to the Continental troops under his command that he had planned for them a safe, sure, and remunerative expedition, of which the very large booty would be all their own. Calling it a secret, he let everybody know its destination. Without adequate preparation—without a field-piece or a medicine-chest—he hastily marched off the Virginia and North Carolina troops, in the second week in August (1776), to the malarious regions of Georgia. By his order, Howe, of North Carolina, and Moultrie, of South Carolina, soon followed. About four hundred and sixty men from South Carolina were sent to Savannah by water, with two field-pieces; and on the 18th, Lee, after reviewing the collected troops, sent the Virginians and a portion of the South Carolinians to Sunbury. The fever made sad havoc among them, and fourteen or fifteen men were buried daily. Then Lee sought to shift from himself to Moultrie the further conduct of the expedition, for he saw it must be disastrous. Moultrie warned him that no available resources which would render success possible had been provided, and the wretched expedition was abandoned. Fortunately for his reputation, Lee was ordered North early in September and joined Washington on Harlem Heights, receiving his \$30,000 from Congress as he passed through Philadelphia. (See *Lee, Charles.*)

**East Florida, SEIZURE OF (1812).** Florida was divided into two provinces, East and West. The boundary-line was the Perdido River, east of Mobile Bay. The Georgians coveted East Florida, and in the spring of 1812 Brigadier-general George Mathews, of the Georgia militia,

who had been appointed a commissioner, under an act of a secret session of Congress in 1810-11, to secure that province should it be offered to the United States, stirred up an insurrection there. Amelia Island, lying a little below the dividing line between Georgia and Florida, was chosen for a base of operations. The fine harbor of its capital, Fernandina, was a place of great resort for smugglers during the days of the embargo, and, as neutral ground, might be made a dangerous place. The possession of the island and harbor was therefore important to the Americans, and a sought-for pretext for seizing it was soon found. The Florida insurgents planted the standard of revolt (March, 1812) on the bluff opposite the town of St. Mary, on the border line. Some United States gunboats under Commodore Campbell were in the St. Mary's River, and Mathews had some United States troops at his command near. The insurgents, two hundred and twenty in number, sent a flag of truce (March 17) to Fernandina, demanding the surrender of the town and island. About the same time the American gunboats appeared there. The authorities bowed in submission, and General Mathews, assuming the character of a protector, took possession of the place in the name of the United States. At the same time the commodore assured the Spanish governor that the gunboats were there only for aid and protection to a large portion of the population, who thought proper to declare themselves independent. On the 19th the town was formally given up to the United States authorities; a custom-house was established; the floating property in the harbor was considered under the protection of the United States flag, and smuggling ceased. The insurgent band, swelled to eight hundred by reinforcements from Georgia, and accompanied by troops furnished by General Mathews, besieged the Spanish garrison at St. Augustine, for it was feared the British might help the Spaniards in recovering what they had lost in the territory. The United States government would not countenance this kind of filibustering, and Mathews was superseded as commissioner (April 10, 1812) by Governor Mitchell, of Georgia. Mitchell, professing to believe Congress would sanction Mathews's proceedings, made no change in policy. The House of Representatives did actually pass a bill, in secret session (June 21), authorizing the President to take possession of East Florida. The Senate rejected it, for it would have been unwise to quarrel with Spain at the moment when war was about to be declared against Great Britain. Not many years afterwards Florida was ceded to the United States by Spain.

**East India Company (English).** At the close of the year 1600, Queen Elizabeth granted a charter to a company of London merchants for the monopoly of the trade over a vast expanse of land and sea in the region of the East Indies, for fifteen years. The charter was renewed from time to time. The first squadron of the company (five vessels) sailed from Torbay (Feb. 15, 1601) and began to make footholds,

speedily, on the islands and continental shores of the East, establishing factories in many places, and at length obtaining a grant (1698) from a native prince of Calcutta and two adjoining villages, with the privilege of erecting fortifications. This was the first step towards the acquirement by the company, under the auspices of the British government, of vast territorial possessions, with a population of two hundred millions, over which, in 1877, Queen Victoria was proclaimed empress. The company had ruled supreme in India, with some restrictions, until 1858, when the government of that Oriental empire was vested in the Queen of England. Though the company was not abolished, it was shorn of all its political power, as it had been of its trade monopoly. The East India Company first introduced tea into England, in the reign of Charles II.

**East India Company and a Compromise.** Resolved to retain a duty on tea exported to America, the British government proposed to allow the East India Company to send tea, in their ships, free of export duty, so as to enable the colonists to get the tea at a cheaper rate than before, while paying a small duty. The *cost of the tea* was not a question with the Americans. It was the *principle involved* in the act of taxing them without their consent that made them oppose the measure, which they did most effectually in all seaports where the East India Company sent their ships. (See *Tea-ships, Reception of.*)

**East Tennessee, BURNSIDE IN (1863).** General Burnside was assigned to the command of the Army of the Ohio, and was ordered to take active co-operation with the Army of the Cumberland in August, 1863. He had gathered twenty thousand men near Richmond, Ky., well disciplined and equipped. They left camp August 21, climbed over the Cumberland Mountains, and entered the magnificent Valley of East Tennessee, their baggage and stores carried, in many places, by pack-mules. On his entering the valley twenty thousand Confederates, commanded by General Simon B. Buckner (see *Fort Donelson*), fled to Georgia and joined Bragg. General Burnside had been joined by General Hartsuff and his command. Their numbers were swelled by junction with other troops. At the mouth of the Clinch River they first had communication with Colonel Minty's cavalry, on Rosecrans's extreme left. At London bridge General Shackleford had a skirmish with Confederates, and drove them across the stream, they burning the magnificent structure, two thousand feet long. Early in September a force of Confederates, under General Frazer, holding Cumberland Gap, surrendered to the Nationals, and the great valley between the Cumberland and Alleghany Mountains (of which Knoxville was the metropolis), extending from Cleveland to Bristol, seemed to be permanently rid of armed Confederates. The loyal inhabitants of that region received the National troops with open arms. Burnside made his headquarters at Knoxville.

**East Tennessee waiting for Deliverance.** East Tennessee, where loyalty to the Union was strongly predominant, was kept in submission to the Confederacy by the strong arm of military power. The people longed for deliverance, which seemed near at hand when, in January, 1862, the energetic General Mitchel made an effort to seize Chattanooga. His force was too small to effect it, for E. Kirby Smith was watching that region with a strong Confederate force. Mitchel asked Buell for reinforcements, but was denied. Finally General Negley, after a successful attack upon Confederates near Jasper, having made his way over the rugged ranges of the Cumberland Mountains, suddenly appeared opposite Chattanooga (June 7). Towards evening he had heavy guns in position, and for two hours he cannonaded the town and the Confederate works near. The inhabitants and Confederates fled from the town. With a few more regiments Negley might have captured and held the place, and Mitchel could have marched into East Tennessee. But Buell would not allow it. The insurgents had already evacuated Cumberland Gap voluntarily, and the inhabitants of East Tennessee were jubilant with hope of deliverance. But they were again disappointed and compelled to wait. The cautious Buell and the fiery Mitchel did not work well together, and the latter was soon assigned to the command of the Department of the South.

**Eastern Boundary of the United States.** Jay's treaty provided for a commission for determining the eastern boundary of the United States. In the treaty of peace (1783) it had been defined as at the St. Croix River. A question arose as to which stream was the true St. Croix. Massachusetts had claimed the Maquodavie as the true St. Croix; the British claimed the Passamaquoddy as the true St. Croix, and insisted that the western branch of it—the Schoodic—was the boundary. The commissioners (appointed Oct. 25, 1798) decided that the Passamaquoddy and its eastern branch was the true St. Croix, by which the disputed territory was divided about equally between the two nations. The ownership of the numerous islands in Passamaquoddy Bay was not determined.

**Eastern Indians, WAR WITH.** In conformity with the treaty of Utrecht, the French had withdrawn from the peninsula of Nova Scotia, and on Cape Breton began the erection of the formidable fortress of Louisburg, which would overlook the entrance to the Gulf of St. Lawrence and the coasts of Nova Scotia and New England. The French still claimed, if not for themselves, for the independent Indian tribes in the East, the territory as far west as the Kennebec. In behalf of this claim the French missions on the Penobscot and at Norridgewock were kept up, and the natives were observed to be in bad humor. The people of Massachusetts suspected the Jesuit missionary at the latter place of stimulating the Indians to war, and a secret expedition was sent (August, 1722) against it from Massachusetts. (See *Norridgewock*.) Hostilities continued, and the Indians

attacked points all along the New England frontier to the Connecticut River. To cover the towns in that valley Fort Dummer was built (1724) on the site of Brattleborough, the oldest English settlement in the State of Vermont. The Indians had captured seventeen vessels belonging to Massachusetts in the Gut of Causo in 1722; now (1724) armed schooners which they had seized prowled along the New England coast and captured seven vessels. It was deemed necessary to strike some decisive blow. The mission station at Norridgewock was destroyed, and the premium on scalps was raised to \$500 each. Captain John Lovewell, a noted partisan, surprised a party of sleeping Indians at Salmon Falls (February, 1725), killed them all, and marched to Dover in triumph with their scalps elevated on poles. In a second expedition he fell into an ambush on the margin of a pond, near the head of the Saco, and was slain at the first fire, with eight of his men. The remainder repulsed the Indians and retreated. The war was soon ended by treaties or agreements with the Indians. As the war had been kindled chiefly through the rascality of private traders, measures were adopted by the Massachusetts Legislature to protect the Indians from the extortion of these people.

**Eastman, HARVEY GRIDLEY,** commercial teacher, was born at Marshall, Oneida Co., N. Y., Oct. 16, 1832; died at Denver, Col., July 13, 1878. After attending the common schools of his neighborhood, he completed his education at the State Normal School at Albany; and at the age of twenty-three opened a commercial school at Oswego, N. Y., having been a teacher in a similar school kept by his uncle in Rochester. In that school he first conceived the plan of a commercial or business college. On the 3d of November, 1859, Mr. Eastman opened a business college in the city of Pongkeepsie, on the Hudson, and the first pupil was Andrew Houston, who, on Nov. 3, 1859, placed his son in the college. The institution began with three pupils, and the number rapidly increased. In 1865 there were more than seventeen hundred students in the college. It was the first institution in which actual business was taught. Mr. Eastman was a very liberal and enterprising citizen, foremost in every judicious measure which promised to benefit the community in which he lived. He was twice elected mayor of the city, and held that office at the time of his death. On the day of his funeral the city was draped in mourning and nearly all places of business were closed, for he was eminently respected as a citizen and as a public officer.

**Easton, JAMES,** was born at Hartford, Conn., and died at Pittsfield, Mass. Mr. Easton was a builder, and settled in Pittsfield, Mass., in 1763. Active in business and strong in intellect, he became a leader in public affairs there, and was chosen to a seat in the Massachusetts Assembly in 1774. He was also colonel in the militia, and held the position of leader of the minute-men of that town. When the expedition to assail Ticonderoga was organized in western Massa-

achusetts, Colonel Easton joined Allen and Arnold in accomplishing the undertaking, and it was he who bore the first tidings of success to the Provincial Congress of Massachusetts.

**Easton, TREATIES AT.** Easton, on the Delaware, was a favorite place for holding councils with the Indian chiefs between the years 1754 and 1761. On these occasions 200 to 500 Indians were frequently seen. Teedyuscung, an eminent Delaware chief, who represented several tribes, was chief speaker and manager among the barbarians. In 1756 the relations between the English and the Six Nations, the Delawares, Shawnoese, and Mohegans were critical, for the barbarians, especially the Delawares, had become greatly incensed against the white people of Pennsylvania. The Quakers of that state had espoused the cause of the pagans and formed an association for securing justice for the Indians and friendship between them and the white people. (See *Friendly Association*.) They held two conferences at Easton with the Indians, and Sir William Johnson complained that the Quakers had intruded upon his office. Finally, in July, 1756, a conference was held between the Delawares, Shawnoese, Mohegans, the Six Nations, and Governor Denny and his council, and George Croghan, an intriguing Indian trader. At the suggestion of the Quakers Teedyuscung invited Charles Thomson, master of the Quaker Academy in Philadelphia, and afterwards permanent secretary of the Continental Congress, to act as his secretary. Denny and Croghan opposed it; Teedyuscung persisted in having Thomson make minutes of the proceedings, so that garbled and false reports of interested men might not be given as truth. By this arrangement the Indians received fair play. The conference was thinly attended; but at another, begun on the 8th of November, the same year, the Indian tribes were well represented. In reply to questions by Governor Denny of what he complained, Teedyuscung charged the proprietaries of Pennsylvania with obtaining large territories by fraud, and specified well-known instances like that of the "Indian Walk." (See *Walking Purchase*.) At that conference there were many citizens from Philadelphia, chiefly Quakers, and the result was, after deliberations kept up for nine days, a satisfactory treaty of peace was made between the Indians and the English, the governor offering to indemnify the Delawares for any lands which had been fraudulently taken from them. That matter was deferred until a council was held at Easton in July, 1757, when Teedyuscung was well plied with liquor. The Quakers, with much exertion, enabled the old chief to resist the intrigues of Croghan to weaken his influence among the Indians. Another council was held there in the autumn of 1758. The object was to adjust all differences between the English and the Six Nations, as well as other tribes farther westward and southward. The governors of Pennsylvania and New Jersey, Sir William Johnson, Colonel Croghan, and a large number of the Friendly Association were present. Teedyuscung acted as chief speaker, which

offended the Six Nations, who regarded the Delawares as their vassals; but he conducted himself admirably, maintained his position firmly, and resisted the wiles of Colonel Croghan and the governor. This great council continued eighteen days. The land question was thoroughly discussed. All causes for misunderstanding between the English and the Indians were removed, and a treaty for a general peace was concluded Oct. 26, 1758. There was another council held at Easton in 1761, concerning settlements at Wyoming, in which Teedyuscung took an active and eloquent part. A war party of the Six Nations descended the Susquehanna in the autumn of 1763, murdered Teedyuscung and burned his dwelling, and charged the crime upon the white settlers in the Wyoming Valley. (See *Susquehanna Company*.)

**Eastport (Me.), CAPTURE OF (1814).** Early in July, 1814, Sir Thomas M. Hardy sailed secretly from Halifax with a squadron, consisting of the *Ramillies* (the flag-ship), sloop *Martin*, brig *Bover*, the *Bream*, the bomb-ship *Terror*, and several transports with troops under Colonel Thomas Pilkington. The squadron entered Passamaquoddy Bay on the 11th, and anchored off Fort Sullivan, at Eastport (Moose Island), then in command of Major Perley Putnam with a garrison of fifty men, having six pieces of artillery. Hardy demanded an instant surrender, giving Putnam only five minutes to consider. The latter promptly refused, but at the vehement importunities of the alarmed inhabitants, who were indisposed to resist, he surrendered the post on condition that, while the British should take possession of all public property, private property should be respected. This was agreed to, and one thousand armed men, with women and children, a battalion of artillery, and fifty or sixty pieces of cannon were landed on the main, when formal possession was taken of the fort, the town of Eastport, and all the islands and villages in and around Passamaquoddy Bay. Several vessels laden with goods valued at three hundred thousand dollars, ready to be smuggled into the United States, were seized. Sixty cannons were mounted, and civil rule was established under British officials. The British held quiet possession of that region until the close of the war.

**Eaton, THEOPHILUS,** first governor of the New Haven colony, was born at Stony Stratford, England, in 1591; died at New Haven, Jan. 7, 1657. He was bred a merchant, and was for some years the English representative at the court of Denmark. Afterwards he was a distinguished London merchant, and accompanied Mr. Davenport to New England in 1637. With him, he assisted in founding the New Haven colony, and was chosen its first chief magistrate. Mr. Eaton filled the chair of that office continuously until his death.

**Eaton, WILLIAM,** was born at Woodstock, Conn., Feb. 23, 1764; died at Brimfield, Mass., Jan. 1, 1811. He graduated at Dartmouth College in 1790. He entered the Continental army at the age of sixteen, and was discharged in

1783. In 1797 he was appointed American consul at Tunis, and arrived there in 1799. He acted with so much boldness and tact that he secured for his country the freedom of its commerce from attacks by Tunisian cruisers. He returned to the United States in 1803; was appointed naval agent of the United States for the Barbary States (which see); and accompanied the American fleet to the Mediterranean in 1804. He assisted Hamet Caramelli, the rightful ruler of Tripoli, in an attempt to recover his throne, usurped by his brother. (See *Tripoli, War with.*) Soon afterwards Eaton returned to the United States, and passed the remainder of his life at Brimfield. For his services to American commerce the State of Massachusetts gave him ten thousand acres of land. The King of Denmark gave him a gold box in acknowledgment of his services to commerce in general and for the release of Danish captives at Tunis. Burr tried to enlist General Eaton in his conspiracy, and the latter testified against him on his trial. (See *Burr's Mysterious Expedition.*)

**Eckford, HENRY**, naval constructor, was born at Irvine, Scotland, March 12, 1775; died in Constantinople, Nov. 12, 1832. He learned his art with an uncle at Quebec, when he began business for himself in New York in 1796, and soon took the lead in his profession. During the War of 1812-15 he constructed ships-of-war on the Lakes with great expedition and skill; and soon after the war he built the steamship *Robert Fulton*, in which, in 1822, he made the first successful trip in a craft of that kind to New Orleans and Havana. Made naval constructor at Brooklyn in 1820, six ships-of-the-line were built after his models. Interference of the Board of Naval Commissioners caused him to leave the service of the government, but he afterwards made ships-of-war for European powers and for the independent states of South America. In 1831 he built a war-vessel for the Sultan of Turkey, and going to Constantinople, organized a navy-yard there, and there he died.

**Econochaca, or Holy Ground, BATTLE AT.** Marching from Fort Deposit, in Butler County, Ala. (December, 1813), General Claiborne, pushing through the wilderness nearly thirty miles with horse and foot and friendly Choctaw Indians, arrived near Econochaca, or Holy Ground, a village built by Weathersford. (see *Fort Mims*) upon a bluff on the left bank of the Alabama, just below Powell's Ferry, Lowndes County, in an obscure place, as a "city of refuge" for the wounded and dispersed in battle, fugitives from their homes, and women and children. No path or trail led to it. It had been dedicated to this humane purpose by Tecumtha and the Prophet (which see) a few months before, and the Cherokees had been assured by them that, like Ant-tose, no white man could tread upon the ground and live. There the barbarian priests performed horrid incantations, and in the square in the centre of the town the most dreadful cruelties had already been perpetrated. White prisoners and Creeks friendly to them had been there tortured and roasted. On the morning of Dec. 23

Claiborne appeared before the town. At that moment a number of friendly half-bloods of both sexes were in the square, surrounded by pine-wood, ready to be lighted to consume them, and the prophets were busy in their mummery. The troops advanced in three columns. The town was almost surrounded by swamps and deep ravines, and the Indians, regarding the place as holy, and having property there of great value, though partially surprised, prepared to fight desperately. They had conveyed their women and children to a place of safety deep in the forest. By a simultaneous movement, Claiborne's three columns closed upon the town at the same moment. So unexpected was the attack that the dismayed Indians broke and fled before the whole of the troops could get into action. Weathersford was there. The Indians fled in droves along the bank of the river, and by swimming and the use of canoes they escaped to the other side and joined their families in the forest. Weathersford, when he found himself deserted by his warriors, fled swiftly on a fine gray horse to a bluff on the river between two ravines, hotly pursued, when his horse made a mighty bound from it, and horse and rider disappeared under the water for a moment, when both arose, Weathersford grasping the mane of his charger with one hand and his rifle with the other. He escaped in safety. Econochaca was plundered by the Choctaws and laid in ashes. Full two hundred houses were destroyed, and thirty Indians killed. The Tennesseans lost one killed and six wounded.

**Eden, SIR ROBERT**, the last royal governor of Maryland, was born at Durham, Eng.; died at Annapolis, Md., Sept. 2, 1786. Succeeding Governor Sharpe in 1768, he was more moderate in his administration than his predecessors. He complied with the orders of Congress to abdicate the government. He went to England, and at the close of the war returned to recover his estate in Maryland. He had married a sister of Lord Baltimore, and was created a baronet Oct. 19, 1776.

**Edes, BENJAMIN**, was an eminent patriotic journalist in Boston during the Revolution. He was born at Charlestown, Mass., Oct. 14, 1732; died in Boston, Dec. 11, 1803. He was captain of the "Ancient and Honorable Artillery Company" (which see) in 1760, and was one of the Boston "Sons of Liberty." In his printing-office many of the tea-party disguised themselves, and were there regaled with punch after the exploit at the wharf was performed. (See *Boston Tea-party.*) He began, with Mr. Gill, in 1755, the publication of the *Boston Gazette and Country Journal*, which became a very popular newspaper, and did eminent service in the cause of popular liberty. Adams, Hancock, Otis, Quincy, Warren, and other leading spirits were constant contributors to its columns, while Mr. Edes himself wielded a caustic pen. He was in Watertown during the siege of Boston, from which place he issued the *Gazette*, the "mouth-piece of the Whigs." It was discon-

tinued in 1798, after a life, sustained by Edes, of forty years.

**Edge-tool Manufactures.** Probably the first American establishment for the exclusive manufacture of edge-tools was founded by Samuel W. Collins, at Collinsville, Conn., which is now one of the largest establishments of the kind in the world. It was begun about 1826, when the product of a day's labor there was the forging and tempering of eight broadaxes. In 1876 there were one hundred edge-tool manufactories in the United States, employing about four thousand hands. The capital invested in the business in 1870 was \$5,000,000, and the annual product was valued at \$6,000,000. Oliver Hunt, a blacksmith in the south part of Worcester County, Mass., began the business of axe-making, in connection with general blacksmithing, about sixty years ago, or in 1816. Out of this small beginning grew the present extensive "Douglass Axe Company," for the manufacture of axes.

**Edict of Nantes, THE,** promulgated by Henry IV. of France, gave toleration to the Protestants in feuds, civil and religious. It was published April 13, 1598, and was confirmed by Louis XIII. in 1610, after the murder of his father; also by Louis XIV. in 1652; but it was revoked by him Oct. 22, 1685. It was a great state blunder, for it deprived France of five hundred thousand of her best citizens, who fled into Germany, England, and America, and gave those countries the riches that flow from industry, skill, and sobriety. They took with them to England the art of silk-weaving, and so gave France an important rival in that branch of industry. (See *Huguenots in America.*)

**Education in Mexico.** In 1551 a royal and pontifical university was established in Mexico by the Emperor Charles V., with the same privileges as that at Salamanca. There were in its cloisters two hundred and twenty-five doctors and masters, with twenty-two professors of all the sciences then known, and a good library. Other institutions of learning were founded in Mexico about that time, called colleges; some for the Spanish children, others for the Indian youths. There were also free schools and academies; also charitable institutions, and thirteen hospitals. In the city of Mexico the first printing on the American continent was done.

**Education in the United States.** Popular education has made rapid progress in our country within the present century, and especially since the first quarter thereof. In 1776 there were seven colleges in the English-American colonies; in 1876 there were three hundred and forty-nine colleges proper and about fifty so called. In 1776 the common schools were few and very inferior; in 1876 they were numerous and efficient. The school population in 1876 was thirteen million, and of this number six million were enrolled in the records of public schools. Sabbath-schools are doing much for the moral and intellectual education of the people. The first one in the country was opened by the Methodists, in Virginia, in 1786; in 1876

they numbered seventy thousand, with over seven hundred and fifty-three thousand teachers and six million pupils.

**Edwards, JONATHAN,** a remarkable metaphysician and theologian, was born at East Windsor, Conn., Oct. 5, 1703; died at Princeton, N. J., March 22, 1758. He graduated at Yale College in 1720, having begun to study Latin when he

JONATHAN EDWARDS.

was six years of age. He is said to have reasoned out for himself his doctrine of free-will before he left college, at the age of seventeen. He began preaching to a Presbyterian congregation before he was twenty years old, and became assistant to his grandfather, Rev. Mr. Stoddard, minister at Northampton, Mass., whom he succeeded as pastor. He was dismissed in 1750, because he insisted upon a purer and higher standard of admission to the communion-table. Then he began his missionary work (1751-57) among the Stockbridge Indians, and prepared his greatest work, on *The Freedom of the Will*, which was published in 1754. He was inaugurated President of the College of New Jersey, at Princeton, Feb. 16, 1758, and died of small-pox a little more than a month afterwards. He married Sarah Pierrepont, of New Haven, in 1727, and they became the grandparents of Aaron Burr.

**Edwards, NINIAN,** was born in Montgomery County, Md., in March, 1775; died of cholera at Belleville, Ill., July 20, 1833. William Wirt directed his early education, which was finished at Dickinson College, Pennsylvania, and in 1819 he settled in the Green River district of Kentucky. Before he was twenty-one he became a member of the Kentucky Legislature; was admitted to the bar in 1798 in Kentucky, and to that of Tennessee the next year, and rose very rapidly in his profession. He went through the offices of circuit judge and of appeals to the bench of chief-justice of Kentucky in 1808. The next year he was appointed the first governor of the Territory of Illinois, and retained that office until its organization as a state in 1818. From 1818 till 1824 he was United States Senator, and from 1826 to 1830 he was governor of the state. He did much, by promptness and activity, to

restrain Indian hostilities in the Illinois region during the War of 1812.

**Edwards, PIERREPONT**, son of the metaphysician, was born at Northampton, Mass., April 8, 1750; died at Bridgeport, Conn., April 14, 1826. He graduated at the College of New Jersey, at Princeton, in 1768. His youth was spent among the Stockbridge Indians, where his father was missionary, and he acquired the language perfectly. Mr. Edwards became an eminent lawyer; espoused the cause of the patriots, and fought for liberty in the army of the Revolution. He was a member of the Congress of the Confederation in 1787-88, and in the Connecticut Convention warmly advocated the adoption of the National Constitution. He was Judge of the United States District Court in Connecticut at the time of his father's death. Mr. Edwards was the founder of the "Toleration Party" in Connecticut, which made him exceedingly unpopular with the Calvinists.

**Election for President and Vice-President.** Under the Constitution as originally adopted, the candidates for President and Vice-President were voted for in the electoral college of each state, without designating which the elector intended for the first and which for the second office. Lists of these were transmitted to the seat of government, and the candidate having the greatest number (if a majority of the whole) became President, and the one having the next greatest number Vice-President. If the two highest candidates received an equal number of votes, the House of Representatives (as now) was to proceed immediately to choose by ballot one of them for President, voting by states, each state having one vote, and a majority of all the states being necessary to a choice. In case of a tie on the Vice-President, the Senate was to choose between the equal candidates. The Twelfth Amendment to the Constitution (which see) changed the mode of voting for the two officers, the electors being required to vote separately for President and Vice-President. They were to name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President; distinct lists of all persons voted for as President and Vice-President, signed and certified, were sent to the seat of government, directed to "the President of the Senate," whose duty it was, in the presence of the Senate and House of Representatives, to open all the certificates, and count the votes, the person having the greatest number of votes for the respective offices (if a majority of the whole) to be declared elected. Such continues to be the mode.

**Electoral Colleges, THE.** The people do not vote directly for President and Vice-President, but they choose, for each Congressional district in the respective states (and two at large in each state) a representative in an electoral college, which consists of as many members as there are congressional districts in each state. The theory of the framers of the Constitution was, that by this means the best men of the country would be chosen in the several districts, and they would

better express the wishes of the people concerning a choice of President and Vice-President than a vote directly by the people for these officers. The several electors chosen in the different states meet at their respective state capitals at a specified time, and name in their ballots the persons for President and Vice-President. Then each electoral college makes a list of the names voted for these officers, and the number of votes for each, which lists the members of the college sign and certify, and the list of each state electoral college is transmitted to the President of the Senate of the United States. (See *Election for President and Vice-President.*)

**Electoral Commission, THE.** The Forty-fourth Congress met in its last session early in December, 1876. There was a Democratic majority in the House of Representatives. On the 4th a resolution was adopted, providing for the investigation of the action of returning boards in South Carolina, Florida, and Louisiana. (See *Presidential Election, 1876.*) There was much excitement in Congress and anxiety among the people. Thoughtful men saw much trouble at the final counting of the votes of the electoral colleges by the President of the Senate, according to the prescription of the Constitution, for already his absolute power in the matter was questioned. Proctor Knott, of Kentucky, offered a resolution for the appointment of a committee of seven members by the speaker, to act in conjunction with a similar committee that might be appointed by the Senate, to prepare and report a plan for the creation of a tribunal to count the electoral votes, whose authority no one could question, and whose decision all could accept as final. The resolution was adopted. The Senate appointed a committee; and on Jan. 18, 1877, the joint committee, consisting of fourteen members, reported a bill that provided for the meeting of both Houses in the hall of the House of Representatives on Feb. 1, 1877, to there count the votes in accordance with a plan which the committee proposed. In case of more than one return from a state, all such returns, having been made by appointed tellers, should be, upon objections being made, submitted to the judgment and decision, as to which was the lawful and true electoral vote of the state, of a commission of fifteen, to be composed of five members from each House, to be appointed *vice voce*, Jan. 30, with four associate-justices of the Supreme Court of the United States, who should, on Jan. 30, select another of the justices of the Supreme Court, the entire commission to be presided over by the associate-justice longest in commission. After much debate, the bill passed both Houses. It became a law, by the signature of the President, Jan. 29, 1877. The next day the two Houses each selected five of its members to serve on the Electoral Commission. Judges Clifford, Miller, Field, and Strong, of the Supreme Court, were named in the bill, and these chose as the fifth member of associate-justices Joseph P. Bradley. The Electoral Commission assembled in the hall of the House of Representatives Feb. 1, 1877. The legality of returns from several states was questioned, and was

passed upon and decided by the commission. The counting was completed on March 2d, and the commission made the final decision in all cases. The President of the Senate then announced that Hayes and Wheeler were elected. The Forty-fourth Congress finally adjourned on Saturday, March 3. The 4th of March, prescribed as the day for the taking of the oath of office by the President, falling on Sunday, Mr. Hayes, to prevent any technical objections that might be raised, privately took the oath of office on that day, and on Monday, the 5th, he was publicly inaugurated, in the presence of a vast multitude of his fellow-citizens.

**Electric Lamps.** In July, 1859, Professor Moses G. Farmer lighted a parlor, at No. 16 Pearl Street, Salem, Mass., with electric light, subdivided for different lamps. It was used throughout the whole month of July, and was only abandoned because the generation of the electricity for use as an illuminator was four times as expensive as an equivalent amount of gaslight. The apparatus consisted of a galvanic battery of about three dozen six-gallon jars placed in the cellar of the house, from which the electric current was conveyed by suitable conducting-wires to the mantle-piece of the parlor, where were located two electric lamps, either of which could be lighted at pleasure, or both at once.

**Electric Light, EARLY HISTORY OF.** (See *Electric Lamps.*) In 1845 John W. Starr, of Cincinnati, filed a caveat in the United States Patent Office for a divisible electric light. He went to England to complete and prove his experiment, and was accompanied by his agent, Mr. King. He carried letters of introduction to distinguished men there, and George Peabody, American banker in London, agreed to furnish him with all the money necessary, provided his invention should be sanctioned by scientific men. He completed his experiments at Manchester, and there the invention proved highly successful in the presence of many scientific men, among them Professor Faraday, who pronounced it perfect. The excitement and overwork of the brain by this triumph caused the death of Starr the same night, who was found dead in his bed the next day. Nothing was ever done with the invention afterwards. In his caveat, Starr said: "I claim the method of heating conductors so as to apply them to illumination, the current being regulated so as to obtain the highest degree of heat without fusing the conductor. I claim the method of obtaining an intermitting light for the use of light-houses, in the manner set forth, and for signals. I claim the mode of submarine lighting by enclosing the apparatus in a suitable glass vessel, hermetically sealed; and also the mode of lighting places containing combustible or explosive compounds or materials, as set forth."

**Electro-magnetic Telegraph.** This invention, conceived more than a century ago, was first brought to perfection as an intelligent medium of communication between points distant from each other by Professor Samuel Finley Breese Morse, of New York, and was first pre-

sented to public notice in the year 1838. In the autumn of 1837 he filed a caveat at the Patent Office; and he gave a private exhibition of its marvellous power in the New York University in January, 1838, when intelligence was instantly transmitted by an alphabet composed of dots and lines, invented by Morse, through a circuit

MORSE APPARATUS, CIRCUIT AND BATTERY.

MORSE KEY.

MORSE REGISTER.

of ten miles of wire, and plainly recorded. Morse applied to Congress for pecuniary aid to enable him to construct an experimental line between Washington and Baltimore. For four years he waited, for the action of the government was tardy, in consequence of doubt and positive opposition. At the beginning of March, 1842, Congress appropriated \$30,000 for his use; and in May, 1844, he transmitted from Washington to Baltimore, a distance of forty miles, the first message, furnished him by a young lady—"What hath God wrought!" The first public message was the announcement of the nomination by the Democratic National Convention in Baltimore (May, 1844) of James K. Polk for President of the United States. Professor Morse also originated submarine telegraphy. He publicly suggested its feasibility in a letter to the Secretary of the Treasury in 1843. So early as 1842 he laid a submarine cable, or insulated wire, in the harbor of New York, for which achievement the American Institute awarded him a small gold medal. In 1858 he participated in the labors and honors of laying a cable under the sea between Europe and America. (See *Atlantic Telegraph.*) Monarchs gave him medals and orders, Yale College conferred upon him the honorary

degree of LL.D., and in 1858, at the instance of the emperor of the French, several European governments combined in the act of giving Professor Morse the sum of \$80,000 in gold as a token of their appreciation. Improvements have been made in the transmission of messages. For more than a quarter of a century the messages were each sent over a single wire, only one way at a time. Early in 1871, through the inventions of Edison and others, messages were sent both ways over the same wire at the same instant of time. Very soon four messages were sent the same way. This number may possibly be increased until multiplex transmission shall become common.

**Eliot, JARED**, was born Nov. 7, 1685; died at Killingworth, Conn., April 28, 1763. He graduated at Yale College in 1706, and from 1709 until his death he was minister of the first church at Killingworth. He was a most practical and useful man, and did much for the advancement of agriculture and manufactures in New England. He strongly urged in essays the introduction into the colonies of a better breed of sheep. In 1747 he wrote: "A better breed of sheep is what we want. The English breed of Cotswold sheep cannot be obtained, or at least not without great difficulty; for wool and live sheep are contraband goods, which all strangers are prohibited from carrying out on pain of having the right hand cut off." (See *Navigation Laws*.) In 1761 the London "Society for the Encouragement of Arts, Manufactures, and Commerce" honored him with its medal, and he was made a member of the Royal Society of London. He was the first to introduce the white mulberry into Connecticut, and with it silk-worms, and published a treatise on silk-culture. Mr. Eliot was also an able physician, and was particularly successful in the treatment of insanity and chronic complaints.

**Eliot, JOHN**, commonly known as the Apostle to the Indians, was born at Nasing, Essex, England, in 1603; died May 20, 1690. Educated at Cambridge, he came to Boston in 1631, and the next year was appointed minister at Roxbury. Seized with a passionate longing for the conversion of the Indians and for improving their condition, he commenced his labors among the twenty tribes within the English domain in Massachusetts in October, 1646. He acquired their language through an Indian servant in his family, made a grammar of it, and translated the Bible into the Indian tongue. It is claimed that Eliot was the first Protestant minister who preached to the Indians in their native tongue. An Indian town called Natick was erected on the Charles River for the "praying Indians" in 1657, and the first Indian church was established there in 1660. During King Philip's War Eliot's efforts in behalf of the praying Indians saved them from destruction by the white people. He travelled extensively, visited many tribes, planted several churches, and once preached before King Philip, who treated him with disdain. He persuaded many to adopt the customs of civilized life, and lived to see twenty-four of them

become preachers of the Gospel to their own tribes. His influence among the barbarians was unbounded, and his generosity in helping the sick and afflicted among them was unsparing. Cotton Mather affirmed, "We had a tradition that the country could never perish as long as Eliot was alive." He published many small works on religious subjects, several of which were in the Indian language. His greatest work was the translation of the Bible into the Indian language (1661-66), and was the first Bible ever printed in America. It is much sought after by collectors. A copy was sold in New York in 1868 for \$1130. The language in which it was written has perished.

**Elizabeth, QUEEN OF ENGLAND**, daughter of Henry VIII and Aune Boleyn, was born at Greenwich Sept. 7, 1533; died March 24, 1603. Under the tuition of Roger Ascham she acquired much proficiency in classical learning, and before she was seventeen years of age she was mistress of the Latin, French, and Italian languages, and had read several works in Greek. By education she was attached to the Protestant Church, and was persecuted by her half-sister Mary, who was a Roman Catholic. Elizabeth never married. When quite young her father negotiated for her nuptials with the son of Francis I. of France, but it failed. She flirted awhile with the ambitious Lord Seymour. In 1558 she declined an offer of marriage from Eric, King of Sweden, and also from Philip of Spain. Her sister Mary died Nov. 17, 1558, when Elizabeth was proclaimed queen of England. With caution she proceeded to restore the Protestant religion to ascendancy in her kingdom. Her reform began by ordering a large part of the church service to be read in English, and forbade the elevation of the host in her presence. Of the Roman Catholic bishops, only one consented to officiate at her coronation. In 1559 Parliament passed a bill which vested in the crown the supremacy claimed by the pope; the mass was abolished, and the liturgy of Edward VI. restored. In one session the whole system of religion in England was altered by the will of a single young woman. When Francis II. of France assumed the arms and title of King of England in right of his wife, Mary Stuart, Elizabeth sent an army to Scotland which drove the French out of the kingdom. She supported the French Huguenots with money and troops in their struggle with the Roman Catholics in 1562. In 1563 the Parliament, in an address to the queen, entreated her to choose a husband, so as to secure a Protestant succession to the crown. She returned an evasive answer. She gave encouragement to several suitors, after she rejected Philip, among them Archduke Charles of Austria, the Duke of Anjou, and Robert Dudley, Earl of Leicester. The latter remained her favorite until his death in 1588. During the greater part of Elizabeth's reign, Cecil, Lord Burleigh, was her prime-minister. For more than twenty years from 1564 England was at peace with foreign nations, and enjoyed great prosperity. Because of the opposite interests in religion, and possibly because of matrimonial affairs, Elizabeth and Philip of

Spain were mutually hostile, and in 1588 the latter sent the "Invincible Armada" for the invasion of England. It consisted of over one hundred and thirty vessels and thirty thousand men. It was defeated and dispersed (Aug. 8), and in a gale more than fifty of the Spanish ships were wrecked. On the death of Leicester the queen showed decided partiality for the Earl of Essex. Her treatment, and final consent to the execution by beheading, of Mary, Queen of Scots, has left a stain on the memory of Elizabeth. She assisted the Protestant Henry IV. of France in his struggles with the French Roman Catholics,

a century the dispute between the first settlers at Elizabethtown, N. J. (who came from Long Island and New England), and, first, the proprietors of New Jersey, and, next, the crown, arose and continued concerning the title to the lands on which these settlers were seated. The dispute occurred in consequence of conflicting claims to eminent domain, caused by a dispute about the original title to the soil. The Elizabethtown settlers obtained their land from the Indians, with the consent of Governor Nicolls; but already the Duke of York, without the knowledge of Nicolls or the settlers, had sold

the domain of New Jersey to Berkeley and Carteret. (See *New Jersey*.) The new proprietors ignored the title of the settlers, and made demands as absolute proprietors of the soil, which the latter continually resisted themselves, and so did their heirs. Frequent unsuccessful attempts at ejectment were made; the settlers resisted by force. The Assembly, called upon to interfere, usually declined, for that body rather favored the Elizabethan claimants. Finally, in 1757, Governor Belcher procured an act of Assembly, by which all past differences should be buried. It was not acceptable; and in 1751 the British government ordered a commission of inquiry to determine the law and equity in the case. The proprietors also began chancery suits against the heirs of the Elizabethtown settlers, and these were pending when the Revolution broke out (1775) and settled the whole matter.

Ellery, WILLIAM, a signer of the Declaration of Independence, was born at Newport, R. I., Dec. 22,

QUEEN ELIZABETH.

whom Philip of Spain subsidized. Her reign was vigorous, and is regarded as exceedingly beneficial to the British nation. Literature was fostered, and it was illustrated during her reign by such men as Spenser, Shakespeare, Sidney, Bacon, and Raleigh. Elizabeth was possessed of eminent ability and courage, but her personal character was deformed by selfishness, inconsistency, deceit, heartlessness, and other unwomanly faults. She signified her will on her deathbed that James VI. of Scotland, son of the beheaded Mary, should be her successor, and he was accordingly crowned as such.

**Elizabethtown Claimants.** For more than

1727; died there, Feb. 15, 1820. He graduated at Harvard in 1747, became a merchant in Newport, and was naval officer of Rhode Island in 1770. He afterwards studied and practised law at Newport, and gained a high reputation. An active patriot, he was a member of Congress from 1776 to 1785, excepting two years, and was very useful in matters pertaining to finance and diplomacy. He was especially serviceable as a member of the Marine Committee and of the Board of Admiralty. During the occupancy of Rhode Island by the British he suffered great loss of property, but bore it with quiet cheerfulness as a sacrifice for the public good. He was

chief-justice of the Superior Court of Rhode Island, and in 1790 was collector of the revonue at Newport. Mr. Ellery was a strenuous advocate of the abolition of slavery.

**Ellet, CHARLES L.**, engineer, was born in Pennsylvania, Jan. 1, 1810; died in Cairo, Ill., June 21, 1862. Mr. Ellet planned and built the first wire suspension bridge in the United States across the Schuylkill at Fairmount. He

CHARLES ELLET.

planned and constructed the first suspension bridge over the Niagara River below the Falls, and other notable bridges. When the Civil War broke out he turned his attention to the construction of steam "rams" for the Western rivers, and a plan proposed by him to the Secretary of War (Mr. Stanton) was adopted, and he soon converted ten or twelve powerful steamers on the Mississippi into "rams," with which he rendered great assistance in the capture of Memphis (which see). In the battle there he was struck by a musket-ball on the knee, from the effects of which he died. Mr. Ellet proposed to General McClellan a plan for cutting off the Confederate army at Manassas, which the latter rejected, and the engineer wrote and published severe strictures on McClellan's mode of conducting the war.

**Ellicott, ANDREW**, civil engineer, was born in Bucks County, Penn., Jan. 24, 1754; died at West Point, N. Y., Aug. 29, 1820. His father and uncle founded the town of Ellicott's Mills, on the Patapsco, Md., in 1790. Andrew was much engaged in public surveying for many years after settling in Baltimore in 1785. In 1789 he made the first accurate measurement of Niagara River from lake to lake, and in 1790 he was employed by the United States government in laying out the city of Washington. In 1792 he was made Surveyor-general of the United States, and in 1796 he was a commissioner to determine the southern boundary between the territory of the United States and Spain, in accordance with a treaty. From Sept. 1, 1813, until his death, Mr. Ellicott was professor of mathematics and civil engineering at West Point.

**Elliot, Mrs., and Colonel Balfour.** After the

martyrdom of Colonel Hayne (which see), the hatred and contempt felt for the British officers in Charleston was intense. The women boldly showed their indignation. Mrs. Charles Elliot, sister of Rebecca Motte (see *Fort Motte*), had treated Colonel Balfour with much politeness, and he was fond of her society, for she was a brilliant woman. One day, not long after the execution of Hayne, Balfour was walking in the garden with Mrs. Elliot, when he pointed to a chamomile-flower and asked its name. "The rebel-flower," answered Mrs. Elliot. "And why is it called the rebel-flower?" Balfour inquired. "Because," replied the patriotic woman, "it always flourishes most when trampled upon."

**Elliott, CHARLES LORING**, portrait-painter, was born at Scipio, N. Y., in December, 1812; died at Albany, Aug. 25, 1868. His father was an architect, and he prepared him for that profession. He became a pupil of Trumbull, in New York, and afterwards of Quidor, a painter of faucy-pieces. Having acquired the technicalities of the art, his chief employment for a time was copying engravings in oil, and afterwards he attempted portraits. He practised portrait-painting in the interior of New York for about ten years, when he went to the city (1845), where he soon rose to the head of his profession as a portrait-painter. It is said that he painted seven hundred portraits, many of them of distinguished men. His likenesses were always remarkable for fidelity, and beauty and vigor of coloring.

**Elliott, JESSE DUNCAN**, was born in Maryland, July 14, 1782; died in Philadelphia, Dec. 10, 1845. He entered the United States Navy as midshipman in April, 1804, and rose to master

JESSE DUNCAN ELLIOTT.

July 24, 1813. He was with Barron in the Tripolitan War, and served on the Lakes with Chaucey and Perry in the War of 1812-15. He captured two British vessels (*Detroit* and *Caledonia*) at Fort Erie, for which exploit he was pre-

sented by Congress with a sword. He was in command of the *Niagara* in Perry's famous combat on Lake Erie, to which the commodore went from the *Lawrence* during the action. (See *Lake Erie, Battle on*.) He succeeded Perry in command on Lake Erie in October, 1813. Elliott was with Decatur in the Mediterranean in 1815, and was promoted to captain in March, 1818. He commanded the West India squadron (1829-32); took charge of the navy-yard at Charleston in 1833; and afterwards cruised several years in the Mediterranean. On his return he was court-martialled, and suspended from command for four years. A part of the sentence was remitted, and in 1844 he was appointed to the command of the navy-yard at Philadelphia. For the part which Elliott took in the battle of Lake Erie Congress awarded him the thanks of the nation and a gold medal.

boats were taken to the mouth of Buffalo Creek, and in these the expedition embarked at midnight. At one o'clock in the morning (Oct. 9) they left the creek, while scores of people watched anxiously on the shore for the result. The sharp crack of a pistol, the roll of musketry, followed by silence, and the moving of two dark objects down the river proclaimed that the enterprise had been successful. Joy was manifested on the shores by shouts and the waving of lanterns. The vessels and their men had been made captives in less than ten minutes. The guns at Fort Erie were brought to bear upon the vessels. A struggle for their possession ensued. The *Detroit* was finally burned, but the *Caledonia* was saved, and afterwards did good service in Perry's fleet on Lake Erie. In this brilliant affair the Americans lost one killed and five wounded. The loss of the British is

THE ELLIOTT MEDAL.

**Elliott's Exploit at Fort Erie.** Black Rock, two miles below Buffalo, was selected as a place for a dock-yard for fitting out naval vessels for Lake Erie. Lieutenant Jesse D. Elliott, then only twenty-seven years of age, while on duty there, was informed of the arrival at Fort Erie, opposite, of two vessels from Detroit, both well manned and well armed and laden with valuable cargoes of peltry. They were the *Caledonia*, a vessel belonging to the Northwestern Fur Company, and the *John Adams*, taken at the surrender of Hull, with the name changed to *Detroit*. They arrived on the morning of Oct. 8 (1812), and Elliott at once conceived a plan for their capture. Timely aid offered. The same day a detachment of unarmed seamen arrived from New York. Elliott turned to the military for assistance. Lieutenant-colonel Scott was then at Black Rock, and entered warmly into Elliott's plans. General Smyth, the commanding officer, favored them. Captain Towson, of the artillery, was detailed, with fifty men, for the service; and sailors under General Winder, at Buffalo, were ordered out, well armed. Several citizens joined the expedition, and the whole number, rank and file, was about one hundred and twenty-four men. Two large

not known. A shot from Fort Erie crossed the river and instantly killed Major William Howe Cuyler, aid to General Hull, of Watertown, N. Y. The *Caledonia* was a rich prize; her cargo was valued at \$200,000.

**Ellsworth, EPHRAIM ELMER,** was born at Mechanicsville, N. Y., April 23, 1837; killed at Alexandria, Va., May 24, 1861. He was first engaged in mercantile business in Troy, N. Y., and as a patent solicitor in Chicago he acquired a good income. While studying law he joined a Zouave corps at Chicago, and in July, 1860, visited some of the Eastern cities of the Union with them, and attracted great attention. On his return he organized a Zouave regiment in Chicago; and in April, 1861, he organized another from the New York Fire Department. These were among the earlier troops that hastened to Washington. Leading his Zouaves to Alexandria, Ellsworth was shot by the proprietor of the Marshall House, while he was descending the stairs with a Secession flag which he had pulled down. (See *Virginia, Invasion of*.) His body was taken to Washington, and lay in state in the East Room of the White House. It was then taken to New York, where it lay in state in the City Hall, and, after being carried in procession through the

streets of the city, it was conveyed to his birth-place for burial. He was young and handsome, and his death, being the first of note that had

EPHRAIM ELMER ELLSWORTH

occurred in the opening war, produced a profound sensation throughout the country.

Ellsworth, OLIVER, LL.D., was born at Windsor, Conn., April 29, 1745; died Nov. 26, 1807. He graduated at the College of New Jersey in 1766; was admitted to the bar in 1771; practised in Hartford, Conn.; and was made state attorney. When the war for independence was kindling he took the side of the patriots in the Legislature of Connecticut, and was a delegate in Congress from 1777 to 1780. He became a member of the State Council, and in 1784 was appointed a judge of the Supreme Court. Judge Ellsworth was one of the framers of the National Constitution, but, being called away before the adjournment of the convention, his name was not attached to that instrument. He was

OLIVER ELLSWORTH.

the first United States Senator from Connecticut (1789-95), and drew up the bill for organizing the Judiciary Department. In 1796 he was made Chief-justice of the Supreme Court of the United States, and at the close of 1799 he was one of the envoys to France (which see).

**El Molino del Rey and Casa de Mata, CAPTURE OF (1847).** Almost within cannon-shot

distance of the city of Mexico is Chapultepec, a hill composed of porphyritic rock, and known in the Aztec language as "Grasshoppers' Hill." It rises from the ancient shore of Lake Tezucuo, and was the favorite resort of the Aztec princes. It was also the site of the palace and gardens of Montezuma. That hill was crowned with a strong castle and Military College, supported by numerous outworks, which, with the steepness of the ascent to it, seemed to make it impregnable. Only the slope towards the city was easily ascended, and that was covered with a thick forest. At the foot of the hill was a stone building, with thick high walls, and towers at the end, known as El Molino del Rey—"The King's Mill." About four hundred yards from this was another massive stone building, known as Casa de Mata. The former was used (1847) as a cannon-foundry by the Mexicans, and the latter was a depository of gunpowder. Both were armed and strongly garrisoned. General Scott, at Tacubaya, ascertained that Santa Aña, while negotiations for peace were going on, had sent church bells out of the city to be cast into cannon, and he determined to seize both of these strong buildings and deprive the Mexicans of those sources of strength. He proposed to first attack El Molino del Rey, which was commanded by General Leon. The Mexican force at these defences were about fourteen thousand strong, their left wing resting on El Molino del Rey, their centre forming a connecting line with Casa de Mata and supported by a field-battery, and their right wing resting on the latter. To the division of General Worth was intrusted the task of assailing the works before them. At three o'clock on the morning of Sept. 8 (1847) the assaulting columns moved to the attack, Garland's brigade forming the right wing. The battle began at dawn by Huger's 24-pounder opening on El Molino del Rey, when Major Wright, of the Eighth Infantry, fell upon the centre with five hundred picked men. On the left was the second brigade, commanded by Colonel McIntosh, supported by Duncan's battery. The assault of Major Wright on the centre drove back infantry and artillery, and the Mexican field-battery was captured. The Mexicans soon rallied and regained their position, and a terrible struggle ensued. El Molino del Rey was soon assailed and carried by Garland's brigade, and at the same time the battle around Casa de Mata was raging fiercely. For a moment the Americans reeled, but soon recovered, when a large column of Mexicans was seen filing around the right of their intrenchments to fall upon the Americans who had been driven back, when Duncan's battery opened upon them so destructively that the Mexican column was scattered in confusion. Then Sumner's dragoons charged upon them, and their rout was complete. The slaughter had been dreadful. Nearly one fourth of Worth's corps were either killed or wounded. The Mexicans had left one thousand dead on the field. Their best leaders had been slain, and eight hundred men had been made prisoners. The strong buildings were blown up, and none of

the defences of Mexico outside its gates now remained to them, excepting the Castle of Chapultepec and its supports. (See *Chapultepec*.)

**Emancipation of Slaves.** By the President's Emancipation Proclamation (which see), the number of slaves set free was as follows:

Arkansas.....	111,104	South Carolina....	402,541
Alabama.....	435,132	Texas.....	180,682
Florida.....	61,753	Virginia (part)....	450,437
Georgia.....	462,232	Louisiana (part)...	247,734
Mississippi.....	436,696		
North Carolina....	275,081	Total.....	3,063,392

The institution was not disturbed by the proclamation in eight states, which contained 831,780 slaves, distributed as follows:

Delaware.....	1,798	Tennessee.....	275,784
Kentucky.....	225,490	Louisiana (part)...	85,281
Maryland.....	87,188	West Virginia....	12,761
Missouri.....	114,465	Virginia (part)....	29,013

The remainder were emancipated by the Thirteenth Amendment to the National Constitution, making the whole number set free 3,895,172.

**Emancipation of Slaves, PROCLAMATION OF (1863).** On July 16, 1862, Congress passed an act for the suppression of slavery, one provision of which declared the absolute "freedom of the slaves of rebels" under certain operations of war therein defined. This gave the President a wide field for the exercise of executive power, but he used it with great prudence. The patient Lincoln hoped the wise men among the insurgents might heed the threat contained in the act. Finally, in September, he issued a warning proclamation, declaring that in case the enemies of the government did not lay down their arms before the 1st of January, 1863, he would then issue a proclamation of the freedom of the slaves. This warning was unheeded, and on the day mentioned the President issued the following proclamation:

“PROCLAMATION.

“Whereas, On the 22d day of September, in the year of our Lord one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to wit:

“That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to oppress such persons, or any of them, in any efforts they may make for their actual freedom.

“That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any, in which the people thereof, respectively, shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall on that day be in good faith represented in the Congress of the United States by members chosen thereto at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States.”

“Now, therefore, I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-Chief of the Army and Navy of the United States in time of actual armed rebellion against the authority and Government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do, on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do, publicly proclaimed for the full period of one hundred days from the day first above mentioned, order and designate, as the States and parts of States wherein the people thereof, respectively, are then in rebellion against the United States, the following, to wit:

“Arkansas, Texas, Louisiana (except the parishes of St. Bernard, Plaquemine, Jefferson, St. John, St. Charles, St. James, Ascension, Assumption, Terre Bonne, Lafourche, Ste. Marie, St. Martin, and Orleans, including the city of New Orleans, Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia (except the forty-eight counties designated as West Virginia and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Anne, and Norfolk, including the cities of Norfolk and Portsmouth), and which excepted parts are, for the present, left precisely as if this proclamation were not issued.

“And by virtue of the power and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated States and parts of States are, and henceforward shall be, free; and that the Executive Government of the United States, including the military and naval authorities thereof, will recognize and maintain the freedom of said persons.

“And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defence; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages.

“And I further declare and make known that such persons, of suitable condition, will be received into the armed service of the United States, to garrison forts, positions, stations, and other places, and to man vessels of all sorts in said service.

“And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of mankind, and the gracious favor of Almighty God.

“In testimony whereof I have hereunto set my name, and caused the seal of the United States to be affixed.

“Done at the City of Washington, this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and of the Independence of the United States the eighty-seventh.

“ABRAHAM LINCOLN.

“By the President:

“WILLIAM H. SEWARD, *Secretary of State*.

(See fac-simile on pages 433 to 436 inclusive.)

**Emancipation of the Slaves (1863).** The second session of the Thirty-seventh Congress commenced Dec. 2, 1861. A civil war of unparalleled magnitude was then raging. The people and their representatives were satisfied that slavery was the cause of the fratricidal strife, and it was not long before they perceived the necessity for destroying the system in order to save the life of the Republic. They perceived that it nurtured, by the labor of slaves, the men who were making war on the Republic, and that very few of the white people need be kept from the Confederate armies to carry on agricultural operations at home. The President and the loyal people therefore resolved to destroy the system by some method of abolition. The former kindly proposed to give pecuniary aid to any state government which might provide for the abolition of slavery. The kind proposition tested the temper of the slaveholders. They refused to listen, and a conference of Congressmen of the border slave-labor states, which Mr. Lincoln called, and to whom he submitted a plan for compensating the holders of slaves, told him plainly that it was his “duty to avoid all interference, direct or indirect, with slavery in the Southern States;” and their constituents generally scouted the proposition with scorn. Any further offer of compromise with the enemies of the Republic was seen to be useless, and Congress proceeded to deal vigorously with slavery, the strong right arm of the warriors against the national government. They proceeded to abolish slavery in the District of Columbia, over which Congress had exclusive control. A bill became a law (March 13, 1862), providing for the confiscation of the property of rebels against the government, which included the emancipation of their slaves. It prohibited all

Whereas, on the twenty-second day of September, in the year of our Lord one thousand eight hundred and sixty-two, a proclamation was issued by the President of the United States, containing, among other things, the following, to-wit:

"That on the first day of January, in the year of our Lord one thousand eight hundred and sixty-three, all persons held as slaves within any State or designated part of a State, the people whereof shall then be in rebellion against the United States, shall be then, thenceforward, and forever free; and the Executive Government of the United States, including the military and naval authority thereof, will recognize and maintain the freedom of such persons, and will do no act or acts to repress such persons, or any of them, in any efforts they may make for their actual freedom.

"That the Executive will, on the first day of January aforesaid, by proclamation, designate the States and parts of States, if any, in which the people thereof, respectively, shall then be in rebellion against the United States; and the fact that any State, or the people thereof, shall on that day be in good faith represented in the Congress of the United States, by members chosen thereto at elections wherein a majority of the qualified voters of such State shall have participated, shall, in the absence of strong countervailing testimony, be deemed conclusive evidence that such State, and the people thereof, are not then in rebellion against the United States."

Now, therefore I, Abraham Lincoln, President of the United States, by virtue of the power in me vested as Commander-in-Chief of the Army and Navy of the United States, in time of actual armed rebellion against authority and government of the United States, and as a fit and necessary war measure for suppressing said rebellion, do, on this first day of January, in the year of our Lord one thousand eight hundred and sixty-three, and in accordance with my purpose so to do, <sup>publicly</sup> proclaim for the full period of one hundred days from the day first above mentioned order and designate

as the States and parts of States wherein the people thereof respectively, on this day in rebellion against the United States, the following, to-wit:

Arkansas, Texas, Louisiana, (except the Parishes of St. Bernard, Plaquemine, Jefferson, St. John, St. Charles, St. James Ascension, Assumption, Terrebonne, Lafourche, St. Mary, St. Martin, and Orleans, including the City of New Orleans,) Mississippi, Alabama, Florida, Georgia, South Carolina, North Carolina, and Virginia, (except the fortyeight counties designated as West Virginia, and also the counties of Berkeley, Accomac, Northampton, Elizabeth City, York, Princess Anne, and Norfolk, including the cities of Norfolk & Portsmouth; and which excepted parts are, for the present, left precisely as if this proclamation were not issued.

And by virtue of the power, and for the purpose aforesaid, I do order and declare that all persons held as slaves within said designated States, and parts of States, are, and henceforward shall be free; and that the Executive Government of the United States, including the Military and naval authorities, thereunto respectively recognizing and maintaining the freedom of said persons.

And I hereby enjoin upon the people so declared to be free to abstain from all violence, unless in necessary self-defence; and I recommend to them that, in all cases when allowed, they labor faithfully for reasonable wages.

And I further declare and make known, that such persons of suitable condition, will be received into the armed service of the United States to garrison forts, positions stations, and other places, and to man vessels of all sorts in said service.

And upon this act, sincerely believed to be an act of justice, warranted by the Constitution, upon military necessity, I invoke the considerate judgment of Mankind, and the gracious favor of Almighty God.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this first day of January, in the year of our Lord one thousand eight hundred and sixty three, and of the

Independence of the United States  
of America the eighty-seventh.

Abraham Lincoln

By the President;  
William H. Seward  
Secretary of State

officers in the military or naval service of the Republic returning alleged fugitive slaves to their masters. On July 15, 1862, another law was perfected, which declared the absolute freedom of the slaves of public enemies under certain operations of war therein defined. The President, hoping the wiser and cooler men of the Confederacy might heed the warning, hesitated to act. The loyal people became impatient, and he was hard pressed by remonstrances and petitions. Finally a deputation from a convention in Chicago of Christians of all denominations waited upon him (Sept. 13, 1862) with a memorial requesting him at once to issue a proclamation of universal emancipation. The President, believing the time had not yet come for an act so radical, and especially at that critical juncture, when the National armies seemed everywhere to be weak, said, "I do not wish to issue a document that the whole world would see must necessarily be inoperative, like the Pope's bull against the comet." He said he was in sympathy with them; and when the committee left he said, "Whatever shall appear to be God's will, I will do." On the 22d he issued a preliminary proclamation of emancipation, in which he declared it to be his purpose, at the next meeting of Congress, to again recommend pecuniary compensation in aid of emancipation in states in which insurrection did not exist. He then declared that on the 1st of January next ensuing "the slaves within every state or designated part of a state, the people whereof should then be in rebellion," should be declared "thenceforward and forever free;" such freedom to be maintained by the whole force of the government, which should not, at the same time, repress any efforts the slaves might make for their actual freedom. This warning was treated with scorn, and was used to "fire the Southern heart" as evidence that the war was waged for the liberation of the slaves, and not for the restoration of the Union. When the hundred

days fixed for the determining of this momentous movement had expired it was found that the enemies of the Republic were more rebellious than ever. Accordingly, on the first day of January, 1863, President Lincoln issued his famous "Proclamation of Emancipation," which speedily led to a radical revolution in the social and labor systems among a large portion of the inhabitants of the Republic. (See *Emancipation of Slaves, Proclamation of*.) This proclamation, considered in all its relations, was one of the most important public documents ever issued by the hand of man. As the centuries roll on, mankind, more and more completely emancipated from the thralldom of injustice at the hands of the stronger, will regard it with ever-deepening reverence as the consummation of the hopes and labors of the founders of the Republic, who declared that "all men are created equal." Unlike the preliminary proclamation, it was wonderfully potential. The loyal portion of the nation, educated by the teachings of events to an habitual and profound sense of justice as well as expediency involved in such an act, were waiting with impatience for the proclamation. While the friends of the government hailed its appearance with joy, the conspirators against the life of the Republic were struck with dismay. The charming vision of a magnificent empire whose fundamental policy was avowed to be human slavery was suddenly changed; and they clearly saw that the whole fabric of their hopes and ambitious schemes was only a dissolving view—a baseless structure of a dream. The Golden Circle (which see) suddenly narrowed to a mere speck in the imagination of its inventors, and the whole gorgeous group of dignitaries who were to administer the public affairs of the grand slave empire of the West, stretching from Mason and Dixon's Line (which see) to the tropics, became transformed by the touch of this spear of Ithreal. The proclamation—so calm, so clear, so

decided, and withal so evidently fraught with irresistible power—carried joy and hope to the hearts of suffering millions in the Eastern Hemisphere. It touched with a mighty power a chord of sympathy in the bosom of every genuine aspirant for freedom in Europe to whom it was revealed, and elicited a quick response. From the hour when that proclamation was promulgated the prayers of true men in all lands ascended to the throne of Heaven in supplications for the success of the armies of the Republic in their struggle with its enemies. From the moment when that act of justice was proclaimed by the chief magistrate of the nation the power of the foes of the government began to grow more and more feeble. Already thousands of freedmen—made so by the decision that they were “contrabands” (which see)—had entered the public service in various ways, and a large number of them were enrolled as soldiers in the National army. From that moment until the close of the Civil War victory followed victory for the Union troops in quick succession. The proclamation was signed by Abraham Lincoln, President of the United States, and by William H. Seward, Secretary of State. The first tidings by the mouth of man given of it to the freedmen was uttered to a regiment of them in arms, beneath a magnificent live-oak tree, near Beaufort, S. C., within hughle-sound of the place where the South Carolina Ordinance of Secession (which see) for the perpetuation of slavery was framed. It was announced by Dr. Brisbane, a native of South Carolina. By the adoption afterwards of the Thirteenth Amendment to the Constitution, slavery was abolished from the domain of the Republic. It will be observed that the signature of President Lincoln to the proclamation is in a slightly tremulous hand. He signed it on New-year’s morning, after shaking hands with numerous callers.\*

**Emancipation of Ireland.** Ireland had suffered even more than the United States from the restrictive legislation and colonial monopoly of Great Britain. Its volunteer army (see *Ireland*), commanded by officers of their own choice, amounted to about fifty thousand at the close of the war with America (1782). They were united under one general-in-chief. Feeling strong in the right and in its material and moral vitality at the moment, and encouraged by the success of the Americans, Ireland demanded reforms for herself. The viceroy reported that unless it was determined that the knot which bound the two countries should be severed forever, the points required by the Irish Parliament must be conceded. It was a critical moment. Eden, who was secretary for Ireland, proposed the repeal of the act of George I. which asserted the right of the Parliament of

Great Britain to make laws to bind the people and the kingdom of Ireland—the right claimed for Parliament which drove the Americans to war—and the Rockingham ministry adopted and carried the important measure. Appeals from the courts of Ireland to the British House of Peers were abolished; the restraints on independent legislation were done away with, and Ireland, still owing allegiance to Great Britain, obtained the independence of its Parliament. This was the fruit of the war for independence in America. The people of Ireland owed the vindication of their rights to the patriots of the United States; but their gratitude took the direction of their complained-of oppressor, and their legislature voted \$500,000 for the levy of twenty thousand seamen to strengthen the royal navy, whose ships had not yet been withdrawn from American waters, and which, with an army, were still menacing the liberties of the Americans.

**Embargo Act, First (1794).** The British Orders in Council (Nov. 6, 1793) and a reported speech of Lord Dorchester (Guy Carleton) to a deputation of the Western Indians, produced much indignation against the British government. Under the stimulus of this excitement Congress passed (March 26, 1794) a joint resolution laying an embargo on commerce for thirty days. The measure seemed to have chiefly in view the obstructing the supply of provisions for the British fleet and army in the West Indies. It operated quite as much against the French. Subsequently (April 7) a resolution was introduced to discontinue all commercial intercourse with Great Britain and her subjects, as far as respected all articles of the growth or manufacture of Great Britain or Ireland, until the surrender of the Western posts (see *Jay’s Treaty*), and ample compensation should be given for all losses and damages growing out of British aggression on the neutral rights of the Americans. It was evident from the course of the debate and the temper of the House that the resolution would be adopted. This measure would have led directly to war. To avert this calamity Washington was inclined to send a special minister to England. The appointment of Jay followed. (See *Jay’s Treaty*.)

**Embargo Act (1807).** On the receipt of despatches from Minister Armstrong, at Paris, containing information about the new interpretation of the Berlin Decree and also of the British Orders in Council, President Jefferson, who had called Congress together earlier than usual (Oct. 25, 1807), sent a message to that body communicating facts in his possession and recommending the passage of an embargo act—“an inhibition of the departure of our vessels from the ports of the United States.” The Senate, after a session of four hours, passed a bill—

\* The pen with which President Lincoln wrote his Proclamation of Emancipation was given to Senator Sumner by the President, at the request of the former, and by him presented to the late George Livermore, of Boston. It is a steel pen, of the kind called “The Washington,” in a common cedar holder—all as plain and unostentatious as was the President himself.

twenty-two to six—laying an embargo on all shipping, foreign and domestic, in the ports of the United States, with specified exceptions, and ordering all vessels abroad to return home forthwith. This was done in secret session. The House, also with closed doors, debated the bill three days and nights, and it was passed by a vote of eighty-two to forty-four, and became a law Dec. 22, 1807. Unlimited in its duration and universal in its application, the embargo was an experiment never before tried by any nation—an attempt to compel two belligerent powers to respect the rights of neutrals by withholding intercourse with all the world. It accomplished nothing, or worse than nothing. It aroused against the United States whatever spirit of honor and pride existed in both nations. Opposition to the measure, in and out of Congress, was violent and incessant, and on March 1, 1809, it was repealed. At the same time Congress passed a law forbidding all commercial intercourse with France and England until the Orders in Council and the decrees should be repealed.

**Embargo Act** (preliminary to war, 1812). The continued aggressions of the British upon American commerce created a powerful war party in the United States in 1811, and a stirring report of the Committee on Foreign Relations, submitted to Congress in November, intensified that feeling. Bills were speedily passed for augmenting the army, and other preparations for war were made soon after the opening of the year 1812. The President was averse to war, but his party urged and threatened him so pertinaciously that he consented to declare war against Great Britain. As a preliminary measure he sent a confidential message to Congress (April 1, 1812) recommending the passage of an act laying an embargo for sixty days. A bill was introduced to that effect by Mr. Calhoun, of South Carolina, which prohibited the sailing of any vessel for any foreign port, except foreign ships with such cargoes as they might have on board when notified of the act.

The bill was passed (April 6), and was speedily followed by a supplementary act (April 14) prohibiting exportations by land, whether of goods or specie. The latter measure was called the land embargo. It was vehemently denounced, for it suddenly suppressed an active and lucrative trade between the United States and Canada.

**Embargo Act** (1813). It was ascertained that the British blockading squadron in American waters was constantly supplied with provisions from American ports by unpatriotic men; also that British manufactures were being introduced on professedly neutral vessels. Such traffic was extensively carried on, especially in New England ports, where magistrates were often leniently disposed towards such violators

of law. In a confidential message (Dec. 9, 1813) the President recommended the passage of an embargo act to suppress the traffic, and one passed both Houses on the 17th, to remain in force until Jan. 1, 1815, unless the war should sooner cease. It prohibited, under severe penalties, the exportation, or attempt at exportation, by land or water, of any goods, produce, specie, or live stock; and to guard against evasions even the coast trade was entirely prohibited. This bore heavily on the business of some of the New England sea-coast towns. No transportation was allowed, even on inland waters, without special permission from the President. While the act bore so heavily on honest traders, it pretty effectually stopped the illicit business of "speculators, knaves, and traders, who enriched themselves at the expense of the community." This act, like all similar ones, was called a "terrapin policy;" and illustrative of it was a caricature representing a British vessel in the offing, some men embarking goods in a boat on the shore, and a stout man carrying a barrel of flour towards the boat, impeded by being seized by the seat of his pantaloons by an enormous terrapin, urged on by a man who cries out, "D—n it, how he nicks 'em." The victim exclaims, "Oh! this cursed Ograbme!"—the letters of the last word, transposed, spell *embargo*. This act was repealed in April, 1814.

EMBARGO.

**Embargo, PROPOSITIONS TO GREAT BRITAIN CONCERNING THE.** Feeling the pressure of the opposition to the embargo at home, Pinckney was authorized to propose to the British ministry a repeal of the Embargo Act, as to Great Britain, on condition of the recall of her Orders in Council. Not wishing to encounter a refusal, Pinckney sounded Canning, the Secretary for Foreign Affairs, who gradually led the American minister into making a formal proposition. To this Canning made a reply (Sept. 28, 1808) in writing, unsurpassed in diplomatic cunning and partially concealed sarcasm. It also contained sound views on the whole subject of the orders and decrees. Canning insisted that as France was the original aggressor, by the issuing of the Berlin

Decree, retaliation (the claimed cause of the embargo) ought, in the first instance, to have been directed against that power alone; and England could not consent to buy off a hostile procedure, of which she ought never to have been made the object, at the expense of a concession made, not to the United States, upon whom the operation of the British orders was merely incidental, but to France, against which country, in a spirit of just retaliation, they had been originally aimed. The Berlin Decree had been the beginning of an attempt to overthrow the political power of Great Britain by destroying her commerce, and almost all Europe had been compelled to join in that attempt; and the American embargo had, in fact, come in aid of Napoleon's continental system. This attempt, Canning said, was not likely to succeed, yet it was important to the reputation of Great Britain not to show the least sign of yielding while the slightest doubt existed of its unequivocal failure, or the smallest link in the confederacy against her remained undissolved. The disconcerted American ambassador, evidently piqued at the result of his proposition, advised his government to persevere in the embargo. The embargo was far less effectual abroad than it was supposed it would be, and the difficulty of maintaining it strictly at home caused its repeal in March, 1809.

**Embargo, PUBLIC RECEPTION OF THE.** The decided support of the embargo (which see) given by both Houses of Congress was supplemented by resolutions of the Legislatures of Georgia, the Carolinas, Virginia, Ohio, Pennsylvania, and New Hampshire. An Enforcement Act was passed (January, 1809), and, to make it efficient, the employment of twelve additional revenue cutters was authorized; also the fitting out for service of all the ships of war and gunboats. This Enforcement Act was despotic, and would not have been tolerated except as a temporary expedient, for the Orders in Council were mild in their effects upon American trade and commerce compared with that of this Embargo Act. It pretty effectually suppressed extensive smuggling, which was carried on between the United States and Canada, and at many sea-ports, especially in New England. But the opposition clamored for its repeal. At the opening of the year 1814 there were expectations, speedily realized, of peace near; also of a general pacification of Europe. These signs were pointed to by the opposition as cogent reasons for the repeal. These considerations had weight, added to which was the necessity for increasing the revenue. Finally, on the 19th of January (1814), the President recommended the repeal of the Embargo Act, and it was done by Congress on the 14th of April. There were great rejoicings throughout the country, and the demise of the Terrapin was hailed as a good omen of commercial prosperity. The "Death of the Embargo" was celebrated in verses published in

the *Federal Republican* newspaper of Georgetown, in the District of Columbia. These were reproduced in the *New York Evening Post*, with an illustration designed by John Wesley Jarvis, the painter, and drawn and engraved on wood by Dr. Alexander Anderson. The picture was redrawn and engraved by Dr. Anderson (which see), on a reduced scale, for the author in 1864, after a lapse of exactly fifty years. The lines which it illustrates are as follows:

TERRAPIN'S ADDRESS.

"Reflect, my friend, as you pass by,  
As you are now, so once was I:  
As I am now, so you may be—  
Laid on your back to die like me!  
I was, indeed, true sailor born;  
To quit my friend in death I scorn.  
Once Jemmy seemed to be my friend,  
But basely brought me to my end!  
Of head bereft, and light, and breath,  
I hold *Fidelity* in death:  
For 'Sailors' Rights' I still will tug;  
And Madison to death I'll bug,  
For his perfidious zeal displayed  
For 'Sailors' Rights and for Free-trade.'  
This small atonement I will have—  
I'll lug down Jemmy to the grave.  
Then trade and commerce shall be free,  
And sailors have their liberty.  
Of head bereft, and light, and breath,  
The Terrapin, still true in death,  
Will punish Jemmy's perfidy—  
Leave trade and brother sailors free."

DEATH OF THE TERRAPIN, OR THE EMBARGO.

PASSENGER'S REPLY.

"Yes, Terrapin, bereft of breath,  
We see thee faithful still in death.  
Stick to't—Free-trade and Sailors' Rights!  
Hug Jemmy—press him—hold him—bite.  
Never mind thy head—thou'lt live without it;  
Spunk will preserve thy life—don't doubt it.  
Down to the grave, t' atone for sin,  
Jemmy must go with Terrapin.  
Bear him but off, and we shall see  
*Commerce restored and sailors free!*  
Hug, Terrapin, with all thy might—  
Now for 'Free-trade and Sailors' Right.'  
Stick to him, Terrapin! to thee the nation  
Now eager looks—then die for her salvation.

"FLORIDA RESPUBLICA.

"BANKS OF GOOSE CREEK, CITY OF WASHINGTON,  
15th April, 1814."

EMERSON, RALPH WALDO, was the leader of the transcendental school of New England, and was born in Boston, May 25, 1803. He graduated at Harvard in 1821; taught school five years, and in 1826 was licensed to preach by the Middlesex (Unitarian) Association. In the winter of 1833—

34, after returning from Europe, he began the career of a lecturer and essayist. Marrying in 1835, he fixed his residence at Concord, Mass., and was a contributor to, and finally editor of, *The Dial*, a quarterly magazine, and organ of the New England transcendentalists. He lived the quiet life of a literary man and philosopher, with the reputation, for more than forty years, of a profound thinker and elegant writer. He published essays, poems, and lectures. (See *Transcendentalism*.) Died April 27, 1882.

**Emigration from Maryland proposed.** In consequence of an annoying social ostracism to which the Roman Catholics in Maryland were subjected, an application (1751) was made to the French court in their behalf for a grant of land in Louisiana, to which they proposed to emigrate. This application was made by Charles Carroll (a wealthy landed proprietor and hereditary agent of the Baltimore family), one of whose family was afterwards a signer of the Declaration of Independence, and another the first Roman Catholic bishop in the United States. The application was not successful, probably because the French court did not think it prudent to introduce an English colony into Louisiana.

**Emigration to America regulated.** In April, 1637, King Charles I. issued a proclamation to restrain what was called the "disorderly transportation of his subjects to the American colonies." It commanded that no license be given them without a certificate that they had taken the oaths of supremacy and allegiance, and conformed to the discipline of the Church of England. On complaint of several disorders in New England, especially in ecclesiastical matters, the king, in July (1637), appointed Sir Ferdinando Gorges governor-general of that domain; but Archbishop Laud, the enemy of religious liberty, and other lords of council, having lost their authority, this last-named arrangement was never carried out. In May, 1638, the Privy Council of England issued an order for the Lord Treasurer to take immediate and effective measures for procuring the stay of eight ships then lying in the Thames, prepared to sail for New England. It is said that in these Oliver Cromwell, Sir Arthur Hazlerig, John Hampden, and others of republican proclivities, were about to sail for America. These were the men who were largely influential in bringing the king to the scaffold in less than a dozen years afterwards.

**Emigration to New England in 1630.** A fleet of fourteen sail, filled with men, women, and children, with provisions, sailed from England for America early in 1630, twelve of them arriving at Charlestown (which see) early in July. These ships contained eight hundred and forty passengers, among them John Winthrop, the appointed governor of the colony. There were, also, Deputy-governor Dudley and several gentlemen of wealth and distinction. The expense of the whole equipment and transportation was more than \$100,000. Some of them went up the Charles River until it became shallow and narrow, and landed at a well-watered place which was afterwards called Watertown. It became a

great hive of population, out of which swarmed many people to settle wild districts of country. After the arrival of this fleet, a day of thanksgiving was observed in all the plantations in New England.

**Emigration to South Carolina (1764).** After the conclusion of the treaty of peace at Paris, and when there seemed to be a promise of a long cessation of war in America, emigration from Europe began to flow in copiously. The Assembly of South Carolina, to encourage emigration, appropriated (1764) a large fund for bounties to foreign Protestants and such industrious poor people of Great Britain and Ireland as should resort to the province within three years and settle in the inland regions. Two townships, each containing forty-eight thousand acres, were laid out—one on the Savannah River, called Mecklenburg, and the other on the Santee, called Londonderry—for the use of emigrants. Soon afterwards five or six hundred poor Germans, who had been enticed into England under deceitful promises, were assisted by the citizens of London and by the government in making their way to Carolina. Ships for their conveyance and provisions for the voyage were furnished. The king gave them one hundred and fifty stand of arms out of the Tower; and on their arrival at Charleston (April, 1764) the assembly of the province voted \$2500 to be distributed among them, and one of the two townships was allotted to them. At about the same time two hundred and twelve French Protestants settled in South Carolina, and were given vacant lands; and multitudes of individuals came to that province from Ireland, England, and Scotland. In the course of that year about one thousand families went to South Carolina from the northern colonies.

**Emigration to the United States.** The number of emigrants who came to our shores in 1873 was greater than ever before or since. It reached in that year 473,000. These added vastly to the material wealth of the Republic; for it has been computed that the average value of each emigrant who comes here as a producer is \$800, not counting the money the emigrant brings with him, which it is calculated is spent by him in preparing to become a producer. The Chinese, about whom so much has been said, have never formed more than four per cent. of our total emigration. The "panic," or great revulsion in the business of the country, which began in 1873, caused a great reflux tide of emigration. In 1874 the number of emigrants who returned to Europe was over seventy-two thousand, and the next year nearly ninety-three thousand.

**Emmett, THOMAS ADDIS,** an Irish adopted American citizen, was born at Cork, Ireland, April 24, 1763; died in New York, Nov. 14, 1827. He graduated at Trinity College, Dublin; first studied medicine, and then law, and was admitted to the Dublin bar in 1791. He became a leader of the Association of United Irishmen, and was one of a general committee whose ultimate object was to secure the freedom of Ireland

from British rule. With many of his associates, he was arrested in 1798, and for more than two years was confined in Fort George, Scotland. His brother Robert, afterwards engaged in the same cause, was hanged in Dublin in 1803. Thomas was liberated and banished to France after the treaty of Amiens, the severest penalties being pronounced against him if he should return to Great Britain. His wife was permitted to join him, on condition that she should never again set foot on British soil. He came to America in 1804, and became very eminent in his profession in the city of New York. He was made attorney-general of the state in 1812. A monument—an obelisk—was erected to his memory in a portion of St. Paul's church-yard, New York, near Broadway.

**Emory, WILLIAM HELMSLEY**, United States Army, was born in Queen Anne's County, Md., about 1812, and graduated at West Point in 1831. He was appointed lieutenant of the topographical engineers July 7, 1833; was aid to General Kearney in California in 1846-47, and was made lieutenant-colonel Sept. 30, 1847. He was astronomer to the commission to determine the boundary between the United States and Mexico (which see). He was serving as captain of cavalry in Mexico when the Civil War broke out, and brought his command into Kansas in good order. In May, 1861, he was made lieutenant-colonel of the Sixth Cavalry; served in the campaign of 1862 in the Army of the Potomac, and was made brigadier-general of volunteers in March of that year. He did good service under Banks in Louisiana, and under Sheridan in the Shenandoah Valley. He was made colonel of the Fifth Cavalry in the fall of 1863, and in March, 1865, was breveted brigadier- and major-general of the United States Army.

**Emott, JAMES, LL.D.**, was born at Poughkeepsie, N. Y., March 14, 1771; died there, April 10, 1850. He graduated at Union College in 1800, and began the practice of law at Ballston Centre, but soon removed to Albany. He represented that district in the Legislature in 1804. He practised law awhile in New York city, and then returned to Poughkeepsie. He was in Congress from 1809 to 1813, and was a leader of the Federal party therein. He was again in the Legislature (1814-17), and was speaker of that body. From 1817 to 1823 he was first judge of Dutchess County, and was judge of the second circuit from 1827 to 1831, when, in compliance with the then absurd law of the state, that prohibited the holding of a judicial office by a citizen over sixty years of age, he retired from public life with his intellect in full vigor.

**Empire State**, a popular name given to the State of New York because it is the most populous, wealthy, and politically powerful state in the Union. It is sometimes called the "Excelsior State," from the motto EXCELSIOR—"higher"—on its seal and coat of arms. The city of New York, its commercial metropolis and the largest city in the Union, is sometimes called the "Empire City."

**Emucfau, BATTLE OF.** On a bend in the Tallapoosa River, Alabama, was a Creek village called Emucfau. Jackson, with a considerable force, approaching the place (Jan. 21, 1814), saw a well-beaten trail and some prowling Indians, and prepared his camp that night for an attack. At six o'clock the next morning a party of Creek warriors fell upon him with great fury. At dawn a vigorous cavalry charge was made upon the foe by General Coffee, and they were dispersed. Coffee pursued the barbarians for two miles with much slaughter. Then a party was despatched to destroy the Indian encampment at Emucfau, but it was found to be too strongly fortified to be taken without artillery. When Coffee fell back to guard approaching cannon, the Indians, thinking it was a retreat, again fell upon Jackson, but, after a severe struggle, were repulsed. Jackson made no further attempt to destroy the encampment at Emucfau. He was astonished at the prowess of the Creek warriors. In their retrograde movement (Jan. 24), the Tennesseans were again threatened by the Indians near Enotochopco Creek. A severe engagement soon ensued; but the Tennesseans, having planted a six-pound cannon on an eminence, poured a storm of grape-shot on the Indians, which sent them yelling in all directions. The slaughter among the Indians was heavy, while that among the white troops was comparatively light. In the two engagements (Emucfau and Enotochopco), Jackson lost twenty killed and seventy-five wounded.

**End of Indian Wars in the East.** New-Englanders greatly rejoiced because of the conquest of Canada, as it promised a deliverance of their northern and eastern frontiers from the scourge of Indian forays with which they had been afflicted six times within eighty-five years. By these successive conflicts, the Indians themselves had been almost annihilated. Most of the hostile remnants had emigrated to Canada. Only a small body of Penobscots remained on a reservation in Maine which is still possessed by their descendants.

**End of Quaker Political Rule in Pennsylvania.** (See *Quaker Rule in Pennsylvania*.)

**End of the Colonial System.** On April 6, 1776, the Continental Congress, by resolution, threw open their ports to the commerce of the world "not subject to the King of Great Britain." This resolution was the broom that swept away the colonial system within the present bounds of the Republic, and the flag of every nation save one was invited to our harbors. Absolute free-trade was established. The act was a virtual declaration of independence.

**Endicott, JOHN**, born at Dorchester, Eng., in 1589; died in Boston, Mass., March 15, 1665. Sent by the "Massachusetts Company" to superintend the plantation at Nankeag, he arrived there Sept. 6 (N. S.), and in April next year was appointed governor of the colony, but was succeeded by John Winthrop. In 1636 he was sent with Captain Underhill, with about ninety men, on an expedition against Indians on Block Island and the Pequods. (See *Pequod War*.) Mr.

Endicott was deputy-governor of Massachusetts several years, and also governor, in which office he died. Bold, energetic, sincere, and bigoted, he was the strougest of the Puritans, and was severe in the execution of laws against those who differed from the prevailing theology of the colony. He was one of the most persistent persecutors of the Quakers, and stood by unmoved, as governor, when they were hanged in Boston; and so violent were his feelings against the Roman Catholics, and anything that savored of "popery," that he caused the red cross of St. George to be cut out of the military standard. He opposed long hair on men, and insisted that the women should use veils in public assemblies. During his several administrations many were punished for the slightest offences, and four Quakers were hanged in Boston.

**Enforcing the "American Association."** Immediately after the adjournment of the Continental Congress (1774), measures were taken in various colonies for enforcing the observance of the American Association, by the appointment of committees of inspection. Philadelphia set the example (Nov. 22). New York followed, by appointing (Nov. 23) a Committee of Sixty, with full powers. Other provinces took measures to the same effect, and there was a general observance of the requirements of the association for a while. (See *American Association*.)

**England at the Beginning of the Seventeenth Century.** At about the time when the English colonists began to make permanent settlements in America, there had been great improvements in the agricultural industry of England. The methods of agriculture had been improved, and its boundaries enlarged. Implements were better, and tillage was more productive. The farmers generally had an abundance of food; lived in better houses; pewter dishes had taken the place of wooden ones; feather-beds those of straw and coarse wool; clover had been introduced from the Netherlands, and increased the food for sheep and cattle, and gardens began to be more generally cultivated. From the Netherlands had come the hop; also the cabbage, lettuce, apricot, gooseberry, muskmelon, and apple. Cherries had come from France, currants from Greece, and plums from Italy. From Flanders the Flemings had brought the rose and other fragrant plants, natives of the East. Of these improvements in the rural economy of the kingdom the early English settlers in America availed themselves.

**England seeks Indian Allies to enslave her Colonies.** During the war for independence the British were in constant alliance with the barbarians of the forest in the effort to crush freedom in America. Such an alliance was authorized before the war broke out. So united were the people in Massachusetts in resistance to the Regulation Act (which see), that Gates called for more troops. He had then (August, 1774) at Boston five regiments, one at Castle William, one at Salem, and hastily summoned two more from Quebec. He also sent transports

to bring another regiment from New York, and asked for reinforcements from England. He also resolved to raise "irregulars of one sort or another in America." He wrote to Carleton at Quebec: "I ask your opinion what measures would be most efficacious to raise a body of Canadians and Indians, and for them to form a junction with the king's forces in this province." Carleton's commission authorized him to employ Indians in the military service if thought necessary, to be drawn from "the Indian tribes from the coast of Labrador to the Ohio; and to march them against rebels into any of the plantations in America." This willingness of the British king to employ barbarians against his American subjects justified the charge in the Declaration of Independence—"He has endeavored to bring on the inhabitants of our frontiers the merciless Indian savages." Chatham and Burke uttered indignant protests in Parliament against such an alliance, and it smothered the last spark of loyalty in the bosom of every patriotic American.

**English Ambassador at Moscow.** Mr. Gunning, England's diplomatic agent at the court of Catharine II. of Russia, deceived by the Russian minister, assured the British ministry that the empress would favorably receive a proposition to loan troops for crushing rebellion in America. (See *Russian Troops for America*.) Then the king wrote an autograph letter to Catharine soliciting her good offices in the matter, and Gunning was ordered to ask for twenty thousand men. The project of a treaty for taking a body of Russian troops into the British pay and service, to continue for two years, was sent to Gunning, with the assurance that the force was so necessary that "expense was not so much an object as in ordinary cases." Gunning was politely but coolly received by the empress. When second instructions were received from England the empress was in religious seclusion, and he applied to her chief minister, who graciously promised to forward Gunning's request to her. On her return the English agent sought an audience of Catharine, but was refused. He asked, through the minister, for fifteen thousand troops, and finally for ten thousand. Deluded by the cordial manner with which he was always treated by the Russian minister, Gunning persisted. Catharine answered the letter of the king, and by her rebuke of the nefarious proposition to employ foreign troops to enslave his subjects she offended the British monarch. The proposition was condemned by every court in Europe which was aware of Gunning's efforts at negotiation. "I cannot reconcile Catharine's elevation of soul with the dishonorable idea of trafficking in the blood of her subjects," wrote Vergennes to the French envoy at Moscow. Finally, the Russian court determined to get rid of Gunning's persistent importunities. The minister declined any further discussion of the subject; and when asked by the French envoy whether such a proposition had ever been seriously entertained by Russia, the minister replied, "People have said so, but it is physically impossible; besides,

it is not consistent with the dignity of England to employ foreign troops against its own subjects." (See *Russian Troops for America*.) Some of the opposition in Parliament strongly protested against the employment of German troops. "We conceive," they said, "the calling in foreign forces to decide domestic quarrels to be a measure both disgraceful and dangerous."

**English and French American Colonists, FIRST HOSTILITIES BETWEEN.** Madame de Guercheville, a pious lady in France, zealous for the conversion of the American Indians, persuaded De Monts (which see) to surrender his patent, and then obtained a charter for "all the lands of New France." She sent out missionaries in 1613. They sailed from Honfleur March 12, and arrived in Acadia, where the arms of Madame Guercheville were set up in token of possession. Her agent proceeded to Port Royal (now Annapolis), where he found only five persons, two of whom were Jesuit missionaries previously sent over. The Jesuits went with other persons to Mount Desert Island. Just as they had begun to provide themselves with comforts, they were attacked by Samuel Argall, of Virginia. The French made some resistance, but were compelled to surrender to superior numbers. One of the Jesuits was killed, several were wounded, and the remainder made prisoners. Argall took fifteen of the Frenchmen, besides the Jesuits, to Virginia; the remainder sailed for France. This success induced the governor of Virginia to send an expedition to crush the power of the French in Acadia, under the pretext that they were encroaching upon the rights of the English. Argall sailed with three ships for the purpose. On his arrival he broke in pieces, at St. Saviour, a cross which the Jesuits had set up, and raised another, on which he inscribed the name of King James. He sailed to St. Croix and destroyed the remains of De Mont's settlement there; and then he went to Port Royal and laid that deserted town in ashes. The English government did not approve the act, nor did the French government resent it.

**English Colonial Governments in North America.** *Royal Governments:* Nova Scotia, St. Johns, Newfoundland, New Hampshire, New York, New Jersey, Virginia, the Carolinas, Georgia, and the Floridas. *Charter Governments:* Rhode Island, Connecticut, and partly Massachusetts and the Carolinas. *Proprietary Governments:* Pennsylvania and Maryland.

**English Colonies in the West proposed.** When, by the Treaty of Paris (which see), the British obtained possession of the French domain in America, Colonel Croghan, a deputy Indian agent, who knew the value of lands in the Northwest from personal observation, urged their immediate colonization. Several distinguished men—Sir William Johnson, Governor Franklin, of New Jersey, and General Gage—with some fur-traders of Philadelphia, engaged in a project for founding settlements there which promised them a return of great wealth. Dr. Franklin favored the enterprise, for it promised some new security for the existing colonies.

The domain designed for this colonization embraced the whole territory bounded by the Ohio and the Mississippi rivers, a line along the Wabash and Maumee to Lake Erie, and thence across Michigan, the lake, Green Bay, and Fox River to the mouth of the Wisconsin. It was estimated that the tract contained about sixty-three million acres. Lord Shelburne favored the project, but the narrow Hillsborough, at the head of the Board of Trade and Plantations, opposed the scheme, because "emigrants to so remote regions would establish manufactures for themselves, and in the very heart of America might form a power which distance must emancipate." The project was abandoned, and the Alleghanies continued to be the frontier of British settlements for several years longer.

**English Constitution, THE,** is not a permanent instrument embodying the foundation of all laws, like that of the United States, but comprehends the whole body of English laws enacted by Parliament, and by which the British people are governed. The Constitution of the United States is superior to the Congress or National Legislature; the Parliament or National Legislature of England is superior to the Constitution. What Parliament declares to be the Constitution of England is the Constitution of England; what the Parliament enacts the monarch must be governed by, and the courts cannot adjudge to be unconstitutional and void. Sheridan comprehensively said: "The king of England is not seated on a solitary eminence of power; on the contrary, he sees his equals in the coexisting branches of the Legislature, and he recognizes his superior in the LAW."

**English Expedition against New Netherland.** Believing a story that the Dutch and Indians were conspiring against the New England colonists, some men of the latter induced Cromwell to furnish two ships and a small body of troops to join New-Englanders, under Robert Sedgwick and John Leverett, in an expedition against New Netherland. The latter was then major-general of the Massachusetts forces. Through the influence of Roger Williams, then in England, Cromwell's vessels were delayed. When the armament arrived in New England the war with the Dutch was over, and news of peace soon reached Boston. Then the expedition proceeded against Acadia, Cromwell alleging that a sum of money promised by France on the cession of that country had never been paid. Acadia was taken possession of by Sedgwick and Leverett, and two years afterwards Cromwell made a new grant of Nova Scotia to La Tour and others. (See *La Tour*.)

**English Revolution, THE.** When James II. attempted to establish despotism in England by destroying the constitution in Church and State, he arrayed against himself the united Church, the aristocracy, and the intelligent people of the realm. He also resolved to make the Roman Catholic religious system of the kingdom, and sought to destroy all forms of Protestantism. He prorogued Parliament, and ruled despotically as an autocrat without it. So uni-

versal were the alarm and indignation caused by his conduct that there was a general longing for relief; and the fires of revolution burned intensely in the hearts of the people before they burst into a flame. The king's daughter Mary, who had married her cousin William, Prince of Orange, was heir to the throne of England in the absence of a male heir. When the people were ripe for revolution it was announced that James's second wife had given birth to a son (June 10, 1688). The hopes of the nation, which were centred on Mary, were grievously disappointed. The opinion was general that the alleged heir just born was a supposititious one, and not the child of the queen. The volcano was instantly uncapped, and on the 30th of June (1688) leading men of the kingdom sent an invitation to William of Orange to invade England and place his wife on its throne. He came, landed at Torbay (Nov. 5) with fifteen thousand men, and penetrated the country. The people flocked to his standard, King James fled to France, and all England was speedily in the hands of the welcome invader. On the 13th of February the Convention Parliament conferred the crown of England on William and Mary as joint sovereigns. Bancroft says of the political theory of the revolution: "The old idea of a Christian monarchy resting on the law of God was exploded, and political power sought its origin in compact. Absolute monarchy was denied to be a form of civil government. Nothing, it was held, can bind freemen to obey any government save their own agreement. Political power is a trust, and a breach of the trust dissolves the obligation to allegiance. The supreme power is the legislature, to whose guardianship it has been sacredly and unalterably delegated. By the fundamental law of property no taxes may be levied on the people but by its own consent or that of its authorized agents. These were the doctrines of the revolution, dangerous to European institutions and dear to the colonies; menacing the Old World with convulsive struggles and reforms, and establishing for America the sanctity of its own legislative bodies. Throughout the English world the right to representation could never again be separated from the power of taxation. The theory gave to vested rights in England a bulwark against the monarch; it encouraged the colonists to assert their privileges, as possessing a sanctity which tyranny only could disregard, and which could perish only by destroying allegiance itself."

**English Settlement in Louisiana projected.** In October, 1698, King William sent three ships to take possession of the Mississippi River, and prepare for planting a colony of French Protestants on its borders. Nothing came of it. In the same month Iberville (which see) and others sailed for the same river, and planted the seeds of French dominion there.

**English Settlement on Long Island.** Some of the inhabitants of Lynn, Mass., finding themselves straitened for land, went to Long Island in search of a plantation. They bargained for

a tract near the west end with Lord Stirling's agent and with the natives. The jealous Dutch sent a force to take possession of the land, and set up the arms of the Prince of Orange. Soon afterwards a dozen of the English company began to erect buildings there, and took down the Dutch arms and placed the effigy of an ugly Indian in its place. The Dutch, provoked, sent some soldiers, who brought off the Englishmen and imprisoned them; but they were released after a few days, having taken an oath of allegiance to the stadtholder. The adventurers now moved to the east end of the island, and, to the number of forty families, settled the town of Southampton. Rev. Mr. Pierson, with several of the company at Lynn, formed a church, and all went to Southampton, where he became their pastor. There they formed a civil government in 1640. The same year a large tract of land on Long Island was purchased of the Indians for the Connecticut colony, and settlements were begun there. The tract was on the north part of the island, in the vicinity of Oyster Bay. Connecticut colonists began to settle there, but were driven back by Kieft, the Dutch governor, because they appeared within sight of his residence. The inhabitants of Connecticut immediately seized the fort just below Hartford, and obliged the Dutch to recede within ten miles of the Hudson River.

**English Turn, in the Mississippi.** A London physician named Coxe purchased the old patent for Carolina granted to Sir Robert Heath (see *North Carolina*) in 1630, and put forward pretensions to the mouth of the Mississippi, which two armed English vessels were sent to explore. Bicaville (which see), exploring the Mississippi at a reach some fifty miles from its mouth, unexpectedly encountered one of Coxe's vessels coming up. Assured that this was not the Mississippi, but a dependency of Canada, already occupied by the French, the English commander turned about and left the river; and that reach has ever since been known as "the English Turn."

**Enlargement of the Capitol.** The extinguishment of Indian titles to vast tracts of land in the northwest during Fillmore's administration had induced a vast influx of population into those regions beyond the Mississippi. Many million acres were purchased from the Upper and Lower Sioux tribes, who removed to other reservations. Emigration in large volumes was also flowing into the Republic from Europe, and there was unwonted activity everywhere. States and territories were increasing rapidly in numbers and population, and additional representatives were crowding the halls of legislation. These were becoming too narrow, and Congress made provision for enlarging them. That enlargement was begun in 1851, when (July 4) the corner-stone of the addition was laid, with imposing ceremonies, by President Fillmore. (See *National Capitol*.) An oration was delivered by Daniel Webster on that occasion, in the course of which he said, "If, therefore, it shall hereafter be the will of God

that this structure shall fall from its base, that its foundations be upturned and the deposit beneath this stone brought to the eyes of men, be it then known that on this day the Union of the United States of America stands firm; that their Constitution still exists unimpaired, and with all its usefulness and glory growing every day stronger in the affections of the great body of the American people, and attracting more and more the admiration of the world." All through the Civil War (1861-65) the work on the extension went on, with perfect faith on the part of the government that the insurrection would be suppressed, the Union saved, and that the increase of states and territories would go steadily on, demanding the use of enlarged halls of legislation. The extension was completed in 1867.

**Entails abolished in Virginia.** A committee of the Virginia Legislature, the active members of which were Jefferson, Wythe, and Pendleton, were charged (1776) with a revision of the common law, the British statutes (valid in that state), and the criminal statutes. Mr. Jefferson framed the new law of descent, which abolished primogeniture, and directed property "into the channels which the head and heart of every sane man would be prone to choose." By this law the lands of an intestate might be equally divided among his representatives.

**Enterprise and Boxer.** The *Enterprise*, 14 guns, was an American brig that acquired the reputation of being "lucky." She cruised

for a long time off the New England coast, the terror of British provincial privateers, under Captain Johnston Blakeley, until he was promoted to the command of the new sloop-of-war *Wasp*, when Lieutenant William Burrows became her commander. On the morning of Sept. 1, 1813, she sailed from Portsmouth, N. H., in quest of British cruisers. On the morning of the 5th she discovered a British brig in a bay near Pen-aquid Point, which, observing the *Enterprise*, bore down upon her in menacing attitude. Burrows accepted the challenge, cleared his ship for action, and, after getting a proper distance from land to have ample sea-room for conflict, he edged towards the stranger, which proved to be the British brig *Boxer*, 14 guns, Captain Samuel Blyth. At twenty minutes past three o'clock in the afternoon the brigs closed within half pistol-shot of each other, and both vessels opened fire at the same time. The wind was light, with very little sea, and the cannonading was destructive. Ten minutes later the *Enterprise*

ranged ahead of the *Boxer*, and, taking advantage of her position, she steered across the bows of her antagonist, and delivered her fire with such precision and destructive energy that, at four o'clock, the British officer in command shouted through his trumpet that he had surrendered; but his flag being nailed to the mast, it could not be lowered until the Americans should cease firing. It was found that Captain Blyth had been cut nearly in two by an 18-pound cannon-ball. Almost at the same moment when Blyth fell on the *Boxer*, Burrows, of the *Enterprise*, was mortally wounded. So also was Midshipman Kervin Waters. Blyth was killed instantly; Burrows lived eight hours. The latter refused to be carried below until the sword of the commander of the *Boxer* was delivered to him, when he grasped it and said, "Now I am satisfied; I die contented." The command of the *Enterprise* devolved upon Lieutenant E. R.

GRAVES OF BURROWS, BLYTH, AND WATERS.

McCall, of South Carolina, who conducted his part of the engagement to its close with skill. He took both vessels into Portland Harbor on the morning of the 7th. The two young commanders were buried side by side in a cemetery at Portland. Congress presented a gold medal to the nearest masculine representative of Lieutenant Burrows; and another was presented to Lieutenant McCall.

**Envoys to France.** Monroe was recalled from France in 1796, and Charles Cotesworth Pinckney, of South Carolina, was appointed to fill his place. On his arrival in France, late in the year, with the letter of recall and his own credentials, the Directory refused to receive him. Not only so, but, after treating him with great discourtesy, the Directory peremptorily ordered him to leave France. He withdrew to Holland (February, 1797), and there awaited further orders from home. When Mr. Adams took the chair of State, the United States had no diplomatic agent in France. The "French party,"

or Republicans, having failed to elect Jefferson President, the insolent Directory (which see) determined to punish a people who dared to thwart their plans. In May, 1797, they issued a decree which was tantamount to a declaration of war against the United States. At about the same time President Adams, observing the perilous relations between the United States and France, called an extraordinary session of Congress to consider the matter. There had been

letters for the English-American colonists. The Church of England was early made a State establishment in the colony of Virginia, but elsewhere the free spirit of the people kept episcopacy at bay, for they remembered how much they had suffered at the hands of the Church of England. On the accession of George III. and the administration of the Earl of Bute, among the reforms in the colonies contemplated and proposed by the ministry was the curtail-

THE M'CALL MEDAL.

a reaction among the people, and many leading Democrats favored war with France. A majority of the cabinet advised further negotiations, and John Marshall, a Federalist, and Elbridge Gerry, a Democrat, were appointed envoys extraordinary to join Pinckney and attempt to settle all matters in dispute. They reached France in October (1797), and sought an audience with the Directory. Their request was met by a haughty refusal, unless the envoys would first agree to pay into the exhausted French treasury a large sum of money, in the form of a loan, by the purchase of Dutch bonds wrung from that nation by the French, and a bribe to the amount of \$240,000 for the private use of the five members of the Directory. The proposition came semi-officially from Talleyrand, one of the most unscrupulous political trimmers of the age. It was accompanied by a covert threat that if the proposition was not complied with the envoys might be ordered to leave France in twenty-four hours, and the coasts of the United States be ravaged by French cruisers from St. Domingo. They peremptorily refused, and Pinckney uttered, in substance, the noble words, "Millions for defence, but not one cent for tribute!" The envoys asked for their passports. They were given to the two Federalists under circumstances that amounted to their virtual expulsion, but Gerry, the Democrat, was induced to remain. He, too, was soon treated with contempt by Talleyrand and his associates, and he returned home in disgust.

**Episcopacy in America.** The Church and State in England worked in concert in forging

ment or destruction of the Puritan and Dissenting influence in the provinces, which seemed inimical to monarchy, and to make the ritual of the Anglican Church the State mode of worship. So early as 1748 Dr. Secker, Archbishop of Canterbury, had proposed the establishment of episcopacy in America, and overtures were made to several eminent Puritan divines to accept the unité, but they all declined it. A royalist churchman in Connecticut, in 1760, in a letter to Dr. Secker, and to the Earl of Halifax, then at the head of the Board of Trade and Plantations, urged the necessity of providing two or three bishops for the colonies, the support of the Church, and a method for repressing the rampant republicanism of the people. "The rights of the clergy and the authority of the king," said the Bishop of London, "must stand or fall together." The Anglican Church now had many adherents in all the colonies, who naturally desired its ascendancy; but the great mass of the people looked upon that Church as an ally of the State in acts of oppression, and earnestly opposed it. They well knew that if Parliament could create dioceses and appoint bishops, they would establish tithes and crush out dissent as heresy. For years controversy in our country on this topic was warm, and sometimes acrimonious. Essays for and against episcopacy appeared in abundance. The Bishop of Llandaff, in a sermon preached before the Society for the Propagation of the Gospel in Foreign Parts (which see), in which he advocated the necessity of establishing episcopacy in America, heaped abuse without stint upon the colonists. "Upon the adventurers themselves," he said,

" what reproach could he cast heavier than they deserve? who, with their native soil, abandoned their native manners and religion, and ere long were found, in many parts, living without remembrance or knowledge of God, without any divine worship, in dissolute wickedness and the most brutal profrigacy of manners." He charged them with having become "infidels and barbarians;" and the prelate concluded that the only remedy for the great evil was to be found in a Church establishment. His recommendations were urged with zeal by churchmen in the colonies. The Dissenters were aroused. They observed in the bishop's sermon the old persecuting spirit of the Church, and visions of Laud and the Star-chamber disturbed them. Eminent writers in America entered the lists in opposition to him. Among others, William Livingston, whose famous letter to the bishop, issued in pamphlet form, refuted the charges of that dignitary so completely that they were not repeated. The theological controversy ceased when the vital question of resistance to the oppressive power of both Church and State was brought to a final issue. The first English bishop within the domains of our Republic was Samuel Seabury, of Connecticut, who was consecrated by three bishops of the Scottish Episcopal Church, Nov. 14, 1784. (See *Seabury, Samuel*.)

**Episcopacy in Massachusetts.** (See *Higginson and the Brownes*.)

**Episcopacy in New England, GROWTH OF.** Puritan austerity had extended to a large class of intelligent free-thinkers and doubters in New England, and they felt inclined to turn towards the freer, more orderly, and dignified Church of England. The rich and polite preferred a mode of worship which seemed to bring them into sympathy with the English aristocracy, and there were many who delighted in the modest ceremonies of the church. Nor were these influences confined to laymen. There were studious and aspiring men among the ministers to whom the idea of apostolic succession had charms; and they yearned for freedom from the obstinate turbulence of stiff-necked church members who, in theory, were the spiritual equals of the pastors, whom, to manage, it was necessary to humor and to suit. These ideas found expression in an unexpected quarter. Timothy Cutler, a minister of learning and great ability, was rector of Yale College in 1719. To the surprise and alarm of the people of New England, Mr. Cutler, with the tutor of the college and two ministers in the neighborhood, took occasion, on commencement day, 1722, to avow their conversion to episcopacy. Cutler was at once "excused" from all further service in the college, and provision was made for all future rectors to give satisfactory evidence of "the soundness of their faith in opposition to Arminian and prelatical corruptions." Weaker ones engaged in the revolt halted, but others persisted. Cutler became rector of a new Episcopal Church in Boston, and the dismissed ministers were maintained as mission-

aries by the Society for the Propagation of the Gospel in Foreign Parts (which see). This secession from the Church resting on the Saybrook Platform (which see), made the ministers of Massachusetts keen-eyed in the detection of signs of defection. John Checkly (afterwards ordained an Episcopal missionary) published Leslie's *Short and Easy Method with Deists*, with an appendix by himself, in which Episcopal ordination was insisted upon as necessary to constitute a Christian minister. The authorities in Boston were offended. Checkly was tried on a charge that the publication tended "to bring into contempt and infamy the ministers of the holy Gospel established by law within his majesty's province of Massachusetts." For this offence Checkly was found guilty and fined £50. (See *Higginson and the Brownes*.)

**Episcopal Churches, FIRST, IN THE COLONIES.** The Episcopal Church service was first established in New York. Governor Fletcher proposed, in 1693, levying a tax for building churches and supporting Episcopal ministers in that province. The Provincial Assembly passed an act accordingly. It was nearly four years after the passage of the act before anything was done in pursuance of it. The Episcopalians built a church, and by the Legislature in 1697 a royal grant and confirmation was made of the church and parcel of land adjoining. (See *Trinity Church*.) The first Episcopal Church formed in New Jersey was organized in 1702, and at the same time one was formed in Rhode Island. The latter built their first place of worship at Providence in 1722. In 1752 Bishop Compton sent the Rev. Mr. Evans from England to Philadelphia to perform the services of the church there. A numerous congregation soon attended the public worship in accordance with the ritual of the Church of England. It was largely composed of persons who had separated from the Friends or Quakers, and who now became permanently attached to the Episcopal Church. (See *Episcopacy in America and Episcopacy in New England*.)

**Equal Rights Party.** In the city of New York, in 1835, there arose in the ranks of the Democratic party a combination of men opposed to all banking institutions and monopolies of every sort. A "Workingmen's party" had been formed in 1829, but had become defunct, and the "Equal Rights party" was its successor. They acted with much caution and secrecy in their opposition to the powerful Democratic party, but never rose above the dignity of a faction. They made their first decided demonstration at Tammany Hall at the close of October, 1835, when an event occurred which caused them afterwards to be known as *Loco-focos* (which see), a name applied by the Whigs to the whole Democratic party. The faction soon became formidable, and the regulars endeavored to reconcile the irregulars by nominating their favorite for the Presidency (Richard M. Johnson) for Vice-President with Mr. Van Buren.

**Eric the Red** (see *Northmen*) was a Scandi-

navian navigator, who emigrated to Ireland about the year 982, after which he discovered Greenland, where he planted a colony. He sent out an exploring party under his son Lief, about the year 1000, who seems to have discovered the continent of America, and landed somewhere on the shores of Massachusetts or the southern portion of New England.

**Ericsson, JOHN, LL.D.**, was born in Vermland, Sweden, in 1803. He became an eminent engineer in his own country, and attained the rank of captain in the Swedish army. In 1826 he visited England with a view to the introduction of his invention of a flame engine. He engaged actively in mechanical pursuits, and made numerous inventions, notably that of artificial draft, which is still used in locomotive engines. He won the prize offered by the Manchester and Liverpool Railway for the best locomotive, making one that attained the then astonishing speed of fifty miles an hour. He invented the screw propeller for navigation, but the British admiralty being unwilling to believe in its capacity and success, Ericsson came to America in 1839, and has resided in the city of New York or its immediate vicinity ever since. In 1841 he was engaged in the construction of the United States ship-of-war *Princeton*, to which he applied his propeller. She was the first steauship ever built with the propelling machinery under the water-line and out of reach of shot. In 1840 he received the gold medal of the Mechanics' Institute of New York for the best model of a steam fire-engine, and constructed the first one seen in America. King Oscar of Sweden made him Knight of the Order of Vasa in 1852. He has accomplished many things in mechanical science since he came to this country. He invented and constructed the *Monitor*, which fought the *Merrimac* (see *Monitor and Merrimac*), and in that brought Theodore R. Timby's invention of the revolving turret into thoroughly practical use.

**Erie Canal, THE.** The greatest work of internal improvement (which see) constructed in the United States previous to the Pacific Railway was the Erie Canal, which connects the waters of the great lakes with the Atlantic Ocean by way of the Hudson River. It was contemplated by General Schuyler and Elkanah Watson, but was first definitely proposed by Gouverneur Morris, at about the beginning of this century. Various writers put forth essays upon the subject, among them De Witt Clinton, who became its most notable champion. The project took such shape that, in 1810, canal commissioners were appointed, with Gouverneur Morris at their head. In 1812 Clinton, with others, was appointed to lay the project before the national Congress, and solicit the aid of the national government. Fortunately, the latter declined to extend its patronage to the great undertaking. The War of 1812-15 put the matter at rest for a while. That war made the transportation of merchandise along our sea-coasts perilous, and the commercial intercourse between seaboard cities was carried on in a large degree by wheel-vehicles. For this purpose Cocestoga wag-

ons were used between New York and Philadelphia, and when one of these made the journey of ninety miles in three days, with passengers, it was called "the flying-machine." It has been estimated that the amount of increased expense by this method of transportation of merchandise for the coast region alone would have paid the cost of a system of internal navigation from Maine to Georgia. The want of such a system was made clear to the public mind, especially to the population then gathering in the Western States. Then Mr. Clinton, more vigorously than ever, pressed upon the public attention the importance of constructing the projected canal. He devoted his wonderful energies to the subject, and in a memorial of the citizens of New York, prepared by him, he produced such a powerful argument in its favor that not only the people of his native state, but of other states, approved it. The national government would do nothing in the matter, and the State of New York resolved to construct the canal. Clinton was made governor in 1816, and used all his official and private influence in favor of the Erie Canal. He saw it begun during his first administration. The first excavation was made July 4, 1817, and it was completed and formally opened by him, as chief magistrate of the state, in 1825, when a grand aquatic procession from Albany proceeded to the sea, and the governor poured a keg of the water of Lake Erie into the Atlantic Ocean. It was a nuptial ceremony far more beneficent and grand in its idea than the ancient wedding of the Doge of Venice with the Adriatic. The canal was constructed at a cost of \$7,602,000. Untold wealth has been won for the state and the city of New York by its operations, directly and indirectly. Over its bosom have floated the products of the Northwestern states and territories, valued at billions of dollars. In the year 1872 the value of property transported on that canal (notwithstanding a three-track railway runs parallel with it) was about \$168,000,000. The value of all freight that had passed over it from 1837 to 1872—a period of thirty-five years—was \$4,795,215,078. Other canals were afterwards constructed by the State of New York, at a total cost of little more than \$89,000,000. In November, 1832, the people of the state voted to ratify an amendment to the Constitution making the canals free of tolls.

**Erskine, NEGOTIATIONS WITH.** David Montague Erskine was the British minister in the United States at the time of Madison's accession to the presidency. He found the new President so exceedingly anxious for peace and good feeling between the two countries that he had written to Canning, the British minister, such letters on the subject that he was instructed to propose to the Americans a reciprocal repeal of all the prohibitory laws upon certain conditions. Those conditions were so partial towards Great Britain—requiring the Americans to submit to the Rule of 1756 (which see)—that they were rejected. Very soon, however, arrangements were made by which, upon the Orders of Council being repealed, the President should issue a proclamation declaring a restoration of commercial

intercourse with Great Britain, but leaving all restrictive laws as against France in full force. Mr. Erskine also offered reparation for the insult and injury in the case of the *Chesapeake* (see *Chesapeake and Leopard*), and also assured the government of the United States that Great Britain would immediately send over an envoy extraordinary, vested with power to conclude a treaty that should settle all points of dispute between the two governments. This arrangement was completed April 18, 1809. The next day the Secretary of State received a note from Erskine, saying he was authorized to declare that his majesty's Orders in Council of January and November, 1807, would be withdrawn on the 10th of June next ensuing. On the same day (April 19) the President issued a proclamation declaring that trade with Great Britain might be resumed after June 10th. This proclamation gave great joy in the United States. Partisan strife was hushed, and the President was toasted and feasted by leading Federalists, as a Washingtonian worthy of all confidence. In the House of Representatives, John Randolph, who landed England for her magnanimity, offered (May 3, 1809) a resolution which declared "that the promptitude and frankness with which the President of the United States has met the overtures of the government of Great Britain towards a restoration of harmony and freer commercial intercourse between the two nations meet the approval of this House." The joy was of brief duration. Mr. Erskine was soon afterwards compelled to communicate to the President (July 31) that his government had refused to sanction his arrangement, ostensibly because the minister had exceeded his instructions, and was not authorized to make any such arrangement. Mr. Erskine was recalled. The true reason for the rejection by the British authorities of the arrangement made by Erskine probably was, that, counting upon the fatal effects of sectional strife in the Union, already so rampant in some places, the British government was encouraged to believe that the bond of union would be so weakened that a scheme then perfecting by the British ministry for destroying that union would be successful. (See *Henry, John, Mission of.*) England having spurred the olive-branch so confidently offered, the President of the United States issued another proclamation (Aug. 9, 1809), declaring the Non-intercourse Act to be again in full force in regard to Great Britain.

**Esopus War, THE.** There had been a massacre by the Indians of Dutch settlers at Esopus (now Kingston) in 1655. The settlers had fled to Manhattan for security, but had been persuaded by Stuyvesant to return to their farms, where they built a compact village for mutual protection. Unfortunately, some Indians, who had been helping the Dutch in their harvests in the summer of 1658, became noisy in a drunken rout, and were fired upon by the villagers. This outrage caused fearful retaliation. The Indians desolated the farms, and murdered the people in isolated houses. The Dutch put forth their strength to oppose the barbarians, and the "Esopus War" continued until 1664 intermittingly.

Some Indians, taken prisoners, were sent to Curaçoa and sold as slaves. The anger of the Esopus Indians was aroused, and, in 1663, the village of Wiltwyck, as the Esopus village was called, was almost totally destroyed. Stuyvesant was there at the time, holding a conference with the Indians in the open fields when the destructive blow fell. The houses were plundered and burned, and men, hurrying from the fields to protect their families and property, were either shot down or carried away captive. The struggle was desperate, but the white people were victorious. When the assailants were driven away, they carried off full forty women and children; and in the heap of ruins which they left behind them were found the charred remains of twenty-one murdered villagers. It was the final event of violence of that war.

**Essex and Alert, THE.** Captain David Porter, commanding the *Essex*, thirty-two guns, displayed a flag at her mast-head, as he left Sandy Hook (June 26, 1812) on a cruise, bearing the significant words, "FREE-TRADE AND SAILORS' RIGHTS." He soon captured several English merchant vessels, making trophy bonfires of most of them on the ocean, and their crews his prisoners. After cruising southward several weeks in disguise, capturing a prize now and then, he turned northward, and chased a fleet of English transports bearing one thousand troops to Halifax, convoyed by a frigate and a bomb-vessel. He captured one of the transports, and a few days afterwards (Aug. 13) fell in with the British armed ship *Alert*, Captain T. L. P. Langhorne, mounting twenty 18-pound carronades and six smaller guns. The *Essex* was disguised as a merchantman. The *Alert* followed her for some time, and at length opened fire with three cheers from her people. Porter caused his ports to be knocked out in an instant, when his guns responded with terrible effect. It was a complete surprise. The *Alert* was so badly injured and her people were so panic-stricken that the conflict was short. In spite of the efforts of the officers, the men of the *Alert* ran below for safety. She was surrendered in a sinking condition. She was the first British national vessel captured in the war. Nobody was killed on either vessel.

**Essex, CRUISE OF THE.** When Commodore Bainbridge was about to sail from Boston with the *Constitution* and *Hornet* (see *Constitution and Java*), orders were sent to Captain Porter, of the *Essex*, then lying in the Delaware, to cruise in the track of the West Indiamen, and at a specified time to rendezvous at certain ports, when, if he should not fall in with the flag-ship of the squadron, he would be at liberty to follow the dictates of his own judgment. Having failed to find the *Constitution* at any appointed rendezvous, and having provided himself with funds by taking \$55,000 from a British packet, Porter made sail for the Pacific Ocean around Cape Horn. While in these waters, Porter seized twelve armed British whale-ships, with an aggregate of three hundred and two men and one

hundred and seven guns. These were what he entered the Pacific Ocean for. He armed some of them, and at one time he had a fleet of nine vessels. He sent paroled prisoners to Rio de Janeiro, and cargoes of whale-oil to the United States. On the 15th of September, 1813, while among the Galapagos Islands, he fell in with a British whaling-vessel armed with twelve guns and manned by thirty-nine men. He captured her, and found her laden with beef, pork, bread, wood, and water, articles which Porter stood greatly in need of at that time. The exploits of the *Essex* in the Pacific produced great excitement in the British navy, and the government sent out the frigate *Phæbe*, with one or two consorts, to attempt her capture. Porter heard of this from an officer who was sent into the harbor of Valparaiso, Chili, with prizes. He also learned that the Chilian authorities were becoming more friendly to the English than to the Americans. In consequence of this information, Porter resolved to go to the Marquesas Islands, refit his vessel, and return to the United

down their cheeks." When the *Essex* was thoroughly fitted for her long voyage and for encountering enemies, she sailed (Dec. 12) with her prizes from Nooaheevah Island (which he had named Madison), and on Feb. 3, 1814, entered the harbor of Valparaiso. One of the captured vessels, which he had armed and named *Essex Junior*, cruised off the harbor as a scout, to give warning of the approach of any man-of-war. Very soon two English men-of-war were reported in the offing. They sailed into the harbor, and proved to be the *Phæbe*, thirty-six guns, Captain Hillyar, and her consort, the *Cherub*, twenty-two guns, Captain Tucker. The former mounted thirty long 18-pounders, sixteen 32-pound carronades, and one howitzer; also six 3-pounders in her tops. Her crew consisted of three hundred and twenty men and boys. The *Cherub* mounted eighteen 32-pound carronades below, with eight 24-pound carronades and two long ones above, making a total of twenty-eight guns. Her crew numbered one hundred and eighty. The *Essex* at that time could muster

THE ESSEX AND HER PRIZES IN MASSACHUSETTS BAY, NOOAHEEVAH.

States. He had captured almost every English whale-ship known to be off the coasts of Peru and Chili, and had deprived the enemy of property to the amount of \$2,500,000 and three hundred and sixty seamen. He had also released the American whalers from peril, and inspired the Peruvians and Chilians with the most profound respect for the American navy. Among the Marquesas Islands (at Nooaheevah) Porter became involved in hostilities with the warring natives. He had allowed his men great indulgence in port, and some of them formed strong attachments to the native women. They were so dissatisfied when he left, that they became almost mutinous. He had kept his men from going on shore for three days before he weighed anchor. "The girls," says Porter in his *Journal*, "lined the beach from morning until night, and every moment importuned me to take the taboos of the men, and laughingly expressed their grief by dipping their fingers into the sea and touching their eyes, so as to let the salt-water trickle

only two hundred and twenty-five, and the *Essex Junior* only sixty. The *Essex* had forty 32-pound carronades and six long 12-pounders; and the *Essex Junior* had only ten 18-pound carronades and ten short sixes. The British vessels blockaded Porter's ships. At length he determined to escape. The sails of his vessels were spread for the purpose (March 28, 1814), and both vessels started for the open sea, when a squall partially disabled the flag-ship, and both took shelter in a bay. There they were attacked by the *Phæbe* and *Cherub*, and one of the most desperate and sanguinary battles of the war ensued. When, at last, the *Essex* was a helpless wreck and on fire, and his magazine was threatened—when every officer but one was slain or disabled; when, of the two hundred and twenty-five brave men who went into the fight on board of her only seventy-five effective ones remained—Porter hauled down his flag. So ended the long and brilliant cruise of the *Essex*. Her gallant commander wrote to the Secretary

of War from Valparaiso, "We have been unfortunate, but not disgraced." He and his companions were sent home in the *Essex Junior*, which was made a cartel-ship, and Porter was honored as the Hero of the Pacific. Municipal honors were lavished upon him, and several state legislatures and the national Congress gave him thanks.

**Essex Junta Plot.** Early in 1809, John Quincy Adams, being in Washington attending the Supreme Court, in a confidential interview with President Jefferson, assured him that a continuation of the Embargo (which see) much longer would certainly be met by forcible resistance in Massachusetts, supported by the Legislature, and probably by the judiciary of the state; that if force should be resorted to to quell that resistance, it would produce a civil war, and in that event he had no doubt the leaders of the Federal party (referring to those of the old Essex Junta, which see) would secure the co-operation of Great Britain. He declared that the object was, and had been for several years, a dissolution of the Union and the establishment of a separate confederacy. He knew from unequivocal evidence, not provable in a court of law, that in case of a civil war the aid of Great Britain to effect that purpose would be as surely resorted to as it would be indispensably necessary to the design. A rumor of such a design was alluded to, at about the same time, by De Witt Clinton, in New York, and in the *Boston Patriot*, a new administration paper, to which the Adamses, father and son, were contributors. Such a plot, if it ever existed, was confined to a few Federal members of Congress, in consequence of the purchase of Louisiana. They had proposed to have a meeting in Boston, to which Hamilton was invited, though it was known that he was opposed to the scheme. The meeting was prevented by Hamilton's sudden and violent death. A series of articles signed "Falkland" had appeared in New England papers, in which it was argued that if Virginia, finding herself no longer able to control the national government, should secede and dissolve it, the Northern States, though thus deserted, might nevertheless be able to take care of themselves. There seem to have been no more treasonable designs among the members of the Essex Junta than in the Hartford Convention (which see), and the designs of that body were known to have been patriotic.

**Essex Junta, THE.** The injudicious course of President John Adams, who was anxious for a renomination and election, caused a fatal schism in the Federal party. He looked to the Southern States as his chief hope in the coming election; and believing McHenry and Pickering, of his cabinet, to be unpopular there, he abruptly called upon them to resign. McHenry instantly complied, but Pickering refused, when Adams dismissed him with little ceremony. This event produced much excitement. Bitter animosities were engendered, and criminations and recriminations ensued. The open war in the Federal party was waged by a few leaders,

several of whom lived in the maritime county of Essex, Mass., the early home of Pickering, and on that account the irritated President called his assailants and opposers the "Essex Junta." He denounced them as slaves to British influence—some lured by monarchical proclivities and others by British gold. A pamphlet from the pen of Hamilton, whom Adams, in conversation, had denounced as a "British sympathizer," damaged the President's political prospects materially. The Republicans rejoiced at the charge of British influence, and said, in effect, "We thank thee, Jew, for that word." Adams's course caused a great diminution of the Federal vote, and Jefferson was elected. The opposition chanted:

"The *Federalists* are down at last,  
The *Monarchists* completely cast!  
The *Aristocrats* are stripped of power—  
Storms o'er the *British* faction lower.  
Soon we *Republicans* shall see  
Columbia's soos from hoodage free.  
Lord, how the *Federalists* will stare—  
A JEFFERSON in ADAMS' chair!"—*The Echo*.

**Estaing, D', CHARLES HENRY THEODAT,** was born at Auvergne, France, in 1729; guillotined in Paris, April 28, 1794. He was colonel of a French regiment in 1748, brigadier-general in 1756, and served in the French fleet after

CHARLES HENRY THEODAT D'ESTAING.

1757, joining the East India squadron under Count Lally. Made lieutenant-general in 1763 and vice-admiral in 1778, he was sent to America with a strong naval force to assist the patriots, arriving in Delaware Bay in July, 1778. In a battle with the British fleet and in a storm off Rhode Island, in August, his vessels were so shattered that he withdrew to Boston for their repair. He made a cruise in the West Indies in 1779, and in the fall of that year he engaged jointly with the American army in the siege of Savannah, but abandoned the contest before a promised victory for the allies was won. He returned to France in 1780, and in 1783 he commanded the combined fleets of France and Spain, and was made a Spanish grandee. He favored the French Revolution, and commanded the National Guards at Ver-

sailles, but falling under the suspicion of the Terrorists, he was beheaded.

**Etchemins.** This Algonquian family, occupying the eastern part of Maine, lived, at an early period, on the Penobscot River, between the Abenakes proper and the Micmacs. They are now represented by the remnants of the Penobscots and Passamaquoddies. Their number is now about one thousand. About one half of them (the Penobscots) live on islands in the Penobscot River, and the remainder (Passamaquoddies) on the western shore of Passamaquoddy Bay and on the Schoodic lakes. These remnants are mostly Roman Catholics, and have churches and schools. Their blood remains pure, for the laws of Maine will not allow them to intermarry with the white people, and they are declining in strength.

**Eustis, WILLIAM, LL.D.,** was born at Cambridge, Mass., June 10, 1753; died in Boston, Feb. 6, 1825. He graduated at Harvard in 1772, and studied the healing art under Dr. Joseph Warren. As a surgeon he served throughout the war for independence, and was a member of the Massachusetts Legislature from 1788 to 1794. He was in the governor's council two years, and was in Congress from 1800 to 1805, and from 1820 to 1823. Secretary of War from 1809 until Hull's Surrender (which see) in 1812, he then resigned, for there was much fault found with his administration. In 1815 he was sent as minister to Holland, and was governor of Massachusetts in 1824, dying while in office.

**Eutaw Spring, BATTLE NEAR.** This spring, near Nelson's Ferry, on the Santee, is a first and second apparition of a subterranean stream. It first bubbles up from a bed of rock marl, at the foot of a hill twenty or thirty feet in height, and, after flowing less than sixty yards,

EUTAW SPRING.

descends, rushing and foaming, into a cavern beneath a high ridge of marl, covered with alluvium and forest trees. After traversing its subterranean way some thirty rods, it re-

appears on the other side, where it is a broader stream, of sufficient volume to turn a mill-wheel. It flows over a smooth, rocky bed, shaded by cypress-trees, about two miles, when it enters the Santee. It was near this spring that a severe battle was fought, Sept. 8, 1781. Early in August, General Greene, on the High Hills of Santee (which see), was reinforced by North Carolina troops under General Sumner; and at the close of that month he crossed the Wateree and Congaree and marched against the British camp at Orangeburg, commanded by Lieutenant-colonel Stuart. Rawdon had left these troops in Stuart's charge and returned to England. Stuart, who had been joined by the garrison of Fort Ninety-six, immediately retreated on the approach of Greene to Entaw Spring, forty miles eastward, and there encamped. Greene pursued so stealthily that Stuart was not fully aware that the republicans were after him until they were close upon him, at dawn on the morning of Sept. 8, 1781. Greene moved in two columns, the centre of the first composed of North Carolina militia, with a battalion of South Carolina militia on each flank, commanded respectively by Marion and Pickens. The second consisted of North Carolina regulars, led by General Sumner, on the right; an equal number of Virginians, under Lieutenant-colonel Campbell, in the centre; and Marylanders, commanded by Colonel O. H. Williams, on the left. Lee's Legion covered the right flank, and Lieutenant-colonel Henderson's troops covered the left. Washington's cavalry and Kirkwood's Delaware troops formed a reserve, and each line had artillery in front. Skirmishing commenced at eight o'clock in the morning, and very soon the conflict became general and severe. The British were defeated and driven from the field with much loss. The victory was complete, and the winners spread over the British camp, eating, drinking, and plundering. Suddenly and unexpectedly the fugitives rallied and renewed the battle, and after a terrible conflict of about five hours the Americans, who had lost heavily, were compelled to give way. But Stuart, knowing that partisan legions were not far away, felt insecure, and that night, after breaking up one thousand muskets and destroying stores, he retreated towards Charleston, pursued early the next morning (Sept. 9) by parties who chased them far towards the sea. Although the battlefield remained with the Americans, neither party could fairly claim a victory. During the day and the pursuit the Americans lost in killed and wounded about five hundred and fifty men; the British loss, including prisoners, was full eight hundred. Lieutenant-colonel Washington was severely wounded in the second battle, and was made prisoner. For his good conduct on that occasion Congress presented to Greene their thanks, a gold medal, and a British standard taken in the flight. A few days after the battle, with a large number of sick soldiers, he retired with his troops to the Santee hills and encamped. There his militia left him. He remained until the middle of November, when he marched his army into the low country, where he might obtain an

abundance of food. The necessities of Greene's army had compelled him to go to the Hills. The troops were too much exhausted to continue active operations. They were barefooted and half naked. He had no army hospital stores, very little salt, and his ammunition was very low.

the provincials. That was on March 2, and was repeated two other succeeding days. At seven o'clock on the evening of March 4, General Thomas, with two thousand men, provided with intrenching tools, proceeded to take possession of Dorchester Heights. A train of three hundred carts and wagons, filled with fascines and bun-

GOLD MEDAL AWARDED TO GREENE.

**Evacuation of Boston (1776).** When General Howe comprehended the real peril of his situation in Boston, after the fortification of Dorchester Heights by Washington, he began to devise means for securing the safety of his army. (See *Siege of Boston*.) Less than three thousand New England farmers—meanly clad, poorly fed, and inadequately disciplined—had created the peril by their vast labors in a single night. When the fortifying of Dorchester

dles of pressed hay, followed, all moving in perfect silence. Within an hour they were all on the heights, undiscovered by the enemy in the city, where every ear was filled with the noise of the cannonade and bombardment, which the Americans kept up from seven o'clock in the evening until dawn. A relief party appeared on the heights at three o'clock, and at daylight on March 5—the anniversary of the Boston massacre—the astounded Britons saw two re-

VIEW OF BOSTON FROM DORCHESTER HEIGHTS IN 1774.

Heights was undertaken, a severe cannonade and bombardment from batteries along the American line, from Roxbury to the extreme left, was opened on the town to divert the attention of the British from the secret labors of

doubts on Dorchester Heights, armed with cannons that commanded the town of Boston, and manned by resolute men. On the summit of the steep hills were barrels filled with stones to be rolled down upon ascending assailants, and a

strong *abatis*, formed of the trees of adjacent orchards, protected the foot of the heights. Howe was overwhelmed with astonishment, and exclaimed, "I know not what I shall do! The rebels have done more in one night than my whole army would have done in a month." Admiral Sholdham said: "If they retain possession of the heights, I cannot keep a ship in the harbor." It was determined to drive the Americans away by a direct assault, and two thousand four hundred picked soldiers—the flower of the army—were placed under the command of Lord Percy, with orders to drive the Americans from the heights. Percy embarked his men and awaited the darkness of night. A storm suddenly arose; at midnight it was a gale that drove several British ships ashore, and on the morning of the 6th the rain fell so copiously that the troops could not move. Howe, in dismay, called a council of war. The terrified loyalists demanded of the general the sure protection which he had promised them. Washington was preparing to bombard and attack Boston at two points, when the council determined to evacuate it. The resolution spread dismay among the loyalists, or Tories. They, too, determined to leave, and endure the perils and discomforts of a sea voyage, and privations in a strange land, rather than brave the resentment of the Whigs whom they had helped to oppress. Howe offered to leave Boston in the fleet if Washington would let him do so unmolested. A tacit consent was given, but the American commander did not relax his vigilance. He planted a new battery, and was ready to attack the British at any moment. The embarkation was delayed until Sunday morning, March 17, Howe hoping for the arrival of reinforcements. At four o'clock in the morning the troops and loyalists began their embarkation. The latter could not carry much of their goods with them, the war-ships and transports were so few. What they could not take with them they destroyed. The soldiers broke open and pillaged many of the stores, and a sycophantic New York Tory was authorized by Howe to seize dry-goods and clothing belonging to Whig merchants and place them in the vessels. The soldiers wantonly defaced handsome furniture, and valuable goods were cast into the sea. At sunset on that beautiful Sabbath day the great fleet had left Boston for Halifax, bearing away eleven hundred loyalists with the army to Nova Scotia. The nation, through Congress, thanked Washington for the great deliverance, and gave him a beautiful gold medal. (See *Gold Medal awarded to Washington*.)

**Evacuation of Harper's Ferry (1861).** Joseph E. Johnston, of the United States Topographical Engineers, had abandoned his flag and been commissioned a brigadier-general by the Confederate government, and was charged with the duty of holding Harper's Ferry, the key to the Shenandoah Valley in its relation to the free-labor states. General McClellan was throwing Ohio troops into Western Virginia, and General Robert Patterson, in command of the Department of Pennsylvania, was rapidly gathering a force

at Chambersburg, Penn., under General W. H. Keim. A part of the insurgents at the ferry were on Maryland Heights, on the left bank of the Potomac, and against these Patterson marched from Chambersburg with about fifteen thousand men. Just at this moment commenced Wallace's dash on Romney (see *Romney*), which frightened Johnston, and he abandoned Harper's Ferry, and moved up the valley to Winchester. Before leaving he destroyed the great bridge of the Baltimore and Ohio Railway at the ferry with fire and gunpowder. It was one thousand feet long. Then he spiked the heavy guns that could not be taken away, and encamped a few miles up the valley. Patterson, who was at Hagerstown, Md., pushed on, and on June 16 and 17 about nine thousand of his troops crossed the Potomac by fording it at Williamsport. These were led by Brigadier-general George Cadwalader, at the head of five companies of cavalry. At that moment Patterson received orders by telegraph from General Scott, at Washington, to send to him all the regulars, horse and foot, under his (Patterson's) command, and a Rhode Island regiment. Patterson was embarrassed, and requested the general to leave the regulars with him, for he expected to hold the position and to keep open a free communication with the great West by the Baltimore and Ohio Railway. Scott refused, saying, "We are pressed here; send the troops without delay." The order was obeyed, and Patterson was left without a single piece of available artillery, with only one troop of raw cavalry, and a total force of not more than ten thousand men, mostly undisciplined, to confront Johnston with full fifteen thousand drilled troops. Patterson prudently recrossed the Potomac, and remained on the Maryland side until the beginning of July.

**Evacuation of Manassas (1862).** On receiving information of this evacuation by the Confederates, General McClellan ordered (March 9, 1862) the immediate advance of his whole army in that direction simply to give his troops some experience on the march and bivouac, preparatory to undertaking the spring campaign. General Stoneman pursued the retiring Confederates beyond the Rappahannock, but did not molest them, and the whole army returned to Alexandria on the 14th. In its retrograde movement, Stoneman's cavalry was followed by that of Stuart and Ewell, and even by artillery, for some distance. This movement one of the French aids of McClellan called a "promenade of the Army of the Potomac." It greatly disappointed the loyal people, for they supposed it was going "on to Richmond."

**Evacuation of New York (1783).** Washington, Governor Clinton, and Sir Guy Carleton held a conference at Dobbs's Ferry, and made arrangements for the British troops to evacuate the city of New York on Nov. 25, 1783. On that morning the American troops, under General Knox, who had come down from West Point and encamped at Harlem, marched to the "Bowery Lane," and halted at the present junction of the Third Av-

eune and the Bowery. There they remained until about one o'clock in the afternoon, the British claiming the right of possession until meridian. At that hour the British had embarked at Whitehall, and before three o'clock General Knox took formal possession of the city and of Fort George, amid the acclamations of thousands of citizens and the roar of artillery at the Battery. Washington repaired to his quarters at France's Tavern, and there, during the afternoon, Governor Clinton gave a public dinner to the officers of the army. In the evening the town was brilliantly illuminated, rockets shot up from many private dwellings, and bonfires blazed at every corner. The British, on leaving, had nailed their flag to the staff in Fort George and slushed the pole; but a boy soon took it down, and put the stripes and stars in its place. At sunset on that clear, frosty day the last vessel of the retiring British transports disappeared beyond the Narrows.

**Evacuation of Philadelphia (1778).** The danger of being blockaded by a French fleet in the Delaware caused the British fleet to leave those waters, and the British army to evacuate Philadelphia and flee towards New York. That movement was begun on June 18, 1778. The baggage and stores, and a considerable number of loyalists, were sent around to New York in the fleet. The British army, seventeen thousand strong, having crossed the Delaware, took up its march across New Jersey, and was pursued by Washington, who broke up his encampment at Valley Forge so soon as he heard of the evacuation of Philadelphia. (See *Monmouth Court-house, Battle of.*)

**Evacuation of Sumter (1861).** After defending Fort Sumter until his supplies were exhausted, and the fortress was almost a ruin, Major Anderson consented to evacuate it on honorable terms. (See *Fall of Fort Sumter.*) The

ering off the bar to make arrangements for the departure of the inmates of Sumter. The military authorities at Charleston furnished a steamer to take the garrison to the *Baltic*, where Mr. Fox (see *Relief of Fort Sumter*) was waiting to receive them. After the flag of Sumter was saluted by the garrison, it was lowered, and the soldiers, in full dress, left the battered fortress, Major Anderson carrying with him the flag, and the band playing "Yankee Doodle." When Major Anderson and his staff left the sally-port, it struck up "Hail to the Chief." Soon after they left, Governor Pickens and suite, his executive council, General Beauregard, and others,

GOLD BOX PRESENTED TO ANDERSON.

went to the fort in a steamer, took formal possession, and raised over it the Confederate and South Carolina flags. The fort had been *evacuated*, not *surrendered*. The flag had been lowered, but not given up—dishonored, but not captured. The sovereignty of the Republic, symbolized in the flag, had not been yielded to the

FORT SUMTER MEDAL.

act was performed on Sunday, April 14, 1861. Lieutenant Snyder, of the garrison, and Lieutenant Hartstene, who had joined the insur-

insurgents. So soon as the garrison were on board the *Baltic*, the flag of Sumter was raised to the mast-head and saluted with cheers and firing of great guns from the other vessels. The

vessel (the *Isabel*) that conveyed the garrison to the *Baltic* did not leave Fort Sumter, on account of the tide, until Monday morning, April 15. The *Baltic* sailed for New York. The praises of Major Anderson and his little band were upon every lip, while the people of the country were deeply moved by the outrage in Charleston harbor. Before the evacuation, the citizens of Taunton, Mass., impressed with his prowess and patriotism, had voted him an elegant sword; the authorities of New York gave him the freedom of the city in an elegant gold box. The citizens also presented him with a gold medal, suitably inscribed. The citizens of Philadelphia gave him an elegant sword, and societies and legislative bodies presented him with tokens of the good-will of his countrymen. Finally, the Chamber of Commerce of New York ordered (June 6, 1861) the execution of a series of medals to be presented to Major Anderson and to each man of the garrison. (See *Fort Sumter, First Reinforcement* *et*.)

**Evans, OLIVER**, inventor, was born at Newport, Del., in 1775; died in New York, April 21, 1819. He was of Welsh descent, and was grandson of Evan Evans, D.D., the first Episcopal minister in Philadelphia. Apprenticed to a wheelwright, he early displayed his inventive genius. At the age of twenty-two years he had invented a most useful machine for making card-teeth. In 1786-87 he obtained from the Legislatures of Maryland and Pennsylvania the exclusive right to use his improvements in flour-mills. He constructed a steam-carriage in 1799, which led to the invention of the locomotive engine. His steam-engine was the first constructed on the high-pressure principle. In 1803-4 he made the first steam dredging-machine used in America, to which he gave the name of "Oracter Amphibolis," arranged for propulsion either on land or water. This is believed to have been the first instance in America of the application of steam power to the propelling of a land carriage. Evans foresaw and prophesied the near era of railway communication and travel. He proposed the construction of a railway between Philadelphia and New York, but his limited means would not allow him to convince the sceptics by a successful experiment.

**Evans, SIR DE LACY**, was a distinguished British general. He was born in Ireland in 1787; died in London, Jan. 2, 1870. He entered the British army at the age of twenty years, served in the East Indies, and early in 1814 came to America with the rank of brevet-colonel. He was engaged in the Battle of Bladensburg (which see) in August, and led the troops that entered Washington city and destroyed the public buildings there. He was with General Ross in the expedition against Baltimore in September, and was near that general when he fell. Evans was also with Pakenham in the attempt to capture New Orleans. He was wounded in the battle that occurred below that city. Returning to Europe, he served under Wellington. Afterwards he was elected to Parliament,

and was subsequently promoted to lieutenant-general. In the latter capacity he served in the war in the Crimea in 1854.

SIR DE LACY EVANS.

**Everett, ALEXANDER HILL, LL.D.**, was born in Boston, March 19, 1790; died in Canton, China, June 29, 1847. He graduated at Harvard in 1806, studied law with J. Q. Adams, and in 1809 accompanied him to St. Petersburg as *attaché* to his legation, to which he became secretary in 1815. He became *chargé d'affaires* at Brussels in 1818, in 1825-29 was minister to Spain, and from 1845 until his death was American commissioner in China.

**Everett, EDWARD, LL.D., D.C.L.**, was born at Dorchester, Mass., April 11, 1794; died in Boston, Jan. 15, 1865. He graduated at Harvard in 1811, and was ordained pastor of the Brattle Street

(Boston) Unitarian Church in February, 1814. He was chosen professor of Greek in Harvard University in 1815, and took the chair on his return from Europe in 1819. Mr. Everett was in Congress from 1825 to 1835; governor of Massachusetts from 1836 to 1840; minister to England from 1841 to 1845; President of Harvard from 1846 to 1849; and succeeded Daniel

EDWARD EVERETT.

Webster as Secretary of State in November, 1852. Mr. Everett was in the United States Senate from March, 1853, until May, 1854, when he re-

tired to private life on account of feeble health. He took great interest in the efforts of the women of the United States to raise money to purchase Mount Vernon. He wrote and spoke much, and by his efforts procured a large amount of money, and the estate was purchased. He was nominated for the Vice-Presidency of the United States in 1860 by the Constitutional Union Party." Mr. Everett was a rare scholar and finished orator. He was one of the early editors of the *North American Review*.

**Ewell, RICHARD STODDARD**, was born in the District of Columbia in 1820; died at Spring Hill, Tenn., Jan. 25, 1872. He graduated at West Point in 1840, served in the Mexican War, and received the brevet of captain. He joined the

RICHARD STODDARD EWELL

Confederates in their war against the Union in 1861; was promoted to major-general in 1862, and was conspicuous in the Shenandoah Valley, in the battles near Richmond, Malvern Hills, Cedar Mountain, Gettysburg, the Wilderness, Spottsylvania Court-house, and during the siege of Petersburg. In the Battle of Groveton (which see) he lost a leg, and was made lieutenant-general in May, 1863. He was engaged in stock-raising in Tennessee at the time of his death.

**Exchange of Prisoners in the Revolution.** For some time after the war for independence was begun the British authorities refused to exchange prisoners, because they would not "treat with rebels;" but after Howe's arrival in New York, when the British had five thousand prisoners and the Americans three thousand, negotiations for exchange were opened. Obstructions arose, at first, on account of the refusal of Congress to ratify the agreement made by Arnold concerning the prisoners taken at the Cedars. Six Hessian officers were offered in exchange for General Lee. Howe refused, for he held Lee as a deserter from the British army. (See *Lee, Treason of*.) Congress put the six officers and Lieutenant-colonel Campbell, a British officer, in close confinement, to suffer whatever extremities might be inflicted on Lee. The latter was exchanged in 1778. There was another difficulty. The Americans captured on Long

Island and at Fort Washington, and confined in New York prisons and prison-ships, had suffered extremely; and those sent out for exchange in the spring of 1777 were generally very feeble and emaciated. On this account Washington refused to make an even exchange of healthy British and German soldiers for the mere wrecks of American soldiers. Besides, the term of enlistment of all the American prisoners had expired, and they were no longer soldiers, while every British prisoner sent in was a recruit to the army of the enemy. These disputes delayed exchanges. Humanity alone caused Congress to consent to any exchange. At length all things were adjusted, and Elias Boudinot, of New Jersey, a Huguenot by descent, was appointed American commissary of prisoners.

**Excise Law, THE FIRST.** The Secretary of the Treasury (Hamilton) recommended a tax on liquors. A bill to that effect was introduced into Congress at the beginning of 1791. As finally passed, it imposed upon all imported spirits a duty varying from twenty-five to forty cents per gallon, according to strength. The excise to be collected on domestic spirits varied with their strength from nine to twenty-five cents per gallon on those distilled from grain, and from eleven to thirty cents when the material was molasses or other imported product; thus allowing, especially when the duty on molasses was taken into account, a considerable discrimination in favor of the exclusively home product. There was much opposition to this law in and out of Congress. The details of the working of the law for securing a revenue from this source were very stringent, yet very just. It was opposition to this law in western Pennsylvania which produced the "Whiskey Insurrection" (which see).

**Excise Law, VIOLENT OPPOSITION TO THE,** appeared in western Pennsylvania soon after its enactment, and when steps were taken for its enforcement. The law was disregarded, indictments were found against a number of distillers, and thirty warrants were issued, which the marshal of the district undertook to serve. He had served twenty-nine of them, when he and the inspector of the district were fired upon by some armed men and compelled to fly for their lives. They assailed the inspector's (Neville's) house, and an appeal to the militia was in vain. A small detachment of soldiers was obtained from the neighboring garrison of Fort Pitt (Pittsburgh). The next morning (July 17, 1794) five hundred assailants appeared. One man was killed, the buildings were burned, and the officers of the law were driven out of Pittsburgh and compelled to flee for their lives down the Ohio River. The mob were led by John Holcroft, who assumed the name of Tom the Tinker. Leading politicians took part in a public meeting at Mingo Creek Meeting-house (July 23), who were disposed to make common cause with the rioters. They finally agreed to call a convention of delegates from all the townships west of the mountains, and from the adjoining counties of Maryland and Virginia, to

meet in three weeks at Parkinson's Ferry, on the Monongahela. A few days afterwards the mail from Pittsburgh to Philadelphia was intercepted and robbed. Two leading politicians—Bradford and Marshall—concerned in this robbery forthwith addressed a circular letter to the officers of the militia of the western counties, stating that letters in the rifled mail revealed important secrets, which made it necessary for the military to act, and called upon the militia to muster, on Aug. 1, at Braddock's Field, with arms and accoutrements and provisions for four days. Full seven thousand men appeared at the appointed rendezvous. The leaders in the insurrection were elated. The meeting at Parkinson's Ferry was an armed convention. Colonel Cook, one of the judges of Fayette County, presided, and Albert Gallatin (afterwards Secretary of the Navy) acted as secretary. Bradford assumed the office of major-general and reviewed the troops. It was his design to get possession of Fort Pitt and the arms and ammunition therein, but finding most of the militia officers unwilling to co-operate, he abandoned the project. The excise-officers were expelled from the district, and many outrages were committed. The insurrectionary spirit spread into the neighboring counties of Virginia. The reign of terror was extended and complete, when President Washington, acting with energy, sent an armed force and quelled the insurrection. (See *Whiskey Insurrection, The.*)

**Execution of Quakers in Philadelphia.** While the British army was in Philadelphia in 1778, Joseph Galloway, an active Tory, and others employed John Roberts and Abraham Carlisle, members of the Society of Friends, as secret agents in detecting foes to the British government. Carlisle was a sort of inquisitor-general, watching at the entrances to the city, pointing out and causing the arrest of Whigs, who were first cast into prison and then granted permissions to pass the lines. Both Roberts and Carlisle acted as guides to British expeditions when they went out of Philadelphia to fall upon and massacre their countrymen. These facts being laid before Congress, that body caused the arrest of Roberts and Carlisle. They were tried, found guilty, and hanged.

**Executive Departments.** When the Congress under the National Constitution was first organized (April, 1789) the executive departments of the old Congress were still in operation. Having made provision for a revenue, the Congress directed their attention to the reorganization of these departments, as follows: The *State Department* is managed by the Secretary of State and two assistant secretaries. It was created in 1781, as the Department of Foreign Affairs. It has a diplomatic branch, a consular branch, a disbursing agent, a translator, a clerk of appointments and commissions, a clerk of the rolls and archives, of territorial business, and of pardons and passports, and a superintendent of statistics. The *Treasury Department* is in charge of the Secretary of the Treasury and

two assistant secretaries, and is composed of the following bureaus: Of the Secretary, first, second, and third comptroller; of Commissioner of

SEAL OF THE STATE DEPARTMENT.

Customs, first, second, third, fourth, fifth, and sixth auditors; of the Treasurer, of the Register, of the Solicitor, of the Light-house Board, of the United States Coast Survey, of Internal Revenue, of the Comptroller of the Currency,

SEAL OF THE TREASURY DEPARTMENT.

and of the Bureau of Construction. It also has the control of the United States Mint; and also of a Special Commission of Internal Revenue, a Director of Statistics, and a Supervising Architect. The *War Department* is in charge of the Secretary of War and one regular assistant. The following bureaus are attached to this department: Of the Commanding-general, Adjutant-general, Quartermaster-general, Paymaster-general, Commissary-general, Surgeon-general, of Engineers, Topographical and Ordnance, and, at one time, of Refugees and Freedmen. (For seal of this department, see *Board of War.*) The *Navy Department* is in charge of the Secretary of the Navy, and its functions are discharged by the Secretary and one assistant secretary and eight bureaus, as follows: Of Yards and Docks, Navigation, Ordnance, Construction and Repairs, Equipment and Recruiting, Provisions

and Clothing, Steam Engineering, and of Medicine and Surgery. A Marine Corps is attached to the navy, and the entire supervision of it is

SEAL OF THE NAVY DEPARTMENT.

vested in a colonel-commandant, whose orders for duty are approved by the Secretary of the Navy. The *Interior Department* is in charge of the Secretary of the Interior and one assistant secretary, who have the supervision and man-

SEAL OF THE INTERIOR DEPARTMENT.

agement of the following branches of the public service: The public lands, pensions, Indians, Patent-office, Department of Agriculture, and Bureau of Education. The latter is an independent bureau, with a commissioner. The *Post-office Department* is under the direction and management of the Postmaster-general and three assistant postmaster-generals. Its management is distributed among several bureaus, as follows: Of Appointments, in charge of the First Assistant Postmaster-general; Contracts, in charge of the Second Assistant; Finance, in charge of the Third Assistant; Money Order, in charge of a Superintendent; Inspection and Division, Topographical Division, and an Auditor's Department. The *Attorney-general's Department*, or *Department of Justice*, is under the control of the United States Attorney-general. The ordi-

nary duties of the office are, 1. To give legal opinions when called for by the President or heads of departments; 2. To examine the titles

SEAL OF THE POST-OFFICE DEPARTMENT.

of all lands purchased by the government; 3. To receive all applications for pardons; 4. To receive all applications for judicial appointments; 5. To conduct the suits of the United States government in the Supreme Court of the

SEAL OF ATTORNEY-GENERAL'S DEPARTMENT.

United States; 6. To have supervision of all suits arising in any of the departments, when referred by the head thereof to the Attorney-general. The head of this department was first made a cabinet officer in 1849, when the Department of the Interior was created and its Secretary made a cabinet minister.

**Exeter, N. H., Founded.** When Rev. John Wheelwright, a kinsman of Anne Hutchinson, was driven from Boston in 1638, he founded a church at Squamscot Falls, and, at the same time, a body politic upon a purely democratic model, and called the settlement Exeter. Every man, without regard to his theological views, had a voice in choosing rulers annually, and two assistants to each ruler. When, in 1641, New Hampshire came under the jurisdiction of Massachusetts, Wheelwright's political policy

was respected; and he had the satisfaction of seeing the rights of his freemen allowed, without regard to their religion, by the colony which had banished him.

**Exmouth** (Edward Pellew), VISCOUNT, English admiral, was born at Dover, England, April 19, 1757; died at Teignmouth, Jan. 23, 1833. He entered the navy at the age of thirteen years, first distinguished himself in the battle on Lake Champlain in 1776, and rendered great assistance to Burgoyne in his invasion of New York. He became a post-captain in 1782. For the first capture of a vessel of the French navy (1792) in the war with France, Pellew was knighted and employed in blockading the French coast. For bravery in saving the people of a wrecked ship at Plymouth in 1796 he was made a baronet. Pellew was in Parliament in 1802, but in 1804 was again in the naval service; was promoted to rear-admiral, and made commander-in-chief in the East Indies, when he annihilated the Dutch naval force there. He was created Baron Exmouth in 1814, made a full Admiral of the Blue, and allowed a pension of \$10,000 a year. With a fleet of nineteen ships, he brought the Dey of Algiers to terms in 1816, and liberated about twelve hundred prisoners.

**Expedition against Acadia (1755).** Governor Shirley, of Massachusetts, and Governor Laurence, of Nova Scotia, had arranged an expedition, in the campaign of 1755 (see *French and Indian War*), to drive the French out of the latter province. There was much enthusiasm excited in New England in favor of this expedition, for there was still a dread of forays on the frontiers by the French and Indians in the East. Three thousand men, under General John Winslow, sailed from Boston (May 20), and landed at the head of the Bay of Fundy. There they were joined by Colonel Monckton with three hundred British regulars from a neighboring garrison, and that officer, having official precedence of Winslow, took command. They captured the forts there in possession of the French (in June), and placed the whole country under martial rule. Then the English proceeded to commit a most flagrant crime in driving the French inhabitants out of their country, dispersing them, without resources, among the English colonies, and confiscating all their property, which they did not allow them to take away. (See *Acadians, Expulsion of the.*)

**Expedition against Florida (1778).** Tory refugees from Georgia acquired considerable influence over the Creek Indians, and from east Florida, especially from St. Augustine, made predatory excursions among their former neighbors. General Robert Howe, then commanding the Southern Department, was ordered from Charleston to Savannah to protect the Georgians and attack St. Augustine. A considerable body of troops led by Howe, and accompanied by General Honstoun, of Georgia, penetrated as far as the St. Mary's River, where sickness, loss of draught-horses, and disputes about command checked the expedition and caused it

to be abandoned. The refugees in Florida retaliated by an invasion in their turn.

**Expedition down the St. Lawrence (1813).** General Armstrong, Secretary of War, planned another invasion of Canada in the autumn of 1813. There had been a change in the military command on the northern frontier. For some time the infirmities of General Dearborn, the commander-in-chief, had disqualified him for active service, and in June (1813) he was superseded by General James Wilkinson, who, like Dearborn, had been an active young officer in the Revolution. Leaving Flournoy in command at New Orleans, Wilkinson hastened to Washington city, when Armstrong assured him he would find fifteen thousand troops at his command on the borders of Lake Ontario. On reaching Sackett's Harbor (Aug. 20), he found one third of the troops sick, no means for transportation, officers few in number, and both officers and men raw and undisciplined. After some movements on the lake, Wilkinson found himself at Sackett's Harbor in October, sick with lake-fever. Armstrong was there to take personal charge of preparations for an attack upon Kingston or Montreal. Knowing the personal enmity between Wilkinson and Wade Hampton, Armstrong, accompanied by the adjutant-general, had established the headquarters of the War Department at Sackett's Harbor to promote harmony between these two old officers, and to add efficiency to the projected movements. Wilkinson, not liking this interference of Armstrong, wished to resign; but the latter would not consent, for he had no other officer of experience to take his place. After much discussion, it was determined to pass Kingston and make a descent upon Montreal. For weeks the bustle of preparation was great, and many armed boats and transports had been built at the Harbor. On Oct. 17 orders were given for the embarkation of the troops at Sackett's Harbor, and General Hampton, then halting on the banks of the Chateaugay River, was ordered to move to the St. Lawrence, at the mouth of that stream. The troops at the Harbor were packed in scows, bateaux, Durham boats, and common lake sail-boats, at the beginning of a dark night, with an impending storm hovering over the lake. Before morning there was a furious gale, with rain and sleet, and the boats were scattered in every direction. The shores of the little islands in that region were strewn with wrecks, and fifteen large boats were totally lost. On the 20th a large number of the troops and saved boats arrived at Grenadier Island, near the entrance to the St. Lawrence. There they were finally all gathered. The damage and loss of stores, etc., was immense. The troops remained encamped until Nov. 1. The snow had fallen to the depth of ten inches. Delay would be dangerous, and on Nov. 9 General Brown and his division pushed forward, in the face of a tempest, to French Creek, at the (present) village of Clayton, on the St. Lawrence. Chauncey at the same time made an ineffectual attempt to blockade the British vessels in the harbor of Kingston. British marine

scoats were out among the Thousand Islands. They discovered the Americans at French Creek, where, on the afternoon of Nov. 1, there was a sharp fight between the troops and British schooners and gunboats filled with infantry. The remainder of the troops, with Wilkinson, came down from Grenadier Island, and on the clear and cold morning of the 5th the whole flotilla, comprising three hundred bateaux, preceded by gunboats, filled with seven thousand troops, went down the St. Lawrence, pursued by British troops in a galley and gunboats, through the sinuous channels of the Thousand Islands. The same evening the belligerents had a fight by moonlight in Alexandria Bay, and land troops from Kingston reached Prescott, opposite Ogdensburg, at the same time. Wilkinson disembarked his army just above Ogdensburg, and marched to some distance below to avoid the batteries at Prescott. Brown, meanwhile, successfully took the flotilla past Prescott on the night of the 6th, and the forces were reunited four miles below Ogdensburg. There Wilkinson was informed that the Canada shores of the St. Lawrence were lined with posts of musketry and artillery to dispute the passage of the flotilla. To meet this emergency, Colonel Alexander McComb was detached with twelve hundred of the best troops of the army, and on the 7th landed on the Canada shore. He was followed by Lieutenant-colonel Forsyth with his riflemen. On the 8th a council of war was held, and, after receiving a report from Colonel J. G. Swift, the active chief-engineer, concerning the strength of the army, the question "Shall the army proceed with all possible rapidity to the attack of Montreal?" was considered, and was answered in the affirmative. General Brown at once crossed the river with his brigade. Meanwhile a large reinforcement had come down from Kingston to Prescott, and were marching rapidly forward to meet the American invaders. A severe engagement ensued at Chrysler's Field, a few miles below Williamsburg (Nov. 11, 1813). The flotilla was then at the head of the Long Rapids, twenty miles below Ogdensburg. The Americans were beaten in the fight and driven from the field (see *Chrysler's Field, Battle at*), and that night they withdrew to the boats. The following morning the flotilla passed the Long Rapids safely. General Wilkinson was ill, and word came from Hampton that he would not form a junction with Wilkinson's troops at St. Regis. The officers were unwilling to serve longer under the incompetent Wilkinson, and it was determined, at a council of war, to abandon the expedition against Montreal. The troops went into winter quarters at French Mills (now Covington), on the Salmon River.

**Expedition of Captain Willing.** Pittsburgh was made the headquarters of a western military department, and with it communication had been opened with New Orleans. From that city, with the countenance, if not the aid, of the Spanish governor, Captain Willing, commanding the post at Pittsburgh, had obtained a supply of arms and ammunition. While in the Southwest, he had invited the English settlers

in west Florida to join the American Union, but without success; and when, early in 1778, he descended the Ohio and Mississippi for another supply of arms and munitions, obtaining crews to row his boats back to Pittsburgh, he remained behind with his followers, seized an English vessel on the river, and, proceeding to Baton Rouge and Natchez, burned the houses and abducted the slaves of English planters. He was captured by a British force sent from Pensacola, who built forts at Mauthac, Baton Rouge, and Natchez.

**Expedition of George Rogers Clarke (1778).** It was ascertained in the spring of 1778 that the English governor of Detroit (Hamilton) was inciting the Western Indians to make war on the American frontiers. Under the authority of the State of Virginia, and with some aid from it in money and supplies, George Rogers Clarke, a pioneer, enlisted two hundred men for three months, with whom he embarked at Pittsburgh and descended to the site of Louisville, where thirteen families, following in his train, seated themselves on an island in the Ohio (June, 1778). There Clarke was joined by some Kentuckians, and, descending the river some distance farther, hid his boats and marched to attack Kaskaskia (now in Illinois), one of the old French settlements near the Mississippi. The expeditionists were nearly starved when they reached the town. Taken entirely by surprise, the inhabitants submitted (July 4, 1778) without resistance. Cahokia and two other posts near also submitted. In the possession of the command of Kaskaskia were found letters directing him to stimulate the Indians to hostilities. Clarke established friendly relations with the Spanish commander at St. Louis, across the Mississippi. The French inhabitants in that region, being told of the alliance between France and the United States, became friendly to the Americans. The Kaskaskians, and also those of Vincennes, on the Wabash, took an oath of allegiance to Virginia, and Clarke built a fort at the Falls of the Ohio, the germ of Louisville. The Virginia Assembly erected the conquered country, embracing all the territory north of the Ohio claimed as within their limits, into the country of *Illinois*, and ordered five hundred men to be raised for its defence.

**Expenditures of the United States for the War for Independence.** The annual expenditures of the United States, in the aggregate, for the war had been at the rate of \$20,000,000 in specie. The estimates for 1782 were for \$8,000,000. Yet so tardy were the several states in raising sums for the current expenditures of the general government, that in the first five months the aggregate amount received from them was less than \$20,000, or less than the estimated expense for a single day. Of this amount not a dollar had been received from the Eastern or the Southern States.

**Express Business, THE,** originated in the United States about the year 1837. James W. Hale, yet (1880) living, conducted a news-room in the old Tontine Coffee-house, at the corner of Wall and Water Streets, New York city.

One day a young man (William F. Harnden) called on Hale and asked his advice concerning business. It was a season of great business depression. Hale had daily inquiries about persons travelling between New York and Boston who might carry small packages. He found that means for sending small packages between cities was a growing want, and he said to the young man, "I think that if you will travel between New York and Boston on the steamboat (there was then no railway), and do errands for busi-

ness men in both places, charging a fair remuneration for your services, it will pay you well." Young Harnden tried it successfully, and such was the origin of "Harnden's Express Company," the first of the great companies which have amassed large fortunes by the business, and been of incalculable benefit to the public. But Mr. Harnden, the founder of the express system, by engaging in a gigantic emigration scheme, impoverished himself and died a poor man in 1845, at the age of thirty-three years.

## F.

**Fair Messenger, THE.** While General Greene was pursuing Lord Rawdon towards Orangeburg, he wished to send a message to General Sumter, then on the Santee, to take a position in front of the enemy and impede his flight. The errand was a most perilous one, and no man in the army was bold enough to undertake it, for the Tories were everywhere on the alert. Emily Geiger, a brave maiden eighteen years of age, volunteered to carry the letter to Sumter. Greene told her its contents, so that in case she found it necessary to destroy it the message might be delivered orally. The girl mounted a fleet horse, crossed the Wateree at the Camden Ferry, and while passing through a dry swamp was arrested by some Tory scouts.

on to Sumter's camp, and very soon he and Marion were co-operating with Greene. Emily Geiger afterwards married a rich planter on the Congaree.

**Fairfax Court-house, SKIRMISH AT (1861).** Rumors prevailed that the insurgents were at Fairfax Court-house. Lieutenant C. H. Tompkins, with seventy-five cavalry, was sent from Arlington Heights on a scout in that direction. He left late in the evening of May 31, and reached the village of Fairfax Court-house at three o'clock the next morning, where Colonel Ewell, late of the United States Army, was stationed with several hundred insurgents. Tompkins captured the pickets and dashed into the town, driving the insurgents before him. There they

ARREST OF EMILY GEIGER.

As she came from the direction of Greene's army her errand was suspected. She was taken to a house at the edge of a swamp, and a woman employed to search her. When left alone she ate up Greene's letter piece by piece, and no evidence being found against her she was released with many apologies. She passed

were reinforced, and a severe skirmish occurred in the streets. Shots were fired upon the Union troops from windows. Finding himself greatly outnumbered by the Confederates, Tompkins retreated, taking with him five fully armed prisoners and two horses. He lost one man killed, four wounded, and one missing. He

also lost twelve horses and their equipments. About twenty of the insurgents were killed or wounded.

**Fairfax, THOMAS**, sixth Lord and Baron of Cameron, was a friend and patron of Washington in his youth. He was born in England in 1691, and died at his lodge, Greenway Court, in Frederick County, Va., Dec. 12, 1781. He was educated at Oxford; was a contributor to Addison's *Spectator*, and finally, soured by disappointments, quitted England forever, and settled on the vast landed estate in Virginia which he had inherited from his mother, daughter of Lord Culpepper. (See *Culpepper*.) He built a lodge in the midst of ten thousand acres of land, some of it arable and excellent for grazing, where he resolved to build a fine mansion and live a sort of hermit lord of a vast domain. He was at middle age when he came to America. He never built the great mansion, but lived a solitary life in the lodge he had built, which he called Greenway Court.

sure," he said, "it is time for me to die." A ballad gives the sequel as follows:

"Then up rose Joe, all at the word,  
And took his master's arm,  
And to his bed he softly led  
The lord of Greenway farm.  
Then thrice he called on Britain's name,  
And thrice he wept full sore,  
Then sighed, 'O Lord, thy will be done!  
And word epoke never more."

#### Falkland Islands, AFFAIR AT THE (1831).

The policy of President Jackson towards foreign nations was intimated in his instructions to Louis McLane, his first minister to England, in which he said, "Ask nothing but what is right; submit to nothing that is wrong." In this spirit he dealt with the lessee of the Falkland Islands, lying east of Patagonia, South America. These islands were under the protection of Buenos Ayres, and had been leased to Don Louis Vernet, who undertook to compel sailing vessels to take out license to catch seals under his authority. Having captured three American vessels, when the news of this and

GREENWAY COURT.

There young Washington first met him and became a frequent visitor, for Fairfax found him a bright young man, a good hunter, in which sport he himself loved to engage, and useful to him as a surveyor of his lands. He became very fond of the young surveyor, who was a loved companion of George William Fairfax, a kinsman of Lord Fairfax. Many visitors went to Greenway Court, and the hospitable owner always treated everybody kindly. There Lord Fairfax lived during the storms of the French and Indian War, and of the Revolution, taking no part in public affairs, but always a staunch loyalist. When the news came that his young friend Washington had captured Cornwallis, he was ninety years of age. He was overcome with emotion, and he called to his body-servant, Joe, to carry him to his bed, "for I am

other outrages reached the United States, the President, always prompt in the vindication of the rights of his countrymen against foreign aggressors, sent Captain Duncan, in the ship-of-war *Lexington*, to protect American sealers in that region. In December, 1831, he broke up Vernet's establishment, restored the captured property to the owners, and sent seven of the most prominent actors to Buenos Ayres for trial. The authorities of that republic were indignant at this treatment of Vernet, as he was under the protection of their flag, but they did not think it proper to pursue the affair beyond a vigorous protest.

**Fall of British Posts.** In the course of one week (in 1781) four British posts on the verge of the upper country of South Carolina fell into the hands of the Americans. These posts formed

part of a line of military connection between Charleston and Camden, and so on to Ninety-six. Greene sent out Marion and Lee to attempt their capture, and they were successful. Orangeburg was taken May 11; Fort Motte, May 12; the post at Nelson's Ferry, May 14; and Fort Granby, May 16. Nelson's Ferry is on the Santee, at the mouth of Entaw Creek, about fifty miles from Charleston. Fort Nelson, situated a few miles above, was captured on April 16. Fort Motte was near the junction of the Wateree and Congaree rivers, and was the most important of all these minor posts.

**Fall of Fort Sumter.** For three months after the expulsion of the *Star of the West* from Charleston harbor, Major Anderson and his little garrison in Fort Sumter suffered and toiled until their provisions were exhausted, and a formidable army and forts and batteries, all prepared for the reduction of that fort, had grown up around them. The Charleston newspapers and politicians at public gatherings had been constantly inflaming the public mind with political excitement, calling the fort the "Bastille of the Federal Union," and declared that "the fate of the Southern Confederacy hung by the ensign halyards of Fort Sumter." The Legislature of South Carolina authorized the organization of ten thousand men, and M. L. Bonham, late member of Congress, was appointed major-general of the state forces. Volunteers from every part of the Confederacy flocked into Charleston, and at the close of March not less than seven thousand armed men and one hundred and twenty pieces of cannon, mounted on logs and earthworks, were menacing Major Anderson and his little garrison. These were under the general command of P. G. T. Beauregard, a Louisiana Creole, who had deserted his flag, and been commissioned a brigadier-general by Jefferson Davis. He had arrived at Charleston on March 4. Fort Sumter had been built for defence against external, not internal foes. Its strongest sides were towards the sea; its weakest side was towards Morris Island, three fourths of a mile distant. On that side were its sally-port and docks. On that island the insurgents erected a formidable battery, shielded by railroad iron, making it bomb-proof. Two other batteries were erected on the same island, and armed with Columbiads and mortars. They were all fully manned. At Fort Moultrie and other points were batteries bearing on Sumter. The insurgents had also created a curious monster for the water, in the form of a huge floating-battery, made of pine and palmetto logs, and plated with railway-iron. Major Anderson's bearing had won for him the most cordial esteem of the civil authorities in Charleston. The faithful Peter Hart was his judicious messenger on all occasions (see *Fort Sumter, First Reinforcement of*), and his trusted caterer for the garrison in fresh provisions in the Charleston market. A source of great anxiety had been removed when, on Feb. 3, the women and children (twenty in number) were removed from the fort and taken to New York. During March rumors were everywhere afloat that the government was about

to give up Fort Sumter to the Carolinians. Anderson was perplexed by these rumors, but held firmly to his determination to defend it. Beauregard made (March 25) a proposition for its surrender on degrading terms, to which the major replied with warmth, "If I can only be permitted to leave on the pledge you mention, I shall never, so help me God, leave this fort alive." Beauregard apologized. The message of the President to Governor Pickens (see *Relief of Fort Sumter*) produced a crisis. It caused intense excitement throughout the Confederacy, and especially at Charleston. Beauregard received a despatch from the government at Montgomery (April 10), conditionally authorizing him to demand the surrender of Fort Sumter. He determined to make the demand at twelve o'clock the next day. All the military and the batteries around Charleston harbor were made ready for action. Politicians had been urging this blow for some time. Roger A. Pryor, lately a member of Congress from Virginia, and a venerable man from the same state named Edmund Ruffin were among the foremost in urging an attack upon Fort Sumter. They wished it for its effect on the politics of the state. The Virginia Convention was yet full of Unionists. (See *Virginia Secession Ordinance*.) On the night of the 10th, while Charleston was rocked with excitement, Pryor harangued the multitude on the occasion of his being serenaded. He thanked the Carolinians for having "annihilated this emerald Union, reeking with corruption, and insolent with excess of tyranny. Thank God," he said, "it is at last blasted and riven by the lightning wrath of an outraged and indignant people." Referring to the doubtful position of Virginia, he said: "Do not distrust Virginia. As sure as to-morrow's sun will rise upon us, just so sure will Virginia be a member of the Southern Confederacy. And I will tell you, gentlemen, what will put her in the Southern Confederacy in less than an hour by Shrewsbury clock — *Strike a blow!* The very moment that blood is shed, Old Virginia will make common cause with her sisters of the South." This cry for blood, sent to Montgomery by telegraph, was repeated at the capital of the Confederacy. Mr. Gilchrist, a member of the Alabama Legislature, said to Davis and his companions, "Gentlemen, unless you sprinkle blood in the faces of the people of Alabama, they will be back in the old Union in less than ten days." The order went to Beauregard to strike the blow. At noon, on April 11, he sent messengers to demand the surrender of the fort. Anderson promptly refused, but told the messengers that, unless his government sent him relief before the 15th, he would be compelled to evacuate the fort for want of supplies. Towards midnight, after communicating with Montgomery, Beauregard sent the same messengers to Anderson, telling him if he would agree to evacuate the fort on the 15th it should not be attacked. He promised to do so, unless he should be relieved. This answer was given at two o'clock on the morning of the 12th. Anderson did not know what his government was doing for him, for a messenger from Washington had been detained in Charles-

ton. The insurgents did know. On the previous evening, scouts had discovered the *Pawnee* and *Harriet Lane* outside Charleston bar, battling with the storm. Their report startled the Charleston authorities. No time was to be lost, for relief for Anderson was nigh. At midnight the discharge of seven heavy guns had given a signal for all the reserves to congregate. The people rushed to the streets, and were scarcely in repose again, when they were awakened by another alarm. Word had been sent to Anderson that a bombardment of the fort was about to commence. Suddenly the dull booming of a mortar at Fort Johnson was heard, and a fiery shell went flying through the black night. Then

and shell beat hardest, Surgeon Crawford ascended to the parapet, and beheld the relief-vessels through the misty air. They could not get over the bar, for its sinuous channel was uncertain. The workmen at the guns in the fort received food and drink while at their posts, and they toiled on wearily until dark, when the port-holes were closed. The ensuing night was dark and stormy, with high wind and tide. A slow bombardment of the fort was kept up all night. The storm ceased before the dawn. The sun rose in splendor. The cannonade and bombardment was fiercely renewed. Red-hot shot were hurled into the fort. The barracks and officers' quarters were consumed. The powder-magazine was shielded as well as possible. On the morning of the 13th no food was left for the garrison to eat but salted pork. The flames spread, and the sally-port was consumed. To prevent explosion, ninety barrels of gunpowder were rolled into the water. The heat and vapor became stifling in the fort, yet the exhausted garrison kept the old flag flying. Eight times its staff had been hit without serious injury; but at near two o'clock that day the staff was shot off near the peak, and, with the flag, fell among the gleaming cinders. Lieutenant Hall rescued the precious bunting before it took fire. Peter Hart (see *Fort Sumter, First Reinforcement of*), carried it, with the piece of the staff, and fastened it, where the soiled

INTERNAL APPEARANCE OF FORT SUMTER AFTER THE BOMBARDMENT.

the great guns on Morris Island opened upon Fort Sumter, and a furious attack began. At his own request, the venerable Virginian Edmund Ruffin fired the first shot at Sumter. Other batteries opened. Fort Sumter remained silent. The men were in the bomb-proofs, for there were not enough to man the guns properly. The officers and men were arranged in three reliefs. The first was commanded by Captain Doubleday, the second by Surgeon Crawford, and the third by Lieutenant Snyder. Thus prepared, Anderson ordered, at seven o'clock in the morning, a reply to the attack. The first shot was sent by Captain Doubleday, at the strong battery on Morris Island, when all the other batteries were assailed by shots from Fort Sumter. The first shot sent against Fort Moultrie was fired by Surgeon (afterwards Major-general) Crawford. It was caught in the sand-bags, and afterwards sent as a present to George P. Kane, chief of Police of Baltimore, one of the most active disunionists there. For four hours this combat lasted, when the firing from the batteries became more concentrated, and told fearfully upon the walls and parapets. Some of the barbette guns were dismantled and otherwise disabled, and the barracks were set on fire. The garrison had heard rumors of approaching relief, and when the storm of shot

banner was kept flying defiantly. Not far off, eighty-five years before, a flag had been planted by Sergeant Jasper, battling for the establishment of American nationality; now defenders of the flag were battling for its maintenance. At about this hour Senator Wigfall appeared at the fort, to persuade Anderson to surrender, but failed. (See *Wigfall at Fort Sumter*.) Soon afterwards aids came from Beauregard for the same purpose; and then other deputations appeared; but Anderson refused to surrender the fort. Finally, when shot and shell and flame and lack of food had rendered the garrison helpless, he agreed to evacuate the fort, the garrison departing with company arms and property and all private property, and the privilege of saluting and retaining the old flag. Not one of the garrison had been killed or seriously injured. That night they enjoyed undisturbed repose. The bombardment had lasted thirty-six hours, and over three thousand shot and shell had been hurled at the fort. The evacuation took place the following day—the Sabbath (April 14, 1861)—and the garrison was carried in a small steamboat out to the *Baltic*, and all sailed for New York. The fort had been evacuated, not surrendered. Anderson bore away the flag of Sumter, which was used

as his winding-sheet, and was buried with him.

**Fall of Mackinaw (1812).** Fort Holmes, on the Island of Mackinaw (which see), was garrisoned, in 1812, by fifty-seven American soldiers, under the command of Lieutenant Porter Hancks, of the United States Artillery. It was

suspicious of mischief, sent Captain Daurman to St. Joseph, to observe the temper and disposition of the British there. On his way he met the hostile flotilla, and was made a prisoner. News of the declaration of war had not reached the far-off post of Mackinaw. The overwhelming force under Roberts landed, and took possession of the fort and island. The summons to surrender was the first intimation that Hancks had of the declaration of war. The Indians were ready to massacre the whole garrison if any resistance were made. Fortunately, it was surrendered without firing a gun.

**Fallen Timbers, BATTLE OF.** On the morning of Aug. 20, 1794, General Wayne, on his campaign in the Indian wilderness (see *Wayne's Indian Campaign*), advanced with his whole army from his camp at Roche de Bout, at the head of the Maumee Rapids, according to a plan of march prepared by his young aide-de-camp, Lieutenant William Henry Harrison. He had proceeded about five miles, when they were smitten with a terrible volley of bullets from a concealed foe, and compelled to

FORT MACKINACK, OR MACKINAW.

important as a defence of the fur-traders and a check upon the neighboring Indians. The fort was on a bluff overlooking the fine harbor, and with an uninterrupted view of Lake Huron on the northwest and Lake Michigan on the west. It was commanded by the higher ground in the rear, on which was a stockade, defended by two block-houses, each mounting a brass 6-pounder. It was isolated from the haunts of men more than half the year by barriers of ice and snow, and exposed to attacks by the British and Indians at Fort St. Joseph, on an island forty miles northeast from Mackinaw, then commanded by Captain Charles Roberts. When Sir Isaac Brock, governor of Upper Canada, received at Fort George, on the Niagara River, from British spies, notice of the declaration of war, he despatched an express to Roberts, ordering him to attack Mackinaw immediately. He was directed to summon to his assistance the neighboring Indians, and to ask the aid of the employes of the Northwestern Fur Company. On the morning of July 16, Roberts embarked with a strong motley force, civilized and barbarian, in boats, bateaux, and canoes, with two 6-pounders, and conveyed by the brig *Caledonia*, belonging to the Northwestern Fur Company, loaded with provisions and stores. Hancks,

fall back. They were on the borders of a vast prairie, at a dense wood, in which a tornado had prostrated many trees, making the movements of mounted men very difficult, and forming an excellent cover for the foe, who were composed of Canadians and Indians, two thousand in number, posted on their lines within supporting distance of each other. But Wayne's troops fell

TURKEY-FOOT'S ROCK.

upon them with fearful energy, and made them flee towards the British Fort Miami, below, like a herd of frightened deer for cover. In one hour the

victory was complete. The fugitives left forty of their number dead in the pathway of their flight. By the side of each dead body lay a musket and bayonet from British armories. Wayne lost in killed and wounded one hundred and thirty-three men; the loss of his foes was not ascertained. On the battle-ground, at the foot of the Maumee Rapids, is a limestone rock, on which are numerous carvings of birds' feet. It is a stone upon which Me-sa-sa, or Turkey-foot, a renowned chief, leaped when he saw his line of dusky warriors giving way, and by voice and gesture endeavored to make them stand firm. He fell, pierced by a musket-ball, and died by the side of the rock. Members of his tribe carved turkeys' feet upon the stone in commemoration of him, and for many years men, women, and children, passing there, would linger at the stone, place dried beef, parched corn, and pease, or some cheap trinket upon it, and, calling upon the name of Me-sa-sa, weep piteously. The carvings perpetuate the English name of the chief.

**Falling Waters, SKIRMISH NEAR.** Embarrassing telegraphic despatches were received by General Patterson near Harper's Ferry (see *Evacuation of Harper's Ferry*) late in June. He was eager to advance, though Johnston had a greatly superior force. He made a reconnaissance on the 1st of July, and on the 2d, with the permission of Scott, he put the whole army across the river at Williamsport, and pushed on in the direction of the camp of the insurgents. Near Falling Waters, five miles from the ford they had crossed, the advanced guard, under Colonel John J. Abercrombie, which had arrived at four o'clock A. M., fell in with Johnston's advance, consisting of three thousand five hundred infantry, with Pendleton's battery of field-artillery, and a large force of cavalry, under Colonel J. E. B. Stuart, the whole commanded by the leader afterwards known as "Stonewall" Jackson. Abercrombie, with a section of Perkins's battery, under Lieutenant Hudson, supported by the first troop of Philadelphia cavalry, advanced to attack the foe with a warm fire of musketry. A severe conflict ensued, in which McMullen's Philadelphia Independent Rangers participated. In less than half an hour, when Hudson's cannons had silenced those of the insurgents, and Colonel George H. Thomas was coming up to the support of Abercrombie, Jackson, perceiving his peril, fled, and was hotly pursued for about five miles, when, the insurgents being reinforced, the pursuit ceased. This event occurred July 2, 1861.

**Falmouth (now Portland) BURNED.** British cruisers hovered along the New England coast in 1775, and landed men occasionally in quest of supplies. They were sometimes rudely handled by the people. One of their cruisers, commanded by Lieutenant Mowatt, was sent to Falmouth, where the loading of a royal mast ship had been obstructed, and Mowatt himself had been arrested and treated somewhat rudely a short time before. On the refusal of the inhabitants to give up their arms, and after allowing two hours for the removal of the women and children, he bombarded the town, and five hundred houses

were presently in flames. The courageous townspeople defeated Mowatt's attempt to land.

**Falmouth, TREATY AT.** The Penobscot and Norridgewock Indians sent delegates to a conference at Boston (June 23, 1749), and there proposed to treat for peace and friendship with the New-Englanders. A treaty was soon afterwards made at Falmouth, N. H., between them and the St. Francis Indians, by which peace was established. At a conference held at St. George's, in York County, Me. (Sept. 20, 1753), the treaty at Falmouth was ratified by more than thirty of the Penobscot chiefs; but the next year, when hostilities between France and England began anew, these eastern Indians showed signs of enmity to the English. With five hundred men, the Governor of Massachusetts, accompanied by Colonel Mascarene, a commissioner from Nova Scotia, Major-general Winslow, commander of the forces, and other persons of rank, embarked at Boston to hold another conference with these Indians at Falmouth. There, at the last of June (1754), former treaties were ratified.

**Family Compact.** On Aug. 15, 1761, Choiseul, the able French minister, brought about, by treaty, a firm alliance between France and Spain—a family compact that eventually proved beneficial to the English-American colonies. It was designed to unite all the branches of the House of Bourbon as a counterpoise to the maritime ascendancy of England. It was agreed that at the conclusion of the then existing war France and Spain, in the whole extent of their dominions, were to stand as one State towards foreign powers. This treaty secured to the American colonies, in advance, the aid of Charles III. of Spain. A special convention was concluded the same day between France and Spain, by which the latter agreed to declare war against England unless peace between France and England should be concluded before May, 1762. Choiseul covenanted with Spain that Portugal should be compelled, and Savoy, Holland, and Denmark should be invited, to join in a federative union "for the common advantage of all maritime powers." Pitt proposed to declare war against Spain, but was outvoted, and resigned (Oct. 5, 1761).

**Fanning, DAVID,** one of the most desperate of the North Carolina Tories during the war for independence, was born in Wake County, N. C., about 1756; died in Nova Scotia in 1825. He was a carpenter by trade, and led a vagabond life, sometimes trading with Indians. Late in the Revolution he joined the Tories for the purpose of revenge for injuries inflicted upon him. He gathered a small band of desperadoes like himself, and laid waste whole settlements and committed fearful atrocities. For these services he received the commission of lieutenant from the British commander at Wilmington (Craig, which see). So encouraged, he captured many leading Whigs, and hauged those against whom he held personal resentment. At one time he captured a whole court in session, and carried off judges, lawyers, clients, officers, and some of the citizens. Three weeks later he captured

Colonel Alston and thirty men in his own house, and soon afterwards, dashing into Hillsborough, he captured Governor Burke and his suite, and some of the principal inhabitants. The name of Fanning became a terror to the country, and he was outlawed. At the close of the war he fled to New Brunswick, where he became a member of the Legislature. About 1800 he was sentenced to be hanged for rape, but escaped. (See *Model North Carolina Tory*.)

**Fanning**, EDMUND, LL.D., was born on Long Island, N. Y., in 1737; died in London, Feb. 28, 1818. He graduated at Yale College in 1757, and settled as a lawyer in Hillsborough, N. C., where he became popular, and was made colonel

EDMUND FANNING.

of Orange County (1763) and clerk of the Supreme Court (1765). He was also a member of the Legislature, and married the daughter of Governor Tryon. He became rapacious, and by his exorbitant legal fees made himself very obnoxious to the people. Their hatred was increased by his energetic exertions in suppressing the Regulator movement. (See *Regulators*.) He fled to New York with Governor Tryon to avoid the consequences of popular indignation. He was appointed surveyor-general of North Carolina in 1774. In 1776 he raised and led a force called "the King's American Regiment of Foot." After the Revolution he went to Nova Scotia, where he became a councillor and lieutenant-governor in September, 1783, and from 1786 to 1805 he was Governor of Prince Edward's Island. He rose to the rank of general in the British army in 1808. Fanning was an able jurist, and always regretted his later career in North Carolina. He was greatly influenced by his father-in-law.

**Farewell Address of Washington.** It was the wish of a majority of the American people that Washington should hold the office of chief magistrate for a third time. He yearned for the happiness of private life, and he would not consent; and in the fall of 1796 John Adams was elected President of the United States. Before the election took place, Washington issued (Sept. 17) a farewell address to the people. It was an earnest appeal to them to preserve the Union of the States as the only sure hope for the continuance of their liberties, and of the national life and prosperity. When the President

had written out his address, he submitted it to Hamilton, Jay, and Madison for their criticism and suggestions. This was done. Several suggestions were made and a few verbal alterations. Unwilling to mar the draught which Washington had submitted to them, Hamilton made a copy, introducing a few grafts and making fewer prunings, and returned it to the President. The latter adopted most of the suggestions, and, making a fair copy in his own handwriting, sent it to the printer (C. Claypoole, of Philadelphia), who published a daily paper, and in that it was first printed. The original MS. of this address was in the possession of the late Robert Lennox, of New York. It was also published on a handsomely printed broadside, with a portrait of Washington at the head, drawn by Joseph Wright, and engraved by David Edwin.

**Farmington (Miss.), SKIRMISH AT.** While the National troops were pressing on Corinth (see *Corinth, Evacuation of*), General Pope sent Generals Paine and Palmer towards the hamlet of Farmington, five miles from Corinth, then occupied by Missouri troops, under Marmaduke, about 4500 in number. They were in the woods around a little log meeting-house. The Nationals attacked Marmaduke (May 23, 1862), and, after a sharp skirmish, Marmaduke fled to the lines at Corinth, leaving of his command about thirty men slain and one hundred wounded, also his camp with all his supplies, and two hundred prisoners. The National loss was two killed and eleven wounded.

**Farms.** The number of acres included in actually surveyed farms in the United States in 1870 was nearly 408,000,000. Of this amount about 189,000,000 acres were unimproved. The average size of the farms was 153 acres. The total value of these lands was \$9,263,000,000. The total value of the products, including the betterments and additions to live stock, was \$2,500,000,000; and animals slaughtered, home manufactures, forest, market-garden, and orchard products, increased the value of the entire agricultural products to \$3,028,500,000, or equal to the entire amount of the national debt at the close of the Civil War. The total amount of wages paid in one year in this production was a little more than \$310,000,000.

**Farragut**, DAVID GLASGOW, was born near Knoxville, Tenn., July 5, 1801; died at Portsmouth, N. H., Aug. 14, 1870. His father, George Farragut, was a native of Minorca; came to America in 1776; entered the Continental Army; was a bugler, it is supposed, at the age of seventeen, in the battle of the Cowpens, where, it is erroneously supposed, he saved the life of Colonel Washington; attained the rank of major; settled in Tennessee; and was master in the United States Navy, serving under Patterson in the defence of New Orleans. (See *Borgue, Lake*.) David entered the navy as midshipman when between nine and ten years of age, first serving under Porter, and was with him in the terrible fight at Valparaiso. He was raised to commander in 1841, having served faithfully up to that time. Still persevering in duty, he was placed

in very responsible positions afloat and ashore, and when the Civil War broke out he was in command of the *Brooklyn*, steam sloop-of-war. He commanded the naval expedition against New Orleans in the spring of 1862, having the *Hartford* as his flag-ship. He organized the

DAVID GLASGOW FARRAGUT.

Western Gulf Blockading Squadron on his arrival in the Gulf of Mexico, and by boldness and skill, with admirable assistants, he went up to New Orleans triumphantly. (See *New Orleans, Capture of.*) He operated with great vigor on the Mississippi River, afterwards, between New Orleans and Vicksburg; and on July 16, 1862, he was placed first on the list of proposed admirals. In 1863 he co-operated in the capture of Port Hudson, and in August, 1864, defeated the Confederate forces in Mobile Bay. His exploits in the Gulf region gave him great fame, and in December, 1864, he received the thanks of Congress, and the rank of vice-admiral was created expressly on his account. In July, 1866, he was made admiral. He visited Europe, Asia, and Africa in the steamship *Franklin*, in 1867-68, and was received with the highest honors.

**Fast and Festival in Virginia.** Acts were passed by the Virginia Assembly in 1662 making the 30th of January—the day of the beheading of Charles I.—a yearly fast; and the 29th of May—the birthday and anniversary of the restoration to the throne of England of Charles II.—a holiday.

**Fast-day in the Southern Confederacy (1861).** On May 21, 1861, the Confederate Congress authorized President Davis to proclaim a fast-day, which he did on the 25th, appointing June 13. In that proclamation he said, "Knowing that none but a just and righteous cause can gain the divine favor, we would implore the Lord of Hosts to guide and direct our policy in the paths of right, duty, justice, and mercy; to unite our hearts and our efforts for the defence of our dearest rights; to strengthen our weakness, crown our cause with success, and enable us to secure a speedy, just, and honorable peace."

**Fast-day in Virginia (1774).** The inhabi-

tants of the Old Dominion were profoundly moved by the Boston Port Bill (which see), and its House of Burgesses, on May 24, 1774, on motion of Robert Carter Nicholas, adopted a resolution recommending to the people of the colony that the day on which the Port Bill was to go into operation should be a "day of fasting and prayer, devoutly to implore the divine interposition for averting the dreadful calamity which threatened destruction to their civil rights and the evils of civil war; and to give to the American people one heart and one mind firmly to oppose, by all just and proper means, every injury to American rights." George Mason (which see) sent word for his whole household to keep the day strictly, and to attend church clad in mourning.

**Father of his Country.** An endearing name given to Washington by his countrymen early in the history of the Republic, and still used affectionately by them. This name was first given to Cicero by the Roman Senate because of his zeal and courage in exposing the conspiracy of Catiline. It was afterwards given to several of the Roman Cæsars. The authorities of Florence conferred the same title upon the powerful and influential Cosmo de' Medici, and it is inscribed upon his tomb.

**Father of Waters.** A popular title of the Mississippi River, an Indian name which signifies "great water." This significant title was given because of the great length (three thousand one hundred and sixty miles) and volume of the river, it receiving as tributaries eight large streams, besides hundreds of smaller ones, that drain an immense basin, comprising more than one million two hundred thousand square miles.

**Fay, JONAS,** was born at Hardwick, Mass., Jan. 17, 1737; died at Bennington, Vt., March 6, 1818. He received a good English education, and was with a Massachusetts regiment at Fort Edward in 1756. He settled at Bennington in 1766, and became prominent in the disputes between New York and the New Hampshire Grants (which see). He was the agent of the "Grants" sent to New York in 1772 to inform Governor Tryon of the grounds of their complaint. Mr. Fay was clerk to the convention (1774) that resolved to defend Ethan Allen and other leaders who were outlawed by the New York Assembly, by force if necessary. Being a physician, he was made surgeon of the expedition against Ticonderoga in May, 1775, and was afterwards in Colonel Warner's regiment. He was also a member of the convention in 1777 that declared the independence of Vermont, and was the author of the declaration then adopted, and of the communication announcing the fact to Congress. Dr. Fay was secretary of the convention that formed the new state constitution in 1777, and one of the Council of Safety that first administered the government. In 1782 he was judge of the Supreme Court of the state; agent of the state to Congress at different times; and, in conjunction with Ethan Allen, he published an account of the New York and New Hampshire controversy.

Febiger, CHRISTIAN, a Dane; and a soldier in the war for independence. He was born in Denmark in 1747; died in Philadelphia, Sept. 20, 1796. He had seen military service before entering the army in April, 1775. He was in the battle of Bunker's Hill, where he led a portion of a regiment of which he was adjutant; accompanied Arnold to Quebec a few months afterwards, where he was made a prisoner, and served with great fidelity throughout the war. He was conspicuous in the assault on Stouy Point (July, 1779), leading one of the attacking columns; also at Yorktown, where he commanded the Second Virginia Regiment, with the rank of lieutenant-colonel. From 1789 till his death Colonel Febiger was treasurer of the State of Pennsylvania.

**Federal Celebrations.** The ratification of the National Constitution was celebrated at Philadelphia (July 4, 1788) with imposing ceremonies. The ten ratifying states were represented by as many ships moored at intervals in the Delaware, along the front of the city, each displaying at her mast-head a white flag bearing the name of the state represented in golden letters. All the river craft were embellished with flags and streamers. A large procession paraded the streets, in which several of the principal citizens personated, in appropriate dresses, some event, such as "Independence," the "French Alliance," the "Definitive Treaty of Peace," "Washington," the "New Era," the "Federal Constitution," the "Ten Ratifying States." In a car in the form of an eagle, lofty and ornamental, sat Chief-justice McKean and two of his bench associates, bearing a framed copy of the Constitution on a staff. The car and its contents personified the new Constitution. On the staff was a cap of Liberty, bearing in golden letters the legend "The People." A citizen and an Indian chief rode together, smoking a pipe of peace, personifying peace on the frontiers. Various trades were represented; also the shipping interest, and different associations in Philadelphia. Altogether there were about five thousand in the procession, which ended at Union Square, where seventeen thousand persons were addressed by James Wilson, who took a conspicuous part in framing the Constitution. The oration was followed by a collation. About three weeks afterwards a similar celebration occurred in the city of New York, where a large majority of the inhabitants were in favor of the Constitution. Greenleaf's *Political Register*—anti-Federal in its politics—contained a disparaging account of the celebration; and when, a night or two afterwards, news came of the ratification of the Constitution by the convention in session at Poughkeepsie, a mob attacked the printing-office, broke in the doors, and destroyed the type. The people of Providence, R. I., were in favor of the Constitution, and were preparing to celebrate its ratification on the 4th of July, with other ceremonies appropriate to the day, when one thousand men, some of them armed, headed by a judge of the Supreme Court, came in from the country, and compelled the citizens to omit in the celebration anything favorable to

the Constitution. A more violent collision took place in Albany. The friends of the Constitution celebrated its ratification on the 3d of July, the opponents at the same time burning it. Both parties united in celebrating the 4th, but dined at different places. After dinner the Federalists formed a new procession, and when they were passing the headquarters of the anti-Federal party a quarrel occurred, followed by a fight, in which clubs and stones, swords and bayonets, were freely used, to the injury of several persons. There was much asperity of feeling everywhere exhibited. A new convention to amend the Constitution was proposed, but was never held.

**Federal Cities.** The Congress having determined to have two Federal cities, one on the Delaware and one on the Potomac, it was resolved at the annual session opened at Trenton, Nov. 1, 1784, to appoint commissioners to lay out one of these projected cities near the falls of the Delaware, and erect public buildings there. The sum of \$100,000 was appropriated for the purpose. It was also voted that it was then inexpedient to erect public buildings in more than one place. In January following Congress was adjourned to New York, and there it continued to meet for several years, the want of funds and differences of opinion preventing anything being done towards the establishment of a permanent seat of government.

**Federal Convention, LEADING MEN IN THE.** The representatives of twelve states were assembled in convention at Philadelphia in the summer of 1787 to prepare a constitution of government for the United States of a national character. George Washington, a delegate from Virginia, was chosen President, and William Jackson, Secretary. The convention was composed of some of the most illustrious citizens of the new Republic. There was the aged Franklin, past eighty-one years of age, who had sat in a similar convention at Albany in 1754. (See *Albany, Fourth Colonial Convention* at.) John Dickinson, of Pennsylvania, W. S. Johnson, of Connecticut, and John Rutledge, of South Carolina, had been members of the Stamp Act Congress at New York in 1765 (which see). Washington, Dickinson, and Rutledge had been members of the Continental Congress of 1774. From that body also were Roger Sherman, of Connecticut, William Livingston, Governor of New Jersey, George Read, of Delaware, and George Wythe, of Virginia. From among the signers of the Declaration of Independence, besides Franklin, Read, Wythe, and Sherman, had come Elbridge Gerry, of Massachusetts, and Robert Morris, George Clymer, and James Wilson, of Pennsylvania. Eighteen members had, at the same time, been delegates to the Continental Congress; and among the whole number there were only twelve who had not at some time sat in that body. The officers of the Revolution were represented by Washington, Mifflin, Hamilton, and C. C. Piuckney. Of the members who had taken conspicuous positions since the Declaration of Independence, the most prominent were Hamilton,

Madison, and Edmund Randolph, then the successor of Patrick Henry as governor of Virginia. The members who took the leading part in the debates were Gerry, Gorham, and King, of Massachusetts; Johnson Sherman, and Ellsworth, of Connecticut; Hamilton and Lansing, of New York; Paterson, of New Jersey; Wilson, Gouverneur Morris, and Franklin, of Pennsylvania; Dickinson, of Delaware; Martin, of Maryland; Williamson, of North Carolina; and Charles Cotesworth Pinckney and Charles Pinckney, of South Carolina. Rhode Island had refused to elect delegates to the convention.

#### Federal Convention, MEMBERS OF THE (1787).

The following are the names of the members that formed the National Convention. From *New Hampshire*—John Langdon, John Pickering, Nicholas Gilman, and Benjamin West. *Massachusetts*—Francis Dana, Elbridge Gerry, Nathaniel Gorham, Rufus King, and Caleb Strong. *Connecticut*—William Samuel Johnson, Roger Sherman, and Oliver Ellsworth. *New York*—Robert Yates, John Lansing, Jr., and Alexander Hamilton. *New Jersey*—David Brearley, William Churchill Houston, William Paterson, John Neilson, William Livingston, Abraham Clark, and Jonathan Dayton. *Pennsylvania*—Thomas Mifflin, Robert Morris, George Clymer, Jared Ingersoll, Thomas Fitzsimons, James Wilson, Gouverneur Morris, and Benjamin Franklin. *Delaware*—George Read, Gunning Bedford, Jr., John Dickinson, Richard Bassett, and Jacob Broom. *Maryland*—James McHenry, Daniel of St. Thomas Jenifer, Daniel Carroll, John Francis Mercer, and Luther Martin. *Virginia*—George Washington, Patrick Henry, Edmund Randolph, John Blair, James Madison, Jr., George Mason, and George Wythe. Patrick Henry having declined the appointment, George McClure was nominated to supply his place. *North Carolina*—Richard Caswell, Alexander Martin, William Richardson Davie, Richard Dobbs Spaight, and Willie Jones. Richard Caswell having resigned, William Blount was appointed a deputy in his place. Willie Jones having also declined his appointment, his place was supplied by Hugh Williamson. *South Carolina*—John Rutledge, Charles Pinckney, Charles Cotesworth Pinckney, and Pierce Butler. *Georgia*—William Few, Abraham Baldwin, William Pierce, George Walton, William Houston, and Nathaniel Pendleton. Fac-similes of the signatures of the signers of the Constitution, copied from the original in the archives of the national government, are given on pages 472-474. William Jackson was secretary.

**Federal Convention, RULES FOR THE.** A committee was appointed to report rules of proceeding by the convention. They copied them chiefly from those of Congress, and their report was adopted. Each state was to have one vote; seven states were to constitute a quorum; all committees were to be appointed by ballot; the doors were to be closed, and an injunction of secrecy was placed on the debates. The members were not even allowed to take copies of the entries on the journal. (See *National Constitution*.)

**Federal Hall.** The Continental Congress, when sitting in New York, had been accommodated in the old City Hall, northeast corner of Wall and Nassau streets. This building had fallen into decay when the first national Congress was about to meet there. Desirous of permanently retaining the seat of the national government at New York, and to provide the national Legislature with suitable accommodations, several wealthy citizens advanced to the city treasury (then empty) \$32,500, with which the old building was remodelled and extensively repaired. The name of "Federal Hall" was

FEDERAL HALL

given to it, and the city councils placed it at the disposal of the Congress. New York retained the national capitol only a short time, as it was removed to Philadelphia in 1790, and remained there until it occupied its present seat in the District of Columbia (which see) in 1801.

**Federalists.** While the National Constitution was under discussion throughout the Union, in 1788, and it was passing the ordeal of state conventions, its advocates were called Federalists, because the effect of the Constitution would be to bind the several states more closely as a so-called confederation. They formed a distinct party that year, and held supreme political power in the Republic until the close of the century. The leading members of the party were Washington, Hamilton, Adams, Jay, and many of the less distinguished patriots of the Revolution. Their opponents were called Anti-Federalists. (See *Republicans*.) In the contests of the French Revolution, which had influence upon public opinion in the United States, the Federalists leaned towards England, and the Anti-Federalists or Republicans towards France. In the presidential election in 1800, the Federalists were defeated and Jefferson was elected. The party became unpopular because of its opposition to the War of 1812; and it fell into fatal disrepute because of the Hartford Convention, whose proceedings, done in secret, were supposed to be treasonable. The party had become so weak in 1816 that Monroe, the Republican candidate for President, received the electoral votes of all the states but two. At his re-election, in 1820, the vote of the states was unanimous for him. Then the party was disbanded.

thor of *The Adventures of Telemachus*, while yet an inferior in orders, was sent to Canada as a missionary. There, as afterwards in France, he boldly admonished the public authorities for their shortcomings. Frontenac (which see) imprisoned Fénelon, then attached to the Seminary of St. Sulpice, on a charge of having preached against him. After having been a missionary in Canada two years, he returned to France. He probably received in that region some hints for *Telemachus*.

"Fenians" in the United States. Notwithstanding the unfriendliness and positive enmity of the government of Great Britain to the

United States during the Civil War, the latter was ever faithful to its treaty stipulations. When, in the spring of 1866, a military organization of Irish residents in the United States, known as "The Fenian Brotherhood," associated for the avowed purpose of freeing Ireland from British domination, made a movement (May and June) for a formidable invasion of the neighboring British province of Canada, the United States government, instead of investing them with "belligerent rights," true to its pledges concerning neutrality laws, interfered, and suppressed the warlike movement.

Fenwick, GEORGE, proprietor of a part of

Connecticut, died in England in 1657. He came to America in 1636 to take charge of the infant colony of Saybrook (which see). He returned to England, and came back in 1639, and from that time governed Saybrook till December, 1644, when its jurisdiction and territory were sold to the Connecticut colony at Hartford. Fenwick was appointed one of the judges who tried and condemned Charles I.

**Fenwick, JOHN**, a Friend or Quaker, was a founder of the colony of West Jersey. He was born in England in 1618; died in 1683, after he had conveyed his claim to West Jersey to William Penn. (See *New Jersey Colony*.) Fenwick emigrated to West Jersey in 1675, and settled at Salem. His claim was resisted by Governor Andros of New York, and he was arrested and cast into jail, where he remained about two years. He lost his estate and died poor.

**Ferguson, ELIZABETH GRÆME**, daughter of Dr. Græme, of Græme Park, near Philadelphia, became famous during the Revolution by a futile mission which she good-naturedly undertook. She was a cultivated woman, and enjoyed the personal friendship of many eminent persons. Her husband was in the British army, yet she possessed the esteem and confidence of both Whigs and Tories. Johnstone, one of the Peace Commissioners sent over here in 1778, finding they could do nothing with the Congress, employed Mrs. Ferguson to sound General Joseph Reed as to his disposition to aid the imperial government in bringing about a reconciliation between it and the revolted colonies. She was patriotic and judicious. Johnstone instructed her as to what she should say to Reed, and she performed the errand without losing the esteem of any one. (See *Peace Commissioners*.) Her husband never joined her after the war. His estate was confiscated, but the State of Pennsylvania returned a part of it to her in 1781. She died on her farm in Montgomery County, Penn., Feb. 23, 1801, aged sixty-one years.

**Ferguson, PATRICK**, entered the British army at the age of eighteen, and came to America in the spring of 1777, serving under Cornwallis, first in the North and then in the South. After the siege of Charleston in 1780, he was promoted to major, and was detached by Cornwallis to embody the Tories in Western Carolina. He was killed in the battle of King's Mountain (which see).

**Ferrera, EDWARD**, was born of Italian parents in Granada, Spain, Jan. 10, 1832, and was brought to the United States while an infant. His parents taught dancing, and that became his profession, and he taught that accomplishment at the West Point Military Academy. When the Civil War broke out, he raised a regiment (Shepard Rifles), and as its colonel accompanied Burnside in his expedition to the coast of North Carolina early in 1862. He commanded a brigade under General Reno, and served in the Army of Virginia, under General Pope, in the summer of 1862. He was made brigadier-general in September, and was in the battles of South Mountain, Antietam, and Fredericksburg.

He served in the siege of Vicksburg (1863), and commanded a division at the siege of Knoxville (which see), in defence of Fort Sanders. In the operations against Petersburg, he led a division of colored troops, and in December, 1864, was breveted major-general of volunteers.

**Fersen, AXEL**, count; was born in Stockholm in 1755; died there June 20, 1810. He came to America on the staff of Rochambeau, fought under Lafayette, and received from Washington

AXEL FERSEN.

the Order of the Society of the Cincinnati (which see). Returning to France, he became a favorite at court, and was the disguised coachman in the flight of the royal family from Versailles during the Revolution. He returned to Sweden, and was invested with dignities and honors, and in 1801 was made grand marshal of Sweden. On suspicion of complicity in the death of Prince Christian of Sweden, he was

seized by a mob, while marshalling the funeral procession, and tortured to death.

**Fessenden, WILLIAM PITT**, was born at Boscawen, N. H., Oct. 6, 1806; died at Portland, Me., Sept. 8, 1869. He graduated at Bowdoin College in 1823; was admitted to the bar in 1827; was member of the Maine Legislature two terms; and was elected to Congress in 1841. From Feb. 24, 1854, till his death he was United States Senator, excepting when Secretary of the Treasury from July, 1864, to March, 1865. Mr. Fessenden was one of the founders of the Republican party in 1856, and throughout the Civil War did eminent service as chairman of the Finance Committee of the Senate.

**Few, WILLIAM**, was born in Baltimore County, Md., June 8, 1748; died at Fishkill, N. Y., July 16, 1828. His ancestors came to America with William Penn. His family went to North Carolina in 1758, and in 1776 William settled in Georgia, where he became a councillor, and assisted in framing the state constitution. He was in the military service, and in 1778 was made state surveyor-general. In 1780-83 and 1786 he was in Congress, and in 1787 assisted in framing the National Constitution. He was United States Senator (1789-93), and was a judge on the bench of Georgia three years. In the summer of 1799 he removed to New York, and became a member of the Legislature and a commissioner of loans.

**Field, CYRUS WEST**, was born at Stockbridge, Mass., Nov. 13, 1819; went to New York in 1835; and became an enterprising and prosperous merchant. Mr. Field is universally known and honored as the chief founder of the practical system of submarine telegraphy. (See *Atlantic Telegraph*.)

**Fifteenth Amendment.** On Feb. 26, 1869, Congress adopted a joint-resolution recommending the following as a fifteenth amendment to the National Constitution: "ARTICLE XV., Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States, or by any state, on account of race, color, or previous condition of servitude. Section 2. The Congress, by appropriate legislation, may enforce the provisions of this article." This amendment was soon ratified by the requisite number of states.

**Figure-head of the Constitution.** In 1833 Captain Jesse D. Elliott, commanding the frigate *Constitution*, who had been stationed at Charleston, S. C., to suppress insurrection (see *Nullifiers*), was ordered to the navy-yard at Charlestown, Mass., with his ship. He found public feeling there almost unanimous in favor of President Jackson, because of his course towards the Nullifiers. The ship was hauled up for repairs. A new figure-head was needed, and, in accordance with ample precedents (and at the request of citizens of Boston, it was said), Elliott ordered an image of President Jackson to be carved for the purpose. Because of Jackson's course towards the United States Bank (see *National Bank*), there soon afterwards occurred a great revulsion of feeling in Massachusetts towards him. The placing of his image on the bow of the favorite ship of the Bostonians was regarded as an insult; and when it was finally put upon the vessel by Elliott, he was denounced and abused in the opposition newspapers, by handbills, and by anonymous letters. A great clamor was raised all over the country. Indignation meetings were held; and, finally, on a dark and stormy night (summer of 1834), some then unknown person sawed off the figure-head undiscovered and carried it away. The act produced intense excitement among the friends of the administration. The perpetrator of the deed was diligently sought, but not discovered. He is now (1883) an old man. Then he was young, enthusiastic, and fond of adventure. He was at a "Whig" meeting, and heard the wish expressed, at the beginning of the session, that the "detestable figure-head" might be destroyed. He immediately left the meeting, in a storm, proceeded to the *Constitution* in a boat, climbed up the rigging of the bowsprit, and, while the wind and thunder roared, sawed off the figure-head at the neck, unheard by the sentinels on deck. Lowering it into his boat with a rope, he bore it away to a place of concealment. After a while suspicion pointed to him as the perpetrator. He went to Washington, called on President Jackson, and told him the whole story of his prank; when Jackson, delighted with the heroism of the frank young man, promised to keep his secret and to pardon him if he should be arrested and found guilty of the act. Full twenty years afterwards his visiting-card contained the device of a hand-saw, with Cæsar's despatch as a motto—"I came, I saw, I conquered." This narrative the writer had from his lips about the year 1840. The young man who performed that mad prank

was Samuel W. Dewey, for a long time connected with the shipping interest in the city of New York.

**Fillmore, MILLARD**, thirteenth President of the United States, was born at Locke (now Sumner Hill), Cayuga Co., N. Y., June 7, 1800; died at Buffalo, March 8, 1874. At the time of his birth Cayuga County was a wilderness, with few set-

MILLARD FILLMORE.

tlements, the nearest house to that of the Fillmores being four miles distant. Mr. Fillmore's early education was limited, and at the age of fourteen years he was apprenticed to a fuller. He became fond of reading, and at the age of nineteen years he conceived the design of studying law. He made an arrangement with his master to pay him thirty dollars for the two years of the unexpired term of his apprenticeship, and studied law with Walter Wood, who gave him his board for his services in his office. In 1821 he went on foot to Buffalo, where he arrived, an entire stranger, with four dollars in his pocket. There he continued to study law, paying his expenses by teaching school and assisting in the post-office. In 1823, although he had not completed the requisite period of study to be admitted to the bar, he was admitted, and commenced practice at Aurora, Cayuga County, where his father then resided. In a few years he stood in the rank of the foremost lawyers in the state. He was admitted to practice in the highest courts of the state in 1829; and the next year he moved to Buffalo, where he practised his profession until 1847, when he was chosen controller of the state. Then he retired from the profession. His political life began in 1828, when he was elected to the Legislature of New York by the Anti-Masonic party (which see). He served three successive terms, retiring in the spring of 1831. Mr. Fillmore was particularly active in procuring the passage of a law abolishing imprisonment for debt. It was mostly drafted by himself, and passed in 1831. In 1832 he was elected to Congress as an opponent of Jackson's administration. He was re-elected as a Whig in 1836, and retained his seat, by successive re-elections, until 1842, when he declined a renomination. His career in Congress was marked by ability, integrity, and industry. He acted in Congress with Mr. Adams in favor of

receiving petitions for the abolition of slavery. He was opposed to the annexation of Texas, and in favor of the abolition of the interstate slave-trade. In September, 1844, Mr. Fillmore was nominated by the Whigs for governor of the State of New York, but was defeated by Silas Wright, the Democratic candidate. Elected controller of his state in 1847, Mr. Fillmore filled that responsible office with rare ability and fidelity. In June, 1848, he was nominated by the Whig National Convention for the office of Vice-President of the United States, and was elected, with General Taylor for President. He resigned the office of controller in February following; and on the death of the President (July, 1850), Mr. Fillmore was inducted into that high office. During his administration the slavery question was vehemently discussed, and was finally set at rest, it was hoped, by the passage of various acts which were parts of compromises proposed in the Omnibus Bill (which see) of Mr. Clay in the summer of 1850. It was during his administration that difficulties with Cuba occurred, diplomatic communications with Japan were opened, measures were adopted looking towards the construction of a railway from the Mississippi to the Pacific Ocean, and other matters of great public interest occurred. Mr. Fillmore retired from office March 4, 1853, leaving the country in a state of peace within and without, and every department of industry flourishing. In 1852 he was a candidate in the Whig convention for President of the United States, but did not get the nomination. During the spring and summer of 1854 he made an extensive tour through the Southern and Western States; and in the spring of 1855, after an excursion in New England, he sailed for Europe, where he remained until June, 1856. While at Rome he received the news of his nomination for the Presidency by the "Native American Party" (which see). He accepted it, but Maryland alone gave him its electoral vote. The remainder of his life was spent in Buffalo, where he indulged his taste for historical studies.

**Fillmore's Cabinet.** On the death of President Taylor (July 9, 1850), Vice-President Fillmore became, by a provision of the Constitution, President of the United States. He took the oath of office on the 10th, when President Taylor's cabinet resigned. Fillmore declined to consider their resignations until after the funeral of the late President, when he appointed the following named gentlemen: Daniel Webster, of Massachusetts, Secretary of State; Thomas Corwin, of Ohio, Secretary of War; Alexander H. H. Stuart, of Virginia, Secretary of the Interior; William A. Graham, of North Carolina, Secretary of the Navy; Nathan K. Hall, of New York, Postmaster-general; and John J. Crittenden, of Kentucky, Attorney-general. These names impressed the people with confidence in Fillmore's administration.

**Financial Condition of the United States (1861).** When Howell Cobb became Secretary of the Treasury in 1857 the coffers of the gov-

ernment were so overflowing that the Treasury notes next due were bought in; but in preparation for disunion he had so adroitly managed his department to weaken it, and so paralyze one strong arm of the government, that the Treasury was empty in 1860. In the fall of that year the secretary was in the market as a borrower to carry on the ordinary operations of the government and to pay interest on its loans. His management had created distrust in financial circles, and he was compelled to pay ruinous premiums, when money was never more abundant. When he left (in December) the Treasury was greatly embarrassed. But the country was never richer. The cereal crop and, indeed, all others were enormous, but capital had hidden in fear of threatened danger. Fortunately for the Republic, never were the people generally in such easy circumstances. The exports had greatly exceeded the imports, and the tide of trade and exchange was running so heavily in favor of the Americans at the close of November that coin came flowing into the country from Europe in immense volumes. The banks in the North were in a healthy condition. When John A. Dix entered Buchanan's cabinet (Jan. 11, 1861) as Secretary of the Treasury, and that cabinet was purged of Floyd and Thompson, and strengthened by loyal men; confidence in the government quickly grew, and there was soon an equipoise in the public mind in the free-labor states, in view of their financial condition, that made them stroug and hopeful, and there was a disposition to lend to the government. They were sensible of the existence of sufficient virtue to save the Republic. The utterances of the supposed organ of the President-elect (*Springfield Journal*, III.) also inspired confidence. "If South Carolina," it said, "violates the law, then comes the tug of war. The President of the United States, in such an emergency, has a plain duty to perform. Mr. Buchanan may shirk it, or the emergency may not exist during his administration. If not, then the Union will last through his term of office. If the overt act on the part of South Carolina takes place on or after the 4th of March, 1861, then the duty of executing the laws will devolve upon Mr. Lincoln."

**Financial Embarrassment (1815).** In January, 1815, Alexander J. Dallas, Secretary of the Treasury, in a report to Congress, laid bare the poverty of the national Treasury. The year had closed with \$19,000,000 unpaid debts, to meet which there was a nominal balance in the Treasury of less than \$2,000,000 and about \$4,500,000 of uncollected taxes. For the next year's services \$50,000,000 would be required. The total revenue, including the produce of the new taxes, was estimated at about \$11,000,000—\$10,000,000 from taxes, and only \$1,000,000 from duties on imports, to such a low ebb had the commerce of the United States been reduced. Various schemes for raising money were devised, but the prospect was particularly gloomy. The government was without money or credit; the regular military force was decreasing; the war party were at variance, Great Britain re-

fusing to treat on admissible terms; a victorious British army threatening the Northern frontier; Cockburn in possession of Cumberland Island, off the coast of Georgia; the Southern States threatened with servile insurrection; a formidable British armament preparing to invade the Gulf region; and the treasonable peace faction doing all in their power to embarrass the government. It was at this juncture that the complaints of the Hartford Convention (which see) and a commission from the Legislature of Massachusetts appeared before the government. Fortunately, the news of the treaty of peace and the victory at New Orleans went over the country in February and saved the people from utter discouragement. The government took heart and authorized a loan of \$18,400,000, the amount of Treasury notes then outstanding; and as an immediate means to go on with, a new issue of Treasury notes to the amount of \$25,000,000 (part of them in sums under \$100, payable to bearer, and without interest) was authorized. The small notes were intended for currency; those over \$100 bore an interest of five and two-fifths per cent., or a cent and a half a day for every \$100. All acts imposing discriminating duties on foreign vessels of reciprocity nations, and embargo, non-importation, and non-intercourse laws, were repealed; and so commerce was immediately revived and the revenue increased.

**Financial Policy, AN HONEST.** Before the close of the session of Congress in March, 1869, a bill was passed defining the financial policy of the country. Its chief provision was as follows: "The faith of the United States is solemnly pledged to the payment, in coin or its equivalent, of all the interest-bearing obligations of the United States, except in cases where the law authorizing the issue of any such obligations has expressly provided that the same may be paid in lawful money or other currency than gold and silver." This law gave great financial credit and strength to the nation.

**Fine Arts, FIRST SCHOOL OF, PROJECTED IN AMERICA.** (See *School of Fine Arts*.)

**Fined for Refusing Honors.** In 1632 the General Court of the Plymouth Colony passed an act that whoever should refuse the office of governor should pay a fine of one hundred dollars, unless he was chosen two years successively; and that whoever refused the office of councillor or magistrate should pay a fine of fifty dollars. These offices required so much labor and expense of time and money in the early colonial days that they had no allurements sufficient to make men aspire to them. There were no denagognes then. Governor Bradford, who had served ten years, "now by importunity got off."

**Fire, GREAT, IN NEW YORK (1776).** The British anticipated snug winter quarters in the city of New York, when, at a little past midnight, Sept. 21, 1776, a fire broke out in a low drinking-place and brothel—a wooden building on the wharf, near Whitehall Slip. The wind was brisk from the southwest, and the flames spread rapidly, unchecked, for there were few inhabitants

in the city. Every building between Whitehall and Broad Streets up to Beaver Street was consumed, when the wind veered to the southeast and drove the flames towards Broadway. The buildings on each side of Beaver Street to the Bowling Green were burned. The fire crossed Broadway and swept all the buildings on each side as far as Exchange Street, and on the west side to Partition (Fulton) Street, destroying Trinity Church. Every building westward towards the Hudson River perished. The Tories and British writers of the day charged the destruction of the city to Whig incendiaries. Some of these citizens who came out of the gloom to save their property were murdered by British bayonets or cast into the flames. Even General Howe in his report made the charge, without a shadow of truth, that the accident was the work of Whig conspirators. About five hundred buildings (almost a third part of the city) were laid in ashes.

**Fire in Boston (1760).** Nearly a tenth part of Boston was consumed by fire on March 20, 1760, in about four hours. It began, by accident, at Cornhill. There were consumed one hundred and seventy-four dwelling-houses, one hundred and seventy-five warehouses and other buildings, with merchandise, furniture, and various articles, to the value of \$355,000; and two hundred and twenty families were compelled to look to their neighbors for shelter. The donations from every quarter for the relief of the sufferers amounted to about \$87,000.

**Fire Lands.** After the close of the old war for independence a committee was appointed by the Connecticut Legislature to ascertain the value of the property destroyed in that state by the torches of British and Hessian marauders. In 1793 the Assembly granted to the sufferers five hundred thousand acres of land lying within the limits of the Western Reserves (which see) in Ohio, and now included in the counties of Huron and Erie and a small part of Ottawa. This tract is still known as the "Fire Lands."

**Firemen's Ambulance System (1861-65).** The benevolent work of the Volunteer Refreshment Saloons of Philadelphia (which see) was supplemented by a good work carried on wholly by the firemen of that city. When sick and wounded

PHILADELPHIA FIREMEN'S AMBULANCE.

soldiers began to be brought to the hospitals in Philadelphia, the medical department found it difficult to procure proper vehicles to convey them from the wharves to their destination. The distress caused by delays and inconvenient conveyances the sympathetic firemen attempted

to alleviate. An arrangement was made for the chief of the department to announce the arrival of a transport by a given signal, when the firemen would hasten to the landing-place with spring-wagons. Finally, the "Northern Liberties Engine Company" had a fine ambulance constructed. More than thirty other engine and hose companies followed their example, and the suffering soldiers were conveyed from ship to hospital with the greatest tenderness. These ambulances cost in the aggregate over \$30,000, all of which was contributed by the firemen. The number of disabled soldiers who were conveyed on these ambulances during the war was estimated at more than one hundred and twenty thousand.

**Fires, RECENT GREAT.** In October, 1871, one of the most destructive fires on record occurred in Chicago, when a large portion of the business part of the city was destroyed. It raged about twenty-eight hours, spread over two thousand acres of ground, laid two thousand five hundred buildings in ruins, and consumed property, real and personal, to the amount of about \$200,000,000. Of this amount, \$90,000,000 was insured. In November, the following year, a fire in the heart of Boston swept over sixty acres of ground, destroying property to the amount of \$75,000,000, on which was an insurance of \$50,000,000.

**Firmness of Franklin.** After the attack by Wedderburne when before the Privy Council, and his dismissal from the office of postmaster-general for the colonies, he was subjected to the danger of arrest, and possibly a trial, for treason; for the ministry, angry because he had exposed Hutchinson's Letters (which see), made serious threats. Conscious of rectitude, he neither left England then nor swerved a line from his course of duty. When, in February, 1776, Lord North endeavored to find out from him what the Americans wanted, "We desire nothing," said Franklin, "but what is necessary to our security and well-being." After stating that some of the obnoxious acts would probably be repealed, Lord North said the Massachusetts acts must be continued, both "as real amendments" of the constitution of that province, and "as a standing example of the power of Parliament." Franklin briefly replied: "While Parliament claims the right of altering American constitutions at pleasure there can be no agreement, for we are rendered unsafe in every privilege." North answered: "An agreement is necessary for America; it is so easy for Britain to burn all your seaport towns." Franklin coolly answered: "My little property consists in houses in those towns; you may make bonfires of them whenever you please; the fear of losing them will never alter my resolution to resist to the last the claim of Parliament."

**First "Abolition" Newspaper in the United States.** In 1815 Mr. Lundy, of St. Clairsville, Ohio, called a meeting of his neighbors to organize an anti-slavery society. Six persons attended and formed the "Union Humane Society." In a few weeks Lundy's house was too small to hold the members, and in six months they num-

bered over four hundred. Mr. Lundy wrote articles against slavery, and in January, 1816, he issued a newspaper called *The Appeal*, devoted to the cause of abolition.

**First American Diplomat in France.** In 1776 Silas Deane, of Connecticut, was sent by the Secret Committee of Correspondence of the Continental Congress as minister, or secret diplomatic agent, to the court of France, intimations having been given that such an agent would be kindly received there. Mr. Deane went in the character of a Bermuda merchant; and, the better to cover his designs, he did not take any considerable sum of money or bills of exchange with him for his support. The Secret Committee was to send them after him by way of London, to arrive in Paris nearly as soon as himself, lest a capture should betray his secret. On his arrival in Paris he sought an interview with the Count de Vergennes, the minister for foreign affairs, but no notice was taken of him. He repeated his application in vain. His remittances were all captured or lost. He soon expended the cash he took with him, and was in great distress. His landlady became importunate, and he was threatened with ejection into the street. He again repeated his application for an interview with Vergennes, but was denied. Which way to turn he knew not. He walked in the fields in the suburbs in despair. There he met a citizen who resided in the suburbs, to whom he revealed his distressed condition. The citizen invited him to make his house his home until remittances should arrive. Losing hope of either funds or an interview with the minister, he resolved to return to America, and was actually packing his wardrobe when two letters reached him, announcing the Declaration of Independence by Congress and the action of Arnold with the British fleet on Lake Champlain. Two hours later he received a card from Vergennes, requesting his company immediately. Deane, indignant at the treatment he had received, refused to go. The next morning, as he was rising from his bed, an under secretary called, inviting him to breakfast with the count. He again refused; but, on the secretary's pressing him to go, he consented, and was received very cordially by Vergennes. A long conversation on American affairs took place, when Deane acquainted the minister with the nature of his mission. So began the diplomatic relations between France and the United States which resulted in the negotiation of a treaty of amity and alliance between the two nations. (See *Treaties with France*.)

**First American Vessel in a Russian Port.** Francis Dana was appointed envoy of the United States to the Russian court, Dec. 19, 1780, but was not received in his public character, as the empress (Catharine II.) had been chosen to mediate, with the Emperor of Germany, between France, Spain, and England. His presence, however, was agreeable to the empress, and she gave him assurance of the friendly disposition of Russia towards the United States. She promised that they should, in the prosecution of com-

merce, have all the advantages in Russian ports of the most favored nations. This was late in the spring of 1783. On June 1 a Massachusetts vessel of five hundred tons' burden, commanded by Captain McNeal, arrived at Riga, and displayed the flag of the United States. Mr. Dana wrote: "This is the first and only arrival of an American vessel in any Russian port. The impression it has made here is favorable."

**First and Last Execution for Treason in the United States.** When Admiral Farragut arrived before New Orleans (April 28, 1862), he sent Captain Bailey ashore with a flag to demand the surrender of the city. The military commander (Lovell) turned over the whole matter to the civil authorities. The demand was refused. Meanwhile a force had landed from one of the vessels and hoisted the national flag over the Mint. As soon as they retired a gambler, named William B. Mumford, with some young men, tore down the flag and dragged it through the streets in derision. This act was hailed with acclamations of approval by the secessionists of the city, and paragraphs of praise and exultation appeared in the New Orleans journals. General Butler arrived with two thousand troops (May 1), and took possession of the city. His headquarters were at the St. Charles Hotel, before which a threatening crowd gathered. Among them was Mumford, who openly boasted of his exploit in humbling the "old rag of the United States." He became so dangerous to good order as the leader of the turbulent spirits in New Orleans that Butler had him arrested and tried for treason. He was found guilty and executed—the only man who, up to this time (1880), has been tried, found guilty, and suffered death for that crime since the foundations of the national government were laid.

**First Attempt to Favor the Loyalists.** New York took the first step. The treaty of peace between the United States and Great Britain, in 1783, made no provision for the American Loyalists (which see), who were quite numerous. Some of them, who had become refugees in Canada or Nova Scotia, had been sustained by pensions from the British crown during the war. They, with multitudes who remained in the States, had been impoverished by confiscations or by the ravages of war, and now saw absolute poverty before them. Those who remained were not only impoverished, but were tortured with an undefinable dread of harsher treatment at the hands of their indignant fellow-citizens, whom, in many instances, these Tories had fearfully oppressed. It was this dread that caused more than a thousand Loyalists at New York to follow the example of their Tory brethren in Boston in 1776, and become refugees in Nova Scotia by leaving their native land when the British forces departed. It was a sad sight to see persons of refinement and wealth before the war flying for refuge—they scarcely knew to what protection—from the just wrath of their countrymen and former friends and neighbors. Triumph and success, and the sight of misery, softened the asperities of feeling among the

Americans towards the great body of the Loyalists, and sentiments of compassion took the place of resentment soon after the Revolution. Many refugees were allowed to return to America. Their property was restored. New York was the first state that repealed its confiscation acts. Other states followed its example, and in time society, disrupted by the Revolution, was readjusted.

**First Bible printed in America.** Christopher Sauer, at Germantown, Penn., printed a Bible there in the German language in 1743. At the same time a German newspaper was printed weekly at Philadelphia.

**First Bishop for New France, THE,** was Francis de Laval, abbot of Montigny, a prelate who came over in 1659, bringing with him for the first time monks of other orders besides Jesuits.

**First Blood shed in the Civil War (1861–65).** When the Washington Artillery—one of the Pennsylvania companies which hastened to the relief of Washington city—were passing through Baltimore (April 13, 1861) they were followed by an excited mob, who assailed them with insulting words and a few missiles. A colored man, sixty years of age, supposed to have been a runaway slave, was attached to the company, and was in military dress. His appearance greatly excited the ire of the mob, who raised the cry of "Nigger in uniform!" Stones and bricks were hurled at him, and he received a severe wound in the face from which the blood flowed freely. His excursion through Baltimore was never a pleasant memory for him; and he was heard to say that he would go through the infernal regions with the Washington Artillery, but never again through Baltimore.

**First Blood shed in the Second War for Independence.** While the army of General Hull was lying in camp below Sandwich, in Canada, he was absent at Detroit two or three days. There had been some skirmishing with detachments of his army, under Colonels Cass and McArthur, near the Tarontee (see *Skirmish at the Tarontee*); and the apparent supineness of the general made the younger officers and the men suspect him of incapacity, if not of treachery. While Hull was absent at Detroit the command of the American troops in Canada devolved on Colonel McArthur, and he resolved to attack Fort Malden. He detached some rangers to seek a convenient passage of the Tarontee or the *Canards* above the bridge, so as to avoid the guns of the British armed vessel *Queen Charlotte*, lying in the river. This was impracticable. A scouting party was sent under Major Denny to reconnoitre, who found an Indian ambuscade between Turkey Creek and the Tarontee, in the Petit Côte settlement. There Denny had a sharp skirmish with the barbarians, when a part of his line gave way, and he was compelled to retreat in confusion, pursued nearly three miles by the victorious Indians. He tried to rally his men, but in vain. In the skirmish he lost six men killed and two wounded. This was the first blood shed in the war of 1812–15. (See *Ta-ron-tee, Skirmish at.*)

**First Blood shed in the War with Mexico.** General Taylor, informed that the Mexicans had crossed the Rio Grande, and were between Fort Brown and Point Isabel, endeavoring to cut off all communication with his stores at the latter place, and that other armed parties were endeavoring to cross, sent a party under Captain Thornton to reconnoitre. Nearly his whole command were surprised and captured. Lieutenant Mason was killed. Thornton escaped only by an extraordinary leap of his horse over a thick hedge, followed by harmless bullets. The blood of Mason was the first shed in the war with Mexico, April 24, 1846. (See *Mexico, War with.*)

**First Christian Marriage in Virginia.** Captain Newport arrived at Jamestown, Va., in 1608, with a second supply for the colony, bringing seventy passengers, many of whom were persons of some distinction at home. Among them was John Langdon, who soon afterwards married Ann Burras, who had come to the colony as the maid of Mrs. Forrest. These were the first white women seen in the Colony of Virginia proper. The daughter of John White (Mrs. Dare), and eighteen other women with her, were in the colony on the coast of North Carolina in 1587, when that region was called Virginia. This was the first Christian marriage in Virginia.

**First Church in Boston.** In August, 1632, the inhabitants of Charlestown and Boston began the erection of a church edifice at the latter place. There were then one hundred and fifty-one church members at the two settlements. They amicably divided, the church in Boston retaining Mr. Wilson as its pastor, and that in Charlestown invited Rev. Thomas James to its pulpit. The Boston church edifice had mud walls and a thatched roof, and stood on the south side of State Street, near where the old state-house afterwards stood. Mr. Wilson, who had been a teacher only, was ordained pastor of the first church in Boston, Nov. 22, 1632.

**First Code of Laws in Massachusetts.** At the request of the General Court, the Rev. John Cotton drew up the first code of laws of Massachusetts. They were taken entirely from the Old-Testament Scripture. It was found that they were not adapted to a state of society so different from that of the Hebrews in the time of Moses, and Rev. Nathaniel Ward, who was familiar with the Roman as well as the Jewish laws, drew up a code which was substituted for Cotton's in 1641. The first article of this code provided that the rights of person and property vested in the citizen should be inviolate, except by express law, or, in default of that, by the "Word of God." Governor Winthrop did not approve of Mr. Ward's adaptation of Greek and Roman laws. He thought it better that the laws should be taken from the Scriptures rather than "on the authority of the wisdom and justice of those heathen commonwealths." The "Body of Liberties" compiled by Mr. Ward was really the first constitution of Massachusetts Bay.

**First Colonial Copyright Law.** The Gen-

eral Court of Massachusetts in 1672 gave leave to John Usher, an eminent Boston bookseller, the exclusive right of printing, on his own account, a revised edition of the laws of that colony, which had been first printed at Cambridge in 1634.

**First Copyright and Patent Law in the United States.** South Carolina's Legislature passed a law in 1784 for the encouragement of the arts and sciences. It provided for the security of the copyright of books to the authors, and a like privilege to the inventors of useful machines. (See *Copyright Law.*)

**First Court of Chancery in New York, THE,** was established in the year 1701, agreeably to the special directions of the Lords of Trade (which see). This court was directed to sit on the first Tuesday in every month.

**First Democratic Government in America.** When the *Mayflower* entered Cape Cod Bay, off the shores of (present) Massachusetts, and cast anchor, it was perceived that they were out of the northern limits of the South Virginia or London Company, and their then charter received from that company was useless. Already symptoms of faction had appeared among the emigrants on board, who imagined that when on shore they would be under no government; it was therefore judged expedient by the wise ones of the company that, before disembarkation, they should combine themselves into a body politic, to be governed by the majority. A written instrument was drawn up, and, after solemn prayer and thanksgiving, it was subscribed (Nov. 11, O. S.) by every man on board, forty-one in number. It was on the lid of Elder Brewster's chest that this constitution of government was signed. They then proceeded to elect John Carver for governor. Thus was erected the first republic—a pure democracy—in America.

**First Duel between Congressmen.** Barent Gardinier was an able opponent of the administration in Congress in 1808. In a speech on a bill supplementary to the Embargo Act, he assailed the administration with great violence of language, accusing it of being under the influence of France, having secret motives of mischief hidden under a cover of patriotism, and declaring that he believed there was a dark conspiracy in operation. The administration members were greatly excited. He was frequently called to order, and even threats were made to expel Gardinier from the House. He was assailed with a torrent of personal abuse, especially by Campbell, of Maryland. Gardinier challenged him to mortal combat. They fought, and Campbell shot Gardinier through the body. He barely escaped with his life; and when he returned to his seat he assailed his opponents with more violence than ever.

**First English Colony planted in America.** In 1585 Sir Walter Raleigh sent out from England Sir Richard Grenville, with seven ships and many people, to form a colony in Virginia, with Ralph Lane as their governor. At Roanoke Island Grenville left one hundred and seven

men under Lane to plant a colony, the first ever founded by Englishmen in America. (See *Grenville and Lane*.) This colony became much straitened for want of provisions next year, and, fortunately for them, Sir Francis Drake, sailing up the American coast with a squadron, visited the colony and found them in great distress. He generously proposed to furnish them with supplies, a ship, a pinnace, and small boats, with sufficient seamen to stay and make a further discovery of the country; or sufficient provisions to carry them to England, or to give them a passage home in his fleet. The first proposal was accepted; but a storm having shattered his vessels, the discouraged colonists concluded to take passage for home with Drake, which they did. The whole colony (one hundred and three persons) sailed from Virginia June 18, 1586, and arrived at Portsmouth, England, July 28.

**First Episcopal Society in New England.** This society was formed in Boston in 1686, when the service of the Prayer-book was first introduced into New England. When Governor Andros arrived he applied to one of the Boston churches for the celebration of the Episcopal ritual in worship. The ministers refused his request. In the following spring he took possession of the Old South Church and used it for prayers and other divine services. In 1688 an Episcopal church was erected in Tremont Street, Boston, and called King's Chapel.

**First Execution in the Plymouth Colony.** John Billington, a profane man from London, was found guilty of murder, and was executed at Plymouth in 1630. His conduct had been bad from the beginning. Governor Bradford, writing to Rev. Mr. Cushman in 1625, said: "He is a knave, and so will live and die."

**First Exports from the Mississippi River.** Two French ships sailed for France from the Mississippi, richly laden, in 1716. These were the first to carry merchandise over the sea from Louisiana.

**First French Minister to the United States, RECEPTION OF.** On the ratification of the treaty between France and the United States of Feb. 6, 1778, diplomatic relations were fully established between the two governments by the French sending M. Gerard (who had been an active participator in the negotiations) as minister plenipotentiary to the young republic. He sailed for America in D'Estaing's flagship, in company with Silas Deane, and arrived at Philadelphia early in July. There being no traditional

M. GERARD.

rules of etiquette suitable for the occasion, the ceremonies which took place at his reception by Congress, on August 6, were entirely new. Richard Henry Lee and Samuel Adams, delegates in

vided by that body, waited upon the minister at his lodgings. A few minutes afterwards the two delegates and M. Gerard entered the coach; the minister's chariot being behind, received his secretary. The carriages arrived at the state-house a little before one o'clock, when the minister was conducted by Messrs. Lee and Adams to a chair in the Congress chamber, the members of that body and the President sitting; M. Gerard, being seated, presented his credentials into the hands of his secretary, who advanced and delivered them to the President of Congress. The secretary of Congress then read and translated them, which being done, Mr. Lee introduced the minister to Congress, at the same moment the minister and Congress rising. M. Gerard bowed to the President (Henry Laurens) and Congress, and they bowed to him, whereupon the whole seated themselves. In a moment the minister arose, made a speech to Congress (they sitting), and then, seating himself, he gave a copy of his speech to his secretary, who presented it to the President. The President and Congress then rose, when the former made a reply to the speech of the minister, the latter standing. Then all were again seated, when the President gave a copy of his answer to the secretary of Congress, who presented it to the minister. The President, the Congress, and the minister then arose again together. The minister bowed to the President, who returned the salute, and then to the Congress, who bowed in return; and the minister, having bowed to the President and received his bow in return, withdrew, and was attended home in the same manner in which he had been conducted to the audience. Within the bar of the House, the Congress formed a semicircle on each side of the President and the minister, the President sitting at one extremity of the semicircle, at a table upon a platform elevated two steps, the minister sitting at the opposite extremity of the semicircle, in an arm-chair, upon the same level with the Congress. The door of the Congress chamber being thrown open below the bar, about two hundred gentlemen were admitted to the audience, among whom were the vice-president of the Supreme Executive Council of Pennsylvania, the Supreme Executive Council, the speaker and members of the Assembly, several foreigners of distinction, and officers of the army. The audience being over, the Congress and the minister at a proper hour repaired to an entertainment given by the Congress to the minister, at which were present, by invitation, several foreigners of distinction and gentlemen of public character. Such was the most attentive manner in which the first foreign minister of the United States was received, and he from the gayest court in Europe.

**First French Missionaries in America.** Zealous for the extension of the dominion of France in America, Champlain (which see) was equally zealous in the promotion and spread of the Christian faith. To aid him in the latter task he brought from France (1615), with a company of colonists, four Récollet friars, the first of a band of heroic missionaries who strove to

convert the dusky pagans of our continent to the Christian faith. Clad in coarse garments, held by a knotted cord, with wooden sandals on their feet, they held their first mass in the open air at Quebec, while cannons on the fort and ship were thundering. At that moment a large council of Algonquin and Huron Indians was assembled at Hochelaga (Montreal), and with the latter one of the priests (Father Le Caron) and twelve Frenchmen went to the Huron country, on the border of the lake bearing that name. Champlain had followed with an exploring party, and, near the site of the (present) village of Orilla, he and Father Le Caron met. There were present two thousand warriors, painted and plumed, and in their presence, in the solitude of the primeval forest, this devoted Récollet friar chanted the *Te Deum* and offered the "sacrifice of the mass"—the administration of the holy communion. So began the wonderful series of missions by the French, prosecuted chiefly by the Jesuits, in America.

**First General Assembly in Plymouth Colony.** In 1639 the towns in Plymouth Colony sent deputies for legislation for the first time, and the first General Assembly was held on June 4. Hitherto the governor and his assistants were virtually the representatives of the people. They had only a few laws, which they called "fundamental;" they were governed, in general, by the common law and statutes of England.

**First Governor-General of the Carolinas.** The people of the Carolinas suffered long, if not patiently, the oppression inflicted by governors appointed by the proprietors, until, at length, the eyes of the latter were opened to see their true interests, by the outrageous conduct of Seth Sothel. He was suspended from all authority in Carolina in November, 1691, and he was made to comply only by the fear of a threatened *mandamus* to appear before the king. Then they appointed Philip Ludwell governor of the northern and southern colonies of the Carolinas, and he became first governor-general. He was an honest but inefficient man. He could not carry out a single measure opposed to the popular will, and in 1692 he was removed and Thomas Smith made governor in his place.

**First Grand Jury in New England.** In 1637 the first grand jury was empanelled (September), from which time the courts, in criminal cases, proceeded by the inquest of a grand jury, and by petit jurors as to matters of fact.

**First Impost Duties in English-American Colonies.** In 1672 the British Parliament, regarding colonial commerce as a proper source of public revenue and taxation, passed a law imposing a duty on sugar, tobacco, ginger, cocoanut, indigo, logwood, fustic, wool, and cotton, under certain conditions. It was enacted that the whole business should be managed and the imposts levied by officers appointed by the commissioners of customs in England, under the authority of the lords of the treasury. This was the first attempt at taxation of the colonies without their consent.

### First Impost Duty in the United States.

In the spring of 1783 the Congress discussed the question of laying an impost duty for the restoration of the public credit. Finally, on April 18, 1782, it was voted "that it be recommended to the several states as indispensably necessary to the restoration of public credit, and to the punctual and honorable discharge of the public debts, to invest the United States, in Congress assembled, with power to levy for the use of the United States" certain duties named upon certain goods imported from any foreign port. Under the provisions of the Articles of Confederation (which see), the unanimous consent of the states was necessary to confer this power upon the Congress. This was the first attempt to lay such duties for revenue. The necessity was obvious, and all the states except Rhode Island and Georgia agreed to an *ad valorem* duty of five per cent. upon all goods excepting spirituous liquors, wines, teas, pepper, sugars, molasses, cocoa, and coffee, on which specific duties were laid. The Assembly gave, as a reason for its refusal, the inequality of such a tax, bearing harder on the commercial states, and the inexpediency and danger of intrusting its collection to Federal officers, unknown and not accountable to the state governments. A committee of the Congress, with Alexander Hamilton, a delegate from New York, as chairman, was appointed to lay the proposition before the several states and to urge their acquiescence. They sent it forth with an eloquent address, which appealed to the patriotism of the people. The measure was approved by the leading men of the country, and all the states but two were willing to give Congress the desired power. "It is *money*, not *power*, that ought to be the object," they said. "The former will pay our *debts*, the latter may destroy our *liberties*."

**First Indian Government established in New England.** In 1647 the General Court of Massachusetts organized the Natick Indians at Nonantum (see *Missions to the Indians*) into a political community, where a court of jurisdiction was established. An order was passed that one or more of the magistrates at Boston should, once a quarter, keep a court at Nonantum, and determine all cases, civil and criminal, that might arise among the Indians. Power was given to the sachems to bring any of their people to this court, and to hold a court themselves once a month if they saw fit. All fines imposed upon any Indians were bestowed upon some meeting-houses for the education of their poorer children in learning, by the advice of the magistrates. A similar court was set up on the site of Concord. In 1651 the Indians built a town at Natick, and applied for a form of civil government. Mr. Eliot advised them to adopt that which Jethro proposed to Moses. Accordingly, about one hundred of them met in council (August 6) and chose one ruler of one hundred, two rulers of fifties, and ten rulers of tens. After the election they entered into a solemn covenant.

**First Mass celebrated in Boston.** THE, was performed by a Roman Catholic priest in 1788,

and the following year the first Roman Catholic Church was founded in Boston.

**First Mayor of New York.** After the capture of New Netherland by the English, and the name of the province as well as the capital (New Amsterdam) was changed to New York, and all the arrangements had been made for a municipal government under English laws, Thomas Willett was appointed the first mayor (June, 1665), while the sheriff (Schout) and a majority of the new board of aldermen (burgomasters) were Dutch. Willett was much esteemed by all the people of both nationalities.

**First Military Organization in Pennsylvania.** (See *Franklin's Volunteer Militia*.)

**First Mint established in the English-American Colonies.** The earliest colonial coinage was in Massachusetts, in pursuance of an order of the General Court, passed May 27, 1652, which established a "mint-house" at Boston. The order required the coinage of "12-pence, 6-pence, and 3-pence peeces, which shall be for forme flatt, and stamped on one side with N. E., and on the other side with XII, VI, and III, according to the value of each piece. These coins were to be of the fineness of "new sterling English money," and every shilling was to "weigh three penny Troy weight, and lesser peeces proportionably." It was found, as soon as they were in circulation, that, owing to the excessive plainness of their finish, they were exposed to "washing and clipping." To remedy this evil, the General Court, on Oct. 9 of the same year, ordered a new die, and required that "henceforth both shillings and smaller peeces shall have a double ring on either side, with this inscription: "Massachusetts, and a tree in the centre, on the one side, and New England and the date of the year on the other

THE "PINE-TREE SHILLING."

side." In 1662 a two-penny piece was added to the series. This mint existed about thirty-four years, but all the coins issued have only the dates 1652 and 1662, the original dies having done service, probably, throughout the whole period. These coins are now known as "pine-tree shillings."

**First National Congress, OPENING OF THE.** On the 8th of January, 1790, Washington left his house on Franklin Square, New York, in his coach, drawn by four bay horses, preceded by Colonel Humphreys and Major Jackson, in military uniform, riding two of his white horses, and followed by his private secretaries, Lear and Nelson, in his chariot. His own coach was followed by carriages bearing the Chief-justice and Secretaries of the Treasury and of War, the

Secretary of State not having yet arrived. The President was met at the outer door of the hall by the door-keepers of the Senate and House of Representatives, and conducted by them to the door of the Senate-chamber, from which he was led through the assembled members of Congress (the Senators on one side and Representatives on the other) to the chair of state, where he was seated. In a few minutes the President arose, and with him the members of both Houses, and read his speech, or message. Handing a copy to the President of the Senate and Speaker of the House, he retired, bowing to the members as he passed out. Then he returned to his house in the same manner as he came. On that occasion Washington was dressed in a suit of clothes made in a woollen factory at Hartford, Conn. (See *Washington's Tour in New England*.) These ceremonies at the opening of each Congress were done away with by Jefferson, when he became President, he sending his written messages to Congress by his private secretary, instead of delivering them in person.

**First Naturalization Act in the Colonies.** In 1715 the Assembly of New York passed an act for naturalizing all Protestants of foreign birth then inhabiting that colony.

**First Navigation Act.** By an ordinance of the British Parliament (1646), all goods, merchandise, and necessaries for the English-American plantations were exempted from duty for three years, on condition that no colonial vessel be suffered to lade any goods of the growth of the plantations and carry them to a foreign port, excepting in English bottoms. The preamble to the ordinance mentioned "Virginia, Bermudas, Barbadoes, and other places of America."

**First Organ in a Congregational Church in New England.** Late in November, 1785, an organ was introduced into the First Congregational Church in Boston. Never before had instrumental music been heard in a Congregational church in New England.

**First Paper-money in America.** To defray the expenses of De Nonville's Expedition (which see), a paper currency, similar to the Continental Bills of Credit (which see), was issued by the government of Canada in 1684, which was called "card money." It was redeemable in bills on France.

**First Paper-money in Virginia.** Levies for the French and Indian War (which see) were raised in Virginia, and in 1755 the Virginia Assembly, having voted £20,000 towards their support, authorized the issue of treasury notes—the first paper-money of that province.

**First Political Newspapers in America (1732).** The quarrel between Governor Cosby and Rip van Dam resulted in the employment of the newspaper press for the first time in America as a political engine. The *New York Gazette*, printed by Bradford, became the organ of the governor and the royalist party; the *New York Weekly Journal*, printed by John P. Zenger, was the organ of the Republicans. (See *Zenger's Trial*.)

**First Presidential and Congressional Elec-**

tion. All of the ratifying states excepting New York chose presidential electors, in accordance with the provisions of the Constitution (which see). The electors chosen met in their respective states on the day in February, 1789, appointed by the expiring Continental Congress, and cast their votes unanimously for George Washington. Meanwhile the election of senators and representatives had occurred in the several states—the former by the State Legislatures and the latter by the people. The election of representatives was attended with much party warmth of feeling, as the people were divided, by a pretty sharply defined line, into "Federal" and "Anti-Federal" parties.

**First Prisoner of War (1812).** Captain Wilkinson, of the Royal Marines, excited suspicions in Norfolk, Va., when war was declared, that he was about to give information of the fact to a British man-of-war then hovering on the coast. He was seen rapidly making his way from the house of the British consul through back streets to a mail-boat about to start for Hampton. He darted on board the boat, and tried to conceal himself. A boat from the navy-yard and another from Fort Norfolk gave chase. Wilkinson was brought back, and conveyed to the navy-yard as a prisoner of war, the first taken after war was declared.

**First Public Worship at Jamestown.** Rev. Mr. Hunt accompanied the first emigrants to Virginia. The weather was very warm, and under an awning made of an old sail, fastened to two or three trees, to shade them from the sun, the first public worship was held. They made walls of split rails; their seats were unhewed logs, until they cut planks; the pulpit was a bar of wood nailed to two trees; and in stormy weather they repaired to an old and greatly worn tent. This was the chapel until they built a barn-like structure, set upon "rude crutches," covered with rafts, sedge, and earth, as were the walls. Their best houses were like the church, though of inferior workmanship; and out of the chapel they could not well keep the wind and rain, yet in it they had daily common prayer morning and evening, every Sunday two services, and "every three months the holy communion, until the minister died."

**First Quaker Meeting-house in Boston,** THE, was built in 1710.

**First Quarantine Law.** A profitable trade had been opened between Massachusetts and Barbadoes and other West India islands. In the summer of 1647 there was a wasting epidemic in those islands, carrying off six thousand people in Barbadoes, and nearly as many in the other islands, proportionably to their population. The General Court of Massachusetts, on hearing of the disease, published an order that all vessels which should come from the West Indies should stay at the Castle at the entrance to the harbor, and not land any passengers or goods without license from three of the Council, under a penalty of \$500. A like penalty was imposed upon any person visiting such quaran-

lined vessel without permission. A similar order was sent to Salem and other ports. Was this disease yellow fever?

**First Remittance from New Plymouth.** In November, 1621, Rev. Robert Cushman came to New Plymouth in the *Fortune*, and embarked for England in the same vessel the following month, taking with him a cargo of furs, saassafra, clapboards, and wainscot, valued at about \$2450, the first remittance from the Pilgrim colony.

**First Republican Government in America.** When the six thousand white inhabitants of Louisiana heard of the cession of their domain by France to Spain, by the treaty of 1763, they formed an Assembly of representatives of each parish in the colony, which resolved to ask the King of France to observe their loyalty, and not sever them from his dominions. They sent John Milhet, a wealthy merchant of New Orleans, as their envoy to Paris, to present their petition to Choiseul (which see); but that minister said, "It may be France cannot bear the charge of supporting the colony's precarious existence." On July 10, 1765, Antonio de Ulloa wrote a letter at Havana to New Orleans, and announced to the authorities there that he had received orders to take possession of Louisiana in the name of the Spanish monarch. He landed there on March 5, 1766, with civil officers, three Capuchin monks, and eighty soldiers. The colonists received him coldly. The French garrison of three hundred soldiers refused to enter the Spanish service, nor would the inhabitants consent to give up their nationality. Ulloa could only direct a Spanish commissary to defray the expenses of government at the cost of Spain, and to administer it under the French flag, by old French officers. Very soon the Spanish restrictive commercial system was applied to Louisiana. The merchants of New Orleans remonstrated. "The extension and freedom of trade," they said, "far from injuring states and colonies, are their strength and support." The ordinance was suspended, and very little Spanish jurisdiction was exercised in Louisiana. The conduct of Ulloa, the derangement of business, and a sense of vassalage aroused the whole colony at the end of two years, and it was proposed to make New Orleans a republic like Holland or Venice, with a legislative body of forty men, and a single executive. The people of the country parishes filled the city, and, joining those of New Orleans, formed a numerous assembly, in which John Milhet, his brother, Lafrenière, and one or two others were conspicuous. They adopted an address to the Superior Council (Oct. 25, 1768), rehearsing their grievances, and in their Petition of Rights they claimed freedom of commerce with the ports of France and America, and demanded the expulsion of Ulloa from the colony. The address was signed by nearly six hundred names. It was adopted by the Council (Oct. 26); and when the French flag was displayed on the public square, women and children kissed its folds, and nine hundred men raised it amid shouts of "Long live the

King of France; we will have no king but him." Ulloa fled to Havana, while the people of Louisiana made themselves a republic as an alternative to their renewed political connection with France. They elected their own treasurer, and syndics to represent the mass of the colony. They sent envoys to Paris bearing a memorial to the French monarch (Louis XV.), asking him to intercede between them and the King of Spain. Du Chatelet, the French ambassador in London, wrote to Choiseul (Feb. 24, 1769): "The success of the people of New Orleans in driving away the Spaniards is at least a good example for the English colonies; may they set about following it." (See *Choiseul and the Americans*.)

**First Salt-works established in America.** In 1630 Governor Harvey, of Virginia, commenced an establishment for the manufacture of salt by solar evaporation of sea-water, to be erected at Accomac, on the eastern shore of Chesapeake Bay.

**First Sermon preached in New England.** Rev. Robert Cushman (which see), one of the agents sent by the "Pilgrims" at Leyden to London, to prepare the way for their emigration to America, became one of the founders of New Plymouth colony, in New England. He reached New Plymouth Nov. 9, 1621, and on Dec. 12 he preached a sermon "On the Sin and Danger of Self-love." This was the first sermon preached in New England by a regularly ordained minister. It was printed in London, and is believed to be the oldest sermon extant preached in America. In the "Epistle Dedicatory," the preacher declared it to be the general belief that New England was an island.

**First Settlement in Ohio.** (See *Ohio Company*.)

**First Settler in North Carolina.** George Durant, a Quaker, appears to have been the first white settler in North Carolina—about 1650. Other settlers appeared in the region of the Chowan. Durant's Neck perpetuates the name of that first settler.

**First Ship and first Water-mills built in Massachusetts.** In 1633 a ship was built at Medford, of sixty tons burden—the beginning of ship-building in New England. The same year a water-mill was built at Dorchester by Mr. Stoughton, by permission of the authorities; and another was erected at Roxbury by Mr. Dummer. The same year rye was first raised in New England, at which the poor people greatly rejoiced to find the land would bear it.

**First Ship built in Boston, THE,** was called *The Trial*. She made a trip to Balboa in 1638, laden with cod and mackerel, and returned with a cargo of fruit, wine, oil, iron, and wool for the colonies.

**First Ship built in New England.** On the arrival of the Popham Colony (which see), Thomas Digby, the master shipwright, caused timber to be cut down, hewn into shape, and left to season until late in the fall, when he built a vessel, of thirty tons burden, which was named *Virginia*. This was the first vessel built

by Englishmen in New England. Its first use was to convey the disappointed colonists back to Old England. That was in 1607.

**First Ship built on Manhattan Island.** Adriaen Block was a bold Dutch navigator. He came from Holland to Manhattan in 1613, in the *Tigress*, a small vessel; and when she was about to sail for Amsterdam, with a cargo of furs and skins, late in the year, she took fire and was destroyed. The hardy seamen built rude log huts to shelter themselves from the snows and winds, and went cheerily to work to construct a new vessel. It was completed before the ice in the bay had broken up in the spring. Block named it *Ormsl*—the "restless"—a title that seemed prophetic of the unresting commercial activity of the great city and forests of vessels that now appear where that rude hamlet and little vessel were built early in the seventeenth century.

**First Street-lamps in Boston, THE,** were put up in 1774.

**First supplying of Indians with Fire-arms.** In 1656 the Legislature of Massachusetts granted a license to certain persons to supply the Eastern Indians with arms and ammunition for hunting, on paying an acknowledgment into the public treasury. They soon learned to use them for a different purpose.

**First Tariff Bill passed by the National Congress.** On May 15, 1789, the first tariff bill adopted by the Congress of the United States was carried in the House of Representatives by the very decided majority of forty-one to eight. It was modified by the Senate before its final passage. It imposed specific duties on distilled spirits, molasses, wines, beer, ale, porter, cider, malt, sugar, coffee, cocoa, tea, candles, cheese, soap, boots and shoes, silks, cables and tarred and untarred cordage, fine and pack thread, wrought steel, nails and spikes, salt, manufactured tobacco, indigo, wool and cotton cards, coal, pickled and dried fish, playing-cards, cotton, and hemp. *Ad valorem* duties of ten per cent. were laid on glass of all kinds (black quart-bottles excepted), china, stone and earthen ware, gunpowder, paints, shoe and knee buckles, gold and silver lace and leaf, blank-books, paper, cabinet wares, leather, ready-made clothing, hats, gloves, millinery, canes, brushes, gold and silver and plated ware and jewelry, buttons, saddles, sheet and rolled iron, iron castings, anchors, tin and wooden ware. A duty of five per cent. was laid upon all other articles, including manufactures of wool, cotton, and linen, excepting saltpetre, tin, lead, old pewter, brass, iron and brass wire, copper in sheets, wood, dyestuffs, hides and furs, which were to be admitted free of duty. In a subsequent act it was provided that in all cases of *ad valorem* duties the value should be ascertained by adding ten per cent., or, if the goods came from the Cape of Good Hope or beyond, twenty per cent., to the cost at the place of exportation. Upon all goods re-exported within twelve months a drawback was to be allowed of the whole amount of duties, one per cent. being deducted. For the encouragement of American shipping,

when the goods were imported in American vessels a tenth part of the duties was to be remitted. This first tariff act was limited to the 1st of June, 1796.

**First Temperance Society in America.** French traders engaged extensively in the sale of intoxicating liquors to the Indians in Canada. The Jesuit missionaries opposed the traffic with all their might. That traffic was not only injurious to the Indians, but interfered seriously with the labors of the missionaries. The wealthy traders managed to interest the governor-general in their behalf, also the king's counsel, on the pretext that the traffic was necessary to secure the good-will of the Indians. It was asserted that the evils of it were imaginary or much exaggerated. For once, however, philanthropy triumphed over sordid interest. The Bishop of Quebec went to France in 1678, and obtained a royal decree prohibiting this outrageous traffic under heavy penalties.

**First Traitor in the United States, THE.** On the establishment of a general hospital (July 27, 1755), Dr. Benjamin Church was unanimsously chosen chief director. He was a grandson of Colonel Benjamin Church, distinguished in the Indian wars in New England. He was born at Newport, R. I., Aug. 24, 1734; lost at sea in May, 1776. He was a graduate of Harvard University, studied medicine in London, and became eminent as a surgeon. He lived a bachelor, extravagantly and licentiously, in a fine mansion which he built at Raynham, Mass., in 1768. For several years preceding the Revolution he was conspicuous among the leading Whigs. Of the Massachusetts Provincial Congress he was an active member. At the same time, while he was trusted as an ardent patriot, Church was evidently the secret enemy of the Republicans. So early as 1774 he wrote parodies of his own popular songs in favor of liberty for the Tory newspapers; and in September, 1775, an intercepted letter, written by him in cipher to Major Cain, in Boston, which had passed through the hands of the mistress of Church, was deciphered; and the woman confessed that he was the author. The case was laid before the Continental Congress, and he was dismissed from the general directorship of the hospital. He was arrested, and tried by a court-martial at Cambridge on a charge "of holding a criminal correspondence with the enemy." He was convicted (Oct. 3), and imprisoned at Cambridge. On the 7th of November the Congress ordered him to be "close confined, without the use of pen, ink, or paper; and that no person be allowed to converse with him, except in the presence and hearing of a magistrate of the town or the sheriff of the county where he shall be confined, and in the English language, until further orders from this or a future Congress." He was so confined in the jail at Norwich, Conn. In May, 1776, he was released on account of failing health, and sailed for the West Indies in a merchant vessel. He and the vessel were never heard of afterwards. Benjamin Church was the first traitor to the Repub-

lican cause in America. He was well educated, and a writer in prose and verse of considerable ability.

**First Troops for the Defence of Washington (1861).** Pennsylvania sent the first troops to the capital for its defence. (See *Pennsylvania Troops at the Capital*.) Massachusetts was equally ready and determined, and some of her troops reached the capital on the day after the arrival of the Pennsylvanians. Some troops were sent by Massachusetts (April 17, 1861) to Fortress Monroe, in Virginia, then in imminent danger of seizure by the insurgents; and thirteen companies, under General Butler, started for Washington city. Rhode Island, through which these troops passed, was in a blaze of excitement. Governor Sprague had promptly tendered to the government the services of one thousand infantry and a battalion of artillery; and the Legislature, assembling on April 17, promptly provided for the state's quota and appropriated \$500,000 for war purposes. The banks offered adequate loans to the state; and within a few days Rhode Island troops were on their way towards Washington — Colonel Tompkins's Rhode Island Marine Artillery, with eight guns, and the First Regiment of Infantry, twelve hundred strong, under Colonel Burnside. Governor Sprague accompanied these troops as commander-in-chief. Connecticut was equally excited. The patriotic Governor Buckingham issued a proclamation, on the very day of the President's call, urging the citizens of his state to volunteer their services in support of the government. So warm was the response of the banks and the people that, in a message to the Legislature on May 1, the governor avowed that forty-one volunteer regiments had already been accepted, and that a part of these were already in the national capital. New York was equally prompt and patriotic, and its troops soon pressed forward to Washington. New Jersey was equally aroused. Governor Olden, inspired by the enthusiastic loyalty of his people, issued a call for his state's quota two days after the President's proclamation. The Trenton banks tendered a loan to the state, and the authorities of Newark appropriated \$100,000 for the maintenance of families of volunteers, and \$15,000 for the equipment of the soldiers. On the 30th the Legislature met, and appointed Theodore Runyon commander of the New Jersey forces; and then the movement towards Washington began. Pennsylvania, under the guidance of her energetic governor (Curtin), had appropriated (April 12, 1861) \$500,000 for arming and equipping the militia of the state; and when news of the attack on Fort Sumter reached Philadelphia the excitement of the people was intense. The President's call for troops increased the enthusiasm, and before the Legislature met in extra session, April 30, thousands of Pennsylvanians were enrolled in the Union army, and hundreds of them were in Washington city. The Legislature authorized a loan of \$3,000,000 for war purposes. The states of the West and Northwest were equally enthusiastic, and within a few days after the President's call thousands of

volunteers were on the way towards Washington. Notwithstanding these demonstrations at the North, the leaders in the insurrection excited the people of the South with false hopes by boastful and impassioned harangues.

**First Type-foundry in America.** In 1769 Abel Bnell, of Killingworth, Conn., established a type-foundry there, in which he made good long-primer type. That year he had asked assistance of the Connecticut Legislature in establishing a type-foundry.

**First United States Ambassador to Great Britain.** On the 1st of June, 1785, John Adams was introduced by the Marquis of Carmarthen to the King of Great Britain as ambassador extraordinary from the United States of America to the Court of London. The inexecution of the treaty of peace on the part of Great Britain had threatened an open rupture between the two nations. Adams was sent with full powers to arrange all matters in dispute. His mission was almost fruitless. He found the temper of the British people, from the peasant up to the monarch, very unfriendly to the United States. He was never insulted, but the chilliness of the social atmosphere and the studied neglect of his official representations often excited hot indignation in his bosom. But his government, under the old confederation, was so weak and powerless that he was compelled to endure the *hauteur* of British officials in silence. They gave him to understand that they would make no arrangements about commercial relations between the two governments; and when he proposed to his own government to pass countervailing navigation laws for the benefit of American commerce, he was met by the stern fact that it possessed no power to do so. At length, believing his mission to be useless, and the British government sturdily refusing to send a minister to the United States, Mr. Adams asked and obtained permission to return home.

**First United States Minister Plenipotentiary to France.** On the 14th of September, 1778, the Continental Congress appointed Dr. Benjamin Franklin the first minister plenipotentiary to the Court of France, and a committee of five was chosen to draft instructions to him. The committee was composed of Gouverneur Morris, Samuel Chase, W. H. Drayton, Samuel Adams, and Richard Henry Lee.

**First Vessel of War taken (1812).** When war was declared Commodore Rodgers was in the port of New York with a small squadron. He at once put to sea in pursuit of a British squadron conveying the West Indian fleet of merchantmen to England. Rodgers's flag-ship, the *President*, fell in with the *Belvidera*, and chased her several hours. News of this affair reaching Rear-admiral Sawyer, at Halifax, he sent out a squadron of war vessels under Captain Broke to search for Rodgers and his frigate. Broke's flag-ship was the *Shannon*, 38 guns. This squadron appeared near New York early in July, and made several captures, among them the United States brig *Nautilus*, 14 guns, Lieutenant-commander Crane. She had arrived at

New York just after Rodgers left, and went out immediately to cruise in the track of the West Indian fleet. The next day she was captured by the *Shannon*, and her one hundred and six men were made prisoners. This was the first vessel of war taken on either side in that contest. A prize-crew was placed in her, and she was made one of Broke's squadron. The *Nautilus* was retaken by Captain Warrington, June 30, 1815, between Java and the islands of the East India Archipelago. She was also the last vessel captured on either side during the war. Informed of the proclamation of peace, Warrington gave up the *Nautilus* to the English and returned home.

**First Yearly Meeting of Friends in Philadelphia, THE,** was held there in July, 1683. William Penn was there and preached a most encouraging sermon. He was full of hope for the future of his people and his province. A Yearly Meeting of Friends had already been held the same year, in Boston, where, twenty-three years before, Mary Dyer was hanged because she was a Quaker. In Boston they were yet (1683) but a handful, while in Philadelphia their spacious log meeting-house was, on this occasion, crowded. William Penn was then in the full vigor of manhood, being thirty-nine years of age.

**Fish, HAMILTON,** son of Colonel Nicholas Fish, was born in New York city, Aug. 3, 1808. He graduated at Columbia College in 1827, and was admitted to the bar in 1830. He became a member of Congress in 1842. In 1848 he was chosen governor of the State of New York, and in 1851 became a member of the United States Senate, acting with the Republican party after its formation in 1856. He was a firm supporter of the government during the Civil War, and in March, 1869, Mr. Fish was called to the cabinet of President Grant as Secretary of State, and remained in that position eight years, during which time he assisted materially in settling peacefully, disputes with Great Britain, of which the "Alabama Claims" was a principal topic. (See *Tribunal of Arbitration*.) He is President of the General Society of the Cincinnati.

**Fish, NICHOLAS,** was born in New York city, Aug. 23, 1758; died there, June 20, 1833. He studied law in the office of John Morin Scott, and was on his staff as aid in the spring of 1776. In June he was made brigade-major, and in November major of the Second New York regiment. Major Fish was in the battles at Saratoga in 1777; was division inspector in 1778, and commanded a corps of light infantry in the battle of Monmouth. He served in Sullivan's Expedition (which see) in 1779; under Lafayette, in Virginia, in 1781, and was at the surrender of Cornwallis, behaving gallantly during the siege. For many years after 1786, Fish, who had become lieutenant-colonel during the war, was adjutant-general of the State of New York, and was appointed supervisor of the United States revenue in 1794. In 1799 he became President of the New York State Cincinnati Society.

**Fisheries, DISPUTE ABOUT THE.** In the sum-

mer of 1815 some ill-feeling was engendered between the United States and Great Britain concerning the fisheries on the coasts of British America in the East. American fishermen were charged with a violation of the treaty of 1818 with Great Britain, which stipulated that they should not cast their lines or nets in the bays of the British provinces, except at the distance of three miles or more from shore. Now the British government claimed the right to draw a line from headland to headland of these bays, and to exclude the Americans from the waters within that line. It had been the common practice, without interference, before, for American fishermen to catch cod within large bays, where they could easily carry on their vocation at a greater distance than three miles from the shore; now this new interpretation would exclude them from all bays. The British government sent an armed naval force to sustain this claim, and American vessels were threatened with seizure if they did not comply. The government of the United States, regarding the assumption as illegal, sent two war steamers (*Princeton* and *Fulton*) to the coast of Nova Scotia to protect the rights of American fishermen. For a time war between the two governments seemed inevitable, but the dispute was amicably settled by mutual concessions in October, 1853.

**Fisheries, THE.** The interruption of the fisheries formed one of the elements of the war for independence, 1775-83; and promised to be a marked consideration in any treaty of peace with Great Britain. Public law on the subject had not been settled. By the Treaty of Utrecht (which see) France had agreed not to fish within thirty leagues of the coast of Nova Scotia; and by that of Paris not to fish within fifteen leagues of Cape Breton. Vergeunes, in a letter to Luzerne, the French minister at Philadelphia, had said: "The fishing on the high seas is as free as the sea itself, but the coast fisheries belong, of right, to the proprietors of the coast; therefore, the fisheries on the coasts of Newfoundland, of Nova Scotia, and of Canada belong exclusively to the English, and the Americans have no pretension whatever to share in them." But the Americans had almost alone enjoyed these fisheries, and deemed that they had gained a right to them by exclusive and immemorial usage. New England, at the beginning of the war, had, by act of Parliament, been debarred from fishing on the banks of Newfoundland, and they claimed that, in any treaty of peace, these fisheries ought to be considered as a perpetual joint property. Indeed, New England had planned, and furnished the forces for, the first reduction of Cape Breton, and had rendered conspicuous assistance in the acquisition of Nova Scotia and Canada by the English. The Congress, on March 23, 1779, in Committee of the Whole, agreed that the right to fish on the coasts of Nova Scotia, the banks of Newfoundland, in the Gulf of St. Lawrence, and the straits of Labrador and Belle Isle, should in no case be given up. In the final treaty of peace (1783) the fishery question was satisfactorily settled.

**Fisher's Hill, BATTLE OF.** When driven from Winchester (see *Winchester, Battle of*) Early did not halt until he reached Fisher's Hill, beyond Strasburg, and twenty miles from the battle-field. It was strongly fortified, and was considered the most impregnable position in the valley. In his despatch to the Secretary of War (Sept. 19, 1864) Sheridan wrote: "We have just sent the enemy whirling through Winchester, and are after them to-morrow." He kept his word, and appeared in front of Fisher's Hill on the 22d. There Early was strongly intrenched. Sheridan sent Crook's corps to gain the left and rear of the position, and advanced to the attack of the left and front, with Wright's and Emory's corps. The assault began at four o'clock. The Confederate line was soon broken, and the entire force retreated in disorder up the valley, leaving behind them sixteen guns and over one thousand men as prisoners. Early's army was saved from total destruction by the holding in check of Torbert's cavalry in the Luray Valley, and the detention of Wilson's cavalry, who fought at Front Royal the day before (Sept. 21). Sheridan chased Early to Port Republic (which see), where he destroyed the Confederate train of seventy-five wagons. Thence his cavalry pursued as far as Staunton, where the remnant of Early's army sought and found shelter in the passes of the Blue Ridge. The National cavalry destroyed a vast amount of supplies at Staunton, passed on to Waynesborough, and laid waste the Virginia Central Railway. Then Sheridan's whole army went down the Shenandoah Valley, making his march a track of desolation. He had been instructed to leave nothing "to invite the enemy to return." He placed his forces behind Cedar Creek, half-way between Strasburg and Middletown. Early's cavalry had rallied, under Rosser, and hung upon Sheridan's rear as he moved down the valley. Torbert and his cavalry turned upon them (Oct. 9) and charged the Confederates, who fled, leaving behind them three hundred prisoners, a dozen guns, and nearly fifty wagons. They were chased twenty-six miles. Three days later Early attempted to surprise Sheridan, while resting at Fisher's Hill, when the Confederates were severely chastised. Supposing Early would not attempt any aggressive movement soon, Sheridan left Wright in command of the army and went to Washington on official business.

**Fishing Bounties.** In 1792 an act of Congress re-established the old system of bounties to which the American fishermen had been accustomed under the British government. All vessels employed for the term of four months, at least, in each year, on the Newfoundland banks and other codfisheries, were entitled to a bounty varying from \$1 to \$2.50 per ton, according to their size, three eighths to go to the owners and five eighths to the fishermen. The national benefit of the fisheries as a nursery for seamen in case of war was urged as the chief argument in favor of the bounties. That benefit was very conspicuous when the war with Great Britain occurred in 1812-15.

**Fishing Creek, SUMTER'S DEFEAT AT.** When General Gates was approaching Camden he sent General Sumter with a detachment to intercept a convoy of stores passing from Ninety-six to Rawdow's camp at Camden. Sumter was successful. He captured forty-four wagons loaded with clothing and made a number of prisoners. On hearing of the defeat of Gates, Sumter continued his march up the Catawba River and encamped (Aug. 18, 1780) near the mouth of Fishing Creek. There he was surprised by Tarleton, and his troops were routed with great slaughter. More than fifty were killed and three hundred were made prisoners. Tarleton recaptured the British prisoners and all the wagons and their contents. Sumter escaped, and in such haste that he rode into Charlotte (N. C.) without hat or saddle.

**Fitch, JOHN,** inventor, was born at East Windsor, Conn., Jan. 21, 1743; died at Bardstown, Ky., July 2, 1798. He was an armorer in the military service during the Revolution, and at Trenton, N. J., manufactured sleeve-buttons. For a while, near the close of the war, he was a surveyor in Virginia, during which time he prepared, engraved on copper, and printed, on a press of his own manufacture, a map of the Northwest country, afterwards formed into a territory. He constructed a steamboat in 1786 that could be propelled eight miles an hour. A company was formed (1788) in Philadelphia, which caused a steam-packet to ply on the Delaware River, and it ran for about two years, when the company failed. In 1793 he unsuccessfully tried his steam-navigation projects in France. Discouraged, he went to the Western country again, where he died, leaving behind him a history of his adventures in the steamboat enterprise, in a sealed envelope, directed to "My children and future generations," from which Thompson Wescott, of Philadelphia, prepared an interesting biography of Fitch, which was published in 1867.

**Five Forks, BATTLE OF THE.** (See *Petersburg, Final Struggle for.*) Sheridan had crossed the Appomattox from Bermuda Hundred, and, passing in the rear of the army before Petersburg, on the morning of March 29, 1865, had halted at Dinwiddie Court-house. A forward movement of the National army had just begun. Warren and Humphreys, with their corps, had moved at an early hour that morning against the flanks of the Confederates, and they bivouacked in front of the works of their antagonists, only six miles from Dinwiddie Court-house. Warren had lost three hundred men in a fight on the way. On the next day (March 30) Sheridan sent a part of his cavalry to the Five Forks, but the Confederate works there were too strongly armed and manned to be ridden over, and the Nationals were driven back to the Court-house. There was some severe fighting that day, without a decisive result. Sheridan was engaged in the struggle, but at midnight he was satisfied that Lee was withdrawing his troops and felt quite at ease. It was known at headquarters that his troops had been driven back from Five Forks and that it was uncertain whether he

could hold his position. Warren was sent to his aid with a portion of his corps. Ranking Warren, Sheridan became commander of the whole force. Leaving Warren half-way between Dinwiddie Court-house and Five Forks, Sheridan pressed boldly on towards the latter place, with cavalry alone, and drove the Confederates into their works and enveloped them with his overwhelming number of horsemen. He now ordered Warren forward to a position on his right so as to be fully on the Confederate left. He drove some Confederates towards Petersburg and returned before Warren was prepared to charge upon the works. At four o'clock P.M. Warren moved to the attack. Ayres charged upon the Confederate right, carried a portion of the line, and captured more than 1000 men and several battle-flags. Merritt charged the front and Griffin fell upon the left with such force that he carried the intrenchments and seized 1500 men. Crawford, meanwhile, had come forward, cut off their retreat in the direction of Lee's lines, struck them in the rear, and captured four guns. Hard pressed, the Confederates fought gallantly and with great fortitude. At length the cavalry charged over the works simultaneously with the turning of their flanks by Ayres and Griffin, and, bearing down upon the Confederates with great fury, caused a large portion of them to throw down their arms, while the remainder made a disorderly flight westward, pursued many miles by Merritt and McKenzie. The Confederates lost a large number of men, killed and wounded, and over 5000 were made prisoners. The Nationals lost about 1000, of whom 634 were killed and wounded.

**Five Nations, LAST EXPEDITION AGAINST THE, BY THE FRENCH.** In 1697 Frontenac led an expedition against the Iroquois Confederacy. He crossed Lake Ontario with a powerful force, and marching southward to Lake Onondaga, he found their principal village deserted and burned. He sent seven hundred men to destroy the Oneida castle. They took a few prisoners. It would doubtless have fared hard with the French if the Senecas had not been kept back by a false report that the Ottawas were to attack them at the same time. As it was, the count thought it prudent to retire. He had taken prisoner an aged Onondaga chief, about one hundred years old, whom he gave up to his savage followers for torture.

**Five Nations, THE,** were the five Algonquin nations, namely: Mohawks, Oneidas, Onondagas, Cayugas, and Senecas, who originally formed the Iroquois Confederacy. The Five Nations were joined by the Tuscaroras, from North Carolina, in 1713, and then the confederacy was called the Six Nations.

**Five Nations, TREATY WITH THE (1684).** A grand convention was held at Albany between the English and the Iroquois Confederacy in the summer of 1684, at which a treaty was concluded (Aug. 2) between Lord Esingham, Governor of Virginia, and Governor Dongan and chiefs of a portion of that confederacy. (See *Iroquois Confederacy.*) It was a treaty of peace on behalf

of all the English settlements. By it the Five Nations put the lands and castles of the Mohawks and Oneidas under the protection of the English government, and the English undertook to guarantee them to the Indians. As an external mark by which this act should be announced, the Indians desired that the arms of the Duke of York might be affixed to their castles.

**Flag for the Confederacy (1861).** The "Congress" at Montgomery discussed the subject of a national flag with much feeling. Several models had been offered. Mr. Memminger presented two. One, from some women of Charleston, was

CONFEDERATE FLAG.

composed of a blue cross on a red field, with seven stars—similar to the South Carolina flag (which see); the other was from a gentleman of the same city. It was a cross, with fifteen stars. Memminger made a speech on

presenting these models. Then a committee of one delegate from each state was appointed to report upon a device for a national flag and seal. Brooke, of Mississippi, offered a resolution to instruct the committee to report a design as similar as possible to that of the United States, making only such changes as should give them distinction. He eulogized the old flag, and was severely rebuked for uttering sentiments which were regarded as almost treasonable. W. Porcher Miles, of South Carolina, chairman of the committee, protested against the resolution and the utterances of the member. He "gloried," he said, "more, a thousand times, in the palmetto flag of his state." He had regarded "from his youth the stars and stripes as the emblem of oppression and tyranny." Brooke withdrew his motion. Mrs. C. Ladd, of South Carolina, presented a model, through W. W. Boyce, "tri-colored, with a red union, seven stars, and the crescent moon." In her letter accompanying the flag, she offered her three boys to her "country" and suggested "Washington Republic" as the title of the Confederacy. Boyce made a speech in presenting the model. Chilton, Toombs, Stephens, and others also presented designs for flags. They were sent in almost daily, some of them showing a strong attachment to the old national flag. Seven designs were sent by two young women in the art department of "Tucogee Female College," the principal features of all being an eagle, stars, and a cotton-bale. In their letter they said: "With cotton as king, there are seven states bound by a chain of sisterly love, that will strengthen with time, as onward, right onward, they move up the glorious path of Southern independence." The committee made an elaborate report, in which they said they did not share in the sentiment of attachment to the "stars and stripes," too often repeated in communications; yet they recommended a flag that had a certain resemblance to the one they were deserting. It was to con-

sist of a red field, with a white space extending horizontally through the centre and equal in width to one third the width of the flag; the field of the union was blue, extending from the top to the bottom of the white stripe, and stopping at the lower red stripe. In the centre of the union was a circle of white stars, corresponding in number to that of the states of the Confederacy. It was really the old flag—red, white, and blue—with three "alternate stripes, red and white," instead of thirteen such stripes. This flag was first displayed in public over the state-house at Montgomery, March 4, 1861.

**Flag of Sumter.** When news reached Washington of the evacuation of Charleston (February, 1865), the President appointed the anniversary (April 14) of the evacuation of the fort when the old flag which Anderson took with him should be again raised over the fortress by his hand. A large number of citizens left New York in the steamer *Oceanus* to assist in the ceremonies. When the multitude were assembled around the flag-staff, the songs of *Victory at Last* and *Rally round the Flag* were sung. Rev. Mr. Harris, who made the prayer at the raising of the flag over Fort Sumter, Dec. 27, 1860 (see *Anderson in Fort Sumter*), now offered prayer and pronounced a blessing on the old flag. Rev. Dr. Storrs read selections from the Psalms. General Townsend read Major Anderson's despatch announcing the fall of Sumter. Then the faithful Sergeant Hart (see *Fort Sumter, First Reinforcement of*) appeared with a carpet-bag containing the flag. It was attached to the halyards, when General Anderson, after a brief and touching address, hoisted it to the peak of the flag-staff amid loud huzzas, followed by singing *The Star-spangled Banner*. Six guns on the fort were then fired, and were responded to by all the batteries that took part in the bombardment in 1861. Rev. Henry Ward Beecher, the orator of the day, pronounced an address. So, four years from the time of the evacuation of Fort Sumter it was "repossessed" by the government.

**Flag of the Continental Navy.** When the Provincial Congress of South Carolina, in February, 1776, presented the thanks of that body to their representatives in the Continental Congress for their services there in bringing about the establishment of a navy, and other measures of importance, Christopher Gadsden presented the standard which was to be used by the American navy, representing on a yellow field a rattlesnake, with thirteen full-grown rattles, coiled to strike, with the words "Don't tread on me." The Massachusetts navy had a flag with a pine-tree on it. (See *Flag, The National*.)

**Flag of the "Sovereign State" of South Carolina.** The secession convention adopted a banner for the new empire on the day when the ordinance of secession was passed. It was composed of red and blue silk. The first was the ground of the standard, and the last, in the form of a cross, was displayed over its whole field. On the blue cross were fifteen stars, the number of the slave-labor states. The largest star, in the centre, was for South Carolina. On the red

field was a palmetto-tree, and a crescent moon of silver.

**Flag, THE NATIONAL.** Every colony had its peculiar ensign, and the army and navy of the united colonies, at first, displayed various flags, some colonial, others regimental, and others, like the flag on Fort Sullivan, Charleston harbor—a blue field with a silver crescent—for special occasions. The American flag used at the battle on Buuker's (Breed's) Hill, was called the "New England flag." It was a blue ground,

THE NEW ENGLAND FLAG.

with the red cross of St. George in a corner, quartering a white field, and in the upper dexter quartering was the figure of a pine-tree. The New-Englanders had also a "pine-tree flag"

THE PINE-TREE FLAG.

as well as a "pine-tree shilling." The above engraving is a reduced copy of a vignette on a map of Boston, published in Paris in 1776. The *London Chronicle*, an anti-ministerial paper, in its issue for January, 1776, gives the following description of the flag of an American cruiser that had been captured: "In the Admiralty Office is the flag of a provincial privateer. The field is white bunting; on the middle is a green pine-tree, and

upon the opposite side is the motto 'Appeal to Heaven.'" The Culpepper men, who marched with Patrick Henry towards Williamsburg to demand instant restoration of powder to the old magazine, or payment for it by Governor Dunmore, bore a flag with a rattlesnake upon it, coiled ready to strike, with Patrick Henry's words (see *Virginia Convention*, 1775), and the words "Don't tread on me." It is believed that the first American flag bearing thirteen red and white stripes was a Union flag presented to the Philadelphia Light Horse by Captain Abraham Markoe, a Dane, probably early in 1775. A "Union flag" is mentioned as having been displayed at a gathering of Whigs at Savannah in June, 1775—probably thirteen stripes. The earliest naval flags exhibited thirteen alternate red and white stripes, some with a pine-tree upon them, and others with a rattlesnake stretched across the field of stripes, and beneath it the words, either imploringly or as a warning, "Don't tread on me." The new Union flag raised at Cambridge, Jan. 1, 1776, was composed of thirteen alternate red and white stripes, with the English union in one corner. (See *Union Flag at Boston*.) Finally, the necessity of a national flag was felt, especially for the marine service, and the Continental Congress adopted the following resolution, June 14, 1777: "*Resolved*, That the flag of the United States be thirteen stripes, alternate red and white; that the union be thirteen stars, white, on a blue field, representing a new constellation." There was a dilatoriness in displaying this flag. The resolution was not officially promulgated over the signature of the secretary of the Congress until Sept. 3, though it was previously printed in the newspapers. This was more than a year after the colonies had been declared free and independent. Probably the first display of the national flag at a military post was at Fort Schuyler, on the site of the village of Rome, Oneida Co., N. Y. The fort was besieged early in August, 1777. The garrison were without a flag, so they made one according to the prescription of Congress by cutting up sheets to form the white stripes, bits of scarlet cloth for the red stripes, and the blue ground for the stars was composed of portions of a cloth cloak belonging to Captain Abraham Swartwout, of Dutchess County, N. Y. This flag was unfurled over the fort on the 3d of August, 1777. Paul Jones was appointed to the *Ranger* on June 14, 1777, and he claimed that he was the first to display the stars and stripes on a naval vessel. The *Ranger* sailed from Portsmouth, N. H., on Nov. 1, 1777. It is probable that the national flag was first unfurled in battle on the banks of the Brandywine, Sept. 11, 1777—the first battle after its adoption. It first appeared over a foreign stronghold, June 23, 1778, when Captain Rathbone, of the American sloop-of-war *Providence*, with his crew and some escaped prisoners, captured Fort Nassau, New Providence, Bahama Islands. The captors were menaced by the people, when the stars and

THE CULPEPPER FLAG.

stripes were nailed to the flag-staff in defiance. John Singleton Copley, the American-born painter, in London, claimed to be the first to display the stars and stripes in Great Britain. On the day when George III. acknowledged the independence of the United States (Dec. 5, 1782), he painted the flag of the United States in the background of a portrait of Elkanah Watson. To Captain Mooers, of the whaling-ship *Bedford*, of Nantucket, is doubtless due the honor of first displaying the national flag in a port of Great Britain. He arrived in the Downs, with it flying at the fore, Feb. 3, 1783. That flag was first carried to the East Indian seas in the *Enterprise* (an Albany-built vessel), Captain Stewart Dean, in 1785. When Vermont and Kentucky were added to the union of states the flag was altered. By an act of Congress (Jan. 13, 1794) the number of the stripes and stars in the flag was increased from thirteen to fifteen. The act went into effect May 1, 1795. From that time until 1818, when there were twenty states, the number of the stars and stripes remained the same. A committee appointed to revise the standard invited Captain Samuel C. Reid, the brave defender of the privateer *Armstrong* (see *Privateers*) to devise a new flag. He retained the original thirteen stripes, but added a star for every state. That has been the device of the flag of the United States ever since. It now (1880) has thirteen stripes and thirty-eight stars.

**Flags, EXCHANGE OF.** Monroe had far exceeded his instructions in the warmth of his expressions of sympathy with the French revolutionists at his public reception (which see), and his conduct so displeased his government that the Secretary of State (Mr. Randolph), suggested that a private reception and an oral speech were what the cabinet expected. He was reminded that the United States were neutral, and that offence might be given to England or Spain, with both of which negotiations were then pending; and it might become necessary at some time "to explain away or disavow an excess of fervor, so as to reduce it down to the cool system of neutrality." Before this rebuke reached him, Monroe had gone much farther in his demonstrations of sympathy in the name of his government. The French Convention having decreed the suspension in their hall of the French and American flags, intertwined, in testimony of eternal union and friendship, Monroe took it upon himself to send an American flag for the purpose in the name of the American people. It was conveyed by the hand of Captain Barney, of the navy of the Revolution, who, in addition to a letter by Monroe, delivered a speech of his own. Barney received the fraternal embrace of the President of the Convention, and soon afterwards a commission in the French navy. The Convention ordered the French colors to be sent to the American Congress. They were presented by the French ambassador (Adet), Jan. 1, 1796, with an address, to which the President responded, and the colors were ordered to be deposited in the archives of the nation. (See *Monroe, Reception of, in France.*)

Fletcher, BENJAMIN, governor of New York, succeeded Governor Sloughter, whose life and administration were suddenly terminated by *delirium tremens*. (See *Leisler's Insurrection.*) Fletcher was also authorized to govern Pennsylvania, which had recently been taken from him and made a royal province; also, to facilitate the defence of New York against the French in Canada, he was invested with the command of the militia of Connecticut and New Jersey, as well as that of the province to be defended. Fletcher was a colonel in the British army. Possessed of violent passions, he was weak in judgment, greedy, dishonest, and cowardly. He fell naturally into the hands of the aristocratic party, and his council was composed of the enemies of Leisler. The recklessness of his administration, his avarice, his evident prostitution of his office to the securing of personal gain, disgusted all parties. He continually quarrelled with the popular Assembly, and his whole administration was unsatisfactory. The Quaker-governed Assembly of Pennsylvania thwarted his schemes for obtaining money for making war on the French; and he was fortunately led by Colonel Peter Schuyler in all his military undertakings. The Assembly of Connecticut denied his right to control their militia; and late in the autumn of 1693 he went to Hartford with Colonel Bayard and others from New York, and in the presence of the train-bands of that city, commanded by Captain Wadsworth (see *Connecticut Charter*); he directed (so says tradition) his commission to be read. Bayard began to read, when Wadsworth ordered the drums to be beaten. "Silence!" said Fletcher, angrily. When the reading was again begun, "Drum! drum!" cried Wadsworth. "Silence!" again shouted Fletcher, and threatened the captain with punishment. Wadsworth stepped in front of the governor, and, with his hand on the hilt of his sword, he said: "If my drummers are again interrupted, I'll make sunlight shine through you. We deny and defy your authority." The cowed governor sullenly folded the paper, and with his retinue returned to New York. With a pretended zeal for the cause of religion, Fletcher procured the passage of an act by the Assembly for building churches in various places, and under it the English Church and preaching in English were introduced into New York. Trinity Church was organized under the act, and its present church edifice stands upon the ground where the first structure was erected. During Fletcher's administration, pirates infested American waters; and he was accused not only of winking at violations of the navigation laws, but of favoring the pirates, for private gain. They sometimes found welcome in the harbor of New York (see *Buccaneers*), instead of being seized and punished. When Bellomont, after the Treaty of Ryswick, came over as governor of Massachusetts, he was commissioned to investigate the conduct of Fletcher and to succeed him as governor, and he sent him to England under arrest. The colony felt a relief when he was gone, for his career had been marked by misrule and profligacy.

**Fleury, Louis** (Chevalier and Viscount de), was a lieutenant-colonel in the Continental Army, and died a field-marshal of France. He was educated an engineer, and, coming to America, he received a captain's commission from Washington. For his good conduct in the campaign of 1777, Congress gave him a horse and commission of lieutenant-colonel (Nov. 26, 1777); and in the winter of 1778 he was inspector under Stenben. He was adjutant-general of Lee's division in June, 1779, and was so distinguished at the assault on Stony Point (July, 1779) that Congress gave him thanks and a silver medal. De Fleury

pack-horse, and upon this animal, which with difficulty he spurred into a trot, he escaped. The fugitive army was well covered in its retreat by Major Clarke's battalion. The Indians, after following about four miles, turned back; but the army did not halt until it was safely within the palisades of Fort Jefferson. They had run from the scene of conflict to Fort Jefferson, a distance of twenty-nine miles, between nine o'clock in the morning and seven o'clock in the evening—ten hours.

**Floating Batteries.** The first American floating battery was seen in the Charles River, at

MEDAL AWARDED TO LIEUTENANT-COLONEL DE FLEURY.

returned to France soon after the affair at Stony Point, before the medal was struck; and it was probably never in his possession, for it seems to have been lost, probably while Congress was in session at Princeton. In April, 1859, a boy found it while digging in a garden at Princeton. De Fleury, on his return to France, joined the French troops under Rochambeau sent to America in 1780.

**Flight of St. Clair's Army (1791).** After a desperate fight (see *St. Clair's Campaign*) the ranks of the soldiers were broken by the Indians, and the former, gathering in groups, were shot down without resistance. Then a most disorderly flight began, the militia leading. Among the fugitives were a number of women, chiefly wives of the soldiers. In the army of St. Clair there were about two hundred. Of these, fifty-six were killed in the fight; the remainder joined in the flight. One of them, Mrs. Catharine Miller (who died in Cincinnati about the year 1838), was so fleet of foot that she ran ahead of the army. She had a great quantity of red hair that streamed behind her as she ran, and formed the *oriflamme* which the soldiers followed. St. Clair behaved with the greatest bravery in the battle. He was so tortured with gont that he could not mount his horse without assistance. He was not in uniform—his chief covering was a warm cappa coat and a three-cornered hat, from under which his white hair was seen streaming as he and General Butler rode up and down the lines during the battle. He had three horses killed under him, and eight bullets passed through his clothes. When the retreat began he mounted a

Boston, in October, 1775. Washington had ordered the construction of two, to assist in the siege of the New England capital. They were armed and manned, and on the 26th of October opened fire on the town, producing much consternation. They appear to have been made of strong planks, pierced near the water-line for oars, and further up were port-holes for musketry and the admission of light. A heavy gun was placed in each end, and upon the top were four swivels. The ensign was the pine-tree flag. Colonel Reed, writing to Colonel Moylan, on Oct. 20, 1775, said: "Please to fix some particular color for a flag and a signal, by which our vessels may know each other. What do you think of a flag with a white ground, a tree in the middle, and the motto 'An Appeal to Heaven?' This is the flag of our floating batteries." When the War of 1812-15 broke out, the subject

AMERICAN FLOATING BATTERY.

of harbor defences occupied much of the attention of citizens of the American coast-towns, especially in the city of New York. Among the scientific men of the day, John Stevens and Robert Fulton appear conspicuous in proposing plans for that purpose. Earlier than this (in 1807), Abraham Bloodgood, of Albany, suggest-

ed the construction of a floating revolving battery not unlike, in its essential character, the revolving turret built by Captain Ericsson in the winter of 1861-62. (See *Monitor*.) In March, 1814, Thomas Gregg, of Pennsylvania, obtained a patent for a proposed iron-clad steam vessel-of-war, resembling in figure gunboats and "rams"

GREGG'S IRON-CLAD VESSEL IN 1814.

during the late Civil War in the United States. At about the same time a plan of a floating battery submitted by Robert Fulton was approved by naval officers. It was in the form of a steamship of peculiar construction, that might move at the rate of four miles an hour, and furnished, in addition to its regular armament, with submarine guns. Her construction was ordered by Congress, and she was built at the ship-yard of Adam and Noah Brown, at Corlear's Hook, New York, under the supervision of Fulton. She was launched Oct. 29, 1814. Her machinery was tested in May following, and on July 4 (1815) she made a trial-trip of fifty-three miles to the ocean and back, going at the rate of six miles an hour. This vessel was called *Fulton the First*. She

measured one hundred and forty-five feet on deck and fifty-five feet breadth of beam; drew only eight feet of water; mounted thirty 32-pound carronades, and two columbiads of one hundred pounds each. She was to be commanded by Captain Porter. It was a structure resting upon two boats on keels, separated from end to end by a channel fifteen feet wide and sixty feet long. One boat contained the boiler for generating steam, which was made of copper. The machinery occupied the other boat. The water-wheel (A) revolved in the space between them. The main or gun deck supported the

SECTION OF THE FLOATING BATTERY.

armament, and was protected by a parapet four feet ten inches thick, of solid timber, pierced by embrasures. Through twenty-five port-holes were as many 32-pounders, intended to fire red-hot shot, which could be heated with great safety and convenience. Her upper, or spar, deck, upon which many hundred men might parade, was encompassed with a bulwark for safety. She was rigged with two stout masts, each of which supported a large lateen yard and sails. She had two bowsprits and jibs, and four rudders, one at each extremity of each boat, so that she might be steered with either end foremost. Her machinery was calculated for an additional engine, which might discharge an immense column of water which it was intended to throw

upon the decks and through the port-holes of an enemy, and thereby deluge her armament and ammunition. The most extravagant stories concerning this monster of the deep went forth at about the time of her being launched. In a treatise on steam vessels, published in Scotland soon afterwards, the author said: "Her length is three hundred feet; breadth, two hundred feet; thickness of her sides, thirteen feet, of alternate oak plank and corkwood; carries forty-four guns, four of which are 100-pounders; can discharge one hundred gallons of boiling water in a few minutes, and by mechanics brandishes three hundred entlasses with the utmost regularity over her gunwales; works, also, an

FLOATING BATTERY, "FULTON THE FIRST."

equal number of pikes of great length, darting them from her sides with prodigious force, and withdrawing them every quarter of a minute." The insurgents of South Carolina constructed a floating battery in Charleston harbor in the winter of 1861. It was a curious monster, made of heavy pine timber, filled in with palmetto-logs, and covered with a double layer of railroad iron. It appeared like an immense shed, twenty-five

FLOATING BATTERY AT CHARLESTON.

feet in width, and, with its appendage, about one hundred feet in length. It mounted in its front (which sloped inwards from its iron-clad roof) four enormous siege-guns. The powder-magazine was in the rear, below the water-line, and at its extremity was a platform covered with sand-bags, to protect its men and balance the heavy guns. Attached to it was a floating hospital. It was intended to tow this monster to a position so as to bring its guns to bear on Fort Sumter. Stevens's floating battery was a more formidable structure. This battery had been in process of construction by Messrs. Stevens, of Hoboken, N. J., for several years before the Civil War. It was intended solely for a harbor defence. Already there had been about \$1,000,000 spent upon it, chiefly by the United States government, and yet it was not completed. Until just before the war it had been shut in from the public eye. It was to be seven hundred feet in length, covered with iron plates, so as to be proof against shot and shell of every kind. It was to be moved by steam-engines of sufficient strength to give it a momentum that would cause it, as a "ram," to cut in two any ship-of-war then known when it should strike her at the waist. It was intended for a battery of sixteen heavy rifled cannons in bomb-proof casemates, and two heavy columbiads for throwing shells. The latter were to be on deck, fore and aft. The smoke-stack was to be constructed in sliding sections, like a telescope, for obvious purposes; and the vessel was so constructed that it might be sunk to the level of the water. Its burden was rated at six thousand tons. It was not completed when the Civil War ended. The following is a portion of the specification: "The boat is framed on an angle of about eighteen degrees all round the vessel, where the top timbers elevate the balls, and the lower ones direct them under her. The top deck, which glances the ball, may be hung on a mass of hinges near the ports. Said deck is supported

by knees and cross-timbers on the lower sides, so that it may be sprung with powder, if required (when boarded by the enemy), to a perpendicular, when the said deck will be checked by stays, while the power of powder will be exhausted in the open air, and then fall or spring to the centre of the deck again. The aforesaid deck will run up and down with the angle, which may be copped or laid with iron. The gun-deck may be bored at pleasure, to give room, if required, as the men and guns are under said deck. The power is applied between her keels, where there is a coucave formed to receive them from the bow to the stern, except a small distance in each end, forming an eddy. The power may be reversed to propel her either way. Said power is connected to upright levers, to make horizontal strokes alternately." This project was abandoned, and the battery was sold at auction in 1880. (See *Stevens, John.*)

**Florida.** This twenty-seventh state admitted into the Union received its name from its discoverer in 1512. (See *Ponce de Leon.*) It was visited by Vasquez, another Spaniard, in 1520. It is believed by some that Verrazani saw its coasts in 1524 (see *Verrazani*); and the same year a Spaniard named De Geray visited it. Its conquest was undertaken by Narvaez, in 1528 (see *Narvaez*), and by De Soto in 1539. Huguenots—Protestants of France—sought refuge there at about the middle of the 16th century (see *Huguenots*), when they were attacked by the Spaniards. The latter, landing on the site of St. Augustine, founded a city there in 1565, which

STATE SEAL OF FLORIDA.

was captured by Sir Francis Drake in 1586. The domain of Florida, in those early times, extended indefinitely westward, and included Louisiana. La Salle visited the western portion in 1682, and in 1696 Pensacola was settled by Spaniards. At the beginning of the 18th century the English in the Carolinas attacked the Spaniards at St. Augustine; and subsequently the Georgians, under Oglethorpe, made war upon them. (See *Oglethorpe.*) By the treaty of Paris, in 1763, Florida was exchanged by the Spaniards, with Great Britain, for Cuba, which had then recently been conquered by England. Soon afterwards they divided the territory into East and West Florida, the Appalachian River being the boundary-line. Natives of Greece, Italy, and Minerva were induced to settle there, at a place called New Smyrna, about sixty miles south of St. Augustine, to the number of fifteen hundred, where they engaged in the cultivation of indigo and the sugar-cane; but becoming dis-

satisfied with their employers, they removed to St. Augustine. During the old war for independence, the trade of the Southern colonies was seriously interfered with by pirates fitted out in Florida, and the British incited the Indians in that region to make war on the Americans. The Spaniards invaded West Florida, and captured the garrison at Baton Rouge in 1779; and in May, 1781, they seized Pensacola. By the treaty of 1783, Florida was retroceded to Spain, and the western boundary was defined, when a greater part of the inhabitants emigrated to the United States. When, in 1803, Louisiana was ceded to the United States by France, it was declared to be ceded with the same extent that it had in the hands of Spain, and as it had been ceded by Spain to France. This gave the United States a claim to the country west of the Perdido River, and the government took possession of it in 1811. Some irritation ensued. In the war with Great Britain (1812), the Spanish authorities at Pensacola favored the English. An expedition against the Americans having been fitted out there, General Jackson captured that town. Again, in 1818, it was captured by Jackson, but was subsequently returned to Spain. Florida was purchased from Spain by the United States in 1819, and was surrendered to the latter in July, 1821. Emigration then began to flow into the territory, in spite of many obstacles. In 1835 a distressing warfare broke out between the fierce Seminole Indians (see *Seminole*), who inhabited some of the better portions of Florida, and the government of the United States, and continued until 1842, when the Indians were subdued, though not thoroughly conquered. (See *Seminole War*.) In May, 1858, the whole body of the Seminoles remaining in Florida were removed to reservations west of the Mississippi. Florida was admitted into the Union as a state on the 8th of March, 1845. Inhabitants of the state joined in the war against the government, a secession ordinance having been passed Jan. 10, 1861, by a convention assembled on the 3d. (See *Secession Ordinances*.) Forts and arsenals and the navy-yard at Pensacola were seized by the insurgents. The state authorities continued hostilities until the close of the war. On the 13th of July, 1865, William Marvin was appointed provisional governor of the state, and on the 23th of October a state convention, held at Tallahassee, repealed the ordinance of secession. The civil authority was transferred by the National government to the provisional state officers in January, 1866, and, under the reorganization measures of Congress, Florida was made a part of the third military district in 1867. A new constitution was ratified by the people in May, 1868, and after the adoption of the Fourteenth Amendment to the National Constitution, on the 14th of June, Florida was recognized as a reorganized state of the Union. The government was transferred to the state officers on the 4th of July. Population in 1880, 269,493.

**FLORIDA, CESSION OF BY SPAIN.** Jackson's invasion of Florida and his capture of Pensacola (see *Seminole War*) caused much political debate in and out of Congress. By some he was much

censured, by others praised. The United States government upheld him, and the Secretary of State (J. Q. Adams) made an able plea of justification, on the ground of the well-known interference of the Spanish authorities in Florida in American affairs, and the giving of shelter to British subjects inciting the Indians to make war. It was thought the British government would take notice of the summary execution of Arbuthnot and Ambrister (see *Seminole War*); but it took the ground that British subjects, meddling in the affairs of a foreign nation, must take the consequences. Secretary Adams and the Spanish minister, Don Onis, had been in correspondence for some time concerning the settlement of the Florida question and the western boundary of the United States next to the Spanish possessions. Finally, pending discussion in Congress on Jackson's vigorous proceedings in Florida, the Spanish minister, under new instructions from home, signed a treaty (Feb. 22, 1819) for the cession of Florida, on the extinction of the various American claims for spoliation, for the satisfaction of which the United States agreed to pay to the claimants \$5,000,000. The Louisiana boundary, as fixed by the treaty, was a compromise between the respective offers heretofore made, though leaning a good deal towards the American side. It was agreed that the Sabine to the thirty-second degree of north latitude, thence a north meridian line to the Red River, the course of that river to the one hundredth degree of longitude west from Greenwich, thence north by that meridian to the Arkansas River to its head and to the forty-second degree of north latitude, and along that degree to the Pacific Ocean, should be the boundary between the possessions of the United States and Spain. The Florida treaty was immediately ratified by the United States Senate, and, in expectation of a speedy ratification by Spain, an act was passed to authorize the President to take possession of the newly ceded territory. But there was great delay in the Spanish ratification. It did not take place until early in 1821. The ratified treaty was received by the President in February.

**FLORIDA, CONQUESTS ON THE COASTS OF.** Commodore Dupont and General Wright made easy conquests on the coast of Florida. In February, 1862, they captured Fort Clinch, on Amelia Island, which the Confederates had seized, and drove the insurgents from Fernandina. Other posts were speedily abandoned, and a flotilla of gunboats, under Lieutenant T. H. Stevens, went up the St. John's River, and captured Jacksonville, March 11. St. Augustine was taken possession of about the same time by Commander C. R. P. Rogers, and the alarmed Confederates abandoned Pensacola and all the fortifications opposite Fort Pickens. Before the middle of April the whole Atlantic coast from Cape Hatteras to Perdido Bay, west of Fort Pickens (excepting Charleston and its vicinity), had been abandoned by the Confederates.

**FLORIDA, DE LUNA'S EXPEDITION TO.** Don Tristan de Luna sailed from Vera Cruz, Mexico,

Aug. 14, 1559, with fifteen hundred soldiers, many zealous friars who wished to convert the heathen, and many women and children, families of the soldiers. He landed near the site of Pensacola, Fla., and a week afterwards a terrific storm destroyed all his vessels and strewed the shores with their fragments. He sent an exploring party into the interior. They travelled forty days through a barren and almost uninhabited country, and found a deserted Indian village, but not a trace of the wealth with which it was supposed Florida abounded. Constructing a vessel sufficient to bear messengers to the Viceroy of Mexico, De Luna sent them to ask for aid to return. Two vessels were sent by the viceroy, and, two years after his departure, De Luna returned to Mexico.

**Florida, INCURSIONS FROM.** In the summer of 1778 two bodies of armed men, composed of regulars and refugees, made a rapid incursion into Georgia from East Florida—one in boats through the inland navigation, the other overland by the way of the river Altamaha. The first party advanced to Sunbury and summoned the fort to surrender. Colonel McIntosh, its commander, replied, "Come and take it." The enterprise was abandoned. The other corps pushed on towards Savannah, but was met by about one hundred militia, with whom they skirmished. In one of these General Screeve, who commanded the Americans, was mortally wounded. At near Ogeechee Ferry the invaders were repulsed by General Elbert with two hundred Continental soldiers. Hearing of the repulse at Sunbury, they, also, retreated.

**Florida, INVASION OF, BY OGLETHORPE.** When Oglethorpe returned to Georgia from England (1736) he discovered a hostile feeling among the Spaniards at St. Augustine. They had tried to incite the Indians against the new settlements, and also to procure the assassination of Oglethorpe. The latter, not fairly prepared to resist an invasion, sent a messenger to St. Augustine to invite the Spanish commandant to a friendly conference. He explored some of the coast islands and prepared for fortification. (See *Oglethorpe*.) His messenger did not return, and he proceeded to secure possession of the country so far as its defined boundary permitted him. His hostile preparations made the Spaniards vigilant, and even threaten war; and when, in 1739, there was war between England and Spain, he determined to strike the Spaniards at St. Augustine a heavy blow before they were fully prepared to resist it. He penetrated Florida with a small force and captured some outposts early in 1740; and in May he marched towards St. Augustine with six hundred regular troops, four hundred Carolina militia, and a large body of friendly Indians. With these he stood before St. Augustine in June, after capturing two forts, and demanded the instant surrender of the post. It was refused, and Oglethorpe determined to starve the garrison by a close investment. The town was surrendered, and a small squadron blockaded the harbor. Swift-sailing galleys ran the weak blockade and well

supplied the fort. Oglethorpe had no cannon and could not breach the walls. In the heats of summer malaria invaded his camp, the siege was raised, and he returned to Savannah. Hostilities were now suspended for about two years. (See *Georgia, Invasion of by Spaniards*.)

**Florida Ordinance of Secession.** Florida, purchased of Spain, and the most unimportant state in the Union, was early made the theatre of seditious speech and action by her politicians. Her representatives in Congress were anxious for secession, and forward in assumptions of sovereignty for their little state. Anxious to establish an independent empire on the borders of the Gulf of Mexico, the politicians met in convention early in January, 1861, at Tallahassee, the state capital, a city of less than two thousand inhabitants. Colonel Petit was chosen chairman of the convention, and Bishop Rutledge invoked the blessing of the Almighty upon the acts they were about to perform. The members numbered sixty-nine, and about one third of them were "Co-operationists." (See *Mississippi Ordinance of Secession*.) The Legislature of Florida, fully prepared to co-operate with the convention, had convened at the same place on the 5th. On the 10th the convention adopted an ordinance of secession by a vote of sixty-two against seven. In its preamble it was declared that "all hopes of preserving the Union upon terms consistent with the safety and honor of the slave-holding states" had been "fully dissipated." And it was further declared that by the ordinance Florida had withdrawn from the Union and become "a sovereign and independent nation." On the following day the ordinance was signed, while bells rang and cannons thundered to signify the popular joy. The news was received by the Florida representatives in Congress at Washington; but, notwithstanding the state had "withdrawn from the Union," they remained in their seats for reasons given in a letter to Joseph Finnegan, written by Senator David L. Yulee from his desk in the Senate chamber. "It seemed to be the opinion," he said, "that if we left here, force, loan, and volunteer bills might be passed, which would put Mr. Lincoln in immediate condition for hostilities; whereas, by remaining in our places until the 4th of March, it is thought we can keep the hands of Mr. Buchanan tied and disable the Republicans from effecting any legislation which will strengthen the hands of the incoming administration." Senators from other states wrote similar letters under their official franks. The convention was addressed by L. W. Spratt, of South Carolina, an eminent advocate for reopening the African slave-trade. Delegates were appointed to a general convention to assemble at Montgomery, Ala., and other measures were taken to secure the "sovereignty" of Florida. The Legislature authorized the emission of treasury notes to the amount of \$500,000, and defined the crime of treason against the state to be, in one form—the holding of office under the National government in case of actual collision between the state and government troops—punishable with death.

The governor of the state (Perry) had made arrangements before the passage of the ordinance of secession to seize the United States forts, navy-yard, and other government property in Florida.

**Florida, REVOLUTIONARY MOVEMENTS IN (1810).** The success of Napoleon's arms in Spain and the impending peril to the Spanish monarchy gave occasion for revolutionary movements in the Spanish province of West Florida bordering on the Mississippi. That region undoubtedly belonged to the United States as a part of Louisiana bought from the French, but Spain had refused to relinquish it. The inhabitants were mostly of British or American birth. Early in the autumn of 1810 they seized the fort at Baton Rouge, met in convention, and proclaimed themselves independent, adopting a single star for their flag, as the Texans did in 1836. There were some conflicts between the revolutionists and adherents of the Spanish connection, and an attack upon the insurgents seemed imminent from the Spanish garrison at Mobile. Through Holmes, Governor of the Mississippi Territory, the revolutionists applied to the United States for recognition and aid. They claimed all the unlocated lands in the domain, pardon for all deserters from the United States Army (of whom there were many among them), and an immediate loan of \$100,000. Instead of complying with these requirements, the President issued a proclamation for taking possession of the east bank of the Mississippi, an act which had been delayed because of conciliatory views towards Spain. Claiborne, Governor of the Orleans Territory, then in Washington, was sent in haste to take possession, authorized, in case of resistance, to call upon the regular troops stationed on the Mississippi, and upon the militia of the two adjoining territories. It was not necessary. Soon after this movement at Baton Rouge a man named Kemper, who purported to act under the Florida insurgents, approached Mobile, with some followers, to attempt the capture of the garrison. He was repulsed; but the alarmed Spanish governor wrote to the American authorities that if he were not speedily reinforced he should be disposed to treat for the transfer of the entire province. Congress passed an act authorizing the President to take possession of both East and West Florida to prevent its falling into the hands of another foreign power. Thus it might be held subject to future peaceful negotiations with Spain.

**Floridians.** (See *Mobilians*.)

**Floyd, JOHN BUCHANAN,** was born in Montgomery County, Va., in 1805; died at Abingdon, Va., April 26, 1863. Admitted to the bar in 1828, he practised law in Helena, Ark.; but in 1839 he settled in Washington County, in his native state. He served in the Virginia Legislature several terms, and was governor of the state in 1850-53. His father, John, had been governor of Virginia. In 1857 President Buchanan appointed him Secretary of War, in which office he proved disloyal, and conspired

to overthrow the government by furnishing the slave-labor states with arms and dispersing the army. (See *Floyd's Disloyal Acts*.) Indicted by the grand jury of the District of Columbia as being privy to the abstracting of \$870,000 in bonds from the Department of the Interior, at the close of 1860 he fled to Virginia, where he was commissioned a general in the Confederate army. In that capacity he was driven from West Virginia by General Rosecrans. The night before the surrender of Fort Donelson (which see) he stole away in the darkness, and, being censured by the Confederate government, he never served in the army afterwards.

**Floyd, WILLIAM,** a signer of the Declaration of Independence, was born in Suffolk County, L. I., Dec. 17, 1764; died in Oneida County, N. Y., Aug. 4, 1821. He took an early and vigorous part in the Revolution; was a member of the New York Committee of Correspondence; and a member of the First Continental Congress in 1774, and until 1777. He was again a member after October, 1778. He was a state senator in 1777. During the occupancy of Long Island by the British, for nearly seven years, his family were in exile. Mr. Floyd held the commission of brigadier, and commanded the Suffolk County militia in repelling an invasion of Long Island by the British. General Floyd was a member of the First National Congress, and as Presidential elector gave his vote for Jefferson in 1801.

**Floyd's Disloyal Acts.** John B. Floyd, Secretary of War, was deeply concerned in the conspiracy for the overthrow of the Republic. While in office in the cabinet of President Buchanan, he was detected, by a committee of the House of Representatives, in the act of stripping the Northern arsenals of arms and ammunition and filling those of the South with those munitions of war. So early as Dec. 29, 1859—a year before—according to the report of the committee, he had ordered the transfer of 65,000 percussion muskets, 40,000 muskets altered to percussion, and 10,000 percussion rifles from the armory at Springfield, Mass., and the arsenals at Watervliet, N. Y., and Watertown, Mass., to the arsenals at Fayetteville, N. C., Charleston, S. C., Augusta, Ga., Mount Vernon, Ala., and Baton Rouge, La.; and these were distributed in the spring of 1860, before the meeting of the Democratic Convention at Charleston (which see). Eleven days after the issuing of the above order by Floyd Jefferson Davis introduced (Jan. 9, 1860) into the National Senate a bill "to authorize the sale of public arms to the several states and territories, and to regulate the appointment of superintendents of the National armories." Davis reported the bill from the Military Committee of the Senate, and, in calling it up on Feb. 21, said, "I should like the Senate to take up a little bill which I hope will excite no discussion. It is the bill to authorize the states to purchase arms from the National armories. There are a number of volunteer companies wanting to purchase arms, but the states have not a sufficient supply." Senator Fessenden,

of Maine, asked (Feb. 23) for an explanation of reasons for such action. Davis replied that the Secretary of War had recommended an increase of appropriations for arming the militia, and, as *the militia of the states were not militia of the United States*, he thought it best for the volunteer companies of states to have arms that were uniform in case of war. Fessenden offered an amendment (March 26) that would deprive it of mischief, but it was lost, and the bill was passed by a strict party vote—29 Democrats against 18 Republicans. It was smothered in the House of Representatives. (See "Wise's Proposition to Davis when Secretary of War," article *Rebellion planned in 1856*.) By a stretch of authority under an old act of Congress (1825), Floyd sold to states and individuals in the South over 31,000 muskets altered from flint to percussion for \$2.50 each. On Nov. 24, 1860, he sold 10,000 muskets to G. B. Lamar, of Georgia; and on the 16th he had sold 5000 to Virginia. The *Mobile Advertiser*, one of the principal organs of the conspirators in Alabama, who knew the secret of Floyd's movements, said, "During the past year 135,430 muskets have been quietly transferred from the Northern arsenal at Springfield alone to those of the Southern States. We are much obliged to Secretary Floyd for the foresight he has thus displayed in disarming the North and equipping the South for this emergency. There is no telling the quantity of arms and munitions which were sent South from other arsenals. There is no doubt but that every man in the South who can carry a gun can now be supplied from private or public sources." A Virginia historian of the war (Pollard) said, "It was safely estimated that the South entered upon the war with 150,000 small-arms of the most approved modern pattern and the best in the world." Only a few days before Floyd left his office of Secretary of War and fled to Virginia he attempted to supply the Southerners with heavy ordnance also. On Dec. 20, 1860, he ordered forty columbiads and four 32-pounders to be sent from the arsenal at Pittsburgh to an unfinished fort on Ship Island, in the Gulf of Mexico; and seventy-one columbiads and seven 32-pounders to be sent from the same arsenal to an embryo fort at Galveston, Tex., which would not be ready for armament in five years. When Quartermaster Taliaferro (a Virginian) was about to send off these heavy guns, an immense public meeting of citizens, called by the mayor, was held, and the guns were retained. When Floyd fled from Washington his successor, Joseph Holt, of Kentucky, countermanded the order.

**Flying Camp.** In June, 1776, Congress, at the suggestion of Washington, called for ten thousand men from Pennsylvania, Delaware, and Maryland to form a "flying camp" for the protection of New Jersey. Colonel Hugh Mercer, of Virginia, was promoted to brigadier-general and put in command of this corps, which never reached the number called for. On the death of the commander, at Princeton, it was broken up.

**Focus of Sedition.** It is agreed by all ob-

servers that the National capital was the focal point of active conspiracy against the Union during 1860; for there, in Congress, were gathered the chief political actors in the movement. There was the voltaic pile that energized the secession movement in all the slave-labor states. A leading Georgia journal (*The Southern Confederacy*), published at Atlanta, said, "The towns and cities have been flooded with sensational despatches and inflammatory rumors, manufactured in Washington city for the especial occasion. To be candid, there has never been as much lying and hullyng practised, in the same length of time, since the destruction of Sodom and Gomorrah as in the recent campaign. The fault has been at Washington city. From that cesspool have emanated all the abominations that ever cursed a free people." So early as Dec. 13, 1860, about all of the leading disunionists at Washington assembled at night at the room of Reuben Davis, a representative in Congress from Mississippi, and there signed the following letter to their constituents: "The argument is exhausted. All hope of relief in the Union through the agencies of committees [these had just been appointed; see *Thirty-sixth Congress*], Congressional legislation, or Constitutional amendments is extinguished, and we trust the South will not be deceived by appearances or the pretence of new guarantees. The Republicans are resolute in their purpose to grant nothing that will or ought to satisfy the South. We are satisfied the honor, safety, and independence of the Southern people are to be found only in a Southern confederacy—a result to be obtained only by separate state secession—and that the sole and primary aim of each slave-holding state ought to be its speedy and absolute separation from an unnatural and hostile Union." This declaration was signed by a large number of Senators and Representatives and sent broadcast over the slave-labor states, first by telegraph, and then in print. Mr. Toombs returned to Washington from Georgia a few days after; and on Dec. 22 he telegraphed an address to the people of that state, in which he said, "I now tell you, upon the faith of a true man, that all further looking to the North for security for your constitutional rights in the Union ought to be instantly abandoned. It is fraught with nothing but ruin to yourselves and your posterity. Secession by the 4th of March next should be thundered from the ballot-box by the unanimous voice of Georgia on the 2d day of January next [the time for electing members of the Secession Convention]. Such a voice will be your best guarantee for liberty, security, tranquillity, and glory." This despatch unsettled conservatives and dazed the mass of the people. Several of similar character from Toombs and others were sent from Washington, and decided the wavering vote of Georgia for secession. (See *Georgia Ordinance of Secession*.)

**Fontainebleau, Treaty of.** At Fontainebleau, Nov. 3, 1762, a treaty of peace was negotiated, which was signed at Paris. (See *Treaty of Paris*.)

**Food at New Plymouth.** The food of the "Pilgrims" at Plymouth was very simple and of small variety for several years. When, in August, 1623, the third supply of colonists—about sixty in number—came, the best dish that could be set before them was a lobster, a piece of fish, and a cup of "fair spring-water." As to bread, there was none in the colony.

**Foote, ANDREW HULL,** Rear-admiral United States Navy, was born at New Haven, Conn., Sept. 12, 1806; died in New York city, June 26, 1863. He entered the navy as midshipman in 1822; was flag-lieutenant of the Mediterranean

ANDREW HULL FOOTE.

squadron in 1833; and in 1838, as first lieutenant of the ship *John Adams*, Commodore Read, he circumnavigated the globe, and took part in an attack on the pirates of Sumatra. He was one of the first to introduce (1841) the principle of total abstinence from intoxicating drinks into the United States Navy; and on the *Cumberland* (1843-45) he delivered, on Sundays, extemporary sermons to his crew. He successfully engaged in the suppression of the slave-trade on the coast of Africa (1849-52). In command of the China station in 1856, when the Chinese and English were at war, Foote exerted himself to protect American property, and was tired upon by the "Celestials." His demand for an apology was refused, and he stormed and captured four Chinese forts, composed of granite walls seven feet thick and mounting one hundred and seventy-six guns, with a loss of only forty men. The Chinese garrison of five thousand men lost four hundred of their number killed and wounded. In the summer of 1861 Foote was made captain, and in September was appointed flag-officer of a flotilla of gunboats fitted out chiefly at Cairo, and commanded the naval expedition against Forts Henry and Donelson (which see), on the Tennessee and Cumberland rivers, early in 1862, in co-operation with General Grant. In the attack on the latter he was severely wounded in the ankle by a fragment of a shell. Though suffering, he commanded the naval attack on Island Number Ten (which see). After its reduction he re-

turned to his home at New Haven. He was appointed rear-admiral in July, 1862; and in May, 1863, was ordered to take command of the South Atlantic squadron, but died while preparing in New York to leave for Charleston.

**Foragers, PROPERTY DESTROYED BY.** With the opening of the spring of 1778 strong foraging parties were sent out by the British holding Philadelphia; and these often met small parties of American soldiers, when sharp skirmishes ensued. One of these parties joined an expedition up the Delaware (May 7), who captured or burned a number of vessels, among them an unfinished Continental frigate at the falls near Trenton, whither it had been conveyed for safety.

**Forbes, JOHN,** was born in Fifeshire, Scotland, in 1710; died in Philadelphia, March 11, 1759. He was a physician, but, preferring military life, he entered the British army, and was lieutenant-colonel of the Scotch Greys in 1745. He was acting quartermaster-general under the Duke of Cumberland; and late in 1757 he came to America, with the rank of brigadier-general. He commanded the troops—eight thousand in number—against Fort Duquesne (which see), and he named the place Pittsburgh, in honor of William Pitt.

**Force, PETER,** was born at Passaic Falls, N. J., Nov. 26, 1790; died in Washington, D. C., Jan. 23, 1868. He learned the printer's trade in New York city, and was president of the New York Typographical Society in 1812. In November, 1815, he settled in Washington city, became a newspaper editor and publisher, and was mayor of the city in 1836-40. He was major-general of the militia of the district in 1860, and was president of the National Institute. Mr. Force made a contract with the United States government in 1833 for the preparation and publication of a documentary history of the American colonies covering the entire period of the Revolution. He prepared and published nine volumes, folio, and had the tenth prepared, when Congress refused to make further appropriations for the work, and it has never been published. He had gathered an immense collection of books, manuscripts, maps, and plans; and in 1867 his entire collection was purchased by the government for \$100,000, and it was transferred to the library of Congress. His great work is entitled *American Archives*. Mr. Force's first publication in Washington was the *National Calendar*, an annual volume of national statistics, which was continued from 1820 to 1836.

**Forces at Yorktown.** For the siege of Yorktown the French provided thirty-seven ships of the line, and the Americans nine. The Americans furnished 9000 land-troops (of whom 5500 were regulars), and the French 7000. Among the prisoners were two battalions of Anspachers, amounting to 1027 men, and two regiments of Hessians, numbering 875. The flag of the Anspachers was given to Washington by the Congress. (See *Offerings of a Grateful Congress*.)

Foreign Governments and the United

States (1861). From the time when the South Carolina Ordinance of Secession was passed there was observed in most of the European courts an unfriendliness of spirit towards the National government and a willingness to give its enemies encouragement in their revolutionary measures. The public journals in their interest were equally unfriendly in their utterances. When, early in February, the Confederate States government (which see) was organized, Europe seemed prepared to accept the hopeless dismemberment of the Republic as an accomplished fact. This belief was strengthened by the despatches of most of the foreign ministers at Washington to their respective governments, who announced, early in February, the practical dissolution of the Union; and some affected to be amazed at the folly of Congress in legislating concerning the tariff and other National measures when the nation was hopelessly expiring. The Queen of England, in her speech from the throne, expressed a "heartfelt wish" that the differences that distracted our country "might be susceptible of a satisfactory adjustment." For these humane expressions she was reproved; and, finally, yielding to the importunities of her ministers, some of whom earnestly desired the downfall of our Republic, she issued (May 13, 1861), a proclamation of neutrality, by which a Confederate government, as existing, was acknowledged, and belligerent rights were accorded to the insurgents. Already an understanding existed between the governments of England and France that they were to act together in regard to American affairs. They had even gone so far as to apprise other European governments of this understanding, with the expectation that they would concur with them and follow their example, whatever it might be. Thus, at the very outset of our difficulties, these two powerful governments had entered into a combination for arraying Europe on the side of the insurgents, and giving them moral if not material aid in their efforts to destroy the Republic. The proclamation of the British queen, made with unseemly haste before the minister of the new administration (C. F. Adams) could reach England, was followed by corresponding unfriendly action in the British Parliament. And in addition to affected indifference to the fate of our nation, British legislators, orators, publicists, and journalists were lavish of censureless abuse, not only of the government, but of the people of the free-labor states who were loyal to the government. This abuse was often expressed in phrases so unmanly and ungenerous, and even coarse and vulgar at times, that high-minded Englishmen blushed for shame. The emperor of the French was more cautious and astute; but he followed the British queen in according belligerent rights to the insurgents by a decree (June 11, 1861), and, at the same time, entered into political combinations for the propagation of imperialism in North America, with a belief that the days of the great Republic were numbered and its power to enforce the Monroe Doctrine (which see) had vanished. The Queen of Spain also

hastened to proclaim the neutrality of her government, and to combine with France in replanting the seeds of monarchical institutions in the Western Hemisphere, now that the Republic was expiring. The King of Portugal also recognized the insurgents as belligerents. But the more enlightened and wise monarch of Russia, who was about to strike off the shackles of almost forty million slaves in his own dominions, instructed his minister (July 29, 1861) to say to the imperial representative at Washington: "In every event the American nation may count upon the most cordial sympathy on the part of our august master during the important crisis which it is passing through at present." The Russian emperor kept his word; and the powers of Western Europe, regarding him as a pronounced ally of the American Republic, acted with more circumspection. The attitude of foreign governments encouraged the insurgents to believe that recognition and aid would surely be furnished; and the government of England, by a negative policy, did give them all the aid and encouragement it prudently could until it was seen that the Confederate cause was hopeless, when Lord John Russell addressed the head of the Confederacy in insulting terms. That astute publicist, Count Gasparin, of France, writing in 1862, when considering the unprecedented precipitancy with which leading European powers recognized the insurgents as belligerents, said, "Instead of asking on which side were justice and liberty, we have hastened to ask on which side were our interests; then, too, on which side were the best chances of success." He said England had a legal right to be neutral, but had no moral right to withhold her sympathies from a nation "struggling for its existence and universal justice against rebels intent on crimes against humanity."

**Foreign Intercourse** was first established by law in 1790. President Washington, in his message (Jan. 8, 1790), suggested to Congress the propriety of providing for the employment and compensation of persons for carrying on intercourse with foreign nations. The House appointed a committee (Jan. 15) to prepare a bill to that effect, which was presented on the 21st. It passed the House on March 30. The two Houses could not agree upon the provisions of the bill, and a committee of conference was appointed; and finally the original bill, greatly modified, was passed (June 25, 1790). The act fixed the salary of ministers at foreign courts at \$9000 a year, and *chargés d'affaires* at \$4500. To the first ministers sent to Europe the Continental Congress guaranteed the payment of their expenses, with an additional compensation for their time and trouble. These allowances had been fixed at first at \$11,111 annually. After the peace the Continental Congress had reduced the salary to \$9000, in consequence of which Franklin insisted upon his recall, the sum being insufficient. When the bill of 1790 went before the Senate that body was only willing to vote a general sum for the expenses of foreign intercourse, and to leave the compensation of the respective ministers to the discretion

of the President, urging that the difference in expenses at the various courts called for discrimination in the sums allowed. To this the House would not agree, and for a while both Houses insisted upon compliance with their respective views. Hence the delay in the passage of the bill. The act also made allowance for "outfits," which had been insisted upon by Jefferson when he was appointed to succeed Franklin.

**Foreign Officers in the Continental Army.** There being a great deficiency of native skill in the departments of artillery and engineering at the beginning of the war, it was thought desirable to procure foreign officers; and it was a part of Silas Deane's business abroad to engage a few of this description. He found a large number of officers were then out of employment, and Deane was beset with almost endless solicitations. He exceeded his instructions and sent out about fifty officers of all ranks, to whom he made extravagant promises of promotion. These officers became a source of discontent to the native officers and considerable embarrassment to Congress. There was, indeed, great jealousy and heart-burnings among the officers; and on account of these foreigners being put in places of high rank, there was a disposition on the part of some Americans to quit the army. Because a French officer named Du Coudray, it was rumored, was to be made a major-general, Greene, Knox, and Sullivan, in a joint letter to Congress, threatened to resign if the appointment should be made. Deane had signed a contract with Du Coudray for a major-generalship in consideration of some supplies which he had furnished. Congress, offended, voted the letter an "attempt to influence their decision, an invasion of the liberties of the people, and indicating a want of confidence in the justice of Congress," for which the writers were required to make an apology. Duportail, Radrière, and J. B. Govion were engaged as engineers, and were officers of merit, recommended by the French court. Kosciuszko and Count Pulaski were officers from Poland, where they had won distinction; and the Baron de Steuben, a Prussian officer, was of great service in disciplining the army, which he joined at Valley Forge. Lafayette served as a volunteer, without pay, and served the American cause with the zeal and fidelity of a disinterested patriot. He brought with him eleven other officers, among them the Baron de Kalb. (See *Choiseul and the Americans*.)

**Forest Foundling, A.** After the battle at Tallahatchie (November, 1813) an Indian mother was found among the slain. Upon her bosom lay her infant boy, vainly endeavoring to draw sustenance from the cold breast. The babe was carried to General Jackson, who vainly tried to induce some of the captive mothers to give it nourishment. "No," they said, "his relations are all dead; kill him too." The babe was nourished with sugar and water in Jackson's tent until a nurse could be procured at Huntsville, when it was sent to Mrs. Jackson. The general was a childless man, and he adopt-

ed this forest foundling as his son. Mrs. Jackson watched over him with a mother's care, and he grew to be a beautiful youth, full of promise; but he died of consumption at the Hermitage before he reached manhood, and was sincerely mourned by his foster parents. The instincts of the Indian were strong in this boy. He delighted to roam in the forests, and decorate his head with feathers, and start out of an ambush with loud yells and horrible grimaces to frighten children. He was apprenticed to a harness-maker in Nashville.

**Forrest in Tennessee and Kentucky.** General N. B. Forrest had become a famous guerilla chief in 1863, and early in 1864 the sphere of his duties was enlarged, and their importance increased. He was acknowledged to be the most skillful and daring Confederate leader in the West. He made an extensive raid in Tennessee and Kentucky with about five thousand mounted men in March and April, 1864. He had been skirmishing with General W. S. Smith in northern Mississippi, and, sweeping rapidly across the Tennessee River into western Tennessee, rested a while at Jackson, and then (March 23) pushed on towards Kentucky. A part of his force captured Union City the next day, with the National garrison of four hundred and fifty men. Forrest then pushed on to Paducah, on the Ohio River, with three thousand men, and demanded the surrender of Fort Anderson there, in which the little garrison of seven hundred men, under Colonel Hicks, had taken refuge. It was refused; and after assailing the works furiously, and plundering and burning the town, until midnight, he ceased the assault. Hearing of reinforcements for Hicks approaching, he decamped (March 27) with a loss of three hundred men killed and wounded. The National loss was sixty killed and wounded. Forrest was chagrined by this failure, and proceeded to attack Fort Pillow, on the Mississippi, which he captured in April. (See *Fort Pillow*.) Hearing of the march of General Sturgis from Memphis to intercept him, Forrest escaped from Tennessee into Mississippi. A few weeks later, troops sent out from Memphis to hunt up and capture him were defeated by him in a severe engagement at Gun Town (June 10), on the Mobile and Ohio Railway, and were driven back with great loss. On the 14th he was defeated near Tupelo, Miss. Not long afterwards, when Smith was in Mississippi with ten thousand men, the bold raider flanked him, and dashed into Memphis in broad daylight, at the head of three thousand cavalry, in search of National officers, and escaped again into Mississippi. Forrest died Oct. 29, 1877.

**Forrest's Invasion of Tennessee (1864).** For several weeks Forrest, the guerilla leader, had been in northern Alabama, to prevent troops from the Mississippi joining Sherman. He crossed the Tennessee River, near Waterloo (Sept. 25, 1864), with a force of light cavalry about seven thousand strong, and invested Athens. The post was surrendered about half an hour before sufficient reinforcements arrived to hold it. These, with the garrison, after a sharp con-

flict, became prisoners. Forrest then pushed on northward to Pulaski, in Tennessee, destroying the railway; but General Rousseau, at Pulaski, repulsed Forrest after brisk skirmishing several hours, when the raider made eastward, and struck the railway between Tallahoma and Decherd. He was confronted and menaced by National forces under Rousseau, Steedman, and Morgan, and withdrew before he had done much damage. At Fayetteville he divided his forces, giving four thousand to Buford, his second in command. Buford attacked Athens (Oct. 2-3), which General Grainger had regarrisoned with the Seventy-third Indiana, and was repulsed. Forrest had pushed on to Columbia, on the Duck River, with three thousand men, but did not attack, for he met Rousseau, with four thousand men, coming down from Nashville. At the same time, General C. C. Washburne was moving up the Tennessee on steamers, with four thousand troops (three thousand of them cavalry), to assist in capturing the invaders. Several other leaders of the National troops, under the command of General Thomas, who had now arrived at Nashville, joined in the hunt for Forrest. He saw his peril, and, parolling his one thousand prisoners, he destroyed five miles of the railway south from the Duck River, and escaped over the Tennessee (Oct. 6), at Bainbridge, with very little loss.

**Forsyth, JOHN**, was born at Fredericksburg, Va., Oct. 22, 1780; died in Washington, D. C., Oct. 21, 1841. He graduated at the College of New Jersey in 1799. His parents removed to Georgia when he was quite young; he studied law, and was admitted to its practice about the year 1801. He was attorney-general of the state in 1808; member of Congress from 1813 to 1818, and from 1823 to 1827. He was also United States Senator, and from 1827 to 1829 was governor of Georgia. Mr. Forsyth was United States minister to Spain (1819-22), and negotiated the treaty that gave Florida to our Republic. He opposed "nullification" (which see) in South Carolina, favored Clay's Compromise Act of 1833 (which see), and was United States Secretary of State from 1835 to 1841.

**Fort Anne, EVENTS NEAR (1777).** When the British took possession of Ticonderoga (July 6, 1777), Burgoyne ordered gunboats to pursue the bateaux laden with stores, etc., from the fort. (See *Burgoyne's Campaign*.) The boom-bridge barrier across the lake there was soon broken, and the pursuing vessels overtook the fugitive boats near Skenesborough, and destroyed them and their contents. Colonel Long, in command of the men in them, escaped with his people and the invalids, and after setting fire to everything combustible at Skenesborough (now Whitehall), they hastened to Fort Anne, a few miles in the interior, followed by a British regiment. When near the fort, Long turned on his pursuers, and routed them; but the latter being reinforced, Long was driven back. He burned Fort Anne, and fled to Fort Edward, on the Hudson.

**Fort Brown, ON THE RIO GRANDE (1846).** On

his arrival on the Rio Grande, opposite Matamoras (March 29, 1846), with a part of the Army of Occupation, General Taylor began building a fort that would accommodate two thousand men. It was placed in command of Major Jacob Brown, and was afterwards named Fort Brown, in compliment to him. Taylor was ordered by General Ampudia, commander of the Mexican forces at Matamoras, to withdraw within twenty-four hours, as he claimed the territory around Fort Brown belonged to the Department of Tamaulipas, a part of Mexico. Taylor refused to do so; and when he had gone back to Point Isabel with a part of his forces, leaving Major Brown in command, Arista crossed the river with some troops to attack the fort. His army was hourly increasing in strength. On the night of May 4 the Mexicans erected a battery behind the fort, and early the next morning opened a heavy fire from it upon the fortification. At the same time batteries at Matamoras, which had fired upon the fort on the 3d, hurled shot and shell, but with little effect, for Brown had erected bomb-proof shelter. Almost at the beginning of the bombardment, the gallant commander was killed. The bombardment continued thirty-six hours, when Arista demanded a surrender of the fort. It was refused, and towards evening (April 6) a heavy tempest of shot and shell fell upon the fort. The fort withstood the attack until relieved by approaching troops under General Taylor. (See *Mexico, War with*.)

**Fort Cumberland attacked.** At the head of the Bay of Fundy the British had maintained Fort Cumberland from the year 1755. In 1776 only a small garrison was there to take care of the public property. Captain Jonathan Eddy, a native of Massachusetts, who had lived many years in the vicinity of the fort, believing it might be easily captured, applied to the Provincial Congress of Massachusetts for men and supplies for that purpose. These were not furnished, and Eddy returned to Nova Scotia, where he raised a few men, and on the night of Nov. 20, 1776, attacked the fort. Apprised of the movement, the little garrison, prepared, repulsed the assailants. A British reinforcement soon arrived, and the assailants fled in haste. The inhabitants, who had joined the standard of Eddy, soon saw their houses in flames, and then, fearing British vengeance, made their way to New England in a famishing condition.

**Fort Detroit.** The old French village of Detroit contained one hundred and sixty houses in 1812, and about eight hundred souls. It stretched along the river at a convenient distance from the water, and the present Jefferson Avenue was the principal street. On the high ground in the rear, about two hundred and fifty yards from the river, stood Fort Detroit, built by the English after the conquest of Canada, in 1760. It was quadrangular in form, with bastions and barracks, and covered about two acres of ground. The embankments were nearly twenty feet high, with a deep ditch, and were surrounded with a double row of pickets. The fort did not command the river. The town, also, was surround-

ed by pickets fourteen feet in height, with loopholes to shoot through.

**Fort Detroit, GARRISON OF, SAVED FROM STARVATION (1763).** While Detroit was closely besieged by Pontiac, a schooner was despatched from the Niagara River with provisions for the relief of the garrison. She was manned by twelve white men and six Mohawk Indians, and arrived in the Detroit River Sept. 3d. While at anchor, the vessel was attacked by about three hundred and fifty Indians in canoes, but they were dispersed by the crew. The master of the vessel and one of his crew were killed, and four were wounded. The vessel arrived in safety at Detroit, and with its contents the garrison was saved from starvation.

**Fort Donelson, CAPTURE OF.** After the capture of Fort Henry (which see) there was no hindrance to the river navy going up the Tennessee to the fertile cotton regions of the heart of the Confederacy. Foote sent Lieutenant-commander S. L. Phelps, with three vessels, to reconnoitre the borders of that river. They penetrated to Florence, Alabama, seizing Confederate vessels and destroying Confederate property, and discovered the weakness of the league in all that region, for Unionism was everywhere prevalent, but suppressed by the mailed hand of the Confederate leaders. Phelps's report caused an immediate expedition against Fort Donelson, situated on the high left bank of the Cumberland River, at Dover, the capital of Stewart County, Tenn. It was formed chiefly of outlying intrenchments, covering about one hundred acres, upon hills furrowed by ravines. At Fort Henry General Grant reorganized his army in three divisions, under Generals McClernand, Smith, and Lew. Wallace. (See *Belmont*.) Commodore Foote returned to Cairo to take his mortar-boats up the Cumberland River to assist in the attack. On the morning of Feb. 12, 1862, the divisions of McClernand and Smith marched for Fort Donelson, leaving Wallace with a brigade to hold the vanquished forts on the Tennessee. On the same evening Fort Donelson was invested. Grant resolved to wait for the arrival of the flotilla bearing troops that would complete Wallace's division before making the attack. General Pillow was in command of the fort; but, on the morning of the 13th, General Floyd arrived from Virginia with some troops and superseded him. They were assisted by General S. B. Bockner (see *Kentucky State Guard*), a better soldier than either. All day (Feb. 13) there was skirmishing, and at night the weather became extremely cold, while a violent rain-storm was falling. The National troops, bivouacking without tents, suffered intensely. They dared not light camp-fires, for they would expose them to the guns of their foes. They were without sufficient food and clothing. Perceiving the perils of his situation, Grant had sent for Wallace to bring over his troops. He arrived about noon on the 14th. The transports had arrived, and Wallace's division was completed and posted between those of McClernand and Smith, by which the thorough investment

of the fort was completed. At three o'clock that afternoon the bombardment of the fort was begun by the *Carondelet*, Captain Walke, and she was soon joined by three other armored gunboats in the front line. A second line was formed of unarmored boats. The former were exposed to a tremendous pounding by missiles from the shore-batteries; and they were compelled to retire, after receiving one hundred and forty wounds and having fifty-four men killed and wounded. Foote returned to Cairo to repair damages and to bring up a sufficient naval force to assist in carrying on the siege. Grant resolved to wait for the return of Foote and the arrival of reinforcements. But he was not allowed to wait. On the night of the 14th the Confederate leaders held a council of war, and it was concluded to make a sortie early the next morning, to rout or destroy the invading forces, or to cut through them and escape to the open country in the direction of Nashville. This was attempted at five o'clock (Feb. 15). The troops engaged in it were about ten thousand in number, commanded by Generals Pillow and Bushrod R. Johnson. They advanced from Dover—Mississippians, Tennesseans, and Virginians—accompanied by Forrest's cavalry. The main body was directed to attack McClernand's division, who occupied the heights that reached to the river. Buckner was directed to strike Wallace's division, in the centre, at the same time, so that it might not be in a condition to help McClernand. These movements were not suspected by the Nationals, and so quick and vigorous was Pillow's attack that Grant's right wing was seriously menaced within twenty minutes after the sortie of the Confederates was known. The attack was quick, furious, and heavy. Oglesby's brigade received the first shock, but stood firm until their ammunition began to fail, when they gave way under the tremendous pressure, excepting the extreme left, held by Colonel J. A. Logau, with his Illinois regiment. Imitating their commander, they stood as firmly as a wall, and prevented a panic and a rout. The light batteries of Taylor, McAllister, and Dresser, shifting positions and sending volleys of grape and canister, made the Confederate line recoil again and again. At eight o'clock McClernand's division was so hard pressed that he sent to Wallace for help. Wallace, being assigned to a special duty, could not comply without orders, for which he sent. Grant was away, in consultation with Commodore Foote, who had arrived. Again McClernand sent for help, saying his flank was turned. Wallace took the responsibility. Then Buckner appeared. The battle raged fiercely. McClernand's line was falling back, in good order, and calling for ammunition. Wallace took the responsibility of ordering some up. Then he thrust his brigade (Colonel Thayer commanding) between the retreating troops and the advancing Confederates, flushed with hope, and formed a new line of battle across the road. Back of this was a reserve. In this position they awaited an attack, while McClernand's troops supplied themselves with ammunition from wagons

which Wallace had ordered up. Just then the combined forces of Pillow and Buckner fell upon them and were repulsed by a battery and the First Nebraska. The Confederates, after a severe struggle, retired to their works in confusion. This was the last sally from the fort. "God bless you!" wrote Grant's aid the next day to Wallace, "you did save the day on the right." It was now noon. Grant was in the field, and, after consultation with McClellan and Wallace, he ordered the former to retake the hill he had lost. This was soon bravely done, and the troops bivouacked on the field of victory that cold winter night. Meanwhile, General Smith had been smiting the Confederates so vigorously on their right that, when night came on, they were imprisoned within their trenches, unable to escape. Finding themselves closely held by Grant, the question, How shall we escape? was a paramount one in the minds of Floyd and Pillow. They were both terror-stricken by the impending danger of falling into the hands of their outraged government. At midnight the three Confederate commanders held a private council, when it was concluded that the garrison must surrender. "I cannot surrender," said Floyd; "you know my position with the Fed-

chusetts was advised, with justice, to make peace by restoring to the Indians their lands. The attacks of the barbarians extended all along the northern frontier as far west as the Connecticut River. To cover the towns in that valley, Fort Dummer was erected on the site of what is now Brattleborough, in Vermont, the oldest English settlement in that state. (See *Norridgewock, Expedition to.*)

**Fort Fisher, CAPTURE OF.** It was late in 1864 when an attempt was made to close the port of Wilmington against English blockade-runners by capturing Fort Fisher and its dependencies at the mouth of the Cape Fear River. The expedition sent against that fort consisted of a powerful fleet of war-vessels under Admiral D. D. Porter and a land force under the immediate command of General Godfrey Weitzel, of the Army of the James, accompanied by General B. F. Butler as commander of that army. The whole force (the troops on transports) was gathered in Hampton Roads early in December. The troops consisted of General Ames's division of the Twenty-fourth Corps and General Paine's division of the Twenty-fifth (colored) Corps. The war-vessels were wooden ships, iron-clads, monitors, gunboats, and a powder-

THE POWDER-SHIP. (See foot-note on page 507.)

erals; it won't do, it won't do." Pillow said, "I will not surrender myself nor my command; I will die first." "Then," said Buckner, coolly, the surrender will devolve on me." Then Floyd said: "General, if you are put in command, will you allow me to take out, by the river, my brigade?" "If you will move before I surrender," Buckner replied. Floyd offered to surrender the command, first, to Pillow, who replied, "I will not accept it—I will never surrender." Buckner said, like a true soldier, "I will accept it, and share the fate of my command." Within an hour after the conference Floyd fled up the river with a part of his command, and Pillow sneaked away in the darkness and finally reached his home in Tennessee. The Confederates never gave him employment again. The next morning the fort and 13,500 men were surrendered, and the spoils of victory were 3000 horses, 48 field-pieces, 17 heavy guns, 20,000 muskets, and a large quantity of military stores. During the siege the Confederates lost 237 killed and 1000 wounded; the National loss was estimated at 446 killed, 1755 wounded, and 152 made prisoners.

**Fort Dummer.** In the war against the Norridgewock Indians (1723) repeated attempts were made to engage the assistance of the Mohawks, but they were unsuccessful, and Massa-

ship, destined to be blown up abreast of the fort with a hope of destructive effect. Fort Fisher was an extensive earthwork on a point of sandy land between the Cape Fear River at its mouth and the ocean, and was commanded by General W. H. C. Whiting. The land-face of the fort occupied the whole width of the cape known as Federal Point, and was armed with twenty heavy guns. All along the land-front was a stockade, and on the sea-front were the wrecks of several blockade-runners. At noon on the 14th the transports, with the troops, went to sea; the naval vessels had departed thirty-six hours before. The appointed rendezvous of the expedition was twenty-five miles off the coast, at Fort Fisher, so as not to be discovered by the Confederates until ready for action. There was a delay in the arrival of the war-vessels, and the transports, coaled and watered for only ten days, were compelled to run up to Beaufort harbor (N. C.) for both, the war-fleet remaining off Fort Fisher. A capital part of the movement was the explosion on board of a vessel anchored near the fort, in the night, of two hundred and fifteen tons of gunpowder, with the hope that it would dismount the guns or otherwise disable the fort and garrison, so as to allow the troops to land and make an easy conquest. During the absence of the troops up the coast the powder-

ship performed her functions, but with no serious effect,\* and the war-vessels bombarded the fort, doing very little damage. The transports returned on Christmas evening, the next morning the war-vessels opened a bombardment, and at 3 o'clock P.M. the troops began their debarkation two miles above the fort. Only a part of the troops had been landed when the surf ran too high to permit more to go ashore. These marched down to attack the fort. Not a gun had been dismounted, and, as they were ready to rake the narrow peninsula on which the troops stood the moment the fleet should withhold its fire, prudence seemed to require the troops to withdraw. They did so, and were ordered to the James River to assist in the siege of Petersburg (which see), and the expedition of the land force against Fort Fisher was temporarily abandoned. It was resumed ten days afterwards. The war-vessels had remained off Fort Fisher. The same troops, led by Weitzel, were placed under the command of General A. H. Terry, with the addition of a thin brigade of 1400. Lieutenant-colonel Comstock, of General Grant's staff, who accompanied the first expedition, was made the chief-engineer of this. The expedition left Hampton Roads Jan. 6, 1865, and rendezvoused off Beaufort (N. C.), where Porter was taking in supplies of coal and ammunition. They were all detained by rough weather, and did not appear off Fort Fisher until the evening of the 12th. The navy, taught by experience, took a position where it could better affect the land-front of the fort than before. Under cover of the fire of the fleet, 8000 troops were landed (Jan. 13). Terry wisely provided against an attack in the rear by casting up intrenchments across the peninsula and securing the free use of Masonborough Inlet, where, if necessary, troops and supplies might be landed in still water. On the evening of the 14th the light guns were landed, and before morning were in battery. Wisely planned by Terry, a

grand assault was made on the morning of the 15th. The batteries of the war-ships opened the battle on the 14th. They kept up a bombardment all day, severely damaging the guns of the fort and silencing most of them. The iron-clads fired slowly throughout the night, worrying and fatiguing the garrison, and at eight o'clock in the morning (Jan. 15) the entire naval force moved up to the attack. Meanwhile, 1400 marines and 600 sailors, armed with revolvers, cutlasses, and carbines, were sent from the ships to aid the troops in the assault. Ames's division led in the assault, which began at half past three o'clock P.M. The advance carried shovels and dug rifle-pits for shelter. A heavy storm of musketry and cannons opened upon the assailants. The fleet had effectually destroyed the palisades on the land-front. Sailors and marines assailed the northeast bastion, and with this assault began the fierce struggle. The garrison used the huge traverses that had shielded their cannons as breastworks, and over these the combatants fired in each others' faces. The struggle was desperate and continued until nine o'clock, when the Nationals, fighting their way into the fort, had full possession of it. All the other works near it were rendered untenable; and during the night (Jan. 16-17) the Confederates blew up Fort Caswell, on the right bank of the Cape Fear River. They abandoned the other works and fled towards Wilmington. The National loss in this last attack was 681 men, of whom 88 were killed. On the morning succeeding the victory, when the Nationals were pouring into the fort, its principal magazine exploded, killing 200 men and wounding 100. The fleet lost about 300 men during the action and by the explosion. The loss of the Confederates was reported by General Terry as over 2000 prisoners, 169 pieces of artillery, over 2000 small-arms, and a considerable quantity of ammunition and commissary stores. The port of Wilmington was closed to blockade-runners.

\* The powder-ship was the *Louisiana*, a propeller of 295 tons, having an iron hull. She was disguised as a blockade-runner. To have the powder above the water-line, a light deck was built for the purpose. On this was first placed a row of barrels of powder, standing on end, the upper one open. The remainder of the powder was in canvas bags, holding about sixty pounds each, the whole being stored as represented in the above sketch, in which the form of the vessel is also delineated. The whole weight of the powder was 215 tons, or 430,000 pounds. To communicate fire to the whole mass simultaneously, four separate threads of the Gomez fuse were woven through it, passing through each separate barrel and bag. At the stern and under the cabin was a heap of pine wood (H) and other combustibles, which were to be fired by the crew when they should leave the vessel. Three devices were used for communicating fire to the fuses, namely, clock-work, by which a percussion-cap was exploded; short spermaceti candles, which burned down and ignited the fuses at the same time; and a slow match that worked in time with the candles and the clock-work. The powder-vessel followed a blockade-runner and was anchored within three hundred yards of the fort, according to the report of Commander Rhind. When the combustibles were fired and the apparatus for igniting the fuses were put in motion, the crew escaped in a swift little steamer employed for the purpose. The explosion took place in one hour and fifty-two minutes after the crew left. Notwithstanding the concussion of the explosion broke window-glasses in a vessel twelve miles distant, and the whole fleet, at that distance, felt it, and it was also felt on land at Beaufort and New Berne, from sixty to eighty miles distant. There was no perceptible effect upon the fort and garrison. The edges of the parapets were as sharply defined as ever, and even the grass was not disturbed.

**Fort George, CAPTURE OF (1813).** The victors left York (see *York, Capture of*) early in May, 1813, and proceeded to attack Fort George, near the mouth of the Niagara River. Stormy weather had detained them at York for a week. Losses and sickness had reduced the number of the troops to one thousand. These were again conveyed by the fleet of Chauncey, who, with Dearborn and other naval commanders, went before in the pilot-schooner *Lady of the Lake* and selected a landing-place four miles east of Fort Niagara. The British force at Fort George and vicinity, under General Vincent, then numbered about one thousand eight hundred. Besides that fort they had several works along the Niagara River. The American troops were debarked May 8, and Chauncey sailed for Sackett's Harbor for supplies and reinforcements for the army. He returned to Dearborn's camp, in the *Madison*, on the 22d of May, and the same evening Commodore Perry arrived there. Arrangements were immediately made for an attack on Fort George. The commodore and Perry reconnoitred the enemy's batteries in the *Lady of the Lake*. Dearborn was ill, but on the morning

of the 27th the troops were conveyed by the squadron to a point a little westward of the mouth of the Niagara, and landed under cover of the guns of the fleet. The advance was led by Colonel Winfield Scott, accompanied by Commodore Perry, who had charge of the boats. He and Scott both leaped into the water at the head of the first division of the men, and, in the face of a galling fire and gleaming bayonets, they ascended the bank. The other troops followed, and, after a severe conflict on the plain, the British fell back discomfited. General Vincent, satisfied that he must retreat, and knowing Fort George to be untenable, ordered the garrison to spike the guns, destroy the ammunition, and abandon it. This was done, and the whole British force retreated westward to a strong position among the hills, at a place called "The Beaver Dams," about eighteen miles from the Niagara River. There Vincent had a deposit of stores and provisions. The garrisons of Forts Erie and Chippewa becoming alarmed, abandoned them, and the whole Niagara frontier of Canada passed into the hands of the Americans.

**Fort George, L. I., SURPRISE OF.** In the autumn of 1780 some Rhode Island Tory refugees took possession of the manor-house of General John Smith, at Smith's Point, L. I., fortified it and the grounds around it, and named the works Fort George, which they designed as a depository of stores for the British in New York. They began cutting wood for the British army in the city. At the solicitation of General Smith, and the approval of Washington, Major Benjamin Tallmadge crossed the Sound from Fairfield, with eighty dismounted dragoons, and landed, on the evening of Nov. 21, at Woodville. There he remained until the next night on account of a storm. At the mills, two miles from Fort George, he found a faithful guide, and at dawn he and his followers burst through the stockade, rushed across the parade, shouting "Washington and glory!" and so furiously assailed the redoubt on three sides that the garrison surrendered without resistance. Tallmadge demolished the fort, burned vessels lying at the wharf, and with three hundred prisoners started for Fairfield. At Cornu he destroyed three hundred tons of hay, collected for the British in New York, and reached Fairfield with his prisoners without losing a man. For this exploit Tallmadge received the thanks of Congress.

**Fort Granby, on the confines of Pennsylvania,** was surprised by French and Indians in August, 1756, who made the garrison prisoners, loaded them with flour, and drove them into captivity.

**Fort Griswold, MASSACRE AT.** (See *Arnold at New London.*)

**Fort Harrison and Spring Hill (1864).** Generals Ord and Birney, with a considerable force of National troops, crossed the James River on muffled pontoon bridges on the night of Sept. 28, to attack the Confederate works below Chapin's Bluff, the heaviest of which was Battery Harrison, on a hill overlooking a great extent of country. It was the strongest of the defences

of Richmond. Ord stormed and carried it before reinforcements could reach its thinned garrison. With the fort were captured a long line of intrenchments, with twenty-two pieces of heavy ordnance and about three hundred men. In the assault, General Burnham was killed and Ord severely wounded. The Nationals lost about seven hundred men killed and wounded. The strong work was named Fort Burnham, in honor of the slain general. Then Fort Gilmer, a little farther on, was assailed by the Nationals, with a loss of three hundred men. Meanwhile Birney, with three thousand colored troops in advance, attacked the Confederate works at Spring Hill, on New Market Heights. These were commanded by General Charles Paine. The Spring Hill redoubt was very strong. On its front was a marsh, traversed by a brook fringed with trees, and it was further defended by an *abatis*. The eager troops swept across the marsh, scaled the heights (Sept. 29, 1864), carried the works at the point of the bayonet, and secured the key-point to the Confederate defences in that quarter. The struggle was desperate, and the victory was won by the black warriors at a fearful cost of life and vigor. Before the storming party reached the works, two hundred of them fell dead, and not less than one thousand were killed, wounded, or captured. For their gallantry on that occasion, General Bntler, at the close of the war, presented a silver medal to the most meritorious actors. The Confederates attempted to retake Fort Harrison (Oct. 1, 1864). The troops were under the immediate direction of General Lee. They were driven back, with a loss of seven battle-flags and almost the annihilation of Clingman's North Carolina Brigade. Meanwhile General Kautz had pushed up and entered the Confederate outer line, within three or four miles of Richmond, when he was attacked and driven back, with a loss of nine guns and four hundred of his men made captives. The Confederates were in turn assailed by the Tenth National Corps, and, after a severe battle, were driven back, with a loss of seven hundred men and three brigade commanders.

**Fort Harrison, ATTACK UPON (1812).** At the very hour when the Pigeon Roost massacre took place (see *Fort Wayne*), two young haymakers were killed and scalped near Fort Harrison, on the Wabash, two miles above Terre Haute. The Prophet (see *Tecumtha and the Prophet*) at Tippecanoe was still busy stirring up the Indians against the white people. The garrison of Fort Harrison was commanded by Captain Zachary Taylor (afterwards President of the United States), who was just recovering from a severe attack of bilious fever. He had been warned by friendly Indians to be on his guard. His garrison was weak, for of the fifty men who composed it, not more than a dozen were exempt from the prevailing fever. Only two non-commissioned officers and six privates could mount guard at the same time. In the presence of impending danger some of the convalescents went upon duty freely. At midnight (Sept. 4, 1812) the barbarians stealthily approached the fort and set fire to one of the block-houses, which

contained the stores of the garrison. At the same time they furiously attacked the fort with muskets. So feeble in body were the garrison that it was difficult to keep the flames of the block-house under, and the horrid yells of the Indians made them feel that all was lost, and that they must give up in despair. Two of the stoutest soldiers deserted the post and tried to escape. One was cut in pieces and the other returned. Nothing but the prudence, valor, and presence of mind of the commander saved the post. The fire was subdued by great exertions. At six o'clock in the morning (Sept. 5) the garri-

son returned the fire of the assailants so briskly that the latter retired out of reach of the guns, after a contest of almost eight hours. They destroyed or drove off the live-stock found in the neighborhood, and for a while after the Indians abandoned the siege the garrison subsisted on green corn from the fields around, which the barbarians had spared. Soon afterwards General Hopkins, with Kentucky volunteers, gave ample relief to the sick and weary soldiers at Fort Harrison. Their entire loss in the siege was only three men killed and three wounded.

FORT HARRISON.

son returned the fire of the assailants so briskly that the latter retired out of reach of the guns, after a contest of almost eight hours. They destroyed or drove off the live-stock found in the neighborhood, and for a while after the Indians abandoned the siege the garrison subsisted on green corn from the fields around, which the barbarians had spared. Soon afterwards General Hopkins, with Kentucky volunteers, gave ample relief to the sick and weary soldiers at Fort Harrison. Their entire loss in the siege was only three men killed and three wounded.

**Fort Henry, CAPTURE OF.** At a bend of the Tennessee River, where it approaches the Cumberland River within about twelve miles, the Confederates built Fort Henry, on the right bank, and on a high hill opposite Fort Hieman. At the beginning of February, 1862, a land force under General Ulysses S. Grant, and a flotilla of gunboats under Commodore A. H. Foote, were sent to capture these two forts. They appeared about two miles below Fort Henry on Feb. 3. That fort was armed with seventeen great guns, twelve of which swept the river, and the garrison and troops encamped outside of the fort numbered less than three thousand. These were commanded by General Tilghman, of Maryland, a graduate of West Point Academy. Foote placed four of his iron-clad gunboats in position to bombard the fort, while two of his un-

armored vessels fished up torpedoes with which the Confederates had strewn the river bottom. Some of the troops went up the left side of the river to silence the guns of Fort Hieman, when the garrison fled. Meanwhile Foote opened (Feb. 6) a heavy fire on Fort Henry. It was so severe that in an hour the garrison were paucistricken. The troops outside of the fort had fled to Fort Donelson, twelve miles distant, on the Cumberland River; and only the commander and less than one hundred men remained in the fort to surrender to Foote. Grant and the land troops did not arrive until after the surrender, when the fort was turned over to him. The Nationals lost two killed and thirty-eight wounded. Of the latter, twenty-nine were wounded and scalded on the gunboat *Essex* by steam let out of the boilers by the piercing of a thirty-two-pound shell. As it passed it took off a portion of the head of Lieutenant S. B. Britton, the aid of Captain Porter, of the *Essex*, only seventeen years of age. This victory was a very important one. The Nationals were now fairly planted in the rear of the Confederates at Columbus (which see); and if they should capture Fort Donelson, on the Cumberland, the Confederates believed their cause would be ruined in Kentucky, Tennessee, and Missouri. The first great step towards the capture of Fort Donelson had been taken. Halleck telegraphed to McClellan, "Fort Henry is ours! The flag of the Union is re-established on the soil of Tennessee. It will never be removed." The Secretary of the Navy wrote to Foote: "The country appreciates your gallant deeds, and this department desires to convey to you and your brave associates its profound thanks for the service you have rendered."

**Fort Johnson, SEIZURE OF.** After the discovery of intrigues by Governor Campbell, of South Carolina, the Council of Safety of that province ordered Colonel William Moultrie to take possession of Fort Johnson, on James Island, near Charleston. Aware of this contemplated movement, Lord Campbell sent a party to the fort to throw the guns and carriages from the platform; and on Sept. 15, 1775, having suddenly dissolved the last royal Assembly in South Carolina, he fled for safety on board the British ship *Tamar*. Meanwhile the fort had been taken possession of by three companies, commanded respectively by C. C. Pinckney, Bernard Elliot, and Francis Marion. The fugitive governor sent his secretary in a boat from the *Tamar* to demand by "what authority they had taken possession of his majesty's fort?" "We hold the fort by express command of the Council of Safety," replied Lieutenant-colonel Motte, who was in command. A schooner was stationed between Fort Johnson and the town

lan, "Fort Henry is ours! The flag of the Union is re-established on the soil of Tennessee. It will never be removed." The Secretary of the Navy wrote to Foote: "The country appreciates your gallant deeds, and this department desires to convey to you and your brave associates its profound thanks for the service you have rendered."

to intercept the *Tamar's* boats; and very soon tents holding five hundred men dotted James Island, near the fort.

**Fort Lee, CAPTURE OF.** Early on the morning of Nov. 20, 1776, Cornwallis crossed the Hudson River from Dobbs's Ferry to Closter's Landing, five miles above Fort Lee, and with a force about six thousand strong, including artillery, climbed a steep, rocky pathway up a gorge in the Palisades, unobserved by Greene. A farmer awoke that officer from slumber in the morning twilight, in time for him to escape from imminent peril. He fled in haste from Fort Lee, with the garrison of two thousand men, leaving cannons, tents, stores, and camp equipage behind. He barely escaped capture. Washington, apprised of the danger, so well covered his retreat that less than one hundred stragglers were made prisoners.

**Fort McHenry, BOMBARDMENT OF.** Fort McHenry was a regular work on Fell's Point, Baltimore, about one half its present dimensions. In anticipation of a visit from the British marauding squadrons, the Baltimoreans had sunk some vessels in the narrow channel between the fort and Lazzaretto Point, which prevented the passage of an enemy's ships. Fort McHenry was garrisoned by about one thousand men, volunteers and regulars, commanded by Major George Armistead. To the right of it, guarding the shores of the Patapsco, and to prevent troops landing in the rear, were two redoubts (Fort Covington and Babcock's Battery). In the rear of these, upon high ground, was an unfinished circular redoubt for seven guns, and on Lazzaretto Point, opposite Fort McHenry, was a small battery. This and Fort Covington were in charge of officers of Barney's flotilla. Such were Fort McHenry and its supporters on the morning of Sept. 12, 1814, when the British fleet, under Admiral Cochrane, consisting of sixteen heavy vessels, five of them bomb-ships, had made full preparations for the bombardment of the fort. At sunrise (Sept. 13, 1814) the bomb-vessels opened a heavy fire on the fort and its dependencies at a distance of two miles, and kept up a well-directed bombardment until three o'clock in the afternoon. Armistead immediately opened the batteries of Fort McHenry upon the assailants; but after a while he found that his missiles fell short of his antagonist and were harmless. The little garrison was composed of two companies of Sea Fencibles, under Captains Bunbury and Addison; two companies of volunteers from the city of Baltimore, under the command of Captains Berry and Pennington; a company of United States artillery, under Captain Evans; a fine company of volunteer artillerymen, led by Judge Joseph H. Nichol-

son; a detachment of Barney's flotilla, under Lieutenant Redman, and detachments of regulars, six hundred strong, furnished by General Winder, and under the command of Lieutenant-colonel Stewart and Major Lane. The garrison was exposed to a tremendous shower of shells for several hours, without the power to inflict injury in turn, or even to check the fury of the assault; yet they endured the trial with cool courage and great fortitude. At length a bomb-shell dismounted a twenty-four-pounder in the fort, killing a lieutenant and wounding several of the men. Admiral Cochrane, observing the confusion in the fort caused by this event, and hoping to profit by it, ordered three of his bomb-vessels to move up nearer the fort, in order to increase the effectiveness of their guns. Armistead was delighted, and immediately ordered a general cannonade and bombardment from every part of the fort; and so severe was his punishment of the venturesome intruders that within half an hour they fell back to their old anchorage. A rocket vessel (*Erebus*) was so badly damaged that the British were compelled to send a division of small boats to tow her out of reach of Armistead's guns. The garrison gave three cheers, and the firing ceased. After the British vessels had resumed their former stations, they opened a more furious bombardment than before, and kept it up until after midnight, when it was discovered that a considerable force (twelve hundred picked men in barges) had been sent up the Patapsco in the gloom to attack Fort McHenry in the rear. They were repulsed, and the bombardment from the vessels ceased. At seven o'clock in the morning of the 14th the hostile shipping and the land forces menacing

THE ARMISTEAD VASE.

the city withdrew, and Baltimore was saved. In this attack on the fort the British did not lose a man; and the Americans had only four men killed and twenty-four wounded, chiefly by the exploding of the shell that dismounted the twenty-four-pounder. During the bombardment

Francis S. Key was held in custody in a vessel of the fleet, and was inspired by the event to compose the yet popular song of *The Star-spangled Banner* (which see). Armistead and his brave little band received the grateful benedictions of the people of Baltimore and of the whole country. The citizens of Baltimore presented Armistead with a costly service of silver, the principal piece—a vase—in the form of a bomb-shell (see p. 510). Governor-general Prevost, of Canada, was so certain of an easy victory at Baltimore that he ordered rejoicings at Montreal on account of the capture of Washington to be postponed until after the capture of Baltimore should be heard of!

**Fort Macon, Capture of.** This fort, commanding the important harbor of Beaufort, N. C., and Bogue Sound, was seized by Governor Ellis early in 1861. Its possession by the government would secure the use of another fine harbor on the Atlantic coast for the National vessels engaged in the blockading service. It stands upon a long ridge of sand cast up by the ocean waves called Bogue Island. After the capture of New Berne (which see), Burnside sent General Parke to take the fort. A detachment took possession

time. The troops fell back to the rapids of the Maumee, and there formed a fortified camp. There they built a fortification which was called Fort Meigs, in honor of the Governor of Ohio. Harrison's troops there were about one thousand eight hundred in number, and were employed under the skilful direction of Captain Wood, chief-engineer of his army. The work was about two thousand five hundred yards in circumference, the whole of which, with the exception of several small intervals left for block-houses, was to be picketed with timber fifteen feet long and from ten to twelve inches in diameter, set three feet in the ground. When the fort was partly finished (March, 1813), the general and engineer left the camp in the care of Captain Leftwich, who ceased work upon it, utterly neglected the suffering garrison, and actually burned the pickets for fire-wood. On the return of Wood, work on the fort was resumed, and pushed towards completion. Harrison had forwarded Kentucky troops from Cincinnati, and on April 12 he himself arrived at Fort Meigs. He had been informed on the way of the frequent appearance of Indian scouts near the rapids, and little skirmishes with what he supposed to be

UP THE MAUMEE VALLEY, FROM FORT MEIGS.

of Beaufort, and a flag was sent to the fort demanding its surrender. The commander of the garrison, a nephew of Jefferson Davis, declared he would not yield until he had "eaten his last biscuit and slain his last horse." On April 11, 1861, Parke began a siege of the fort. Batteries were erected on Bogue Island, and gunboats, under Commodore S. Lockwood, co-operated with the troops. The garrison was cut off from all communication with the outside world by land or water. A bombardment was begun on the morning of April 25. The fort responded with great spirit and vigor, and a tremendous artillery duel was kept up for several hours, when the fort displayed a white flag. Before ten o'clock the next morning the fort was in possession of the Nationals, with about five hundred prisoners.

**Fort Meigs and its Defence.** When Harrison heard of the advance of Winchester to the Maumee and the Raisin, he ordered all of his available force to push forward to reinforce that officer. The advancing column was soon met by fugitives from Frenchtown, and thoughts of marching on Malden were abandoned for the

advance of a more powerful force. Expecting to find Fort Meigs invested by the British and Indians, he took with him all the troops on the Anglaize and St. Mary's rivers. He was agreeably disappointed to find on his arrival that no enemy was near in force. They soon appeared, however. Proctor, at Fort Malden, had formed plans for an early invasion of the Maumee Valley. Ever since the massacre at Frenchtown he had been active in concentrating a large Indian force for the purpose at Amherstburg. He so fired the zeal of Tecumtha and the Prophet by promises of future success in the schemes for an Indian confederation that at the beginning of April the great Shawnoese warrior was at Fort Malden with one thousand five hundred Indians. Full six hundred of them were drawn from the country between Lake Michigan and the Wabash. On the 23d of April, Proctor, with white and dusky soldiers, more than two thousand in number, left Amherstburg on a brig and smaller vessels, and, accompanied by two gunboats and some artillery, arrived at the mouth of the Maumee, twelve miles from Fort Meigs, on the 26th, where they landed. One of

the royal engineers (Captain Dixon) was sent up with a party to construct works on the left bank of the Maumee, opposite Fort Meigs. On the 28th of April Harrison was informed of the movement of Proctor and his forces. He knew that General Green Clay was on the march with Kentuckians, and he despatched Captain William Oliver with an oral message urging him to press forward by forced marches. Meanwhile Proctor and his forces had arrived, and on the morning of May 1, 1813, he opened a cannonade and bombardment from the site of Maumee City upon Fort Meigs, and continued, with slight intermission, for five days, but without much injury to the fort and garrison. The fire was returned occasionally by eighteen-pounders. The Americans had built a strong traverse athwart the fort, behind which they were sheltered. Their ammunition was scarce, and it was used sparingly; but they had an abundant supply of food and water for a long siege. Still Harrison felt anxious. He looked hourly up the Maumee for the appearance of Clay with reinforcements. The latter had heard the cannonading at the fort, and had pressed forward as rapidly as possible. Proctor had thrown a force of British and Indians across the river to gain the rear of the fort, and these the vanguard of Clay encountered. When the latter officer drew near he received explicit orders from Harrison to detach eight hundred men from his brigade, to be landed on the left bank of the river, a mile and a half above Fort Meigs, to attack the British batteries, spike their guns, destroy their carriages, and then cross the river to the fort; the remainder of Clay's troops to fight their way to the fort. These orders met Clay as he was descending the Maumee in boats (May 5, 1813). Colonel Dudley was appointed to lead the expedition against the British batteries. The work was successfully performed; but a band of riflemen, under Captain Leslie Combs, being attacked by some Indians in ambush, Dudley led reinforcements to them. The Indians were soon put to flight, but Dudley, unmindful of his instructions, pushed on in pursuit, leaving Colonel Isaac Shelby in charge of the batteries. Both the British and Indians were reinforced; the batteries were retaken; and after a sharp fight, in which Shelby's troops participated, Dudley's whole command was put to flight, and dispersed in great confusion. A great part of them were killed or captured. Dudley was slain and scalped, and Combs and many companions were marched to Fort Miami below as prisoners. (See *Running the Gauntlet*.) Of the eight hundred who landed from the boats only one hundred and seventy escaped to Fort Meigs. While these scenes were occurring on the left bank of the Maumee, there was a desperate struggle on the fort side. A part of the remainder of Clay's command, under Colonel W. E. Boswell, having landed a short distance above the fort, were ordered to fight their way in. They were soon attacked by a body of British and Indians, but were joined by a sallying party from the fort; and while a sharp struggle was going on there, Harrison ordered a helpful sortie from the fort

to attack some works cast up by the enemy near a deep ravine. This was done by three hundred and fifty men, under Colonel John Miller, of the regulars. They found a motley force there, eight hundred and fifty strong, but they were soon driven away and their cannons spiked. The fight was desperate, the Americans being surrounded at one point by four times their own number. The victors returned to the fort with forty-three captives. Boswell in the meantime had utterly routed the force before him at the point of the bayonet. Fort Meigs was saved. The result of that day's fighting, and the ill-success of all efforts to reduce the fort, caused Proctor's Indian allies to desert him, and the Canadian militia to turn their faces homeward. The Prophet had been promised by Proctor the whole territory of Michigan as his trophy, and Tecumtha was to have the person of General Harrison, whom he had intensely hated since the battle at the Tippecanoe (which see), as his. These promises were unfulfilled, and the Indians left in disgust. Only Tecumtha's commission and pay of a brigadier in the British army secured his further services.

**Fort Mercer.** On the New Jersey shore of the Delaware, not far below Philadelphia, was a strong work called Fort Mercer, with a garrison under the command of Colonel Christopher Greene, of Rhode Island. After Howe had taken possession of Philadelphia (September, 1777), he felt the necessity of strengthening his position; so, in the middle of October, he ordered General Sir Henry Clinton to abandon the forts he had captured in the Hudson Highlands (see *Forts Clinton and Montgomery*), and send six thousand troops to Philadelphia. He had just issued this order, when news of the surrender of Burgoyne and his army reached him. He then perceived that he must speedily open the way for his brother's fleet to ascend the Delaware to Philadelphia, or all would be lost. He ordered Count Donop to take twelve hundred picked Hessian soldiers, cross the Delaware at Philadelphia, march down the New Jersey shore, and take Fort Mercer by storm. He obeyed, and at the same time the British vessels-of-war in the river opened a furious cannonade on Fort Mifflin, opposite. Already the works at Billingsport, below, had been captured, and a narrow channel had been opened through obstructions above. This admitted British vessels to approach near enough to cannonade the two forts. On the approach of Donop (Oct. 22, 1777), Greene abandoned the outworks of Fort Mercer, and retired into the principal redoubt. At the edge of a wood, within cannon-shot of the fort, Donop planted a battery of ten heavy guns, and late in the afternoon he demanded the instant surrender of the fort, threatening that, in case of refusal and resistance, no quarter would be given. Colonel Greene had only four hundred men back of him, but he gave an instant and defiant refusal, saying, "We ask no quarter, nor will we give any." Then the besiegers opened their heavy guns, and, under their fire, pressed up to storm the fort. They were received by terrible volleys of musketry and grape-shot from

cannons, while two concealed American galleys snote them with a severe enflading fire. The slaughter of the assailants was fearful. Connt Donop instantly fell, and many of his officers were slain or mortally wounded. At twilight the invaders withdrew, after a loss of two hundred men. The Americans lost thirty-seven, killed and wounded. Donop died three days after the battle. He said, "I die a victim to my ambition and the avarice of my sovereign." (See *German Mercenaries*.)

**Fort Mifflin.** The firing of the first gun upon Fort Mercer (which see) was the signal for British vessels to approach and attack Fort Mifflin, opposite. They had made their way through the obstructions near Billingsport. The *Augusta*, ship-of-war, and other armed vessels, came up the river, but were kept at bay by American galleys and floating-batteries. The attack was deferred until the morning after (Oct. 23) the assault on Fort Mercer. A heavy cannonade was brought to bear on the British fleet by the American flotilla, and at the same time an equally heavy fire was kept up by the royal vessels on Fort Mifflin, the little garrison of which was commanded by Lieutenant-colonel Smith, of Maryland. Smith made a gallant defence. A hot shot from the fort set fire to the *Augusta*, and she blew up. After an engagement of several hours, the British fleet retired, and the Americans remained masters of the Delaware a short time longer. Finally the British erected batteries on Providence Island, that commanded Fort Mifflin, and brought up a large floating-battery and four 64-gun ships and two 40-gun ships to attack the fort. On the 10th of November (1777) the British opened their batteries on land and water. Lieutenant-colonel Smith, with his garrison of three hundred men, sustained the siege six consecutive days. When every gun was dismounted, and the fort was almost a ruin, the garrison left in the night (Nov. 16), after firing the remains of the barracks, and escaped to Fort Mercer, which Colonel Greene, despairing of relief, evacuated Nov. 20, 1777. During the siege of Fort Mifflin, about two hundred and fifty men of the garrison were killed and wounded. The British loss is not known.

**Fort Mims, MASSACRE AT.** In the autumn of 1812, Tecumtha and the Prophet (which see) went among the Creeks to stir them up to make war upon the white people. They were divided in sentiment, for many of them preferred peace and friendship with the Americans, and civil war was engendered. The white settlers among them were in great peril, and in the spring of 1813 they were led to expect an exterminating blow. They knew that a British squadron was in the Gulf, and on friendly terms with the Spaniards at Pensacola. They prepared to defend themselves as well as they might. They learned that British agents at Pensacola were distributing supplies among the Creeks. Very soon hostilities began here and there, and the white people fled to secret places for refuge—some in the thick swamps not far above the junction of the Alabama and Tombigbee rivers. There they

were joined by wealthy half-blood families, and the house of Samuel Mims, an old and wealthy inhabitant, was strongly stockaded with heavy pickets. Several other buildings were enclosed within the acre of ground stockaded, and the whole was known as Fort Mims. Major Beasley was placed in command, and authorized to receive any citizens who would assist in defence of the station, and issue soldiers' rations to them. Its dimensions were soon too small for the people who flocked to it for protection against the impending storm, and a new enclosure was built. At the close of August Indians were seen prowling around Fort Mims; but Major Beasley was confident that he could "maintain the post against any number of Indians." The 30th of August was a beautiful day, and no sense of danger was felt at the fort. It contained five hundred and fifty—men, women, and children. The midday drum was beaten for dinner. The soldiers were loitering listlessly around, or were playing cards; almost one hundred children were playing around, and young men and maidens were dancing. At that moment a thousand almost naked Creek warriors lay in a ravine not more than four hundred yards from the fort, ready, like famished tigers, to spring upon their prey. They were led by Weathersford, a famous Creek chief. The first tap of the dinner-drum was the signal for the barbarians to rise from their cover and rush to the fort; and the first intimation of their presence was a horrid yell, that filled the air as they came streaming over a field towards an open gate of the fort. Beasley flew to close it, and the soldiers rushed with their arms to the port-holes. The unarmed men and the women and children, pale with terror, huddled within the houses and cabins of the enclosure. Beasley was too late. He was felled by clubs and tomahawks, and over his dead body the terrible torrent rushed into the new enclosure. The soldiers made a gallant fight for three hours. They were nearly all slain. The unarmed people were in the old enclosure, with a picket between them and the slaughter. The Indians became weary, and slackened their fire. The people in the main fort hoped the savages were about to depart. They were disappointed. Weathersford was not a man to accept half a victory when a whole one was attainable. His people, who had begun to carry away plunder, were rebuked by him, and exhorted to complete the work. The horrid task was resumed. The few soldiers left made stout resistance, when the barbarians sent fire on the wings of arrows to the roof of Mims's house, and it burst into a flame. Very soon the whole "fort" was in flames. The Indians pressed into the main fort. With the most horrid cruelties they murdered the defenceless. Weathersford begged his warriors to spare the women and children, but they refused. He had raised the storm, but was not able to control it. At sunset four hundred of the inmates of Fort Mims lay dead. Not a white woman or child escaped. Twelve of the soldiers cut their way through the cordon of barbarians and escaped. Most of the negroes were spared, and were made

slaves of the Indians. A negro woman, who had received a ball in her breast, escaped to the river, seized a canoe, and paddling down to Fort Stoddard, gave to General Claiborne there the first tidings of the horrible tragedy. The contest lasted from twelve o'clock until five. The barbarians had suffered severely, for not less than four hundred Creek warriors were killed or wounded, as the victims had sold their lives as dearly as possible.

**Fort Motte, CAPTURE OF (1781).** This fort was simply the fine residence of Rebecca Motte, near the Congaree River, which the British had fortified. Mrs. Motte was the widowed mother of six children. She had been turned out of her house, and taken refuge at her farm-house on a hill near by. Marion and Lee approached with a considerable force, but having no artillery, could not dislodge the garrison of Fort Motte.

FORT MOTTE.

What was to be done had to be done quickly, for other posts required their attention. Only by setting the house on fire could the British be driven out. To this method Mrs. Motte gave her cheerful assent. She brought an Indian bow and arrows. To the latter lighted combustibles were affixed, and an expert fired the arrows into the roof of the dwelling. It was soon in a blaze, when the garrison were compelled to sally out and surrender. The patriotic owner then regaled both American and British officers at her table. Lee then pushed towards the Savannah River, to assist Pickens and Clarke in holding the country between Fort Ninety-six and Augusta, to prevent the garrison of either place joining the other.

**Fort Moultrie, SEIZURE OF (1860).** Major Anderson abandoned weaker Fort Moultrie, and went to stronger Fort Sumter, on the evening of Dec. 26, 1860. (See *Anderson in Fort Sumter*.) He left officers and men to spike the guns, burn the carriages, and cut down the flag-staff, that no secession banner might occupy the place of the national flag. The bewildered citizens of Charleston saw the smoke of the burning carriages at dawn, and when they knew its origin, the disunionists were greatly exasperated. The Secession Convention requested Governor Pickens to take possession of the government property in and around Charleston. The arsenal, into which Floyd had crowded arms, was seized in the name of the State of South Carolina, and thus seventy thousand stand of arms and a vast amount of stores, valued at \$500,000, were placed in the hands of the enemies of the government.

Men of Charleston, equipped with these weapons, went in two armed steam-vessels and seized Castle Pinckney (which was surrendered by its faithless commander, N. L. Coste), and took possession of dismantled Fort Moultrie in the name of "the sovereign State of South Carolina." The fort was strengthened, new breastworks were constructed, and heavy guns were mounted.

**Fort Necessity.** During his march towards Fort Duquesne, Washington, at a point on the Monongahela River less than forty miles from his destination, heard of the approach of a party of French and Indians to intercept him. He fell back to a rich, fertile bottom called The Great Meadows, about fifty miles from Cumberland, where he hastily erected a stockade, which he appropriately called Fort Necessity. While engaged in this work, scouts had observed the stealthy approach of French soldiers. Word to this effect was sent to Washington by a friendly sachem known as Half-king, who stated that the detachment was very near his camp. Putting himself at the head of forty men, he set off, in the intense darkness, at nine o'clock at night, for the encampment of Half-king. The rain fell in torrents, and they did not reach the friendly Indians until just before sunrise (May 28, 1754). Half-king and his warriors joined Washington's detachment, and when they found the enemy, in a secluded spot among the rocks, they immediately attacked them. A sharp skirmish ensued. Jumonville, who led the French, and ten of his men, were killed, and twenty-two were made prisoners. This was the first blood shed in the French and Indian War. Washington had one man killed, and two or three were wounded. It was afterwards ascertained that Jumonville was the bearer of a summons for the surrender of Fort Necessity. Two days later Colonel Fry died at Cumberland. Troops hastened forward to join Washington at Fort Necessity. On him the chief command now devolved. Reinforced, he proceeded towards Fort Duquesne with four hundred men. At the same time M. de Villiers, brother of Jumonville, was marching, at the head of one thousand Indians and a few Frenchmen, to avenge his kinsman's death. Hearing of this, Washington fell back to Fort Necessity, where, on the 3d of July, he was attacked by about fifteen hundred of the foe. After a conflict of about ten hours, De Villiers proposed an honorable capitulation. Washington signed it on the morning of the 4th of July. Then the troops marched out with the honors of war, and departed for their homes.

**Fort Niagara** is on the east side of Niagara River, near its mouth. Its building was begun as early as 1673, when La Salle (which see) enclosed a small spot there with palisades. In 1687 De Nouville (which see) constructed a quadrangular fort there, with four bastions. It was enlarged to quite a strong fortification by the French in 1725. It was taken from them, in 1759, by Sir William Johnson. It then covered eight acres. During the Revolution it was the rendezvous of British troops, Tories, and Indians, who desolated central New York, and sent

predatory bands into Pennsylvania. "Then," says De Veaux, "civilized Europe revelled with savage Americans, and ladies of education and refinement mingled in the society of those whose only distinction was to wield the bloody tomahawk and the scalping-knife. Then the squaws of the forests were raised to eminence, and the most unholy unions between them and officers of highest rank were smiled upon and countenanced." Fort Niagara remained in possession of the British until the frontier posts were given up to the Americans, in 1796. It was captured by the British in the War of 1812-15.

**Fort Niagara, BOMBARDMENT OF (1812).** Fort Niagara, on the right bank of the Niagara River, at its mouth, was garrisoned by the Americans, commanded by Lieutenant-colonel George McFeely. The British had raised breastworks in front of the village of Newark, opposite the fort, at intervals, all the way up to Fort George, and placed behind them several mortars and a long train of battering cannons. These mortars

exasperated British determined on retaliation. They crossed the Niagara River on the black, cold night of Dec. 18, about one thousand strong, regulars and Indians, under Colonel Murray. Gross negligence or positive treachery had exposed the fort to easy capture. It was in command of Captain Leonard. When, at three o'clock in the morning, a British force approached to assail the main gate, it was standing wide open. Leonard had left the fort on the evening before, and spent the night with his family, three miles distant. With a competent and faithful commander at his post, the fort, with its garrison of nearly four hundred effective men, might have been saved. The fort was entered without resistance, when the occupants of a block-house within and invalids in the barracks made a stout fight for a while. This conflict was over before the remainder of the garrison were fairly awake, and the fort in possession of the British. The victory might have been almost bloodless, had not a spirit of revenge, instigated by

FORT NIAGARA, FROM FORT GEORGE, IN 1812.

began a bombardment of Fort Niagara on the morning of Nov. 21, 1812, and at the same time a cannonade was opened at Fort George and its vicinity. From dawn until twilight there was a continuous roar of artillery from the line of batteries on the Canada shore; and during the day two thousand red-hot shot were poured upon the American works. The mortars sent showers of destructive bomb-shells. Buildings in the fort were set on fire several times, and were extinguished by great exertions. Meanwhile the garrison returned the assault gallantly. Newark was set on fire by shells several times; so, also, were buildings in Fort George, and one of its batteries was silenced. Shots from an out-work of Fort Niagara (the Salt Battery) sunk a British sloop in the river. Night ended this furious artillery duel.

Fort Niagara captured (1813). When McClure abandoned Fort George and laid Newark in ashes (see *Newark*), in December, 1813, the

the black ruins of Newark, prevailed. A large number of the garrison, part of them invalids, were bayoneted after resistance had ceased. This horrid work was performed on Sunday morning, Dec. 19, 1813. The loss of the Americans was eighty killed—many of them hospital patients—fourteen wounded, and three hundred and forty-four made prisoners. The British loss was six men killed, and Colonel Murray, three men, and a surgeon wounded. The British fired a signal-cannon, announcing their success, which put in motion a detachment of regulars and Indians at Queenston for further work of destruction. They crossed the river to Lewiston, and plundered and laid waste the whole New York frontier to Buffalo.

**Fort Orange (Albany).** In 1614 Captain Christiansen, who, in the interest of trade, went up the Hudson River to the head of navigation, built a fortified trading-house on an island just below the site of Albany, which he called Castle

Island. The spring floods made the place untenable, and in 1617 a new fort was built at the mouth of the Tawasentha ("place of many dead"), or Norman's Kill, on the west side of the river. There a treaty of friendship and alliance was made with the Five Nations, the first ever made between the Indians and Hollanders. The situation of the new fort proving to be inconvenient, a more permanent fortification was built a few miles farther north, and called Fort Orange, in compliment to the Stadtholder, or chief magistrate, of Holland. Some of the Walloons settled there, and held the most friendly relations with the Indians. Near the fort Kilian van Rensselaer, a wealthy pearl merchant of Amsterdam, purchased from the Indians a large tract of land in 1630, sent over a colony to settle upon it, and formed the "Colonie of Reus-selaerswyck." (See *Patroons*.) A settlement soon grew around Fort Orange, and so the foundations of Albany were laid.

Fort Pickens, on Santa Rosa Island, commanded the entrance to the harbor of Pensacola Bay. Nearly opposite, but a little farther seaward, on a low sand-spit, was Fort McRee. Across from Fort Pickens, on the main, was

mors that the fort was to be attacked, and he took immediate measures to save it and the other forts near. He called on Commodore Armstrong (Jan. 7) and asked his co-operation, but, having no special order to do so, he declined. On the 9th Slemmer received instructions from his government to use all diligence for the protection of the forts, and Armstrong was ordered to co-operate with Slemmer. It was feared that the small garrison could not hold more than one fort, and it was resolved that it should be Pickens. It was arranged for Armstrong to send the little garrison at the Barrancas on a vessel to Fort Pickens. Armstrong failed to do his part, for he was surrounded by disunion officers who were plotting with Secessionists. But Slemmer, with great exertions, had the troops of Barrancas carried over to Pickens, with their families and much of the ammunition. The guns bearing upon Pensacola Bay at the Barrancas were spiked; but the arrangement for the vessels of war *Wyandot* and *Supply* to anchor near Fort Pickens was not carried out. To Slemmer's astonishment, these vessels were ordered away to carry coal and stores to the home squadron on

FORTS PICKENS AND McREE.

Fort Barrancas, built by the Spaniards, and taken from them by General Jackson. Nearly a mile eastward of the Barrancas was the navy-yard, then in command of Commodore Armstrong. Before the Florida Ordinance of Secession was passed (Jan. 10, 1861) the governor of the state (Perry) made secret preparations with the governor of Alabama to seize all the national property within the domain of Florida—namely, Fort Jefferson, at the Garden Key, Tortugas; Fort Taylor, at Key West; Forts Pickens, McRee, and Barrancas, and the navy-yard near Pensacola. Early in January the commander of Fort Pickens (Lieutenant Adam J. Slemmer), a brave Pennsylvanian, heard ru-

the Mexican coast. On the 10th the navy-yard near Pensacola was surrendered to Florida and Alabama troops, and these prepared to bring guns to bear upon Pickens from Fort Barrancas. (See *Navy-yard near Pensacola Seized*.) Slemmer was now left to his own resources. His was the strongest fort in the Gulf, but his garrison consisted of only eighty-one souls, officers and men. These labored unceasingly to put everything in working order. Among the workers were the heroic wives of Lieutenants Slemmer and Gilmore—refined and cultivated women—whose labors at this crisis form a part of the history of Fort Pickens. On the 12th Captain Randolph, Major Marks, and Lieutenant Rut-

ledge appeared, and, in the name of the governor of Florida, demanded a peaceable surrender of the fort. It was refused. "I recognize no right of any governor to demand the surrender of United States property," said Slemmer. On the 15th Colonel William H. Chase, a native of Massachusetts, in command of all the insurgent troops in Florida, accompanied by Farrand, of the navy-yard near Pensacola, appeared, and, in friendly terms, begged Slemmer to surrender, and not be "guilty of allowing fraternal blood to flow." The tempter did not succeed. On the 18th Chase demanded the surrender of the fort, and it was refused. Then began the siege of Fort Pickens (which see).

**Fort Pickens, SIEGE OF.** Lieutenant Slemmer had held Fort Pickens firmly against all hostile forces and specious persuasions, supported by a loyal little garrison. Insurgent forces threatening it continually increased. On Jan. 18, 1861, Colonel Chase, commander of the insurgents near Pensacola, had demanded the surrender of Fort Pickens, and it had been refused. Its commandant, Lieutenant Slemmer, had not been able to get reinforcements from the government. When the new administration came into power (March 4, 1861) a new line of policy was adopted. The government resolved to reinforce with men and supplies both Sumter and Pickens. (See *Relief of Fort Sumter*.) Between the 6th and 9th of April the chartered steamers *Atlantic* and *Illinois* and the United States steam frigate *Powhatan* left New York for Fort Pickens with troops and supplies. Lieutenant John L. Worden (see *Monitor and Merrimac*) was sent by land with an order to Captain Adams, of the *Sabine*, then in command of a little squadron off Fort Pickens, to throw reinforcements into that work at once. Captain Braxton Bragg, late of the United States Army, was now in command of all the insurgent forces in the vicinity, with the commission of brigadier-general; and Captain Ingraham, late of the United States Navy, was in command of the navy-yard near Pensacola. Bragg had arranged with a treasonable sergeant of the garrison to betray the fort on the night of the 11th of April, for which service he was to be rewarded with a large sum of money and a commission in the Confederate army. He had seduced a few of his companions into complicity in his scheme. A company of one thousand insurgents were to cross over in a steamboat and escalate the fort when the sergeant and his confederates would be on guard. The plot was revealed to Slemmer by a loyal man in the insurgent camp named Richard Wilcox, and the catastrophe was averted by the timely reinforcement of the fort by marines and artillerymen under Captain Vogdes. A few days afterwards the *Atlantic* and *Illinois* arrived with several hundred troops under the command of Colonel Henry Brown, with ample supplies of food and munitions of war; and Lieutenant Slemmer and his almost exhausted little garrison were sent to Fort Hamilton, New York, to rest. By May 1 there was a formidable force of insurgents menacing Fort Pickens, numbering near-

ly seven thousand, arranged in three divisions. The first, on the right, was composed of Mississippians, under Colonel J. R. Chalmers; the second was composed of Alabamians and a Georgia regiment, under Colonel Clayton; and the third was made up of Louisianians, Georgians, and a Florida regiment—the whole commanded by Colonel Gladdin. There were also five hundred troops at Pensacola, and General Bragg was commander-in-chief. Reinforcements continued to be sent to Fort Pickens, and in June Wilson's Zouaves, from New York, were encamped on Santa Rosa Island, on which Fort Pickens stands. During the ensuing summer nothing of great importance occurred in connection with Fort Pickens, and other efforts afterwards made by the insurgents to capture it failed.

**Fort Pillow, CAPTURE OF (1864).** This fort was garrisoned by about five hundred and fifty men, including two hundred and sixty colored soldiers, under the command of Major L. F. Booth. Forrest approached Fort Pillow on the morning of April 13, 1864, drove in the pickets, and began an assault. A sharp battle ensued. About nine o'clock Major Booth was killed, and the command devolved on Major Bradford. The whole force was now called within the fort, and the fight was maintained until past noon. Meanwhile the gunboat *New Era*, of the Mississippi squadron, lying near, had taken part in the defence of the fort, but the height of the bank prevented her doing much execution. Forrest sent a flag to demand an instant surrender. While negotiations were going on Forrest sent large numbers of his troops to favorable positions for attack, which could not have been gained while the garrison was free to fight. By this trick he gained a great advantage. Bradford refused to surrender, and Forrest gave a signal, when his men sprang from their hiding-places, which they had gained by treachery, and, with a cry of "No quarter!" pounced upon the fort at different points, and in a few moments were in possession of it. Generals Forrest and Chalmers entered the fort simultaneously from opposite sides. The surprised and overwhelmed garrison threw down their arms. Some of them attempted to escape down the steep bank of the river or to find concealment in the bushes. The conquerors followed and butchered the defenceless men, who begged for quarter. Within the fort like scenes were exhibited. Soldiers and civilians—men, women, and children, white and black—were indiscriminately slaughtered. The massacre continued until night, and was renewed in the morning. Full three hundred were murdered in cold blood. Major Bradford, who was a native of a slave-labor state, was a special object of Forrest's hatred. He regarded him as "a traitor to the South." While on his way towards Jackson, Tenn., as a prisoner of war, the day after the Confederates left Fort Pillow, the major was taken from the line of march and deliberately murdered. So testified one of Forrest's cavalry before a Congressional committee. Forrest had determined to strike terror in the minds of colored troops and their leaders. This seemed to be his chosen method.

Major Charles W. Gibson, of Forrest's command, said to the writer, "Forrest's motto was, *War means fight, and fight means kill*—we want but few prisoners."

**Fort Pitt Threatened.** This was the most important military post of the English west of the Alleghanies. They had launch-boats to bear the Englishmen to the country of the Illinois. For some time the bitter foes of the English—the Mingo and Delawares—had been seen hovering around the post. On May 27, 1763, they exchanged a large quantity of skins with the English traders for powder and lead, and then suddenly disappeared. Towards midnight Delaware chiefs warned the garrison that danger hovered around them, and warned them to fly, offering to keep the property safe. But the garrison preferred to remain in their strong fort; and the Indians, after murdering a whole family near the fort and leaving a tomahawk as a declaration of war, withdrew and threatened Fort Ligouier. (See *Pontiac's War*.)

**Fort Pownall, ERECTION OF.** Governor Pownall, of Massachusetts, took possession of the country around the Penobscot River in 1759, and secured it by the erection of a fort there. It was done by four hundred men granted by Massachusetts for the purpose, at a cost of about \$15,000, and named Fort Pownall.

**Fort Pulaski, CAPTURE OF.** At the close of 1861 the National authority was supreme along the coasts from Wassaw Sound, below the Savannah River, to the North Edisto, well up towards Charleston. General T. W. Sherman directed his chief-engineer, General Q. A. Gillmore, to reconnoitre Fort Pulaski and report upon the

were made to find a channel by which gun-boats might get in the rear of the fort. It was found, and land-troops under General Vile went through it to reconnoitre. Another expedition went up to the Savannah River by way of Wassaw Sound, and the gunboats had a skirmish with Tatnall's "Mosquito Fleet." (See *Port Royal*.) Soon afterwards the Nationals erected batteries that effectually closed the Savannah River in the rear of Pulaski, and at the close of February, 1862, it was absolutely blockaded. General Gillmore planted siege-guns on Big Tybee that commanded the fort; and on April 10, 1862, after General Hunter (who had succeeded General Sherman) had demanded its surrender, and it had been refused, thirty-six heavy rifled cannons and mortars were opened upon it, under the direction of Generals Gillmore and Vile. It was gallantly defended until the 12th, when, so battered as to be untenable, it was surrendered. This victory enabled the Nationals to close the port of Savannah against blockade-runners.

**Fort Schuyler, SIEGE OF (1777).** On the site of the village of Rome, Oneida Co., N. Y., General Stanwix built a fort which received his name. After the war for independence began it was named Fort Schuyler. In the Revolution it was on the western borders of civilization. There was a small garrison there in the summer of 1777, commanded by Colonel Peter Gansevoort. It stood as a sort of barrier against hostile tribes of the Six Nations. The little garrison had been reinforced by the regiment of Colonel Marinus Willett, and was well provisioned. Burgoyne had sent Colonel St. Leger with Canadians, Tories, and Indians, by way of

BREACH IN FORT PULASKI.

feasibility of a bombardment of it. It had been seized by the Secessionists early in the year. Gillmore reported that it might be done by planting batteries of rifled guns and mortars on Big Tybee Island. A New York regiment was sent to occupy that island, and explorations

Lake Ontario, to penetrate the Mohawk Valley and make his way to Albany, there to meet the general. St. Leger appeared before Fort Schuyler on Aug. 3, 1777. The Tories in his train were commanded by Colonels Johnson, Claus, and Butler, and the Indians by Brant. On receiving news that General Herkimer was coming to the aid of the garrison with the Tryon County militia (see *Battle of Oriskany*), a larger portion within the fort made a sortie. They fell upon the camp of Johnson's "Greens" (see *Sir John Johnson*) so suddenly and furiously that they were dispersed in great confusion, Sir John not having time to put on his coat. Papers, clothing, stores, and other spoils of his camp sufficient to fill twenty wagons fell into the hands of the Americans. A part of the "Greens" had gone to oppose the advance of Herkimer, approaching at that moment. St. Leger continued the siege. Colonel Willett stealthily left the fort at night with a message to Schuyler, then near the mouth of the Mohawk, asking for relief. Schuyler called for a volunteer leader to go to the relief of Fort Schuyler. General Arnold

responded, and beat up for recruits. The next day (Aug. 15) eight hundred strong men were following Arnold up the Mohawk Valley. At Fort Dayton he pardoned a young Tory prisoner condemned to death, on condition that he should go into the camp of St. Leger's savages with a friendly Oneida Indian, represent the approaching Americans as exceedingly numerous, and so frighten away the Indians. It was done. The Tory had several shots fired through his clothing. Almost breathless, he and the Oneida entered the camp, and told of a terrible fight they had just had with the Americans, who were as numerous as the leaves on the trees. The alarmed Indians immediately fled as fast as their legs could carry them towards the western wilds, followed by the Canadians and Tories pell-mell in a race towards Oswego. So ended the siege, and so did Burgoyne receive a paralyzing blow.

**Fort Schuyler, TREATY AT (1784).** While the British retained possession of the western frontier posts it was difficult to fix by treaty the Indian boundaries and open the western lands to settlers. But a treaty made at Fort Schnyler (formerly Fort Stanwix) by commissioners of the United States and the chiefs and warriors of the Six Nations gave some facilities in that direction. By this treaty the Mohawks, Onondagas, Cayngas, and Senecas who had adhered to the British during the war consented to a peace and a release of prisoners. At the same time they ceded all their territory west of Pennsylvania.

**Fort Stanwix Built.** In 1758, when returning with a detachment of provincial troops from Oswego, Brigadier-general Stanwix constructed a fort on the Mohawk, at the camping-place between that river and Wood Creek, that empties into Oneida Lake, for the security of the Indians in the neighborhood who adhered to the English. It occupied a portion of the site of Rome, in Oneida County. In honor of the commander, it was named Fort Stanwix. After its relief from capture in August, 1777, through the exertions of General Schuyler, it was named Fort Schuyler.

**Fort Stanwix, TREATY AT (1768).** Fort Stanwix was built by General Stanwix, with the assistance of Colonel Bradstreet on his return from the capture of Fort Frontenac in 1758. (See *Frontenac*.) After the French and Indian War there were various projects for settlements beyond the mountains. On the 5th of November, 1768, a treaty was held at Fort Stanwix, at which the Six Nations, in consideration of the payment of a little over \$50,000, ceded to the crown all their country south of the Ohio as far as the Cherokee or Tennessee River. So much of this region as lay south of the Great Kanawha was claimed by the Cherokees as their hunting ground.

**Fort Steadman.** (See *Petersburg, Final Struggle et.*) Lee assigned to the duty of assaulting Fort Steadman the two divisions of Gordon's command, with the larger portion of Bushrod R. Johnston's command in support. Behind these he massed about twenty thousand men to break

through the National line if the attack should prove successful. They were supplied with provisions and ammunition for a long struggle. The assault began at four o'clock in the morning (March 25, 1865). Its garrison, composed of the Fourteenth New York Artillery, had no suspicion of danger near. The fort was in front of the Ninth Corps, forming a salient, not more than one hundred yards from the Confederate intrenchments. The surprise was so complete that the assailants met with no resistance. A part of the garrison fled; the remainder were made prisoners. A brigade of the Ninth Corps met the same fate, and abandoned their guns. Now was the moment when Lee's army might have passed through the National line. It did not, and the golden moment was lost forever. The Confederates attacked Fort Haskell, near, but were repulsed. Confederate columns pressing through the gap were assailed by a murderous fire of artillery; and an assault by General Hartranft's division of the Ninth Corps, with an enfilading fire of artillery, caused the surrender of nineteen hundred men. Fort Steadman was recovered, and at the same time a strongly intrenched picket-line of the Confederates was seized and permanently held. Lee was disheartened by the failure and losses.

**Fort Stephenson, DEFENCE OF.** At Lower Sandusky (now Fremont), Ohio, was a regular earthwork, with a ditch, circumvallating pickets, bastions, and block-houses, called Fort Stephenson. It was garrisoned by one hundred and sixty men, under the command of Major George Croghan, of the regular army, then only

GEORGE CROGHAN.

twenty-one years of age. Tecumtha had urged Proctor to renew the siege of Fort Meigs, but that timid officer hesitated a long while. Finally, late in July, he appeared before the fort (in command of General Clay) with his own

and Tecumtha's followers, about four thousand strong. Satisfied that he could not take the fort, Proctor and his white troops embarked, with their stores (July 28, 1813) for Sandusky Bay, with the intention of attacking Fort Stephenson. The Indians marched across the heavily wooded country to assist in the siege. Cro-

ghan by the usual threat of massacre by the Indians in case of a refusal. Croghan defied him, and immediately a cannonade and bombardment were commenced from the gunboats and from howitzers which the British had landed. It was then four o'clock in the afternoon. All night long the great guns assailed the fort

SITE OF FORT STEPHENSON, FREMONT, OHIO, IN 1860.

ghan was vigilant. He had been advised by his superiors to evacuate the fort when it was known that an overwhelming force of the enemy was approaching. He preferred to remain, and did so, in half disobedience of orders. The British arrived in their boats on the 31st, when Croghan perceived that the woods were swarming with Indians. Tecumtha had concealed

with very little effect, and were answered occasionally by a solitary six-pounder cannon, which was all the ordnance possessed by the little garrison. It was shifted from one block-house to another to make the enemy believe the fort was well armed with several great guns. During the night the British dragged three six-pounder cannons to a point higher than the fort, and

GOLD MEDAL AWARDED TO COLONEL CROGHAN.

about two thousand of them in the forest to watch the roads along which reinforcements for the fort might approach. Proctor at once made a demand for the surrender of the fort, accom-

panied by the usual threat of massacre by the Indians in case of a refusal. Croghan defied him, and immediately a cannonade and bombardment were commenced from the gunboats and from howitzers which the British had landed. It was then four o'clock in the afternoon. All night long the great guns assailed the fort

ing uneasy, for there were rumors of reinforcements on the way to relieve the fort. Proctor determined to storm it, and at five o'clock in the afternoon, while a thunder-storm was approaching, the British marched in two columns to assail the fort; at the same time British grenadiers made a wide circuit through the woods to make a feigned attack at another point. As the two columns advanced the artillery played incessantly upon the fort, and under cover of this fire they reached a point within fifteen or twenty paces of the pickets before they were discovered. The garrison consisted mostly of Kentucky sharpshooters. These now opened a deadly fire with their rifles. The British lines wavered, but soon rallied; and the first, led by Lieutenant-colonel Short, pushed over the glacis, leaped into the ditch, and were about to obey their commander, who shouted, "Cut away the pickets, my brave boys, and show the damned Yankees no quarter!" when the six-pounder cannon, mounted and masked in a block-house that commanded the moat, opened a terrible storm of slugs and grape-shot, which swept along the living wall with awful effect. The second column, led by Lieutenant Gordon, leaped into the ditch, and met with a similar reception. Both leaders and many of their followers were slain, and a precipitate and confused retreat followed. The cowardly Indians, who were always afraid of caunons, had not joined in the assault. The loss of the British in killed and wounded was one hundred and twenty-one men; the garrison lost one man killed and several wounded. For this gallant defence Croghan received many honors. The ladies of Chillicothe, Ohio, presented him with an elegant sword. Congress gave him the thanks of the nation then, and twenty-two years afterwards awarded him a gold medal. This gallant defence had a powerful effect on the enemy.

**Fort Sumter, FIRST GUN FIRED AT.** Edmund Ruffin, a Virginian, seventy-five years of age, with long, white, flowing locks, was at the battery on Morris Island when the attack on Fort

EDMUND RUFFIN.

Sumter began. (See *Fall of Sumter*.) At his own request he was permitted to fire the first shot. Of this feat he boasted much, but did

not appear prominently anywhere else during the war. He survived the conflict, in which he lost all his property. On Saturday, June 17, 1865, he committed suicide by blowing off the top of his head with a gun at the residence of his son, near Danville, Va. He left a note in which he said: "I cannot survive the liberty of my country." The wretched man was then almost eighty years of age.

**Fort Sumter, FIRST REINFORCEMENT OF.** When the wife of Major Anderson (a daughter of General D. L. Clinch) heard of the perilous position of her husband in Fort Sumter, surrounded by foes, and uncertain of the fidelity of many of his garrison, she was very anxious that he should have a tried and faithful servant with him. She was then in New York city and an invalid; but she resolved to take an old and tried sergeant, who had served her husband in the war with Mexico, into Fort Sumter. His name was Peter Hart, and she heard that he was somewhere in New York city. After searching for him among all the Harts whose names were in the city directory, she found him connected with the police. At her request he called upon her, accompanied by his wife. After telling him of Major Anderson's peril, she said, "I want you to go with me to Fort Sumter." Hart looked towards his young wife, a warm-hearted Irishwoman, for a moment, and then said, "I will go, madam." "But I want you to stay with the major." Hart looked inquiringly towards his Margaret, and replied, "I will go, madam." "But, Margaret," said Mrs. Anderson, "what do you say?" "Indeed, ma'am, it's Margaret's sorry she can't do as much for you as Pater can," was the good woman's reply. "When will you go, Hart?" asked Mrs. Anderson. "To-night, madam, if you wish." "To-morrow night at six o'clock I will be ready," said Mrs. Anderson. At that hour, in spite of the remonstrances of her physician, the devoted wife left New York, on Thursday evening, Jan. 3, 1861, for Charleston, accompanied by Peter Hart in the character of a servant, ready at all times to do her bidding. None but her physician knew her destination. They travelled without intermission, and arrived at Charleston late on Saturday night. She had neither eaten, drunk, nor slept during the journey, for she was absorbed with the subject of her errand. From Wilmington to Charleston she was the only woman on the train. Therein, and at the hotel in Charleston, she continually heard her husband cursed and threatened. She knew Governor Pickens personally, and the next morning she sought from him a permit for herself and Hart to go to Fort Sumter. He could not allow a man to be added to the garrison. Regarding with scorn the suggestion that the addition of one man to a garrison of seventy or eighty, when thousands of armed men were in Charleston, could imperil the "sovereign State of South Carolina," Mrs. Anderson sent a message to the governor, saying, "I shall take Hart with me, with or without a pass." Her words of scorn and her message were repeated to the governor, and he, seeing the absurdity of his objection, gave a pass for Hart. At ten o'clock

on Sunday morning, Jan. 6, accompanied by a few personal friends, Mrs. Anderson and Peter Hart went in a boat to Fort Sumter. As she saw the banner over the fort she exclaimed, "The dear old flag!" and burst into tears. It was the first time emotion had conquered her will since she left New York. As her friends carried her from the boat to the sally-port, her husband ran out, caught her in his arms, and exclaimed, in a vehement whisper, "My glorious wife!" and carried her into the fort. "I have brought you Peter Hart," she said. "The children are well. I return to-night." In her husband's quarters she took some refreshment. The tide served in the course of two hours, and she returned to Charleston. She had reinforced Fort

plain, and their possession, became subjects of earnest consultation among patriots. The subject was talked of in the Connecticut Legislature after the affair at Lexington, and several gentlemen formed the bold design of attempting their capture by surprise. With this view, about forty volunteers set out for Bennington to engage the co-operation of Ethan Allen, a native of Connecticut, and the brave leader of the "Green Mountain Boys" (which see). He readily seconded their views. They had been joined at Pittsfield, in western Massachusetts, by Colouels Easton and Brown, with about forty followers. Alleeo was chosen the leader after the whole party reached Castleton, at twilight, on the 7th of May (1775). Colonel Easton was

RUINS OF FORT TICONDEROGA, IN 1848.

Sumter with Peter Hart, a more efficient power at the right hand of Major Anderson at that critical moment than a hundred soldiers would have been, for he was ever vigilant, keen, faithful, judicious, and brave, and was the major's trusted friend on all occasions. On a bed placed in the cars, and accompanied by Major Anderson's brother, the devoted wife started for New York on Sunday evening. She was insensible when she reached Washington. A dear friend carried her into Willard's Hotel. Forty-eight hours afterwards she started for New York, and there she was for a long time threatened with brain fever. This narrative, in more minute detail, is from the lips of Mrs. Anderson.

**Fort Ticonderoga, CAPTURE OF (1775).** When it became apparent that war was inevitable, the importance of the strong fortresses of Ticonderoga and Crown Point, on Lake Cham-

chosen to be Allen's lieutenant, and Seth Warner, of the "Green Mountain Boys," was made third in command. At Castleton Colouel Arnold joined the party. He had heard the project spoken of in Connecticut just as he was about to start for Cambridge. He proposed the enterprise to the Massachusetts Committee of Safety, and was commissioned a colonel by the Provincial Congress, and furnished with means and authority to raise not more than four hundred men in western Massachusetts and lead them against the forts. On reaching Stockbridge, he was disappointed in learning that another expedition was on the way. He hastened to join it, and claimed the right to the chief command by virtue of his commission. It was emphatically refused. He acquiesced, but with a bad grace. On the evening of the 9th they were on the shore of Lake Champlain, opposite Ticonderoga, and at dawn the next morning the officers and eighty men were on the beach a few rods from the fortress, sheltered by a bluff. A lad familiar with the fort was their

guide. Following him, they ascended stealthily to the sally-port, where a sentinel snapped his musket and retreated into the fort, closely followed by the invaders, who quickly penetrated to the parade. With a tremendous shout the New-Englanders awakened the sleeping garrison, while Allen ascended the outer staircase of the barracks to the chamber of the commander (Captain Delaplace), and beating the door with the handle of his sword, cried out with his loud voice, "I demand an instant surrender!" The captain rushed to the door, followed by his trembling wife. He knew Allen, and recognized him. "Your errand?" demanded the commander. Pointing to his men, Allen said, "I order you to surrender." "By what authority do you demand it?" inquired Delaplace. "By the authority of the Great Jehovah and the Continental Congress!" answered Allen, with emphasis, at the same time flourishing his broadsword over the head of the terrified commander. Delaplace surrendered the fort and its dependencies, and a large quantity of precisely such munitions of war as the colonists needed — one hundred and twenty iron cannons, fifty swivels, two mortars, a howitzer, a cohorn, a large quantity of ammunition and other stores, and a warehouse full of naval munitions, with forty-eight men, women, and children, who were sent to Hartford. Two days afterwards (May 12) Colonel Seth Warner made an easy conquest of Crown Point. So, at the outset, the colonists obtained the control of Lake Champlain, the open door through which to enter Canada.

**Fort Washington, CAPTURE OF (1776).** On the day of the Battle of White Plains (which see), General Knyphausen, with six German regiments, crossed the Harlem River and encamped on the flat below Fort Washington and King's Bridge. That fort was a strong work, supported by outlying redoubts. It was on the highest point of land on Manhattan Island. When Washington heard of the peril that menaced it, he advised General Greene, in whose charge both it and Fort Lee, on the top of the palisades on the west side of the river, opposite, had been left, to withdraw the garrison and stores, but left the matter to that officer's discretion. When he arrived there (Nov. 15, 1776) he was disappointed in not finding his wishes gratified. Greene desired to hold the fort as a protection to the river; the Congress had ordered it to be held till the last extremity, and Colonel Robert Magaw, its commander, said he could hold out against the whole British army until December. Washington was not satisfied of its safety, but yielded his judgment, and returned to Hackensack. There, at sunset, he received a copy of a bold reply which Magaw had made to a summons to surrender sent by Howe, accompanied by a threat to put the garrison to the sword in case of a refusal. Magaw had protested against the savage menace, and refused compliance. Washington went immediately to Fort Lee. Greene had crossed over to the island. Starting across the river in a small boat, Washington met Greene and Putnam returning; and being informed that the garrison were in fine spirits,

and could defend themselves, he went back to Fort Lee. Early on the morning of the 16th (November) Howe opened a severe cannonade from the heights on the Westchester shore. Under its cover the attack was made in four columns. Knyphausen, with his Germans, moved up from the flats along the rough hills nearest the Hudson. At the same time Lord Percy led a division of English and German troops to attack the lines on the south. General Mathews, supported by Lord Cornwallis, crossed the Harlem near King's Bridge, with guards, light infantry, and grenadiers; while Colonel Sterling, with Highlanders, crossed at a point a little above the present High Bridge. The outworks of the fort were defended on the north by Colonel Rawlings, with Maryland riflemen and militia from Mercer's Flying Camp, under Colonel Baxter. The lines towards New York were defended by Pennsylvanians, commanded by Colonel Lambert Cadwalader. Magaw commanded in the fort. Rawlings and Baxter occupied redoubts on heavily wooded hills. By a simultaneous attack at all points, the battle was very severe outside of the fort. The British and German assailants pressed hard upon the fort, and both Howe and Knyphausen made a peremptory demand for its surrender. Resistance to pike, ball, and bayonet, wielded by five thousand veterans, was in vain, and Magaw yielded. At half-past one o'clock (Nov. 17, 1776) the British flag waved in triumph over Fort Washington. The Americans lost in killed and wounded not more than one hundred men, while the British lost almost one thousand. The garrison that surrendered, with militia, numbered about two thousand five hundred, of whom more than two thousand were disciplined regulars. Washington, standing on the brow of the palisades at Fort Lee, with Thomas Paine, author of *Common Sense*, saw the surrender. The name of the fortification was changed to Fort Mifflin. Its garrison soon filled the prisons on land and water at New York. (See *Prisons and Prisoners*.) Recent discoveries show that the fall of Fort Washington was accomplished through the agency of treason. See Edward F. Delancey's paper on Fort Washington, read before the New York Historical Society in 1878.

**Fort Wayne, ATTACK UPON (1812).** Forts Wayne and Harrison, the former at the junction of the St. Joseph's and St. Mary's rivers, where they form the Maumee, and the latter on the Wabash, were strongholds of the Americans in the northwest. General Proctor, in command at Fort Malden, resolved to reduce them, with the assistance of Tecumtha, whom Brock had commissioned a brigadier-general. Major Muir, with British regulars and Indians, was to proceed up the Maumee Valley to co-operate with other Indians, and the 1st of September was appointed as the day when they should invest Fort Wayne. The garrison consisted of only seventy men, under Captain James Rhea. The Indians prosecuted raids in other directions to divert attention from Forts Wayne and Harrison, and prevent their being reinforced. A scalping-party fell upon the "Pigeon-roost Settlement" in Scott Cou-

ty, Ind. (Sept. 3, 1812), and during the twilight they killed three men, five women, and sixteen children. Similar atrocities were committed by these savage allies of the British preparatory to the investment of Fort Wayne. For several days the Indians had been seen hovering in the woods around the fort, and on the night of Sept. 5 they attacked the sentinels. The treacherous Miamis, who, since the massacre at Chicago (which see), had resolved to join the British, kept up a zealous pretence of friendship for the Americans, hoping by this to get possession of the fort by surprise. They joined the other Indians in an attack on the fort on the night of the 6th, supposed to have been six hundred

daily expresses were sent to Webb asking aid, but none was furnished. One day General Johnson, with a corps of provincials and Putnam's Rangers, had marched a few miles in that direction, when they were recalled, and Webb sent a letter to Munro advising him to surrender. This letter was intercepted, and Montcalm sent it to Munro, with a peremptory demand for his instant surrender. Perceiving further resistance to be useless, for his ammunition was exhausted, he yielded, Montcalm agreeing to an honorable surrender, and a safe escort of the troops to Fort Edward. The Indians were disappointed, for they expected blood and booty. When the English had en-

FORT WAYNE IN 1812.

strong. They attempted to scale the palisades, but were driven back. Then, under the direction of a half-breed, they formed two logs into the shape of canons, and demanded the instant surrender of the fort, which would be battered down in case of a refusal. The troops were not frightened. They knew friends were on their way to relieve them. The besiegers kept up assaults until the 12th, when they fled precipitately on the approach of a delivering force that night which saved the fort. The Indians had destroyed the live-stock, crops, and dwellings outside of the fort. The city of Fort Wayne stands near the spot.

**Fort William Henry, SIEGE AND CAPTURE OF (1757).** Montcalm left Ticonderoga towards the close of July, 1757, with nearly nine thousand men, of whom about two thousand were Indians, and moved against Fort William Henry, built by Sir William Johnson, at the head of Lake George. It was garrisoned by about three thousand troops, under Colonel Munro, a brave English officer, who felt strong in his position because of the close proximity of four thousand English troops, under General Webb, at Fort Edward, only fifteen miles distant. Webb was Munro's commanding general. When Montcalm demanded (Aug. 1, 1757) the surrender of the post and garrison, the colonel refused, and sent an express to General Webb for aid. For six days Montcalm continued the siege, and

entered the woods a mile from Fort William Henry, the savages fell upon them, and slew a large number of men, women, and children, before Montcalm could stay the slaughter. The Indians pursued the terrified garrison (plundering them in their flight) to within about cannon-shot of Fort Edward. Then Fort William Henry and all its appendages were destroyed, and it was never rebuilt. Now (1887) the Fort William Henry Hotel stands upon its site. The fall of that fort caused greater alarm in the colonies than the loss of Oswego the year before. Montcalm retired to Canada.

**Fortifications, FIRST, ORDERED BY CONGRESS.** When the question of taking measures for the defence of the colonies was proposed in Congress, a discussion arose that was long and earnest, for many members yet hoped for reconciliation. On the very day that a British reinforcement at Boston, with Howe, Clinton, and Burgoyne, entered that harbor, Duane, of New York, moved, in the Committee of the Whole, the opening a negotiation, in order to accommodate the unhappy disputes existing between Great Britain and the colonies, and that this be made a part of the petition to the king. But more determined spirits prevailed, and a compromise was reached late in May (25th), when directions were given to the Provincial Congress at New York to preserve the communications between that city and the country by fortifying posts at

the upper end of New York Island, near King's Bridge, and on each side of the Hudson River, on the Highlands. They were also directed to establish a fort at Lake George and sustain the position at Ticonderoga, on Lake Champlain, which the "Green Mountain Boys" (which see) and others had seized a fortnight before. (See *Ticonderoga*.)

**Fortifications for Harbors, FIRST AUTHORIZED.** A bill for this purpose was reported (March 4, 1794) by a committee of one from each state, while the bill for the construction of a navy was under consideration. The act authorized the President to commence fortifications at Portland, Portsmouth, Gloucester, Salem, Boston, Newport, New London, New York, Philadelphia, Wilmington, Baltimore, Alexandria, Norfolk, Ocracoke Inlet, Cape Fear River, George-

completed at a cost of \$2,500,000. It was named in honor of President Monroe. Its walls, faced with heavy blocks of granite, were thirty-five feet in thickness and casemated below, and were entirely surrounded by a deep moat filled with water. It stands upon a peninsula known as Old Point Comfort, which is connected with the main by a narrow isthmus of sand and by a bridge in the direction of the village of Hampton. There were sixty-five acres of land within its walls, and it was armed with almost four hundred great guns when the war broke out. It had at that time a garrison of only three hundred men, under Colonel Justin Dimick, of the regular army. Its possession was coveted by the insurgents, but Dimick had turned some of its cannons landward. These taught the Confederates, civil and military, pru-

FORTRESS MONROE IN 1861.

town, Charleston, Savannah, and St. Mary's. Annapolis was added by a subsequent act. For this purpose only \$136,000 were appropriated. The President was authorized to purchase 200 cannons for the armament of the new fortifications, and to provide 150 extra gun-carriages, with 250 tons of cannon-halls, for which purpose \$96,000 were appropriated. Another act appropriated \$81,000 for the establishment of arsenals and armories in addition to those at Springfield and Carlisle, and \$340,000 for the purchase of arms and stores. The exportation of arms was prohibited for one year, and all arms imported during the next two years were to come in free of duty.

Fortress Monroe, in 1861, was the most extensive military work in the United States. Its construction was begun in 1819, and was

planned with wisdom, and discretion. General B. F. Butler, having been appointed commander of the Department of Virginia (see *Baltimore in Possession of National Troops*), with his headquarters at Fortress Monroe, arrived there on May 22, 1861, and took the chief command, with troops sufficient to insure its safety against any attacks of the insurgents. Butler's first care was to ascertain the practicability of a march upon and seizure of Richmond, then the seat of the Confederate government. Its capture was desired by the National government, but no troops could then be spared from Washington. Fortress Monroe was firmly held by the Nationals during the war. It was an important post, for it was the key to the principal waters of Virginia.

**Forts Clinton and Montgomery, CAPTURE OF (1777).** While Burgoyne was contending

with Gates on the upper Hudson, Sir Henry Clinton was attempting to make his way up the river, to join him or to make a diversion in his favor. Among the Hudson Highlands were three forts of considerable strength, but with feeble garrisons — Fort Constitution, opposite West Point, and Forts Clinton and Montgomery, on the west side of the river at the lower entrance to the Highlands, standing on opposite sides of a creek, with high, rocky shores. From Fort Montgomery, on the northern side of the stream, to Anthony's Nose, opposite, the Americans had stretched a boom and chain across the river to prevent the passage of hostile vessels up that stream. Forts Clinton and Montgomery were under the immediate command of Governor George Clinton and his brother, General James Clinton. Tories had informed Sir Henry Clinton of the weakness of the garrisons, and as soon as expected reinforcements from Europe had arrived, he prepared transports to ascend the river. He sailed (Oct. 4, 1777) with more than three thousand troops, in many armed and unarmed vessels, commanded by Commodore Hotham, and landed them at Verplanck's Point, a few miles below Peekskill, then the headquarters of General Putnam, the supreme commander of the Highland posts. He deceived Putnam by a feigned attack on Peekskill, but the more sagacious Governor Clinton believed he designed to attack the Highland forts. Under cover of a dense fog, on the morning of the 6th, Sir Henry re-embarked two thousand troops, crossed the river, and landed them on Stony Point, making a circuitous march around the Dunderberg to fall upon the Highland forts. At the same time, his armed vessels were ordered to anchor within point-blank-shot distance of these forts, to beat off any American vessels that might appear above the boom and chain. Sir Henry divided his forces. One party, led by General Vaughan, and accompanied by the baronet (about two hundred strong), went through a defile west of the Dunderberg, to strike Fort Clinton, while another party (nine hundred strong), led by Colonel Campbell, made a longer march, back of Bear Mountain, to fall on Fort Montgomery at the same time. Vaughan had a severe skirmish with troops sent out from Fort Clinton, on the borders of Lake Sinipink, near it; at the same time the governor sent a messenger to Putnam for aid. The messenger, instead, deserted to the British. Campbell and his men appeared before Fort Montgomery at five o'clock P.M. and demanded the surrender of both forts. It was refused, when a simultaneous attack by both divisions and by the vessels in the river was made. The garrison (chiefly militia) made a gallant defence until dark, when they were overpowered and sought safety in a scattered retreat to the adjacent mountains. The governor fled across the river, and at midnight was in the camp of Putnam, planning future operations. His brother, badly wounded, made his way over the mountains to his home at New Windsor. Some American vessels lying above the boom, unable to escape, were burned by their crews. By the light of this conflagration the fugitive garrisons found

their way through the mountains to settlements beyond.

**Forts Jackson and St. Philip, SURRENDER OF.** Although Farragut had passed these forts, and the Confederate flotilla had been destroyed, the fortifications were still firmly held by the insurgents. The mortar-fleet under Porter was yet below them. General Butler, who had accompanied the gunboats on their perilous passage (see *Naval Battle on the Mississippi*) on the *Saxon*, had returned to his transports, and in small boats his troops, under the general pilotage of General Godfrey Weitzel, passed through bayous to the rear of Fort St. Philip. When he was prepared to assail it, the garrison was surrendered without resistance (April 28), for they had heard of the destruction of the Confederate flotilla. The commander of Fort Jackson, fearing that all was lost, accepted generous terms of surrender from Commodore Porter. The prisoners taken in the forts and at the quarantine numbered about 1000. The entire loss of the Nationals from the beginning of the contest until New Orleans was taken was 40 killed and 177 wounded.

**Forts Jefferson and Taylor.** At the Garden Key, one of the Tortugas Islands, off the extremity of the Florida Peninsula, was Fort Jefferson; and at Key West was Fort Taylor. Neither of these forts was quite finished at the beginning of 1861. The Secessionists early contemplated their seizure, but the laborers employed on them by the United States government were chiefly slaves, and their masters wished to reap the fruit of their labor as long as possible. It was believed these forts might be seized at any time by the Floridians. Captain Brannan, with a company of artillery, occupied barracks about half a mile from Fort Taylor. Some of the military and civil officers there were Secessionists, and they determined to oppose Captain Brannan if he should attempt to take possession of that fort. Finally Captain Brannan succeeded by a stratagem in gaining possession. The steamer *Wyan-dot* lay near the fort, and her guns commanded the bridge that connected it with the island. One Sunday morning, while the inhabitants were at church, Captain Brannan marched his men by a back road, crossed the bridge, and entered the fort. Supplies had already been forwarded by water. Both forts were strengthened and were lost to the Confederates.

**Forts Morgan and Gaines Seized.** On the night of Jan. 3, 1861, Colonel J. B. Todd, under orders of Governor Moore, embarked on a steamer-boat, with four companies of insurgent volunteers, for Fort Morgan, at the entrance to Mobile harbor, about thirty miles below the city. They reached the fort at about three o'clock in the morning. The garrison seems to have been disloyal, for they made no resistance, and cheered the flag of Alabama when it was put in the place of the banner of the United States. At five o'clock the fort was in the hands of the insurgents. One of the captors wrote: "We found here about five thousand shot and shell; and we are ready to receive any distinguished strangers the government may see fit to send on

a visit to us." Fort Gaines, on Dauphin Island, opposite Fort Morgan, shared the fate of the latter. That morning (Jan. 4, 1861) the United States revenue cutter *Lewis Cass* was surrendered to the collector of the port of Mobile.

**Foster, JOHN G.**, was born in New Hampshire in 1823; died at Nashua, N. H., Sept. 2, 1874. He graduated at West Point in 1846, entering the engineer corps. He served in the war with Mexico and was breveted captain for meritorious services. For two years (1855-57) he was professor of engineering at West Point; made captain in the United States Army in July, 1860; major in March, 1863, and lieutenant-colonel in 1867. Captain Foster was one of the garrison of Fort Sumter during the siege, and was made brigadier-general of volunteers in October, 1861. He took a leading part in the capture of Roanoke Island, early in 1862, and of New Berne, N. C., of which he was made governor in July. He was promoted to major-general of volunteers, and became commander of the Department of North Carolina, and defended that region with skill. In July, 1863, he was made commander of the Department of Virginia and North Carolina, with his headquarters at Fortress Monroe. He was afterwards in command of the Department of Ohio, of which he was relieved on account of wounds in January, 1864. He afterwards commanded the departments of South Carolina and Florida. He was breveted major-general of the United States Army for services during the Civil War.

**Fouchet, JEAN ANTOINE JOSEPH, Baron**, was born at St. Quentin, France, in 1763. He was a law student at Paris when the Revolution broke out, and published a pamphlet in defence of its principles. Soon afterwards he was appointed a member of the executive council of the revolutionary government, and was French ambassador to the United States in 1794-95. Here his behavior was less offensive than that of "citizen" Genet, but it was not satisfactory, and he was succeeded by Adet, a more prudent man. After he left the United States, the French Directory appointed him a commissioner to St. Domingo, which he declined. Under Bouaparte he was prefect of Var, and in 1805 he was the same of Aju. Afterwards he was created a baron and made commander of the Legion of Honor. He remained in Italy until the French evacuated it in 1814. On Napoleon's return from Elba Fouchet was made prefect of the Gironde. The date of his death is not known.

**Four New Provinces in North America.** After the Treaty of Paris, the King of England, with the advice and consent of the Privy Council (which see), granted letters patent, under the great seal, to erect four distinct and separate governments, styled Quebec, East Florida, West Florida, and Grenada. The government of Quebec was bounded on the Labrador coast by the River St. John; thence by a line drawn from the head of that river to the south end of Lake Nepissing, where the line, crossing the River St. Lawrence and Lake Champlain, in 45° north latitude, passes along the high-

lands which divide the streams that empty, respectively, into the St. Lawrence and the sea; along the coast of the Bay de Chaleurs and the coast of the Gulf of St. Lawrence to Cape Rosiers, and thence crossing the mouth of the St. Lawrence, at the west end of Anticosti Island, to the place of beginning at the River St. John. East Florida was bounded on the west by the Gulf of Mexico and the Appalachian River; on the north by a line drawn from that part of the Appalachian where the Chattahoochee and Flint rivers meet, to the south of the St. Mary's River, and by the course of that stream to the Atlantic Ocean; and eastward and southward by the Gulf of Florida, including all islands within six leagues of the sea-coast. West Florida was bounded on the south by the Gulf of Mexico, including all islands within six leagues of the coast, from the Appalachian to Lake Pontchartrau; westward, by that lake, the Lake Maurepas, and the Mississippi River; northward, by a line drawn due east of that part of the Mississippi which lies in 31° north latitude, to the Appalachian, and to the eastward by that river. The government of Grenada was declared to "comprehend the island of that name, together with the Grenadines, and the islands of Dominica, St. Vincent, and Tobago." At the same time the whole coast from the River St. John to Hudson's Strait, together with the islands of Anticosti and Madelaine, and all other smaller islands upon that coast, were put under the care of the governor of Newfoundland. The islands of St. John and Cape Breton, with lesser islands adjacent, were annexed to Nova Scotia; and all the lands between the rivers Altamaha and St. Mary were annexed to Georgia. Power was given to all these new colonies to call assemblies, and exercise political functions, similar to those of other English-American colonies.

**Fourteenth Amendment of the Constitution.** On June 13, 1866, the following Amendment to the National Constitution was adopted by Congress, by joint resolution: "ARTICLE XIV., Section 1. All persons born or naturalized in the United States, and subject to the jurisdiction thereof, are citizens of the United States and of the state wherein they reside. No state shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States, nor shall any state deprive any person of life, liberty, or property, without due process of law; nor deny to any person within its jurisdiction the equal protection of the laws. Section 2. Representatives shall be apportioned among the several states according to their respective numbers, counting the whole number of persons in each state, excluding Indians not taxed; but when the right to vote at any election for the choice of Electors for President and Vice-President of the United States, Representatives in Congress, the executive and judicial officers of a state, or the members of the Legislature thereof, is denied to any of the male inhabitants of such state (being twenty-one years of age and citizens of the United States), or in any way abridged except

for participation in rebellion or other crime, the basis of representation therein shall be reduced in the proportion which the number of such male citizens shall bear to the whole number of male citizens twenty-one years of age in such state. *Section 3.* No person shall be a Senator or Representative in Congress, or Elector, or President, or Vice-President, or hold any office, civil or military, under the United States, or under any state, who, having previously taken an oath as a member of Congress, or as an officer of the United States, or as a member of any State Legislature, or as an executive or judicial officer of any state, to support the Constitution of the United States, shall have engaged in insurrection or rebellion against the same, or given aid and comfort to the enemies thereof; but Congress may, by a vote of two-thirds of each House, remove such disability. *Section 4.* The validity of the public debt of the United States, authorized by law, including debts incurred for payment of pensions and bounties, for services in suppressing insurrection or rebellion, shall not be questioned; but neither the United States nor any state shall assume or pay any debt or obligation incurred in aid of insurrection or rebellion against the United States, or any claim for the loss or emancipation of any slave. But all such debts, obligations, and claims shall be held illegal and void. *Section 5.* Congress shall have power to enforce, by appropriate legislation, the provisions of this article." On July 20, 1868, the Secretary of State proclaimed that the requisite number of states had ratified this Amendment.

**Fourth of July, FIRST ANNIVERSARY OF INDEPENDENCE ON THE.** The first anniversary of the Declaration of Independence was celebrated in Philadelphia, by the members of Congress and patriotic citizens, in 1777. The bells of the city rang out joyfully nearly all day and all the evening. On the Delaware vessels displayed the just-adopted flag of the inchoate nation; and at three o'clock there was a dinner at the city tavern, at which were the members of Congress and officers of the civil government of Pennsylvania. Patriotic toasts were offered, and the band of the Hessians captured at Trenton gave stirring music for the occasion. There were military parades during the day, and at night the city was made glorious by fireworks and a general illumination. The day was celebrated in Boston, Annapolis, Charleston, and smaller towns. Three months afterwards Philadelphia was in possession of the British troops.

**Fowle, DANIEL,** was born at Charlestown, Mass., in 1715; died at Portsmouth, N. H., in June, 1787. He learned the art of printing, and began business in Boston in 1740, where, from 1748 to 1750, he was joint partner with Gainiel Rogers in publishing the *Independent Advertiser*. They had published the *American Magazine* from 1743 to 1746, and were the first in America to print the New Testament. (See *First Bible printed in America*.) Mr. Fowle settled in Portsmouth, N. H.; and there, in October, 1756, began the publication of the *New Hampshire Gazette*.

**Fox, GEORGE,** founder of the Society of

Friends, or Quakers, was born at Drayton, Leicestershire, England, in July, 1624; died in London, Jan. 13, 1691. His father, a Presbyterian, was too poor to give his son an education beyond reading and writing. The son, who was grave

GEORGE FOX.

and contemplative in temperament, was apprenticed to a shoemaker, and made the Scriptures his constant study. The doctrines he afterwards taught were gradually fashioned in his mind (see *Quakers*), and believing himself to be called to disseminate them, he abandoned his trade at the age of nineteen, and began his spiritual work, leading a wandering life for some years, living in the woods, and practising rigid self-denial. He first appeared as a preacher at Manchester, in 1648, and he was imprisoned as a disturber of the peace. Then he travelled over England, meeting the same fate everywhere, but gaining many followers. He warmly advocated all the Christian virtues, simplicity in worship, and in manner of living. Brought before a justice at Derby, in 1650, he told the magistrate to "quake before the Lord," and thereafter he and his sect were called Quakers. Taken before Cromwell, in London, that ruler not only released him, but declared his doctrines were salutary, and he afterwards protected him from persecution; but after the Restoration he and his followers were dreadfully persecuted by the Stuarts. He married the widow of a Welsh judge in 1669, and in 1672 he came to America, and preached in Maryland, Long Island, and New Jersey, visiting Friends wherever they were seated. Fox afterwards visited Holland and parts of Germany. His writings upon the subject of his peculiar doctrine—that the "light of Christ within is given by God as a gift of salvation"—occupied, when first published, three folio volumes.

**Fox, GEORGE, IN NEW ENGLAND.** The founder of the sect called Friends, or Quakers, visited New England in 1672, but being more discreet than others of his sect, he went only to Rhode Island, avoiding Connecticut and Massachusetts. Roger Williams, who denied the pretensions to

spiritual enlightenment, challenged Fox to a disputation. Before the challenge was received, Fox had departed, but three of his disciples at Newport accepted it. Williams went there in an open boat, thirty miles from Providence, and, though over seventy years of age, rowed the vessel himself. There was a three days' disputation, which at times was a tumultuous quarrel. Williams published an account of it, with the title of *George Fox digged out of his Burrowes*; to which Fox replied in a pamphlet entitled, *A New England Firebrand Quenched*. Neither was sparing in sharp epithets.

**France, GOOD NEWS FROM.** In the winter of 1780 Lafayette was in France, urging the government to send ample and speedy aid to the struggling Americans. He had been received in Paris, on his return from the United States, with intense enthusiasm, for his fame as a soldier was universally known. His personal magnetism was wonderful, and his influence at court marvellous. By persevering efforts, he obtained a promise of not only a supply of arms and clothing, but also that a French land and naval force should be sent speedily to the assistance of the Americans. Old Count Maurepas, who was at the head of the French ministry, said, "It is fortunate for the king that Lafayette did not take it into his head to strip Versailles of its furniture to send to his dear America, as his majesty would have been unable to refuse it." The good tidings of French aid was brought to America on his return (April, 1780). Supplies for the army were then urgently needed, for there was almost a famine in the American camp.

**France, RELATIONS WITH.** The French government was pleased when the breach between Great Britain and her colonies began, and sought to widen it. England had stripped France of her possessions in America, and France sought to dismember the British empire, and cause it a greater loss, by the achievement of the independence of the colonies. Arthur Lee, of Virginia, being in London soon after the breaking-out of hostilities, made such representations to the French ambassador there that the Count de Vergennes, the French Minister for Foreign Affairs, sent Caron de Beaumarchais, a well-known political intriguer and courtier (see *Beaumarchais*), to concert measures with Lee for sending to the Americans arms and military stores to the amount of \$200,000. An open breach with the English was not then desirable, and the French minister, to cover up the transaction, gave it a mercantile feature, by having Beaumarchais transmit the supplies under the fictitious firm-name of Rodrigue Hortales & Co. Before the matter was completed, Silas Deane, sent by the Committee of Secret Correspondence (which see), arrived in Paris (May, 1776), in the disguise of a private merchant. He was received kindly by Vergennes, and introduced to Beaumarchais. It was agreed that Hortales & Co. should send the supplies by way of the West Indies, and that Congress should pay for them in tobacco and other American products. When the arrangement was completed, Beaumarchais de-

spatched vessels from time to time, with valuable cargoes, including two hundred cannons and mortars, and a supply of small-arms from the French arsenals; also four thousand tents, and clothing for thirty thousand men. Deane was suspected of some secret connection with the French government, and was closely watched by British agents; and the French court would trust none of its secrets to the Congress, for its most private deliberations (the sessions were always private) leaked out, and became known to the British ministry. The business was done by the Secret Committee. Soon after the declaration of independence, a plan of treaties with foreign nations had been reported by a committee and accepted by Congress, and Franklin, Deane, and Jefferson were appointed (Sept. 28, 1776) commissioners to the court of France. Jefferson declined the appointment, and Arthur Lee was substituted. They were directed to live in a style "to support the dignity of their public character" (see *Diplomacy of the Revolution*), and provision was made for their maintenance. Franklin arrived at Paris, and was joined by Deane and Lee in December. The commissioners were courteously received by Vergennes, privately, but without any recognition of their diplomatic character. France was secretly strengthening her navy, and preparing for the inevitable war which her aid to the revolted colonies would produce. The commissioners received from the French government a quarterly allowance of \$400,000, to be repaid by the Congress, with which they purchased arms and supplies for troops, and fitted out armed vessels—a business chiefly performed by Deane, who had been a merchant, and managed the transactions with Beaumarchais. Out of these transactions grew much embarrassment, chiefly on account of the misrepresentations of Arthur Lee, which led Congress to believe that the supplies forwarded by Beaumarchais were gratuities of the French monarch. This belief prevailed until the close of 1778, when Franklin, on inquiry of Vergennes about the matter, was informed that the king had furnished nothing; he simply permitted Beaumarchais to be provided with articles from the arsenals upon condition of replacing them. The matter becoming a public question, the startled Congress, unwilling to compromise the French court, declared (January, 1779) that they "had never received any species of military stores as a present from the court of France." Then Beaumarchais claimed payment from the Congress for every article he had forwarded. This claim caused a lawsuit that lasted about fifty years. It was settled in 1835, by the payment by the United States government to the heirs of Beaumarchais of over \$200,000.

**Francis, JOHN WAKEFIELD, M.D., LL.D.**, a physician and biographer, was born in New York city, Nov. 17, 1789; died there, Feb. 8, 1861. He graduated at Columbia College in 1811. He began business life as a printer, but commenced the study of medicine, in 1808, under Dr. Hesack, and was his partner until 1820. From 1810 until 1814 they published the *American Medical and Philosophical Register*. He occupied the chair of

Materia Medica in the College of Physicians and Surgeons, and, visiting Europe, was a pupil of the celebrated Abernethy. After filling various professorships until 1826, he devoted himself to the practice of his profession and to literary pursuits. Dr. Francis was probably the author of more biographies and memoirs than any American of his time, and was active, as one of the founders, in the promotion of the objects of the New York Historical Society and of other institutions. He was the first president of the New York Academy of Medicine, and was a member of numerous scientific and literary societies.

**Franking Privilege, THE,** was a privilege of sending and receiving letters post free given to members of the British Parliament and of the Congress of the United States, and to certain public functionaries. This privilege was abused, and it was abolished in Great Britain in 1840. It was abolished in the United States in 1873. The mails were thus greatly relieved of a dead weight, and money was saved to the government amounting to at least \$2,250,000 annually.

**Frankland.** In 1784, North Carolina ceded her western lands to the United States. The people of East Tennessee, piqued at being thus disposed of, and feeling the burdens of state taxation, alleging that no provision was made for their defence or the administration of justice, assembled in convention at Jonesborough, to take measures for organizing a new and independent state. The North Carolina Assembly, willing to compromise, repealed the act of cession the same year, made the Tennessee counties a separate military district, with John Sevier brigadier-general, and also a separate judicial district, with proper officers. But ambitious men urged the people forward, and at a second convention, at the same place (Dec. 14, 1784), they resolved to form an independent state, under the name of Frankland. A provisional government was formed; Sevier was chosen governor (March, 1785); the machinery of an independent state was put in motion, and the governor of North Carolina (Martin) was informed that the counties of Sullivan, Washington, and Greene were no longer a part of the State of North Carolina. Martin issued a proclamation, exhorting all engaged in the movement to return to their duty; and the Assembly passed an act of oblivion as to all who should submit. But the provisional constitution of Frankland, based upon that of North Carolina, was adopted (November, 1785) as a permanent one, and the new state entered upon an independent career. Very soon rivalries and jealousies appeared. Parties arose, and divided the people, and at length a third party, favoring adherence to North Carolina, led by Colonel Tipton, showed much and increasing strength. The new state sent William Cocke as a delegate to the Congress, but he was not received, while the North Carolina party sent a delegate to the Legislature of that state. Party spirit ran high. Frankland had two sets of officers, and civil war was threatened. Collisions became frequent. The inhabitants of southwestern Vir-

ginia sympathized with the revolutionists, and were inclined to secede from their own state. Finally an armed collision between men under Tipton and Sevier took place. The latter were defeated, and finally arrested, and taken to prison in irons. Frankland had received its death-blow. The Assembly of North Carolina passed an act of oblivion, and offered pardon for all offenders in Frankland in 1788, and the trouble ceased. Virginia, alarmed by the movement, hastened to pass a law subjecting to the penalties of treason any person who should attempt to erect a new state in any part of her territory without previous permission obtained of her Assembly.

**Franklin and Governor Shirley.** At the beginning of the French and Indian War (1754) the colonists, as well as the royal governors, saw the necessity of a colonial union in order to present a solid front of British subjects to the French. Dr. Franklin labored earnestly to this end, and in 1755 he went to Boston to confer with Governor Shirley on the subject. At the governor's house they discussed the subject long and earnestly. Shirley was favorable to union, but he desired it to be effected by the fiat of the British government and by the spontaneous act of the colonists. Franklin, on the contrary, animated by a love of popular liberty, would not consent to that method of forming a colonial union. He knew the true source of power was lodged with the people, and that a good government should be formed by the people for the people; and he left Shirley in disappointment. Shirley not only condemned the idea of a popular colonial government, but assured Franklin that he should immediately propose a plan of union to the ministry and Parliament, and also a tax on the colonies.

**Franklin and the Chess-player.** Franklin, in England in 1774, was a perfect enigma to the British ministry. They were perplexed with doubts of the intentions of the defiant colonists. They believed Franklin possessed the coveted secret, and tried in vain to draw it from him. He was an expert chess-player, and well known as such. Lord Howe (afterwards admiral on our coast) was intimate with leading ministers. His sister-in-law, Mrs. Howe, was also an expert chess-player and an adroit diplomatist. She sent Franklin an invitation to her house to play chess, with the hope that in the freedom of social conversation she might obtain the secret. He went; was charmed with the lady's mind and manners; played a few games; and accepted an invitation to repeat the visit and the amusement. On his second visit, after playing a short time, they entered into conversation, when Mrs. Howe put questions adroitly to the sage, calculated to elicit the information she desired. He answered without reserve and with apparent frankness. He was introduced to her brother, Lord Howe, and talked freely with him on the subject of the great dispute; but, having early perceived the designs of the diplomatists, his usual caution had never allowed him to betray a single secret

worth preserving. At the end of several interviews, enlivened by chess-playing, his questioners were no wiser than at the beginning.

**Franklin, BATTLE OF (1864).** General Thomas had sent General Schofield southward to confront Hood's invasion of Tennessee (which see), and he took post south of Duck River, hoping to fight the invaders there. But two divisions under A. J. Smith, coming from Missouri, had not arrived, and Schofield fell back, first to Columbia, and then to Franklin, not far below Nashville, General Stanley saving his train from seizure by Forrest after a sharp fight with the guerilla chief. At Franklin, Schofield disposed his troops in a curved line south and west of the town, his flanks resting on the Harpeth River. He cast up a line of light intrenchments along his entire front. His cavalry, with Wood's division, were posted on the north bank of the river, and Fort Granger, on a bluff, commanded the gently rolling plain over which Hood must advance in a direct attack. Schofield had about 18,000 men. At four o'clock on the afternoon of Nov. 30, 1864, Hood advanced to the attack with all his force. A greater part of his cavalry, under Forrest, was on his right, and the remainder were on his left. The Confederates fell fiercely upon Schofield's centre, composed of the divisions of Ruger and Cox, about 10,000 strong. Their sudden appearance was almost a surprise. Schofield was at Fort Granger, and the battle, on the part of the Nationals, was conducted by General Stanley. By a furious charge Hood hurled back the Union advance in utter confusion upon the main line, when that, too, began to crumble. A strong position on a hill was carried by the Confederates, where they seized eight guns. They forced their way within the second line and planted a Confederate flag upon the intrenchments. All now seemed lost to the Nationals, who, as their antagonists were preparing to follow up their victory, seemed about to break and fly, when Stanley rode forward and ordered Oplyke to advance with his brigade. Swiftly they charged the Confederate column and drove them back. Conrad, close by, gave assistance. The works and the guns were recovered; 300 prisoners and ten battle-flags were captured; and the Union line was restored, and not again broken, though Hood hurled strong bodies of men against it. The struggle continued until long after dark; it was almost midnight when the last shot was fired. The advantage lay with the Nationals. The result was disastrous to Hood. His men were dispirited, and he lost 6253 soldiers, of whom 1750 were killed and 702 made prisoners. Schofield's loss was 2326, of whom 180 were killed and 1104 missing. The Nationals withdrew from Franklin a little after midnight, and fell back to Nashville.

**Franklin before the House of Commons.** In February, 1766, Dr. Franklin was examined before the House of Commons relative to the Stamp Act (which see). At that examination he fairly illustrated the spirit which animated the colonies. When asked, "Do you think the

people of America would submit to the stamp duty if it was moderated?" he answered, "No, never, unless compelled by force of arms." To the question, "What was the temper of America towards Great Britain before the year 1763?" he replied, "The best in the world. They submitted willingly to the government of the crown, and paid, in their courts, obedience to the acts of Parliament. Numerous as the people are in the old provinces, they cost you nothing, in forts, citadels, garrisons, or armies, to keep them in subjection. They were governed by this country at the expense only of a little pen, ink, and paper; they were led by a thread. They had not only a respect but an affection for Great Britain—for its laws, its customs, and manners; and even a fondness for its fashions that greatly increased the commerce. Natives of Britain were always treated with peculiar regard. To be an 'Old England man' was of itself a character of some respect, and gave a kind of rank among us." It was asked, "What is their temper now?" and Franklin replied, "Oh, very much altered." He declared that all laws of Parliament had been held valid by the Americans, excepting such as laid internal taxes; and that its authority was never disputed in levying duties to regulate commerce. When asked, "Can you name any act of assembly or public act of your governments that made such distinction?" Franklin replied, "I do not know that there was any; I think there never was occasion to make such an act till now that you have attempted to tax us; that has occasioned acts of assembly declaring the distinction, on which, I think, every assembly on the continent, and every member of every assembly, have been unanimous." This examination was one of the causes which led to a speedy repeal of the Stamp Act.

**Franklin before the Privy Council.** The exposure of the letters of Hutchinson and his political friends (see *Hutchinson's Letters*) created great excitement in England. Franklin, to protect innocent parties from being suspected of revealing them, frankly took upon himself the whole responsibility of the act of sending them to America. A petition for the recall of Hutchinson followed. It was sent to Franklin to present to the king. His request to do so was not granted, but it reached the monarch through Lord Dartmouth. The king laid it before the Privy Council. There was then hot indignation against Franklin in court circles. He was summoned before the council (Jan. 8, 1774) to consider the petition. He appeared with counsel. A crowd was present—not less than thirty-five peers. Wedderburn, the Solicitor-general (of whom the king said, at his death, "He has not left a greater knave behind him in my kingdom"), abused Franklin most shamefully with unjust and coarse invectives, while not an emotion was manifested in the face of the abused statesman. The ill-bred lords of that day seconded Wedderburn's abuse by derisive laughter, instead of treating Franklin with decency. At the end of the solicitor's ribald speech the petition was dismissed as "groundless, scandalous, and vexatious." "I have never been so

sensible of the power of a good conscience," Franklin said to Dr. Priestley, with whom he breakfasted the next morning. When he went home from the council he laid aside the suit of clothes he wore, making a vow that he would never put them on again until he should sign the degradation of England by a dismemberment of the British empire and the independence of America. He kept his word, and, as commissioner for negotiating peace almost ten years afterwards, he performed the act that permitted him to wear the garments again.

Franklin, BENJAMIN, LL.D., was born in Boston, Jan. 17, 1706; died in Philadelphia, April 17, 1790. His father was from England; his mother was a daughter of Peter Folger, the Quaker poet of Nantucket. He learned the art of printing

BENJAMIN FRANKLIN.

with his brother; but they disagreeing, Benjamin left Boston when seventeen years of age, sought employment in New York, but, not succeeding, went to Philadelphia and there found it. He soon attracted the attention of Governor Keith as a very bright lad, who, making him a promise of the government printing, induced young Franklin, at the age of eighteen, to go to England to purchase printing material. He was deceived, and remained there eighteen months, working as a journeyman printer in London. He returned to Philadelphia late in 1726, and in 1729 established himself there as a printer. He started the *Pennsylvania Gazette*, and married Deborah Read, a young woman whose husband had absconded. For many years he published an Almanac under the assumed name of Richard Saunders. It became widely known as "Poor Richard's Almanac," as it contained many wise and useful maxims, mostly from the ancients. Franklin was soon marked as a wise, prudent, and sagacious man, full of well-directed public spirit. He was the chief founder of the Philadelphia Library in 1731. He became clerk of the Provincial Assembly in 1736, and postmaster of Philadelphia the next year. He was the founder of the University of Pennsylvania (which see) and the Philosophical Society of Philadelphia in 1744, and was elected a member of the Provincial Assembly in 1750. In 1753 Franklin was appointed deputy postmaster for

the English-American colonies; and in 1754 he was a delegate to the Colonial Congress of Albany (which see), in which he prepared a plan of union for the colonies, which was the basis of the Articles of Confederation (which see) adopted by Congress more than twenty years afterwards. Franklin had begun his investigations and experiments in electricity, by which he demonstrated its identity with lightning, so early as 1746. The publication of his account of these experiments procured for him membership in the Royal Society, the Copley gold medal, and the degree of LL.D. from Oxford and Edinburgh in 1762. Harvard and Yale colleges had previously conferred upon him the degree of Master of Arts. Franklin was for many years a member of the Assembly and advocate of the rights of the people in opposition to the claims of the proprietaries; and in 1764 he was sent to England as agent of the popular legislature, in which capacity he afterwards acted for several other colonies. His representation to the British ministry, in 1765-66, of the temper of the Americans on the subject of taxation by Parliament did much in effecting the repeal of the Stamp Act. He tried to avert the calamity of a rupture between Great Britain and her colonies; but, failing in this, he returned to America in 1775, after which he was constantly employed at home and abroad in the service of his countrymen struggling for political independence. In Congress, he advocated, helped to prepare, and signed the Declaration of Independence; and in the fall of 1776 he was sent as ambassador to France, as the colleague of Silas Deane and Arthur Lee. To him was chiefly due the successful negotiation of the treaty of alliance with France (which see); and he continued to represent his country in that kingdom until 1785, when he returned home. While Dr. Franklin was in France, and residing at Passy in 1777, a medallion likeness of him was made in the red clay of that region.

THE FRANKLIN MEDALLION.

The engraving of it here given is about half the size of the original. He took an important part in the negotiation of the treaties of peace.

In 1786 he was elected governor of Pennsylvania, and served one term; and he was a leading member in the convention, in 1787, that framed the National Constitution. His last public act was the signing of a memorial to Congress on the subject of slavery by the Abolition Society of Pennsylvania, of which he was the founder and president. Dr. Franklin performed extraordinary labors of usefulness for his fellow-men. In addition to scientific and literary institutions, he was the founder of the first fire-company in Philadelphia in 1738; organized a volunteer military association for the defence of the province in 1744; and was colonel of a regiment, and built forts for the defence of the frontiers in 1755. He was the inventor of the Franklin fireplace, which, in modified forms, is still in use. He was also the inventor of the lightning-rod. Franklin left two children—a son and a daughter.

**Franklin sent to the French Court.** Late in the autumn of 1776 Dr. Franklin was sent as a diplomatic agent to France in the ship *Reprisal*. The passage occupied thirty days, during which that vessel had been chased by British cruisers and had taken two British brigantines as prizes. He landed at Nantes on Dec. 7. Europe was surprised, for no notice had been given of his coming. His fame was world-wide. The courts were filled with conjectures. The story was spread in England that he was a fugitive for safety. Burke said, "I never will believe that he is going to conclude a long life, which has brightened every hour it has continued, with so foul and dishonorable a flight." On the Continent it was rightly concluded that he was on an important mission. To the French people he spoke frankly, saying that twenty successful campaigns could not subdue the Americans; that their decision for independence was irrevocable; and that they would be forever independent states. On the morning of Dec. 23 Franklin, with the other commissioners (Silas Deane and Arthur Lee), waited upon Vergennes, the French Minister for Foreign Affairs, when he presented the plan of Congress for a treaty. (See *Treaty with France proposed*.) Vergennes spoke of the attachment of the French nation to the American cause; requested a paper from Franklin on the condition of America; and that, in future, intercourse with the sage might be in secret, without the intervention of a third person. Personal friendship between these two distinguished men became strong and abiding. He told Franklin that as Spain and France were in perfect accord, he might communicate freely with the Spanish minister, the Count de Aranda. With him the commissioners held secret but barren interviews, for Spain was indifferent. Aranda would only promise the freedom of Spanish ports to American vessels. (See *France, Relations with*.)

**Franklin Stove, THE.** The manufacture of apparatus for heating and cooking is an important item in our industrial operations. The first iron fireplace for heating rooms was in-

vented by Dr. Benjamin Franklin about the year 1740, and is known as the "Franklin Stove" to this day. It is an open fireplace constructed of iron, and portable, so that it may be used in any room with a chimney. It was made for the purpose of better warming and for saving fuel. He refused the offer of a patent for it by the governor of Pennsylvania, as he held that, as we profit by the inventions of others, so we should

THE FRANKLIN STOVE.

freely give what we may for the comfort of our fellow-men. He gave his models to Robert Grace, one of his early friends in London, who had an iron-foundery, and he made much money by casting these stoves. They were in general use in all the rural districts of the country until about fifty years ago, when anthracite coal began to take the place of wood as fuel and required a different kind of stove.

**Franklin, WILLIAM,** only son of Dr. Benjamin Franklin, was the last royal governor of New Jersey. He was born in Philadelphia in 1729, an illegitimate son; died in England, Nov. 17, 1813. It is not known who his mother was. About a year after his birth Franklin was married, took this child into his own house, and brought him up as his son. He held a captain's commission in the French War (1744-48). From 1754 to 1756 he was controller of the Colonial Post-office, and clerk to the Provincial Assembly. He went to London with his father in 1757, and was admitted to the bar in 1758. In 1762 he was appointed governor of the Province of New Jersey, remaining loyal to the crown when the Revolution broke out, and in January, 1776, a guard was put over him at his residence at Perth Amboy. He gave his parole that he would not leave the province. In June (1776) he called a meeting of the Legislature of New Jersey, for which offence—defiance of public opinion—he was arrested and sent to Connecticut, where for more than two years he was strictly guarded, when, in November, 1778, he was exchanged. He remained in New York, and was active as President of the Board of Associated Loyalists (which see) until 1782, when he sailed for England, where he was allowed by the government \$9000 and a pension of \$4000 a year. His father willed him lands in Nova Scotia and forgave him all his debts, nothing more. In his will, Dr. Franklin observed concerning this son, from whom he was estranged: "The part he acted against me in the late war, which is of public notoriety, will account for my leaving him no more of an estate he endeavored to deprive me of."

**Franklin, WILLIAM BUEL,** was born at York, Penn., Feb. 27, 1823, and graduated at West Point in 1843. In the engineer service, he was actively engaged when the war with Mexico broke out. He served on the staff of General Taylor at the battle of Buena Vista (which see), and was breveted first lieutenant. Serving as professor of natural and experimental philosophy at West Point for four years, he occupied

the same chair, and that of civil engineering, in the New York City Free Academy in 1852. In May, 1861, he was appointed colonel of a new regiment, and in July was assigned the command of a brigade in Heintzelman's division.

WILLIAM BUEL FRANKLIN.

He was in the hottest of the fight at Bull's Run; made a brigadier of volunteers in September, and appointed to the command of a division of the Army of the Potomac. Franklin did excellent service in the campaign of the Virginia Peninsula, and on July 4, 1862, was promoted to major-general. He served under McClellan in Maryland, and under Burnside at Fredericksburg, and in 1863 was assigned to the Department of the Gulf, under Banks. In March, 1865, he was breveted major-general of the United States Army, and resigning in March, 1866, engaged in the vocations of civil life.

**Franklin's Courage and Magnanimity.** A DUEL. Late in 1773 Dr. Franklin presented to Lord Dartmouth, to be laid before the king, a petition from Massachusetts for the removal of Governor Hutchinson and Chief-justice Oliver from office. They were charged with conspiracy against the colony, as appeared by certain letters which had been published. (See *Hutchinson's Letters*.) A rumor found utterance in the newspapers that the letters had been dishonestly obtained through John Temple, who had been permitted to examine the papers of the deceased Mr. Whately, to whom the letters were addressed. That permission had been given by William Whately, brother and executor of the deceased. Whately never made a suggestion that Temple had taken the letters away, but he published such an evasive card that it seemed not to relieve Temple from the implication. The latter challenged Whately to mortal combat. They fought, but were unhurt. Another duel was likely to ensue, when Dr. Franklin, to prevent bloodshed, publicly said: "I alone am the person who obtained and transmitted to Boston the letters in question." This frank and courageous avowal drew upon him the wrath of the ministry. (See *Franklin before the Privy Council*.)

**Franklin's First Mission to England.** The

Pennsylvania Assembly, yielding to the urgency of public affairs in the midst of war, voted a levy of \$500,000 without insisting upon their claim to tax the proprietary estates. They protested that they did it through compulsion; and they sent Franklin to England (1752) as their agent to urge their complaint against the proprietaries.

**Franklin's Frankness.** Mr. Strahan, of London, had been a sort of go-between through whom Dr. Franklin had communicated with Lord North. On July 5, 1776, Franklin wrote to him: "You are a member of Parliament, and one of that majority which has doomed my country to destruction. You have begun to burn our towns and murder our people. Look upon your hands; they are stained with the blood of your relations! You and I were long friends; you are now my enemy, and I am yours.—B. FRANKLIN."

**Franklin's Hints.** While the Continental Congress was in session in the fall of 1774, much anxiety was felt in political circles in England concerning the result, and the real intention of the Americans. The ministry, in particular, were anxious to know. (See *Franklin and the Chess-player*.) It was believed that Franklin was a depository of the important secret, and he was solicited by persons high in authority to promulgate the extent of the demands of his countrymen. So urgent were these requests, that, without waiting to receive a record of the proceedings of the Congress, he prepared a paper entitled *Hints for Conversation upon the Subject of Terms that may probably produce a durable Union between Britain and the Colonies*, in seventeen propositions. The substance of the whole was, that the colonies should be reinstated in the position which they held in relation to the imperial government before the obnoxious acts then complained of became laws, by a repeal, and by a destruction of the whole brood of enactments in reference to America hatched since the accession of George III. In a word, he proposed that English subjects in America should enjoy all the essential rights and privileges claimed as the birthright of subjects in England. Nothing came of the "Hints."

**Franklin's Motion for Prayers.** In the convention that framed the National Constitution very slow progress towards anything definite was made for some time. There were such diversities of opinion that it seemed, after being several days in session, the convention must, of necessity, dissolve without accomplishing anything. Some proposed a final adjournment, and a part of the New York delegation, disgusted, withdrew and went home. At this momentous crisis Dr. Franklin arose and said to the President: "How has it happened, sir, that while groping so long in the dark, divided in our opinions, and now ready to separate without accomplishing the great objects of our meeting, we have hitherto not once thought of humbly applying to the Father of Lights to illuminate our understandings? In the beginning of the contest with Great Britain, when we were sen-

eible of danger, we had daily prayers in this room for divine protection. Our prayers, sir, were heard, and graciously answered." After a few more remarks, he moved that "henceforth, prayers, imploring the assistance of Heaven and its blessings on our deliberations, be held in this assembly every morning before we proceed to business." The convention, excepting three or four members, thought prayers were unnecessary, because in this case they would be merely formal. Objections were also made because there were no funds to defray the expenses of such clerical services. The motion was not adopted.

**Franklin's Volunteer Militia.** Franklin proposed a plan, which was adopted, to raise a military force to protect the provinces when threatened by the Indians in 1747. He was the sole author of two lotteries that raised more than £6000 in money to pay the cost of erecting batteries on the river; and by a volunteer system he caused the raising of one hundred and twenty companies of militia, of which Philadelphia raised ten, of one hundred men each. The women were so zealous that they furnished ten pairs of silk colors, wrought with various mottoes. Many of the Quakers admitted the propriety of self-defence, and approved Franklin's measures. This was the first military organization ever formed in Pennsylvania.

**Fraser, SIMON**, a British brigadier-general, was born in Scotland and killed in the first battle on Bemis's Heights in September, 1777. He had served with distinction in Germany, and was appointed brigadier by Governor Carleton Sept. 6, 1776. He gained a victory over the Americans at Hubbardton (which see) in July, 1777. He was shut by one of Morgau's riflemen.

**Fredericksburg, BATTLE AT.** Lee's evacuation of Maryland after the battle on Antietam Creek occurred on the 19th and 20th of September, 1862. Lee rested a few days on the Virginia side of the Potomac, and then marched leisurely up the Shenandoah Valley. McClellan did not pursue, but, after twice calling for reinforcements, he declared his intention to stand where he was, on the defensive, and "attack the enemy should he attempt to recross into Maryland." The government and the loyal people, impatient of delay, demanded an immediate advance. On Oct. 6 the President instructed McClellan to "cross the Potomac and give battle to the enemy, or drive him South. Your army must now move," he said, "while the roads are good." Twenty-four days were spent in correspondence before the order was obeyed, the general complaining of a lack of men and supplies to make it prudent to move forward. At length, when beautiful October had nearly passed by and Lee's army was thoroughly rested and reorganized, and communications with Richmond were re-established, the Army of the Potomac began to cross the river (Oct. 26), 100,000 strong. The Nationals were led on the east side of the Blue Ridge, but failed to strike the retreating Confederates over the mountain in flank or to get ahead of them;

and Lee pushed Longstreet's troops over the Blue Ridge to Culpepper Court-house, between the Army of the Potomac and Richmond, ready to dispute the advance of the Nationals. Quick and energetic movements were now necessary to sever and defeat, in detail, Lee's army. On Nov. 5 McClellan was relieved of command, and General Burnside was put in his place. A sense of responsibility made the latter commander exceedingly cautious. Before he moved he endeavored to get his 120,000 men well in hand. Aquia Creek was made his base of supplies, and he moved the army towards Fredericksburg on Nov. 10. Sumner led the movement down the left bank of the Rappahaunock. By the 20th a greater portion of Burnside's forces were opposite Fredericksburg, and their cautious commander the town. Sumner demanded the surrender of the city (Nov. 21). It was refused. The bridges had been destroyed. A greater portion of the inhabitants now fled, and the town was occupied by Confederate troops. Lee's army, 80,000 strong, was upon and near the Heights of Fredericksburg by the close of November, and had planted strong batteries there. The army lay in a semicircle around Fredericksburg, each wing resting upon the Rappahaunock, its right at Port Royal and its left six miles above the city. Pontoons for the construction of bridges across the Rappahaunock were not received by Burnside until the first week in December. Then 60,000 National troops under Sumner and Hooker lay in front of Fredericksburg, with 150 cannons, commanded by General Hunt. The corps of Franklin, about 40,000 strong, was encamped about two miles below. On the morning of Dec. 11 the engineers went quietly to work to construct five pontoon bridges for the passage of the National army. Sharpshooters assailed the engineers. The heavy ordnance of the Nationals on Stafford Heights opened upon the town, set it on fire, and drove out many troops. The sharpshooters remained. They were dislodged by a party that crossed the river in boats, the bridges were rebuilt, and by the evening of the 12th a greater portion of the National army occupied Fredericksburg, and on the morning of the 13th made a simultaneous assault all along the line. The Confederates, with 300 cannons, were well posted on the heights and ready for action. The battle was begun by a part of Franklin's corps—Meade's division—supported by Gibbon's, with Doubleday's in reserve. Meade soon silenced a Confederate battery, but very soon a terrible storm of shells and canister-shot, at near range, fell upon him. He pressed on, and three of the assailing batteries were withdrawn. Jackson's advanced line, under A. P. Hill, was driven back and 200 men made prisoners, with several battle-flags as trophies. Meade still pressed on, when a fierce assault by Early compelled him to fall back. Gibbon, who came up, was repulsed, and the shattered forces fled in confusion; but the pursuers were checked by General Birney's division of Stoneman's corps. The Nationals could not advance, for Stuart's cavalry, on Lee's right, strongly menaced the Union left. Final-

ly, Reynolds, with reinforcements, pushed back the Confederate right to the Massaponax, where the contest continued until dark. Meanwhile, Couch's corps had occupied the city, with Wilcox's between his and Franklin's. At noon Couch attacked the Confederate front with great vigor. Kimball's brigade, of French's division, led, Hancock's following. Longstreet was posted on Marye's Hill, just back of the town. Upon his troops the Nationals fell heavily, while missiles from the Confederate cannons made great lanes through their ranks. After a brief struggle, French was thrown back, shattered and broken, nearly one half of his command disabled. Hancock advanced, and his brigades fought most vigorously. In fifteen minutes, Hancock, also, was driven back. Of 5000 veterans whom he led into action, 2013 had fallen, and yet the struggle was maintained. Howard's division came to the aid of French

in 1809, because of the increase and influence of free negroes, was manifested in the legislation of several states immediately afterwards. Indeed, such fears had existed earlier. In 1796 North Carolina passed an act prohibiting emancipation, except for meritorious services, and by allowance of the county courts. South Carolina had passed a similar act in 1800; also another act the same year, declaring it unlawful for any number of free negroes, mulattoes, or mestizos to assemble together, even though in the presence of white persons, "for mental instruction or religious worship." There had been two alarms of insurrection in Virginia (1799 and 1801), and in 1805 the freedom of emancipation, allowed by an act in 1782, was substantially taken away, by a provision that, thenceforward, emancipated slaves remaining in the state one year after obtaining their freedom should be apprehended and sold into slavery for the benefit

of the poor of the county. Overseers of the poor, binding out black or mulatto orphans as apprentices, were forbidden to require their masters to teach them reading, writing, and arithmetic, as in the case of white orphans; and free blacks coming into the state were to be sent back to the places whence they came. The Legislature of Kentucky in 1808 passed a law that free negroes coming into that state should give security to depart within twenty days, and on failure to do so should be sold for one year, the same process to be repeated, if, at the end of the year, they should be found in the state twenty days afterwards. This law remained in force until the breaking-out of the late Civil War.

SCENE IN FREDERICKSBURG ON THE MORNING ON DEC. 12, 1862.

and Hancock; so also did those of Sturgis and Getty. Finally, Hooker crossed the river with three divisions. He was so satisfied of the hopelessness of any further attacks upon the strong position of the Confederates that he begged Burnside to desist. He would not yield. Hooker sent 4000 men in the track of French, Hancock, and Howard, to attack with bayonets only. These were hurled back by terrific volleys of rifle-balls, leaving 1700 of their number prostrate on the field. Night soon closed the awful conflict, when the Army of the Potomac had 15,000 less of effective men than it had the day before. Burnside, intent on achieving a victory, proposed to send his old corps (the Ninth) against the fatal barrier (a stone wall) on Marye's Hill, but Sumner dissuaded him, and, on the 14th and 15th, his troops were withdrawn to the north side of the Rappahannock, with all his guns, taking up his pontoon bridges. Then the Confederates reoccupied Fredericksburg.

**Free Negroes.** The alarm expressed in debates on the act prohibiting the slave-trade,

from the office of President of the Republic, the privilege of receiving his letters free of postage for the remainder of his life. This privilege has been extended to all subsequent presidents, and also to their widows.

**Free School, THE FIRST, IN CHARLESTON.** Several benevolent persons having, by their last wills, left sums of money for the foundation of a free school for the use of the inhabitants of the province of South Carolina, the Assembly passed an act in 1712 for erecting a free school in Charleston; for which purpose the governor, with fifteen other persons, were incorporated as commissioners.

**Free Schools IN MARYLAND.** In 1694 a law was passed by the Legislature of Maryland, assembled at Annapolis, the new capital, for establishing free schools in that province. They appropriated towards their endowment sundry imposts on negroes and spirits imported, and on skins, furs, beef and pork exported.

**Freedmen's Bureau.** Early in 1865 Con-

gress established a Bureau of Freedmen, Refugees, and Abandoned Lands, attached to the War Department; and early in May General O. O. Howard was appointed Commissioner or head of this bureau. He appointed eleven assistant commissioners, all army officers; namely— for the District of Columbia, General John Eaton, Jr.; Virginia, Colonel O. Brown; North Carolina, Colonel E. Whittlesey; South Carolina and Georgia, General R. Saxton; Florida, Colonel T. W. Osborne; Alabama, General W. Swayne; Louisiana, first the Rev. T. W. Conway, and then General A. Baird; Texas, General E. M. Gregory; Mississippi, Colonel S. Thomas; Kentucky and Tennessee, General C. B. Fiske; Missouri and Arkansas, General J. W. Sprague. The bureau took under its charge the freedmen, the refugees, and the abandoned lands in the South, for the purpose of protecting the freedmen and the refugees in their rights, and returning the lands to their proper owners. In this work right and justice were vindicated. To make the operations of the bureau more efficient and beneficial, an act was passed (Feb. 19, 1866) for enlarging its powers. President Johnson interposed his veto, but it became a law, and performed its duties well so long as they were required.

**Freedom of a City.** The conferring of all the privileges of a citizen upon a stranger, or one not entitled to such privileges because of non-residence, is an ancient way of conferring honors upon one for meritorious services. When the eminent lawyer of Pennsylvania, Andrew Hamilton, had ably defended the liberty of the press in the case of John Peter Zenger (which see), the corporation of the city of New York conferred the freedom of that city upon him. The certificate of such honor is usually enclosed in a gold box, bearing on the underside of the

GENERAL BROWN'S GOLD BOX.

lid an inscription indicative of the event. I give the form of such a document in a copy of the certificate of freedom which the corporation of the city of New York gave to General Jacob Brown, after the battles of Chippewa and Lundy's Lane, in the summer of 1814, as follows:

"To all to whom these presents shall come, De Witt Clinton, Esq., Mayor, and the Aldermen of the city of New York, send greeting: At a meeting of the Common Council, held at the

Common Council chamber in the City Hall of the city of New York, the following resolutions were unanimously agreed to: Whereas the Corporation of the city entertains the most lively sense of the late brilliant achievements of General Jacob Brown on the Niagara frontier, considering them as proud evidences of the skill and intrepidity of the hero of Chippewa and his brave companions in arms, and attesting ample proof of the superior valor of our hardy farmers over the veteran legions of the enemy, *Resolved*, That, as a tribute of respect to a gallant officer and his intrepid associates, who have added such lustre to our arms, the freedom of the city of New York be presented to General Jacob Brown, that his portrait be obtained and placed in the gallery of portraits belonging to this city, and that the thanks of this corporation be tendered to the officers and men under his command. Know ye that Jacob Brown, Esquire, is admitted and allowed a freeman and a citizen of the said city, to have, to hold, to use, and enjoy the freedom of the city, together with all the benefits, privileges, franchises, and immunities whatsoever granted or belonging to the said city. By order of the mayor and aldermen. In testimony whereof the said mayor and aldermen have caused the seal of the said city to be hereunto affixed. Witness: De Witt Clinton, Esquire, Mayor, the fourth day of February, in the year of our Lord one thousand eight hundred and fifteen, and of the independence and sovereignty of the United States the thirty-ninth. De Witt Clinton."

**Freedom of Speech and of the Press.** The first amendment to the National Constitution, ratified in December, 1791, after forbidding Congress to make any law respecting an establishment of religion, or prohibiting the free exercise thereof, says, "or abridging the freedom of speech or of the press; or the right of the people to peaceably assemble, and to petition the government for a redress of grievances." This secures the invaluable right of utterance of opinions, and reserves to all citizens the privilege of making their grievances known to the National government.

**Freedom of the Press in Massachusetts.** The controversies carried on through pamphlets in Massachusetts in discussions of the subjects of paper-money, the small-pox, and the quarrels between the governor (Shute) and the representatives, had exhibited so much freedom that James Franklin was encouraged to set up a newspaper at Boston, called the *New England Courant*. The first number was dated Aug. 6, 1721. It was designed as a medium of public discussion, to take the place of pamphlets, and was the first newspaper in America that aspired to this eminence. Its freedom of speech made the authorities uneasy; and one of its articles, in relation to the fitting-out of a vessel to cruise against pirates, was construed as contempt of the General Court, for which Franklin was imprisoned. His brother Benjamin, then a youth of sixteen, published in it some mild essays on religious hypocrisy, which gave greater offence. It was charged that the paper had a "tendency to mock religion;" that it profanely abused the Holy Scriptures; injuriously reflected upon the ministers of the Gospel and "on his majesty's government," and disturbed the peace and good order of the province. James Franklin was forbidden to publish a newspaper, pamphlet, or anything else unless it should be approved and licensed by the colonial secretary. This order was evaded by the *Courant* being published in the name of his brother Benjamin, but the caution necessary to be used made contributors shy. They gradually ceased to write, and the paper, losing interest, finally perished for lack of support. Such was the fate of the first nominally free press in America.

**Freedom of the Press Vindicated.** (See *Zenger's Trial*.)

**Free-soil Party.** THE, was founded in 1848 upon the principle of the non-extension of the slave system in the territories. It was an outgrowth of the Liberty Party of 1846. The immediate cause of its organization was the acquisition of new territory at the close of the war with Mexico, which would, if not prevented, become slave territory. In a bill appropriating money for the negotiation of peace with Mexico, submitted to Congress in 1846, David Wilmot, a Democratic member from Pennsylvania, offered an amendment, "Provided that there shall be neither slavery nor involuntary servitude in any territory on the continent of America which shall hereafter be acquired by or annexed to the United States by virtue of this appropriation, or in any other manner, except for crime," etc. It was carried in the House, but failed in the Senate; and in the next session it was defeated in both branches. This was the famous *Wilmot Proviso* (which see). Resolutions to this effect were offered in both the Democratic and Whig conventions in 1846, but were rejected. A consequence of such rejection was a considerable secession of prominent men, and many others, from both parties, especially in Massachusetts, New York, and Ohio. In New York the seceding Democrats were called "Barnburners," and the two classes of seceders combined were called "Free-soilers." The two combined, and at a convention held at Buffalo, Aug. 9, 1848, they formed the *Free-soil Party*. The convention was composed of delegates from all the free-labor states, and from Delaware, Maryland, Virginia, and the District of Columbia. They nominated Martin Van Buren for President of the United States, and Charles Francis Adams for Vice-President. The ticket received a popular anti-slavery vote of two hundred and ninety-one thousand, but did not receive a single electoral vote. The Free-soil Convention at Pittsburgh in 1852 nominated John P. Hale for President, and George W. Julian for Vice-President, who received a popular vote of one hundred and fifty-seven thousand. The compromise measures of 1850, and the virtual repeal of the Missouri Compromise (which see), in the act for the creation of the territories of Kansas and Nebraska in 1854, greatly increased the strength of the Free-soil party, and it formed the nucleus of the historical Republican party in 1856, when the Free-soilers, as a distinct party, disappeared.

**Free-stone State.** A name sometimes given to Connecticut because of its free-stone quarries. It is also called the "Land of Steady Habits" and the "Nutmeg State." It received the first of the latter names in allusion to the moral character of the inhabitants, and the second because of the ingenuity and shrewdness of the people, who were jocosely charged with making and selling nutmegs made of wood for genuine ones.

**Free-thinkers in America.** The freedom of thought and expression on theological subjects which now happily prevails did not exist in the

last century. Then a person who openly opposed the accepted tenets of orthodoxy was ostracized, and hence it is that, even in this day, Franklin and Jefferson are sometimes spoken of as infidels (that is, opposers of the Christian religion)—a charge cruelly unjust. They were simply free-thinkers—men who indulged in the exercise of reason in dealing with the theology of the day. The first American free-thinker was Jeremiah Dummer, for many years colonial agent in England of Connecticut, and author of the *Defence of the New England Charters*. Franklin was one of his converts, yet never carried his views so far as to deny, as Dummer did, the supernatural origin of the Christian religion. Franklin was no propagandist of his peculiar theological views. He thought religion necessary for the good of individuals and society, ostensibly adhered to the Church of England, and never countenanced attacks upon current religious ideas. The first work of a free-thinker published in America was Ethan Allen's *Oracles of Religion*. From passages in his *Notes on Virginia*, published in London, 1787, it is evident that Jefferson was of similar mind in many things, yet his views of the necessity and goodness of the Christian religion were similar to those of Franklin. Paine was of a different stamp, and ought not to be mentioned in association with Franklin and Jefferson. He made coarse attacks upon the Christian religion, and nothing was too sacred in the later years of his life, when his mind became imbruted by intemperance, to escape the wrath of his pen. His indecent attack upon Washington, and his scoffing essay against Christianity, left his otherwise bright name under a cloud.

**Free-trade between New England and Canada Proposed.** D'Aulnay, in Acadia, claimed for the Company of New France the country east of Pemaquid, and had his trading-house on the east side of the Peuboscot, near (present) Castine. (See *La Tour*.) In consequence of D'Aulnay's jealous exclusion of the English colonists from the French territory, a messenger was sent (1651) by the commissioners of the United Colonies to the Governor of Canada at Quebec to propose free-trade between that province and New England. Two Canadian priests brought a reply, after long delay, but it was evident that they were more intent on obtaining assistance in a bloody war with the Five Nations, in which Canada was then engaged, than in arrangements for prosecuting the arts of peace. They asked permission for war parties of converted Indians to pass through the territories of the United Colonies on their way against the Five Nations. These envoys appealed to the New-Englanders as "fellow-Christians," and with this endearing epithet, and touching descriptions of the distress of their Indian converts and the danger to the Jesuit missions, they tried to persuade the Puritans to assist them in their war with the great Indian confederacy. Trade was hardly alluded to by them. There was no sympathy between Puritans and Jesuits, and the envoys were dismissed with a civil refusal. This was the first commu-

unication on record between New England and Canada.

**Free-trade in Negroes (1750).** To completely enslave the English-American colonies, the British Parliament, in 1750, gave liberty to trade in negroes, as slaves, to and from any part of Africa between Sallee, in South Barbary, and the Cape of Good Hope, to all the subjects of the King of England. This was designed to fill the colonies with slaves, who should neither trouble Great Britain with fears of encouraging political independence nor compete with their industry with British workshops; neither would they leave their employers the entire security that might enable them to prepare a revolt.

**Frelinghuysen, FREDERICK,** was born in New Jersey, April 13, 1753; died April 13, 1804. He graduated at the College of New Jersey in 1770, and became an eminent lawyer. He was a member of the Continental Congress much of the time during the war, and served as a captain in the army. Afterwards he filled various state and county offices, and in 1790 was appointed by Washington to lead an expedition against the western Indians, with the rank of major-general. In 1793 he was chosen United States Senator, and served three years.

**Frelinghuysen, THEODORE, LL.D.,** was born at Millstone, N. J., March 28, 1787; died at New Brunswick, N. J., April 12, 1862. He graduated at the College of Princeton, in 1804, and was admitted to the bar in 1808. In the War of 1812-15 he commanded a company of volunteers, and in 1817 became attorney-general of New Jersey, which post he held until 1829, when he was chosen a United States Senator. In 1838 he was chosen Chancellor of the University of New York, and made his residence in that city; and in 1844 he was nominated for Vice-President of the United States, with Henry Clay for President. Mr. Frelinghuysen left the University of New York in 1850 to become President of Rutgers College (which see), in his native state, which position he held until his death.

**Frémont in Missouri (1861).** John C. Frémont was in Europe when the Civil War broke out. He was commissioned major-general of volunteers (May 14, 1861), and leaving Europe on receiving notice of his appointment, he returned home, bringing with him arms for his government. He arrived in Boston on June 27, and July 6 he was appointed to the command of the Western Department (which see), just created. He arrived at St. Louis July 26, where he made his headquarters. He found disorder everywhere. The terms of enlistment of Home Guards, or three-months' men, were expiring, and they were unwilling to re-enlist. He had very little money or arms at his disposal, and was unable to send aid to General Lyon, in the southwestern portion of the state, battling with the insurgents. He resolved to assume grave responsibilities. He applied to the United States Treasurer at St. Louis for a portion of \$300,000 in his hands, but was refused. He was about to seize \$100,000 of it, when the officer yielded; and with the money Frémont secured the re-

enlistment of many of the Home Guards. He strongly fortified St. Louis, and prepared to place the important post at Cairo in a position of absolute security. With nearly four thousand troops on steamers, he proceeded to Cairo with such a display that the impression was general that he had twelve thousand. Although large bodies of Confederate troops in Kentucky and Missouri were gathered for the purpose of seizing Cairo and Bird's Point, Frémont was not molested in this mission, and Prentiss, at the former place, was amply strengthened. Pillow and Thompson and Hardee, who had advanced in that direction, fell back (see *Army of Liberation in Missouri*), and became very discreet. Frémont returned to St. Louis on Aug. 4, having accomplished his wishes and spread alarm among the Confederates. Polk, at Memphis, ordered Pillow to evacuate New Madrid with his men and heavy guns, and hasten to Randolph and Fort Pillow, on the Tennessee shore. When news of the battle at Wilson's Creek and the death of Lyon reached St. Louis, the Secessionists were jubilant. (See *Wilson's Creek*.) Frémont immediately proclaimed martial law, and appointed a provost-marshal. Some of the most active Secessionists were arrested, and the publication of newspapers charged with disloyalty was suspended. But the condition of public affairs in Missouri was becoming more and more alarming. The provisional government was almost powerless. Frémont took all authority into his own hands. Secessionists were arrested and imprisoned, and disloyalty of every kind felt the force of his power. He proclaimed that the property, real and personal, of all persons in Missouri who should be proven to have taken an active part with the enemies of the government in the field should be confiscated to the public use, and their slaves, if they had any, should thereafter be free men. As he acted promptly in accordance with his proclamation, great consternation began to prevail. At that moment his hand was stayed. Because of his avowed determination to confiscate the property and free the slaves of the disloyalists, a storm of indignation suddenly arose in the border slave-states, which alarmed the national government, and the President, wishing to placate the rebellious spirit of those states, requested Frémont to modify his proclamation on those points. He declined to do so, when the President, at Frémont's request, issued an order for such a modification. Frémont could not, for it would imply that he thought the measure wrong, which he did not.

**Frémont, JOHN CHARLES,** was born in Savannah, Ga., Jan. 21, 1813, and graduated at Charleston College in 1830. His father was a Frenchman, and his mother a Virginian. He was instructor in mathematics in the United States Navy from 1833 to 1835. Engaged in surveying the Cherokee country in the winter of 1837-38, he began his famous explorations, first in the country between the Missouri River and the British possessions. He had been appointed second lieutenant of Topographical Engineers in July. In 1841 he married a daughter of Sen-

ator Thomas H. Benton, and in May, 1842, he began, under the authority of the government, the exploration of an overland route to the Pacific Ocean. He ascended the highest peak of the Wind River Mountains, which was afterwards named "Frémont's Peak." He explored the Great Salt Lake region in 1843, and penetrated to the Pacific near the mouth of the Columbia River. In 1845 he explored the Sierra Nevada, in California, and in 1846 became involved in hostilities with the Mexicans on the Pacific coast. He assisted in the conquest of

JOHN CHARLES FRÉMONT.

California, was appointed its military governor, and, after its admission as a state, became one of its first United States Senators. He had continued his explorations after the war. For his scientific researches, Frémont received, in 1850, a gold medal from the King of Prussia, and another from the Royal Geographical Society of London. He had already received from his countrymen the significant title of "The Pathfinder." At his own expense he made a fifth exploration, in 1853, and found a new route to the Pacific. In 1856, the newly formed Republican party nominated him for the Presidency of the United States, and he received 114 electoral votes against 174 given for Buchanan. Returning from Europe in May, 1861, on being appointed major-general in the United States Army, he was assigned to command the Western Department; but, through the intrigues of ambitious politicians, was removed from the command in the course of six months, while successfully prosecuting a campaign he had planned. He was in command of another department, but resigned in 1862, declining to serve under an officer inferior to him in rank. Radical Republicans nominated him for the Presidency in 1864, after which he took leave of political life; but he became active in promoting the construction of a transcontinental railway.

**Frémont, JOHN C., IN CALIFORNIA.** Captain Frémont was sent by his government, in the spring of 1845, to explore the great basin and the maritime region of Oregon and California.

He crossed the Sierra Nevada, in the dead of winter, from Great Salt Lake into California, with between sixty and seventy men, to obtain supplies. Leaving them in the Valley of the San Joaquin, he went to Monterey, then the capital of the province of California, to obtain permission from the Mexican authorities to continue his explorations. It was given, but was almost immediately withdrawn, and he was peremptorily ordered to leave the country without delay. He refused, when General de Castro, the Mexican governor, mustered the forces of the province to expel him. At length he was permitted to go on with his explorations without hinderance. On May 9, 1846, he received despatches from his government, directing him to watch the movements of the Mexicans in California, who seemed disposed to hand the province over to the British government. It was also rumored that General de Castro intended to destroy all the American settlements on the Sacramento River. Frémont hurried back to California, and found De Castro on the march against the settlements. The settlers flew to arms, and joined Frémont's camp, and, under his leadership, these settlements were not only saved, but the Mexican authorities were driven out of California. Frémont and his followers met General de Castro and his forces, strong in numbers, when Frémont retired about thirty miles, to a mountain position, where he called around him the American settlers in that region. With these he captured a Mexican post at Sonoma Pass (June 15, 1846), with nine cannoons and two hundred and fifty muskets. De Castro was routed, and on the 5th of July the Americans in California declared themselves independent, and elected Frémont governor of the province. He then proceeded to join the American naval forces at Monterey, under Commodore Stockton, who had lately arrived, with authority from Washington to conquer California. Frémont appeared there with one hundred and sixty mounted riflemen. On Aug. 17 (1846), Stockton and Frémont took possession of the city of Los Angeles (city of the angels), now the capital of Los Angeles County, Cal.; and at that place General Kearney, who had just taken possession of New Mexico, joined Stockton and Frémont, Dec. 27, 1846. Kearney would not sanction the election of Frémont as governor of California, and on Feb. 8, 1847, assuming that office himself, he declared the annexation of California to the United States. Frémont refused to obey General Kearney, his superior officer, who sent him to Washington under arrest, where he was tried by a court-martial, which sentenced him to be dismissed from the service, but recommended him to the clemency of the President. The penalty was remitted, and in October, 1848, Frémont entered upon his fourth exploration among the far western mountains. He was the real liberator of California. The Legislature of that state elected him one of its first United States Senators.

**Frémont's Embarrassments.** Frémont was censured for his failure to reinforce Colonel Mulligan at Lexington. The public knew very little of his embarrassments at that time. Press-

ing demands came for reinforcements from General Grant at Paducah. At various points in his department were heard cries for help, and a peremptory order came from General Scott for him to forward five thousand troops immediately to Washington city, notwithstanding McClellan numbered seventy-five thousand within easy call of the capital. Frémont's force, never exceeding fifty-six thousand, was scattered over his department. Chafing under unjust complaints, he proceeded to put into execution his plan of ridding the Mississippi Valley of Confederates. (See *Frémont's Plan*.) More than twenty thousand soldiers were set in motion (Sept. 27, 1861) southward (five thousand of them cavalry), under the respective commands of Generals Hunter, Pope, Sigel, McKinstry, and Asboth, accompanied by eighty-six heavy guns. These were moving southward early in October; and on the 11th, when his army was thirty thousand strong, he wrote to his government: "My plan is, New Orleans straight; I would precipitate the war forward, and end it soon victoriously." He was marching with confidence of success, and his troops were winning little victories here and there, when, through the influence of men jealous of him and his political enemies, Frémont's career was suddenly checked. False accusers, public and private, caused General Scott to send an order for him to turn over his command to General Hunter, then some distance in the rear. Hunter arrived just as the troops were about to attack Price. He took the command, and countermanded Frémont's orders for battle; and nine days afterwards General H. W. Halleck was placed in command of the Department of Missouri. The disappointed and disheartened army were turned back, and marched to St. Louis in sullen sadness. Soon afterwards an elegant sword was presented to Frémont, inscribed, "To the Pathfinder, by the Men of the West."

**Frémont's Plan.** When General Frémont took charge of the Western Department (which see), he formed a plan for ridding not only Missouri, but the whole Mississippi Valley, of armed insurgents, and for opening the navigation of this great river, then obstructed by Confederate batteries at Memphis and elsewhere. His plan contemplated the capture or dispersion of troops under General Price in Missouri, and the seizure of Little Rock, Ark. By so doing, Frémont expected to turn the position of Pillow and others in the vicinity of New Madrid (see *Army of Liberation*), cut off the supplies from the southwest, and compel them to retreat, at which time a flotilla of gunboats, then building near St. Louis, might descend the Mississippi, and assist in military operations against the batteries at Memphis. In the event of this movement being successful, he proposed to push on towards the Gulf of Mexico with his army, and take possession of New Orleans.

**French and English Settlers in South Carolina.** There were warm collisions between the French and English settlers in South Carolina, mostly on political grounds, until 1696, when the

refugees, or Huguenots, there were admitted to full citizenship on certain conditions, among them that of taking the oath of allegiance to King William. After that, the people of those two nationalities lived in peace and harmony.

**French and Indian War.** A fourth intercolonial war between the English and French colonies in America was begun in 1754, in which the Indians, as usual, bore a conspicuous part. The English population (white) in the colonies was then a little more than one million, planted along the seaboard. The French were one hundred thousand strong, and occupied the regions of Nova Scotia, the St. Lawrence, the Great Lakes, and a line of trading-posts in the Valley of the Mississippi to the Gulf of Mexico. The latter, as chiefly traders, had gained great influence over many of the Indian tribes. There was outward peace, but inward war, between the colonists, and it needed only a small matter to kindle a flame of hostilities. After the capture of Louisburg (1745), the French had taken measures to extend and strengthen their dominion in America. Their power became aggressive, and early in 1754 it was evident that they intended to hold military possession of the Ohio and the region around its head-waters. The English attempted to build a fort at the forks of the Ohio. The French seized the post, and completed the fortification. (See *Duquesne, Fort*.) Washington led provincial troops to recapture it, but was unsuccessful. The colonists appealed to the British government, and received promises of its aid in the impending war; and in 1755 General Edward Braddock was sent with regular troops to command any forces that might be raised in America to resist the French and their Indian allies. Three separate expeditions were planned—one against Fort Duquesne, another against forts on or near Lake Ontario, and a third against French forts on Lake Champlain. An expedition against Acadia was also undertaken. The three expeditions failed to accomplish their full purposes. In May, 1756, England declared war against France, and sent Lord Loudon as chief commander in the colonies, with General Abercrombie as his lieutenant. Expeditions similar to those of 1755 were planned, but failed in the execution. The skilled soldier the Marquis de Montcalm, commanding the French and Indians, captured Oswego, on the southern shore of Lake Ontario. Loudon proposed to confine the campaign of 1757 to the capture of Louisburg, on Cape Breton. (See *Louisburg*.) Going there with a large land and naval armament, he was told that the French were too strong for him. He believed it, withdrew, and returned to New York. Meanwhile Montcalm had strengthened Fort Ticonderoga, on Lake Champlain, and captured and destroyed the English fort, William Henry, at the head of Lake George (August, 1757); and so ended the campaign and the leadership of the inefficient Lord Loudon. William Pitt took the chief control of public affairs in England, and prepared to prosecute the war in America with vigor. General James Abercrombie was placed in chief command in America in 1758, and Admiral Bos-

cawen was sent with a fleet to co-operate. Louisburg, Fort Ticonderoga, and Fort Duquesne were to be attacked. Louisburg was captured, but Abercrombie, who led the troops towards Lake Champlain, was unsuccessful in his attack on Ticonderoga. The French fort Frontenac, at the foot of Lake Ontario, was captured; so, also, was Fort Duquesne, and its name was changed to Fort Pitt, in compliment to the great prime-minister. These successes so alarmed the Indians that they agreed, in council, not to fight the English any more. Pitt now resolved to conquer Canada. General Amherst was placed in chief command in America in the spring of 1759, and a land and naval force was sent over from England. Again three expeditions were put in motion—one to go up the St. Lawrence, to capture Quebec; another to drive the French from Lake Champlain, and force them back to Canada; and a third to attack Fort Niagara, at the mouth of the Niagara River. General Wolfe commanded the expedition against Quebec, General Amherst led the troops against the French on Lake Champlain, and General Prideaux commanded the expedition against Fort Niagara. Prideaux was killed in besieging Fort Niagara, but it was captured under the lead of Sir William Johnson, his lieutenant, in July. Amherst drove the French from Lake Champlain into Canada, and they never came back; and he built the strong fortress on Crown Point, whose picturesque ruins still attract the attention of the tourist. Wolfe attacked Quebec, and at the moment of victory he was killed. Montcalm, the commander of the French, also perished on the field. In 1760 the French tried to recapture Quebec, but were unsuccessful. Early in September Amherst went down the St. Lawrence and captured Montreal. The conquest of Canada was now completed, and the French and Indian War was essentially ended. The last act in it was a treaty of peace, concluded in Paris in 1763.

**French and Spanish Fleets in English Waters.** The French and Spanish armada, composed of about fifty ships-of-war, appeared off the English coast in August, 1779. The English fleet to oppose them consisted of not more than forty ships of the line, commanded by Sir Charles Hardy. The combined fleets were commanded by French and Spanish leaders respectively, and therefore lacked the unity necessary for perfect co-operation. On Aug. 16 they appeared off Plymouth, but did not attack the town. Two days later a gale drove the armada westward; when it ceased, the scattered ships were rallied, and, sailing up the channel, made the English fleet retreat before them. The French and Spanish officers could not agree upon a line of action, and there was delay. Then a deadly malady ravaged the French ships and infected the Spaniards, and the French returned to port, where they remained. The Spanish vessels sailed for Cadiz, cursing their allies. Not even English merchant-vessels on return voyages had been harmed by this immense armament. The whole scheme of invading England was a failure. Hoping to produce a revolt in discontented Ireland,

both Vergennes and Blanca sent agents there; the latter to the Irish Roman Catholics. His emissary was a priest, who was promised a bishopric if he should succeed in creating a revolt. Vergennes relied more upon the Presbyterians in Ireland than upon the Roman Catholics. But neither party in Ireland could be relied upon as allies of France and Spain.

**French Army, DEPARTURE OF (1782).** The headquarters of the American army were at Verplanck's Point at the beginning of autumn, 1782, where (about ten thousand strong) it was joined by the French army on its return from Virginia, in September. The latter encamped on the left of the Americans, at Crompond, about ten miles from Verplanck's Point. They had received orders to proceed to Boston and there embark for the West Indies. They left their encampment near Peekskill Oct. 22, and marched by way of Hartford and Providence. Rochambeau there left the army in charge of Baron de Viomeuil and returned to Washington's headquarters on his way to Philadelphia. The French troops reached Boston the first week in December. On the 24th they sailed from Boston, having been in the United States two and a half years. Rochambeau sailed from Annapolis for France, Jan. 11, 1783.

**French Consuls Warned.** As the French consuls and vice-consuls to whom the French Republic, through "citizen" Genet, committed the functions of admiralty courts, were disposed to continue the exercise of their admiralty jurisdiction, after the action of the United States government against them, a circular letter was issued (Sept. 7, 1793) threatening to revoke the exequatur, or recognition of a consul, of any officer who might persist in such usurpation. The French consul at Boston defied the menace, and, with the help of a French frigate at anchor in the harbor, he had the insolence to rescue out of the hands of the United States marshal a vessel brought in as a French prize, but upon which process had been served at the suit of the British owners, who claimed that she had been illegally captured within the waters of the United States. The friends of the French cause thwarted all attempts to obtain an indictment against the deposed consul. (See *Genet in the United States.*)

**French Creek, AFFAIR AT (1813).** The troops collected by Wilkinson on Grenadier Island (see *Expedition down the St. Lawrence*) suffered much, for storm after storm swept over Lake Ontario, and snow fell to the depth of ten inches. A Canadian winter was too near to allow delays on account of the weather, and on Oct. 29 General Brown, with his division, moved forward in boats, in the face of great peril, in a tempest. He landed at French Creek (now Clayton) and took post in a wood. The marine scouts from Kingston discovered Brown on the afternoon of Nov. 1, and two brigs, two schooners, and eight gunboats, filled with infantry, bore down upon him, at sunset. Brown had planted a battery of three 18-pounders on a high wooded bluff on the western shore of French Creek, at its mouth, and with it the assailants were driven away.

The conflict was resumed at dawn the next morning, with the same result. The British lost many men; the Americans only two killed and four wounded. Meanwhile, troops were coming down the river from Grenadier Island, and there landed on the site of Clayton. Wilkinson arrived there on Nov. 3, and on the morning of the 5th the army, in three hundred bateaux and other boats, moved down the river.

MOUTH OF FRENCH CREEK.

**French Cruisers, DEPREDATIONS OF (1811).** While discussions were yet in progress concerning the repeal (arrest) of the French decrees, privateers of that nation on the North Sea and the Baltic were as active against American commerce as ever. They captured every American vessel found in these waters, in the hope of effecting a ransom or a compromise. The conduct of the few French national vessels then at sea was no better. Some French frigates, bound to the Mauritius, robbed in succession three innocent American vessels, burning two of them and sparing the third only as a means of getting rid of their prisoners. These acts were aggravated by the refusal of Napoleon to make any compensation for the robberies under the Rambouillet Decree (which see).

**French Decrees.** The presence of Jay in England to make a treaty with Great Britain aroused the French to a sense of the importance of observing its own treaty stipulations with the United States, which had been utterly disregarded since the war with England began. On Jan. 4, 1795, a new decree was issued, giving full force and effect to those clauses of the treaty of commerce (1778) with the United States respecting contraband and the carriage of enemies' goods. When news of the failure of the Americans to elect Jefferson President reached France, the Directory issued a decree (March 2, 1797) purporting to define the authority granted to French cruisers by a former decree. It was intended to annihilate American commerce in-European waters. The treaty with America

was declared to be so modified as to make American vessels and their cargoes liable to capture for any cause recognized as lawful ground of capture by Jay's treaty. They also decreed that any Americans found serving on board hostile armed vessels should be treated as pirates, even though they might plead imprisonment and compulsion as an excuse; in other words, American seamen, impressed by the British, were made liable to be hanged by the French. On Jan. 18, 1798, a sweeping decree against American commerce was promulgated by the French Directory. It declared to be good prizes all vessels having merchandise on board the production of England or her colonies, whoever the owner of the merchantman might be; and forbade, also, the entrance into any French port of any vessel which, at any previous part of her voyage, had touched at any English possession.

**French Depredations.** On Feb. 27, 1797, the Secretary of State laid before Congress a full exhibit of the wrongs inflicted by the French on American commerce. Skipwith, American consul-general in France, had presented to the Directory (which see) one hundred and seventy claims, many of them for provisions furnished, examined, and allowed; for one hundred and three vessels embargoed at Bordeaux, for which promised indemnity had never been paid; and to these wrongs were added enormous depredations then going on in the West Indies, seizing and confiscating the property of Americans without restraint. American vessels were captured and their crews treated with indignity and cruelty. Encouraged by the accession of Spain to their alliance and the victories of Bonaparte in Italy, the French Directory grew every day more insolent. They were countenanced by a great party in the United States, which had failed by only two votes to give a President to the American Republic.

**French Domain in America, HOW DIVIDED.** On the 7th of October, 1763, the King of England (George III.), by proclamation, erected out of the territory acquired from the French by the Treaty of Paris three provinces on the continent—namely, East Florida, West Florida, and Quebec; and an insular province styled Grenada. East Florida was bounded on the north by the St. Mary's River, the intervening region thence to the Altamaha being annexed to Georgia. The boundaries of West Florida were the Appalachicola, the Gulf of Mexico, the Mississippi, and lakes Pontchartrain and Maurepas; and on the north by a line due east from the mouth of the Yazoo River, so as to include the French settlements near Natchez. The boundaries of the Province of Quebec were in accordance with the claims of New York and Massachusetts, being a

line from the southern end of Lake Nepissing, striking the St. Lawrence at 45° north latitude and following that parallel across the foot of Lake Champlain to the head-waters of the Connecticut River, and thence along the highlands which form the water-shed between the St. Lawrence and the sea. Grenada was composed of the islands of St. Vincent, Dominica, and Tobago.

**French Emissary in America.** Vergennes, the French minister, felt very anxious to know the exact state of public opinion in America, and in 1775 he employed De Bouvoloir, a French gentleman of great discretion, who had been in the colonies. He was despatched with the consent of the king; and this was the beginning of French intervention in the affairs of the Americans during the old war for independence. De Bouvoloir was introduced to Franklin and other members of Congress at the close of 1775. With them he held several conferences, by night. The members inquired of him whether France was disposed to aid the Americans, and at what price; and whether it would be prudent to send a plenipotentiary to the French court. Bouvoloir replied that France was well disposed towards the Americans; that if she should give them her aid, it would be on just and equitable conditions. "Make your proposals," he said, "and I will present them." He thought it would be precipitate, and even hazardous, to make any arrangements just then, "for," he said, "what passes in France is known in London." Bouvoloir reported to Vergennes that the Americans were united in loud complaints against the injustice of the British government, and almost wholly so in a determined opposition to its rule.

**French Fleet, ARRIVAL OF (1778).** In accordance with the spirit of the treaty of alliance with France (Feb. 6, 1778), a French fleet was speedily fitted out at Toulon. It consisted of twelve ships of the line and four frigates, commanded by the Count D'Estaing. This fleet arrived in the Delaware on July 8, 1778, bearing four thousand French troops. With it came M. Gerard, the first French minister accredited to the United States. Silas Deane also returned from his mission in France in the same vessel (the *Languedoc*), the flag-ship. Having sent his passengers up to Philadelphia in a frigate, D'Estaing sailed for Sandy Hook, and came to anchor off the harbor of New York. Lord Howe, who had fortunately for himself left the Delaware a few days before D'Estaing's arrival, was now with his fleet in Raritan Bay, whither the heavy French vessels could not safely follow. On July 22 he sailed, with his squadron, to co-operate with General Sullivan against the British in Rhode Island.

**French Fleet, ATTEMPTED INTERCEPTION OF.** When vessels left England with Braddock's troops, the French, ever vigilant, sent a fleet with four thousand soldiers, under the Baron Dieskau, to reinforce their army on the St. Lawrence. Admiral Boscawen was sent with an English fleet to intercept the French armament.

They came together south of Newfoundland. "Are we at peace or war?" asked the French commander. He was answered by the thunder of Boscawen's cannons, and two of the French vessels were captured; the remainder escaped, and passed into the Gulf of St. Lawrence, through the Strait of Belle Isle. Dieskau was accompanied by Vaudreuil, the successor of Duquesne as governor of Canada. The French fleet had left one thousand soldiers at Louisbourg. The hostile movements of the English caused the French ambassador at London to be recalled. To this the English retorted by issuing letters of marque and reprisal. These and other irritations caused a declaration of war between the two countries the next year.

**French Fleet, THE, AND ARNOLD.** At the solicitation of Washington, the French fleet at Newport sailed for the Virginia waters to assist in capturing Arnold, then marauding in Virginia. The fleet was to co-operate with Lafayette, whom Washington had sent to Virginia for the same purpose. The British blockading squadron, which had made its winter-quarters in Gardiner's Bay, at the eastern end of Long Island, pursued the French vessels, and off the capes of Virginia a sharp naval engagement occurred, in which the latter were beaten and returned to Newport. This failure on the part of the French fleet caused Lafayette to halt in his march at Annapolis, Md. Two of the French vessels, taking advantage of a storm that disabled the blockading squadron, entered Chesapeake Bay (February, 1781). Thus threatened by land and water, Arnold withdrew to Portsmouth, so far up the Elizabeth River as to be out of the reach of the British ships. There he was reinforced by troops under General Phillips, of the Convention troops, who had been exchanged for General Lincoln. The French ships soon returned to Newport, after making some prizes.

**French Forces, ARRIVAL OF (1780).** On the 10th of July, 1780, a powerful French fleet, commanded by the Chevalier de Ternay, arrived at Newport, R. I. It was composed of seven ships of the line, besides frigates and transports. The latter bore a French army, six thousand strong, commanded by Lieutenant-general the Count de Rochambeau. This was the first division intended for the American service, and was the first-fruit of Lafayette's persistent personal efforts at the French court. With wise forethought the official relations between Washington and Rochambeau had been settled by the French government. In order to prevent any difficulties in relation to command between the French and American officers, the French government commissioned Washington a lieutenant-general of the empire. This allowed him to take precedence of Rochambeau and made him commander of the allied armies. On all points of precedence and etiquette the French officers were to give place to the American officers. (See *Newport, French Fleet and Army at.*)

**French Forts in the West.** The French, for the security of the interior territory of America,

built a fort in the Illinois country, in latitude 41° 30', as a check upon the several tribes of the Sioux who were not in alliance with them. They also built a fort at the junction of the Illinois and a large tributary, and five other forts from the junction of the Missouri and Mississippi rivers to Kaskaskia. The fort at the latter place was regarded as of great importance, because it was "the pass and outlet of the convoys of Louisiana and of the traders and hunters of the post at Detroit, and that of the greater part of the savage nations." Another, on the banks of the Ohio, opposite the mouth of the Tennessee River, was considered "the key of the colony of Louisiana," and would obstruct the designs of the English in alienating the Indians of the Ohio. It would also, Vandreuil thought, restrain the incursions of the Cherokees on the Wabash and Mississippi rivers, check the Chickasaws, and by this means secure the navigation of the Mississippi and a free communication between Louisiana and Canada. There were at that time about sixty forts in Canada, most of which had around them five self-supporting settlements; and the establishments, posts, and settlements in Louisiana at that time (1756) employed about two thousand soldiers.

**French Interest in the American Union.** When, on the 2d of June, 1779, the Legislature of Virginia unanimously ratified the treaties of alliance and commerce between France and the United States, and the governor had informed the French minister at Philadelphia of the fact, that functionary at once notified his government. Vergennes, on September 27, instructed the minister at Philadelphia (Luzerne) in these words: "During the war it is essential, both for the United States and for us, that their union should be as perfect as possible. When they shall be left to themselves, the general confederation will have much difficulty in maintaining itself, and will, perhaps, be replaced by separate confederations. Should this revolution take place, it will weaken the United States, which have not now, and never will have, real and respectable strength except by their union. But it is for themselves alone to make these reflections. We have no right to present them for their consideration, and we have no interest whatever to see America play the part of a power. The possibility of a dissolution of the Union (see *Dissolution of the Union Threatened*), and the consequent suppression of Congress, leads us to think that nothing can be more conformable to our political interest than separate acts by which each state shall ratify the treaties concluded with France; because in this

way every state will be found separately connected with us, whatever may be the fortune of the general confederation." The policy of the French, as well as the Spaniards, towards the United States was purely selfish from beginning to end. The two Bourbon monarchs hated republicanism, and feared the revolution as menacing thrones; and the chief motive in favoring the Americans, especially of France, was to injure England, humble her pride, and weaken her power.

**French Mills, AMERICAN ARMY IN WINTER-QUARTERS AT.** After the battle at Chrysler's Field (which see) the American army went into winter-quarters at French Mills, on the Salmon River. The waters of that stream were freezing, for it was late in November (1813). General Brown proceeded to make the troops as comfortable as possible. Huts were constructed, yet, as the winter came on very severe, the soldiers suffered much; for many of them had lost their blankets and extra clothing in the disasters near Grenadier Island, at the beginning of their voyage down the St. Lawrence; and in the battle at Chrysler's Field. Until the huts were built, even the sick had no shel-

LANDING-PLACE OF TROOPS ON THE SALMON RIVER.

ter but tents. Provisions were scarce, and the surrounding country was a wilderness. They were in the midst of the cold of a Canadian winter, for they were on the 45th degree of north latitude. In their distress they were tempted by British emissaries, who circulated placards among the soldiers containing the following words: "NOTICE.—All American soldiers who may wish to quit the unnatural war in which they are at present engaged will receive the arrears due them by the American government, to the extent of five months' pay, on their arrival at the British outposts. No man shall be required to serve against his own country." It is believed that not a single soldier of American birth was enticed away by this allurement. In February, 1814, the army began to move away

from their winter encampment. The flotilla was destroyed and the barracks were burned. Brown, with a larger portion of the troops, marched for Sackett's Harbor, and the remainder accompanied Wilkinson, the commander-in-chief, to Plattshurg.

**French Neutrals.** (See *Acadians*, and *Acadia, English Settlers in.*)

**French Politics in America.** The progress of the French Revolution, decisively begun at the meeting of the States-General (May 5, 1789) was contemporaneous with the organization of the American Republic under the new Constitution. The Americans naturally sympathized with the French people avowedly struggling to obtain political freedom; and the influence of that sympathy was speedily seen in the rapid development of the Republican party in the United States. The supposed advent of Liberty in France had been hailed with enthusiasm in America, but common-sense and a wise prudence caused many thinking Americans to doubt the genuineness of French democracy. This tended to a more distinct defining of party lines between the Federalists and Republicans. This enthusiasm was shown by public festivals in honor of the French revolutionists. At a celebration in honor of the temporary conquest of the Austrian Netherland by Dumouriez (1792), held in Boston, Jan. 24, 1793, a select party of three hundred sat down to a feast in Faneuil Hall, over which Samuel Adams, then Lieutenant-governor of Massachusetts, presided. Speeches, toasts, music—all were indicative of sympathy for the French cause. The children of the Boston schools were paraded in the streets, and to each one was given a cake imprinted with the words "Liberty and Equality." Similar celebrations were held in other places; and the public feeling in favor of the French was intensified by the arrival of M. Genet as representative of the French Republic. That was on the 9th of April, 1793. He brought with him news of the declaration of war against England. It had reached New York five days before. More fiercely than ever the two parties were arrayed against each other; and now the Federalists were first called the "British party," and the Republicans the "French party." So long as the French Republic, so miscalled, lasted, the politics of France exerted marked influence in the United States. (See *Genet in the United States.*)

**French Privateers.** On the arrival of Citizen Genet at Charleston, S. C., he fitted out privateers to depredate on British commerce, issued commissions for their commanders, and conferred authority upon French consuls each to create himself into an admiralty court to decide upon the disposition of prizes brought into port by French cruisers. Genet had commissioned two, when the United States government interfered. He persisted, in defiance of the government, and very soon quite a number were afloat—namely, *Sans Culotte*, *Citizen Genet*, *Cincinnati*, *Vainqueur de la Bastille*, *L'Embuscade*, *Anti-George*, *Carmagnole*, *Roland*, and *Concord*.

*L'Embuscade*, the frigate that brought Genet to America, and the *Genet*, were both fitted out as privateers at Charleston. The others went out of the ports of Savannah, Boston, and Philadelphia. These captured more than fifty English vessels, quite a number of them within American waters. After Genet had been warned that the fitting-out of privateers in American ports was a violation of law, he had the *Little Sarah* (a vessel captured by one of the privateers and sent to Philadelphia) made into a letter-of-marque under the very eyes of the government, and called the vessel *The Little Democrat*. Governor Mifflin prepared to seize the vessel before it should leave port, when Jefferson, tender towards the French minister, waited on Genet in person to persuade him not to send the vessel to sea. Genet stormed, and declared his crew would resist. He finally promised that the vessel should only drop down the river a little way. That "little way" was far out of the reach of militia or other forces. Very soon afterwards, in violation of his solemn assurance, Genet ordered *The Little Democrat* to go to sea, and others followed. In the last year of John Adams's administration, and before there was a final settlement of difficulties with France, quite a large number of French privateers yet at sea fell into the hands of American cruisers. These, with others previously taken, made the number captured about fifty. There were also recaptures of numerous merchant vessels which had been previously taken by the French.

**French Refugees in America.** The colony of Huguenots planted in America by Coligni (see *Huguenots in America*) disappeared, but the revocation of the Edict of Nantes (which see) in 1685 caused another and larger emigration to America. The refugees in England had been kindly assisted there, and after the accession of William and Mary Parliament voted \$75,000 to be distributed "among persons of quality and all such as, through age or infirmity, were unable to support themselves." The king sent a large body of them to Virginia, and lands were allotted them on the James River; others purchased lands of the proprietaries of Carolina, and settled on the Santee River; while others—merchants and artisans—settled in Charleston. These Huguenots were a valuable acquisition to the colonies. In the South they planted vineyards and made wine. A large number of them settled in the province of New York, chiefly in Westchester and Ulster counties, and in the city of New York. (See *Leisler*.)

**French Settlements in the West.** Callières, who succeeded Frontenac as governor of Canada in 1699, sent messages to the Five Nations with the alternative of peace or an exterminating war, against which, it was alleged, the English could not render them assistance. Their jealousy had been excited against the latter by a claim of Bellomont to build forts on their territory, and they were induced to send a deputation to a grand assembly at Montreal of all the Indian allies of the French. There a treaty of friendship was concluded; and so the

French, who had been restrained by the hostility of the Iroquois Confederacy, secured a free passage towards the Mississippi. Almost immediately one hundred settlers, with a Jesuit leader, were sent to take possession of the strait between lakes Erie and St. Clair. They built a fort, and called the spot Detroit, the French name for a strait or sound. It soon became the favorite settlement of western Canada. Villages of French settlers soon grew up around the Jesuit missionary stations at Kaskaskia and Cahokia, on the eastern bank of the Mississippi, between the mouths of the Illinois and Ohio. These movements occasioned no little alarm to the English in New York and New England.

**French Spoiliations.** The United States made claims upon the government of France from time to time for depredations committed upon American commerce under the rule of the Directory (which see), the First Consul, and the Empire. Negotiations to this end had been long continued by various ministers from the United States, but nothing satisfactory had been obtained or definitely settled. The change in the government of France by the Revolution of 1830 was a favorable time for Mr. Rives, the American minister to France, to again propose a settlement. The French had set up a counter-claim of the non-fulfilment of the treaty of 1778; but the American government argued that subsequent events had exonerated the United States from all demands under that treaty. Mr. Rives succeeded in negotiating a treaty by which the long-pending controversy was closed. By it the French government agreed to pay to the United States, in complete satisfaction of all claims of American citizens for spoiliations, nearly \$5,000,000, in six annual instalments, \$300,000 to be allowed by the American government to France for French citizens for ancient supplies (see *Beaumarchais*), accounts, or other claims. The United States Senate ratified the treaty, but the French Chamber of Deputies refused to make the appropriation to carry it out, and an unpleasant dispute arose between the two governments. The matter was finally settled on the basis of the treaty in 1836.

**French, THE, AND THE CHICKASAWS.** For a long time the Chickasaws, who were friendly with the English, and obstinately opposed the progress of the French up the Mississippi River, presented the only obstacle to a regular communication between Louisiana and Canada. In 1736 an expedition, consisting of two hundred Frenchmen and four hundred Indians, was sent from Canada to meet a party from New Orleans for the purpose of extirpating the Chickasaws. The party from below not coming up in time, and the party from Canada, looking with contempt upon the Chickasaws, began the war on their own account by attacking the Chickasaw towns. Three hundred warriors instantly gathered, gave battle to their assailants, and completely defeated them. Full forty Frenchmen and eight of their Indian allies were killed, and the remain-

der were made prisoners and afterwards tortured at the stake.

**French, THE, FIRST COLLISION OF, WITH NEW-ENGLANDERS.** Nova Scotia (see *Acadia*), granted to Sir William Alexander, passed into the hands of a joint-stock association of French merchants, called "The Hundred Associates, or Company of New France," at the head of which was Cardinal Richelieu. In 1629, by the aid of a fleet under Sir David Kerrk, who captured Quebec (see *Canada, Conquest of*), Sir William gained temporary possession of Nova Scotia; but it, with Canada and Cape Breton, was restored to the French (1632) by treaty. The Hundred Associates sent a governor to rule Nova Scotia, or Acadia, whose western limits were undefined. Meanwhile enterprising Plymouth colonists had obtained a grant on the Kennebec, and were carrying on a profitable trade with the Indians. Thus encouraged, they pushed eastward and established a trading-post on the Penobscot, and another still farther east, at Machias. The French regarded this movement as an intrusion, and sent a pinnace to the Penobscot to "displaut" the English there. The people of Plymouth sent two armed vessels to recover the post, but failed. The same fate overtook the one at Machias the next year (1633). The French gave bills on France for the goods, but drove away the settlers. The New-Englanders were notified by the French commander that they would not be allowed to trade eastward of Pemaquid Point, a promontory about half-way between the Kennebec and the Penobscot. (See *Pemaquid*.) Too feeble to resist, the Plymouth people withdrew.

**French Treaties Declared Void.** The French republic having repeatedly violated the treaties between France and the United States made in 1778, the Congress, by act passed July 6, 1798, declared those treaties void.

**French Vessels Captured (1747).** A fleet of thirty-eight sail was sent from France, under M. de la Jouquiere, a part of which was appointed to convoy six East India ships, and the rest, with transports and merchantmen full of stores, goods, and merchandise, were destined for Canada and Nova Scotia. English fleets, under Admirals Anson and Warren, that sailed in pursuit of the French vessels, fell in with them on May 3, and, after a sharp battle, captured six of the French men-of-war, all their merchant vessels, and took nearly five thousand prisoners. About seven hundred of the French and five hundred of the English were killed and wounded. The treasure taken by these admirals was afterwards conveyed in twenty wagons to the Bank of England. The estimated loss of the French was over \$7,000,000.

**French West Indies, BRITISH MAKE WAR UPON THE.** Canada conquered, the British turned their arms against the French West India islands, in which the colonies participated. Guadeloupe had already been taken. General Monckton, after submitting his commission as governor to the Council of New York, sailed from that port (January, 1762) with two line-of-battle

ships, one hundred transports, and twelve hundred regulars and colonial troops. Major Gates (afterwards adjutant-general of the Continental army) went with Monckton as aide-de-camp, and carried to England the news of the capture of Martinique. Richard Montgomery (afterwards a general in the Continental army) held the rank of captain in this expedition. The Colonial troops were led by General Phineas Lyman. (See *Crown Point, Expedition against.*) Grenada, St. Lucia, and St. Vincent's—indeed, every island in the Carribean group possessed by the French—fell into the hands of the English. (See *Treaty of Paris.*) The French fleet was ruined, and French merchantmen were driven from the seas. British vessels, including those of New York and New England, now obtained the carrying-trade of those islands; also, under safe conducts and flags of truce, that of Santo Domingo.

**Frenchtown (Raisin River), MASSACRE AT.** In the middle of December, 1812, General Harrison wrote to the War Department that if no political or other necessity existed for the recovery of Michigan and the invasion of Canada, the enormous expense of transportation and the sufferings of men and beasts in the task pleaded for a remission of efforts to attain that recovery until spring. He was directed to use his own judgment in the matter, and was assured that immediate measures would be taken for recov-

Virginia, and one from Ohio, under General Simon Perkins, as the right wing of the army; and the Kentuckians, under General James Wilkinson, as the left wing. So arranged, the army pressed forward towards the rapids of the Maumee, the designated general rendezvous. Winchester, with eight hundred young Kentuckians, reached there on the 10th of January, 1813, and established a fortified camp, when he learned that a party of British and Indians were occupying Frenchtown, on the Raisin River (now Monroe, Mich.), twenty miles south of Detroit. He sent a detachment, under Colonels Allen and Lewis, to protect the inhabitants in that region, who drove the enemy out of the hamlet of about thirty families, and held it until the arrival of Winchester on the 20th with about three hundred men. General Proctor was then at Fort Malden, eighteen miles distant, with a considerable body of British and Indians. With fifteen hundred of these he crossed the Detroit River and marched stealthily at night to destroy the Americans. Winchester was informed late in the evening of the 21st that a foe was approaching. He did not believe it, and at midnight was in perfect repose. The sentinels were posted, but, the weather being intensely cold, pickets were sent out upon roads leading to the town. Just as the drummer-boy was beating the reveille in the gray twilight of the 22d, the sharp

MONROE, FROM THE BATTLE-GROUND.

ering the control of Lake Erie to the Americans. He was instructed, in case he should penetrate Canada, not to offer the inhabitants anything but protection; and, secondly, not to make temporary acquisitions, but to proceed so surely that he might hold fast any territory he should acquire. Other troops having arrived, Harrison resolved to attempt the capture of Fort Malden. His whole effective force did not exceed six thousand three hundred men. He designated the brigades from Pennsylvania and

crack of a rifle, followed by the rattle of musketry, awoke the sleepers. Bomb-shells and canister-shot immediately succeeded in a shower upon the camp. The Americans, seizing their arms, tried to defend themselves. Very soon the soldiers fled to the woods, when the savages, who swarmed there, smote them fearfully with gleaming hatchets. The British and their dusky allies made it a war of extermination. Winchester was captured, and he concluded an arrangement with Proctor to surren-

der his troops on condition that ample provision should be made for their protection against the barbarians. The promise was given and immediately violated. Proctor, knowing Harrison (who had advanced to the Mannee) to be near, hastened towards Malden with his captives, leaving the sick and wounded prisoners behind. The Indians followed awhile, when they turned back, murdered and scalped those who were unable to travel as captives, set fire to the houses, and took many prisoners to Detroit to procure exorbitant prices for their ransom. Proctor's indifference to this outrage, and the dreadful suspicion, which his character warranted, that he encouraged the butchery of the defenceless people, was keenly felt all through the West, particularly in Kentucky, for most of the victims were of the flower of society in that state; and for a long time afterwards the most inspiring war-cry of the Kentucky soldiers was, "Remember the River Raisin!"

**Freneau, PHILIP**, called "the Poet of the Revolution," was born in New York city, Jan. 2, 1752; died in Monmouth County, N. J., Dec. 18, 1832. He graduated at the College of New Jersey in 1771. He was of Huguenot descent, and evinced a talent for rhyming as early as the age of seventeen years, when he wrote a poetical *History of the Prophet Jonah*. He was in the West Indies during a part of the war for independence, and while on a voyage in 1780 he was captured by a British cruiser. After his release he wrote many patriotic songs, and was engaged in editorial duties, notably on the Democratic *National Gazette*, of Philadelphia, the organ of Mr. Jefferson and his party. He continued to edit and publish newspapers. His productions contributed largely to animate his countrymen while struggling for independence. An edition of his *Revolutionary Poems, with a Memoir and Notes*, by E. A. Duyckinck, was published in New York in 1865. His poetry was highly commended by Scotch and English literary critics.

**Friendly Association.** In the middle of the last century the descendants of William Penn, who succeeded to the proprietorship of Pennsylvania, departed from the just course pursued by the great founder of the commonwealth towards the Indians and the white people, and exasperated both by their greed and covetousness. The Indians were made thoroughly discontented by the frauds practised upon them in the purchase of lands and the depredations of a banditti called traders. (See *Walking Purchase*.) So much had they become alienated from the English that in 1755 the Delawares and others joined the French in making war. For some time the Friends, or Quakers, had observed with sorrow the treatment of the Indians by Thomas and John Penn and the traders, and, impelled by their uniform sympathy with the oppressed, they formed a society in 1756 called "The Friendly Association for Regaining and Preserving Peace with the Indians by Pacific Measures." The society was a continual thorn in the sides of the proprietors and Indian trad-

ers, for the active members of the association watched the interests of the red men with keen vigilance, attended every treaty, and prevented a vast amount of fraud and cheating in the dealings of the white people with the natives. Charles Thomson, afterwards secretary of the Continental Congress, was an efficient co-worker with them, making truthful reports of the proceedings at treaties, and preventing false or garbled statements. (See *Easton, Treaties et.*) The Friendly Association continued until 1764.

**Fries's Insurrection.** A second insurrection broke out in Pennsylvania early in 1799. A direct tax had been levied, among other things, on houses, arranged in classes. A means for making that classification was by measuring windows. The German inhabitants of Northampton, Bucks, and Montgomery counties made such violent opposition to this measurement that those engaged in it were compelled to desist. Warrants were issued for the arrest of opposers of the law; and in the village of Bethlehem the marshal, having about thirty prisoners, was set upon by a party of full fifty horsemen, headed by a man named Fries. The President sent troops to maintain the laws. No opposition was made to them, and Fries and about thirty others were arrested and taken to Philadelphia, where their leader was indicted for treason, tried twice, each time found 'guilty, but finally pardoned. Several others were tried for the same offence. While these trials were going on, Duane, editor of the *Aurora* (Bache had died of yellow fever), abused the officers and troops, who, finding no law to touch him, sent a deputation of their own number to chastise him, which they did on his own premises.

**Frobisher, MARTIN**, was born at Doncaster, Yorkshire, England; died at Plymouth, Nov. 7, 1594. He was a mariner by profession, and yearned for an opportunity to go in search of a northwest passage to India. For fifteen years

MARTIN FROBISHER.

he tried in vain to get pecuniary aid to fit out ships. At length the Earl of Warwick and others privately fitted out two small barks of twenty-five tons each and a pinnace, with the approval of Queen Elizabeth, and with these he

sailed from Deptford in June, 1576, declaring that he would succeed or never come back alive. As the flotilla passed the palace at Greenwich, the queen, sitting at an open window, waved her hand towards the commander in token of good-will and farewell. Touching at Greuland, Frobisher crossed over and coasted up the shores of Labrador to latitude 63°, where he entered what he supposed to be a strait, but which was really a bay, which yet bears the name of Frobisher's Inlet. He landed, and promptly took possession of the country around in the name of his queen. Trying to sail farther northward, he was barred by pack-ice, when he turned and sailed for England, bearing a heavy black stone which he believed contained metal. He gave the stone to a man whose wife, in a passion, cast it into the fire. The husband snatched the glowing mineral from the flames and quenched it in some vinegar, when it glittered like gold. On fusing it, some particles of the precious metal were found. When this fact became known a gold fever was produced. Money was freely offered for fitting-out vessels to go for more of the mineral. The queen placed a ship of the royal navy at Frobisher's disposal, and he sailed, with two other vessels of thirty tons each, from Harwich in 1577, instructed to search for gold, and not for the northwest passage. The vessels were laden with the black ore on the shores of Frobisher's Inlet, and on the return of the expedition to England a commission was appointed to determine the value of the discovery. Very little gold was found in the cargoes, yet faith was not exhausted, and Frobisher sailed in May, 1578, with fifteen ships in search of the precious metal. Storms dispersed the fleet. Some turned back, two of them went to the bottom of the sea, and three or four of them returned laden with the worthless stones. Frobisher had won the honor of a discoverer, and as the first European who penetrated towards the Arctic circle to the sixty-third degree. For these exploits, and for services in fighting the Spanish armada, he was knighted by Elizabeth, and in 1590-92 he commanded a squadron sent against the Spaniards. In 1594 he was sent with two ships to help Henry IV. of France, and in a battle at Brest (Nov. 7) he was mortally wounded.

**Front Royal, BATTLE AT.** On May 23, 1862, General Ewell fell with crushing force, almost without warning, upon the little garrison of one thousand men, under Colonel Kenly, at Front Royal. Kenly was charged with the protection of the roads and bridges between Front Royal and Strasburg. His troops were chiefly New-Yorkers and Pennsylvanians. Kenly made a gallant defence, but was driven from the town. He made another stand, but was pushed across the Shenandoah. He attempted to burn the bridge behind him, but failed, when Ewell's cavalry in pursuit overtook him. Kenly again gave battle, in which he was severely wounded, when seven hundred of his men, with a section of rifled ten-pounders and his whole supply train, fell into the hands of the Confederates.

**Frontenac, FORT (or Cataragoi), CAPTURE**

**OF.** After the repulse of the English at Ticonderoga (July 8, 1758), Colonel John Bradstreet urged General Abercrombie to send an expedition against Fort Frontenac, at the foot of Lake Ontario. He detached three thousand men for the purpose, and gave Colonel Bradstreet command of the expedition. He went by the way of Oswego, and crossed the lake in bateaux, having with him three hundred bateau-men. His troops were chiefly provincials, and were furnished with eight pieces of cannon and two mortars. They landed within a mile of the fort on the evening of Aug. 25, constructed batteries, and opened them upon the fort at short range two days afterwards. Finding the works unteuable, the garrison surrendered (Aug. 27) without much resistance. The Indians having previously deserted, there were only one hundred and ten prisoners. The spoils were sixty cannons, sixteen mortars, a large quantity of small-arms, provisions and military stores, and nine armed vessels. On his return, Bradstreet assisted in building Fort Stanwix, in the Mohawk Valley, on the site of Rome, Oneida County.

**Frontenac, LOUIS DE BUADE (Count de),** was born in France in 1620; died at Quebec, Nov. 28, 1698. In the military service, he was made a colonel at seventeen years of age, and was an eminent lieutenant-general at twenty-nine, and covered with decorations and scars. Selected by Marshal Turenne to lead troops sent for the relief of Canada, he was made governor of that province in 1672, and built Fort Frontenac (now Kingston), at the foot of Lake Ontario, in 1673. (See *La Salle*.) He was recalled in 1682, but was reappointed in 1689, when the French dominions in America were on the brink of ruin. With great energy he carried on war against the English in New York and New England, and their allies the Iroquois. Early in 1690 an expedition which he sent towards Albany desolated Schenectady; and the same year he successfully resisted a land and naval force sent against Canada. He was in Montreal when an Indian runner told him of the approach to the St. Lawrence of Colonel Schuyler. (See *King William's War*.) Frontenac, then seventy years of age, called out his Indian allies, and, taking a tomahawk in his hand, he danced the war-dance, and chanted the war-song in their presence and then led them successfully against the foe. He afterwards repulsed Phipps at Quebec (see *Phipps*), having been informed of his expedition by an Indian runner from Pemaquid. So important was that repulse considered that King Louis caused a medal to be struck with the legend, "France victorious in the New World." This success was followed by an expedition sent by Frontenac against the Mohawks in 1696; and he led forces in person against the Onondagas the same year. Frontenac was the terror of the Iroquois, for his courage and activity were wonderful. He restored the fallen fortunes of France in America, and died soon afterwards.

**Frontiers Protected.** The English frontier settlements in the West and South needed pro-

tection in 1757. Colonel Stanwix was ordered, with nearly two thousand men, composed of a battalion of Royal Americans, and Pennsylvania, Maryland, and Virginia provincials, to the defence of the Western frontiers; and a part of a battalion of Royal Americans, with some provincial troops, under Colonel Bouquet, were sent to protect the frontiers of the Carolinas.

**Frontiers Threatened (1755).** After Dunbar's precipitate retreat to Philadelphia, on the defeat of Braddock (which see), the frontiers of Pennsylvania, Maryland, and Virginia were uncovered, and war parties in the interest of the French took advantage of this weakness and began hostilities. The Governor of Pennsylvania (Morris) called loudly for men and money to defend the frontiers of that province. Philadelphians urged the Assembly to make a liberal grant. Instead of that they voted a tax of £50,000 to be levied on real and personal estates, "not excepting those of the proprietaries"—a course which they well knew to be contrary to the governor's instructions. (See *Proprietary Innovations*.) Wealthy Philadelphians offered to pay the amount of the proportion of the tax that might be levied on the proprietors, but there was a principle involved, and the Assembly evaded the offer. The governor stood out, and the bill failed to pass. Dunbar's regiment went back towards the frontiers and afforded temporary protection.

**Fruit Culture in the United States** has had an amazing growth. Until within about sixty years it was hardly deserving of notice in the census. It is said that a little more than fifty years ago (1826) there was not a nursery for the sale of fruit-trees in all New England, and the neglected gardens yielded only a small quantity of small fruit, chiefly currants. The first horticultural society in the country was founded in 1829. Now (1886) fruit-raising of every kind is becoming an important industry. The products of our orchards annually amount in value to full \$55,000,000.

**Fry, JOSEPH**, was born at Andover, Mass., in April, 1711; died at Fryeburg, Me., in 1794. He was an ensign in the army that captured Louisburg in 1745, and a colonel in the British army at the capture of Fort William Henry (which see) by Montcalm in 1757. He escaped and reached Fort Edward. In 1775 Congress appointed him brigadier-general, but in the spring of 1776 he resigned on account of infirmity.

**Fry, JOSHUA**, was born in Somersetshire, England; died in Maryland, May 31, 1754. He was educated at Oxford, and was professor of mathematics in the College of William and Mary, in Virginia. He served in public civil life in Virginia, and in 1754 was intrusted with the command of an expedition against the French on the head-waters of the Ohio. He died at a place at the mouth of Will's Creek (now Cumberland) while conducting the expedition. He had been colonel of the militia (1750) and a member of the governor's council.

**Frye, JAMES**, was born at Andover, Mass., in

1709; died Jan. 8, 1776. He served in several local offices, and in the army at the capture of Louisburg in 1755. At the opening of the Revolution he commanded the Essex Regiment (Massachusetts), taking an active part in the Battle of Bunker's Hill. He afterwards commanded a brigade of the army investing Boston.

**Fugitive Slave Law (1818).** The domestic slave-trade increased the liability of free persons of color being kidnapped, under the provisions of the Fugitive Slave Act of 1793. A petition was presented to Congress from the Yearly Meeting of Friends, or Quakers, at Baltimore, praying for further provisions for protecting free persons of color. This had followed a bill brought in by a committee at the instigation of Pindall, a member from Virginia, for giving new stringency to the Fugitive Slave Act. While this bill was pending, a member from Rhode Island (Burritt) moved to instruct the committee on the Quaker memorial to inquire into the expediency of additional provisions for the suppression of the foreign slave-trade. Pindall's bill was warmly opposed by members from the free-labor states as going entirely beyond the constitutional provision on the subject of fugitives from labor. They contended that the personal rights of one class of citizens were not to be trampled upon to secure the rights of property of other citizens. The bill was supported by the Southern members and a few Northern "doughfaces" (which see); also by Speaker Henry Clay; and it passed the House of Representatives by a vote of eighty-four to sixty-nine. Among the yeas were ten from New York, five from Massachusetts, four from Pennsylvania, and one from New Jersey. It passed the Senate, after several important amendments, by a vote of seventeen to thirteen. Meanwhile some of its Northern supporters seem to have been alarmed by thunders of indignation from their constituents, and when it reached the House it was laid on the table, and was there allowed to die.

**Fugitive Slave Law (Personal Liberty Bills), THE FIRST.** In 1793 an act was passed by Congress for the rendition of fugitive slaves. It provided that the owner of the slave, or "servant," as it was termed in the act, his agent or attorney, might seize the fugitive and carry him before any United States judge, or before any magistrate of the city, town, or county in which the arrest was made; such magistrate, on being satisfied that the charges against the fugitive were true, should give a certificate to that effect, which was a sufficient warrant for remanding the person seized back to slavery. Any person in any way obstructing such seizure or removal, or harboring or concealing such fugitive, was liable to a penalty of \$500. For some time the law attracted very little attention, but finally this summary violation of the right of personal liberty without a trial by jury, or any appeal on points of law, was denounced as dangerous and unconstitutional; and most of the free-labor states passed acts forbidding their magistrates, under severe penalties, to take any

part in carrying this law into effect. It became a dead letter until revived in 1850.

**Fugitive Slave Law, THE (1850).** One of the acts contemplated by Mr. Clay's "On-ibus Bill" (which see) was for the rendition of fugitive slaves to their owners, under the provision of clause 3, section 2, article 4 of the National Constitution. In September, 1850, a bill to that effect was passed, and became a law by the signature of President Fillmore. The bill was drawn up by Senator James M. Mason, of Virginia, and in some of its features was made very offensive to the sentiments and feelings of the people of the free-labor states. It provided that the master of a fugitive slave, or his agent, might go into any state or territory of the Republic and, with or without legal warrant there obtained, seize such fugitive and take him forthwith before any judge or commissioner, whose duty it should be to hear and determine the case. On satisfactory proof being furnished the judge or commissioner, such as the affidavit, in writing, or other acceptable testimony, by the pursuing owner or agent, that the arrested person "owes labor" to the party that arrested him, or his principal, it was made the duty of such judge or commissioner to use the power of his office to assist the claimant to take the fugitive back into bondage. It was further provided that in no hearing or trial under the act should the testimony of such alleged fugitive be admitted in evidence; and that the parties claiming the fugitive should not be molested in their work of carrying the person back "by any process issued by any court, judge, or magistrate, or any person whomsoever;" and any citizen might be compelled to assist in the capture and rendition of a slave. This last clause of the act was so offensive to every sentiment of humanity and justice, so repugnant to the feelings of the people of the free-labor states, and so contrary to the Anglo-Saxon principle of fair play, that, while the habitual respect for law by the American people caused a general acquiescence in the requirements of the Fugitive Slave Law, there was rebellion against it in every Christian heart. It was seen that free negroes might, by the perjury of kidnappers and the denial of the right to defence allowed to the vilest criminal, be carried away into hopeless slavery, beyond the reach of pity, mercy, or law. This perception of possible wrong that would follow the execution of the Fugitive Slave Law caused several free-labor states to pass laws for the protection of their colored population. (See *Personal Liberty Laws*.)

**Fuller, SARAH MARGARET,** a vigorous and luminous writer on social subjects, was born at Cambridge, Mass., May 23, 1810; drowned, July 16, 1850. A bright girl, at the age of seventeen she read French, Italian, Spanish, and German fluently. She became a teacher in Boston in 1835, and, two years later, in Providence, R. I. She formed classes for young ladies in Boston for training in conversation, and the next year (1840) became editor of the *Dial*, the organ of the Transcendentalists (which see), to which she contributed articles on the social condition

of women. In 1844 she became literary editor of the *New York Tribune*. Miss Fuller travelled in Europe, and, visiting Italy in 1847, she married the Marquis D' Ossoli. In 1850, returning to her native country with her husband and child, the vessel was wrecked on the southern coast of Long Island, and all three were drowned. Her writings are held in the highest estimation, and have made a deep impression upon features of social life in America.

**Fulton, ROBERT,** was born at Little Britain, Lancaster Co., Penn., in 1765; died in New York, Feb. 21, 1815. He received a common-school education, became a miniature painter, and, at the age of twenty, was practising that profession in

ROBERT FULTON.

Philadelphia, by which he made enough money to buy a small farm in Washington County, on which he placed his mother. Then he went to England, studied painting under Benjamin West, became a civil engineer, and made himself familiar with the steam-engine, then just improved by Watt. He devised various machines, among them an excavator for scooping out the channels of aqueducts. He wrote and published essays on canals and canal navigation in 1795-96. He went to Paris in 1797, and remained there seven years with Joel Barlow, studying languages and sciences, and invented a torpedo. This he offered to the French and English governments, but both rejected the invention, and in December, 1806, he arrived in New York. He went to the seat of government, where the models and drawings of his torpedo made a favorable impression. In 1807 he perfected his steamboat for navigating the Hudson, having been aided by Robert R. Livingston, with whom he had been acquainted in Paris. Livingston had made experiments in steam-boating as early as 1798, when he was granted the exclusive privilege of navigating the waters

of the state by steam. Fulton was finally included in the provisions of the act, and in September, 1807, the *Clermont*, the first steamboat that navigated the Hudson, made a successful voyage from New York to Albany and back. She traveled at the rate of five miles an hour. At the same time, Fulton regarded his torpedo as the greater and more beneficial invention, as he believed it would establish the "liberty of the seas." His government, in 1810, appropriated \$5000 to enable him to try further experi-

the presence of a large number of naval officers and others, he sent his torpedo under the vessel, which was raised about six feet by the explosion of the floating mine and broken in two in the middle, and in a few minutes nothing was seen of her but some floating fragments. The torpedo was composed of a cylinder containing one hundred and eighty pounds of gunpowder. Clock-work was affixed, which, at the end of a given time, caused a gun-flint-lock to strike fire and ignite the powder. The torpedo was made to float under the vessel with the tide. The experiment was perfectly satisfactory, but the British government would not adopt the implement, because it might give to weaker maritime nations a system of naval warfare that would make them equal in strength to Great Britain, the mistress of the seas. In 1810 Fulton laid the matter before the government of the United States. The subject caused much discussion; very successful experiments were tried, and Fulton proposed a "torpedo war" against England. This discussion produced some agitation in Great Britain, and the government was reproached for allowing such an invention to go to America. But the United States government, after appropriating \$5000 to try experiments, failed to perceive the usefulness of the torpedo, and Fulton's application failed here also. Fulton felt so certain that the torpedo would yet play a conspicuous part in the history of nations, that, after he had completed his experiments in steam navigation, and had seen the triumph of his genius, he wrote to Joel Barlow, giving an account of it, and said: "However, I will not admit that it [steam navigation] is *half so important* as the torpedo system of defence and attack, for out of it will grow the liberty of the seas, an object of infinite importance to the welfare of America and every civilized country." Fulton's torpedoes were of various constructions. The one which

FULTON'S BIRTHPLACE.

ments with his torpedo; but a commission decided against it, and he was compelled to abandon his scheme. Steam navigation was a success. He built ferry-boats to run across the North (Hudson) and East rivers, and built vessels for several steamboat companies in different parts of the United States. In 1814 he was appointed by the government engineer to superintend the construction of one or more floating batteries. He built a war steamer (the first ever constructed), which he called the *Demologos*. She had the speed of two and a half miles an hour, and was deemed a marvel. Fulton died, and she was named *Fulton the First*, taken to the Brooklyn Navy-yard and there used as a receiving-ship until January, 1829, when she was accidentally blown up.

**Fulton's Torpedoes.** While in France, Robert Fulton had pondered the idea of destroying ships by introducing floating mines under their bottoms, in submarine boats. The idea was doubtless suggested by a contrivance of the kind by David Bushnell, a young man of Connecticut, exhibited in the harbor of New York in 1776. Fulton was filled with the benevolent idea that the introduction of such secret and destructive agencies would have a tendency to do away with naval warfare, and thus would be established what he called the "liberty of the seas." Impelled by this idea, he left France and went to England, in 1804, to offer his invention to the British government. By permission, he successfully exhibited his "infernal machine," by blowing up the *Dorothea*, an old Danish brig (Oct. 15, 1805), in Walmer Road, not far from Deal. In

DESTRUCTION OF THE DOROTHEA.

he considered the most effective was a contrivance to be exploded by means of clock-work. He proposed to fill a copper case with one hundred pounds or more of gunpowder, with a cork

cushion to buoy it up. A gun-lock was to be so attached as to be operated upon by the clock-work. The latter was so made as to run a certain number of minutes before operating upon the lock. The torpedo was to be suspended in a water-tight pine box. This was to be connected with a harpoon by a line of such length that when the harpoon should be fired from a gun in the stern of a row-boat into the bow of an enemy's vessel, the torpedo or mine would swing around to a position under the bottom of the ship-of-war, about amidships. The operation of attack is shown in the annexed drawing, in which A is a platform on which the torpedo rests in the boat; B is the torpedo, and C the water-tight pine box; D is the pin to be drawn to allow the clock-work to start. The harpooner stationed at the gun steers the boat and fires according to his judgment. The diagram on the lower part of the drawing shows a bird's-eye view of a vessel (A) at anchor; B, her cable; E, F, two torpedoes; C, D, the coupling-

er rank. The four estates — proprietors, earls, barons, and commons—were to sit in one legislative chamber. The proprietors were always to be eight in number, to possess the whole judicial power, and have the supreme control of all tribunals. The commons were to have four members in the legislature to every three of the nobility. Every form of religion was professedly tolerated, but the Church of England only was declared to be orthodox. In the highest degree monarchical in its tendency, this form of government was distasteful to the people; so, after a contest of about twenty years between them and the proprietors, the absurd scheme was abandoned. It had never been put into use.

**Funding System Adopted.** On Aug. 4, 1790, an act was adopted for funding the public debt of the United States. It authorized the President of the United States to borrow \$12,000,000, if so much was found necessary, for discharging the arrears of interest and the over-

due instalments on the foreign debt, and for paying off the whole of that debt, could it be effected on advantageous terms; the money thus borrowed to be reimbursed within fifteen years. A new loan was also to be opened, payable in certificates of the domestic debt, at their par value, and in Continental bills of credit, "new tenor" (see *Old and New Tenor*), at the rate of one hundred dollars for one. The act also authorized an additional loan, payable in certificates of the state debts, to the amount of \$21,500,000; but no certificates were to be received excepting such as had been issued for services and supplies during the war for independence. For payment of

TORPEDOES.

lines, twelve feet long. On touching the vessel's cable, the torpedoes were drawn under her by the tide. In this way the *Dorothea* was attacked.

**Fundamental Constitutions.** The proprietors of the Carolinas, wishing to establish an aristocratic government, in feudal form, employed the Earl of Shaftesbury and John Locke to frame one. They completed the task in March, 1669, and named the instrument "Fundamental Constitutions." It provided for two orders of nobility: the higher to consist of landgraves, or earls, the lower of caciques, or barons. The territory was to be divided into counties, each containing four hundred and eighty thousand acres, with one landgrave and two caciques. There were also to be lords of manors, who, like the nobles, might hold courts and exercise judicial functions, but could never attain to a high-

er rank. The four estates — proprietors, earls, barons, and commons—were to sit in one legislative chamber. The proprietors were always to be eight in number, to possess the whole judicial power, and have the supreme control of all tribunals. The commons were to have four members in the legislature to every three of the nobility. Every form of religion was professedly tolerated, but the Church of England only was declared to be orthodox. In the highest degree monarchical in its tendency, this form of government was distasteful to the people; so, after a contest of about twenty years between them and the proprietors, the absurd scheme was abandoned. It had never been put into use.

**Funding System Adopted.** On Aug. 4, 1790, an act was adopted for funding the public debt of the United States. It authorized the President of the United States to borrow \$12,000,000, if so much was found necessary, for discharging the arrears of interest and the over-

due instalments on the foreign debt, and for paying off the whole of that debt, could it be effected on advantageous terms; the money thus borrowed to be reimbursed within fifteen years. A new loan was also to be opened, payable in certificates of the domestic debt, at their par value, and in Continental bills of credit, "new tenor" (see *Old and New Tenor*), at the rate of one hundred dollars for one. The act also authorized an additional loan, payable in certificates of the state debts, to the amount of \$21,500,000; but no certificates were to be received excepting such as had been issued for services and supplies during the war for independence. For payment of the interest and principal on the public debt—the foreign debt having the preference, and then the Continental loan—a pledge was made of the income of the existing tonnage and import duties, after an annual deduction of \$600,000 for current expenses. The faith of the United States was also pledged to make up all deficiencies of interest. The proceeds of the sales of Western lands then belonging to, or which might belong to, the United States, were specially and exclusively appropriated towards the discharge of the principal. For superintending these loans and for the general management of the public debt, the old Continental system of a loan-office commission in each state was continued. The funding system was very beneficial to the country. The result of its satisfactory operation on the business of the nation was the re-establishment of commerce.

**Funeral Ceremonies of Indians in the Gulf Region.** The sun-worshippers, who inhabited the region of the Gulf of Mexico now in our Southern States (see *Sun-worshippers*), had peculiar ceremonies at funerals, especially of that of a chief. The body underwent a sort of embalming, when it was placed on the ground, in a sitting position, by the nearest relatives of the deceased. Then food and money were placed by its side, and a conical mound of earth piled over it, at the foot of which was made a paling of arrows stuck in the ground. Around this tomb the people gathered in great numbers, some standing, some sitting, and all howling. This ceremony continued three days and nights, after which, for a long time, chosen women visited the tomb three times a day, morning, noon, and night.

**Fur-trade, THE AMERICAN.** While the English-American colonies remained dependents of Great Britain, they derived very little advantage from the extensive fur-trade with the Indians, for the Hudson's Bay Company absorbed nearly the whole of the traffic. It was contention between the French and English colonists for the control of this trade that was a powerful element among the causes that brought on the French and Indian War. In 1762 a fur company was organized in New Orleans for carrying on the fur-trade extensively with the Western Indians. It was started by the Director-general of Louisiana. A trading expedition was fitted out, and under the direction of Pierre Liguette Laclède, the principal projector of the enterprise, it went to the Missouri region, and established its chief depot on the site of the city of St. Louis, which name was then given to that locality. There furs were gathered from the regions extending eastward to Mackinaw, and westward to the Rocky Mountains. Their treasures went in boats down the Mississippi to New Orleans, and thence to Europe; or up the Illinois River, across a portage to Lake Michigan, and by way of the chain of great lakes and

the St. Lawrence to Montreal and Quebec. In the pathway of this trade and transportation were planted the seeds of many of our Western settlements, which have grown into great commonwealths. The Rocky Mountains were at length passed, and, early in the present century, fur-trading posts had been established on the Columbia River and other waters that empty into the Pacific Ocean. In 1784 John Jacob Astor, an enterprising young German merchant of New York, embarked in the fur-trade. He purchased furs in Montreal and sold them in England; and after the treaty of 1795 he introduced them into the city of New York and thence shipped them to different European ports. In this trade, chiefly, he amassed a fortune of \$250,000, when he embarked in a scheme for making a great fur depot on the Pacific coast. He was then competing with the great fur companies of the Northwest, under a charter in the name of the "American Fur Company," for which he furnished the entire capital. Mr. Astor made an earnest effort to carry on the business between the Pacific coast of America and China, founding the town of Astoria at the mouth of the Columbia River. The bad faith of a business partner broke up that establishment in 1813, who sold it out for a nominal sum and placed it under British control. After that Mr. Astor carried on his operations in the region of the Rocky Mountains, with his chief post at Mackinaw. Alaska, acquired in 1867 by purchase, has opened a new field for the American fur-trade. The furs from that region are mainly those of the fur-seal; there are also those of the beaver, ermine, fox, otter, marten, and other animals. The annual fur-trade of Alaska is estimated at fully \$2,000,000 in value, the monopoly of the seal-fur-trade being in the hands of the Alaska Commercial Company of San Francisco, Cal. The number of seals to be taken each year is limited to one hundred thousand. The company has twenty trading-posts on the shores and islands of Alaska.

## G.

**Gadsden, CHRISTOPHER,** was born in Charleston, S. C., in 1724; died there, Aug. 28, 1805. He was educated in England, became a merchant in Charleston, and a sturdy champion of the rights of the colonies. He was a delegate to the Stamp Act Congress (which see), and ever advocated openly republican principles. He was a member of the First Continental Congress (which see). Chosen a colonel in 1775, he was active in the defence of Charleston in 1776, when he was made a brigadier-general. He was active in civil affairs, and was one of the many civilians made prisoners by Sir Henry Clinton and carried to St. Augustine. (See *Siege of Charleston*.) He was exchanged in 1781 and carried to Philadelphia. In 1782 he was elected governor of his state, but declined on account of infirmity.

**Gaelic Preaching in Georgia.** The trustees of the province of Georgia, desirous that the

Highlanders of Scotland residing there should have a Presbyterian minister to preach to them in Gaelic, and to teach and catechise their children in English, sent over John McLeod in 1736, and gave to him and his successors, in perpetuity, three hundred acres of land. Mr. McLeod was a native of the Isle of Skye. He was allowed from the Provincial Fund \$250 a year until the colony should be able to maintain him at their sole expense. This mission was so supported until 1740, when a greater part of the men of the Highland settlement had perished in war with the Spaniards at St. Augustine, and Mr. McLeod left Georgia.

**Gage Instructed to Arrest Patriots.** When Gage's demand for twenty thousand armed men at Boston was received by the ministry they laughed in derision, believing that a few soldiers could accomplish all that was necessary to make the patriots cower. Lord Dartmouth

wrote to Gage, in the king's name, that the disturbers of the peace in Boston appeared to him like a rude rabble "without a plan, without concert, and without conduct," and thought a small force would be able to encounter them. He instructed him that the first step to be taken towards the re-establishment of government would be to arrest and imprison the principal actors and abettors in the Provincial Congress, whose proceedings appeared like rebellion and treason. He suggested that the measure must be kept a secret until the moment of execution. "If it cannot be accomplished," said Dartmouth, "without bloodshed, and should be a signal for hostilities, I must again repeat, that any efforts of the people, unprepared to encounter with a regular force, cannot be very formidable." This was written only a few weeks before the affairs at Lexington and Concord (which see). Dartmouth continued, "The charter of Massachusetts empowers the governor to use and exercise the law martial in time of rebellion." It appears, from statements in official despatches, he believed there was an "actual and open rebellion" in that province, and therefore the exercise of his powers named were justifiable. The movements of ministers were keenly watched. "Your chief dependence," wrote Franklin to Massachusetts, "must be on your own virtue and unanimity, which, under God, will bring you through all difficulties." Garuier, the French ambassador at London, wrote to Vergennes, "The minister must recede or lose America forever."

**Gage Lampooned.** The Whig press of Massachusetts boldly lampooned General Gage. On his dismissal of John Haucocock from the command of the Governor's Independent Cadets, the following appeared in the *Massachusetts Spy*, with the title, "A Sample of Gubernatorial Eloquence, as Lately Exhibited to the Company of Cadets:—"

"Your Colonel H—n—k, by neglect  
Has been deficient in respect;  
As he my sovereign toe ne'er kissed,  
'Twas proper he should be dismissed;  
I never was and never will  
By mortal man be treated ill.  
I never was nor ever can  
Be treated ill by mortal man.  
Oh, had I but have known before  
That temper of your factious corps,  
It should have been my greatest pleasure  
To have prevented that bold measure—  
To meet with such severe disgrace—  
My standard flung into my face!  
Disband yourselves! so cursed stout!  
Oh, had I, had I, turned you out!"

**Gage, THOMAS,** was born in England about 1720; died there, April 2, 1787. He was second son of Viscount Gage, and entered the army in his youth. He was with Braddock at his defeat on the Monongahela (which see), when he was lieutenant-colonel, and led the advance. In that hot encounter he was wounded. Late in 1758 he married a daughter of Peter Kemble, President of the Council of New Jersey. His widow lived until 1824, when she died at the age of ninety years. Gage served under Amherst in northern New York and Canada, and on the capture of Montreal by the English in 1760 he was made military governor of that city. (See *Montreal*.) He was promoted to

major-general, and in 1763 succeeded Amherst as commander-in-chief of the British forces in North America. In 1774 he succeeded Hutchinson as governor of Massachusetts, and occupied Boston with troops, much to the annoyance and irritation of the inhabitants. Acting under instructions from his government rather than in accordance with his conscience and judgment, he took measures which brought on armed resistance to British rule in the colonies. After the affairs at Lexington, Concord, and Bunker's Hill he was ungenerously held responsible for the blunders of the ministry, and resigned his command in October, 1775, when he was succeeded by General William Howe as chief of the forces in America.

**Gage's Alarm-tricks.** General Gage, performing no act of courage during the summer of 1775, while Washington was besieging Boston, endeavored to terrify the Americans and to keep up the spirits of his own soldiers by warning the former that thousands of veteran warriors were coming from Russia and the German principalities to crush the "unnatural rebellion." He vented his ill-humor upon American prisoners in his hands, casting into prison officers of high rank, thinking thus to terrify the common soldiery, whose intelligence and courage he entirely underrated in reality, though praising them when it suited his purpose. (See *Gage's Real Opinion of the Americans*.) Against this treatment Washington remonstrated; but Gage insolently scorned to promise "reciprocity with rebels," and replied: "Britons, ever pre-eminent in mercy, have overlooked the criminal in the captive; your prisoners, whose lives, by the laws of the land, are destined to the cord, have hitherto been treated with care and kindness—judiscriminately, it is true, for I acknowledge no rank that is not derived from the king." Washington remembered that Gage's want of presence of mind had lost the battle of the Monongahela (which see), and replied, in a dignified manner, "I shall not stoop to retort and invective. You affect, sir, to despise all rank not derived from the same source as your own. I cannot conceive one more honorable than that which flows from the uncorrupted choice of a brave and free people, the purest source and original fountain of all power. Far from making it a plea for cruelty, a mind of true magnanimity would comprehend and respect it."

**Gage's Real Opinion of the Americans.** In his report of the battle on Bunker's (Breed's) Hill, General Gage said to Lord Dartmouth, "The trials we have had show the rebels are not the despicable rabble too many have supposed them to be; and I find it owing to a military spirit encouraged among them for a few years past, joined with uncommon zeal and enthusiasm. They intrench and raise batteries—they have engineers. They have fortified all the heights and passes around this town [Boston], which it is not impossible for them to annoy. The conquest of this country is not easy; you have to cope with vast numbers. In all their wars against the French they never showed

so much conduct, attention, and perseverance as they do now. I think it is my duty to let your lordship know the true situation of affairs." Franklin wrote to his English friends, "Americans will fight; England has lost her colonies forever."

Gaines, EDMUND PENDLETON, was born in Culpepper County, Va., March 20, 1777; died in New Orleans, June 6, 1849. The family moved to Tennessee in 1790. Edmund entered the

EDMUND PENDLETON GAINES.

army as ensign in 1799, and was promoted to lieutenant-colonel in the summer of 1812. He rose to brigadier-general in March, 1814; and after his gallant conduct at Fort Erie in August, that year, he was breveted major-general. For that exploit, and his general good services during the war, Congress gave him thanks and a gold medal. Gaines served under Jackson in

came famous for her successful persistence in litigation to secure her rights.

**Gaines's Mills, BATTLE OF.** General McClellan transferred his army from the Chickahominy and his stores from the Pamunkey to the James River. He ordered the stores and munitions of war to be sent to Savage's Station, and what could not be removed to be burned, and supplies to be sent to the James as speedily as possible. He also sent his wounded to the same station, and prepared to cross the Chickahominy for the flight with the right wing—a perilous undertaking, for Jackson and Ewell were prepared to fall on Porter's flank. This movement was so secretly and skilfully made, however, that Lee was not informed of the fact until twenty-four hours after it was actually begun on the morning of the 27th of June. The duty of protecting the stores in their removal was assigned to General Porter. His corps (the Fifth) was also charged with the duty of carrying away the siege-guns and covering the army in its march to the James. These troops were accordingly arrayed on the rising ground near Gaines's Mills, on the arc of a circle between Cool Arbor and the Chickahominy, when they were attacked by a Confederate force, in the afternoon (June 27, 1862), led by Generals Longstreet and A. P. Hill. A few of the siege-guns were yet in position. Morell's division occupied the left, Sykes's regulars and Duryea's Zouaves the right, and McCall's division formed a second line, his left touching Butterfield's right. Seymour's brigade and horse-batteries commanded the rear, and cavalry under General Philip St. George Cooke were on flanking service near the Chickahominy. The brunt of the battle first fell upon Sykes, who threw the assailants back in confusion with great loss. Longstreet pushed forward with his veterans to their relief, and was joined by Jackson and D. H. Hill. Ewell's

GENERAL GAINES'S MEDAL.

the Creek War (which see), and fought the Seminoles in 1836. (See *Seminole War*.) Late in life he married Myra Clarke, of New Orleans, heiress of a large estate, who, after his death, be-

division also came into action. The Confederate line, now in complete order, made a general advance. A very severe battle ensued. Slocum's division was sent to Porter's aid by

McClellan, making his entire force about 35,000. For hours the struggle along the whole line was fierce and persistent, and for a long time the issue was doubtful. At five o'clock Porter called for more aid, and McClellan sent him the brigades of Meagher and French, of Richard-sou's division. The Confederates were making desperate efforts to break the line of the Nationals, but for a long time it stood firm, though continually growing thinner. Finally a furious assault by Jackson and the divisions of Loug-street and Whiting was made upon Butterfield's brigade, which had long been fighting. It gave way and fell back, and with it several batteries. Then the whole line fell back. Porter called up all of his reserves and remaining artillery (about eighty guns), covered the retreat of his infantry, and checked the advance of the victors for a moment. Just then General Cooke, without orders, attacked the Confederate flank with his cavalry, which was repulsed and thrown into disorder. The horses, terrified by the tremendous roar of nearly two hundred cannons and the rattle of thousands of muskets, rushed back through the Union batteries, giving the impression that it was a charge of Confederate cavalry. The artillerists recoiled, and Porter's whole force was pressed back to the river. While flying in fearful disorder, French and Meagher appeared, and, gathering up the vast multitude of stragglers, checked the flight. Behind these the shattered brigades were speedily formed, while National batteries poured a destructive storm of shot and shell upon the head of the Confederate column. Seeing fresh troops on their front, and ignorant of their number, the Confederates fell back and rested upon the field they had won at a fearful cost. In this sanguinary battle the Nationals lost about 8000 men, of whom 6000 were killed or wounded. The loss of the Confederates was about 5000. General Reynolds was made prisoner. Porter lost twenty-two siege-guns. During the night he withdrew to the right side of the Chickahominy, destroying the bridges behind him.

Gallatin, ALBERT, LL.D., was born in Geneva, Switzerland, Jan. 20, 1761; died at Astoria, L. I., Aug. 12, 1849. He was a graduate of the University of Geneva. Both of his parents were of distinguished families, and died while he was an infant. Feeling great sympathy for the Americans struggling for liberty, he came to Massachusetts in 1780, entered the military service, and for a few months commanded the post at Passamaquoddy. At the close of the war he taught French at Harvard University. Having received his patrimonial estate in 1784, he invested it in land in western Virginia; and in 1786 he settled on land on the banks of the Monongahela, in Fayette County, Penn., which he had purchased, and became naturalized. Having served in the Pennsylvania State Convention and in the Legislature (1789 and 1790-92), he was chosen United States Senator in 1793, but was declared ineligible on the ground that he had not been a citizen of the United States the required nine years. He was instrumental in bringing about a peaceful termination of the

"Whiskey Insurrection" (which see), and was elected a member of the House of Representatives in 1795. An active member of the Republican, or Democratic, party, he even went so far, in a speech in Congress (1796), as to charge Washington and Jay with having pusillanimously surrendered the honor of their country.

ALBERT GALLATIN.

(See *Jay's Treaty*.) This, from the lips of a young foreigner, exasperated the Federalists. He was a leader of the Democrats in the House, and directed his attention particularly to financial matters. Mr. Gallatin remained in Congress until 1801, when President Jefferson appointed him Secretary of the Treasury, which office he held until 1813, and obtained the credit of being one of the best financiers of the age. His influence was felt in other departments of the government and in the politics of the country. Opposed to going to war with Great Britain in 1812, he exerted all his influence to avert it. In March, 1813, he was appointed one of the envoys to Russia to negotiate for the mediation of the Czar between the United States and Great Britain. He sailed for St. Petersburg, but the Senate, in special session, refused to ratify his appointment because he was Secretary of the Treasury. The attempt at mediation was unsuccessful. When, in January, 1814, Great Britain proposed a direct negotiation for peace, Gallatin, who was still abroad, was appointed one of the United States Commissioners to negotiate. He resigned his secretaryship. In 1815 he was appointed minister to France, where he remained until 1823. He refused a seat in the cabinet of Monroe on his return, and declined to be a candidate for Vice-President, to which the dominant Democratic party nominated him. President Adams appointed him minister to Great Britain, where he negotiated several important commercial conventions. Returning to America in 1827, he took up his residence in the city of New York. There he was engaged in public services, in various ways, until 1839, when he withdrew from public duties and directed the remainder of his life to literary pursuits, especially in the field of history and ethnology. He was the chief founder (1842) and first president of the American Ethnological Society, and was

president of the New York Historical Society from 1843 until his death, six years afterwards. Although strictly in private life, Mr. Gallatin took special interest in the progress of the country, and wrote much on the subject. So early as 1823 he wrote an essay on the ethnological and philosophical characteristics of the North American Indians, at the request of Humboldt.

**Gallatin's Financial Plan.** The opponents of Jefferson's administration complained vehemently, in 1808, that the country was threatened with direct taxation at a time when the sources of its wealth, by the orders and decrees of Great Britain and France, were drying up. Albert Gallatin, the Secretary of the Treasury, replied to these complaints by reproducing a flattering but delusive suggestion contained in his annual report the preceding year. He suggested that, as the United States were not likely to be involved in frequent wars, a revenue derived solely from duties on imports, even though liable to diminution during war, would yet amply suffice to pay off, during long intervals of peace, the expenses of such wars as might be undertaken. Should the United States become involved in war with both France and Great Britain, no internal taxes would be necessary to carry it on, nor any other financial expedient, beyond borrowing money and doubling the duties on import. The scheme, afterwards tried, bore bitter fruit.

**Gallaudet, THOMAS HOPKINS, LL.D.**, instructor of the deaf and dumb, was born in Philadelphia, Penn., Dec. 10, 1787; died at Hartford, Conn., Sept. 9, 1851. He graduated at Yale College, in 1805, where he was a tutor for a while. At Andover Theological Seminary he prepared for the ministry, and was licensed to preach in 1814. Becoming interested in the deaf and dumb, he began his labors for their instruction in 1817, with a class of seven pupils. He became one of the most useful men of his time, labored incessantly for the benefit of the deaf and dumb, and was the founder of the first institution in America for their instruction. He was president of it until 1830, when he resigned. The asylum was located at Hartford, where Dr. Gallaudet became chaplain for the Connecticut Retreat for the Insane, in 1833, which office he retained until his death. Dr. Gallaudet published several works for the instruction of the young, besides other books. He was of Huguenot descent. His two sons, Thomas and Edward Miuer, have devoted their lives to the instruction of the deaf and dumb. The former, an Episcopal clergyman, has been instrumental in organizing churches for the deaf and dumb; and the latter established (1857), in Washington, an institution for them and the blind. In 1864 he originated measures for the establishment of a deaf-mute college, of which he was made professor of moral and political science.

**Galloway, JOSEPH, LL.D.**, was an eminent lawyer of Philadelphia, Penn., and a loyalist. He was born in Maryland about 1730; died in England, Aug. 29, 1803. He was a member of

the Pennsylvania Assembly in 1764, and was at one time speaker, and, with Franklin, advocated a change of the government of Pennsylvania from the proprietary to the royal form. A member of the First Continental Congress, he was conservative in his views, yet his line of argument in his first debates tended towards political independence. He proposed a plan of colonial government, which was rejected. (See *Galloway's Plan*.) Finally, after the question of independence began to be seriously agitated, he abandoned the Whig, or Republican, cause, and was thenceforward an uncompromising Tory. When the British army evacuated Philadelphia, in 1778, he left his country, with his daughter, went to England, and never returned. He was a leading American loyalist in England, and wrote and published several political pamphlets.

**Galloway's Plan of Government.** Joseph Galloway, an eminent lawyer of Philadelphia, proposed, in the First Continental Congress, a plan for a union of the colonies which had been foreshadowed by others long before. It contemplated a government with a president-general appointed by the king, and a Grand Council, chosen every three years by the colonial assemblies, who were to be authorized to act jointly with Parliament in the regulation of the affairs of the colonies. Parliament was to have superior authority, with a right to revise all acts of the Grand Council, which, in turn, was to have a negative in British statutes relating to the colonies. This plan was, at first, favorably considered by many in the Congress; but it was rejected, and not permitted to be entered on the minutes of the journal.

**Galveston, BATTLE AT.** This place was taken possession of by Commodore Renshaw (Oct. 8, 1862). To hold the city more securely, a Massachusetts regiment, under Colonel Burrill, was sent there from New Orleans. In front of the town (Dec. 28) lay six National war-vessels, under the command of Renshaw. General Magruder, of the Confederate army, then in command of the Department of Texas, collected a land and naval force near Galveston, and before daylight on Jan. 2, 1863, he attacked the National forces by land and water. At first the men from Massachusetts repulsed those of Magruder, but, Confederate vessels coming up with a fresh supply, the National soldiers were overpowered. After a brief action, the *Harriet Lane* (one of the National vessels) was captured, and the *Westfield*, Renshaw's flag-ship, was blown up by his order, to prevent her falling into the hands of the Confederates. The firing of the magazine of the *Westfield* was done prematurely, by an intoxicated man, and Commodore Renshaw, a lieutenant, and an engineer, with about a dozen of her crew, perished by the explosion. Nearly as many officers and men were killed in a gig lying by the side of the *Westfield*. Magruder's victory was almost a barren one, for Farragut re-established the blockade before the *Harriet Lane* could be converted into a Confederate cruiser.

**Galveston, SURRENDER OF.** Attempts were

made to "repossess" important posts in Texas, especially Galveston. On May 17, 1862, Henry Eagle, in command of war-vessels in front of Galveston, demanded its surrender, under a threat of an attack from a large land and naval force that would soon appear. "When those forces appear," said the authorities, "we shall reply." So matters remained until Oct. 8, when Galveston was formally surrendered by its civil authorities to Commodore Renshaw, of the National Navy, the Confederate troops retiring. It was held by the Nationals ever afterwards.

**Gansevoort, HENRY SANDFORD**, was born at Albany, Dec. 15, 1835. He was a grandson of Colonel Gansevoort, of Fort Stanwix fame. In April, 1861, he entered the regular artillery service, and fought gallantly during the Peninsular campaign of 1862, and in several battles afterwards. He first became lieutenant-colonel and then colonel of the 13th N. Y. Volunteer Cavalry, with which he performed gallant service in Virginia. In 1865 he was breveted brigadier-general of volunteers "for faithful and meritorious services," and became captain of artillery. His health failed, and when returning from the Bahama Islands he died, April 12, 1871, when almost within sight of the city of his birth. He was greatly beloved by all who knew him.

**Gansevoort, PETER, JR.**, was born at Albany, N. Y., July 17, 1749; died July 2, 1812. He was appointed major of a New York regiment in July, 1775, and in August he joined the army, under Montgomery, that invaded Canada. He rose to

PETER GANSEVOORT, JR.

colonel the next year; and in April, 1777, he was put in command of Fort Schuylcr (see *Fort Stanwix*), which he gallantly defended against the British and Indians in August. He most effectually co-operated with Sullivan in his campaign in 1779, and afterwards in the Mohawk region. In 1781 he received from the Legislature of New York the commission of a brigadier-general. General Gansevoort filled civil offices, particularly that of Commissioner for Indian Affairs, with great fidelity. In 1803 he was made mili-

tary agent and brigadier-general in the United States Army.

**Garfield, JAMES ABRAM**, was born in Cuyahoga County, Ohio, Nov. 19, 1831. Left an orphan, his childhood and youth were spent alternately in school and in labor for his support. He drove horses on the Ohio Canal; learned the carpenter's trade; worked at it during school vacations; entered the Geangu Academy at Chester, Ohio, in 1850, and, at the end of four years, had fitted himself for junior in college. He entered Williams College, Mass., that year; graduated in 1856; gave his first vote for the Republican candidates, and took part in the canvass as a promising orator. He was tutor and student in a collegiate institute at Hiram, Ohio; studied law; was a member of the Ohio State Senate in 1859, and often preached to congregations of the Disciples' Church, of which he was a member. A firm supporter of the government, Garfield entered the military service in its defence, and in Eastern Kentucky and elsewhere proved himself a skillful soldier. In December, 1863, he took his seat in Congress as a representative of the district of the Western Reserve. In that body his career as a statesman was marvellous. He grasped every topic in debate with a master's hand. In 1880 he was chosen to a seat in the National Congress. In the same year he was elected President of the United States, and entered upon its duties on March 4, 1881. After an administration of four months he was shot by an assassin at Washington, July 2, 1881, and lingered until the 19th of September following, when he died at Elberon, on the seashore, in New Jersey. His death was sincerely mourned in all parts of the civilized world. The monarchs of three kingdoms directed their courts to wear mourning for the dead statesman for a specified time.

**Garrison, WILLIAM LLOYD**, leader in the movement for the abolition of slavery in the United States, was born at Newburyport, Mass., Dec. 12, 1804; died May 24, 1879. He was a

WILLIAM LLOYD GARRISON.

shoemaker's apprentice, but finally learned the art of printing, and became a contributor to the press in early life. In all his writings he showed

a philanthropic spirit, and a sympathy for the oppressed everywhere. In 1827 he edited the *National Philanthropist*, in Boston; and, as assistant editor of a Baltimore paper, he denounced the taking of a cargo of slaves from that city to New Orleans as "domestic piracy." For this he was fined, and imprisoned forty-nine days, until Arthur Tappan, of New York, paid the fine. On Jan. 1, 1831, he began the publication of his famous *Liberator*, a weekly newspaper and uncompromising opponent of slavery, which was discontinued in 1865, when the result for which he had devoted the best energies of his life had been effected by the Emancipation Proclamation (which see) of President Lincoln. Mr. Garrison was a founder (1832) of the American Antislavery Society, and was its president from that time until 1865. Attending, as a delegate, the World's Antislavery Convention, in London (1840), he refused to take his seat, because the feminine delegates from America were refused seats in that body. In 1866 he received about \$30,000 as a national testimonial from his friends for his arduous labors in the cause of humanity.

**Gas-light.** The first attempts to introduce gas as an illuminator in the United States were made in Baltimore, between 1816 and 1820. They failed; but it was successfully introduced into Boston in 1822. The next year the first gas-light company was formed in New York—the "New York Gas-light Company." They began operations with a capital of \$1,000,000. But the people were so slow to adopt the new illuminator that the company were not in full operation until 1827, when the population was about one hundred and sixty-six thousand. Gas for illumination was first introduced into Philadelphia in 1835, when the population of that city was about eighty-five thousand.

**Gaspee, A COMMISSION OF INQUIRY.** After the destruction of the *Gaspee*, a commission, composed of Admiral Montague, the vice-admiralty judge at Boston, the chief-justices of Massachusetts (Peter Oliver), New York (D. Horsmanden), and New Jersey (F. Smyth), and the governor of Rhode Island (J. Wanton), met at Newport to inquire into the affair. Robert Auchmuty took the place of Montague. The commissioners were notified that there had been no neglect of duty or connivance on the part of the provincial government, and it was intimated that this special court was unnecessary and alarming. The Assembly of Rhode Island met at East Greenwich to watch the commissioners, and Governor Wanton laid before it his instructions to arrest offenders, and send them to England for trial. Chief-justice Stephen Hopkins asked the Assembly how he should act. They left it to his discretion, for they were assured of his patriotism and sound judgment. "Then," said Hopkins, in the presence of both Houses, "for the purpose of transportation for trial I will neither apprehend any person by my own order, nor suffer any executive officer in the colony to do it." The commissioners adjourned without eliciting any positive knowledge of the persons who destroyed the *Gaspee* in June, 1772.

**Gaspee, AFFAIR OF THE.** An armed schooner in the British revenue service called the *Gaspee* had given great annoyance to the American navigators in Narraganset Bay by her commander haughtily demanding the lowering of their flags whenever they passed her, in token of submission. They often disobeyed. For this disobedience a Providence sloop was chased by the schooner. The former, by taking a peculiar course, caused the latter to run aground upon a low sandy point (ever since known as "Gaspee Point") on the west side of Narraganset Bay. The same night (June 9, 1772) sixty-four armed men went down from Providence in boats, captured the people on board the *Gaspee*, and burned the vessel. A large reward was offered for the discovery of the perpetrators (who were well known in Providence), but they were not betrayed. Joseph Wanton, the royal governor of Rhode Island, issued a proclamation ordering diligent search for the perpetrators of the act. Admiral Montague made endeavors towards the same end, and the home government offered a reward of \$5000 for the leader, with the promise of a pardon if the informer should be an accomplice. Not one of the men betrayed their trusted leader, Abraham Whipple, afterwards a commodore in the Continental Navy. A commission of inquiry was established under the great seal of England, but it availed nothing. These commissions closed their labors on June 23, and no further inquiry was attempted. When, subse-

The image shows five handwritten signatures in cursive script, arranged vertically. From top to bottom, they are: J. Wanton, D. Horsmanden, F. Smyth, Peter Oliver, and Robt Auchmuty. The signatures are written in dark ink on a light background.

SIGNATURES OF THE COMMISSIONERS.

quently, the colonists were at war with Great Britain, the act of Captain Whipple was avowed, and Sir James Wallace, in command of a British ship of war in Narraganset Bay, wrote as follows

to the perpetrator of the act: "You, Abraham Whipple, on the 9th of June, 1772, burned his majesty's vessel, the *Gaspee*, and I will hang you at the yard-arm." Whipple coolly replied: "Sir, always catch your man before you hang him." A ballad was written at the time, containing

placed General Schuyler. He gained undeserved honors as commander of the troops that defeated and captured Burgoyne and his army in the fall of 1777. He soon afterwards intruded for the position of Washington as commander-in-chief, using his power as president of the Board

GASPEE POINT.

fifty-eight lines of doggerel verse, which ended as follows:

"Now, for to find these people out,  
King George has offered very stout,  
One thousand pounds to find out one  
That wounded William Duddington.  
One thousand more he says he'll spare  
For those who say the sheriff's were.  
One thousand more there doth remain  
For to find out the leader's name;  
Likewise five hundred pounds per man  
For any one of all the clan.  
But, let him try his utmost skill,  
I'm apt to think he never will  
Find out any of those hearts of gold,  
Though he should offer fifty-fold."

**Gaston, WILLIAM, LL.D.**, was born at New Berne, N. C., Sept. 19, 1778; died at Raleigh, N. C., Jan. 23, 1844. He graduated at the College of New Jersey in 1796, and was admitted to the bar in 1798, when he soon became the leading lawyer in his state. Serving in his state Legislature, he was elected to Congress in 1812, and remained in that body until 1817. The laws and judicial organization of his state bear marks of his wisdom. He was judge of the Supreme Court of North Carolina from 1834 till his death. Judge Gaston was an advocate of free suffrage for colored men.

**Gates, HORATIO**, was born at Maldou, Essex County, England, in 1728; died in New York city, April 10, 1806. He was a godson of Horace Walpole. He entered the British army in his youth, and rose rapidly to the rank of major. Gates came to America, was severely wounded at Braddock's defeat (1755), and was aid to General Monekton in the expedition against Martinique in 1762. After the peace, he bought an estate in Virginia, and when the war for independence broke out Congress appointed him (June, 1775) adjutant-general of the Continental Army, with the rank of brigadier-general. In 1776-77 he was twice in command of the Northern Army, having, through intrigue, dis-

placed General Schuyler. He gained undeserved honors as commander of the troops that defeated and captured Burgoyne and his army in the fall of 1777. He soon afterwards intruded for the position of Washington as commander-in-chief, using his power as president of the Board

HORATIO GATES.

for such of them as could not take care of themselves. He was presented with the freedom of the city of New York, and elected to the state Legislature, but declined to serve.

**Geary, JOHN W.**, was born in Westmoreland County, Penn., about 1820; died at Harrisburg, Penn., very suddenly, Feb. 9, 1873. He became a civil engineer, and served as lieutenant-colonel of a Pennsylvania regiment of volunteers in the war with Mexico, wherein he was wounded, and for gallant services was made colonel of his regiment. He was first commander of the city of Mexico after its capture. He went to San Francisco in 1848, and was the first mayor of that city. Returning to Pennsylvania, he was appointed Governor of Kansas in July, 1856, and early in 1861 raised and equipped a regiment of volunteers. In the spring of 1862 he became brigadier-general, and did good service throughout the war, becoming, at the end of Sherman's march from Atlanta to the sea, military governor of Savannah. In 1867 he was elected governor of Pennsylvania.

**General Armstrong, THE PRIVATEER.** The merchants of New York fitted out no less than twenty-six fast-sailing privateers and letters-of-marque within one hundred and twenty days after the declaration of war (1812), carrying about two hundred pieces of artillery, and manned by over two thousand seamen. Among the most noted of these privateers was the *General Armstrong*, a moderate-sized schooner, mounting a "Long Tom" forty-two-pounder and eighteen carronades. Her complement was one hundred and forty men. Her first commander was Captain Barnard; her second, Captain G. R. Champlin. Early in March, 1813, while Champlin was cruising off the Surinam River, on the coast of South America, he gave chase to the British sloop-of-war *Coquette*, mounting twenty-seven guns and manned by one hundred and twenty-six men and boys. They engaged in conflict between nine and ten o'clock (March 11, 1813). Supposing his antagonist to be a British letter-of-marque, Champlin ran the *Armstrong* down upon her, with the intention of boarding her. When it was too late, Champlin discovered that she was a heavier vessel than he suspected. They poured heavy shot into each other, and for a while the fight was very obstinate, within pistol-shot distance. Champlin was wounded and his vessel severely bruised, but, getting free from the *Coquette* by a vigorous use of sweeps, the *Armstrong* escaped under a heavy fire from her antagonist. The Tammany Society of New York gave the captain an elegant sword, and voted thanks to his companions in the fight. In 1814 the *General Armstrong* was under the command of Captain Samuel C. Reid, and in September she was in the harbor of Fayal, one of the islands of the Azores, belonging to Portugal. It was a neutral port, and Reid did not expect to be disturbed there by British vessels. He was mistaken. On the 26th Commodore Lloyd appeared off the harbor with his flag-ship, the *Plantagenet*, 74 guns; the frigate *Rota*, 44, Captain Somerville; and the brig *Carnation*, 18, Captain Bentham—each with a full complement of men. The *Armstrong* had only seven guns and ninety men, including her officers. In violation of the laws and usages of neutrality, Lloyd sent into the harbor, at eight o'clock in

the evening, four large and well-armed launches, manned by about forty men each. At that time Reid, suspecting mischief, was warping his vessel under the guns of the castle. The moon was shining brightly. The barges and the privateer opened fire almost simultaneously, and the launches were driven off with heavy loss. At midnight fourteen launches were sent in, manned by about five hundred men. A terrible conflict ensued, which lasted forty minutes, when the launches were again repulsed, with a loss of one hundred and twenty killed and one hundred and thirty wounded. At daylight (Sept. 27) a third attack was made by the brig *Carnation*, which opened heavily, but was soon so cut up by the well-directed guns of the *Armstrong* that she hastily withdrew. The privateer was also much damaged, and it being evident that she could not endure a fourth attack, Captain Reid directed her to be scuttled to prevent her falling into the hands of the British. She was then abandoned, when the British boarded her and set her on fire. While the British lost over three hundred men in the three attacks, the *Armstrong* lost only two men killed and seven wounded during the ten hours. To Captain Reid and his brave men is justly due the credit of saving New Orleans from capture. Lloyd's squadron was a part of the expedition then gathering at Jamaica for the invasion of Louisiana (which see). The object of the attack on the *Armstrong* was to capture her, and make her a useful auxiliary in the work. She so crippled her assailants that they did not reach Jamaica until full ten days later than the expedition intended to sail from there. It had waited for Lloyd, and when it approached New Orleans Jackson had made ample arrangements to receive the invaders. Had they arrived ten days sooner the city must have fallen. The State of New York gave Captain Reid thanks and a sword, and he was greeted with enthusiasm on his return to the United States. The Portuguese government demanded and received from the British an apology for the violation of neutrality, and restitution for the destruction of Portuguese property at Fayal during the action. That government also demanded satisfaction and indemnification for the destruction of the American vessel in their neutral port. This was refused, and neither the owners of the vessel nor their heirs have ever received indemnification for their losses either from Great Britain or Portugal.

**Genet, EDMOND CHARLES**, was born at Versailles, France, Jan. 8, 1763; died at Greenbush, opposite Albany, N. Y., July 14, 1834. His literary talent was early developed. At the age of twelve years he received from the King of Sweden a gold medal for a translation of the history of Eric XIV. into Swedish, with notes by himself. He was a brother of the celebrated Madame Campan, and was brought up in the French court; yet he was a republican. Attached to the embassies of Berlin, Vienna, London, and St. Petersburg, he maintained his republican bias, and on his return from the Russian court (1792) was appointed minister to the United

States. He had already been made adjutant-general of the armies of France and minister to Holland by the revolutionists, and employed in revolutionizing Geneva and annexing it to France. His diplomatic career in the United States was very offensive to the government, and he was recalled. (See *Genet in the United States*.) At about that time a change of faction had taken place in his country, and he did not think it prudent to return. He never went back

EDMOND CHARLES GENET.

to France. Marrying the daughter of Governor George Clinton, he became a naturalized citizen of the United States, and an ornament to society here. He was twice married, his second wife being a daughter of Mr. Osgood, the first Postmaster-general under the new Constitution. Fond of agriculture, he took great interest in its pursuit; and his last illness was occasioned by attendance at a meeting of an agricultural society of which he was president. He was known as "Citizen Genet," a title assumed by the French revolutionists, and imitated by their American admirers. The Philadelphia newspapers often contained notices of the marriage of "citizen" Smith or Jones and "citessse" Roseberry or Lavender.

**Genet in the United States.** The French revolutionists affected a simplicity of manner in all things, consistent with their battle-cry in the forum and in the field—"Liberty, Equality, and Fraternity!" They addressed the highest functionary as "citizen;" and Edmond Charles Genet, sent to the United States as the representative of the French Republic, was designated as "Citizen Genet." He arrived at Charleston, S. C., April 9, 1793. He was received with open arms by the Republican, or Democratic, party. He was disposed to treat the United States government with contempt, believing the people would not sustain it in its coldness towards the French revolutionists. He came with blank commissions for naval and military service, and before he proceeded to the seat of government to present his credentials he fitted out two pri-

vateers at Charleston to prey on British commerce, and gave authority to every French consul in America to constitute himself a court of admiralty to dispose of prizes brought into American ports by French cruisers. One of these vessels (*L'Embuscade*) went prowling up the coast, seizing several small vessels, and finally capturing a British merchantman within the capes of the Delaware, when she proceeded in triumph to Philadelphia, where she was received with acclamations of joy by the excited people. Upon the bow of *L'Embuscade*, her foremast, and her stern, liberty-caps were conspicuous, and the British colors were reversed in the prize, with the French colors flying above them. Fourteen days later Genet arrived by land at Philadelphia, where, according to preconcert, a number of citizens met him at the Schuylkill and escorted him into the city, while cannons roared and church-bells rang out merry peals of welcome. There he received addresses from various societies, and so anxious were his admirers to do homage to the representative of the authors of the Reign of Terror in France that they invited him to a public dinner before he had presented his credentials to the President of the United States. Genet presented his credentials to Washington in person (April 19, 1793), and found himself in an atmosphere of the most profound dignity. He felt his own littleness as a mere political enthusiast while standing before the representative of true democracy in America, and of the soundest principles of the American Republic. He withdrew from the audience abashed and subdued. He had heard expressions of sincere regard for the people of France that touched the sensibilities of his heart, and he had felt, in the courtesy and severe simplicity and frankness of the President's manner, wholly free from effervescent enthusiasm, a withering rebuke, not only of the adulators in public places, but also of his own pretensions, aspirations, and offensive conduct. Once out of the presence of Washington, he became the same defiant champion of the "rights of the people," affecting to be shocked at the evidences of monarchical sympathies in the President's house. He there saw a bust of Louis XVI., and declared its presence in the house of the President of the United States was an "insult to France," and he was "astounded" to find that relatives of Lafayette had lately been admitted to the presence of the President. His feelings were speedily soothed in a great banquet-hall of his republican friends (May 23, 1793), where his ears were greeted with the *Marseilles Hymn*, and his eyes delighted with a "tree of Liberty" on the table. His heart was made glad by having the red cap of Liberty placed on his own head first and then upon the head of each guest, while the wearer, under the inspiration of its symbolism, uttered some patriotic sentiment. At dinner, at which the Governor of Pennsylvania (Mifflin) was present, a roasted pig received the name of the murdered French king, and the head, severed from his body, was carried around to each of the guests, who, after placing the cap of Liberty on his

own head, pronounced the word "tyrant," and proceeded to mangle with his knife that of the poor pig. One of the Republican taverns in Philadelphia displayed as a sign a revolting picture of the mutilated and blood-stained corpse of Queen Marie Antoinette. This madness ran a short course, and its victims became heartily ashamed of it. Genet took this for a genuine and settled feeling, and acted upon it. Meanwhile the insulted government took most dignified action. The captured British merchantman was restored to its owners, and the privateers were ordered out of American waters. Orders were sent to the collectors at all American ports to seize all vessels fitted out as privateers, and to prevent the sale of any prize captured by such vessels. Chief-justice Jay declared it to be the duty of grand-juries to present all persons guilty of such violation of the laws of nations with respect to any of the belligerent powers. The French ambassador and his friends were greatly irritated. He protested, and the Secretary of State (Jefferson), who had favored the enthusiasm of Genet's reception, finding he had a troublesome friend on his hands, plainly told Genet that by commissioning privateers he had violated the sovereignty of the United States. With offensive pertinacity, Genet denied this doctrine as contrary to right, justice, and the laws of nations, and threatened to "appeal from the President to the people;" and in this the Republican newspapers sustained him. Secret Democratic societies which had been formed became more bold and active, and Genet, mistaking the popular clamor for the deliberate voice of the nation, actually undertook to fit out a privateer at Philadelphia, in defiance of the government, during the President's absence at Mount Vernon. It was a vessel captured by *L'Embuscade*, and Genet named her *The Little Democrat*. Governor Mifflin, like Jefferson, had become sick of the "Citizen," and he interfered. Genet would not heed his threats nor the persuasions of Jefferson. He denounced the President as unfaithful to the wishes of the people, and resolved to force him to call Congress together. Washington, on his return to Philadelphia, and informed of the insolence of Genet, exclaimed, "Is the minister of the French Republic to set the acts of the government at defiance with impunity?" His cabinet answered "No!" The most exacting country could not counsel longer forbearance, and the French government was requested (July, 1793) to recall its minister; and it was done. There was a reaction in the public mind towards a more patriotic attitude. The insolence of Genet had shocked the national pride. On the 22d of April (1793) the President issued a proclamation of neutrality (which see), which the radical Democrats denounced as an "edict of royalty." Genet—succeeded by M. Fouchet, a man equally indiscreet—did not leave the country, but became an excellent naturalized citizen of the United States, and died here.

**Genet's Mischievous Schemes.** It was not only in American waters and on the Atlantic seaboard that it became necessary to watch

"Citizen" Genet's mischievous schemes. He projected an invasion of Florida, the expedition for which was to be organized in South Carolina and to rendezvous in Georgia. Another of his schemes projected a like movement against New Orleans, to be set on foot in Kentucky. George Rogers Clarke, who had done good service in the Revolution, but who, through intemperance and other causes, had become impoverished, lent himself to be the leader of the expedition from Kentucky. Genet found a willingness among the Kentuckians to engage in such an enterprise, because Spain had refused the free navigation of the Mississippi. The "Democratic Society" at Lexington had taken this matter in hand. French emissaries were employed in Kentucky and South Carolina, and commissions were issued; but both enterprises failed for want of money. At one time Genet had two thousand seamen and soldiers on his hands to support. These and other efforts of Genet to set the neutral policy of the United States at defiance, and his general insolence of conduct in trying to stir up the people and the state governments, caused serious thoughts in the mind of Washington of abruptly dismissing him and ordering him to leave the country. But a wise forbearance undoubtedly accomplished good results in a better way.

**Geneva Award.** (See *Tribunal of Arbitration*.)

**George Griswold, THE RELIEF-SHIP.** The blockade of Southern ports caused a lack of the cotton supply in England and the running of mills on half-time or the shutting them up altogether. This produced wide-spread distress in the manufacturing districts. In Lancashire alone one million stomachs depended for bread on the mills. In 1862 a pitiful cry of distress came over the sea. It was heard by the loyal people of the North, who, repressing their just resentment against the British government for the "aid and comfort" it had given to the enemies of the Republic, heeded the cry, and the *George Griswold* was laden at New York, chiefly through the liberality of merchants there, with food for the starving English operatives of the value of more than \$200,000. With her was sent a government war-vessel as a convoy to protect her precious freight from the touch of the Anglo-Confederate cruiser *Alabama*, which was then lighting the ocean with the blaze of American merchant-vessels which she had set on fire. (See *Alabama, Destruction of the*.)

**George (Lewis) I., King of Great Britain,** was born in Osnabrück, Hanover, May 28, 1660; died near that place, June 10, 1727. Eldest son of Ernest Augustus, Elector of Hanover, he was the first sovereign of the Hanoverian line. His mother was Sophia, daughter of James I. of England. In 1681 he went to England to seek the hand of his cousin, the Princess Anne (afterwards queen), in marriage, but, being ordered by his father not to proceed in the business, he returned, and married his cousin Sophia Dorothea. By act of the Convention Parliament (see *English Revolution*) in 1689, and by Parlia-

ment in 1701, the succession of the English crown was so fixed that in the event of a failure of heirs by William and Mary, and Anne, it should be limited to the Electress Sophia of Hanover, George's mother, passing over nearer heirs who were Roman Catholics. By the treaty of union with Scotland (1707) the same succession was secured for its crown. By the death of Sophia, three months before Queen Anne died, George became heir-apparent to the throne of the latter because of failure of heirs, and he succeeded her. His son, the Prince of Wales, became openly hostile to his father in 1718, and at Leicester House he established a sort of rival court. This enmity arose from the treatment of the prince's mother, the unfortunate Sophia Dorothea (to whom he was much attached), who, accused of intrigue with Count Königsmarck, was divorced in 1694, and imprisoned from that time until her death in 1726. George I. was a man of moderate intellectual ability, a cruel husband, a bad father, but not a bad sovereign, for he allowed able men to manage the affairs of the kingdom. He was taken with a fit in his carriage, while on his way to Osnabrück, and died before he reached that place. His son (George) by the unfortunate Sophia succeeded him.

George (Augustus) II., King of England, son of the preceding and Sophia Dorothea, was born in Hanover, Oct. 30, 1683; died in Kensington Palace, Oct. 25, 1760. In his childhood and youth he was neglected by his father, and was brought up by his grandmother, the Electress Sophia. In 1705 he married a daughter of the Margrave of Brandenburg-Anspach, a woman of superior character and ability. He was made a peer of England the next year, with the chief title of Duke of Cambridge. He was a brave soldier under the Duke of Marlborough. In 1714 he accompanied his father to England, and was proclaimed Prince of Wales Sept. 22. The prince and his father hated each other cordially, and he was made an instrument of intrigue against the latter. The Princess of Wales was very popular, and the father also hated her. At one time the king proposed to send the prince to America, there to be disposed of so that he should have no more trouble with him. He was crowned king Oct. 11, 1727. His most able minister was Walpole (as he was of George I.), and he and the clever queen ruled the realm for fourteen years. He, in turn, hated his son Frederick, Prince of Wales, as bitterly as he had been hated by his father. It was during the later years of the reign of George II. that the "War of the Austrian Succession" and the French and Indian War (in which the English-American colonies were conspicuously engaged) occurred. During that reign England had grown amazingly in material and moral strength among the nations. The wisdom of William Pitt had done much towards the acquirement of the fame of England, which had never been greater than in 1760. George died suddenly, like his father, at the age of seventy-seven years. He had never been popular with the English people.

George (William Frederick) III., King of

England, was born June 4, 1738; died in Windsor Castle, Jan. 29, 1820. His mind was narrow, his disposition was crafty and arbitrary, and during his long reign, while he was sane, his years were passed in continual combat against the growing liberal spirit of the age. Being a native of England (which his two royal predecessors were not), and young and moral, he was at first popular on his accession to the throne (Oct. 26, 1760). In his first speech in

GEORGE III. AT THE TIME OF HIS ACCESSION.  
(From an anonymous print.)

Parliament he expressed pride in his English birth, and thereby great enthusiasm in his favor was excited. On Sept. 8, 1761, he married Charlotte Sophia, sister of the Duke of Mecklenburg-Strelitz, who shared his throne fifty-seven years, and bore him fifteen children, all but two of whom grew to maturity. Unfortunately for his kingdom, he neglected the wise counsels of Pitt, and made his preceptor, the Scotch Earl of Bute, his prime-minister and confidential friend. The minister and his master became very unpopular, and in 1763 Bute resigned, and was succeeded by George Grenville, who inaugurated the Stamp Act policy and other obnoxious measures towards the English-American colonies, which caused great discontent, a fierce quarrel, a long war, the final dismemberment of the British empire, and the political independence of the colonies. With the Stamp Act began the terribly stormy period of the reign of George III. In 1783 he was compelled to acknowledge the independence of his lost American colonies. Then he had continual quarrels with his ministry, and talked of leaving England and retiring to his little kingdom of Hanover, but refrained on being assured that it would be much easier for him to leave England than to return to it. Like his two royal predecessors, George hated his oldest son, the Prince of Wales, because he was generally in political opposition to him and led a loose life. After a serious dispute with Russia, which threatened to seize Turkey, and another with Spain, war with revolutionized France began in 1793, and the most arbitrary rule was exercised in England, driving the people at times to the

verge of revolution. Ireland was goaded into rebellion, which was suppressed by the most cruel methods—equal in atrocity to any perpetrated by the French in La Vendée and Brittany. The union of Great Britain and Ireland was effected in 1800, the parliament of the latter ceasing to exist. Against the king's wishes, peace was made with France in 1802; but war was again begun the next year. Then came the struggle with Napoleon Bonaparte, which lasted until the overthrow of that ruler at Waterloo (June, 1815). In 1810 the king lost his youngest and favorite daughter—Amelia—by death. His anxiety during her illness deprived him of reason. He had been threatened with

USUAL APPEARANCE OF GEORGE III. ABOUT 1776.  
(From a sketch by Gear.)

insanity once or twice before; now his mind was clouded forever. The first indication of his malady appeared on the day of the completion of the fiftieth year of his reign—Oct. 25, 1810. From that date his reign ceased in fact, and his son George, Prince of Wales, was made regent of the kingdom (Feb. 5, 1811). For nearly nine years the care of his person was intrusted to the faithful queen. In 1819 the Duke of York assumed the responsibility. The queen was simple in her tastes and habits, rigid in the performance of moral duties, kind and benevolent. Their lives were models of moral purity and domestic happiness.

**George III. and English Opinion concerning America.** The great landholders in England, as well as the more warlike classes, had become sick of trying to tax the Americans without their consent. Indeed, all classes were convinced of its futility, and yearned for a change

in the policy. Even the stubborn king, though unrelenting in his purpose to bring the Americans into submission, declared that the man who should approve the taxing of them, in connection with all its consequences, was "more fit for a madhouse than for a seat in Parliament." In the House of Commons (June, 1779), Lord John Cavendish moved for orders to withdraw the British forces employed in America; and the Duke of Richmond, in the House of Lords, proposed a total change of measures in America and Ireland. In both houses these sensible measures were supported by increasing numbers. North was frequently dropping hints to the king that the advantages to be gained by continuing the war would never repay its expenses. The king, disturbed by these propositions and the yielding disposition of his chief minister, summoned them all to his library (June 21, 1779), where, in a speech of more than an hour in length, he expressed to them "the dictates of his frequent and severe self-examination." He declared his firm resolution to carry on the war against America, France, and Spain; and that, "before he would hear of any man's readiness to come into office, he would expect to see it signed, under his own hand, that he was resolved to keep the empire entire, and that, consequently, no troops should be withdrawn from America, nor its independence ever be allowed." Stubbornly blind to well-known facts, he persisted in believing that, "with the activity of Clinton, and the Indians in their rear, the provinces, even now, would submit." This obstinacy left him only weak men to support him; for it ranged every able statesman and publicist in the kingdom on the side of the opposition.

**George the Third's first Official Blunder.** There were members of the aristocracy that, through envy, hated Pitt, who, in spite of them, had been called to the highest offices in the kingdom. When young Prince George heard of the death of the king, he went to Carleton House, the residence of his mother, and sent for Newcastle, Pitt's political enemy. He and Lord Bute prevailed upon the young king to discard Pitt and favor their own schemes. Newcastle prepared the first speech from the throne of George III.; and when Pitt, as prime-minister, went to him and presented the draft of an address to be pronounced at the meeting of the Privy Council, he was politely informed that the speech was already prepared and the preliminaries were arranged. Pitt immediately perceived that the king's tutor and warm personal friend of the young king's mother, the Scotch Earl of Bute, had made the arrangements, and would occupy a conspicuous place in the administration. George chose Bute for his counsellor and guide, and Pitt, to whom England more than to any other man owed its present power and glory, was allowed to retire and have his place filled by this Scotch adventurer. The people of England were disgusted, and by this blunder George created a powerful opposition party at the beginning of his reign.

**Georgetown (S. C.), CAPTURE OF.** In June, 1781, General Marion moved against Georgetown, on Winyaw Bay. The garrison made very slight resistance, and then fled down the bay and hurried to Charleston. He had not men enough to garrison Georgetown, so he moved the spoils up the Pelee to his old encampment at Snow's Island. (See *Marion's Camp*.)

**Georgia, COLONY OF,** was one of the original thirteen states of the Union, and was the latest settled. When, in 1729, the proprietors of the Carolinas surrendered their charter to the crown, the whole country southward of the Savannah River to the vicinity of St. Augustine was a wilderness, peopled by native tribes, and was claimed by the Spaniards as a part of Florida. The English disputed the claim, and war-clouds seemed to be gathering. At that juncture General James Edward Oglethorpe, commiserating the wretched condition of prisoners for debt who crowded the English prisons, proposed in Parliament the founding of a colony in America, partly for the benefit of this unfortunate class, and as an asylum for oppressed Protestants of Germany and other Continental states. A committee of inquiry reported favorably, and the plan, as proposed by Oglethorpe, was approved by King George II. A royal charter was obtained for a corporation (June 9, 1732) for twenty-one years, "in trust for the poor," to establish a colony in the disputed territory south of the Savannah, to be called *Georgia*, in honor of the king. Individuals subscribed largely to defray the expenses of emigrants, and within two years Parliament appropriated \$160,000 for the same purpose. The trustees, appointed by the crown, possessed all legislative and executive power, and there was no political liberty for the people. In November, 1732, Oglethorpe left England with one hundred and twenty emigrants, and, after a passage of fifty-seven days, touched at Charleston, giving great joy to the inhabitants, for he was about to erect a barrier between them and the Indians and Spaniards. Landing a large portion of the emigrants on Port Royal Island, he proceeded to the Savannah River with the remainder, and upon Yamacraw Bluff (the site of Savannah) he laid the foundations of the future state in the ensuing spring of 1733. The rest of the emigrants soon joined him. They built a fort, and called the place *Savannah*, the Indian name of the river, and there he held a friendly conference with the Indians (see *To-mo-chi-chi*), with whom satisfactory arrangements for obtaining sovereignty of the domain were made. Within eight years twenty-five hundred emigrants were sent over from England at an expense to the trustees of \$400,000. The condition upon which the lands were parcelled out was military duty; and so grievous were the restrictions, that many colonists went into South Carolina, where they could obtain land in fee. Nevertheless, the colony increased in numbers, a great many emigrants coming from Scotland and Germany. Oglethorpe went to England in 1734, and returned in 1736 with three hundred

emigrants, among them one hundred and fifty Highlanders skilled in military affairs. John and Charles Wesley and George Whitefield came to spread the gospel among the people and the surrounding heathen. (See *Whitefield*.) Moravians had also settled in Georgia (see *Moravians*), but the little colony was threatened with disaster. The jealous Spaniards at St. Augustine showed signs of hostility. Against this expected trouble Oglethorpe had prepared by building forts in that direction. Finally, in 1739, war broke out between England and Spain, and Oglethorpe was made commander of the South Carolina and Georgia troops. With one thousand men and some Indians he invaded Florida, but returned unsuccessful. In 1742 the Spaniards retaliated, and, with a strong land and naval force, threatened the Georgia colony with destruction. Disaster was averted by a stratagem employed by Oglethorpe, and peace was restored. (See *Oglethorpe*.) Slavery was prohibited in the colony, and the people murmured. Many settlements were abandoned, for tillers of the soil were few. Finally, in 1750, the restrictions concerning slavery were removed; and in 1752, the trustees having surrendered their charter to the crown, Georgia became a royal province, with privileges similar to the others. A general assembly was established in 1755, and in 1763 all the lands between the Savannah and St. Mary rivers were, by royal proclamation, annexed to Georgia. The colony prospered from the time of the transfer to the crown. The Georgians sympathized with their northern brethren in their political grievances, and bore a conspicuous part in the war for independence. A state constitution was adopted by a convention on the 5th of February, 1777, and Georgia took its place among the independent states of the Union, with Button Gwinnett, one of the signers of the Declaration of Independence, as acting governor.

**Georgia Adopts the "American Association."** A new Provincial Convention met in Georgia July 4, 1775, and adopted the American Association. This hitherto "defective link in the American chain" now took its place firmly. The convention appointed delegates to the Continental Congress. Lyman Hall, already there from St. John's Parish (which see), was appointed, with Archibald Bullock, Dr. Jones, John Honstoun, and Rev. Dr. Zubley, a Swiss by birth, and minister of the Presbyterian Church at Savannah. A meeting at Savannah had already appointed a Committee of Safety.

**Georgia Coast, CONQUEST OF THE.** Late in November, 1861, Commodore Dupont went down the coast from Port Royal (which see) with a part of his fleet, and with equal ease took possession of Big Tybee Island, at the mouth of the Savannah River, from which Fort Pulaski, which was within easy mortar distance, might be assailed, and the harbor of Savannah perfectly sealed against blockade-runners. On the approach of the National gunboats the defences were abandoned, and on Nov. 25 Dupont wrote to the Secretary of War: "The flag of the United

States is flying over the territory of Georgia." Before the close of the year the National authority was supreme from Warsaw Sound, below the mouth of the Savannah, to the North Edisto River, below Charleston. Every fort on the islands of that region had been abandoned, and there was nothing to make serious opposition to National authority. When the National forces reached those sea islands along the coasts of South Carolina and Georgia, there was a vast quantity of valuable sea-island cotton, gathered and ungathered, upon them. When the first panic was over the Confederates returned, stealthily, and applied the torch to millions of dollars' worth of this staple.

**Georgia, FLIGHT OF THE ROYAL GOVERNOR OF.** Sir James Wright was appointed royal governor of Georgia in 1764. He ruled wisely, but was a warm adherent of the royal cause. His influence kept down open resistance to the acts of Parliament for some time; but when that resistance became strong, it was suddenly overpowering. In January, 1776, Joseph Habersham, a member of the Assembly, raised a party of volunteers and made Governor Wright a prisoner, but set him free on his parole not to leave his own house. This parole he violated. A sentinel was placed before his door, and all intercourse between Wright and friends of the crown was forbidden. One stormy night (Feb. 11, 1776) Governor Wright escaped from a back window of his house, with an attendant, fled to a boat at the river-side, and went down the Savannah five miles to Bonaventure, the residence of his companion; thence he was conveyed before daylight to the British armed ship *Scarborough*, in Tybee Sound. So ended the rule of the last royal governor in Georgia. Sir James was a native of Charleston, S. C. He was the son of a chief-justice (Robert Wright) of that province. Sir James was agent of the province in Great Britain, and attorney-general; and in 1760 was appointed chief-justice and lieutenant-governor. In 1772 he was created a baronet. After his escape from Savannah he retired to England, losing all his large estate in Georgia by confiscation. He died in 1786.

**Georgia, INVASION OF, BY SPANIARDS.** In 1742 the Spaniards at St. Augustine determined to invade, seize, and hold Georgia, and capture or drive the English settlers from it. With a fleet of thirty-six vessels from Cuba and a land-force about three thousand strong, they entered the harbor of St. Simon's in July. Oglethorpe, always vigilant, had learned of preparations for this expedition, and he was on St. Simon's Island before them, but with less than one thousand men, including Indians, for the governor of South Carolina had failed to furnish men or supplies. The task of defending both provinces from invasion devolved upon the Georgians. When the Spanish fleet appeared Oglethorpe went on board his own little vessels and addressed the seamen with encouraging words; but when he saw the ships of the enemy pass the English batteries at the southern end of the island, he knew resistance would be in vain, so he ordered his squadron to

run up to Frederica, while he spiked the guns at St. Simon's and retreated with his troops. There, waiting for reinforcements from South Carolina (which did not come), he was annoyed by attacks from Spanish detachments, but always repulsed them. Finally, he proceeded to make a night attack on the Spanish camp at St. Simon's. When near the camp a Frenchman in his army ran ahead, fired his musket, and deserted to the enemy. The Spaniards were aroused, and Oglethorpe fell back to Frederica, and accomplished the punishment of the deserter in a novel way. He addressed a letter to the Frenchman as a spy in the Spanish camp, telling him to represent the Georgians as very weak in numbers and arms, and to advise the Spaniards to attack them at once; and if they would not do so, to try and persuade them to remain at St. Simon's three days longer; for within that time a British fleet, with two thousand land-troops, would arrive to attack St. Augustine. This letter was sent to the deserter by a Spanish prisoner, who, as it was expected he would, carried it to the Spanish commander. The Frenchman was put in irons, and afterwards hanged. A council of war was held, and while it was in session vessels from Carolina, seen at sea, were mistaken for the British fleet alluded to. The Spaniards determined to attack Oglethorpe immediately, and then hasten to the defence of St. Augustine. They advanced on Frederica, along a narrow road flanked by a forest and a morass; and when within a mile of the fort Oglethorpe and his Highlanders, lying in ambush, fell upon them furiously. Nearly the whole of the advanced division were killed or captured, and a second, pressing forward, shared their fate. The Spaniards retreated in confusion, leaving about two hundred dead on the field. They fled to their ships, and in them to St. Augustine, to find that they had been outgeneraled by Oglethorpe. The place of the slaughter is called "Bloody Marsh" to this day. This stratagem probably saved Georgia and South Carolina from utter destruction.

**Georgia Ordinance of Secession.** On Jan. 2, 1861, elections were held in Georgia for members of a convention to consider the subject of secession. The people, outside of the leading politicians and their followers, were opposed to secession; and Alexander H. Stephens, the most consistent and able statesman in Georgia, though believing in the right of secession, opposed the measure as unnecessary and full of danger to the public welfare. On the other hand, Robert Toombs, a shallow but popular leader, unscrupulous in methods of leadership, goaded the people on to disaster by harangues, telegraphic despatches, circulars, etc. He was then one of the most active of the conspirators in the National Congress, and worked night and day to precipitate his state into revolution. The vote at the election was from 25,000 to 30,000 less than usual, and there was a decided majority of the members elected against secession. The convention assembled at Milledgeville, the capital of the state, on Jan. 16. There were 295 members present, who chose Mr. Crawford to pre-

side. "With all the appliances brought to bear, with all the fierce, rushing, maddening events of the hour," said a writer of the day, "the Co-operationists had a majority, notwithstanding the falling-off of nearly 30,000, and an absolute majority of elected delegates of twenty-nine. But, upon assembling, by coaxing, bullying, and all other arts, the majority was changed." On the 18th a resolution was passed by a vote of 165 against 130, declaring it to be the right and duty of the state to withdraw from the Union. On the same day they appointed a committee to draft an ordinance of secession. It was reported almost immediately, and was shorter than any of its predecessors. It was in a single paragraph, and simply declared the repeal and abrogation of all laws which bound the Commonwealth to the Union, and that the State of Georgia was in "full possession and exercise of all the rights of sovereignty which belong and appertain to a free and independent state." The ordinance elicited many warm expressions of Union sentiments. Mr. Stephens made a telling speech in favor of the Union, and he and his brother Linton voted against secession in every form. But he did not take the exalted position of Henry Clay, who, on one occasion in Congress, said: "If Kentucky to-morrow unfurls the banner of resistance, I will never fight under that banner. I owe a paramount allegiance to the whole Union; a subordinate one to my own state." When, at two o'clock in the afternoon of Jan. 19, 1861, the Ordinance of Secession was adopted, by a vote of 208 against 89, Stephens declared that he should go with his state, and, in accordance with a resolution adopted, he signed the ordinance. A resolution to submit the ordinance to the people of the state for ratification or rejection was rejected by a large majority. At that stage of the proceedings, a copy of a resolution passed by the Legislature of the State of New York, tendering to the President of the United States all the available forces of the state, to enable him to enforce the laws, was received, and produced much excitement. Thomas immediately offered the following resolution, which was adopted unanimously: "As a response to the resolution of New York, that this convention highly approves of the energetic and patriotic conduct of the Governor of Georgia in taking possession of Fort Pulaski (which see) by Georgia troops, and requests him to hold possession until the relations of Georgia with the Federal Government be determined by this convention, and that a copy of this resolution be ordered to be transmitted to the governor of New York." The convention chose delegates to the proposed general convention at Montgomery.

**Georgia Paper Currency.** In 1760 the Legislature authorized the issuing of the sum of \$37,000 in bills of credit.

**Georgia, SUBJUGATION OF (1779).** General Lincoln was sent to Georgia to take the place of General Howe. General Prevost, commanding the British forces in East Florida, was ordered to Savannah, to join Lieutenant-colonel Campbell

for the subjugation of Georgia to British rule. On his way, Prevost captured Sunbury (Jan. 9, 1779) and took two hundred Continental prisoners. As soon as he reached Savannah he sent Campbell against Augusta, which was abandoned by the garrison, who escaped across the river. The state now seemed at the mercy of the invader. An invasion of South Carolina was anticipated. The militia of that state were summoned to the field. Lincoln was at Charleston. With militia lately arrived from North Carolina and the fragments of Howe's force, he had about fourteen hundred men, whom he stationed to guard the fords of the Savannah. The force under Prevost was much larger, but he hesitated to cross the river, the marshy borders of which were often overflowed to the width of three or four miles, threaded only at one or two points by a narrow causeway. A detachment sent by Prevost to take possession of Port Royal Island was repulsed by Colonel Moultrie. Lincoln, being reinforced, sent Colonel Ashe, of North Carolina, with fourteen hundred troops, to drive the British from Augusta. The British fled down the Georgia side of the river at his approach. He crossed and pursued, and at Brier Creek, about half-way to Savannah, he lay encamped, when he was surprised, and, after a sharp skirmish, was defeated, and his troops dispersed. (See *Brier Creek*.) The British re-occupied Augusta and opened a communication with the South Carolina Tories and the friendly Creek Indians. Now secured in the quiet possession of Georgia, Prevost issued a proclamation reinstating Sir James Wright as governor, and the laws as they had been before 1775. Savannah became the headquarters of the British army in the South.

**Georgia, THE PROVINCIAL CONGRESS OF,** assembled at Tondee's Long Room, at Savannah, July 4, 1775, at which delegates from fourteen districts and parishes were in attendance—namely, from the districts of Savannah, Vernonburg, Acton, Sea Island, and Little Ogeechee, and the parishes of St. Matthew, St. Philip, St. George, St. Andrew, St. David, St. Thomas, St. Mary, St. Paul, and St. John. Archibald Bullock was elected president of the Congress, and George Walton secretary. The Congress adopted the "American Association," and appointed as delegates to the Continental Congress Lyman Hall (already there), Archibald Bullock, Dr. Jones, John Houstoun, and Rev. Dr. Zubley, a Swiss by birth, who soon became a Tory. Sir James Wright (the governor) issued proclamations to quench the flames of patriotism, but in vain. His power had departed forever.

**Georgia, THE STATE OF,** was the latest settled of the original thirteen. It framed its first state constitution in 1777, its second in 1789, and a third in 1793, which was several times amended. On June 2, 1788, Georgia ratified the National Constitution. The settlers on the frontier suffered much from incursions of the Creek and Cherokee Indians; but their friendship was secured by treaties in 1790-91. By a treaty in

1802 the Creeks ceded to the United States a large tract, which was afterwards assigned to Georgia, now forming the southwestern counties of the state. The same year Georgia ceded to the United States all its claims to the lands westward of the boundaries of its present limits. Finally difficulties arose between the state and the national government respecting the Cherokees (see *Cherokees and Georgians*), and on their removal to the country west of

STATE SEAL OF GEORGIA.

the Mississippi, in 1838, Georgia came into possession of all their lands. Immediately after the election of Mr. Lincoln in 1860, the politicians of Georgia took measures for accomplishing the secession of that state. (See *Georgia Ordinance of Secession*.) Its delegates in the Confederate government organized at Montgomery, Ala., were conspicuous, A. H. Stephens being made Vice-President of the Confederacy. The governor of Georgia ordered the seizure of the public property of the United States within the limits of his state, and war made havoc on its coasts and in the interior. Sherman swept through the state with a large army late in 1864, "living off the country," and within its borders the President of the Confederacy was captured in May, 1865. (See *Davis, Jefferson, Capture of*.) Within its borders was the famous Andersonville Prison-pen (which see). In June, 1865, a provisional governor was appointed for the state. A convention held at Milledgeville late in October repealed the Ordinance of Secession, declared the war debt void, amended the constitution so as to abolish slavery, and in November elected a governor, legislature, and members of Congress. Congress did not approve these measures, and the senators and representatives chosen were not admitted to seats. In 1867 Georgia, with Alabama and Florida, formed a military district, and was placed under military rule. A convention at Atlanta, in March, 1868, framed a constitution, which was ratified in April by a majority of nearly eighteen thousand votes. On June 25, Congress, by act, provided for the readmission of Georgia, with other states, upon their ratification of the Fourteenth Amendment to the National Constitution. For a violation of the "Reconstruction Act," in not permitting colored men, legally elected, to occupy seats in the Legislature, Georgia representatives were not permitted to take seats in Congress. The Supreme Court of the state declared that negroes were entitled to hold office. A new election was held, both houses of the state Legislature were duly organized (Jan. 31, 1869), all the requirements of Congress were acceded to, and by act of Congress, on July 15, Georgia was readmitted into the Union. Its representatives took their seats in December, 1869. Population in 1880, 1,542,180.

GEORGIA, TRUSTEES' GOVERNMENT OF. To

twenty-one trustees George II. gave a charter (June 9, 1732) for planting a colony in America. They chose for its site the unoccupied country between South Carolina and Georgia. The project, which mainly contemplated the relief of prisoners for debt in England, and to establish an asylum for persecuted Protestants in Continental Europe, met with universal approval, and donations from persons of all ranks were made to enable emigrants to go to America. The Bank of England made a generous gift. The House of Commons voted, from time to time, sums which aggregated, in the course of two years, \$180,000. Lord (Viscount) Perceval was chosen president of the trustees, and a code of regulations for the colony, with agreements and stipulations, was speedily prepared. The title of the association was, "Trustees for Settling and Establishing the Colony of Georgia." The trustees were, Anthony, Earl of Shaftesbury, John (Lord) Perceval, Edward Digby, George Carpenter, James Edward Oglethorpe, George Heathcote, Thomas Tower, Robert Moore, Robert Hucks, Roger Holland, William Sloper, Francis Eyles, John La Roche, James Vernon, William Beletha, John Barton, Richard Bundy, Arthur Beaford, Samuel Smith, Adam Anderson, and Thomas Coram. They were vested with legislative powers for the government of the colony for the space of twenty-one years, at the expiration of which time a permanent government was to be established by the king or his successor, in accordance with British law and usage. They adopted a seal for the colony, which indicated the avowed intention of making it a silk-producing commonwealth. On one side was represented a group of toiling silk-worms, and the motto, "Non sibi, sed alius;" on the other, the genius of the colony, between two urns (two rivers), with a cap of liberty on her head, in her hands a spear and a horn of plenty, and the words, "Colonia Georgia Ang." This was a strange seal for a colony whose toilers and others possessed no political freedom. The code of laws and regulations adopted by the trustees provided that each tract of land granted to a settler should be accepted as a pledge that the owner should take up arms for the common defence whenever required; that no tract should exceed twenty-five acres in extent, and no person should possess more than five hundred acres; that no woman should be capable of succeeding to landed property; that, in default of male heirs, the property of a proprietor should revert to the trustees, to be again granted to another emigrant; that if any portion of land granted should not, within eighteen years thereafter, be cleared, fenced, and cultivated, it should relapse to the trustees. It was recommended that the daughters of a deceased proprietor having no male heirs, unless provided for by marriage, should have some compensation, and his widow have the use of his house and half his land during her life. No inhabitant was permitted to leave the province without a license, the importation of rum was disallowed, trade with the West Indies was declared unlawful, and negro slavery was absolutely forbidden. It has

been well said that, with one or two exceptions, this code did not exhibit a trace of commonsense. It is no wonder the colony did not prosper, for the laws were hostile to contentment, discouraging every planter whose children were girls, and offering very poor incentives to industry. When, in 1752, the trusteeship expired, and Georgia was made a royal province, its growth was rapid.

**Germain and the Indians.** Lord George Germain, Secretary for the Colonies, seemed to take pride and comfort in employing agents who would incite the savages of the wilderness to fall on the Americans. He complained of the humanity of Carleton, who, in the autumn of 1776, hesitated to employ the Indians in war; but in Hamilton, governor of Detroit, he found a ready agent in the carrying out of his cruel schemes. Early in September (1776) that functionary wrote he had assembled small parties of barbarians in council, and that the Ottawas, Chippewas, Wyandots, and Potawatomies, with the Senecas, would "fall on the scattered settlers on the Ohio and its branches;" and saying of the Americans, "Their arrogance, disloyalty, and imprudence has justly drawn upon them this deplorable sort of war." It was Germain and his agents (sometimes unworthy ones) who excited the Indians to scalp and murder the white settlers, without distinction of age or sex, all along the frontier line from New York to Georgia. He reproved every commander who showed signs of mercy in his conduct in this business.

**Germain, LORD GEORGE** (Viscount Sackville), was born Jan. 26, 1716; died Aug. 26, 1785. His father (Duke of Dorset) was lord-lieutenant of Ireland, and he was educated there. He entered the army, and rose to the

LORD GEORGE GERMAIN.

rank of lieutenant-general. He entered Parliament in 1761, and was made Colonial Secretary in 1775, ever evincing the most vindictive spirit towards the Americans. He became so unpopular at home that, during the London riots in 1780, he felt compelled to barricade his house in the city. So consonant were his views with those

of the king, that he was a great favorite at court. His influence over the young king at the time of his coronation and soon afterwards was so well known that a handbill appeared with the words, "No Lord George Sackville! No Petticoat Government!" alluding to the influence of the monarch's mother.

**German Mercenaries.** Soon after the opening of Parliament in the autumn of 1775, that body, stimulated by Lord North, the premier, and Lord George Germain, who had been chosen Secretary for the Colonies, and, at the sugges-

tion of Admiral Howe, promptly voted twenty-five thousand men for service against the Americans. It was difficult to obtain enlistments in Great Britain, and mercenaries were sought in Germany. At the close of the year, and at the beginning of 1776, bargains were effected between representatives of the British government and the reigning princes of Hesse-Cassel, Hesse-Hanau, Brunswick, Anhalt, Auspach, and Waldeck. In the bargain, the fundamental law of trade—supply and demand—prevailed. The King of England had money, but lacked troops; the German rulers had troops, but wanted money. The bargain was a natural one, on business principles; the morality of the transaction was another affair. About seventeen thousand German troops, most of them well disciplined, were hired. The German rulers were to receive for each soldier a bounty of \$22.50, besides an annual subsidy, the whole amounting to a large sum. The British government agreed to make restitution for all soldiers who might perish from contagious disease while being transported in ships and in engagements during sieges. They were to take an oath of allegiance to the British sovereign during their service, without its interfering with similar oaths to their respective rulers. Their chief commanders, when they sailed for America, were Generals Baron de Riedesel, Baron Knyphausen, and De Heister. The general name of "Hessians" was given to them by the Americans, and, because they were mercenaries, they were heartily detested by the colonists. When any brutal act of oppression or wrong was to be carried out, such as a plundering or burning expedition, the Hessians were generally employed in the service. The transaction was regarded by other nations as disgraceful to the British. The King of Great Britain shrank from the odium it inflicted, and refused to give commissions to German recruiting officers (for he knew their methods of forcing men into the service), saying, "It, in plain English, amounts to making me a kidnapper, which I cannot think a very honorable occupation." All Europe cried "Shame!" and Frederick the Great, of Prussia, took every opportunity to express his contempt for the "scandalous man-traffic" of his neighbors. Without these troops, the war would have been short. A part of them, under Riedesel, went to Canada (May, 1776); the remainder, under Knyphausen and De Heister, joined the British under Howe, before New York, in the summer of 1776, and had their first encounter on Long Island, Aug. 27.

**Germans in America.** Germany had long lain prostrate, with few gleams of hope for resurrection from the deadly blow given it by the Thirty Years' War. For more than half a century it had lain in almost inert isolation, like a magnificent ruin. The Protestants of that country beheld the light breaking when the settlements in America began to prosper, and Germans, especially from the borders of the Rhine, flocked to the young world beyond the sea, and largely peopled the land, in the course of a century, between the Mohawk Valley and northern

Virginia. They brought with them the love of liberty and of rural life, and gave to the new nation, formed late in the 18th century, much rich blood.

**Germans in North Carolina.** In 1709 one hundred German families, driven from their desolated homes in the palatinates on the Rhine, came to America, and penetrated the interior of North Carolina. They were led by Count Graffenreidt, and founded settlements along the head-waters of the Neuse and upon the Roanoke, with the count as governor. They had just begun to gather the fruits of their industry, when suddenly, in the night (Oct. 2, 1711), the Tuscarora Indians and others fell upon them like lightning, and before the dawn one hundred and thirty persons perished by the hatchet and knife. Then along Albemarle Sound the barbarians swept, with a torch in one hand and a deadly weapon in the other, and scourged the white people for three days, leaving blood and cinders in their path, when, from drunkenness and exhaustion, they ceased murdering and burning. On the eve of this murderous raid the Indians had made captive Count Graffenreidt and John Lawson, surveyor-general of the province. Lawson they tortured to death, but the count saved his life and gained his liberty by adroitly persuading them that he was the sachem of a tribe of men who had lately come into the country, and were no way connected with the English, or the deeds of which the Indians complained. Graffenreidt made a treaty of peace with the Tuscaroras and Corees.

**Germantown, BATTLE OF.** There were formidable obstructions in the Delaware River below Philadelphia, placed there by the Americans, and also two forts and a redoubt that commanded the stream. The British fleet was in Delaware Bay (Sept. 25), but could not reach Philadelphia before these obstructions were removed. General Howe prepared to assist his brother in removing these obstructions, and sent strong detachments from his army to occupy the shores of the Delaware below Philadelphia, which the Americans still held. Perceiving the weakening of Howe's army, and feeling the necessity of speedily striking a blow that should revive the spirits of the Americans, it was resolved to attack the British army at Germantown. Washington had been reinforced by Maryland and New Jersey troops. His army moved in four columns during the night of Oct. 3, 1777; the divisions of Sullivan and Wayne, flanked by General Conway's brigade on the right, moving by way of Chestnut Hill, while Armstrong, with Pennsylvania militia, made a circuit to gain the left and rear of the enemy. The divisions of Greene and Stephen, flanked by McDougall's brigade (two thirds of the whole army), moved on a circuitous route to attack the front of the British right wing, while the Maryland and New Jersey militia, under Smallwood and Forman, marched to fall upon the rear of that wing. Lord Stirling, with the brigades of Nash and Maxwell, formed the reserve. Howe's force stretched across the country from Germantown,

with a battalion of light infantry and Simcoe's Queen's Rangers (American loyalists) in the front. In advance of the left wing were other light infantry, to support pickets on Mount Airy, and the extreme left was guarded by Hessian Yagers (riflemen). Near the large stone mansion of Chief-justice Chew (yet standing), at

CHEW'S HOUSE.

the head of the village, was a strong regiment under Colonel Musgrave. Washington's army, moving stealthily, tried to reach Chestnut Hill before the dawn (Oct. 4), but failed. It was near sunrise when they emerged from the woods on that eminence. The whole country was enveloped in a thick fog. The British were surprised. The troops of Wayne and Sullivan fell, unexpectedly and with heavy force, upon the British infantry in front, and they were hurled back upon their main line in confusion by a storm of grape-shot. This cannonade awakened Cornwallis, who was sleeping soundly in Philadelphia, unconscious of danger near. Howe, too, nearer the army, was aroused from slumber, and arrived near the scene of conflict to meet his flying battalions. Then he hastened to his camp, to prepare his troops for action. Musgrave sent a part of his regiment to support the fugitives, and, with six companies, took refuge in Chew's strong dwelling. He barricaded the doors and lower windows, and made it a castle. From its upper windows he poured such a volley of bullets upon Woodford's pursuing brigade that their march was checked. The fire of the American small-arms upon the building was ineffectual. Finally Maxwell's artillery brought cannons to bear upon the house, but its strong walls resisted the heavy round shot. Then an attempt was made to set fire to the mansion. This check in the pursuit brought back Wayne's division, leaving Sullivan's flank uncovered. This event, and the failure of Greene to attack at the time ordered, disconcerted Washington's plans. Greene's troops had fallen into confusion in the fog, as they traversed the broken country, but they soon smote the British right with force. The failure of other troops to co-operate with them by turning the British left caused Greene to fail, and the golden opportunity to strike a crushing blow had passed. In the fog that still

prevailed, parties of Americans attacked each other on the field; and it was afterwards ascertained that, while the assault on Chew's house was in progress, the whole British army were preparing to fly across the Schuykill, and rendezvous at Chester. At that moment of panic General Grey observed that his flanks were secure, and Knyphausen marched with his whole force to assist the beleaguered garrison and the contending regiments in the village. Then a short and severe battle occurred in the heart of Germantown. The Americans could not discern the number of their assailants in the confusing mist, when suddenly the cry of a trooper, "We are surrounded!" produced a panic, and the patriots retreated in great confusion. The struggle lasted about three hours. The Americans lost about six hundred, killed, wounded, and missing; the British about eight hundred. Washington fell back to his encampment on Skip-pack Creek. General Nash, while covering the retreat with his brigade, was mortally wounded.

**Gerry, ELBRIDGE**, a signer of the Declaration of Independence, was born at Marblehead, Mass., July 17, 1744; died in Washington, D. C., when Vice-President of the United States, Nov. 23, 1814. He graduated at Harvard, in 1762. He took part early in the strife before the Revolution, and in 1772 represented his native town in the State Legislature. Gerry was the first to propose, in the Provincial Congress of Massachusetts, a law for fitting out armed vessels and establishing a Court of Admiralty. He took a seat in the Continental Congress early in 1776, signed the Declaration of Independence, and remained in that body, with few intermissions, until 1785. He was an efficient member of finance committees in the Congress, and was President of the Treasury Board in 1780. A delegate in the convention that framed the National Constitution, he was one of those who refused to sign the instrument. He was a member of Congress from 1789 to 1793, and in 1797 was sent as one of the special envoys on a mission to France. He was elected governor of Massachusetts by the Democratic party in 1810, and in 1812 was chosen Vice-President of the United States. Mr. Gerry married a daughter of Charles Thomson, Secretary of Congress, who died in 1849, aged 86 years.

**Gerrymandering**, a political term employed in this country from the year 1812 even to this day. The history of it may be briefly told. After a bitter contest for power in Massachusetts between the Federalists and Democrats, the latter succeeded, in 1811, in electing their candidate for governor, Elbridge Gerry, and a majority of both houses of the Legislature. In order to secure the election of United States Senators in the future, it was important to perpetuate this possession of power, and measures were taken to retain a Democratic majority in the State Senate in all future years. The senatorial

districts had been formed without any division of counties. This arrangement, for the purpose alluded to, was now disturbed. The Legislature proceeded to rearrange the senatorial districts of the state. They divided counties in opposition to the protests and strong constitutional arguments of the Federalists; and those of Essex and Worcester were so divided as to form a Democratic majority in each of those Federal counties, without any apparent regard to convenience or propriety. The work was sanctioned and became a law by the signature of Governor Gerry, for which act the opposition severely castigated him through the newspapers and at public gatherings. In Essex County the arrangement of the district, in relation to the towns, was singular and absurd. Russell, the veteran editor of the *Boston Centinel*, who had fought against the scheme valiantly, took a map of that county, and designated by particular coloring the towns thus selected, and hung it on the wall of his editorial room. One day Gilbert Stuart, the eminent painter, looked at the map, and said the towns which Russell had

THE GERRY-MANDER.

thus distinguished resembled some monstrous animal. He took a pencil, and with a few touches represented a head, wings, claws, and tail. "There," said Stuart, "that will do for a salamander." Russell, who was busy with his pen, looked up at the hideous figure, and exclaimed, "Salamander! Call it *Gerry-mander*." The word was immediately adopted into the political vocabulary as a term of reproach for those who change boundaries of districts for a partisan purpose.

**Getty, GEORGE W.**, was born in the District of Columbia about 1820, and graduated at West Point in 1840. He served in the war with Mexico, and in the Seminole War in Florida; and, becoming brigadier-general of volunteers in 1862, did excellent service in the campaign on

the Peninsula. He was in the battles of South Mountain, Antietam, and Fredericksburg in 1862; also in the campaign against Richmond in 1864 until August, when he was breveted major-general of volunteers. He was in the army in the Shenandoah Valley the remainder of the year. He was also in the battle at Sailor's Creek and at the surrender of Lee. In March, 1865, he was breveted major-general in the United States Army.

**Gettysburg, BATTLE OF.** On the day when General Meade took command of the Army of the Potomac (June 28, 1863) Lee was about to cross the Susquehanna at Harrisburg and march on Philadelphia. The militia of Pennsylvania, who had shown great apathy in responding to the call for help, now, when danger was at their door, turned out with considerable spirit; and Lee, observing this, and hearing that the augmented Army of the Potomac was in Maryland and threatening his rear and flanks, immediately abandoned his scheme for further invasion and ordered a retrograde movement. On the same day, Stuart, with a large force of cavalry, crossed the Potomac, pushed on to Westminster, at the right of the Nationals, crossed over to Carlisle, encountering Kilpatrick and his cavalry, and followed Ewell in his march towards Gettysburg. Longstreet had been ordered to cross the South Mountain range, and press on through Gettysburg to Baltimore to keep Meade from cutting Lee's communications. Lee hoped to crush Meade, and then march in triumph on Baltimore and Washington; or, in case of failure, to secure a direct line of retreat into Virginia. Meanwhile Meade was pushing towards the Susquehanna with cautious movement, and on the evening of June 30 he discovered Lee's evident intention to give battle at once. On the day before, Kilpatrick and Custer's cavalry had defeated some of Stuart's a few miles from Gettysburg. (See *Hanover, Battle at*.) Buford's cavalry entered Gettysburg; and on the 30th the left wing of Meade's army, led by General Reynolds, arrived near there. At the same time the corps of Hill and Longstreet were approaching from Chambersburg, and Ewell was marching down from Carlisle in full force. On the morning of July 1 Buford, with six thousand cavalry, met the van of Lee's army, led by General Heth, between Seminary Ridge (a little way from Gettysburg) and a parallel ridge a little farther west, when a sharp skirmish ensued. Reynolds, who had bivouacked at Marsh Creek, a few miles distant, was then advancing with his own corps, followed by Howard's, having those of Sickles and Slocum within call. The sound of fire-arms quickened his pace, and he marched rapidly to the relief of Buford, who was holding the Confederates in check. While Reynolds was placing some of his troops on the Chambersburg road, the Confederates made an attack, when a volley of musketry from the Fifty-sixth Pennsylvania, led by Colonel J. W. Hoffman, opened the decisive battle of Gettysburg. Meredith's "Iron Brigade" then charged into a wood in the rear of the Seminary to fall upon Hill's right, under General Archer. The Nationals were pushed

back, but other troops, under the personal direction of Reynolds, struck Archer's flank, and captured that officer and eight hundred of his men. At the moment when this charge was made, the bullet of a Mississippi sharpshooter pierced Reynolds's neck, when he fell forward and expired. General Doubleday had just arrived, and took Reynolds's place, leaving his own division in charge of General Rowley. Very soon the Mississippi Brigade, under General Davis, was captured, and at noon the whole of the First Corps, under General Doubleday, was well posted on Seminary Ridge, and the remainder of Hill's corps was rapidly approaching. Meanwhile the advance division of Ewell's corps had taken a position on a ridge north of the town, connecting with Hill, and seriously menacing the National right, held by General Cutler. Doubleday sent aid to Cutler, when a severe struggle ensued for some time, and three North Carolina regiments were captured. Now the battle assumed far grander proportions. Howard's corps, animated by the sounds of battle on its front, pressed rapidly forward, and reached the field of strife at a little past noon. He left Steinwehr's brigade on Cemetery Hill, placed General Schurz in temporary charge of the corps, and, ranking Doubleday, took the chief command of all the troops in action. The Confederate numbers were continually augmented, and, to meet an expected attack from the north and west, Howard was compelled to extend the National lines, then quite thin, about three miles, with Culp's Hill on the right, Round Top on the left, and Cemetery Hill in the centre, forming the apex of a redan. At about three o'clock in the afternoon there was a general advance of the Confederates, and a terrible battle ensued, with heavy losses on both sides. The Nationals were defeated. They had anxiously looked for reinforcements from the scattered corps of the Army of the Potomac. These speedily came, but not until the preliminary engagement in the great battle of Gettysburg was ended. General Meade was at Taneytown, thirteen miles distant, when he heard of the death of Reynolds, and he ordered General Hancock, Howard's junior, to leave his corps with Gibbons and take the chief command at Gettysburg. He arrived just as the beaten forces were hurrying towards Cemetery Hill. He reported to Meade that he was satisfied with Howard's disposition of the troops. The latter had called early upon Slocum and Sickles, and both promptly responded. Sickles joined the left of the troops on Cemetery Hill that night. Hancock had gone back; and, meeting his own corps, posted it a mile and half in the rear of Cemetery Hill. Meade had now given orders for the concentration of his whole army at Gettysburg, and he aroused them at one o'clock in the morning of July 2, when only the corps of Sykes and Sedgwick were absent. Lee, too, had been bringing forward his troops as rapidly as possible, making his headquarters on Seminary Ridge. On the morning of the 2d a greater portion of the two armies confronted each other. Both commanders seemed averse to taking the

initiative of battle. The Nationals had the advantage of position, their lines projecting in wedge form towards the Confederate centre, with steep rocky acclivities along their front. It was late in the afternoon before a decided movement was made. Sickles, on the left, between Cemetery Hill and Round Top, expecting an attack, had advanced his corps well towards the heaviest columns of the Confederates. Then Lee attacked him with Longstreet's corps. There was first a severe struggle for the possession of the rocky eminence on Meade's extreme left, where Birney was stationed. The Nationals won. Meanwhile there was a fierce contest near the centre, between Little Round Top and Cemetery Hill. While yet there was strife for the former, General Crawford, with six regiments of Pennsylvania Reserves, swept down its northwestern side with tremendous shouts, and drove the Confederates through the woods to the Emmetsburg road, making three hundred of them prisoners. Generals Humphreys and Graham were then in an advanced position, the former with his right on the Emmetsburg road, when Hill, advancing in heavy force from Seminary Ridge, fell upon him and pushed him back, with a loss of half his men and three guns. In this onset Sickles lost a leg, and Birney took command of the corps. Elated by this success, the Confederates pushed up to the base of Cemetery Hill and its southern slope, throwing themselves recklessly upon supposed weak points. In this contest Meade led troops in person. Finally, Hancock, just at sunset, directed a general charge, chiefly by fresh troops under Doubleday, who had hastened to his assistance from the rear of Cemetery Hill. These, with Humphreys' shattered regiments, drove the Confederates back and recaptured four guns. The battle ended on the left centre at twilight. Then the battle was renewed on the National right, where General Slocum was in chief command. Ewell had attacked him with a part of his corps at the time Longstreet assailed the left. The assault was vigorous. Up the northern slopes of Cemetery Hill the Confederates pressed in the face of a murderous fire of canister and shrapnel from the muzzles of the guns. Another part of Ewell's corps attempted to turn the National right by attacking its weakened part on Culp's Hill. The Confederates were repulsed at the right centre; and, after a severe battle on the extreme right of the Nationals, the Confederates there were firmly held in check. So ended, at about ten o'clock at night, the second day's battle at Gettysburg, when nearly forty thousand men of the two armies, who were "effective" thirty-six hours before, were dead or wounded. The advantage seemed to be with the Confederates, for they held the ground in advance of Gettysburg which the Nationals had held the previous day. During the night Meade made provision for expelling the Confederate

intrusion on the National right by placing a heavy artillery force in that direction. Under cover of these guns a strong force made an attack, and for four hours Geary's division kept up a desperate struggle. Then the Confederates fell back, and the right was made secure. Now Ewell was repulsed on the right, and Round Top, on the left, was impregnable; so Lee determined to strike Meade's centre with a force that should crush it. At noon (July 3) he had one hundred and forty-five cannons in battery along the line occupied by Longstreet and Hill. All night General Hunt, of the Nationals, had been arranging the artillery from Cemetery Hill to Little Round Top, where the expected

VIEW ON LITTLE ROUND TOP.\*

blow would fall. Lee determined to aim his chief blow at Hancock's position on Cemetery Hill. At one o'clock P.M. one hundred and fifteen of his cannons opened a rapid concentrated fire on the devoted point. Fourscore National guns replied, and for two hours more than two hundred cannons shook the surrounding country with their detonations. Then the Confederate infantry, in a line three miles in length, preceded by a host of skirmishers, flowed swiftly over the undulating plain. Behind these was a heavy reserve. Pickett, with his Virginians, led the van, well supported, in a charge upon Cemetery Hill. In all, his troops were about fifteen thousand strong. The cannons had now almost ceased thundering, and were succeeded by the awful roll of musketry. Shot and shell from Hancock's batteries now made fearful lanes through the oncoming Confederate ranks. Hancock was wounded, and Gibbons was placed in command. Pickett pressed onward, when the divisions of Hayes and Gibbons opened an appalling and continuous fire upon them. The Confederates gave way, and 2000 men were made prisoners, and fifteen battle-flags became trophies of victory for Hayes. Still Pickett moved on, scaled Cemetery Hill, burst through Hancock's line, drove back a portion of General Webb's brigade, and planted the Confederate

\* This is a view of the crest of Little Round Top at the place of a National battery. The group of trees in the distance is on Cemetery Hill, where Hancock's command was stationed, and Gettysburg is seen just behind it.

flag on a stone wall. But Pickett could go no farther. Then Stanuand's Vermont brigade of Doubleday's division opened such a destructive fire on Pickett's troops that they gave way. Very soon 2500 of them were made prisoners, and with them twelve battle-flags, and three fourths of his gallant men were dead or captives. Wilcox supported Pickett, and met a similar fate at the hands of the Vermonters. Meanwhile Crawford had advanced upon the Confederate right from near Little Round Top. The Confederates fled; and in this sortie the whole ground lost by Sickles was recovered, with 260 men captives, 7000 small-arms, a cannon, and wounded Unionists, who had lain nearly twenty-four hours un-cared for. Thus, at near sunset, July 3, 1863, ended the battle of Gettysburg. During that night and all the next day Lee's army on Seminary Ridge prepared for flight back to Virginia. His invasion was a failure; and on Sunday morn-

tween the United States and Great Britain occurred in the city of Ghent, the capital of East Flanders, Belgium, situated at the confluence of the Scheldt and Lys. There the American commissioners assembled at about midsummer, 1814, and were joined by the British commissioners early in August. (See *Treaty of Peace, 1814.*) Their deliberations and discussions continued several months, and the final result was reached Dec. 24. The leading citizens of Ghent took great interest in the matter. Their sympathies were with the Americans, and they mingled their rejoicings with the commissioners when the work was done. On Oct. 27 (1814) the Academy of Sciences and Fine Arts at Ghent invited the American commissioners to attend their exercises, when they were all elected honorary members of the academy. A sumptuous dinner was given, at which the Intendant, or chief magistrate, of Ghent offered the following

VIEW OF THE CITY OF GHENT, FROM THE SCHELDT.

ing, July 5, his whole army was moving towards the Potomac. (See *Lee's Second Retreat from Maryland.*) This battle, in its far-reaching effects, was the most important of the war. The National loss in men, from the morning of the 1st until the evening of the 3d of July, was reported by Meade to be 23,186, of whom 2834 were killed, 13,709 wounded, and 6643 missing. A greater portion of the latter were prisoners. Lee, as usual, made no report of his losses. It was the policy of the Confederate government to conceal such discouraging facts from the people. A careful estimate, made from various sources, made his loss about 30,000, of whom 14,000 were prisoners.

Ghent, NEGOTIATION OF TREATY OF PEACE AT. The negotiation of the treaty of peace be-

sentiment: "Our distinguished guests and fellow-members, the American ministers — may they succeed in making an honorable peace to secure the liberty and independence of their country." The band then played *Hail Columbia*. The British commissioners were not present. After the treaty was concluded, the American commissioners gave a dinner to the British commissioners, at which Count H. van Steinhuyser, the Intendant of the department, was present. Sentiments of mutual friendship were offered. A few days afterwards the Intendant gave an entertainment to the commissioners of both nations.

Gibbon, EDWARD, historian, was born at Putney, April 27, 1737; died in London, Jan. 16, 1794. He was from infancy feeble in physical

constitution. His first serious attempt at authorship was when he was only a youth—a treatise on the age of Sesostris. He was fond of Oriental research. Reading Bossuet's *Variations of Protestantism and Exposition of Catholic Doctrine*, he became a Roman Catholic, and at length a free-thinker. He was a student at Ox-

EDWARD GIBBON.

ford when he abjured Protestantism, and was expelled. He read with avidity the Latin, Greek, and French classics, and became passionately fond of historical research. He also studied practically the military art, as a member of the Hampshire militia, with his father. In 1751 he published a defence of classical studies against the attacks of the French philosophers. In 1764 he went to Rome, and studied its antiquities with delight and seriousness, and there he conceived the idea of writing his great work, *The Decline and Fall of the Roman Empire*. "It was at Rome," he wrote, "on the 15th of October, 1764, as I sat musing amid the ruins of the Capitol, while barefooted friars were singing vespers in the Temple of Jupiter, that the idea of writing the decline and fall of the city first started to my mind." But that work was not seriously begun until 1770, and the first volume was completed in 1775. In 1774 he became a member of the House of Commons, and at first took sides with the Americans, writing much in their favor. He finally became a firm supporter of the British ministry in their proceedings against the Americans, writing in their defence a pamphlet in the French language, when he was provided by them with a lucrative sinecure office worth \$4000 a year. His mouth (or rather pen) was thus stopped by the government favor. To this venality the following epigram alludes. It was written, it is said, by Charles James Fox.

"King George, in a fright, lest Gibbon should write  
The story of Britain's disgrace,  
Thought no means more sure his pen to secure  
Than to give the historian a place.

"But his caution is vain, 'tis the curse of his reign  
That his projects should never succeed;  
Though he write not a line, yet a cause of decline  
In the author's example we read."

On the downfall of the North administration, and the loss of his salary, Gibbon left England and went to live at Lausanne, Switzerland. There he completed his great work in June, 1787, and, sending the manuscript to England, it was issued on his fifty-first birthday. It is said that his booksellers realized a profit on the work of \$300,000, while the author's profits were only \$30,000. On setting out for England in the spring of 1793, he was afflicted with a very serious malady (hydrocele), which he long concealed, until it finally developed into a fatal disorder, which terminated his life suddenly in London the next year.

Gibbs, ALFRED, was born in New York, April 23, 1823; died at Fort Leavenworth, Kan., Dec. 26, 1868. He graduated at West Point in 1846, served under Scott in Mexico and afterwards against the Indians, and when the Civil War broke out he was in Texas. He was made prisoner, and when exchanged in 1862 he was made colonel of New York volunteers, and served under Sheridan, in the latter part of the war, in command of a cavalry brigade. He was active in the Army of the Potomac at all times, and was a thoroughly trustworthy officer. In March, 1865, he was breveted major-general of volunteers.

Gibson, GEORGE, was born at Lancaster, Penn., in October, 1747; died at Fort Jefferson, O., Dec. 14, 1791. On the breaking-out of the Revolution he raised a company of one hundred men at Fort Pitt, who were distinguished for their bravery and as sharpshooters, and were called "Gibson's Lambs." These did good service throughout the war. A part of the time Gibson was colonel of a Virginia regiment. To obtain a supply of gunpowder, he went down the Ohio and Mississippi rivers, with twenty-five picked men and a cargo of flour, ostensibly for trade, and returned with the desired ammunition. In the disastrous battle (Nov. 4, 1791) in which St. Clair was defeated, Colonel Gibson was mortally wounded.—His brother JOHN was also a soldier of the Revolution. He was born in May, 1730, and died in April, 1822. He was in Forbes's expedition against Fort Duquesne, and acted a conspicuous part in Dunmore's War (which see) in 1774. He commanded a Continental regiment in the war for independence, his chief command being on the Western frontier. He was made a judge of the Common Pleas of Alleghany County, and in 1800 was appointed by Jefferson Secretary of the Indian Territory, which post he held until it became a state. (See *Logan's Speech*.)

Gilbert, RALEIGH, a nephew of Sir Walter Raleigh, commanded a vessel in an expedition to settle at the mouth of the Kennebec River in 1607. They arrived at Mohegan Island, and on Cape Small Point (now Phippsburg) they built a fort. The settlement was temporary.

Gilbert, SIR HUMPHREY, a distinguished navigator, and half-brother of Sir Walter Raleigh (see *Raleigh*), was born at Dartmouth, Devonshire, Eng., in 1539; died at sea, Sept. 9, 1583. Finishing his studies at Eton and Oxford, he entered upon the military profession; and being

successful in suppressing a rebellion in Ireland in 1570, he was made commander-in-chief and Governor of Munster, and was knighted by the lord-deputy. Returning to England soon afterwards, he married a rich heiress. In 1572 he

SIR HUMPHREY GILBERT.

commanded a squadron of nine ships to reinforce an armament intended for the recovery of Flushing; and soon after his return he published (1576) a *Discourse of a Discoverie for a New Passage to Cathaia and the East Indies*. He obtained letters-patent from Queen Elizabeth, dated June 11, 1578, empowering him to discover and possess any lands in North America then unsettled, he to pay to the crown one fifth of all gold and silver which the countries he might discover and colonize should produce. It invested him with powers of an absolute ruler over his colony, provided the laws should not be in derogation of supreme allegiance to the crown. It guaranteed to his followers all the rights of Englishmen; and it also guaranteed the absolute right of a territory where they might settle, within two hundred leagues of which no settlement should be permitted until the expiration of six years. This was the first colonial charter granted by an English monarch. Armed with this, Gilbert sailed for Newfoundland in 1579 with a small squadron; for he did not believe there would be profit in searching for gold in the higher latitudes, to which Frobisher had been. (See *Frobisher*.) He was accompanied by Raleigh; but heavy storms and Spanish war-ships destroyed one of his vessels, and the remainder were compelled to turn back. Gilbert was too much impoverished to undertake another expedition until four years afterwards, when Raleigh and his friends fitted out a small squadron, which sailed from Plymouth under the command of Gilbert. The queen, in token of her good-will, had sent him as a present a golden anchor, guided by a woman. The flotilla reached Newfoundland in August, and entered the harbor of St. John, where Cartier found La Roque almost fifty years be-

fore. (See *Cartier*.) There, on the shore, Gilbert set up a column with the arms of England upon it, and in the presence of hundreds of fishermen from western Europe, whom he had summoned to the spot, he took possession of the island in the name of his queen. Storms had shattered his vessels, but, after making slight repairs, Gilbert proceeded to explore the coasts southward. Off Cape Breton he encountered a fierce tempest, which dashed the larger vessel, in which he sailed, in pieces on the rocks, and about one hundred men perished. The commander was saved, and took refuge in a little vessel (the *Squirrel*) of ten tons. His little squadron was dispersed, and, with one other vessel (the *Hind*), he turned his prow homeward. Again, in a rising September gale, the commander of the *Hind* shouted to Gilbert that they were in great peril. The intrepid navigator was sitting abaft, with a book in his hand, and calmly replied, "We are as near heaven on the sea as on the land." The gale increased, and when night fell the darkness was intense. At about midnight the men on the *Hind* saw the lights of the *Squirrel* suddenly go out. The little bark had plunged beneath the waves, and all on board perished. Only the *Hind* escaped, and bore the news of the disaster to England.

Gillmore, QUINCY ADAMS, was born in Lorain County, O., Feb. 23, 1825. He graduated at West Point in 1849, and entered the Engineer Corps. He was for four years (1852-56) Assistant Instructor of Engineering at West Point.

QUINCY ADAMS GILLMORE.

In October, 1861, he was appointed chief-engineer of an expedition against the Southern coasts under General T. W. Sherman. He superintended the construction of the fortifications at Hilton Head, and planned and executed measures for the capture of Fort Pulaski in the spring of 1862, when he was made brigadier-general of volunteers. After service in western Virginia and Kentucky, he was breveted colonel in the United States Army, and succeeded Hunter (June, 1863) in command of the Department of South Carolina, when he was promoted to major-general. After a long and unsuccessful attempt to capture Charleston, he proceeded to

join the Army of the James, in command of the Tenth Army Corps. For his services during the war, he was breveted major-general in the United States Army.

**Gingham.** This fabric was first manufactured in the United States by Erastus Bigelow, at Clinton (a town founded by him), in Massachusetts, about the year 1846. It was the first attempt to manufacture gingham by machinery, and enabled the American manufacturers to compete successfully with the English.

**Girard, STEPHEN,** founder of Girard College, was born near Bordeaux, France, May 21, 1750; died in Philadelphia, Dec. 26, 1831. Engaged in the merchant service in early life, he established himself in mercantile business in Philadelphia in 1769, and traded to the West Indies until the beginning of the war for independence. Resuming his West India trade after the war, he accumulated money; but the foundation of his great wealth was laid by events of the negro insurrection in Santo Domingo. Two of his vessels being there, plauters placed their effects on board of them, but lost their lives in the massacre that ensued. The property of owners that could not be found was left in Girard's possession. In 1812 he bought the building and much of the stock of the old United States Bank, and began business as a private banker. He amassed a large fortune, and at his death left property valued at almost \$9,000,000. Besides large bequests to public institutions, he gave to Philadelphia \$500,000 for the improvement of the city. He gave \$2,000,000 and a plot of ground in Philadelphia for the erection and support of a college for orphans, which was opened Jan. 1, 1848. In it as many poor white orphan boys as the endowment will support are admitted. There are about five hundred beneficiaries in the institution at a time. By a provision of the will of the founder, no ecclesiastic, missionary, or minister of any sect whatever is to hold any connection with the college, or be admitted to the premises as a visitor; but the officers of the institution are required to instruct the pupils in the purest principles of morality, leaving them to adopt their own religious opinions. The beneficiaries are admitted between the ages of six and ten years; fed, clothed, and educated; and between the ages of fourteen and eighteen are bound out to mechanical, agricultural, or commercial occupations.

**Gist, MORDECAI,** was born in Baltimore, Md., in 1743; died in Charleston, S. C., Sept. 2, 1792. He was captain of the first troops raised in Maryland at the breaking-out of the Revolution; was made major of Smallwood's regiment in 1776, and commanded it at the battle of Long Island. Promoted to colonel in 1777, and brigadier-general early in 1779, he did good service throughout the war, saving the remnant of the army after Gates's defeat, and being present at the surrender of Cornwallis.

**Glendale (or Frazier's Farm), BATTLE OF.** There was a sharp contest at White Oak Swamp Bridge on the morning of June 30, 1862, after

the Army of the Potomac had passed on its way to the James River. General Franklin had been left with a rear-guard to protect the passage of the bridge and to cover the withdrawal of the wagon-trains at that point. The Confederate pursuers, in two columns, were checked by the destruction of the bridges. Jackson, at noon, was met at the site of the destroyed bridge by the troops of Smith, Richardson, and Naglee, and the batteries of Ayres and Hazard, who kept him at bay during the day and evening. Hazard was mortally wounded, and his force was cut up, but Ayres kept up a cannonade with great spirit. During the night the Nationals retired, leaving 350 sick and wounded behind, and some disabled guns. At the same time a sharp battle had been going on at Glendale, or Nelson's, or Frazier's Farm, about two miles distant. Near Willie's Church General McCall's division was posted in reserve, General Meade's division on the right, Seymour's on the left, and that of Reynolds (who was a prisoner) under Colonel S. G. Simmons. The artillery was all in front of the line. Sumner was some distance to the left, with Sedgwick's division; Hooker was at Sumner's left; and Kearney was at the right of McCall. Longstreet and Hill had tried to intercept McClellan's army there, but were too late, and found themselves confronted by these Nationals. General Lee and Jefferson Davis were with Longstreet. The Confederates waited for Magruder to come up, and it was between three and four o'clock in the afternoon before they began an attack. Longstreet then fell heavily upon McCall's Pennsylvania Reserves (which see), 6000 strong. He was repulsed by four regiments, led by Colonel Simmons, who captured 200 of his men drove them back to the woods. Then the fugitives turned, and, by a murderous fire, made the pursuers recoil and flee to the

MORDECAI GIST.

forest. In that encounter the slaughter was dreadful. This first struggle was quickly followed by others. The contending lines swayed in charges and counter-charges for two hours.

The Confederates tried to break the National line. Finally General Meagher appeared with his Irish brigade, and made such a desperate charge across an open field that the Confederates were driven to the woods. Then Randall's battery was captured by the Confederates, when McCall and Meade fought desperately for the recovery of the guns and carried them back. Meade had been severely wounded. Just at dark McCall was captured, and the command devolved on Seymour. Very soon afterwards troops of Hooker and Kearney came to help the Reserves, the Confederates were driven to the woods, and the battle at Glendale ended. Before dawn the next morning the National troops were all silently withdrawn; and early the next day the Army of the Potomac, united for the first time since the Chickahominy first divided it, was in a strong position on Malvern Hill, about eighteen miles from Richmond.

**Glover, JOHN**, was born at Salem, Mass., Nov. 5, 1732; died at Marblehead, Jan. 30, 1797. At the beginning of the Revolution he raised one thousand men at Marblehead and joined the army at Cambridge. His regiment, being composed almost wholly of fishermen, was called the "Amphibious Regiment," and in the retreat from Long Island (which see) it manned the boats. It also manned the boats at the crossing of the Delaware before the victory at Trenton. Glover was made brigadier-general in February, 1777, and joined the Northern army under General Schuyler. He did good service in the campaign of that year, and led Burgoyne's captive troops to Cambridge. He was afterwards with Greene in New Jersey, and Sullivan in Rhode Island.

**Gnadenhutten.** (See *Christian Indians, Massacre of.*)

**"God Save the King."** This national song some suppose was written early in the eighteenth century, and the air to which it was sung has been, by some, attributed to Handel. It was sung with as much unctious in the English-American colonies as in England until the mother country began to oppress her children in the Western World. The air did not originate with Handel in the reign of George I., for it existed in the reign of Louis XIV. of France. Even the words are almost a literal translation of a canticle which was always sung by the maidens of St. Cyr when King Louis entered the chapel of that establishment to hear the morning prayer. The author of the words was M. de Brinen, and the music was by the eminent Lulli, the founder of the French opera. The following is a copy of the words:

"Grand Dieu sauve le Roi!  
Grand Dieu venge le Roi!  
Vive le Roi!  
Que toujours glorieux,  
Louis victorieux!  
Voye ses ennemis!  
Toojours soumis!  
Grand Dieu sauve le Roi!  
Grand Dieu venge le Roi!  
Vive le Roi!"

This air was sung by the vine-dressers of France until kingcraft lost its hold upon the

people. (See "*Song of the Guillotine*," for a parody on this song.)

**Godfrey, THOMAS**, inventor of the quadrant commonly known as Hadley's, was born in Philadelphia; died there, December, 1749. He was a glazier; was a self-taught mathematician; and in 1730 he communicated to James Logan, who had befriended him, his improvement of Davis's quadrant. In May, 1742, Logan addressed a letter to Dr. Edmund Hadley, in England, describing fully Godfrey's instrument. Hadley did not notice it, when Logan sent a copy of his letter to Hadley, together with Godfrey's account of his invention, to a friend, to be placed before the Royal Society. Hadley, the vice-president, had presented a paper, a year before, describing a reflecting-quadrant like Godfrey's. They both seem to have hit upon the same invention; and the society, deciding that both were entitled to the honor, sent Godfrey household furniture of the value of \$1000, instead of money, on account of his intemperate habits.

**Goffe, WILLIAM**, was a son of a Puritan clergyman, one of Cromwell's major-generals, and one of the judges who signed the death-warrant of Charles I. and was denounced as a "regicide." With his father-in-law, General Whalley, he arrived in Boston in the summer of 1660, and shared his fortunes in America. (See *Regicides.*) When, during King Philip's War, Hadley was surrounded by the Indians, and the alarmed citizens every moment expected an attack (1675), Goffe suddenly appeared among them, took command, and led them so skilfully that the barbarians were soon repulsed. He as suddenly disappeared. His person was a stranger to the inhabitants, and he was regarded by them as an angel sent for their deliverance. Soon after Goffe's arrival in Boston, a fencing-master erected a platform on the Common, and dared any man to fight him with swords. Goffe, armed with a huge cheese covered with a cloth for a shield, and a mop filled with muddy water, appeared before the champion, who immediately made a thrust at his antagonist. Goffe caught and held the fencing-master's sword in the cheese and besmeared him with the mud in his mop. The enraged fencing-master caught up a broadsword, when Goffe cried, "Hold! I have hitherto played with you; if you attack me I will surely kill you." The alarmed champion dropped his sword, and exclaimed, "Who can you be? You must be either Goffe, or Whalley, or the devil, for there are no other persons who could beat me."

**Gold Discovered in California.** During the same month that a treaty of peace between the United States and Mexico was signed at Guadalupe Hidalgo, a man named Marshall, employed by Captain Sutter, who owned a mill twenty-five miles up the American fork of the Sacramento River, discovered gold while digging a mill-race. The metal was soon afterwards found in other places, and during the summer of 1848 rumors of the fact reached the United States. They were not generally believed, un-

til a despatch from Colonel Mason declared that there was enough gold in California to pay all the expenses of the war with Mexico. In December (1848) the message of President Polk gave the rumor tangible form, and early in 1849 thousands of gold-seekers were on their way to California. Around Cape Horn, across the Isthmus of Panama, and over the central plains and vast mountain-ranges of the continent men went by hundreds, and gold was found in every direction in California. Gold-seekers from Europe and Asia flocked to the shores of the Pacific, and the dreams of the early Spanish adventurers seemed to be realized. This was the beginning of the discoveries of the immense mineral resources of the western states and territories of the United States.

**Gold Medal awarded to General Grant.** After the successful operations under Grant in east Tennessee and at Chattanooga, he was the recipient of the heartfelt thanks of the loyal people. In a letter the President of the United States thanked him, and Congress voted him thanks and a gold medal, with suitable emblems, devices, and inscriptions. The legislat-

COMITIA AMERICANA"—"The American Congress to George Washington, the Commander-in-chief of its Armies, the Assertor of Freedom." On the reverse, the device shows troops advancing towards a town; others marching towards the water; ships in view; General Washington in front, and mounted, with his staff, whose attention he is directing to the embarking enemy. The legend is, "HOSTIBUS PRIMO FUGATIS"—"The enemy for the first time put to flight." The exergue under the device, "BOSTONIUM RECUPERATUM. XVII. MARTII. MDCCLXXVI"—"Boston recovered, March 17, 1776." (See medal on p. 583.)

**Golden Circle, THE.** The scheme for establishing an empire whose corner-stone should be negro slavery contemplated for the area of that empire the domain included within a circle the centre of which was Havana, Cuba, with a radius of 16 degrees latitude and longitude. It will be perceived, by drawing that circle upon a map, that it included the thirteen slave-labor states of our republic. It reached northward to the Pennsylvania line—the old "Mason and Dixon's Line" (which see)—and southward to the Isth-

THE GRANT MEDAL.

ures of New York and Ohio voted him thanks in the name of the people of those great states. The President, in view of these victories, recommended (Dec. 7, 1863) the loyal people to meet in their respective places of worship to thank God for the "advancement of the National cause."

**Gold Medal awarded to Washington.** On March 25, 1776, when news of the British evacuation of Boston reached Congress, that body resolved that its thanks be presented to the commander-in-chief and the officers and soldiers under his command, "for their wise and spirited conduct in the siege and acquisition of Boston; and that a medal of gold be struck in commemoration of this great event and presented to his Excellency." This medal was nearly two and three-quarter inches in diameter. On one side was a profile head of Washington, with the Latin legend, "GEORGIO WASHINGTON, SVPREMO DVCI EXERCITVVM ADSERTORI LIBERTATIS

mus of Darien. It embraced the West India Islands and those of the Caribbean Sea, with a greater part of Mexico and Central America. The plan of the plotters seems to have been to first secure Cuba and then the other islands of that tropical region, with Mexico and Central America; and then to sever the slave-labor states from the Union, making the former a part of the great empire, within what they called "The Golden Circle." In furtherance of this plan, a secret association known as the "Order of the Lone Star" was formed. Another association was subsequently organized as its successor, the members of which were called "Knights of the Golden Circle" (which see). Their chief purpose seems to have been the corrupting of the patriotism of the people to facilitate the iniquitous design. The latter association played a conspicuous part as abettors of the enemies of the Republic during the late Civil War. They were the efficient

allies of those who openly made war on the Union.

**Golden Hill, BATTLE OF.** The "Boston Massacre" holds a conspicuous place in history. Nearly two months before, a more significant event of a similar character occurred in the city of New York. The insolent British soldiers had destroyed the Liberty Pole (Jan. 16, 1770), and, two days afterwards, two of them caught

tween Fulton Street and Maiden Lane), where the soldiers, reinforced, charged upon their pursuers. The citizens resisted with clubs, and a severe conflict ensued, during which an old sailor was mortally wounded by a bayonet. The mayor appeared and ordered the soldiers to disperse; but they refused, when a party of "Liberty Boys," who were playing ball on the corner of John Street and Broadway, dispersed them. The soldiers made another attack on citizens in the afternoon; and these conflicts continued, with intermissions, about two days, during which time several persons were badly injured. Twice the soldiers were disarmed by the citizens. (See *Liberty Poles*.)

GOLD MEDAL AWARDED TO WASHINGTON. (See p. 582.)

posting scurrilous handbills throughout the city abusing the Sons of Liberty were taken before the mayor. Twenty armed soldiers went to their rescue, when they were opposed by a crowd of citizens, who seized stakes from carts and sleds standing near. The mayor ordered the soldiers to their barracks. They obeyed, and were followed by the exasperated citizens to Golden Hill (on the line of Cliff Street, be-

between Fulton Street and Maiden Lane), where the soldiers, reinforced, charged upon their pursuers. The citizens resisted with clubs, and a severe conflict ensued, during which an old sailor was mortally wounded by a bayonet. The mayor appeared and ordered the soldiers to disperse; but they refused, when a party of "Liberty Boys," who were playing ball on the corner of John Street and Broadway, dispersed them. The soldiers made another attack on citizens in the afternoon; and these conflicts continued, with intermissions, about two days, during which time several persons were badly injured. Twice the soldiers were disarmed by the citizens. (See *Liberty Poles*.)

**Goldsborough (N. C.), JUNCTION OF NATIONAL ARMIES AT.** Hoke fled from Wilmington (see *Cape Fear, Confederates driven from*) northward, towards Goldsborough, towards which the Nationals under Schofield now pressed. It was at the railroad crossing of the Neuse River. General Cox, with 5000 of Palmer's troops, crossed from New Berne and established a depot of supplies at Kingston, after a moderate battle on the way with Hoke. Perceiving the Confederate force to be about equal to his own, Schofield ordered Cox to intrench and wait for expected reinforcements. On March 10, 1865, Hoke pressed Cox and attacked him, but was repulsed with severe loss—1500 men. The Nationals lost about 300. The Confederates fled across the Neuse, and Schofield entered Goldsborough on the 20th. Then Terry, who had been left at Wilmington, joined Schofield (March 22), and the next day Sherman arrived there. Nearly all the National troops in North Carolina were encamped that night around Goldsborough. General Joseph E. Johnston, with the combined and concentrated forces of Beauregard, Hardee, Hood, the garrison from Augusta, Hoke, and the cavalry of Wheeler and Hampton, was at Smithfield, half-way between Goldsborough and Raleigh, with about 40,000 troops, mostly veterans.

**Goldsborough, LOUIS MALESHERBES,** was born in Washington, D. C., Feb. 18, 1805; died Feb. 20, 1877. He was appointed midshipman in 1812, and lieutenant in 1825. In the Seminole War (which see) he commanded a company of mounted volunteers, and also an armed steamer. Made commander in 1841, he took part

in the Mexican War. From 1853 to 1857 he was superintendent of the Naval Academy at Annapolis. In the summer of 1861 he was placed in command of the North Atlantic Blockading Squadron, and with Burnside commanded the joint expedition to the sounds of North Carolina. For his services in the capture of Roanoke Island Congress thanked him. He afterwards dispersed the Confederate fleet under

Lynch in the North Carolina waters. He was made rear-admiral July 16, 1862.

LOUIS M. GOLDSBOROUGH.

**Gomez, STEPHEN, VOYAGE OF.** The Council of the Indies induced Charles V. of Spain to send Gomez (who had circumnavigated the globe in Magellan's expedition in 1520-21) to find a north-west passage to the Pacific Ocean. He sailed to Cuba (1525), thence to Florida, and then northerly to Cape Race, latitude 46° north, and returned without making any discovery. Like Cortereal, he kidnapped some of the natives (see *Cortereal*) and returned to Spain with them in 1525. He was the first Spaniard who sailed along the northern coast of America.

**Gooch, WILLIAM, governor of Virginia** from 1727 to 1749, was born at Yarmouth, Eng., Oct. 21, 1681; died Dec. 17, 1751. He had been an officer under Marlborough, and in 1740 he commanded in the unsuccessful attack on Carthage. In 1746 he was made a brigadier-general and was knighted, and a major-general in 1747. He returned to England in 1749. He ruled with equity in Virginia, and was never complained of.

**Goodrich, SAMUEL GRISWOLD** ("Peter Parley"), a popular writer for the young, was born at Ridgefield, Conn., Aug. 19, 1793; died in New York city, May 9, 1860. He was a publisher in Hartford in 1824; soon afterwards he settled in Boston, and for many years edited *The Token*. He began the issuing of "Peter Parley's Tales" in 1827, and continued them until 1857. He also published geographical and historical school-books. From 1841 to 1854 he edited and published *Merry's Museum* and *Parley's Magazine*. Of 170 volumes written by him, 116 bear the name of "Peter Parley;" and more than 7,000,000 copies of his books for the young have been sold. Mr. Goodrich was American consul at Paris during Fillmore's administration.

**Goodyear, CHARLES, inventor,** was born at North Haven, Conn., Dec. 29, 1800; died in New York city, July 1, 1860. He was an early manufacturer of India-rubber, and he made vast improvements in its practical use in the arts. His first important discovery was made in 1836—a

method of treating the surface of the gum. This process was superseded by his discovery early in 1849 of a superior method of vulcanization. He procured patent after patent for improvements in this method, until he had more than sixty in number, in America and Europe. He obtained the highest marks of distinction at the international exhibitions at London and Paris. He saw, before his death, his material applied to almost five hundred uses, and to give employment in England, France, Germany, and the United States, to about sixty thousand persons.

**Gordon, WILLIAM, D.D.,** historian of the Revolution, was born at Hitchin, Eng., in 1730; died at Ipswich, Eng., Oct. 19, 1807. He came to America in 1770, and was ordained at Roxbury in 1772. He took an active part in public affairs during the Revolution, and in 1778 the College of New Jersey conferred upon him the degree of Doctor of Divinity. Returning to England in 1786, he wrote and published a history of the Revolution in four volumes, octavo.

**Gorges, ROBERT, son of Ferdinand,** had a tract of land bestowed upon him in New England, on the coast of Massachusetts Bay, extending ten miles along the coast and thirty miles inland. He was appointed Lieutenant-general of New England, with a council, of whom Francis West, who had been commissioned "Admiral of New England" by the Council of Plymouth, and the governor of New Plymouth for the time being, were to be members, having the power to restrain interlopers. West, as admiral, attempted to force tribute from fishing-vessels on the coast. Gorges brought to New England with him a clergyman named Morrell, appointed by the Archbishop of Canterbury, to act as commissioner of ecclesiastical affairs; also a number of indentured servants. After being a year at Plymouth, Gorges attempted to plant a colony at Wissags. He had encountered Weston, who came over to look after his colony, and took some proceedings against him as an interloper. Weston had been shipwrecked and robbed, but was kindly treated by the Pilgrims, who, nevertheless, regarded his misfortunes as judgments for his desertion of the company. (See *Weston's Colony*.)

**Gorges, SIR FERDINANDO,** was a native of Somersetshire, Eng.; born about 1565, and died in 1647. Gorges was associated with the courtiers of Queen Elizabeth, and was engaged in the conspiracy of the Earl of Essex against the queen's council (1610), and testified against him at his trial for treason (1601). Having served in the royal navy with distinction, he was appointed governor of Plymouth in 1604. A friend of Raleigh, he became imbued with that great man's desire to plant a colony in America, and when Captain Weymouth returned from the New England coast (1605) and brought captive natives with him, Gorges took three of them into his own home, from whom, after instructing them in the English language, he gained much information about their country. Gorges now became chiefly instrumental in forming the Plymouth Company, to settle western Virginia

(see *Plymouth Company*), and from that time he was a very active member, defending its rights before Parliament and stimulating by his own zeal his desponding associates. In 1615, after the return of Captain Smith (see *Smith, John*), he set sail for New England, but a storm compelled the vessel to put back, while another vessel, under Captain Dermer, prosecuted the voyage. (See *Dermer*.) Gorges sent out a party (1616) which encamped on the river Saco through the winter; and in 1619-20 Captain Dermer repeated the voyage. The new charter obtained by the company created such a despotic monopoly that it was strongly opposed in and out of Parliament, and was finally dissolved in 1635. (See *Council of Plymouth*.) Gorges had, meanwhile, prosecuted colonization schemes with vigor. With John Mason and others he obtained grants of land (1622), which now compose a part of Maine and New Hampshire (see *New Hampshire*), and settlements were attempted there. His son Robert was appointed "general governor of the country," and a settlement was made (1624) on the site of York, Me. After the dissolution of the company (1635), Gorges, then a vigorous man of sixty years, was appointed (1637) governor-general of New England, with the powers of a palatine, and prepared to come to America, but was prevented by an accident to the ship in which he was to sail. He made laws for his palatinate, but they were not acceptable. Gorges enjoyed his viceregal honors a few years, and died.

**Gorham, NATHANIEL**, was born at Charlestown, Mass., May 27, 1738; died June 11, 1796. He took an active part in public affairs at the beginning of the Revolution, especially in the local affairs of Massachusetts. He was a delegate to the Continental Congress (1782-83 and from 1785 to 1787), and was chosen its president in June, 1786. He was an influential member of the convention that framed the National Constitution, and exerted great power in procuring its ratification by Massachusetts. In conjunction with Oliver Phelps, he purchased an immense tract of land in the State of New York. (See *Holland Land Company*.)

**Gorton, SAMUEL**, a restless, contumacious clergyman, born in England about 1600, and died in Rhode Island late in 1677. He was a clothier in London, and embarked for Boston in 1636, where he soon became entangled in theological disputes and removed to Plymouth. There he preached such heterodox doctrines that he was banished as a heretic in the winter of 1637-38. With a few followers he went to Rhode Island, where he was publicly whipped for calling the magistrates "just-asses," and other rebellious acts. In 1641 he was compelled to leave the island. He took refuge with Roger Williams at Providence, but soon made himself so obnoxious there that he escaped public scorn by removing (1642) to a spot on the west side of Narraganset Bay, where he bought land of Miantonomo and planted a settlement. The next year inferior sachems disputed his title to the land; and, calling upon Massachusetts to as-

sist them, an armed force was sent to arrest Gorton and his followers, and a portion of them were taken to Boston and tried as "damnable heretics." For a while they endured confinement and hard labor, in irons, and in 1644 they were banished from the colony. Gorton went to England and obtained from the Earl of Warwick an order that the clergyman and his followers should have peace at the settlement they had chosen. He called the place Warwick when he returned to it in 1648. There he preached on Sunday and performed civil service during the week.

**Gosnold, BARTHOLOMEW**, a friend of Raleigh and his colonization schemes. Because of Raleigh's failure, he did not lose faith. The long routes of the vessels by way of the West Indies seemed to him unnecessary, and he advocated the feasibility of a more direct course across the Atlantic. He was offered the command of an expedition by the Earl of Southampton, to make a small settlement in the more northerly part of America; and on the 26th of April, 1602, Gosnold sailed from Falmouth, England, in a small vessel, with twenty colonists and eight mariners. He took the proposed shorter route, and touched the continent near Nahant, Mass., it is supposed, eighteen days after his departure from England. Finding no good harbor there, he sailed southward, discovered and named Cape Cod, and landed there. This was the first time the shorter (present) route from England to New York and Boston had been traversed; and it was the first time an Englishman set foot on New England soil. Gosnold passed around the cape, and entered Buzzard's Bay, where he found an attractive group of islands, and he named the westernmost Elizabeth, in honor of his queen. The whole group bear that name. He and his followers landed on Elizabeth Island, and were charmed with the luxuriance of vegetation, the abundance of small fruits, and the general aspect of nature. Gosnold determined to plant his colony there, and on a small rocky island, in the bosom of a great pond, he built a fort; and, had the courage of the colonists held out, Gosnold would have had the immortal honor of making the first permanent English settlement in America. Afraid of the Indians, fearing starvation, wondering what the winter would be, and disagreeing about the division of profits, they were seized with a depressing homesickness. So, loading the vessel with sassafras-root (then esteemed in Europe for its medicinal qualities), furs gathered from the natives, and other products, they abandoned the little paradise of beauty, and in less than four months after their departure from England they had returned; and, speaking in glowing terms of the land they had discovered, Raleigh advised the planting of settlements in that region, and British merchants afterwards undertook it. (See *New England*.) Elizabeth Island now bears its original name of Cottyunk. Gosnold soon afterwards organized a company for colonization in Virginia. A charter was granted him and his associates by James I., dated April 10, 1606, the first under which the English were settled in

America. He sailed Dec. 19, 1606, with three small vessels and one hundred and five adventurers, of whom only twelve were laborers; and, passing between Capes Henry and Charles, went up the James River in April, 1607, and landed where they built Jamestown afterwards. The place was an unhealthy one, and Gosnold remonstrated against founding the settlement there, but in vain. Sickness and other causes destroyed nearly half the number before autumn. Among the victims was Gosnold, who died on the 22d of August, 1607.

**Gospel, Society for the Propagation of the.** Edward Winslow, the third governor of the Plymouth colony (see *Winslow, Edward*), became greatly interested in the spiritual concerns of the Indians of New England; and when, in 1649, he went to England on account of the colony, he induced leading men there to join in the formation of a society for the propagation of the Gospel among the natives in America. The society soon afterwards began its work in America, and gradually extended its labors to other English colonies. In 1701 (June 16) it was incorporated under the title of "The Society for the Propagation of the Gospel in Foreign Parts." William III. zealously promoted the operations of the society, for he perceived that in a community of religion there was security for political obedience. The society was under the direction of the Church of England, whose system was esteemed monarchical, while Presbyterianism, and especially Quakerism and Independency, were deemed republican in character. The society still exists, and its operations are widely extended over the East and West Indies, Southern Africa, Australia, and islands of the Southern Ocean. In 1873 it had 484 ordained missionaries, including 45 native clergy in India, 822 teachers and catechists, 141 students in colleges abroad, and an annual income of about \$550,000. Its seal is an ellipse in form, with a ship under full sail near a shore, and natives running to give it a welcome. It bears the inscription, "SIGILLUM SOCIETATIS DE PROMOVENDO EVANGELIO IN PARTIBUS TRANSMARINIS."

**Government for Pennsylvania.** In 1682 William Penn published a "Frame of Government" for Pennsylvania, leaving to himself and successors "no power of doing mischief—that the will of one man may not hinder the good of the whole country." The legislative and executive power was vested in a council of seventy-two persons, elected by the freemen for three years, one of them to go out annually. To this frame of government were subjoined forty fundamental laws. This government, "for the matter of liberty and privilege," Penn justly said, was "extraordinary" for the time. Afterwards, when an Assembly of Deputies were in session at near the close of the court, an "Act of Settlement" was passed, constituting eighteen members of the Assembly a council, and the remainder delegates, the latter to number thirty-six. The governor and council were to possess jointly the right of proposing laws. This "Settle-

ment" restored to Penn the power which he had too generously given away by the conditions of the Frame of Government. Afterwards the deputies, discontented with their subordinate position, assumed the right of suggesting laws. Some violent proceedings ensued, when Penn, to allay the excitement, intrusted the executive authority to five commissioners, leaving legislation to the deputies. This, however, was not effectual, and in 1690 Penn restored the power originally given to the council.

**Government Hospitals during the Civil War.** The United States government made ample provision for the sick and wounded during the Civil War. The hospitals were extensive and complete. When the war closed, there were 204 general hospitals, fully equipped, with a capacity of 136,894 beds. Besides these, there were numerous temporary and flying hospitals—the former in camps and on vessels, and the latter on battle-fields. From the beginning, in July, 1861, until July 1, 1865, there had been treated, in the general hospitals alone, 1,057,423 cases, among whom the rate of mortality was only 8 per centum. This low rate was due chiefly to the employment of a sufficiency of competent surgeons, a bountiful provision in all hospitals of every necessary, the beneficent labors of the United States Sanitary Commission (which see) and the United States Christian Commission (which see), the untiring labors of women in every hospital, and the potent influence of the army and hospital chaplains, who together numbered at least 100,000. There were in the national armies during the war 12,145 surgeons and assistant surgeons. Of these nearly 300 perished—some in battle, but most of them from disease.

**Government Year, THE.** In January, 1790, two questions arose in Congress, as to when the federal or government year should begin, and what was the term for which members had been chosen—two years from the date of their election, or only to the end of the current Congress. The national government had not actually gone into operation on March 4, the day originally appointed, but several weeks later, and some of the members had not been elected until a still later period. It was finally agreed, on the report of a joint committee, that the Congress should expire with the 3d of March, 1791, and that persons chosen to fill vacancies should be considered as chosen only for the remainder of the Congress. Ever since, the 4th of March has been the beginning of a new Congress.

**Governors of Loyal States, CONVENTION OF.** On the same day when President Lincoln issued his proclamation (Sept. 22, 1862) warning the slaveholders that if they did not lay down their arms within three months their slaves would be set free (see *Emancipation Proclamation*), the governors of eleven of the free-labor states assembled at Altoona, Penn., to consider national affairs. Their sessions were held in secret. Among other proceedings looking to unity of action, they adopted an address

to the President, warmly commending his proclamation as a righteous and most salutary act, which would give immense strength to the defenders of the imperilled Republic, and as a sure promise of success to the cause. This address was written by Governor John A. Andrew,

JOHN A. ANDREW.

of Massachusetts, one of the most earnest and energetic of the "war governors" at that time. It was signed by Governor Curtin of Pennsylvania, Andrew of Massachusetts, Yates of Illinois, Washburne of Maine, Salomon of Wisconsin, Kirkwood of Iowa, Martin of Indiana (by his representative, D. G. Rose), Sprague of Rhode Island, Pierpont of West Virginia, Tod of Ohio, Berry of New Hampshire, and Blair of Michigan.

**Grand Gulf, BATTLE AT.** On the morning of April 29, 1863, Admiral Porter, with his gun and mortar boats, attacked the Confederate batteries at Grand Gulf, on the Mississippi, and after a contest of five hours and a half the lower batteries were silenced. The upper ones were too high to be much affected. The Confederates had field-batteries which were moved from point to point, and sharpshooters filled rifle-pits on the high sides. Grant, becoming convinced that Porter could not take the batteries, ordered him to run by them with gunboats and transports, as he had done at Vicksburg and Warrenton, while the army (on the west side of the river) should move down to Rodney, below, where it might cross without much opposition. At six o'clock in the evening, under cover of a heavy fire from the fleet, all the transports passed by in good condition.

**Granger, GORDON,** born in New York about 1825; died at Santa Fé, June 10, 1876. He graduated at West Point in 1845; served in the war with Mexico, and was made captain of cavalry in May, 1861. He served under Halleck and Grant in the West, and was made major-general of volunteers Sept. 17, 1862. He commanded the district of central Kentucky, was put in command of the Fourth Army Corps after the battle of Chickamanga, was engaged in the struggle on Missionaries' Ridge, November, 1863, and was active in the military movements that led to the capture of Mobile in 1864, for which

he was breveted major-general of the United States Army.

**Granite State,** a popular name for the State of New Hampshire, because the mountainous portions of it are largely composed of granite.

**Grant, JAMES,** a Scotch officer, born in 1720; died April 13, 1806. In 1757 he was major of the Moutgomery Highlanders. He was in the expedition against Fort Duquesne in 1758, and in 1760 was governor of East Florida. He led an expedition against the Cherokees in May, 1761, was acting brigadier-general in the battle of Long Island in 1776, and was made major-general in 1777. He was with Howe in New Jersey and Pennsylvania in 1777. He fought the Americans at Monmouth in 1778, and in November sailed in command of troops sent against the French in the West Indies, taking St. Lucia in December. In 1791 he was made governor of Stirling Castle, and was several years in Parliament. It is said that he was such a notorious gourmand in his later life that he required his cook to sleep in the same room with him.

**Grant, ULYSSES SIMPSON,** was born at Point Pleasant, O., April 27, 1822, and graduated at West Point in 1843. He served in the war with Mexico—first under General Taylor, and then under General Scott—taking part in every battle between Vera Cruz and the city of Mexico. He was made captain in 1853, and resigned the next year, when he settled in St. Louis. He was one of the first to offer his services to his country when the Civil War broke out, and became colonel of an Illinois volunteer regiment. In May he was made brigadier-general, and placed in command at Cairo. He occupied Paducah, broke up the Confederate camp at Belmont (which see), and in February, 1862, captured Forts Henry and Donelson (which see). He was then promoted to major-general; con-

ULYSSES SIMPSON GRANT.

ducted the battle of Pittsburgh Landing, or Shiloh, and for a while was second in command to Halleck. He performed excellent service in the West and Southwest, especially in the vicinity

of the Mississippi River and at and near the Tennessee River, in 1863. He was created a lieutenant-general (March 1, 1864), and awarded a gold medal by Congress. He issued his first order as general-in-chief of the armies of the United States at Nashville, March 17, 1864. In the grand movements of the armies in 1864, he accompanied that of the Potomac, with his headquarters "in the field," and he remained with it until he signed the articles of capitulation at Appomattox Court-house, April 9, 1865. In 1866 he was promoted to General of the United States Army. After the war, Grant fixed his headquarters at Washington. When President Johnson suspended Stanton from the office of Secretary of War Grant was put in his place *ad interim*. Stanton was reinstated by the Senate Jan. 14, 1868. In 1868, Grant was elected President of the United States by the Republican party, and was re-elected in 1872. He retired from the office March 4, 1877, and soon afterwards made a journey around the world, receiving great honors everywhere. Died July 23, 1885.

**Grantees of North Carolina.** In 1630 Charles I. granted to Sir Robert Heath, his attorney-general, a patent for a domain south of Virginia, six degrees of latitude in width, and extending westward to the Pacific Ocean. Heath did not meet his engagements, and the patent was vacated. In March, 1663, Charles II. granted to eight of his rapacious courtiers a charter for the domain granted to Heath. They had begged it from the king under the pretence of a "pious zeal for the propagation of the gospel among the heathen." These courtiers were, the covetous and time-serving premier and historian, the Earl of Clarendon; George Monk, who, for his conspicuous and treacherous services in the restoration of the monarch to the throne of England, had been created Duke of Albemarle; Lord Craven, the supposed dissolute husband of the Queen of Bohemia; Sir Anthony Ashley Cooper, afterwards Earl of Shaftesbury (see *Shaftesbury*); Sir John Colleton, a corrupt loyalist, who had played false to Cromwell; Lord John Berkeley and his brother, then governor of Virginia (see *Berkeley, Sir William*), and Sir George Carteret, a proprietor of New Jersey—a man "passionate, ignorant, and not too honest." (See *Carteret, Sir George*.) When the petitioners presented their memorial, so full of pious pretensions, to King Charles, in the garden at Hampton Court, the "merrie monarch," after looking each in the face a moment, burst into loud laughter, in which his audience joined heartily. Then, taking up a little shaggy spaniel with large, meek eyes, and holding it at arm's-length before them, he said, "Good friends, here is a model of piety and sincerity which it might be wholesome for you to copy." Then, tossing it to Clarendon, he said, "There, Hyde, is a worthy prelate; make him archbishop of the domain which I shall give you." With grim satire, Charles introduced into the preamble of the charter a statement that the petitioners, "excited with a laudable and pious zeal for the propagation of the gospel; have begged a certain country in the parts of America not yet cultivated and plant-

ed, and only inhabited by some barbarous people who have no knowledge of God."

**Grant's Cabinet Ministers.** On March 5, 1869, President Grant sent into the Senate the names of the following persons he had chosen for his constitutional advisers. They were confirmed on the 11th; Hamilton Fish for Secretary of State; George S. Boutwell for Secretary of the Treasury; John A. Rawlins, Secretary of War; Adolph E. Borie, Secretary of the Navy; Jacob D. Cox, Secretary of the Interior; John A. J. Creswell, Postmaster-general; E. Rockwood Hoar, Attorney-general. The President first made choice of Alexander T. Stewart, a New York merchant, for Secretary of the Treasury, but an old law made him ineligible. General Schofield was first nominated for Secretary of War, but he withdrew; and E. B. Washburne, who was the President's first choice for Secretary of State, declined the honor. *Second Term.*—The following named gentlemen composed Grant's cabinet ministers at the beginning of his second term of office: Hamilton Fish, Secretary of State; W. W. Belknap, Secretary of War; W. A. Richardson, Secretary of the Treasury; George M. Robeson, Secretary of the Navy; Columbus Delano, Secretary of the Interior; John A. J. Creswell, Postmaster-general; George H. Williams, Attorney-general.

**Grant's Final Address to his Soldiers,** (See *Disbanding of the Union Armies*.)

**Grape Island, AFFAIR AT.** In Boston Harbor was Grape Island, to which, on Sunday morning, May 21, 1775, some British troops repaired to secure some hay; for so closely were they besieged in Boston, that only on the islands in and near the harbor could they procure grass or straw or fresh meat. Three alarm-guns were fired; the drums beat to arms; the bells of neighboring towns were rung; and very soon about two thousand of the men of that region were flocking to the water's edge. They soon obtained a lighter and a sloop, when many jumped on board, pushed off, and landed on the island. The British fled, and the Americans burned the hay they had gathered.

**Grasse, COUNT DE.** (See *De Grasse*.)

**Grasse, COUNT DE, ARRIVAL OF.** On Aug. 3, 1781, the French fleet, under Count de Grasse, appeared on the American coast. De Grasse had sailed from France, towards the end of March, with twenty-six ships-of-the-line, followed by an immense convoy of about two hundred and fifty merchantmen. That convoy he put safely into the harbor of Port Royal, having carefully avoided a close engagement with a part of Rodney's fleet, under Admiral Hood. He engaged with British vessels at long range (April 29), and so injured them that they were obliged to go to Antigua for repairs, and, meanwhile, De Grasse accomplished the conquest of Tobago in June. He then proceeded with the fleet of merchantmen to Santo Domingo, and soon afterwards sailed with an immense return convoy, bound for France. After seeing it well on its way, he steered for the Chesapeake,

and, despite the activity of British fleets watching for him, he was safe within the capes of Virginia, and at anchor, with twenty-four ships-of-the-line, at the beginning of September. He found an officer of Lafayette's staff at Cape Henry, sent to request him to blockade the York and James rivers, so as to cut off Cornwallis's retreat. This was done by four ships-of-the-line and several frigates; and three thousand French troops were sent to join Lafayette.

**Grasse, COCNT DE, DAUGHTERS OF.** The family of De Grasse were ruined by the fury of the French Revolution, and four of his daughters (Amelia, Adelaide, Melanie, and Silvia) came to America in extreme poverty. Congress, in February, 1795, gave them each \$1000, in consideration "of the extraordinary services rendered the United States in the year 1781 by the late Count de Grasse, at the urgent request of the commander-in-chief of the American forces, beyond the term limited for his co-operation with the troops of the United States."

**Graves (Lord), THOMAS,** was born in 1725; died Jan. 31, 1802. Having served under Anson, Hawke, and others, he was placed in command of the *Antelope*, on the North American station, in 1761, and made Governor of Newfoundland. In 1779 he became Rear-admiral of the Blue, and the next year came to America with reinforcements for Admiral Arbuthnot. On the return of the latter to England in 1781, Graves became chief naval commander on the American station. He was defeated (Sept. 5) by De Grasse. In 1795 he was second in command under Lord Howe, and was raised to an Irish peerage and Admiral of the White on June 1, the same year.

**Great Bridge, BATTLE AT THE.** On the invasion of the Elizabeth River by Lord Dunmore (November, 1775), Colonel Woodford called the militia to arms. Dunmore fortified a passage of the Elizabeth River, on the borders of the Dismal Swamp, where he suspected the militia would attempt to cross. It was known as the Great Bridge. There he cast up intrench-

ments, at the Norfolk end of the bridge, and amply supplied them with cannons. These were garrisoned by British regulars, Virginia Tories, negroes, and vagrants, in number about six hundred. Woodford constructed a small fortification at the opposite end of the bridge. On Saturday morning, Dec. 9, Captains Leslie and Fordyce, sent by Dunmore, attacked the Virginians. After considerable manœuvring and skirmishing, a sharp battle ensued, lasting about twenty-five minutes, when the assailants were repulsed, and fled, leaving two spiked field-pieces behind them. The loss of the assailants was fifty-five killed and wounded. Not a Virginian was killed, and only one man was slightly wounded in the battle.

**Great Britain.** Although this name was applied by the French at a very early period, to distinguish it from "Little Britain," the name of the western peninsular projection of France, called by the Romans *Armorica*, it was seldom used on that island until the accession of James I. to the crown of England (1603), when the whole of the island, comprising England, Scotland, and Wales, was united under one sovereign. By the legislative union between England and Scotland in 1707, Great Britain became the legal title of the kingdom. The official style of the empire is now "United Kingdom of Great Britain and Ireland."

**Great Britain and the Spanish Colonies.** The pressure of the American Embargo Act upon British commerce had been greatly relieved by an unlooked-for event. In June, 1808, the Spaniards revolted against Napoleon's attempt to impose upon them a king from his own family; and this not only opened the Spanish peninsula to British merchandise, but, as the Spanish colonies yet universally adhered to the cause of the old royal family, a commercial intercourse now began, for the first time, between Spanish America and Great Britain. The migration of the royal family of Portugal to Brazil had also given to British merchants access to those extensive regions. The embargo cut off American vessels from participation in this new and valuable traffic. The news of the Spanish revolt had caused a Boston town-meeting to memorialize the President to suspend the em-

VIEW AT THE GREAT BRIDGE.

ments, at the Norfolk end of the bridge, and amply supplied them with cannons. These were garrisoned by British regulars, Virginia Tories, negroes, and vagrants, in number about

bargo, at least as to Spain and Portugal. The revolt had released American vessels detained in Spanish ports by the Bayonne Decree, and it was speedily followed by a repeal (July, 1808)

of the British Orders in Council, so far as Spain was concerned.

**Great Britain calling her Subjects Home.** Some American officers, imprisoned by the British, were paroled in 1814, with a commission to inform their government that twenty-three prisoners sent to England (see *Scott's Boldness and Humanity*), charged with treason, had not been brought to trial, but remained on the ordinary footing of prisoners of war. This speedily led to a dismissal of all imprisoned officers, on both sides, on parole. When the British government thus abandoned its untenable claim to hold subjects found in arms against it as traitors, though they might be residents and naturalized citizens of other lands, it covered its retreat by a proclamation recalling all its subjects from foreign service, granting pardon for all past treasons of this sort on the score of probable ignorance, but threatening to punish as traitors all taken in the service of any hostile power after four months from the date of the proclamation.

**Great Chain across the Hudson River at West Point.** The obstruction of the Hudson River, to prevent British vessels passing up that stream during the war for independence, and thus defeat the ministerial project for dividing the Union, occupied much of the attention of the patriots. First there were vessels sunk, and a sort of *chevaux-de-frise* constructed in the channel between Monnt Washington, on New York island, and the Palisades. A *chevaux-de-frise* was placed in the channel between Pollopel's Island and the western shore of the river, just above the upper entrance to the Highlands. A chain and boom were stretched across

Warwick, Orange Co., by Peter Townsend, under the supervision of Timothy Pickering. The task was performed in six weeks. The links were carted to New Windsor, where, at Captain Machin's forges, they were put together, and the whole floated down the river to West Point on logs late in April. The links weighed from one hundred to one hundred and fifty pounds each. The length of the chain was fifteen hundred feet, and its entire weight was one hundred and eighty-six tons. The logs that buoyed it were placed transversely with the chain, a few feet apart, and their ends secured by chains and strong timbers. The ends were made secure to the rocks on both shores. Fort Constitution, on Constitution Island, defended one end, and a small battery the other. In winter it was drawn on shore by a windlass, and replaced in the spring. The British never attempted to disturb it; but it is said Benedict Arnold, when he prepared for the consummation of his treason, took measures for weakening the chain—how, is not stated. A doubtful story.

**Great Fire in Charleston.** In 1740, while the Carolinians were feeling the disastrous effect of the miscarriage of the expedition against St. Augustine (which see), a fire broke out (November) in Charleston which consumed three hundred of the best buildings in the town, with goods and provincial property to a prodigious amount. The Legislature applied to the British Parliament for relief, which voted \$100,000 to be distributed among the sufferers.

**Great Uprising, THE.** The uprising of the people of the free-labor states in defence of the life of the Republic was a wonderful spectacle.

GREAT CHAIN AND MORTARS.

the river from Anthony's Nose to Fort Montgomery, at the lower entrance to the Highlands. In the spring of 1778 the most notable of all these obstructions, a heavy chain supported by huge logs, was stretched across the Hudson from West Point to Constitution Island, opposite. It was constructed at the Stirling Iron-works, at

Men, women, and children felt the enthusiasm alike, and, as if by preconcerted arrangement, the national flag was everywhere displayed, even from the spires of churches and cathedrals. In cities, in villages, and at way-side taverns all over the country, it was unfurled from lofty poles in the presence of large assem-

blages of the people, who were addressed frequently by some of the most eminent orators in the land. It adorned the halls of justice and the sanctuaries of religion; and the Red, White, and Blue—the colors of the flag in combination—became a common ornament of the women and a token of the loyalty of the men. In less than a fortnight after the President's call for troops the post-offices were gay with letter-envelopes bearing every kind of device, in brilliant colors, illustrative of love of country and hatred of rebellion. The use of these became a passion, and no less than four thousand different kinds of "Union envelopes" were produced in the course of a few weeks. The uprising in the slave-labor states, though less general and enthusiastic, was nevertheless marvellous.

**Greed a Cause of Disaster.** Greed for plunder caused disaster to Sumter at Hanging Rock (which see) and Greene at Entaw Spring (which see), and greater disasters occurred to the British from this cause. To the greed of naval officers Cornwallis was indebted for his disaster at Yorktown, more than to anything else. The best British naval officers were averse to serving against the Americans. Howe only obeyed commands when he came in 1776, and after him appeared inferior officers. Arbuthnot was old and imbecile; Graves was coarse, vulgar, and without skill in his profession; and Rodney, superior in ability to either of them, was avaricious. His fleet had been ordered to the Chesapeake to assist Cornwallis, when besieged at Yorktown, by keeping De Grasse at bay; but he lingered so long in disposing of his prizes taken at St. Eustatius (which see), and in trying to escape financial difficulties in which his indiscriminate seizure of property had involved him, that, pleading ill-health, he sent Sir Samuel Hood, and returned to England. Hood was ordered to go to the Chesapeake with fourteen ships-of-the-line and a fire-ship to form a junction with Graves; but, instead of obeying this order, which would have given the British fleet great superiority in strength to that of the French, he cruised off the New England coast in search of prizes. The consequence was, De Grasse entered the Chesapeake before there was a serious opposing force there and he worsted Graves in a fight and drove him away. (See *Naval Engagement off the Capes of Virginia*.)

**Greedy Predominant.** After the siege of Savannah and the possession of Georgia and the coast islands of South Carolina by the British, their power might have been permanent in the South had they emancipated and armed the slaves. But the slave-trade was then the most lucrative occupation of England, and the thought of slavery being a sin, and its abolition a good, had not entered the average English mind. The army would have opposed the enlistment of negroes, and the officers were more willing to share in the profits of sending them to the West Indies and selling them as slaves than to gain advantage for their country or for the good of humanity. This greed was encouraged by the king and his ministers. Germain's instructions

to the British officers authorized the confiscation and sale not only of the negroes employed in the American army, but of those who voluntarily followed the British troops and took British protection. Hundreds of confiding negroes were shipped to the West Indies as soldiers and sold as slaves. The Indians in Georgia were employed to catch slaves and bring them in. Every slave was valued at an average of \$250. Georgia and South Carolina were filled with the sons of numbers of separated families.

Greeley, HORACE, an eminent journalist, was born at Amherst, N. H., Feb. 3, 1811; died at Pleasantville, Westchester County, N. Y., Nov. 29, 1872. Fond of reading almost from babyhood, he felt a strong desire as he grew to youth

HORACE GREELEY.

to become a printer, and in 1826 became an apprentice to the art in Poultney, Vt. He became an expert workman. His parents had moved to Erie, Penn., and during his minority he visited them twice, walking nearly the whole way. In August, 1831, he was in New York in search of work, with ten dollars in his pocket. He worked as a journeyman until 1833, when he began business on his own account, with a partner, printing the *Morning Post*, the first penny daily paper (owned by Dr. H. D. Shepard) ever published. His partner (Storey) was drowned in July, and Jonas Winchester took his place. The new firm issued the *New Yorker*, devoted mainly to current literature, in 1834, of which Mr. Greeley was editor. The paper reached a circulation of nine thousand, and continued seven years. In 1840 he edited and published the *Log Cabin*, a campaign paper that obtained a circulation of eighty thousand copies; and on April 10, 1841, he issued the first number of the *Daily Tribune*, a small sheet that sold for one cent. In the fall of that year the *Weekly Tribune* was issued. Mr. Greeley formed a partnership with Thomas McElrath, who took charge of the business department, and from that time until his death he was identified with the *New York Tribune*. Of Mr. Greeley's career in connection with that paper it is not necessary here to speak, for it is generally known. His course on political and social questions was erratic. He believed it better, be-

fore the Civil War broke out, to let the states secede if the majority of the people said so. When Jefferson Davis was to be released on bail, he volunteered his signature to his bail-bond; and yet during the whole war he was thoroughly loyal. In 1869 he was the Republican candidate for Comptroller of the State of New York; and in 1872 he accepted a nomination for President of the United States from a party with the principles of which, and from men with whom, he had always been in fierce antagonism. It is evident now that for a year or more Mr. Greeley's brain, overworked, was disturbed; and as soon as the election that year was over, and he was defeated, his brain, doubly taxed by anxiety at the bedside of a dying wife, was prostrated with disease, and he sank rapidly into the grave. Mr. Greeley was the author of several books, his most considerable work being a history of the Civil War, in two thick volumes, called *The American Conflict*. Mr. Greeley died in a full belief in the doctrine of universal salvation, which he had held for many years.

**Greeley's Peace Mission.** In the summer of 1864 a number of leading conspirators against the life of the Republic were at the Clifton House, at Niagara Falls, in Canada, where they plotted schemes for exciting hostile feelings between the United States and Great Britain; for burning Northern cities; rescuing the Confederate prisoners on and near the borders of Canada; spreading contagious diseases in the National military camps; and, ultimately, much greater mischief. These agents were visited by members of the Peace Faction (which see). At the suggestion, it is said, of a conspicuous leader of that faction, a scheme was set on foot to make the loyal people, who yearned for an honorable peace, dissatisfied with the administration. The Confederates at the Clifton House employed a Northern politician of the baser sort to address a letter to Horace Greeley, editor of the *New York Tribune*, informing him that a delegation of Confederates were authorized to go to Washington in the interest of peace if full protection could be guaranteed them. The kindly heart of Mr. Greeley sympathized with this movement, for he did not suspect a trick. He drew up a "Plan of Adjustment," which he sent, with the letter of the Confederates, to President Lincoln, and urged the latter to respond to it. The more sagacious President had no confidence in the professions of these conspirators; yet, unwilling to seem heedless of any proposition for peace, he deputed Mr. Greeley to bring to him any person or persons "professing to have any proposition of Jefferson Davis, in writing, for peace, embracing the restoration of the Union and abandonment of slavery," with an assurance of safe-conduct for him or them each way. Considerable correspondence ensued. Mr. Greeley went to Niagara Falls. Then the Confederates pretended there was a misunderstanding. The matter became vexatious, and the President sent positive instructions to Greeley prescribing explicitly what propositions he would receive; namely, for a restoration of peace, the integrity of the whole Union, and the abandonment of

slavery, and which might come by and with the authority that can control the armies then at war with the United States. This declaration was the grand object of the Confederates at Niagara, and they used it to "fire the Southern heart" and to sow the seeds of discontent among the loyal people of the land.

**Green, BARTHOLOMEW,** the first newspaper publisher in America, was born at Cambridge, Mass., Oct. 12, 1666; died in Boston, Dec. 28, 1732. He succeeded his father, Samuel, as printer, in Boston, and on April 24, 1704, he issued the first number of the *Boston News-Letter*, a publication issued by him during his life. He published the *Weekly News-Letter*, which was combined with the other, and it was called the *Boston Weekly News-Letter*.

**Green Mountain Boys.** Some of the settlers who had received grants of land from Governor Wentworth, of New Hampshire (see *New Hampshire Grants*), had crossed the Green Mountains and occupied lands on the shores of Lake Champlain. Emigration flowed over the mountains rapidly after the close of the French and Indian War, and the present State of Vermont was largely covered by Wentworth's grants. The authorities of New York now proceeded to assert their claims to this territory under the charter given to the Duke of York. Acting-governor Colden issued a proclamation to that effect (Dec. 28, 1763), to which Wentworth replied by a counter-proclamation. Then the matter, on Colden's application, was laid before the king in council. A royal order was issued (March 13, 1764) which declared the Connecticut River to be the eastern boundary of New York. The settlers did not suppose this decision would affect the titles to their lands, and they had no care about political jurisdiction. Land speculators caused the New York authorities to assert further claims that were unjust and impolitic. On the decision of able legal authority, they asserted the right of property in the soil, and orders were issued for the survey and sale of farms on the "Grants" in the possession of actual settlers, who had bought, paid for, and improved them. The settlers, disposed to be quiet, loyal subjects of New York, were converted into rebellious foes, determined and defiant. A new and powerful opposition to the claims of New York was created, composed of the sinews and muskets and determined wills of the *people* of the "Grants," backed by New Hampshire, and, indeed, by all New England. New York had left them no alternative but the degrading one of leaving or repurchasing their possessions. The Governor and Council of New York summoned the people of the "Grants" to appear before them at Albany, with their deeds and other evidences of possession, within three months, failing in which it was declared that the claims of all delinquents would be rejected. No attention was paid to the summons. Mean while speculators had been purchasing from New York large tracts of these estates, and were preparing to take possession. The settlers sent an agent to England to lay their case before the king. He came back in

1767 with an order for the Governor of New York to abstain from issuing any more patents for lands eastward of Lake Champlain. The order was not *ex post facto*, and the New York patentees proceeded to take possession of their purchased lands. The settlers aroused for resistance, led by a brave and determined commander from Connecticut, Ethan Allen. The men under his command called themselves the "Green Mountain Boys;" and for some years the New Hampshire Grants formed a theatre where all the elements of civil war, excepting actual carnage, were in active exercise. In 1774 Governor Tryon, of New York, issued a proclamation, ordering Ethan Allen, Seth Warner, and other leaders of the Green Mountain Boys, to surrender themselves within thirty days, or be subjected to the penalty of death. These leaders retorted by offering a reward for the arrest of the Attorney-general of New York. The war for independence soon broke out and suspended the controversy. In that war the Green Mountain Boys took a conspicuous part.

**Green Mountain State.** A popular name of Vermont, the principal mountain-range being the Green Mountains.

**Green, SAMUEL,** the second printer in the United States, was born in England in 1615; died at Cambridge, Mass., Jan. 1, 1702. He succeeded Day (which see) in 1648. Mr. Green had nineteen children, and his descendants were a race of printers in New England and in Maryland. He printed the Psalter, translated into the Indian language by Eliot the Apostle, and many other books. His son Bartholomew printed, in April, 1704, the first newspaper ever issued in America—the *Boston News-Letter*—which was continued by Green and his successors.

**Greene and the Southern Army.** At Charlotte, N. C., General Greene assumed command of the Southern army. He found the troops without pay and their clothing in rags. There was hardly a dollar in the military chest, and subsistence was obtained wholly by impressment. At Salisbury he was quartered at the house of Mrs. Elizabeth Steele, a patriot of the purest mould. She heard Greene speak despondingly because of the emptiness of the money-chest. Her heart was touched; and while he was at table she brought two bags full of specie, the earnings of toil, and presented them to him, saying, "Take these, for you will want them, and I can do without them." Greene was very grateful; and before he left her house he wrote on the back of a portrait of the king hanging in the room, "O, George, hide thy face and mourn!" and then hung it up with its face to the wall.

**Greene, CHRISTOPHER,** was born at Warwick, R. I., in 1737; killed in Westchester County, N. Y., May 13, 1781. He was major in the "army of observation" authorized by the Legislature of Rhode Island. He accompanied Arnold through the wilderness to Quebec in the fall of 1775 (see *Arnold's Expedition*), and was made prisoner in the attack on that city at the close of December. In October, 1776, he was put in command of a regiment, and was placed in charge of Fort

Mercer, on the Delaware, which he gallantly defended the next year. He took part in Sullivan's campaign in Rhode Island in 1778, and in the spring of 1781 his quarters on the Croton River were surrounded by a party of loyalists and he was slain. For his defence of Fort Mercer, Congress voted him a sword in 1786, and it was presented to his eldest son.

**Greene, GEORGE SEARS,** was born at Warwick, R. I., May 6, 1801, and graduated at West Point in 1823. He resigned in 1836, became a civil engineer, and was employed in the construction of the High Bridge and Croton Reservoir in New York city. In January, 1862, he was appointed colonel of a New York volunteer regiment, and commanded in Auger's division in Banks's corps. Having been appointed brigadier-general, he took command of Auger's division on the latter's promotion, and fought gallantly under Mansfield at Antietam. He was in the battles of Chancellorsville and Gettysburg. He was wounded at Wabatchie (which see), and was in eastern North Carolina early in 1865.

**Greene, NATHANIEL,** was born at Warwick, R. I., May 27, 1742; died June 19, 1786, and was buried at Savannah, Ga. His father was a member of the Society of Friends or Quakers, and the son was a birthright Friend. His educa-

NATHANIEL GREENE.

tion was confined to the English of the common school, and his youth was spent on the farm, in a mill, or in a blacksmith's shop. At the age of twenty years he studied law and afterwards military tactics. He was fond of books from his childhood. In 1770 he was elected a member of the Rhode Island Legislature, where in he held a seat, a popular member, until appointed to the command of the Southern army in 1780. His military proclivities caused him to be "disowned" by Friends, and he became a member of a military company. Three regiments of militia were organized in Rhode Island after the affair at Lexington, as an "army of observation," and these Greene, as provincial brigadier-general, led to Cambridge, where he was created a brigadier-general in the Continental army, June 22, 1775. Washington saw

and appreciated his soldierly qualities, and in August, 1776, he was made a major-general. He commanded the left wing of the army at Trenton; was active in New Jersey; by a rapid movement saved the army from destruction at the Brandywine; was in the battle of Germantown (Oct. 4, 1777); and in March, 1778, accepted the office of quartermaster-general, but with a guarantee that he should not lose his right of command in action. This office he resigned in August, 1780. In the battle of Springfield (which see) in June, 1780, he was conspicuous. During Washington's visit to Hartford (September, 1780), he was in command of the army, and was president of the Court of Inquiry in the case of Major André soon afterwards. (See *Treason of Arnold*.) Greene succeeded Gates in command of the Southern army (Oct. 14, 1780), which he found a mere skeleton, while a powerful enemy was in front of it. He took command of it at Charlotte, N. C., Dec. 4. By skill and energy he brought order and strength out of confusion, and soon taught Cornwallis that a better general than Gates confronted him. He made a famous retreat through Carolina into Virginia (see *Greene's Famous Retreat*), and, turning back, fought the British army at Guilford Court-house, N. C. (which see), March 15, 1781. Greene then pushed into South Carolina, and was defeated by Lord Rawdon in a battle at Hobkirk's Hill (which see), April 25. Soon afterwards he besieged the

fort of Ninety-six (which see), and on Sept. 8 gained a victory at Eutaw Spring, S. C., for which Congress gave him thanks, a British standard, and a gold medal. (See *Eutaw Spring*.) Expelling the British from the Southern country, Greene returned to Rhode Island at the close of the war. Congress presented him with two pieces of artillery. The State of Georgia gave him a fine plantation a few miles from Savannah, where he settled in the fall of 1785, and died the next year. South Carolina also gave him a valuable tract of land. A monument dedicated jointly to Greene and Pulaski stands in the city of Savannah, and the State of Rhode Island has erected an equestrian statue of him at the national capital, executed by H. K. Browne.

Greene, REV. ZECHARIAH, was born at Stafford, Conn., Jan. 11, 1760; died at Hempstead, L. I., June 20, 1858, aged ninety-eight years. He was a soldier in the army of the Revolution; became a minister of the Gospel and a settled pastor on Long Island, and was a chaplain in the army in the War of 1812-15.

**Greene's Famous Retreat.** After the disas-

ter at the Cowpens, Cornwallis placed his force in light marching order and started in pursuit of Morgan, hoping to intercept him before he could cross the Catawba River. The earl ordered all his stores and superfluous baggage to be burned, and his whole army was converted into light infantry corps. The only wagons saved were those with hospital stores, salt, and ammunition, and four empty ones for the sick and wounded. Sensible of his danger, Morgan, leaving seventy of his severely wounded under a flag of truce, crossed the Broad River immediately after the battle at the Cowpens, and pushed for the Catawba. Cornwallis followed the next morning. Two hours before the van of the pursuers appeared, Morgan had passed the Catawba at Trading Ford, and before

TRADING FORD ON THE CATAWBA.

the British could begin the passage, heavy rains produced a sudden rise in the waters, and time was given to Morgan to send off his prisoners and to refresh his weary troops. When Greene heard of the affair at the Cowpens, he put his troops in motion to join Morgan. Pressing forward with only a small guard, he joined Morgan two days after he had passed the Catawba (Jan. 29, 1781), and assumed, in person, the command of the division. And now one of the most remarkable military movements on record occurred. It was the retreat of the American army, under Greene, from the Catawba through North Carolina into Virginia. When the waters of the Catawba subsided, Cornwallis crossed and resumed his pursuit. He reached the right bank of the Yadkin (Feb. 3) just as the Americans were safely landed on the opposite shore. Again he was arrested by the sudden swelling of the river. Onward the flying patriots sped, and after a few hours Cornwallis was again in full pursuit. At Guilford Court-house Greene was joined (Feb. 7) by his main army from Cheraw, and all continued their flight towards Virginia, for they were not strong

enough to give battle. After many hardships and narrow escapes, the Americans reached the Dan (Feb. 15, 1781), and crossed its rising waters into the friendly bosom of Halifax County, Va. When Coruwallis arrived, a few hours afterwards, the stream was so high and turbulent that he could not cross. There, mortified and disappointed, the earl abandoned the chase, and, moving sullenly southward through North Carolina, established his camp at Hillsborough.

**Greene's Triumphs in the South.** While Greene and his army remained on the Santee Hills until late in the fall, his partisan corps, led by Marion, Sumter, Lee, and others, were driving the British forces from post to post, in the low country, and smiting Tory bands in every direction. The British finally evacuated all their interior stations and retired to Charleston, pursued almost to the edge of the city by the partisan troops. The main army occupied a position between that city and Jacksonborough, where the South Carolina Legislature had resumed its sessions. Greene had failed to win victories in battle, but had fully accomplished the object of his campaign—namely, to liberate the Carolinas and Georgia from British rule. In the course of nine months he had recovered the three Southern states, and at the close of 1781 he had all of the British troops below Virginia hemmed within the cities of Charleston and Savannah. General Wayne and his little army became the jailers at the latter place at the beginning of 1782.

**Greenough, HORATIO,** sculptor, was born in Boston, Sept. 6, 1805; died at Summerville, Mass., Dec. 13, 1852. He graduated at Harvard in 1825. He evinced a taste and talent for the cultivation of art in his early youth, and soon

HORATIO GREENOUGH.

after his graduation he went to Italy, where he remained about a year. On his return to Boston in 1826 he modelled several busts, and then returned to Italy, making Florence his residence. Ever active, ever learning, and exceedingly industrious, he executed many pieces of sculpture of great merit. Among them was a group—"The Chanting Cherubs"—the first of the kind ever undertaken by an American sculptor. He made a colossal statue of Wash-

ington, half nude, in a sitting posture, for the Capitol at Washington, but it was so large that it could not be taken into the rotunda, its destined resting-place, and it occupies a position before the eastern front of the great building. He also executed a colossal group for the government—"The Rescue"—which occupied the artist about eight years. Besides numerous statues and groups, Mr. Greenough made busts of many of our statesmen. His *Life and Essays* were published in 1853 by his friend Henry T. Tuckerman. Mr. Greenough was greatly beloved by those who were favored with his personal acquaintance as a noble, generous, and kind-hearted man.

**Greenville, TREATY AT.** After the successful campaigns of General Anthony Wayne against the northwestern Indian tribes in 1793-94, his army lay in winter-quarters in Greenville, Darke Co., O., and there, on the 3d of August, 1795, he concluded a treaty with several of the tribes—namely, Wyandots, Delawares, Shawnoese, Ottawas, Chippewas, Potawatomies, Miamis, Eel River Indians, Weas, Piankshaws, Kickapooe, and Kaskaskias. There were 1130 Indian participants in making the treaty. The principal chiefs present were Tarhe, Buckhongeheles, Black Hoof, Blue Jacket, and Little Turtle. The basis of the treaty was that hostilities should permanently cease and all prisoners be restored. The boundary-line between the United States and the lands of the several tribes was fixed.

**Gregg, DAVID MCM.,** was born in Pennsylvania in 1834, and graduated at West Point in 1855, entering the dragoon service. He was in expeditions against the Indians in Washington Territory and State of Oregon (1858-60), and was promoted to captain of cavalry in May, 1861. He was colonel of volunteer cavalry through the campaign in Virginia in 1862, and in November of that year was created brigadier-general of volunteers. He commanded a division of cavalry in the Army of the Potomac from December, 1862, until February, 1865, when he resigned. In August, 1864, he was breveted major-general of volunteers, at the age of thirty.

**Gregory, FRANCIS H.,** was born at Norwalk, Conn., Oct. 9, 1789; died in Brooklyn, N. Y., Oct. 4, 1866. He entered the United States navy as midshipman in 1809; was made lieutenant in 1814 and captain in 1828. He served under Chauncey on Lake Ontario, was made a prisoner, and confined in England eighteen months. In the war with Mexico he commanded the frigate *Raritan*. His last sea service was in command of the African squadron. During the Civil War he superintended the construction of iron-clads. On July 16, 1862, Captain Gregory was made a rear-admiral on the retired list. During the War of 1812 supplies for the British were constantly ascending the St. Lawrence. Chauncey ordered Lieutenant Gregory to capture some of them. With a small force he lay in ambush among the Thousand Islands in the middle of June, 1814. They were discovered, and a British gunboat was sent to attack them. They did not wait for the assault, but holdly

dashed upon and captured their antagonist. She carried an 18-pound carronade, and was manned by eighteen men. These were taken prisoners to Sackett's Harbor. This and other

FRANCIS H. GREGORY.

exploits, though appreciated at the time, were not then substantially rewarded, except by promotions; but, thirty years afterwards, Congress gave Gregory and his companion officers in the capture of the gunboat (Sailing-masters Vaughan and Dixon) \$3000.

**Grenville, GEORGE**, author of the Stamp Act, was born Oct. 14, 1712; died Nov. 13, 1770. A grad-

GEORGE GRENVILLE.

uate of Cambridge University, a fine mathematician, and a student at law, he gave promise of

much usefulness. Entering Parliament in 1741, he represented Buckinghamshire for twenty-nine years, until his death. In 1762 he was made Secretary of State; Chancellor of the Exchequer and First Lord of the Treasury in 1763; and in 1764 he proposed the famous Stamp Act (which see). He was the best business man in the House of Commons, but his statesmanship was narrow. Thomas Grenville, who was one of the agents employed in negotiating the treaty of peace in 1783, was his son.

**Grenville, SIR RICHARD**, was born in the west of England in 1540; died at sea in 1591. Sir Walter Raleigh was his cousin. When a mere youth he served in the imperial army of Germany against the Turks, and on his return was appointed to a command in Ireland, and made sheriff of Cork. In 1571 he had a seat in Parliament and was knighted by Queen Elizabeth. The colonization schemes of his kinsman commanded his ardent approval, and on the 9th of April, 1585, he sailed from Plymouth, Eng., in command of some ships fitted out by Raleigh, bearing one hundred and eighty colonists and a full complement of seamen, for the coast of Virginia. Ralph Lane, a soldier of distinction, accompanied him as governor of the colony. Thomas Harriott, a distinguished mathematician and astronomer, was with them as historian and naturalist (see *Harriott, Thomas*); also Thomas Cavendish, the eminent English navigator, who sailed around the earth. Grenville was more intent upon plunder and finding gold than planting a colony; the choice of him for commander was unfortunate. Sailing over the usual long Southern route, they did not reach the coast of Florida until June, and as they went up the coast they encountered a storm off a point of land that nearly wrecked them, and they called it Cape Fear. They finally landed on Roanoke Island, with Manteo, whom they had brought back from England, and who had been created Lord of Roanoke. Grenville sent him to the mainland to announce the arrival of the English, and Lane and his principal companions soon followed the dusky peer. For eight days they explored the country and were hospitably entertained everywhere. At an Indian village a silver cup was stolen from one of the Englishmen, and was not immediately restored on demand. Grenville ordered the whole town to be destroyed, with all the standing maize, or Indian corn, around it. This wanton act kindled a flame of hatred in the bosoms of the natives that could not be quenched. Not observing this, the commander left the colony and returned to England with the ships. These all became piratical cruisers on the seas, and entered the harbor of Plymouth on the 18th of September laden with plunder from Spanish galleons. Governor Lane also treated the natives cruelly, and they became greatly exasperated in spite of the soothing influence of Harriott, their benefactor. In mortal fear of the Indians, their provisions exhausted, and no ship arriving from England, they hailed with joy the appearance of Sir Francis Drake, who, returning from the West Indies, touched at Roanoke Island. (See *Drake, Sir*

*Francis*.) They gladly entered his ship and returned to England. About three weeks afterwards Grenville arrived there with three ships, laden with provisions. Leaving fifteen men on the deserted spot to keep possession of the country, Grenville again sailed for England. He afterwards, as vice-admiral, performed notable exploits against the Spaniards, but finally, in a battle with a large Spanish fleet off the Azores, in 1591, he was wounded, made prisoner, and soon afterwards died.

**Grey, CHARLES** (Earl), was born Oct. 23, 1729; died Nov. 14, 1807. He was aide-de-camp to Wolfe, at Quebec, in 1759. He was commissioned lieutenant-colonel in 1761, and, as colonel, accompanied General Howe to Boston in 1775, who gave him the rank of major-general. He led the party that surprised General Wayne in the night. (See *Paoli Tarern*.) He was an active commander in the battle of Germantown (which see) and as a marauder on the New England coast in the fall of 1778. He surprised and cut in pieces Baylor's dragoons at Tappan. For these and other services in America he was made a lieutenant-general in 1783. He became general in 1795, and was elevated to the peerage in 1801.

**Greytown, ATTACK UPON.** There was a little village on the Mosquito coast (see *Nicaragua, Invasion of*) called San Juan, or Greytown, in which some American citizens resided. They alleged that they had been outraged by the local authorities (who were English), who professed to derive their power directly from the Mosquito king, or chief, of a native tribe so called. An appeal was made to the commander of a United States naval vessel, then lying near. That shallow commander (Hollins) actually proceeded to bombard the little town, as a punishment for the acts of its authorities. This brought out the denunciations of the English residents, who alleged that, by arrangement with the Mosquito monarch, the British government was the protector of his dominions. For a while the folly of Hollins threatened serious difficulties between the two countries. This was in 1852.

**Gridley, RICHARD**, was born at Canton, Mass., in 1711; died there, June 20, 1796. He was a skilful engineer and artilleryist, and was chief-engineer in the siege of Louisburg, in 1745. He entered the service, as colonel of infantry, in 1755, was in the expedition to Crown Point, under General Winslow, planned the fortifications at Lake George (Fort George and Fort William Henry), served under Amherst, and was with Wolfe at Quebec. He retired on half-pay for life. Espousing the cause of the patriots, he was appointed chief-engineer of the army that gathered at Cambridge, planned the works on Bunker's Hill and Dorchester Heights, and was in the battle there, in which he was wounded. He was active in planning the fortifications around Boston, and in September, 1775, he was commissioned a major-general in the provincial army of Massachusetts. He was commander of the Continental artillery until superseded by Knox.

**Grierson, BENJAMIN H.**, was born at Pittsburgh, Penn., in July, 1837; went on the staff of General Preutiss when the Civil War broke out, and became an active cavalry officer. (See *Grierson's Raid*.) He was made major-general of volunteers in May, 1865, and for his services in the war was breveted major-general United States Army in March, 1867. He had been commissioned lieutenant-colonel of United States cavalry in July, 1866.

**Grierson's Raid.** Some of Grant's cavalry, which he had left in Tennessee, were making extensive and destructive raids while he was operating against Vicksburg. On April 17, Colonel B. H. Grierson, of the Sixth Illinois Cavalry, left La Grange, Tenn., with his own and two other regiments, and, descending the Mississippi, swept rapidly through the rich western portion of that state. These horsemen were scattered in several detachments, striking Confederate forces here and there, breaking up railways and bridges, severing telegraph-wires, wasting public property, and as much as possible diminishing the means of transportation of the Confederates in their efforts to help their army at Vicksburg. Finally, on the 2d of May, having penetrated Louisiana, this great raid ceased, when Grierson, with his wearied troops and worn-out horses, entered Baton Rouge, where some of General Banks's troops were stationed. In the space of sixteen days he had ridden six hundred miles, in a succession of forced marches, often in drenching rain, and sometimes without rest for forty-eight hours, through a hostile country, over ways most difficult to travel, fighting men and destroying property. His troops had killed and wounded about one hundred of the Confederates, captured and paroled full five hundred, destroyed three thousand stand of arms, and inflicted a loss on their foes of property valued at \$6,000,000. Grierson's loss was twenty-seven men and a number of horses. During the twenty-eight hours preceding the arrival of the raiders at Baton Rouge they had travelled seventy-six miles, engaged in four skirmishes, and forded the Comite River. Grierson declared that he found the Confederacy to be only a shell. This was in 1863.

**Griffin, CHARLES**, was born in Licking County, O., in 1826; died at Galveston, Texas, Sept. 15, 1867. He graduated at West Point in 1847, and entered the artillery. He was made captain of artillery in April, 1861, and with his battery fought bravely in the battle of Bull's Run. He was made brigadier-general of volunteers in July, 1862; served under General Porter in the campaign against Richmond. He was active in the Army of the Potomac until the surrender of Lee at Appomattox Court-house, where, as commander of the Fifth Corps, he received the arms and colors of the Army of Northern Virginia. In March, 1865, he was breveted major-general United States Army, and received other brevets for "meritorious services during the Rebellion." In the winter of 1865-66 he was placed in command of the Department of Texas.

**Griffin, CYRUS**, was born in Virginia in 1749; died at Yorktown, Va., Dec. 14, 1810. He was educated in England, was connected by marriage there with a noble family, and when the Revolution broke out he espoused the cause of the patriots. From 1778 to 1781, and in 1787-88, he was a member of the Continental Congress, and in the latter year its president. He was commissioner to the Creek nation in 1789, and from that year until his death he was judge of the United States District Court in Virginia.

**Griffon, THE**, the vessel of La Salle, on Lake Erie, was built early in 1667, at the mouth of Cayuga Creek, not far below the site of Buffalo, and near the foot of Squaw Island. She was armed with a battery of seven small cannons and some muskets, and floated a flag bearing the device of an eagle. In August, the same year, she sailed for the western end of Lake Erie. This was the beginning of the commerce on the Great Lakes. For a full account of this vessel, see O. H. Marshall's monograph on the building of the *Griffon*. (See *La Salle*.)

**Grijalva, JUAN DE**. His uncle, Diego Velasquez, the first governor of Cuba, sent him, in command of four vessels, to complete the discoveries of Cordova. (See *Cordova*.) He sailed from Santiago, Cuba, in the spring of 1518. He cruised along the peninsula of Yucatan as far as the region of the Panuco, where he held friendly communication with the Aztecs, the subjects of Montezuma. From them he obtained gold, jewels, and other treasures, with which he freighted one of his ships. Grijalva afterwards settled in Nicaragua, where he was killed by the natives, Jan. 21, 1527. He was the first discoverer of Mexico.

**Grover, CUVIER**, was born at Bethel, Me., July 24, 1829. He graduated at West Point in 1850, entering the First Artillery. He was made brigadier-general of volunteers in April, 1861, and commanded a brigade in Heintzelman's corps in the Army of the Potomac. When Hooker took command of the troops at Fairfax (1862), General Grover took that officer's division. From December, 1862, to July, 1864, he commanded a division of the Nineteenth Corps in the Department of the Gulf. He was in the Shenandoah campaign in 1864; and from January till June, 1865, he was in command of the District of Savannah. General Grover was brevetted major-general for "meritorious services during the Rebellion," and was commissioned lieutenant-colonel of infantry in 1866.

**Groveton, BATTLE OF**. After the battle at Cedar Mountain (which see), Pope took position with his army along the line of the Rapid Anna, where he was reinforced by troops from North Carolina, under Burnside and Stevens. The Confederates now concentrated their forces for a dash on Washington in heavy columns. Halleck, perceiving possible danger to the capital, issued a positive order to McClellan (Aug. 3, 1862) for the immediate transfer of the Army of the Potomac from the James River to the vicinity of Washington. The commander of that army instructed Halleck that the "true defence

of Washington" was "on the banks of the James." The order was at once repeated, but it was twenty days after it was first given before the transfer was accomplished. Meanwhile, General Lee having massed a heavy force on Pope's front, the latter had retired behind the forks of the Rappahannock. Lee pushed forward to that river with heavy columns, and on the 20th and 21st of August a severe artillery duel was fought above Fredericksburg, for seven or eight miles along that stream. Finding they could not force a passage of the river, the Confederates took a circuitous route towards the mountains to flank the Nationals, when Pope made movements to thwart them. But danger to the capital increased every hour. Troops were coming with tardy pace from the Peninsula, and on the 25th, when those of Franklin, Heintzelman, and Porter had arrived, Pope's army, somewhat scattered, numbered about sixty thousand men. Jackson crossed the Rappahannock, marched swiftly over Bull's Run Mountain, through Thoroughfare Gap, to Gainesville (Aug. 26), where he was joined by Stuart, with two cavalry brigades. At twilight Stuart was at Bristow Station, in Pope's rear, and between the latter and Washington. He and Banks had no suspicion of this movement. Jackson knew the perils of his position, and the necessity for quick action. He sent Stuart forward to Manassas Junction before daylight (Aug. 27), to break up Pope's communications with the capital. The alarm instantly spread among the Nationals. Jackson, with his whole force, pressed to the Junction, and Pope attempted to capture him before he should form a junction with Longstreet, at the head of Lee's column, then approaching. Pope ordered McDowell, with Sigel and the troops of Reynolds, to hasten to Gainesville to intercept Longstreet. Reno was ordered to move on a different road, and support McDowell, while Pope moved along the railway towards Manassas Junction with Hooker's division. He directed General Porter to remain at Warrenton Station until Banks should arrive there to hold it, and then hasten to Gainesville. McDowell reached Gainesville without interruption; but, near Bristow Station, Hooker encountered General Ewell, and in the struggle that ensued each lost about three hundred men. The latter hastened towards Manassas, but Hooker's ammunition failing, he was unable to pursue. Pope now ordered a rapid movement upon the Confederates at the Junction, while General Kearney was directed to make his way to Bristow Station, where Jackson might mass his troops and attempt to turn the National right. This movement was made early on the morning of Aug. 28, 1862. Porter was ordered to move towards Bristow Station at one o'clock, but did not march before daylight, at which time Jackson had taken another direction. He destroyed an immense amount of captured stores, and hastened to join Longstreet, then approaching through Thoroughfare Gap. Some of Pope's troops failed to execute orders. The latter arrived at the Junction just after Jackson had left, and pushed all of his available forces upon Centreville in pur-

suit. Kearney drew Jackson's rear-guard out of Centreville late in the afternoon (Aug. 28), and the forces of the Confederates were turned towards Thoroughfare Gap, from which was coming their help. Towards evening the troops under Ewell and Taliaferro encamped near the battle-ground of Bull's Run nearly a year before. King's division of McDowell's corps was in close pursuit, and when they had reached a point desired by the watching Confederates, the latter fell fiercely upon them. A sanguinary battle ensued. The brunt of it was borne by Gibbons's brigade, supported by that of General Donbley. The struggle continued until dark. The losses were heavy, and in that battle General Ewell lost a leg. Pope, at Centreville, now attempted to crush Jackson before Longstreet could join him. McDowell and King were directed to maintain their position, while Kearney should follow Jackson closely at one o'clock in the morning (Aug. 29), and Porter (whom he believed to be at the Junction) to move upon Centreville at dawn. Before these movements could be executed, Longstreet and Jackson had formed a partial junction. Near the entrance to Thoroughfare Gap, through which Longstreet had marched, there was a sharp engagement, which ended at twilight. Longstreet was held in check for a while by Ricketts's division and the cavalry of Buford and Bayard, which had fought the battle. Early the next morning (Aug. 29) Ricketts fled to Gainesville, closely pursued. Pope's army was now scattered and somewhat confused. Lee's whole army, now combined, pressed forward. Pope ordered Sigel, supported by Reynolds, to advance from Groveton and attack Jackson on wooded heights near. He ordered Heintzelman, with the divisions of Hooker and Kearney, towards Gainesville, to be followed by Reno, while Porter, with his own corps and King's division, was to move upon the road to Gainesville from Manassas for the turning of Jackson's flank on the Warrenton pike, and to fall heavily on his rear. Lee was then approaching along that pike, and Jackson determined to hold his advantageous position, at all hazards, until the main army should arrive. At five o'clock in the morning, Sigel, with the divisions of Schurz, Schenck, and Milroy, advanced to attack Jackson. A battle began at seven o'clock, and continued with great fury until ten, Sigel constantly advancing, while it was evident that Jackson had been reinforced. It was so. Longstreet, with the vanguard of Lee's whole army, which had been streaming through Thoroughfare Gap all the morning unopposed, had now reached the field of action. Sigel maintained his ground until noon, when Kearney's division arrived, and took position on Sigel's right. Reynolds and Reno also came up, followed soon afterwards by Hooker. Then the Nationals outnumbered the Confederates, and for some hours the battle assumed the aspect of a series of skirmishes. Pope ordered Porter into action, and other troops were directed to support him; but Porter, as he alleged, did not receive the order until dusk, and the brunt of the battle fell upon his intended supports. It was desperately and

gallantly fought on both sides. Jackson was hourly reinforced by fresh divisions of Lee's army. Soon after dark this sharp and important battle at Groveton ended, without victory on either side, and each having lost about seven thousand men. Pope's entire army (excepting Banks's force at Bristow Station) and a part of McClellan's was in this action. Pope's effective men had been reduced in numbers by various causes, and it was estimated that his army fit for service did not exceed forty thousand men on the evening of the battle at Groveton.

**Guadalupe Hidalgo, TREATY OF.** At Guadalupe Hidalgo, a city of Mexico, a treaty of peace, friendship, limits, and settlements was concluded Feb. 2, 1848, between Nicholas P. Trist on the part of the United States, and Don Luis Gonzaga Cnevas, Don Bernardo Couto, and Don Miguel Atristain on the part of Mexico. It provided for a convention for the provisional suspension of hostilities; for the cessation of the blockade of Mexican ports; for the evacuation of the Mexican capital by the United States troops within a month after the ratification of the treaty, and the evacuation of Mexican territory within three months after such evacuation; for the restoration of prisoners of war; for a commission to survey and define the boundary-lines between the United States and Mexico; for the free navigation of the Gulf of California and the Colorado and Green rivers for United States vessels; freedom of Mexicans in any territory acquired by the United States; Indian incursions; payment of money to Mexico for territory conquered and held, and of debts due citizens of the United States by Mexico; regulation of international commerce, and other minor regulations about property, etc. Both governments ratified the treaty. (See *Mexico, War with.*)

**Guatimozin (Quauhtemotzin),** the last king of Mexico, was a native of that province, and nephew of Montezuma. On the death of his elder brother, in 1520, he was raised to the throne, and vigorously defended his capital against the Spaniards. In attempting to escape he was made prisoner. He was inhumanly tortured by being stretched upon burning coals by Cortez, in order to extort from him a revelation of more treasure than was found in the vanquished city. He was removed from the coals to prison, and, afterwards suspected of complicity in an insurrection, he was hanged by the Spaniards without trial.

**Guerilla Warfare in Missouri and Arkansas (1862).** In the summer of 1862 these two states were overrun by bands of "guerillas," or independent bands of armed men carrying on irregular warfare. In June, 1862, Missouri was erected into a separate military district, with General J. M. Schofield at its head. When Curtis withdrew to the Mississippi and left the guerillas of Arkansas at liberty to roam about as they pleased, he found it difficult to counteract their influence on the Secessionists of Missouri. Price recruited guerilla bands for active service, and these, becoming numerous in mid-summer, were preparing to seize important posts

in Missouri. To meet this peril Schofield was authorized to organize all the militia of the state, and he soon had 50,000 enrolled, and 20,000 of them ready for service. His entire force was now scattered over Missouri in six divisions, and for two months a desperate and sanguinary guerilla warfare was carried on in the bosom of that commonwealth, the chief theatre being north of the Missouri River. At Kirksville, in Adair County, there was a desperate fight (Aug. 6, 1862), in which the Confederates were defeated, with a loss of 180 killed and 500 wounded. Soon after that the guerilla bands were mostly broken up. From April until September there were in Missouri about one hundred skirmishes. The guerillas of Arkansas attempted, late in the summer, to aid those of Missouri. Nearly 800 of these attacked and captured Independence, with 362 Missouri cavalry; and at about the same time some 1500 Arkansas guerillas invaded southwestern Missouri. They joined other guerilla bands, and made southwestern Missouri a battle-field. These roving bands were soon driven out of Missouri, and formed the nucleus of an army 40,000 strong, which was gathered in Arkansas under General T. C. Hindman, formerly a member of Congress.

**Guerilla Warfare in Missouri and Arkansas (1863).** The Confederates occupied all Texas in 1863, and carried on a sort of guerilla warfare in Arkansas and Missouri. In the earlier months Marmaduke was very active. Early in January, with about 4000 men, he burst suddenly out of northern Arkansas and fell upon Springfield, in Missouri, but was repulsed, with a loss of 200 men. After some other reverses, he fell back; and at Little Rock, the capital of Arkansas, he planned a formidable raid into Missouri, chiefly for seizing National stores at Cape Girardeau, on the Mississippi. He invaded the state with 8000 men, and was met near the cape (April 20) by General McNeill, who, after a sharp engagement, drove the invader out of Missouri. Other bands of guerillas, under various leaders, roamed over western Arkansas, and at one time, in May, seriously menaced Fort Blunt, in the Indian Territory. These were 3000 Confederates under Colonel Coffey. There was a sharp engagement at Honey Springs, in the Indian Territory (July 17), between Nationals under General Blunt and Confederates led by General Cooper, in which the latter were defeated, with a loss in killed, wounded, and prisoners of 627. The Nationals lost 77 men. A guerilla band, led by a white savage named Quantrell, fell upon the defenceless town of Lawrence, in Kansas, on Aug. 13, and murdered 140 of the inhabitants. They also laid 135 buildings in ashes. Near Baxter's Springs, on the Cherokee Reservation, while General Blunt was on his way from Kansas to Fort Smith, with an escort of 100 cavalry, he was attacked and his escort scattered by 600 guerillas led by Quantrell, who plundered and burned the trains of the Nationals. Blunt's forces were nearly all killed or disabled in the conflict; his wounded were murdered. Blunt and only a dozen followers escaped to Fort Blair. At the close of September a Confeder-

ate force, about 2500 strong, led by Colonel Shelby, made a raid through western Missouri in search of supplies. They penetrated to Booneville (Oct. 1), on the Missouri River, when they were driven back and out of the state by Generals Brown and McNeill.

**Guess, GEORGE (Sequoyah),** a half-breed Cherokee Indian who invented a syllabic alphabet of his native language, of eighty-five characters. He was born about 1770; died at San Fernando, northern Mexico, in August, 1843. He had a small farm in the Cherokee country, was an ingenious silversmith, and in 1828 established a newspaper, called the *Cherokee Phoenix*. Guess accompanied his nation in their exodus to a land beyond the Mississippi.

**Guilford, BATTLE OF.** Resting his troops a while in Virginia, after his race with Cornwallis, Greene recrossed the Dan into North Carolina; and as he moved cautiously forward to foil the efforts of Cornwallis to embody the Tories of that state, he found himself (March 1, 1781) at the head of about 5000 troops in good spirits. Feeling strong enough to cope with Cornwallis, he sought an engagement with him; and on the 15th they met near Guilford Courthouse, where they fiercely contended for the mastery. The battle-field was about five miles from the (present) village of Greensborough, in Guilford County, N. C. Greene had encamped within eight miles of the earl, on the evening of the 14th, and on the morning of the 15th he moved against his enemy. The latter was prepared to receive him. Greene had disposed his army in three positions—the first at the edge of woods on a great hill; the second in the forest, three hundred yards in the rear; and the third a little more than one fourth of a mile in the rear of the second. The first line was composed of North Carolina militia, mostly raw recruits, nearly 1100 in number, commanded by Generals Butler and Eaton. These had two cannons, with Washington's cavalry on the right wing, and Lee's legion, with Campbell's militia, on the left wing. The whole were commanded by Greene in person. The British appeared in the front of the Americans at a little past noon in full force, the right commanded by General Leslie, and the left by Colonel Webster. Under cover of a severe cannonade the British advanced, delivering a volley of musketry as they approached, and then, with a shout, rushed forward with fixed bayonets. The American militia fled after the first firing of one or two volleys, when the victors pressed on and attacked the second line, composed of Virginia militia under Generals Stevens and Lawson. After a stout resistance they, too, fell back upon the third line. Up to this time the battle had been carried on, on the part of the British, by their right, under Leslie. Now Webster, with the left, pressed forward with the right division in the face of a terrible storm of grape-shot and musketry. Nearly the whole of the two armies were now in conflict. The battle lasted almost two hours, when Greene, ignorant of the heavy losses sustained by the British, ordered a re-

treating, leaving his cannons behind and Cornwallis master of the field. It was one of the most sanguinary battles of the war. The Americans lost about 400 killed and wounded, besides 1000 who deserted to their homes. The British loss was about 600. Among the fatally wounded was Colonel Webster. That battle ended British domination in North Carolina. The army of Cornwallis was too much shattered for him to maintain the advantage he had gained. After issuing a proclamation boasting of his victory, calling upon the Tories to rally to his standard, and offering pardon to the "rebels" who should submit, he moved with his whole army towards Wilmington, near the seaboard. The news of the battle produced a profound sensation in England. "Another such victory," said C. J. Fox, in the House of Commons, "will ruin the British army;" and he moved (June 12, 1781) to recommend the ministers to conclude a peace with the Americans at once. William Pitt (son of the great Chatham) spoke of the war against the Americans with great severity.

**Gunboat Fleet.** When the Confederate line across Kentucky had been broken (see *Military Events in Kentucky*), the national government determined to concentrate the forces of Halleck and Buell for a great forward movement to push the Confederates towards the Gulf of Mexico, according to Frémont's plan (which see). Twelve gunboats—some of them iron-plated—had been constructed at St. Louis and Cairo, and at the close of January, 1861, these were armed with one hundred and twenty-six heavy guns and some light artillery, and were placed under the command of Flag-officer A. H. Foote, of the United States Navy.

er. Porter prepared, at the same time, to run by the batteries at Vicksburg with all his gunboat and mortar fleet, with transports and barges. The object was to cover and assist Grant's movement below. The armored vessels were laden with supplies; so, also, were the transports. It was arranged for the gunboats to go down in single file, a few hundred yards apart, attack the batteries as they passed, and allow the transports to pass under cover of the smoke. This was done on the evening of April 16, 1863. These vessels were terribly pounded by the batteries on the heights, but returned the fire with spirit. One of the vessels was set on fire, which burned to the water's edge and sank. The gantlet was successfully run, and only one man lost his life in the operation. Grant immediately ordered six more transports to do likewise, and it was done.

**Gunboats.** By the act of Congress approved April 21, 1806, provision was made for the construction of fifty gunboats. President Jefferson had imbibed very strong prejudice in favor of such vessels. A flotilla of them, obtained from Naples, had been used effectively in the war with Tripoli in 1804; and they were favorites in the service, because they afforded commands for enterprising young officers. A few had been built in the United States in 1805, their chief contemplated use being the defence and protection of harbors and rivers. Then was inaugurated the "gunboat policy" of the government, so much discussed for three or four years afterwards. Towards the close of the year (1806) the President announced that the fifty gunboats were so far advanced that they might be put into commission the following

GUNBOATS IN 1807.

**Gunboat Fleet Running the Gantlet at Vicksburg.** Grant withdrew his forces from the bayous above Vicksburg (see *Bayous in the Yazoo River*), and sent them down the west side of the Mississippi, to cross and gain the rear of Vicksburg, on the line of the Black Riv-

er. In December, 1807, the President was authorized to procure one hundred and eighty-eight additional gunboats, by purchase or construction, making in all two hundred and fifty-seven. These gunboats were variously rigged, as seen in the engraving. Some carried a sin-

gle swivel amidship, and others one in the bow, and sometimes one in the stern. Jefferson, who had urged the construction of these little vessels-of-war, appears to have conceived the idea that such a flotilla should merely be

was of another form. It was two boats covered by one common deck, and all heavily armored.

**Gunpowder, CAPTURE OF (1775).** South Carolina made vigorous preparations for war in 1775, but found herself greatly lacking in the

FOOTE'S GUNBOAT FLOTILLA, IN 1862.

kept in readiness, properly distributed along the coast, but not actually manned until necessity should call for their being put into commission. For this proposition he was ridiculed not only by naval officers, but among the people at large, and he was denounced by the opposition as "a dreaming philosopher," and the whole gunboat system as "wasteful imbecility called by the name of economy." Quite different were the gunboats that performed most efficient service on the Western rivers during our late Civil War. They were largely covered with plates of iron, moved by steam, and armed with very heavy guns. Foote (which see) commanded the first flotilla of gunboats on the Mississippi River. (See *Floating Batteries*.)

**Gunboats on the Western Rivers.** During the Civil War gunboats and "rams" in many forms were built for service on the Western rivers. Some of them were wooden structures only, while others were of iron or covered with heavy plates of iron. The *Manassas* (which see) had no appearance of a boat, but looked like a huge water-monster. The

THE LOUISIANA.

*Louisiana* showed another form of boat. Indeed, it was a floating battery, movable by steam. This was a Confederate structure. The *New Era*

quantity of gunpowder needed. The Council of Safety ordered a fast-sailing ship, under Captain Lamfever, to capture gunpowder and military stores in the island of New Providence. Just as he was about to sail, with twelve vol-

THE NEW ERA.

unteers, he was ordered to intercept a brig making her way towards St. Augustine, loaded with military stores and India goods. He surprised and boarded the brig, and took from her fifteen thousand pounds of gunpowder. He spiked her guns, and soon afterwards arrived at Charleston and gave the powder into the hands of the Committee of Safety. The victorious vessel had been chased to Charleston bar, but evaded her pursuers. This powder was of great service to the cause of liberty in America.

**Gunpowder Plot in 1861.** In June, 1861, a proposition was made to L. Pope Walker, the Confederate Secretary of War, to blow up the national Capitol some time between the 4th and 6th of July, 1861, at which time there would be a called session of Congress, and its halls, lobbies, and gallery would be filled with people. It was supposed President Lincoln would also be present. The plan so pleased the Confeder-

ates that directions were given for a conference between this modern Guy Fawkes and Judah P. Benjamin, the Confederate Attorney-general. The would-be destroyer of a multitude of innocent men, women, and children demanded a large sum of money for his proposed exploit. What arrangements were made with him (if any) have not been revealed. The plot was not undertaken. The strength of the national government at Washington soon became too manifest to make such an undertaking safe.

**Gwinnett, BUTTON**, a signer of the Declaration of Independence, was born in England about 1732; died in Georgia, May 27, 1777. He

was a merchant at Bristol, England, and emigrated to Charleston, S. C., in 1770. He settled on St. Catharine's Island, off the coast of Georgia, in 1772. Cautious and doubtful, he took no part in political affairs until after the war for independence was begun, when he became active in the patriot cause. He was chosen a representative in Congress in 1776, where he voted for and signed the Declaration of Independence. In 1777 he was President of the Provincial Council of Georgia, and by hostility to General McIntosh excited the resentment of the latter, who challenged Gwinnett to fight a duel. He accepted the challenge, and on May 15, 1776, was mortally wounded.

## H.

**Habeas Corpus, SUSPENSION OF THE PRIVILEGE OF THE WRIT OF.** The second clause of Section 9, Article I., of the National Constitution says: "The privilege of the Writ of Habeas Corpus shall not be suspended unless when, in case of rebellion or invasion, the public safety may require it."

**Habersham, JOSEPH**, was born at Savannah, Ga., July 28, 1751; died there, Nov. 17, 1815. His father, James, who was born in England in 1712, and died at New Brunswick, N. J., in 1775, accompanied Whitefield to Georgia in 1738, and

JOSEPH HABERSHAM.

was secretary of the province in 1754; president of the Council, and acting-governor in 1769-72. Joseph was a member of the first patriotic committee in Georgia in 1774, and ever afterwards took an active part in the defence of the liberties of his country. He helped to seize gunpowder in the arsenal in 1775, and was a member of the Council of Safety. He was one of a company who captured a government ship (July, 1775), with munitions of war, including fifteen thousand pounds of gunpowder. He led some volunteers who made the royal governor, Wright, a prisoner (Jan. 18, 1776), and confined him to his house under a guard. When Savannah was taken by the British, early in 1778, he

took his family to Virginia; but in the siege of Savannah (1779) by Lincoln and D'Estaing, he held the office of colonel, which he retained till the close of the war. He was appointed Postmaster-general in 1795, and resigned in 1801.

**Hadley, ATTACK OF INDIANS UPON.** At Hadley, on the Connecticut River, the Indians, in the absence of the little garrison, attempted the destruction of life and property, Sept. 1, 1675. The inhabitants were in the meeting-house, it being fast-day. The men seized their arms to defend themselves, their wives, and their little ones from the merciless barbarians. Just as the savages seemed about to strike a destructive blow, and the men, unskilled in military affairs, felt themselves almost powerless, a man with a long, flowing white beard and military air suddenly appeared, drew his sword, and, putting himself at the head of the armed men, filled them with courage and led them to victory. The barbarians fell back and fled, when the mysterious leader as suddenly disappeared, none knowing whence he came or whether he went. It was Colonel Goffe, the "regicide," who was then concealed in the house of Mr. Russell, at Hadley. (See *Goffe, William*.)

"Hail, Columbia!" a stirring, patriotic song, was written in the spring of 1798, when war with France seemed inevitable. Mr. Fox, a young singer and actor in the Philadelphia Theatre, was to have a benefit. There was so little novelty in the play-house that he anticipated a failure. On the morning before the appointed day he called upon Joseph Hopkinson, a lawyer and man of letters, who indulged in writing verses, and said, "Not a single box has been taken, and I fear there will be a thin house. If you will write me some patriotic verses to the air of the *President's March* (which see) I feel sure of a full house. Several people about the theatre have attempted it, but they have come to the conclusion it can't be done. I think you may succeed." Hopkinson retired to his study, wrote the first verse and chorus, and submitted them to Mrs. Hopkinson, who sang them with a harpsichord accompaniment. The tune and words harmonized. The song was soon finished, and the young actor received it the same evening. Next morning

the theatre placards contained an announcement that Mr. Fox would sing a new patriotic song. The house was crowded; the song was sung, and the audience were wild with delight, for it touched the public heart with electrical effect at that moment. Eight times the singer was called out to repeat the song. When it was sung the ninth time the whole audience arose and joined in the chorus. On the following night (April 30, 1798) President Adams and his wife, and some of the heads of departments, with their families, were present, and the singer was called out time after time. It was repeated night after night in the theatres of Philadelphia and other places, and it became the universal song of the boys in the streets. On one occasion a throng of people gathered before the author's residence, and suddenly the song *Hail, Columbia!* from five hundred voices broke the stillness of the night.

**Haines's Bluff.** At this point on the Yazoo River there were stirring military events preparatory to the siege of Vicksburg. General Sherman, with the Fifteenth Corps, had been operating in the Yazoo region, and when Grant determined to change his base of supplies to Grand Gulf, below Vicksburg, Sherman was ordered to make a feint against Haines's Bluff, which the Nationals had been unable to pass. On the morning of April 29 he proceeded from Milliken's Bend, with Blair's division, in ten steamboats, and armored and other gunboats, and went up the Yazoo. On the morning of May 6 the armored gunboats assailed the fortifications at Haines's Bluff, and in the evening Blair's troops were landed, as if with the intention of making an attack. The bombardment was kept up until dark, when the troops were quietly re-embarked. The assault and menace were repeated the next day, when Sherman received an order from Grant to hasten with his troops down the west side of the Mississippi and join him at Grand Gulf. (See *Vicksburg, Siege of.*)

**Hakluyt, RICHARD**, was born about 1553; died Oct. 23, 1616. Educated at Oxford University, he was engaged there as a lecturer on cosmography, and was the first who taught the use of globes. In 1583 he published an account of voyages of discovery to America; and four years afterwards, while with the English ambassador at Paris, Sir Edward Stafford, probably as his chaplain, he published in French a narrative of the voyages of Landonniere and others; and in 1587 he published them in English, under the title of *Four Voyages unto Florida*. On his return to England in 1589, Hakluyt was appointed by Raleigh one of the company of adventurers for colonizing Virginia. His greatest work — *The Principal Navigations, Voyages, Trafficks, and Discoveries of the English Nation, made by Sea or over Land, to the most remote and farthest distant Quarters of the Earth, at any Time within the Compass of these Fifteen Hundred Years* — was published the same year. It contains many curious documents, and is illustrated by maps. Anthony à Wood, writing late in the seventeenth century, referring to this great work, spoke of it as an

“honor to the realm of England, because possessing many ports and islands in America that are bare and barren, and only bear a name for the present, but may prove rich places in future time.” Now nearly sixty million people are on the continent of North America. Hakluyt was appointed prebendary of Westminster in 1605, having been previously prebendary of Bristol. Afterwards he was rector of Wetheringset, Suffolk, and at his death was buried in Westminster Abbey. Henry Hudson, who discovered Spitzbergen in 1608, gave the name of Hakluyt's Head to a point on that island; and Bylot gave his name to an island in Baffin's Bay. A society founded in 1846, for the republication of early voyages and travels, has taken his name.

**Haldimand, SIR FREDERICK, K. B.**, was born at Neuchâtel, Switzerland, in October, 1728; died at Yverdon, Switzerland, June 5, 1791. He left the Prussian army, and in 1754, with his friend Henry Bouquet (which see), entered the British military service. He came to America in 1757, and as lieutenant-colonel distinguished himself at Ticonderoga (1758) and Oswego (1759). He accompanied Amherst to Montreal in 1760. In 1767 he was employed in Florida, and became major-general in America in 1772. Returning to England in 1775 to give the ministry information respecting the colonies, he was commissioned a major-general (Jan. 1, 1776), and in 1777 a lieutenant-general and lieutenant-governor of Quebec, where he succeeded Carleton as governor in 1778. He ruled in an arbitrary manner until 1784, when he returned to England.

**Hale, NATHAN, DEATH OF, AS A SPY.** In Knowlton's regiment (see *Harlem Plains, Battle of*) was a fine young captain, Nathan Hale, a trusted officer, and chosen for the perilous service of a spy. At the house of Robert Murray, on the Inceberg (now Murray Hill, in the city of New York), where Washington had his headquarters for a brief time while retreating towards Harlem Heights, Hale received instructions on duty from the commander-in-chief. He entered the British camp on Long Island as a plain young farmer, and made sketches and notes unsuspected. A Tory kinsman knew and betrayed him. He was taken to Howe's headquarters at the Beekman mansion, and confined in the green-house all night. He frankly avowed his name, rank, and character as a spy (which his papers revealed), and, without even the form of a trial, was handed over to the provost-marshal (Cunningham) the next morning (Sept. 22, 1776) to be hanged. That infamous officer denied Hale the services of a clergyman and the use of a Bible; but the more humane officer who superintended the execution furnished him with materials to write letters to his mother, his betrothed, and sisters. These the brutal Cunningham destroyed before the face of his victim, while tears and sobs marked the sympathy of the spectators. With unflinching voice, Hale said, at the last moment, “I only regret that I have but one life to lose for my country.” Hale was a native of Coventry, Conn., where he was born, June 6, 1755, and graduated at Yale

College in 1773. He was teaching school at New London when the affair at Lexington caused him to enter the army of patriots as a captain in Knowlton's regiment. Just before the American army left New York, Hale, with an associate, took, at midnight, a sloop laden with provisions from under the guns of a frigate.

**Halifax, THE EARL OF**, when only thirty-two years of age (1748), was made First Commissioner, or President, of the Board of Trade and Plantations, which office he held for many years, though unfitted by a lack of statemanship, intellectual strength, and knowledge of the world, for the position. He was fond of authority and show, but was totally ignorant of the character of the American people. He was ambitious of renown; and, finding himself virtually the controller of the affairs of a vast region of country, he resolved to make a name to be honored as a wise, industrious, and energetic executive officer. He failed to do so.

**Hall, CHARLES FRANCIS**, an arctic explorer, was born at Rochester, N. H., in 1821; died in Greenland, Nov. 8, 1871. First he was a blacksmith, and then a journalist in Cociunati. In 1859 he appeared in New York, and at a meeting of the Geographical Society he offered to go in search of the remains of Sir John Franklin. Funds for the purpose were raised, and in May, 1860, he sailed from New London, Conn., in a whaling vessel, commanded by Captain Buddington. The vessel became locked in the ice. He made the acquaintance of the Esquimaux, learned their language, acquired their friendship, and lived with them two years, making his way back to the United States in September, 1862, without having discovered any traces of Sir John Franklin and his party. He was accompanied by an Esquimaux and his wife. His *Arctic Researches and Life among the Esquimaux* was published in 1864. In July of that year he set out on another polar expedition, with Buddington, expecting to be absent two or three years, but did not return until late in 1869. Satisfied that none of Franklin's men were alive, Hall labored to induce Congress to fit out a ship to search for the supposed open polar sea, and it made an appropriation for the purpose. A ship called the *Polaris* was fitted out, and sent (from New York, June 29, 1871) under the general command of Hall, Buddington going as sailing-master, accompanied by scientific associates. In August they reached the northern settlement in Greenland. Pushing on northward, the vessel reached 82° 16', probably the most northerly point yet reached. They wintered in a cove (which they called *Polaris*), in latitude 81° 33'. In October Hall and three others started on a sledge expedition northward, and reached a point a few miles short of that touched by the *Polaris*. They soon returned, when Hall was taken sick and soon afterwards died, it is supposed from apoplexy. In August, 1872, Captain Buddington attempted to return with the *Polaris*, but for weeks was in the ice-pack. She was in great peril, and preparations were made to abandon her. The boats, provisions, and

nineteen of the crew were put on the ice, but before the rest of them could get out the vessel broke loose and drifted away. Those on the ice drifted southward for one hundred and ninety-five days, floating helplessly about two thousand miles. An Esquimaux, the friend of Captain Hall, kept the company from starving by his skill in seal-fishing. The party were picked up in April, 1873, by a Nova Scotia whaling steamer, and the *Polaris* made a port on an island, where her crew wintered, made boats of her boards, and set sail southward. They were picked up, June 23, by a Scotch whaler and taken to Dundee.

**Hall, DOMINICK AUGUSTINE**, was born in South Carolina in 1765; died in New Orleans, Dec. 19, 1820. He was district judge of Orleans Territory from 1809 till it became the State of Louisiana in 1812, when he was appointed United States judge of the state. While the city of New Orleans was under martial law early in 1815, General Jackson caused Judge Hall's arrest for interfering with the operation of that law. On his release, in March, he summoned Jackson to answer for contempt of court, and fined him \$1000. (See *Jackson, Andrew*.)

**Hall, GORDON**, first American missionary to Bombay, was born in Tolland County, Mass., April 8, 1784; died of cholera in India, March 20, 1826. He was ordained at Salem in 1812, and sailed for Calcutta, where he arrived in February, 1813, and spent thirteen years there in missionary labors.

**Hall, LYMAN**, signer of the Declaration of Independence, was born in Connecticut in 1725; died in Burke County, Ga., Oct. 19, 1790. He graduated at Yale College in 1747, and, becoming a physician, he established himself at Sumbury, Ga., where he was very successful. He was a member of the Georgia Convention in 1774-75, and was influential in causing Georgia to join the Confederacy. He was sent as a delegate to Congress in March, 1775, by the Parish of St. John, and in July was elected a delegate by the Provincial Convention of Georgia (which see). He remained in Congress until 1780, when the invasion of the state caused him to hasten home. He was governor of Georgia in 1783.

**Halleck, FITZ-GREENE**, poet, was born at Guilford, Conn., July 8, 1790; died there, Nov. 9, 1867. At the age of eighteen years he became a clerk in the banking-house of Jacob Barker, and was long a confidential clerk with John Jacob Astor, who made him one of the first trustees of the Astor Library. From early boyhood he wrote verses. With Joseph Rodman Drake, he wrote the humorous series known as *The Croker Papers* for the *Evening Post* in 1819. His longest poem, *Fanny*, a satire upon the literature and politics of the times, was published in 1821. The next year he went to Europe, and in 1827 his *Alnwick Castle, Marco Bozzaris*, and other poems were published in a volume. Halleck was a genuine poet, but he wrote comparatively little. His pieces of importance are only thirty-two in number, and altogether comprise only about four thousand lines. Yet he wrote with

great facility. His *Fanny*, in the measure of Byron's *Don Juan*, was completed and printed within three weeks after it was begun. Late in life he joined the Roman Catholic Church.

**Halleck, HENRY WAGER**, was born at Waterville, Oneida Co., N. Y., in 1814; died at Louisville, Ky., Jan. 9, 1872. He graduated at West Point in 1839, entering the engineer corps. Until June, 1840, he was assistant professor at

HENRY WAGER HALLECK.

West Point, and from 1841 to 1844 he was employed on the fortifications in New York harbor. In 1845 he visited the military establishments of Europe. In the winter of 1845-46 he delivered at the Lowell Institute, Boston, a series of lectures on the science of war, since published in book form with the title of *Elements of Military Art and Science*. He served in California and on the Pacific coast during the war with Mexico, in which he distinguished himself. He was on the staff of Commodore Shubrick at the capture of Mazatlan, and was made lieutenant-governor. From Aug. 13, 1847, to Dec. 20, 1849, he was Secretary of the Province and Territory of California, and had a large share in preparing the state constitution. He left the army in 1854, and began the practice of law in San Francisco. In August, 1861, Halleck was appointed a major-general of the United States Army, and succeeded Frémont in command of the Western Department in November. In 1862 he took command of the army before Corinth, and in July of that year he was appointed general-in-chief, and held that position until superseded by Grant, when he became chief-of-staff in the United States Army, which position he held till April, 1865, when he was placed in command of the Military Division of the James, with his headquarters at Richmond. In August he was transferred to the Division of the Pacific, and in March, 1869, to that of the South, with headquarters at Louisville. General Halleck published several works upon military and scientific topics.

**Hamet, CAMELLI**, claimed to be the lawful incumbent of the seat of power at Tripoli. The reigning Bey, his brother, was considered a usurper. Hamet had fled to Egypt for the pro-

tection of the vicaroy. General Eaton agreed to assist Hamet in procuring a restoration of his rights, but failed through the conclusion of a peace between the ruler of Tripoli and the United States in 1805. (See *Tripoli, War with*.) Hamet was left at Syracuse, with a large family, by an American vessel, and without any means of support. He sent an indignant letter to the United States government, complaining of bad faith, and Congress voted him \$2400 for his temporary relief.

**Hamilton, ALEXANDER**, was born at Nevis, W. I., Jan. 11, 1757; mortally wounded in a duel July 11, 1804. His father was a Scotchman; his mother, of Hnguenot descent. He came to the English-American colonies in 1772, and attended a school kept by Francis Barber (which see) at Elizabeth, N. J., and entered King's (Columbia) College in 1773. He made a speech to a popular assemblage in New York city in 1774, when only seventeen years of age, remarkable in every particular, and he aided the patriotic cause by his writings. In March, 1776, he was made captain of artillery, and served at White Plains, Trenton, and Princeton; and in March, 1777, became aide-de-camp to Washington, and his secretary and trusted confidant. He was of

ALEXANDER HAMILTON.

great assistance in Washington in his correspondence, and in planning campaigns. In December, 1780, he married a daughter of General Philip Schuyler, and in 1781 he retired from Washington's staff. In July he was appointed to the command of New York troops, with the rank of colonel, and captured by assault a redoubt at Yorktown, Oct. 14, 1781. After the surrender of Cornwallis he left the army; studied law; was a member of Congress (1782-83), and soon took the lead in his profession. He was a member of the New York Legislature in 1787, and of the convention at Philadelphia, that year, that framed the National Constitution. With the aid of the able pens of Madison and Jay, Hamilton put forth a series of remarkable essays in favor of the Constitution, which, in book form, bear the name of *The Federalist* (which see). Hamilton wrote the larger half of that work. He was called to the cabinet of Washington as Secretary of the Treasury, and was the founder of the financial system of the

Republic. Having finished the great work of assisting to put in motion the machinery of the government of the United States, and seeing it in successful working order, he resigned, Jan. 31, 1795, and resumed the practice of law; but his pen was much employed in support of the policy of the national government. When, in 1798, war with France seemed probable, and President Adams appointed Washington commander-in-chief of the armies of the Republic, Hamilton was made his second in command, with the rank of major-general. On the death of Washington (December, 1799), Hamilton succeeded him as commander-in-chief, but the provisional army was soon disbanded. Though opposed to the practice of duelling, he felt compelled to accept a challenge to mortal combat from Aaron Burr, and was killed. (See *Hamilton and Burr*.)

**Hamilton and a National Government.** On Sept. 3, 1780, Alexander Hamilton wrote to Duane, member of Congress from New York, and expressed his views on the subject of state supremacy and a national government. He proposed a call for a convention of all the states on the 1st of November following, with full authority to conclude, finally, upon a general confederation. He traced the cause of the want of power in Congress, and censured that body for its timidity in refusing to assume authority to preserve the infant republic from harm. "Undefined powers," he said, "are discretionary powers, limited only by the object for which they were given." He said that "some of the lies of the army, but for the influence of Washington, would obey their states in opposition to Congress. . . . Congress should have complete sovereignty in all that relates to war, peace, trade, finance, foreign affairs, armies, fleets, fortifications, coining money, establishing banks, imposing a land-tax, poll-tax, duties on trade, and the unoccupied lands." He proposed that the general government should have power to provide certain perpetual revenues, productive and easy of collection. He claimed the plan of confederation then before Congress to be defective, and urged alteration. "It is neither fit for war," he said, "nor for peace. The idea of an uncontrollable sovereignty in each state will defeat the powers given to Congress and make our union feeble and precarious." He recommended the appointment of joint officers of state—for foreign affairs, for war, for the navy, and for the treasury—to supersede the "committees" and "boards" hitherto employed; but he neither favored a chief magistrate with supreme executive power, nor two branches in the national legislature. The whole tone of Hamilton's letter was hopeful of the future, though written in his tent in the midst of a suffering army.

**Hamilton and Burr.** In the winter of 1804 General Alexander Hamilton was in Albany, attending to law business. While he was there a caucus or consultation was held by the leading Federalists in a private room in Lewis's City Tavern. It was a secret meeting to consult and compare opinions on the question whether the

Federalists, as a party, ought to support Col. Aaron Burr for the office of governor of the State of New York. In a bedroom adjoining the closed dining-room in which the caucus was held, one or two of Burr's political friends were concealed, and heard every word uttered in the meeting. The characters of men were fully discussed, and Hamilton, in a speech, spoke of Burr as an unsuitable candidate, because no reliance could be placed in him. The spies reported the proceedings to their principal, and on the 17th of February (1804) a correspondent of the *Morning Chronicle* wrote that at a Federal meeting the night before the "principal part of Hamilton's speech went to show that no reliance ought to be placed in Mr. Burr." In the election which ensued Burr was defeated, and, though Hamilton had taken no part in the canvass, his influence was such that Burr attributed his defeat to him. Burr, defeated and politically ruined, evidently determined on revenge—a revenge that nothing but the life of Hamilton would satiate. Dr. Charles Cooper, of Albany, had dined with Hamilton at the table of Judge Taylor, where Hamilton spoke freely of Burr's political conduct and principles only, to which he declared himself hostile. Dr. Cooper, in his zeal, just before the election, in published letters, said: "Hamilton and Kent both consider Burr, politically, as a dangerous man, and unfit for the office of governor." He also wrote that Hamilton and Kent both thought that Burr ought not to be "trusted with the reins of government," and added, "I could detail a still more despicable opinion which Hamilton had expressed of Burr." The latter made these private expressions of Hamilton concerning his political character a pretext for a challenge to mortal combat; and, seizing upon the word "despicable," sent a note to Hamilton, demanding "a prompt and unqualified acknowledgment or denial of having said anything which warranted such an expression." Several notes passed between Hamilton and Burr, through the hands of friends, in one of which Hamilton frankly said that "the conversation which Dr. Cooper alluded to turned wholly on political topics, and did not attribute to Colonel Burr any instance of dishonourable conduct, nor relate to his private character; and in relation to any other language or conversation of General Hamilton which Colonel Burr will specify, a prompt and frank avowal or denial will be given." This was all an honorable man could ask. But Burr seemed to thirst for Hamilton's life, and he pressed him to fight a duel in a manner which, in the public opinion which then prevailed concerning the "code of honor," Hamilton could not decline. They fought at Weehawken (July 11, 1804), on the west side of the Hudson River, and Hamilton, who would not discharge his pistol at Burr, for he did not wish to hurt him, was mortally wounded and died the next day. The public excitement, without regard to party, was intense. Burr fled from New York and became for a while a fugitive from justice. He was politically dead, and bore the burden of scorn and remorse for more than thirty years.

**Hamilton and Jefferson, QUARREL OF.** The persistent and sometimes violent attacks upon the financial policy of the government, sometimes assuming the aspect of personality towards Hamilton, that appeared in Freneau's *National Gazette*, in 1792, at length provoked the Secretary of the Treasury to publish a newspaper article, over the signature of "An American," in which attention was called to Freneau's paper as the organ of the Secretary of State, Mr. Jefferson, and edited by a clerk employed in his office. This connection was represented as indelicate, and inconsistent with Jefferson's professions of republican purity. He commented on the inconsistency and indelicacy of Mr. Jefferson in retaining a place in the cabinet when he was opposed to the government he was serving, vilifying its important measures, adopted by both branches of the Legislature, and sanctioned by the chief magistrate; and continually casting obstacles in the way of establishing the public credit and providing for the support of the government. The paper concluded with a contrast, as to the effect upon the public welfare, between the policy adopted by the government and that advocated by the party of which Jefferson aspired to be leader. Freneau denied, under oath, that Jefferson had anything to do with his paper, and declared he had never written a line for it. To this, "An American" replied that "actions were louder than words or oaths," and charged Jefferson with being "the prompter of the attacks on government measures and the aspersions on honorable men." The papers by "An American" were at once ascribed to Hamilton, and drew out answers from Jefferson's friends. To these Hamilton replied. The quarrel waxed hot. Washington (then at Mount Vernon), as soon as he heard of the newspaper war, tried to bring about a truce between the angry secretaries. In a letter to Jefferson (Aug. 23, 1792) he said: "How unfortunate and how much to be regretted it is that, while we are encompassed on all sides with avowed enemies and insidious friends, internal dissensions should be harrowing and tearing out our vitals." He portrayed the public injury that such a quarrel would inflict. He wrote to Hamilton to the same effect. Their answers were characteristic of the two men, Jefferson's concluding with an intimation that he should retire from office at the close of Washington's term. Hamilton and Jefferson were never reconciled; personally there was a truce, but politically they were bitter enemies.

**Hamilton, ANDREW,** was an eminent lawyer of Pennsylvania, and died in Philadelphia, Aug. 4, 1741, at a ripe old age. He acquired much distinction by his defence of the liberty of the press on the trial of Zenger in New York (which see). He filled many public stations in Pennsylvania, including that of Speaker of the Assembly, which he resigned in 1739 in consequence of physical infirmity.

**Hamilton, GOVERNOR, AT DETROIT.** One of the most active promoters of Indian raids upon the frontier settlements of the Americans in the

Northwest was Colonel Henry Hamilton, Lieutenant-governor of Detroit. To that post he summoned several Indian nations to a council late in 1777; and from that point he sent abroad along the frontiers bands of savages to murder and plunder the American settlers. Their cruelties he applauded as evidence of their attachment to the royal cause. He gave standing rewards for scalps, but offered none for prisoners. His war-parties, composed of white men and Indians, spared neither men, women, nor children. He planned a confederation of the tribes to desolate Virginia. In 1778 he wrote to Germain, whose favorite he was, "Next year there will be the greatest number of savages on the frontier that has ever been known, as the Six Nations have sent belts around to encourage those allies who have made a general alliance." But early in that year he was made a prisoner of war at Vincennes, and he was sent to Virginia. (See *Clarke, George Rogers.*) He had formed a conspiracy for the Southern and Northern Indians to desolate the whole frontier from New York to Georgia.

**Hamilton, SCHUYLER,** was born in New York, July 25, 1822, and graduated at West Point in 1841. He served in the war with Mexico, and was acting aid to General Scott. He was severely wounded in a hand-to-hand engagement with Mexicans. He was breveted captain, and remained on Scott's staff until 1854. He left the army in 1855, but on the fall of Sumter (1861) he joined the New York Seventh Regiment as a private. He became aid to General Butler at Annapolis, and soon entered the military family of General Scott at Washington. He was made brigadier-general in November, 1861, and accompanied General Halleck to Missouri, where he commanded the district of St. Louis. In February, 1862, he commanded a division in Pope's army; and by the planning and construction of a canal, greatly assisted in the capture of New Madrid and Island Number Ten. In September, 1862, he was made major-general of volunteers. He resigned in February, 1863.

**Hamilton's Plan for a National Government.** Hamilton was afraid of democracy. He wished to secure for the United States a strong government; and in the convention at Philadelphia in 1787 he presented a plan, the chief features of which were, an assembly, to be elected by the people for three years; a senate, to be chosen by electors voted for by the people (as the President of the United States now is), to hold office during good behavior; and a governor, also chosen to rule during good behavior by a similar but more complicated process. The governor was to have an absolute negative upon all laws, and the appointment of all officers, subject, however, to the approval of the senate. The general government was to have the appointment of the governors of the states, and a negative upon all state laws. The senate was to be invested with the power of declaring war and ratifying treaties. In a speech preliminary to his presentation of this plan, Hamilton expressed doubts as to republican government at

all, and his admiration of the English constitution as the best model; nor did he conceal his theoretical preference for monarchy, while he admitted that, in the existing state of public sentiment, it was necessary to adhere to republican forms, but with all the strength possible. He desired a general government strong enough to counterbalance the strength of the state governments and reduce them to subordinate importance.

#### Hamilton's Report on the Finances (1790).

The first report to the national Congress by the Secretary of the Treasury was waited for with great anxiety not only by the public creditors, but by every thoughtful patriot. It was presented to the House of Representatives Jan. 15, 1790. It embodied a financial scheme which was generally adopted, and remained the line of financial policy of the new government for more than twenty years. On his recommendation, the national government assumed not only the foreign and domestic debts of the old government, incurred in carrying on the late war, as its own, but also the debts contracted by the several states during that period for the general welfare. The foreign debt, with accrued interest, amounting to almost \$12,000,000, was due chiefly to France and private lenders in Holland. The domestic debt, including outstanding Continental money and interest, amounted to over \$42,000,000, nearly one third of which was accumulated accrued interest. The state debts assumed amounted in the aggregate to \$21,000,000, distributed as follows: New Hampshire, \$300,000; Massachusetts, \$4,000,000; Rhode Island, which came into the Union May 29, 1790, \$200,000; Connecticut, \$1,600,000; New York, \$1,200,000; New Jersey, \$800,000; Pennsylvania, \$2,200,000; Delaware, \$200,000; Maryland, \$800,000; Virginia, \$3,000,000; North Carolina, \$2,400,000; South Carolina, \$4,000,000; Georgia, \$300,000. Long and earnest debates on this report occurred in and out of Congress. There was but one opinion about the foreign debt, and the President was authorized to borrow \$12,000,000 to pay it with. As to the domestic debt, there was a wide difference of opinion. The Continental bills, government certificates, and other evidences of debt were mostly held by speculators, who had purchased them at greatly reduced rates; and many prominent men thought it would be proper and expedient to apply a scale of depreciation to them, as in the case of the paper-money towards the close of the war, in liquidating them. Hamilton declared such a course would be dishonest and impolitic, and that the public promises should be met in full, in whatever hands the evidences were found. It was the only way, he argued justly, to sustain public credit. He proposed the funding of the public debt in a fair and economical way by which the creditors should receive their promised six per cent. until the government should be able to pay the principal. He assumed that in five years, if the government should pursue an honorable course, loans might be made for five, and even four, per cent., with which the claims might be met. The propositions of

Hamilton, though warmly opposed, were obviously so just that they were agreed to in March (1790), and a new loan was authorized, payable in certificates of the domestic debt at their par value in Continental bills of credit (new issue), at the rate of one hundred to one. Congress also authorized an additional loan to the amount of \$21,000,000, payable in certificates of the state debts. A system of revenue from imports and internal excise, proposed by Hamilton, was adopted.

**Hampden (ME.), BRITISH AT.** When the British had taken possession of Castine (which see), a land and naval force was sent up the Penobscot River to capture or destroy the corvette *John Adams*, which had fled up the river to the town of Hampden. The commander of the *John Adams*, Captain C. Morris, was warned of his danger, and he notified General John Blake, Commander of the Tenth Division of Massachusetts Militia. The British force consisted of two sloops-of-war, a tender, a large transport, and nine launches, commanded by Commodore Barrie, and 700 soldiers, led by Lieutenant-colonel St. John. The expedition sailed on Sept. 1, 1814, and the next morning General Gosselin took possession of Belfast, on the western shore of Penobscot Bay, at the head of 600 troops. The expedition landed some troops at Frankfort, which marched up the western side of the river. The flotilla, with the remainder, sailed on, and arrived near Hampden at five o'clock in the evening, when the troops and about 80 marines were landed and bivouacked. They found the militia assembling to resist them. Meanwhile Captain Morris had taken out of the *John Adams* nine short 18-pounders, and mounted them on a high bank, in charge of Lieutenant Wadsworth. With the remainder of his guns, he took position on the wharf, with about 200 seamen and marines, prepared to defend his crippled ship to the last extremity. She had been much damaged by striking a rock when she entered Penobscot Bay, and had run up to Hampden to avoid capture. The British detachment landed at Frankfort, and moved forward cautiously, in a dense fog, to join the other invaders, with a vanguard of riflemen. Blake had sent a body of militia to confront the invaders. These were suddenly attacked, when they broke and fled in every direction, leaving Blake and his officers alone. This panic imperilled the force that was to defend the *John Adams*, when Morris, seeing no other means for the salvation of his troops but in flight, ordered his guns to be spiked and the vessel set on fire. This was done, and the men under Morris fled northward. With Blake and his officers and a bare remnant of his command, Morris retreated to Bangor, and thence made his way overland to Portland. The British took possession of Hampden, and a part of their force—500 strong—pushed on to Bangor with their vessels. They met a flag of truce with a message from the magistrates of Bangor asking terms of capitulation. Nothing was granted excepting respect for private property. They entered the town, when Commodore Barrie gave

notice that persons and property should be protected if supplies were cheerfully furnished. This promise was speedily broken. The sailors were given license to plunder as much as they pleased. Many stores were robbed of everything valuable. The leader of the land-troops tried to protect private property. The British remained in Bangor thirty-one hours, quartered on the inhabitants, who were compelled to sign a parole as prisoners of war. General Blake was compelled to sign the same, and 190 citizens were thus bound. Having despoiled the inhabitants of property valued at over \$20,000, and burned several vessels, the marauders departed, to engage in similar work at Hampden (Sept. 5). Barrie allowed the sailors to commit the most wanton acts of destruction. They desolated the village meeting-house—tore up

OLD MEETING-HOUSE (NOW TOWN-HOUSE), HAMPDEN.

the Bible and psalm-books in it, and demolished the pulpit and pews. As at Havre-de-Grace (which see), they wantonly butchered cattle and hogs, and compelled the selectmen to sign a bond to guarantee the delivery of vessels then at Hampden at Castine. The speedy return of peace cancelled the bond. The total loss of property at Hampden by the hands of the marauders, exclusive of a very valuable cargo on board the schooner *Commodore Decatur*, was estimated at \$44,000. When a committee at Hampden waited upon Barrie and asked for the common safeguards of humanity, he replied, "I have none for you; my business is to burn, sink, and destroy"—the cruel order issued by Admiral Cochrane.

**Hampton, ATTACK UPON (1813).** The British, exasperated by their repulse at Craney Island (which see), proceeded to attack the flourishing little village of Hampton, near Old Point Comfort. It was defended at the time by about 450 Virginia soldiers, commanded by Major Stapleton Crutchfield. They were chiefly militia infantry, with a few artillerymen and cavalry. They had a heavy battery to defend the waterfront of the camp and village, composed of four 6-, two 12-, and one 18-pounder cannon, in charge of Sergeant William Burke. Early on the morning of June 25, 1813, about 2500 British land-troops, under General Sir Sidney Beckwith (including rough French prisoners, called *Chasseurs Britanniques*), landed under cover of the guns of the *Mohawk*, behind a wood, about two miles from Hampton. Most of the inhabitants fled; the few who could not were willing to trust to

the honor and clemency of the British, if they should capture the town. As they moved upon the village, Crutchfield and his men—infantry, artillery, and cavalry—fought the invaders gallantly; but at length overwhelming numbers, failure of gunpowder, volleys of grape-shot, and flights of Congreve rockets compelled the Americans, who were partially outflanked, to break and flee in the direction of Yorktown. Thus ended a sharp battle, in which the British lost, in killed, wounded, and missing, about fifty men, and the Americans about thirty. Of eleven missing Americans, ten had fled to their homes. The victorious British now entered the village of Hampton, and Cockburn, who had come on shore, and was in chief command, gave the place up to pillage and rapine. The atrocities committed at that town upon the defenceless inhabitants of Hampton, particularly the women, were deeply deplored and condemned by the British authorities and writers. Cockburn, who was doubtless the chief instigator of them, covered his name with dishonor by the act. The British officers who tried to palliate the offence by charging the crimes upon the Frenchmen were denounced by the most respectable British writers. A commission appointed to investigate the matter said, in their report, "The sex hitherto guard-

ed by the soldier's honor escaped not the assaults of superior force." Leaving Hampton, Cockburn sailed down the coast of North Carolina on a marauding expedition. (See *Amphibious War*.)

**Hampton Blockaded.** The village of Hampton is near the end of the peninsula between the York and James rivers, Virginia. An armed sloop was driven ashore there by a gale in October, 1775. The Hamptonians took out her guns and munitions of war, and then burned her, making her men prisoners. Dunmore at once blockaded the port. The people called to their aid some Virginia regulars and militia. Dunmore sent some tenders close into Hampton Roads to destroy the town. The military marched out to oppose them; and when they came within gunshot distance George Nicholas, who commanded the Virginians, fired his musket at one of the tenders. This was the first gun fired at the British in Virginia. It was followed by a volley. Boats sunk in the channel retarded the British ships, and, after a sharp skirmish the next day (Oct. 27), the blockaders were driven away. One of the tenders was taken, with its armament and seamen, and several of the British were slain. The Virginians did not lose a man. This was the first battle of the Revolution in Virginia.

**Hampton, DESTRUCTION OF (1861).** On the night of Aug. 7, 1861, the village of Hampton, near Fortress Monroe (which see), containing about five hundred houses, was set on fire by order of the insurgent general Magruder, and all but the court-house and seven or eight other

buildings were consumed. National troops had occupied Hampton after the battle of Big Bethel (which see), but had just been withdrawn. Among other buildings destroyed at that time was the ancient St. John's Church, in the sub-

ST. JOHN'S CHURCH.

urbs of the village. It was the third oldest house of worship in Virginia. The earliest inscription found in its graveyard was 1701. Before the Revolution the royal arms, handsomely carved, were upon the steeple. It is said that, soon after the Declaration of Independence, the steeple was shattered by lightning and the insignia of royalty hurled to the ground. The church was in a state of good preservation, and was used as a place of worship according to the ritual of the Protestant Episcopal Church in America, until 1861.

**Hampton, WADE**, was born in South Carolina in 1754; died at Columbia, S. C., Feb. 4, 1835. He was distinguished as a partisan officer under Sumter and Marion in the Revolution. Was twice a member of Congress—from 1795 to 1797, and from 1803 to 1805. In October, 1808, he was commissioned a colonel in the United States Army; brigadier-general in 1809, and major-general March 2, 1813. Imperious and overbearing in his nature and deportment, he was constantly quarrelling with his subordinates. He was superseded by Wilkinson in command at New Orleans when the war broke out in 1812, and was put in command of the Army of the North, with headquarters on the borders of Lake Champlain. In that position he gained no honors, and his career there was chiefly marked by disobedience to the orders of his superiors. In April, 1814, he resigned his commission, and left the army. He was an extensive land and slave owner in South Carolina and Louisiana, and passed there a large portion of his later years. — His grandson, Wade Hampton, was a leader of Confederate cavalry in the Civil War, in which he gained distinction for boldness and courage. He was elected to Congress in 1879.

**Hancock and Adams.** (See *Adams and Hancock.*)

**Hancock and Washington.** (See *Washington's Tour in New England and Official Etiquette.*)

**Hancock, JOHN, LL.D.**, was born at Quincy, Mass., Jan. 12, 1737; died there, Oct. 8, 1793. He

graduated at Harvard in 1754, and becoming a merchant with his uncle, inherited that gentleman's large fortune and extensive business. He

JOHN HANCOCK.

was one of the most active of the Massachusetts "Sons of Liberty" (which see), and, with Samuel Adams, was outlawed by Gage in June, 1775. Hancock was a member of the Provincial Assembly in 1766, and was chosen President of the Provincial Congress in October, 1774. He was a delegate to the first Continental Congress, and continued in that body until 1778. As President of Congress, he first placed his bold signature to the Declaration of Independence. In February, 1778, he was appointed first major-general of the Massachusetts militia, and took part in Sullivan's campaign in Rhode Island in August following. He was a member of the Massachusetts State Convention in 1780, and gov-

HANCOCK'S HOUSE, BOSTON.

ernor of the state from 1780 to 1785, and from 1787 till his death. He was president of the state convention that adopted the National Constitution. Hancock's residence was in a fine stone

mansion on Beacon Street, fronting the Common. It was built by his uncle, Thomas Hancock, from whom he inherited a fortune.

**Hancock, WINFIELD SCOTT,** was born in Montgomery County, Penn., Feb. 14, 1824, and graduated at West Point in 1844. He served in the war with Mexico, and left that country quartermaster of his regiment. In September, 1861, he was made brigadier-general of volunteers, and served in the campaign on the Virginia peninsula in 1862. He was distinguished in the battles of South Mountain and Antietam. Having been made major-general of volunteers in November, 1862, he led a division at Fredericksburg in December; also at Chancellorsville and Gettysburg, in 1863. Placed in command of the Second Army Corps, he led it in the campaign of the Army of the Potomac in 1864-65. In August, 1865, he was made a brigadier-general in the United States Army, and in 1866 was breveted major-general. He was in command of different military departments after the war; and was the Democratic candidate for the presidency of the U. S., in 1880. Died Feb. 9, 1886.

**Hand, EDWARD,** was a native of Ireland, born Dec. 31, 1744; died at Rockford, Lancaster Co., Penn., Sept. 3, 1802. He came to America in the Eighth Royal Irish regiment, in 1774, as surgeon's mate; resigned his position on his arrival, and settled in Pennsylvania for the practice of the medical profession. He joined a regiment as lieutenant-colonel at the outbreak of the Revolution, and served in the siege of Boston. Made colonel in 1776, he led his regiment in the battle on Long Island, and also at Trenton. In April, 1777, he was appointed brigadier-general; and in October, 1778, succeeded Stark in command at Albany. In Sullivan's campaign against the Indians, in 1779, he was an active participant. Near the close of 1780, Hand succeeded Scammel as adjutant-general. He was a member of Congress in 1784-85, and assisted in the formation of the Constitution of Pennsylvania in 1790.

**Hanging Rock, SKIRMISH AT (1780).** After his unsuccessful attack on Rocky Mount (which see), Colonel Sumter crossed the Catawba, and fell upon a British post at Hanging Rock, twelve miles east of the river (Aug. 6, 1780), commanded by Major Carden. A large number of British and Tories were there. Among the former were the infantry of Tarleton's Legion. Sumter soon dispersed them, when his men scattered through the camp, seeking plunder and drinking the liquors found there. Intoxication followed. The British rallied, and attacked the disordered patriots, and a severe skirmish ensued. The British were reinforced, and Sumter was compelled to retreat; but the British had been so severely handled that they did not attempt to pursue. With a few prisoners and some booty, Sumter retreated towards the Waxhaw, bearing away many of his wounded men. The battle lasted about four hours. Sumter lost twelve killed and forty-one wounded. At the same time Marion was smiting the British and Tories with sudden and fierce blows among the

swamps of the lower country, on the borders of the Pedee, Pickens was annoying Cruger near the Saluda, and Clarke was calling for the patriots along the Savannah and other Georgia

HANGING ROCK.

streams to drive Brown from Augusta. Hanging Rock is a huge conglomerate boulder near the Lancaster and Camden highway, a few miles east of the Catawba River, in South Carolina. It is a shelving rock, twenty or thirty feet in diameter, lying on the verge of a high bank of a small stream, nearly one hundred feet above it. Under its concavity fifty men might find shelter from rain.

**Hanover, CAVALRY BATTLE AT.** General Meade's cavalry, during Lee's invasion of Maryland, before the battle of Gettysburg (which see), was continually hovering on the flanks of the Confederate army. The most dashing of the cavalry officers of that time were Colonels Kilpatrick and Custer. At about the same hour when Buford's division occupied Gettysburg (June 29, 1863), Kilpatrick, passing through Hanover, a few miles from Gettysburg, was suddenly surprised by Stuart's cavalry, then on their march for Carlisle. Stuart led in person, and made a desperate charge on the flank and rear of Farnsworth's brigade, at the eastern end of the village. A severe battle ensued in the town and on its borders, when Custer joined in the fight with his troops, and the Confederates were repulsed. The Nationals lost about five hundred men.

**Hanoverian Troops.** King George III. was Elector of Hanover, and when it was resolved to send mercenaries to crush the rebellion in America, the king offered the use of Hanoverian troops, and asked only a reimbursement of expenses. His agent for the purchase of other German troops (Colonel William Fawcett) went

to the Hague early in August, 1775, and thence to Hanover, to receive and muster into the service of Great Britain five battalions of electoral infantry (2300 men), who were employed to garrison Gibraltar and Minorca, and thus release an equal number of troops for service in America.

**Hansen, JOHN**, delegate to the Continental Congress from 1781 to 1783, was born in Maryland, and died in Prince George County, in that state, Nov. 13, 1783. Mr. Hansen was President of Congress in 1781-82.

**Harcourt, WILLIAM, EARL**, was born in England, March 20, 1743; died June 18, 1830. He entered the army in 1759. He came to America in 1776, and distinguished himself by the capture of General Charles Lee. He was then colonel of dragoons. This exploit procured him the position of aide-de-camp to the king. He became major-general in 1782, lieutenant-general in 1793, and commander of the British forces in Holland in 1794. In 1798 he became general; succeeded to the title of earl in 1809; took his seat in the House of Lords, and became a field-marshal.

**Hard-Cider Campaign.** Political parties are always seeking catch-words to use in a campaign with effect among the least thoughtful of the people. General Harrison lived in the growing West, and his dwelling had once been a log-house, at North Bend, where he exercised great hospitality. In the campaign referred to a log-cabin was chosen as a symbol of the plain and unpretentious candidate, and a barrel of cider as that of his hospitality. During the campaign, all over the country, in hamlets, villages, and cities, log-cabins were erected and fully supplied with barrels of cider. These houses were the usual gathering-places of the partisans of Harrison, young and old, and to every one hard cider was freely given. The meetings were often mere drunken carousals that were injurious to all, and especially to youth. Many a drunkard afterwards pointed sadly to the hard-cider campaign in 1840, as the time of his departure from sobriety and respectability.

**Hardee, WILLIAM J.**, was born at Savannah, Ga., in 1818; died at Wytheville, Va., Nov. 6, 1873. He graduated at West Point in 1838, entering the Dragoons, and in 1860 was lieutenant of the First Cavalry. Resigning in January, 1861, he joined the insurgents, and in June was appointed brigadier-general in the Confederate army. For bravery in the battle of Shiloh (which see) he was promoted to major-general, and in October, 1862, he was raised to the rank of lieutenant-general. He was very active in military operations in Arkansas, Mississippi, Tennessee, and Georgia; and after the defeat of the Confederates at Missionaries' Ridge, late in 1863, he succeeded Bragg in the chief command, until relieved by General Johnston. He commanded at Savannah and Charleston at the time of their capture, early in 1865; fought at Averasborough and Bentonville, N. C. (which see); and surrendered with Johnston's army, April 27, 1865.

**Harford, HENRY**, was a natural son of Frederick Calvert, the fifth Lord Baltimore, who was a man of some literary accomplishments, but of dissolute habits, and who died without lawful issue. He bequeathed the province of Maryland to this illegitimate son, who was then (1771) a boy at school. Lord Baltimore's brother-in-law, Robert Eden, had succeeded Sharpe as governor of Maryland, and he continued to administer the government of the province in behalf of the boy, until the fires of the Revolution consumed royalty in all the provinces.

**Harker, CHARLES G.**, was born at Swedesborough, N. J., Dec. 2, 1837; killed near Kenesaw Mountain, June 27, 1864. He graduated at West Point in 1858, and in the fall of 1861 was colonel of Ohio volunteers. He was made brigadier-general in September, 1863. He did good service in Tennessee and Georgia, especially in the battle of Shiloh, the siege of Corinth, the battle of Murfreesborough, Chickamauga, and Missionaries' Ridge. He commanded a brigade under General Howard in the Georgia campaign, and distinguished himself at Resaca.

**Harlem Plains, BATTLE ON.** On the morning of Sept. 16, 1776, the British advanced guard, under Colonel Leslie, occupied the rocky heights now at the northern end of the Central Park. His force was composed of British infantry and Highlanders, with several pieces of artillery. Descending to Harlem Plains, they were met by some Virginians under Major Leitch, and Connecticut Rangers under Colonel Knowlton. A desperate conflict ensued. Washington soon reinforced the Americans with some Maryland and New England troops, with whom Generals Putnam, Greene, and others took part to encourage the men. The British were pushed back to the rocky heights, where they were reinforced by Germans, when the Americans fell back towards Harlem Heights. In this spirited engagement the Americans lost about sixty men, including Major Leitch and Colonel Knowlton, who were killed. This affair made the British more cautious.

**Harmar, JOSIAH**, was born in Philadelphia in 1753; died there, Aug. 20, 1813. He was educated chiefly in the school of Robert Proud, the Quaker and historian. He entered the army as captain of a Pennsylvania regiment in 1776; was its lieutenant-colonel in 1777; and served faithfully through the war in the north and in the south. Made brevet-colonel in the United States Army in September, 1783, he was sent to France in 1784 with the ratification of the definitive treaty of peace. He was made Indian agent for the territory northwest of the Ohio, and in 1787 Congress made him a brevet brigadier-general. On Sept. 29, 1789, he was appointed commander-in-chief of the army of the United States, and commanded an expedition against the Miami Indians in the fall of 1790, but was defeated. Harmar resigned his commission in January, 1792, and was made adjutant-general of Pennsylvania in 1793, in which position he was active in furnishing Pennsylvania troops for Wayne's campaign in 1793-94.

**Harmar's Expedition (1790).** The British, in violation of the treaty of 1783, still held Detroit and other western military posts in 1790. British agents instigated the Indians of the Northwest to make war on the frontier settlers, in order to secure for British commerce the monopoly of the fur-trade. This had been kept up ever since 1783, and the posts were held with a hope that the league of states would fall in pieces and an opportunity would be afforded to bring back the new Republic to colonial dependence. Sir John Johnson, former Indian agent, was again on the frontier, and Lord Dorchester (Sir Guy Carleton) was again governor of Canada, which gave strength to the opinion that the discontents of the barbarians were fostered for a political purpose. The northwestern tribes, encouraged by the British agents, insisted upon re-establishing the Ohio River as the Indian boundary. Attempts to make a peaceable arrangement were unsuccessful. The barbarians would listen to no other terms; and in September, 1790, General Josiah Harmar led more than one thousand volunteers from Fort Washington (now Cincinnati) into the Indian country around the head-waters of the Maumee (or Miami) to chastise the hostile Indians, as Sullivan had scourged the Senecas in 1779. (See *Sullivan's Campaign*.) He did not succeed. They found the Indians near the head of the

These reached the Maumee after sunrise on October 23. Militia under Major Hall proceeded to pass around the Indian village at the head of the Maumee, and assist, in their rear, an attack of the main body on their front. The latter were to cross the Maumee at the usual ford, and then surround the barbarians, who were led by the celebrated chief Little Turtle. Before

FORT WASHINGTON, ON THE SITE OF CINCINNATI

this could be effected the Indian encampment was aroused, and a part of them fled. Some of the militia and the cavalry who had passed the ford started in pursuit, in disobedience of orders, leaving the regulars, who had also passed the ford, unsupported, when the latter were at-

tacked by Little Turtle and the main body of the Indians and driven back with great slaughter. Meanwhile the militia and cavalry pursuers were skirmishing with the Indians a short distance up the St. Joseph's. They were compelled to fall back in confusion towards the ford, and followed the remnant of the regulars in their retreat. The Indians did not pursue. The whole expedition now returned to Fort Washington.

**Harnett, CORNELIUS**, was born in England, April 20, 1723; died at Wilmington, N. C., April 20, 1781. Wealthy and independent, he was influential in his adopted state (North Carolina), and was among the first to denounce the Stamp Act and kindred measures. He was a leading man in all public assemblages as the war for in-

THE MAUMEE FORD—PLACE OF HARMAR'S DEFEAT.

dependence approached; was president of the Provincial Congress in 1775; and on the abdication of the royal governor (Martin) became acting-governor of the state. He was except-

Manmee, at the junction of the St. Joseph's and St. Mary's rivers, late in October, 1790. Four hundred men were detached to attack them, of whom sixty were regulars, under Major Wyllis.

ed in an offer of pardon to the inhabitants of North Carolina by Sir Henry Clinton, in which exception was included Robert Howe. He was the chief constructor of the constitution of North Carolina, framed in 1776, under which Harnett became one of the Council; and in 1778 he was elected to Congress. While the British held possession of the country adjacent to Cape Fear River in 1781, Mr. Harnett was made prisoner, and died in confinement. His dwelling (yet standing, I believe, in 1880) is a fine old mansion, about a mile and a half from the centre of

HARNETT'S HOUSE.

the city of Wilmington, N. C., on the northeast branch of the Cape Fear River.

Harney, WILLIAM SELBY, was born in Louisiana in 1798. He entered the army while quite young; was in the Black Hawk War; and was made lieutenant-colonel of Dragoons in 1836. Ten years later he was colonel. He served in the Florida, or Seminole, War (which see), and in the war with Mexico. In 1848 he was breveted brigadier-general for his services in the battle of Cerro Gordo (which see). He was promoted to brigadier in 1858, and placed in command of the Department of Oregon; and in July, 1859, he took possession of the island of San Juan, near Vancouver, which was claimed to be a part of British Columbia. (See *Tribunal of Arbitration*.) Harney was recalled. He then commanded the Department of the West; and in April, 1861, while on his way to Washington, he was arrested by the insurgents at Harper's Ferry, Va., and taken to Richmond. He was soon released, and, on returning to St. Louis, issued proclamations warning the people of Missouri of the dangers of secession. In consequence of an injudicious arrangement made with Price, the Confederate leader, Harney was relieved of his command. He retired in August, 1863; was breveted major-general United States Army in March, 1865; and was a member of the Indian Commission in 1867.

Harper & Brothers, PUBLISHING HOUSE OF, was established in 1817, by James and John Harper, sons of a Long Island farmer. They had both been apprenticed to different persons in New York to learn the art of printing. When they had reached manhood they joined interests and began business for themselves by setting up a small book and job printing-office on Do-

ver Street, in New York, not far from the great establishment of Harper & Brothers at the present time. It was an auspicious time for them, as with the return of prosperity after the War of 1812-15 there was a great demand for books. Evert A. Duyckinck was then a prosperous bookseller in New York, and he employed "J. & J. Harper" to print the first book that was issued from their press. In August, 1817, they delivered to him two thousand copies of a translation of Seneca's *Morals*, which they had "composed" and printed with their own hands. In the winter of 1818 they resolved to print a book on their own account. They first ascertained from leading booksellers how many copies each one would purchase from them in sheets. In April they issued five hundred copies of a reprint of Locke's *Essay on the Human Understanding*, with the imprint of J. & J. Harper. Joseph Wesley and Fletcher, two younger brothers, who had learned the printer's trade with James and John, became partners with the elder ones, the former in 1823 and the latter in 1826. Then was organized the firm of "Harper & Brothers," which continued forty-three years without interruption, when the senior partner of the house was suddenly separated from it by death. The brothers had established themselves in Cliff Street, and when the youngest entered the firm they were employing fifty persons and ten hand-presses. This was then the largest printing establishment in New York. At the end of nine years after J. & J. Harper began business they purchased the building on Cliff Street in which they were established. They began to stereotype their works in 1830, and led the way to the production of cheap books and the creation of a new army of readers. They continually enlarged their business, purchasing building after building on Cliff Street, and had erected a fine structure on Franklin Square, connecting with those on Cliff Street (altogether nine in number), when, at midday on Dec. 9, 1853, the whole establishment was laid in ashes, the fire occurring from an unfortunate mistake of a plumber at work in the building. Their total loss was very heavy, but very soon the present magnificent buildings arose out of the ruins. In 1776 James Rivington was considered the most extensive printer, publisher, and bookseller in this country. His establishment was at the foot of Wall Street, New York. It seldom had more than four hundred volumes on its shelves, with a fair assortment of stationery. In 1876 the bookselling business of Harper & Brothers occupied an immense building of iron on Franklin Square, five stories in height, with cellar and sub-cellar, and another on Cliff Street, in the rear of it, built of brick, six stories in height, with a basement. These buildings are connected by iron bridges at each story. The establishment is fully supplied with every kind of improved machinery for carrying on the publishing business, from the setting-up of type and stereotyping to the finishing the complete book for the reader. In 1876 they employed about five hundred persons, of whom one hundred and seventy were women. In 1850 they began the publication of *Harper's*

*New Monthly Magazine*, which has been the acknowledged leader in that department of literature. *Harper's Weekly*, an illustrated paper, was begun in January, 1857. *Harper's Bazar*, a beautifully illustrated repository of knowledge, of current fashions, and general literature, was commenced in November, 1867. To supply these periodicals with illustrations, they had in their art department in 1876 about thirty regular contributors of original matter and fifty engravers. Some idea of the extent of their publishing business may be conceived by the fact that the white paper used for their printing cost them, at that time, two thousand dol-

Virginia Convention (April 17, 1861), the authorities of that state set forces in motion to seize the United States armory and arsenal at Harper's Ferry, a small village in Jefferson County, Va., at the confluence of the Potomac and Shenandoah rivers, where the conjoined streams pass through the Blue Ridge. It became an important point in the war that ensued. There, for many years, the national government had possessed an armory and arsenal, where 10,000 muskets were made every year, and where from 80,000 to 90,000 stand of arms were generally stored. When the secession movement began, at the close of 1860, measures were taken for the

PUBLISHING HOUSE OF HARPER & BROTHERS.

lars a day. The four brothers—James, John, Joseph Wesley, and Fletcher—have passed from among the living, and the great establishment, constantly increasing in the bulk and prosperity of business, is conducted by their sons and grandsons. The four brothers were born at Newtown, L. I. James was born on the 13th of April, 1795, and died on the 27th of March, 1869. John was born on the 22d of January, 1797, and died on the 22d of April, 1875. Joseph Wesley was born on the 25th of December, 1801, and died February 14, 1870. Fletcher was born on the 31st of January, 1806, and died on the 29th of May, 1877.

**Harper's Ferry, ATTEMPTED SEIZURE OF, BY VIRGINIA.** Within twenty-four hours after the passage of the Ordinance of Secession by the

security of this post. A small body of United States dragoons, under the command of Lieutenant Roger Jones, was sent there as a precautionary measure. After the attack on Fort Sumter, rumors reached Harper's Ferry that the government property there would be speedily seized by the Virginians. The rumors were true. On the morning of April 18, the military commanders at Winchester and Charlestown received orders from Richmond to seize the armory and arsenal that night. They were further ordered to march into Maryland, where, it was expected, they would be joined by the minute-men of that state in an immediate attack on Washington. About 3000 men were ordered out, but only about 250 were at the designated rendezvous, four miles from the ferry, at the appointed hour

—eight o'clock in the evening—but others were on the march. As a surprise was important, the little detachment moved on. It was composed of infantry and cavalry and some artillery, with one cannon. The cavalry, only about twenty strong, were commanded by a dashing officer—Captain Ashby. When the detachment was within a mile of the ferry, marching in silence and darkness, there was suddenly a flash and explosion in that direction. This was quickly repeated, and the mountain heights were soon illuminated by flames. Ashby dashed towards the town, and soon returned with a report that the armory and arsenal were on fire, and that the National troops had crossed the Potomac, and taken the mountain-road in the direction of Carlisle Barracks, in Pennsylvania. Lieutenant Jones had been secretly warned, twenty-four hours before, of the plan for seizing the

land, *Invasion of, by Lee*), Harper's Ferry, where a large amount of stores had been gathered, was held by National troops, under Colonel D. H. Miles. When that post was threatened, Halleck instructed McClellan to reëvacuate the garrison, and on the day of the struggle at Turner's Gap (see *South Mountain*) he ordered Miles to hold out to the last extremity. Meanwhile Jackson, by quick movements, had crossed the Potomac at Williamsport, and at noon on Sept. 13 he was in the rear of Harper's Ferry. The Confederates were then in possession of Loudon Heights and also of Maryland Heights, which commanded Harper's Ferry. That post was completely invested on the 14th. Miles was told by McClellan to "hold on," and also informed how he might safely escape. But he appeared to pay no attention to instructions, and to make no effort at defence; and when, early on the

HARPER'S FERRY, LOOKING SOUTH.

post that night. There were indications all around him of impending troubles. Trains of powder were so prepared that, at a moment's warning, the powder in the magazine might be exploded, and the government buildings be set on fire. Word came to Jones, at near ten o'clock at night, that 2000 Virginians were within twenty minutes' march of him. The trains were fired, and the whole public property that was combustible was soon in ashes. Then Jones and his little garrison fled across the Potomac, and reached Hagerstown in the morning, and thence pushed on to Chambersburg and Carlisle Barracks, Penn. Jones was highly commended by his government. The insurgent forces immediately took possession of ruined Harper's Ferry, as a strategic point. Within a month full 8000 Virginians, Kentuckians, Alabamians, and South Carolinians were there, and menaced Washington.

**Harper's Ferry, SURRENDER OF.** While Lee was in Maryland, in September, 1862 (see *Mary-*

land, no less than nine batteries opened upon the garrison, he displayed a white flag. Before it was seen by the Confederates, one of their shots had killed him. The post was surrendered, with all its troops, ordnance, ammunition, and stores. There were 11,583 men—half of them New-Yorkers—surrendered; and the spoils were, 73 cannons, 13,000 small-arms, 200 wagons, and a large quantity of tents and camp equipage. It was shown that Miles had disobeyed orders to take measures for the defence of the post, and he was strongly suspected of sympathy with the Confederate cause.

**Harriott, THOMAS**, a friend of Sir Walter Raleigh, was born at Oxford, England, in 1560; died in London, July 2, 1621. He was a skilful mathematician and astronomer, and taught the science of mathematics to Raleigh. In 1585 he accompanied Raleigh's expedition to Virginia, under Grenville (see *Grenville*), as historian, and most of the knowledge of that expedition is derived from Harriott's account. He was left there.

by Grenville, and remained a year making observations; and from the pencil of With, an artist, he obtained many useful drawings. Harriott labored hard to restrain the cupidity of his companions, who were more intent upon finding gold than tilling the soil. While Governor Lane declared that Virginia had "the goodliest soil under the cope of heaven," and "if Virginia had hut horses and kine, and were inhabited by English, no realm in Christendom were comparable to it," he utterly neglected the great opportunity. (See *Lane*.) Harriott saw that the way to accomplish that object was to treat the Indians kindly, as friends and neighbors; and he tried to quench the fires of revenge which the cruelty of the English had kindled. The natives were curious and credulous. They regarded the English with awe. Their fire-arms, burning-glasses, clocks, watches, and books seemed to the savage mind like the work of the gods. As the colonists were never sick, and had no women with them, the natives thought that they were not born of woman, and were therefore immortal. Taking advantage of this feeling, Harriott displayed the Bible everywhere, and told them of its precious truths, and it was often pressed to their bosoms affectionately. When King Wingina (see *Lane*) fell ill, he sent for Harriott, and dismissing his juggling priest and "medicine-man," placed himself under the Englishman's care. He invoked the prayers of the English, and under the careful nursing of the historian the king speedily recovered. Many of his subjects resorted to Harriott when they fell sick. Had his example been followed, Virginia might soon have been "inhabited by English," and filled with "horses and kine." On his return to England, Harriott published a *Brief and True Report of the New Found Land of Virginia*. From the Earl of Northumberland he received a pension, and spent much of his time in the Tower with Raleigh and his wife. (See *Raleigh*.) Harriott was the inventor of the present improved method of algebraic calculation by introducing the signs > and <.

**Harris, GEORGE, LORD**, was born March 18, 1746; died at Belmont, Kent, England, May 19, 1829. He became captain in 1771, and came to America in 1775. He was in the skirmish at Lexington, and was wounded in the battle of Brunker's Hill. In the battles of Long Island, Harlem Plains, and White Plains, and in every battle in which General Howe, Sir Henry Clinton, and Earl Cornwallis, in the North, participated, until late in 1778, he was an actor. Then he went on an expedition to the West Indies; served under Byron off Grenada in 1779; also, afterwards, in India, and in 1798 was made governor of Madras, and placed at the head of the army against Tippoo Sultan, capturing Seringapatam, for which service he received public thanks and promotion. In 1812 he was raised to the peerage.

**Harrison and Tecumtha.** William Henry Harrison, governor of the Indiana Territory, suspicious of the movements of Tecumtha and also of the Prophet, invited them to an inter-

view at Vincennes. Though requested not to bring more than thirty followers, Tecumtha appeared with about four hundred warriors. The council was held in a field just outside the village. The governor, seated on a chair, was surrounded by several hundred of the unarmed people, and attended by judges of the territory, several officers of the army, and by Winnemack, a friendly Potawatomie chief, who had on this, as on other occasions, given Harrison notice of Tecumtha's hostile designs. A sergeant and twelve men from the fort were stationed under some trees on the border of the field, and the Indians, who sat in a semicircle on the ground, had left their rifles at their camp in the woods, but brought their tomahawks with them. Tecumtha, in an opening speech, declared the intention of the tribes, by a combination, not to countenance any more cessions of Indian lands, except by general consent. He contended that the Indians were one people, and the lands, belonging to the whole in common, could not be alienated by a part. This position was combated by Harrison, who asserted that the lands sold had been so disposed of by the occupants, and that the Shawnoese had no business to interfere. When these words were interpreted, Tecumtha, with violent gesticulations, declared the governor's statements were false, and that he and the United States had cheated and imposed upon the Indians. As he proceeded with increased violence, his warriors sprang to their feet, and began to brandish their tomahawks. Harrison started from his chair, and drew his sword, as did the officers around him. Winnemack cocked his loaded pistol, and the unarmed citizens caught up whatever missiles were at hand. The guard of soldiers came running up, and were about to fire upon the Indians, but were checked by the governor, who asked the interpreter what was the matter. On being informed, he denounced Tecumtha as a bad man; that, as he had come under promise of protection, he might depart in safety, but he must instantly leave the neighborhood. The council broke up, and Tecumtha retired to his camp. On the following morning, to allay all suspicion, he expressed regret for his conduct, and asked and obtained another interview, at which he disclaimed all hostile intentions against the white people, but gave the governor to understand that he should adhere to his determination to oppose all cessions of land thereafter. Chiefs of other tribes, who were with him, declared their intention to adhere to the new confederacy. Anxious to ascertain the real intentions of the Shawnoese chief, Harrison visited his camp, when Tecumtha told him that he should make war on the Americans with reluctance, and promised if the recent cessions were given up, and the principle adopted by the United States government of taking no more land from the Indians without the consent of all the tribes, he would be their friend and ally, for he knew the pretended friendship of the British was only selfishness. Yet, if the Americans persevered in their methods of getting the land of the Indians, he should be compelled to

join that people in war against the people of the United States. Harrison promised to lay the matter before his government.

**Harrison, BENJAMIN**, a signer of the Declaration of Independence, was born at Berkeley, on the James River, Va., in 1740; died there in April, 1791. He was a member of the Virginia House of Burgesses in 1764, and soon became a leader among the patriots of the day. An attempt to bribe him to support the Stamp Act by offering him a seat in the Council excited his indignation, though he had opposed Henry's resolutions on the subject. He was a member of various associations and committees, and was a delegate to the first Colonial Congress, in 1774. In that body he was efficient as chairman of the Board of War. He advocated independence in 1776, and signed the great Declaration. He resigned his seat in 1777; again entered the House of Burgesses, and was chosen its speaker. This position he held until 1782, when he was elected governor of the state, and was twice re-elected. Governor Harrison did not like the National Constitution, and voted against it in convention.

**Harrison, WILLIAM HENRY**, ninth President of the United States, was born at Berkeley, Charles City Co., Va., Feb. 9, 1773; died at Washington, D. C., April 4, 1841. He was a son of Benjamin Harrison, governor of Virginia, and was edu-

WILLIAM HENRY HARRISON.

cated at Hampden-Sidney College. He began preparations for the profession of medicine, but soon abandoned it for a military life. In 1791 Washington commissioned him an ensign. Made

a lieutenant in 1792, he afterwards became an efficient aid to General Wayne, and with him went through the campaign in Ohio, in 1794. After the treaty of Greenville (1794), he was placed in command of Fort Washington, on the site of Cincinnati, and was promoted to captain. While on duty at North Bend, he was married

HARRISON'S GRAVE.

to Anna, daughter of Judge Symmes, an extensive land-owner there. She survived him many years. In 1797 he was appointed Secretary of the Northwest Territory, and left the army. In 1799 he became a delegate to Congress, and was made the first governor of Indiana Territory in 1801. That office he held until 1813, and, as Superintendent of Indian Affairs, performed efficient service. In the course of his administration, he made thirteen important treaties with different tribes. Harrison, at the head of troops, gained a victory over the Indians (Nov. 7, 1811) at Tippecanoe (which see). He was in command of the Army of the Northwest in the second war for independence, in which position he was distinguished for prudence and bravery. Resigning his commission in 1814, he was employed in making treaties with the Indians for cessions of lands. From 1816 to 1819 he was member of Congress from Ohio, and was in the United States Senate from 1825 to 1828, having previously served a term in the Ohio Senate. In 1823 President Adams sent him as minister to the Republic of Colombia, South America, and on his return he made his residence at North Bend, O. In 1840 General Harrison was elected President of the United States, receiving 234 votes out of 294. Just one month after he entered upon his duties (March 4, 1841) he died at the national capital. President Harrison's remains lie in a vault upon an eminence overlooking the Ohio River, at North Bend.

**Harrison's Cabinet.** Immediately after the delivery of his inaugural address, President Harrison nominated for cabinet ministers, Daniel Webster, of Massachusetts, Secretary of State; Thomas Ewing, of Ohio, Secretary of the Treas-

ury; John Bell, of Tennessee, Secretary of War; George E. Badger, of North Carolina, Secretary of the Navy; Francis Granger, of New York, Postmaster-general; and John J. Crittenden, of Kentucky, Attorney-general.

**Harrison's Invasion of Canada.** The veteran Isaac Shelby, then governor of Kentucky, joined Harrison at Camp Seneca, with about four thousand mounted volunteers from his state. He had called for a certain number, and twice as many came as he asked for. They were gathered at Newport and Cincinnati. With Major John Adair and the late Senator J. J. Crittenden as his aids, Governor Shelby pressed forward towards Lake Erie. Colonel Richard M. Johnson's troop was among Shelby's men. Harrison was rejoiced to see them come. Perry had secured the coveted control of Lake Erie (see *Lake Erie, Battle of*), and thus reinforced and encouraged, Harrison moved immediately, and on the 15th and 16th of September, 1813, the whole Army of the Northwest—excepting some troops holding Fort Meigs and minor posts—were on the borders of the lake, at a point now called Port Clinton. General McArthur, who had succeeded Clay in command at Fort Meigs (which see), was ordered to embark artillery, provisions, and stores from that place, and on the 20th the embarkation of the army upon Perry's vessels began. The weather was delightful, and the whole army were in high spirits. They rendezvoused first at Put-in-bay Island, on the 24th, and the next day were upon the Middle Sister Island. The Kentuckians had left their horses on the peninsula between Sandusky Bay and Portage River, and were organized as infantry. In sixteen armed vessels and about one hundred boats the armament started from the Detroit River. On the way a stirring address by General Harrison was read to the troops, which concluded as follows: "The general entreats his brave troops to remember that they are sons of sires whose fame is immortal; that they are to fight for the rights of their insulted country, while their opponents combat for the unjust pretensions of a master. Kentuckians, remember the River Raisin! but remember it only while victory is suspended. The revenge of a soldier cannot be gratified upon a fallen enemy." Expecting to be attacked at their landing-place, the troops were debarked (Sept. 28), in perfect battle order, on Hartley's Point, nearly four miles below Amherstburg. No enemy was there. Proctor, who was in command at Fort Malden, taking counsel of prudence and fear, and in opposition to the earnest entreaties and indignant protests of his officers and Tecumtha, had fled northward with his army and all he could take with him, leaving Fort Malden, the navy buildings, and the storehouses smoking ruins. As the Americans approached the town, they met, instead of brave Britons and painted savages, a troop of modest women who came to implore mercy and protection. Their fears were removed by the kind-hearted leaders, and the Americans entered Amherstburg with the bands playing Yankee Doodle. The loyal inhabitants had fled with the army. The flotilla arrived at Detroit on

the 29th, and the same day Colonel Johnson arrived there with his troop of cavalry. Harrison had encamped at Sandwich, and all started in pursuit. The enemy was overtaken at the Moravian Towns, on the Thames, and defeated in battle. (See *Thames, Battle of the*.) Detroit and all Michigan were recovered. All that Hull had lost was regained. Colonel Lewis Cass was left at Detroit, with a strong garrison, as military governor of the territory.

**Harrison's Landing, ARMY AT.** To this point General McClellan led his army after the battle on Malvern Hills, July 1, 1862. It is five or six miles below the mouth of the Appomattox River, on the right bank of the James, and was the birthplace of President Harrison. Its landing is one of the best on the James, and was made the chief depot of supplies of the Army of the Potomac while it lay there in the summer of 1862, and where it suffered great mortality from malarial fevers. There the commander-in-chief called for reinforcements, reporting, on the 3d of July, that he had "not over 50,000 men with their colors." The President, astounded, went to Harrison's Landing, and found the army greatly disheartened. He found the army 40,000 stronger than the commander had erroneously reported, but was unable to get a reply to his question, "Where are the 75,000 men yet missing?" It was found that 34,000 men, or more than three fifths of the army reported on the 3d, were absent on furloughs. The general soon afterwards reported 88,665 "present and fit for duty," absent by authority, 34,472; absent without authority, 3778; sick, 16,619—making a total of 143,534. A week later the adjutant-general's office reported the total of the Army of the Potomac, exclusive of General Wool's command at Fortress Monroe, to be 158,314, of whom 101,691 were present and fit for duty. This great army remained there idle some weeks, suffering greatly from sickness, when it was called to the vicinity of Washington.

**Harrison's Military Movements.** Before the declaration of war against England (June, 1812) Kentucky and Ohio had made preparations for such an event. Early in May Governor Scott, of Kentucky, in obedience to instructions from the War Department, had organized ten regiments of volunteers, making an effective force of 5500 men; and Governor Meigs, of Ohio, promptly responded to the call for troops to accompany Hull to Detroit. (See *Canada, Invasion of*.) William Henry Harrison, then Governor of Indiana Territory, had already caused block-houses and stockades to be erected in various parts of his territory as defences against the Indians, and the militia-men were placed in a state of preparation for immediate action when called upon. Having been authorized by the national government to call upon Kentucky for any portion of its contingent of troops, he repaired to Frankfort, where he was honored with a public reception. He expressed his views freely concerning the imminent peril in which General Hull was placed, and suggested a series of military operations in

the Northwest. The fall of Detroit and the massacre at Chicago (which see) caused the greatest excitement in Kentucky, and volunteers were offered by thousands. It was the general desire of the volunteers and militia of the West that Harrison should be their leader against the British and Indians. Governor Scott was requested by some of the leading men in Kentucky to appoint him commander-in-chief of the forces of that state, and he was commissioned Aug. 25, 1812. A corps of mounted volunteers was raised, and Major Richard M. Johnson became their leader. While Harrison was on his way northward from Cincinnati with his troops he received the commission of brigadier from the President of the United States, with instructions to take command of all the forces in the territories of Indiana and Illinois, and to cooperate with General Hull and with Governor Howard, of Missouri. These instructions were issued before the disaster to Hull was known. He hesitated to accept the commission because of the delicate relations in which it might place him with General Winchester, commander of the Army of the Northwest. He pressed forward to Piqua, and sent a detachment to relieve Fort Wayne (which see). At Piqua Harrison was joined by mounted volunteers under Johnson, when the army in the wilderness of Ohio numbered 2200 men. The Indian spies reported: "Kaintuckee is crossing as numerous as the trees." It was determined by a council of officers to strike the neighboring Indians with terror by a display of power. Harrison divided his army. One detachment of mounted dragoons, under Colonel Simrall, laid waste (Sept. 19, 1812) the Little Turtle's town on the Eel

River, excepting the buildings erected by the United States for the now deceased chief on account of his friendship since the Treaty of Greenville in 1794 (which see). Another detachment, under Colonel S. Wells, was sent (Sept. 16) to destroy a Potawatomie town on the Elkhart River, sixty miles distant; while Colonel Payne, with another detachment, laid in ashes a Miami village in the forks of the Wabash, and several other towns lower down that stream, with their corn-fields and gardens. General Winchester arrived at Harrison's camp on Sept. 18, when the latter resigned his command to that superior in rank. The troops almost mutinied, for they revered Harrison. The latter returned to St. Mary to collect the mounted men from Kentucky, to march on towards Detroit. At Piqua he received a letter from the War Department assigning him to the command of the Northwestern Army, which, it was stated, would consist, "in addition to the

regular troops and rangers in that quarter, of the volunteers and militia of Kentucky and Ohio, and three thousand from Virginia and Pennsylvania," making his whole force ten thousand men. He was instructed to provide for the defence of the frontiers, and "then to retake Detroit, with a view to the conquest of Canada." He was invested with very ample powers. "You will command such means as may be practicable," said the despatch from the War Department. "Exercise your own discretion, and act in all cases according to your own judgment." His soldiers rejoiced, and were ready and eager to follow wherever he might lead. He arranged with care an autumn campaign, which contemplated the seizure of the important position at the foot of the rapids of the Maumee, or Miami, and, possibly, the capture of Maldeu and Detroit, making his base of military operations the foot of the rapids. (See *Fort Meigs*.) There were nearly three thousand troops at St. Mary on the 1st of October. Fort Defiance, at the junction of

SITE OF FORT DEFIANCE, IN 1860.

the Maumee and Anglaize, was made a post of deposit for provisions, and a corps of observation was placed at Saudusky. The mounted Kentuckians were formed into a regiment, and Major Johnson was appointed its colonel; and these, with Ohio mounted men under Colonel Findlay, formed a brigade commanded by General E. W. Tupper, of Ohio, who had raised about one thousand men for the service. Harrison ordered the construction of a new fort near old Fort Defiance; but his operations were soon afterwards disturbed by antagonisms between Tupper and Winchester. The latter dismissed Tupper from his command and gave it to Allen, of the regulars, when the Ohio troops absolutely refused to serve under any but their old commander. It was really a conflict between regulars and volunteers, and the intended expedition against Detroit was postponed. Harrison was much annoyed, but prosecuted his plans with extraordinary vigor for a winter campaign.

General Tupper had entered upon an independent expedition with 650 mounted volunteers, and endeavored to seize the post at the foot of the Manneé Rapids; but, after a bold attempt, he was repulsed by the British and Indians there. Some further attacks upon the barbarians succeeded, and smoothed the way for the final recovery of Michigan; but as winter came on the suffering of the troops was severe, especially of those under Winchester. The whole effective force then (December, 1812) in the Northwest did not exceed 6300, and a small artillery and cavalry force. Yet Harrison determined to press on to the rapids and beyond if possible. On Dec. 30 Winchester moved towards the rapids. Harrison, having heard of the presence of Tecumtha on the Wabash with a large force of Indians, recommended Winchester to abandon the movement; but the latter did not heed the advice. He reached the rapids, and was summoned to the River Raisin to defend the inhabitants at Frenchtown and its vicinity. Winchester pressed on, and there occurred a dreadful massacre of troops and citizens on Jan. 22, 1813. (See *Frenchtown*.) This event ended the campaign. With 1700 men General Harrison took post on the high right bank of the Manneé, at the foot of the rapids, and there established a fortified camp. (See *Fort Meigs*.) Nothing of importance occurred there during the winter. Troops were concentrated there, and in March (1813) Harrison sent a small force, under Captain Langham, to destroy the British vessels frozen in the Detroit River near Amberstburg (Fort Malden). The ice in the vicinity had broken up, and the expedition was fruitless. The attack on Fort Meigs by the British and Indians followed in May. The attack on Fort Stephenson (which see) followed, and the summer of 1813 was passed in completing arrangements for the invasion of Canada. This was done after Perry's victory on Lake Erie (which see). Harrison penetrated Canada from Fort Malden, and defeated Proctor on the Thames (which see). Soon after that Harrison, because of treatment received at the hands of the Secretary of War (Armstrong), resigned his commission and left the service.

**Hart, JOHN**, a signer of the Declaration of Independence, was born at Hopewell, N. J., in 1708; died there in 1780. He was a farmer, scantily educated, but a man of strong common-sense, patriotism, and moral excellence. He was in Congress from 1774 till 1777, and suffered much at the hands of the loyalists. He was compelled to flee from his home, and was hunted from place to place until the capture of the Hessians at Trenton. (See *Trenton, Battle of*.) He was called "honest John Hart."

**Hartford Convention (1779).** The alarming depreciation of the Continental paper-money produced great anxiety throughout the colonies, and on Oct. 20 a convention of delegates from five of the Eastern States was held at Hartford, Conn. They proposed a new regulation of prices, on the basis of twenty dollars in paper for one dollar in coin; and they advised a gen-

eral convention at Philadelphia at the beginning of 1780, to adopt a scheme for all the colonies. Congress approved the suggestion of the convention, but urged the states to adopt the regulation at once, without waiting for a general convention.

**Hartford Convention (1814).** Because the Massachusetts militia had not been placed under General Dearborn's orders, the Secretary of State, in an official letter to Governor Strong, refused to pay the expenses of defending Massachusetts from the common foe. Similar action, for similar cause, had occurred in the case of Connecticut, and a clamor was instantly raised that New England was abandoned to the enemy by the national government. A joint committee of the Legislature of Massachusetts made a report on the state of public affairs, which contained a covert threat of independent action on the part of the people of that section, saying that, in the position in which that state stood, no choice was left it but submission to the British, which was not to be thought of, and the appropriation for her own defence of those revenues derived from the people which the national government had hitherto thought proper to expend elsewhere. The report recommended a convention of delegates from sympathizing states to consider the propriety of adopting "some mode of defence suited to the circumstances and exigencies of those states," and to consult upon a radical reform in the national Constitution. The administration minority denounced this movement as a preparation for a dissolution of the Union. The report was adopted by a large majority, and the Legislature addressed a circular letter to the governors of the other New England States inviting the appointment of delegates to meet in convention at an early day, to deliberate upon "means of security and defence" against dangers to which those states were subjected by the course of the war. They also proposed the consideration of some amendments to the Constitution on the subject of slave representation. The proposition was acceded to. Hartford, in Connecticut, was the place, and Thursday, Dec. 15, 1814, the time, designated for the assembling of the convention. On that day twenty-six delegates,\* representing

\* George Cabot, the president of the convention, was a descendant of one of the discoverers of the American continent of that name. He was a warm Whig during the Revolutionary struggle, and soon after the adoption of the national Constitution was chosen a senator in Congress by the Legislature of Massachusetts. He was a pure-hearted, lofty-minded citizen, a sound statesman, and a man beloved by all who knew him.

Nathan Dane was a lawyer of eminence, and was also a Whig in the days of the Revolution. He was a representative of Massachusetts in Congress during the Confederation, and was specially noticed for his services in procuring the insertion of a provision in the famous Ordinance of 1787 establishing territorial governments over the territories northwest of the Ohio which forever excluded slavery from those regions. He was universally esteemed for his wisdom and integrity.

William Prescott was a son of the distinguished Colonel Prescott, of the Revolution, who was conspicuous in the battle of Bunker's Hill. He was an able lawyer, first in Salem, and then in Boston. He served with distinction in both branches of the Massachusetts Legislature.

Harrison Gray Otis was a native of Boston, and member of the family of that name distinguished in the Revolution. He

**Massachusetts, Connecticut, Rhode Island, New Hampshire, and Vermont, assembled at Hart-**

was a lawyer by profession, and served the public in the Massachusetts Legislature and in the national Congress. He was an eloquent speaker, and as a public man, as well as a private citizen, he was very popular.

Timothy Bigelow was a lawyer, and for several years was speaker of the Massachusetts House of Representatives.

Joshua Thomas was judge of probate in Plymouth County, Mass., and was a man of unblemished reputation in public and private life.

Joseph Lyman was a lawyer, and for several years held the office of sheriff of his county.

George Bliss was an eminent lawyer, and distinguished for his learning, industry, and integrity. He was several times a member of the Massachusetts Legislature.

Daniel Waldo was a resident of Worcester, where he established himself in early life as a merchant. He was a state senator, but would seldom consent to an election to office.

Samuel Sumner Wilde was a lawyer, and was raised to a seat on the bench of the Supreme Court of Massachusetts.

Hodijah Baylies was an officer in the Continental army, in which position he served with reputation. He was for many years judge of probate in the county in which he lived, and was distinguished for sound understanding, fine talents, and unimpeachable integrity.

Stephen Longfellow, Jr. was a lawyer of eminence in Portland, Me., where he stood at the head of his profession. He was a representative in Congress.

Chauncey Goodrich was an eminent lawyer, and for many years a member of the Legislature of Connecticut in each of its branches. He was also a member of each house of Congress and lieutenant-governor of Connecticut. His reputation was very exalted as a pure statesman and useful citizen.

John Treadwell was in public stations in Connecticut a greater part of his life, where he was a member of each legislative branch of the government, a long time a judge of the Court of Common Pleas, and both lieutenant-governor and governor of the state. He was a Whig in the Revolution, and a politician of the Washington school.

James Hillhouse was a man of eminent ability, and widely known. He was a lawyer of celebrity, served as a member of the Legislature of Connecticut, and was for more than twenty years either a senator or representative in Congress. He fought bravely for his country in the old war for independence, and was always active, energetic, and public spirited.

Zephaniah Swift was a distinguished lawyer. He served as speaker of the Connecticut Assembly, and was a member of Congress, a judge, and for a number of years chief-justice of the Supreme Court of Connecticut.

Nathaniel Smith was an extraordinary man. He was a lawyer by profession, and for many years was considered as one of the most distinguished members of his profession in Connecticut. He was a member of Congress, and a judge of the Supreme Court of Connecticut. His whole life was marked by purity of morals and love of country.

Calvin Goddard was a native of Massachusetts, but studied and practised law in Connecticut, and became a distinguished citizen of that state. He rose to great eminence in his profession, and was in Congress four years. He was repeatedly elected a member of the General Assembly, and was appointed a judge of the Supreme Court of that state.

Roger Minot Sherman was another distinguished lawyer of Connecticut, and was for a long time connected with the government of that state. He was a man of the highest reputation as possessor of the qualities of a good citizen.

Daniel Lyman was a soldier of the Revolution, and rose to the rank of major in the Continental army. After the peace he settled as a lawyer in Rhode Island, where he became distinguished for talents and integrity. He was chief-justice of the Supreme Court of that state.

Samuel Ward was a son of Governor Ward, of Rhode Island, and at the age of eighteen years was a captain in the Continental army. He was with Arnold in his expedition to Quebec in 1775. At that city he was made a prisoner. Before the close of the war he rose to the rank of colonel. He was elected a member of the convention held at Annapolis, Md., in 1786, which was the inception of the convention which framed the national Constitution.

Benjamin Hazard was a native of Rhode Island, and a lawyer, in which profession he was eminent. He served for many years in the Legislature of his state.

Edward Manton was a native of Rhode Island, and rarely mingled in the political discussions of his day. He was a man of sterling worth in every relation in life.

Benjamin West was a native of New Hampshire, and a lawyer by profession, in which he had a good reputation.

Mills Olcott was a native of New Hampshire, and a son of Chief-justice Olcott, of that state. He was a lawyer by profession.

William Hall, Jr. was a native of Vermont. His business was that of a merchant, and he was frequently a member of the state Legislature. He was universally esteemed and respected by all good men.

ford, then a town of four thousand inhabitants, and organized by the appointment of George Cabot, of Boston, as president of the body, and Theodore Dwight as secretary. The delegates were George Cabot, Nathan Dane, William Prescott, Harrison Gray Otis, Timothy Bigelow, Joshua Thomas, Samuel Sumner Wilde, Joseph Lyman, Stephen Longfellow, Jr., Daniel Waldo, Hodijah Baylies, and George Bliss, from Massachusetts; Channcey Goodrich, John Treadwell, James Hillhouse, Zephaniah Swift, Nathaniel Smith, Calvin Goddard, and Roger Minot Sherman, from Connecticut; Daniel Lyman, Samuel Ward, Edward Manton, and Benjamin Hazard, from Rhode Island; Benjamin West and Mills Olcott, from New Hampshire; and William Hall, Jr., from Vermont. The sessions of the convention, held with closed doors, continued three weeks. Much alarm had been created at the seat of the United States government by the convention, especially because the Massachusetts Legislature, at about that time, appropriated \$1,000,000 towards the support of ten thousand men to relieve the militia in service, and to be, like the militia, under the state's control. All sorts of wild rumors, suggesting treason, were set afloat, and the government sent Major Thomas S. Jesup with a regiment of soldiers to Hartford at the time of the opening of the convention, ostensibly to recruit for the regular army, but really to watch the movements of the supposed unpatriotic conclave. The convention, at the outset, proposed to consider the powers of the national executive in calling out the militia; the dividing of the United States into military districts, with an officer of the army in each, with discretionary power to call out the militia; the refusal of the executive to pay the militia of certain states, called on for their own defence, on the ground that they had not been put under the control of the national commander over the military district; and the failure of the government to pay the militia admitted to have been in the United States service; the proposition for a conscription; a bill before Congress for classifying and drafting the militia; the expenditure of the revenue of the nation in offensive operations on neighboring provinces; and the failure of the United States government to provide for the common defence, and the consequent necessity of separate states defending themselves. A committee, appointed Dec. 20, reported a "general project of such measures" as might be proper for the convention to adopt; and on the 24th it was agreed that it would be expedient for it to prepare a general statement of the unconstitutional attempts of the executive government of the United States to infringe upon the rights of the individual states in regard to the military, etc., and to recommend to the legislatures of the states the adoption of the most effectual and decisive measures to protect the militia and the states from the usurpations contained in those proceedings. Also to prepare a statement concerning the general subject of state defences, and a recommendation that an application be made to the national government for an arrangement with

the states by which they would be allowed to retain a portion of the taxes levied by Congress, to be devoted to the expenses of self-defence, etc. They also proposed amendments to the

ations concerning slave representation and taxation. The convention adopted a report and resolutions in accordance with the sentiments indicated by the scope of the deliberations.

These were signed by all the delegates present, and ordered to be laid before the legislatures of the respective states represented in the convention. The report and resolutions were moderate but firm, able in construction, and forcible though heretical in argument and conclusion. The labors of the Hartford Convention ended on Jan. 4, 1815, and after prayer on the morning of the 5th that body adjourned, but with the impression on the part of some of the members that circumstances might require them to reassemble. For that reason the seal of secrecy on their proceedings was not removed. This gave wide scope for conjecture, suspicion, and misrepresentation, some declaring that the proceedings were patriotic, and others that they were treasonable in the extreme. Their report was immediately published throughout the country. It disappointed radical Federalists and suspicious Democrats; yet, because the members of the convention belonged to the party to which the Peace Faction adhered, they incurred much odium, and for

FAC-SIMILE OF THE SIGNATURES TO THE REPORT OF THE HARTFORD CONVENTION.

Constitution to accomplish the restriction of the powers of Congress to declare and make war, admit new states into the Union, lay embargoes, limit the presidency to one term, and alter-

many years the term "Hartford Convention Federalists" conveyed much reproach. At the next election in Massachusetts the Administration, or Democratic, party issued a handbill with

an engraving indicative of the character of the opposing parties—the Federal party by the devil, crowned, holding a flaming torch, and pointing to British coin on the ground; the Democratic party by a comely young woman representing Liberty, with an eagle beside her, holding in one hand the Phrygian bonnet on

and commanded Abercrombie's brigade in the battles of Cedar Mountain, Manassas, and Antietam, receiving a severe wound in the latter engagement. In November he was promoted to major-general; and in the spring of 1863 was sent to Kentucky, where he commanded the Twenty-third Corps. He was in command of the works at Bermuda Hundred in the siege of Petersburg, 1864–65. In March, 1865, he was brevetted major-general in the United States Army.

"HARTFORD CONVENTION CANDIDATE."

a staff, and in the other a palm-leaf. The above cut is a copy of the engraving on a reduced scale.

**Hartley, DAVID**, was born in 1729; died at Bath, England, Dec. 19, 1813. Educated at Oxford, he became a member of Parliament, in which he was always distinguished by liberal views. He opposed the American War, and was appointed one of the British commissioners to treat for peace with Franklin at Paris. He was one of the first advocates in the House of Commons for the abolition of the slave-trade, and was an ingenious inventor.

**Hartman, JOHN FREDERICK**, was born in Montgomery County, Penn., Dec. 16, 1830, and graduated at Union College in 1853. He commanded a Pennsylvania regiment in Burnside's expedition to the coast of North Carolina early in 1862. He was in all the operations of that corps (the Ninth), and was made brigadier-general in May, 1864. At Antietam he led the famous charge that carried the lower bridge (see *Antietam, Battle of*), and was in command of the division of the Ninth Corps that gallantly recaptured Fort Steadman, before Petersburg, in March, 1865, for which he was brevetted major-general. He was elected Governor of Pennsylvania in 1876.

**Hartsuff, GEORGE L.**, was born at Tyre, N. Y., May 28, 1830; died in New York city, May 16, 1874. He graduated at West Point in 1852, serving in Texas and Florida. In 1856 he was assistant instructor in artillery and infantry tactics at West Point. He was made assistant adjutant-general, with the rank of captain, in March, 1861. He served at Fort Pickens from April till July, 1861, and then in western Virginia, under General Rosecrans. In April, 1862, he was made brigadier-general of volunteers,

and the gift of one half his estate, amounting to about \$4000—a large sum at that time. The school was erected into a college, and named, in honor of its benefactor, Harvard College. Henry Dunster, a Hebrew scholar just arrived in the colony, was chosen its first president. A class began a collegiate course of study in 1633, and nine were graduated in 1642. Efforts were made to educate Indians for teachers, but only one was ever graduated. In 1642 the general management of the temporalities of the institution was intrusted to a board of trustees, and in 1650 the General Court granted it a charter, with the title, "President and Fellows of Harvard College." The profits of the ferry between Boston and Charlestown were given to the college; the town of Cambridge voted it several parcels of land, and the colonial and state Legislatures of Massachusetts made annual grants until 1814, when the practice ceased. The first honorary degree of Doctor of Divinity was given to Increase Mather in 1692, and a few years afterwards Harvard received the first of a series of munificent gifts from the Hollis family, including valuable books. Its library was destroyed by fire in 1766, and about six thousand volumes were lost, including those of the founder. The institution which has become a university, has sixteen extensive buildings of brick and stone, from two to five stories in height. The number of instructors is over 100, and the number of pupils averages 1200. It contains a library of more than 200,000 volumes and a valuable museum, and is munificently endowed. An "annex" for the higher education of women has been established. The founder, a native of England, died at Charlestown, Mass., Sept. 14, 1638.

**Harvard College Circular.** Even after the delusion of "Salem witchcraft" had become ap-

parent to all sensible men, the Mathers determined to prove the reality of visible witches; and at the instance of Increase Mather, the president of Harvard College, a circular was sent out, signed by him and all the neighboring ministers, in the name of that institution (March 5, 1695), inviting reports of "apparitions, possessions, enchantments, and all extraordinary things, wherein the existence and agency of the invisible world is more sensibly demonstrated," to be used "as some fit assembly of ministers might direct." Cotton Mather afterwards lamented that in ten years scarce five returns were received to this circular.

**Harvard, JOHN**, founder of Harvard College, was born in Middlesex, Eng., in 1608; died at Charlestown, Mass., Sept. 14, 1638. He graduated at Emanuel College, Eng., in 1635. He emigrated to Massachusetts, where he was made a freeman in 1637, and in Charlestown he became a preacher of the Gospel. (See *Harvard College*.)

**Hassler, FERDINAND RUDOLPH**, was born at Aerneu, Switzerland, Oct. 6, 1770; died in Philadelphia, Nov. 20, 1843. He was engaged in a trigonometrical survey of his native country, and was induced to come to America about the year 1807 by Albert Gallatin, then Secretary of the Navy. He was employed as professor of mathematics at West Point from 1807 to 1810, and in 1811 he was sent by our government to Europe as scientific ambassador to London and Paris, and to procure necessary implements and standards of measure for use in the projected Coast Survey (which see). He began that survey in July, 1816, and left it in April, 1818, but resumed it in 1832 and continued superintendent until his death, when he was succeeded by A. D. Bache. Professor Hassler made valuable contributions to the *American Philosophical Transactions* on the subject of the coast survey. In 1832 he made a valuable report to the United States Senate on weights and measures.

**Hatch, JOHN PETER**, was born in New York, and graduated at West Point in 1845. He served under General Scott in Mexico. In September, 1861, he was made a brigadier-general and assigned to a cavalry brigade under General King. He commanded the cavalry of the Fifth Corps in the campaign in the Shenandoah Valley in the early part of 1862. In July he took command of an infantry brigade, and in August that of King's division. He was wounded at Manassas, and at South Mountain. He also commanded forces on John's Island, near Charleston, S. C., in July, 1864, and commanded the coast division of the Department of the South from November, 1864, to February, 1865. He co-operated with Sherman while moving through the Carolinas. He was breveted brigadier-general United States Army.

**Hatchee, BATTLE AT**. After the repulse of the Confederates from Corinth (Oct. 4, 1862), Rosecrans gave his troops rest until next morning, when he ordered a vigorous pursuit of the fugitives. General McPherson, who had arrived with fresh troops, led in the chase, and followed the Confederates fifteen miles that day.

Meanwhile, a division under General Hurlbut, which had been sent to attack the Confederate rear or intercept their retreat, had met the head of Van Dorn's column, near Pocahontas, on the morning of the 5th, and was driving it back across the Hatchee River, towards Corinth, when General Ord, who ranked Hurlbut, came up and took the command. A severe battle ensued near the waters of the Hatchee, where the Confederates lost two batteries and three hundred men. Ord fell, severely wounded. Hurlbut resumed command, but did not pursue, for his force was inferior. The greater portion of the National army followed the fugitives to Ripley, where the pursuit ended.

**Hatcher's Run, BATTLE OF**. On Sunday morning, Feb. 5, 1865, a strong flanking column of Nationals moved on the right of the lines of the Confederates at Petersburg, beyond Hatcher's Run, to strike the South-side railway. The entire National army in front of Petersburg had received marching orders to meet whatever might be developed by the movement. This flanking movement was led by Warren's and Humphrey's corps and Gregg's cavalry. The cavalry moved down the Jerusalem Plank-road to Reams's Station. The divisions of Ayres, Griffin, and Crawford, of Warren's corps, moved along another road, while portions of Humphrey's corps (Mott's and Smyth's divisions) moved along still another road, with instructions to fall upon the right of the Confederate works on Hatcher's Run, while Warren should move round to the flank and strike the rear of their adversaries. The cavalry had pushed on from Reams's Station to Dinwiddie Court-house, encountering Wade Hampton's horsemen, dismounted and entrenched. A division of Humphrey's corps carried the Confederate works on Hatcher's Run, making the passage of it safe for the Nationals. The latter cast up temporary earthworks, which were assailed in the afternoon, the Confederates pressing through a tangled swamp. They were repulsed. The Nationals lost about three hundred men; their antagonists a few more. Warren's corps took position on the left of Humphrey's during the night, and the cavalry was recalled. Two other corps were disposed so as to assist, if necessary. Towards noon (Feb. 6), Crawford, moving towards Dabney's Mills, met and fought the Confederates under Pegram. The latter were repulsed, but finally the Nationals were pushed back with heavy loss. Then the Confederates attacked Humphrey's corps, and were repulsed in disorder. The Nationals were rallied behind intrenchments and stood firm, and made a permanent extension of Grant's line to Hatcher's Run. The City Point railroad was extended to that stream. In the battle of Hatcher's Run the Nationals lost nearly 2000 men; the Confederates 1000. General Pegram was killed.

**Hat-making**. In 1662 the Legislature of Virginia offered a premium of ten pounds of tobacco (then the currency) for every good hat, of wool or fur, made in the colony. The business of hat-making rapidly increased in the colonies;

so rapidly that, in 1731, the felt-makers in London complained to the Parliament that the foreign markets were almost entirely supplied by hats made in America. They proposed to have the exportation of American hats to foreign markets prohibited; and in 1732 Parliament enacted that "no hats of felt, dyed or undyed, finished or unfinished, shall be put on board any vessel, in any place within any British plantation, nor be laden upon any horse or other carriage, with the intent to be exported from thence to any other plantation, or to any other place whatever, upon forfeiture thereof; and the offender shall likewise pay £500 for every such offence." This law remained in force until the Revolution, but it was constantly evaded, and the American establishments were able to supply the home demand during that war. It is now an important industry in the United States.

**Hatteras, FORTS AT, CAPTURED.** In the summer of 1861 the Confederates built two forts on Hatteras Island, off the coast of North Carolina, to guard the entrance to Hatteras Inlet, through which British blockade-runners had begun to carry supplies to the insurgents. General B. F. Butler, then in command at Fortress Monroe (which see), proposed the sending of a land and naval force against these forts. It was done. An expedition composed of eight transports and warships, under the command of Commodore Stringham, and bearing about 900 land-troops, under the command of General Butler, left Hampton Roads for Hatteras Inlet on the 20th of August. On the morning of the 28th the vessels of war opened their guns on the forts (Hatteras and Clark) and some of the troops were landed. The war-vessels of the expedition were the *Minnesota* (flag-ship), *Paucnee*, *Harriet Lane*, *Monticello*, *Wabash*, *Cumberland*, and *Susquehanna*. The condition of the surf made the landing difficult, and only about 300 men got on shore. The forts were under the command of the Confederate Major W. S. G. Andrews, and a small Confederate naval force, lying in Pamlico Sound, was in charge of Samuel Barron. An assault by both arms of the service began on the 28th and was kept up until the next day, when the forts were surrendered. Not one of the Nationals was injured; the Confederates lost 12 or 15 killed and 35 wounded. The number of troops surrendered, including officers, was 715, and with these 1000 stands of arms, 31 pieces of cannon, vessels with cotton and stores, and considerable gunpowder. The victorious expedition returned to Hampton Roads, when General Wool, who had succeeded General Butler in command there, issued a stirring order, announcing the victory. It was a severe blow to the Confederates, and led to important results. Colonel Hawkins, with a portion of his Ninth New York (Zouave) Regiment, was sent to garrison the forts at Hatteras and hold the island and inlet.

**Haverhill, MASSACRE AT.** After the attack upon Deerfield (which see), Hertel de Ronville, willing to lead his murderous and motley band in the work of murdering helpless women and children, ascended the St. Francis, and, passing

the White Mountains, made their rendezvous at Winnipiseogee, where they expected to meet a party of Abenakes. Disappointed in this, they descended the Merrimac to Haverhill, a little cluster of thirty cottages and log cabins, in the centre of which was a new meeting-house. On the night of Aug. 29, 1708, when every family was slumbering, this band of invading savages rested near, and at daylight the next morning fell with fury upon the startled sleepers of the village. The midday sun shone on a charred village, strewn with murdered men, women, and children. Hearing of these cruelties, Colonel Peter Schuyler, of Albany, wrote to Vaudrenil, governor of Canada: "I hold it my duty towards God and my neighbors to prevent, if possible, these barbarous and heathen cruelties. My heart swells with indignation when I think that a war between Christian provinces, bound to the exactest laws of honor and generosity, which their noble ancestors have illustrated by brilliant examples, is degenerating into a savage and boundless butchery. These are not the methods for terminating the war. Would that all the world thought with me on this subject!"

**Haviland, WILLIAM**, born in Ireland in 1718; died Sept. 16, 1784. He served in the British army at Carthagena and Porto Bello, and was aid to General Blakeney in suppressing the rebellion of 1745. He was lieutenant-colonel under London in America (1757); served with Abercrombie at Ticonderoga (1758), and under Amherst (1759-60), entering Montreal with the latter officer in September, 1760. He was senior brigadier-general and second in command at the reduction of Martinique in 1762, and at the siege of Havana. He was made lieutenant-general in 1772, and general in 1783.

**Havre de Grace, ATTACK ON (1813).** Havre de Grace was a small village, two miles above the head of Chesapeake Bay, and near the mouth of the Susquehanna River, containing about sixty houses, mostly built of wood. It was on the post-road between Philadelphia and Baltimore, as it now is upon the railway between the two cities. On the night of May 2, 1813, Sir George Cockburn, commander of a British squadron engaged in marauding on the shores of Chesapeake Bay, approached the village, and at dawn on the morning of the 3d the inhabitants were awakened by the sound of arms. Fifteen or twenty barges, filled with armed men, were seen approaching, when a few lingering militia opened heavy guns upon them from a battery on an eminence called Point Comfort. These were answered by grape-shot from the British. The drums in the village beat to arms. The affrighted inhabitants, half dressed, rushed to the streets, the non-combatants flying in terror to places of safety. Very soon hissing Congreve rockets set buildings on fire in the town, and these were followed by more destructive bombshells. While panic and fire were raging, the British landed. All but eight or ten of the militia had fled from the village, and only two men (John O'Neil and Philip Albert) remained at the battery. These were captured, with the

battery, when the guns of the latter were turned upon the town. The invaders were four hundred strong. They were divided into squads, and began the work of plundering and destroying systematically, officers and men equally interested in the business. When half the village had been destroyed, Cockburn went on shore, and was met on the common by several ladies who had taken refuge in a brick dwelling known as the "Pringle Mansion." They entreated him

bold and manly eloquence. He was chairman of the committee of the First Provincial Congress of Massachusetts (October, 1774) to consider the state of the country. Mr. Hawley remained in public life until failing health compelled him to retire.

**Hawley, JOSEPH ROSWELL**, journalist, soldier, and statesman, was born in Richmond County, N. C., Oct. 31, 1826, and graduated at Hamilton College in 1847. He began the practice of law at Hartford in 1850. He was a captain in the First Connecticut Regiment in the battle of Bull's Run; and was active under General Terry on the coasts of South Carolina and Florida. He commanded a brigade in the battle of Olustee, Fla. (which see); joined the Army of the James, under Terry, and participated in battles against Petersburg and Richmond; was made brigadier-general, and became Terry's chief-of-staff in Virginia. He was breveted major-general in 1865, and in 1866-67 was governor of Connecticut. He was President of the "Centennial Commission," and performed the duties with great efficiency and masterly skill. He was then a member of Congress, having been elected in 1874, and afterwards was promoted to a seat in the U. S. Senate. General Hawley has been

THE PRINGLE HOUSE.

to spare the rest of the village, and especially the roof that sheltered them. He yielded, and called off the plunderers. Meanwhile a large British detachment had gone up the Susquehanna about six miles, to the head of tide-water, and destroyed an extensive iron and cannon foundry. A number of vessels there, which had escaped from the bay, were saved by being scuttled and sunk. After the lapse of four hours, when forty of the sixty houses in the village were destroyed, and nearly every other edifice injured, the marauders assembled in their vessels in the stream, and at sunset sailed out into the bay to pay a similar visit to villages on the Susquehanna River. (See *Cockburn in the Chesapeake*.) Havre de Grace was at least sixty thousand dollars poorer when the invaders left than when they came.

**Hawk-eye State.** This name is said to have been given to Iowa because an Indian chief of that name who ruled there was a terror to the *voyageurs* upon the Mississippi.

**Hawley, JOSEPH**, was born at Northampton, Mass., in 1724; died March 10, 1788. After his graduation at Yale College in 1742, he labored as a minister of the gospel. He studied law, and in the practice of it rose to distinction rapidly. Early espousing the republican cause, he was regarded as one of its ablest advocates. He steadily refused a proffered seat in the governor's Council, but served in the Assembly from 1764 to 1776, where he was distinguished for his

engaged in journalism since 1857.

**Hawthorne, NATHANIEL**, was born at Salem, Mass., July 4, 1804; died at Plymouth, N. H., May 19, 1864. He was graduated at Bowdoin College in 1825. His first novel was published anonymously in Boston in 1832. In 1837, a number of his tales and sketches were published under the title of *Twice-told Tales*. A second series appeared in 1842. From 1838 to 1841, he held a position in the Boston Custom-House. Afterwards he lived at Brook Farm, a community of literary men and philosophers. Marrying in 1843, he took up his abode at Concord. He became surveyor of the port of Salem. He afterwards settled in Lenox, Mass., and in 1852 returned to Concord. In 1853 he became U. S. Consul at Liverpool, which place he resigned in 1857. His most popular writings are *The Scarlet Letter* and *The House of the Seven Gables*. *Septimus*, *American Note-Books*, *English Note-Books*, etc., appeared after his death. A complete edition of his works was published in 18 volumes.

**Hayes, ISAAC ISRAEL**, explorer, was born in Chester County, Penn., March 5, 1832, and graduated an M.D. at the University of Pennsylvania in 1853. He was surgeon of the second Griunell expedition to the Polar Seas, under Dr. Kane. Satisfied of the existence of an open Polar sea, he wrote and lectured on the subject on his return. He excited such interest in the subject that, with the aid of subscriptions in Europe and the United States, he was enabled

to fit out the steamer *United States*, of 133 tons, in which he sailed from Boston, July 9, 1860, with thirteen other persons, for the Arctic regions. They anchored, after a perilous voyage, in Port Foulke, on the west coast of Greenland, in latitude 78° 17', on Sept. 9, where they wintered. In April, 1861, with twelve men and fourteen dogs, he pushed northward over the ice in a boat; but finally the vessel was sent back, and Dr. Hayes, with three companions and two dog-sledges, pressed on to land in latitude 81° 37', beyond which they discovered open water. The expedition returned to Boston in October. Dr. Hayes found his country in civil war, and he served in it as a surgeon. In 1867 he published an account of his expedition, under the title of *The Open Polar Sea*; and the Royal Geographical Society of London and the Geographical Society of Paris each presented to him a gold medal. In 1869 he sailed in the steamer *Panther*, in company with the artist William Bradford, and explored the southern coasts of Greenland. After his return he published "The Land of Desolation." Died Dec. 17, 1881.

Hayes, RUTHERFORD BIRCHARD, President of the United States, was born in Delaware, O., Oct. 4, 1822. He graduated at Kenyon College, O., in 1842, and at the Cambridge Law School in 1845. He practised law in Cincinnati until

RUTHERFORD BIRCHARD HAYES.

1861, when he became, first the major, and then the colonel, of the Twenty-third Regiment Ohio Volunteers, first serving in western Virginia. He was wounded in the battle of South Mountain, Md.; and from December, 1862, to September, 1864, he commanded the First Brigade, Kanawha Division. He was appointed brigadier-general in October, 1864, for gallant conduct at Winchester, Fisher's Hill, and Cedar Creek. In March, 1865, he was breveted major-general of volunteers, and in the same year was elected to Congress. In 1867 he was elected governor of Ohio, and was re-elected in 1869 and 1875. In 1876 he was chosen President of the United States by a majority of one in the Electoral College over his opponent, Samuel J. Tilden.

Hayne, ISAAC, was born in South Carolina in 1745; died in Charleston, S. C., Aug. 4, 1781. He was an extensive planter and owner of iron-works, a firm patriot, and was captain of artillery and state senator in 1780. He was made a prisoner at the capture of Charleston (which see), and returned to his home on parole. Early in 1781 he was ordered to take up arms as a British subject or go to Charleston a prisoner, his wife and children then being dangerously sick with small-pox. He went to Charleston, where he was required to bear arms in support of the royal government or suffer close confinement. On being assured that if he would sign a declaration of allegiance to the British crown he would not be required to bear arms against his countrymen, he did so, and hastened home to find his wife dying and one of his children dead. Finally he was summoned to take up arms against his people. This being in violation of his agreement, it dissolved all obligations, and he repaired to the American camp, received a commission as colonel, and was soon made a prisoner. Colonel Balfour, then the British commander in Charleston, hesitated about disposing of Hayne; but when Lord Rawdon arrived from Orangeburg, on his way to embark for England, pursuant to the spirit of Cornwallis's orders he directed Colonel Hayne to be hung. This was done without even the form of a trial. The prisoner did not anticipate such treatment until he was officially informed that he had not two days to live. The patriot's children, the women of Charleston, the lieutenant-governor of the province, all pleaded for his life, but in vain. The savage sentence was executed. After Balfour's death, Lord Rawdon meanly tried to fix the ignominy of the act upon that humane officer.

Hayne, ROBERT YOUNG, was born near Charleston, S. C., Nov. 10, 1791; died at Ashville, N. C., Sept. 24, 1839. He was admitted to the bar in 1812; and when his law tutor, Langdon Cheves, went to Congress he succeeded to his large practice. He rose rapidly, and in 1818 was Attorney-general of South Carolina. He was United States Senator from 1823 to 1832, and was distinguished as an orator. In the latter year he and Daniel Webster had their famous debate on the tariff, during which Hayne declared the right of a state to nullify acts of the general government. In a state convention he drew up the Ordinance of Nullification; and when, the next year, he was governor of South Carolina, he maintained that right, and prepared for armed resistance. Clay's compromise (which see) allayed the fierce dispute.

Hayne's Mission at Washington. On Jan. 11, 1861 (two days after the attack on the *Star of the West*) (which see), Governor Pickens sent two of his executive council to Major Anderson to demand the surrender of Fort Sumter to the authorities of South Carolina. Anderson refused to give it up, and referred the matter to the President of the United States; whereupon Pickens sent Isaac W. Hayne, the Attorney-general of the state, with Lieutenant Hall, of An-

derson's command, to present the same demand to the national executive. Hayne bore a letter from Pickens, in which the latter declared to the President that the demand for surrender was suggested because of his "earnest desire to avoid the bloodshed which the attempt to retain possession of the fort would cause, and which would be unavailing to secure that possession." Hayne arrived in Washington Jan. 13, 1861, when ten of the disloyal senators still holding their seats advised him, in writing, not to present the letter of Pickens to the President until after the Southern Confederacy should be formed—a month later—and proposed to ask the President not to reinforce Fort Sumter meantime. Mr. Hayne offered, in writing, to refer the matter to the authorities of his state, if the President would make such a promise. This correspondence was laid before the President by some of the Senators. The executive replied, through Secretary Holt, that he could not give such a pledge without usurping the powers of Congress. When Pickens was informed of this state of the case, he directed Hayne to demand the surrender of Fort Sumter forthwith. He did so (Jan. 31), in a letter of considerable length. The President refused to receive Hayne excepting as a private citizen, and also refused compliance with the demands of South Carolina.

**Haynes, JOHN**, was born at Copford Hall, Essex, England; died March 1, 1654. He accompanied Rev. Mr. Hooker to Boston in 1633, and in 1635 was chosen governor of Massachusetts. He was one of the best educated of the early settlers in New England, and possessed the qualities of an able statesman. He went to the valley of the Connecticut with Mr. Hooker in 1736; became one of the most prominent founders of the Connecticut colony; was chosen its first governor, in 1639; and served alternately with Edward Hopkins until 1654. Mr. Haynes was one of the five who drew up the written constitution of Connecticut, the first ever framed in America. (See *Connecticut, First Constitution of*.) He was a man of large estate, spotless purity of character, a friend of civil and religious liberty, and was always performing acts of benevolence. He probably did more for the true interests of Connecticut than any other of the earlier settlers.

**Hays, ALEXANDER**, was born at Pittsburgh, Penn., in 1820; killed in battle in "The Wilderness," Va., May 5, 1864. He graduated at West Point in 1844; served in the war with Mexico; left the army in 1848; did good service as captain, colonel, and brigadier-general of volunteers in the Army of the Potomac from the beginning of the Civil War, distinguishing himself in the seven days' battle before Richmond in 1862, and at Chancellorsville and Gettysburg. At the time of his death he was leading a brigade in Hancock's corps. He was breveted major-general of volunteers.

**Hayti.** The native name of Santo Domingo (which see).

**Hayti, INDEPENDENCE OF.** In 1803 France

lost her hold on western Santo Domingo, known as Hayti. The negro forces were commanded by Christophe and Dessalines, rebels against Toussaint (which see). The French forces, under Rochambeau, about eight thousand in number, were driven into the town of Cape François, and they were saved from total destruction only by flying to the ships of the British blockading squadron. On Nov. 27, 1803, the independence of Hayti was proclaimed. Upon Dessalines the negro and mulatto generals conferred the governor-generalship, and he presently proclaimed himself emperor. The French authorities, however, continued to hold possession of the eastern, or formerly Spanish, part of Santo Domingo for some time longer.

**Hayward, THOMAS**, a signer of the Declaration of Independence, was born in St. Luke's Parish, S. C., in 1746; died in March, 1809. He studied law in England, made a tour in Europe, and on his return became a warm defender of the rights of the colonies. He was a member of the First General Assembly of South Carolina after the flight of the royal governor. He was also a member of the Committee of Safety, and a delegate in Congress from 1775 to 1778, when he was appointed a judge. He was also in active military service in South Carolina, and in 1780 was wounded. Captured at the fall of Charleston, he was sent a prisoner to St. Augustine. He retired from public life in 1799.

**Hazard, EBENEZER**, was the first Postmaster-general under the Confederation (1782-89), and left the position when the new government was organized under the national Constitution. He was born in Philadelphia in 1745; died there, June 13, 1817. He graduated at Princeton in 1762. Mr. Hazard published *Historical Collections*, in two volumes, in 1792-94; also, *Remarks on a Report concerning Western Indians*.

**Hazard, SAMUEL**, was born in Philadelphia, May 26, 1784; died there, May 22, 1870. He was a son of Ebenezer. In early life he engaged in commerce, and made several voyages to the East Indies before he began a literary career. He was the author of *Register of Pennsylvania* (1828-36), in sixteen volumes; *United States Commercial and Statistical Register* (1839-42), in six volumes; *Annals of Pennsylvania*, from the discovery of the Delaware in 1609 to the year 1682, in one volume; and *Pennsylvania Archives* (1682-1790), in twelve volumes of about eight hundred pages each. These works are invaluable to historians.

**Hazen, MOSES**, was born at Haverhill, Mass., in 1733; died at Troy, N. Y., Feb. 3, 1803. He served in the French and Indian War (which see). He was in the attack on Louisburg in 1758, and with Wolfe at Quebec in 1759, where he distinguished himself. He fought bravely at Sillery in 1760 and was made a lieutenant. A half-pay British officer, he was residing near St. John, Canada, when the Revolution broke out, and he furnished supplies to Montgomery's troops; he afterwards became an efficient officer in the Continental army. His property was

destroyed by the British. In June, 1781, he was made a brigadier-general. He and his two brothers emigrated to Vermont after the war, and finally settled in Albany.

**Hazen, WILLIAM BARCOCK**, was born at West Hartford, Vt., Sept. 27, 1830. He graduated at West Point in 1855, when he was a resident of Ohio. He served against the Indians in California and Oregon (1856-57). Afterwards he was in Texas, and had several severe encounters; in one of these, hand-to-hand with Comanches, he was severely wounded. At the breaking-out of the Civil War he was assistant professor of tactics at West Point, and was made captain in May, 1861. Taking command of the Forty-first Regiment Ohio volunteers, he joined Buell at Louisville in December; and in January had command of a brigade, with which he took a conspicuous part in the battle of Shiloh. After that he was very active in Kentucky, Tennessee, and northern Mississippi and Alabama, and did excellent service in the battle at Stone River or Murfreesborough, in protecting the reforming army. He had been made brigadier-general in November. At Chickamanga and Missionaries' Ridge he was actively engaged, and he served through the Atlanta campaign. In Sherman's march to the sea he commanded a division, with which he captured Fort McAllister (December, 1864). He was engaged in the operations which ended in the surrender of Johnston's army; was breveted major-general in 1865, and in 1880 was placed at the head of the Weather Signal Bureau. Died Jan. 16, 1887.

**Head, SIR FRANCIS BOND**, Governor of Canada, was born in Kent County, Eng., Jan. 1, 1793. In 1825 he explored the gold and silver mines in the Argentine Republic, S. A. Late in 1835 he was appointed governor of Upper Canada, where his injudicious measures caused an insurrection, in which American sympathizers with the people became involved. He kept the outbreak in check until his resignation in March, 1838. The same year he was created a baronet. (See *Canadian Rebellion*.)

**Headquarters of Washington.** The following is a list of the localities of the principal headquarters of Washington during the old war for independence. Those marked with an asterisk were standing in 1876. Cragie House,\* Cambridge (residence of the late H. W. Loughfellow), 1775-76; at No. 180 Pearl Street and No. 1 Broadway,\* New York city, 1776; also Morton House (afterwards Richmond Hill), at the junction of Varick and Charlton streets; Roger Morris's house,\* Harlem Heights, New York Island, 1776; the Miller House,\* near White Plains, Westchester Co., N. Y., 1776; Freeman's Tavern, Morristown, N. J., 1777-78; Ford Mansion,\* Morristown, 1779-80; Schnyler House,\* Pompton, N. J., 1777; the Ring House,\* at Chad's Ford, on the Brandywine, and the Elmar House, White-marsh, 1777; the Potts House,\* Valley Forge, 1777-78; the Brinkerhoff House, Fishkill, N. Y., 1778; at Fredericksburg (now in Putnam County, N. Y.); New Windsor-on-the-Hudson, 1779, 1780, and 1781; Hopper House,\* Bergen Co., N. J.,

1780; Birdsall House,\* Peekskill-on-the-Hudson, 1780; De Wiudt House,\* at Tappan, 1780; Moore's house, Yorktown, Va., 1781; Hasbronck House,\* Newburg-on-the-Hudson, 1782, 1783; Farm-house,\* at Rocky Hill, N. J., near Princeton, 1783; Francke's Tavern,\* corner of Broad and Pearl streets, New York city, where he parted with his officers, 1783.

**Heath, WILLIAM**, was born at Roxbury, Mass., March 2, 1737; died there, Jan. 24, 1814. He was bred a farmer; joined the "Ancient and Honorable Artillery Company," of Boston (which see), and was made its commander in 1770. He was also colonel of a Suffolk regiment; was a representative in the General Assembly; member of the committees of Correspondence and Safety; delegate to the Provincial Congress (1774-75), and was made a brigadier-general, early in 1776, in the Continental army. He rose to major-general in August following. He was very serviceable in organizing the undisciplined troops at Cambridge before the battle of Bunker's Hill, and went to New York with Washington in the spring of 1776. After the battle of White Plains (which see), he took post in the Hudson Highlands, and was stationed there in 1779. He had supervision of Burgoyne's captured troops, in 1777, at Cambridge. He went to Rhode Island on the arrival of the French forces in 1780. General Heath was state senator in 1791-92; was probate judge of Norfolk County in 1793, and declined the office of lieutenant-governor in 1806, to which he had been chosen.

**Heckewelder, JOHN**, Moravian missionary and writer, was born at Bedford, Eng., March 12, 1743; died at Bethlehem, Penn., Jan. 21, 1823. Becoming a preacher in his youth, he came to America (1754) and labored forty years among the Indians of Pennsylvania, studying carefully their language and producing a vocabulary. In

MISS MARIA HECKEWELDER.

1762 he accompanied Christian Post on a mission to the Indians in Ohio; and in 1797 he was sent to superintend a mission on the Muskingum River.

He settled at Bethlehem, Penn., after an adventurous career, and published (1819) a *History of the Manners and Customs of the Indian Nations who formerly inhabited Pennsylvania and the neighboring States*. His daughter, Johanna Maria, was born at the present village of Port Washington, on April 20, 1781, and was the first white child born within the present limits of Ohio. She lived a maiden at Bethlehem, Penn., until about 1870. In a diary kept by the younger pupils of the Bethlehem boarding-school, where Miss Heckewelder was educated, under date of Dec. 23, 1788 (the year when Marietta, O., was founded), occurs the following sentence: "Little Miss Maria Heckewelder's papa returned from Fort Pitt, which occasioned her and us great joy."

**Heintzelman**, SAMUEL P., was born in Pennsylvania, Sept. 30, 1805, and graduated at West Point in 1826. He served in the war with Mexico, organizing at Vera Cruz a battalion of recruits and convalescents, with whom he marched to the city of Mexico. After the war he commanded in the Southern District of California, and effectually suppressed Indian hostilities. Soon after the treachery of Twigg (which see), he left Texas, and, at Washington, D. C., was made inspector-general there. In May he was made brigadier-general of volunteers, and commanded a division under McDowell in the battle of Bull's Run, where he was severely wounded. In the campaign on the Peninsula he commanded an army corps, having been made major-general of volunteers in May. General

SAMUEL P. HEINTZELMAN.

Heintzelman commanded the right wing of Pope's army in the battle of Mauassas, or second battle of Bull's Run (which see), and afterwards took command of the defences of Washington. He retired in February, 1869, and was made major-general. He died May 1, 1880.

**Helena, BATTLE AT.** There was a sharp struggle between the National and Confederate troops at Helena, Ark., on the west side of the Mississippi, on July 4, 1863. General B. M. Prentiss was in command there. The Confederates in that region were under the command of General Holmes, assisted by Generals Price, Marmaduke,

Fagan, Parsons, McRae, and Walker, and were the remnants of shattered armies, about 8000 strong in effective men. The post at Helena was strongly fortified. It had a garrison of 3000 men, supported by the gunboat *Tyler*. Holmes was ignorant of the real strength of Prentiss, and made a bold attack upon the works. At three o'clock in the afternoon the Confederates were repulsed at all points, and withdrew with a loss, reported by Holmes, of twenty per cent. of the entire force—or 1636 men. Prentiss lost 250 men. The Confederate loss must have been much greater than Holmes reported, for Prentiss buried 300 of their dead left behind, and captured 1100 men.

**Hendrick**, a Mohawk chief, killed near Lake George, N. Y., Sept. 8, 1755. He was son of a

HENDRICK.

Mohegan chief, and married Hunnis, a Mohawk maiden, daughter of a chief. He was a leading spirit in that nation, wise in council and eloquent in speech. He attended the Colonial Convention at Albany (which see) in 1754, and in 1755 joined General William Johnson with two hundred Mohawk warriors, at the head of Lake George. In company with Colonel Williams, he and his followers were ambushed at Rocky Brook, near Lake George, and he was slain.

**Hennepin**, LOUIS, a Récollet, or Franciscan, missionary and explorer. He was born at Ath, Belgium, about 1640, and died in Holland early in the eighteenth century. Entering the Franciscan Order, he made a tour through Germany and Italy, preached a while, had charge of a hospital, and was a regimental chaplain at the battle of Senef, between the Prince of Condé and William of Orange, in 1674. The next year he was ordered to Canada, and made the voyage with Bishop Laval and Robert Cavalier de la Salle (which see). After preaching in Quebec, he went to the Indian mission at Fort Frontenac, and visited the Mohawk country. In 1678 he accompanied La Salle to the Western wilds, with Chevalier de Tonti and the Sieur de la Motte.

Left by La Salle a little below the present site of Peoria to prosecute discoveries, he and two others penetrated to the Mississippi in a canoe, by way of the Illinois River, in February and March, 1680. They explored the Mississippi northward until, in April, they were captured by a party of Sionx and carried to their villages. Hennepin, at the beginning of the voyage, had invoked the aid of St. Anthony of Padua, and when he discovered the great rapids of the Upper Mississippi he gave them the name of Falls of St. Anthony. He claimed to have discovered the sources of the Mississippi, but never went above the Falls of St. Anthony, and there carved the arms of France on the forest trees. In July (1680) Hennepin and his companions were rescued from the Sionx by Graysolon du Luit (Duluth), and they were taken down to the Wisconsin River and made their way to Lake Michigan, and so on to Quebec. From the latter place Hennepin embarked for France, and there, in 1683, he published a full account of his explorations, which contains many exaggerations. Yet it is a work of much value, as it pictures the life and habits of the Indians of the Northwest. In 1697 he published his *New Discovery of a vast Country situated in America*, which contained his former work, with a description of a voyage down the Mississippi, largely copied from the narrative of Leclerc. This fraud was exposed by Dr. Sparks. Hennepin never went down the Mississippi below the mouth of the Wisconsin River, yet, in that work, he claimed to be the first who descended the great river to its mouth. He lost the favor of Louis XIV., and when he endeavored to return to Canada the king ordered his arrest on his arrival there. The time of his death is unknown. As late as 1701 he was in Rome, seeking to establish a mission on the Mississippi.

**Henrico College.** The London Company took the first steps for establishing schools in the English-American colonies. In 1618 the king, at their request, permitted contributions to be made in England for "building and planting a college at Henrico for the training-up of the children of the infidels," the Indians. Henrico was a settlement on the James River, below the site of Richmond, established by Governor Sir Thomas Dale, and so named in honor of Henry, Prince of Wales. The company appropriated ten thousand acres of land at Henrico as an endowment for the proposed college or university. Edwin Sandys took special interest in the undertaking, and wealthy and influential persons in England, as well as in the colony, made generous donations for it. In 1620 George Thorpe, a member of the Council for Virginia, was sent to take charge of the college land, and preparations were in progress for establishing the institution when the dreadful massacre by the Indians (1622) occurred. (See *Opechancanough*.) Mr. Thorpe and the minister at Henrico were victims, and a blight fell upon the enterprise. In 1621 Rev. Patrick Copeland, returning from the East Indies in the *Royal James*, one of the ships of the East India Com-

pany, commanded by Martin Pring (see *New England*), collected about three hundred and fifty dollars from members of that company on board for the purpose of establishing a church or a school in Virginia. The London Company determined to found a free school at Charles City, and call it the "East India School." Early in 1622 a carpenter, with apprentices, was sent over to construct a building for it, and provision was made for a school-master, when the massacre paralyzed all efforts in that direction. The university scheme was abandoned, but in 1625 efforts were made to establish the East India School, and this project also failed. No school for the education of the Indians in Virginia was established afterwards until Robert Boyle's benefactions towards the close of the century. (See *William and Mary College*.)

**Henry, JOHN, DISCLOSURES OF.** An Irish adventurer, but a naturalized citizen of the United States, produced a temporary excitement in 1812 by "disclosures" concerning a plot for the destruction of the Union. According to his story, he purchased an estate in Vermont, near the Canada frontier, and there studied law for five years, and amused himself by writing articles against republican institutions, which he detested. These essays at length attracted the attention of the Governor of Canada (Sir J. H. Craig), who invited him to Montreal, from which he sent him on a mission to Boston early in 1809. That was the period of the Embargo, when violent opposition to the measure appeared in New England. It was thought that the United States might declare war against England, and Henry was instructed to ascertain whether rumors that in such an event the New England States would be disposed to separate from the rest of the Union had any solid foundation. He was to make diligent inquiries at the proper sources of information; and should any such disposition appear, and with it an inclination to form a connection with Great Britain, Henry was to intimate to the leaders that the British government might be communicated with through Governor Craig; and should the prospect seem promising, he was to exhibit these instructions as his credentials. Henry was given to understand that he would be well rewarded for his pains. He reached Boston March 9, 1809, where he remained three months, till the apparent settlement of affairs by Erskine's arrangement, when Henry was recalled by Craig. During that time he had written many encouraging letters to Craig's secretary. He spoke of the extreme discontent in New England, and expressed an opinion that, if war against England should be declared, the Legislature of Massachusetts would take the lead in setting up a separate northern confederation, which might result, perhaps, in some connection with Great Britain. He finally reported that a withdrawal from the Union was an unpopular idea there, but that there were leaders in favor of it. He did not mention any names. Henry went to England for his reward for his services, when he was treated coolly by the officers of the government, and, in a letter from Under-secretary Peel, he was referred to

Craig's successor in the Canadian government. Offended at this treatment, Henry did not go to Canada, but landed in Boston, accompanied by a Freuchman, who called himself Count de Crillon, but who was an impostor and swindler. Henry visited Governor Gerry, and from him obtained a letter of introduction to President Madison. He then went to Washington, and laid the whole matter before the President, who was so well satisfied of the great value of Henry's disclosures, at the moment when war was about to be declared against England—overwhelming proof of the secret designs of the British government to destroy the new Republic—that he gave Henry \$50,000 out of the secret service fund in his possession for the entire correspondence of the parties to the affair in this country and in England. At Philadelphia, Henry wrote a letter to the President (Feb. 26, 1811) as a preface to his disclosures, and on the 9th of March he sailed for France in the United States schooner *Wasp*, where he would be safe from British vengeance. On the same day the documents were laid before Congress, with a message from the President, in which he charged that the British government had employed a secret agent in fomenting disaffection in the capital of Massachusetts to the constituted authorities of the nation, and "in intrigues with the disaffected for the purpose of bringing about resistance to the laws, and eventually, in concert with a British force, of destroying the Union and forming the eastern part thereof into a political connection with Great Britain." Both political parties endeavored to make political capital out of these "disclosures," but the excitement created soon died away. Mr. Foster, the British minister at Washington, declared publicly that he had no knowledge of the affair. Lord Holland called upon the British government (May 5) for an explanation, and gave notice that he should call for an investigation. Every pretext was brought to bear to defeat such a measure; and when it could no longer be resisted, the ministry cast the odium of the transaction, in which they had evidently been engaged, on Sir James Craig. Lord Holland declared that, until such investigation should be had, the fact that Great Britain had entered into a "dishonorable and atrocious intrigue against a friendly power would stand unrefuted." And so it stands to this day.

Henry, JOSEPH, LL.D., was born in Albany, N. Y., Dec. 17, 1797. He was a watchmaker for some years. In 1826 he was appointed Professor of Mathematics in the Albany Academy, and in 1827 he began a series of experiments in electricity. He fully developed the power of electro-magnetism, and perfected the electro-magnetic telegraph, endowing it with the power of intelligent communication, which Professor Morse achieved. So early as 1831 he transmitted signals through a wire more than a mile in length, an account of which was published in *Silliman's American Journal of Science*. He was called to the chair of Natural Philosophy in the College at Princeton, N. J.; and, going to England in 1837, he explained to Professor Wheat-

stone his method of ringing a church-bell one hundred miles away by an electro-magnet. On the organization of the Smithsonian Institute at Washington in 1846, Professor Henry was appointed its secretary, which position he filled with great ability until his death, May 13, 1878. He published many scientific papers.

Henry, PATRICK, was born in Hanover County, Va., May 29, 1736; died June 6, 1799. He was of Scotch descent. His father was a native of

PATRICK HENRY.

Aberdeen, and liberally educated. Embarking in commercial pursuits at the age of fifteen years, he was unsuccessful. Marrying Miss Shelton, daughter of an innkeeper, at eighteen, he assisted, at times, in "keeping a hotel;" and finally, after six weeks' study, he took up the profession of the law. But want of business kept him very poor, and he was twenty-seven years old before his oratorical powers were discovered. Then, in a celebrated case tried in the court-house of Hanover County (see

HANOVER COURT-HOUSE.

*Parson's Case*), he made such a wonderful forensic speech that his fame as an orator was established. Henry became a member of the Virginia House of Burgesses in 1765, wherein, that

year, he introduced resolutions for their bold opposition to the Stamp Act (see *Henry's Resolutions*), and made a most remarkable speech. From that time he was regarded as a leader of the radical patriots of his colony. He was admitted to the bar of the highest court in Virginia in 1769, and in 1773 he was appointed one of the Virginia Committee of Correspondence. As a delegate to the First Continental Congress in 1774, he opened the business of that body by declaring the union of the provinces, and saying, "I am not a *Virginian*—I am an *American*." He was an eloquent leader in the famous Provincial Convention at Richmond (March, 1775), and, at the head of the militia of Hanover, compelled Governor Dunmore to restore powder he had removed from the colonial magazine at Williamsburg. For a short time Henry was in the military service, and was the first governor of the State of Virginia (1776-79). He was again elected governor after the war; and was a member of the state convention that ratified the national Constitution, he opposing it with all his strength because it menaced state supremacy. In 1794 Henry retired from the bar, and took up his abode at Red Hill, in Charlotte. Washington appointed him Secretary of State in 1795; but he declined the nomination, as he did that of envoy to France, offered by President Adams, and of governor, offered by the people. Henry was elected to the State Senate in 1799, but he never took his seat.

**Henry VIII., STATUTE OF.** Early in January, 1768, an address to the king was voted by the House of Lords, in which they recommended the transmission of instructions to the governor of Massachusetts to obtain full information of all treasons, and to send the offenders to England to be tried under an unrevoked statute of Henry VIII., which provided for the punishment of treason committed out of the kingdom. Against this proposition Edmund Burke, in the House of Commons, thundered eloquent anathemas. "At the request of an exasperated governor," he said, "we are called upon to agree to an address advising the king to put in force against the Americans the Act of Henry VIII. And why? Because you cannot trust the juries of that country, sir! That word must convey horror to every feeling mind. If you have not a party among two millions of people, you must either change your plan of government or renounce the colonies forever." He denounced the measure as "cruel to the Americans and injurious to England."

**Henry's Resolutions in the Virginia Assembly.** When the news of the passage of the Stamp Act and kindred measures reached Virginia (May, 1765) the House of Burgesses was in session. The aristocratic leaders in that body hesitated, and the session was drawing near its close, when Patrick Henry, finding the older and more influential members disinclined to move in the matter, offered a series of resolutions, in which all the rights of British-born subjects were claimed for the Virginians; denied any authority, anywhere, excepting in the

Provincial Assembly, to impose taxes upon them; and denounced the attempt to vest that authority elsewhere as inconsistent with the ancient constitution and subversive of liberty in Great Britain as well as in America. The aristocratic members were startled, and a hot debate ensued. Henry supported his resolutions with rare eloquence and boldness. Some rose from their seats, and others sat in breathless silence. At length, when alluding to tyrants, Henry exclaimed, "Cæsar had his Brutus, Charles the First his Cromwell, and George the Third—" At this moment there was a cry of "Treason! treason!" from different parts of the house. Henry paused a moment, and concluded his sentence by saying "may profit by these examples. If that be treason, make the most of it." The resolution passed in spite of the old leaders; but in Henry's absence, the next day, they were reconsidered and softened. But a manuscript copy had already been sent to Philadelphia, and they soon appeared in the newspapers, producing a wonderful effect. These resolutions were followed in Massachusetts by the recommendation of a committee of the General Assembly for a congress of delegates from the several colonies to meet in New York city in October following. (See *Stamp Act Congress*.)

**Herkimer (or Herkheimer), NICHOLAS,** was born about 1727; died Aug. 16, 1777, at his home at Danube, N. Y., from a wound received in the battle at Oriskany. He was the son of a palatine who settled in that region in the time of Queen Anne, and one of the original patentees of Burnet's Field (now in Herkimer County, N. Y.). Nicholas was made a lieutenant of Provincials in 1758, and was in command at Fort Herkimer during the attack of the French and Indians upon it that year. In 1775 he was appointed colonel of the First Battalion of Tryon County militia. He was also chairman of the County Committee of Safety; and in September, 1776, he was made brigadier-general by the Provincial Convention of New York. He commanded the Tryon County militia in the battle at Oriskany (Aug. 6, 1777), where he was severely wounded in the leg by a bullet, and he bled to death in consequence of defective surgery. On the 4th of October following the Continental Congress voted the erection of a monument to his memory of the value of \$500, but it has never been erected. He was a staunch patriot and brave soldier.

**Herron, FRANCIS J.,** was born at Pittsburgh, Penn., and removed to Dubuque, Io., in 1856. He organized and commanded the "Governor's Grays," which he led in the battle of Wilson's Creek (which see); and in the battle of Pea Ridge (which see) he commanded the Ninth Iowa Regiment, which he had raised, and of which he was lieutenant-colonel. In July, 1862, he was promoted to brigadier-general, and distinguished himself in Arkansas. In November, 1862, he was made a major-general; and he took part in the capture of Vicksburg in 1863. He was with General Banks afterwards in his operations in Louisiana. After the war he practised

law in New Orleans, and was made United States Marshal for Louisiana.

Heth, HENRY, was born in Virginia about 1825; graduated at West Point in 1847; left the service and joined the insurgents in April, 1861, and entered the service of Virginia as brigadier-general. He was made a Confederate major-general in May, 1863, and commanded a division of A. P. Hill's corps in Virginia. He fought at Gettysburg, and in the campaign in defence of Richmond (1864-65), and surrendered with Lee.

Hewes, JOSEPH, a signer of the Declaration of Independence, was born at Kingston, N. J., in 1730; died in Philadelphia, Nov. 10, 1779. His parents were Quakers, and he was educated at the College of New Jersey. He was engaged in business at Edenton, N. C., in 1760, and was a member of the Colonial Legislature in 1763. Mr. Hewes was a delegate in the First Continental Congress, and was on the Committee to "State the Rights of the Colonies." He was active in the most important committees of that body. At the head of the Naval Committee, he was, in effect, the first Secretary of the United States Navy. He declined a re-election in 1777, but resumed his seat in 1779, which he resigned in October on account of failing health.

Hiacoomes was the first Indian convert to Christianity in New England. When the first white settlers landed at Martha's Vineyard (1642), he was there, and he was converted under the preaching of Thomas Mayhew. He learned to read, and in 1645 he began to preach to his countrymen. An Indian church was formed there, and Hiacoomes was ordained pastor, and Tackanash was appointed teacher, by Elliot and Colton. Hiacoomes died about 1690, aged eighty years.

Hi-a-wat-ha, the reputed founder of the Iroquois Confederacy. Tradition tells us that he came from above, dwelt among the Onondagas, and caused the five related nations to form a confederacy for their mutual protection. (See *Iroquois Confederacy*.) The people called him Hiawatha, the "wise man." When they had assembled at the great conference on the border of the lake, Hiawatha appeared in a white canoe, with his young daughter; and as they walked up the bank, a sound like a rushing wind was heard in the air. Then a dark object, increasing in size every moment as it approached, appeared in the heavens. Fear seized the people, and they fled. Hiawatha stood firm. The object was an immense white heron, which fell upon and crushed the beautiful girl, at the same time being destroyed itself. The father was unhurt, and after grieving three days for the loss of his darling child, he reappeared at the council, and addressed the assembled nations. He told the Mohawks that they should be the first nation, because they were warlike and mighty, and should be called the "Great Tree;" the Oneidas were made the second nation, because they were wise in council, and received the name of the "Everlasting Stone;" the Onondagas were the third nation, because they were

gifted in speech and mighty in war, and they were named the "Great Mountain;" the Cayugas were the fourth nation, for they were cunning hunters, and they received the name of the "Dark Forest;" and the Senecas were the fifth nation, for they dwelt in the open country, and were skilful in the cultivation of corn and beans and making cabins. To these he gave the name of "Open Country." These five nations formed a league like that of the Amphycyons of Greece, and became almost invulnerable. Hiawatha was regarded as the incarnation of wisdom, and was sent to earth by the Great Spirit to teach savages how to live better lives. The story of his life is fancifully told by Longfellow, in his *Song of Hiawatha*.

Hicks, ELIAS, was born at Hempstead, L. I., March 19, 1748; died at Jericho, L. I., Feb. 27, 1830. He was a very able preacher among Friends, or Quakers, and was a formally recognized minister at the age of twenty-seven. After preaching many years, he embraced Unitarian views, and boldly promulgated them. This produced a schism in the society, and a separation, the new lights receiving the name of "Hicketites," and the old church of "Orthodox." They have never fused. He preached with eloquence and vigor until a short time before his death, when he was about eighty-two years of age.

Hicks, THOMAS HOLLIDAY, governor of Maryland, was born in Dorchester County, Md., Sept. 2, 1798; died in Washington, D. C., Feb.

13, 1865. He was a farmer in early life, was often in the state Legislature, and was governor of the commonwealth from 1858 to 1862. He was elected to the United States Senate, in 1862, for the unexpired term of a deceased senator, and re-elected for the term ending in 1867. When the Civil War broke out, Governor Hicks stood firmly for the Union. He declared, in a proclamation after the attack on the Massachusetts regiment in Baltimore (April 19, 1861), that all his authority would be exercised in favor of the government. By his patriotism and firmness, Maryland was saved from attempting secession from the Union.

THOMAS HOLLIDAY HICKS.

Higginson and the Brownes at Salem. With the carefully selected company of pioneers in the founding of the colony of Massachusetts Bay, who landed at Naumkeag (afterwards named Salem), with John Endicott, in 1629, was Francis Higginson, an eminent non-conforming minister, acting as the pastor to the emigrants and as missionary to the heathen. It was late in June when the little company arrived at their destination, where "the corruptions of the English

Church were never to be planted," and Higginson served the people in spiritual matters faithfully until the next year, when he died. With the same company came two excellent brothers, John and Samuel Browne. Both were members of the Council, were reputed to be "sincere friends of the plantation," had been favorites of the company in England, and one of them, an experienced lawyer, had been a member of the Board of Assistants in London. They did not expect the new system in religious worship established by the austere Endicott, and they refused to unite with the public assembly. Resting upon their rights under the charter, they gathered a company in which the Book of Common Prayer was used in worship. This was a mortal offence. Should the hierarchy of England be allowed to thus intrude the forms of worship of the prelacy in the retreat of the Puritans? Not at all. Regarding the Brownes as spies in the camp, these excellent men, acting innocently in accordance with the dictates of their own consciences, were rudely seized like criminals (after their mode of worship was forbidden as a mutiny and they presented), and were sent back to England in the returning ships. So was the seed of Episcopacy first planted in Massachusetts, and so was its germ ruthlessly plucked.

**Higginson, FRANCIS**, first minister at Salem, Mass., was born in England, in 1588; died in Salem, Mass., Aug. 6, 1630. He was an eloquent Puritan divine, and accepted an invitation to the new Puritan settlement at Salem, to which place he emigrated in the summer of 1629, and died of hectic fever the next year. His son John succeeded, became a leader, and so supported his mother in the maintenance of her six children. He became chaplain of the fort at Saybrook, was one of the "seven pillars" of the Church at Guilford, and became pastor of his father's church at Salem in 1660, where he continued until his death, in 1708, a period of about fifty years.

**High Commission, COURT OF**, an ecclesiastical tribunal created by Queen Elizabeth (1559), by which all spiritual jurisdiction was vested in the crown. It was designed as a check upon Puritan and Roman Catholic Separatists. Originally it had no power to fine or imprison, but under Charles I. and Archbishop Laud it assumed illegal powers, and became an instrument of persecution of the non-conformists of every kind. It was complained of to Parliament, and was abolished in 1641, at the beginning of the Civil War in England.

**High Hills of Santee, THE**, are composed of elevated lands extending southward from the Kershaw line twenty-two miles parallel with the Wateree River. They have ever been noted for their salubrity and their mineral springs, and were made famous by the encampment of General Greene's army upon them in the summer of 1781. They are immense sand-hills, varying in width on the summit from one to five miles. The village of Statesburg is on these hills, and there was the residence of General Sumter.

**Highland Defences Abandoned.** Sir Henry Clinton took possession of Forts Clinton and Montgomery on Oct. 6, 1777, and sent a marauding expedition up the Hudson. (See *Kingston, Burning of*.) The news that reached the marauders of the surrender of Burgoyne made them flee in haste back to New York; and at the same time Clinton was ordered by General Howe, at Philadelphia, to abandon the Highland posts, and send to the Delaware a reinforcement of six thousand soldiers.

**Hildreth, RICHARD**, historian, was born at Deerfield, Mass., June 28, 1807; died in Florence, Italy, July 11, 1865. He graduated at Harvard College in 1829. He studied and practised law and wrote for newspapers and magazines until 1832, when he began to edit the *Boston Atlas*. In the course of many years, Mr. Hildreth wrote several books and pamphlets, chiefly on the subject of slavery, to which system he was opposed. He resided on a plantation in the South in 1834-35; in Washington, D. C., as correspondent of the *Atlas*, in 1837-38, when he resumed his editorial post on that paper; and resided in Demerara, British Guiana, from 1840 to 1843, when he edited, successively, two newspapers there. Mr. Hildreth's principal work was a *History of the United States*, in six volumes (1849-56). He was one of the editors of the *New York Tribune* for several years. In 1861, President Lincoln appointed him United States Consul at Trieste, but failing health compelled him to resign the position. He never returned to his native country.

**Hill, AMBROSE POWELL**, was born in Culpeper County, Va., in 1824; killed at Petersburg, Va., April 2, 1865. He graduated at West Point in 1847, entered the First Artillery, and served in the war with Mexico, and against the Seminoles in 1849-50; and, resigning in 1861, joined the insurgents, and was made colonel of Virginia volunteers. He soon rose to major-general in the Confederate army, and was one of its most efficient officers in the various encounters in 1862 and 1863, in Virginia and Maryland. He was one of the most efficient officers of Lee's army, in the defence of Petersburg and Richmond, in 1864-65. In the final struggle at Petersburg, he was instantly killed by a musket-shot.

**Hill, DANIEL HARVEY**, was born in South Carolina, in 1822. He graduated at West Point in 1842; entered the artillery; served in the war with Mexico, and was breveted captain and major; left the army in 1849, and became professor of mathematics—first in Washington College, Lexington, Va., and then in Davidson College, North Carolina. In 1859 he was principal of the Military Institute at Charlotte, N. C.; and when the Civil War broke out he joined the insurgents, becoming colonel of North Carolina volunteers. He took part in the defence of Richmond in 1862, and was active in the seven days' battle. He soon rose to the rank of major-general. He commanded the Department of the Appomattox, and in February, 1865, was in command at Augusta, Ga. He was a broth-

er-in-law of "Stouewall" Jackson, and a skilful commander. He published two works on religious subjects.

**Hillabee Towns, DESTRUCTION OF.** There was an existing jealousy between the West Tennessee troops, under Generals Jackson and Coffee, and the East Tennessee troops, under Generals Cocke and White, both intent upon punishing the Creeks. After the battle of Talladega (which see), the Hillabee Creeks were disposed to peace, and offered to make terms with Jackson. He cordially responded, and preparations were made for the happy transaction. Meanwhile Generals Cocke and White, ignorant of this measure, came down upon the Hillabees, and spread destruction in their path. Oekfuskee and Genalga, two deserted villages—one of thirty and the other of ninety houses—were laid in ashes; and on the morning of Nov. 18, 1813, the troops appeared before the principal town. The inhabitants were unsuspecting of danger, and made no resistance; yet General White, for the purpose of inspiring terror in the minds of the Creek nation, fell furiously upon the non-resistants, and murdered no less than sixty warriors. Then, with two hundred and fifty widows and orphans as prisoners in his train, he returned to Fort Armstrong, a stronghold which the East Tennesseans had built on the Coosa, in the present Cherokee County, Ala. The Hillabees, knowing no other American commander than Jackson, regarded this outrage as most foul perfidy on his part, and thenceforth they carried on the war with malignant fury.

**Hillsborough, Lord, and Johnson of Connecticut.** William Samuel Johnson, a strict Churchman and able jurist, was agent for the Colony of Connecticut in England. He was very desirous to avoid a rupture between the colonies and the mother country, but he was faithful to the interests and rights of his colony. He called on the Earl of Hillsborough, to congratulate him on his elevation to the newly created office of Secretary of State for the Colonies, and told the earl that he might count on his friendship and affection, for Connecticut was a "loyal colony." Hillsborough, rather curtly, complained that Connecticut had very little correspondence with the home government, and that repeated requests for copies of the laws of the colony had been disregarded. "The colony has several times sent over a copy of the printed law-book," answered Johnson. "It is the duty of your colony," said the earl, "to transmit from time to time not only the laws that pass, but all the minutes of the proceedings of the Council and Assembly, that we may know what you are about, and rectify whatever is amiss." "If your lordship means," answered Johnson, "to have the laws of our colony transmitted for the inspection of the ministry, as such, and for the purpose of approbation or disapprobation by his majesty in council, it is what the colony has never done, and, I am persuaded, will never submit to. By the charter which King Charles II. granted, the colony was invested with a power of legislation not subject to revision." "There

are such things as extravagant grants, which are, therefore, void," said Hillsborough. "You will admit there are many things which the king cannot grant, as the inseparable incidents of the crown," Johnson answered. "Nobody has ever reckoned the power of legislation among the inseparable incidents of the crown;" and he presented logical arguments in favor of the colony. For two hours they discussed the subject of the rights of Connecticut, and Hillsborough showed that there was a disposition on the part of the ministry to declare the charter of Connecticut, as well as those of the other colonies, void; not because of any pretence that the charter had been violated, but because the people, by the enjoyment of it, were too free. "You are in danger of being too much a separate, independent state," said Hillsborough, "and of having too little subordination to this country."

**Hillsborough's Instructions.** When the Massachusetts Circular Letter (which see) reached the ministers, they were highly offended, and Lord Hillsborough, Secretary of State for the Colonies, instructed the governor of Massachusetts to require the Assembly to rescind that circular, and in case of refusal to dissolve them. Instructions were also sent to all the other colonial governors to take measures to prevent the respective Assemblies from paying any attention to the circular. This excited hot indignation in the Assemblies and among the people. It was regarded as a direct attempt to abridge or absolutely control public discussion in the colonies. They resented the act in strong but decorous language; and that order was more potential in crystallizing the colonies into a permanent union than any event in their past history. The colonial Assemblies everywhere took decided action. The Massachusetts Assembly refused to rescind. (See *Circular Letter*.) New Hampshire, Rhode Island, and Connecticut warmly commended the action of Massachusetts. The New York Assembly adopted the circular, and declared the right of the colonists to correspond, through their representatives, on subjects of public importance. The Legislature of Pennsylvania treated the order with decorous scorn, and a meeting of the people urged, by resolution, a cordial union of all the colonies in resistance to oppression. The Assembly of Delaware, also, took bold ground in the matter. When Governor Sharpe made an arrogant demand in the matter of the Assembly of Maryland, in laying the obnoxious order before them, that body assured him that they should not treat a letter "so replete with just principles of liberty" with indifference, and added, "We shall not be intimidated by a few sounding expressions from doing what we think is right;" and they thanked the Massachusetts Assembly. Virginia not only approved the circular, but sent one of her own to the colonial Assemblies, inviting their concurrence with it. North Carolina rejected the order and approved the circular. A committee of the South Carolina Legislature declared, by resolutions, that the circulars of both Massachusetts and Virginia were replete with duty to the king, respect for Parliament, attachment to

Great Britain, and "founded upon undeniable constitutional principles." The resolutions were adopted by the Assembly, and the royal government dissolved them. Then the citizens of Charleston paraded the streets by torch-light, garlanded an effigy of the Goddess of Liberty with flowers and evergreens, and crowned it with laurel and palmetto leaves. They also burned the seventeen Massachusetts "Rescinders" in effigy. The Georgia Assembly approved the Circular, and were dissolved by Governor Wright.

**Hindman, THOMAS C.**, was born in Tennessee, in 1818; died at Helena, Ark., Sept. 27, 1868. He served in the War with Mexico; was member of Congress from 1859 to 1861, and of the Charleston Convention in 1860 (which see). He became a brigadier-general in the Confederate army, and was the chief leader of Confederate troops in Arkansas. After the battle of Shiloh (which see), in which he participated, he was made a major-general. He was in command of a division in Polk's corps at Chickamauga. After the fall of the Confederacy, he went to Mexico, and returned to Helena in the spring of 1867, where he was murdered by one of his former soldiers.

**Hinman, ELISHA**, was born at Stonington, Conn., March 9, 1734; died there, Aug. 29, 1807. He went to sea at the age of fourteen years, and was a captain at nineteen, sailing to Europe and the Indies. He entered the navy of the Revolution, under Hopkins, in 1776, and was one of the first captains appointed by Congress. He was a very active officer. Captured when in command of the *Alfred*, 32 guns, he was taken to England, whence he escaped to France, and cruised successfully after his return, in 1779-80. President Adams offered him the command of the *Constitution* in 1798, but on account of his age he declined. From that time until 1802 he was engaged in the revenue service.

**Hobkirk's Hill, BATTLE OF (1781).** When Greene heard of the retreat of Cornwallis, he pursued him as far as the Deep River, when he turned back and moved southward towards Camden to strike a blow for the recovery of South Carolina. Lord Rawdon, one of Cornwallis's best officers, was in command at Camden. On the 19th of April Greene encamped at Hobkirk's Hill, only about a mile from Rawdon's intrenchments, where, six days afterwards, he was surprised by the British and defeated, after a sharp battle of several hours. Greene's force was too weak to assail Rawdon's intrenchments with any prospect of success, and he encamped on a wooded eminence and awaited reinforcements under Sumter. On the night of the 24th a drummer deserted to the British and informed Rawdon of Greene's weakness and his expectation of strength. As his provisions were almost exhausted, Rawdon saw no chance for success in battle unless he should strike immediately, so he prepared to fall upon Greene early on the morning of the 25th. Unsuspecting of danger, Greene's army were unprepared for an attack. The cavalry horses were unsaddled, some of the soldiers were washing their clothes, and Greene and his staff were at a spring on a slope of Hob-

kirk's Hill taking breakfast. Rawdon had gained the left flank of the Americans by marching stealthily along the margin of a swamp. Partially surprised, Greene quickly formed his army in battle-line. His cavalry were soon mounted.

VIEW AT THE SPRING; HOBKIRK'S HILL.

The Virginia brigade, under General Huger, with Lieutenant-colonels Campbell and Hawes, formed the right; the Maryland brigade, with Delaware troops under Kirkwood, led by Colonel Otho H. Williams, with Colonel Gunby and Lieutenant-colonels Ford and Howe, occupied the left; and the artillery, under Colonel Harrison, were in the centre; North Carolina militia were held in reserve; and in this position Greene was prepared to receive the oncoming Rawdon, whose forces ascended the slope with a narrow front. The regiments of Ford and Campbell endeavored to turn their flank, while Gunby's Marylanders assailed the front with bayonets without firing. The battle was thus opened with great vigor, Greene commanding the Virginians in person. At the moment when the Americans felt sure of victory, Captain Beatty, commanding a company of Gunby's veterans, was killed, and his followers gave way. An unfortunate order was given for the whole regiment to retire, when the British broke through the American centre, pushed up to the brow of the hill, and forced Greene to retreat. Meanwhile Washington had fallen on the British rear and captured about two hundred soldiers, whose officers he quickly paroled, and in the retreat carried away fifty of the captives. The Americans were chased a short distance, when Washington turned upon the pursuers, made a gallant charge, and checked them. By this movement Greene was enabled to save all his artillery and baggage. He rallied his men, crossed the Wateree above Camden, and rested in a strong position before moving on Fort Mifflin. The loss of each army in the battle was about the same—less than two hundred and seventy. This defeat disconcerted Greene at first, but his genius triumphed.

**Hoboken, MASSACRE AT.** The river Indians, or those dwelling on the borders of the Hudson, were tributary to the powerful Mohawks. In the midwinter of 1643, a large party of the latter came down to collect by force of arms tribute which had not been paid. The River Indians—five hundred in number—fled before the invaders, and took refuge, with their wives and children, among the Hackensacks at Hoboken, opposite Manhattan Island, where they asked the protection of the Dutch. At the same time many of the tribe in lower Westchester fled to Manhattan and took refuge with the Hollanders. The humane De Vries, who had a settlement on Staten Island, proposed to Governor Kieft to make this an occasion for establishing a permanent peace with the Indians, whose anger his cruelties had fearfully aroused. But the “man of blood” refused; and it was made the occasion of spilling more innocent blood. On a cold night in February, 1643, the fugitives at Hoboken, and those on Manhattan, slumbering in fancied security, were attacked by order of Kieft, without the shadow of an excuse, by armed Hollanders sent by the governor to murder them. Eighty of these Dutchmen were sent across the Hudson stealthily, among floating ice, and fell suddenly upon the stricken families at Hoboken. They spared neither age nor sex. “Warrior and squaw, sachem and child, mother and babe, were alike massacred,” says Brodhead. “Daybreak scarcely ended the furious slaughter. Mangled victims, seeking safety in the thickets, were driven into the river; and parents, rushing to save their children, whom the soldiers had thrown into the stream, were driven back into the water, and drowned before the eyes of their unrelenting murderers.” About one hundred of the dusky people perished there, and forty of those on Manhattan. The river and the surrounding country were lighted with the blaze of burning wigwams; and by that horrid illumination De Vries witnessed the butchery from the ramparts of Fort Amsterdam. He told the cowardly governor, who remained within the walls of the fortress, that he had begun the ruin of the colony. The governor sneered at the clemency of De Vries; and when the soldiers returned to the fort the next morning, with thirty prisoners and heads of several of the slain Indians of both sexes, he shook their bloody hands with delight, praised them for their bravery, and made each of them a present. Then De Vries uttered his prophecy. (See *Kieft*.)

**Hochelaga**, the capital of the Huron king, on the site of Montreal, Canada. It contained fifty houses when Europeans first visited it. Each house was about one hundred and fifty feet long and forty wide, covered over with the broad bark of trees, finely cut and joined like boards, and divided into many rooms. Above were garrets, in which the Indians kept their corn. The town was circular in form, stockaded, and environed by three courses of ramparts made of timber, and about thirty feet in height. It had one sally-port, which was closed with heavy timbers, stakes, and bars. On the ramparts

were magazines of stones for the defence of the town. It was to this capital that Cartier ascended in October, 1535. He and his companions landed at the foot of the rapids below Montreal, and with great pomp marched to the residence of the king at the town—a village of about fifty huts, surrounded with a triple row of palisades, in the midst of extensive corn-fields. The mountain which was back of the village Cartier named Mont Real (Royal Mountain), the name given to the great city which now lies there. Women and maidens brought armfuls of children to see the white men. The king, Azouhanna, helpless from palsy, was brought to Cartier on a deer-skin, and he prayed that the white chief might cure him of his malady. Many others came for the same purpose, but Cartier could only pray for their recovery. (See *Cartier*.)

**Hoe, RICHARD MARCH**, was born in New York city, Sept. 12, 1812. His father, Robert Hoe, was a most ingenious mechanic, born in Leicestershire, England, in 1784, and died in Westchester County, N. Y., Jan. 4, 1833. He was a builder,

RICHARD MARCH HOE.

and arrived in New York in 1803, when he relinquished his trade and began the manufacture of printing-materials and of a hand-press invented by his brother-in-law, Peter Smith. Making great improvements in printing-presses, his business increased, but, his health failing, in 1832 his eldest son, Richard, took charge of the business, with two partners. Meanwhile Richard had made material improvements in the manufacture of saws, and the production of these implements became an important part of their business. In 1837 Richard went to England to obtain a patent for an improved method of grinding saws. His observation of printing-presses in use there enabled him to make very great improvements in printing-machines. He patented his “Lightning Press,” so called because of the rapidity of its motions, in 1847. For many years Richard has carried on the manufacture of printing, hydraulic, and other presses, with his two brothers, Robert and Peter, the senior partner adding from time to time, by his inventive genius, great improvements, especially in the construction of power-presses, for rapid

and excellent printing. The "Perfecting Press" manufactured by the Hoes is capable of throwing off about fifteen thousand newspapers, printed on both sides, in one hour. (See *Printing*.) Their main establishment in New York covers more than an entire square, and they employ nearly one thousand persons. Educational forces have been greatly increased by the inventions of Richard M. Hoe, who may be ranked among the foremost of public benefactors.

**Holland.** The United Provinces of Holland, by their States-General, acknowledged the independence of the United States on April 19, 1782. This was brought about by the energetic application of John Adams, who, on the capture of Laurens (see *Laurens, Petition of*), was sent to the Hague as minister-plenipotentiary to the States-General, or government, of Holland. His special mission was to solicit a loan, but he was clothed with full powers to negotiate a treaty of amity and commerce. Mr. Adams acquainted the States-General, and also the Stadtholder (the sovereign) — the Prince of Orange — with the object of his mission. Mr. Adams was not received in the character of minister-plenipotentiary until nearly a year after his arrival. He persuaded the States-General that an alliance with the United States of America would be of great commercial advantage to the Netherlands; and immediately after Holland had acknowledged the independence of the United States Mr. Adams negotiated a treaty of amity and commerce (Oct. 8, 1782); he also made a successful application for a loan, which was a seasonable aid for the exhausted treasury of the colonies. The treaty was signed at the Hague by John Adams and the representatives of the Netherlands, and was ratified in January, 1783.

**Holland at War with Great Britain.** Late in 1780 Great Britain, satisfied that the Netherlands would give national aid to the "rebellious colonies," and desirous of keeping that power from joining the Armed Neutrality League (which see), sought a pretext for declaring war against the Dutch. British cruisers had already depredated upon Dutch commerce in time of peace, and the British government treated the Netherlands more as a vassal than as an independent nation. The British ministry found a pretext for war in October (1780), when Henry Laurens, late President of the American Congress, was captured on the high seas by a British cruiser, and with him were found evidences of a negotiation of a treaty between the United States and the Netherlands, which had been in progress some time. On Dec. 20 King George declared war against Holland. Before the declaration had been promulgated, and while efforts were making at the Hague to conciliate England and avoid war, British cruisers pounced upon and captured two hundred unsuspecting merchant vessels laden with cargoes of the aggregate value of \$5,000,000; orders had also gone forth for the seizure of the Dutch island of Eustatius. This cruel and unjust war deepened the hatred of continental Europe for Great Britain, for that government was regard-

ed as a bully, ever ready to oppress and plunder the weak.

**Holland Land Company.** The tract of land ceded by the State of New York to the State of Massachusetts in 1786 (see *Territorial Dispute between Massachusetts and New York*) was sold by the latter state to Oliver Phelps and Nathaniel Gorham for \$1,000,000. These gentlemen soon afterwards extinguished the Indian title to a part of this territory, surveyed it into tracts denominated ranges and townships, and sold large parcels to speculators and actual settlers. In 1790 they sold nearly the whole of the residue of the survey (1,204,000 acres) to Robert Morris, of Philadelphia, for eight pence an acre, who resold it to Sir William Pulteney. Phelps and Gorham being unable to fulfil their contract in full with Massachusetts, compromised, and surrendered that portion of the land to which the Indian title was unextinguished, in consideration of which the state relinquished two thirds of the contract price. In 1796 Robert Morris purchased from the state this portion also, extinguished the Indian title, sold off several large tracts upon the east side of and along the Genesee River, and mortgaged the residue to Wilhelm Willink, of Amsterdam, and eleven associates, called the "Holland Land Company." This company, by the foreclosure of the mortgage, acquired full title to the land, surveyed it, and opened their first land-office in Batavia, N. Y., in 1801. It was in this land speculation that Robert Morris was involved in financial ruin, and compelled to endure the privations of a debtor's prison for a long time. The Holland Land Company having sold the larger part of the domain, they, in 1805, conveyed the residue of the wild lands to several companies, who finally disposed of all to *bona fide* purchasers and settlers.

**Holland Menaced.** The consuls and other agents of the British government were enjoined to exercise great watchfulness in every part of Europe to intercept all munitions of war destined for the American colonies. New England mariners resorted to the island of St. Eustatius. To check the formation of magazines there which the colonists might use, the British envoy, with haughty menaces, required the States-General of Holland to forbid their subjects from even transporting military stores to the West Indies, except sufficient to supply the wants of their own colonies. (See *Rule of 1756*.)

**Holland Receives an American Ambassador (1782).** For eight months John Adams had been waiting in Holland for an audience of reception by the States-General, but that cautious body delayed until the voice of the people should be heard. When he heard of the result at Yorktown, Adams presented (June 9, 1782) to the President of the States-General a request that he might have an opportunity to offer his credentials, and demanded a categorical answer which he might transmit to Congress. He then went in person to the deputies of the several cities of Holland, making the same demand of each one of them. It was a bold and novel procedure, but the starchy diplomat was equal to

the occasion. First Friesland declared (Feb. 26, 1782) in favor of receiving the American ambassador. On April 4 Zealand adhered; Overysel on the 5th, Groningen on the 9th, Utrecht on the 10th, and Guelderland on the 17th. On the 19th of April, the anniversary of the affair at Lexington, their high-mightinesses the States-General, representing the unanimous decision of the lower provinces, resolved that Mr. Adams should be received. So it was that the Dutch Republic was the second power on the earth to recognize the independence of the United States.

**Holland's Neutrality.** King George asked leave to recruit troops for his army in Holland, and to obtain from that republic the loan of its "Scottish brigade." The traditions, the dignity, the principles, and the policy of the States-General forbade compliance with the request, and it was refused. This gave great offence to Great Britain. The king felt that "He that is not with me is against me." This was the first attempt of either party to induce Holland to take part in the American war.

**Hollins, GEORGE N.**, was born at Baltimore, Md., Sept. 20, 1799, entered the United States Navy in 1814, and assisted in the defence of the capital in August of that year. He was made a prisoner on board the *President*, and kept so until the end of the war. In 1815 he accompanied Decatur to the Mediterranean. He became notorious by the bombardment of a town on the Pacific coast. (See *Greytown*.) In 1861 he left the navy and joined the insurgents, and in the Confederate service operated on the Mississippi with "rams" and gunboats. He died in 1867.

**Hollis, THOMAS**, was born in England in 1659, and died in London in February, 1731. He was a benefactor of Harvard College, by giving it, altogether, nearly \$20,000 in endowments of professorships. He also gave books to the library, and founts of Hebrew and Greek type for the use of the college.

**Holmes, ABIEL, D.D., LL.D.**, was born at Woodstock, Conn., Dec. 24, 1763; died at Cambridge, Mass., June 4, 1837. He graduated at Yale College in 1783, and was a tutor there in 1786 and 1787. He was pastor of a church in Georgia from 1785 to 1791, and of the First Church, Cambridge, from 1792 to 1832. He prepared and published, in two octavo volumes, very valuable *Annals of America*, closing in 1826. He also published a *Life of his father-in-law, President Stiles (1798)*, a *Memoir of the French Protestants, a History of Cambridge*, and many sermons. Dr. Oliver Wendell Holmes, the distinguished poet, is a son of this eminent divine.

**Holmes, OLIVER WENDELL, M.D.**, son of Abiel, was born at Cambridge, Mass., Aug. 19, 1809. He graduated at Harvard University in 1829; began the study of law, but soon abandoned it for the study of medicine, and in 1822 he went to Europe, and studied in the hospitals of Paris and other large cities. In 1838 Dr. Holmes was appointed professor of anatomy and physiology in Dartmouth College; and in

1847 he was given the same chair in Harvard, which he filled till 1883. He began his brilliant literary career in early life as a poet and essayist, and has sustained the bright promise of his youth. His poems are often strongly marked with the most delicate humor, and he ranks high as a poet at home and abroad. His books, and his contributions to newspaper and magazine literature, are numerous and highly esteemed.

**Holt, JOSEPH**, was born in Breckenridge County, Ky., Jan. 6, 1807, and entered upon the practice of law in 1828. He followed his profession in Kentucky and Mississippi until 1857, when President Buchanan appointed him Com-

JOSEPH HOLT.

missioner of Patents, and Postmaster-general in 1859. When John B. Floyd left the cabinet at the close of 1860, Mr. Holt assumed the charge of the War Department, in which position he was watchful and efficient. In 1863 he was appointed judge advocate of the United States Army, and was a thorough supporter of Lincoln's administration throughout. In 1864 he was placed at the head of the Bureau of Military Justice, and declined the cabinet appointment of Attorney-general. He was breveted major-general of the United States Army in March, 1865.

**Home Manufactures (1768).** The women assisted the non-importation leagues by self-denial and industry. They caught the spirit of opposition to the Stamp Act, and resolved to deny themselves foreign luxuries; and when the new taxation scheme (1767) went into operation, they set their fingers at work producing home-made clothing. A letter written at Newport, R. I., early in 1768, said: "Within eighteen months past, 487 yards of cloth and 36 pairs of stockings have been spun and knit in the family of James Nixon, of this town. Another family, within four years past, hath manufactured 980 yards of woollen cloth, besides two coverlids and two bed-ticks, and all the stocking-yarn for the family. Not a skein was put out of the house to be spun, but the whole performed by the family. We are credibly informed that many families in this colony within the year past, have each manufactured upwards of 700

yards of cloth of different kinds." In Boston, forty or fifty young ladies, calling themselves "Daughters of Liberty," met at the house of Rev. Mr. Moorhead, where they spun, during the day, 237 skeins of yarn, some very fine, which were given to the pastor. There were upwards of 100 busy spinners in Mr. Moorhead's congregation. That wool might not be wanting, the colonists entered into an agreement to abstain from killing and eating lambs. Through the industry of the people and the frugality practised, the markets were soon sufficiently supplied with coarse and common clothes, which were cheerfully worn. The spinning-wheel was the weapon with which the women of America fought the ministry. The infant manufactories of America received a strong impulse from non-importation agreements, and home-made articles, first worn from necessity, became fashionable. The graduating class at Harvard College took their degrees in homespun suits in 1770.

**Hood Chased by Sherman (1864).** Instructed by the chief of the Confederacy to draw Sherman out of Georgia, for his presence was creating great disaffection to the Confederate cause, Hood moved rapidly towards Tennessee, threatening important points on the railway. Sherman followed as rapidly, and, by forced marches, saved Kingston (Oct. 10, 1864), which was one of the threatened places. Hood turned westward towards Rome. Sherman followed, and sent Garrard's cavalry and the Twenty-third corps across the Oostenaulla, to strike Hood's flank if he should turn northward. By quick movements Hood avoided the intended blow, and, appearing before Resaca, demanded its surrender. A vigorous attack by the Confederates was repulsed, and Hood moved on, closely pursued by Sherman. The Confederates destroyed the railway near Buzzard's Roost and captured the Union garrison at Dalton. Sherman tried to make Hood fight, but that active leader avoided this peril and puzzled the Nationals by his inexplicable movements. Still pursuing, Sherman and his entire force were grouped about Gaylesville, in a fertile region of northern Alabama. Now satisfied that Hood did not mean to fight, but was luring the Nationals out of Georgia, Sherman determined to execute a plan which he had already submitted to Lieutenant-general Grant—namely, to destroy Atlanta and its railway communications, march his army through the heart of Georgia, and capture and take possession of Savannah or Charleston, on the Atlantic seaboard. He abandoned the chase after Hood and returned to Atlanta early in November.

**Hood, JOHN B.**, was born in Bath County, Ky., in 1830; died of yellow fever in New Orleans, Aug. 30, 1879. He graduated at West Point in 1853, became a cavalry officer, and fought the Comanche Indians, in Texas, in 1857. He left the army and espoused the cause of the Confederates in 1861, receiving the appointment of brigadier. He joined Twiggs in betraying the army in Texas into the hands of

the Secessionists. He was promoted to major-general in 1862, and commanded the largest division of Longstreet's corps at Gettysburg. He lost a leg at Chickamanga. In the Atlanta campaign in 1864 he was with Longstreet, and su-

JOHN B. HOOD.

persed Johnston in command of the army at Atlanta in July. He invaded Tennessee late in that year; was defeated at Nashville; driven into Alabama, and was relieved of command by General Richard Taylor. He died Aug. 31, 1879.

**Hood's Invasion of Tennessee.** Late in October, 1864, General Hood, with about 55,000 troops, crossed the Tennessee River at Florence, where Forrest, the guerilla chief, aided him (see *Hood Chased by Sherman*); and at Johusville, on the Tennessee, destroyed National stores valued at \$1,500,000. Hood had been reinforced by General Taylor, of Louisiana. General Thomas, then at Nashville, had about 30,000 troops, who, under Schofield, confronted Hood; and he had about as many more at different points, in active service. Hood moved on Nashville (Nov. 17). General Schofield, who was at Columbia with a large force, fell back to Franklin, where, with not more than 18,000 men, he made a stand. He fought Hood there (Nov. 30) and checked his onward march. (See *Franklin, Battle of*.) Schofield fell back to Nashville, followed by Forrest's cavalry. Hood pushed forward to invest that city. There a severe battle was fought (Dec. 15), when Hood was repulsed and made a hasty retreat across the Tennessee into northern Alabama, closely pursued by the victors. (See *Nashville, Battle of*.)

**Hooker, JOSEPH**, was born at Hadley, Mass., in 1815; died at Garden City, L. I., Oct. 31, 1879. He graduated at West Point in 1837, entering the artillery. He served in the war with Mexico, and was breveted lieutenant-colonel for bravery therein. He resigned in 1853 and settled in California, where he was residing when, in May, 1861, he was appointed brigadier-general of volunteers and assigned to the Army of the Potomac, in which he acquired the name of "Fighting Joe Hooker." In May, 1862, he was made major-general. He was severely wounded in

the battle of Antietam, and soon afterwards was commissioned brigadier-general in the United States Army. Early in 1863 he succeeded Burnside in the command of the Army of the Potomac, and was himself succeeded by General

JOSEPH HOOKER.

Meade in June. He performed efficient service near Chattanooga in the fall of 1863, and in the Atlanta campaign of 1864. Hooker was brevetted major-general of the United States Army in 1868, when he retired from active service.

**Hooker, THOMAS**, founder of the Colony of Connecticut, was born at Marketfield, Leicestershire, Eng., in 1586; died at Hartford, Conn., July 7, 1647. He was a popular non-conformist preacher in London, but was silenced, when he kept a school, in which John Eliot, the "Apostle," was his assistant. Hooker fled from persecution to Holland in 1630, and arrived at Boston in September, 1633. He was ordained pastor of the church at Newtown, and in June, 1636, he and his whole congregation began a migration to the valley of the Connecticut, where they founded Hartford. He was exceedingly influential in all New England.

**Hooper, WILLIAM**, a signer of the Declaration of Independence, was born in Boston, Jan. 17, 1742; died at Hillsborough, N. C., October, 1790. He graduated at Harvard in 1760. He studied law under James Otis, and went to North Carolina in 1764, settling in Wilmington in 1767. He was a representative in the Provincial Legislature, and was a delegate to the first Continental Congress in 1774, in which he drew up an address to the inhabitants of Jamaica. Soon after signing the Declaration of Independence he resigned his seat and returned home, where he subsequently took part in local public affairs.

**Hopkins, COMMODORE ESEK, CRUISE OF.** A squadron of seven vessels, fitted out by the Marine Committee (see *Navy Department, Continental*), sailed on a cruise (February, 1776), under Commodore Hopkins, then nearly sixty years of age, to operate against the fleet of Lord Dunmore (see *Dunmore's War on the Virginians*) on the Virginian coast. He sailed from the Dela-

ware. His flag-ship was the *Alfred*, 28 guns. Hopkins proceeded farther south, and made a descent on the island of New Providence, one of the Bahamas, capturing its governor, its fort, and one hundred guns, with a quantity of stores. Leaving the Bahamas for the New England coast, he fell in with and captured two British vessels (April 4) off Long Island, for which the President of Congress complimented him officially. He attacked another British vessel of 29 guns, but she escaped. For this, Hopkins and one or two of his lieutenants were censured. Charges were preferred against him, and he was dismissed from the service, Jan. 2, 1777. He was a brother of Stephen Hopkins, a member of Congress. No commander-in-chief of the navy was afterwards appointed.

**Hopkins, EDWARD**, was born at Shrewsbury, Eng., in 1600; died in London, March, 1657. He was a successful merchant in London, and, being much attached to Mr. Davenport, came with him to America, in 1637, and accompanied him to the banks of the Quinnipiac and assisted in the preliminary work of founding the New Haven Colony. He went to Hartford, where he was chosen governor in 1639, and ruled the Connecticut Colony from 1640 to 1654, alternately every other year with Mr. Haynes. On the death of his elder brother, Mr. Hopkins returned to England, where he became warden of the fleet, commissioner of the admiralty, and member of Parliament. In 1643 Mr. Hopkins had aided in forming the New England Confederacy, and he never lost his interest in the colonies. At his death he bequeathed much of his estate to New England institutions of learning—for the support of grammar-schools at Hartford and New Haven, which are still kept up. He also left a donation of £500, which, by a decree in chancery, went to Harvard College.

**Hopkins, ESEK**, was the first commodore of the American navy. He was born at Scituate,

ESEK HOPKINS.

R. I., in 1718; died at North Providence, R. I., Feb. 26, 1802. Governor Cooke commissioned

him a brigadier-general at the breaking-out of the Revolution. In December, 1775, Congress commissioned him commander-in-chief of the inchoate navy, and he put to sea in the first squadron in February, 1776, consisting of four ships and three sloops, sailing for the Bahama Islands. There he captured a large quantity of ordnance stores and ammunition, and one hundred cannons. He captured two British vessels on his return. Complaint was made that he had not annoyed the British ships on the Southern coast, and he was arraigned before the Naval Committee of Congress, on the charge. He was acquitted, but unavoidable delays in getting vessels to sea afterwards caused other charges to be made, and he was dismissed the service, Jan. 2, 1777. During his long life he exerted great political influence in Rhode Island.

**Hopkins, SAMUEL, D.D.**, father of the American Colonization Society (which see), and of the so-called Hopkinsian divinity, known as Hopkinsian Calvinism. He was born at Waterbury, Conn., in September, 1721; died at Newport, R. I., Dec. 20, 1803. Graduated at Yale College in 1741, he studied divinity with Jonathan Edwards, and became a pastor in 1743. He settled in Newport in 1770, but, during the British occupation of that place, his parish was so much impoverished that he was compelled to live on weekly contributions and the voluntary aid of a few friends the remainder of his life. Newport was a great slave-mart, and Dr. Hopkins powerfully opposed the traffic. So early as 1773 he formed a plan for evangelizing Africa and colorizing it with free negroes from America. He exerted such influence against slavery that, in 1774, Rhode Island passed a law forbidding the importation of negroes into the colony, and, early in 1784, the Legislature declared that all children born after the following March should be free.

**Hopkins, STEPHEN, LL.D.**, one of the signers of the Declaration of Independence, was born at Scituate, R. I., March 7, 1707; died at Providence, July 19, 1785. He was engaged in early life in mercantile business and land-surveying; became an active member of the Rhode Island Legislature, and was speaker of the Assembly from 1732 till 1741. In 1739 he was chief-justice of the Court of Common Pleas, and of the Supreme Court from 1751 to 1754. Mr. Hopkins was a delegate in the Colonial Convention at Albany in 1754, and one of the committee who drew up a plan of union. From 1754 to 1768 he was governor of Rhode Island, excepting four years. He was a member of the first Continental Congress, and remained in that body from 1776 to 1778. He had been from the beginning a staunch opposer of the oppressive measures of Parliament. He was one of the committee that drafted the Articles of Confederation (which see); was a good mathematician, and was for many years chancellor of Brown University. Notwithstanding his defective early education, Mr. Hopkins's knowledge of literature, science, and political economy was varied and extensive.

**Hopkinson, FRANCIS**, one of the signers of the Declaration of Independence, was born in Philadelphia in 1738; died there, May 9, 1791. He graduated at Princeton in 1763. In 1765 he was admitted to the bar; visited England; and on his return married Miss Borden, of Bordentown, N. J. His republican principles caused his removal from a lucrative office in New Jersey. He was a member of Congress in 1776-77, and was distinguished during the Revolution by political and satirical writings. His best known is *The Battle of the Kegs*. He was for several years Commissioner of the Loan-office, and was Judge of Admiralty for ten years—1779-89.

**Hopkinson, JOSEPH**, author of *Hail, Columbia*, was a son of Francis, and was born in Philadelphia, Nov. 12, 1778; died there, Jan. 15, 1842. He graduated at the University of Pennsylvania, became a lawyer of much repute, and was the leading counsel of Dr. Rush in his suit against Cobbett. (See *Cobbett's Revenge*.) He was also counsel for Judge Chase in his impeachment trial. (See *Chase, Samuel*.) As a member of Congress (1816-20), he distinguished himself by his course on the tariff question, and by his opposition to a recharter of the United States Bank. In 1828 Mr. Hopkinson was appointed Judge of the United States District Court of eastern Pennsylvania, an office which his father and grandfather had held. He was a leading member of the convention that revised the Constitution of Pennsylvania in 1837. Mr. Hopkinson was Vice-President of the American Philosophical Society. His best-known literary production is *Hail, Columbia* (which see).

**Hornet and Peacock, BATTLE OF THE.** After the capture of the *Java* (see *Constitution and Java*) Bainbridge left the sloop-of-war *Hornet*, Commander James Lawrence, to blockade the *Bonne Citoyenne*, an English vessel laden with treasure in the harbor of San Salvador, on the coast of Brazil. The *Hornet* was driven away by a larger British vessel, and on the 24th of February, 1813, she fell in with the British brig *Peacock*, 18 guns, Captain Peake, off the mouth of the Demerara River. The *Hornet*, gaining a good position, with quick and incessant firing, came down upon the *Peacock*, closed upon her, and in this advantageous position poured in her shot with so much vigor for fifteen minutes that her antagonist not only struck her colors, but raised the union in a position that indicated a cry of distress. Very soon afterwards the mainmast of the *Peacock* fell and went over her side. She was sinking when officers from the *Hornet* went on board of her. Her guns were thrown overboard, the holes made by balls were plugged, and every exertion was made to keep her afloat until her wounded could be removed, but in vain. She rapidly filled and went to the bottom of the sea, taking down with her nine British and three American seamen. Lawrence sailed immediately for the United States, and the story of the exploit of the *Hornet* created a profound sensation. A Halifax newspaper said: "It will not do for our vessels to fight those of the Americans siu-

gle-handed; they are a dead nip." Public honors were awarded to Lawrence, and Congress voted him thanks and a gold medal. The corporation of New York resolved to present him with the freedom of the city (which see), with a

vous together at the middle of March. On the 23d they entered the port, and the *Hornet* was about to cast anchor, when a strange sail was discovered at the windward. Biddle immediately went seaward to reconnoitre. The stran-

MEDAL AWARDED TO CAPTAIN LAWRENCE BY CONGRESS.

piece of plate bearing appropriate devices and inscriptions, and to give a public dinner to the officers and crew of the *Hornet*. The banquet was given at Washington Hall, on Tuesday, May 4, 1813, only a few weeks before Lawrence was slain. Art and song made contributions to the praise of Lawrence, and the pencil caricature made fun of the vanquished British, as seen in the annexed sketch, which was published by

ger came down before the wind, and a little before two o'clock was within musket-shot distance from the *Hornet*, displayed English colors, and fired a gun. The challenge was accepted by the *Hornet*, and for fifteen minutes a sharp cannonade was kept up. Then the British vessel ran down upon the *Hornet* with the intention of boarding her. The vessels became entangled, and the opportunity for boarding was lost by the refusal of the men of the stranger to undertake it. Biddle's men, on the contrary, were eager for a hand-to-hand fight, but, as his advantage lay with his guns, he would not allow it. His broadsides terribly raked his antagonist, and in a few minutes she was surrendered. Springing upon the taffrail to inquire if she had actually surrendered, Biddle was fired upon by two British marines and wounded in the neck. His assassins were instantly slain by bullets fired from the *Hornet*. The latter became disengaged, and wore to give her antagonist a broadside, when twenty men on the stranger threw up their hands and asked for quarter. The conquered vessel had struck her colors after a battle of twenty-three minutes. She was the brig *Penguin*, 18 guns, Captain Dickenson. She mounted nineteen carriage-guns, besides guns in her top. Her complement of men was one hundred and thirty-two, and her size and weight of metal was the same as those of the *Hornet*. The latter lost one man killed and ten wounded. The loss of the *Penguin* was unknown. Among her slain were her commander and boatswain. After taking from her all that was valuable, Captain Biddle scuttled her (March 25), and she went to the bottom of the deep South Atlantic Ocean. Special honors were bestowed upon Captain Biddle. When he arrived at New York a public dinner was given to him, and his native town (Philadelphia) gave him a beautiful service of silver-

BORNET AND PEACOCK.

Charles, a Philadelphian, soon after the victory. A silver medal was given to each of the other officers of the *Hornet*. The officers of the *Peacock* sent a public letter of thanks to Lawrence for his generous treatment of the prisoners.

**Hornet and Penguin.** When Decatur departed with the *President* (see *President and Endymion*) he ordered the remainder of his squadron to rendezvous at the port of Tristan d'Acunha, the principal of a group of islands in the South Atlantic, in latitude 37° south and 12° west from Washington. They followed the *President* to sea (Jan. 22, 1815), not knowing her fate, and the *Hornet*, 18 guns, Captain James Biddle, and *Tom Bowline* arrived at the rendez-

plate. Congress thanked him in the name of the Republic, and voted him a gold medal. Converting the *Tom Bowline* into a cartel ship, he sent his prisoners in her to Rio Janeiro.

**Hornet, CHASE OF THE.** When sailing towards the Indian seas on the morning of April 27, 1815, the *Hornet* and *Peacock* were close together, and Captain Warrington, of the latter, signalled to Biddle, of the former, that a strange vessel was seen in the distance. Both sloops started in chase, with a light wind, and gained on the stranger. The *Peacock* was ahead, and on the afternoon of the 23th displayed caution in her movements, for she had discovered that the stranger was a heavy British line-of-battle ship, and that she was about to turn upon and chase the American vessels. Then the *Peacock* and *Hornet* spread their sails for flight. The latter was in greater peril, for she was a slower sailer than her consort. The huge Englishman was gaining upon her. Biddle began to lighten her, and during the entire night of the 23th and early morning of the 29th the chase became exceedingly interesting. At dawn the British vessel was within gunshot distance of the *Hornet*, on her lee quarter. At seven o'clock the pursuer threw out British colors and a rear-admiral's flag, and began firing. Onward the *Hornet* sped, casting overboard anchors, shot, cables, spars, boats, many heavy articles on deck and below, and all of her guns but one. At noon the pursuer was within a mile of her, and again commenced firing. Onward the *Hornet* still sped, her commander having resolved to save his ship at all hazards. By consummate seamanship and prudence he did so, and, with her single gun, and without boat or anchor, the *Hornet* arrived at New York, June 9, 1815. The vessel that had pursued her was the British ship *Cornwallis*, 74 guns, on her way to the East Indies.

**Hosmer, HARRIET G.**, sculptor, was born at Watertown, Mass., Oct. 9, 1830. She began modelling in clay at an early age, and, having finished her education in school, she took a course of anatomical instruction in a medical college at St. Louis, Mo. She made a bust of "Hesper," in marble, in 1852, which attracted much attention, and her father (a physician) placed her under the tuition of Mr. Gibson, sculptor, at Rome. Her best-known work—"Beatrice Cenci"—was executed for the public library at St. Louis. She soon became a distinguished and popular artist. One of her best productions, finished in 1859, is "Zenobia in Chains." Miss Hosmer makes Rome her permanent abiding-place, where she is constantly and profitably employed.

**Hospitality to the Continental Congress.** The Philadelphians gave the members of the Continental Congress, assembled in their city in September, 1774, a most hospitable reception. The Carpenters' Association, themselves warm patriots, gave them the free use of their hall—the famous Carpenters' Hall—and their library above; and the directors of the Library Company of Philadelphia requested their librarian

to furnish the members of the Congress with any books which they might wish to use during the session. They were also recipients of unbounded hospitality at the hands of leading citizens, among whom they were continually entertained at tables sumptuously provided. John Adams recorded in his diary an entertainment given by a young lawyer, a member of the Society of Friends. "This plain Friend," says Adams, "and his plain though pretty wife, with her 'thees' and 'thous,' had provided a most costly entertainment in ducks, hams, chickens, beef, pig, tarts, creams, custards, jellies, fools, trifles, floating islands, beer, porter, punch, wine," etc. His diary contains notices of many such entertainments at that time.

**Hostile Forces in the West Indies (1778).** So soon as D'Estaing's destination became known in England, a British fleet, under Admiral Byron, was sent to follow him across the Atlantic. It did not arrive at New York until late in the season. Byron proceeded to attack the French fleet in Boston harbor. His vessels were dispersed by a storm, and D'Estaing, his ships perfectly refitted, sailed (Nov. 1, 1778) for the West Indies, then, as between England and France, the principal seat of war. On the same day five thousand British troops sailed from New York for the same destination, escorted by a strong squadron. The English fleet arrived first, and, joining some other vessels already there, proceeded to attack the island of St. Lucia. D'Estaing unsuccessfully tried to relieve it. Soon afterwards Byron's fleet, from the northeast coast, arrived, when D'Estaing took refuge at Martinique. Byron tried in vain to draw him into action, and then started to convoy, a part of the way, the homeward-bound West Indianmen of the mercantile marine. During his absence a detachment from Martinique captured the English island of St. Vincent. Being largely reinforced soon afterwards, D'Estaing sailed with his whole fleet and conquered the island of Grenada. Before the conquest was quite completed Byron returned, when an indecisive engagement took place, and the much damaged British fleet put into St. Christopher's. D'Estaing then sailed (August, 1779) to escort, part of the way, the homeward-bound French West Indianmen; and, returning, sailed for the coast of Georgia to help the Americans to recover that state.

**Houdon, JEAN ANTOINE**, an eminent French sculptor, was born in Versailles, March 20, 1741; died in Paris, July 15, 1828. He passed ten years at Rome in the study of the antiques. In 1785 he was employed to make a marble statue of Washington for the State of Virginia, which now stands in the rotunda of the state Capitol at Richmond. He visited Mount Vernon and made a cast of the living face only, and, after returning to France, modelled the entire full length of the patriot. That original cast is at Mount Vernon. It is the true model of Washington's face, and should be the standard portrait, instead of that of Stuart, in which the artist avowedly exaggerated. (See p. 648.)

HOUDON'S STATUE OF WASHINGTON.

**Housatonic, NEW ENGLAND TRADING-POST ON THE.** Denied a footing on the Delaware by the Dutch, the New-Englanders pressed their encroachments towards the Upper Hudson. High up on the Housatonic River they established a trading-post, as the Dutch alleged, to draw off the Indian trade from them.

**House of Burgesses,** the name given to the collected representatives of boroughs in Virginia when representative government was first established there under the administration of Governor Yeardly. That body was elected by the people, and at first consisted of two representatives from seven corporations. These, with the governor and Council, formed the General Assembly of Virginia. That general form of government was maintained until that colony became an independent state in 1776. That first House of Burgesses assembled at Jamestown in July, 1619, and by the end of summer four more boroughs were established and representatives chosen. The character of the *personnel* of that popular branch of the Virginia Legislature for many years was sometimes severely criticised by contemporary writers. A clergyman who lived there wrote that the popular Assembly was composed largely of those unruly men whom King James had sent over from the English prisons as servants for the planters, and were not only vicious, but very ignorant. These men (Stith, an accurate historian observes) disgraced the colony in the eyes of the world. Finally better material found its way into the House of Burgesses; and when the old war for independence was kindling, some of the brightest and purest men in the commonwealth

HOUDON'S MASK OF WASHINGTON'S FACE.

composed that House, and were the conservators of the rights of man in Virginia as opposed to the governor and his council.

**Houston and Texas.** Samnel Houston, the hero of Texan independence, was governor of that state when the Secessionists, in convention, declared its withdrawal from the Union. The convention officially informed the governor of the act, and that they had instructed their appointed delegates to ask for the admission of Texas into the "Southern Confederacy." To this communication Houston promptly replied, in substance, that the convention had transcended its delegated powers; that its acts were usurpations; and that he should consider it his duty to act as governor until the Legislature of the state should take action in the matter, regardless of all alleged changes in the political relations of the state. This reply produced great excitement. Believing the governor was about to assemble the militia of the state to resist the convention, that body passed an ordinance (March 8, 1861) which defied his authority. Then the venerable Houston, in a stirring address to the people, recounted his services and his trials, and complained bitterly of the "usurpations" of the convention, which, he said, "had transferred the people, like sheep from the shambles, from the Union to an unlawful league." Loving Texas too well to do aught that should kindle civil war upon its soil, he said he should not attempt, under the circumstances, to exercise his authority as governor, nor would he take the oath of allegiance to the "Southern Confederacy."

**Houston, SAMUEL,** first President of Texas, was born near Lexington, Va., March 2, 1793; died at Huotersville, Tex., July 25, 1863. His family went to Tennessee in his early days, where the Cherokee Indians adopted him as one of their nation. He served with distinction un-

der Jackson in the Creek War, in 1813-14, and was severely wounded. Leaving the army in 1818, he became a lawyer, and was a member of Congress from 1823 to 1827. He was govern-

SAMUEL HOUSTON.

or of Tennessee in 1827, and afterwards lived among the Cherokees, as their legal protector from fraud. Emigrating to Texas, he took a leading part in its public affairs. Instrumental in achieving its independence (1836), he was elected its first President that year; also from 1841 to 1844. He favored the annexation of Texas to the United States, and was elected its first United States Senator in 1846. In that position he remained until 1849, when he was chosen governor of Texas. He opposed the secession and insurrectionary movements in that state with all his might, and retired from office rather than take the oath of allegiance to the Southern Confederacy.

**Hovey and Washburne's Raid.** While General Pemberton was confronting General Grant on the Tallahatchie, late in 1862, Generals Hovey and Washburne crossed the Mississippi, and, with their cavalry, made such destructive raids upon the railways in Northern Mississippi that the Confederates fell back to Grenada. They had broken up railways and destroyed rolling-stock on which the Confederates greatly depended.

**Howard, JOHN EAGER,** was born in Baltimore County, Md., June 4, 1752; died there, Oct. 12, 1827. He was a captain in Hull's regiment at the battle of White Plains. He became a major in the Continental army in 1777, and was distinguished in the battle of Germantown. He was in the battle of Mowmouth (which see), and was made lieutenant-colonel. In 1780 he was detailed, with the Maryland and Delaware troops, to serve in the Southern Department. In Gates's defeat, near Camden, he participated, and he led

the Continental infantry in the battle of the Cowpens, at one time holding in his hands the swords of seven surrendered British officers. For his conduct there Congress voted him a silver

JOHN EAGER HOWARD.

medal. It was the first occasion during the old war for independence in which the bayonet was effectively used. He was distinguished in the battles of Guilford, Hobkirk's Hill, and Eutaw Spring, and was severely wounded in the latter engagement. After the war he married a daughter of Chief-justice Chew, of Pennsylvania. He

SILVER MEDAL AWARDED TO COLONEL HOWARD.

was a member of Congress (1787-88), and governor of Maryland from 1789 to 1792. Colonel Howard was a member of the Maryland Senate in 1795, and United States Senator from 1796 to 1803. He was named by Washington for one of his brigadier-generals in 1798. When Baltimore was threatened in 1814, Howard placed himself at the head of aged men armed for its defence.

**Howard, OLIVER OTIS, LL.D.,** was born at Leeds, Me., Nov. 8, 1830. He graduated at Bowdoin College in 1850, and at West Point in 1854, entering the Ordnance Corps, and becoming instructor in mathematics at West Point in 1857. He took command of a Maine volunteer regiment in June, 1861, and commanded a brigade at the battle of Bull's Run. In September he was made a brigadier-general. At the battle

of Fair Oaks, or Seven Pines (which see), he lost his right arm. After the battle of Antietam (which see) he commanded Sumner's corps; and while Hooker led the Army of the Potomac, in 1863, he was in command of the Eleventh Corps.

OLIVER OTIS HOWARD.

Howard was conspicuous at Gettysburg (which see), and in Lookout Valley and Missionaries' Ridge; also in the relief of Knoxville, late in the year. He was in command of the Army of the Tennessee in 1864, and was in all of the battles in the Atlanta campaign. The right of Sherman's army, on its march to the sea, was commanded by Howard, as well as in the march through the Carolinas afterwards. In December, 1864, he was made a brigadier-general in the United States Army, and was afterwards breveted major-general. At the conclusion of the war, General Howard was made commissioner of the Freedmen's Bureau, and held the office until the bureau was closed, in June, 1872. Trustee and president of Howard University, he resigned in April, 1873, and was appointed commissioner to the Indians. In 1880-82 he was Superintendent of the Military Academy at West Point.

Howe, ELLAS, JR., inventor of a sewing-machine, was born at Spencer, Mass., July 9, 1819; died in Brooklyn, L. I., Oct. 3, 1867. In 1835 he engaged in manufacturing cotton-mill machinery at Lowell, and contrived the sewing-machine of which he was the inventor, producing his first machine, with pecuniary assistance from a friend, in May, 1845, and patented it in September, 1846. Public indifference, violation of his rights, and extreme poverty tended to discourage him, but did not. In 1854 he was enabled to establish his legal claim to priority of invention. Then a flood-tide of prosperity flowed in, and by the time his patent expired, in September, 1867, he had realized about \$2,000,000. At the Paris exposition that year, he received a gold medal and the cross of the Legion of Honor. He had contributed largely in support of the government during the Civil War, and, until his health failed, did duty as a private soldier in a Connecticut regiment.

Howe, GENERAL, ABANDONS NEW JERSEY. The campaign of 1777 was long delayed. The British army, not having received its supply of tents, as well as reinforcements and stores, did not move until towards the middle of June. Washington had watched all Howe's movements with much anxiety and perplexing uncertainty. Whether he would move up the Hudson or on Philadelphia was a question that caused Washington to make disposition of his troops to meet either enterprise. He moved a large portion of his main army from Morristown to Middlebrook, twelve miles from Princeton, leaving Putnam, with a division of Eastern troops, in the Highlands. Howe moved out of New Brunswick (June 13) with the apparent design of forcing his way to Philadelphia. As Washington had only eight thousand men with him, he called troops from the Highlands, and the New Jersey militia turned out in force to aid him. Howe's real object seems to have been to draw Washington into an engagement, for he had another plan for reaching Philadelphia. He made a sudden and rapid retreat, evacuated New Brunswick, and fell back to Amboy. Washington sent Stirling, with his division, to the low ground, and moved with the main army to Quibbletown. Then Howe turned suddenly, to gain the rear of the Americans, when Washington fell back to his strong position at Middlebrook, where Howe did not choose to attack him. In that movement Stirling's division lost a few men and three pieces of artillery. Howe now abandoned New Jersey, crossed over to Staten Island, and there embarked his main army, about sixteen thousand strong (leaving Sir Henry Clinton, with five thousand men, to hold New York), to co-operate with Burgoyne, who was to descend from the St. Lawrence, in defending the city from assault. Howe finally sailed, in his brother's fleet, for Chesapeake Bay.

Howe, GEORGE AUGUSTUS (Viscount), born 1724; killed near Ticonderoga, July 8, 1758. He succeeded to his father's title when he was eleven years of age. In 1757 he was commissioned colonel of the Sixtieth (Royal American) regiment. Later in the year he was made colonel of the Fifty-fifth Foot, and soon afterwards brigadier-general, and sent to America with General Abercrombie in the spring of 1758. He led the right wing of the army in the expedition against Ticonderoga. At the head of an advanced party, he met a detachment of French troops in the forest between the foot of Lake George and Ticonderoga, and in a skirmish with them was killed at the outset. His body was taken back to the head of the lake, and thence to Albany, by young Major Philip Schuyler, where it was entombed in the family vault of the Schuylers. There it remained several years. The remains were finally placed in a leaden coffin, and deposited under the chancel of St. Peter's Church, in Albany. When his remains were taken from the vault, his hair, which had been cut short as an example for his soldiers, had grown to long, flowing, and beautiful locks. The province of Massachusetts erected a monument to his mem-

ory in Westminster Abbey. Lord Howe was elder brother of Richard and William Howe, who came to fight the Americans in their war for independence. His fall was regarded as an ill omen in the army, and produced almost universal consternation and laugnor. Mante says, "With him the soul of the expedition seemed to expire." Abercroubie returned with his troops to Albany.

**Howe, RICHARD** (Earl), born March 19, 1725; died August 5, 1799. Educated at Westminster and Eton, he succeeded to the Irish viscounty and the family estate on the death of his brother, killed near Ticooderoga in 1758. In 1739 he was a midshipman in Anson's fleet, and was made post-captain for gallantry in 1745. He entered Parliament in 1757, and in 1765 was made Treasurer of the British Navy. In October, 1770, he was promoted to rear-admiral of the Blue, and in 1776 was sent to command the British fleet on the American station, charged with a commission, jointly with his brother, to make peace with or war upon the Americans. They failed to secure peace, and made war. After leaving the Delaware with his fleet, in 1778, he had an encounter off Rhode Island with a French fleet, under the Count D'Estaing, when he disappeared from the American waters. In 1782 he was made admiral of the Blue, and created an English viscount; and in September of that year he relieved Gibraltar, and received the thanks of both Houses of Parliament. In 1787 he was made admiral of the White, and in August the next year was raised to an earldom.

RICHARD HOWE.

Because of a complete victory over the French, which he obtained in 1794, he was rewarded with a gold medal, the Order of the Garter, and the commission of admiral of the fleet, which he resigned in 1797. His last service in the royal navy was persuading mutineers at Spithead to return to duty. In St. Paul's Cathedral a fine monument was erected to the memory of Admiral Howe.

**Howe, ROBERT**, was a native of Brunswick, N. C. History bears no record of his private life. He was in the Legislature in 1773. He appears to have been one of the earliest and most uncompromising of the patriots of the Cape Fear region, for we find him honored with an exception, together with Cornelius Harnett, when royal clemency was offered to the rebels

by Sir Henry Clinton, in 1776. He was appointed colonel of the first North Carolina regiment, and with his command went early into the field of Revolutionary strife. In December, 1775, he joined Woodford at Norfolk, in opposition to

ROBERT HOWE.

Lord Dunmore and his motley army. For his gallantry during this campaign, Congress, on the 29th of February, 1776, appointed him, with five others, brigadier-general in the Continental army, and ordered him to Virginia. In the spring of 1776, British spite towards General Howe was exhibited by Sir Henry Clinton, who sent Cornwallis, with nine hundred men, to ravage his plantation near old Brunswick village. He was placed in chief command of the Southern troops in 1778, and was unsuccessful in an expedition against Florida and in the defence of Savannah. His conduct was censured, but without just cause. Among others whose voices were raised against him was Christopher Gadsden, of Charleston. Howe required him to deny or retract. Gadsden would do neither, and a duel ensued. They met at Cannonsburg, and all the damage either sustained was a scratch upon the ear of Gadsden by Howe's ball.

**Howe, SAMUEL GRIDLEY**, M.D., was born in Boston, Mass., Nov. 10, 1801; died there, Jan. 6, 1876. He graduated at Brown University in 1821, became a physician, and, sympathizing with the Greeks in their struggle for independence, went there in 1824, and served as a surgeon in the army and in other capacities until 1830. In 1831 he became interested in the establishment of an institution for the blind in Boston. The Perkins Institute was the result. It was put in operation in 1832, with Dr. Howe at the head of it. In that institution, through the unwearied efforts of Dr. Howe, Laura Bridgman, a deaf, dumb, and blind girl, became educated. Dr. Howe, while in Europe, preparatory to opening the institution, engaged a little in politics, and was in a Prussian prison about six weeks. He was ever active in every good work. He went to Greece again in 1867, as bearer of supplies to the Cretans in their struggle with the Turks. In 1871 he was one of the commissioners sent by the government of the United States to Santo Domingo to report upon the annexation of that island to the American Republic.

lic.—**JULIA WARD**, wife of Dr. Howe, was born in New York in 1819, and is distinguished for her literary talents and benevolent work.

**Howe, WILLIAM**, was born Aug. 10, 1729; died July 12, 1814. He was, by illegitimate descent, uncle of George III. He entered the army as cornet of dragoons, and distinguished himself under Wolfe at Quebec. Made colonel of infantry in 1764, he rose to the rank of major-general in 1772. In May, 1775, he arrived at Boston with reinforcements for General Gage. At that time there was much reluctance among British officers to serve against the American colonists. The Earl of Effingham and the eldest son of William Pitt resigned their commissions rather than engage in the unnatural service; and General Oglethorpe, the senior general of the royal army, declined the proffered service of commander-in-chief of the British army in America. After Gage's recall, it was offered to General Howe, and accepted. He was in chief command in the battle on Bunker's (Breed's) Hill (June 17, 1775), and when forced to leave Boston (March, 1776) he went with his troops to Halifax. In August, the same year, he landed a large number of troops on Staten Island, near New York. With them the Americans were defeated in battle on Long Island (Aug. 27, 1776), and for this he was soon afterwards knighted. He took possession of New York city Sept. 15, and was defeated in battle at White Plains, Oct. 28. (See *White Plains, Battle of*.) On the 16th of November he captured Fort Washington, on New York island, and in July, 1777, he sailed in the fleet of his brother, Admiral Howe, for Chesapeake Bay. Marching for Philadelphia, he defeated Washington in battle on Brandywine Creek (Sept. 11, 1777), and entered Philadelphia on the 26th of September. Howe repulsed an attack made by Washington (Oct. 4) at Germantown, and spent the ensuing winter in Philadelphia. In May, 1778, he was succeeded by Sir Henry Clinton, and returned to England. Sir William was made lieutenant-general of ordnance in 1782, and in 1786 colonel of dragoons and full general. In 1795 he was appointed governor of Berwick, and on the death of his brother, in 1799, succeeded to his Irish viscounty. Howe was governor of Plymouth and a Privy-Councillor at the time of his death.

**Howe, WILLIAM, COMMANDER OF THE BRITISH ARMY IN AMERICA.** The ministry resolved to raise the military force in Boston to ten thousand men, and supersede the incapable Gage. The command was offered to General Amherst, who declined it; it was then offered to William Howe, a man of inferior genius as a military commander. "Is it a proposition or order from the king?" he asked, when it was offered. When told it was an order, he said, "It is my duty to obey it." His constituents in Nottingham reproached him, saying, "Your brother died there (see *Howe, George Augustus*) in the cause of freedom; the Americans have shown their gratitude to your name and family by erecting a monument to him." "If you go," said some of them, "we hope you may fall."

**Howe's Expedition against St. Augustine (1778).** In retaliation for incursions from Florida (see *Florida, Incursions from*), General Robert Howe, at the head of two thousand Americans, mostly militia of South Carolina and Georgia, attempted the capture of St. Augustine. He met with very little opposition before he reached the St. Mary River, where the British had erected a fort, called Tonyu, in compliment to the governor of the province. On the approach of Howe they destroyed the fort; and, after some slight skirmishing, retreated towards St. Augustine. But the Americans were driven back from Florida by a fever which swept away nearly one fourth of their number, and rendered their retreat absolutely necessary.

**Howitzer, A,** is a short cannon, or species of mortar, of iron or brass. They are generally four or five feet long and ten inches in diameter. There are mountain howitzers, sometimes carried on horseback, weighing 220 pounds, the whole length about 37 inches, and diameter of bore  $4\frac{1}{2}$  inches. The range varies, according to elevation, from 150 to 1000 yards.

**Hubbardton, BATTLE AT (1777).** Generals Fraser and Riedesel, with British and German troops, began a pursuit of the Americans as soon as their flight from Ticonderoga was discovered. They overtook their rear-guard, about 1200 strong (July 7, 1777), at Hubbardton, Vt. The main body of St. Clair's army had marched towards Castleton, leaving the rear-guard, under Colonel Seth Warner, to gather up stragglers. While waiting their arrival, Warner was struck by the van of the pursuers, and a sharp engagement took place. Colonel Francis, of New Hampshire, was killed. The Americans were dispersed, and fled, excepting 200 who were made prisoners. The pursuers lost almost as many in killed and wounded, and soon gave up the chase. St. Clair, with about 2000 men, made his way through the woods to Fort Edward. The Americans also lost 120 in killed and wounded. The British captured about 200 stand of arms.

**Huddy and Asgill.** Captain Joseph Huddy was a captain in the New Jersey line during the Revolution. Late in 1781 he was in charge of a block-house on Tom's River, Monmouth County, N. J. There he and his little garrison were captured in March, 1782, by a band of refugee loyalists sent by the "Board of Associated Loyalists" of New York, of which ex-Governor Franklin of New Jersey was president, and taken to that city. On April 8, these prisoners were put in charge of Captain Richard Lippincott, a New Jersey loyalist, who took them in a sloop to the British guard-ship at Sandy Hook. There Huddy was falsely charged with being concerned in the death of Philip White, a desperate Tory, who was killed while trying to escape from his guard. While a prisoner, Huddy was taken by Lippincott to a point at the foot of the Navesink Hills, near the present light-houses, and there hanged. Lippincott affixed a label to the breast of the murdered Huddy, on which retaliation was threatened, and ending with the words, "*Up goes Huddy for Philip White!*"

This murder created intense excitement at Freehold, N. J., where Huddy was buried, and the leading citizens petitioned Washington to retaliate. A council of his officers decided in favor of retaliation, and that Lippincott, the leader, ought to suffer. He was demanded of Sir Henry Clinton. Congress authorized retaliation, and from among several British officers, prisoners of war, Captain Charles Asgill, a handsome young

CAPTAIN CHARLES ASGILL.

officer, twenty years of age, and son of Sir Charles Asgill, was chosen by lot, to be executed immediately. Washington postponed the execution until he should hear from Clinton about the surrender of Lippincott. Clinton at once condemned the action of Lippincott, and ordered (April 26) the Board of Associated Loyalists not to remove or exchange any prisoners of war without the authority of the commander-in-chief. He caused the arrest of Lippincott for trial, who claimed that he acted under the orders of the Board of Associated Loyalists. Franklin tried to get him to sign a paper that he had acted without their orders or approbation, but he stoutly refused, and was acquitted. Sir Guy Carleton succeeded Clinton, and he promised that further inquiry in the matter should be had. Meanwhile months elapsed and the execution was postponed. Lady Asgill appealed to the king in behalf of her only son. She also wrote to the King and Queen of France asking them to intercede with Washington. She also wrote a touching letter to Washington, who was disposed to save the young officer, if possible. The King and Queen of France did intercede, and on Nov. 5, 1782, Congress resolved, "That the commander-in-chief be, and hereby is, directed to set Captain Asgill at liberty." It was done. The case of young Asgill had created an intense interest in Europe, and, on the arrival of every ship from America at any European port, the first inquiry was about the fate of Asgill. In 1836, Congress granted to Martha Piatt, only surviving child of Captain Huddy, then seventy years of age, \$1200 in money and 600 acres

in land, the "amount due Captain Huddy for seven years' service as captain of artillery." Asgill succeeded to the title and estate of his father, and rose to the rank of general in the British army. The famous Madame de Sevigné made the story of Captain Asgill the groundwork of a tragic drama.

**Hudson, HENRY**, was born about the middle of the sixteenth century. He was an expert English navigator, and was first employed by English merchants, in 1607, to search for a northeastern passage to India. He sailed from Gravesend on the 1st of May, 1607, in a small vessel manned by only ten men and a boy—the latter his son. In latitude 80°, on the eastern coast of Greenland, he was stopped by the ice-pack. He fought the ice-floes and storms for many weeks, and then returned to England in September, bearing only the fruit of the discovery of the island of Spitzbergen. Neither he nor his employers were disheartened, and late in April, 1608, he sailed again, expecting to make a passage between Spitzbergen and Nova Zembla. Again he was compelled by the ice to turn back. His employers were now discouraged, and Hudson went over to Holland and offered his services to the Dutch East India Company, and they were accepted. On the 6th of April, 1609, he sailed from Amsterdam in the *Half Moon*, a stanch vessel of ninety tons, and steered for Nova Zembla. Again the ice-barrier forbade his entrance to the polar seas. Determined not to return fruitless to Amsterdam, he sailed around the southern shores of Greenland, into the beaten track of searchers after a northwest passage.

HENRY HUDSON.

Again he was repulsed by the ice. Sailing southward, he discovered the American continent off the coast of Maine, and in Casco Bay he repaired his storm-shattered vessel. He then sailed southward as far as the Capes of Virginia, touching at Cape Cod on the way. Returning, he discovered Delaware Bay, and early in September he entered Raritan Bay, south of Staten Island, and afterwards entered the (present) har-

bor of New York. Treating the Indians unkindly, they were hostile, and one of his seamen was killed by them, who attacked a boat's crew in canoes. From the north flowed a large river into New York Bay. Believing it would afford a north-west passage, he sailed up the stream, and was not undeceived until he met fresh-water in the Highlands. He kept on in his ship as far as the site of Albany, and in small boats several miles farther. Returning to the sea, he followed the coast southward as far as Chesapeake Bay, and then returned to England and told the story of his discoveries. The unworthy monarch on England's throne, jealous of the advantage which the Dutch might derive from Hudson's discoveries, detained him as an English subject; but the navigator outwitted his sovereign, for he had sent an account of his voyage to his Amsterdam employers by a trusty hand. Hudson made a fourth voyage, in 1610, leaving England in April, and in June and July discovered, far up the coast of North America, the bay that bears his name, and intended to winter there, but his provisions ran short and he was compelled to return. Some of his crew mutinied, and, seizing him, placed him, his son, and seven of his adherents in an open boat, and set them adrift. His fate was revealed by one of the mutineers. England sent an expedition in search of him, but no trace could be found.

**Hudson, HENRY, CRUEL FATE OF.** In 1610 Henry Hudson sailed from England on his fourth voyage in search of a polar ocean passage to India; this time in the northwest. He discovered the bay that bears his name in the far north of the western hemisphere, and intended to winter there; but a majority of his crew became mutinous and compelled him to sail homeward. On the way his son and seven of his men who had remained faithful to him were seized by the mutineers, and, with the commander, were placed in an open shallop and abandoned on the icy sea, where, of course, they soon perished. The names of the wretched passengers in that little vessel, left to perish, were Henry Hudson, John Hudson, Arnold Ludlow, Shadrach Fanna, Philip Staffe, Thomas Woodhouse, Adam Moore, Henry King, and Michael Bute. The compassionate carpenter of the ship furnished them with a fowling-piece, some powder and shot, some meal and an iron pot to cook it in, and a few other things. They were towed by the ship out of the ice-floes to the open sea, and then cut adrift.

**Hudson's Bay Company, FOUNDATION OF THE.** In 1666 Captain Gillam was sent from England in a ship to search for a north-west passage to India through Hudson's Bay. He sailed into Baffin's Bay, but was turned back at the seventy-fifth degree by the ice-pack. He then entered Hudson's Bay, and sailed to the southern end of it, where, at the mouth of a river which he named Rupert, he built a fort which he named Charles, and laid the foundations of a fur-trade with the natives. Two years afterwards the Hudson's Bay Company was chartered. The king gave to Prince Rupert,

and several lords, knights, and merchants associated with him, a charter, under the title of the "Governor and Company of Adventurers of England trading into Hudson's Bay." The charter ceded to the company the whole trade of the waters within the entrance to Hudson's Strait and of the adjacent territories. The original sum invested by the company was a little more than \$50,000. No trade in the world was so profitable as that engaged in by the Hudson's Bay Company. It was said that at one time the proprietors of the stock, not ninety in number, gained about two thousand per cent.

**Hudson's Voyage up the North River, LIMIT OF.** There is some difference of opinion as to the limit of Hudson's voyage in the river that bears his name, De Laet making it the forty-third degree of north latitude, which is about twenty-five miles above Albany. Juet, in his journal of the voyage, says the *Half Moon* anchored (probably near the site of Albany), and sent out small boats to explore the rapidly shallow stream. The boats probably went a little distance above the site of Waterford; probably to between latitude 42° and 43°. Brodhead, the latest historian of New Netherland, says he thinks the boats went, probably, "some distance above Waterford."

**Huger, ISAAC,** was born in South Carolina, March 19, 1742; died in Charleston, S. C., in November, 1797. He and his four brothers—Daniel, John, Francis, and Benjamin—were distinguished in the struggle for independence, the latter falling in the lines at Charleston, May 11, 1780. They were of Huguenot descent. Isaac was in the Cherokee expedition in 1760, and entered the patriot army of South Carolina as lieutenant-colonel in June, 1775. He rose to brigadier in January, 1779, for active and gallant services. In the attack on Savannah, in the fall of that year, he led the Georgia and South Carolina militia. His force was defeated and dispersed by Tarleton at Monk's Corner, S. C. He distinguished himself under Greene, especially at Guilford and Hobkirk's Hill (which see).

**Huguenots in America.** The name of Huguenot was first given to the Protestants of France who favored the Reformation, but afterwards it was confined to the Calvinists, or followers of John Calvin, who was the morning-star of the Reformation in that country. Under his teaching the number of Protestants in France rapidly increased from 1528 to 1559, when the great synod held in May adopted Calvin's ideas of church government and discipline, as well as doctrine, in an embodied confession of faith. The Huguenots were then so strong that they confidently expected to be the dominant party in the state in time. They included some of the royal family and many of the nobility. Among the latter were Admiral Coligni, a man respected by both parties, a brave and patriotic soldier, and for a while the favorite of the queen-mother and regent of France, Catharine de' Medici. In 1555 he formed a project of a settlement for the persecuted Huguenots in America; and in that year Henry II. furnished two ships, com-

manded by the Chevalier de Villagagnon, who, with a small Protestant colony, sailed from Havre-de-Grace in May (1555), and reached the bay of Rio Janeiro, Brazil, in September. Coligni provided ministers for his colony, and in a synod that year, held at Geneva, of which Calvin was president, the church determined to send two ministers to Brazil. The enterprise was a failure. On the death of Henry, Queen Catharine became regent of the kingdom during the minority of her son Charles. She cared nothing for religion, but had espoused the cause of the Protestants because the leader of the Roman Catholics was the Duke of Guise, a descendant of Charlemagne, and a claimant of a right to the French throne. The Protestants were still suffering greatly from persecution, and late in 1561 Coligni sought permission from Catharine to provide a refuge for them in the wilds of America. She readily granted all he desired, and early in 1562 he sent John Ribault, an expert mariner of Dieppe, with two caravels (small two-masted ships without whole decks), with sailors and soldiers, and a few gentlemen of fortune, who were prompted by a love of adventure and the prospect of gain to seek a place wherein to plant a colony. They arrived off the coast of Anastasia Island (it is enposed), below the site of St. Augustine, at the close of April. Sailing along the "sweet-smelling coast" of Florida, northward, the two vessels entered a river which was named Mary, and were kindly received by the natives when they landed. The Frenchmen were delighted with everything they beheld—the climate; the forest, redolent with the perfume of the magnolia; birds with gorgeous plumage and sweetest notes; and "people of the finest forms and kindest natures." In the presence of half-naked, wondering semi-worshippers, the Christians knelt in the shadows of a flower-laden magnolia-tree, and offered thanksgivings to God for their safe voyage. At twilight they returned to their ships; and the next morning conveyed a stone column, on which were carved the arms of France, planted it on a flowery knoll, and in the usual manner took possession of the country in the name of the boy-king Charles IX., son of Catharine. A few days later they sailed northward, entered a broad sound which they named Port Royal, on the coast of South Carolina, explored the Coosa and the Combahee, in the land where D'Allyon met a deserved fate (see *Vasquez*), and on Port Royal Island, near the site of Beaufort, made choice of a spot for a colony. The Indians were kind, and so were the Frenchmen, and there was mutual friendship. Ribault addressed his company on the glory to be obtained and the advantage to the persecuted Huguenots by planting there the seed of empire, and asked, "Who will undertake the work?" Nearly all were willing. A colony of thirty persons was organized by the choice of Albert Pierria for governor. Ribault built a fort, and named it Carolina, in honor of his king, the remains of which were yet visible when the writer visited it in 1866. After giving the colonists good advice, Ribault departed for Europe with the rest of the company. Coligni

was delighted with his report, but was unable to do anything for his colony then, for civil war was raging between the Huguenots and Roman Catholics. When it subsided the admiral sent three vessels—the *Elizabeth of Honfleur*, the *Pétite Britain*, and the *Falcon*—under the command of René-Laudounière, who was with the former expedition, to the aid and reinforcement of the colony. He was accompanied by Jacob Lemoyne, an artist and geographer; two skilful pilots (the brothers Vasseur) of Dieppe; and many young men of family and fortune, as well as mechanics and laborers. Landounière left Havre-de-Grace on the 22d of April, 1564, reached the coast of Florida in two months, and, instead of going to Port Royal, he proceeded to plant a colony on the banks of the St. John. He had evidently heard of the fate of the first colony before leaving France. That colony, expecting supplies from home, had not planted, and when Ribault did not return they were menaced with starvation. The friendly Indians supplied them with corn, but it was consumed by fire. Dissensions arose among them, a mutiny broke out, and their governor was murdered. The Indians became distrustful of the Frenchmen and withheld supplies, and the latter determined to desert Port Royal. Constructing a frail brigantine, they departed for home, with scanty supplies. Tempest-tossed on the ocean, their food was exhausted, and their vessel floated, a mere wreck, on the waters. One after another died and fell into the sea, and the survivors were about to eat the last victim when a green shore greeted their eyes, and a small vessel saved them from death. It is believed they were on the shores of England, for it is known that some of these French adventurers were taken before Queen Elizabeth, and gave her the first information concerning that beautiful middle region of America which Raleigh afterwards tried to colonize. (See *Raleigh*.) Landounière anchored his ship, landed where Ribault had set up the arms of France, and erected a fort on the south bank of the river, which he named Carolina. Rumors came of rich mines in the interior, and a violent gold-fever raged. Disappointment cured the fever, but idleness and improvidence were the rule in the colony. There were too many "gentlemen" who would not soil their hands with labor. At length there was a mutiny, and some of the soldiers and sailors seized two of the vessels, sailed for the West Indies, and turned pirates. The rich soil was neglected, starvation was threatened, and Landounière determined to return to France. From Sir John Hawkins (see *Drake, Sir Francis*), who sailed into the St. John, he bought a ship, and was about to embark for Europe with the whole company, when Ribault appeared with a squadron of seven ships, with supplies, and a fresh colony of men, women, and children. He arrived near the close of August, 1565. A few days afterwards Pedro Menendez, a Spanish officer, appeared off the mouth of the St. John with five ships, who told Landounière that he was sent by his master, Philip of Spain, to hang and destroy all Protestants whom he should find on land or sea; that he should execute his or-

ders to the letter, and that if any Roman Catholics were among the Huguenots they should be well treated. The captains of the French vessels cut their cables and put to sea, chased by the Spaniards, who could not overtake them, and returned to the coast farther south. The Frenchmen returned to the St. John, where Indians brought the news that the Spaniards had landed, and were building fortifications. Ribault, who was in chief command, believing the Spaniards meant to march overland and attack Fort Carolina, with three ships manned by sailors and soldiers went to sea to drive their enemies from the coast. Meanwhile Menendez had sent a galleon to Cuba for a reinforcement of Spanish troops. The spot fortified by Menendez was the site of St. Augustine, Fla. During Ribault's absence the Spanish marched over the country, captured Fort Carolina, butchered a greater portion of the Huguenots there, and hanged some of them upon trees, with the inscription over them, "Not as Frenchmen, but as Lutherans." The number of Huguenots murdered there was one hundred and forty-two. Ribault's vessels meanwhile had been wrecked below St. Augustine, and while making his way towards Fort Carolina, with about three hundred men, they were caught by the Spaniards and massacred. Landonniere and a few others escaped from the St. John, and so ended the Huguenot colony. (See *Coligni*.) A fiery Frenchman, Chevalier Dominic de Gourges, a Roman Catholic, determined to avenge this outrage. He sold his property to obtain money to fit out an expedition to Florida. He kept his destination a secret, even from his followers. He arrived in Florida in the spring of 1568, and was joined by the natives in an attack upon two forts on the St. John occupied by the Spaniards below Fort Carolina. The strong places were captured, and the whole of the Spaniards were slaughtered, excepting a few whom De Gourges hanged upon trees, under the words, "Not as Spaniards and mariners, but as traitors, robbers, and murderers." Menendez firmly planted a colony at St. Augustine. In 1598 Henry IV., of France, issued an edict at Nantes (see *Edict of Nantes*) that secured full toleration, civil and religious, for the Huguenots, and there was comparative rest for the Protestants until the death of Cardinal Mazarin, in 1661. Then the Huguenots began to be persecuted, and in 1685 Louis XIV. revoked the Edict of Nantes. The fires of intolerance were kindled, and burned so furiously that at least five hundred thousand Protestants took refuge in foreign lands. In 1705 there was not a single organized congregation of Huguenots in all France. Many came to America—some to South Carolina, some to New York, and a few to Massachusetts, Rhode Island, and Virginia. They formed excellent social elements wherever they settled, and many leading patriots in our old war for independence were descended from them. Three of the presidents of the Continental Congress—Henry Laurens, John Jay, and Elias Bondinot—were of Huguenot parentage.

**Huguenots in Brazil.** The benevolent Ad-

miral De Coligni formed a project in 1555 to establish a colony of Huguenots, or French Protestants (see *Huguenots*) in Brazil, where they might have freedom in divine worship; also to promote the interests of his nation. Two ships, furnished by Henry II., of France, were placed under the command of the Chevalier De Villagagnon, who sailed with a colony of Protestants from Havre-de-Grace in May. They arrived on the coast of South America in September, at the harbor of (present) Rio Janeiro. There on an island an attempt was made to build a fort, but it was washed away by the sea. Some Protestant ministers were invited from Geneva. At a synod held at Geneva in that year, of which Calvin was president, it was resolved to send two ministers to Brazil; they finally sent fourteen missionaries in 1556. Three ships were fitted out at the royal expense to convey more Protestants to Brazil, under the command of Villagagnon, who had embraced the Reformed religion, but abandoned it and returned to the bosom of the Roman Catholic Church. His treatment of the colony under his charge caused its ruin, and nearly all of the emigrants returned to France. But for the treachery of Villagagnon Rio Janeiro might now have been the capital of a French, instead of a Portuguese, empire.

**Hull, ISAAC,** was born at Derby, Conn., March 9, 1775; died in Philadelphia, Feb. 13, 1843. At the age of nineteen he commanded a merchant ship which sailed to London. He entered the navy as lieutenant in 1798, and rose to captain

ISAAC HULL.

in 1806. He was in the *Constitution*, and distinguished himself in the West Indies and in the Mediterranean. He sailed in the *Constitution* in July, 1812, and had a remarkable chase by a British squadron. (See *Constitution, Famous Retreat of the*.) In August he encountered the *Guerriere*, and made her a captive. (See *Constitution and Guerriere*.) For this exploit Congress

voted Captain Hull a gold medal. Afterwards he was a naval commissioner, and commodore of the navy-yards at Boston, Portsmouth, and Washington. He served in the American navy, afloat and ashore, thirty-seven years. His remains rest in Laurel Hill Cemetery, and over them is a beautiful altar-tomb of Italian marble—a copy of the tomb of Scipio Barbatus at Rome. It is chastely ornamented, and surmounted by an American eagle, in the attitude of defending the national flag, upon which it stauds.

HULL'S MONUMENT.

Hull, WILLIAM, was born at Derby, Conn., June 24, 1753; died at Newton, Mass., Nov. 29, 1825. He graduated at Yale College in 1772, studied divinity a year, then became a student at the Litchfield Law School, and was ad-

WILLIAM HULL.

mitted to the bar in 1775. He soon afterwards became captain in Webb's regiment, and joined the Continental army at Cambridge. He behaved bravely at Dorchester Heights, White Plains, Trenton, and Princeton, and after the battle at the latter place he was promoted to major. Through all the most conspicuous bat-

ties in the North, Hull was active and courageous, and a participant in the capture of Cornwallis. He served as inspector under the Baron von Stenben, was promoted to lieutenant-colonel in 1779, and soon afterwards to colonel. Hull practised law with reputation at Newton after the war, was a leading member of the Massachusetts Legislature in both houses, and was a noted man in wealth and reputation in that state when he became major-general of militia. He commanded a portion of the troops which suppressed Shays's Rebellion (which see). In 1793 he was a commissioner to Canada to treat with the Indians; and on his return from Europe, in 1798, he was made a judge of the Court of Common Pleas. From 1805 to 1812 he was governor of Michigan Territory, where, after a fruitless and brief campaign for the invasion of Canada, as commander of the Army of the Northwest, he was compelled to surrender Detroit and the territory into the possession of the British. (See *Canada, Invasion of.*) For this act he was tried by a court-martial, sentenced to death, pardoned by the President, and afterwards published such a thorough vindication of his conduct that his name and fame now appear in history un tarnished.

**Hull's Evacuation of Canada.** Hull's army, which had crossed the Detroit River into Canada, lay almost inactive between Sandwich and Fort Malden. The young officers of the army became exceedingly impatient, and almost mutinous, because Hull continually restrained them, and was unwilling to send out detachments on offensive expeditions. He had given Van Horne so few men wherewith to escort Captain Brush, with his cattle and provisions (see *Van Horne's Defeat*), that when the army heard of the disaster to the troops there was plain and loud talk at headquarters that startled the general. "Send five hundred men at once," said McArthur and Cass, "to escort Brush to headquarters." "I cannot spare more than one hundred," replied Hull. The mutinous spirit was then so threatening that Hull called a council of officers, when it was agreed to march immediately upon Fort Malden. The troops were delighted. Preparations went on vigorously, and an order to march for Amherstburg was momentarily expected, when, near the close of the day, an order was promulgated for the army to *re-cross the river to Detroit!*—an order to abandon Canada. This order was in consequence of intelligence just received that a large force of British regulars, Canadian militia, and Indians were approaching from the east, under Governor Sir Isaac Brock. Sullenly the humiliated army obeyed their cautious commander, and on the night of Aug. 7 and the morning of the 8th they crossed the Detroit River, and encamped upon the rolling plain in the rear of Fort Detroit. Major Denny was left on the Canada side with one hundred and thirty convalescents and a corps of artillerists, to occupy Sandwich and afford

"all possible protection to the well-disposed inhabitants." The chief object of the evacuation was to secure a permanent communication between his army and the sources of his supplies in the Ohio settlements.

**Hull's Invasion of Canada.** When General Hull arrived near Detroit with his army (July 6, 1812), he encamped at Spring Wells, opposite Sandwich, where the British were casting up intrenchments. His troops were anxious to cross the Detroit River immediately and invade Canada, but Hull had orders to await advices from Washington. The troops became almost mutinous. The general was perplexed, but was relieved by receiving a despatch from the Secretary of War telling him to "commence operations immediately." He could not procure boats enough to carry over a sufficient force to land in the face of the enemy at Sandwich, so he resorted to strategy. Towards the evening of July 11 all the boats were sent down to Spring Wells, in full view of the British, and Colonel McArthur, with his regiment, marched to the same place. After dark troops and boats moved up the river unobserved to Bloody Run, above Detroit. The British, finding all silent at Spring Wells, believed the Americans had gone down to attack Malden, eighteen miles below, so they left Sandwich and hurried to its defence. At dawn there were no troops to oppose the passage of the Americans, and Hull's troops passed the river unmolested. Colonel Cass hoisted the American flag at Sandwich, and the American troops encamped near. On the same day Hull issued a stirring proclamation, in which he set forth the reasons for the invasion, and assured the inhabitants that all who remained at home should be secure in person and property. He did not ask them to join him, but to remain quiet. This proclamation, and the presence of a considerable army, caused many Canadian militia to desert their standard. To the Americans the conquest of Canada appeared like an easy task. (See *Canada, Attempted Conquest of.*)

**Hull's Surrender.** (See *Detroit, Surrender of.*)

**Hull's Trial.** General William Hull, on his release at Montreal, on parole (see *Detroit, Surrender of*), returned to his farm at Newton, Mass., from which he was summoned to appear before a court-martial at Philadelphia on the 25th of February, 1813, of which General Wade Hampton was appointed president. The members of the court were three brigadier-generals, nine colonels, and three lieutenant-colonels. A. J. Dallas, of Pennsylvania, was judge-advocate. This court was suddenly dissolved by the President, without giving any reason for the act; and, almost a year afterwards, Hull was summoned before another, convened at Albany, N. Y., Jan. 3, 1814, composed of three brigadiers, four colonels, and five lieutenant-colonels, with Dallas as judge-advocate. General Dearborn was appointed president of the court. His neglect of duty to inform Hull of an armistice he had entered into with the British (and so allowed Brock to go unopposed to Fort Malden with troops) was charged by the accused and his

friends as the chief cause of the disaster at Detroit. The defendant might justly have objected to that officer as his chief judge, for the acquittal of Hull would have been a condemnation of Dearborn. But Hull was anxious for trial, and he waived all feeling. He was charged with treason, cowardice, neglect of duty, and unofficerlike conduct from April 9 until Aug. 16, 1812. He was tried on the last two charges only. Colonel Cass was his chief accuser. The specifications under the charge of "Cowardice" were: "1. Not attacking Malden, and retreating to Detroit. 2. Appearance of alarm during the cannonade. 3. Appearance of alarm on the day of the surrender. 4. Surrendering of Detroit." The specifications under the last charge were similar to those under the first. After a session of eighty days, the court decided (March 26, 1814) that he was not guilty of treason, but found him guilty of cowardice and neglect of duty, and sentenced him to be shot dead, and his name stricken from the rolls of the army. The court strongly recommended him to the mercy of the President, on account of his age and his Revolutionary services. On the 25th of April, 1814, the President approved the sentence of the court-martial, and on the same day the following order, bearing the signature of Adjutant-general Walbach, was issued: "The rolls of the army are to be no longer disgraced by having upon them the name of Brigadier-general William Hull. The General Court-martial, of which General Dearborn is president, is hereby dissolved." For about twelve years Hull lived under a cloud. His applications to the War Department at Washington for copies of papers which would vindicate him were denied, until John C. Calhoun became Secretary of War, when he promptly furnished them. With these General Hull set about writing his vindication, which was contained in a pamphlet of a little more than three hundred pages, entitled *Memoirs of the Campaign of the Northwestern Army of the United States*. It wrought a great change in the public mind. It was seen that he had been misjudged by his impetuous young officers; that his motives in making the surrender were humane and just, and that his assuming the whole responsibility of the act was heroic in the extreme. To Mr. Wallace, one of his aids, he said, when they parted at Detroit: "God bless you, my young friend! You return to your family without a stain; as for myself, I have sacrificed a reputation dearer to me than life; but I have saved the inhabitants of Detroit, and my heart approves the act." Colonel Cass, later in life, declared it to be his conviction that the main defect of General Hull was "the imbecility of age." To-day, the character of General William Hull, purified of unwarranted stains, appears in history without a blemish in the eye of just appreciation.

**Humphreys,** ANDREW ATKINSON, LL.D., was born in Pennsylvania in 1812, and graduated at West Point in 1831. He distinguished himself in Florida (see *Seminole War*) in 1832, and resigned in 1836. He re-entered the army as lieutenant of topographical engineers in 1838. From

1845 to 1849 he assisted in the coast survey, and in 1853 took charge of the office of Explorations and Surveys, in the War Department. He became a member of General McClellan's staff in March, 1862, and soon afterwards was made brigadier-general of volunteers. He fought at Fredericksburg and Chancellorsville; became General Meade's chief-of-staff from July, 1863, to November, 1864, and commanded the Second Corps from November, 1864, to June, 1865. He was breveted major-general for meritorious services in the siege of Petersburg and the pursuit and capture of General Lee.

**Humphreys, DAVID, LL.D.**, was born at Derby, Conn., July, 1752; died at New Haven, Conn., Feb. 21, 1818. He graduated at Yale College in 1771, and was for a short time tutor in the family of Colonel Phillipse, of Phillipse Manor, N. Y.

DAVID HUMPHREYS.

He entered the army as captain early in the war for independence, and in October, 1777, was major of a brigade. He was aid to General Putnam in 1778, and early in 1780 was made aid to Washington. Having distinguished himself at Yorktown, he was made the bearer of the captured British standards to Congress, when that body voted him an elegant sword. At the close of the war he accompanied Washington to Mount Vernon, and in July, 1784, went to France as secretary of legation to Jefferson, accompanied by Kosciuszko. In 1787 he was appointed colonel of a regiment for the Western service, but when it was reduced, in 1788, he again went to Mount Vernon, where he remained with Washington until sent as minister to Portugal in 1790. He was master of ceremonies in regulating the etiquette of the republican court of the first President. Appointed Minister to Spain (1797), he continued there until 1802, and concluded treaties with Algiers and Tripoli. Colonel Humphreys was extensively engaged in agriculture and manufactures after his return to America, and in 1812 he took command of the militia of Connecticut. Colonel Humphreys was a poet of considerable genius; also a dramatic writer. He wrote a life of General Putnam in 1798.

**Hundred, A**, was a territorial division, having for its chief object the more convenient and efficient administration of justice. The name was

originally derived from the fact that each of these divisions was to contain one hundred free families. In England, to each hundred belonged a court baron, similar in its nature and extent of jurisdiction to a county court. Our towns are the equivalents of the ancient hundreds.

**Hundred Associates—New France.** Cardinal Richelieu, in 1627, annulled a charter of the "Trading Company of New France," then held by the Siens De Caen, who were Huguenots, and in pursuance of his plans for the suppression of these Protestants and the aggrandizement of his monarch, organized a company under the name of the Hundred Associates, to whom he gave the absolute sovereignty of the whole of New France, then claimed to include the American territory from Florida to Hudson's Bay. They were given complete monopoly of the trade in that region, excepting in the whale and cod fisheries. The charter required the company to settle four thousand Roman Catholics there within fifteen years, to maintain and permanently endow the Roman Catholic Church in New France, and to banish all Huguenots or Protestants from the colony. Circumstances frustrated this magnificent scheme of temporal and spiritual dominion in America. Canada was conquered by the British in 1629, but was restored by the treaty of St. Germain-Laye (March 27, 1632), the whole of Canada, Cape Breton, and Acadia being restored to the French. The scheme of the Hundred Associates was not revived.

**Hunker**, a name given to a conservative in politics in the United States; one opposed to progress; an "old fogy." It was one of the names applied to opposing sections of the Democratic party. The other name, at the time, was "Barnburner" (which see).

**Hunt, HENRY JACKSON**, was born in Ohio about 1821, and graduated at West Point in 1839. He served in the war with Mexico, and in May, 1861, was made major of artillery. In September he became aid to General McClellan, with the rank of colonel, and in September, 1862, was made brigadier-general of volunteers. In the battle of Bull's Run he was engaged in command of the artillery on the extreme left. He was chief of staff of the Army of the Potomac in the campaign on the Peninsula, and continued with that army as one of its most efficient and useful officers until the close of the war. In March, 1865, he was breveted major-general of the United States Army.

**Hunt, REV. ROBERT**, the first pastor of the Virginia Colony. He went out with Newport and the first settlers as chaplain, having been recommended by Richard Hakluyt. (See *Hakluyt, Richard*.) He is supposed to have been a rector in Kent. He was a peace-maker amid the dissenters of the first colonists. Mr. Hunt held the first public service at Jamestown, under an awning, but soon afterwards a barn-like structure was erected for worship. In the winter of 1608 a fire burned Mr. Hunt's little library, and the next year he died. He was succeeded for a brief season by Rev. Mr. Glover, who sou

died. He had accompanied Sir Thomas Gates to Virginia.

**Hunter, DAVID**, was born in Washington, D. C., July 21, 1802, and graduated at West Point in 1822. He was appointed colonel of cavalry in May, 1861, and commanded the main column of the Union troops, as brigadier, in the battle of Bull's Run, and was severely wounded. In August he was made major-general of volunteers; served under Frémont in Missouri, and superseded him in November. In the spring of 1862 he was in command of the Department of the South. He commanded the Department of West Virginia in the summer of 1864, where he was active for a while. For his various services he was breveted major-general in the United States Army in March, 1865, and retired in June, 1866.

**Hunter, ROBERT MERCER TALIAFERRO**, was born in Essex County, Va., April 21, 1809, and was educated at the University of Virginia. He became a member of the House of Delegates when twenty-four years of age, and was a member of Congress from 1837 to 1841, and from 1845 to 1847. From 1839 to 1841 he was speaker. Mr. Hunter was always one of the most persistent supporters of the doctrine of state supremacy and of the slave-labor system, advocating with vehemence all measures calculated to enforce the practical operations of the former and to nationalize the latter. In 1847 he became a United States Senator, and remained such by re-election until July, 1861, when he was expelled from that body for treason against the government. He became the Confederate "Secretary of State," and afterwards a member of the Confederate Congress. After the war he was arrested and held for a while as a prisoner of state, but was released on his parole and pardoned by President Johnson in 1867.

**Hunter's Emancipation Proclamation.** In the spring of 1862 General David Hunter was in command of the "Department of the South." He declared martial law in his department. Giving a free interpretation to his instructions from the War Department, he took measures for organizing regiments of negro troops; and to facilitate the business of recruiting he issued a general order (April 25, 1862) which proclaimed the absolute freedom of all the slaves within his department, declaring that "slavery and martial law, in a free country, are incompatible." This was a step too far in advance of public sentiment, then, and of the government policy of that period; so President Lincoln annulled the order, and President Davis outlawed Generals Hunter and Phelps. General Mitchell took Hunter's place.

**Hunters' Lodges.** When the insurrection broke out in Canada in 1837, the Americans strongly sympathized with the insurgents, regarding them as patriots seeking for political freedom. This sympathy was most vehement along the frontier between the United States and Canada. Men banded in secret organizations with a view to give material aid to the insurgents, and this was given pretty freely by bodies of excitable citizens, led by such men as

Van Rensselaer, who took possession of Navy Island in the Niagara River, belonging to Canada, or William Johnson, who was called the "Pirate of the Thousand Islands," and was outlawed by the governments of the United States and Great Britain. These secret organizations were called "Hunters' Lodges." Among their members were many Canadian refugees, and William Lyon Mackenzie, the chief agitator in Upper Canada, who had been driven from the province, organized an "Executive Committee" at Buffalo, N. Y., for the purpose of directing the invasion of Canada. These "Hunters' Lodges" organized invading parties at Detroit, Sandusky, Oswego, and Watertown, in northern New York, and in Vermont. At one time, Van Rensselaer and Johnson had under them about 2000 men, at an island a little below Kingston, U. C. It is said that these "Hunters' Lodges" within the American lines numbered, at one time, nearly 1200, with a membership of 80,000 souls. They were kept up after the insurrection was crushed and its leaders were hanged, imprisoned, or exiled. The "Hunters' Lodges" were suppressed by order of President Tyler in 1842.

**Huntington, EBENEZER**, was born at Norwich, Conn., Dec. 26, 1754; died there, June 17, 1834. He graduated at Yale College in 1775, and joined the patriot army as lieutenant in Wyllys's regiment. He served under Heath, Parsons, and Watts, and commanded the regiment of the latter in Rhode Island in 1778 as lieutenant-colonel. At Yorktown he commanded a battalion of infantry, and served on General Lincoln's staff until the end of the war, when he was made a general of the Connecticut militia. Huntington was named by Washington for brigadier-general in 1798. In 1810-11 and 1817-19 he was a member of Congress. His father, Jabez, was an earnest patriot, devoting his five sons as soldiers in the cause of freedom, and was active himself, serving on the Committee of Safety during the war.

**Huntington, JEDEDIAH**, was born at Norwich, Conn., Aug. 4, 1743; died at New London, Sept. 25, 1813. He graduated at Harvard College in 1763. He was an active Son of Liberty, and joined the army at Cambridge, April 26, 1775; was made brigadier-general in May, 1777; joined the Continental army near Philadelphia in the fall of 1777; and in 1778 was on the court-martial that tried General Lee. After the war he held several civil offices, among them collector of customs at New London, which he filled during four administrations. General Huntington was a member of the first Board of Foreign Missions.

**Hurlbut, STEPHEN AUGUSTUS**, was born at Charleston, S. C., March 24, 1815; became a lawyer; served in the Florida War; and in 1845 settled in Illinois. He was appointed brigadier-general of volunteers in May, 1861; commanded a division at the battle of Shiloh; and was made major-general in 1862. He served under Sherman in Mississippi; succeeded Banks in command of the Department of the Gulf; and in 1869 was sent as minister to Colombia, South America.

He was afterwards sent to Peru, where he died, March 27, 1882.

**Huron-Iroquois.** The name Iroquois was given by the French to the most interesting of all the dusky nations in North America. They prefixed the name Huron, because their language indicated the Hurons—who were seated near the shores of Georgian Bay—to be a part of the Iroquois family, and, like them, were isolated in the midst of the Algonquins when discovered by the French. (See *Hurons*.) The Huron-Iroquois have been considered in the article on the "Iroquois Confederacy" (which see). The "Six Nations," as they were called at the period of the Revolution, now number about 13,600, distributed as follows: 7000 in Canada, at the following places: Bay of Quinté, on the Grand River, on the Thames, at Sault St. Louis, at St. Regis, and at the Lake of the Two Mountains. The 6600 in the United States are mostly in the State of New York, where there are over 5000. The remainder are at Green Bay and the Quapaw agency.

**Husband, HERMANN,** a leader of the North Carolina "Regulators," was born in Pennsylvania, and died near Philadelphia in 1795. He was a member of the Society of Friends by birth and profession. Removing to Orange County, N. C., he became a member of the Legislature of that colony, and a leader among the opponents of the royal government called Regulators (which see) in 1768, organized for the forcible redress of public grievances. When, on May 14, 1771, a battle began on the Allemanee Creek between one thousand men under Governor Tryon and two thousand Regulators (in which the latter were defeated), Husband declared that the peace principles of his sect would not allow him to fight. He had not objected to the arming of the people, but when they were about to use their arms he rode away, and was never afterwards seen in that region until the struggle for independence was over. He had made his way to Pennsylvania, where, in 1771, he published an account of the Regulator movement. Husband was a member of the Pennsylvania Legislature in 1778, and was concerned in the Whiskey Insurrection (which see) in 1794, with Gallatin, Breckenridge, and others, as a committee of safety. For this offence he suffered a short imprisonment at Philadelphia. He died on his way home.

**Hutchings, WILLIAM,** one of the latest survivors of the Continental soldiers (which see), was born at York, Me., Oct. 6, 1764; died May 2, 1866. He and Lemuel Cook (which see), another of the later survivors, were born the same year, and died the same month. They were the last survivors of the soldiers in the old war for independence. His father lived until he was

ninety-one years old. When William was four years old the family removed to "Plantation Number Three," at the mouth of the Penobscot (now Castine). There, on a farm, which his de-

WILLIAM HUTCHINGS.

scendants occupied, he continued to live until his death, excepting a short interval of time. He was a witness to the stirring scenes of the Massachusetts expedition to Penobscot (which see) in 1779, and aided (by compulsion) the British in the construction of Fort George, on the peninsula. After the destruction of the British fleet, his father, who refused to take the oath of

REMAINS OF FORT GEORGE, IN 1860.

allegiance to the crown, retired to New Castle, where he remained until the close of the war. At the age of fifteen, having acquired a man's stature, William Hutchings entered the Continental army. He enlisted in a regiment of Massachusetts militia commanded by Colonel Samuel McCobb, Captain Benjamin Lemont's company, as a volunteer for six months. That was in the spring of 1780 or 1781; and he was honorably discharged about Christmas, the same year, at Cox's Head, at the mouth of the Kenne-

hec River. He received an annual pension of \$21.60 until 1865, when an annual gratuity of \$300 was granted by Congress to each of the five Revolutionary soldiers then supposed to be living. Only four of the number lived to receive this gratuity. William Hutchings and Lemuel Cook were the last. Mr. Hutchings was a devout member of the Methodist Church for nearly seventy years, and for many of his latter years he was an advocate and professor of total abstinence from intoxicating drinks. In 1865, when over one hundred years of age, he received an invitation from the city authorities of Bangor to join in the celebration of the Fourth of July there. He accepted it. A revenue cutter conveyed him from Castine to Bangor. The guns of Fort Knox, on the Penobscot, gave him a salute of welcome as he passed. At Bangor multitudes rushed to get a glimpse of the veteran as he was escorted through the streets. Senator Hamlin delivered an oration on that occasion, and at the close Mr. Hutchings responded at some length to a toast. "My friends told me," he said, "that the effort to be here might cause my death; but I thought I could never die any better than by celebrating the glorious Fourth." (See *Cook, Lemuel.*)

**Hutchinson and the King.** So eager was the king to see Governor Hutchinson, of Massachusetts, on his arrival in England in July, 1774, that he was hurried by Lord Dartmouth to the presence of his majesty without time to change his clothes. He gave the king much comfort. He assured him that the Port Bill was a wise and effective method for bringing the Boston people into submission; that it had occasioned extreme alarm; that no colony would comply with their request for a general suspension of commerce; and that Rhode Island had accompanied its refusal with a sneer at the selfishness of the Bostonians. The king had heard and believed that the Boston clergy preached toleration for all kinds of immoralities for the sake of liberty, and scores of other tales, which Hutchinson did not deny; and for two hours the conversation went on, until the king was satisfied that Boston would be unsupported in its rebellious attitude by the other colonies. "The author of this intelligence," says Bancroft, "became at once a favorite, was offered the rank of a baronet, and was consulted as an oracle by Gibbon, the historian, and other politicians at court."

**Hutchinson and the Massachusetts Assembly (1770).** Thomas Hutchinson, a native of Boston, a colonial councillor, and lieutenant-governor of Massachusetts, was, on the recall of Governor Bernard in 1769, made governor of the province. He was already unpopular because of his opposition to all movements tending towards popular freedom. When, in May, 1770, he called a meeting of the Assembly at Cambridge, that body insisted that, by the terms of the charter, the General Court could only be held at Boston. A dispute arose that consumed much of the time of two sessions, and it was October before the Assembly would agree to proceed with

needed business, and then under protest, after a day spent in solemn humiliation and prayer. Then they made a bitter complaint against the governor because he had withdrawn from the castle in Boston harbor the company in the pay of the province and given the fortress up to the regulars. They also complained of the unusual number of ships of war in Boston harbor; all of which they charged to misrepresentations at court by Governor Bernard, as well as the incumbent. They appointed Dr. Franklin as agent of the province in England. And then began that series of contests between Hutchinson and the people which speedily caused his exile from his native land.

**Hutchinson, ANNE,** was born at Alford, Lincolnshire, England, in 1591; died in Westchester County, N. Y., August, 1643. She was a daughter of Rev. Francis Marbury, Rector of St. Martin, Vintry, and other London parishes. The preaching of John Cotton and her brother-in-law, John Wheelwright, greatly interested her, and she, with her husband, followed them to Boston in the autumn of 1634, where she was admitted to membership in the church. Being a woman of strong mind, fluent in speech, bold in defence of her convictions, she soon acquired great influence in the church. She called meetings of the women of the church to discuss doctrines and sermons, and she expressed views on religious matters which had offended some of her fellow-passengers on the voyage. She was tolerated for a while, but finally the controversy between her supporters and opponents became a public controversy (1636). Governor Vane, Cotton, Wheelwright, and the whole Boston church excepting five members were her supporters, while the country clergy and churches were united against her. The dispute permeated every department of the colony and influenced public action in civil, military, and ecclesiastical affairs. On Aug. 30, 1637, an ecclesiastical synod at Newtown condemned her opinions, and she was summoned before the General Court to answer. After a trial of two days' duration, she and some of her adherents were sentenced to banishment from the territory of Massachusetts. She went to Rhode Island, where a deputation sent by the church at Boston vainly tried to reclaim her. Her husband died in 1642, when she removed, with her surviving family, into the territory of New Netherland to avoid persecution. The Indians and Dutch were then at war. The former invaded her retreat and murdered her, her son, and son-in-law, and carried off her little granddaughter, Aona Collins. Some of her neighbors also suffered, eighteen of them being killed, and their cattle, put into barns, were burned. The place of the tragedy was on Pelham Neck. The region was called Anne's Hoeck, or Point. Several women and children were saved in a boat. When Mrs. Hutchinson's little granddaughter was delivered to the Dutch at New Amsterdam, four years afterwards, according to the terms of a treaty, to be sent to her friends in Boston, she had forgotten her own language, and did not wish to leave her Indian friends.

**Hutchinson in the Massachusetts Council.** Thomas Hutchinson, appointed lieutenant-governor of Massachusetts, having received compensation for his losses (see *Riot in Boston*), took a seat in Governor Bernard's Council (January, 1767), where he had no right. The Massachusetts Assembly resented this usurpation, this "lust of power," in intruding into an elective body to which he had not been chosen. The Council, by unanimous vote, denied the pretensions of the intruder, for the language of the charter was too clear to admit of a doubt; yet Bernard urged the interposition of the British government to keep him there. This conduct of the crown officers greatly irritated the people.

**Hutchinson Letters, THE.** Early in 1773, letters written by Governor Hutchinson and others of the crown officers in Massachusetts to Mr. Whately, one of the under secretaries of the government, were put into the hands of Dr. Franklin, agent for Massachusetts, by Dr. Hugh Williamson, of Philadelphia. In these letters the popular leaders were vilified, the liberal clauses of the colonial charter were condemned, the punishment of Bostonians by restraints upon their commercial privileges was recommended, and "an abridgment of what are called English privileges" in America, by coercive measures, was strongly urged. Franklin saw in these letters evidences of a conspiracy against his country by enemies in its bosom, and he sent them to Thomas Cushing, Speaker of the Massachusetts Assembly. They were finally published, and created intense excitement throughout the colonies. The tempest of indignation which they raised was fearful to Hutchinson and his friends. When a committee waited upon him for an explicit answer as to the authenticity of his own letters, he replied, "They are mine, but were quite confidential." This was not satisfactory, and the Assembly adopted a petition to the king for his removal. The writers of the letters were Thomas Hutchinson, Andrew Oliver (Lieutenant-governor), Charles Paxton, Thomas Moffatt, Robert Auchmuty, Nathaniel Rogers, and George Rome.

**Hutchinson, THOMAS,** Governor of Massachusetts, was born in Boston, Sept. 9, 1711; died at Brompton, near London, June 3, 1780. He was a graduate of Harvard University (1727), and, after engaging unsuccessfully in commerce, studied law, and began its practice in Boston. That city sent him to London as its agent in important business; and he represented that city in the General Court for ten years. In 1752 he was chosen judge of probate; was a councillor from 1749 to 1766; was lieutenant-governor from 1753 to 1771; and was made chief-justice of the province in 1768. At that time he held four high offices under the king's appointment, and he naturally sided with the crown in the rising disputes, and became very obnoxious to the republicans. When, in 1769, Governor Bernard was recalled, Hutchinson became acting-governor of Massachusetts, and was commissioned governor in 1771. He was continually engaged in controversies with the pop-

ular Assembly, and often with his Council. The publication of some of his letters (1773), which proved that he had been for years urging upon Parliament the necessity for the strict enforce-

THOMAS HUTCHINSON.

ment of power over the colonies, raised a storm of indignation, and his recall was demanded. This indignation was increased by his action concerning the landing of cargoes of tea in Boston (see *Boston Tea-party*), and he sailed for England, June 1, 1774, where he was rewarded with a pension. He never returned to his native country. He wrote and published a history of Massachusetts from the first settlement until 1750. The official residence of the governor of Massachusetts was called the "Province House."

THE PROVINCE HOUSE.

It was standing a few years ago, in the rear of stores on Washington Street, in front of Milk Street. It was a large brick building, three stories in height, and was formerly decorated with the king's arms, richly gilded. A cupola surmounted the roof. In front of the house was a lawn, with an iron fence, and on each side of the gate was a large oak-tree. The ground sloped, and in front were about twenty stone steps. The king's arms are in possession of the Massachusetts Historical Society.

**Hutchinsonian Controversy, THE.** The Massachusetts theocracy, actuated by the spirit of the English persecuting bishops and of the Court of High Commission, persecuted relentlessly, as heretics and schismatics, the persons who occu-

pied towards them the position which they had held towards their own persecutors. With the influx of new-comers from England, new opinions flowed into Massachusetts from the seething caldron of disputations in the mother-country. Among the new-comers was Anne Hutchinson, who was independent in thought and bold in the expression of opinion—a religious enthusiast, whose care of a numerous family did not prevent her taking a prominent part in the Church, and, at meetings of the women, which she instituted, freely discussing religious doctrines and criticising sermons. She maintained the leading tenet of the Reformation (justification by faith alone), involuntary faith, and the free grace of God. She declared that it was this faith, and not in the repetition of acts of devotion or in acts of morality, that made the true religious person. This doctrine of justification by faith was accepted by the theocracy as sound orthodox, but, as Mrs. Hutchinson put it, it struck a vital blow at the constitution of the Church in Massachusetts, for it mercilessly smote the self-esteem and influence of the leaders. Their "sanctification," this smart woman alleged, in which they prided themselves—their sanctimonious carriage and austere lives—furnished no evidence whatever of their "justification"—their change of heart and acceptance with God. The only evidence of justification, she said, was an internal evidence and consciousness on the part of believers that the Holy Ghost dwelt within them. The clergy were embarrassed, for they preached justification by faith and the internal and supernatural assurance of election to salvation, but they also held that such assurances were false and deceptive, unless accompanied by outward evidence of sanctity in life and conversation. Hence their austerity. While the Boston churches, under the influence of Mrs. Hutchinson, inclined to embrace her doctrines, ex-Governor Winthrop and most of the clergy throughout the colony denounced her as

an antinomian, and the pretended personal union with the Holy Ghost as no better than blasphemy. The governor and Cotton and Wheelwright (see *Hutchinson, Anne*) supported her views, while most of the magistrates, ex-Governor Winthrop, and the clergy of the colony were her stern and active opponents. They were cautious, however, how they condemned their favorite doctrine of faith and free grace; but they zealously upheld the necessity of a system of worship and austere self-denial which they had crossed the Atlantic to establish. Mrs. Hutchinson irritated them by classifying the two parties—her friends as "under the covenant of grace," and her opponents "under the covenant of works;" and because Mr. Wheelwright made the distinction in a sermon, he was arraigned for sedition, and found guilty. The governor and a few others offered a protest, but the General Court refused to receive it. Disputes ran high, and the whole colony was ablaze with excitement. Men of opposite opinions sometimes came to blows; families were divided, and society was fearfully rent. In the midst of the turmoil, Winthrop was elected (1637) governor, and the orthodox party claimed a triumph. The Hutchinsonians were beaten, but not subdued. The theological questions raised by Mrs. Hutchinson were referred to a synod—a conference of delegates from all the churches. That body pronounced the women's meeting in Boston "disorderly;" for the feminine church members, though "heirs of salvation," had no power in the earthly theocracy. They condemned the Hutchinsonians as schismatics, and the General Court proceeded to end the controversy by the wretched argument of force. Mrs. Hutchinson and Wheelwright, and several others, were sentenced to banishment. It being winter, the former was allowed to remain at Roxbury, vigilantly watched, until spring; and about sixty of her most active adherents were disfranchised and deprived of their fire-arms.

## I.

**Iberville, PIERRE LE MOYNE**, born at Montreal, July 16, 1661; died in Havana, W. I., July 9, 1706. He was one of eleven brothers who figure in some degree in French colonial history. Entering the French navy at fourteen, he became distinguished in the annals of Canada for his operations against the English in the north and east of that province. In 1698 he was sent from France to the Gulf of Mexico with two frigates (Oct. 22), to occupy the mouth of the Mississippi and the region neglected after the death of La Salle. On finding that stream, he received from the Indians a letter left by De Tonty, in 1686, for La Salle. There he built Fort Biloxi, garrisoned it, and made his brother Bien-ville the king's lieutenant. In May, 1699, he returned to France, but reappeared at Fort Biloxi in January, 1700. On visiting France and returning in 1701, he found the colony reduced by disease, and transferred the settlement to Mobile, and began the colonization of Alabama.

Disease had impaired his health, and the government called him away from his work as the founder of Louisiana. (See *Louisiana*.) He was engaged in the naval service in the West Indies, where he was destroyed by yellow fever at Havana.

**Idaho** (Id-ah'-o) was created a territory by act of Congress approved March 3, 1863, from portions of Dakota, Nebraska, and Washington territories (which see), and embracing the present territory of Montana and nearly all of Wyoming. Within its domain the Cœur d'Aléne mission was established, in 1842. The permanent settlement of the territory did not begin until the discovery of gold, in 1860. This metal is found at the head-waters of all the rivers, and the territory is very rich in developed and undeveloped beds of the precious metals. These drew large numbers of settlers from California, Oregon, and settlements eastward. Its capital is Boise City. Population in 1880, 32,610.

**Idiots.** Institutions for idiots are of recent origin in our country. In 1818, Mr. Gallaudet admitted an idiot boy into the Deaf and Dumb Asylum at Hartford, and his mind was strengthened. The first asylum for idiots was opened in a wing of the Perkins Institute, in Boston, late in 1848. In New York, in 1851, the "New York Asylum for Idiots" was created, and was permanently located at Syracuse, N. Y., in 1855. The number of idiots in the United States in 1870 was 24,527. All but 1645 were born in the United States.

**Illinois Indians.** This family of the Algonquin nation comprised several clans—Peorias, Moingwenas, Kaskaskias, Tamaroas, and Cahokias. At a very early period they drove a Dakota tribe, whom they called the Arkansas, to the country on the Southern Mississippi. These were the Quapaws. In 1640 they almost exterminated the Winnebagoes; and soon afterwards they waged war with the Iroquois and Sioux. Their domain was between Lakes Michigan and Superior and the Mississippi River. Marquette found some of them (the Peorias and Moingwenas) near Des Moines, west of the Mississippi, in 1672; also the Peorias and Kaskaskias on the Illinois River. The Tamaroas and Cahokias were on the Mississippi. The Jesuits found the chief Illinois town consisting of eight thousand people, in nearly four hundred large cabins, covered with water-proof mats, with, generally, four fires to a cabin. In 1679 they were badly defeated by the Iroquois, losing about thirteen hundred, of whom nine hundred were prisoners; and they retaliated by assisting the French, under De la Barre and De Nonville, against the Five Nations. The Illinois were converted to Christianity by Father Marquette and other missionaries, and in the year 1700 Chicago, their great chief, visited France, where he was much caressed. His son, of the same name, maintained great influence in the tribe until his death, in 1754. When Detroit was besieged by the Foxes, in 1712, the Illinois went to its relief, and in the war that followed they suffered severely. Some of them were with the French at Fort Duquesne; but they refused to join Pontiac in his conspiracy. (See *Pontiac*.) With the Miami, they favored the English in the war of the Revolution, and joined in the treaty at Greenville in 1795. (See *Greenville*.) By the provision of treaties, they ceded their lands, and a greater portion of them went to a country west of the Mississippi, within the present limits of Kansas, where they remained until 1867, when they were removed to a reservation of seventy-two thousand acres southwest of the Quapaws. In 1872 the whole Illinois nation had dwindled to forty souls. This tribe, combined with the Weas and Piankeshaws, numbered only one hundred and sixty in all.

**Illinois, POSITION OF (1861).** This young state, with a population of 1,700,000, had a loyal governor (Richard Yates) at the beginning of 1861. The Legislature assembled at Springfield, the home of the Republican President elect, on January 7. The governor's message was ten-

perate, but firm. He summed up what he believed to be the sentiment of the people of Illinois in the words of General Jackson's toast thirty years before—"Our Federal Union; it must be preserved!" Great enthusiasm and determination prevailed, and throughout the war that ensued the men of Illinois were seen almost everywhere battling in defence of the life of the Republic.

**Illinois, STATE OF,** was first explored by Marquette and Joliet (which see), French missionaries from Canada, in 1763, who were followed by La Salle and Hennepin (which see). Twenty years later mission stations were established at Kaskaskia, Cahokia, and Peoria; and early in the 18th century a French monastery was established at Kaskaskia. By the treaty of 1763, the "Illinois country," as it

STATE SEAL OF ILLINOIS.

was called, was passed under the jurisdiction of the English. By the treaty of 1783 it was ceded to the United States, and it formed a part of the Northwest Territory (which see). The country conquered by General Clarke, in 1778-79 (see *Clarke's Expedition*);

the Virginia Assembly erected into a county, which they called Illinois. It embraced all territory north of the Ohio claimed as within the limits of Virginia, and ordered 500 men to be raised for its defence. In 1809, when the present boundaries of Indiana were defined, Illinois included Wisconsin and a part of Minnesota, and in 1810 contained more than 12,000 inhabitants. Among the prominent events of the War of 1812-15 in that region was the massacre at Chicago (which see). After that war the population rapidly increased, and on Dec. 3, 1818, Illinois, with its present limits, was admitted into the Union as a state. The census of 1820 showed a population in that state of more than 55,000 souls. The Black Hawk War (which see) occurred in Illinois in 1832. There the Mormons established themselves in 1840, at Nauvoo (see *Mormons*); their founder was slain by a mob at Carthage, in 1844, and soon afterwards a general exodus of this people occurred. A new state constitution was framed in 1847, and in July, 1870, the present constitution was adopted. The Illinois Central Railroad, completed in 1856, has been a source of great material prosperity for the state. During the late Civil War, Illinois furnished to the national government (to Dec. 1, 1864) 197,364 troops. Population in 1880, 3,077,871.

**Illinois, TERRITORY OF.** During the last session of the Tenth Congress, 1809, the Territory of Illinois was erected, and Ninian Edwards was appointed its governor. The inhabited portions of this territory, including the (present) states of Illinois and Wisconsin, were chiefly near the Mississippi River, opposite the mouth of the Missouri. The old village of Kaskaskia was

made the seat of government. The population then was about ten thousand.

**Impeachment of President Johnson.** On Jan. 7, 1867, Mr. Ashley, representative in Congress from Ohio, rose in his place and charged the "Acting President of the United States" with the commission of "high crimes and misdemeanors, for which he ought to be impeached." He charged him with usurpations and violations of law: 1. "In that he has corruptly used the appointing power; 2. In that he has corruptly used the pardoning power; 3. In that he has corruptly used the veto power; 4. In that he has corruptly disposed of public property of the United States; and, 5. In that he has corruptly interfered in elections, and committed acts which, in contemplation of the Constitution, are high crimes and misdemeanors." For more than a year afterwards Congress bore with the opposition and unseemly acts of the President. Their patience became exhausted. On Feb. 22, 1868, the House of Representatives, by a vote of 126 to 47, "Resolved, That Andrew Johnson, President of the United States, be impeached of high crimes and misdemeanors." A committee presented nine articles of impeachment: 1. Unlawfully ordering the removal of Secretary Stanton, in violation of the Tenure-of-Office Act (which see); 2. Unlawfully appointing Lorenzo B. Thomas as Secretary of War *ad interim*; 3. Substantially the same as the 2d; 4. Conspiring with Thomas and other persons to prevent, by threats, Mr. Stanton from holding office; 5. Conspiring to hinder the execution of the Tenure-of-Office Act; 6. Conspiring to take forcible possession of the War Department; 7 and 8 substantially the same as 5 and 6; 9. Charged that he had tried to induce, by false representations, the commander of the Department of Washington to violate the laws and to obey the orders of the President only. Managers were appointed, and on March 3 they presented two other charges: 1. Seditious speech while on a political tour (see *President Johnson's Tour*), trying to excite the hostility of the people against Congress; and, 2. That at Washington he had declared that Congress was not a legal body, authorized to exercise legislative powers. The trial was begun on March 30, before the Senate, sitting as a High Court of Impeachment, Chief-justice Chase presiding. The examination of witnesses ended April 22. The arguments of counsel were concluded May 5, and twenty days were consumed in debates in the Senate. The votes of fifty-four senators present were taken on the verdict, of whom 35 were for conviction, and 19 for acquittal. As two thirds of the votes were necessary for conviction, the President was acquitted by one vote.

**Impediments to Burgoyne's March.** From Skenesborough (now Whitehall), at the head of Lake Champlain, to the Hudson River, the conquering Burgoyne marched through a very rough and thickly wooded country, intersected by numerous streams and dotted with morasses. There was a single military road, over which, between Fort Anne (on the route) and Fort Edward, there

were full fifty bridges and causeways. These Schuyler destroyed as he fell back towards the Hudson, and felled great trees across the road, with their branches intertwining, at places where it was difficult to turn aside. All the stock was drawn off, and the New England militia were summoned to the rescue.

**Impending Crisis.** The state elections in 1858 and 1859 satisfied the opponents of the rapidly growing Republican party that there was impending a great change in national politics. The political leaders in the slave-labor states, who had been interested in a scheme for forming an empire whose corner-stone should be negro slavery and its bounds the Golden Circle (which see), perceived the peril. They believed they would not be able to elect another President of their choice. They were in full alliance with the Democratic party of the North, then in power, but they saw signs of disintegration going on in that party, caused by disgust with the workings of the Fugitive Slave Law and the attempt to nationalize slavery. A large portion of that party, led by Senator Stephen A. Douglas, showed a proclivity towards independent action, and even affiliation with the Republican party, on the subject of slavery. The hopes of the friends of the slave system of the further undivided support of the Northern Democracy vanished. In view of this impending crisis, the Southern politicians, who wished to dissolve the Union, deemed it expedient, it is averred, to absolutely destroy all unity in the Democratic party, and make it powerless, when the Republicans might elect their candidate for President in the fall of 1860. Then would appear a sufficient pretext for a revolution—the election of a sectional President. This danger to the slaveholders' interest might be magnified by a sectional war-cry that would "fire the Southern heart," and produce a "solid South" in favor of secession, a dissolution of the Union, and the construction of a new republic or kingdom within the Golden Circle. It is asserted that with this view politicians who were afterwards Confederate leaders in the late Civil War entered the Democratic nominating convention held at Charleston, S. C., late in April, 1860. (See *Democratic Convention at Charleston*.)

**Impress, THE—TREATY OF 1806.** Proofs of the sufferings of American seamen from the operations of the British impress system were continually received, and so frequent and flagrant were these outrages, towards the close of 1805, that Congress took action on the subject. It was felt that a crisis was reached, when the independence of the United States must be vindicated, or the national honor would be imperilled. There was ample cause not only for retaliatory measures against Great Britain, but even for war. A Non-importation Act (which see) was passed. It was resolved to try negotiations once more. William Plunkney, of Maryland, was appointed (May, 1806) minister extraordinary to England, to become associated with Monroe, the resident minister, in negotiating a treaty that should settle all disputes between the two gov-

ernments. He sailed for England, and negotiations were commenced Aug. 7. As the American commissioners were instructed to make no treaty which did not secure the vessels of their countrymen on the high seas against press-gangs, that topic received the earliest attention. The Americans contended that the right of impressment, existing by municipal law, could not be exercised out of the jurisdiction of Great Britain, and, consequently, upon the high seas. The British replied that no subject of the king could expatriate himself—"once an Englishman, always an Englishman"—and argued that to give up that right would make every American vessel an asylum for British seamen wishing to evade their country's service. Finally, the British commissioners stated in writing that it was not intended by their government to exercise this claimed right on board any American vessel, unless it was known it contained British deserters. In that shape this portion of a treaty then concluded remained, and was unsatisfactory because it was based upon contingencies and provisions, and not upon positive treaty stipulations. The American commissioners, then, on their own responsibility, proceeded to treat upon other points in dispute, and an agreement was made, based principally upon Jay's treaty of 1794. The British made some concessions as to the rights of neutrals. The treaty was more favorable to the Americans, on the whole, than Jay's, and, for the reasons which induced him, the American commissioners signed it. It was satisfactory to the merchants and most of the people; yet the President, consulting only his Secretary of State, and without referring it to the Senate, rejected it.

**Impressment.** The British government claimed the right for commanders of British ships of war to make up any deficiency in their crews by pressing into their service British-born seamen found anywhere not within the immediate jurisdiction of some foreign state. As many British seamen were employed on board of American merchant-vessels, the exercise of this claimed right might (and often did) seriously cripple American vessels at sea. To distinguish between British and American seamen was not an easy matter, and many British captains, eager to fill up their crews, frequently impressed native-born Americans. These were sometimes dragged by violence from on board their own vessels and condemned to a life of slavery as seamen in British ships of war. These acts were among the causes of the War of 1812-15, or second war for independence. When Jonathan Russell, minister at the British court, attempted to negotiate with that government (August, 1812) for a settlement of disputes between the Americans and British, and proposed the withdrawal of the claims of the latter to the right of impressment and the release of impressed seamen, Lord Castlereagh, the British Minister for Foreign Affairs, refused to listen to such a proposition. He even expressed surprise that, "as a condition preliminary even to a suspension of hostilities, the government of the United States should have thought fit to

demand that the British government should desist from its ancient and accustomed practice of impressing British seamen from the merchant-ships of a foreign state, simply on the assurance that a law was hereafter to be passed to prohibit the employment of British seamen in the public or commercial service of that state." The United States had proposed to pass a law making such a prohibition in case the British government should relinquish the practice of impressment and release all impressed seamen. Castlereagh acknowledged that there might have been, at the beginning of the year 1811, sixteen hundred *bona fide* American citizens serving by compulsion in the British navy. Several hundreds of them had been discharged, and all would be, Castlereagh said, upon proof made of their American birth; but the British government, he continued, could not consent "to suspend the exercise of a right upon which the naval strength of the empire mainly depended, unless assured that the object might be attained in some other way." There were then upwards of six thousand cases of alleged impressment of American seamen recorded in the Department of State, and it was estimated that at least as many more might have occurred, of which no information had been received. Castlereagh had admitted on the floor of the House of Commons that an official inquiry had revealed the fact that there were, in 1811, thirty-five hundred men claiming to be American citizens. Whatever may have been the various causes combined which produced the war between the United States and Great Britain in 1812-15, when it was declared, the capital question, and that around which gathered in agreement a larger portion of the people of the Republic, was that of impressment. The contest was, by this consideration, resolved into a noble struggle of a free people against insolence and oppression, undertaken on behalf of the poor, the helpless, and the stranger. It was this conception of the essential nature of the conflict that gave vigor to every blow of the American soldier and seaman, and the watch-words "Free Trade and Sailors' Rights" prevailed on land as well as on the sea. (See *Impress, The*.)

**Impressment in American Ports.** In 1707 Parliament, by act, forbade the impressment of seamen in American ports and waters for privateering service, unless of such sailors as had previously deserted from ships of war.

**Impressment in Boston (1747).** Commodore Knowles, while in Boston harbor, in November, 1747, finding himself short of men, sent a press-gang into the town one morning which seized and carried to the vessels several of the citizens. This violence aroused the populace. Several of the naval officers on shore were seized by a mob and held as hostages for their kidnapped countrymen. They also surrounded the Town House, where the Legislature was in session, and demanded the release of the impressed men. The governor called out the militia, who reluctantly obeyed. Then, alarmed, he withdrew to the castle. Knowles offered a company of marines

to sustain his authority, and threatened to bombard the town if his officers were not released. The populace declared that the governor's flight was abdication. Matters became so serious that the influential citizens, who had favored the populace, tried to suppress the tumult. The Assembly ordered the release of the officers, and Knowles sent back most of the impressed men. The authorities attributed the outbreak to "negroes and persons of vile condition." This was the first of a series of impressments of American citizens by British officers which finally led to war. (See *Second War for Independence*.)

**Inauguration Ball.** On the evening of the inauguration of Mr. Lincoln, a grand ball was given in honor of the occasion, in a large temporary building near the City Hall, in Washington. Several foreign ministers, and heads of departments, with their families, were present. The dancing began at eleven o'clock. Mr. and Mrs. Lincoln, in whose honor the ball was given, appeared soon afterwards. The President entered the room with Mayor Berret, of Washington, and Mrs. Lincoln entered leaning on the arm of Senator Douglas. The incident was accepted as a proclamation of peace and friendship between the two late rivals for the Presidency. Joy and gayety prevailed. Of all the company present, the most honored and the most burdened was Abraham Lincoln. With that brilliant pageant ended the poetry of Abraham Lincoln's life; after that, it was spent in the sober prose of dutiful endeavor to save and redeem the nation.

**Inauguration of Jefferson Davis.** Mr. Davis was at his home, not far from Vicksburg, when apprised of his election as President of the Confederacy formed at Montgomery, February, 1861. He hastened to that city, and his journey was a continuous ovation. He made twenty-five speeches on the way. Members of the convention, and the authorities of Montgomery met him eight miles from the city. He arrived at the Alabama capital at eight o'clock at night. Cannons thundered a welcome, and the shouts of a multitude greeted him. Formally received at the railway-station, he made a speech, in which he briefly reviewed the then position of the South, and said the time for compromises had passed. "We are now determined," he said, "to maintain our position, and *make all who oppose us smell Southern powder and feel Southern steel*. . . . We will maintain our rights and our government at all hazards. We ask nothing—we want nothing—and we will have no complications. If the other states join our Confederacy, they can freely come in on our terms. Our separation from the old Union is complete, and no compromise, no reconstruction, can now be entertained." The inaugural ceremonies took place at noon, Feb. 18, on a platform erected in front of the portico of the State House. Davis and Stephens, with Rev. Dr. Marly, rode in an open barouche from the Exchange Hotel to the Capitol, followed by a multitude of state officials and citizens. The oath of office was administered to Davis by Howell Cobb, President of

the "Congress," at the close of his inaugural address. In the evening, in imitation of the custom, President Davis held a "levee" at Estelle Hall, and the city was brilliantly lighted up by bonfires and illuminations.

**Inauguration of President Buchanan.** James Buchanan, fifteenth President of the United States, was inaugurated on March 4, 1857. The day was clear and pleasant. The number of spectators of the scene from abroad was immense, there being, it was said, representatives from every state in the Union. The President elect moved in a barouche from Willard's Hotel, escorted by military under General Quitman. Mr. Buchanan was accompanied in his carriage by President Pierce, and Senators Bigler and Foote, of the Committee of Arrangements. Chief-justice Taney administered the oath of office.

**Inauguration of President Fillmore.** (See *Fillmore, Millard*.)

**Inauguration of President Garfield.** General Garfield was inaugurated March 4, 1881. Chief-justice Waite administered the oath of office.

**Inauguration of President Grant.** The turbulent administration of President Johnson closed on March 4, 1869, and Ulysses S. Grant was inaugurated the eighteenth President of the United States. On the same day, the retiring President issued a long address to his countrymen in vindication of his course as chief magistrate of the Republic. He recited the most prominent acts of his administration, declaring the necessity for them; and, having done this, he assailed the majority of the Congress with his usual vehemence of tone, accusing them of acting in "utter disregard of the Constitution," accusing them of "preventing the return of peace," and "making the liberties of the people and the rights and power of the President objects of constant attack." He charged them with the commission of nearly every act of oppression enumerated in the indictment against George III., of England, contained in the Declaration of Independence, and added, "This catalogue of crimes, long as it is, is not yet complete." General Grant was honored at his inauguration with a large civic and military display, and an immense gathering of citizens from all parts of the Union. The ceremonies took place at the eastern front of the Capitol, as usual, at a little past noon, when Chief-justice Chase administered the oath of office. His inaugural address foreshadowed the course of his administration. He declared his intention to have on all subjects a policy to recommend, but none to enforce; to always express his views clearly to Congress, and to exercise the constitutional power of the veto whenever his judgment bade him interfere; to treat the momentous subjects growing out of the recent civil war with calmness, and "without prejudice, hate, or sectional pride." He declared that, to protect the national honor, every dollar of the public debt should be paid in gold, unless otherwise stipulated in the contract. He recommended the adoption of some plan for the payment of the debt, and for the resumption

of specie payments. In foreign policy he proposed to deal with nations with equal justice as with individuals. He called attention to the Indians, and said he would favor any course that would tend to their civilization, Christianization, and ultimate citizenship. He expressed a hope that the question of suffrage might be speedily settled by the adoption of the Fifteenth Amendment to the Constitution (which see).

**Inauguration of President Harrison.** The city of Washington was thronged with people from every part of the Union to witness the inauguration of President Harrison, on March 4, 1841. He was then a month beyond the age of sixty-eight years, yet there was remarkable vigor in his movements for one who had experienced so much of the rougher circumstances of life's career. He was accompanied to the Capitol by ex-President Van Buren, in a carriage, and on a platform at the eastern entrance to the building he delivered his inaugural address, in a clear voice, frequently interrupted by cheers. When it was concluded, Chief-justice Taney administered the oath of office, and then successive cannon-peals announced to the multitude that the ninth President of the United States was duly installed into office. His inaugural speech was well received by all parties, and another "era of good feeling" seemed about to dawn.

**Inauguration of President Hayes.** The 4th of March, 1877, fell on Sunday. President-elect Rutherford B. Hayes was in Washington, the guest of Senator John Sherman. There had been threats made by the Opposition of taking forcible possession of the Presidential office and inaugurating Samuel J. Tilden, the rival candidate for President. It was thought best by the friends of the President-elect not to postpone the administering of the oath of office to him until Monday, as had been done in other cases when the time for inaugurating a new President fell on Sunday. Mr. Hayes therefore took the oath of office privately, in Senator Sherman's house on Sunday, and on the following day the public inauguration ceremonies were performed at the usual place on the east front of the Capitol, in the presence of an immense multitude of people. The oath of office was administered by Chief-justice Waite.

**Inauguration of President Jackson.** There were incidents of peculiar interest connected with the inauguration of Andrew Jackson, the seventh President of the United States. President Adams had convened the Senate on the morning of March 4, 1829, and at twelve M. that body adjourned for one hour. During that time the President-elect entered the Senate-chamber, having been escorted from Gadsby's Hotel by a few surviving officers and soldiers of the old war for independence. These having addressed him at the hotel, and in the Senate-chamber, in the presence of the chief officers of government, foreign ministers, and many ladies, he made a feeling reply, as follows: "Respected Friends: Your affectionate address awakens sentiments and recollections which I feel with siu-

cerity and cherish with pride. To have around my person, at the moment of undertaking the most solemn of all duties to my country, the companions of the immortal Washington, will afford me satisfaction and encouragement. That by my best endeavors I shall be able to exhibit more than an imitation of his labors, a sense of my own imperfections and the reverence I entertain for his virtues forbid me to hope. To you, respected friends, the survivors of that heroic band that followed him so long and so valiantly on the path to glory, I offer my sincere thanks, and to Heaven my prayers, that your remaining years may be as happy as your toil and your lives have been illustrious." The whole company then proceeded to the eastern portico of the Capitol, where, in the presence of a vast assembly of citizens, the President-elect delivered his inaugural address and took the oath of office, administered by Chief-justice Marshall.

**Inauguration of President Jefferson.** On the morning of March 4, 1801, Jefferson was escorted by a body of militia and a procession of citizens to the Capitol, where the Senate had met in special session, called some months before by the President. Aaron Burr, already sworn in as Vice-President, gave up the chair to Jefferson, taking a seat at his right hand. On his left sat John Marshall, then chief-justice, ready to administer the oath of office. The late speaker and ex-President Adams were not present, the latter having left for home that morning on account of sickness in his family. Jefferson delivered a carefully written inaugural address, in which he pleaded for harmony. "Every difference of opinion," he said, "is not a difference of principle. Brethren of the same principle, we are called by different names. We are all Republicans; we are all Federalists."

**Inauguration of President John Adams (1797).** The Senate adjourned to the chamber of the House of Representatives, with Jefferson at their head, where a brilliant assemblage of ladies had gathered to witness the inauguration of the second President of the Republic, in the old State House, Philadelphia. In front of the speaker's chair sat the chief-justice (Jay), with three other judges of the Supreme Court. The new Vice-President and the secretary of the Senate took seats on their right; on the left sat the speaker and clerk of the House. The doors being opened, a crowd instantly filled the galleries. When Washington entered he was greeted with shouts of applause from all sides. Being now a private citizen, he took a seat in front of the judges. The President-elect entered, attended by the heads of departments and the marshal of the district, and was received with shouts as he ascended to the chair. In a few minutes he arose and read an elaborate inaugural address, when the oath was administered by the chief-justice. Then he took his seat for a few minutes, arose, bowed to all around, and retired. The Vice-President followed, and he, in turn, was followed by the ex-President. It was the last time Washington and Jefferson met. Washington was greeted

with prolonged shouts in and out of the House, and that evening (March 4, 1797) he was sumptuously entertained by the merchants and others of Philadelphia. He departed for Mount Vernon a few days afterwards.

**Inauguration of President John Q. Adams.** At about half-past twelve o'clock on the 4th of March, 1825, Mr. Adams entered the Capitol, accompanied by ex-President Monroe and his family, by the judges of the Supreme Court, in their robes of office, and the members of the Senate, preceded by the Vice-President, with a number of the members of the House of Representatives. Mr. Adams, dressed in a plain suit of black, ascended to the speaker's chair. The doors of the hall of Representatives, in which the people had assembled, being closed, Mr. Adams read his inaugural address and immediately afterwards took the oath of office, administered by Chief-justice Marshall.

**Inauguration of President Johnson.** On the death of President Lincoln, Andrew Johnson, the Vice-President, succeeded him in office, in accordance with the provisions of the Constitution. At that time he occupied rooms at the Kirkwood House, in Washington. On the morning of the death of Mr. Lincoln (April 15, 1865), the cabinet ministers, excepting Mr. Seward, who was very ill, addressed a note to the Vice-President, officially notifying him of the decease of the President, and that the emergency of the government demanded that he should immediately enter upon the duties of the Presidency. Mr. Johnson appointed ten o'clock that morning, when he would be ready to take the oath of office at his rooms. That oath was duly administered at the appointed time by Chief-justice Chase, in the presence of the cabinet ministers and several members of Congress. Then the President delivered a brief speech to the gentlemen present. There, in the midst of universal and unparalleled excitement, the authority of the nation was quietly transferred to other hands a few hours after the death of President Lincoln. Mr. Johnson requested Mr. Lincoln's cabinet (which see) to remain, and the government went on, without a shock to its steady movement.

**Inauguration of President Lincoln.** Mr. Lincoln arrived in Washington in the early morning of Feb. 23, 1861, schemes to prevent his reaching there having been frustrated. (See *Lincoln, Plot to Assassinate.*) On March 4, 1861, Mr. Lincoln was inaugurated, under circumstances of peculiar interest. In expectation of open violence on the part of conspirators against the life of the Republic and its adherents, General Scott had made ample provision for the preservation of order by the strong arm of military power. This fact was known, and no disorder occurred. Chief-justice Taney administered the oath of office as quietly as on any former occasion. It was done at the eastern front of the Capitol, and from the platform there erected, Mr. Lincoln, in a clear, firm voice, delivered his inaugural address. In it he expressed the most kindly feelings towards the

people of all parts of the Union, and his determination to administer the government impartially for the protection of every citizen and of every interest. "I have no purpose," he said, "directly or indirectly, to interfere with the institution of slavery in the states where it exists. I believe I have no lawful right to do so, and I have no inclination to do so." He then discussed the political structure of our government, showing that union was older than the Constitution; that it was necessarily perpetual; that there is no inherent power in the whole or in part to terminate it, and that the secession of a state was an impossibility. He declared that he should use the powers intrusted to him for the protection of the Union. "In this," he said, "there need be no bloodshed or violence; and there shall be none, unless it be forced upon the national authority." He expressed a firm determination "to hold, occupy, and possess the property and places belonging to the government, and to collect the duties and imposts."

**Inauguration of President Madison.** On the 4th of March, 1809, James Madison, the fourth President of the United States, was inaugurated at Washington city. He was then fifty-eight years of age. The ceremony was performed in the hall of the House of Representatives, in the presence of the Senate, the members of the late House, the heads of departments, foreign ministers, and an assemblage of citizens. The President was dressed in a full suit of clothes of American manufacture, from the wool of merino sheep, raised in this country from a flock brought from Spain by Colonel Humphreys. His coat was from the manufactory of Colonel Humphreys, and his waistcoat and breeches from that of Chancellor Livingston, presents, respectively, of these gentlemen. George Clinton was inaugurated Vice-President at the same time. The oath of office was administered to Madison by Chief-justice John Marshall. In the evening the citizens of Washington and the members of Congress indulged in a ball or dancing assembly in honor of the occasion.

**Inauguration of President Monroe (1817).** The President-elect, accompanied by the Vice-President, D. D. Tompkins, left the residence of the former, attended by a vast concourse of citizens, on horseback, under the guidance of a marshal appointed for the occasion, and proceeded to the Senate-chamber in the Capitol, where the oath of office was administered to the Vice-President before the Senate, then in session. This done, the Senate adjourned, and the President, Vice-President, judges of the Supreme Court, and the senators present, accompanied by ex-President Madison, proceeded to an elevated portico temporarily erected for the purpose, where, in the presence of a vast assemblage of citizens and strangers, including government officers and foreign ministers, he delivered his inaugural address. Then the oath of office was administered by Chief-justice Marshall (March 4, 1817), and the new President entered upon his important duties. The tone of his inaugural address

was so patriotic and conciliatory that it was received with almost universal satisfaction.

**Inauguration of President Pierce.** A disagreeable storm of sleet and rain prevailed at Washington city on the day of the inauguration of Franklin Pierce as President of the United States, March 4, 1853. It was estimated that the population of Washington and Georgetown had been increased full twenty thousand within a week of that event. The military array on that occasion was on a scale grander than any that had preceded it. General Pierce rode to the Capitol in a barouche, with President Fillmore and Senators Bright and Hamlin. The Vice-President-elect was too ill to be present, and died a little more than a month later (April 17, 1853). The usual proceedings of inaugurating a Vice-President were dispensed with, and the President's party, diplomatic corps, and government officers proceeded directly to a platform at the eastern entrance to the Capitol, where General Pierce took the oath of office, administered by Chief-justice Taney, and then delivered his inaugural address. Salvos of artillery announced the conclusion of the ceremonies, and the new President repaired to the White House, or presidential mansion. The oath of office was afterwards administered to Mr. King at Matanzas by the United States consul. Then he retired to his residence, near Selma, Ala., where he died.

**Inauguration of President Polk.** The weather, on the 4th of March, 1845, when James Knox Polk was inaugurated President of the United States, was inclement; yet an immense multitude of his fellow-citizens were in Washington to witness the ceremony. It was lowering in the morning, and towards noon, before the procession reached the Capitol, rain began to fall, which diminished the intended exhibition and display on the occasion. The inaugural procession moved about eleven A.M., from the quarters of the President-elect at Coleman's Hotel, under the direction of General McCall and his aids. It was composed of military corps and civilians. The President-elect and Mr. Tyler rode together in an open barouche. They proceeded to the Senate-chamber, where the Vice-President, George M. Dallas, had taken the oath of office. Thence all proceeded to a platform at the eastern entrance to the Capitol, where Mr. Polk delivered his inaugural address. Chief-justice Taney then administered the oath of office, and during the afternoon the new President received the congratulations of his fellow-citizens. In the evening he and his wife attended the two inauguration balls given in the city.

**Inauguration of President Taylor.** The 4th of March, 1849, falling on Sunday, Zachary Taylor, the twelfth President of the United States, was inaugurated on Monday, the 5th. There was a greater number of people present at that ceremony, from all parts of the Union, than there had ever been before on a like occasion. The bells of the city of Washington rang out merry peals on that morning, and the streets resounded with martial music. At nine o'clock

one hundred citizens, who officiated as marshals, proceeded in a body to Willard's Hotel, for the purpose of paying their respects to General Taylor. The President-elect, dressed in a plain black suit, was borne in a carriage to the Capitol, accompanied by ex-President Polk, R. C. Winthrop, Speaker of the House of Representatives, and Mayor Seaton, of Washington. The carriage was drawn by four horses. The Senate was convened at eleven o'clock, when Mr. Fillmore took the oath of office as Vice-President, in the presence of the judges of the Supreme Court and foreign representatives. At a little past twelve o'clock President-elect Taylor appeared and took a seat, and, after a pause of a few minutes, the whole company proceeded to a platform at the eastern entrance to the Capitol, where, at one o'clock, the new chief magistrate delivered his inaugural address, in the presence of an immense multitude of his fellow-citizens. Then Chief-justice Taney administered the oath of office. These ceremonies were ended by salvos of artillery, and the President proceeded immediately to the White House (the presidential mansion), where he received the friendly salutes of thousands of citizens.

**Inauguration of President Tyler.** In accordance with the provisions of the Constitution, the Vice-President, John Tyler, succeeded to the office of the deceased President Harrison. Mr. Tyler was at Williamsburg, Va., at the time. The cabinet jointly sent a letter to him, by the hand of Fletcher Webster, acquainting him of the death of the President. By great despatch both ways the Vice-President arrived at the capital at four o'clock on April 6 (1845), and at twelve M. he was waited upon by the cabinet, when he took the oath of office as President, administered by Judge Cranch, of the Circuit Court of the District of Columbia. After the funeral of the dead President, Mr. Tyler issued an inaugural address to the people, through the press, which gave general satisfaction. He retained the cabinet of President Harrison (which see).

**Inauguration of President Van Buren** took place at the national Capitol, March 4, 1837. It was a beautiful day at Washington, and the President-elect took his seat, with his venerable predecessor, in a phaeton made of wood from the frigate *Constitution*, and presented to Jackson by the democracy of New York. They were escorted from the President's house to the Capitol, through Pennsylvania Avenue, by a body of cavalry and infantry, and accompanied by an immense concourse of citizens. After reaching the Senate-chamber, Mr. Van Buren, attended by the ex-President, the members of the Senate, of the cabinet, and the diplomatic corps, led the way to the rostrum erected at the ascent to the eastern portico of the Capitol, where he delivered his inaugural address in clear and impressive tones, and in an easy and eloquent manner. At the close of the address the oath of office was administered by Chief-justice Taney. The tone of his inaugural address satisfied the people that in the administration of Van Buren there would

be no change in policy from that of President Jackson.

**Inauguration of President Washington.** who was elected the first chief-magistrate of the United States under the national Constitution, with John Adams as Vice-President. Presidential electors were chosen by the people in the autumn of 1788, who met in electoral college on the first Wednesday in February, 1789, and chose the President and Vice-President. His election was announced to him by Charles Thomson, who had been sent to Mount Vernon for the purpose, with a letter from John Langdon, *pro tempore* President of the Senate. Thomson arrived on April 14, 1789. Washington accepted the office, and towards evening the same day rode rapidly to Fredericksburg to bid farewell to his aged mother. On the morning of the 16th, accompanied by Thomson, Colonel Humphreys, and his favorite body-servant, he began his journey towards New York, everywhere on the way greeted with demonstrations of reverence and affection. He was received at New York with great honors, and on the 30th of April he took the oath of office as President of the United States, administered by Robert R. Livingston, Chancellor of the State of New York. The ceremony took place in the open outside gallery of the old City Hall, on the corner of Wall and Nassau Streets, in the presence of both Houses of Congress and a vast multitude of citizens. He was dressed in a plain suit of dark-brown cloth and white silk stockings, all of American manufacture. He never wore a wig. His ample hair was powdered and dressed in the fashion of the day, clubbed and ribboned. After taking the oath and kissing the sacred volume on which he had laid his hands, he reverently closed his eyes, and in an attitude of devotion said, "So help me, God!" The chancellor said, "It is done!" And then, turning to the people, he shouted, "Long live George Washington, the first President of the United States." The shout was echoed and re-echoed by the populace, when Washington and the members of Congress retired to the Senate-chamber, where the President delivered a most impressive inaugural address. Then he and the members went in procession to St. Paul's Chapel, and there invoked the blessings of Almighty God upon the new government.

**Incas.** These ancient rulers of Peru first became known to Europeans by rumor, and then by conquest, early in the sixteenth century. Their empire extended from Quito, in Ecuador, on the north, to Tucuman, in the Argentine Republic, on the south, and eastward to the summit of the Andes and beyond. The first Inca, tradition says, was Manco Capac, who appeared on an island in Lake Titicaca. He founded Cuzco, and that was the seat of the Inca empire. Capac introduced a knowledge of the arts and promoted civilization. His advent is supposed to be at about the time when the Northmen discovered America (see *Northmen*), at the beginning of the eleventh century. The empire, extended by conquest and annexation,

included many nations. Of these, the Quichnas were dominant, for from that tribe the Incas sprung. Their last conquest was the annexation of Quito, which produced a civil war that made the Spanish conquest of the whole empire in 1532 an easy matter. It was done by a few Spaniards led by an illiterate and cruel adventurer named Pizarro. (See *Pizarro*.) The kingdom was destroyed and the dynasty of the Incas was blotted out. The Incas claimed to have descended from the sun, and worshipped that luminary. They cultivated the arts, indulged in poetry, kept records by means of knotted cords, were diligent agriculturists, and ruled despotically, yet wisely. The supreme Inca had wives and concubines, and his eldest son by his sister or other nearest of kin was his successor. The inhabitants were divided into groups of ten thousand, over whom a governor Inca ruled, and all industry was regulated by the state with as much liberty as possible. Every individual had a right to as much land as would support life. They had just laws, the arts flourished, and the Incas left monuments of skill and industry in aqueducts and a great highway upon the Andes that excite the wonder of the traveller to this day.

**Incas of Peru, EMPIRE OF THE, OVERTHROWN.** Among the conquerors of the West India islands and Central America were Francisco Pizarro and Diego de Almagro. The success of Cortez inspired these men to attempt greater conquests. Pizarro was with Vasco Nuñez de Balboa (see *Nuñez*) when the latter discovered the Pacific Ocean, and there received hints of the opulent countries farther south on the coast of that ocean. He and Almagro associated themselves with a wealthy priest at Panama (Hernando de Luque), and took a joint oath that they would never forsake each other until they had fully conquered that country. Pizarro first, and Almagro afterwards, sailed for Peru; and both were repulsed and compelled to leave the country. Pizarro then went to Spain, and received from the monarch a commission as governor and captain-general of all the country which he had discovered, and was vested with supreme authority. Pizarro returned, and, joining his associates at Panama, they fitted out three vessels, with one hundred and eighty soldiers, and sailed in February, 1531, to conquer the empire of the Incas. They marched steadily along the coast after landing, plundering the principal settlements, but were kept at bay six months on the Bay of Guayaquil by the valor of the inhabitants. They were reinforced by one hundred and thirty men soon afterwards. Near the mouth of the River Piuro Pizarro established the first Spanish colony in Peru. With a small train of followers (sixty-two horse and one hundred and six foot, telling them his object was "to propagate the Roman Catholic faith, and not to injure any one"), Pizarro pushed forward towards Caxamalca, one of the seats of the Inca power, near which Atahualpa, the reigning monarch of Peru, was encamped with a considerable body of soldiers. The Inca sent a deputation to welcome Pizarro. The latter,

feigning warm friendship for Atahualpa, and assuming the character of an ambassador from a powerful monarch, entered the town, and invited the Inca to an audience the next day, that Pizarro might renew his assurances of friendship. Meanwhile the treacherous Spaniard disposed his troops so as to seize the Inca and carry him to camp a prisoner. Atahualpa appeared in great pomp and splendor, sitting on a throne overlaid with plates of gold and silver, garnished with precious stones and adorned with plumes. He was borne upon the shoulders of attendants, and was followed by several officers of his court and bands of singers and dancers. At the same time the plain became filled with about thirty thousand troops. As the Inca approached, Father Valverde, chaplain of the expedition, advanced with a crucifix in one hand and a breviary in the other, and expounded the doctrines of the Christian faith. He told the Inca of the Pope and his gift to the monarch of Spain of all lands in the West (see *Pope's Gift*); required him to become a Christian; to acknowledge the supreme jurisdiction of the Pope; and to acknowledge the King of Spain as his lawful sovereign. Atahualpa rejected all these proposals with scorn and indignation, and asked the priest where he had heard of the right of a foreigner to take possession of the country of the Incas. "In this book," said Valverde, handing Atahualpa the breviary. The Inca held it to his ear, and, casting it upon the ground in disdain, said, "This is silent; it tells me nothing." The enraged monk ran to his countrymen and cried out, "To arms, Christians! to arms! The word of God is insulted. Avenge this profanation on these impious dogs." Pizarro gave the word, and a furious assault began. The astonished Peruvians fled without making any resistance. Pizarro pressed forward on horseback through the crowd of nobles, and, dragging the Inca to the ground, carried him away a prisoner to the quarters of the Spaniards. The Peruvians were pursued and slaughtered with great barbarity until night fell upon the scene. About five thousand of them were killed. The Inca found that gold was the object of this pretended friendly embassy, and he offered, as a ransom, to fill the room in which he was confined with vessels of gold to a certain height. They were brought, and amounted in value, when melted down, to \$17,500,000. After this immense sum was divided among the victors the Inca demanded his release. Pizarro had determined to have the kingdom. He made charges against Atahualpa—some true, some false; among others, that he had incited his subjects to take up arms against the Spaniards, and that he was an idolater. For these offences he was tried and condemned to be burned alive. Amazed, the Inca begged for his life, and to be sent to Spain. Pizarro silenced his entreaties by ordering an immediate execution of the sentence. At that critical moment Father Valverde, intent upon effecting the conversion of this heathen, promised him a mitigation of the horrid death if he would become a Christian. Atahualpa thereupon desired to

be baptized. This done, instead of being burned, he was strangled at the stake (Aug. 29, 1533). "An evidence of God's mercy," said a Spanish historian. Pizarro now forced his way to Cuzco—the Holy City—(November, 1533), the ancient capital, which contained a magnificent Temple of the Sun and nearly two hundred thousand inhabitants. Pizarro took possession of it in the name of the King of Spain, and the amount of gold and silver which he found there nearly equalled that of the ransom of Atahualpa. The empire of the Incas was now overturned, and Pizarro founded Lima, nearer the sea, as the capital of Peru.

**Independence, FIRST PROPOSITION IN CONGRESS FOR.** In a debate in the Continental Congress (February, 1776) on the subject of opening the American ports to commerce, the power of a nationality became a topic. Roger Sherman wished first to procure a protective treaty with some foreign power. Benjamin Harrison said, indicating a desire for independence, "We have hobbled on under a fatal attachment to Great Britain. I feel that attachment as much as any man, but I feel a stronger one for my country." His colleague, George Wythe, said, "It is too true, our ships may be taken unless we provide a remedy; but we may authorize vessels to arm, and we may give *letters-of-marque* and reprisal. We may also invite foreign powers to make treaties of commerce with us; but before this measure is adopted it is to be considered in what character we shall treat—as subjects of Great Britain? as rebels? No; we must declare ourselves a free people." Then he moved a resolution "That the colonies have a right to contract alliances with foreign powers." A timid member said, "Why, this is independence." Seven colonies decided to consider the motion, but nothing more was done at that time. This was between three and four months before Lee offered his resolution for independence (which see).

**Independence in the British Parliament.** The Declaration of Independence had lost America many friends in England, for it aroused the national spirit against the attempt to dismember the British empire. But there were still warm friends to the American cause among members of the House of Commons. The king, having heard of Howe's success on Long Island, felt assured of soon suppressing the rebellion; and in his opening speech on the assembling of Parliament (October, 1776), expressed a desire to restore "to the Americans the blessings of law and liberty," of which their fanatical leaders had deprived them. A warm debate ensued, in which Charles James Fox boldly took ground in favor of the independence of the Americans. "The administration," he said, "deserve nothing but reproach for having brought the Americans into such a situation that it is impossible for them to pursue any other conduct than what they have pursued. In declaring independence, they have done no more than the English did against James II. . . . But if this happy time of 'law and liberty' is to be restored to Americans,

why was it ever disturbed? It reigned there till the abominable doctrine of gaining money by taxes infatuated the heads of our statesmen. Why did you destroy the fair work of so many ages in order to re-establish it by the bayonets of disciplined Germans? If we are reduced to the dilemma of conquering or abandoning America, I am for abandoning America." The sagacity and fearlessness of Fox, then only twenty-seven years of age, made him the most important member of the House of Commons, and his speech above alluded to was highly lauded by Burke and Gibbon. Yet he was not a statesman—only a great speaker. He was licentious, dissipated, and without strong moral convictions, and loved to be talked about.

**Independence, LONGINGS FOR.** During the long quarrel between Great Britain and her colonies, to 1776, the latter had honestly disclaimed any desire for political independence of Great Britain. They felt a pride in being a part of the British empire; but when the king and Parliament had declared the colonists rebels, the royal governor had abdicated, fleets and armies had come to compel them to submit to oppressive laws, and German mercenaries had been hired to fight and crush them, their respectful petitions treated with disdain, and submission had become a synonym of slavery, there was a spontaneous desire and bold expression for independence throughout the colonies. A few men like Samuel Adams had desired it from the beginning; now, early in 1776, Samuel Adams found the people with him. Washington and other military leaders did not hesitate to express their wishes for independence. "When I took command of the army (July, 1775)," Washington wrote, "I abhorred the idea of independence; but I am now fully convinced nothing else will save us." Thomas Paine's *Common Sense* (which see) gave powerful impetus to the idea. Legislative bodies soon began to move in the matter. The Continental Congress was firm at heart, but timorous in action. In January (1776) Dr. Franklin tried to get a day set for the consideration of his plan for a confederation, but the privilege was denied. Their constituents everywhere were ahead of the representatives; but in February, when it was proposed to Congress to send out an address disclaiming all ideas of independence, there was a general expression of disgust and resentment. It was presented by Wilson, of Pennsylvania, in a long, ill-written draught of an address to his constituents. Harrison and Wythe, of Virginia, both spoke warmly against it, and the latter offered a brief resolution (see *Independence, First Proposition in Congress for*), which made timid members start in alarm, for it meant independence; but the resolution was adopted. As the spring advanced other measures having the same tendency were adopted by Congress. The Committee of Secret Cor-

respondence (which see) appointed Silas Deane a political and commercial agent to operate in France and elsewhere; and finally a resolution for independence was passed (June, 1776) by the Congress. Of the colonial authorities, those of Massachusetts and North Carolina were the first to act officially. The Provincial Congress authorized (April 22, 1776) their delegates in the Continental Congress "to concur" with others in "declaring independence." On the next day the people of Massachusetts did the same. Those of Rhode Island and Virginia instructed their representatives to *propose* independence. The delegates from Connecticut were instructed to *assent* to it. The Provincial Congress of New Hampshire issued similar instructions. The delegates of New Jersey were left to act as they pleased. The New York Congress took no action. Neither did the authorities of Pennsylvania give any instructions in the matter. The Maryland convention, at the close of May, forbade their delegates voting for independence; but at the close of June they were in accord with Virginia. Delaware, South Carolina, and Georgia took no official action on the subject. By the first of June (1776) a great majority of the colonists were longing for independence.

**Independence of the United States, ACKNOWLEDGMENT OF, BY EUROPEAN POWERS.** France, by treaty, acknowledged their independence in February, 1778; Holland in April, 1782; Sweden in February, 1783; Denmark in February, Spain in March, and Russia in July, 1782; and Great Britain in 1783. (See *Treaty of Peace*.)

**Independence, RESOLUTION OF CONGRESS ON.** Virginia had instructed her representatives in Congress to *propose* independence. On the 7th of June, 1776, Richard Henry Lee offered in that body the following resolution: "That these United Colonies are, and of right ought to be, free and independent states, and

THE STATE HOUSE AS IT APPEARED IN 1774.  
(From a vignette on an old map of Philadelphia.)

that all political connection between us and the State of Great Britain is, and ought to be, totally dissolved." It was instantly seconded by John Adams. To shield him and Lee from

ministerial wrath as arch-rebels, the Secretary of Congress was directed to omit their names in the entry on the journal, and that record simply declared that "certain resolutions respecting independence being moved and seconded," it was resolved that the further consideration of them should be postponed until the next day. The postponement was extended to the 2d of July, on which day it was adopted by a vote of eleven colonies in the affirmative. The representatives of Pennsylvania were divided, four of the seven delegates voting in favor of it, and three against it. The two delegates from Delaware, present, were divided. At that time the meeting-place of the Continental Congress was in a large room on the lower floor of the State House in Philadelphia, which has since been known as "Independence Hall." (See *Declaration of Independence*.)

"Independent Reflector," THE, was established as a weekly magazine, in the city of New York, by James Parker. It was neatly printed on foolscap paper, and contained moral and political essays, but no current news. Its first number was issued on Thursday, Nov. 30, 1752, and it continued about two years. Its papers were contributed by a society of literary gentlemen in and near New York, the principal of whom were William Livingston, President Aaron Burr, John Morin Scott, William Alexander (Lord Stirling), and William Smith, who died chief-justice of Canada. It finally gave great offence to the crown officers in the colonies, and their threats so intimidated Parker that he refused to print it any longer, and it was discontinued. The writer had spared no party—social, political, or religious—and the editor-in-chief (the unknown William Livingston) was denounced in private circles as an infidel and libertine, and from the pulpit as the Gog and Magog of the Apocalypse. The mayor of the city, who had felt the scorching heat of the *Reflector*, recommended the grand jury to present it as a libel and nuisance, and the editor was publicly charged with profanity, irreligion, and sedition. In the spring of 1753, Livingston (still unknown) violently assailed the Episcopalians in the *Reflector*. The occasion was the effort (which was successful) of establishing King's (now Columbia) College under the control of the Episcopalians. Livingston was one of the small minority of the trustees, and it was his pen that furnished the papers under different signatures in the *Reflector*, in which (March, 1753) he opened his batteries upon the Anglican Church. Violent opposition immediately appeared, in which the pens of Johnson, Barclay, Auchmuty, and other churchmen were employed. The *Reflector* was discontinued Nov. 22, 1753, at its fifty-second number. For his services in opposing the pretensions of the Episcopalians, the Synod of Connecticut voted thanks to Livingston; and in Gaines's *New York Mercury* he was lampooned in a poem of two hundred lines, in which the anonymous writer thus alluded to the mysterious editor of the *Reflector*:

"Some think him a *Tindall*, some think him a *Chubb*,  
Some think him a *Ranter*, that spouts from his *Tub*;

Some think him a *Newton*, some think him a *Locke*,  
Some think him a *Stone*, some think him a *Stock*—  
But a *Stock*, he, at least, may thank nature for giving,  
And if he's a *Stone*, I pronounce it a *Living*."

**Indian Allies of the Americans (1814).** In March, 1814, a council of the Northern Indian tribes was convened at Dayton, O., at which those present were required, as an earnest of their peaceful intentions, to take up arms against the British, with the pay of seventy-five cents a day to each warrior. Another council, more numerous attended, gathered at the old council-ground of Greenville (June and July, 1814), when the Indian boundary-lines, as they existed before the war, were confirmed. After that the Wyandots, Delawares, Senecas, Shawnoese, and most of the Miamis joined in the war-dance and took up arms as required. A large body of the barbarian allies soon assembled at Detroit; but after one or two inroads into Canada, they were dismissed as troublesome, expensive, and useless.

**Indian Allies of the Confederates.** West of Arkansas lie the Indian territories, where, in 1861, at the outbreak of the Civil War, dwelt the semicivilized nations of Cherokees, Choctaws, and Chickasaws, then numbering about forty thousand souls. There were also some Creeks and Senecas and Shawnoese on a visit there at the same time. A brother of Governor Rector, of Arkansas, was then the government agent among the Cherokees. The Confederate government formed at Montgomery directed Governor Rector to endeavor to attach these half-barbarians to the insurgent cause. To this work the governor's brother addressed himself. When, in June, 1861, Jefferson Davis ordered three regiments to be formed of these Indians, he commissioned Albert Pike, a poet of some pretensions and a native of New England, to make a treaty with them. Pike met them in council in their own country. He succeeded with the less civilized Choctaws and Chickasaws. By a treaty made they were allowed two delegates in the Congress at Montgomery. Pike was also commissioned a brigadier-general, and led two regiments in the Confederate army. A third regiment was raised before the close of 1861. With these half-savages Pike fought in the battle at Pea Ridge (which see), and there they were hopelessly dispersed.

**Indian Bureau (1786).** (See *Commissioners of Indian Affairs*.) In August, 1786, the Indian Bureau was reorganized by ordinance, and made subordinate to the Department of War. Two superintendents were appointed, one for the district north of the Ohio, the other for the region south of that river, whose functions were to see that the regulations of Congress were enforced; to keep the Indians quiet by doing them justice and to prevent their encroachments; also to prevent that misconduct on the part of the frontier settlers by which Indian hostilities were generally provoked.

**Indian Cessions of Land (1803).** Ohio having become a state of the Union (1802), propositions were made for four other states out of the northwestern territory (which see). At a treaty held with Governor Harrison, of the Indian Ter-

ritory, Aug. 13, 1803, a large extinguishment was made of Indian titles north of the Ohio. In consideration of the protecting care of the United States, of \$580 in cash, of an increase of their annuity to \$1000, of \$300 towards building a church, and of annual payment, for seven years, of \$100 to a Roman Catholic priest, the remnant of the Kaskaskia tribe, reduced to a few hundred persons—the feeble representation of the once powerful confederacy of the Illinois—ceded to the United States (excepting a small reservation), all the vast tract lying within the lines beginning at the mouth of the Illinois River, descending the Mississippi to the mouth of the Ohio, ascending the Ohio to the mouth of the Wabash, and from a point up that stream westward to the Mississippi, embracing all the southern portion of the State of Illinois. By two treaties made at Vincennes (Aug. 18 and 27) with the Delawares and Piankeshaws, and at St. Louis (Nov. 3), in 1804, with the Sacs and Foxes (which see), by Governor Harrison, of Indiana, the Indian title to large additional tracts in that region was extinguished. The Delawares and Piankeshaws, in consideration of small additional annuities, ceded all the country south of Vincennes to the falls of the Ohio, at Louisville. The Sacs and Foxes, in consideration of an annuity in goods to the value of \$1000, ceded a great tract on both sides of the Mississippi of near 80,000 square miles, extending on the east bank from the mouth of the Illinois River and thence to the Wisconsin, and including on the west a considerable part of the (present) State of Missouri, from the mouth of the Gasconade northward. In the summer of 1805 large tracts of land in Ohio and Indiana were ceded to the United States by Western Indians. By a treaty made by Governor Harrison, of Indiana (July 4), at Fort Industry, on the Maumee, with the Wyandots, Ottawas, Chippewas, Museses, Delawares, Shawnoese, and Potawatomes, they relinquished all claim to the tract of land in Ohio known as "The Connecticut Reserve," in consideration of a perpetual annuity of \$1000, in addition to \$16,000 already paid or secured to some of their tribes by the Connecticut Land Company, the purchasers for Connecticut of that tract. By another treaty (Aug. 21, 1805) with the Delawares, Potawatomes, Miamis, Eel River Indians, and Weas, the Indian title was extinguished to all that part of the (present) State of Indiana within fifty miles of the Ohio, except a narrow tract along the west bank of the Wabash; and thus, in connection with former cessions, was opened to settlement the whole northern banks of the Ohio, from its source to its mouth. In 1808 there were again cessions of large tracts of land by the Indians south of the Ohio River. The Choctaws (which see) ceded that wide tract intervening between the settlements about Natchez and those on the Tombigbee, including all the southern portion of the (present) State of Mississippi, for \$50,000, to be appropriated to the discharge of debts due to certain traders, a gratuity of \$500 each to three of the principal chiefs, besides an annuity of \$50 during their chieftaincy, and goods of the

value of \$3000 to be annually furnished to the nation. The Ottawas, Chippewas, Wyandots, and Potawatomes ceded a great tract of territory north of the Maumee River, from the junction of the Auglaize eastward, extending up the Detroit River and Lake Huron so as to include a third part or more of the peninsula of Michigan, for \$10,000, payable in goods, and an annuity of \$2400.

**Indian Cessions of Lands in 1818.** By a treaty negotiated in September, 1817, and again in 1818, the Wyandots, Delawares, Senecas, and Shawnoese, with some bands of the Potawatomes, Ottawas, and Chippewas, ceded all their remaining lands in Ohio—about four million acres, embracing the valley of the Maumee. For this cession \$14,000 were paid to the several tribes, in various proportions, in the name of damages suffered from the British in the late war: \$500 to the Delawares; \$10,000 annually to the Wyandots, Senecas, Shawnoese, and Ottawas forever; and \$3300 annually for fifteen years to the Potawatomes and united Chippewas and Ottawas. About three hundred thousand acres were reserved in various tracts, and assigned to different bands, families, and individuals, under the idea that the Indians might adopt the habits of civilization and become farmers. An annuity of \$1000 had already been granted (in 1816) for twelve years to the united Chippewas, Ottawas, and Potawatomes of the Illinois and Milwaukee reservations, in consideration of a tract twenty miles wide, including the site of Chicago, and extending back from Lake Michigan southwesterly to the Kankakee and Fox rivers. Some considerable cessions were also obtained in Illinois and Indiana from the Potawatomes, Weas, Miamis, and Delawares. The states of Kentucky and Tennessee also received large accessions to their territories by a cession in 1818 by the Chickasaws of all the tract of land included between the Mississippi and the northern course of the Tennessee River. The Chickasaw villages were mostly lower down the Mississippi, this tract having been used as hunting-grounds. In consideration for this important cession, the United States agreed to pay to the Choctaw nation (besides reservations made to certain chiefs) \$70,000 annually for fifteen years. This whole tract was already covered by old Virginia and North Carolina land-grants, which the government paid for, but individuals profited by.

**Indian Commissioners.** (See *Commissioners of Indian Affairs.*)

**Indian Commissions.** The importance of keeping on good terms with the Indians, and especially with the Six Nations, was felt at the beginning of the war for independence. Three boards for the management of Indian affairs were constituted: one for the Six Nations and other Northern tribes, a second for the Cherokees and Creeks, and a third for the intervening nations; and \$500 was voted for the education of Indian youths at Wheelock's school at Hanover, N. H. Louis, a half-breed of negro and Indian blood, was given a commission as

colonel, and faithfully adhered to the American cause.

**Indian Commonwealth Proposed.** In a message to Congress, Jan. 17, 1825, President Monroe suggested the propriety of removing all the scattered Indian tribes in the United States and concentrating them in one nation west of the Mississippi River. Measures were taken to carry this plan into effect. Treaties were made with the Osage and Kansas Indians extinguishing their titles to territory west of the Mississippi, and so a territory was provided for those Indians who might be induced to emigrate from the states on the east side of that river. But they were generally unwilling to remove, and such a scheme has never been carried out. The nearest approach to it was the establishment of the Indian Territory. (See *Indian Territory*.)

**Indian Congress in Georgia.** In 1774 Sir James Wright, royal governor of Georgia, called a congress of the principal heads of the Creek and Cherokee Indians, who were induced to cede to the British crown several million acres of valuable land in the most healthful and fertile portion of the province for the payment of debts which the barbarians owed to white traders.

**Indian Corn.** When the English settlers first went to Virginia, they found the Indians cultivating maize, and the Europeans called it "Indian corn." It proved to be a great blessing to the emigrants to our shores, from Maine to Florida. Indian corn appears among the earliest exports from America. So early as 1748 the two Carolinas exported about 100,000 bushels a year. For several years previous to the Revolution Virginia exported 600,000 bushels annually. The total amount of this grain exported annually from all the English-American colonies at the beginning of the Revolution was between 560,000 and 580,000 bushels. At the beginning of this century the annual export was 2,000,000 bushels. But its annual product was not included in the census reports of our country until 1840, when the aggregate yield was nearly 400,000,000 bushels. The largest production we have ever had was in 1855, when it was 1,000,000,000 bushels, valued at \$400,000,000. While Captain Miles Standish and others of the Pilgrims (which see) were seeking a place to land, they found some maize in one of the deserted huts of the Indians. Afterwards Somo-set, the friendly Indian, and others, taught the Pilgrims how to cultivate the grain, for it was unknown in Europe, and this supply, serving them for seed, saved the little colony from starvation the following year. The grain now first received the name of "Indian corn." Mr. Schoolcraft tells us that Indian corn entered into the mythology of the barbarians in the region of the upper lakes. In legend the Indians tell us that a youth, on the verge of manhood, went into the forest to fast, where he built himself a lodge and painted his face in sombre colors; and then he asked the Master of Life for some precious gift that should benefit his race. Being weak from fasting, he lay down in his lodge and

gazed through its opening into the blue depths of the heavens, from which descended a visible spirit in the form of a beautiful young man dressed in green, and having green plumes on his head. This embodied spirit bade the young Indian to rise and wrestle with him as the only way to obtain the coveted blessing. Four days the wrestlings were repeated, the youth feeling each time an increasing moral and supernatural energy, while his bodily strength declined. This mysterious energy promised him the final victory. On the third day his celestial visitor said to him: "To-morrow will be the seventh day of your fast, and the last time I shall wrestle with you. You will triumph over me and gain your wishes. As soon as you have thrown me down, strip off my clothes and bury me on the spot in soft, fresh earth. When you have done this, leave me, but come occasionally to visit the place to keep the weeds from growing. Once or twice cover me with fresh earth." The spirit then departed, but returned the next day; and, as he had predicted, the youth threw him on the ground. The young man obeyed his visitor's instructions faithfully, and very soon was delighted to see the green plumes of the heavenly stranger shooting up through the mould. He carefully weeded the ground around them, and kept it fresh and soft, and in due time his eyes were charmed at beholding a full-grown plant bending with fruit that soon became golden just as the frost touched it. It gracefully waved its long leaves and its yellow tassels in the autumn wind. The young man called his parents to behold the new plant. "It is *Men-du-min*," said his father; "it is the grain of the Great Spirit." They invited their friends to a feast on the excellent grain, and there were great rejoicings. Such is the legend of the origin of Indian corn, or maize.

**Indian Hospitality.** Everywhere Europeans landing on the shores of America were treated with great kindness by the natives, who saw them for the first time; and such might have been the pleasing intercourse with the barbarians until now but for the cruelty and injustice with which the hospitality of the aborigines was frequently requited. When Amidas and Barlow, sent out to America by Sir Walter Raleigh, visited Roanoke Island, they were hospitably entertained by the wife of a brother of the Hatteras king, in the absence of her husband, who had been on board their ships. When these navigators were alarmed by the appearance of some hunters, she caused several of her men to go out and take away and break their bows and arrows; and when, in alarm, the English were preparing to leave in their boat, she carried them supper half cooked in pots, at the same time ordering several men and thirty women to act as a guard to them through the night, sitting on the sandy beach. She also sent them some fine mats to screen them from the weather. This kindness was afterwards so requited by cruelties by men under Grenville, Lane, and other Englishmen, that destruction was brought upon a colony planted on Roanoke Island.

**Indian Lands, CESSIONS OF, IN THE SOUTH.** The people of Tennessee had regarded the tract of country on the southern course of the Tennessee River as yielded up by the late treaty with the Creeks; but the Cherokees claimed it towards the east, and the Choctaws and Chickasaws towards the west. A treaty signed at Washington (March 22, 1816), which recognized the Cherokee claim, offended the Tennesseans. In consequence of loud complaints, a new treaty was made, by which the Cherokees relinquished their claim to lands on the south side of the Tennessee to the parallel of Huntsville. By two other treaties the Choctaws and Chickasaws relinquished all claim to territory east of the Tombigbee, excepting the valley of Bear Creek, a small tributary of the Tennessee. By these treaties a larger portion of Alabama and a large tract in southern Tennessee were laid open to settlement. The Chickasaws, besides gratuities to certain chiefs, received a consideration of \$4500 down, and an annuity of \$12,000 for ten years; the Choctaws, \$10,000 down, and an annuity of \$6000 for twenty years; the Cherokees, \$5000 down, and an annuity of \$6000 for ten years. The latter also received \$5000 in consideration of their relinquishment of any claims of theirs to any part of South Carolina.

**Indian Policy, A NEW.** On the accession of General Grant to the Presidency, the "Indian Problem," so called, or that of the best policy to be pursued towards the wild Indian tribes of this continent, was pressed upon the attention of Congress. An "Indian war" seemed to be an ever-present evil. "The best way for the government is to make them poor by the destruction of their stock, and then settle them on lands allowed them," said a distinguished army officer. Another distinguished army officer said, "The only good Indian is a dead Indian." With such a spirit had much of the government policy towards the barbarians been pervaded. Injustice, dishonesty, and violence had been meted out to them, and the consequence was they became the implacable enemies of the white people. President Grant was disposed to try a policy of humanity and justice. He recommended the appointment of a number of members of the Society of Friends, or Quakers, as Indian agents. The members of that society have always been noted as friends of the Indians (see *Friendly Association*) and all suffering people, and for general uprightness and peaceful principles. Congress approved the proposition, and on April 11, 1869, on the nomination of the President, appointed sixteen of them such agents. The new system, or policy, promised the happiest results. There has been a rapid advancement in the arts of peace among many Indian nations. In 1875 the Indian Commissioner reported that, out of a barbarian population of two hundred and seventy-nine thousand, more than forty thousand men and boys supported themselves by the labor of their own hands. He also reported that ten thousand Indian children were attending schools. It seems evident that the true policy is to abolish the whole machinery of Indian reservations, super-

tendents, agents, etc., make every Indian a citizen of the state or territory in which he may reside, give him all the rights and duties of citizenship, and hold him individually responsible to the laws. Only in this way can our barbarian brethren be civilized.

**Indian Reservations.** Many years ago the United States government adopted the policy of placing Indian tribes on reservations of land, with a view to winning them from the hunting and nomadic state to that of permanent residents and cultivators of the soil. In 1876 there were about one hundred of these reservations, upon which about one hundred and eighty thousand of the barbarians were seated. The aggregate area of these reservations is about one hundred and sixty-eight thousand square miles. Of these, thirty-one are east of the Mississippi River, and nineteen on the Pacific slope. The remainder are between these. There are about forty thousand Indians who have no lands awarded by treaty, but they have reservations set apart for them upon the public lands of the United States, fifteen in number, aggregating about sixty thousand square miles.

**Indian Slaves FIRST SENT TO EUROPE.** Ferdinand and Isabella, on hearing of the murder of Spaniards by natives of the West India Islands, ordered that whoever should be found guilty of that crime should be sent to Spain as slaves. Bartholomew Columbus, with whom his brother Christopher left the command in Santo Domingo, gave much latitude in his interpretation of the order, and when he sent back some vessels that brought provisions from Spain, he sent three hundred natives of both sexes for slaves.

**Indian Territory.** By act of Congress, June 30, 1834, "all that part of the United States west of the Mississippi River, and not within the states of Missouri and Louisiana, or the Territory [now the state] of Arkansas, shall be considered the Indian country." It has been reduced in area by the successive formation of states and territories, until now it is bounded north by Colorado and Kansas, east by Missouri and Arkansas, south by Texas, and west by Texas and New Mexico, and contains an area of 69,000 square miles. A narrow strip of territory west of the one hundredth meridian was ceded to the United States by Texas, and is classed geographically with the Indian Territory. The population is estimated at 68,152, of whom 2407 are white people, 6378 colored, and 59,367 Indians. Of the latter, nearly 25,000 were on reservations or agencies in 1873, and 34,400 were rovers. The territory includes seventeen Indian reservations, besides considerable unassigned land. The tribes consist of the Cherokees, Choctaws, Chickasaws, Creeks, Seminoles, Sacs and Foxes; Potawatomes, Shawnoese, Osage, Kaws, Kiowas, Comanches, Apaches, Arapahoes, and Cheyennes; the Quapaws, the confederated Peorias, Kaskaskias, Piankeshaws, Weas, and Miamis; the Ottawas, Wyandots, and Senecas; the affiliated bands of Wichitas, Keechies, Wacoos, Tawacanies, Caddoes, Ioneis, Del-

awares, and Penetethka Comanches. In the latter part of 1873 the Modocs (a remnant of Captain Jack's band) and about 400 Kickapoos and Potawatomes, from the borders of Texas and Mexico, were removed to the Indian Territory. The territory is well watered and wooded, and has much fertile land suitable for raising cereals and cotton, while the climate is mild and salubrious, but dry. In 1873 the Indian population cultivated 217,790 acres of land, and raised 92,574 bushels of wheat, 1,599,924 bushels of corn, 60,750 bushels of oats, 198,470 bushels of potatoes, 138,745 tons of hay, with considerable quantities of barley, beans, pease, rice, sugar, turnips, and 7000 bales of cotton; they also produced 3,930,460 feet of sawed lumber. A portion of the territory is fine grass land, well fitted for raising live-stock. The several Indian tribes possessed in 1873, in the aggregate, the following live-stock: 212,155 horses, 322,854 horned cattle, 13,100 sheep, and 430,445 swine. The aggregate value of the live-stock was \$9,403,178. The territory also produces iron, coal, marble, sandstone, and brick-clay. Buffaloes, wild horses, and wild turkeys are abundant. There are eleven agencies in the territory, viz., Cherokee, Choctaw (including also the Chickasaw), Creek, Kaw, Kiowa, Neosho (the Osages), Quapaw, Sac and Fox (including absentee Shawnoese), Seminole, upper Arkansas. (Cheyennes and Arapahoes), and Wichita. The agents represent the United States, but each tribe has its own internal government. In certain instances, where white men are concerned, the jurisdiction of the United States courts extends over the territory. The subject of a territorial government for the Indian country has long been discussed, but, as there are two opposing parties who take cognizance of the matter, no decision has yet been reached. It is the policy of the United States to settle the various Indian tribes in this region upon separate reservations, as far as possible, where they may be free from the encroachment of the white people, and under the general superintendence and protection of the government; but already about two thousand five hundred "pale faces" have intruded and seated themselves in the territory. The Methodists, Presbyterians, and Baptists have each several missions in the territory, and one or more are maintained by the Friends, Moravians, and Roman Catholics. There are many thousand church members among the Indians, and the number is rapidly increasing.

**Indian Trust Fund, ROBBERY OF THE.** At the close of 1860 it was discovered that Indian Trust Funds, in bonds, in the custody of the Secretary of the Interior (Thompson) had been stolen. They were in the special custody of Goddard Bailey, a South Carolinian, and a relative of the Secretary of War, Floyd. The latter had been chiefly instrumental in getting up a military expedition to Utah, in which full \$6,000,000 had been squandered, at a critical time in the affairs of the nation, and helped the Secretary of the Treasury to embarrass the nation by injuring the public credit. The troops in Utah were stationed at "Camp Floyd," and

the secretary had contracted with the firm of Russell & Co. for the transportation of supplies to that post. For this service they were to receive \$1,000,000 a year. Floyd accepted from them drafts on his department, before the service was performed, to the amount of over \$2,000,000. These acceptances were so manifestly illegal that it was difficult to negotiate them. The contractors became embarrassed, and hit upon a scheme for raising money more rapidly. Russell induced Bailey to exchange Indian Trust Fund bonds for Floyd's illegal acceptances, it is believed, with the connivance of the secretary. They were hypothecated in New York and money raised on them. When the national treasury became embarrassed, late in 1860, under the manipulations of Cobb, these bonds depreciated, and the holders called on Russell for additional security. Bailey supplied him with more bonds, until the whole amounted to \$870,000. As the time approached for his being called upon for the abstracted coupons on these bonds, payable Jan. 1, 1861, Bailey was driven to a confession. Thompson was then in North Carolina as commissioner of the "sovereign state of Mississippi," conspiring with the disunionists. Bailey confessed to him in a letter, which he antedated Dec. 1, pleading for himself that his motive had been to save the honor of Floyd, compromised by his illegal advances. Thompson returned, and, after a consultation, it is said, with Floyd, revealed the matter to the President, who was astounded. Thompson, who knew all about it, conducted the farce of discovering the thief. In due time Bailey made a public confession. The grand jury at Washington indicted Floyd on three counts, namely, malversation in office, complicity in the abstraction of the bonds, and conspiracy against the government. Floyd fled. Rumor magnified the amount of money thus stolen to millions, and the impression went abroad that plunder was the business of the cabinet. The blow to the public credit was staggering. A congressional committee of investigation mildly expressed the opinion that Floyd's conduct "could not be reconciled with purity of motives and faithfulness to public trusts." He was then the honored guest of the authorities at Richmond, Va.

**Indian War in Minnesota (1862).** At midsummer, Little Crow, a saintly-looking savage in civilized costume, leader of Sioux warriors, began war on the white people, and in August and September butchered inhabitants at three points in Minnesota, and at posts beyond the boundary of that state. For nine days the Sioux besieged Fort Ridgely. Fort Abercrombie was also besieged, and twice assaulted; and in that region the Indians murdered about five hundred white inhabitants, mostly defenceless women and children. General H. H. Sibley was sent with a body of militia to crush the Indians. He attacked a large force under Little Crow at Wood Lake, and drove them into Dakota, making five hundred of their number prisoners. Tried by court-martial, three hundred of them were sentenced to be hanged. The President interfered, and only thirty-seven of the worst

offenders were executed, Feb. 23, 1863. The "Sioux War" was not ended until the summer of 1863, when General Pope took command of that department, picketed the line of settlements in the far Northwest with two thousand soldiers, and took vigorous measures to disperse the hostile bands. Generals Sibley and Sully moved against them in June, 1863, fought the savages at different places, and finally scattered them among the wilds of the eastern slopes of the spurs of the Rocky Mountains.

**Indian War in North Carolina (1711).** The Indians in northeastern North Carolina beheld with jealousy and discontent the spreading European settlements in their land along the regions of Albemarle and Pamlico sounds and up the streams. The remnants only of once powerful tribes remained, of whom the Tuscaroras were the most numerous. These had been driven into the forests, and there had nursed their revenge until it became too strong to be repressed, and, led by the dominant tribe, they struck a sudden blow for the extermination of the white people. German settlements under Count Grafenreidt were first smitten, at midnight (Oct. 2, 1711), and one hundred and thirty men, women, and children were slaughtered, and for scores of miles the country was lighted up with the flames of burning dwellings. For three days they scourged the settlers near the sounds with the hatchet and the torch, and left a terrible pathway of blood and cinders. Those who escaped the massacre called upon their brethren of the southern colony for aid, when Colonel Barwell, with a party of South Carolinians and friendly Indians, marched to their relief. He drove the Tuscaroras to their fortified town in (the present) Craven County, and there made a treaty of peace with them. The white people soon violated it, and war began again. Again the South Carolinians were called upon for help. Back to the rescue of their brethren went the Carolinians, with a large body of Indians, all led by Colonel Moore. The barbarians were soon defeated, and at their fort in Greene County he made (March, 1713) eight hundred of the Tuscaroras captives, when the remainder fled, and joined their kindred in the North. (See *Tuscaroras*.) A treaty of peace was made with the Corees in 1755, and North Carolina never suffered from Indian hostilities afterwards.

**Indian War in Oregon.** Settlers in Oregon and in Washington Territory, in 1855, suffered much from parties of barbarians, who went in bands to murder and plunder the white people. The savages were so well organized at one time that it was thought the white settlers would be compelled to abandon the country. Major-general Wool, stationed at San Francisco, went to Portland, Or., and there organized a campaign against the Indians. The latter had formed a powerful combination, but Wool brought hostilities to a close during the summer of 1856. The bad conduct of Indian agents, and possibly encouragement given the Indians by employes of the Hudson's Bay Company, were the chief causes of the trouble.

**Indian War in South Carolina (1703).** Before the settlement of Georgia was begun, below the Savannah River, the South Carolinians were often annoyed by Indian depredations, incited by the Spaniards in Florida. In 1703, the Appalachian Indians (a tribe of the Mobilian family), in league with the Spaniards, were attacked by Governor Moore and a body of white men and Indians. Their chief village was desolated; nearly eight hundred of the Appalachians were made prisoners, and their whole territory was made tributary to the white people. A few years later a secret general Indian confederacy was formed to exterminate the white people by a single blow. Within forty days, in the spring of 1715, the Indian tribes from the Cape Fear to the St. Mary and back to the mountains had coalesced in the conspiracy, and before the people of Charleston had any intimation of danger, one hundred white victims had been slain in the remote settlements. The Creeks, Yamasees, and Appalachians in the South had confederated with the Cherokees, Catawbas, and Congarees in the West, in all about six thousand strong, while more than one thousand warriors issued from the Nense region to avenge their misfortunes in the war of 1712-13. (See *Indian War in North Carolina*.) The people were filled with terror. Governor Craven acted with the utmost wisdom and energy. He declared the province to be under martial law, and at the head of twelve hundred men, black and white, he marched to meet the foe. The Indians were at first victorious, but after several bloody encounters the Southern warriors were driven across the Savannah River (May, 1715), and halted not until they found refuge under the Spanish guns at St. Augustine. The Cherokees and their northern neighbors had not yet engaged in the war, and they wearily returned to their hunting-grounds, deeply impressed with a sense of the greatness and strength of the white people.

**Indian War in Virginia (1675).** For trifling offences the white people in Virginia colony were in the habit of punishing the Indians cruelly. Retaliations followed, and in 1675 Maryland and Virginia joined in fitting out an expedition to confront various tribes who had joined for the purpose of avenging the death of many warriors, some of them through rank treachery. The expedition, composed of one thousand men, was led by Colonel John Washington (great-grandfather of the patriot), whose men murdered a number of Indian chiefs who came out for a parley. For this Washington was blamed, and was publicly reprimanded in the Virginia Assembly by Governor Berkeley, who said, "If they [the Indians] had killed my grandfather and my grandmother, my father, my mother, and all my friends, yet, if they had come to treat in peace, they should have gone in peace." Dreadful desolations by the Indians followed. In the following winter they penetrated Virginia almost to Jamestown, animated more by revenge than eagerness for plunder. Before spring sixty of the colonists had fallen victims. In this season of distress Berkeley seemed very inefficient, and this fact called forth the ener-

gies of Bacon to save the colony from further injuries by the barbarians. (See *Bacon's Rebellion*.)

**Indian War with the Dutch in New Netherland.** The oppressions of Kieft (which see) aroused the surrounding Indians to war. Eleven petty tribes—some on the main, some on Long Island—united to make war in the spring of 1643. They desolated the scattered farms which extended thirty miles from Manhattan. Massacre, plunder, and burning prevailed everywhere, and in all directions the terrified Europeans were seen flying to New Amsterdam for their lives. Satiated with revenge, the Indians made peace. An Indian war broke out again in September the same year. First a tribe above the Highlands attacked and plundered a Dutch canoe coming from Fort Orange (Albany). Some other tribes joined them in plundering farms on Long Island and a settlement in New Jersey, back of Newark Bay. It was in this war that Mrs. Hutchinson and her family perished. (See *Hutchinson, Anne*.) This war continued, at intervals, for more than a year. During the latter years of Stuyvesant's administration, war with the Indians raged in (present) Ulster County, at Esopus (now Kingston), and vicinity. Stuyvesant's better policy finally pacified them, and peace prevailed while the Dutch ruled.

Indiana was first explored by French missionaries and traders, and Vincennes was a missionary station so early as 1700. Indiana constituted a part of New France (which see), and afterwards of the Northwest Territory. In 1702

STATE SEAL OF INDIANA.

some French Canadians discovered the Wabash, and established several trading-posts on its banks—among others, Vincennes. Little is known of the early settlers until the country was ceded to the English, in 1763. The treaty of 1783 included Indiana in the United States. A distressing Indian war broke out in 1788, but by victories over the barbarians, by General Wilkinson (1791) and General Wayne (1794), a dangerous confederacy of the tribes was broken up. Another was afterwards attempted by Tecumtha, but was defeated by the result of the battle of Tippecanoe (which see). On July 4, 1800, the territorial government of Indiana was organized, with William Henry Harrison as governor. It then included Michigan and Illinois. The former was set off in 1805, and the latter in 1809, when Indiana was reduced to its present dimensions. At that time the population was about 24,000 souls. When war with Great Britain broke out, in 1812, a fresh impulse was given to Indian depredations, which had never fairly ceased, but the barbarians were beaten, and were quiet after the close of that contest. On June 29, 1816, a con-

vention adopted a state constitution for Indiana, and on Dec. 11 it was admitted into the Union as a state. Rapid and continued emigration ensued. This was greatly increased by the opening of the Erie Canal (which see). During the Civil War Indiana furnished to the National army 195,147 soldiers. Population in 1880, 1,978,301.

**Indiana, ATTEMPT TO INTRODUCE SLAVERY IN.** In 1803 a movement was made in Congress for suspending for a limited term, in the case of Indiana Territory, the provision of the Ordinance of 1787 (which see) prohibiting slavery northward of the Ohio River. A committee, of which John Randolph, of Virginia, was chairman, reported strongly against the proposition, believing that "in the salutary operation of this salutary and sagacious restraint the inhabitants of Indiana would, at no distant day, find ample remuneration for a temporary privation of labor and immigration." At the next session (1804) the subject was brought up and referred to a new committee, of which Rodney, the new Democratic representative from Delaware, was chairman. This committee reported in favor of such suspension, so as to admit, for ten years, the introduction of slaves born within the territory of the United States, their descendants to be free, masculine at the age of twenty-five years, and feminine at twenty-one years. No action was had, but the subject was afterwards before Congress several times on the urgent application of inhabitants of Indiana for the privilege of introducing slavery into the territory.

**Indiana, POSITION OF (1861).** This flourishing state, carved out of the Northwest Territory (which see), and containing over 1,350,000 inhabitants, was intensely loyal to the Union. There was no special occasion for the revelation of this loyalty until the attack on Fort Sumter (which see), when it was aroused to intense action. Its governor (Oliver P. Morton) was able, energetic, and steadfast in support of the national authority during the war, and the sons of Indiana were seen on almost every battlefield of that contest. One of the earlier battles of that war was fought by an Indiana regiment (see *Romney*), and its colonel (Wallace) took a high rank in the Union army as an energetic leader.

**Indiana Territory.** In the year 1800 the "Connecticut Reserve," in the northeastern portion of Ohio, having been sold to a company of speculators, measures were taken to extinguish certain claims on the part of the United States and the State of Connecticut. The speculators found their bargain to be peculiarly unprofitable, and likely to prove a serious embarrassment. Full one thousand settlers were already on the "Reserve." Hitherto a confirmation of the Connecticut title to these lands by the United States had been inferentially acknowledged, and Connecticut had given no quitclaim deeds, therefore it was to the interest of the speculators to obtain from the United States a direct confirmation. On the other hand, it was an object for the United States to extinguish Connecticut's claim of jurisdiction. Congress passed an

act (April 28, 1800) authorizing the issue of letters-patent conveying the title of these lands to the governor of Connecticut, for the benefit of those claiming under her, and similar letters-patent were issued by Connecticut, relinquishing all claim to jurisdiction. So the "Reserve" was annexed to the Northwest Territory, which was presently divided, by act of Congress (May 7), into two separate jurisdictions, the western one being called the Territory of Indiana, after one of the old ante-Revolutionary land companies. St. Vincent, or Vincennes, was made the capital, and William Henry Harrison was appointed governor of the territory.

**Indians.** Believing the earth to be a globe, Columbus expected to find India or Eastern Asia by sailing westward from Spain. The first land discovered by him—one of the Bahama Islands—he supposed to be a part of India, and he

A NORTH AMERICAN INDIAN.

called the inhabitants *Indians*. This name was afterwards applied to all the nations of the adjacent islands and the continent. *Origin.*—There is no positive knowledge concerning the origin of the aborigines of America; their own traditions widely vary, and conjecture is unsatisfying. Recent investigations favor a theory that, if they be not indigenous, they came from two great Asiatic families; the more northern tribes of our continent from the lighter Mongolians, who crossed at Behring's Strait, and the more southerly ones, in California, Central and South America, from the darker Malays, who first peopled Polynesia, in the southern Pacific Ocean, and finally made their way to our continent, gradually spreading over it from the Pacific to the Atlantic. Language fails to connect any of them with the Asiatic families, but their traditions, implements, and modes of life point to such a relationship. It has been suggested that the

Mandans and Chinooks, who are almost white, are descendants of a Welsh colony said to have been lost in the wilds of North America seven hundred years ago. *Unity.*—There seems to be a physical identity of race throughout most of the continent. Their skin is generally of a dark reddish-brown, or cinnamon, color; they have long, black, and straight hair, prominent cheek-bones, and broad faces; eyes deep-set, full and rounded lips, broad and prominent noses, scanty beard; their heads are generally square, and their stature about the same as that of other races of the same latitude. Their muscular development is not great, and their hands and feet are small; their skin is thinner, softer, and smoother than that of Europeans; the expression of the men is often noble, and many of the women are handsome. Haughty in deportment, taciturn, stoical, cunning, persevering, revengeful, brave and ferocious in war; cruel towards enemies and faithful towards friends; grateful for favors, hospitable and kind, the Indians of North America are undoubtedly capable of great and rapid development under the genial influence of civilization. Their mental temperament is poetic and imaginative in a high degree, and it is often expressed in great beauty and eloquence of language; but in their present social condition, their animal propensities greatly preponderate over the intellectual. The tribes south of California have always been noted for mental development much superior to those of more northern latitudes. *Pursuits.*—War, hunting, and fishing are the chief pursuits of the men of the more barbarous tribes; agriculture of the semi-civilized. Among the savages found in North America by Europeans, the women performed almost all the manual labor and burden-bearing. They carried on their limited agriculture, which consisted in the production of maize or Indian corn, beans, squashes, potatoes, and tobacco. They manufactured the implements of war, and for hunting and fishing; made mats, and skin and feather clothing, canoes, ornaments of the teeth and claws of beasts, and of shells and porcupine-quills; performed all domestic drudgery, and constructed the lodges of the bark of trees or the hides of beasts. Rude figures of animate and inanimate objects carved in wood or stone, or moulded in clay, and picture-writing on the inner bark of trees or the skins of beasts, or cut upon rocks, with rude ornamented pottery, was the extent of their accomplishments in the arts of design and of literature. The picture-writing was sometimes used in musical notation, and contained the burden of their songs. *Religion.*—They believed in a good and Supreme Being, and in an Evil Spirit, and recognized the existence of inferior good and evil spirits. They believed in a future state of existence, and there were no infidels among them. Superstition swayed them powerfully, and charlatans, called "medicine-men," were their physicians, priests, and prophets, who, on all occasions, used incantations. Christian missionaries have labored among them in many places, from the time the Spaniards and Frenchmen settled in America until now, and have done much

to enlighten them. *Government.*—There was not a semblance of a national government among the aborigines when the Europeans came, except that of the "Iroquois Confederacy" (which see). Their language was varied by more than a hundred dialects, and they were divided into many distinct families or tribes, under a kind of patriarchal rule. Each family had its armorial sign, called a *totem*, such as an eagle, a bear, or a deer, by which it was designated. The civil head of a tribe was called a sachem, and the military leader a chief. These official honors were gained sometimes by inheritance, but more frequently by personal merit. Such was the simple government, seldom disobeyed, that controlled about a million of dusky inhabitants of the present domain of the United States, which extends over nearly twenty-five degrees of latitude and about sixty degrees of longitude. *Geographical Distribution.*—There seem to have been only eight radically distinct nations known to the earlier settlers—namely, the Algonquin, Huron-Iroquois, Cherokee, Catawba, Uchee, Natchez, Mobilian or Floridian, and Dakota or Sioux. More recently, other distinct nations have been discovered—namely, the Athabascas, Sahaptins, Chinooks, Shoshones, and Attakapas. Others will doubtless be found. The Algonquians were a large family occupying all Canada, New England, a part of New York and Pennsylvania; all New Jersey, Delaware, Maryland, and Virginia; eastern North Carolina above Cape Fear, a large part of Kentucky and Tennessee, and all north and west of those states east of the Mississippi. (See *Algonquians*.) Within the folds of this nation were the Huron-Iroquois, occupying a greater portion of Canada south of the Ottawa River, and the region between Lake Ontario and lakes Erie and Huron, nearly all of the State of New York, and a part of Pennsylvania and Ohio along the southern shores of Lake Erie. Detached from the main body were the Tuscaroras and a few smaller families dwelling in southern Virginia and the upper part of North Carolina. Five families of the Huron-Iroquois, dwelling within the limits of the State of New York, formed the famous "Iroquois Confederacy" (which see) of Five Nations. The Cherokees inhabited the fertile and picturesque region where the mountain-ranges that form the water-shed between the Atlantic and the Mississippi melt into the lowlands that border the Gulf of Mexico. (See *Cherokees*.) The Catawbans were their neighbors on the east, and dwelt upon the borders of the Yadkin and Catawba rivers, on both sides of the boundary-line between North and South Carolina. (See *Catawbans*.) The Uchees were a small family in the pleasant land along the Oconee and the head-waters of the Ogeechee and Chattahoochee, in Georgia, and touched the Cherokees. They were only a remnant of a once powerful tribe, when the Europeans came, and they claimed to be more ancient than the surrounding people. (See *Uchees*.) The Natchez occupied a territory on the eastern side of the Mississippi, extending northeastward from the site of the city of Natchez along the Pearl River to the head-waters of the Chickasaw. They claimed to be older than

the Uchees, and, like others of the Gulf region, they worshipped the sun and fire, and made sacrifices to the source of terrestrial light. (See *Natchez*.) The Mobilians or Floridians occupied a domain next in extent to that of the Algonquians. It stretched along the Atlantic coasts from the mouth of the Cape Fear River to the extremity of the Florida peninsula, and westward along the Gulf of Mexico about six hundred miles to the Mississippi River. They also held jurisdiction up that stream as far as the mouth of the Ohio. The domain included parts of South Carolina, the whole of Florida, Alabama, and Mississippi, all of Georgia not occupied by the Cherokees and Uchees, and portions of Tennessee and Kentucky. The nation was divided into three confederacies, each powerful and independent, like our separate states. They were known respectively as the Muscogee or Creek (the most powerful), the Choctan, and the Chickasaw. The heart of the Creek family was in Alabama. (See *Mobilians*.) Under the general title of Dakotas or Sioux have been grouped a large number of tribes west of the Great Lakes and Mississippi, with whom the earlier French explorers came in contact. These, speaking dialects of the same language, apparently, were regarded as parts of one nation. They inhabited the domain stretching northward from the Arkansas River to the western trijunction of Lake Winnipeg, and westward along all that line to the eastern slope of the Rocky Mountains. They have been arranged into four grand classes: 1. The Winnebagos, situated between Lake Michigan and the Mississippi, within the domain of the Algonquians; 2. The Assinibois, or Sioux proper, who formed the more northerly part of the nation; 3. The Minnetaree group, in Minnesota; and 4. The Southern Sioux, who were seated in the country between the Platte and Arkansas rivers. (See *Dakotas*.) The Sahaptins include the Nez Percés and Walla Wallas, extending from the Rocky Mountains to the Pacific Ocean, in Oregon and Washington Territory. (See *Sahaptins*.) Beyond these are the more powerful Chinooks, now rapidly melting away. They embraced numerous tribes, from the mouth of the Columbia River to the Grand Dalles. (See *Chinooks*.) The Shoshones comprise tribes inhabiting the territory around the head-waters of the Columbia and Missouri rivers; the Comanches, extending from the head-waters of the Brazos to those of the Arkansas; families in Utah and Texas, and several tribes in California. (See *Shoshones*.) The Attakapas and Chitemachas, in Texas, have languages that enter into no known group. *Present Condition* (1883).—It is estimated that the present Indian population in the Republic is about 300,000, of whom a little more than two thirds are partially or absolutely under the control of the national government. To the more docile tribes have been allotted reservations of land belonging to the public domain, guaranteed to their use by treaties. These reservations are almost one hundred in number, and their aggregate area is about 170,000 square miles. They are mostly west of the Mississippi River. There are about 40,000 Indians on res-

ervations of public land not guaranteed to them by treaty. These occupy about 60,000 square miles. The remainder are wild tribes of savages. *The Future*.—The expensive and complicated machinery for the management of our Indian affairs stands much in the way of the elevation of the dusky race in the scale of civilization, and is productive of much evil by creating irritation, jealousy, and universal lack of faith in the white race. These irritations keep a large portion of the Indians in a state of chronic hostility, and whole tribes utterly refuse all overtures of our government to accept its protection and fostering care. It is estimated that the number of the people of potentially hostile Indians is full 60,000. Among many tribes, the introduction of agriculture, schools, and churches has been attended with the happiest results; and it is estimated that one sixth of our restrained Indian population now subsist by the labor of their own hands. Recent official investigations show that the popular belief that the Indian race is dying out is undoubtedly erroneous. They seem to unite kindly with other races, and the half-breeds show a healthy and vigorous offspring.

**Indians employed in War by White People.** The French coalesced with the Indians in warfare from the beginning of the planting of colonies in America. Large numbers of the barbarians became converts to Christianity, and the Jesuit priests had almost unlimited control over them. They were the dreadful scourge in the hands of French leaders, temporal and spiritual, that smote the English frontiers. They were warm allies of the French in the Seven Years' War, and the English also employed many of their race against the foe. When the war for independence broke out, the British sought them for allies; the Americans only sought to secure their neutrality. Pitt denounced the employment of savages in a speech in Parliament in 1777, when that employment was defended by one of the Secretaries of State, saying, "It is perfectly justifiable to use all the means that God and Nature have put into our hands." Pitt replied, after reiterating the words with scorn, "I know not what idea that lord may entertain of God and Nature, but I know that such abominable principles are equally abhorrent to religion and humanity. . . . I call upon that right reverend bench [pointing to the bishops], the holy ministers of the Gospel, and pious pastors of the Church—I conjure them to join in the holy work [of disavowing these principles], and to vindicate the religion of our God." The appeal was in vain. The bishops voted with the ministry; and Lord George Germain, the Colonial Secretary, gave special instructions, received from the king, to employ Indians in fighting republicans. Brant, the great Mohawk chief, a brother-in-law of Sir William Johnson, who had been in England (1775-76), been there caressed by the king, the ministry, and the aristocracy, and espoused the royal cause, was employed to lead those of the Six Nations who would follow him. The best of the British leaders in America were opposed to a coalition with

the savages in war, but it was a pet project of Governor Tryon, the king, and his pliant ministers. La Corne St. Luc, a bitter partisan, had declared, "We must let loose the savages upon the frontier of these scoundrels to inspire terror, and to make them submit;" and in the spring of 1777, Tryon wrote to Germain that he and La Corne were "perfectly agreed in sentiment respecting the employment of Indians," and commended him to the ministry as a proper leader of them. La Corne had pledged to the ministry his "honor and his life" that he would raise a corps of Canadians and Indians and "be in the environs of Albany in sixty days after he landed at Quebec." The British employed the Indians in their armies all through the war for independence. So in the wars in the Northwest and Southwest that succeeded that of the Revolution, and in the War of 1812-15. (See *Frenchtown, Massacre at.*)

**Indians, Failure of Negotiations with (1793).** The British fur-traders and British officials in the Northwest continually stimulated the tribes in that region to oppose the extension of the frontier settlements in that direction. A commission appointed in 1793 to negotiate with the hostile northwestern tribes arrived at Fort Niagara May 17, accompanied by a deputation of Quakers and Heckewelder, the famous Moravian missionary. They were kindly received by the governor of Upper Canada (Simcoe). They went up Lake Erie, and at the entrance of the Detroit River they met a deputation of Indians who came from a council then in session at the rapids of the Manmee. This deputation came to inquire whether the commissioners were empowered to consent to the Ohio River as a boundary. They replied that it was impossible, as many settlements had already been made north of the Ohio, on lands ceded by the Indians. The commissioners offered large presents of money, in addition to remuneration already made, for the peaceable possession of the ceded territory. When the deputation reported to the council, a long debate ensued. The council, under the influence of British emissaries, refused to negotiate unless the Ohio should be considered the boundary of the United States. War followed. (See *Wayne's Indian Campaign.*)

**Indians sold for Slaves in South Carolina.** To obtain money to carry on a war against the Indians, Governor West and his council offered (1680) a price for every Indian captive, and then sold all who were brought in to West Indian slave-dealers, who again disposed of them profitably to West Indian planters. When this nefarious business was brought to the notice of the proprietors, it was promptly put a stop to.

**India-rubber (caoutchouc) Manufacture.** This inspissated juice of trees and plants found in the East Indies, Mexico, and Central and South America, was first brought into notice in commerce at about the middle of the last century. It came from India, and Dr. Priestley, in his work on Perspective Drawing, published in 1770, speaks of the substance as good for erasing pencil-marks. It was hence called "India-

rubber." In 1813, Jacob Hummel, of Philadelphia, obtained a patent for "gum elastic varnish," and in 1819 a water-proof cloth called "macintosh" was made by the use of this gum in Glasgow, Scotland, by a man named McIntosh. The natives of Para, Brazil, where the caoutchouc-tree abounds, made water-proof shoes in a rude manner of the gum more than sixty years ago, and some of them were introduced into our country by T. C. Wales, a Boston merchant, in 1823. He afterwards sent casts to Brazil, and had well-shaped shoes made; and so the business of furnishing "gum-shoes" was begun in the United States. That substance, in various forms, is now used very extensively in the United States for a variety of purposes, under the name of India-rubber, gutta-percha, etc. In 1874 there were 14,746,000 pounds of caoutchouc imported into the United States. Edwin Chaffee, of Roxbury, Mass., made an important discovery in the preparation of the gum for use, and he and others formed the "Roxbury India-rubber Company" in 1833, with a capital of \$400,000. The next most important improvement was made by Charles Goodyear (which see) in "vulcanizing" caoutchouc, for which he obtained a patent in 1844. In 1870 there were fifty-six establishments in the United States for the manufacture of caoutchouc. Gutta-percha is a substance similar to caoutchouc, but is really not identical with it. It was first brought to notice here about 1845, when a company was formed in Brooklyn, N. Y., for its manufacture. It is one of the most useful articles used in our industrial arts.

**Indigo Plant, THE**, was introduced into South Carolina in 1743. That year Miss Lucas brought to Charleston, from the West Indies, some indigo seed. The cultivation of this plant being considered important, the seed was used as an experiment. The trial proved so very satisfactory that seed was imported from the West Indies, and several Carolina planters turned their attention to the cultivation of indigo, and studied the art of extracting the dye. In 1748, the British Parliament, to encourage the growth of indigo in the English-American colonies, offered a bounty of sixpence a pound on all that should be raised on American plantations, and imported directly into Great Britain from the place of its growth. There had been sent to England, in 1747, from Carolina, 200,000 pounds of indigo. At that time Great Britain was consuming 600,000 pounds of French indigo a year, which, at five shillings a pound, cost the nation \$750,000. These statistics induced Parliament to grant the bounty.

**Inferior Courts.** The old scheme of county courts for the adjudication of smaller civil cases, and of Courts of Sessions, composed of the justices of the peace of each county, for the trial of petty crimes, was retained throughout the states, as was also the system of separate tribunals for probate of wills, administration of the estates of deceased persons, and guardianships of minors. In the forms of legal processes, "The State," "The Commonwealth," or "The People" was substituted for "The King;" and the forms

and practices of the courts were made to conform to English technicalities.

**Ingalls, RUFUS**, was born at Denmark, Me., Aug. 23, 1820. He graduated at West Point in 1843, entering the Rifles, but was transferred to the Dragoons in 1845. He served in the war with Mexico, and was on the staff of General Harney on the Pacific coast. (See *Harney, W. S.*) In April, 1861, he went with Colonel Brown to reinforce Fort Pickens; and in July was ordered to the Army of the Potomac, where he was upon the staff of General McClellan, with the rank of lieutenant-colonel. He was chief-quartermaster of that army from 1862 to 1865, and was made brigadier-general of volunteers in May, 1863. He was in most of the battles of the Army of the Potomac from that of South Mountain to the surrender of Lee at Appomattox.

**Ingersoll, CHARLES JARED**, author and statesman, was born in Philadelphia, Oct. 3, 1782; died there, Jan. 14, 1862. He became a lawyer, and was attached to the legation of Rufus King when he was minister to France. After travelling in Europe, he returned, and published a poem in 1800, and a tragedy in 1801. In 1810 he published a political satire, called *Inchiquin the Jesuit's Letters*. In 1813 he was in Congress, and from 1815 to 1829 he was United States District Attorney. He was again in Congress from 1841 to 1847, when he was a Democratic leader. President Polk nominated him minister to France, but the Senate did not confirm the nomination. He wrote a history of the second war between the United States and Great Britain.

**Inglis, CHARLES, D.D.**, was born in 1734; died in Nova Scotia early in 1816. From 1764 to the Revolution he was assistant rector of Trinity Church, New York, and was rector from 1777 to 1783. He adhered to the royal cause, and departed for Nova Scotia with the loyalists who fled from New York city in 1783. His letters evinced considerable harsh feeling towards the American patriots as "fomenters of rebellion." Dr. Inglis was consecrated bishop of Nova Scotia in 1788, and in 1809 became a member of the Governor's council. He published an answer to Paine's *Common Sense* (which see), which made him obnoxious to the patriots, and they confiscated his estate. His son John was made bishop of Nova Scotia in 1825; and his grandson, General Sir John Eardley Wilmot Inglis, was the brave defender of Lucknow, and died in Germany in 1862.

**Inman, HENRY**, a portrait-painter, was born at Utica, N. Y., Oct. 20, 1801; died in New York, Jan. 17, 1846. He was a pupil of John Wesley Jarvis, a portrait-painter, to whom he was apprenticed for seven years. He painted landscapes and historical pictures, but portraits were his chief subjects. In 1844 he went to England, where, becoming the guest of Wordsworth, the poet, he painted his portrait. He also painted the portraits of other distinguished men while in England. He had begun painting an historical picture for the national Capitol at the time of his death.

**Inoculation of the Continental Army.** Dur-

ing the encampment of the Continental army at Morristown, in the winter of 1776-77, Washington caused all the new recruits who joined the army there to be inoculated for the small-pox. That dreadful disease had terribly smitten the American army in Canada in the spring and early summer of 1776, and prostrated in death one of the best of the American officers, General Thomas. In the Hudson Highlands, opposite West Point, the whole army encamped there were inoculated, together with the women and children, excepting those who had had the disease. "Of five hundred who have been inoculated here," wrote Dr. Thacher, "four only have died." He mentioned a system of treatment adopted there. It was then customary to prepare the system for inoculation by doses of calomel and jalap. An extract of butterroot, made by boiling the inner bark of the tree, was substituted, and found to be more efficacious and less dangerous than the mineral drug. Dr. Thacher considered it "a valuable acquisition to the *materia medica*." Vaccination for the kin-pox had not then been introduced into our country. (See *Small-pox*.)

**Insane, THE.** Places of refuge for the comfort of the insane are well supported by state aid in our country. In all our institutions for the insane a most humane system is employed. The first asylum for this unfortunate class established in this country was founded at Williamsburg, Va., in 1773, and was the only one in the United States until 1818, when the Somerville (Mass.) Institution was incorporated. That was followed in 1821 by the Bloomingdale Asylum, New York; and in 1824 by an asylum at Hartford. In 1876 there were sixty-six institutions for the care of the insane in our country, in which about sixteen thousand persons were under treatment. The total number of insane persons in the United States in 1870 was about thirty-eight thousand. This number is a much less percentage than in any other country.

**Insurrection in New Hampshire (1786).** On Sept. 20, 1786, about two hundred men, armed in different modes, surrounded the General Assembly at Exeter and held the whole body prisoners several hours; but the citizens, appearing in arms, crushed the insurrection there in its infancy. The object of the insurrection was to force the Assembly to adopt a paper-money system for which a convention of delegates from about thirty towns in the state had petitioned. The insurgents were insolent in their demands. Just at twilight a drum was heard at a distance, and the cry of "Huzza for government! Bring up the artillery!" when the mob, terrified, scattered in all directions. They rallied the next day, but the governor having called out the state forces, the mob was dispersed without bloodshed.

**Inter-colonial and Foreign Emigration.** When the French dominion in America was ended, and the causes for war dismissed thereby, and the Indian tribes on the frontiers were quieted, emigration began to spread westward in New England, and also from the middle colonies over the mountains westward. Many

went from the other colonies into South Carolina, where immigration was encouraged, because the white people were alarmed by the preponderance of the slave population. Bounties were offered to immigrants, and many Irish and Germans settled in the upper districts of that province. Enriched by the labor of numerous slaves, South Carolina was regarded as the wealthiest of the colonies. Settlers also passed into the new province of East Florida. A body of emigrants from the Roanoke settled in West Florida, about Baton Rouge; and some Canadians went into Louisiana, for they were unwilling to live under English rule. A colony of Greeks from the shores of the Mediterranean settled at what is still known as the inlet of New Smyrna, in Florida. And while these movements were going on there were evidences of a rapid advance in wealth and civilization in the older communities. At that time the population and production of Maryland, Virginia, and South Carolina had unprecedented increase, and it was called their golden age. Commerce rapidly became more diffused. Boston, which almost engrossed trade in navigation, now began to find rivals in New York, Baltimore, Norfolk, Charleston, and little seaports on the New England coasts; and its progress, which had been arrested by these causes twenty-five years before, stood still twenty-five years longer.

**Interior Department, THE,** was established in the spring of 1849. It was the first establishment of a new branch of the government since 1798, when the Navy Department was created. Its chief is called Secretary of the Interior, and is a cabinet officer. The first incumbent of the office was Thomas Ewing, of Ohio, appointed by President Taylor. The device of the seal of the Interior Department is an eagle, just ready to soar, resting on a sheaf of grain, with arrows and an olive-branch in its talons, and over it the words "DEPARTMENT OF THE INTERIOR." (See *Executive Departments*.)

**Internal Improvements.** In 1806 the system of internal improvements by grants from the national Treasury was first begun. The sum of \$30,000 was appropriated towards laying out a public road over the Alleghany Mountains from Cumberland, Md., to the Ohio River. The President was also authorized to expend \$6600 in opening a road from Athens, Ga., towards New Orleans; also the sum of \$6000 upon each of two other roads—one the old road from Nashville to Natchez, the other through the territory just ceded by the Indians, from Cincinnati to the Mississippi opposite St. Louis. (See *Eric Canal*.)

**Internal Improvements Proposed.** Jefferson, previous to the commercial troubles during his administration, had suggested the appropriation of the surplus revenue, then rapidly accumulating, to internal improvements. A like healthful state of the national finances was promised at the beginning of Monroe's administration. The experience of the war period in the immense cost of transportation, for lack of facilities, now suggested the expediency of mak-

ing good highways or other means for the transit of merchandise. Madison had called attention to the subject, and recommended the construction of "such roads and canals as could best be executed under the national authority" as objects of a "wise and enlarged patriotism." These recommendations were reiterated by Monroe in his first annual message (Dec. 2, 1817); and he suggested that if any obstacle should be found in the want of express constitutional authority, that might be easily remedied. A bill was introduced into Congress appropriating \$600,000 for the general purpose of internal improvements; but this bill, and another continuing the Cumberland Road, or national turnpike

ious charges made against the United States government to that of the French by Adet, were that the Americans had made a treaty with Algiers without waiting for French intervention; that the government had hidden away the French flag which had been sent to it (see *Flags, Exchange of*), instead of suspending it in the hall of the House of Representatives; and that the American government allowed to be published certain almanacs, or registers, in which the minister from Great Britain was placed before those of France and Spain, which latter country had recently become the ally of France.

**International Exhibitions.** The following table gives statistics of the seven great interna-

GOVERNMENT TOLL-GATE ON THE CUMBERLAND ROAD.

that led over the Alleghanies from east to west, failed to pass, the objections being taken, among others, that as yet there was no surplus in the Treasury. The sum of \$350,000 was appropriated for completing the part of the Cumberland Road already begun. While Congress thus hesitated the State Legislatures had already begun to act. Virginia had just established an "Internal Improvement Fund," the project of the Erie Canal had been revived in New York, and similar improvements began to be considered in Pennsylvania and North Carolina.

**International Etiquette.** Among other se-

tional exhibitions which have taken place within twenty-five years ending in 1876:

	Date of Exhibition.	Number of Exhibitors.	Number of Visitors.	Number of Days open.
London.....	1851	13,917	6,039,135	141
New York....	1854	.....	4,250,160	...
Paris.....	1855	23,754	5,162,330	200
London.....	1862	28,653	6,211,103	177
Paris.....	1867	50,226	10,200,000	210
Vienna.....	1873	42,584	7,254,687	186
Philadelphia..	1876	.....	9,857,626	159

**International Law, FIRST ACCEPTANCE OF, BY CHINA.** In 1868 Anson Burlingame, United States Minister to China, arrived home, charged by the Chinese government with a roving commission to make treaties with the United States and the European powers. On July 28, 1868, supplementary articles to a treaty made in 1858 were signed at Washington, and soon afterwards were ratified by the Chinese government. This was the first acceptance by that government of the principles of international law. The treaty provided for entire liberty of conscience and worship for Americans in China, and for the Chinese in America; for joint efforts to suppress the coolie trade; for the mutual enjoyment of the rights of travel in the two countries; for education; for the establishment of schools; and for other mutual privileges which were allowed to the most favored nations. Mr. Burlingame was engaged in his noble mission in Europe when he suddenly died. (See *Burlingame, Anson.*)

**Inter-oceanic Canal.** In 1825 the Federal Republic of Central America made a contract with a company formed at New York for the purpose of effecting a navigable water communication between the Atlantic and Pacific oceans. The proposed route was through Nicaragua, one of the states, by the River St. John, into Nicaragua Lake, whence, from its western extremity, a canal was to be cut for about seventeen miles to the Pacific. (See *Darien Ship Canal.*)

**Intrepid, DESTRUCTION OF THE.** The ketch *Intrepid*, used in the destruction of the *Philadelphia* (which see), had been converted into a floating mine for the purpose of destroying the piratical cruisers in the harbor of Tripoli. In a room below deck one hundred barrels of gunpowder were placed, and immediately above them a large quantity of shot, shell, and irregular pieces of iron were deposited. Combustibles were placed in other parts of the vessel. On the night of Sept. 3, 1804, the *Intrepid* was towed into the harbor by two boats, the whole under the command of Captain Somers, attended by Lieutenant Wadsworth, of the *Constitution*, and Mr. Israel, an ardent young man who got on board the *Intrepid* by stealth. These, with a few men to work the torpedo-vessel, and the crews of the boats, constituted the company engaged in the perilous enterprise. The *Intrepid* entered the harbor at nine o'clock in the evening. The night was very dark. Many eager eyes were turned towards the spot where her shadowy form was last seen. Suddenly a fierce and lurid light streamed up from the dark waters like volcanic fires and illuminated the surrounding objects with its lurid glare—rocks, flotilla, castle, town, and the broad bosom of the harbor. This was followed by an instant explosion, and for a few moments flaming masts and sails and fiery bomb-shells rained upon the waters, when suddenly all was again dark. Anxiously the companions of the intrepid men who went into the harbor awaited their return. They never came back. What was the cause of the premature explosion that destroy-

ed vessels and men will never be known. The belief was that the ketch was captured by the Tripolitans on the watch, and that Somers, preferring death to miserable captivity, had himself applied a lighted match to the powder. A fine monument of white marble, erected to the memory of the slain men and the event—first placed at the navy-yard at Washington city—now stands at the western front of the national Capitol.

**Invasion of Canada, PREPARATIONS FOR, AT BUFFALO (1812).** After the battle at Queens-town (which see) General Van Rensselaer, disgusted by the conduct of his militia there, resigned his command, and was succeeded by General Alexander Smyth, of Virginia, who made his headquarters at Buffalo. He had insisted that the proper place for invading Canada was between Fort Erie and Chippewa; and for that service he gathered, in the vicinity of Black Rock, about four thousand troops, late in the fall of 1812. He made such grandiloquent proclamations of his intentions that the British were prepared to meet the invaders. He issued orders (Nov. 25) for the whole army to be ready to march at a moment's warning, and gave directions for forming the troops in battle order on the Canada shore. Boats and scows sufficient to carry three thousand men, with artillery, at one time, were made ready for service by Colonel Winder on the evening of the 27th, when Smyth issued his final order for Colonel Boerstler to cross over with a competent force, at three o'clock in the morning, to destroy a bridge five miles below Fort Erie, capture the guard there, kill or take the artillery horses, and, with the captives, if any, return to the American shore. Captain King, of the artillery, was ordered to cross higher up the river and storm British batteries there. Smyth's proclamations had warned the British of the impending invasion, and they were prepared for it at every point between Fort Erie and Chippewa. Owing to blunders, the early morning expeditions across the river in the darkness were failures, with only partial success. Two British batteries were captured, and some British field-pieces were destroyed, but many of the Americans were made prisoners. The bridge had been only partially destroyed. It was sunrise (Nov. 28) when the troops at Black Rock were embarked, and in that position the impatient soldiers, shivering in the cold air, waited from morning until evening, and nothing was seen of Smyth during the day. Meanwhile the British were collected in force on the opposite shore, under Lieutenant-colonel Cecil Bishopp. When all was in readiness an order came from the general to "disembark and dine!" The wearied and worried troops were greatly exasperated. A council of war was called. They could not agree. During the next three days Smyth issued pompous orders about crossing. On Nov. 30 he said in an order, "While embarking, the music will play martial airs. *Yankee Doodle* will be the signal to get under way. . . . The landing will be effected in despite of canons. The whole army has seen that canons

are to be little dreaded. . . . Hearts of War! to-morrow will be memorable in the annals of the United States." To-morrow came, but not the promised achievement. The troops had embarked, and were crossing the stream, when General Peter B. Porter, at the head of the flotilla, a quarter of a mile from the shore, received orders for the whole army to disembark and repair to their quarters. This order was accompanied by a declaration that the invasion of Canada was indefinitely abandoned. The regulars were ordered into winter-quarters, and the militia and volunteers were ordered to their homes. The volunteers begged to be sent into Canada under General Porter, promising the speedy capture of Fort Erie, but Smyth evaded their request. They felt themselves betrayed by a mere blusterer without courage, and a deceiver without honor. It was evident to all that he was afraid of Lieutenant-colonel Bishopp. Their anger and disgust were increased by Smyth's ungenerous charges against General Porter, whom the volunteers and militia all loved. The latter attributed the abandonment of the invasion of Canada to Smyth's cowardice. Confidence in Smyth's military ability was destroyed, and three months afterwards he was deposed without trial and expelled from the army.

#### Invasion of Cuba from the United States.

There had been more or less discontent in Cuba since the beginning of the present century, and after the French republic was proclaimed in 1848 projects for its annexation to the United States were prevalent. Fears were entertained that it might fall into the hands of the English or French, and the people of the United States, especially in the slave-labor states, were much concerned in the matter. The latter desired its annexation to the United States because such a measure would extend the area of slavery. In 1848 President Polk authorized the American minister at Madrid to offer the Spanish government \$100,000,000 for the island. The proposition was peremptorily rejected. In 1849 Narcisso Lopez, a native of Venezuela, S. A., who had lived long in Cuba, where he had been in the Spanish military service, came to the United States with a number of Cubans, having been implicated in a revolutionary movement. He declared that the Creole population were ready for revolt and annexation to the United States. Recruits were collected in the United States for a descent upon the island in 1849, but the measure was defeated by the authorities here. A second attempt was made in 1850, and a landing was effected at Cardenas, Cuba. It resulted in failure, and the party was driven to sea. In August, 1851, Lopez sailed from New Orleans in a steamer with five hundred men, and landed at Morillo, in the Vuelta Abojo. It had been asserted that on the appearance of this expedition on the coast there would be a general uprising of the Creole population; but it did not take place. The invaders were met by Spanish troops, and many of the former were killed in engagements. Fifty of those captured, with Colonel Crittenden, of Kentucky, were shot in

Havana. The survivors were soon afterwards paroled, with their leaders, and Lopez was garroted in Havana on Sept. 1. Some of his companions were shot; others were transported, and subsequently pardoned. There was considerable irritation of feeling on the part of the Cuban authorities for some time afterwards. The American steamship *Black Warrior* was fired upon by a Spanish vessel of war, and she was seized in the harbor of Havana (Feb. 28, 1854), and the ship and cargo were declared confiscated. This event seriously threatened war between the United States and Spain, but the matter was finally amicably settled between the two governments.

**Invasion of Eastern Maine (1814).** Commodore Hardy sailed secretly from Halifax early in July, 1814, with a considerable land and naval force, and captured Eastport without much opposition. (See *Eastport, Capture of.*) This easy conquest encouraged the British to attempt the seizure of the whole region between Passamaquoddy Bay and the Penobscot River. A strong squadron, under Admiral Griffith, bearing about four thousand troops, led by Governor Sir John Cope Sherbrooke, of Nova Scotia, capt-

SIR JOHN COPE SHEEBROOKE.

ured Castine, on Penobscot Bay, and also Belfast, and went up the Penobscot River to Hampden, a few miles below Bangor, to capture or destroy the American corvette *John Adams*, which, caught in that stream, had gone up so far to escape from the British. The militia, called to defend Hampden and the *Adams*, fled when the British approached, and the object of the latter was accomplished. Captain Morris, commander of the *Adams*, buroed her to prevent her falling into the hands of the British. The latter pressed on to Bangor, where they tarried about thirty hours, destroyed several vessels at the mouth of

the Kenduskeag, and plundered property valued at over \$20,000. Then they returned to Hampden and there repeated their destructive work. Then the troops and fleet descended the Penobscot, and, after capturing Machias, returned to Halifax. General Gosselin was left to hold the country, which he did with dignity and humanity.

VIEW AT THE MOUTH OF THE KENDUSKEAG.

**Invasion of Kentucky (1861).** On Sept. 4, 1861, the Confederates, under General (Bishop) Polk, entered Kentucky and seized and fortified Columbus, in western Kentucky. On the next day a Confederate force under Felix K. Zollicoffer (formerly a member of Congress) entered Kentucky from East Tennessee. At the same time Simon B. Buckner, who had been placed in command of the professed "neutral" Kentucky State Guard (which see), and had formed a Confederate camp in Tennessee, just below the Kentucky line, entered the latter state, and, acting in concert with Polk and Zollicoffer, attempted to seize Louisville. He was foiled by the vigilance of General Robert Anderson (late of Fort Sumter), who was in command there, with General W. T. Sherman as his lieutenant. Buckner fell back to Bowling Green, on the Nashville and Louisville Railroad, and there established a camp as a nucleus of a powerful Confederate force that was gathered soon afterwards. These movements ended the neutrality of Kentucky. Her loyal sons flew to arms, and from that time she ranked among the loyal states of the Union.

**Invasion of Maryland (1814).** While stirring events were occurring on the New England coast and the Northern frontier, others of equal importance occurred in the vicinity of Chesapeake Bay and the national capital. There were premonitions of impending danger in that region early in 1814. News reached the government that four thousand British troops, destined for the United States, had landed at Bermuda. This news was followed by the arrival, in Lynn Haven Bay, of Admiral Cockburn, the marauder, with a strong naval force, to begin the work indicated in Admiral Cochrane's order to "destroy the seaport towns and ravage the country." In April news came of the downfall of Napoleon and of his abdication, which would release British veterans from service in Europe. Notwithstanding the national capital was then almost defenceless, the passage of British ships up the Potomac might be disputed only by the

guns of Fort Washington, a few miles below the city, and there was little force to obstruct the passage of land-troops across Maryland from the Chesapeake, the apathy of the government was very conspicuous. On the 1st of July official intelligence reached the President that "a fleet of transports, with a large force, bound

to some port in the United States, probably on the Potomac," was about to sail from Bermuda. In the military district of which the District of Columbia formed a part there were only a little more than two thousand effective men, under General Winder, and these were scattered at points some distance from each other. There was a company of marines at the barracks at Washington, and a com-

pany of artillery at Fort Washington. With all this knowledge of weakness and impending danger, the Secretary of War, whose opinions governed the President and cabinet, could not be persuaded that the capital was likely to receive any harm. The government organ (*National Intelligencer*) boasted that any British force that might come could be easily driven away. The folly of this boast was soon made manifest by sad events. General Winder continually warned the government of danger; and when danger actually appeared he was placed, by official orders, at the head of fifteen thousand militia for the defence of the capital. This army was on paper only. The militia lay hidden in official orders; and when, at the middle of August, a powerful British land and naval force appeared in Chesapeake Bay, Winder had only a handful of men with which to defend the capital. The call for the militia was tardily answered, for they feared the loss of their slaves if the masters should leave the plantations. There was widespread alarm over Maryland and Virginia. At that juncture Commodore Barney, with an armed schooner and fifteen barges, was in the Patuxent River, near its mouth. He fled up the stream to avoid attack by British vessels. The latter landed a strong force, under General Ross, and pushed on towards Washington. Winder issued stirring appeals for the military to turn out, and asked General Smith, of Baltimore, to turn out his brigade. The British pursued Barney and caused the destruction of his flotilla. Pressing on towards the capital, they were met by troops under Winder at Bladensburg, when a severe engagement ensued, which resulted in victory for the invaders. Then they marched on Washington, set fire to its public buildings, and gave the town up to plunder. Only the Patent Office building was saved. The vessels and other public property at the navy-yard were destroyed by the Americans to prevent them falling into the hands of the British. The total value of the property annihilated by the Amer-

icans and British at that time was estimated at about \$2,000,000. "Willingly," said the London *Statesman*, "would we throw a veil of oblivion over our transactions at Washington. The Cosacks spared Paris, but we spared not the capital of America." While Ross was crossing Maryland to the national capital a British fleet, under Commodore Gordon, went up the Potomac and plundered Alexandria, on the Virginia shore. The British retreated to their ships after desolating the capital, and, flushed with success, they attempted to capture Baltimore. Ross landed with nine thousand troops at North Point, twelve miles from Baltimore, on Sept. 12, and proceeded to march on the town, when he was confronted by an American force under General Stricker and driven back. Ross was killed, and his troops fled to their ships. At the same time the British fleet sailed up Patapsco Bay and bombarded Fort Mchenry, that guarded Baltimore harbor. They were repulsed, and ships and troops, discomfited, left the Chesapeake to operate on the more southern regions of the American coast.

**Invasion of Maryland and Pennsylvania (1863).** After the battle at Chancellorsville (which see) Lee's army was strong in material and moral force. Recent successes had greatly inspired it. It was reorganized into three army corps, commanded respectively by Generals Longstreet, A. P. Hill, and Ewell. At no time, probably, during the war was the Confederate army more complete in numbers, equipment, and discipline, or furnished with more ample materials for carrying on the conflict, than it was at the middle of June, 1863, when Lee invaded Maryland. According to Confederate official returns, there were at least five hundred thousand men on the army rolls, and more than three hundred thousand "present and fit for duty." Richmond seemed secure from harm. Vicksburg and Port Hudson, on the Mississippi, seemed impregnable against any National forces that might be employed against them. (See *Vicksburg and Port Hudson*.) Their European friends gave them great encouragement, for there were strong manifestations of desires for the acknowledgment of the independence of the "Confederate States of America." Feeling strong, the Confederate authorities ordered Lee to invade Maryland and Pennsylvania. His force was now almost equal to that of Hooker, and in better spirits than was the Army of the Potomac. So early as May 20, Hooker suspected such a movement would be undertaken, and so informed the Secretary of War. Earlier than this Clement C. Barclay, of Philadelphia, who had rare opportunities for information, had warned the authorities of Washington, Baltimore, and Harrisburg of impending danger, but they were slow to believe Lee would repeat the folly of the previous year. Lee's first movement in that direction was to get Hooker from the Rappahannock by feints and a real flanking movement. There was considerable preliminary cavalry skirmishing early in June, and finally a cavalry reconnoissance by Pleasonton revealed the fact of Lee's grand movement. Hooker supposed he would follow his route of the previous

year, and was watching and guarding the fords of the Rappahannock, when Lee projected his right wing, under Ewell, through the Blue Ridge into the Shenandoah Valley at Strasburg. He pushed down the valley to Winchester, where General Milroy was in command of nearly ten thousand men, on the evening of June 13, having marched seventy miles in three days. It was a bold movement. Milroy called in his outposts and prepared to fight, but before daylight he resolved to retreat. He spiked his caissons, drowned his powder, and was about to depart, when the Confederates fell upon him. Then began a race towards the Potomac, but the Nationals were stopped by a force some miles from Winchester, and many of them made prisoners. The garrison at Harper's Ferry fled across the river to Maryland Heights. Informed of Lee's movement, Hooker moved rapidly northward, intent upon covering Washington, while his cavalry watched the passes of the Blue Ridge. The National authorities, as well as those of Maryland and Pennsylvania, were thoroughly aroused by a sense of danger. The President called (June 15) upon the states nearest the capital for an aggregate of one hundred thousand militia; and the governor of Pennsylvania called out the entire militia of the state. Lee had about a week the start of Hooker in the race for the Potomac. On the 15th fifteen hundred Confederate cavalry dashed across the Potomac at Williamsport in pursuit of Milroy's wagon-train; swept up the Cumberland Valley to Chambersburg, in Pennsylvania; destroyed the railroad in that vicinity; plundered the region of horses, cattle, and other supplies; and, with fifty kidnapped negroes, going back to Hagerstown, waited for Lee. The information procured by the raiders satisfied Lee that he should not meet with much opposition, and he pressed forward. Ewell's corps crossed the Potomac at Williamsport, near Shepherdstown, on June 21 and 22, and swept on to Chambersburg, and thence to the Susquehanna, opposite Columbia, levying contributions on the people. The greatest alarm everywhere prevailed. It was believed that Harrisburg and Philadelphia would soon be entered by the Confederates, and millions of valuable things were sent north from the latter city for safety. Even New York seemed menaced. The remainder of Lee's army crossed the Potomac on the 24th and 25th, and pressed on after Ewell towards the Susquehanna. Hooker's army, now full one hundred thousand strong, crossed the river at Edwards's Ferry. Regarding Harper's Ferry, at that moment, of little account, he asked for the abandonment of that vicinity by eleven thousand National troops. The general-in-chief (Halleck) would not consent, and Hooker, at his own request, was at once relieved of his command, and was superseded by General George G. Meade on June 28.

**Invasion of Mexico (1846).** After the battle at Resaca de la Palma (which see) the Mexicans trembled for the safety of Matamoras. Arista sent a deputation to General Taylor to ask for an armistice until the two governments should arrange the dispute. Taylor would not

trust the treacherous Mexican, and refused. During the conference Arista had removed a large quantity of ammunition and stores from Matamoros, and during the succeeding night (May 17) he retreated, with all the troops which he had rallied, to the open country towards Monterey. Informed of this, Taylor crossed the Rio Grande (May 18) with his army, and for the first time the American flag was unfurled over undisputed Mexican soil. (*See Mexico, War with.*)

**Invasion of South Carolina (1779).** General Prevost, after the subjugation of Georgia (February, 1779), crossed the Savannah River (April 27) with two thousand regulars and a large body of Tories and Creek Indians, and marched for Charleston. General Lincoln had recruited his broken army (*see Brier Creek, Battle of*), and was then in the field with about five thousand men, preparing to recover Georgia. He hastened from the Savannah River to the relief of Charleston. Prevost marched so slowly that when he reached Charleston the people there were prepared for its defence. They had cast up intrenchments across Charleston Neck. On the morning of the 11th Prevost demanded the immediate surrender of the town. It was promptly refused; and that night, hearing of the approach of Lincoln, the invaders decamped, and started for Savannah by way of the sea-islands along the coast. For more than a month some British detachments lingered upon John's Island, near Charleston, and after a severe engagement at Stono Ferry, ten miles below Charleston (June 20), Prevost established a military post on Lady's Island, between Port Royal and St. Helen's Island, and then retreated to Savannah. Prevost plundered and cruelly treated the inhabitants on his way to Charleston.

**Invasion of Virginia (1781).** The marauding expedition of Arnold up the James River, early in 1781 (*see Arnold in Virginia*), was followed by a more formidable invasion in the latter part of March. General Phillips, of Burgoyne's army, who had been exchanged for Lincoln, joined Arnold at Portsmouth, with two thousand troops from New York, and took the chief command. They went up the James and Appomattox rivers, took Petersburg (April 25, 1781), and destroyed four thousand hogsheads of tobacco, which had been collected there for shipment to France on account of the Congress. There were virtually no troops in Virginia to oppose this invasion, for all that were really fit for service had been sent to the army of Greene, in the Carolinas. Steuben had about five hundred half-starved and naked troops, whom he was training for recruits. These were mostly without arms, and retreated before Phillips to Richmond. Lafayette, who had halted at Annapolis, now hurried forward, and, by a forced march of two hundred miles, reached Richmond twelve hours before Phillips and Arnold appeared on the opposite side of the river. Joined by Steuben, the marquis here checked the invaders, who retired to City Point, at the junc-

tion of the James and Appomattox. After collecting an immense plunder in tobacco and slaves, besides destroying ships, mills, and every species of property that fell in his way, Phillips embarked his army, and dropped some distance down the river. When, soon afterwards, Cornwallis approached Virginia from the South, he ordered Phillips to meet him at Petersburg. Before the arrival of the earl (May 20), General Phillips died (May 13) at Petersburg. On May 24 Cornwallis crossed the James and pushed on towards Richmond. He seized all the fine horses he could find, with which he mounted about six hundred cavalry, whom he sent after Lafayette, then not far distant from Richmond, with three thousand men, waiting for the arrival of Wayne, who was approaching with Pennsylvania troops. The marquis fell slowly back, and at a ford on the North Anne he met Wayne with eight hundred men. Cornwallis had pursued him as far as Hanover Courthouse, from which place the earl sent Lieutenant-colonel Simcoe, with his loyalist corps, the "Queen's Rangers," to capture or destroy stores in charge of Steuben at the junction of the Rappahannock and Fluvanna rivers. In this he failed. Tarleton had been detached, at the same time, to capture Governor Jefferson and the members of the Virginia Legislature at Charlottesville, whither they had fled from Richmond. Only seven of them were made captives. Jefferson narrowly escaped by fleeing from his house (at Monticello) on horseback, accompanied by a sin-

MONTICELLO.

gle servant, and hiding in the mountains. He had left his dwelling only ten minutes before one of Tarleton's officers entered it. At Jefferson's plantation, near the Point of Forks, Cornwallis committed the most wanton destruction of property, cutting the throats of young horses not fit for service, slaughtering the cattle, and burning the barns with remains of previous crops, laying waste growing ones, burning all the fences on the plantation, and carrying away about thirty slaves. Lafayette now turned upon the earl, when the latter, supposing the forces of the marquis to be much greater than they were, retreated in haste down the Virginia peninsula to Williamsburg, blackening his pathway with fire. It is estimated that during the

invasion—from Arnold's advent in January until Cornwallis reached Williamsburg late in June—property to the amount of \$15,000,000 was destroyed, and thirty thousand slaves were carried away. The British, in their retreat, had been closely followed by Lafayette, Wayne, and Steuben, and were not allowed a minute's rest until they reached Williamsburg, where they were protected by their shipping.

**Investigating Committee, FIRST, IN CONGRESS.** The first investigating committee appointed by Congress was in the case of the defeat of St. Clair (which see). It was a special committee, empowered to send for persons and papers. Their call upon the War Department for all papers relating to the affair first raised the question of the extent of the authority of the House in such matters. The Cabinet unanimously agreed that the House had no power to call on the head of any department for any public paper except through the President, in whose discretion it rested to furnish such papers as the public good might seem to require and admit, and that all such calls must be made by a special resolution of the House, the power to make them being an authority which could not be delegated to any committee. This decision of the cabinet established the method ever since practised of calling upon the President for public papers.

Iowa was originally a part of the vast territory of Louisiana, ceded to the United States in 1803. The first settlement by Europeans was made by Julian Du Buque, who, in 1788, obtained a grant of a large tract, including the site

STATE SEAL OF IOWA.

of the city of Dubuque and the mineral lands around it. There he built a fort, and manufactured lead and traded with Indians until his death, in 1810. The territory was placed under the jurisdiction of Michigan in 1834, and in 1836 under that of Wisconsin. It was erected into a separate territory June 12, 1838, and included all the country north of Missouri between the Mississippi and the Missouri and the British line. This comprised a greater part of Minnesota and the whole of Dakota, with an area of ninety-four thousand square miles. The government was established, at Iowa City, in 1839. In 1844 a state constitution was formed, but an application for admission into the Union was denied. The admission was effected Dec. 28, 1846, and in 1857 the capital was established at Des Moines. The present constitution of Iowa was framed by a convention at Iowa City early in 1857, and was ratified Aug. 3. The clause confining the privilege of the elective franchise to white citizens was stricken out by act of the Legislature, and was ratified by the people in 1868. During the Civil War Iowa contributed 75,860 soldiers to the army of the Republic.

**Iowa, POSITION OF (1861).** This state, lying westward of the Mississippi River, with a population of nearly 700,000 and a loyal governor (S. J. Kirkwood), was quick to perceive the needs of the national government in its struggles with its enemies, and was lavish in its aid. When the President called for troops (April, 1861) the governor said, "In this emergency Iowa must not, and does not, occupy a doubtful position. For the Union as our fathers formed it, and for the government they framed so wisely and so well, the people of Iowa are ready to pledge every fighting-man in the state and every dollar of her money and credit." That pledge was redeemed by sending over 75,000 men to the front. Population in 1880, 1,624,615.

**Ireland and the United States.** Ireland, which had been more oppressed by British rule than the American colonies, had, at the beginning of the contest between the latter and Great Britain, shown peculiar subserviency to its political master. When news of the affairs at Lexington and Bunker's Hill reached that country, the Irish Parliament voted that they "heard of the rebellion with abhorrence, and were ready to show to the world their attachment to the sacred person of the king." Taking advantage of this expressed loyalty, Lord North obtained leave to send four thousand able-bodied men to America as a part of the British army. The strongest and best of the Irish army were selected, and eight regiments were shipped for America. This left Ireland almost defenceless. Its Parliament offered to organize a national militia, which Lord North refused to accept, and instead of a militia, organized and controlled by the British government, self-formed bands of volunteers sprang up all over Ireland. North saw his blunder, and had a militia bill enacted; but it was too late; the Irish Parliament preferred the volunteers, supported by the Irish themselves. Meanwhile the eloquent, patriotic, and incorruptible Henry Grattan had become a member of the Irish Parliament, and he was principally the agent that kindled the fire of patriotic zeal in Ireland that was burning so brightly in America. In 1779, though only thirty-three years of age, he led the Irish Parliament in demanding reforms. He moved an amendment to the address to the king, that the nation could be saved only by free-trade, and it was adopted by unanimous vote. New taxes were refused. The ordinary supplies usually granted for two years were granted for six months. Throughout the little kingdom an inextinguishable sentiment of nationality was aroused, and very soon Ireland had an army of fifty thousand volunteers. Alarmed by the threatening attitude of Ireland, Parliament, in 1781, conceded to the dependent kingdom its claims to commercial equality.

**Ireland, REVOLUTIONARY MOVEMENTS IN.** The combined armies of France and Spain, in 1780, kept the British government on the alert, and they were compelled to keep afloat an immense naval force. To guard against an expected invasion, eighty thousand volunteers were

enrolled in Ireland. With arms in their hands, the Irish felt disposed to assert their own rights, and began to put in operation the American plan of non-importation agreements. This movement obtained for them commercial concessions from the British government, which kept them quiet.

**Irish Colony in South Carolina.** Multitudes of laborers and husbandmen, oppressed by landlords and ecclesiastics in Ireland, and unable to procure a comfortable subsistence, embarked for South Carolina in 1736. These were Protestants, and known as Scotch-Irish (which see). They received a grant of land on the Santee River, where they formed a settlement, and called it Williamsburg.

**Iroquois Confederacy, THE,** was originally composed of five related families or nations of Indians, in the present State of New York. These were called, respectively, Mohawks, Oneidas, Onondagas, Cayngas, and Senecas. Tradition says the confederacy was founded by Hiawatha, the incarnation of Wisdom, at about the beginning of the fifteenth century. He came from his celestial home and dwelt with the Onondagas, where he taught the related tribes the knowledge of good living. Fierce warriors approached from the north, slaying everything human in their path. Hiawatha advised a council. It was held on the bank of Onondaga Lake. Representatives of each nation were there. Under his direction a league was formed, and each canton was assigned its appropriate place in it. (See *Hiawatha*.) They gave it a name signifying "they form a cabin," and they fancifully called the league "The Long House." The eastern door was kept by the Mohawks, and the western by the Senecas, and the great council-fire was with the Onondagas, at their metropolis, a few miles south of the site of the city of Syracuse. By common consent, a chief of the Onondagas, called Atatarho, was made the first president of the league. The Mohawks, on the east, were called "the door." The confederacy embraced within its territory the present State of New York north and west of the Kaatzbergs and south of the Adirondack group of mountains. The several nations were subdivided into tribes, each having a heraldic insignia, or *totem*. Through the totemic system they maintained a tribal union, and exhibited a remarkable example of an almost pure democracy in government. Each canton or nation was a distinct republic, independent of all others in relation to its domestic affairs, but each was bound to the oth-

ers of the league by ties of honor and general interest. Each had an equal voice in the General Council or Congress, and possessed a sort of veto power, which was a guarantee against despotism. After the Europeans came, the sachem, or civil head of a tribe, affixed his totem—such as the rude outlines of a wolf, a bear, a tortoise, or an eagle—to every public paper he was required to sign. It was like a monarch affixing his seal. Each of the original Five Nations was divided into three tribes, those of the Mohawks being designated as the Tortoise or Turtle, the Bear, and the

No. 1.

No. 2.

Wolf. These totems consisted of representations of those animals. These were sometimes exceedingly rude, but were sufficient to denote the tribe of the signer; as, No. 1, appended to the signature of Little Hendrick, a Mohawk chief, represents his totem—a turtle; No. 2, appended to

ATATARHO.\*

\* Atatarho, the first president of the Iroquois Confederacy, is represented by the Indians as living, at the time he was chosen, in grim seclusion in a swamp, where his dishes and drinking-vessels, like those of half-barbarian Caucasians, were made of the skulls of his enemies slain in battle. When a delegation went to him to offer him the symbol of supreme power, they found him sitting smoking his pipe, but unap-

the signature of Kaudagea, a chief of the Bear tribe, represents a bear lying on his back; and No. 3 is the signature of Great Hendrick (which see), of the Wolf tribe, the rude representation of that animal appearing at the end of his signature.

No. 3.

As each confederated nation was divided into tribes, there were thirty or forty sachems in the League. These had inferior officers under them, and the civil power was widely distributed. Office was the reward of merit alone; malfeasance in it brought dismissal and public scorn. All public services were compensated only by public esteem. The powers and duties of the President of the League were similar to those conferred and imposed upon the chief magistrate of our Republic. He had authority to assemble a congress of representatives; had a cabinet of six advisers, and in the council he was moderator. There was no coercive power, excepting public opinion, lodged anywhere. The military dominated the civil power in the League. The chiefs derived their authority from the people, and they sometimes, like the Romans, deposed civil officers. The army was composed wholly of volunteers, and conscription was impossible. Every able-bodied man was bound to do military duty, and he who shirked it incurred everlasting disgrace. The ranks were always full. The recruiting-stations were the war-dances. Whatever was done in civil councils was subjected to review by the soldiery, who had the right to call councils when they pleased, and approve or disapprove public measures. The matrons formed a third and powerful party in the legislature of the League. They had a right to sit in the councils, and there exercise the veto power on the subject of a declaration of war, and to propose and demand a cessation of hostilities. They were pre-eminently peace-makers. It was no reflection upon the courage of warriors if, at the call of the matrons, they withdrew from the war-path. These women wielded great influence in the councils, but they modestly delegated the duties of speech-making to some masculine orator. With these barbarians, woman was man's co-worker in legislation—a thing unheard of among civilized people. So much did the Iroquois reverence the "inalienable rights of man," that they never made slaves of their fellow-men, not even of captives taken in war. By unity they were made powerful: and to prevent degeneracy, members of a tribe were not allowed to intermarry with each other. Like the Romans, they caused their commonwealth to expand by annexation and conquest. Had they remained undiscovered by the Europeans a century longer, the confederacy might have

proachable, because he was entirely clothed with hissing snakes. Here is the old story of Medusa's snaky tresses unveiled in the forests of the new-found world.

embraced the whole continent, for the Five Nations had already extended their conquests from the Great Lakes to the Gulf of Mexico, and were the terror of the other tribes east and west. For a long time the French in Canada, who taught them the use of fire-arms, maintained a doubtful struggle against them. Champlain found them at war against the Canada Indians from Lake Huron to the Gulf of St. Lawrence. He fought them on Lake Champlain in 1609; and from that time until the middle of that century their wars against the Canada Indians and their French allies were fierce and distressing. They made friends of the Dutch, from whom they obtained fire-arms; and they were alternately at war and peace with the French for about sixty years. The latter invaded the cantons of the League, especially after the Five Nations became allied with the English, who, as masters of New York, used their dusky neighbors to carry out their designs. The Iroquois, meanwhile, carried their conquests almost to Nova Scotia on the east, and far towards the Mississippi on the west, and subdued the Susquehannas in Pennsylvania. In 1649 they subdued and dispersed the Wyandots in the Huron country. (See *Wyandots*.) Some of the fugitives took refuge among the Chippewas; others fled to Quebec, and a few were incorporated in the Iroquois confederacy. The Wyandots were not positively subdued, and claimed and exercised sovereignty over the Ohio country down to the close of the last century. Then the Five Nations made successful wars on their eastern and western neighbors, and in 1635 they penetrated to the land of the Catawbas and Cherokees. They conquered the Miamis and Ottawas in 1657, and in 1701 made incursions as far as the Roanoke and Cape Fear rivers, to the land of their kindred, the Tuscaroras. (See *Tuscaroras*.) So determined were they to subdue the Southern tribes, that when, in 1744, they ceded a part of their lands to Virginia, they reserved a perpetual privilege of a war-path through the territory. A French invasion in 1693, and again in 1696, was disastrous to the League, which lost one-half of its warriors. Then they swept victoriously southward early in the 18th century, and took in their kindred, the Tuscaroras, in North Carolina, when the confederacy became known as the Six Nations. In 1713 the French gave up all claim to the Iroquois, and after that the confederacy was generally neutral in the wars between France and England that extended to the American colonies. Under the influence of William Johnson, the English Indian agent, they went against the French in 1755, and some of them joined Pontiac in his conspiracy in 1763. (See *Pontiac*.) When the Revolution broke out, in 1775, the Iroquois, influenced by the Johnson family, adhered to the crown, excepting the Oneidas. Led by Brant and savage Tories, they desolated the Mohawk, Cherry, and Wyoming valleys. The country of the Western Iroquois, in turn, was desolated by General Sullivan in 1779, and Brant retaliated fearfully on the frontier settlements. At the close of the war, the hostile Iroquois,

dreeding the vengeance of the exasperated Americans, took refuge in Canada, excepting the Oneidas and Tuscaroras. By treaties, all the lands of the Six Nations in New York passed into the possession of the white people, excepting some reservations on which the dusky inhabitants yet reside. In the plenitude of their power, the confederacy numbered about 15,000; they now number about 13,000, distributed at various points in Canada and the United States. There are about 5000 in the State of New York, their ancient domain. (See *Huron-Iroquois*.) Like the other barbarians of the continent, the Iroquois were superstitious and cruel. They believed in witches as firmly as did Cotton Mather and his Puritan brethren in New England, and they punished them in human form as fiercely as did Henry the Eighth, or the rulers and the Gospel ministers at Salem in later times. Their "medicine men" and "prophets" were as expert deceivers as the priests, oracles, and jugglers of civilized men. They tortured their enemies in retaliation for kindred slain with almost as refined cruelty as did the ministers of the Holy Inquisition the enemies of their opinions; and they lighted fires around their more eminent prisoners of war, in token of their power, as bright and hot as those kindled by enlightened Englishmen around Joan of Arc as a sorceress, or Bishops Latimer and Ridley as believers in what they thought to be an absurdity.

**Irvine, WILLIAM**, was born at Fermanagh, Ireland, Nov. 3, 1741; died in Philadelphia, July 29, 1804. He was a surgeon of a ship-of-war, came to the United States after the Peace of 1763, and practised medicine at Carlisle, Penn. He was an active patriot, and raised and commanded a Pennsylvania regiment in 1776; was made a captive at Three Rivers, Canada; exchanged in May, 1778; served under Wayne, and in 1781 was stationed at Fort Pitt, charged with the defence of the northwestern frontier. He was a member of Congress from 1786 to 1788, and took a civil and military part in the task of quelling the Whiskey Insurrection. He was again a member of Congress from 1793 to 1795.

**Irving, WASHINGTON**, LL.D., was born in the city of New York, April 3, 1783; died at Tarrytown, N. Y., Nov. 28, 1859. His father was a Scotchman, his mother an Englishwoman. He engaged in literature while yet a youth, and was in Europe for his health from 1804 to 1806. In 1807 he published, in connection with his brother Peter and James K. Paulding, *Salmagundi*, and in 1808, when he was twenty-five years of age, his *Knickerbocker's History of New York*. After editing a magazine during the War of 1812-15, he went to Europe, where he resided seventeen years; when, after the failure of a mercantile house in New York with which he was connected, he was left to rely on his literary labors for support. He spent his time partly in England, France, Germany, and Spain, and published his *Life of Columbus* in 1828, which was followed by the *Conquest of Granada* and the *Alhambra*. From 1829 to 1831 he was secretary of the American legation in London, and re-

ceived from George IV. the fifty-guinea gold medal awarded for eminence in historical composition. He returned to New York in 1832, and prepared and published several works; and

WASHINGTON IRVING.

from 1839 to 1841 contributed to the *Knickerbocker Magazine*. From 1842 to 1846 he was minister to Spain, and on his return to New York he published a revised edition of all his works in fifteen volumes, which had a very large sale. His last work was a *Life of Washington*, in five volumes, completed a few months before his death. Mr. Irving never married. The honorary degree of LL.D. was conferred upon him by Harvard University, Oxford University, in England, and Columbia College, in New York. Mr. Irving's remains rest near the summit of a gentle slope in the cemetery attached to the ancient Dutch church at the entrance to "Sleepy Hol-

ANCIENT DUTCH CHURCH.

low," near Tarrytown, N. Y. They lie by the side of those of his mother. In a row lie the remains of his father, mother, brothers, and sisters. The old church, which he made famous by the story of Ichabod Crane (a leader in the psalm-singing there on Sundays) in his *Legend of Sleepy Hollow*, remains the same as when it was built in 1669, and is the oldest church edifice extant in the State of New York. Over the Sleepy Hollow brook, near it, is the bridge where Brom Bones, the supposed "headless horseman," hurled the pumpkin at the frightened Ichabod, and drove him from the neighborhood and Katrina van Tassel forever.

Isabella, Queen of Castile and Leon, was born at Madrigal, in Old Castile, April 23, 1451; died Nov. 26, 1504. Until her twelfth year Isabella lived in retirement with her mother, a daughter of John II., of Portugal. At the age

ISABELLA OF CASTILE.

of eleven years she was betrothed to Carlos, brother of Ferdinand (whom she afterwards married), then forty-six years old. His death prevented the union. Other candidates for her hand were proposed, but, being a young woman of spirit, she rejected them. Her half-brother Henry, on the throne, contracted a marriage for her, for state purposes, with the profligate Don Pedro Giron, Grand-master of the Order of Calatrava. "I will plunge a dagger in Don Pedro's heart," said the maiden, "before I will submit to the dishonour." The grand-master died as suddenly as Carlos while on his way to the nuptials, probably from the effects of poison. Henry now made an arrangement by which Isabella was recognized as heir to Castile and Leon, with the right to choose her own husband, subject to the king's approval. She chose Ferdinand, Prince of Aragon, who signed the marriage contract at Cervera, Jan. 7, 1469, guaranteeing to his betrothed all the essential rights of sovereignty in Castile and Leon. King Henry, offended because his sister would not marry the King of Portugal, sent a force to seize her person. She escaped to Valladolid, whither Ferdinand hastened in disguise, and they were married, Oct. 19, 1469, in the cathedral there. Civil war ensued. The king died late in 1474, and Isabella was declared queen of Castile and Leon; but her authority was not fully recognized until after a war with the King of Portugal, who was affianced to Juana, the rival of Isabella for the throne. After that her career was brilliant. She appeared in arms at the head of her troops in her wars with the Moors. From a conviction that it was for the safety of the Roman Catholic religion, she reluctantly, it is said, gave her consent to the establishment of the Inquisition; and for this act, and her fiery zeal for the Church, amounting at times to fanatical cruelty, she is

known in history as Isabella the Catholic. Ferdinand was now king of Aragon, and their kingdoms were united and formed a strong empire, and the consolidated Christian power of the Spanish peninsula was effected. The two monarchs were one in love, respect, and interest. They ruled as separate sovereigns, each having an independent council, and sometimes holding their courts at points distant from each other at the same time; but they were a unit in the general administration of the consolidated kingdoms, all acts of sovereignty being executed in the name of both, all documents signed by both, and their profiles stamped together on the national coins, while the royal seal displayed the united arms of Castile and Aragon. The religious zeal of Isabella was inflamed when Columbus, in his application for aid, declared that one great object of his ambition was to carry the Gospel to the heathen of undiscovered lands. But public affairs at first so engrossed the attention of the monarchs that the suit of the navigator did not prevail for a long time. Finally he was summoned before the monarchs, and pleaded his cause in person. The queen's zeal was so inflamed that she resolved to give him aid. "Our treasury," said Ferdinand, "has been too much drained by the war to warrant us in the undertaking." The queen said, "I will undertake the enterprise for my own crown of Castile; and, if necessary, will pledge my jewels for the money." Then she fitted out the expedition that sailed from Palos in the autumn of 1492. (See *Columbus*.) Afterwards she opposed the enslaving the natives of the Western Continent; and when Columbus sent a cargo of captives to Spain, she ordered them to be carried back to their own country. With Cardinal

VALLADOLID CATHEDRAL.

Ximenes she effected a radical reform in the Church, as she had in the State; and criminals, high or low, the clergy and common offenders, felt the sword of justice fall with equal severity. Masculine in intellect, feminine in her moral qualities, pious and loving, Isabella's virtues—as virtues were estimated then and there—made

a favorite theme for the praise of Spanish writers. In person she was beautiful—well formed, clear complexion, light blue eyes, and anuburn hair. She had one son and four daughters. Her youngest daughter, Catharine, became the wife of Henry VIII. of England.

**Island Number Ten.** This island lies in a sharp bend of the Mississippi River, about forty miles below Columbus, and within the limits of Kentucky. It was considered the key to the navigation of the lower Mississippi. To this island some of the troops and munitions of war

a floating battery of ten guns, formed of three gunboats lashed together, side by side, followed by three others separately. The day's work was barren of any decisive result. The island shores were lined with batteries. So the siege went on, with varying fortunes, until the first week in April, when Beauregard telegraphed to Richmond that the "Federal guns" had "thrown three thousand shells and burned fifty tons of gunpowder" without damaging his batteries or killing one of his men. The public began to be impatient, but victory was near. General Pope

ISLAND NUMBER TEN.

were transferred when General Polk evacuated Columbus (which see), and all the troops there were in charge of Beauregard. On the 8th of March (1862) he sent forth a proclamation in which he called for bells with which to make cannons, and there was a liberal response. "In some cities," wrote a Confederate soldier, "every church gave up its bells. Court-houses, public institutions, and plantations sent them. And the people furnished large quantities of old brass—andirons, candlesticks, gas-fixtures, and even door-knobs." These were all sent to New Orleans to be used in cannon-foundries. There they were found by General Butler, sent to Boston, and sold at auction. Beauregard had thoroughly fortified the island, and, after the capture of New Madrid, it became an object of great interest to both parties, for it was besieged by the Nationals. For this purpose Commodore Foote left Cairo (March 14, 1862) with a powerful fleet of gun and mortar boats. There were seven of the former iron-clad and one not armored, and ten of the latter. On the night of the 15th Foote was at Island Number Ten, and the next morning (Sunday) he began the siege with a bombardment by the rifled cannons of his flag-ship, the *Boston*. This was followed by the mortar-boats, moored at proper points along the river shore, from which tons of iron were hurled upon the island and the batteries on the Kentucky banks opposite. All day long the artillery duel was kept up without much injury to either party. Meanwhile a battery of Illinois artillery had been landed on the Missouri shore, in a position to assail the Confederate flotilla near the island. The next day a tremendous attack on the Confederate works was made by

was chafing with impatience at New Madrid. He wished to cross the river to the peninsula and attack the island in the rear, a movement that would insure its capture. The opposite shore was lined with Confederate batteries, and it would be madness to attempt a crossing until these were silenced. General Schuyler Hamilton proposed the construction of a canal across the neck of a swampy peninsula of sufficient capacity to allow the passage of gunboats and transports, so as to effectually flank Island Num-

A MORTAR-BOAT.

ber Ten and insure its capture. It was undertaken under the supervision of Colonel Bissell, and was successfully performed. In the meantime daring feats against the shore batteries had been performed; and during a terrible thunder-storm on the night of April 3 Captain Walke ran by the Confederate batteries with the gun-

boat *Carondelet*, assailed by all of them, her position being revealed by the flashes of lightning. It was the first vessel that ran by Confederate batteries on the Mississippi River. She had not fired a gun during her passage, but the discharge of three assured anxious Commodore Foote of the safety of the *Carondelet* after the dangerous voyage. Perceiving the perilous fate that awaited them after the completion of the canal the Confederates sunk steamboats in the channel of the river to prevent the gunboats descending it, and they unsuccessfully attempted to escape from the island. After the *Carondelet* had passed

THE CARONDELET.

the batteries, Beauregard was satisfied that the siege must speedily end in disaster to his command; so, after turning over the command on the island to General McCall, and leaving the troops on the Kentucky and Tennessee shores in charge of General McCown, he, with a considerable number of his best soldiers, departed for Corinth to check a formidable movement of National troops through middle Tennessee towards northern Alabama. (See *Mitchel's Expedition*.) The vigorous operations of Pope after he passed through the wonderful canal hastened the crisis. McCall and his troops, in their efforts to escape from the island, were intercepted by Pope's forces under Generals Stanley, Hamilton, and Paine; and on April 8, 1862, Island Number Ten, with the troops, batteries, and supports on the main, was surrendered. Over 7000 men became prisoners of war; and the spoils of victory were 123 cannons and mortars, 7000 small-arms, many hundred horses and mules, four steamboats afloat, and a very large amount of ammunition. The fall of Island Number Ten was a calamity to the Confederates which they never retrieved. It caused wide-spread alarm in the Mississippi valley, for it appeared probable that Memphis, one of the strongholds of the Confederates on the Mississippi, where they had immense workshops and armories, would soon share the fate of Columbus, and that National gunboats would speedily patrol the great river from Cairo to New Orleans. Martial law was proclaimed at Memphis, and only by the wisdom and firmness of the mayor were the troops and panic-stricken citizens prevented from laying the town in ashes. Preparations for flight were made at Vicksburg, and intense alarm prevailed at New Or-

leans among the disloyal population. It seemed as if the plan devised by Frémont (see *Frémont's Plan*), and now partially executed, was about to be successfully carried out. Curtis had already broken the military power of the Confederates west of the Mississippi (see *Pea Ridge*), and a heavy National force, pressing on towards Alabama and Mississippi, had just achieved a triumph on the banks of the Tennessee, a score of miles from Corinth. (See *Shiloh*.)

**Isle of Sable.** The Marquis de la Roche (which see) sailed from France with a commission to conquer Canada in 1598. He took with him a colony of convicts from the prisons, and landed forty of them on the Isle of Sable, and then he sailed for Acadia, or Nova Scotia. He finally returned to France, without making a settlement or having the power to carry the miserable outcasts whom he had left on the desolate island. He did not return to America. The French king, hearing of the fate of these convicts, sent Chetodel, who had been De la Roche's pilot, to take them away. It was at the end of seven years after their arrival that this succor came, when only twelve survived, and were carried home. The king saw them just as they had embarked, in their seal-skin dresses and long beards. He gave each of them fifty crowns, and a pardon for his crimes.

**Isolation of the Capital.** On the night of the fearful riot in Baltimore (April 19, 1861) (see *Massachusetts Troops in Baltimore*), Marshal Kane and ex-Governor Lowe went to the mayor and Governor Hicks for authority to commit further outrages. Kane said he had information that other Union troops were on the way by railroad from Harrisburg and Philadelphia, and he wanted authority to destroy the bridges on those roads. The mayor cheerfully gave them power so far as his authority extended, but the governor refused. So, without his sanction, Kane and the mayor went to the office of Charles Howard, President of the Board of Police, and received orders for the destruction of bridges on roads entering Baltimore. A gang of men was sent out who destroyed the Canton Bridge, a short distance from the city. When a train from the north approached, it was stopped, the passengers were turned out, the cars were filled by the mob, and the engineer was compelled to run his train back to the long bridges over the Gunpowder and Bush creeks, arms of Chesapeake Bay. These bridges were fired and a large portion of them consumed. Another party went up the Northern Central Railway from Baltimore to Cockeysville, fifteen miles north, and destroyed two wooden bridges there, and smaller structures on the road. The telegraph-wires on all the leading lines out of Baltimore, excepting the one that kept up a communication with the insurgents at Harper's Ferry, were destroyed, and thus all communication by telegraph and railway between Washington and the loyal states was cut off.

**Italians and America.** The three powers which formerly possessed nearly all of America owed their first discoveries to Italians: *Spain* to Columbus, a Genoese; *England* to the Cabots, Venetians; and *France* to Verazzani, a Floren-

repulsed by less than 1000 men, under Colonel Leggett. He was repulsed at Jackson the next day, and again, on Sept. 1, at Britton's Lane, after a battle of four hours with Indiana troops, under Colonel Dennis. At the latter place Arm-

DESTRUCTION OF THE BRIDGE OVER GUNPOWDER CREEK. (See p. 699.)

tine. Yet it is remarkable that the Italians, unequalled at the period of the discovery in maritime power, knowledge, and experience in navigation, have never acquired an inch of ground for themselves in America.

**Iturbide, AUGUSTIN DE,** Emperor of Mexico, was born in Valladolid, Mexico, in 1784; died in July, 1824. Leading in a scheme for overthrowing the Spanish power in Mexico in 1821, he took possession of the capital with troops in September in the name of the nation, and established a regency. He was declared emperor, May 18, 1822, but rivals and public distrust caused him to abdicate, and he went to Europe in 1823. An insurrection in his favor in Mexico induced him to return in 1824, when he was seized and shot. His widow was granted a pension of \$8000 a year on condition that she should reside in the United States. She lived a long time in Philadelphia, and finally went to Europe. Iturbide's youngest son died in Paris in 1873, where he kept a public-house.

**Iuka Springs, BATTLE NEAR.** After the evacuation of Corinth (which see) General Rosecrans was placed in command of the forces under Pope, who had gone to Virginia (see *Army of Virginia*), to occupy northern Mississippi and Alabama, in the vicinity of Corinth, and eastward to Tusculumbia. His forces were known as the Army of the Mississippi, with headquarters at Corinth. There were no more stirring events in the region of General Grant's command (under whom was Rosecrans) than guerilla operations, from June until September. At the beginning of September the Confederates under Price and Van Dorn moved towards the Tennessee River, and, when Bragg moved into Tennessee, Price attempted to cut off communications between Grant and Buell. General Armstrong (Confederate), with over 5000 horsemen, struck the Nationals (Aug. 30, 1862) at Bolivar, with the intention of severing the railway there. He was

strong left 179 men, dead and wounded, on the field. Informed of this raid, at Tusculumbia, Rosecrans hastened to Iuka, a little village celebrated for its fine mineral springs, about fifteen miles east of Corinth, where a large amount of stores had been gathered. There, with Stanley's division, he encamped at Clear Creek, seven miles east of Corinth, and, at the same time, Price moved northward from Tupelo with about 12,000 Confederate troops. Price struck Iuka (Sept. 10) and captured the National property there. Grant at once put two columns in motion to crush Price—one, under Rosecrans, to attack his flank and rear, and another, under General Ord, to confront him. These movements began on the morning of Sept. 18. Ord, with 5000 men, advanced to Burnsville, followed by General Ross with more, while Rosecrans moved with the separated divisions of Stanley and C. S. Hamilton, about 9000 strong, during a drenching rain, to San Jacinto, twenty miles southward of Iuka. On the next morning (Sept. 19) they pushed on towards Iuka, Mizner's cavalry driving a Confederate guard. Early in the afternoon Hamilton, listening for the sound of Ord's guns, and skirmishing briskly by the way, had reached a point within two miles of Iuka on densely wooded heights. There he formed a line of battle. He sent forward his skirmishers, who were driven back, and a severe battle immediately followed. The Eleventh Ohio battery was, after a severe struggle, placed in position on the crest of the hill. With this battery, a few regiments of Iowa, Missouri, Minnesota, and Indiana troops fought more than three times their number of Confederates, led by Price in person. Finally, when Colonel Eddy, of an Indiana regiment, was mortally wounded, the remainder of his regiment was hurled back in disorder, leaving the almost disabled battery to be seized by the Confederates. For the possession of these guns, desperate charges and countercharges were made, until, at length, the

Confederate soldiers dragged the guns off the field. All of the horses and seventy-two of the artillerymen had been killed. The battle raged warmly elsewhere, when the Confederates were driven to the shelter of the hollows near the village. Darkness ended the battle of Iuka. The National loss was nearly 800, killed, wounded, and missing; that of the Confederates was near-

tenant of artillery. He was appointed aid to General Hamilton in 1799, and resigned in 1803. He was appointed colonel of artillery in the spring of 1812, and brigadier-general in March, 1813. He was in command on Lake Champlain and on the Niagara frontier, in 1814, with the rank of major-general. From 1825 until his death he was governor of Arkansas Territory.

GRAVES OF THE ELEVENTH OHIO BATTERY-MEN.

ly 1400. Ord, meanwhile, whom Grant had sent to assist Rosecrans, had been watching the movements of Confederates, who were making feints on Corinth. Expecting to renew the battle at Iuka in the morning, Stauley pressed forward for the purpose, but found that Price had fled southward under cover of the darkness, leaving behind the captured guns of the Eleventh Ohio battery. Price was pursued all day, but escaped.

**Izard, GEORGE**, was born in South Carolina in 1777; died at Little Rock, Ark., Nov. 22, 1828.

GEORGE IZARD.

He was a son of Ralph Izard. Having finished his education and made a tour in Europe, he entered the United States Army, in 1794, as lieu-

tenant of artillery, who, after the sortie at Fort Erie (which see), had moved down to Queenston. Izard moved towards Chippewa, but vainly endeavored to draw Drummond out. He had some skirmishing in an attempt to destroy a quantity of grain belonging to the British, in which he lost twelve men killed and fifty-four wounded; the British lost many more. Drummond fell back to Fort George and Burlington Heights. Perceiving further operations in that region to be useless, and, perhaps, perilous, Izard crossed the river and abandoned Canada. Knowing Fort Erie to be of little service, he caused it to be mined and blown up (Nov. 5). It has remained a ruin until now.

**Izard, RALPH**, an active Revolutionary patriot, was born near Charleston, S. C., in 1742; died there, May 30, 1804. He was educated at Cambridge, England, and in 1767 married a daughter of Peter Delancy, of New York. They spent some time in Europe, and Mr. Izard was appointed by Congress commissioner to the court of the Grand Duke of Tuscany, and resided in Paris, where he took sides with Arthur Lee against Silas Deane and Franklin. (See *Deane, Silas*.) He returned home in 1780; procured for General Greene the command of the Southern Army, and pledged his large estates for the purchase of ships of war in Europe. He was in Congress from 1781 to 1783, and in the Senate of the United States from 1789 to 1795. Two years afterwards he was prostrated by paralysis. His intellect was mercifully spared, and he lived in comparative comfort about eight years, without pain, when a second shock ended his life, at the age of sixty-two years. A tablet was placed to his memory in the parish church of St. James, Goose Creek, near his paternal seat, "The Elms."

## J.

**Jackson, Andrew, LL.D.**, the seventh President of the United States, was born in Mecklenburg County, N. C., March 15, 1767; died at "The Hermitage," twelve miles from Nashville, Tenn., June 8, 1845. His father died five days after his birth, and a month later his mother moved across the line between North and South Carolina, into the Waxhaw Settlements. This circumstance led to the common error of giving to South Carolina the credit of being the state of his nativity. His parents had come from the

ANDREW JACKSON IN 1814.

north of Ireland, in 1765, and were of the Scotch-Irish. At fourteen years of age, young Andrew joined the revolutionary forces in South Carolina. In that service he had two brothers killed. He was with Sumter in the battle at Hanging Rock (which see), and in 1781 he was made a prisoner. He was admitted to the practice of the law in western North Carolina in 1786; removed to Nashville in 1788; was United States attorney for that district in 1790; member of

the convention that framed the state constitution of Tennessee in 1796; was a member of the United States Senate in 1797, and judge of the Tennessee Supreme Court from 1798 to 1804. From 1798 until 1814 he was major-general of the Tennessee militia, and conducted the principal campaign against the Creek Indians, which resulted in the complete subjugation of that nation in the spring of 1814. His victory at New Orleans (Jan. 8, 1815) gave him great renown; and in 1817 he successfully prosecuted the war against the Seminoles (which see). In 1819 he resigned his military commission, and was governor of newly acquired Florida in 1821-22. He was again United States Senator in 1823-24, also in 1828, and in 1832 he was elected President of the United States. His warfare on the United States Bank (which see) during his presidency resulted in its final destruction. Jackson's remains repose under a temple-form tomb, in the garden of "The Hermitage," his residence, about twelve miles from Nashville, Tenn. Four biographies of him have been written: one by J. H. Eaton, in 1818; a second by William Cobbett, in 1834; a third by Amos Kendall, in 1844; and the last by James Parton, in three volumes, in 1859. President Jackson possessed great firmness and decision of character; was honest and true; not always correct in judgment; often rash in expressions and actions; misled sometimes by his hot anger into acts injurious to his reputation; of unflinching personal courage; possessed of a tender, sympathizing nature, although sometimes appearing fiercely leonine; and a patriot of purest stamp. He retired from public life forever in the spring of 1837. His administration of eight years was marked by great energy, and never were the affairs of the Republic in its domestic and foreign relations more prosperous than at the close of his term of office. In 1852, an equestrian statue of Jackson, in bronze, by Clark Mills, was erected at Washington, at the expense of the nation, and a copy of it occupies a place in a public square in New Orleans.

**Jackson (Miss.), BATTLE AT.** While the troops of General Grant were skirmishing at Raymond (which see), he learned that General Joseph E. Johnston, one of the ablest of the Confederate generals, was hourly expected at Jackson, the capital of Mississippi. To make sure of that place, and to leave no enemy in his rear, Grant pushed on towards Jackson. McPherson entered Clinton early in the afternoon of May 13 (1863), without opposition, and began tearing up the railway between that town and the capital. Sherman was also marching on Jackson, while McClernand was at a point near Raymond. The night was tempestuous. In the morning, Sherman

and McPherson pushed forward, and five miles from Jackson they encountered and drove in the Confederate pickets. Two and a half miles from the city they were confronted by a heavy Confederate force, chiefly Georgia and South Carolina troops under General Walker. General Crocker's division led the van of the Nationals, and a battle began at eleven o'clock, while a shower of rain was falling. The Confederate infantry were in a hollow, with their artillery on the crest of a hill beyond them. Crocker pressed the Confederates out of the hollow and up the slopes to their artillery. Still onward the Nationals pressed in the face of a severe fire, when the Confederates broke and fled towards the city, closely pursued for a mile and a half

men to make Kansas a slave-labor state. In 1822, young Jackson went to Missouri; was a captain in the Black Hawk War (which see); served several years in the State Legislature, and was elected governor of Missouri by the Democrats in 1860. In 1855 he led a band of lawless men from Missouri, who, fully armed, encamped around Lawrence, in Kansas, where he took measures to prevent a legal polling of votes at an election for members of the Territorial Legislature, late in March. His followers threatened to hang a judge who attempted to secure an honest vote, and by threats compelled another to receive every vote offered by a Missourian. When the Civil War broke out, Jackson made strenuous efforts

to place Missouri on the side of secession and rebellion, but was foiled chiefly through the efforts of General Nathaniel Lyon. He was deposed by the Missouri State Convention, in July, 1861, when he entered the Confederate military service as a brigadier-general. He was a refugee in Arkansas at the time of his death.

**JACKSON, FRANCIS JAMES, MISSION OF.** Erskine was succeeded as minister to the United States by Francis James Jackson, an experienced diplomatist, and who had lately figured discreditably in the affair of the seizure of the Danish fleet by British men-of-war at Copenhagen. He had become known as "Copenhagen Jackson," whose conduct did not commend him to the good-will of the people of the United States. The impression was that he had come with explanations of the cause of the rejection of Erskine's arrangement. The Secretary of State, finding he had nothing to offer, addressed Jack-

JACKSON'S TOMB. (See p. 702.)

son in a letter in which a tone of discontent was conspicuous, declaring the surprise and regret of the President that he had no explanations to offer as to the non-ratification of the Erskine arrangement, or authority to substitute any new arrangement for it. The object of the letter, probably, was to draw out from Jackson an explicit admission, as a basis for an appeal to the nation, that he had no authority to treat except upon the ground of Canning's three conditions—namely, 1. The repealing as to Great Britain, but the keeping in force as to France, and all countries adopting her decrees, so long as these decrees were continued, all American non-importation and non-intercourse acts; 2. The renunciation by the United States, during the present war, of any pretensions to carry on any trade with the colonies of belligerents not allowed in time of peace; and 3. The allowing British ships of war to enforce, by capture, the American non-intercourse acts with France and her

**JACKSON, CLAIBORNE F.**, born in Kentucky, April 4, 1807; died at Little Rock, Ark., Dec. 6, 1862. He became conspicuous as a leader of the Secessionists and Confederates during the late civil war, as he was in the efforts of pro-slavery

men to make Kansas a slave-labor state. In 1822, young Jackson went to Missouri; was a captain in the Black Hawk War (which see); served several years in the State Legislature, and was elected governor of Missouri by the Democrats in 1860. In 1855 he led a band of lawless men from Missouri, who, fully armed, encamped around Lawrence, in Kansas, where he took measures to prevent a legal polling of votes at an election for members of the Territorial Legislature, late in March. His followers threatened to hang a judge who attempted to secure an honest vote, and by threats compelled another to receive every vote offered by a Missourian. When the Civil War broke out, Jackson made strenuous efforts to place Missouri on the side of secession and rebellion, but was foiled chiefly through the efforts of General Nathaniel Lyon. He was deposed by the Missouri State Convention, in July, 1861, when he entered the Confederate military service as a brigadier-general. He was a refugee in Arkansas at the time of his death.

allies. (See *Erskine, Negotiations with*.) Jackson declared that the rejection of that part of the arrangement of Erskine relating to the affair of the *Chesapeake* and *Leopard* (which see), was owing partly to the offensive terms employed in the American note to Erskine concerning it. This note had offended the old monarch, with whom Admiral Berkeley was a favorite. In it, Secretary Smith said (April 17, 1809), "I have it in express charge from the President to state that, while he forbears to insist on a further punishment of the offending officer, he is not the less sensible of the justice and utility of such an example, nor the less persuaded that it would best comport with what is due from his Britannic majesty to his own honor." Jackson's manner was offensive. He had an unbounded admiration for the government he represented, and a profound contempt for the Americans as an inferior people. He treated the officers of the United States government with the same haughty bearing that he did those of weak and bleeding Denmark, and after one or two personal interviews, Secretary Smith refused to have any further intercourse with him except in writing. The insolent diplomat was offended, and wrote

an impudent letter to the Secretary. He was informed that no more communications would be received from him, when Jackson, disappointed and angry, left Washington with every member of the diplomatic family, and retired to New York. The United States government requested his recall, and early in 1810 he was summoned to England. No other minister was sent to the United States for about a year.

**JACKSON, GENERAL, FINED FOR CONTEMPT OF COURT.** Jackson, like a true soldier, did not relax his vigilance after the victory that saved Louisiana from British conquest. He maintained martial law in New Orleans rigorously, even after rumors of a proclamation of peace reached that city. When an official announcement of peace was received from Washington, he was involved in a contention with the civil authorities, who had opposed martial law as unnecessary. In the Legislature of Louisiana was a powerful faction opposed to him personally, and when the officers and troops were thanked by that body (Feb. 2, 1815), the name of Jackson was omitted. The people were very indignant. A seditious publication soon appeared, which increased their indignation, and as this was a public matter, calculated to produce disaffection in the army, Jackson caused the arrest of the author and his trial by martial

law. Judge Dominic A. Hall, of the Supreme Court of the United States, issued a writ of *habeas corpus* in favor of the offender. Jackson considered this a violation of martial law, and ordered the arrest of the judge and his expulsion beyond the limits of the city. The judge, in turn, when the military law was revoked (March 13, 1815) in consequence of the proclamation of peace, required Jackson to appear before him and show cause why he should not be punished for contempt of court. He cheerfully obeyed the summons, and entered the crowded court-room in the old Spanish-built court-house

THE OLD COURT-HOUSE.

in citizen's dress. He had almost reached the bar before he was recognized, when he was greeted with huzzas by a thousand voices. The judge was alarmed, and hesitated. Jackson stepped upon a bench, procured silence, and then, turning to the trembling judge, said, "There is no danger here—there shall be none. The same hand that protected this city from outrage against the invaders of the country will shield and protect this court, or perish in the effort. Proceed with your sentence." The agitated judge pronounced him guilty of contempt of court, and fined him \$1000. This act was greeted by a storm of hisses. The general immediately drew a check for the amount, handed it to the marshal, and then made his way for the court-house door. The people were intensely excited. They lifted the hero upon their shoulders, bore him to the street, and there an immense crowd sent up a shout that blanched the cheek of Judge Hall. He was placed in a carriage, from which the people took the horses and dragged it themselves to his lodgings, where he addressed them, urging them to show their appreciation of the blessings of liberty and a free government by a willing submission to the authorities of their country. Meantime, \$1000 had been collected by voluntary subscriptions and placed to his credit in a bank. The general politely refused to accept it,

and begged his friends to distribute it among the relatives of those who had fallen in the late battles. Nearly thirty years afterwards (1843), Congress refunded the sum with interest, amounting in all to \$2700.

**JACKSON, GENERAL, HONORS TO, IN NEW ORLEANS.** On Jan. 21, 1815, Jackson, with the main body of his army, entered New Orleans. They were met in the suburbs by almost the entire population, who greeted the victors as their saviors. Two days afterwards there was an imposing spectacle in the city. At Jackson's request, the apostolic prefect of Louisiana appointed Jan. 23 a day for the public offering of thanks to God for the victory just won. It was a beautiful winter morning on the verge of the tropics. The religious ceremonies were to be held in the old Spanish cathedral, which was decorated with evergreens for the occasion. In the centre of the public square in front of the cathedral, a temporary triumphal arch was erected, supported by six Corinthian columns, and festooned by flowers and evergreens. Beneath this arch stood two beautiful little girls, each upon a pedestal, and holding in her hand a civic crown of laurel. Near them stood two damsels, one personifying *Liberty*, the other *Justice*. From the arch to the church, arranged in two rows, stood beautiful girls dressed in white, each covered with a blue gauze veil, with a silver star on her brow. These personated the several states and territories of the Union. Each carried a basket filled with flowers, and behind each was a lance stuck in the ground, and bearing a shield on which

was inscribed the name and legend of the state or territory which she represented. These were linked by festoons of evergreens that extended from the arch to the door of the cathedral. At the appointed time, Jackson, accompanied by the officers of his staff, passed into the square, and, amid the roar of artillery, was conducted to the raised floor of the arch. As he stepped upon it, the two little girls leaned gently forward and placed the laurel crown upon his head. At the same moment, a charming Creole maiden (Miss Kerr), as the representative of Louisiana, stepped forward, and, with modesty in voice and manner, addressed a few congratulatory words to the general, eloquent with expressions of the most profound gratitude. To these words Jackson made a brief reply, and then passed on towards the church, the pathway strewn with flowers by the gentle representatives of the states. At the cathedral entrance he was received by the apostolic prefect (Abbé du Bourg) in his pontifical robes, supported by a college of priests in

their sacerdotal garments. The abbé addressed the general with eloquent and patriotic discourse, after which the latter was seated conspicuously near the great altar, while the *Te Deum Laudamus* was chanted by the choir and the people. When the pageant was over, the general retired to his quarters to resume the stern duties of a soldier; and that night the city of New Orleans blazed with a general illumination. On the spot where the arch was erected, in the centre of the public square in front of the cathedral, has been erected a bronze equestrian statue of Jackson, by Clark Mills, a copy of one made for the government to adorn the public grounds in Washington city.

STATUE OF JACKSON IN FRONT OF THE CATHEDRAL, NEW ORLEANS.

**JACKSON, JAMES**, was born in Devonshire, Eng., Sept. 21, 1757; died in Washington, March 12, 1806. He came to Savannah, Ga., in 1772, and studied law. He entered the military service, and was brigade-major of the Georgia militia in 1778. He took part in the defence of Savannah; and when the British seized it at the close of 1778, he fled to South Carolina, where he joined General Moultrie. His appearance was so wretched while in his flight, that he was arrested, tried, and condemned as a spy, and was about to be executed, when a reputable citizen of Georgia, who knew him, saved him. Jackson fought a duel in March, 1780, killing his antagonist and being severely wounded himself. He joined Colonel Elijah Clarke, and became aid to Sumter. With Pickens, he shared in the victory at the Cowpens. He afterwards did good service as commander of a legionary corps, and was presented with a dwelling in Savannah by the Georgia Legislature. In 1786 he was made brigadier-general, and governor of Georgia in

1788, but the latter office he declined. From 1789 to 1791 General Jackson was a member of Congress, and United States Senator from 1793 to

JAMES JACKSON.

1795, and from 1801 to 1806. From 1793 to 1801 he was governor of the state.

**JACKSON, SACK OF.** Jackson is the capital of the State of Mississippi, and before the Civil War was one of the most beautiful towns in all that region. It is upon the Pearl River, at the intersection of two railways. After Grant left it (see *Jackson, Battle at*), General Joseph E. Johnston, the Confederate leader, made his headquarters there. After the fall of Vicksburg (which see), Johnston hovered menacingly in Grant's rear. Sherman had pushed out to press him back. Grant sent Sherman reinforcements, giving that leader an army fifty thousand strong. With these he crossed the Big Black River, during a great drought. In dust and great heat the thirsty men and animals went on to Jackson, Johnston retiring before them and taking position behind his breastworks there. Sherman invested Jackson (July 10), each flank resting on the Pearl River. He planted a hundred cannons on a hill, and opened on the town (July 12); but his trains being behind, his scanty ammunition was soon exhausted. In the assault, General Lauman pushed his troops too near the Confederate works, and in the course of a few minutes five hundred of his men were killed or wounded by sharpshooters and the grape and canister from twelve cannons. Two hundred of his men were made prisoners. Under cover of a fog, Johnston made a sortie (July 13), but with no beneficial result, and on the night of July 16-17 he withdrew with his twenty-five thousand men, hurried across the Pearl River, burned the bridges behind him, and retreated to Morton. Sherman did not pursue far, his object being to drive Johnston away and make Vicksburg secure. For this purpose he broke up the railways for many miles, and destroyed everything in Jackson that might be useful to the Confederates; and the soldiers shamefully sacked and plundered the city. They ransacked the houses, taking whatever was of value or otherwise pleased them, and destroyed what they were unable to appreciate or remove. Pianos and articles of furniture were demolished; books in

libraries were torn up or trampled under foot; pictures were thrust through with bayonets; windows were broken and doors torn from their hinges. Furniture and beds, costly and otherwise, were dragged into the street and burned, and buildings were set on fire and destroyed. It was one of the most shameful exhibitions of barbarism of which the Union soldiers were occasionally guilty, and soiled with an indelible stain the character of the National army. When Sherman fell back to Vicksburg, he was followed by a great multitude of negroes of both sexes and of all ages. These events occurred in 1863.

**JACKSON, THOMAS JONATHAN** ("Stonewall"), was born at Clarksburg, Va., Jan. 21, 1824; died at Guiney's Station, Va., May 10, 1863. He graduated at West Point in 1846, entering the Second Artillery. He served in the war with Mex-

THOMAS J. ("STONEWALL") JACKSON.

ico, was breveted captain and major, and resigned in 1852 with health impaired, becoming professor in the Military Institute at Lexington, Va. He entered the Confederate service as colonel in April, 1861, and commanded the "Army of Observation" at Harper's Ferry. His first engagement was at Falling Waters (which see). Jackson commanded a brigade in the battle of Bull's Run, where he received the name of "Stonewall" (which see). As brigadier and major general, he became the chief assistant of General Lee in his campaigns, and was accidentally shot by his own men, while reconnoitring during the battle of Chancellorsville (which see).

**JACKSON, WILLIAM**, born in Cumberland, Eng., March 9, 1759; died in Philadelphia, Dec. 17, 1828. He was brought to Charleston, S. C., an orphan, at an early age. At the breaking-out of the war for independence he entered the military service. He finally became aid to General Lincoln, and was made a prisoner at Charleston in 1780. He was secretary to Colonel John Laurens, special minister to France, and was in Washington's military family as aid, with the rank of major. Jackson was Assistant Secretary of War under Washington, and was secretary to the convention that framed the national Constitution in 1787. From 1789 to 1792 he was aid and private secretary to President Wash-

ington, and after spending some time in Europe, he married Elizabeth Willing, of Philadelphia, in 1795. Major Jackson was surveyor of the port of Philadelphia from 1796 to 1801, and was

WILLIAM JACKSON.

secretary to the General Society of the Cincinnati.

**Jackson's Cabinet.** The whole of President Adams's cabinet having resigned, President Jackson nominated for his constitutional advisers his political friends—namely: Martiu Van Buren, of New York, Secretary of State; Samuel D. Ingham, of Pennsylvania, Secretary of the Treasury; John H. Eatou, of Tennessee, Secretary of War; John Branch, of North Carolina, Secretary of the Navy; and John McPherson Berrian, of Georgia, Attorney-general. It having been determined to make the Postmaster-general a cabinet officer, William T. Barry, of Kentucky, was called to the cabinet as such. The Senate being in session, these nominations were immediately confirmed. James A. Hamilton, of New York, performed the duties of Secretary of State until Mr. Van Buren could close his duties as Governor of New York, on which he had just entered.

**Jamaica, INTERPOSITION OF.** The island of Jamaica is a colony of Great Britain, and was of great commercial importance when the outbreak between the English-American colonies and the mother country occurred. In December its legislature interposed. They affirmed the rights of the colonies, enumerated their grievances, and, enforcing their claims to redress, implored the king to become the mediator for peace, and to recognize the title of the Americans to the benefits of the English Constitution. They disclaimed any intention of joining the American confederated colonies, for they were too weak, being only a small colony of white inhabitants, with more than two hundred thousand slaves. Their petition was received

by the king, but no heed to it was given. The name of Jamaica is an Indian or native word. Oviedo mentions a river so called by the natives of Santo Domingo. The Spaniards spelled it Haymaca.

**James I., KING OF ENGLAND, ETC.,** was born in Edinburgh Castle, June 19, 1566; died in the Palace of Theobald, March 27, 1625. He was son of Mary Queen of Scots and Henry Lord Darnley. Of him Charles Dickens writes: "He was ugly, awkward, and shuffling, both in mind and person. His tongue was much too large for his mouth, his legs were much too weak for his body, and his dull goggle-eyes stared and rolled like an idiot's. He was cunning, covetous, wasteful, idle, drunken, greedy, dirty, cowardly, a great swearer, and the most conceited man on earth. His figure—what was commonly called rickety from his birth—presented the most ridiculous appearance that can be imagined, dressed in thick-padded clothes, as a safeguard against being stabbed (of which he lived in constant fear), of a grass-green color from head to foot, with a hunting-horn daubing at his side instead of a sword, and his hat and feather sticking over one eye or hanging on the back of his head, as he happened to toss it on. He used to loll on the necks of his favorite courtiers, and slobber their faces, and kiss and pinch their cheeks; and the greatest favorite he ever had used to sign himself, in his letters to his royal master, 'his majesty's dog and slave.' He was the worst rider ever seen, and thought himself the best. He was one of the most impertinent talkers (of the broadest Scotch) ever heard, and boasted of being unanswerable in all manner of argument. He wrote some of the most turgid and most wearisome treatises ever read—among others, a book upon witchcraft, in which he was a devout believer—and thought himself a prodigy of authorship. He thought, and said, that a king had a right to make and unmake what laws he pleased, and ought to be accountable to nobody on earth. This is the plain, true character of the personage whom the greatest men about the court praised and flattered to that degree that I doubt if there be anything more shameful in the annals of human nature!" James was the sixth king of Scotland of that name, and came to the throne of England, after experiencing many vicissitudes, March 24, 1603. In 1589 he married Anne, daughter of the King of Denmark. His gross, ill manners and bad personal appearance made an unfavorable impression on the English people. He had trouble with Parliament and with the religionists of his realm from the beginning of his reign. Glad to get rid of troublesome subjects, he readily granted charters for settlements in America; and in 1612 two "heretics" were burned in England, the last execution of that kind that occurred in that country. His son Henry, Prince of Wales, died the same year, and his daughter Elizabeth was married to the Elector Palatine in 1613. His treatment of Sir Walter Raleigh, whom he caused to be beheaded (October, 1618), was disgraceful to human nature; his foreign policy, also, was dis-

graceful to the English name. Fickle, treacherous, couceited, and arbitrary, his whole life was an example to be avoided by the good. Dickens's portrayal of his personal character is a fair picture of his reign so far as the king was concerned. It was during that reign that a new translation of the Bible was authorized (1604)—the English version yet in use. The vile Duke of Buckingham was James's special favorite for a long time; and he and the queen were suspected of causing the king's last illness, by poison.

**James II., KING OF ENGLAND**, was the seventh king of Scotland of that name. He was born in the Palace of St. James, London, Oct. 15, 1633; died at St. Germain, France, Sept. 16, 1701. During the civil war, in which his father lost his head, James and his brother Gloucester and sister Elizabeth were under the guardianship of the Duke of Northumberland, and lived in the palace. When the overthrow of monarchy appeared inevitable, in 1648, he fled to the Netherlands, with his mother and family, and he was in Paris when Charles I. was beheaded. He entered the French service (1651), and then the Spanish (1655), and was treated with much consideration by the Spaniards. His brother ascended the British throne in 1660 as Charles II., and the same year James married Anne Hyde, daughter of the Earl of Clarendon. She died in 1671, and, two years afterwards, James married Maria Beatrice Eleanor, a princess of the House of Este, of Modena, twenty-five years younger than himself. While in exile James had become a Roman Catholic, but did not acknowledge it until 1671. He had become a commander in the British navy, but the test-act of 1673 caused him to leave all public employments. Being sent to Scotland as head of the administration there, he treated the Covenanters with great cruelty. When Charles died, James became king (Feb. 6, 1685). The prime object of his administration was to overthrow the Constitution of England and give the control of the nation to Roman Catholics. His rule was vigorous—oftentimes tyrannous—and in less than three years almost the whole of his subjects detested him. The foreign policy of the government was made subservient to that of France. Finally, the announcement that the queen had given birth to a son brought on a political crisis. The people had been restrained from revolution by the belief that the government would soon fall into the hands of his eldest daughter, who had married the Protestant Prince William of Orange. Now that event seemed remote, and William was invited by leading men of the realm to invade England. He did so in November, 1788, when the king was abandoned by every one but the Roman Catholics—even by his daughter Anne, who was afterwards Queen of England. James fled to France, where he was received by Louis XIV. with open arms. He made efforts to regain his kingdom, but failed.

**James River.** (See *Amphibious Engagement on the James.*)

**James, THOMAS, ARCTIC DISCOVERIES OF.** In 1631 Thomas James was sent out by an association at Bristol to search for a northeast passage to India. With twenty-one men, in the ship *Henrietta Maria* (named in honor of the queen), he sailed May 3. On the 29th of June he spoke the ship of Captain Fox, who had been sent on the same errand by the king, and furnished with a letter to the Emperor of Japan, if he should find that country. Neither James nor Fox discovered the coveted "passage," but the former made valuable discoveries in Hudson's Bay. James was a man of science, and in his *Journal* he recorded his observations on rarities he had discovered, "both philosophical and mathematicall." James and his crew suffered terribly, for they passed a winter in those high latitudes, and returned in 1632.

**Jamestown.** On the 13th of May, 1607, more than one hundred Englishmen landed on a slightly elevated peninsula on the right bank of the "River of Powhatan," Virginia, forty or fifty miles from its mouth, chose the spot for the capital of a new colony, cleared the trees from the ground, and began the building of a village, which, in compliment to their king (James I.), they named Jamestown. They also gave his name to the river. The spot is more of an island than a peninsula, for the marshy isthmus that connects it with the mainland is often covered with water. The Rev. Robert Hunt, the pastor of the colony, preached a sermon and invoked the blessings of God upon their undertaking. Then, in the warm sunshine, and among the shadowy woods and the delicious perfume of flowers, the sound of the metal axe was first heard in Virginia. The first tree was felled for a dwelling on the spot first settled, permanently, by Englishmen in America. The Indians were at first hostile, and the settlement built a stockade. Their first church edifice there was very simple. "When I first went to Virginia," says Captain Smith, "I well remember we did hang an awning (which was an old sail) to three or four trees to shadow us from the sun; our walls were rails of wood, our seats unhewed trees, till we cut planks; our pulpit a bar of wood nailed to two neighboring trees; in foul weather we shifted into an old, rotten tent, for we had few better. . . . This was our church till we built a homely thing, like a barn, set upon crotchets, covered with rafts, sedge, and earth; so were also the walls. The best of our houses were of the like curiosity, but, for the most part, of far worse workmanship, that could neither well defend wind nor rain. Yet we had daily common prayer morning and evening, every Sunday two sermons, and every three months communion till our minister died." The church—"the homely thing, like a barn"—was burned while Captain Smith was a prisoner among the Indians (see *Pocahontas*), and he found the settlers building a house for the President of the Council. When, not long after, he was installed in that office, he ordered the "building of the palace to be stayed, as a thing needless," and the church to be rebuilt at once. Commissioners under the new charter (see *London Company*)

arrived at Jamestown in the spring of 1610. Of the four hundred and ninety persons left there by Smith the previous autumn, only sixty remained alive. They had refused to follow the admonitions of Smith to provide food for the winter, but relied upon the neighboring barbarians to supply them. When Smith departed, the Indians showed hostility and withheld corn and game. They matured a plan for the destruction of the settlers at Jamestown, when Pocahontas, like an angel of mercy, hastened to the settlement under cover of darkness, warned them of their danger, put them on their guard, and saved them. Terrible had been the sufferings of the colonists through the winter. More than four hundred had perished by famine and sickness in the space of six months. It was long after referred to by the survivors as "the starv-

Pocahontas was baptized and married a few years later. (See *Pocahontas*.) The fire that consumed the first church also destroyed a large portion of the town and surrounding palisades. There seems to have been another destructive fire there afterwards, for Smith, speaking of the arrival of Governor Argall, in 1617, says: "In Jamestown he found but five or six houses, the church down, the palisades broken, the bridge [across the marsh] in pieces, the well of fresh water spoiled, and the store-house used for a church." When, in 1619, Governor Yearly organized a representative government in Virginia, and soon afterwards families were established in the colony (see *Women in Virginia*), the settlement at Jamestown grew rapidly, and remote settlements were planted. Suddenly a great calamity overtook the colony. Powhatan

JAMESTOWN IN 1876.

ing time." The settlers were in the depths of despair when the commissioners arrived. Sir Thomas Gates, who was acting-governor, saw no other way to save the lives of the starving men than to abandon the settlement, sail to Newfoundland, and distribute them among the fishermen there. They were embarked in four pinnaces, but, at dawn, they met Lord Delaware, with ships, supplies, and emigrants, at the mouth of the river. All turned back, and, landing at deserted Jamestown, they stood in silent prayer and thanksgiving on the shore, and then followed Rev. Mr. Buckle (who had succeeded Mr. Hunt) to the church, where he preached a sermon in the evening twilight. The congregation sang anthems of praise, and were listened to by crouching savages in the adjacent woods. In that little chapel at Jamestown

was dead, and his successor, Opechancanough, always hostile, planned a blow for the extermination of the white people. It fell with terrible force late in March, 1622, and eighty plantations were reduced to eight. The settlers at Jamestown escaped the calamity, through the good offices of Chanco, a friendly Indian, who gave them timely warning of the plot, and they were prepared for defence. Jamestown became a refuge from the storm for the Western settlements. (See *Opechancanough*.) Sickness and famine ensued, and the colony was greatly reduced in number, for many left through fear. It soon recovered, and increased in strength. A new and substantial church was built, with a heavy brick tower, probably between the years 1620 and 1625. During Bacon's rebellion, in 1676, Jamestown—"the only village in all Vir-

ginia"—was entered by that leader, after driving away the governor, and, in a council of war, it was determined to burn the town, a rumor having reached Bacon that the royalist troops were coming upon him. The torch was applied just at twilight, and the Virginia capital was laid in ashes. Nothing remained the next morning but the brick tower of the church and a few solitary chimneys. (See *Bacon's Rebellion*.) The remains of that tower may still be seen there. They are about thirty feet high, the walls three feet thick, all of imported brick. Around it lie the ruined monuments of the dead buried in the church-yard. Jamestown was never rebuilt. It has remained in desolation over two hundred years.

**Jamestown Colony Saved.** Pocahontas, then about thirteen years old, having discovered a plot among her people to destroy the English colony at Jamestown, went, on a dark and dreary night, to the president (John Smith) and disclosed the design, so that the settlers there were on their guard. Some accident gave the barbarians such an elevated idea of the power and wisdom of the white people that hatred was changed to respect. An Indian, apparently dead from the effects of the fumes of charcoal, was restored by the application of a little vinegar and alcohol. This struck the Indians with astonishment, as a miracle. The barbarians had not yet seen gunpowder. At about that time a small quantity accidentally exploded and killed two or three Indians. Powhatan and some of his people came to Smith with presents, and offered the colonists unfeigned friendship.

**Jamestown, SIEGE OF (1676).** Governor Berkeley, who had been driven from Jamestown by Bacon (see *Bacon's Rebellion*), collected a force of nearly one thousand Accomacians, by liberal promises of pay and plunder, and returned, in two ships and sixteen sloops, and entered his capital. Bacon collected a new force and laid siege to Jamestown (September, 1676). His numbers were inferior to those of the governor, and, fearing a sortie while completing fortifications across the neck of the peninsula, he sent out horsemen to bring the wives of several of the principal men of the colony, who were in Jamestown with the governor. These he placed in full view of their husbands, in the morning, on the top of a small work he had cast up in the night, and kept them there until he had completed his works, as a defence against the shots of the enemy. When the works were finished and the ladies were removed, Berkeley's men made a sally, but were repulsed. The governor could not depend upon his troops, and made a hasty retreat by night, in his vessels. Bacon entered the town the next morning, and, to prevent the governor's return, he laid Jamestown in ashes. It consisted, besides the church and state-house, of about eighteen houses, mostly built of brick.

**Jamestown, SKIRMISH NEAR (1781).** Cornwallis prepared to cross the James River at Jamestown, when he found the republican

troops pressing him hard (see *Steuben in Virginia*), for Sir Henry Clinton had ordered him to send three thousand of his troops to New York. On July 6 Wayne sent out a detachment to capture a British field-piece, and they boldly resisted the attack of a large portion of Cornwallis's army as the former fell back to Lafayette's main force near the Green Spring Plantation. There a sharp skirmish ensued, in which the marquis had a horse shot under him, and each party lost about one hundred men. The blow was so severe that Cornwallis hastened across the river (July 9), and marched, without further molestation, to Portsmouth.

**Japan, INTERNATIONAL INTERCOURSE WITH.** Japan, like China, had always been a sort of sealed kingdom to the commerce of the world. The foundation of the states of California and Oregon, on the Pacific coast, suggested the great importance of commercial intercourse with Japan, because of the intimate relations which must soon exist between this coast and the East Indies. This consideration caused an expedition to be fitted out by the United States government in the summer of 1852 to carry a letter from the President (Mr. Fillmore) to the sovereign of Japan soliciting the negotiation of a treaty of friendship and commerce between the two nations, by which the ports of the latter should be thrown open to American vessels for purposes of trade. For this expedition seven ships of war were employed. They were placed under the command of Commodore M. C. Perry, a brother of the victor on Lake Erie. The diplomatic portion of the mission was also intrusted to Commodore Perry. He did not sail until November (1852). The letter which he bore to the emperor was drafted by Mr. Webster before his decease, but countersigned by Edward Everett, his successor in office. Perry carried out many useful implements and inventions as presents to the Japanese government, including a small railway and equipments, telegraph, etc. He was instructed to approach the Emperor of Japan in the most friendly manner; to use no violence unless attacked; but if attacked, to let the Japanese feel the full weight of his power. Perry delivered his letter of credence, and waited some months for an answer, without being permitted to land on the shores of the empire. Meanwhile he visited and surveyed the Loo Choo Islands. In February, 1854, he returned to the Bay of Jeddo, and finally effected a landing and commenced negotiations, which were happily successful. The treaty then made stipulated that ports should be thrown open to American commerce, to a limited extent, in different Japanese islands; that steamers from California to China should be furnished with supplies of coal; and that American sailors shipwrecked on the Japanese coasts should receive hospitable treatment. So Japan was first opened to friendly relations with the Americans. Before this treaty the Dutch had monopolized the trade of Japan. Subsequently a peculiar construction of the treaty on the part of the Japanese authorities, in relation to the permanent residence of Americans there, threat-

ened a disturbance of the amicable relations which had been established. The matter was adjusted, and in 1860 the first embassy from Japan visited the United States. It was an imposing array of Japanese officials. There was great opposition in the empire to this intercourse with "the barbarians." Civil war ensued. A rapid change now marked public opinion in Japan in regard to foreigners; and from that time the intimate relations, social and commercial, between the United States and Japan have constantly increased, with results wonderfully beneficial to both countries.

**Japanese Embassy.** At the beginning of the year 1872 the government of Japan sent an embassy to the United States to inquire about the renewal of former treaties. It consisted of twenty-one persons, composed of the heads of the several departments of the Japanese government and their secretaries. Among them was an imperial prince—Mr. Mori—who came to represent Japan at Washington as *chargé d'affaires*. Also twelve students. The mission arrived at Washington at the beginning of March. Mr. Mori was the first minister ever sent by his government to reside in a foreign country.

**Jasper, SERGEANT.** During the hottest of the attack of the British fleet on Fort Sullivan (see *Charleston, Defence of*), the South Carolina flag that waved over it fell to the ground outside of the fort, its staff having been cut in two by a cannon-ball. Sergeant William Jasper, of Moultrie's regiment, a native of South Carolina, and about twenty-six years of age, seeing the flag fall, leaped down from one of the embrasures, seized the ensign, climbed back, fixed the colors to a sponge-staff, mounted the parapet, stuck the improvised flag-staff in the sand of one of the bastions, and returned to his place in the fort. A few days afterwards Governor Rutledge took his own sword from his side and presented it to Jasper. He also offered him a lieutenant's commission, which the young man modestly declined because he could neither read nor write, saying, "I am not fit to keep officers' company—I am but a sergeant." He was given a sort of roving commission by Colonel Moultrie, and, with five or six men, he often brought in prisoners before his commander was aware of his absence. An earnest Whig lady of Charleston—Mrs. Susannah Elliot—presented Jasper's regiment with a stand of colors wrought with her own hands. They were shot down at the assault on Savannah (1779), and in trying to replace them on the parapet of a redoubt Jasper was mortally wounded, but brought them off. A county in Georgia and a square in Savannah bear his name.

**Jay, JOHN,** was born in New York, Dec. 12, 1745; died at Bedford, N. Y., May 17, 1829. He was of Huguenot descent. Graduated at King's (Columbia) College in 1764, he was admitted to the bar in 1768, and formed a partnership with Robert R. Livingston. In 1774 he was a delegate in the First Continental Congress, and the same year he married a daughter of William

Livingston, of New Jersey. In that Congress, though the youngest member but one, he took a conspicuous part, being the author of the "Address to the People of Great Britain." His

JOHN JAY.

facile pen was often employed in framing documents in the Congress of 1775. Early in 1776 Mr. Jay left Congress and engaged in the public affairs of his own state, being a leading member of the Provincial Congress in 1776. He wrote the able address of the convention at Fishkill in December, 1776; reported a bill of rights to the New York Constitutional Convention in March, 1777; and was the chief author of the first constitution of the State of New York. After assisting in putting in motion the machinery of his state government, and being made a judge, he entered Congress again, late in 1778, and became president of that body. In September, 1779, he was sent to Spain to negotiate a loan. Mr. Jay was one of the commissioners for negotiating a treaty of peace with Great Britain (which see). He returned to New York in 1784, and was Secretary for Foreign Affairs from that year until the organization of the government under the national Constitution. Mr. Jay was associated with Hamilton and Madison in writing the series of articles in support of the Constitution known collectively as *The Federalist*. Washington appointed Jay the first chief-justice of the Supreme Court of the United States. In 1794 he went on a mission to England (see *Jay's Treaty*); and from 1795 to 1801 he was Governor of the State of New York, under whose administration slavery was abolished. This was the last public office held by Mr. Jay.

**Jay's Mission to England.** On the 7th of April, 1794, a motion was made in the House of Representatives that all commercial intercourse with Great Britain and her subjects be suspend-

ed, so far as respected all articles of the growth or manufacture of Great Britain or Ireland, until the surrender of the Western posts and duo compensation for all losses and damages growing out of British aggressions on our neutral rights should be made. This motion, if adopted, would lead directly to war. Its adoption seemed probable, and Washington, to avert the calamitous consequences, proposed to send a special minister to England to negotiate an amicable settlement of the existing disputes. There were grave charges of violations of the treaty of 1783 made by the two parties against each other. Washington desired to send Hamilton on the mission. Violent opposition to this was made by his political enemies, whose hatred and jealousy were intense. Fearing Hamilton might not have the confirmation of the Senate, Washington nominated John Jay (April 16), which nomination was confirmed April 19. The special minister arrived in England in June, where he was received with great courtesy by the British government. He negotiated a treaty which was not wholly satisfactory to his countrymen, closing his labors on Nov. 19. (See *Jay's Treaty*.)

**Jay's Treaty.** In April, 1794, John Jay was sent to the British court, as envoy extraordinary, to negotiate a treaty that should settle all existing disputes between the two governments. He arrived in London in June, and was received graciously by the ministry. Lord Grenville, then at the head of foreign affairs, expressed great anxiety to bring the negotiations to a successful issue. There was a wide difference of views concerning matters in dispute. The Americans complained that, contrary to the provisions of the treaty of peace (1783), a large number of negroes had been carried off by the evacuating armies; and for this loss compensation was demanded for the owners. They complained, also, of the detention of the Western posts, which was the main cause of the hostility of the Northwestern tribes. They also alleged numerous violations of their neutral rights, especially on the high seas, such as the impressment of seamen and the exclusion of American shipping from the trade of the British West Indies. There were other complaints on the part of the Americans; but the matters more immediately provocative of war were the disputed questions of neutral rights and the detention of the Western posts. Deeming it wise to adjust these two important difficulties, Jay thought it best to yield, temporarily, other considerations, or leave them for future adjustment, and he was induced to sign a treaty (Nov. 19, 1794) defective in some respects and objectionable in others. It provided for the collection of British debts in the United States contracted before the Revolution, but it did not secure indemnity to those who lost slaves. It secured indemnity for unlawful captures on the high seas, and the evacuation of the military posts on the frontiers yet held by the British. These were to be surrendered on June 1, 1796, the present residents to have the option of removing or of becoming American citizens.

There was to be a mutual reciprocity of inland trade and intercourse between the North American territories of the two nations, including the navigation of the Mississippi; but it did not extend to the Hudson's Bay Company, nor to the admission of American vessels into the harbors of the British North American colonies, nor to the navigation of the rivers of those colonies below the highest port of entry. These were the principal features of the first ten articles of the treaty, which were to be perpetual. Eighteen others, of the nature of a treaty of commerce, were limited to two years. They provided for the admission of American vessels into British ports in Europe and the East Indies on terms of equality with British vessels; but no terms were made concerning the East India coasting trade, or the trade between Europe and the British West Indies. There were restrictions upon the American trade to the British West Indies; and British vessels were to be admitted to American ports on terms of the most favored nations. Privateers were to give bonds to respond to any damages they might commit against neutrals, and other regulations of that service were made. The list of contraband articles was clearly defined. No vessel attempting to enter a blockaded port was to be captured unless she had first been notified and turned away. Neither nation was to allow enlistments within its territory by any third nation at war with the other; nor were the citizens or subjects of either to be allowed to accept commissions from such third nation, or to enlist in its service, on penalty of being treated as pirates. Ships of war of the contracting parties were to be mutually admitted in a friendly manner into the ports of each other, such vessels to be free from any claim of search, but were to depart as speedily as might be. Other and stringent regulations were made concerning privateers. In case of rupture or war, the citizens or subjects of either nation resident in the territories of the other were to be allowed to remain and to continue their trade so long as they behaved peaceably. They might be ordered off, in case of suspicion, on twelve months' notice, or without any notice, if detected in violations of the laws. No reprisals were to be ordered by either party till satisfaction had first been demanded. Fugitives from justice charged with murder or forgery were to be mutually given up. This treaty was laid before the Senate early in June, 1795, and its ratification was agreed to on the 14th. The ratification was completed by Washington's signature to it on Aug. 18.

**Jay's Treaty before the House of Representatives.** When the President had proclaimed the treaty as the law of the land, he, according to promise, sent a copy of it (March 2, 1796) to the House. Its appearance was the beginning of a violent debate in that body, which turned upon the question whether the House possessed discretionary power to carry the treaty into execution or not at its pleasure. The debate arose on a motion of Edward Livingston, of New York, calling upon the President

for his instructions to Jay and other papers relating to the treaty. After about thirty speeches, in a debate of three weeks, which grew warmer and warmer the longer it lasted, the resolution was adopted (March 24) by a vote of sixty-two to thirty-seven. The President consulted his cabinet, and they unanimously decided that the House had no right to make such a call, as they were not a part of the treaty-making power. They also decided that it was not expedient for the President to furnish the papers, for the call should be considered as an unfounded claim of power on the part of the House to interfere with the privileges of the President and Senate. The President therefore declined to comply with the request of the House, giving his reasons in a special message. Resolutions asserting the majesty of the House were introduced (April 6), and were supported by Madison. These resolutions were adopted by a vote of fifty-seven to thirty-five, and the subject of the "British treaty" was a staple topic of debate for some time afterwards. Finally (April 30) the House passed a resolution—fifty-one to forty-eight—that it was expedient to pass laws for carrying the treaty into effect.

**Jay's Treaty, OPPOSITION TO.** The leaders of the Democratic party had opposed the treaty from its inception, and the Democratic societies (which see) and newspapers had resolved to oppose and attack it whatever might be its provisions. The treaty was concluded at London on Nov. 19, 1794. It reached the President in March, 1795, after the adjournment of Congress. The Senate was convened, in special session, to consider it, early in June, 1795. After a debate for a fortnight, in secret session, a vote of twenty to ten—precisely a constitutional majority—advised (June 24) the ratification of the treaty, excepting the article which related to the renunciation by the Americans of the privilege of transportation of sugar, molasses, coffee, cocoa, and cotton in the West India trade. Cotton was then just promising to be of vast importance in the carrying-trade (see *Cotton in the United States*), and such an article was wholly inadmissible. The President had determined, before the meeting of the Senate, to ratify the treaty; and when it was laid before the cabinet all agreed with him excepting the Secretary of State (Edmund Randolph, of Virginia), who raised the point that by the ratification, before an obnoxious British Order in Council (which see) concerning neutrals should be repealed, the British claim to the right of search and impressment (which see) would be conceded by the Americans. Hamilton, who had been consulted, advised the ratification, but to withhold the exchange of ratifications until that order should be repealed. The Senate had removed the seal of secrecy from their proceedings, but had forbidden any publication of the treaty itself. Statements concerning the provisions of the treaty soon appeared. The Democratic societies (which see) and newspapers had resolved to oppose and attack the treaty whatever might be its provisions. They had opposed the mission to negotiate it. After it was received Randolph

revealed enough of its character to give a foundation for many attacks upon it in the newspapers. It was denounced as a psillanunimous surrender of American rights. In order to prevent misrepresentations, and to elicit the expressions of the people, Washington caused the whole treaty to be published. He had been anticipated by an unfaithful Senator from Virginia (Stevens Thomson Mason), who caused to be published a full abstract of it in the *Aurora*, a violent opponent of the government. A day or two afterwards a perfect copy was furnished by Mason. Concerning this transaction a writer said:

"Ah, Thomson Mason! long thy fame shall rise  
With Democratic incense to the skies.  
Long shall the world admire thy manly soul,  
Which scorned the haughty Seate's base control:  
Came boldly forward with thy weighty name,  
And gave the treaty up for public game!"

A mad, seditious cry went over the land from the opposition. In several cities mobs threatened personal violence to the supporters of the treaty. Hamilton was stoned at a public meeting in New York, while speaking in the open air. "These are hard arguments," he said, as a stone grazed his forehead. The British minister at Philadelphia was insulted; and in Charleston the British flag was trailed in the dust of the streets. Jay was denounced as a traitor; and in Virginia *disunion* was recommended as a cure for political evils. The Democratic societies and orators put forth claims for sympathy for France. "She has a government congenial to our own. Citizens, your security depends on France. Let us unite with her and stand or fall together!" shouted opposition orators throughout the country. The Democrats adorned their hats with the French cockade. Jay was burned in effigy in many places, and longings for the guillotine were freely expressed in public assemblies. For many years afterwards Jay's treaty was made an efficient war-club in the hands of the Republican or Democratic leaders.

**Jay's Treaty out of Congress.** While debates concerning the treaty were rife in Congress, an apprehension spread among the people, especially the mercantile class, that war with Great Britain would be the consequence of the rejection of the treaty. This thought inspired serious alarm, and petitions began to pour into Congress from all portions of the country in favor of its ratification. Insurance could no longer be obtained against capture on the high seas. Very speedily counter-petitions flowed in, and the whole country, especially the business communities, was fearfully agitated. Brand, the British chargé d'affaires, added fuel to the flame by intimating that if the House should refuse to pass laws for the execution of the treaty, the Western posts would not be given up. This again aroused violent debates in the House; and so the war of words went on in and out of Congress—the chief speaker among the Republicans against the treaty being Albert Gallatin, and in favor of it, Fisher Ames—until the close of April (1796), when the resolution declaring it expedient to pass the laws neces-

sary for carrying the treaty into effect was passed, and the agitation soon ceased.

**Jealousy of Chartered Colonies.** The first ministry of George I., annoyed by obstacles which the colonial charters opposed to absolute imperial control, attempted (1715) to "regulate the chartered governments." The excitement raised by the bill for this purpose caused the ministry to drop it; but they sent orders to the colonial governors not to consent to any laws which would affect British trade, unless with clauses suspending their operations till they received the royal assent. In Rhode Island, Connecticut, and the Carolinas, such assent was not necessary to the enactment of laws; and hence the disposition, so repeatedly exhibited, to strip those provinces of their charters. Five years later (1720) an agent sent to England by the people of the Carolinas represented the "confused, negligent, and helpless government of the proprietaries." Taking advantage of this, the old act for regulating the "chartered governments" was revived. It was again abandoned, but an order for vacating the Carolina charters was issued. Pending the process the administration of the Carolinas was assumed by the crown. It was at this time that Jeremiah Dummer, agent of the Province of Massachusetts, published in London his *Defence of the New England Charters*.

**Jealousy of old Army Officers.** When the army was organized for war in 1812, military officers of the Revolution were chosen to fill the higher places, and they generally failed, not only on account of incapacity, but because of their jealousy of each other, and of younger officers. Unfortunately for the country, President Madison appointed John Armstrong Secretary of War at the beginning of 1813. He was unfitted for his place by his temperament and imperious manner, and was always offended by a suggestion, as if it were an impertinent interference. He snubbed the patriotic Jackson (see *Tennessee*), and drove Harrison from the army; and in the summer of 1813 he called the incompetent Wilkinson from the Gulf region to take the place of Dearborn in command of the forces on the northern frontier. The change was of no value to the cause. Dearborn withdrew from the service before Wilkinson's arrival, leaving the command at Fort George with General Boyd, the senior officer on that frontier. Trouble soon ensued. Armstrong was as much infatuated with the idea of conquering Canada as his predecessors had been; and he conceived a plan for an invasion by the united forces of the armies of the Centre and the North. He ordered Wilkinson to Sackett's Harbor to make arrangements for it. Wilkinson differed with Armstrong about the plan, and bitter enmity between them was soon aroused. The fiery spirit of the Secretary of War could not brook contradiction. There was another imperious and hot spirit then in the field—General Wade Hampton, of South Carolina, one of Marion's partisan officers in the Revolution. He had succeeded Bloomfield in command of the Army of the

North, on Lake Champlain and its vicinity. He was a thorough-going aristocrat. His landed possessions were princely in extent, and he counted his slaves by thousands. He hated Wilkinson intensely. When that officer, on his arrival at Albany, sent his first order to Hampton, the anger of the fiery Southerner was fiercely kindled. He wrote to Armstrong an insolent letter, insisting that his was a separate and independent command, and tendering his resignation in the event of his being ordered to act under Wilkinson. The latter, at the same time, was as jealous of Armstrong, who, he feared, might trample upon his prerogatives; and on the 24th of August (1813) he wrote to the Secretary of War: "I trust you will not interfere with my arrangements, or give orders within the district of my command, but to myself, because it would impair my authority and distract the public service. Two heads on the same shoulders make a monster." This was reasonable; but Armstrong was highly offended, and he finally went to Sackett's Harbor to regulate matters himself, and actually established the War Department there for a while. The jealousies and bickerings of these old officers of the Continental army were highly detrimental to the public service.

**Jealousy of Washington.** After the affair at Trenton the whole country rang with the praises of Washington, and the errors of Congress in not heeding his advice in the construction of the army were freely commented upon. That body was now inferior in its material to the first and second Congresses, and was cursed with cliques and factious; and there were protests among the members, who shook their heads in disapprobation of the popularity and power with which Washington was invested. To a proposition to give him power to name generals John Adams vehemently protested, saying: "In private life I am willing to respect and look up to him; in this House I feel myself to be the superior of General Washington." On Feb. 24, 1777, when mere "ideal reinforcements" were voted to Washington, after an earnest debate, in which "some of the New England delegates and one from New Jersey showed a willingness to insult him," they expressed an "earnest desire that he would not only curb and confine the enemy within their present quarters, but, by the divine blessing, totally subdue them before they could be reinforced." To this seeming irony Washington calmly responded: "What hope can there be of my effecting so desirable a work at this time? The whole of our number in New Jersey fit for duty is under three thousand." The resolution was carried by a bare majority of the states present—Virginia and four New England states. The jealous men were few; the friends and admirers were many. William Hooper, of North Carolina, wrote to Robert Morris: "When it shall be consistent with policy to give the history of that man [Washington] from his first introduction into our service; how often America has been rescued from ruin by the mere strength of his genius, conduct, and courage; encountering

every obstacle that want of money, men, arms, ammunition, could throw in his way; an impartial world will say, with you, he is the greatest man on earth. Misfortunes are the elements in which he shines; they are the groundwork on which his picture appears to the greatest advantage. He rises superior to them all; they serve as forts to his fortitude, and as stimulants to bring into view those great qualities which his modesty keeps concealed."

**Jefferson and Dickinson.** Thomas Jefferson and John Dickinson were patriots of purest mould, but of different constituents in temperament. The first was bold, impassioned, and aggressive; the second was cautious, calm, and disposed to act on the defensive. When the proclamation of King George III. (which see) arrived in America, Jefferson took fire, and exclaimed, "There is not in the British empire a man who more cordially loves a union with Great Britain than I do; but, by the God that made me, I will cease to exist before I will yield to a connection on such terms as the British Parliament propose; and in this I speak the sentiments of America." But Dickinson still adhered to the belief that the petition he had drafted (see *Petition to the King*, 1775) had not been rejected, and that proofs of a conciliatory disposition would be manifest in his speech at the opening of the session of Parliament. In this he was disappointed; but his caution made him so conservative that when the question of independence was voted upon he was opposed to the measure.

**Jefferson Caricatured.** Caricature was very little known in America before the close of the eighteenth century, excepting such as came over from England and France. It was sometimes attempted here with good effect. One of the best issued in the United States in the last decade of that century was one aimed at Jefferson. It forms a frontispiece to a pamphlet entitled *Observations on the Dispute between the United States and France*, by Robert G. Harper, without date, in possession of the writer. It was probably issued in the summer of 1797, at the time when the public mind was much excited by the publication in American newspapers of Jefferson's letter to Mazzei (which see). It alludes to Jefferson's alleged "infidelity" in theological opinions, and his attachment to the course of the French Revolutionists, who in the "Reign of Terror" had developed into a terrible scourge. Upon an "Altar to Gallic Despotism," entwined by a serpent, before which Jefferson is kneeling in devotion, are laid various papers, so marked as to indicate his lack of orthodoxy in theology—"Godwin," "Age of Reason," "J. J. Rousseau," "Helvetius," "Voltaire," and the

*Aurora* and *Chronicle*, the two latter Democratic newspapers. Around the altar are seen bags of offerings, marked "Portugal Oranges Bribe," "American Spoliations," "Spain," "Venice," "Sardinia," "Dutch Reserves," "Flanders." Back of these is seen the black demon of the French Revolution, about to seize a dagger. Over all is the American eagle soaring, with a scroll marked "Constitution—Independence—U. S. A." in one talon, which it has snatched from the altar on which Jefferson had placed it, while the other talon is defending the scroll from the enraged worshipper who is trying to seize it. From Jefferson's hand is fall-

CARICATURE OF JEFFERSON.

ing a letter upon which are the words "To Mazzei."

**Jefferson elected President (1800).** The leaders of the two great parties nominated their respective candidates in 1800, the Federalists choosing to be voted for John Adams and Charles Cotesworth Pinckney; the Democrats, Thomas Jefferson and Aaron Burr. There was a breach in the Federal party, owing to extended dislike of Adams, and the Democrats used the Alien and Sedition Laws with powerful effect against him. The Federalists were defeated. Jefferson and Burr had each seventy-three votes in the electoral colleges; and, according to the provisions of the Constitution, the election was carried into the House of Representatives. (See *Election for President and Vice-President*.) There exciting scenes occurred. Two or three members, too sick to appear otherwise, were brought to the house on beds. For seven days the hal-

loting went on. After it was ascertained that a Democrat was elected, the Federalists all voted for Burr, as being less objectionable than Jefferson; but the friends of the latter were stronger than all opposition, and he was elected. The whole Federal party were mortified and humiliated by the triumph of Jefferson, their arch enemy. He was inaugurated March 4, 1801, and appointed James Madison Secretary of State; Henry Dearborn, Secretary of War; Levi Lincoln, Attorney-general; and before the meeting of Congress in December he appointed Albert Gallatin Secretary of the Treasury, and Robert Smith Secretary of the Navy.

Jefferson, THOMAS, LL.D., the third President of the United States, was born at Shadwell, Va., April 2, 1743; died at Monticello, July 4, 1826. He was educated at the College of William and Mary; studied law under George Wythe,

THOMAS JEFFERSON.

and was admitted to the bar in 1767. From 1769 to 1775 Mr. Jefferson was an active member of the Virginia House of Burgesses. In that body he introduced a bill empowering masters to manumit their slaves. On the 1st of January, 1771, he married Martha Skelton, a rich and beautiful young widow of twenty-three. He was a member of the Committee of Correspondence of Virginia, which he assisted in forming, and was engaged in active public life until his retirement from the presidency of the United States in 1809, when he was sixty-four years of age. In 1774 he wrote his famous *Summary View of the Rights of British America*, which, it is believed, procured for him a place in the list of American traitors denounced by the British Parliament. He had taken an active part against the Boston Port Bill (which see). Mr. Jefferson took his seat in the Continental Congress in June, 1775, when he was thirty-two years of age. In that body he served on the most important committees and in drawing up state papers. On the committee to draft the Declaration of Inde-

pendence, to Mr. Jefferson was assigned the duty of writing that important paper, which he advocated and signed. True to the proclivities of his nature in favor of human liberty, he introduced a clause censuring slavery, which was stricken out. In October, 1776, he retired from Congress to take part in his own state affairs, and for two years and a half he was employed in revising the laws of Virginia and procuring some wise enactments, such as abolishing the laws of primogeniture, giving freedom to convicts, etc. During the entire war for independence Jefferson was very active in his own state, serving as its governor from June, 1779, to 1781. At the time of his retirement from the chair, Cornwallis, invading Virginia, desolated Jefferson's estate at Elk Hill, and he and his family narrowly escaped capture. Mr. Jefferson was again in Congress in 1783, and, as chairman of a committee, reported to that body the definitive treaty of peace with Great Britain. Assisting the suggestions of Gouverneur Morris, he proposed and carried a bill establishing our (present) decimal system of currency. In 1785 he succeeded Dr. Franklin as minister at the French court, where he remained until 1789, when he returned and took a seat in Washington's cabinet as Secretary of State. In France he had published his *Notes on Virginia*, and he had there become thoroughly imbued with the spirit of the French Revolutionists previous to the bloody era of 1793. Not finding at home the same enthusiastic admiration of the French people in their struggle against "the conspiracy of the kings," he became morbidly suspicious of a monarchical party in the United States that might overthrow the government. He formed and led an active party called "Republican" or "Democratic," and there was much acrimonious feeling soon engendered between that and the Federal party, of which Colonel Alexander Hamilton was the active leader. Mr. Jefferson was an able leader of the Democratic party, and secured so large a following, that in 1800 he was elected President, and served eight years, retiring in March, 1809, when he withdrew from public life and retired to his seat at Monticello, near Charlottesville, Va. Among the important events of his administration were the purchase of Louisiana, an exploration of the continent from the Mississippi River to the Pacific Ocean, and difficulties with France and Great Britain on account of their violation of the rights of neutrals. Mr. Jefferson was the founder of the University of Virginia (1819) at Charlottesville, Va., and was its rector until his death, which occurred on the same day, and almost at the same hour, as that on which John Adams died, who was his associate in drafting the Declaration of Independence, and signing it, just fifty years before. Jefferson was a keen politician, though no speaker; a man of great learning and fine scholarship as well as scientific attainments, and in conversation extremely attractive. His house was the resort of learned men of his own country and of Europe. In person he was tall and slender, with sandy hair, florid complexion in his youth, and

brilliant gray eyes, a little inclining to brown. He was buried in a family cemetery near his house at Monticello, and over his grave is a granite monument, bearing the inscription, written by himself, and found among his papers after his death, "Here lies buried THOMAS JEFFERSON, author of the Declaration of Independence,

JEFFERSON'S SEAL

of the Statute of Virginia for Religious Freedom, and father of the University of Virginia." Mr. Jefferson regarded slavery as a moral and political evil, and did much to alleviate its hardships. His correspondence with men of all classes was voluminous, for he was a fluent writer and had a very wide acquaintance. Few men have exerted as much influence in establishing the free institutions of the United States as Thomas Jefferson. He adopted for the motto of his private seal that of Oliver Cromwell—"Rebellion to tyrants is obedience to God."

**Jefferson's Escape from Tarleton.** When, in the early summer of 1781, Cornwallis was overrunning a portion of Virginia, he sent Tarleton with his cavalry to capture the Virginia Assembly sitting at Charlottesville, and also Governor Jefferson, who lived two miles from that place. On the way Tarleton destroyed twelve wagon-loads of clothing intended for Greene's army in North Carolina. Within ten miles of Charlottesville Tarleton detached Captain McLeod, with a party of horsemen, to capture Governor Jefferson at Monticello, while he pressed forward. On his way he captured some members of the Legislature, but when he arrived at Charlottesville the remainder, forewarned, had fled and escaped. McLeod's expedition to Monticello was quite as unsuccessful. Jefferson was entertaining several members of the Legislature, including the presiding officers of both houses, when the British cavalry were seen coming up the winding road towards the mansion. Jefferson immediately sent away his family, while he and the others escaped on horseback. Jefferson had not been gone ten minutes when McLeod rode up and found the house deserted.

**Jefferson's Policy.** Soon after his inauguration, Jefferson indicated his policy in a letter to Nathaniel Macon, in Congress, as follows: "1. Levees are done away with. 2. The first communication to the next Congress will be, like all subsequent ones, by message, to which no answer will be expected. 3. Diplomatic establishments in Europe will be reduced to three ministers. 4. The compensation of collectors depends on you [Congress], and not on me. 5. The army is undergoing a chaste reformation. 6. The navy will be reduced to the

legal establishment by the last of this month [May, 1801]. 7. Agencies in every department will be revived. 8. We shall push you to the uttermost in economizing. 9. A very early recommendation has been given to the Postmaster-general to employ no traitor, foreigner, or Revolutionary Tory in any of his offices." Three days after his inauguration he wrote to Monroe: "I have firmly refused to follow the counsels of those who have desired the giving of offices to some of the Federalist leaders in order to reconcile them. I have given, and will give, only to Republicans under existing circumstances." The doctrine, "To the victor belong the spoils," which has been accepted as orthodox in the politics of our Republic ever since, was then first promulgated.

**Jeffreys, SIR GEORGE, CONDUCT OF.** Sir George Jeffreys was Lord Chief-justice of England under Charles II., and was of a bloodthirsty and cruel disposition, delighting in the severe punishment of the enemies of the king. After the rebellion of the Duke of Monmouth (1685) was crushed he held courts in the insurgent districts which are known in history as the "Bloody Assizes." The partisans of Monmouth in arms were full six thousand in number, many of them persons of great respectability. They were brought before the court of the chief-justice by scores. He seemed to delight in convicting and punishing them. He caused three hundred and twenty to be hanged or beheaded, and more than eight hundred to be sold as slaves in the West Indies and Virginia. Many of the latter were given to court favorites that they might sell them on speculation or extort money for their pardon from those who had any to give. In this nefarious business Lord Effingham, Governor of Virginia, engaged; and many men of culture, as well as good mechanics, were sent to Virginia to be sold as slaves, and so added excellent social materials for society in that colony. "Take care," wrote King Charles to Effingham, "that they continue to serve for ten years at least, and that they be not permitted in any manner to redeem themselves by money or otherwise until that term be fully expired." The Assembly refused to make laws to that end; and when, in 1689, the Stuarts were driven from the throne of England, these people were pardoned, and the Virginians received them with open arms as brethren. (See *Slavery of White People Decried in Massachusetts.*)

**Jenkinson, CHARLES,** was an adroit, untiring, and most active politician. He was private secretary to Lord Bute when he was the English premier, and, when he resigned, Jenkinson became the principal Secretary of the Treasury. He was an Oxford scholar, and becoming personally acquainted with George III., when he was Prince of Wales, became devoted to his service. He had great tact in dealing with delicate personal matters, and so was fitted to please all, or, rather, not to offend any. He was chiefly instrumental in pushing forward the English ministry in their schemes for taxing the English-American colonists, and was really the au-

thor of Townshend's obnoxious bills and Grenville's Stamp Act. He held a place with Lord North at the Treasury Board in 1768, and was the chief instigator of that minister's bills for asserting the absolute authority of the Parliament over the American colonies.

**Jenkinson's Ferry, BATTLE AT.** General Steele, at Little Rock, Ark., tried to co-operate with the Red River expedition, but was unable to do so effectually, for he was confronted by a heavy body of Confederates. He started southward (March 23, 1864) with 8000 troops, horse and foot. He was to be joined by General Thayer at Arkadelphia with 5000 men, but this was not then accomplished. Steele pushed on for the purpose of flanking Camden and drawing out Price from his fortifications there. Early in April, Steele was joined by Thayer, and on the evening of the 15th they entered Camden as victors. Seriously menaced by gathering Confederates, Steele, who, by the retreat of Banks (see *Red River Expedition*), had been released from duty elsewhere, moved towards Little Rock. He crossed the Washita on the night of April 26. At Jenkinson's Ferry, on the Sabine River, he was attacked by an overwhelming force led by E. Kirby Smith in person. Steele's troops, though nearly famished, fought desperately during a most sanguinary battle that ensued. Three times the Confederates charged heavily, and were repulsed. The battle was fought by infantry alone, and the Nationals finally drove their adversaries and gained a complete victory. Then they crossed the river and moved on towards Little Rock. In the struggle at Jenkinson's Ferry the Confederates lost over 3000 men, including more than 300 officers. The Nationals lost 700 killed and wounded. Steele's broken army reached Little Rock on May 2.

**Jenks, JOSEPH,** an early American inventor, was born near London; died at Lun, Mass., in 1683. He came to America in 1645, and is supposed to have been the first brass-founder on this continent. On May 6, 1648, he secured a patent from the Massachusetts Legislature for a water-mill and for a saw-mill. In 1652 he made the dies, it is said, for the silver coinage—the "pine-tree" money of that province. In 1654 he made a fire-engine for Boston, and in 1655 he received a patent for an improved method of manufacturing scythes. In 1667 he had an appropriation for the encouragement of wire-drawing.

**Jersey Prison-ship.** (See *Prisons and Prison-ships*.)

**Jesuit Missionaries among the Six Nations.** There were twenty-four different Jesuit missionaries among the Six Nations between 1657 and 1769. Their names and places of service are as follows: Paul Ragueneau, at Onondaga, from July, 1657, to March, 1658. Isaac Jogues, prisoner among the Mohawks from August, 1642, to August, 1643; a missionary to the same nation in 1646, and killed in October of the same year. Francis Joseph Le Mercier, at Onondaga, from May 17, 1656, to March 20, 1658. Francis Duperon, at Onondaga, from 1657 to 1658.

Simon Le Moyne, at Onondaga, July, 1654; with the Mohawks from Sept. 16, 1655, until Nov. 9 of the same year; then again in 1656, until Nov. 5; again there (third time) from Aug. 26, 1657, until May, 1658; at Onondaga, from July, 1661, until September, 1662; ordered to the Senecas in July, 1663, but remained at Montreal. He died in Canada in 1665. Francis Joseph Bressani, a prisoner among the Mohawks from April 30 to Aug. 19, 1644. Pierre Joseph Mary Chaumont, at Onondaga from September, 1655, until March 20, 1658. Joseph Anthony Ponceat, was a prisoner among the Iroquois from Aug. 20 to Oct. 3, 1652; started for Onondaga Aug. 28, 1657, but was recalled to Montreal. René Ménard was with Le Mercier at Onondaga from 1656 to 1658, and afterwards among the Cayugas. Julien Garnier, sent to the Mohawks in May, 1668, passed to Onondaga, and thence to the Senecas, and was engaged in this mission until 1683. Claude Dablon, at Onondaga a few years after 1655, and was afterwards among the tribes of the Upper Lakes. Jacques Fremin, at Onondaga from 1656 to 1658; was sent to the Mohawks in July, 1667; left there for the Senecas in October, 1668, where he remained a few years. Pierre Rafeix, at Onondaga from 1656 to 1658; chaplain in Courcelle's expedition in 1665; sent to the Cayugas in 1671, thence to Seneca, where he was in 1679. Jacques Bruyas, sent to the Mohawks, July, 1667, and to the Oneidas in September, where he spent four years, and thence returned to the Mohawks in 1672; was at Onondaga in 1679, 1700, and 1701. Etienne de Carheil, sent to Cayuga in 1668, and was absent in 1671-2; returned, and remained until 1684. Pierre Milet, was sent with De Carheil to the Cayugas in 1668, and left in 1684; was at Niagara in 1688, and was taken prisoner at Cataracta in 1689. Jean Pierron, was sent to the Mohawks in July, 1667; went among the Cayugas in October, 1668, and was with the Senecas after 1672, where he was in 1679. Jean de Lamberville was at Onondaga in 1671-72; was sent to Niagara in 1687. Francis Bouiface was sent to the Mohawks in 1668, and was there after 1673. Francis Vaillant de Gueslis succeeded Bouiface among the Mohawks about 1674; accompanied the expedition against the Senecas in 1687; was sent to New York in December, 1687, and to the Senecas in 1703. Pierre de Mareuil was at Onondaga in June, 1709, where he surrendered himself to the English in consequence of war breaking out between the latter and the French, and was courteously treated at Albany. Jacques d'Hen was among the Onondagas in 1708, and the Senecas in 1709. Anthony Gordon, founded St. Regis, in 1769, with a colony from St. Louis. There were two "Sulpicians" as missionaries in northern New York at the middle of the last century—namely, Francis Piquet, who founded Oswegatchie (Ogdensburg) in 1748, and abandoned it in 1760; he was succeeded at Oswegatchie by Pierre Paul Francis de la Garde.

**Jesuit Missionaries in Arizona and California.** (See *Arizona and California*.)

**Jesuit Missionary, FIRST, IN OHIO.** The northern shores of the Great Lakes were visited

by the Roman Catholic missionaries some time before they appeared in the Ohio country. That was about 1747, when Father Armaude de la Richardie began a mission temporarily at Sandusky, and made the place his permanent residence in 1751. He was a Jesuit priest. None of the Recollets with La Salle ever visited the southern shores of Lake Erie. It is possible that Father Peter Portier may have made excursions among the Huron camps before him.

#### Jesuit Missions in North America, EARLY.

In 1539, the Society of Jesus, or Jesuits, was established by Ignatius Loyola. Its members were, by its rules, never to become prelates. Their vows were to be poor, chaste, and obedient, and in constant readiness to go on missions against heresy and heathenism. Their grand maxim was, the widest diffusion of influence, and the closest internal unity. Their missions soon spread to every part of the habitable globe then known. They planted the cross in Europe, Asia, Africa, and America, and on the islands of the sea; and when Champlain had opened the way for the establishment of French dominion in America, to the Jesuits was assigned the task of bearing the Christian religion to the dusky inhabitants in North America. More persevering and more effective than the votaries of commerce and trade, the Jesuits became the pioneers of discovery and settlements in North America. Their paramount object was the conversion of the heathen and an extension of the Church; their secondary, yet powerful, object was to promote the power and dominion of France in America. Within three years after the restoration of Canada to the French (see *Canada, Conquest of*), there were fifteen Jesuit priests in the province (1636). The first most noted Jesuit missionaries were Brébeuf and Daniel, who were bold, aggressive, and self-sacrificing to the last degree. Then came the more gentle Lallemande, who, with others, traversed the dark wilderness with a party of Hurons who lived far to the westward, on the borders of one of the Great Lakes. They suffered incredible hardships and privations—eating the coarsest food, sleeping on the bare earth, and assisting their red companions in dragging their canoes at rough portages. On a bay of Lake Huron they erected the first house of the Society among the North American Indians. That little chapel, which they called the cradle of the Church, was dedicated to St. Joseph, the husband of the Blessed Virgin. They told to the wild children of the forest the story of the love of Christ and his crucifixion, and awed them with the terrors of perdition. For fifteen years Brébeuf carried on his missionary labors among the Hurons, scourging his flesh twice a day with thongs; wearing an iron girdle armed at all points with sharp projections, and over this a bristly hair-shirt, which continually "mortified the flesh;" fasted frequently and long; kept his pious vigils late into the night, and by penitential acts resisted every temptation of the flesh. As missionary stations multiplied in the western wilderness, the central spot was called St. Mary. It was upon the outlet of Lake Superior into Lake Huron. There,

in one year, three thousand Indians received a welcome at the hands of the priest. This mission awakened great sympathy in France. Everywhere prayers were uttered for its protection and prosperity. The king sent magnificently embroidered garments for the Indian converts. The pope expressed his approbation, and to confirm and strengthen these missions a college in New France was projected. The pious young Marquis de Gaenache, with the assent of his parents, entered the order of Jesuits, and with a portion of their ample fortune he endowed a seminary for education at Quebec. Its foundation was laid in 1635, just before the death of Champlain. That college was founded two years before the first high seminary of learning was established in the Protestant colonies in America by John Harvard. (See *Harvard College*.) At the same time, the Duchess d'Acquillon, aided by her uncle, Cardinal Richelieu, endowed a public hospital at Quebec, open to the afflicted, whether white or red men, Christians or pagans. It was placed in charge of three young nuns, the youngest twenty-two, and the oldest twenty-nine years of age, who came from Paris for the purpose. (See *Ursuline Convent*.) In 1640, Hochelaga (Montreal) was taken possession of as a missionary station, with solemn religious ceremonies, and the Queen of Angels was petitioned to take the island of Montreal under her protection. Within thirteen years the remote wilderness was visited by forty-two Jesuit missionaries, besides eighteen other devoted men. These assembled two or three times a year at St. Mary's; the remainder of the time they were scattered through the forests in their sacred work. A plan was conceived in 1638 of establishing missions among the Algonquins, not only on the north, but on the south of the Great Lakes, and at Green Bay. The field of labor opened to the view of the missionaries a vast expanse of wilderness, peopled by many tribes, and they prayed earnestly for recruits. Very soon Indians from very remote points appeared at the mission stations. The hostilities of the Five Nations had kept the French from navigating lakes Ontario and Erie; finally, in 1640, Brébeuf was sent to the Neutral Nation (which see) on the Niagara River. The further penetration of the country south of the Lakes was then denied, but a glimpse of the marvellous field soon to be entered upon was obtained. In September and October, 1641, Charles Raymbault and Isaac Jogues penetrated to the Falls of St. Mary, in the strait that forms the outlet of Lake Superior, where they heard of the Sioux. They yearned to penetrate the country of this famous people. This favor was denied the missionaries. Father Raymbault returned to Quebec and died, but Father Jogues was destined to endure many trials and adventures of missionary life. On his way from Quebec to the Hurons he was captured by a roving band of Mohawks, and he who was one of the first to carry the cross into Michigan was now the first to bear it to the villages of the Five Nations. At the villages on the way from the St. Lawrence to the Mohawk domain, Father Jogues was compelled to submit to the

horrors of running the gauntlet (which see); yet he never repined, but rejoiced in his tribulations, and was made happy by the conversion, here and there, of one of the savages, whom, on one occasion, he baptized with drops of dew. As he roamed through the forests of the Mohawk valley, he carved the name of Jesus and the figure of a cross on the trees, and with a chant took possession of the country in the name of Christ. He was ransomed by the Dutch at Albany, sailed for France, but soon returned to Canada. Another missionary (Bressari), who suffered horribly, was also ransomed by the Dutch. In the summer of 1646 the Jesuits established a mission among the barbarians of Maine, and so French outposts were established on the Kennebec and the upper lakes fourteen years after these missionary labors were begun. There was then a lull in hostilities between the French and the Five Nations, and Father Jogues went to the Mohawks as ambassador from Canada. His report caused an effort to establish a mission among them, and he alone understanding their language, was sent, but lost his life among the Mohawks, who hung his head upon the palisades of a village, and cast his body into the Mohawk River. In 1648, warriors from the Mohawk valley fell upon the Hurons, and the Jesuit missions among them were destroyed, and priests and converts were murdered after horrible tortures. Finally, in 1654, when peace between the French and the Five Nations had been restored, Father Le Moyne was sent as ambassador to the Onondagas, when he was cheered by the sight of many Hurons holding on to their faith. Le Moyne was allowed to establish a mission in the Mohawk valley. Very soon the Onondagas received Father Dablon and his companions kindly, and chiefs and followers gathered around the Jesuits with songs of welcome. A chapel was built in a day. "For marbles and precious metals," Dablon wrote, "we employed only bark; but the path to heaven is as open through a roof of bark as through arched ceilings of silver and gold." In the heart of barbarian New York the solemn services of the Church of Rome were held as securely as if it were in Paris. Fifty French people settled near the missionary station, and very soon there were Christian laborers among the Cayugas and Oneidas. A change came. War was again kindled, and Jesuits and settlers were obliged to flee from the bosom of the Five Nations. After that, the self-sacrificing Jesuits penetrated the western wilderness to the Mississippi River, carrying the cross as the emblem of their religion, and the lilies of France as tokens of political dominion. In these labors they were assisted by the votaries of commerce. Seeds of civilization were planted here and there, until harvests were beginning to blossom all along the Lakes and the Mississippi to the Gulf of Mexico. (See *Allouez, Marquette, Joliet, La Salle, Hennepin, Tonti.*) The discoveries of these priests and traders gave to France a claim to that magnificent domain of millions of square miles, extending from Acadia along the St. Lawrence and the Lakes, and the establishment of French dominion in Louisiana, on the borders

of the Gulf of Mexico. It has been truthfully said, "The history of these [Jesuit] labors is connected with the origin of every celebrated town in the annals of French America: not a cape was turned or a river entered but a Jesuit led the way."

**Jesuits Banished from New York.** The Assembly of New York, in 1700, passed an act requiring every "ecclesiastical person receiving his ordination from the Pope or See of Rome," then residing in the province, to depart from it before the 1st of November. It referred to them as "Jesuits and popish priests," and charged them with inciting the Indians to make war on the English, and of seducing them from their allegiance. Massachusetts passed a similar law, and gave the same reasons for it.

**Jesup, THOMAS SIDNEY,** was born in Virginia in 1788; died in Washington, D. C., June 10, 1860. He entered the army in 1808, and was Hull's adjutant-general in 1813. For his good conduct at the battle of Chippewa he was breveted lieutenant-colonel, also colonel for his services in the battle of Lundy's Lane, or Niagara, in which he was severely wounded. After the war, he was adjutant-general and quartermaster-general of the United States Army (1818) with the rank of brigadier, and was breveted major-general in 1828. In 1836 he was in command of the army in the Creek nation, and at the close of the year he commanded the army in Florida. He was wounded by the Seminoles in January, 1838.

**Jews Disfranchised.** In 1738, William Smith, the defender of Zenger when tried for libel (see *Zenger's Trial*), and an earnest advocate of the freedom of the press, practically denied the freedom of conscience by obtaining the passage of a law by the Legislature of New York disfranchising the Jews. A few had settled in New Amsterdam, under the liberal rule of the Dutch. In 1733, among emigrants who went to the new colony of Georgia were forty Jews. Fearing to alarm the bigotry of the English public, on whose bounty the trustees depended (see *Georgia, Colony of*), they disclaimed any intention of making it a "Jews' colony," and gave express orders to Oglethorpe not to give them any encouragement. The Jews remained quietly, built a synagogue, and gave many good citizens to Georgia, but they were there disfranchised during the colonial period.

**Jogues, ISAAC,** a French missionary, was born at Orleans, Jan. 10, 1607; killed at Canghna-waga, N. Y., Oct. 18, 1646. He became a Jesuit at Rouen in 1624; was ordained in 1636; and, at his own request, was immediately sent to Canada. He was a most earnest missionary among the Indians on both sides of the Lakes. Caught, tortured, and made a slave by the Mohawks, he remained with them until 1643, when he escaped to Albany, and was taken to Manhatta. Returning to Europe, he was shipwrecked on the English coast. He returned to Canada in 1646, where he concluded a treaty between the French and the Mohawks. Visiting Lake George, he named it St. Sacrament, and, descending the Hudson River to Albany, he went among the

Mohawks as a missionary, who seized him and put him to death as a sorcerer.

**John Adams, CRUISE OF THE.** The naval operations on the sea in 1814, though not so important as in the two preceding years in some respects, yet fully sustained the character of the American war-marine. The *John Adams* frigate had been cut down to a corvette of 28 guns in 1813, and was the first that figured after the opening of 1814. She started on a cruise from Washington in January, and on the night of the 18th passed the British blockading squadron in Lynn Haven Bay, put to sea, and ran to the northeast to cross the track of the West India merchantmen. She made a few prizes, and on March 25 she captured the Indiaman *Wood-bridge*. While taking possession of her, the commander of the *Adams* (Captain Charles Morris) observed twenty-five merchant-vessels, with two ships of war, bearing down upon her with a fair wind. Morris abandoned his prize, and gave the *Adams* wings for flight from danger. In April she entered the harbor of Savannah for supplies, and on May 5 sailed for the Manilla Reef, to watch for the Jamaica convoy, but the fleet passed her in the night. She gave chase in the morning, but was kept at bay by two vessels of war. She crossed the Atlantic, and on July 3 was off the Irish coast, where she was chased by British vessels, but always escaped. For nearly two months the weather was foggy, cold, and damp, because the ocean was dotted with icebergs. Her crew sickened, and Captain Morris determined to go into port. He entered Penobscot Bay, and was nearly disabled by striking a rock (Aug. 17, 1814), and made his way up the Penobscot River to Hampden. British vessels followed, and to prevent her falling into the hands of his enemy, Morris burned her. (See *Hampden, British at.*)

**John Brown's Raid.** There seemed to be a peculiar serenity and calmness in the public mind about public affairs in the fall of 1859. The discussions about slavery had almost ceased, the Mormons were quiet, difficulties with Paraguay, S. A., had been amicably settled, troubles with the Indians on the Pacific coast were drawing to a close, and the operations of Walker in Nicaragua were losing much of their interest. It was only the calm that precedes a tempest. Suddenly as a peal of thunder in the genial air of October, a rumor went out of Baltimore that the Abolitionists had seized the government armory and arsenal at Harper's Ferry, at the junction of the Shenandoah and Potomac rivers, and that a general insurrection of the slaves in Virginia was imminent. The rumor was mostly true. John Brown, an enthusiast, fanatical and brave, who had fought pro-slavery men in Kansas, and was known as "Ossawatimie Brown," then in the sixtieth year of his age, had espoused the cause of the Abolitionists (those who advocated the abolition of slavery) in early life, and, filled with zeal for the cause, had suddenly appeared at Harper's Ferry with a few followers, to induce the slaves of Virginia to rise in insurrection and assert their right to freedom.

He had come to believe himself to be the destined liberator of the slaves in the Republic. With a few white followers and twelve slaves from Missouri, he went into Canada West, and at Chatham a convention of sympathizers was held in May, 1859, whereat a "Provisional Constitution and Ordinances for the People of the United States" was adopted—not, as the instrument declared, "for the overthrow of any government, but simply to amend and repeal." It was a part of the scheme for promoting the uprising of the slaves. Brown spent the summer of 1859 in preparations for his work. He hired a farm a few miles from Harper's Ferry, where he was known by the name of Smith. One by one his followers joined him there, and stealthily gathered pikes and other weapons, with ammunition, for the purpose of first arming the insurgent slaves of Virginia. On a very dark night, Brown, with seventeen white men and five negroes, stole into the village of Harper's Ferry, put out the street-lights, seized the government armory and the railway-bridge there, and quietly arrested and imprisoned in the government buildings every citizen found in the street at the earlier hours of the next morning, each one ignorant of what else had happened. These invaders had seized Colonel Washington, living a few miles from the Ferry, with his arms and horses, and liberated his slaves; and at eight o'clock on Monday morning, Oct. 17, Brown and his followers (among whom were two of his sons) had full possession of the village and the government works. He had felt assured that when the first blow should be struck the negroes of the surrounding country would rise and flock to his standard, that a general uprising of the slaves throughout the Union would follow, and that he would win the satisfaction and the honors of a great liberator. When asked what was his purpose, and by what authority he acted, he replied, "To free the slaves; and by the authority of God Almighty." News of this affair went swiftly abroad, and before night a large number of Virginia militia had gathered at Harper's Ferry. Struggles between these and Brown's followers ensued, in which the two sons of the former perished. The invaders were finally driven into a fire-engine house, where Brown bravely defended himself. With one son dead by his side and the other shot through the body, he felt the pulse of his dying child with one hand, held his rifle with the other, and issued oral commands to his men with all the composure of a general in his marquee, telling them to be firm, and sell their lives as dearly as possible. They held their citadel until Monday evening, when Colonel Robert E. Lee arrived with ninety United States marines and two pieces of artillery. The doors of the engine-house were forced open, and Brown and his followers were captured. The bold leader was speedily tried for murder and treason, was found guilty (Oct. 29), and on Dec. 3, 1859, was hanged. Meanwhile the wildest tales of the raid had gone over the land. The governor of Virginia (Henry A. Wise) was almost crazy with excitement, and declared himself ready to make

war on all the free-labor states; and he declared, in a letter to the President (Nov. 25), that he had authority for the belief that a conspiracy to rescue Brown existed in Ohio, Pennsylvania, New York, and other states. Attempts were made to implicate leading Republicans in a scheme for liberating the slaves. A committee of the United States Senate, with James M. Mason, author of the Fugitive Slave Law of 1850, as its chairman, was appointed to investigate the subject. The result was the obtaining of positive proof that Brown had no accomplices, and only about twenty-five followers. Although Brown's mad attempt to free the slaves was a total failure, it proved to be one of the important events which speedily brought about the result he so much desired.

**John Paul Jones and the Earl of Selkirk.** In 1779, while Jones was cruising up and down the east coast of Scotland, between the Solway and the Clyde, he tried to capture the Earl of Selkirk, in order to secure a notable prisoner for exchange. He had been an early friend of Jones's father. His seat was at the mouth of the Dee; and there, in his boyhood, our hero had gambolled under the shadow of its majestic oaks. He anchored his vessel (the *Ranger*) in the Solway at noon, and with a few men, in a single boat, he went to a wooded promontory on which the earl's fine estate lay, where he learned that his lordship was not at home. Disappointed, he ordered his men back to the boat, when his lieutenant, a large and fiery man, proposed to go to the mansion and plunder it of the family plate. Jones would not listen to the proposition, for the memory of old associations made his heart tender towards Lady Selkirk, who had been very kind to him. Again he ordered his men back, but they and the lieutenant, eager for prize-money, in defiance of his expostulations, went to the house and demanded the plate. The frightened Lady Selkirk surrendered it with her own hands. When the prizes of the *Ranger* were sold, Jones bought this plate, and sent it back to Lady Selkirk with a letter in which he expressed his regret because of the annoyance she had suffered.

**John the Painter.** While Silas Deane, commissioner of the Continental Congress, was in Paris (1777), a stranger, advanced in years, called upon him one day, and requested a strictly private interview. It was granted, when the stranger told Deane that he was a native of Scotland, but was an American citizen, and had lived at Amboy, in New Jersey, where he had a comfortable house. The British troops stationed there, suspecting him of being a Whig, had greatly abused him, and finally burned his house to ashes. He told Deane he had resolved on revenge; that he had determined to kill King George, and had come to Europe for the purpose. He had been to England, had laid his plans, and was ready to execute them. He thought it right to acquaint Deane, the United States minister, with his scheme. He said he passed by the name of "John the Painter." Mr. Deane opposed the assassination of the king as

cowardly and unjust. He was innocent of wrong in the matter. If he must have revenge, he should take it in a manly, generous way; he should go into the American army, and meet his enemy as a soldier, and not as a vulgar assassin; and if he could so meet King George, at the head of his army, he could kill him with propriety. It would be lawful to so kill his generals. The man was finally persuaded by Deane to abandon his regicidal plan, and left. He soon returned, thanked Deane for persuading him not to lay violent hands on "the Lord's Anointed," and said he was determined to seek revenge by burning the naval stores at Portsmouth, England. Deane said that would tend to weaken the enemy in carrying on the war, and was legitimate business. He was astonished at the wisdom of the man's plans. He warned him, however, that if he should be caught his life would pay the penalty of his crime. "I am an old man," said "John the Painter," "and it matters little whether I die now or five years hence." He borrowed a guinea from Deane, and crossed the channel. At Portsmouth he took lodgings at the house of a very poor woman on the outskirts of the town. While he was absent, she had the curiosity to examine a bundle which he had brought with him. It contained some clothing and a tin box, with some sort of a machine inside. John wanted a top to it, and had one made by a tinman. The same evening the naval storehouses were fired by this "infernal machine," and \$500,000 worth of property was destroyed. Strict search was made for the incendiary in the morning at every house in the town. The old woman told them of John the Painter and his mysterious tin box. The tinman reported making a top for it. John was fixed upon as the incendiary. Not doubting he had been sent by the enemy for the purpose, and that relays of horses had been furnished for his escape, horsemen were sent out on every road, with orders to pursue any person they should find riding very fast. John, meanwhile, was trudging on foot towards London. Men came up to him and asked him if he had seen any person riding post-haste. "Why do you inquire?" asked John. He was properly answered, when John told the pursuers they were mistaken, for he—"John the Painter"—was the incendiary, and gave them his reasons for the act. They took him back to Portsmouth, where he was recognized by the old woman and the tinman. He caudly told them that he should certainly have killed the king had not Mr. Deane dissuaded him, and that he was revenged, and was ready to die. He was tried, condemned, and hung. A false and unfair account of his trial was published, and no mention was made of Mr. Deane's having saved the life of the king. The *Gentleman's Magazine* for 1777 contains the English account of the affair, with a portrait. The above is compiled from manuscript notes made from the lips of Deane by Elias Bondinot.

**Johnson, Andrew, LL.D.**, seventeenth President of the United States, was born at Raleigh, N. C., Dec. 29, 1808. He learned the trade of a

tailor, and taught himself to read. After working as a journeyman in South Carolina, he went to Greenville, Tenn., taking with him his mother, who was dependent on him. There he worked

ANDREW JOHNSON.

at his trade, married, and was taught by his wife how to write; became alderman and mayor, a member of the Legislature (1832-33 and 1839), presidential elector (1840), state senator in 1841, and member of Congress from 1843 to 1853. From 1853 to 1857 he was governor of Tennessee, and United States Senator from 1857 to 1863. In 1862 he was appointed military governor of Tennessee, and in 1864 was elected Vice-President of the United States. He succeeded Mr. Lincoln as President in 1865; kept up a continual warfare with Congress; was impeached, but acquitted, in 1868, and retired from office in 1869. He received the degree of LL.D. from the University of North Carolina in 1866, and died in Carter County, Tenn., July 31, 1875.

**Johnson, FORT, DESTRUCTION OF.** On the Cape Fear River, not far from Wilmington, was a fortification called Fort Johnson. To it the royal governor (Joseph Martin) of North Carolina fled (June 14, 1775) when the indignant people began to rise in rebellion against royal rule. From that stronghold he sent forth a menacing proclamation, and soon afterwards preparations for a servile insurrection were discovered. The rumor went abroad that Martin had incited the slaves. The exasperated people determined to drive him from the fort and demolish it. A body of five hundred men, led by John Ashe and Coruelius Harnett, marched to the fort. Martin had fled on board a British vessel of war in the river. The munitions of war had all been removed on board of a transport, and the garrison also had fled. The people burned the barracks and demolished the walls.

**Johnson, GUY,** was born in Ireland in 1740; died in London, March 5, 1788. He married a daughter of Sir William Johnson, and in 1774 succeeded him as Indian Agent. He served against the French from 1757 to 1760. At the outbreak of the Revolution he fled to Canada, and thence went with the British troops who took possession of New York City in September,

1776; he remained there some time, and became manager of a theatre. He joined Brant, and participated in some of the bloody outrages in the Mohawk valley. In 1779 he fought with the Indians against Sullivan. (See *Sullivan's Campaign*.) His estates were confiscated.

**Johnson, REVERDY,** a distinguished lawyer, was born at Annapolis, Md., May 21, 1796; died there, Feb. 10, 1876. He was admitted to the bar in 1815. After serving two terms in his State Senate, he was United States Senator from 1845 to 1849, when he became United States Attorney-general under President Taylor. Mr. Johnson was a delegate to the Peace Convention (which see); United States Senator from 1863 to 1868; and minister to Great Britain in 1868-69, negotiating a treaty which was rejected by the United States Senate.

**Johnson, RICHARD MENTOR,** was born at Bryant's Station, Ky., Oct. 17, 1781; died at Frankfort, Ky., Nov. 19, 1850. He graduated at Transylvania University, became a lawyer and state legislator, and raised a regiment of cavalry in 1812. With them he served under Harrison, and was in the battle of the Thames in 1813, where he was dangerously wounded. From 1807 to 1819 and 1829 to 1837 he was a member of Congress. He was United States Senator from 1819 to 1829, and Vice-President of the United States from 1837 to 1841.

**Johnson, RICHARD W.,** was born in Livingston County, Ky., Feb. 7, 1827, and graduated at West Point in 1849. He was a captain of cavalry in the Civil War until August, 1861, when he was made lieutenant-colonel of a Kentucky cavalry regiment. In October he was made a brigadier, and served under Buell. In the summer of 1862 he commanded a division of the Army of the Tennessee, and afterwards had the same command in the Army of the Cumberland. In the battles at Stone River and near Chickamauga, and in the Atlanta campaign he was a most useful officer. He was severely wounded at New Hope Church, and commanded a division of cavalry in the battle of Nashville, in December, 1864. He was breveted major-general in the United States Army for "gallant services during the war," and retired with full rank in October, 1867.

**Johnson, SAMUEL, LL.D.,** was born at Dundee, Scotland, Dec. 15, 1733; died near Edenton, N. C., Aug. 18, 1816. He was brought to North Carolina by his father when he was three years of age, and was in civil office there under the crown until he espoused the cause of the patriots. In 1773 he was one of the North Carolina Committee of Correspondence and an active member of the Provincial Congress. He was chairman of the Provincial Council in 1775, and during 1781-82 was in the Continental Congress. In 1788 he was governor of the state, and presided over the convention that adopted the national Constitution. From 1789 to 1793 he was United States Senator, and from 1800 to 1803 was judge of the Supreme Court.

**Johnson, SIR JOHN,** son of Sir William, was

born in 1742; died in Montreal, Jan. 4, 1830. He was a staunch loyalist, and in 1776 the Whigs tried to get possession of his person. He fled to Canada with about seven hundred followers, where he was commissioned a colonel, and raised a corps chiefly among the loyalists of New York, known as the Royal Greens. He was among the most active and bitter foes of the patriots. While investing Fort Stanwix (or Schuylcr), in 1777, he defeated General Herkimer at Oriskany (which see), but was defeated himself by General Van Rensselaer in 1780. After the war Sir John went to England, but returned to Canada, where he resided as Superintendent of Indian Affairs until his death. He married a daughter of John Watts, a New York loyalist.

**Johnson, THOMAS**, was born in Calvert County, Md., in 1732; died at Rose Hill, near Frederickton, Oct. 26, 1819. He was an eminent lawyer, and was chosen a delegate to the Second Continental Congress in 1775. He had the honor of nominating George Washington for the position of commander-in-chief of the Continental armies. He was chosen governor of the new State of Maryland in 1777, and was Associate-justice of the Supreme Court of the United States from 1791 to 1793, when he resigned. He was offered the position of Chief-justice of the District of Columbia in 1801, but declined it.

**Johnson, WILLIAM**, born in Meath County, Ireland, in 1715; died near Johnstown, N. Y., July 11, 1774. He was educated for a merchant, but an unfortunate love affair changed the tenor of his life. He came to America in 1733 to take

WILLIAM JOHNSON.

charge of landed property of his uncle, Admiral Sir Peter Warren, in the region of the Mohawk valley, and seated himself there, about twenty-four miles west of Schenectady, engaging in the Indian trade. Dealing honestly with the Indians and learning their language, he became a great favorite with them. He conformed to their manners, and, in time, took Mary, a sister of Brant, the famous Mohawk chief, to his home as his wife. When the French and Indian War broke out Johnson was made sole superintendent of Indian affairs, and his great influence kept the Six Nations steadily from any favoring of the

French. He kept the frontier from injury until the treaty of Aix-la-Chapelle (1748). In 1750 he was a member of the Provincial Council. He withdrew from his position of Superintendent of Indian Affairs in 1753, and was a member of the convention at Albany in 1754. He also attended grand councils of the Indians, and was adopted into the Mohawk tribe and made a sachem. At the council of governors, convened by Braddock at Alexandria in 1755, Johnson was appointed "sole superintendent of the Six Nations," created a major-general, and led an expedition intended for the capture of Crown Point. (See *Crown Point, Expedition against.*) The following year he was knighted, and the king gave him the appointment of Superintendent of Indian Affairs in the North; he was also made a colonial agent. He continued in the military service during the remainder of the war, and was rewarded by his king with the gift of one hundred thousand acres of land north of the Mohawk River, which was known as "Kingsland," or the "Royal Grant." Johnson first introduced sheep and blooded horses into the Mohawk valley. Sir William Johnson married a German girl, by whom he had a son and two daughters; also eight children by Mary (or Mollie) Brant, who lived with him until his death. Sir William lived in baronial style and exercised great hospitality.

**Johnson, WILLIAM SAMUEL, LL.D., D.C.L., F.R.S.**, was born in Stratford County, Conn., Oct. 7, 1727; died Nov. 14, 1819. He graduated at Yale College in 1744; became a lawyer, and was distinguished for his eloquence. He was a delegate to the "Stamp Act Congress" (which see), and for five years (from 1766 to 1771) he was agent for Connecticut in England. He corresponded with the eminent Dr. Johnson several years. He was a judge of the Supreme Court of Connecticut and a commissioner for adjusting the controversy between the proprietors of Pennsylvania and the Susquehanna Company. Judge Johnson was in Congress (1784 to 1787), and was also a member of the convention that framed the national Constitution, in which he was the first to propose the organization of the Senate as a distinct branch of the national Legislature. He was United States Senator from 1789 to 1791, and, with his colleague, Oliver Ellsworth, drew up the bill for establishing the judiciary system of the United States. He was President of Columbia College from 1787 to 1800.

**JOHNSONS, THE INFLUENCE OF THE**, in the Mohawk region, gave the Whigs much annoyance, and finally became a scourge. Sir William died just as the war for independence was kindling, and his mantle of partisanship against the Republicans was worn by his son and successor, Sir John Johnson. Equally strong in his opposition to the Whigs was a son-in-law of Sir William, Guy Johnson, who succeeded him as Superintendent of Indian Affairs, having been long his deputy. Guy had such influence over the Indians, that, in July, 1775, a large body of the Mohawks, notwithstanding their solemn

promise of neutrality, followed him to Montreal, and, in the presence of Governor Carleton, pledged an oath of allegiance to the crown, and took up the hatchet against the Republicans. Sir John Johnson had many retainers on his domain, who were Scotch Highlanders, and were all Tories. Suspected of disaffection to the patriot cause, General Schnyler had watched him closely and taken his word of honor to refrain from hostilities. Satisfied that he would not be faithful, Schnyler required him to give his parole (January, 1776) to that effect. This sat so lightly that, in May, Schnyler sent a force under Colonel Elias Dayton to arrest him. The baronet retired to the forests between the Mohawk and the Sacandaga, with his Tory retainers, and soon afterwards they made their way to Canada. In wretched plight, after great suffering in the wilderness, they reached the St. Lawrence, some distance above Montreal, when Sir John was commissioned a colonel in the British service. He raised two battalions, including one thousand men composed of his Highlanders and other Tories, and named his corps "The Royal Greens." With these and Indian followers, Sir John carried on a distressing partisan warfare, mostly in the valley of the Mohawk.

**Johnston, ALBERT SIDNEY**, was born in Mason County, Ky., in 1803; killed in the battle of Shiloh (which see), April 6, 1862. He graduated at West Point in 1826; served in the Black Hawk War, and resigned in 1834. He entered the Texan army as a private in 1836 and was soon made a brigadier, and in 1838 became commander-in-chief of the army and Secretary of War. He retired to private life in Texas. He served in the war with Mexico, and became paymaster in the United States Army in 1849. In 1860-61 he commanded the Pacific Department, and, sympathizing with the Secessionists, he was superseded by General Sumner and entered the Confederate service, in command of the Division of the West. At his death, in the battle of Shiloh, General Beauregard succeeded him.

**Johnson, BUSHROD R.**, was born in Ohio, Sept. 6, 1817, and graduated at West Point in 1840. He served in the Florida and Mexican wars, and was professor of mathematics in military academies in Kentucky and Tennessee. He joined the Confederate army in 1861, and was made a brigadier-general early in 1862; was captured at Fort Donelson (which see), but soon afterwards escaped; was wounded in the battle of Shiloh, and was made major-general in 1864. He was in command of a division in Lee's army that surrendered at Appomattox Court-house.

**Johnston, GENERAL J. E., SURRENDER OF.** With the surrender of Lee (which see), the Civil War was virtually ended. Although he was general-in-chief, his capitulation included only the Army of Northern Virginia. That of Johnston, in North Carolina, and smaller bodies, were yet in the field. When Sherman, who confronted Johnston, heard of the victory at the Five Forks (which see) and the evacuation of Petersburg and Richmond, he moved on Johnston (April 10, 1865) with his whole army. The

latter was at Smithfield, on the Neuse River, with full thirty thousand men. Jefferson Davis and the Confederate cabinet were then at Danville, on the southern border of Virginia, playing "Government," and had just proposed to Johnston a plan whereby they might secure their own personal safety and the treasures they had brought with them from Richmond. It was to disperse his army, excepting two or three batteries of artillery, the cavalry, and as many infantry as he could mount, with which he should form a guard for the "Government," and strike for the Mississippi and beyond, with Mexico as their final objective. Johnston spurned the proposition, and, deprecating the bad example of Lee in continuing what he knew to be a hopeless war, had the moral courage to do his duty according to the dictates of his conscience and his nice sense of honor. He refused to fight any more, or to basely desert his army far away from their homes, as the "Government" proposed, and stated frankly to the people of North and South Carolina, Georgia, and Florida, included within his military department, that "war could not be longer continued by them except as robbers," and that he should take measures to stop it and save the army and people from further evil, and "avoid the crime of waging a hopeless war." Sherman was pushing Johnston with great vigor, when the former received a note from the latter (April 14, 1865), asking if a temporary suspension of active hostilities might be arranged to allow the "civil authorities to enter into the needful arrangements to terminate the existing war." Sherman promptly replied that he would do so, and was willing to hold a conference. He said that, as a basis of action, he would undertake to abide by the terms made by Grant and Lee at Appomattox Court-house. Sherman and Johnston met at Durham's Station, half-way between Raleigh and Hillsborough, at ten o'clock, April 17. Johnston said he regarded the Confederate cause as lost, and admitted that Grant's terms were magnanimous (see *Appomattox*); but he insisted upon conditions involving political guarantees, which Sherman had no authority to grant. At a second conference the next day Sherman consented to a memorandum of agreement as a basis for the consideration of the government, which, if carried out, would have instantly restored to all persons engaged in the rebellion every right and privilege, social and political, which they had enjoyed before the war, without any liability of punishment. It was adroitly drawn up by Breckinridge, and was signed by the respective commanding generals. The national government instantly rejected it, and General Grant was sent to Raleigh to declare that rejection, which he did April 24, and proclaimed that the truce would end in forty-eight hours. This notification was accompanied by a demand for the surrender of Johnston's army, on the terms granted to Lee. The capitulation was agreed upon at the house of James Bennett, near Durham's Station, April 26. About twenty-five thousand troops were surrendered. The capitulation included all the

troops in Johnston's military department. General Taylor surrendered at Citronelle, Ala., to General Canby, on the same terms, and the Confederate navy on the Tombigbee River was surrendered by Commander Farrand to Rear-admiral Thatcher. Wade Hampton, of Johnston's surrendered forces, refused to comply with the

PLACE OF JOHNSTON'S SURRENDER TO SHERMAN.

terms, and dashed off with a considerable body of cavalry towards Charlotte, to follow the fortunes of Jefferson Davis.

**Johnston, JOSEPH ECCLESTON**, was born in Prince Edward County, Va., in February, 1807; graduated at West Point in 1829, and entered the artillery. He served in the war with the Florida Indians, and in the war with Mexico, in which he was twice wounded. He became lieutenant-colonel of cavalry in 1855, and quartermaster-general, with the rank of brigadier, in

JOSEPH ECCLESTON JOHNSTON.

June, 1860. He joined the insurgents in the spring of 1861, and became a general in the Confederate army. He was in command at the battle of Bull's Run, and fought gallantly on the Virginia Peninsula, until wounded at the battle of Fair Oaks, or Seven Pines (1862), when he was succeeded by Lee. He was in command in the Mississippi valley, where he opposed

Grant and Sherman. He was also in command during the Atlanta campaign in 1864 until July, when he was superseded by General Hood. In 1865 he was in command in the Carolinas, and surrendered his army to Sherman April 26, 1865.

**Johnstone's Attempt at Bribery (1778).** One of the British peace commissioners, in 1778, was George Johnstone, an advocate of the Americans in the House of Commons, and who brought letters of introduction to Robert Morris, Joseph Reed, and other leading patriots. Finding the commissioners could do nothing, officially, with Congress, Johnstone attempted to gain by bribery what could not be acquired by diplomacy. To Morris and others he wrote letters, urging the expediency of making arrangements with the government, and suggesting, in some of his letters, that those persons who should be instrumental in bringing it about would not fail of high honors and rewards from the government. An American lady in Philadelphia, whose husband was in the British service, and who was a relative of Ferguson, the secretary of the com-

mission, was induced by Johnstone to approach Joseph Reed with a proposition. Mrs. Ferguson was a daughter of Dr. Græme, of Pennsylvania, a bright woman, in whose prudence and patriotism the Whigs had such confidence that the interchange of visits among them and the Tories never led to a suspicion that she would betray the cause of her country. Johnstone made her believe he was a warm friend of the Americans, and he entreated her to go to General Reed and say to him that if he could, conscientiously, exert his influence in bringing about a reconciliation, he might command \$50,000 and the highest post in the government. "That," said Mrs. Ferguson, "General Reed would consider the offer of a bribe." Johnstone disclaimed any such intention, and Mrs. Ferguson carried the message to Reed as soon as the British left Philadelphia. Reed indignantly replied, "I am not worth purchasing, but, such as I am, the King of England is not rich enough to do it." These facts being made known to Congress, resolutions were passed (Aug. 11, 1778) censuring the commissioner of an attempt at bribery and corruption, and declining to hold any further communication with him. (See *Ferguson, Elizabeth Græme.*)

**Joint High Commission.** The government of the United States, in behalf of its citizens, claimed from Great Britain damages inflicted on the American shipping interests by the depredations of the *Alabama* (which see) and other Anglo-Confederate cruisers. To effect a peaceful solution of the difficulty, Reverdy Johnson, of Maryland, was sent to England in 1868 to negotiate a treaty for that purpose. His mission was not satisfactory. The treaty which he negotiated was almost universally condemned by his countrymen, and was rejected by the Sen-

ate. His successor, J. Lothrop Motley, appointed minister at the British court, was charged with the same mission, but failed in that particular, and was recalled in 1870. The matter was finally settled by arbitration. Much correspondence succeeded the efforts to settle by treaty. Finally, in January, 1871, the British minister at Washington (Sir Edward Thornton), in a letter to Secretary Fish, proposed, under instructions from his government, a Joint High Commission, to be appointed by the two governments, respectively, to settle disputes of every kind between the United States and Great Britain, and so establish a permanent friendship between the two nations. Mr. Fish proposed that the commission should embrace in its inquiries the matter of the "Alabama Claims," so that nothing should remain to disturb amicable relations. The suggestion was approved, and each government appointed commissioners. The President appointed for the United States Hamilton Fish, Secretary of State; Samuel Nelson, Associate-justice of the United States Supreme Court; R. C. Schenck, Minister to England; E. Rockwood Hoar, late United States Attorney-general, and G. H. Williams, United States Senator from Oregon. Queen Victoria appointed George Frederick Samuel, Earl de Grey and Earl of Ripon; Sir Stratford Henry Northcote; Sir Edward Thornton, her representative at Washington; Sir Alexander McDonald, of the Privy Council of Canada and Attorney-general of that province; and Montagne Bernard, Professor of International Law in Oxford University. The commissioners first met in Washington, Feb. 27, 1871. Lord Teunterden, secretary of the British commission, and J. C. Baueroft Davis, Assistant Secretary of State of the United States, were chosen clerks of the Joint High Commission. The commissioners of the United States were instructed to consider: 1. The fisheries; 2. The navigation of the St. Lawrence River; 3. Reciprocal trade between the United States and the Dominion of Canada; 4. The Northwest water boundary and the island of San Juan; 5. The claims of the United States against Great Britain for compensation for injuries committed by Confederate cruisers; 6. Claims of British subjects against the United States for losses and injuries arising out of acts committed during the Civil War. A treaty was agreed to, and was signed May 8, 1871, which provided for the settlement, by arbitration, by a mixed commission, of all claims on both sides for injuries by either government to the citizens of the other, during the Civil War, and for the permanent settlement of all questions in dispute between the two nations: Arbitrators were appointed, who, at Geneva, Switzerland, formed what was known as the "Tribunal of Arbitration," and reached a decision in which both parties acquiesced. (See *Tribunal of Arbitration*.)

Joliet, LOUIS, was one of the discoverers of the Mississippi River. He was born in Quebec in 1645, where his father was a smith; and died about the year 1700. He was educated at the Jesuit college, in Quebec, and afterwards engaged in the fur-trade in the Western wilder-

ness. In 1673 Intendant Talon, at Quebec, with the sanction of Governor Frontenac, selected him to find and ascertain the direction of the course of the Mississippi and its mouth. Starting from Mackinaw, in May, 1673, with Father Marquette and five other Frenchmen, they reached the Mississippi June 17. (See *Marquette*.) They studied the country on their route, made maps, and gained much information. After intercourse with Indians on the Lower Mississippi, near the mouth of the Arkansas, who had trafficked with Europeans, they were satisfied that the Mississippi emptied into the Gulf of Mexico, and made their way back to Green Bay, where Joliet started alone for Quebec to report to his superiors. His canoe was upset in Lachine Rapids, above Montreal, and his journals and charts were lost, but he wrote out his narrative from memory, which agreed, in essentials, with that of Marquette. Joliet afterwards went on an expedition to Hudson's Bay, in the service of his king, and was rewarded by his sovereign with the appointment of hydrographer to his majesty, and was favored with the seigniorship of the island of Anticosti in 1680. La Salle's pretensions denied him the privilege of making explorations in the West.

Joncaire, or Jonquière (Marquis de la), JACQUES PIERRE DE TAFANEL, Governor of Canada in 1749-52, was born at La Jonquière, France, in 1686; died in Quebec, May 17, 1752. He entered the navy in 1698, and in 1703 was adjutant in the French Army. He was a brave and skilful officer, and was in many battles. He became captain in the navy in 1736, and accompanied D'Anville in his expedition against Louisburg in 1745. In 1747 he was appointed Governor of Canada, but, being captured by the British, he did not arrive until 1749.

Jones, JACOB, was born near Smyrna, Del., in March, 1768; died in Philadelphia, Aug. 3, 1850.

JACOB JONES.

He graduated at the University of Pennsylvania, and entered the navy as a midshipman in 1799. He was an officer of the *Philadelphia*

when she was captured at Tripoli. (See *Philadelphia*.) In 1810 he was made commander, and when the War of 1812-15 broke out he was in charge of the sloop-of-war *Wasp*, in which he gained a victory. (See *Wasp* and *Frolic*.) He commanded the *Macedonian*, in Decatur's squadron, as post-captain. After the war he commanded the Mediterranean squadron; was a commissioner of the Navy Board; and Governor of the Naval Asylum at Philadelphia.

**Jones, JOHN PAUL**, was born in the parish of Kirkbean, Scotland, July 6, 1747; died in Paris, July 18, 1799. Before he was eighteen years old he commanded a vessel that traded with the West Indies. Jones came to Virginia in

JOHN PAUL JONES.

1773, inheriting the estate of his brother, who died there. Offering his services to Congress, he was made first-lieutenant in the navy in December, 1775, when, out of gratitude to General Jones, of North Carolina, he assumed his name. Before that he was John Paul. He was a bold and skilful sea-rover, gathering up many prizes. Made captain in the fall of 1776, he, in the *Alfred*, destroyed the Port Royal (N. S.) fisheries, capturing all the vessels and freight. In the summer of 1777 he sailed in the *Ranger* to Europe, and in February, 1778, received from a French commander the first salute ever given to the American flag by a foreign man-of-war. In April he scaled the walls of Whitehaven, in England, on the borders of the Irish Sea, and spiked thirty-eight cannons. Cruising to intercept the Baltic fleet, he fell in with British men-of-war and had a desperate fight, winning a victory (September, 1779), his vessel being the *Bonhomme Richard*. (See *Bonhomme Richard* and *Serapis*.) Congress gave him a gold medal and a commission as commander of the *America*, which ship was soon presented to France. Jones entered the service of Russia as rear-admiral in 1787, and, in consequence of a victory over the Turks, he was made vice-admiral and knighted. On his death in Paris the National Assembly decreed him a public funeral. It is not known where in Paris he was buried.

**Jones, THOMAS AP CATESBY**, was born in

Virginia in 1789; died at Georgetown, D. C., May 30, 1858. He entered the navy in 1805. From 1808 to 1812 he was engaged in the Gulf of Mexico in the suppression of piracy, smuggling, and the slave-trade. He fought the British flotilla on Lake Borgne (which see) late in 1814, when he was wounded and made captive. He commanded the Pacific squadron in 1842.

**Jonesborough, BATTLE AT.** Sherman began his flanking when he raised the siege of Atlanta (which see), on the night of Aug. 25, 1864. General Slocum, with the Twentieth Corps, proceeded to the protection of the sick, wounded, and stores near the Chattahoochee, and Howard and the rest of the army moved for the West Point Railway. General Stanley's corps was on the extreme left, and the armies of Howard, Thomas, and Schofield pressed forward so secretly that Hood was not informed of the movement until the Nationals were destroying that road. This was done (Aug. 28) for twelve miles, and the next day they struck the Macon road. Schofield reached the road at Rough-and-Ready Station, ten miles from Atlanta. Thomas struck it at Conch's; and Howard, crossing the Flint River half a mile from Jonesborough, approached it at that point. There he was met by one half of Hood's army, under Hardee. With the remainder Hood was holding the defences of Atlanta, but he was too weak to attempt to strike Schofield. There was a severe fight at the passage of the Flint River, on the morning of Aug. 31, between the forces of Howard and Hardee. Howard's army was disposed with Blair's corps in the centre, and rude breastworks were cast up. The contest was renewed very soon, when Hardee attempted to crush Howard before he could receive reinforcements. He failed. The Nationals thus attacked were veterans. For two hours there was a desperate strife for victory, which was won by Howard. Hardee recoiled, and in his hasty retreat left four hundred of his dead on the field and three hundred of his badly wounded at Jonesborough. His loss was estimated at twenty-five hundred men. Howard's loss was about five hundred. Meanwhile Sherman had sent relief to Howard. Kilpatrick and Garrard were very active, and General Davis's corps soon touched Howard's left. At four o'clock in the afternoon Davis charged and carried the Confederate works covering Jonesborough on the north, and captured General Govan and a greater part of his brigade. In the morning Hardee had fled, pursued by the Nationals to Lovejoy's.

**Juarez, BENITO**, President of Mexico, was born in Villa Ixtlan, Oaxaca, in 1807; died in the city of Mexico, July 18, 1872. He was descended from the ancient Indian race. Well educated, he gained distinction as a lawyer. He was a legislator, and was governor of his native state from 1848 to 1852. Banished by Santa Ana in 1853, he lived in New Orleans until 1855, when he returned, and became minister of justice. Experiencing the vicissitudes of public life in that country, he was elected President of Mexico in June, 1861. Then came the

French usurpation and the short-lived empire of Maximilian (which see). He defeated the imperial forces in 1867, and caused the emperor to be shot. In October Juarez was re-elected President, and for five years Mexico was distracted by revolutions. Peace was restored in 1872, but Juarez, then President, worn down with perplexities, died of apoplexy.

**Judges, APPOINTMENT OF.** In the states of Connecticut and Rhode Island the judges were appointed annually by the assemblies. In Georgia the chief-justice was appointed in the same way, the county judges being elected annually by the people. In New Jersey, Delaware, and Pennsylvania the judges were appointed by the Assembly for a term of seven years. In the other states they were to hold their office during good behavior. The justices of the peace, as in colonial times, were invested with a jurisdiction as judges in the first instance for the smallest class of civil cases.

**Judge's Mission at Washington.** The authorities of Alabama sent Thomas J. Judge to "negotiate with the government of the United States in reference to the forts, arsenals, and custom-houses" in that state, and "the debt of the United States." He was introduced by Clement C. Clay, Jr., then sitting in the Senate of the United States, who expressed a wish that when Judge should have an audience he should present his credentials and enter upon the proposed negotiations. The President refused to receive him only as a private gentleman, as he had done Hayne, of South Carolina (see *Hayne's Mission*), and the State of Alabama withdrew in the person of Mr. Judge.

**Judicial Kidnapping.** In the reign of James II. (1685-88) officers of the crown in England carried on a traffic with the American colonies more profitable than the African slave-trade. Young persons, as well as felons, were extensively arrested, hurried across the Atlantic, and sold in the colonies for money. This kidnapping became common in Bristol, where the mayor, the sheriff, and justices of the peace were engaged in it. They would threaten small rogues and pilferers with hanging, and, inspired by the terror of such a fate, would petition for transportation as the only avenue for safety. Then they would be divided among the members of the court, who sold these criminals to planters in America.

**Judiciary, NATIONAL, FIRST ESTABLISHED.** While the House of Representatives of the First Congress was employed (1789) in providing means for a sufficient revenue, the Senate was busy in organizing a judiciary. A bill drafted by Oliver Ellsworth, of Connecticut, which embodied a plan of a judiciary, was, after several amendments, adopted by both Houses and became a law. It provided for a Supreme Court, having one chief-justice and five associate-justices, who were to hold two sessions annually at the seat of the national capital. Circuit and district courts were also established, which had jurisdiction over certain specified cases. Each state was made a district, as were also the ter-

ritories of Kentucky and Maine. The districts, excepting Kentucky and Maine, were grouped together into three circuits. An appeal from these lower courts to the Supreme Court of the United States was allowed, as to points of law, in all civil cases where the matter in dispute amounted to two thousand dollars. A marshal for each was to be appointed by the President, having the general powers of a sheriff; and a district attorney, to act for the United States in all cases in which the national government might be interested, was also appointed. John Jay was made Chief-justice of the United States.

**Judiciary, SUBVERSION OF THE, IN AMERICA.** The judges in the colonies had always been appointed to hold office "during good behavior." The custom was abolished in 1761. The British government could not comprehend the justice of equality of political rights between England and the colonies, and on Nov. 18, about a month after Pitt's retirement from office, the Board of Trade and Plantations reported to the king that the existing system of appointments was subversive of all true policy and tended to "lessen the just dependence of the colonies upon the government of the mother country." It pleased the king; and on Dec. 9 instructions went forth to all the colonial governments to grant no judicial commissions but "during pleasure." This tenure of judicial offices made the judges creatures of the king's will and instruments of the prerogative. The New York Assembly, regarding this as a step towards absolute despotism, took the strong ground that these later instructions should be changed or they would grant no salary to judges in their province. Colden, in reporting to the Board of Trade, gave the sources of opposition to be three "popular lawyers, educated in Connecticut, who had strongly imbibed the independent principles of that colony, and who calumniated the administration in every exercise of the prerogative, and gained the applause of the mob by propagating the doctrine that all authority is derived from the people." These three lawyers were William Livingston, afterwards Governor of New Jersey; John Morin Scott, leader among the "Sons of Liberty" (which see) in New York; and William Smith, the historian, who, in the revolution that followed, took sides with the crown. In 1762 the Board of Trade recommended, as a means of making the judges still more the creatures of the crown, that they should receive their salaries from the royal quit-rents. The suggestion was adopted. The king, in the royal provinces, instituted courts, named the judges, removed them at pleasure, fixed the amount of their salaries, and paid them out of funds independent of legislative grants.

**Judiciary, THE, AUTHORITY OF, QUESTIONED.** The three co-ordinate branches of the national government—the Legislative, Executive, and Judicial—were subject to much jealousy, criticism, and opposition at the beginning of the national life of the Republic. The Supreme Court having decided that states were liable to

be sned by individuals—citizens of other states—produced much discussion and opposition. A process of that sort was commenced against the State of Massachusetts. When the writ was served on the governor, he called the Legislature together. They resolved to take no notice of the suit, at the same time recommending, by resolution, an amendment to the national Constitution in that particular, which the governor was requested to transmit to the legislatures of other states. The Legislature of Georgia had a similar case before them. They dealt more harshly with the matter. They assumed a posture of defiance to the Supreme Court, and passed an act subjecting to death, without benefit of clergy, any marshal or other person who should presume to serve any process issued against that state at the suit of any individual. The proposition of Massachusetts was favorably responded to, and ultimately prevailed.

**Judson, ADONIRAM, D.D.**, an eminent Baptist missionary at Burmah, was born at Malden, Mass., Aug. 9, 1788; died at sea, April 12, 1850. He graduated at Brown University in 1807, and Andover Theological Seminary in 1810. He was ordained on Feb. 6, 1812, and, with his wife, Aune Hasseltine, sailed for Calcutta on the 19th. In Rangoon, Burmah, he toiled nearly forty years, gathering around him thousands of converts and many assistants, Americans and Burmese. He translated the Bible into the Burmese language, and had nearly completed a dictionary of that language at the time of his death. His wife dying in 1826, he married (April, 1834) the widow of a missionary (Mrs. Sarah H. Boardman), who died in September, 1845. While on a visit to the United States in 1846, he married Miss Emily Chubbuck ("Fauny Forester," the poet), who accompanied him back to Burmah. His first wife, Aune Hasseltine,

was the first American feminine missionary in the East Indies.

**JUNIUS, LETTERS OF.** During the vehement quarrel between Great Britain and her colonies (1765–1775), a series of letters addressed to King George III., his ministers, and other distinguished public men in England, were published in the *Public Advertiser*, and were generally signed "Junius" or "Philo-Junius." In the first authorized collection of these letters there were forty-four by "Junius" and fifteen by "Philo-Junius." They treated of public men and public measures of that day in a style that produced a profound impression and interest in the public mind, and excited the hottest indignation of those who felt the lash. The style was condensed but lucid; full of studied epigrammatic sarcasm, brilliant metaphor, and fierce personal attack. The government and those interested in the matter tried in vain to ascertain the name of the author. It was evident that he was a man of wealth and refinement, and possessing access to minute information respecting ministerial measures and intrigues. The most eminent legal advisers of the crown tried in vain to get a clue to the secret of his identity; and the mystery which has ever since enveloped the name of the author of the letters of "Junius" has kept up an interest in them, which, because of the remoteness of their topics, could not otherwise have been kept alive. Some afterwards claimed their authorship, but without a particle of proof in favor of the claim. The names of more than fifty persons have been mentioned as the suspected authors. An array of facts, circumstances, and fair inferences has satisfied the most careful inquirers that Sir Philip Francis was "Junius." The letters were chiefly written between 1769 and 1772.

## K.

**Kalb (Baron de), JOHN**, was born in Alsace (then a French province, now in Germany), June 29, 1721; died at Camden, S. C., Aug. 19, 1780. He

BARON DE KALB.

entered the French military service in 1743, and in 1747 rose to the rank of brigadier-general under

Marshal Broglie, and obtained the order of military merit in 1761. The next year he visited the English-American colonies as a secret agent of the French government, to ascertain their political temper. He was a brigadier in the French army when (November, 1776) he was engaged by Franklin and Deane to serve in the Continental army. He accompanied Lafayette to America in 1777, and was appointed major-general (Sept. 15, 1777) by the Continental Congress. He served under the immediate command of Washington until after the evacuation of Philadelphia (June, 1778); then in New Jersey and Maryland until April, 1780, when he was sent to assist Lincoln, besieged in Charleston. He arrived too late. De Kalb became chief commander in the south after the fall of Charleston, but was soon succeeded by General Gates, when he became that officer's second in command. In the disastrous battle at Sanders's Creek, near Camden, S. C., he was mortally wounded, and died three days afterwards. De Kalb's body was pierced with eleven wounds. It was buried at Camden. A marble monument was erected to

his memory in front of the Presbyterian Church at Camden, the corner-stone of which was laid by Lafayette in 1825.

DE KALB'S MONUMENT.

Kane, ELISHA KENT, M.D., was born in Philadelphia, Feb. 3, 1820; died at Havana, Feb. 16, 1857. He was educated at the universities of Virginia and Pennsylvania, taking his medical degree in 1843. Ill-health led to his entering the navy, and he sailed as physician to the embassy to China in 1843. He travelled extensively in Asia and Europe, traversed Greece on foot, explored Western Africa to some extent, was in the war with Mexico, and in May, 1850, sailed as surgeon and naturalist under Lieutenant De Haven, in search of Sir John Franklin. He com-

ELISHA KENT KANE.

manded a similar expedition which sailed from New York in May, 1853. The expedition suffered great hardships, and the survivors returned in October, 1855. They had abandoned their vessel, and had travelled eighty miles on the ice and in boats to a Danish settlement. During that voyage, the open Polar Sea, whose existence was suspected, was discovered. Gold medals were awarded him by Congress, the Legislature of New York, and the Royal Geographical Society of London. But his own life and those of most of his companions were sacrificed. His health failed, and he went first to London and then to Cuba, where he died.

**Kane's Arctic Expedition.** Sir John Franklin, an English navigator, sailed on a voyage of discovery and exploration with two vessels, in May, 1845. Years passed by, and no tidings of him or his companions came. Expeditions were sent from England in search of him. Public interest in the fate of Sir John was excited in Europe and America, and in May, 1850, Henry Grinnell, an opulent merchant of New York, fitted out two ships (*Adrance* and *Rescue*) and placed them in charge of Lieutenant De Haven, to assist in the benevolent effort. These vessels returned, after remarkable adventures in the polar seas, in the autumn of 1851, without success. In connection with the United States government, the same wealthy merchant fitted out another expedition for the same purpose in 1853. Two vessels, under the command of Dr. Elisha Kent Kane (surgeon of the first expedition) sailed from New York in May. Kane and his party made valuable discoveries, among others, of an "open polar sea," so long suspected and sought for by scientific men and navigators. But they failed to find Sir John Franklin. The companies of these two vessels suffered much, and were finally compelled to abandon the ships and make their way in open boats to a Danish settlement in Greenland. Their long absence created fears for their safety, and a relief expedition was sent in search of them. They returned home in the vessels of the latter in the autumn of 1855. The fate of Sir John Franklin and his crew is yet one of the mysteries of the sea. The object of his search—the discovery of a northwest passage from Europe to India—yet occupies men's minds and the efforts of scientific men and navigators. The search has been going on for more than three hundred years. The question whether there is a water connection in the polar regions between the Atlantic and Pacific oceans, or, rather, between Baffin's Bay and Behring's Strait, was solved in October, 1853, by Captain McClure, of the British ship *Investigator*. He passed through Behring's Strait and sailed eastward to a point whence, with sleds, he travelled on the ice to another point eastward, to which Captain Parry and other navigators had penetrated. Before this the mute whale had demonstrated the scientific fact to the satisfaction of naturalists. The same species are found in Behring's Strait and Baffin's Bay; and as the waters of the tropical regions would be like a sea of fire to them, they must have had communication through polar channels. De Haven's expedition met with many perils amid the ice-packs in the polar seas, and the vessels were frozen in from late in September, 1850, until May, 1851, during the long six months' night of the Arctic regions. One of the vessels was placed by the currents and the ice-floes in a careening position, and was not released from it until May, 1851, when she was cut out of the ice.

**Kansas** was a part of the Louisiana purchase in 1803. (See *Louisiana*.) The territories of Kansas and Nebraska (which see) were established in 1854 by act of Congress, which really repealed the Missouri Compromise Act (which see). This produced great agitation throughout the coun-

try, and great commotion among the settlers in Kansas. (See *Kansas, Civil War in.*) On Jan. 29, 1861, Kansas was admitted into the Union as a state. During the war, Kansas furnished to the National Army more than 20,000 soldiers. It

questioned forever. A member from Georgia introduced the following resolution in Congress in 1852: "That the series of acts passed during the first session of the Thirty-first Congress, known as compromises, are regarded as a final adjustment and a permanent settlement of the questions therein embraced, and should be maintained and executed as such." Suddenly the agitation of the slavery question was vehemently aroused. In January, 1854, Senator Stephen A. Douglas, of Illinois, presented a bill in the Senate for the erection of two vast territories in mid-continent, to be called, respectively, Kansas and Nebraska. It provided for permitting the inhabitants of these territories to decide for themselves whether slavery should or should not exist within their domains. This proposed nullification of the Missouri Compromise (which see) produced raucous controversies in and out of Congress, and the people of the free-labor states became greatly excited. After long and bitter discussions in both Houses

CUTTING-OUT, MAY, 1851. (See p. 731.)

is very rapidly increasing in population and wealth. Its population in 1880 was 996,096. Much of the state is a fine grazing country, well supplied with rivers and watered by numerous creeks. On its eastern border the navigable Missouri River presents a water-front of almost one hundred and fifty miles. It has a coal-bearing region which occupies the whole of the eastern part of the state, and embraces about 17,000 square miles. Its climate is beautiful, and, probably, no other Western state has so many bright, sunny days. The rearing of cattle is a promi-

of Congress, the bill was passed, and became a law by receiving the signature of the President, May 31, 1854. From that day the question of slavery was a subject of discussion and sectional irritation, until it was abolished in 1863. The people of the North thought they perceived in this measure a determination to make slavery national, and the boast of Robert Toombs, of Georgia, that he would yet "call the roll of his slaves on Bunker's Hill," seemed likely not to be an illusion.

**Kansas, CIVIL WAR IN.** The Kansas-Nebraska Act (see *Kansas and Nebraska*) left all the territories of the United States open to the establishment in them of the social institutions of every state in the Union, that of slavery among others. It was a virtual repeal of the Missouri Compromise (which see). The question immediately arose, Shall the domain of the Republic be the theatre of all *free* or all *slave* labor, with the corresponding civilization of each condition as a consequence? This question was succeeded by positive action by the friends of each labor system. Those in favor of the slave system, viewing the willingness of those of the free-labor states to accede to the wishes of the Southern politicians so as to secure Southern trade, felt confident that their supremacy was secure. That party sounded the trumpet for battle, and the Territory of Kansas was the chosen battle-field. The Fugitive Slave Law (which see) had created an intense and wide-spread feeling of hostility to slavery in the free-labor states, and when the advocates of slavery began to assert their exclusive right to the government of Kansas, and thus cast down the gauntlet before their opponents, the latter gladly took it up. They resolved to carry

STATE SEAL OF KANSAS.

nent industry. Kansas is a very attractive state for enterprising settlers, and promises to be one of the finest portions of the Union.

**Kansas and Nebraska.** It was thought that the Compromise measures of 1850 (see *Omnibus Bill*) had quieted the agitation of the slavery

on the contest with the peaceful weapons of the ballot-box. Suddenly, emigration began to flow in a steady, copious, and ever-increasing stream from the free-labor states, especially from New England, into the new territory. It soon became evident that the settlers from those states in Kansas would soon outnumber and outvote those from the slave-labor states. The dominant power in politics was pro-slavery in its proclivities. Alarmed by this emigration, it proceeded to organize physical force in Missouri to counteract the moral force of its opponents if necessary. Combinations were formed under various names — "Social Band," "Friends' Society," "Blue Lodge," "The Sons of the South," etc. A powerful organization under the title of the "Emigrant Aid Society" had been formed in Boston under the sanction of the Legislature of Massachusetts immediately after the passage of the Kansas-Nebraska Bill (May, 1854); and the Southern societies just mentioned were organized to oppose this "Emigrant Aid Society." At a meeting at Westport, Mo., early in July, 1854, it was resolved that Missourians who formed the associations represented there should be ready at all times to assist, when called upon by pro-slavery citizens of Kansas, in removing from the territory by force every person who should attempt to settle under the auspices of the Emigrant Aid Society. Both parties planted the seeds of their respective systems in Kansas. They founded towns: those from the free-labor states founded Lawrence, Topeka, Boston, Grasshopper Falls, Pawnee, and one or two others. Those from the slave-labor states founded Kickapoo, Doniphan, Atchison, and others on or near the Missouri River. Immediately after the passage of the Kansas-Nebraska Bill, hundreds of Missourians went to Kansas and selected a tract of land, and put a mark upon it for the purpose of establishing a sort of pre-emption title to it, and at a public meeting resolved, "That we will afford protection to no Abolitionist as a settler of this territory; that we recognize the institution of slavery as already existing in this territory, and advise slaveholders to introduce their property as soon as possible." The national government appointed A. H. Reeder governor of the new territory. He arrived in October, 1854, and took measures for the election of a territorial legislature. With the close of this election (March, 1855), the struggle for supremacy in Kansas between the friends and opponents of the slave system began in dead earnest. The pro-slavery men had an overwhelming majority in the Legislature, for Missourians had gone over the border by hundreds and voted. When, in November, 1854, a delegate to Congress for Kansas was elected, of nearly 2900 votes cast, over 1700 were put in by Missourians who had no right there. At the election of the Legislature, there were only 1410 legal votes in the Territory of Kansas; but there were 6218 votes polled, mostly illegal ones by Missourians. Fully 1000 men came from Missouri, armed with deadly weapons, two cannons, tents, and other paraphernalia of war, led by Claiborne F. Jackson (Governor of Missouri in 1860), and encamped

around the little town of Lawrence, and in like manner such intruders controlled every poll in the territory. Then a reign of terror was begun in Kansas. All classes of men carried deadly weapons. The illegally chosen Legislature met at a point on the border of Missouri, and proceeded to enact barbarous laws for upholding slavery in the territory. These Governor Reeder vetoed, and they were instantly passed over his veto. He was so obnoxious to the pro-slavery party that, at the request of the latter, President Pierce removed him, and sent Wilson Shannon, of Ohio, to fill his place. The actual settlers in Kansas, who were chiefly anti-slavery men, held a convention (Sept. 5, 1855), when they resolved not to recognize the laws of the illegal Legislature as binding upon them. They refused to vote for a delegate to Congress at an election appointed by the Legislature, and they called a delegate convention at Topeka on Oct. 19. At that convention Governor Reeder was elected delegate to Congress by the legal votes of the territory. On the 23d of the same month, another convention of legal voters assembled at Topeka and framed a state Constitution. It was approved by the legal vote of the territory. It made Kansas a free-labor state, and under this Constitution they asked for admission into the Union, as such. The strife between freedom and slavery was then transferred to the national capital. Reeder made a contest for a seat in Congress with the delegate chosen by the illegal votes. Meanwhile, elections had been held (Jan. 17, 1856) in Kansas under the legally adopted new state Constitution, and matters seemed very dark for the pro-slavery party in Kansas, when President Pierce, in a message to Congress (Jan. 24, 1856), represented the action of the legal voters in the territory in framing a state Constitution as rebellion. All through the ensuing spring violence and bloodshed prevailed in the unhappy territory. Seeing the determination of the actual settlers to maintain their rights, armed men flocked into the territory from the slave-labor states and attempted to coerce the inhabitants into submission to the laws of the illegally chosen Legislature. Finally, Congress sent thither a committee of investigation. The majority reported (July 1, 1856) that every election had been controlled by citizens from Missouri; that the action of the legal voters of Kansas was valid, and that the state Constitution was the choice of the majority of the people. The canvass for a new President was now in operation, and so absorbed public attention that Kansas had rest for a while. James Buchanan was elected by the Democratic party. At the beginning of his administration the Dred Scott case (which see) greatly intensified the strife between the pro-slavery and anti-slavery men, especially in Kansas. Mr. Buchanan favored the views of the pro-slavery men, and his strong support gave them, in Kansas, renewed courage. Then the opposing parties were working with energy for the admission of Kansas as a state, with opposing ends in view. The pro-slavery party, in convention at Leecompton early in September, 1857, framed a Constitution in

which was a clause providing that the "rights of property in slaves now in the territory shall in no manner be interfered with," and forbade any amendments of the instrument until 1864. It was submitted to the votes of the people on Dec. 21, but by the terms of the election law passed by the illegal Legislature, no one might vote *against* that Constitution. The vote was taken, "For the Constitution *with* slavery," or "For the Constitution *without* slavery;" so, in either case, a Constitution that protected and perpetuated slavery would be voted for. Meanwhile, at an election for a territorial Legislature, the friends of free-labor were successful, and elected a delegate to Congress. The legally elected Legislature ordered the Lecompton Constitution to be submitted to the people for *adoption* or *rejection*. It was rejected by over 10,000 majority. Notwithstanding this strong popular condemnation of the Lecompton Constitution, President Buchanan sent it in to Congress (Feb. 2, 1858), wherein was a large Democratic majority, with a message in which he recommended its acceptance and ratification. In that message, referring to the opinion of Chief-justice Tauey, the President said: "It has been solemnly adjudged, by the highest judicial tribunal known to our laws, that slavery exists in Kansas by virtue of the Constitution of the United States; Kansas is, therefore, at this moment, as much a slave state as Georgia or South Carolina." The Constitution was accepted by the Senate by a vote of thirty-two against twenty-five, but in the House, a substitute offered by Senator John J. Crittenden, of Kentucky, was adopted, which provided for the resubmission of the Lecompton Constitution to the citizens of Kansas. It was done, and that instrument was again rejected by 10,000 majority. The political power in Kansas was now in the hands of the opponents of slavery; and, finally, at the close of January, 1861, that territory was admitted into the Union as a free-labor state, and the thirty-fourth member of the family. During the political excitement in Kansas there was actual civil war, and some blood was shed. Early in April, 1856, armed men from Southern States, under Colonel Buford, arrived in Kansas. The United States marshal there took Buford's men into the pay of the government, and armed them with government muskets. Lawrence was again besieged (May 5), and on the 21st the inhabitants, under a promise of safety to persons and property, were induced to give up their arms to the sheriff. The invaders immediately entered the town, blew up and burned the hotel, destroyed two printing-offices, and plundered stores and houses. The free-labor party were furnished with arms from the free-labor states. Collisions occurred, and on May 26 a fight took place at Ossawatamie, in which the anti-slavery men were led by John Brown, where five men were killed. There was another skirmish at Black Jack (June 2), which resulted in the capture of Captain Pots and thirty of his men. Emigrants from the free-labor states, on their way through Missouri, were turned back by armed parties. On Aug. 14, anti-slavery men captured a fort near Lecompton, oc-

cupied by Colonel Titus with a party of pro-slavery men, and made prisoners the commander and twenty of his men. On Aug. 25 the acting-governor (Woodlin) declared the territory in a state of rebellion. He and David R. Atchison, late United States Senator from Missouri, gathered a considerable force, and, on Aug. 29, a detachment sent by the latter attacked Ossawatamie, which was defeated by a small band under John Brown. The latter was defeated, with the loss of two killed, five wounded, and seven made prisoners. The assailants lost five killed, and thirty buildings were burned. At the annual election at Leavenworth, a party from Missouri killed and wounded several of the anti-slavery men, burned their houses, and forced about one hundred and fifty to embark for St. Louis. J. W. Geary, who had been appointed governor, arrived in Kansas early in September, and ordered all armed men to lay down their weapons; but Missouri men, in number about 2000, and forming three regiments of artillery, marched to attack Lawrence under the command of a member of the Missouri Legislature. Geary, with United States troops, prevailed upon them to desist, and near the close of the year (1856) he was enabled to report that peace and order prevailed in Kansas.

**Kansas Indians, TREATY WITH THE.** In June, 1825, the Kansas Indians ceded to the United States by treaty all their lands, both within and without the limits of Missouri, excepting a reservation beyond that state, on the Missouri River, about thirty miles square, including their villages. In consideration for this cession, the United States agreed to pay \$3500 a year for twenty years; to furnish them immediately with 300 head of cattle, 300 hogs, 500 fowls, three yoke of oxen, and two carts, with such farming utensils as the Indian Superintendent might deem necessary; also a blacksmith, and persons to aid and instruct them in their agricultural pursuits. This was signed by General William Clarke and twelve Kansas chiefs.

**Kautz, AUGUSTUS V.**, was born at Baden, Germany, Jan. 5, 1823. He graduated at West Point in 1852. His parents, who came to America in the year of his birth, settled in Ohio. He was a private in the Ohio volunteers in the war with Mexico. In May, 1861, he was made a captain of cavalry, and did good service as colonel of cavalry in Kentucky, Tennessee, and Virginia. He was most active in the campaign against Petersburg and Richmond in 1864. (See *Kautz's Raids*.) Mustered out of the service in 1866, he became judge-advocate of the military division of the Gulf. In March, 1865, he was breveted major-general for "meritorious services during the Rebellion."

**Kautz's Raids.** When, early in May, the Army of the James went up the Appomattox, General A. V. Kautz, with three thousand National cavalry, moved from Suffolk, on the south of the James River, to cut the Weldon Railway south of Petersburg, over which Beauregard was sending troops from Charleston to assist

Lee in Virginia. Kautz struck the road at Stony Creek, some distance south of Petersburg, where he burned the railway bridge. Before he reached the road most of Beauregard's forces had passed over it, and filled the city of Petersburg with armed men. Kearny made a circuit, and joined the Nationals at Bermuda Hundred. He left camp on May 12 on another similar raid. Passing up near Drewry's Bluff, he moved on an arc of a circle by Chesterfield Court-house and struck the Richmond and Danville Railway eleven miles west of the Confederate capital. He struck it again at Powhatan; menaced the railway bridge over the Appomattox, which was strongly guarded; swept around eastward and struck the road again at Chula Station; and then, with a part of his command, he crossed to the Southside Railway at White and Black Station, while the remainder went on to the junction of the Danville and Southside roads. Turning eastward, the whole troop swept down to the North Carolina line, destroying the Weldon Road at Jarratt's Station, and, passing Prince George's Court-house, took to City Point one hundred and fifty prisoners, of whom thirteen were officers. These raids occurred in 1864.

**Kearny, LAWRENCE**, United States Navy, was born at Perth Amboy, N. J., Nov. 30, 1789; died there, Nov. 29, 1868. He entered the navy in 1807, performed important services on the coast of South Carolina and adjoining states during the War of 1812-15, and after the war, in command of the schooner *Enterprise*, assisted with efficiency in ridding the West Indies and Gulf of Mexico of pirates. He also, in the *Warren*, drove the Greek pirates from the Levant in 1827, and broke up their nests. In command of the East India squadron in 1851, he secured from the Chinese authorities the recognition of the right of Americans to trade there, and the same protection and facilities to our merchants as were about being granted by treaty to Great Britain.

**Kearny, PHILIP**, was born in New York City, June 2, 1815; killed in battle near Chantilly, Va., Sept. 1, 1862. He studied law, but, preferring the military profession, entered the army at twenty-two years of age as lieutenant of dragoons. Soon afterwards the government sent him to Europe to study and report upon French cavalry tactics. While there he fought in the French army in Africa as a volunteer, and returned in 1840 with the cross of the Legion of Honor. Aid to General Scott (1841-44), he was made captain in the United States Army, and served on the staff of Scott in the war with Mexico, receiving great applause. Near the city of Mexico he lost his left arm in battle. After serving a campaign on the Pacific coast against the Indians, he went to Europe, and served on the staff of the French general Maurier in the Italian War (1859). He received from the French government a second decoration of the Legion of Honor. He hastened home when the Civil War broke out; was made brigadier-general of volunteers just after the battle of Bull's Run, and commanded a brigade of New Jersey troops

in Franklin's division, Army of the Potomac. He commanded a division in Heintzelman's corps, and behaved gallantly during the Peninsular campaign. Kearny was made major-gen-

PHILIP KEARNY.

eral of volunteers in July, 1862. He was the first to reinforce Pope, and was engaged in the battles between the Rappahannock and Washington, from Aug. 25 to Sept. 1.

**Kearny, STEPHEN WATTS**, brother of Philip, was born at Newark, N. J., Aug. 30, 1794; died in St. Louis, Oct. 31, 1843. When the War of 1812-15 broke out, young Kearny left his studies at Columbia College, entered the army as lieutenant of infantry, and distinguished himself in the battle of Queenston Heights. In April, 1813, he was made captain, and rose to brigadier-general in June, 1846. He was in command of the Army of the West at the beginning of the war with Mexico, and with that army marched to California, conquering New Mexico on the way. He established a provisional government at Santa Fé, pressed on to California, and was twice wounded in battle. For a few months in 1847 he was Governor of California; joined the army in Mexico; in March, 1848, was Governor, military and civil, of Vera Cruz, and in May of the same year was made Governor of the city of Mexico. In August, 1848, he was breveted major-general.

**Keith, GEORGE**, was born at Aberdeen, Scotland; died rector of Edhurton, Sussex, England, about 1710. He belonged to the Society of Friends, or Quakers; came to East Jersey, was surveyor-general in 1682, and in 1689 taught school in Philadelphia. He wrote and spoke much in favor of the Quakers, and visited New England in their interest; but about 1691 he established a sect who called themselves "Christian Quakers." Keith was irritable, quarrelsome, and imperious. He finally left the Quakers altogether, and took orders in the Church of England.

**Kenesaw Mountains (Ga.), EVENTS NEAR.** General Johnston, pursued by General Sherman, after evacuating Allatoona Pass (see *Allatoona*

*Pass and Marietta*), took a stand. At his back were the Big and Little Kenesaw mountains, within three miles of Marietta. With these, lying close together, Lost and Pine mountains formed a triangle. Confederate batteries covered their summits, and on the top of each Confederate signal-stations were placed. Thousands of men were busy in the forest casting up intrenchments from base to base of these rugged hills in preparation for a great struggle. Sherman advanced to Big Shanty, and there made preparations to break through the Confederate works between Kenesaw and Pine mountains. Hooker was on the right and front of his line, Howard was on his left and front, and Palmer between it and the railway. Under a heavy cannonade, the advance began, June 14, 1864. The Nationals pushed over the rough country, fighting at almost every step. That night the Confederates abandoned Pine Mountain, and took position in the intrenchments between Kenesaw and Lost mountains. Upon the latter eminence the Nationals advanced in a heavy rain-storm, and on the 17th the Confederates abandoned Lost Mountain and the long line of intrenchments connecting it with Kenesaw. Sherman continually pressed them heavily, skirmishing in dense forests, furrowed with ravines and tangled with vines. From the top of Kenesaw Johnston could see the movements of the Nationals, and from batteries on its summit could hurl plunging shot. The antagonists struggled on; and finally General Hood sallied out of the Confederate intrenchments with a strong force to break through Sherman's line between Thomas and Schofield. He was received with a terrible return blow, which made him recoil in great confusion, leaving, in his retreat, his killed, wounded, and many prisoners. This struggle is known in history as the battle of the Kulp House. This repulse inspired the Nationals. On the 27th (June) they made a furious assault on the Confederate lines at two points south of Kenesaw to break them, separate their forces, and destroy their army. The Nationals were repulsed, with an aggregate loss of about three thousand men. Among the killed were Generals C. G. Harker and D. McCook, and many valuable officers of lower grade were wounded. The loss of the Confederates, behind their breast-works, was slight. Sherman now disposed his troops so as to seriously threaten Johnston's rear. Turner's Ferry across the Chattahoochee was menaced, and the intended effect was instantaneous. On the night of July 2 Johnston abandoned Kenesaw and all his intrenchments, and when, at dawn (July 3), the Nationals stood on the crest of that mountain, they saw the Confederates flying through and beyond Marietta towards the Chattahoochee, in the direction of Atlanta. Sherman pursued, but Johnston escaped across the Chattahoochee, after confronting his pursuers at a line of intrenchments hastily thrown up. Before the Nationals now flowed a deep and rapid stream, and on the opposite side thousands of men were piling up military works to oppose their passage. (See *Atlanta*.)

**Kent Island** (Chesapeake Bay), COLONY ON.

In May, 1631, King Charles I. granted a license to William Clayborne "to traffic in those parts of America for which there was already no patent granted for sole trade." With the intention of monopolizing the Indian trade of Chesapeake Bay, Clayborne and his associates planted a small colony on Kent Island, situated in the centre of the Province of Maryland, soon afterwards granted to Lord Baltimore. This grant and settlement gave much trouble to the proprietor of Maryland and the settlers there under his patent. (See *Clayborne*.)

**Kent**, JAMES, LL.D., an eminent jurist, was born at Phillipstown, Putnam Co., N. Y., July 31, 1763; died in New York city, Dec. 12, 1847. He studied law with Egbert Benson, and began its practice in 1787 at Poughkeepsie, N. Y.

JAMES KENT.

He was a member of the New York Legislature from 1790 to 1793, and became professor of law in Columbia College in 1793. Deeply versed in the doctrine of civil law, he was made a master in chancery in 1796, city recorder in 1797, judge of the Supreme Court in 1798, chief-justice in 1804, and was chancellor from 1814 to 1823. After taking a leading part in the State Constitutional Convention in 1821, he again became law professor in Columbia College, and the lectures he there delivered form the basis of his able *Commentaries on the United States Constitution*, published in four volumes. He was one of the clearest legal writers of his day. In 1828 he was elected President of the New York Historical Society. He passed his later years in revising and enlarging his *Commentaries* and in giving opinions on legal subjects.

**Kenton**, SIMON, a Western pioneer, was born in Fauquier County, Va., April 3, 1755; died in Logan County, O., April 29, 1836. Supposing he had killed in an affray a rival in a love affair when he was sixteen years old, he fled to the wilderness west of the Alleghany Mountains, where he was the friend and companion of Daniel Boone in many daring feats. He was in expeditions against the Indians, was captured by them, and taken to Detroit. Escaping from a British prison there in 1779, he distinguished himself in resisting the invasion of Kentucky by

the British and Indians in that year. Finally, after an expedition against the barbarians on the Miami, he settled (1784) near Maysville.

SIMON KENTON.

He accompanied Wayne in his expedition in 1794. In 1805 he was seated near the Mnd River, O., and was made brigadier-general of militia. In 1813 he served under Governor Shelby at the battle of the Thames (which see). Begged by lawsuits because of defective titles to lands, he lived in penury many years. In 1824 he appeared at Frankfort, Ky., in tattered clothes, and successfully appealed to the Legislature to release the claim of the state to lands which were his. Congress afterwards allowed him a pension.

**Kentucky Neutrality.** The position of the inhabitants of Kentucky at the breaking-out of the Civil War was peculiar and painful. The governor had responded to the President's call for troops in insulting words, and was followed by fierce denunciations of the government policy by the *Louisville Journal*, the leading paper in the state. These were followed by a great Union meeting in Louisville on the evening of April 18, over which James Guthrie (see *Peace Convention*) and other leading politicians of the state held controlling influence. At that meeting it was resolved that Kentucky reserved to herself "the right to choose her own position; and that, while her natural sympathies are with those who have a common interest in the protection of slavery, she still acknowledges her loyalty and fealty to the government of the United States, which she will cheerfully render until that government becomes aggressive, tyrannical, and regardless of our rights in slave property." They declared that the states were the peers of the national government, and gave the world to understand that the latter should not be allowed to use "sanguinary or coercive measures to bring back the seceded states." They alluded to the "Kentucky State Guard" (which see) as the "bulwark of the safety of the commonwealth, . . . pledged equally to fidelity to the United States and to Kentucky." This avowal of peculiar neutrality—of *conditional*

Unionism—delighted the enemies of the Republic.

**Kentucky Neutrality Violated.** Early in the summer of 1861 the Governor of Kentucky declared that arrangements had been made that neither National nor Confederate troops should set foot on the soil of that state. The neutrality of Kentucky was respected many months, and so the purposes of the governor of that state and of Tennessee were promoted, for it gave them time to prepare for war. Pillow had urged the seizure of the bluff at Columbus, in western Kentucky, as an aid to him in his attempt to capture Cairo and Bird's Point; but the solemn assurance of the Confederate government that Kentucky neutrality should be respected restrained him; but on Sept. 4, General (Bishop) Polk, with a considerable force, seized the strong position at Columbus, under the pretext that National forces were preparing to occupy that place. The Confederate Secretary of War publicly telegraphed to Polk to withdraw his troops; President Davis privately telegraphed to him to hold on, saying, "The end justifies the means." So Columbus was held and fortified by the Confederates. General Ulysses S. Grant, then in command of the district at Cairo, took military possession of Paducah, in northern Kentucky, with National troops, and the neutrality of Kentucky was no longer respected. The seizure of Columbus opened the way for the infliction upon the people of that state of the horrors of war. All Kentucky, for one hundred miles south of the Ohio River, was made a military department, with General Robert Anderson, the hero of Fort Sumter, for its commander.

**Kentucky Ordinance of Secession.** General Albert Sidney Johnston, formerly an officer in the United States Army, was in command of the Confederate "Western Department," which included southern and western Kentucky, then held by the insurgents, and the State of Tennessee, with his headquarters at Nashville. Under the shadow of his power the Secessionists of Kentucky met in convention at Russellville, the capital of Logan County, Oct. 29, 1861. They drew up a manifesto in which the grievances of Kentucky were recited, and the action of the loyal Legislature was denounced. They passed an ordinance of secession, declared the state independent, organized a provisional government, chose George W. Johnson Provisional Governor, appointed delegates to the Confederate Congress at Richmond, and called Bowling Green the state capital. Fifty-one counties were represented in that "Sovereignty Convention" by about two hundred men, without the sanction of the people.

**Kentucky, POSITION OF (1861).** This was a border state of great importance, having a population, in 1860, of 1,155,713, of whom 225,483 were slaves. The people were strongly attached to the Union, but its governor (Beriah Magoffin) and leading politicians of his party in the state sympathized with the Secessionists. The action of Kentucky was awaited with great

anxiety throughout the Union. The governor at first opposed secession, for the people were decidedly hostile to revolutionary movements in the Gulf region; yet they as decidedly opposed what the sophists called the "coercion of a sovereign state." At a state convention of "Union and Douglas men," held on Jan. 8, 1861, it was resolved that the rights of Kentucky should be maintained in the Union. They were in favor of a convention of the free-labor and slave-labor border states to decide upon just compromises, and declared their willingness to support the National government, unless the incoming President should attempt to "coerce a state or states." The Legislature, which assembled at about the same time, was asked by the governor to declare, by resolution, the "unconditional disapprobation" of the people of the state of the employment of force against "seceding states." On Jan. 22 the Legislature accordingly resolved that the Kentuckians, united with their brethren of the South, would resist any invasion of the soil of that section at all hazards and to the last extremity. This action was taken because the legislatures of several free-labor states had offered troops for the use of the National government in enforcing the laws in "seceding states." They decided against calling a convention, and appointed delegates to the Peace Congress. A little later the public authorities and other leading men of the state endeavored to give to it a position of absolute neutrality. (See *Kentucky Neutrality*.)

**Kentucky, SETTLEMENTS IN.** The precarious tenure by which places that were settled in Kentucky by Boone and others were held, while the land was subjected to bloody incursions by barbarians, was changed after George Rogers Clarke's incursions into Ohio had made the tribes there no longer in raders of the soil south of that river. The number of "stations" began to multiply. A block-house was built (April, 1779) on the site of the city of Lexington. By a law of Virginia (May, 1779), all persons who had settled west of the mountains before June, 1778, were entitled to claim four hundred acres of land, without any payment; and they had a right of pre-emption to an adjoining one thousand acres for a very small sum of money, while the whole region between the Greene and Tennessee rivers was reserved for military bounties. Settlements quite rapidly increased under this liberal Virginia land system, and fourteen years after its passage Kentucky had a population that entitled it to admission into the Union as a state.

**Kentucky State Guard.** This corps was organized by Governor Magoffin for the ostensible purpose of defending Kentucky—against what? Simon B. Buckner, a captain in the United States Army, and then evidently in the secret service of the Confederate government, was placed at the head of the "guard," using his position effectively in seducing large numbers of the members from their allegiance to the old flag, and in sending recruits to the Confederate army. At the same time the governor tried to

induce the Legislature to appropriate \$3,000,000 to be used by himself and Buckner in "arming the state." This was refused; but the Lower House approved of the governor's refusal to furnish troops to the National government. He issued a proclamation of neutrality, which not only forbade the United States and the Confederate States "invading the soil of Kentucky," but also forbade the citizens of Kentucky making "any hostile demonstrations against any of the aforesaid sovereignties." The Legislature required the "State Guard" to swear allegiance to the United States, as well as to Kentucky. As Buckner could not allow his "guard" to take this oath, it was not long before he led a large portion of them into the Confederate camp, and became a major-general in the Confederate army. Then the *Louisville Journal*, which had denounced the President's call for troops in unmeasured terms of severity, cursed the commander of the "Kentucky State Guard" as one of the worst of traitors. "You are the Benedict Arnold of the day!" it said. "You are the Cariline of Kentucky! Go, thou miscreant!" And when, in February, 1862, Buckner was made a prisoner at Fort Donelson, and sent to Fort Warren, in Boston harbor, many of those who had regarded his "State Guard" as "the bulwark of the commonwealth" were clamorous for his delivery to the civil authorities of Kentucky to be tried for treason against the state.

**Kentucky, STATE OF.** In 1776 Kentucky was made a county of Virginia, and in 1777 the first court was held at Harrodsburg. Conventions held at Danville in 1784-85 recommended a peaceable and constitutional separation from Virginia. In 1786 an act was passed by the Virginia Legislature complying with the desires of Kentucky. There was delay in consummating the change. Other conventions were held urging the matter. In 1790 Kentucky became a separate territory, and

STATE SEAL OF KENTUCKY.

and on June 1, 1792, it was admitted into the Union as a state. Its population at that time was about seventy-five thousand. For several years much uneasiness was felt among the people of Kentucky on account of Indian depredations and the cloudiness

of the political skies, for the great questions of the free navigation of the Mississippi River and the ultimate possession of Louisiana were unsettled. These were settled satisfactorily by the purchase of Louisiana in 1803. During the War of 1812 Kentucky took an active part, sending full seven thousand men to the field; and after that war the state was undisturbed by any stirring events until the breaking-out of the Civil War in 1861. Its progress was rapid. A second constitution took effect in 1800, and continued in force until the adoption of the present one in 1850. At the beginning of the

Civil War Kentucky assumed a position of neutrality, but it was really one of hostility to the Union. The governor refused to comply with the President's requisition for troops; but Lieutenant William Nelson, of the navy, a native of the state, and then on ordnance duty at Washington, began to recruit for the National army; and towards the close of July, 1861, he established "Camp Dick Robinson," in Garrard County, for the organization of Kentucky volunteers. These flocked to this camp and to other recruiting stations. A great majority of the people were loyal to the Union, but the governor was not, and the unfortunate position of neutrality which the latter, with the Secessionists, caused Kentucky to assume brought upon her the miseries of civil war. (See *Kentucky Neutrality*.) Steps were taken for the secession of the state, and for the organization of a Confederate state government, but failed. (See *Kentucky Ordinance of Secession*, and *Kentucky, Position of*.) The state was scarred by battles, invasions, and raids, and martial law was proclaimed by President Lincoln, July 5, 1864. The civil authority was restored Oct. 18, 1865. The Legislature refused to ratify the Fifteenth Amendment to the national Constitution. Population in 1880, 1,648,690.

**Kernstown, BATTLE AT.** When the Army of the Potomac was transferred to the Virginia peninsula, early in 1862, it was necessary to hold the Confederates in check in the Shenandoah valley (where they were led by "Stonewall" Jackson), in order to secure Washington city. General Lander, who had struck Jackson a sharp blow at Blooming Gap (which see), had died, and was succeeded in command by General Shields. Banks was then (February, 1862) in command of the Fifth Corps. He sent Colonel Geary to reoccupy Harper's Ferry, and took command there in person late in that month. He pushed Jackson back to Winchester, where he was posted with about eight thousand men, when Johnston evacuated Manassas, early in March. Then he retired up the valley, pursued by Shields, who produced great consternation among the Secessionists. Shields found his antagonist too strong to warrant an attack, and fell back to Winchester, closely pursued by cavalry under Colonel Ashby. Banks repaired to Manassas after its evacuation, leaving Shields to guard the Shenandoah valley. Near Winchester he had nearly seven thousand men (part of them cavalry) and twenty-four guns well posted half a mile north of the village of Kernstown and two and a half miles south of Winchester. On March 22 Ashby's cavalry drove in Shields's pickets. Under cover of night, Shields pushed on some troops, under Colonel Kimball, to Kernstown. A sharp and severe battle ensued, in which Shields was badly wounded. The Confederates were repulsed at all points, and fled up the valley, closely pursued by Banks, who remained in that region to watch the insurgents, while McClellan should move on Richmond.

**Kettle Creek, BATTLE OF.** Nearly eight hundred North and South Carolina Tories, led by

Colonel Boyd, started to join the British at Augusta in February, 1779, desolating the upper country of the latter state on the way. When within two days' march of Augusta they were attacked (Feb. 14), at Kettle Creek, by Colonel Andrew Pickens, with the militia of Ninety-six, and, after a sharp fight, were defeated. Boyd and seventy of his men were killed, and seventy-five were made prisoners. Pickens lost thirty-eight men.

**Key, FRANCIS SCOTT**, author of *The Star-Spangled Banner*, was born in Frederick County, Md., Aug. 1, 1779; died in Baltimore, Jan. 11, 1843. He was a lawyer and poet, and, removing to Washington, D. C., he became district attorney. A collection of his poems was published after his death. (See *Star-Spangled Banner*.)

**Keyes, ERASMUS DARWIN**, was born at Stockbridge, Mass., May 29, 1811. He graduated at West Point in 1832, entered the artillery, and was made assistant adjutant, with rank of captain, in 1838. Becoming captain in 1841, he was appointed instructor of artillery and cavalry at West Point in 1844. He did service against the Indians on the Pacific coast, and when the Civil War broke out he was appointed (May, 1861) colonel of infantry and brigadier-general of volunteers. At the battle of Bull's Run, in July, he commanded the First Brigade in Tyler's division. Early in 1862 he was appointed commander of the Fourth Corps of the Army of the Potomac, and won the rank of major-general of volunteers and the brevet of brigadier-general United States Army by his conduct in the peninsular campaign. He resigned May 6, 1864.

**Key-stone State.** A popular title for the State of Pennsylvania, supposed to have been given because of its central position among the original thirteen states at the time of the formation of the national Constitution. In an arch formed by the thirteen states Pennsylvania would, from its geographical position, form the key-stone. The early certificates of membership of the Tammany Society have an arch composed of the states, of which Pennsylvania is the key-stone.

**Kickapoos**, an Algonquin tribe found by the French missionaries, towards the close of the seventeenth century, on the Wisconsin River. They were great rovers; were closely allied to the Miamis; and in 1712 joined the Foxes in an attack upon Detroit, and in wars long afterwards. They were reduced in 1747 to about eighty warriors, and when the English conquered Canada in 1763 there were about one hundred Kickapoos on the Wabash. They joined Pontiac in his conspiracy, but soon made peace; and in 1779 they joined George Rogers Clarke in his expedition against the British in the Northwest. Showing hostility to the Americans, their settlement on the Wabash was desolated in 1791; but they were not absolutely subdued until the treaty at Greenville in 1795, after Wayne's decisive victory, when they ceded a part of their land for a small annuity. In the early part of the present century the Kickapoos made other cessions of territory; and in 1811

they joined Tecumtha and fought the Americans at Tippecanoe. In the War of 1812 they were the friends of the English; and afterwards a larger portion of them crossed the Mississippi and seated themselves upon a tract of land on the Osage River. Some cultivated the soil, while others went southward as far as Texas, in roving bands, plundering on all sides. For some time Texas suffered by these inroads; but in 1854 some of them, peaceably inclined, settled in Kansas, when, becoming dissatisfied, many of them went off to Mexico, where they opposed the depredations of the Apaches. Most of the tribe find a home in the Indian Territory west of Arkansas, and no longer count themselves warriors.

**Kidd, WILLIAM**, executed as a pirate and murderer, May 24, 1701, was a native of Scotland, and was born about 1650. He entered the merchant-marine service in his youth, and distinguished himself as a privateersman against the French in the West Indies. He was active against the pirates that infested the waters near New York, out of which port he sailed; and for his services the Assembly of the province gave him \$750 in 1691. In 1695 a company for the suppression of piracy by privateering was organized in England. Among the shareholders in the enterprise were King William III, the Earl of Bellomont (afterwards Governor of Massachusetts and New York), Robert Livingston, of New York, and other men of wealth and influence. One tenth of all the booty gained by privateering was to be set aside for the king, and the rest was to be divided among the shareholders. A new ship, of 287 tons, was bought, and named the *Adventure Galley*; and at the suggestion of Livingston, who was then in England, Captain Kidd was appointed her commander and admitted as a shareholder. His commission bore the royal seal and signature. On the 3d of April, 1696, he sailed from Plymouth, and arrived at New York about the 4th of July. With his ship well provisioned, and with a crew of one hundred and fifty-four men and boys, he sailed for Madagascar, the chief rendezvous of the pirates who infested the India seas. In the course of a year or more rumors reached England that Kidd had turned pirate. At length the clamor became so loud that the royal shareholder in the enterprise and his associates perceived the necessity of taking action, and an order was issued to all the English colonial governors to cause the arrest of Kidd wherever he might be found. In the spring of 1699 he appeared in the West Indies in a vessel loaded with treasure. Leaving her in a bay on the coast of Hayti in charge of his first officer and a part of the ship's company, he sailed northward with forty men in a sloop, entered Long Island Sound, and at Oyster Bay took on board James Emott, a New York lawyer, and, landing him on Rhode Island, sent him to the Earl of Bellomont, then at Boston as Governor of Massachusetts, to inquire how he (Kidd) would be received by his partner in the enterprise. During Emott's absence Kidd had buried some of his treasure, which he brought with

the sloop, on Gardiner's Island. Bellomont's answer was such that Kidd went to Boston (July 1, 1699), where he was arrested, sent to England, tried on a charge of piracy and murder, found guilty, and executed (May 24, 1701), protesting his innocence. It is admitted that his trial was grossly unfair; and it is believed that Kidd was made a scapegoat to bear away the sins of men in high places. Earl Bellomont sent to Hayti for Kidd's ship, but it had been stripped by the men in charge; but he recovered the treasure buried on Gardiner's Island; also that which Kidd had with him on the sloop, amounting in the aggregate to about \$70,000. He and Livingston were then political enemies, and it is not known whether the latter got any share of the plunder.

**Kieft, WILLIAM**. Little is known of Kieft, the fifth Dutch Governor of New Netherland, before his appearance at Manhattan on the 28th of March, 1638. He seems to have been an unpopular dweller at Rochelle, France, where his effigy had been hung upon a gallows. De Vries, an active mariner, who knew him well, ranked him among the "great rascals" of his age. He was energetic, spiteful, and rapacious—the reverse of Van Twiller, his immediate predecessor. (See *Fan Twiller*.) Kieft began his administration by concentrating all executive power in his own hands; and he and his council possessed such dignity, in their own estimation, that it became a high crime to appeal from their decision. He found public affairs in the capital of New Netherland in a wretched condition, and put forth a strong hand to bring order out of confusion. Abuses abounded, and his measures of reform almost stripped the citizens of their privileges. Dilapidated Fort Amsterdam was repaired and new warehouses for the company were erected. He caused orchards to be planted, gardens to be cultivated, police ordinances to be framed and enforced, religion and morality to be fostered, and regular religious services to be publicly conducted. A spacious stone church was built within the fort, and the Connecticut architect hung in its wooden tower Spanish bells which had been captured at Porto Rico. A more liberal policy in respect to the ownership of land (see *Patroons*) caused emigration to increase, and cavaliers from Virginia and Puritans from New England were seen listening to Dominie Bogardus in his fine pulpit in the new church. (See *Bogardus*.) All that Kieft required of new settlers was an oath of fidelity and allegiance to the States-General of Holland. The demands for new homesteads caused Kieft to purchase lower Westchester and a large portion of Long Island. The encroaching Puritans on the east and the Swedes on the Delaware gave Kieft much concern, especially the latter, for Minuit, a former Dutch governor, was at their head. Kieft protested against their "intrusion." Minuit laughed at him and disregarded his threats. Very soon the energetic character of the governor, manifested in well-doing, was as conspicuous in ill-doing. He allowed his fellow-traders with the Indians to stupefy them with rum and cheat them; and

he demanded tribute of furs, corn, and wampum from the tribes around Manhattan. They paid the tribute, but cursed the tyrant. Kieft saw their power and was afraid. Some swine were stolen from colonists on Staten Island, when Kieft, seeking an excuse for striking terror to the hearts of those he had wronged, accused the Raritans of the crime, and sent armed men to chastise them. The River Indians grasped their hatchets and refused to pay tribute any longer. The hatred of all the savages was aroused. The people of New Amsterdam were alarmed, and quarrels between them and the governor were frequent and stormy. He wanted to make war on the Indians. The people refused to bear a musket or favor the crime. Unwilling to bear the responsibility, Kieft called an assembly of "masters and heads of families" in New Amsterdam to consult upon public measures. Twelve discreet men were chosen (1641) to act for them; and this was the first representative assembly in New Netherland. (See *Representative Government*.) War was deferred, and the twelve devised a plan for a municipal government for New Amsterdam. Kieft was alarmed, for he did not wish his own power abridged, and he made promises (but to be broken) of concessions of popular freedom on their giving him consent to chastise the Indians in Westchester. It was reluctantly given, when the perfidious governor dissolved them, and forbade any popular assembly thereafter. In 1643 he caused a cruel massacre of fugitive Indians at Hoboken. (See *Hoboken, Massacre at*.) A fierce war was kindled. The friendly Long Island tribes joined their injured brethren, and the Dutch colony was threatened with destruction. Help came from a Puritan, and the Indians were subdued. Kieft, despised by the colonists on whom he had brought ruin, humbly asked them to form a representative council again. The people gladly did so, for they had lost all confidence in the governor. This concession was a pitiful trick of Kieft to foil the wrath of the colonists. He neglected the advice of the popular assembly, and sought by every means to fill his own coffers with gain against a day of reckoning which he perceived was near. The representatives of the people, finding his rule unendurable, asked for the recall of Kieft before the colony should be ruined. Their prayer was heeded, and the people celebrated his departure by the firing of great guns. Some pugnacious burghers threatened the governor with personal chastisement when he should "take off the coat with which he was bedecked by the lords, his masters." The prophecy of De Vries (1643)—"The murders in which you [Kieft] have shed so much innocent blood will yet be avenged upon your own head"—was fulfilled. Kieft sailed for Holland (Aug. 16, 1647), in the ship *Princess*, with more than \$100,000 of ill-gotten wealth. The vessel, by mistake, entered the Bristol channel, struck a rock, and was wrecked on the coast of Wales. Kieft was drowned.

**Kilpatrick**, HUGH JUDSON, commander of cavalry, was born near Deckertown, N. J., Jan. 17, 1836, and graduated at West Point in 1861, enter-

ing the artillery. He was wounded in the battle at Big Bethel (June, 1861), and in September was made lieutenant-colonel of cavalry. His efficient services on all occasions won for him the office of brigadier-general and brevet major-

HUGH JUDSON KILPATRICK.

general of volunteers, and the command of a division of cavalry in the Army of the Potomac. He was very active in the campaign against Atlanta in 1864, in Sherman's march to the sea, and in his march through the Carolinas to the surrender of Johnston. For the latter campaign he was breveted major-general in the United States Army. In November, 1865, he was appointed minister to Chili. He died Dec. 6, 1881.

**Kilpatrick's Raid.** On Sunday morning, Feb. 28, 1864, General Kilpatrick, with five thousand cavalry, picked from his own and the divisions of Merritt and Gregg, crossed the Rapid Anna, swept around to the right flank of Lee's army by way of Spottsylvania Court-house, and, pushing rapidly towards Richmond, struck the Virginia Central Railroad at Beaver Dam Station, where he had his first serious encounter with the Confederates, under the Maryland leader, Bradley T. Johnson, whom he defeated. Then he struck across the South Anna, cut the Fredericksburg and Richmond Railway, and on March 1st halted within three miles of Richmond. His grand object was to liberate the Union captives from Libby Prison (which see). He was now within the outer line of its defences, at which the Confederates had thrown down their arms and fled into the city. At Spottsylvania Court-house about five hundred of Kilpatrick's best men, led by Colonel Ulric Dahlgren, a dashing young officer, diverged from the main column for the purpose of striking the James River Canal above Richmond, destroying as much of it as possible, and, crossing the James River, attack the Confederate capital on the south simultaneously with the attack of Kilpatrick on the north. The object was to liberate the Union prisoners at Belle Isle, on the James River, in front of Richmond. Kilpatrick, disappointed in not hearing Dahlgren's guns, and hard pressed by the Confederates as he attempted to penetrate the second line of defences, withdrew after

a sharp fight, and halted six miles from Richmond. He was pursued by the Confederates, with whom he skirmished, and returned to his place of departure. Meanwhile Dahlgren, misled by a negro guide, failed to cross the James River, but struck the outer line of fortifications on the northern side of Richmond at dark, March 2. In a conflict that ensued the Nationals were repulsed, and they retreated towards the Chickahominy, hotly pursued. Dahlgren and about one hundred of his men became separated from the rest. On the evening of the 3d the young leader, in a conflict some distance from Richmond, was shot dead, and one hundred of his men were made prisoners.

**Kilpatrick's Raid near Atlanta.** General Sherman, when he heard of Wheeler's raid (which see), sent Kilpatrick, with five thousand cavalry, during the night of Aug. 18, 1864, to strike the railway at West Point, and break it to Fairborn, and then to tear up the Macon road thoroughly. When he reached the Macon road, near Jonesborough, he was confronted by Ross's Confederate cavalry. These he routed, and drove through Jonesborough, and just as he began tearing up the road some cavalry came up from the south, and compelled him to desist and fly. He swept around, and again struck the road at Lovejoy's, where he was attacked by a larger force. Through these he dashed, capturing and destroying a 4-gun battery, and, sweeping around, reached headquarters on the 22d, with seventy prisoners.

**King Cotton,** a popular personification of the cotton-plant, a staple production of the Southern States of the American Union. Its supremacy in commerce and politics was asserted by the politicians of the cotton-growing states. "You dare not make war upon cotton; no power on earth dare make war upon it. Cotton is King!" said Senator James Hammond, of South Carolina. "Cotton is King!" shouted back the submissive spindles of the North. A Northern poet sang:

"Old Cotton will pleasantly reign  
When other kings painfully fall,  
And ever and ever remain  
The mightiest monarch of all."

A senator from Texas exclaimed on the floor of Congress, just as the Civil War was kindling, "I say, Cotton is King, and he waves his sceptre not only over these thirty-three states, but over the island of Great Britain and over Continental Europe; and there is no crowned head there that does not bend the knee in fealty, and acknowledge allegiance to that monarch." This boasting was caused by the erroneous estimate by the politicians of the money value of the cotton crop compared with the other agricultural products of the United States. It was asserted that it was greater than all the latter combined. The census of 1860 showed that the wheat crop alone exceeded in value the cotton crop by \$57,000,000; and the value of the combined crops of hay and cereals exceeded that of cotton over \$900,000,000. The sovereignty of cotton was tested by the Civil War (1861-65). At its close a poet wrote:

"Cotton and Corn were mighty kings,  
Who differed, at times, on certain things,  
To the country's dire confusion;  
Corn was peaceable, mild, and just,  
But Cotton was fond of saying, 'You must!'  
So after he'd boasted, bullied, and cussed,  
He got up a revolution.  
But in course of time the bubble is bursted,  
And Corn is King and Cotton—is worsted."

**King George Misled.** The ministry, either blind or wicked, misled George III. into the belief that a few regiments could subdue Massachusetts, and that New York could easily be seduced to the support of the crown by immunities and benefactions. The deceived monarch, therefore, ordered letters to be written to Gage, at the middle of April, 1775, to take possession of every colonial fort; to seize and secure all military stores of every kind collected for "the rebels;" to arrest and imprison all such as should be thought to have committed treason; to repress rebellion by force; to make the public safety the first object of consideration, and to substitute more coercive measures for ordinary forms of procedure, without pausing to require the aid of a civil magistrate. Four regiments, at first destined for Boston, were ordered to New York, to assist in the progress of intrigue; and a vessel carried out six packages of pamphlets, containing a very soothing and complimentary "Address of the People of Great Britain to the Inhabitants of America," written by Sir John Dalrymple, at the request of Lord North. The Americans were not coaxed by this persuasive pamphlet, nor awed by the attempts to execute the sanguinary orders of Lord Dartmouth to Gage. (See *Lexington, Concord, and Bunker's Hill*.)

**King George's Hatred of Dr. Franklin.** Wright, in his *England under the House of Hanover*, says that, notwithstanding the king, in his speech from the throne (Dec. 5, 1783), had said, "I have sacrificed every consideration of my own to the wishes and opinions of my people. I make it my humble and earnest prayer to Almighty God that Great Britain may not feel the evils which might result from so great a dismemberment of the empire, and that America may be far from those calamities which have formerly proved, in the mother country, how essential monarchy is to the enjoyment of constitutional liberty. Religion, language, interests, affection may—and I hope will—yet prove a bond of permanent union between the two countries. To this end neither attention nor disposition shall be wanting on my part," he nevertheless detested everything American. The acknowledgment of the independence of the United States was wrong from him by dire necessity. Ever since the beginning of the troubles he had thoroughly hated Franklin personally, to whom, on account of his coolness and adroitness, he had given the name of "Arch Rebel." The king carried his prejudices so far that Sir John Pringle was driven to resign his place as President of the Royal Society in this wise: The king unjustly requested the society to publish, with the authority of its name, a contradiction of a scientific opinion of the rebellions Franklin. Pringle replied that it was not in his power to reverse

the order of Nature, and resigned. The pliant Sir Joseph Banks, with the practice of a true courtier, advocated the opinion patronized by his majesty, and was appointed President of the Royal Society.

**King George's War.** There had been peace between France and England for about thirty years after the death of Queen Anne, during which time the colonists in America had enjoyed comparative repose. Then the selfish strifes of European monarchs kindled war again. In March, 1744, France declared war against Great Britain, and the colonists cheerfully prepared to begin the contest known in America as King George's War; in Europe, the War of the Austrian Succession. A contest arose between Maria Theresa, Empress of Hungary, and the Elector of Bavaria, for the Austrian throne. The King of England espoused the cause of the empress, while the King of France took part with her opponent. This caused France to declare war against Great Britain. The French had built the strong fort of Louisburg, on the Island of Cape Breton, after the treaty of Utrecht, and, because of its strength, it was called the Gibraltar of America. When war was proclaimed, Governor Shirley, of Massachusetts, perceiving the importance of that place in the coming contest, plans for its capture were speedily laid before the Massachusetts Legislature. That body hesitated, but the measure was finally agreed upon by a majority of only one vote. Rhode Island, New Hampshire, and Connecticut furnished their proper quota of troops. New York sent artillery, and Pennsylvania provisions. Commodore Warren was in the West Indies with a fleet, and was expected to join the provincials in the expedition. After waiting some time, the colonial forces, under Sir William Pepperell, sailed (April 4, 1745) for Louisburg. Warren joined them at Cansau early in May, and on the 11th the combined land-forces, four thousand strong, debarked at Gabarus Bay, a short distance from the fortress. The first intimation the French had of danger near was the sudden appearance of this formidable armament. Consternation prevailed in the fort and the town. A regular siege was begun on the 31st of May. Other English vessels of war arrived, and the combined fleet and army prepared for attack on the 29th of June. Unable to make a successful resistance, the fortress, the town of Louisburg, and the Island of Cape Breton were surrendered to the English on the 28th. This event mortified the pride of France, and the following year the Duke D'Anville was sent with a powerful naval armament to recover the lost fortress, and to destroy English settlements along the seaboard. Storms wrecked many of his vessels, sickness swept away hundreds of his men, and D'Anville abandoned the enterprise without striking a blow. Anchoring at Chebucto (now Halifax), D'Anville died there by poison, it is believed. With the capture of Louisburg the war ended in the colonies. By a treaty made at Aix-la-Chapelle, all prisoners and property seized by either party were restored. The struggle had been costly, and fruitless of

good excepting in making a revelation of the strength of the colonists.

**King James and the Puritans.** When King James of Scotland ascended the English throne as the successor of Elizabeth, he was regarded as a "Presbyterian king," and the Puritans expected not only the blessings of toleration and protection for themselves, but even hope for supremacy among the religionists of the realm. Soon after his accession, James called a conference of divines at Hampton Court. He was chief actor at that conference, in the rôle of "brute and mountebank." Some of the Puritan divines ranked among the brightest scholars in the land. They were greatly annoyed by the coarse browbeating of the Bishop of London and the coarser jests of the king. The venerable Archbishop Whitgift was present, and bent the supple knee of the courtier in the presence of royalty. When the vulgar king said to the Puritan ministers, "You want to strip Christ again; away with your snivelling," and much more to that effect, Whitgift, the primate, exclaimed, "Your majesty speaks by the special assistance of God's Spirit." And the Bishop of London fell upon his knees and said, "I protest my heart melts within me for joy that Almighty God, of his singular mercy, has given us such a king as, since Christ's time, has not been." This was the beginning of those royal and prelatial revilings and persecutions of the Puritans by the Stuarts and the hierarchy which drove the Puritans, in large numbers, to seek asylum in the wilds of North America.

**King JONAS, D.D.,** was born at Hawley, Mass., July 29, 1792; died while a missionary at Athens, Greece, May 22, 1869. He graduated at Williams College in 1816, and at Andover Seminary in 1819. For some months he was engaged in missionary work in South Carolina; and he went to Palestine in the same work in 1826, where he remained about three years. Reaching Boston in the fall of 1827, he was employed as missionary in the Northern and Middle States, and in July, 1828, he entered upon the Greek mission. A year later he married a Greek maiden, and remained in that country until his death. Before 1867 he had translated and printed, in modern Greek, five volumes of the American Tract Society's publications. He also published four volumes of his own works in that language. Mr. King was one of the most efficient workers in the missionary field, and was a remarkable man.

**King Philip's War.** Massasoit kept his treaty of friendship with the Plymouth Colony faithfully until his death. His eldest son, Metacomet, or Philip, resumed the covenants with the English on the death of his father and kept them inviolate a dozen years. As he saw spreading settlements reducing his domains, acre by acre, his hunting-grounds broken up, his fisheries diminished, and his nation menaced with servitude or annihilation, his patriotism was so violently aroused that he listened to his hot young warriors, who counselled war for the extermination of the white people. His

capital was at Mount Hope, a conical hill, three hundred feet high, not far from the eastern shore of Narraganset Bay. There he reigned supreme over the Pokauokets and Wampanoags,

*Phillip alias Metacomb  
his Pucuko*

PORTRAIT AND SIGN-MANUAL OF KING PHILIP.

and there he planned a confederacy of several New England tribes, comprising about 5000 souls. It was done secretly and with great skill. John Sassamon, who had been educated at Harvard, and was a sort of secretary for Philip, betrayed him, and the Wampanoags slew their secret enemy. For this act three of them were arrested on a charge of murder and were hanged. The anger of the nation was thereby fiercely kindled against the English, and they could not be restrained by the cautious Philip. He sent his women and children to the Narragansets for protection, and proclaimed war. He struck the first blow at Swansey (July 4, 1675, N. S.), thirty-five miles southwest of Plymouth, when the people were just returning from public worship, on a fast-day. Many were slain or captured. The surrounding settlements were aroused. The men of Boston, horse and foot, under Major Savage, joined the Plymouth forces, and all pressed towards Mount Hope. Philip and his warriors had fled to a swamp at Pocasset (Tiverton). There he was besieged many days, but finally escaped and took refuge with the Nipmucks, an interior tribe in Massachusetts, who espoused his cause; and, with 1500 warriors, Philip hastened towards the white settlements in the distant valley of the Connecticut.

Meanwhile, the little colonial army had reached the Narraganset country and extorted a treaty of friendship from Canonchet, the chief sachem of that powerful tribe. The news of this discouraged Philip, and he saw that only in energetic action was there hope for him. He aroused other tribes, and attempted a war of extermination by the secret and efficient methods of treachery, ambush, and surprise. Men in fields, families in their beds at midnight, and congregations in houses of worship were attacked and massacred. They swept along the borders of the English settlements like a scythe of death for several months, and it seemed at one time as if the whole European population would be annihilated. From Springfield north to the Vermont line the valley of the Connecticut was desolated. Twenty Englishmen sent to treat with the Nipmucks were nearly all treacherously slain (Aug. 12, 1675) near Brookfield. They fired that village, but it was partially saved by a shower of rain. Early in September (12) Deerfield was laid in ashes. On the same Sabbath-day Hadley, farther down the river, was attacked while the people were worshipping. A venerable-looking man, with white hair and

beard, suddenly appeared, with a glittering sword, and led the people to a charge that dispersed the Indians, and then as suddenly disappeared. (See *Goffe, Wilham.*) Over other settlements the scourge swept mercilessly. Many valiant young men, under Captain Beers, were slain in Northfield (Sept. 23), and others—"the flower of Essex"—under Captain Lathrop, were butchered by 1000 Indians near Deerfield. Encouraged by these successes, Philip now determined to attack Hatfield, the chief

MOUNT HOPE.

white settlement above Springfield. The Springfield Indians joined him, and with 1000 warriors he fell upon the settlement (Oct. 29); but the English being prepared, he was repulsed with

great loss. Alarmed, he moved towards Rhode Island, where the Narragansets, in violation of their treaty, received him and joined him on the war-path. Fifteen hundred men from Massachusetts, Plymouth, and Connecticut marched to chastise Canonchet for his perfidy. They found the treacherous Indians with Philip, 3000 in number, in a fort within a swamp (South Kingston, R. I.), where their winter provisions had been gathered. Before that feeble palisade the English stood on a stormy day (Dec. 19). They began a siege, and in a few hours 500 wigwams, with the provisions, were in flames. Hundreds of men, women, and children perished in the fire. Full 1000 warriors were slain or wounded, and several hundred were made prisoners. The English lost 86 killed and 150 wounded. Canonchet was slain, but Philip escaped and took refuge again with the Nipmucks. During the winter (1675-76) he vainly asked the Mohawks to join him, but tribes eastward of Massachusetts became his allies. In the spring of 1676 the work of destruction began. In the course of a few weeks the war extended over a space of almost 300 miles. Weymouth, Gruton, Medfield, Lancaster, and Marlborough, in Massachusetts, were laid in ashes. Warwick and Providence, in Rhode Island, were burned, and isolated dwellings of settlers were everywhere laid waste. About 600 inhabitants of New England were killed in battle or murdered; twelve or thirteen towns were destroyed entirely, and about 600 buildings, chiefly dwelling-houses, were burned. The colonists had contracted an enormous debt for that period. Quarrels at length weakened the savages. The Nipmucks and Narragansets charged their misfortunes to the ambition of Philip, and they deserted him. Some of the tribes surrendered to avoid starvation; others went to Canada, while Captain Church, one of the most famous of the English leaders, went out to hunt and destroy the fugitives. Philip was chased from one hiding-place to another. He retired to Mount Hope (August, 1676) discouraged. A few days afterwards his wife and little son were made prisoners. He was now crushed. "My heart breaks," he said, "I am ready to die." A faithless Indian shot him a few days afterwards, and Captain Church cut off his head, and it was carried on a pole into Plymouth. His body was quartered, and his wife and little son were sold into slavery in Bermuda. So perished the last of the Wampanoag princes, and so was broken forever the power of the New England Indians. The estimated white population at that time was not more than 50,000 souls; and from the end of that war began the uninterrupted growth of New England.

**King, RUFUS, LL.D.**, was born at Scarborough, Me., March 14, 1755; died at Jamaica, L. I., April 29, 1827. He graduated at Harvard in 1777; studied law with Theophilus Parsons, at Newburyport, and in 1778 became aide-de-camp on General Glover's staff, in the expedition against the British on Rhode Island. In 1785 he was an earnest advocate of the absolute freedom of the slaves, to be secured by the operation of an

act of Congress, making such freedom a fundamental principle of the Constitution. In 1786 Mr. King married a daughter of John Alsop, an opulent merchant in New York, and made that city his future residence. He and General

RUFUS KING.

Schuyler were chosen the first representatives of New York in the national Senate in 1789, under the new Constitution. Mr. King was a leading Federalist. From 1793 to 1804 he was American minister to Great Britain; and in 1818 he was sent to the United States Senate for the third time. He was an able leader of the opposition to the admission of Missouri under the terms of the compromise as a slave-labor state. In 1825 he accepted the appointment of minister to England, but returned in feeble health the next year.

**King, WILLIAM RUFUS**, was born in Sampson County, N. C., April 7, 1796; died at Calhoun, Ala., April 18, 1853. He graduated at the University of North Carolina in 1803; practised law, and served in the Legislature of his state. He was a member of Congress (1810-16), and for two years (1817-19) was secretary of legation to Russia. On his return he became a cotton-planter in Alabama, and was United States Senator from 1819 to 1846, and from 1847 to 1852, being minister to France during the two years he was out of the Senate. Mr. King was elected Vice-President of the United States in 1852, but died a few weeks after his inauguration. He was a member of Congress forty years, uniformly acting with the Democratic party.

**King William's War.** The first inter-colonial war in America was so called because it occurred at the beginning of the reign of William and Mary, and continued seven years. The accession of these Protestant monarchs caused dis-

aster to the more northerly English-American colonists, for, the French king having espoused the cause of James, war between England and France soon began, and extended to their respective colonies in America. When the declaration of war between the two nations reached America, the Eastern Indians were easily excited to make war by the Baron de Castine, seated at the mouth of the Penobscot (see *Castine, Baron de*), and the Jesuit missionaries among the barbarians. The recent revocation of the Edict of Nantes had kindled fiercely the fires of persecution in France (see *Edict of Nantes*), and the heat was felt in America. Through these Jesuits, the Indians were made allies of the French, and the two races were frequently found on the war-path together, accompanied by a father confessor. The Indians, remembering the treachery of Major Waldron, at Dover (see *Puritans and Indians*) fearfully slaked their thirst for vengeance there. It was the first town attacked (July 7, 1689), when the venerable Major Waldron and twenty others of the garrison were killed (see *Waldron*) and twenty-nine made captives and sold as servants to the French in Canada. Instigated by Father Thury, a Jesuit, an Indian war-party fell (Aug. 12) upon the English stockade at Pemnaquid, built by An-

Phipps, who, with nine vessels and eight hundred men, seized Port Royal, in Acadia, and obtained sufficient plunder there to pay the expenses of the enterprise. In June, Port Royal was again plundered by English privateers from the West Indies. Then the colonies of New England and New York joined in efforts to conquer Canada. A land and naval expedition was arranged, the former commanded by a son of Governor Winthrop, of Connecticut, to go from New York by way of Lake Champlain to attack Montreal; and the latter, fitted out by Massachusetts alone, and commanded by Sir William Phipps, to attack Quebec. Phipps's armament consisted of thirty-four vessels and two thousand men. The expenses of the land expedition were borne jointly by Connecticut and New York. Both were unsuccessful. Some of Winthrop's troops, with Iroquois warriors under Colonel Schuyler, pushed towards the St. Lawrence and were repulsed (August, 1690) by Frontenac. The remainder did not go farther than the head of Lake Champlain. Phipps reached Quebec at about the middle of October, landed some of his troops near, but, finding the city too strongly fortified to warrant a siege, he returned to Boston before the winter set in. Having no chart to guide him, Phipps had been nine weeks

OLD FORT FREDERICK AT PEMNAQUID

dros, and captured the garrison. A few months later Frontenac, Governor of Canada, sent a party of three hundred French and Indian warriors from Montreal (see *Frontenac*) to penetrate the country towards Albany. On a gloomy night in the winter (Feb. 18, 1690), when the snow lay twenty inches deep in the Mohawk valley, they fell upon the frontier town of Schenectady, massacred many of the people, and burned the village. (See *Schenectady*.) Early in the spring, Salmon Falls, near Piscataqua, was surprised (March 28) and thirty of its inhabitants were killed; and the attacking party, on its way homeward, met a third party that had come from Quebec and joined them in destroying the fort and settlement at Casco, where a similar attack had been repulsed by the famous Captain Church. Other Eastern villages suffered. All the colonies were aroused by these atrocities, and the New England people resolved on speedy retaliation. In May (1690) Massachu-

setts fitted out an expedition under Sir William Phipps, who, with nine vessels and eight hundred men, seized Port Royal, in Acadia, and obtained sufficient plunder there to pay the expenses of the enterprise. In June, Port Royal was again plundered by English privateers from the West Indies. Then the colonies of New England and New York joined in efforts to conquer Canada. A land and naval expedition was arranged, the former commanded by a son of Governor Winthrop, of Connecticut, to go from New York by way of Lake Champlain to attack Montreal; and the latter, fitted out by Massachusetts alone, and commanded by Sir William Phipps, to attack Quebec. Phipps's armament consisted of thirty-four vessels and two thousand men. The expenses of the land expedition were borne jointly by Connecticut and New York. Both were unsuccessful. Some of Winthrop's troops, with Iroquois warriors under Colonel Schuyler, pushed towards the St. Lawrence and were repulsed (August, 1690) by Frontenac. The remainder did not go farther than the head of Lake Champlain. Phipps reached Quebec at about the middle of October, landed some of his troops near, but, finding the city too strongly fortified to warrant a siege, he returned to Boston before the winter set in. Having no chart to guide him, Phipps had been nine weeks

cautiously making his way around Acadia and up the St. Lawrence. Massachusetts was compelled to issue bills of credit, or paper-money, to defray the expenses of the expedition. (See *Bills of Credit*.) Fierce forays by the French and Indians continued along the New England frontiers. The English were held up to the Indians by the Jesuits not only as enemies, but as heretics, upon whom it was a Christian duty to make war. The Indians were encouraged, too, to make forays for the capture of women and children, for whom they found a ready market, as servants, in Canada. About one hundred persons were killed or made captive (July 28, 1694) at Durham, ten miles from Portsmouth. Two years later Baron de Castine and a large force of French and Indians captured the garrison at Pemnaquid. Haverhill, thirty-three miles from Boston, was attacked (March, 1697), and forty persons were killed or made captive; and during the ensuing summer more remote settlements suffered greatly. This distressing

warfare was closed the same year by the treaty of Ryswick, Sept. 20, 1697.

**Kingcraft and Republicanism.** Notwithstanding Louis XVI. yielded to his ministers in the matter of assisting the Americans, he hated republicans, and could hardly endure the presence of Franklin, while Queen Maria Antoinette admired him. Lord Stormont, the English ambassador at Paris, said that the king would sometimes break out into a passion when he heard of help furnished to the Americans. In April and May, 1777, Joseph II., of Austria, was six weeks in Paris. He was silent in conversation on American affairs, or took sides against them, a position then unpopular in Paris. One day he excused himself to a lady who was a friend of the Americans by saying: "You know, madam, I am a king by trade." He would not permit a visit from Franklin and Deane, nor consent to meet them in his walks.

**King's (now Columbia) College,** one of the higher institutions of learning established in the English-American colonies. In 1746 an act was passed by the Colonial Assembly of New York for raising £2250, by lottery, "for the encouragement of learning and towards the founding of a college." The sum was increased in 1751, and intrusted to ten trustees, one of whom was a Presbyteriau, two were of the Dutch Reformed Church, and seven were Episcopalians. Rev. Samuel Johnson, of Stratford, Conn., was invited, in 1753, to become president of the proposed institution, and a royal charter constituting King's College was granted Oct. 31, 1754. The organization was effected in May, 1755. The persons named in the charter as governors of the college were the Archbishop of Canterbury, the principal civil officers of the colony, the principal clergymen of the five denominations of Christians in the city of New York, and twenty private gentlemen. The college opened July 17, 1754, with a class of eight, under Dr. Johnson, sole instructor, in the vestry-room of Trinity Church. The corner-stone of the college building was laid Aug. 23, 1756, on the block now bounded by Murray, Church, and Barclay streets and College Place. It faced the Hudson River and "was the most beautifully situated of any college in the world." The first commencement was on June 21, 1758, when about twenty students were graduated. In 1767 a grant was made in the New Hampshire Grants of twenty-four thousand acres of land, but it was lost by the separation of that part of Vermont from New York. (See *New Hampshire Grants*.) In 1762 Rev. Myles Cooper was sent over by the Archbishop of Canterbury to become a "fellow" of the college. He was a strong loyalist, and had a pamphlet controversy with young Alexander Hamilton, one of his pupils. Cooper became president of the college, and so obnoxious were his politics that the college was attacked by the "Sons of Liberty" and a mob in New York on the night of May 10, 1775, and he was obliged to flee for his life. Rev. Benjamin Moore (afterwards bishop of the diocese) succeeded him. The college was

prepared for the reception of troops the next year, when the students were dispersed, the library and apparatus were stored in the City Hall, and mostly lost, and the building became a military hospital. About six hundred of the volumes were recovered thirty years afterwards in a room in St. Paul's Chapel, when none but the sexton knew of their existence. In 1784 regents of a state university were appointed, who took charge of what property belonged to the institution and changed its name to Columbia College, which it still retains. There was no president for several years. In 1787 the original charter was confirmed by the State Legislature, and the college was placed in charge of twenty-four trustees. On May 21, 1787, William Samuel Johnson, LL.D., son of the first president, was chosen to fill his father's place, and the college started on a prosperous career. A new charter was obtained in 1810. A medical and law school was established, and in 1828 the Hon. James Kent delivered a course of law lectures in the college that formed the basis of his famous *Commentaries*. The college occupied the original site until 1857, when it was removed to its present location, between Madison and Fourth avenues and Forty-ninth and Fiftieth streets. The College of Physicians and Surgeons constitutes the medical department of Columbia College. Connected with it is also a "School of Mines." It has had eleven presidents from 1754 to 1883.

**King's Ferry, THE.** Between Stony Point and Verplanck's Point, on the Hudson River, just below the lower entrance to the Highlands, was an important crossing-place, known as the King's Ferry. It was by this ferry that the

OLD SIGN.

great route from the Eastern to the Middle States crossed the Hudson. It was defended by two forts—Stony Point on the west side and Fort Lafayette, at Verplanck's Point, on the east. Sir Henry Clinton resolved to seize this ferry and its defences. On the return of the expedition of Matthews and Collier from Virginia, Sir Henry ascended the Hudson with the same squadron and six thousand soldiers. He landed his troops on both sides of the river (May 31, 1779), a few miles below the forts. The works on Stony Point were unfinished, and, on the approach of the British, were abandoned. Cannons were placed on its outer works and brought to bear on the fort at Verplanck's Point, which, invested on the land side, was compelled to surrender (June 1), after a spirited resistance. So the direct route across the river from the Eastern States was closed for a short time.

**King's Mountain, BATTLE ON (1780).** Major Patrick Ferguson was sent by Cornwallis to embody the Tory militia among the mountains west of the Broad River. Many profligate men joined

his standard, and he crossed the Broad River at the Cherokee Ford (Oct. 1, 1780) and encamped among the hills of King's Mountain, near the line between North and South Carolina, with about fifteen hundred men. Several corps of Whig militia, under colonels Shelby, Sevier, Campbell, and others, united to oppose Ferguson, and on the 7th of October they fell upon his camp among a cluster of high, wooded, gravelly hills of King's Mountain. A very severe en-

Burgoyne. It changed the aspects of the war in the South. It awed the Tories and encouraged the Whigs. The mustering of forces beyond the mountains to oppose his movements took Cornwallis by surprise. It quickened the North Carolina Legislature into more vigorous action, and it caused a general uprising of the patriots of the South, and suddenly convinced their oppressor that his march through North Carolina to the conquest of Virginia was not

to be a mere recreation. Met by North Carolinians at Charlotte, he was compelled to fall back to the Catawba, and his experience in that winter campaign was marked by great perplexities and disasters. (See *King's Mountain, Battle on*, and *Guilford, Battle at*.)

VIEW AT KING'S MOUNTAIN BATTLE-GROUND.

agement ensued, and the British forces were totally defeated. Ferguson was slain, and three hundred of his men were killed or wounded. The spoils of victory were eight hundred prisoners and fifteen hundred stand of arms. The loss of the Americans was twenty men. The event was to Cornwallis what the defeat of the British near Bennington was to Burgoyne. Among the prisoners were some of the most cruel Tories of the western Carolinas, who had executed the severe orders of Cornwallis. Ten

of them, after a trial by "drum-head court-martial," were hung on the limb of a great tulip-tree. On the spot where Ferguson fell, a small monument was erected to commemorate the event and to the memory of some of the patriots killed in the

MONUMENT ON KING'S MOUNTAIN.

battle. The annihilation of Ferguson's corps crushed the spirits of the loyalists.

**King's Mountain, EFFECTS OF THE BATTLE ON.** The effect of the defeat of the British was similar upon the movements of Cornwallis to that of the battle of Bennington on the fate of

not disinterested; and when they proceeded to hold a session within the disputed territory, the Rhode Island Assembly met near by and forbade them to "hold court" within the jurisdiction of the province. The commission adjourned to Boston, and reported to the king (1686) that the Narraganset country (the southwestern continental half of the present State of Rhode Island) belonged to Connecticut; this domain was called the King's Province for a while, but was under the jurisdiction of Joseph Dudley, the temporary royal governor of Massachusetts. He proceeded to organize there an independent government, and changed the names of the towns. (See *Consolidation of Connecticut and New Haven*.)

**Kingston, BURNING OF (1777).** Sir Henry Clinton's success in capturing forts Clinton and Montgomery emboldened him to send a marauding expedition up the Hudson to make a diversion in favor of Burgoyne, hoping thereby to draw many troops from the army of Gates to defend the exposed country below. Early on the morning after the capture of the forts (Oct. 7, 1777), the boom and chain were severed, and a flying squadron of light armed vessels under Sir James Wallace (see *Gaspee, Affair of the*), bearing the whole of Sir Henry's land-force, went up the river to devastate its shores. Sir Henry wrote a despatch to Burgoyne on a piece of tissue-paper, saying, "We are here, and nothing between us and Gates," and enclosing it in a small, hollow bullet, elliptical in form, gave it to a messenger to convey to the de-

sparing general. (See *Clinton's Despatch*.) The messenger was arrested in Orange County as a spy. He swallowed the bullet, which an emetic compelled him to disgorge. The message was found and the spy was hanged. The marauding force, meanwhile, spread havoc and consternation along the shores. The Legislature of the newly organized State of New York were then in session at Kingston, Ulster Co. The marauders went thither and burned the village (Oct. 7), the Legislature having escaped with their papers. Then they crossed over to the village of Rhinebeck Flats, and after destroying much property there, went up to Livingston's Manor and applied the torch. There they heard of Burgoyne's defeat, when the marauders hastened to their vessels and returned to New York. So ended the efforts to carry out the plan of the British ministry (which see).

**Kinnison, DAVID**, last survivor of the Boston Tea-party (which see), was born at Old Kingston, near Portsmouth, R.I., Nov. 17, 1736; died in Chicago, Feb. 24, 1851, at the age of 115 years. With a few neighbors, at Lebanon, Conn. (where he was a farmer), he went to Boston to assist in destroying the tea destined for that port. During the war for independence he was in active service, in the latter part of which he was a prisoner among the Indians more than a year

DAVID KINNISON.

and a half. He lived in different places until the breaking-out of the War of 1812-15, during which he was engaged in the military service of his country. He went to Chicago in 1845. Mr. Kinnison married three times, and was the father of twenty-eight children. He learned to read when he was past sixty years of age, and, until within four years of his death, he earned his living by the work of his own hands.

**Kirkland, SAMUEL**, missionary to the Indians, was born at Norwich, Conn., Dec. 1, 1744; died at Clinton, Oneida Co., N. Y., Feb. 23, 1808. He graduated at Princeton in 1765. At the school

SAMUEL KIRKLAND.

of Rev. E. Wheelock, he learned the Mohawk language, and, by sojourns among the Senecas, their language also. After the affair at Lexington, the Provincial Congress of Massachusetts requested him to use his influence to secure either the friendship or neutrality of the Six Nations (which see). He was instrumental in attaching the Oneidas to the patriot cause. He labored with that nation as a missionary of religion and patriotism during the war, when the other tribes of that confederacy, through the influence of Brant and the Johnsons, had taken the opposite side. He accompanied Sullivan in his expedition against the Senecas in 1779. Mr. Kirkland was the founder of Hamilton College. Having been granted by the government a tract of land two miles square in the present town of Kirkland, Oneida Co., he removed there in 1789.

**Kitchen Cabinet.** An appellation in common use during the administration of President Jackson, of which Francis P. Blair and Amos Kendall were the recipients. Blair was the editor of *The Globe*, the organ of the administration, and Kendall was one of its principal contributors. These two men were frequently consulted by the President as confidential advisers. To avoid observation when they called on him, they entered the President's dwelling by a back door. On this account the Opposition party, who believed the advice of these two men caused Jackson to fill nearly all the offices with Democrats, after turning out the incumbents, called them in derision the "Kitchen Cabinet."

**Kittanning, DESTRUCTION OF.** In consequence of repeated injuries from the white people of Pennsylvania, the Delawares had become bitterly hostile in 1756. They committed many depredations, and early in September Colonel John Armstrong marched against the Indian town of Kittanning, on the Alleghany River, about forty-five miles northeast from Pittsburg. He approached the village stealthily, and fell upon the barbarians furiously with about three hundred men at three o'clock in the morning (Sept. 8,

1756). The Indians refusing the quarter which was offered them, Colonel Armstrong ordered their wigwams to be set on fire. Their leader, Captain Jacobs, and his wife and son were killed; many were destroyed in their burning houses, and those who were slain were scalped. Between thirty and forty Indians were destroyed, and eleven English prisoners were released.

**Knights of the Golden Circle.** These were men banded for the overthrow of the government of the United States. They were a secret society, and were first organized for action in the slave-labor states. They were pledged to assist in the accomplishment of the designs of those who were intent upon the establishment of an empire within the limits of the Golden Circle (which see). It was the soul of the filibustering movements in Central America and Cuba from 1850 to 1857 (see *Nicaragua*); and when these failed, the knights concentrated their energies for the accomplishment of their prime object—the destruction of the Union and the perpetuation of slavery. The subordinate organizations were called “castles.” When the secession movement began, these knights became specially active in Texas. When the disloyal Peace faction made its appearance in the North, an alliance between the leading members of it and the Knights of the Golden Circle was formed, and the “order” became very numerous and formidable in some of the free-labor states, especially in the West. The writer, in New Orleans, in April, 1861, heard a New York journalist tell a group of Secessionists that he belonged to a secret order in that city, 50,000 strong, who would sooner fight for the South than for the North. An army chaplain was told by a Confederate officer, just before the Draft Riot in New York (which see), “You will be surprised at the number of friends we have in your very midst; friends who, when the time comes, will destroy your railroads, your telegraph-wires, your government stores and property, and thus facilitate the glorious invasion [Lee’s] now breaking you in pieces.” At about that time the knights in the West held a meeting at Springfield, Ill. (June 10, 1863), when it was resolved to make the draft a pretext for revolution, and measures were accordingly adopted. It was arranged that New York should take the initiative. The plan was for each state to assume its “independent sovereignty.” The government having failed to suppress the insurrection, the Union was dissolved into its original elements, each of which was left at liberty to form any new combination. Morgan’s Raid in Indiana and Ohio (which see) was a part of the plan of that revolution. It was supposed that the Knights of the Golden Circle and the members of the peace faction would rise and join him by thousands. In this he was mistaken.

**Knowlton, THOMAS,** was born at West Boxford, Mass., Nov. 30, 1740; died Sept. 16, 1776. He was a soldier of the French and Indian War, and assisted in the reduction of Havana in 1762. He was in the Ashford militia at Lexington, April 19, 1775, and was selected as one of the fatigue

party to fortify Bunker’s Hill. In action there he fought bravely. A regiment of light infantry, which formed the van of the American army at New York, was commanded by him, and he was commissioned lieutenant-colonel of a regiment of rangers selected from the Connecticut troops. He fell in the battle of Harlem Plains, and his character was eulogized by Washington in general orders.

**Knox, HENRY,** was born in Boston, July 25, 1750; died at Thomaston, Me., Oct. 25, 1806. He was of Scotch-Irish stock. Young Knox became a thriving bookseller in Boston, and married Lucy, daughter of Secretary Flucker. He be-

HENRY KNOX.

longed to an artillery company when the Revolution began, and his skill as an engineer-artillerist on the staff of General Artemas Ward attracted the attention of Washington. In November (1775) he was placed in command of the artillery, and was employed successfully in bringing cannons from captured forts on Lake Champlain and on the Canadian frontier to Cambridge, for the use of the besieging army. Knox was made a brigadier-general in December, 1776, and was the chief commander of the artillery of the main army throughout the whole war, being conspicuous in all the principal actions. Knox was one of the court of inquiry in Major André’s case; was in command at West Point after hostilities had ceased, and arranged for the surrender of New York. At Knox’s suggestion, the Society of the Cincinnati (which see) was established. He was Secretary of War before and after Washington became President of the United States (1781–1795), and when he left office he settled at Thomaston, where he administered the most generous hospitality. Swallowing a chicken-bone caused his death. General Knox was frequently called into civil life.

**Knoxville, SIEGE OF (1863).** In making efforts to purge East Tennessee of Confederates, Burnside scattered his forces considerably. Perceiving this, Bragg sent Longstreet to the valley of East Tennessee with a strong force to seize Knoxville and drive out the Nationals. He advanced swiftly and secretly; and on Oct. 20 (1863) he struck a startling blow at Burnside’s outposts at Philadelphia, on the railway southwest of London. Burnside, perceiving his peril, concentrated his forces at Knoxville, behind his intrenchments there. The chief of these was an

unfinished work on a hill commanding the southwestern approaches to the town. Longstreet followed rapidly. Wheeler and Forrest, with their cavalry, dashed up to the heights on which this work was situated to seize the hill, and on Nov. 16 attacked the Nationals there, where General W. P. Sanders, of Kentucky, was in command. The National troops on the right were driven from a ridge they occupied, and Longstreet made his headquarters near the bank of the Holston River, less than a mile from the works to be assailed. In this attack General Sanders was killed, and the National loss besides was about one hundred men. Then Longstreet's cavalry were sent to cut off Burnside's supplies and line of retreat, and Knoxville was closely invested. Longstreet believed starvation would soon compel Burnside to surrender. He was mistaken. The latter made sorties from his strong intrenchments. Finally Longstreet threw a force (Nov. 25) across the Holston to seize the heights south of the river that commanded Knoxville. In a sharp conflict that ensued the Confederates were defeated, but they seized a knoll lower down, and planted a battery on it that commanded the fort at Knoxville. At that moment Longstreet received news of Bragg's defeat at Missionaries' Ridge (which see), and he well knew that troops from Grant would soon be upon his rear. So he determined to storm Knoxville at once, before aid could reach Burnside. At the same time he received some reinforcements. At eleven o'clock on a dark and stormy Saturday night (Nov. 28) Longstreet proceeded to assail the principal work, called Fort Sanders. He drove in the National advance and seized the rifle-pits, and the next morning opened a furious cannonade, which was soon followed by a rush of the Confederates, with tremendous yells, to storm the fort. They were the flower of Longstreet's army. The Nationals had formed a net-work of wire from stump to stump in front of the fort, and in this the storming-party became fearfully entangled and bewildered, while the guns of the fort, double-shotted, made havoc in their ranks. The assailants finally gained the ditch and attempted to scale the parapet, and one officer reached the summit and planted a Mississippi flag there, but instantly his dead body and the flag fell into the ditch. Very soon three hundred of the assailants in the ditch surrendered, and the assault ceased. Heavy columns of National troops were now approaching Longstreet's rear, under Sherman, commanded by Granger, Howard, Davis, and Blair. Longstreet, perceiving his peril, raised the siege (Dec. 3), and retreated towards Virginia.

**Knyphausen** (Baron), DODO HENRY, Hessian commander, was born in Alsace in 1730; died in Berlin, Prussia, May 2, 1789. He began his military career in the service of the father of Frederick the Great. He arrived in America in June, 1776, and was first engaged in battle here in that of Long Island in August following. (See *German Mercenaries*.) Knyphausen was in the battle of White Plains; assisted in the capture of Fort Washington, which was named by its

captors Fort Knyphausen; was conspicuous in the battle of Brandywine in 1777, and in Monmouth in 1778; and commanded an expedition to Springfield (which see) in June, 1780. In the absence of Sir Henry Clinton he was in command of the city of New York.

**Kosciuszko**, THADDEUS, was born in Lithuania, Poland, Feb. 12, 1756; died at Soleure, Switzerland, Oct. 16, 1817. He was of noble descent, and was educated at the military academy at Warsaw; also in France at the expense

THADDEUS KOSCIUSZKO.

of the Polish government. He entered the Polish army as captain, but an unhappy passion for the daughter of the Marshal of Lithuania caused him to leave his country and offer his services to the Americans. He arrived in 1776, with a note of introduction and recommendation to Washington by Dr. Franklin. "What do you seek here?" inquired the chief. "I come to fight as a volunteer for American independence," answered Kosciuszko. "What can you do?" asked Washington. "Try me," was the quick reply. He entered Washington's military family (Oct. 18, 1776) as colonel of engineers. He planned the fortified camp of General Gates at Bemis's Heights in 1777, and was the principal engineer in constructing the works at West Point, on the Hudson. Attached to Greene's army in the South, he was the engineer in the siege of Ninety-six (which see) in June, 1781. For his services in the Continental army he received the thanks of the Congress, the Order of the Cincinnati, and the brevet of brigadier-general. Returning to Poland, he fought against the Russians under Poniatowski in 1792; but the Polish patriots were defeated, and Kosciuszko retired to Leipsic. Another rising of the Poles occurred in 1794, when Kosciuszko was placed at the head of the insurgents as dictator, and with five thousand peasants, armed mostly with scythes, he routed nearly twice that number of Russians at Raclawice, April 4. Committing the conduct of a provisional government to a national council, he marched against his enemies. In Warsaw he was besieged by a combined army of Russians and Prussians. These, after several bloody conflicts, were compelled

by the Polish chief to raise the siege. Anetria had joined the assailants of the Poles, and with an army of one hundred and fifty thousand men fell upon and crushed them (Oct. 10) at Macieowice. Kosciuszko fought gallantly, and fell covered with wounds, uttering the sadly prophetic words, afterwards fulfilled, *Finis Polonia!* He was made captive, and was imprisoned at St. Petersburg until the accession of the Emperor Paul, who set him at liberty, and offered Kosciuszko his own sword. It was refused, the Polish patriot saying, "I have no need of a sword, since I have no country to defend." In 1797 he visited the United States, where he was warmly welcomed, and received, in addition to a pension, a grant of land by Congress. He resided near Fontainebleau, in France; and when Bonaparte became emperor in 1806, he tried to enlist Kosciuszko in his schemes in relation to Poland. Kosciuszko refused to lend his services except on condition of a guarantee of Polish freedom. He went to live at Solenre in 1816, where he was killed by a fall from his horse over a precipice. The remains of this true nobleman of Poland lie beside those of Sobieski and Poniatowski in the cathedral church at Cracow. An elegant monument of white marble was erected to his memory at West Point by the cadet corps of 1828, at a cost of \$5000.

**Kossuth at the National Capital.** Louis Kossuth, the exiled governor of Hungary, arrived at Washington at the close of December, 1851. He was received by two United States Senators and the marshal of the district. The Secretary of State (Daniel Webster) waited upon him; so also did many members of Congress. On the 31st he was presented to President Fillmore by Mr. Webster, who received him cordially. On Jan. 5, 1852, he was introduced to the Senate. He entered the Senate chamber accompanied by Senators Cass and Seward. General Shields introduced him. The Senate adjourned, and the members all paid their personal respects to the distinguished exile. He then visited the House of Representatives, where he was warmly received by the speaker and most of the members. Then he was introduced to each member personally, and presented to an immense crowd of ladies and gentlemen who had assembled. A congressional banquet was given him at the National Hotel, at which W. R. King, President of the Senate, presided, Kossuth and Speaker Boyd being on his right hand, and Secretary Webster on his left. On that occasion Kossuth delivered one of his most effective speeches. Mr. Webster concluded his remarks with the following sentiment: "Hungarian independence, Hungarian control of her own destinies, and Hungary as a distinct nationality among the nations of Europe." After Kossuth's departure there were debates in Congress on propositions for the United States to lend material aid to the people of Hungary, struggling for national independence; but the final determination was that the United States should not change its uniform policy of neutrality in favor of Hungary. The cordial reception of Kossuth

everywhere, and the magnetic power of his eloquence over every audience, were gratifying and wonderful. A contemporary wrote: "The circumstances attending the reception of Kossuth constituted one of the most extraordinary spectacles the New World had ever yet beheld."

**Kossuth's Visit to the United States.** In February, 1848, the French people drove Louis Philippe from the throne of France and formed a temporary republic. A revolutionary spirit rapidly spread its influence over Europe, and in a few months almost every country on the Continent was in a state of political agitation. The monarchs made many concessions to the people. Hungary attempted to cast off the yoke of Austria, but did not succeed because of the crushing weight of a Russian army acting for the oppressor. Louis Kossuth, Governor of Hungary, always led the patriots in their struggle for freedom. He was one of the most extraordinary men of his age. On the failure of the revolutionary movements in 1849, he took refuge in Turkey. The Austrian government demanded his extradition. The United States and England interfered, and he was allowed to depart into exile, with his family and friends. The United States government sent the war-steamer *Mississippi* to bring him hither, and early in the autumn of 1851 he embarked for this country. While in exile in Turkey and in prison, he employed his time in studying living languages, and he was enabled to address the people of the West in the English, German, French, and Italian languages. He went to Great Britain, and made a tour through the most populous cities of the kingdom. He arrived at New York Dec. 5, 1851, accompanied by his wife and Mr. and Mrs. Pulszky. Here he addressed public meetings and deputations in various Northern cities, and in all his speeches he showed a most intimate knowledge of American history and institutions. His theme was a plea for sympathy and substantial aid for his country, Hungary. He wished to obtain the acknowledgment of the claims of Hungary to independence, and the interference of the United States and Great Britain, jointly, in behalf of the principle of non-intervention, which would allow the nations of Europe fair play in their renewed struggle for liberty. He constantly asserted that grand principle that one nation has no right to interfere with the domestic concerns of another, and that all nations are bound to use their efforts to prevent such interference. The government of the United States, to which he appealed, assuming its traditional attitude of neutrality in all quarrels in Europe, declined to lend aid, excepting the moral power of expressed sympathy. Kossuth called for private contributions in aid of the struggle of his people for independence, and received more assurances of sympathy than dollars, for there seemed to be a reaction in Europe, and the chance for Hungarian independence appeared more remote than ever. He was received with great distinction at Washington by the President and Congress, and returned to Europe in July, 1852.

## L.

**La Borde, MAXIMILIAN**, son of a French emigrant from Bordeaux, was born in Edgefield District, S. C., in 1804. In 1820 he graduated at the South Carolina College and began the study of law, but soon abandoned it and entered the South Carolina Medical College, graduating in 1826. For thirteen years he practised the healing art in Edgefield, occasionally representing his district in the Legislature. In 1836 he was editor of the *Edgefield Advertiser*, and two years later he was elected Secretary of the State of South Carolina. His fine scholarship attracted public attention, and in 1842 La Borde was called to the chair of logic and belles-lettres in his *alma mater*. He accepted the position, and in 1845 he was transferred to the chair of metaphysics. His method of imparting knowledge was chiefly oral, but, to assist others who preferred the use of text-books, he published a manual on physiology in 1855, which became very popular in the schools of the South. He published an elaborate *History of the South Carolina College, with Sketches of its Presidents and Professors*.

**Lacey, JOHN**, born in Bucks County, Penn., Feb. 4, 1755; died at New Mills, N. J., Feb. 17, 1814. He was of Quaker descent, but patriotically took command of a volunteer company, and became a captain in Wayne's regiment, with which he served in Canada. Becoming a lieutenant-colonel of militia, he joined Potter's brigade at Whitmarsh, with about four hundred

life and became active in the civil service of his state, being a member of the Pennsylvania Assembly in 1778, and of the Council in 1779. He again entered the military service, and from August, 1780, to October, 1781, he was active at the head of a brigade of militia. Removing to New Jersey, he was for many years a county judge and a member of the Legislature.

**La Colle Mill, BATTLE AT.** In the winter of 1813-14 an American force under General Wilkinson was encamped at French Mills (now Fort Covington), in Franklin County, N. Y. (See *Expedition down the St. Lawrence*.) Early in 1814 a large portion of this force was withdrawn. A part were marched to Plattsburg. Soon afterwards (Feb. 28, 1814) a party of British soldiers advanced and destroyed some stores which the Americans had left behind. This invasion alarmed the whole frontier. Late in March, General Wilkinson attempted another invasion of Canada. He advanced up the western shore of Lake Champlain to the Canada frontier (March 30, 1814) with about four thousand picked men. They soon encountered British pickets, and drove them back. In the afternoon the Americans came in sight of La Colle Mill, a heavy stone structure, its windows barricaded with timbers, through which were loop-holes for musketry. The British garrison at the mill consisted of only about two hundred regulars, under Major Hancock. The advance of Wilkinson's troops was commanded by Colonel Isaac

LA COLLE MILL AND BLOCK-HOUSE.

men. Before he was twenty-three years old he was made a brigadier-general, and was engaged in harassing duty while the British had command of Philadelphia. After the evacuation of that city by the British, he left the military

Clark and Major Forsyth. (See *Ogdensburg*.) The artillery was under Captain McPherson, and the reserves were commanded by General Alexander Macomb. Following Clark and Forsyth was Colonel Miller's regiment of six hun-

dred men. Aware that reinforcements for the British were near, Wilkinson ordered an immediate attack. The fire upon the stone citadel was harmless, while the whole American line was exposed to a galling fire. For a while the fight was desperate, when Major Hancock made a sortie from the mill, and after a furious contest they were driven back. Reinforcements came to the garrison, and after a conflict of two hours Wilkinson was compelled to withdraw and abandon the invasion of Canada. The affair at La Colle Mill drew upon him so much obloquy and ridicule that he soon resigned his command and called for a court-martial.

**Laconia**, the name given by Gorges and Mason to the portion of New England granted to them, extending from the Merrimack to the Kennebec, and from the ocean to the St. Lawrence. The proprietors induced several merchants to join them in their adventure, and sent out a colony of fishermen, a part of whom settled at the mouth of the Piscataqua, now Portsmouth, N. H. Others settled on the site of Dover, eight miles farther up the river. The Laconia Company did not prosper, and the towns were little more than fishing-stations. (See *New Hampshire*.)

**La Corne (Chevalier), PIERRE**, was an active Canadian officer from 1720 to 1759, and had great influence over the Indians in connection with the Jesuit missionaries. His intimate knowledge of the Indian language gave him great power, and he was one of the most formidable enemies of the English in Nova Scotia.

**Ladd, WILLIAM**, was born at Exeter, N. H., May 10, 1778; died at Portsmouth, N. H., April 9, 1841. He graduated at Harvard in 1797; became an active champion of peace, and took an active part in organizing the "American Peace Society," of which he was for many years president. He wrote many essays in favor of peace, and edited the *Friend of Peace* and *Harbinger of Peace* newspapers, devoted to the cause. He went so far as to deny the right to maintain defensive war.

**Lafayette at Barren Hill.** To restrain British foragers and marauders, who were plundering the country for some distance around Philadelphia in the spring of 1778, Washington sent out from Valley Forge General Lafayette with about two thousand one hundred men and five pieces of artillery, to cut off all communication between Philadelphia and the country, and to obtain information concerning a rumored intention of the British to evacuate that city. Lafayette crossed the Schuylkill, and took post at Barren Hill, about half-way between Valley Forge and Philadelphia, occupying the Lutheran church there as headquarters. General Howe sent General Grant to make a secret night march to gain the rear of the marquis (May 20), and the next morning Howe marched with about six thousand men, commanded by Clinton and Knyplansen, to capture the young Frenchman and send him to England. The marquis outgeneralled the British, though they surprised him, and escaped across the Schuylkill.

Howe was disappointed, for he was about to depart for England under a partial cloud of ministerial displeasure, and he hoped to close his career in America by some brilliant act.

LUTHERAN CHURCH, BARREN HILL.

**Lafayette at the Tomb of Washington.** Between Washington and Lafayette there had grown up a strong mutual affection during their intercourse in the scenes of the old war for independence. When at the seat of government in October, 1824, while on a visit to the United States, the marquis was conducted to Mount Vernon by George Washington Parke Custis, the adopted son of Washington, with whom George W. Lafayette had lived in the mansion of the great patriot while Lafayette was an exile from France and in a prison. He was conveyed from the capital in a barge, accompanied by his son, John C. Calhoun, Secretary of War, and Mr. Custis, and at the shore at Mount Vernon he was received by Lawrence Lewis, Washington's favorite nephew, and the family of Judge Bushrod Washington, who was then absent on official business. After visiting the mansion, where, forty years before, he took his last leave of the beloved patriot, the company proceeded to the tomb (the old one, on the brow of the hill), where Custis presented the marquis with a ring containing a lock of Washington's hair. He received it with emotion. The door of the vault was opened, and there were displayed the leaden caskets which contained the coffins of Washington and his wife, decorated with flowers. Lafayette entered, kissed the casket, and reverently retired.

**Lafayette at Versailles.** After a short winter passage from Boston to Brest, in February, 1779, Lafayette joined his family and friends in his native land. His offence in sailing for America in defiance of the king's command was atoned for by a week's exile to Paris, and confinement in the house of his father-in-law. He was then received at Versailles, when the king gently reprimanded him, while the queen eagerly sought information concerning America from his own lips. His fame made him the admired of court society as well as of the populace of the French capital. The young marquis observed with alarm that everybody was talking of peace, while America was struggling with armed champions of royalty, and he felt that the independence of the colonies was in peril. With great earnestness he pleaded for aid for the Americans, and was successful. (See *French Forces* and *French Fleet*.)

**Lafayette in Virginia.** Benedict Arnold led a corps of British and Tories into Virginia early in 1781, to plunder and distress that state. To afford the Virginians assistance, Lafayette was sent with a considerable body of troops, principally drafts from the New England States, and, in conjunction with Generals Wayne and Steuben, soon drove Cornwallis—who succeeded Arnold and Phillips (which see) in invading Virginia—first across the James River to Portsmouth, and thence to Yorktown.

**Lafayette, LAST VISIT OF, TO THE UNITED STATES.** On the 26th of January, 1824, the Senate of the United States entertained the following resolutions: "The Marquis de Lafayette having expressed his intention to revisit this country, *Resolved*, That the President be requested to communicate to him the assurances of grateful and affectionate attachment still cherished for him by the government and people of the United States. *And be it further Resolved*, That whenever the President shall be informed of the time when the marquis may be ready to embark, a national ship (with suitable accommodations) be employed to bring him to the United States." The two houses passed a joint resolution of similar tenor, and he was invited to come as the nation's guest. He declined the offer of a ship-of-the-line for his conveyance to this country. With his son, George Washington Lafayette, and his secretary, he sailed from Havre for New York, where he arrived Aug. 15, 1824. In the space of about eleven months he made a tour of about five thousand miles through the United States, visiting the principal portions, and was everywhere received with great enthusiasm. His journey was almost like a continued triumphal procession. Congress, "in consideration of his important services and expenditures during the American Revolution," voted him \$200,000 in cash and a township of land; and when he was ready to depart for France, an American frigate, named, in compliment to him, *Brandywine* (his first battle in the Revolution having occurred on Brandywine Creek, Penn.), was sent by the United States government to convey him back. On his arrival at Havre, the greatness of the American Re-

public, which he had just left, and the littleness of the restored Bourbon dynasty, were brought in conspicuous contrast. A great concourse of people gathered to do him honor on his return were dispersed by the police.

**Lafayette** (Marquis de), MARIE JEAN PAUL ROCH YVES GILBERT MOTIER, was born at Cavillac, Auvergne, France, Sept. 6, 1757; died in Paris, May 19, 1834. Left an heir to an immense estate at the age of thirteen years, he

LAFAYETTE IN 1777. (From a French print.)

received the best education that could be obtained, and at sixteen married a granddaughter of the Duke de Noailles. He entered the army as a captain of dragoons, and in the summer of 1776 he heard of the struggles of the English-American colonies. He immediately resolved to aid them, and, secretly fitting out a vessel at his own expense, he sailed for America in company with Baron de Kalb and ten or twelve other foreign military officers who came to seek service in the Continental army, and landed near Georgetown, S. C., April 19, 1777. They travelled by land to Philadelphia, where Lafayette immediately addressed a letter to Congress, asking leave to serve as a volunteer in the Continental army without pay. In consideration of his zeal and his illustrious family and connections, that body gave him the commission of major-general (July 31, 1777), and Washington invited him to become a member of his military family. He joined the Continental army near a house on Neshaminy Creek in August. At that time he was less than twenty years of age. From that time until the close of the Revolution he was the bosom friend of the commander-in-chief and the untiring and effective champion of the patriot cause in the field and at the court of his native country. He was ever ready to defend the honor of the Americans. In 1778 he challenged Lord Carlisle, one of the British commissioners, to fight a duel. (See *Manifesto of British Commissioners*.)

When the Americans had secured peace and independence for their country, he returned to France, and was made a major-general in the French army. In 1784 he again visited the United States, and was everywhere received with tokens of affection and respect. He became a member of the Notables at Paris in 1787, when he boldly demanded the convocation of the States-General, consisting of three orders—namely, the clergy, nobility, and commons—representatives of the whole nation. They had not met since 1614, a period of one hundred and seventy-three years. The king (Louis XVI.) convened them on May 6, 1789. There were 308 ecclesiastics, 285 nobles, and 621 deputies of the third estate, or the "common people." In July Lafayette was appointed commander-in-chief of the National Guard. When the abolition of titles was decreed, he dropped his, and was known only as General Lafayette. He resigned his command in 1790, and in 1792 commanded one of the armies sent to guard the frontiers of France against the forces of monarchs alarmed by the republican demonstrations in France. When the fierce Jacobins seized power the conservative Lafayette was denounced and his arrest decreed. He crossed the frontier, intending to take refuge in Holland. The Austrians seized him, and confined him in a dungeon five years. For a long time no intelligence of him reached his friends. Meanwhile his wife had been imprisoned at Paris during the "Reign of Terror," but had been set at liberty on the downfall of Robespierre. She hastened to Vienna, obtained a personal interview with the emperor, and gained permission to share the captivity of her husband. Great exertions were made in Europe and America to obtain his release, but in vain, until Bonaparte, at the head of an army, demanded his release. He was set at liberty Aug. 25, 1797. Towards the end of 1799 he returned to his estate of La Grange, forty miles from Paris. Bonaparte tried to bribe him with offered honors to enter public life again as senator. He refused with disdain; and when the vote for making Bonaparte first consul for life was taken, Lafayette voted *no*, and told the ambitious general so in a letter, which ended their intercourse. When Bonaparte became emperor, Lafayette took a seat in the Chamber of Deputies; and this staunch champion of constitutional government refused the offered bauble of a peerage. After the battle of Waterloo, touched with sympathy for the fallen monarch, he offered him facilities for escaping to America; but the emperor, who could not forgive Lafayette's former opposition, refused to accept the offer, and became a prisoner on St. Helena. In the French legislature Lafayette's voice was always in favor of liberal measures. In 1824 the Congress of the United States requested President Monroe to invite Lafayette to America as a guest of the Republic. He came, but declined the offer of a ship. With his son and a private secretary, he landed

in New York (Aug. 15, 1824), visited in succession the whole twenty-four states, and was everywhere received with demonstrations of love and respect. He would have been received with equal respect and enthusiasm by his own people on his return had not the government interfered. During the revolution of 1830, that drove Charles X. from the throne, Lafayette was made commander-in-chief of the National Guard, in which capacity he did great public service. He sacrificed his own republican preferences for the sake of peace and order, and placed Louis Philippe on the throne. He died the acknowledged chief of the constitutional party on the Continent of Europe. He received a magnificent public funeral, when his remains were conveyed to their resting-place in the cemetery of Pigpign, a private burial-ground of several families of the nobility of Paris, back of the gardens of what was once a nunnery, but a boarding-school for young ladies in 1850. The monument is about

LAFAYETTE'S TOMB.

eight feet square, and composed of dark sandstone, with appropriate inscriptions in French. The cross seen in the picture stands over the grave of another.

**Lafayette's Voyage to America.** When Lafayette and other French officers were ready to embark for America (1777), he was informed that the credit of the Continental Congress was so low that it could not furnish them a transport. The young enthusiast replied, "Then I will purchase one myself." He bought and secretly freighted a vessel, called the *Victory*, to carry himself, the veteran Baron de Kalb, and ten or twelve other French officers across the Atlantic. While the vessel was in preparation for sailing, he made a visit to England, where he was invited to visit the navy-yards. Too honorable to inspect the armaments of a people whose armies he was about to fight against, he declined, but thought it a good joke to be introduced to their king. He was then only nineteen years of age. The *Victory* sailed first to a Spanish port, where Lafayette received orders from the king to give up his expedition; but he disobeyed, and sailed for America. The women of Paris

applauded his heroism; the queen gave him tokens of her admiration; the people extolled him for his strong enthusiasm in a good cause; and to his young wife, who was about to become a mother a second time, he wrote from the *Victory*: "From love to me, become a good American; the welfare of America is closely bound up with the welfare of mankind."

**Lafitte and the Baratarians.** After the English had captured the Island of Guadeloupe, French privateersmen lost their last rendezvous in the West Indies, and soon found refuge in Baratania Bay, just west of the mouths of the Mississippi River. They had adopted the flag of the then new insurgent Republic of Carthage, and professed to cruise under that flag against the Spaniards; but, like the old Buccaneers (which see), they made very little discrimination in their captures. These semi-pirates found a market at New Orleans for their plunder, which was smuggled in and sold at very low prices. The leader of this band of outlaws in 1814 was Jean Lafitte, a shrewd Frenchman, who had been called the "Pirate of the Gulf." He and his band had been outlawed by legal proceedings, though his crimes were not against humanity—only violations of the revenue and neutrality laws of the United States. To these marauders a message was sent by the wise commander of the British Gulf squadron from Pensacola, with a proclamation of his intentions to conquer Louisiana, and offering to take these Baratarians into the British service, with rank and pay for Lafitte and other chief leaders if they would join in an attack on New Orleans. When this invitation was put into the hands of Lafitte, he feigned compliance; but as soon as the bearer had departed he called his followers around him, on the border of the sea, and said, in substance, "Comrades, I am an adopted citizen of the United States, and will never violate the confidence placed in me by serving the enemies of this country. We have been outlawed; perhaps we deserve it by our irregularities. No matter; I am ready to serve my adopted country, and ask you to join me. What say you, comrades?" His brawny followers threw up their hats and exclaimed, "We will! we will!" And they were afterwards accepted as volunteers in the defence of New Orleans. Lafitte immediately sent the despatches received from the British commander to the Governor of Louisiana; and so the people were forewarned of danger.

**Lafitte, JEAN,** was born in France about 1780; died, some suppose, at sea in 1817; others, at Sisal, Yucatan, in 1826. In 1813-14 he was at the head of a band of smugglers, with their headquarters at Baratania Bay. (See *Lafitte and the Baratarians*.) After the War of 1812-15 his subsequent career is very obscure; but it is believed that he obtained a privateer's commission from either New Granada or Mexico, and formed a settlement on the site of Galveston, Texas—a settlement of outlaws—which was broken up by a naval force under Lieutenant Kearny in 1821.

**Lake Erie, BATTLE OF.** Commodore Perry, anxiously waiting for men to man his little fleet at Erie, was partially gratified by the arrival there of one hundred men from Black Rock, under Captain Elliott, and early in August, 1813, he went out on the lake before he was fairly prepared for vigorous combat. On the 17th of August, when off Saudusky Bay, he fired a signal-gun for General Harrison, according to agreement. Harrison was encamped at Seneca, and late in the evening of the 19th he and his suite arrived in boats and went on board the flagship *Lawrence*, where arrangements were made for the fall campaign in that quarter. Harrison had about eight thousand militia, regulars and Indians, at Camp Seneca, a little more than twenty miles from the lake. While he was waiting for Harrison to get his army ready to be transported to Fort Malden, Perry cruised about the lake. On a bright morning, Sept. 10, the sentinel watching in the main-top of the *Lawrence* cried, "Sail, ho!" It announced the appearance of the British fleet, clearly seen in the northwestern horizon. Very soon Perry's nine vessels (see *American Fleet on Lake Erie*) were ready for the enemy. At the mast-head of the *Lawrence* was displayed a blue banner, with the words of Lawrence, the dying captain, in large white letters, "DON'T GIVE UP THE SHIP." (See *Perry's Battle-flag*.) The two squadrons slowly approached each other. The British squadron was commanded by Commodore Robert H. Barclay, who fought with Nelson at Trafalgar. His vessels were the ship *Detroit*, 19 guns, and 1 pivot and 2 howitzers; ship *Queen Charlotte*, 17, and 1 howitzer; schooner *Lady Prevost*, 13, and 1 howitzer; brig *Hunter*, 10; sloop *Little Belt*, 3; and schooner *Chippewa*, 1, and 2 swivels. The battle began at noon, at long range, the *Scorpion*, commanded by young Sailing-master Stephen Champlin, then less than twenty-four years of age, firing the first shot on the American side. As the fleets drew nearer and nearer, hotter and hotter waxed the fight. For two hours the *Lawrence* bore the brunt of battle, until she lay upon the waters almost a total wreck—her rigging all shot away, her sails cut into shreds, her spars battered into splinters, and her guns dismounted. One mast remained, and from it streamed the national flag. The deck was a scene of dreadful carnage, and most men would have struck their flag. But Perry was hopeful in gloom. His other vessels had fought gallantly, excepting the *Niagara*, Captain Elliott, the staunchest ship in the fleet, which had kept outside, and was unhurt. As she drew near the *Lawrence*, Perry resolved to fly to her, and, renewing the fight, win the victory. Putting on the uniform of his rank, that he might properly receive Barclay as his prisoner, he took down his broad pennant and the banner with the stirring words, entered his boat with his brother (fourteen years of age), and, with four stout seamen at the oars, he started on his perilous voyage, anxiously watched by those he had left on the *Lawrence*. Perry stood upright in his boat, with the pennant and banner partly wrapped about

him. Barclay, who had been badly wounded, informed of Perry's daring, and knowing the peril of the British fleet if the young commodore should reach the decks of the *Niagara*, ordered big and little guns to be brought to bear on the little boat that held the hero. The voyage lasted fifteen minutes. Bullets traversed

the of Lake Erie. Assured of victory, Perry sat down, and resting his naval cap on his knee, wrote to Harrison, with a pencil, on the back of a letter, the famous despatch: "We have met the enemy, and they are ours—two ships, two brigs, one schooner, and one sloop." The name of Perry was made immortal. His gov-

THE PERRY MEDAL.

the boat, grape-shot falling in the water near covered the seamen with spray, and oars were shivered by cannon-balls, but not a man was hurt. Perry reached the *Niagara* in safety. Hoisting his pennant over her, he dashed through the British line, and eight minutes afterwards the colors of the enemy's flag-ship

erument thanked him, and gave him and Elliott each a gold medal. The Legislature of Pennsylvania voted him thanks and a gold medal; and they gave thanks and a silver medal to each man who was engaged in the battle. The Americans lost twenty-seven killed and ninety-six wounded. The British loss was about two

were struck, all but two of the fleet surrendering. These attempted to escape, but were pursued and brought back, late in the evening, by the *Scorpion*, whose gallant commander (Champliu) had fired the *first* and *last* gun in the bat-

hundred killed and six hundred made prisoners. At about nine o'clock in the evening of the day of the battle, the moon shining brightly, the two squadrons weighed anchor and sailed into Put-in Bay, not far from Sandusky, out of

which the American fleet had sailed that morning. The last survivor of the battle of Lake Erie was John Norris, who died at Petersburg, Va., in January, 1879.

**Lake Ontario, OPERATIONS UPON, IN 1812.** Commodore Isaac Chauncey was in command of a little squadron of armed schooners, hastily prepared, on Lake Ontario late in 1812. The vessels were the *Oneida* (his flag-ship), *Conquest*, *Growler*, *Pert*, *Scourge*, *Governor Tompkins*, and *Hamilton*. He sailed from Sackett's Harbor (Nov. 8) to intercept the British squadron, under Commodore Earl, returning to Kingston from Fort George, on the Niagara River, whither they had conveyed troops and prisoners. Chauncey took his station near the False Ducks, a group of islands nearly due west from Sackett's Harbor. On the afternoon of Nov. 9 he fell in with Earl's flag-ship, the *Royal George*. He chased her into the Bay of Quinté, where he lost eight of her in the darkness of night. On the following morning (Nov. 10) he captured and burned a small armed schooner, and soon afterwards espied the *Royal George* making her way towards Kingston. Chauncey gave chase with most of his squadron (which had been joined by the *Julia*), and followed her into Kingston harbor, where he fought her and five land-batteries for almost an hour. These batteries were more formidable than he supposed. A brisk breeze having arisen, and the night coming on, Chauncey withdrew and anchored. The next morning the breeze had become almost a gale, and Chauncey weighed anchor and stood out lakeward. The *Tompkins* (Lientenant Brown), the *Hamilton* (Lientenant McPherson), and *Julia* (Sailing-master Trant) chased the *Simcoe* over a reef of rocks (Nov. 11), and riddled her so that she sunk before she reached Kingston. Soon afterwards the *Hamilton* captured a large schooner from Niagara. This prize was sent past Kingston with the *Growler* (Sailing-master Mix), with a hope of drawing out the *Royal George*; but Chauncey had so bruised her that she was compelled to haul on shore to keep from sinking. A number of her crew had been killed. The wind had increased to a gale on the nights of the 11th and 12th, and during the night of the 12th there was a snow-storm. Undismayed by the fury of the elements, Chauncey continued his cruise, for his heart was set on gaining the supremacy of the Lakes. Learning that the *Earl of Moira* was off the Real Ducks islands, he attempted to capture her. She was on the alert and escaped, but a schooner that she was convoying was made captive. On the same day Chauncey saw the *Royal George* and two other armed vessels, but they kept out of his way. In this short cruise he captured three merchant-vessels, destroyed one armed schooner, disabled the British flag-ship, and took several prisoners, with a loss, on his part, of one man killed and four wounded. Among the latter was Sailing-master Arundel, commander of the *Pert*, who was badly injured by the bursting of a cannon. He would not leave the deck, and was knocked overboard and drowned.

**Lake Ontario, OPERATIONS UPON, IN 1813.**

After the capture of Fort George (which see), Chauncey crossed the lake, looked into York, and then ran for Kingston without meeting a foe. He retired to Sackett's Harbor, where he urged forward the completion of a new corvette, the *General Pike*, 26 guns. She was launched June 12, 1813, and placed in command of Captain Arthur Sinclair. It was late in the summer before she was ready for a cruise. Meanwhile, the keel of a fast-sailing schooner was laid by Eckford at Sackett's Harbor, and named the *Sylph*, and a small vessel was kept constantly cruising, as a scout, off Kingston, to observe the movements of the British squadron there. This little vessel (*Lady of the Lake*) captured the British schooner *Lady Murray* (June 16), laden with provisions, shot, and fixed ammunition, and took her into the Harbor. Sir James L. Yeo was in command of the British squadron on the lake. He made a cruise westward, and on the 7th of July appeared with his squadron off Niagara. Chauncey and Scott had just returned from the expedition to York (which see). Chauncey immediately went out and tried to get the weather-gauge of Sir James. He had thirteen vessels, but only three of them had been originally built for war purposes. His squadron consisted of the *Pike*, *Madison*, *Oneida*, *Hamilton*, *Scourge*, *Ontario*, *Fair American*, *Governor Tompkins*, *Conquest*, *Growler*, *Julia*, *Asp*, and *Pert*. The British squadron now consisted of two ships, two brigs, and two large schooners. These had all been constructed for war, and were very efficient in armament and shields. The belligerents manœuvred all day, and when at sunset a dead calm fell, they took to sweeps. When darkness came, the American squadron was collected by signal. The wind finally freshened, and at midnight was blowing a fitful gale. Suddenly, a rushing sound was heard astern of most of the fleet, and it was soon ascertained that the *Hamilton* and *Scourge* had disappeared. They had been capized by a terrible squall, and all of the officers and men, excepting sixteen of the latter, had perished. These two vessels carried nineteen guns between them. All the next day the squadrons manœuvred for advantage, and towards evening Chauncey ran into the Niagara River. All that night the lake was swept by squalls. On the morning of the 9th, Chauncey went out to attack Sir James, and the day was spent in fruitless manœuvres. At six o'clock on the 10th, having the weather-gauge, Chauncey formed his fleet in battle order, and a conflict seemed imminent; but his antagonist being unwilling to fight, the day was spent as others had been. Towards midnight there was a contest, when the *Growler* and *Julia*, separating from the rest of the fleet, were captured. Returning to Sackett's Harbor, Chauncey prepared for another cruise with eight vessels. Making but a short cruise, on account of sickness prevailing in the fleet, he remained in the Harbor until Aug. 28, when he went out in search of his antagonist. He first saw him on Sept. 7, and for a week tried to get him into action, but Sir James strictly obeyed his instructions to "risk nothing." On the 11th, Chauncey bore down upon Sir James off the mouth of the

Genesee River, and they had a running fight for three hours. The *Pike* was somewhat injured, but the British vessels suffered most. The latter fled to Kingston, and Chauncey went into Sackett's Harbor. On the 18th he sailed for the Niagara for troops, and was chased by Yeo. After a few days Chauncey crossed over to York with the *Pike*, *Madison*, and *Sylph*, where the British fleet lay, when the latter fled, followed by the American vessels in battle order. The baronet was now compelled to fight or stop boasting of unsatisfied desires to measure strength with the Americans. An action commenced at a little past noon, and the *Pike* sustained the desperate assaults of the heaviest British vessels for twenty minutes, at the same time delivering destructive broadsides upon her foes. She was assisted by the *Tompkins*, Lieutenant Finch; and when the smoke of battle floated away, it was found that the *Holfe* (Sir James's flag-ship) was too much injured to continue the conflict any longer. She pushed away dead before the wind, gallantly protected by the *Royal George*. A general chase towards Burlington Bay immediately ensued. Chauncey could doubtless have captured the whole British fleet, but a gale was threatening, and there being no good harbors on the coast, if he should be driven ashore certain capture by land troops would be the consequence. So he called off his ships and returned to the Niagara, where he lay two days while a gale was skurrying over the lake. The weather remaining thick, after the gales Sir James left Burlington Bay for Kingston. Chauncey was returning to Sackett's Harbor, whither all his transports bearing troops had gone, and at sunset, Oct. 5, when near the Ducks, the *Pike* captured three British transports—the *Confiance*, *Hamilton* (the *Growler* and *Julia* with new names), and *Mary*. The *Sylph* captured the cutter *Drummond* and the armed transport *Lady Gore*. The number of prisoners captured on these five vessels was two hundred and sixty-four. Among the prisoners were ten army officers. Sir James remained inactive in Kingston harbor during the remainder of the season, and Chauncey was busied in watching his movements and assisting the army in its descent of the *St. Lawrence*. (See *Expedition down the St. Lawrence*.) He did not, however, sufficiently blockade Kingston harbor to prevent marine scouts from slipping out and hovering near Wilkinson's flotilla on the *St. Lawrence*.

#### Lake Ontario, OPERATIONS UPON, IN 1814.

Commodore Chauncey was unable to accomplish much with his squadron during 1814. Early in the season he was taken sick, and in July his squadron was blockaded at Sackett's Harbor, and it was the last of that month before it was ready for sea. On the 31st, Chauncey was carried, in a convalescent state, on board the *Superior* (his flag-ship), and the squadron sailed on a cruise. It blockaded the harbor of Kingston, and Chauncey vainly tried to draw out Sir James Yeo for combat. At the close of September, Chauncey was informed that the *St. Lawrence*, pierced for one hundred and twelve guns, which had been built at Kingston, was ready for sea, when the commodore prudently raised the block-

ade and returned to Sackett's Harbor. The *St. Lawrence* sailed in October with more than a thousand men, accompanied by other vessels of war; and with this big ship Sir James was really lord of the lake. The Americans determined to match the *St. Lawrence*, and at Sackett's Harbor the keels of two first-class frigates were laid. One of them was partly finished when peace was proclaimed, early in 1815. She may yet (1880) be seen, housed over on the stocks, in the same condition as when the builders then left her, nearly seventy years ago. Chauncey expected that Yeo would attack his squadron in the harbor, but he did not; and when the lake was closed by ice, the war had ended on the northern frontier.

**Lake State.** A name popularly given to Michigan, which borders upon the four lakes Superior, Huron, Michigan, and Erie. It is sometimes called the "Wolverine State," from its formerly abounding with wolverines.

**Lamar, MIRABEAU B.**, was born at Louisville, Ga., Aug. 16, 1798; died at Richmond, Texas, Dec. 19, 1859. In 1835 he went to Texas, and commanded the cavalry in the battle of San Jacinto, which secured the independence of the province. He was attorney-general and secretary of the new state, and was elected its first vice-president in 1836, then holding the rank of major-general. He was president from 1838 to 1841, and in 1846 he joined General Taylor in the invasion of Mexico. In 1858 he published the *Columbus Inquirer*, a "state rights" journal. Just previous to his death he was United States minister to Nicaragua and Costa Rica.

**Lamar's Plan of a Southern League of States.** Lucius Q. C. Lamar, a member of Congress from Mississippi, proposed as early as November, 1860, a plan for a Southern Confederacy. He proposed that the State of Mississippi should, after passing an ordinance of secession, "consent to form a federal union with all the slave-labor states, the Territory of New Mexico, and the Indian Territory west of Arkansas, under the name and style of the United States of America." It proposed to continue in force all treaties and laws of the United States so far as they applied to Mississippi until the new confederation should be organized. It provided that the governor of Mississippi should perform the functions of president of the new United States within the limits of that state, and that all public officers should remain in place until the new government should be established. It was proposed that the accession of nine states should give effect to the proposed ordinance of confederation, when it should be the duty of the governor of Mississippi to order an election of congressmen and presidential electors. This scheme was proposed many weeks before the Mississippi ordinance of secession was passed, and Lamar remained in the national Congress until Jan. 12, 1861. For his zeal in the secession cause, he was rewarded with the office of diplomatic agent of the Confederates at the Russian court.

**Lamb, JOHN**, an artillery officer in the Revolution, was born in New York city, Jan. 1, 1735; died there, May 31, 1800. Lamb was one of the

most active of the Sons of Liberty (which see), and when the war for independence began he entered the military service. He was in command of the artillery in Montgomery's expedition into Canada, and during the siege of Quebec (Dec. 31, 1775) he was wounded and made prisoner. The following summer, as major of artillery, he was attached to the regiment of Knox;

JOHN LAMB.

and he was commissioned colonel of the New York Artillery Jan. 1, 1777. After doing good service throughout the war, he ended his military career at Yorktown. At about the close of the war he was elected to the New York Assembly; and Washington appointed him (1789) collector of the customs at the port of New York, which office he held until his death.

**Lancaster, TREATY OF.** At Lancaster, Penn., a treaty was made in 1744 between the commissioners of Maryland and Virginia and the deputies of the Iroquois Confederacy, which, since their union with the Tuscaroras of North Carolina, had been called the Six Nations. That treaty provided for the cession of all lands that were and should be claimed by the Indians within the province of Virginia, for the consideration of about \$2000. Their claimed lands in Maryland were, in like manner, confirmed to Lord Baltimore, with definite limits. Thus did Great Britain at once acquire and confirm its claims to the basin of the Ohio, and, at the same time, secure protection to its northern frontier.

**Land Companies.** After the treaty at Fort Stanwix (which see), the banks of the Kenawha, flowing north at the foot of the great Alleghany ridge into the Ohio, began to attract settlers, and application was soon made to the British government by a company, of which Dr. Franklin, Sir William Johnson, Walpole (a wealthy London banker), and others were members, for that part of the newly acquired territory north of the Kenawha, and thence to the upper Ohio. They offered to refund the whole amount (about \$50,000) which the government had paid the Indians (see *Fort Stanwix, Treaty at*), and proposed the establishment of a new and separate colony there. This project was approved by Lord Hillsborough, Secretary of State for the colonies, and the ministry finally agreed to it, but the troubles between the parent government and her children

in America, then rapidly tending towards open war, prevented a completion of the scheme. Such was the origin of the "Walpole," or "Ohio Company," the "Vandalia Company," and the "Indiana Company," founded on a cession said to have been made by the Indians at the Treaty of Fort Stanwix. These schemes of land speculators were dissipated by the same cause that arrested the completion of the Walpole scheme.

**Land Grants in Aid of Internal Improvements.** Millions of acres of the public lands of the United States have been granted to aid in the construction of roads, canals, and railways; and also for educational and other purposes. The first acts of Congress for the purpose of internal improvements were two for the new State of Ohio, which became laws on April 30, 1802, and March 3, 1803, respectively. Previous to that there had been donations of land in favor of various deserving persons. The grants to the inhabitants of Ohio were for the purpose of laying out public roads leading to the Ohio River. Other grants were made from time to time for improvements in the Northwest until 1824, when (May 26) Congress authorized the State of Indiana to construct a canal, giving the right of way, with ninety feet of land on each side thereof. Nothing was done under the act; but in 1827 (March 2) two acts were passed, giving to Indiana and Illinois respectively certain lands in aid of the construction of canals, the first to connect the navigation of the Wabash River with the waters of Lake Erie, and the second to connect the waters of the Illinois River with those of Lake Michigan. A quantity of land equal to one half of five sections in width on each side of the canals was granted, reserving to the United States each alternate section. It was not an absolute grant of land in fee, for, under certain restrictions, the states had a right to sell the awards, and from the proceeds they were to repay the government. On the same day (March, 1827) there was granted to Indiana a certain strip of land formerly held by the Potawatomie Indians, the proceeds of the sale thereof to be applied to building a road from Lake Michigan, via Indianapolis, to some convenient point on the Ohio River. March 3, 1827, a grant was made to Ohio of two sections of land along the entire line of a road to be constructed from Sandusky to Columbus. May 23, 1828, a grant of 400,000 acres of the "relinquished lands" in certain counties in Alabama was made in aid of the improvement of the Tennessee and other rivers in that state. In this grant we find the first provision for indemnity in case the grant was not full by reason of prior sales or disposals by the government. Similar grants were made from time to time for like purposes. March 2, 1833, the State of Illinois was authorized to apply the lands granted by the act of March 2, 1827, for canal purposes to the construction of a railway instead. This was the first act looking to the construction of a railway through the assistance of land donations. The railroad system was then in its infancy. The state did not avail itself of the privilege,

but subsequently built a canal. March 2, 1835, a grant was made to aid the construction of a railway in Florida. Sufficient was given for the way—thirty feet of land on each side—and the right to take and use the timber for one hundred yards on each side for the construction and repairs of the road. This was the first grant of the right of way for a railroad, the previous grant having been for a canal. July 2, 1836, an act granted the right of way through such portions of the public lands as remained unsold—not to exceed eighty feet in width—to the New Orleans and Nashville Railroad Company. This road was never completed. Next came a grant to East Florida and other railroads which were never constructed. March 3, 1837, a grant was made to the Atchafalaya Railroad and Banking Company in Louisiana similar to that to the New Orleans and Nashville Railroad. Aug. 8, 1846, an act granted lands in aid of improvements of the Des Moines River in Iowa, and the Fox and Wisconsin rivers in Wisconsin. These rivers, when improved, were to remain highways for the United States government forever, free from toll. The grant to the then Territory of Iowa for the improvement of the Des Moines River led to long discussions as to the extent of the grant, and to many legal decisions. Finally, on March 22, 1853, the consent of Congress was given to apply a portion of the grant to the construction of a railway. The rivers were not improved, but the railway was constructed—the Keokuk, Fort Des Moines, and Minnesota Railroad. Sept. 20, 1850, a grant was made to the State of Illinois of every alternate section of land, designated by even numbers, for six sections in width, on each side of a railroad and branches thereof. This road, which was built, is known as the Illinois Central. Although this was not the first cession of land to a railway corporation, it granted specific sections instead of one half of a certain number of sections, and may be considered the initiatory measure of the system since adopted in making grants in favor of railways. On June 10, 1852, a donation was made to the State of Missouri for the construction of certain railroads therein, now known as the Hannibal and St. Joseph, and the Missouri Pacific, south branch. This grant was similar in character and extent to that of the Illinois Central. In this, as in the case of the Illinois Central, there was a provision for the reimbursement of the United States for all the land sold. Feb. 9, 1853, an act made a similar grant to Arkansas. June 29, 1854, an act granted aid to Minnesota for constructing a railroad from the southern line of that territory, via St. Paul, to its eastern line, in the direction of Lake Superior. For this purpose there were given each alternate section of land, designated by odd numbers, for six sections in width on each side of said road. This act was repealed in August following. At various times in 1856 grants of land for similar purposes were made to the states of Iowa, Florida, Alabama, Louisiana, Michigan, Wisconsin, and Mississippi. On March 3, 1856, a grant was made to Minnesota. All of these grants made in 1856 and 1857

were similar to that given to Missouri in 1852. July 1, 1862, the "Union Pacific Railroad Company" was created for the purpose of constructing and maintaining a railroad and telegraph line from the Missouri River to the Pacific Ocean. They were granted the right of way through the public lands to the extent of two hundred feet in width on each side of the line of the road, together with the necessary ground for stations, buildings, etc. They were also granted in aid of the construction of the road every alternate section of public land to the amount of five alternate sections a mile on each side of the road, excepting mineral lands and all lands already disposed of or reserved. Several other roads were provided for on the same conditions, which are now known as the Central Pacific, Central Branch of the Union Pacific, Kansas Pacific, and Sioux City and Pacific. It was a grant of ten miles of land on each side of the road. By an act approved July 2, 1864, instead of five, ten sections were granted, making the area twenty miles on each side of these roads. The term mineral land was construed not to mean coal or iron. By the same act a grant of twenty miles of land was made to the Burlington and Missouri River Railroad Company for the construction of a road from the Missouri River to some point not farther west than the one hundredth meridian west longitude, to connect with the Union Pacific Road. March 3, 1864, a grant of land was made to the State of Kansas to assist in constructing railroads within its borders, afterwards known as the Atchison, Topeka, and Santa Fé; Leavenworth, Lawrence, and Galveston; and Missouri, Kansas, and Texas railroads. In May, 1864, similar grants were made to the states of Minnesota, Wisconsin, and Iowa, and others soon followed to Arkansas, Missouri, Alabama, Iowa, Michigan, Minnesota, and Kansas. The North Pacific Railroad Company was created July 1, 1864, with grants similar to those of the Union Pacific, excepting double the extent of land, through the territories. July 27, 1866, grants were made to the Atlantic and Pacific, and the Southern Pacific, on terms similar to those of the Union Pacific. March 3, 1869, land grants were made to the Denver Pacific Railway; and by act of March 3, 1871, similar grants were made to the Southern Pacific (branch line), and Texas and Pacific. Many of the grants made in the earlier years of the system were enlarged, but only four grants have been declared forfeited. About twenty grants have "lapsed" by reason of non-compliance with the terms of the granting acts. The aggregate amount of land granted is more than 215,000,000 acres, but the amount made available is not more than 187,000,000 acres. By the aid of these grants about 15,000 miles of railroad have been built. Their benefits have extended to all parts of the country, and cannot be estimated by value; and they have dispelled all ideas looking to a removal of the seat of government from Washington. (See *Seat of the National Government*.)

**Land Speculations.** There was a vast public domain, which, in consequence of the Revo-

lution, had passed into the hands of particular states, much of which had been ceded to the United States at the time of the organization of the government under the national Constitution. The adoption of that instrument, and the consequent revival of prosperity, created vast land speculations. At that time much of the public lands of the states had been disposed of. Massachusetts retained much of her possessions of wild lands in Maine, while her more valuable tracts in western New York, obtained by compromise, had all passed into the hands of individuals. Of the 7,000,000 acres owned by New York, exclusive of lands yielded to Massachusetts, 5,500,000 acres had been disposed of at a single sale in 1791 for about \$1,000,000. One individual had purchased 3,500,000 acres at the rate of eight cents an acre, payable in five annual instalments, without interest. A large portion of this land was covered by the sterile rocks of the Adirondack Mountains. Almost all of the large tracts of land which the confiscation of the proprietary estates had cast into the hands of Pennsylvania had been bought up by land speculators. The unlocated land warrants of Virginia and North Carolina were sufficient to cover the public lands within their limits, together with all the ceded portions of Kentucky and the territory south of the Ohio. The voracious speculators turned to the lands claimed by Georgia west of the Chattahoochee River, and between that stream and the Mississippi. This great domain was occupied by Indians, whose original title to the land was never conveyed away; but the Legislature of Georgia, assuming the validity of the claim of their state, sold the pre-emption right to a vast portion of that tract to speculators, who proceeded to sell out, at a great advance, to individuals and companies in the Middle States and New England. The profits thus obtained stimulated others to undertake like enterprises, while influences alleged to have been exercised on the legislators of Georgia perhaps suggested operations upon Congress by similar means. In 1795 Messrs. Randall and Whitney, the first a citizen of Maryland and the second of Vermont, in conjunction with some Indian traders at Detroit, formed a scheme for obtaining from Congress, for the sum of \$500,000, the right to purchase of the Indians 20,000,000 acres on the peninsula of Michigan, to be divided into forty shares. Some members of Congress had been offered shares in the speculation on condition that they should aid the speculators in their scheme, to be ultimately purchased if they did not choose to retain them. Overtures were made to Giles, of Virginia, and others. Randall boasted that he had already secured thirty members. Giles, believing a large majority of them were Federalists, resolved to keep silence and detect them by their votes; but another member, unwilling innocent persons should so suffer, revealed the scheme publicly to the House. Randall was arrested, and was put upon his trial for attempting to corrupt the members of the House. His defence was that he had been misunderstood. He was found guilty of a high contempt, and

was sentenced to be reprimanded by the speaker. He was held in custody a few days, when he was released on payment of fees. A little later in the session a difficulty growing out of the Georgia land speculations occurred in the House. A memorial to Congress to do nothing recognizing the validity of the sale of the Indian lands until an investigation could be effected had been sent to Baldwin, a representative of Georgia. Senator Gunn, from that state, deeply interested in the speculation, claimed the right to see the memorial before its presentation, and to have the names of the signers. Baldwin refused. Gunn sent him a challenge through Frelinghysen, of New Jersey, who was also concerned in the speculation. Baldwin laid the challenge before the House, and Gunn and Frelinghysen, adjudged guilty of a breach of privilege, were compelled to address letters of apology to the House.

**Landed Property in Virginia.** In 1615 Governor Dale procured the important privilege for the people of Virginia of holding landed property by a stable tenure. The farmers then did not possess the land they cultivated by a tenure of common socage, but enjoyed it as tenants at will of the crown. Now to every adventurer into the colony, and to his heirs, were granted fifty acres of land, and the same quantity for every person imported by others.

**Lander, FREDERICK WEST,** was born at Salem, Mass., Dec. 17, 1822; died at Paw Paw, Va., March 2, 1862. He studied civil engineering, and was employed by the government in conducting explorations across the continent. He made two surveys to determine the practicability of a railroad route to the Pacific. In the last, he alone of all the party returned alive. He surveyed and constructed a great overland wagon-road, which had been recently completed when the Civil War broke out, when he was employed on secret missions to the South. On the staff of General McClellan he was very active in the vicinity of the Upper Potomac. In a skirmish at Edwards's Ferry, after the disaster at Ball's Bluff (which see), he was wounded in the leg. In January, 1862, he was on active duty, and repulsed a large Confederate force at Hancock, Va. Before his wound was healed he made a brilliant dash (Feb. 14, 1862) on Blooming Gap (which see), for which the Secretary of War gave him special thanks. His health was evidently giving way, and he applied for temporary relief from military duty; but, impatient, he prepared to make another attack on the Confederates, when he suddenly died from congestion of the brain.

**Landing of the Pilgrims, TIME OF THE.** The spot chosen by a party of explorers for the permanent landing-place of the passengers on the *Mayflower* was selected about the 20th of December, 1620, where New Plymouth was built. From about the middle of December until the 25th the weather was stormy, and the bulk of the passengers remained on the ship, while some of the men built a rude shelter to receive them. On the 25th a greater portion of the passengers

went on shore to visit the spot chosen for their residence, when, tradition says, Mary Chilton and John Alden, both young persons, first sprang upon Plymouth Rock from the boat that conveyed them.

**Lane, HENRY S.**, was born in Montgomery County, Ky., Feb. 24, 1811. Removing to Indiana, he was there admitted to the bar, and was a member of the Legislature in 1837. He served one term in Congress (1841-43), and was lieutenant-colonel of volunteers in the war with Mexico. In 1860 he was elected governor of Indiana, but, being chosen United States Senator, he soon afterwards resigned the governorship. Mr. Lane served in the Senate a full term of six years. He died in August, 1831.

**Lane, JAMES H.**, brother of the preceding, was born at Lawrenceburg, Ind., June 22, 1814; died at Leavenworth, Kan., July 11, 1866. He was admitted to the bar in 1840; served as a volunteer in the war with Mexico, commanding a brigade at Buena Vista (which see); and, in 1848, was elected lieutenant-governor of Indiana. He served one term in Congress; settled in Kansas, and was chosen its first United States Senator. He served well during the Civil War, and was again elected United States Senator in 1865.

**Lane, JOSEPH**, was born in Buncombe County, N. C., Dec. 14, 1801. Going early to Indiana, he engaged in business there, and was frequently a member of the Legislature between 1822 and 1846. He served in the war against Mexico, in which he gained distinction, rose to the rank of brigadier-general, and was breveted major-general. In 1848 he was appointed governor of Oregon Territory, organized its government, was its delegate in Congress from 1851 to 1859, and United States Senator from 1859 to 1861. He was again governor in 1863. Mr. Lane was nominated for Vice-President in 1860 on the Democratic ticket, with John C. Breckinridge.

**Lane, SIR RALPH**, was sent from England with Sir Richard Grenville, by Sir Walter Raleigh, to be governor of Virginia, in 1585. Born in Northamptonshire, England, about 1530; died in Ireland in 1604. He was son of Sir Ralph Lane, and Mand, daughter of Lord Parr, uncle of Catharine Parr, one of the queens of Henry VIII. He was equerry in the court of Queen Elizabeth, and commanded troops in Ireland, first in 1569, and again in 1583-84. After his return from Virginia he was colonel in the expedition of Norris and Drake against Portugal in 1589, and in 1591 was muster-master-general in Ireland. He was knighted by the lord-deputy in 1593. Lane's administration as governor of Virginia was fruitless of any good. By following the example of Grenville he exasperated the Indians. Had he been kind and wise the colony might have prospered; but he and his followers were greedy for gold, and only Harriott the historian acted like a sensible Christian. (See *Harriott, Thomas*.) Lane had the gold fever severely, and all trusted more to fire-arms than to friendship to secure the good-will of the Indians. Sometimes the latter were treated with cruelty, and a flame

of vengeance was kindled and kept alive. The Indians deceived the English with tales of gold-bearing regions near, and that the source of the Roanoke River was among rocks near the Pacific Ocean, where the houses were lined with pearls. Lane explored, found himself deceived, and returned. The Indians, who wanted to have the English dispersed in the forest, so as to exterminate them in detail, were discomfited. They looked with awe upon the English with fire-arms, and, believing more were coming to take their lands away from them, they determined to slay them. Lane, satisfied that there was a wide-spread conspiracy against the colony, struck the first blow. He invited King Wingina and his principal chiefs to a friendly conference. They came, confidingly, without weapons. At a preconcerted signal Lane and his followers fell upon and murdered the king and his companions. Thenceforth both parties stood on the defensive. The condition of the English became desperate. Their supplies became exhausted, and none could be got from the natives; only from the woods and waters could food be obtained. The colony was on the verge of starvation and despair, when Sir Francis Drake, returning from a raid upon Spanish towns, came to Roanoke Island. In his ship the colonists gladly embarked for England. (See *Grenville, Sir Richard*, and *Drake, Sir Francis*.)

**Langdon, JOHN, LL.D.**, was born at Portsmouth, N. H., in 1739; died Sept. 18, 1819. He was a successful merchant, and took an early and active part in the events preceding the outbreak of the war for independence. He was a member of the Continental Congress (1775-76), but in June, in the latter year, he resigned his seat and became navy agent. He was speaker of the Assembly, and was ready to make any reasonable sacrifice to promote the cause. When means were needed to support a New Hampshire regiment, he gave all his "hard money," pledged his plate, and applied to the same purpose the proceeds of seventy hogsheads of tobacco. He furnished means for raising a brigade of the troops with which Stark gained the victory at Bennington. He was active in civil affairs, also, all through the war, serving in the Continental Congress and his State Legislature. In 1785 he was President of New Hampshire, and in 1787 was one of the framers of the national Constitution. He was governor of his state in 1788, and again from 1805 to 1811. He was United States Senator from 1789 to 1801. Mr. Langdon declined the office of Secretary of the Navy (1811) and of Vice-President of the United States (1812).

**Langhorne Letter, THE.** A renegade Scotchman named Callender had appeared in Philadelphia as a writer in opposition to Washington's administration. Just after Monroe's return from France, he published a volume called *A History of the United States for 1796*, in which he grossly libelled Hamilton and abused Washington and his administration. For the apparent purpose of obtaining a knowledge of the effects of this abuse upon Washington's mind, and of drawing

from him something of which advantage might be taken, a letter was addressed to him (Sept. 23, 1796), dated Warren, Albemarle Co., Va., and signed "John Langhorne," condoling with him on the aspersions on his character, but suggesting that he ought not to allow them to disturb his peace. The name of the writer was fictitious. Without suspecting this, Washington, with his usual courtesy, replied to the letter, saying that he deplored the attacks on the government, but that as to himself, personally, he had a consolation within which protected him against the venom, and, in spite of the malignity of his enemies, his mind remained tranquil. Washington's reply to Langhorne was taken out of the post-office by a messenger from Monticello, Jefferson's residence, and investigations made by John Nicholas, a member of the opposition party, but a warm personal friend of the ex-President, cast suspicion on Mr. Jefferson as the writer ("John Langhorne"). The correspondence ended with Washington's answer, for the penetration of the writer perceived that nothing was to be drawn from that mode of attack. Nicholas afforded such evidence that Washington believed his first Secretary of State had written it, "with a view to effect some nefarious purpose."

**Lanman, JOSEPH**, United States Navy, was born in Connecticut, July 18, 1810, and entered the navy in 1825. He was made captain in 1861, and commodore in August, 1862. He commanded the frigate *Minnesota* in the North Atlantic Squadron, in 1864-65, and had the command of the second division of Porter's squadron in both attacks on Fort Fisher (which see). He commanded a squadron on the coast of Brazil from 1869 to 1871. In December, 1867, he was made rear-admiral.

**La Salle, ROBERT CAVELIER DE**, a French explorer, was born at Rouen in November, 1643; died in Texas, March 19, 1687. In early life he became a Jesuit, and thereby forfeited his patrimony. He afterwards left the order, and went to Canada as an adventurer in 1666. From the Sulpicians, seigneurs of Montreal, he obtained a grant of land and founded Lachine. Tales of the wonders and riches of the wilderness inspired him with a desire to explore. With two Sulpicians, he went into the wilds of western New York, and afterwards went down the Ohio River as far as the site of Louisville. Governor Frontenac became his friend, and in the autumn of 1674 he went to France bearing a letter from the governor-general, strongly recommending him to Colbert, the French premier. Honors and privileges were bestowed upon him at the French court, and he was made Governor of Fort Frontenac, erected on the site of Kingston, at the foot of Lake Ontario, which he greatly strengthened, and gathered Indian settlers around it. He had very soon a squadron of four vessels on the lake, engaged in the fur-trade, and Fort Frontenac was made the centre of that traffic, in which he now largely engaged and sought the monopoly. Conceiving a grand scheme of explorations and trade westward, per-

haps to China, he went to France in 1678 and obtained permission to execute it. He was allowed to engage in explorations, build forts, and have the monopoly of the trade in buffalo-skins, during five years, but was forbidden to trade with tribes accustomed to take furs to Montreal. Henri de Tonti, a veteran Italian, joined him, and, with thirty mechanics and mariners, they sailed from Rochelle in the summer of 1678, and reached Fort Frontenac early in the autumn. De Tonti was sent farther west to establish a trading-post at the mouth of the Niagara River. He proceeded, also, to build a vessel above the great falls for traffic on Lake Erie, and named it the *Griffin*. (See *Griffin, The*.) It was launched in the summer of 1679, and in August La Salle sailed with De Tonti through the chain of lakes to Green Bay, in the northwestern portion of Lake Michigan. Creditors were pressing him with claims, and he unlawfully gathered furs and sent them back in the *Griffin* to meet those claims. Then he proceeded, with his party, in canoes, to the mouth of the St. Joseph River, in southwestern Michigan, where he established a trading-house and called it Fort Miami. Ascending the St. Joseph, he crossed to the Kankakee, and paddled down it until he reached an Illinois village, and, in January, 1680, he began the establishment of a trading-post on the site of the present Peoria, Ill., which he called Fort Crèvecoeur. Disappointed in the failure of the *Griffin* to make a return voyage with supplies, he put De Tonti in command of the fort and despatched Hennepin and Acau to explore the Illinois to its mouth and the Mississippi northward. (See *Hennepin, Louis*.) With five companions, La Salle started back for Canada, and from the mouth of the St. Joseph he crossed Michigan to a river flowing into the Detroit, and thence overland to Lake Erie. From its western end he navigated it in a canoe to Niagara, where he was satisfied that the *Griffin* had perished somewhere on the lakes. He also heard of the loss of a ship arriving from France with supplies. Settling as well as he could with his creditors, La Salle, with a fresh party of twenty-three Frenchmen and eighteen New England Indians, with ten women and children, began a return journey to Fort Crèvecoeur, with supplies. De Tonti had been driven away by an attack on the Illinois settlement of the Iroquois. The desertion of his men had compelled him to abandon the fort and return to Green Bay. La Salle and his party went down the Illinois to its mouth, when he returned to gather his followers and procure means for continuing his explorations. Late in December, 1681, he started from Fort Miami with his expedition, coasted along the southern shore of Lake Michigan, ascended the Chicago River, crossed to the Illinois, descended to the Mississippi, and went down that stream until it separated into three channels, which he explored to the Gulf of Mexico. La Salle named the great stream River Colbert, in compliment to his patron at the court of France. (See *Mississippi River*.) De Tonti explored the great middle channel. (See *Tonti, Henri de*.) Then the whole company assem-

bled at a dry spot near the Gulf, and there prepared a cross and a column, affixing to the latter the arms of France and this inscription: "LOUIS THE GREAT, KING OF FRANCE AND NAVARRE, APRIL 9, 1682." He also buried there a leaden plate, with a Latin inscription. (See *Proces Verbal*.) The whole company then signed a *proces verbal*, in the following order: La M<sup>ét</sup>arie (notary), De la Salle, P. Zenobe (Récollet missionary), Henri de Tonti, François de Bousvondet, Jean Bourdon, Sieur d'Autray, Jacques Cauclois, Pierre You, Giles Mencret, Jean Michel (surgeon), Jean Mas, Jean Duglignou, Nicholas de la Salle. La Salle formally proclaimed the whole valley of the Mississippi and the region of its tributaries a part of the French dominions, and named the country Louisiana, in compliment to the king. So was first planted the germ of the empire of the French in that region, which flourished in the eighteenth century. La Salle ascended the Mississippi the next year, and returned to Quebec in November, leaving Tonti in command in the West, with directions to meet him at the mouth of the Mississippi the following year. Then he proceeded to France and proposed to the government a settlement in Louisiana and the conquest of the rich mining country in northern Mexico. A patent was granted him, and he was made commandant of the vast territory from the present State of Illinois to Mexico, and westward indefinitely. With two hundred and eighty different persons, he sailed from France, Aug. 1, 1684, with four ships; but disputes between Beaujeu, the navigator of the squadron, and La Salle proved disastrous to the expedition. Touching at Santo Domingo, they entered the Gulf of Mexico, and, by miscalculations, passed the mouth of the Mississippi without knowing it. La Salle became satisfied of this fact, but Beaujeu sailed obstinately on, and finally anchored off the entrance to Matagorda Bay. The colonists debarked, but the store-ship containing most of the supplies was wrecked. Beaujeu, pleading a lack of provisions, deserted La Salle, leaving him only a small vessel. He cast up a fort, which he called St. Louis, and attempted to till the soil; but the Indians were hostile. Some of the settlers were killed, others perished from disease and hardship, and, after making some explorations of the country, the party, at the end of the year, was reduced to less than forty souls. Leaving half of them, including women and children, La Salle set out, at the beginning of 1688, to make his way to the Illinois. His party consisted of his brother, two nephews, and thirteen others, some of whom were sulleyed and ripe for revolt. Penetrating the present domain of Texas to the Trinity River, revolt broke out, and the two ringleaders killed La Salle's nephew, in a stealthy manner; and when the great explorer turned back to look for him, they shot him dead. Nearly all of those who were left at Fort St. Louis were massacred by the Indians, and the remainder fell into the hands of the Spaniards, sent to drive out the French. La Salle, lured by tales of an abundance of precious metals in New Mexico, had

penetrated that country, with a few followers, before leaving Fort St. Louis, but he was disappointed.

**Las Casas, BARTOLOMÉ DE**, was the first apostle to the American Indians. (See *Elot, John*.) Born at Seville, Spain, in 1474; died in Madrid, in July, 1566. His father was a companion of Columbus in his two earlier voyages, and in the second one he took this son, then a student at Salamanca, with him. Bartolomé—or Bartholomew—accompanied Columbus on his third and fourth voyages, and, on his return, entered the Order of the Dominicans, that he might become a missionary among the natives of the new-found islands of the West. He went to Santo Domingo, and was there ordained a priest in 1510, and gave the name to the island in compliment to his order. Las Casas was chaplain to Velasquez when the latter conquered Cuba, and did much to alleviate the sufferings of the conquered natives. (See *Cuba*.) In 1515 he went to Spain to seek redress for them, and found a sympathizer in Cardinal Ximenes, who became Regent of Spain the following year, and sent out three monks to correct abuses. Their services were not satisfactory, and, returning to Spain, Las Casas was appointed "Universal Protector of the Indies." Seeing the few negroes who were in Santo Domingo and Cuba growing robust while laboring under the hot sun, he proposed the introduction of negro slaves to relieve the more effeminate natives. This benevolent proposition gave rise to a lucrative traffic (see *Slave-trade*) and a perversion of the purpose of Las Casas, and he obtained from Charles V. a grant of a large domain on the coast of Venezuela, for the purpose of collecting a colony under his own guidance. This project failed, and in 1527 he proceeded to labor as a missionary among the Indians in Nicaragua, Guatemala, Mexico, and Peru. To reward him for his benevolent labors, his king appointed him Bishop of Cuzco—a rich see; he declined it, but accepted that of Chiapa, in Mexico. The Spaniards were offended by his zeal in behalf of the Indians, and an officer of the Spanish court undertook to justify the conduct of the Spaniards towards the natives. Las Casas, in self-defence, wrote a work upon the natives, which contained many particulars of the cruelties of the Spanish colonists. It was translated into several European languages, and increased the hostilities of the colonists and offended the Church. He returned to Spain in 1551, after about fifty years of benevolent missionary labor, and passed the remainder of his days in a convent at Valladolid. There he completed his *General History of the Indies*, which has never been published, and several other works, in Latin and Spanish.

**Last Bloodshed in the Revolution.** Some Americans, led by Captain Wilmot, a brave and daring young officer, were engaged in the duty of covering John's Island, near Charleston, in September, 1782. He was always impatient of inaction, and often crossed the narrow strait or river to harass British foraging parties on the island. While on one of these excursions, in

company with Kosciuszko (which see), he fell into an ambush and was killed. This, it is believed, was the last life sacrificed in battle in the old war for independence.

**Last Conflict of the Civil War.** On May 11, 1865, Colonel T. H. Barrett, of the Sixty-second United States Colored Infantry, was in command of the National forces at Brazos Santiago, Texas. He sent three hundred men to the mainland, under Lieutenant-colonel Bronson, to attack some Confederates on the Rio Grande. The principal object of the Confederates was to procure horses for mounting the cavalry. Early on the morning of the 13th they attacked and drove the Confederates and seized their camp and some horses. Bronson fell back, when he was reinforced, and the Nationals, under the lead of Colonel Barrett, made another attack, drove off their adversaries, and destroyed their post. The Nationals pursued the Confederates. Resting, they were attacked by a heavy body of Confederates, cavalry and artillery, under the command of General Slaughter. The Rio Grande was on Barrett's left. He had no artillery, and was compelled to fall back, fighting. He lost forty-eight men, made prisoners. The United States colored troops formed a line a mile in length, protecting both flanks of the Nationals, and resisted every attempt of the Confederate cavalry to penetrate it. So ended the battle of Palmetto Ranche, the last conflict of the Civil War in the field. It was about sunset, May 13, 1865, when the Sixty-second Colored Infantry fired the last volley in the Civil War. In that war, which resulted in the destruction of negro slavery in our Republic, the first blood shed was that of a negro (see *Pennsylvanians in Baltimore*); they were negro troops who first entered the Confederate capital as victors (see *Richmond, Evacuation of*), and they were negro troops who fired the last shot in the war which emancipated them from bondage.

**Last Conflict of the Revolution.** The 25th of November was appointed for the evacuation of the city of New York by the British. The latter claimed the right of occupation until noon. Early in the morning Mrs. Day, who kept a boarding-house in Murray Street, near the Hudson River, ran up the American flag upon a pole at the gable end of her house. Cunningham, the notorious British provost-marshal, hearing of it, sent an order for her to pull down the flag. She refused, and at about nine o'clock he went in person to compel her to take it down. He was in full dress, in scarlet uniform and powdered wig. She was sweeping at the door. He ordered her to take down the flag. She refused. He seized the halyards to haul it down himself, whereupon the spunky Whig lady fell upon him with her broom. She made the powder fly out of his wig and finally beat him off. This was the last conflict of the war.

**Last Executions of Quakers in Boston.** In 1660 and 1661 the last executions of Quakers occurred in Boston. Mary Dyer (which see), the wife of a citizen of Providence, who was not a

Quaker, visited those who were in prison in Boston for conscience' sake, after she had once been banished. Her return incurred the penalty of death, and she was led out to execution by hanging, on Boston Common, with two men (Robertson and Stevenson). On the scaffold she was reprieved for the day, on the earnest petition of her son, who promised to persuade her to leave the colony. She went home with him to Rhode Island, under a sentence of banishment, but soon returned to visit Friends in prison. She was arrested, and, the next day, under a strong guard of soldiers, and with the beating of drums to drown her voice, she was taken to the Common and hanged. Her husband had pleaded most piteously for her life, as one "most dearly beloved." But the magistrates and ministers were deaf to every appeal for mercy. The next year William Leddra, who had been banished, returned, and was hanged. These persecutions caused an amazing addition to the number of converts to Quakerism. The same year monthly meetings were established in several places in New England, and not long afterwards quarterly meetings were organized. On hearing of the death of Leddra, Charles II. sent an order to Endicott to stop the persecutions and to send all accused persons to England for trial. This order was sent by the hand of Samuel Shattuck, a banished Quaker, who appeared before Governor Endicott with his hat on. The incensed governor was about to take the usual brutal steps to send him to prison, after ordering an officer to remove Shattuck's hat, when the latter handed the magistrate the order from the throne. Endicott was thunderstruck. He handed back Shattuck's hat and removed his own in deference to the presence of the king's messenger. He read the papers, and, directing Shattuck to withdraw, simply remarked: "We shall obey his majesty's commands." A hurried conference was held with the other magistrates and ministers. They dared not send the accused persons to England, for they would be swift witnesses against the authorities of Massachusetts; so they ordered William Sutton, keeper of the Boston Jail, to set all the Quakers free. So ended their severe persecution in New England; but the magistrates continued for some time to whip Quaker men and women, half naked, through the streets of Boston and Salem, until peremptorily forbidden to do so by the king.

**Last Royal Governor in Maryland.** Maryland was disposed to be very conservative on the question of independence. Its Convention voted (May 20, 1776) that it was not necessary to suppress every exercise of royal authority. But several intercepted letters, written by Governor Eden, which had just come to light, caused Congress to recommend his arrest. The Baltimore Committee volunteered in the matter, but became involved, in consequence, in a collision with the Provincial Convention. A committee of that body reported, on investigation, that the governor, in his correspondence with the British ministry, had not acted in a hostile character; but, at the same time, it was voted to signify to

Governor Eden that the public safety and quiet required him to leave the province, which he did.

**Latitudinarian Church.** Some Independents attempted to establish a "Latitudinarian" Church at Weymouth in 1639, on the principle of admitting to membership all baptized persons, without either requiring a profession of faith or relation of experience. The theocratic government of Boston, zealous for the preservation of the purity of the faith, promptly suppressed this movement. The intended pastor (Leuthall) was forced to make a humble apology, and soon found it expedient to take refuge in Rhode Island. Several laymen who had been active in the matter were heavily fined; one was whipped, and one was disfranchised.

**Latitudinarians in New England.** A new school of divines sprang up among Protestants towards the close of the 16th century, who attempted the delicate task of reconciling reason with revelation. They rejected the authority of tradition. They declared against superstition on the one hand, and enthusiasm on the other, but were tolerant towards those who dissented from them. They were, in fact, Low Churchmen with Arminian principles. These principles had penetrated Massachusetts at the beginning of the 18th century, as evinced by the organization of the Brattle Street Church in Boston. Their practice of what was denominated the "half-way covenant"—of admitting to the holy communion all persons not immoral in their lives; indeed, to all the privileges of church-membership—shocked the Mathers and others; and when, presently, Harvard College passed under the control of this new party, theocracy in New England expired, and the absolute reign of theological rule was at an end. The result on the intellectual history of New England was important. (See *Latitudinarian Church*.)

**La Tour in Acadia.** When Acadia, or Nova Scotia, was retroced to the French (1632), it was apportioned into provinces, under proprietary governors. To Razillé, commander-in-chief, was granted the southern portion of the peninsula, and one of his lieutenants was Charles La Tour, to whom was assigned a large portion of the territory. He and Seigneur D'Aulnay Charissy (another lieutenant), who controlled a section extending westward to the Kennebec River, were both engaged in trade, and bitter quarrels arose between them, on account of mutual (alleged) infringements of rights. After the death of Razillé, D'Aulnay, an unscrupulous man, attempted to assume control of the whole country. He was a Roman Catholic; La Tour was a Protestant. Through the powerful influence at court of Cardinal Richelieu, the king revoked the commission of La Tour, and ordered his arrest. The latter denied the allegations of D'Aulnay, and refused to submit to arrest. With five hundred men in vessels, D'Aulnay appeared off the mouth of the St. John River, in the spring of 1643, and blockaded La Tour in his fortified trading-house. A ship was daily expected from Rochelle, with a

company of one hundred and forty emigrants, and might fall into the power of the blockading squadron. La Tour managed to give to the vessel intimations of danger, and under cover of night he and his wife were conveyed on board of her, and sailed for Boston, to seek the aid of the colony of Massachusetts in defence of their rights. La Tour was permitted by Governor Winthrop to fit out a small naval and military force at Boston. He chartered five vessels, mounting forty pieces of cannon, and procured eighty volunteers for the land-service and fifty sailors. When the armament appeared, D'Aulnay raised the blockade, and sought refuge under the guns of his own fort at Port Royal, where two of his vessels were wrecked. La Tour would have captured that stronghold, had not the New-Englanders left him before their term of service had expired. D'Aulnay sent a protest to Winthrop against this violation of neutrality, and a copy of the order for La Tour's arrest. A treaty of peace was concluded in 1644. Meanwhile the intrepid Madame La Tour was in England, obtaining supplies for her husband's fort. On her return, she was landed at Boston instead of the St. John, as agreed upon. She brought action against the captain of the vessel, and recovered \$10,000 damages, with which she purchased supplies and munitions of war for the fort. It was put in a condition for a vigorous defence. During the temporary absence of her husband, D'Aulnay laid siege to it. Madame La Tour conducted an effective defence, attacking and disabling a frigate and killing or wounding thirty-three of the assailants. The baffled D'Aulnay was compelled to retire, greatly mortified. La Tour, meanwhile, continued to receive stores and munitions from New England, notwithstanding the treaty of neutrality. In reprisal, D'Aulnay seized and confiscated a Boston vessel, and this source of supply for La Tour was cut off. In the spring of 1647 D'Aulnay, hearing that La Tour and most of his men were absent from his fort, again besieged it. Madame La Tour determined to hold it to the last extremity. For three days the assaults were kept at bay. On Easter Sunday a treacherous Swiss sentinel allowed the assailants to enter the outer works. The brave woman rushed to the ramparts with her handful of soldiers, and would have repulsed the besiegers had not D'Aulnay, fearing the disgrace of another defeat at the hands of a woman, offered her honorable terms of capitulation. Anxious to save the lives of her little garrison, Madame La Tour yielded, when the perfidious D'Aulnay violated his solemn pledge. He caused every man of the garrison to be hung save one, whom he made the executioner of his comrades. The ruffians compelled the twice-betrayed Madame La Tour to witness these executions, with a rope around her own neck. D'Aulnay pillaged the fort of all the property, amounting to \$50,000, and retreated to Port Royal. La Tour was a ruined man, and wandered in exile on the shores of Newfoundland and in the wilds around the southern shores of Hudson's Bay. These disasters broke the heart of his brave wife, and she

died. Retributive justice brought about changes in favor of La Tour. Four years after his property was wasted, D'Aulnay died in debt and disgrace. La Tour now came back from the wilderness, vindicated his character before his sovereign, was made lieutenant-governor of Acadia, and again recovered his fort at St. John. He married the widow of his rival, and inherited his shattered estate, and prosperity once more smiled upon the Huguenot; for his claim to extensive territorial rights in Acadia, by virtue of Sir William Alexander's grant to his father, was recognized in 1656. He soon afterwards died. Acadia had then passed once more into the hands of the English.

Laudonnière, RENÉ GOULAIN DE, leader of a French colony in Florida. He first came to America in 1562, with Ribault. In the spring of 1564, Laudonnière sailed for America with three ships to assist the first colony, but landed in Florida. (See *Huguenots in America*.) In the onslaught made upon the French colony by the Spaniards, Laudonnière escaped. (See *Ribault*.)

Laurance, JOHN, was born in Cornwall, England, in 1750; died in New York in November, 1810. He came to New York in 1767, where he was admitted to the bar in 1772, and married the daughter of General McDougall, on whose staff he served. He was also in Washington's military family. He was judge-advocate at the court of inquiry in Major André's case; was a member of Congress in 1785-86; State Senator in 1789; and member of the new Congress from 1789 to 1793. He was also Judge of the United States District Court of New York from 1794 to 1796, and of the United States Supreme Court from 1796 to 1800.

Laurens, HENRY, was born in Charleston, S. C., in 1724; died there, Dec. 8, 1792. He was of Huguenot descent, and was educated in London

HENRY LAURENS.

for mercantile business. By that pursuit he acquired an ample fortune. He opposed British aggressions with speech and in writing, and

pamphlets which he published displayed remarkable legal ability. He was engaged in a military campaign against the Cherokees. In 1770 he retired from business, and went to Europe the next year to superintend the education of his sons; and in England he did what he could to persuade the government to be just towards the Americans. On his arrival at Charleston, late in 1774, he was chosen President of the Provincial Congress and of the Council of Safety. In 1776 he was sent as a delegate to Congress, and was president of that body for a little more than a year from Nov. 1, 1777. He received the appointment of minister to Holland in 1779, and on the voyage across the Atlantic he was captured by the British, and was confined in the Tower of London about fourteen months, suffering so much that his health was permanently impaired. In December, 1781, he was appointed one of the commissioners to negotiate for peace with Great Britain. In November, 1782, he signed a preliminary treaty at Paris, with Franklin and Jay, when he returned home, and passed the remainder of his life in agricultural pursuits. In accordance with an injunction in his will, the body of Mr. Laurens, at his death, was wrapped in cloths and burned—the first act of cremation in America.

Laurens, HENRY, CAPTURE AND IMPRISONMENT OF. A plan for a commercial treaty between the United States and Holland was unofficially proposed to William Lee (September, 1778) by Van Berkel, pensionary of Amsterdam. It was submitted to the Congress, approved, and Henry Laurens was commissioned minister-plenipotentiary to the States-General of Holland to negotiate. He finally sailed in the Congress packet *Mercury*, and on the 3d of September, 1780, she was captured by the frigate *Vesta* off the banks of Newfoundland. Mr. Laurens cast his papers overboard, but they were recovered by a sailor, and the minister was taken to London. After an examination before the Privy Council, Mr. Laurens was committed to the Tower on a charge of high-treason, where he was kept in close confinement more than a year. He was cruelly deprived of pen, ink, and paper, and the converse of friends. Twice he was approached with offers of pardon and liberty if he would serve the ministry, and each time the offer was indignantly rejected by him. He was finally released, and at the request of Lord Shelburne he went to France, to assist in negotiations then making for peace. Among his papers recovered from the sea was the plan for a treaty with Holland; also several letters which disclosed the existing friendship of the States-General for the Americans. The British ministry were irritated by these documents, and the subsequent refusal of Holland to disclaim the act of Van Berkel, and Great Britain declared war against that republic. (See *Holland at War with Great Britain*.)

Laurens, HENRY, PETITION OF. While on his way to Holland, in 1780, as United States minister-plenipotentiary, Henry Laurens was captured by a British ship of war, carried to London,

and confined in the Tower for fourteen months, where, at first, he was treated with much harshness. He had been president of Congress, and was a notable prisoner. On Dec. 1, 1781, Mr. Laurens addressed a petition to the British House of Commons, dated "Tower of London," in which he stated that he had for many years, at the peril of his life and fortune, labored to preserve and strengthen the friendship between Great Britain and her colonies; that he had never excited animosity on either side; that he deprecated the events that brought on the war; that, in its progress, he extended every act of kindness in his power to loyalists as well as to British prisoners of war; that he was captured on the American coast, and on Oct. 4, 1780, was committed to the Tower, being then dangerously ill; that meanwhile he had suffered under a degree of rigour almost, if not altogether, unparalleled in modern British history; that from long confinement and the want of proper exercise, and other obvious causes, his bodily health was greatly impaired, and that he was then in a languishing state; and he prayed for enlargement under proper restrictions and conditions. This petition was presented to the House in the form in which it came from Mr. Laurens's hand, it having been written with a lead-pencil. He was soon afterwards released, but his rigorous imprisonment had so undermined his constitution that he never afterwards enjoyed good health.

Laurens, JOHN, son of Henry, born in South Carolina in 1753; died Aug. 27, 1782. Liberally educated in England, he returned to his native state just as the war for independence was kindling (1775), when he entered the army as an aid to Washington, and frequently acted as secretary. Expert in the French and German languages, he was Washington's chief medium of communication with the foreign officers in the service. He was a patriotic and brave soldier under all circumstances, and was devoted to the commander-in-chief. On one occasion he challenged General Charles Lee for speaking disparagingly of the chief. They fought, and he severely wounded Lee with a pistol-ball. In the battles at the Brandywine and Germantown Laurens was particularly distinguished; and afterwards, at Savanuah and at Charleston and Yorktown, he performed prodigies of valor. At the latter place he was conspicuous at the storming of a battery, and was the first to enter it and receive the sword of the commander. For months his indefatigable activity caused the confinement of the British in Charleston; and finally, at the very close of the struggle, he too carelessly exposed himself in a trifling skirmish near the Combahee, S. C., and was slain. In the autumn of 1780, when the finances of the United States were exhausted, he was sent to France to solicit a loan. While earnestly pressing his suit with Vergennes, the French minister, one day, that gentleman said that the king had every disposition to favor the United States. This patronizing expression kindled the indignation of the young diplomatist, and he replied, with emphasis, "Favor, sir! The respect which

I owe to my country will not admit the term. Say that the obligation is mutual, and I will acknowledge it. But, as the last argument I shall offer to your excellency, the sword which I now wear in defence of France as well as my own country, unless the succor I solicit is immediately accorded, I may be compelled, within a short time, to draw against France as a British subject." This had the desired effect, for France dreaded the subjugation of the colonies, or a reconciliation with the mother country. Presently a subsidy of \$1,200,000, and a further sum as a loan, were granted. The French minister also gave a guarantee for a Dutch loan of about \$2,000,000.

Lauzun (Duke de), ARMAND LOUIS DE GOUTANT, was born in Paris, April 15, 1747; died Dec. 31, 1793. He had led an expedition successfully against Senegal and Gambia in 1779, and came to America with Rochambeau in 1780,

DUKE DE LAUZUN.

in command of a force known as "Lauzun's Legion," with which he took part in the siege of Yorktown. Returning to France, he became a deputy of the nobles in the States-General, and in 1792 was general-in-chief of the Army of the Rhine. In 1793 he commanded the Army of the Coasts of Rochelle. He did good service for his employers in the French Revolution; but when he persistently requested leave to resign his commission, the irritated leaders sent him to the scaffold, where he was beheaded.

**Law against Witchcraft.** Among the "Fundamentals" of Massachusetts was a law against witchcraft, which made its practice punishable

with death. This law was fortified by a declaration of Scripture—"Thou shalt not suffer a witch to live." (See *Salem Witchcraft*.) There was, however, near the close of the seventeenth century, a growing spirit of doubt in New England concerning the reality of much of the supernaturalism which held so prominent a place in Puritan theology. To combat this rising incredulity, Increase Mather published a book of *Remarkable Providences* in 1684, in which were enumerated, among other things, all the supposed cases of witchcraft which had hitherto occurred in New England, with arguments to prove their reality. Five years later the superstitious Cotton Mather published a book entitled *Memorable Providences relating to Witchcraft*, which did much to produce that horrible event in New England history known as "Salem Witchcraft" (which see). Against public opinion and the teachings of common-sense, Cotton Mather maintained publicly his belief in the reality of witchcraft. (See *Harvard College Circular*.)

**Law, COMMON.** In all the states, either by constitutions or by legislative enactments, the English common law, and all those English statutes hitherto recognized and acted upon in the colonies, respectively, were made the basis of state jurisprudence. The common law of England has been defined as that part of the laws which have grown up from usage as distinguished from acts of Parliament or other legislative bodies. For example: A man in New York agreed to pay twelve shillings a day to any man employed in a certain business. Some of the men worked twelve and a half hours out of the twenty-four. It was held that these men were entitled to fifteen shillings a day, because common usage had established ten hours as a day's work at that particular business. The term common law has been applied to all such laws, statutory or customary, as were administered in the most ancient or common law courts. In this sense, in a limited degree, it is commonly understood in the United States. The general course has been, besides adopting the common law of England, to re-enact English statutes which had been sanctioned by colonial legislation and which it was deemed important to retain.

**Law of Inheritance.** A matter of great importance to several of the colonies was settled in Connecticut in 1729. There was a law of that colony (also in the rest of New England, as well as in New Jersey, Pennsylvania, and Delaware) admitting daughters to share with sons as joint heirs, and distributing the lands among all the children equally, except a double share to the eldest son. On the appeal of John Winthrop, great-grandson of the first governor of Massachusetts, from the Superior Court in Connecticut to the King in Council, this law was set aside. This threatened infinite confusion and uncertainty concerning land titles in those colonies and in the settlement of all landed estates. Agents were sent to England, who obtained a reversal of this decision and a confirmation of the Connecticut law.

**Law Reports.** The State of Connecticut set the example of requiring the judges to give, in writing, the reasons of their decisions. Kirby's reports, published in 1789, containing the Connecticut cases from 1785 to 1788, were the first of a series of American law reports, of which we have now several hundred volumes.

**Lawrence, CAPTAIN JAMES, REFUSAL TO VOTE THANKS TO.** Through the influence of the Peace Faction (which see) in Massachusetts, the Senate of that state passed a resolution (June 15, 1813) which Mr. Grundy denounced as "moral treason." The Legislature had passed resolutions of thanks to Hull, Decatur, and Bainbridge, and a proposition was submitted for a similar vote to Lawrence for his gallantry in the capture of the *Peacock*. A committee of the Senate, of which Josiah Quincy was chairman, reported adversely to it, and a preamble and resolution were accordingly adopted. The former declared that similar attentions already given to military and naval officers engaged in a like service had "given great discontent to many of the good people of the commonwealth, it being considered by them as an encouragement and excitement to the continuance of the present unjust, unnecessary, and iniquitous war." The resolution was as follows: "*Resolved*, as the sense of the Senate of Massachusetts, that, in a war like the present, waged without justifiable cause, and prosecuted in a manner which indicates that conquest and ambition are its real motives, it is not becoming a moral and religious people to express any approbation of military or naval exploits which are not immediately connected with a defence of our sea-coast and soil." Captain Lawrence had then been dead ten days, slain on board his ship, the *Chesapeake*, in action with the *Shannon*. (See *Chesapeake and Shannon*.)

**Lawrence, JAMES, U.S.N.,** was born at Burlington, N. J., Oct. 1, 1781; died on board the

JAMES LAWRENCE.

*Chesapeake* (see *Chesapeake and Shannon*), June 5, 1813. His father was a lawyer and distin-

guished loyalist during the old war for independence. James entered the navy as a midshipman Sept. 4, 1798, and in the spring of 1802 he was promoted to lieutenant. In the schooner *Enterprise* he took a distinguished part in the destruction of the frigate *Philadelphia* (which see) in the harbor of Tripoli. In 1810 he was promoted to master-commander; and on Feb. 24, 1813, the *Hornet*, of which he was commander, fought and conquered the British brig *Peacock* (see *Hornet and Peacock*), which sunk before all the prisoners could be taken out of her. In March, 1813, he was commissioned captain in the United States Navy, and took command of the frigate *Chesapeake* in May. On the 1st of June the *Chesapeake* fought the frigate *Shannon*, and was beaten. Captain Lawrence was mortally wounded, and died at Halifax, N. S., four days afterwards. His remains were conveyed to New York, where a public funeral was held. The remains were then buried in Trinity Church burying-ground, and soon after the war the corporation of New York erected an elegant marble monument over the grave. It became dilapidated in time, and in 1847 the corporation of Trinity Church caused the remains to be removed to a place near the southeast corner of the church, a few feet from Broadway, and a mausoleum of brown freestone to be erected

LAWRENCE AND LUDLOW'S MONUMENT.

there in commemoration of both Lawrence and his lieutenant, Ludlow.

**Laws and Penalties in Virginia (1611).** The magistrates of Virginia were furnished with a code of civil laws in 1611 which were intended to completely regulate the morals and moods of the colonists. The pains and penalties were definite and severe. The penalty of death was to be inflicted for blaspheming God; for speaking "maliciously and impiously" of the Holy Trinity; for deriding the Holy Scriptures; for treacherous words against the king; for murder; for adultery, or for rape, whether of white or Indian; for perjury; for trading with the In-

dians without license; for embezzlement of the public goods; for desertion of the colony; for treason against its rulers; for aiding theft; for robbing a garden; for wilfully pulling up a flower or root when set to weeding; for gathering grapes or plucking ears of corn, whether belonging to a private person or the public. The profane swearer was to have a bodkin thrust through his tongue for the second offence, and for the third, death. For absence from public worship or violating the Sabbath the penalty was deprivation of a week's allowance; second offence, public whipping; and for a third offence, death. For slandering the public officers or speaking evil of the colony the penalty was whipping; and for a third offence, death. The penalty for disobeying magistrates and unworthily treating a minister or preacher was a public whipping three times, and being compelled to ask forgiveness of the congregation on three successive Sundays. For killing any domestic animal—even one's own—without permission, was a capital crime in the principal; and his assistant was to lose his ears and be branded in the hand. Those who did not keep their houses neat and clean, and their bedsteads three feet from the ground, or who cast foul water into the streets of Jamestown, were subjected to trial by court-martial. A tradesman who neglected his business was sent to the galleys for four years, if he persisted in the offence. If any one failed to appear at appointed work at the beat of the drum morning and afternoon, or left his work before the hour appointed, he was laid, with head and feet together, all night upon the ground; whipped for the second offence; and for the third time sent to the galleys. He who failed to render to his minister an account of his faith, or refused to take advice from him in matters of religion, was whipped daily until he repented of his obduracy. And the minister who failed to read publicly, on every Sabbath-day, these laws and ordinances was deprived for a week of his allowance from the public store. The military code was still more severe.

**Law's Bubble,** a speculative scheme in which grants of land in Louisiana were involved. John Law, of Edinburgh, established a bank in France (1716), which, by royal authority (1719), became the receiver of the revenues of the kingdom. To it was attached a "Mississippi Company," which had grants of land in Louisiana, from the proceeds of the planting and commerce of which immense profits were expected. The shares of the bank soon rose to twenty times their par value, but fell as suddenly (1720). There was no bottom to the matter, and wide-spread financial distress and ruin followed the bursting of Law's "bubble."

**Laws of Connecticut.** The first body of laws for the commonwealth of Connecticut was compiled by Roger Ludlow, at the request of the General Court. This labor was begun in 1646, and completed in 1649. It comprised a complete collection of all the Connecticut laws then in force and many provisions borrowed from Massachusetts. Like the Justinian code,

it was divided into titles and laws. These laws were printed at Cambridge in 1672.

**League of States.** The United States, under the control of the Articles of Confederation, was simply a league of commonwealths, marked by tokens of an inherent tendency to dissolution. Its first attempt to exercise the functions of sovereignty was a signal failure, and the beginning of a series of failures. The executive powers of the General Congress were wholly dependent on the will and caprice of thirteen distinct legislatures, swayed by sectional interests and moved by sectional jealousies. The league failed, for the same reasons, to establish commercial relations with Great Britain and other governments. The inherent weakness of the new government was palpable to every attentive observer. It was perceived that the inchoate republic was not a nation. In a well-written pamphlet, Lord Sheffield declared his belief that the ruin of the league would be speedy, because anarchy and confusion would follow as a consequence of the independence of the states. He advised against sending a diplomatic representative of Great Britain to our seat of government. He said, "If the American states choose to send consuls, receive them, and send a consul to each state, and this is the whole that is necessary." He regarded the league, composed, as was claimed, of petty sovereignties, as unworthy of the dignified title of nation, and predicted that they would soon become penitent suppliants at the feet of the king for pardon and restoration as colonies. Such was the tendency when the proposition for a convention to amend the Articles of Confederation was called. The adoption of the national Constitution averted the catastrophe.

**Lear, TOBIAS,** was born at Portsmouth, N. H., Sept. 19, 1762; died in Washington, D. C., Oct. 10, 1816. He graduated at Harvard in 1783, and became private secretary to Washington in 1785. The latter remembered Mr. Lear liberally in his will. In 1801 he was American Consul-general in Santo Domingo, and from 1804 to 1812 he held the same office at Algiers. Mr. Lear was an accountant in the War Department at the time of his death.

**Learned, EBENEZER,** was born in 1727; died at Oxford, Mass., April 1, 1801. He was a captain in the French and Indian War, and hastened to Cambridge with militia on the day after the affair at Lexington. His health failed, and he wished to retire from the service in 1776, but he was retained; and in the battle of Stillwater (see *Bemis's Heights*) he commanded the centre of the American army, with the rank of brigadier-general. His health still declining, he retired from the army March 24, 1778. He was then with the army at Valley Forge. In 1795 his name was placed on the pension list.

**Le Bœuf, FORT.** On June 18, 1763, Fort Le Bœuf, in Pennsylvania, was attacked by the Indians. The gallant commander kept the assailants at bay until near midnight, when the Indians set the block-house on fire. The commander and

the garrison escaped to the woods, the Indians supposing they had perished in the flames that laid the fort in ashes. (See *Pontiac's War*.)

**Ledyard, JOHN,** was born at Groton, Conn., in 1751; died at Cairo, Egypt, Jan. 17, 1789. He was educated at Dartmouth College for a missionary to the Indians, and spent several months among the Six Nations. Having a resistless desire for travel, he shipped at New London as a common sailor, and from England accompanied Captain Cook in his last voyage around the world as corporal of marines. He vainly tried to set on foot a trading expedition to the northwest coast of North America, and went to Europe in 1784. He started on a journey through the northern part of Europe and Asia and across Behring's Strait to America in 1786-87. He walked around the whole coast of the Gulf of Bothnia, reaching St. Petersburg in the latter part of March, 1787, without money, shoes, or stockings. He had journeyed fourteen hundred miles on foot in less than seven weeks. Thence he went to Siberia, but was arrested at Irkutsk in February, 1788, conducted to the frontiers of Poland, and there dismissed with an intimation that if he returned into Russia he would be hanged. The cause of his arrest was the jealousy of the Russian-American Trading Company. Going back to London, Ledyard accepted an offer to engage in the exploration of the interior of Africa. He left England in June, 1788, and at Cairo, Egypt, was attacked by a bilious disease which ended his life. There is a life of John Ledyard in Sparks's *American Biography*.

**Ledyard, WILLIAM,** was born at Groton, Conn., in 1738; died there, Sept. 6, 1781. He was cruelly murdered by men of a marauding expedition under Arnold. (See *Fort Griuwold*.)

**Lee (Charles) and Independence.** General Charles Lee, having received his \$30,000 indemnity from Congress (see *Lee, Demands of*), was anxious for peace. At Annapolis, on his way north, he promised to use his great influence in bringing about a reconciliation, and whenever he found willing and sympathizing listeners in Pennsylvania and New Jersey he was free in his denunciation of the Americans for continuing the contest. He was decidedly opposed to independence. At Princeton, in a communication to Congress, he proposed to that body to authorize an offer to open a negotiation with Lord Howe on his own terms. Finding that he could not persuade the Americans to submit to become slaves, he performed treasonable acts with a hope of accomplishing his ends. (See *Treason of General Lee*.) He wrote to Congress from Perth Amboy (Oct. 12, 1776) that Howe would not attack Washington, but would infallibly proceed against Philadelphia; and he sought to weaken the Continental army by dividing it, by inducing Congress to order Washington to send a part of his army to Trenton. At that very moment Howe was moving against Washington.

**Lee, ANN,** founder of the society of celibates called Shakers in the United States. She was born in Manchester, England, Feb. 29, 1736; died

at Watervliet, N. Y., Sept. 8, 1784. A cook in a public institution, she married a blacksmith named Stanley. In 1758 she joined the Shakers in England. The society had just been formed by James and Jane Wardley, Quakers. About 1770 she began to "prophecy" against the wickedness of marriage as the "root of all human depravity," and resumed her maiden name of Lee. She came to America with some followers in 1774, and in 1776 they established themselves at Niskayuna, near Watervliet, or West Troy, where she was the recognized leader of the sect. Being opposed to war, she was suspected of being a British emissary, and, being charged with high-treason, was imprisoned at Albany and Poughkeepsie until released by Governor Clinton in 1777, when she returned to Watervliet, and there her followers greatly increased. During a religious revival in New Lebanon (since in Columbia County, N. Y.) in 1780 many persons were converted to the doctrines of Ann Lee, and the now flourishing Society of Shakers of New Lebanon was founded. She and some of her followers made missionary tours into New England with considerable success from 1781 to 1783, and so greatly were her spiritual gifts manifested that she was acknowledged a mother in Christ—the incarnation of the feminine essence of God. She was called "Mother Ann."

Lee, ARTHUR, LL.D., was born in Westmoreland County, Va., Dec. 20, 1740; died Dec. 14, 1792. Educated in Europe, and taking the degree of M.D. at Edinburgh in 1765, he began practice in Williamsburg, Va. He afterwards studied law in England, and wrote political essays that gained him the acquaintance of Dr. Johnson, Burke, and other eminent men. He was admitted to the bar in 1770, and appointed the alternative of Dr. Franklin as agent of the Massachusetts Assembly, in case of the disability or absence of the latter. For his services to that state he received four thousand acres of land in 1784. In 1775 Dr. Lee was appointed London correspondent of Congress, and in 1776 he was one of the commissioners of Congress sent to France to negotiate for supplies and a treaty; but the ambition of Lee produced discord, and his misrepresentations caused one of the commissioners—Silas Deane (which see)—to be recalled. He returned to America in 1780. Deane's character has since been vindicated. Lee was subsequently a member of Congress, of the Virginia Assembly, a commissioner to treat with the Northern Indians, and a member of the Treasury Board from 1785 to 1789, when he retired from public life. He was patriotic, but of a jealous and melancholy temperament.

Lee, ARTHUR, MISCHIEVOUS INTERMEDDLING OF. When France determined to acknowledge the independence of the United States, Spain agreed to advance money equal in amount to that to be furnished by France. It was to be sent to the United States from Havana. When Lee, who was equally disliked at Madrid and Versailles, heard of this, he talked and wrote so much about it that the Spanish government,

which wished to avoid a rupture with England, took the alarm, and receded from its determination. (See *Diplomacy of the Revolution*.) Lee's constant interference in the public affairs of the Americans abroad, and his jealousy of American agents employed by Congress, produced disaster and disappointment where success was attainable.

Lee, CHARLES, was born at Dernhall, Cheshire, England, in 1731; died in Philadelphia, Oct. 3, 1782. He was the son of a British officer, and entered the army at a very early age, having held a commission when eleven years old. At

CHARLES LEE.

twenty he was a lieutenant in the Forty-fourth Regiment, and accompanied the troops sent to America in 1754, where he saw considerable service during the ensuing six years. His regiment participated in the battle on the Monongahela, where Braddock was defeated. That was Lee's first practical experience of warfare. He served in the campaign from 1756 to the conquest of Canada in 1760, when he returned to England with a captain's commission, and was promoted to major of the One-hundred-and-third Regiment, which was disbanded in 1763, and Lee continued a major on half-pay until 1772, when he was made lieutenant-colonel on half-pay. He had served with distinction in Portugal, but was not promoted in rank, probably because of the sharpness and volubility of his tongue concerning the shortcomings of his superior officers. On visiting the Continent after he was put on the half-pay list, he was made an aide-de-camp of King Stanislaus of Poland. He went to England in 1766, where he failed in his attempts to obtain promotion, and returned to Poland, where he was made a major-general, and afterwards served a short time in the Russian army. Finally, Lee made his way to America, where he claimed to be the author of the *Letters of Junius* (which see). Lee was boastful, restless, impulsive, quarrelsome, egotistical, ironical in expression, and illiberal in his judgment of others. His restlessness caused the Mohawks, who adopt-

ed him, to give him a name signifying "boiling water." He espoused the cause of the American republicans, and when the Continental army was organized he was chosen second major-general under Washington, which he accepted on condition that the Congress should advance him \$30,000 as indemnity for any losses he might sustain by confiscation of his property in England. Through his boasting he became extremely overrated by the Americans of all classes. He was simply an unprincipled and utterly selfish soldier of fortune. His censoriousness, and his jealousy of Washington, whose position he aspired to, made him very mischievous, and finally he played the part of a traitor to the cause, without actual discovery of proof (though always suspected) until a few years ago. (See *Treason of General Lee*.) Made a prisoner in New Jersey late in 1776, he was not exchanged until early in 1778. His bad behavior at the battle of Monmouth in June of that year caused him to be tried by a court-martial, when he was sentenced to suspension from command in the army for one year. The Congress confirmed the sentence. He retired to his estate in Virginia, where he wrote *Queries, Political and Military*, the design of which was to cast a slur upon the character and military conduct of Washington. In a rude cabin of one apartment and little furniture he lived "more like a hermit than a citizen of the world," surrounded by his dogs and his books. Just as his time of suspension had expired he heard that Congress was about to deprive him of his commission, when, in a fit of anger, he wrote an abusive letter to the President, and his immediate dismissal from the army was the consequence. Wearied of solitude, he visited Philadelphia in the fall of 1782, with a view to making sale of his estate. There he was attacked by fever, and died within five days, exclaiming in his last moments, "Stand by me, my brave grenadiers!" In his will, General Lee, after bequeathing his "soul to the Almighty and his body to the earth," directed that his remains should not "be buried in any church or church-yard, or within a mile of any Presbyterian or Anabaptist meeting-house; for," he said, "since I have resided in this country, I have kept so much bad company when living that I do not choose to continue it when dead." He was buried in Christ Church-yard, Philadelphia, with military honors.

**Lee, CHARLES, IN NEW YORK.** Isaac Sears, an active "Son of Liberty" in New York, failing in obtaining official preferment, repaired to the camp at Cambridge, to make complaint of the prevalence of Toryism in New York, and the supineness of the Provincial Convention. He found a ready listener in General Lee. That officer requested Washington to detach him from the army, that he might collect volunteers in Connecticut to secure New York from an expected attack by Sir Henry Clinton, and to expel the Tories. After some hesitation, Washington complied. As soon as he entered upon the duties, he showed his contempt alike of the instructions of Washington and of the civil authorities. He railed at Congress, but worked en-

ergetically until he had raised two regiments in Connecticut—a larger body of men than he had ever commanded before. With about fifteen hundred men he marched upon New York, without intimating his designs to any one. This offended the pride of the colony, and awakened jealousy. He scoffed at the idea of being bound either by Congress or local civil authority. The Committee of Safety sent a request to Lee that the Connecticut troops might not pass the border till the purpose of their coming should be explained. Lee sneered at the request as "woefully hysterical," and as a sign of cowardice, and he made a raucous boast of what he should do if the British should attack the town. Lee entered the city on Feb. 4, just after the ships that bore Clinton and his troops anchored near it. There was a general flight of the inhabitants from the city. Lee's presence with Connecticut troops proved of great value, for Clinton, who, undoubtedly, had intended to seize New York, sailed away for the Carolinas. This lucky turn in affairs gave Lee much credit. He was lauded by everybody, and a demand which he made upon the New York Congress for \$2500 was granted. This was requited by revilings from the lips of this military charlatan. Washington was reading his character thoroughly, and had already spoken of him as "violent and fickle." The Continental Congress instructed him to put the city of New York in the best possible state of defence. This he chose to construe as giving him unlimited authority, and he persecuted suspected persons without stint. When the New York Convention rebuked him, he said, "When the enemy is at the door, forms must be dispensed with." On the eve of his departure for the South, he gave orders to a Connecticut officer "to secure the whole body of professed Tories on Long Island." This order was resented by the Legislature of New York as a usurpation of the rights of a free people, and the Continental Congress condemned and reversed it.

**Lee, EXPLOITS OF THE.** Washington conceived that the readiest way to obtain supplies for the army was the fitting-out of armed vessels for intercepting those sent from England to Boston. He caused six armed schooners to be fitted out for this purpose, which cruised off the New England coasts. One of these, the *Lee*, Captain Manley, captured (Nov. 29, 1775) the brig *Nancy*, an ordnance vessel from Woolwich, containing a large brass mortar, several pieces of brass cannon, a large quantity of small-arms and ammunition, and an abundance of things for the use of camps and artillery. Within ten days afterwards the *Lee* captured three British store-ships and a brig from Antigua laden with rum. In less than five days after the last-mentioned capture several other store-ships fell into the hands of Manley, and so the Continental army was supplied and the British army in Boston was distressed.

**Lee, FRANCIS LIGHTFOOT**, signer of the Declaration of Independence, and brother of Richard Henry and Arthur Lee (which see), was born at Stratford, Westmoreland Co., Va., Oct.

14, 1734; died in Richmond, Va., in April, 1797. In 1765 he was a member of the Virginia House of Burgesses, and held that position until 1772. He was in the Continental Congress from 1775 to 1779, and was active and efficient in framing the "Articles of Confederation" (which see). He was afterwards a State Senator. Mr. Lee and his wife died of pleurisy at almost the same time.

**Lee, GENERAL CHARLES, AMERICANS DECEIVED IN.** Through false pretensions, as well as misrepresentations and misapprehensions, the Americans had unbounded confidence in Charles Lee, and many were in favor of making him commander-in-chief of the Continental army at the time Washington was appointed. Indeed, he expected the honor, and was disappointed and surprised because he did not receive it. He had been in military training from his boyhood, and represented himself as well versed in the science of war. He was better understood in England. "From what I know of him," wrote Sir Joseph Yorke, then British minister at the Hague, "he is the worst present which could be made to any army." And so he proved to the Americans. He was selfish in the extreme. He had left the English army because he "saw no chance of being provided for at home." Soured against his government, he had sought employment anywhere as a mere military adventurer. He venerated England, and declared it to be "wretchedness itself, not being able to herd with the class of men [the English] to which he had been accustomed from infancy." He was continually seeking intimate relations with British officers—writing to Burgoyne, Sir Henry Clinton, and others—while ostensibly fighting against them in favor of the American cause. Even while disobedient, quarrelsome, and inefficient, the Americans did not lose faith in him, nor suspect that in his movements during the flight of the army under Washington from the Hudson to the Delaware (1776), and in his movements at the battle of Monmouth, he was seeking to betray them. But such was undoubtedly the case. (See *Treason of General Lee*.)

**Lee, GENERAL CHARLES, AT CHARLESTON.** When, in June, 1776, the British were about to attack Fort Sullivan, in the harbor of Charleston, Lee, who had been sent south to take command of troops there, went to the fort, and, after a brief inspection, declared it not tenable for "half an hour." It was "a slaughter-pen." He proposed to Governor Rutledge to withdraw the garrison from the fort without striking a blow. Rutledge refused, and Lee contented himself with giving several orders for preparing for a retreat. A better soldier than he commanded the garrison. It was the brave and calm Colonel Moultrie, who was unmoved by the evidences of alarm in the mind of the boastful Lee. Had the will of the latter prevailed, the fort, city, and province would undoubtedly have fallen into the hands of the enemy. Did Lee wish such an event? (See *Treason of General Lee*.)

**Lee, GENERAL CHARLES, DEMANDS OF.** Lee,

with his usual insincerity and boastfulness, claimed for himself the glory which belonged to Moultrie and his little garrison of repulsing the British at Charleston (June 28, 1776); and he used this undeserved reputation in extorting from Congress, in advance, indemnity for any possible forfeiture of property in England because of his relations to the "rebels" in America. There was still a belief in the minds of the Americans of his superior genius and great ability as a military commander, whose favor it was essential to secure. With this impression, John Rutledge, Governor of South Carolina, fearing ill consequences from offending him, acknowledged his great services to that state in saving it from invasion, actually recommended the Congress to comply with Lee's demands, and consented to ask for "the enthusiast" the sum of \$30,000, which was granted.

**Lee, HENRY ("Legion Harry"),** was born in Westmoreland County, Va., Jan. 29, 1756; died on Cumberland Island, Ga., March 25, 1818. He graduated at Princeton in 1773. His mother was Mary Bland, the "lowland beauty," whose

HENRY LEE.

charms inspired Washington, in his youth, with the "tender passion." He was a captain in Bland's cavalry in 1776, and joined the main army in September, 1777. "Lee's Legion" was one of the most active and efficient of the cavalry corps of the Continental army, and it was Washington's body-guard in the battle of Germantown. In 1778 he was made a major, in independent command, first of two companies of horse, and then of three, with a small body of infantry. With these he surprised the British post at Pauls's Hook in July, 1779. (See *Pauls's Hook*.) With the commission of lieutenant-colonel, he joined General Greene in the South,

and was active and efficient in the Southern campaigns. Soon after the battle of Eutaw Spring (which see) Major Lee retired from the service, married, and settled at Stratford. He was a delegate in Congress in 1786, and advocated the adoption of the national Constitution in the Virginia Convention. Lee was in the Virginia Legislature; and when militia were called out to suppress the Whiskey Insurrection (which see), he was placed in command of them. He was in Congress at the time of Washington's death, and was appointed by that body to deliver the funeral oration in Philadelphia. While he was in a debtor's prison he wrote his *Memoirs of the War in the Southern Department of the United States*. Lee was in Baltimore at the time of the newspaper riot, in 1814, and in his endeavors to suppress it received injuries from which he never recovered. He was much beloved by Washington for his many noble qualities; and Greene said, "No man, in the progress of the Southern campaign, had equal merit with Lee."

Lee, RICHARD HENRY, signer of the Declaration of Independence, was born at Stratford, Westmoreland Co., Va., Jan. 20, 1732; died at Chautilly, Va., June 19, 1794. The names of himself and five brothers (Philip Ludwell, Thomas Ludwell, Francis Lightfoot, William, and Arthur) are conspicuous on the pages of our national history. Richard Henry was educated in England, and returned to America at the age of nineteen. In 1756 he was appointed justice of the peace, and entered the Virginia House of Burgesses in 1757, where he was ever distinguished as a debater and a clear political writer. Mr. Lee supported the famous

RICHARD HENRY LEE.

Patrick Henry's Resolutions (which see), and was among the foremost men in Virginia in forming and putting in motion the machinery against royal oppression and Parliamentary rule. He was a delegate to the First Congress (1774), was a member of all the leading committees, and wrote the memorial of Congress to the people of British America. In 1775 he wrote the sec-

ond address of Congress to the people of Great Britain; and from his seat in that body, in June, 1776, he offered the famous resolution which declared the English-American colonies to be "free and independent states." (See *Independence*.) It is said that his speech on that occasion was a brilliant display of eloquence. Leaving Congress in June, 1777, he was again in that body in 1778-80, 1784-85, and 1786-87. In 1784 Mr. Lee was chosen President of Congress, but retired at the end of the year. Mr. Lee was opposed to the national Constitution, because it superseded state supremacy, but he was a supporter of Washington's administration, and was United States Senator from Virginia from 1789 to 1792.

Lee, ROBERT EDMUND, was born at Stratford, Westmoreland Co., Va., June 19, 1807; died at Lexington, Va., Oct. 12, 1870. He graduated at the Military Academy, West Point, second in

ROBERT EDMUND LEE.

his class, in 1829. His father was Henry Lee ("Legion Harry"), the brave leader of mounted men in the Revolution. His mother was a Carter. Entering the engineer corps, he became captain in July, 1838, and was chief-engineer of General Wool's brigade in the war with Mexico. At the close of that war he had earned three brevets—major, lieutenant-colonel, and colonel; and he was a great favorite with General Scott. From Sept. 3, 1852, to March 3, 1855, he was superintendent of the Military Academy at West Point. In the latter year he was promoted to lieutenant-colonel of cavalry, and in March, 1861, to colonel. Accepting the doctrine of state supremacy (which see) when Virginia passed an ordinance of secession, in April, 1861, Lee went "with his state," and, abandoning his flag, went to Richmond, accepted (April 22, 1861) the command of the forces in that commonwealth, and resigned his commission in the National army. In accepting the office of commander of the Virginia forces, he said, "Trusting in Almighty God, an approving conscience, and the aid of my fellow-citizens, I devote myself to the aid of my native state, in whose behalf alone will I ever draw my sword." Circumstances caused him to abandon that resolu-

tion, and he drew his sword in defence of all the slave-labor states. Lee's services had always been very acceptable to his government. He was an officer of fine culture, a soldier brave and discreet, and an engineer of great skill. He had superintended the construction and repairs of the fortresses at the entrance to the harbor of New York after 1841, and was a member of the board of engineers of the Atlantic coast defence. He had married, in 1832, Mary, daughter of G. W. P. Custis, the adopted son of Washington, and by her, in 1857, he became possessor of the estate of Arlington House, opposite Georgetown, on the Potomac, and the "White House" estate, on the Pamunkey. He was in command of a regiment of cavalry in Texas in 1860, and towards the close of that year he obtained leave of absence and returned home, where he was when appointed to the command of the Virginia forces. For a while he did not have a separate command in the field, and for more than a year did not fill any important place in the Confederate army. He was nominally superintendent of fortifications at Richmond and elsewhere, and was the military adviser of President Jefferson Davis and of the Confederate Secretary of War. When General J. E. Johnston was wounded (May 31, 1862), in the battle of Seven Pines, near Richmond, the command of the Confederate Army of Northern Virginia was given to Lee, June 3, and on the 26th of that month he began the series of conflicts before Richmond known as the Seven Days' Battles. Lee's military services during the Civil War are set forth under different heads in other portions of this work. He was finally compelled to resign his army to General Grant at Appomattox Court-house, April 9, 1865, on most generous terms for himself and his followers. He had been appointed general-in-chief of the Confederate armies in February preceding. After the war he retired to private life, refusing even to attend public gatherings of any kind. In October, 1865, he accepted the Presidency of Washington College (now called "Washington and Lee College"), at Lexington, Va. He held that position until his death. On the evening of Sept. 28, 1870, while apparently in his usual health, he was struck with paralysis, and lived only about a fortnight afterwards. Lee's sons—G. W. Custis, W. H. F., and Robert E.—all served as officers in the Confederate army. His eldest son, G. W. C. Lee, was chosen president of the college on the death of his father.

**Lee, R. E., GENERAL-IN-CHIEF.** There was so much dissatisfaction in the Confederacy because of the continual and mischievous interference of President Davis in military affairs, that a serious project was on foot, at the beginning of 1865, to make Lee dictator, and so deprive Davis of all authority over him. To avoid this humiliation, Lee was appointed general-in-chief of all the armies of the Confederacy, Feb. 1, 1865. To the same expression of discontent is attributed the appointment of Johnston to the command of the Southern Department.

**Lee, THOMAS LUDWELL,** was born at Stratford, Westmoreland Co., Va., in 1730; died in

1777. During the preliminary movements of the war for independence he was conspicuous as a lawyer and patriot. He was a member of the Committee of Safety, and in the Virginia Convention, in May, 1776, he was on the committee to draft a declaration of rights and a plan of a state government. On the organization of that government, he was appointed one of the five revisers, and was also elected one of the five judges of the General Court. He was a brother of Richard Henry Lee.

**Lee, WILLIAM,** brother of Richard Henry and Arthur, was born at Stratford, Va., in 1737; died at Green Spring, Va., June 27, 1795. He was agent for Virginia in London, and became a merchant there. London city being overwhelmingly Whig in politics, William Lee was elected sheriff of that city and Middlesex County in 1773. In 1775 he was chosen alderman, but on the breaking-out of the war in America retired to France. Congress appointed him commercial agent at Nantes at the beginning of 1777, and he was afterwards American minister at the Hague. Mr. Lee was also their agent in Berlin and Vienna, but was recalled in 1779. He was an ardent patriot and an able writer.

**Lee, WILLIAM, DISMISSAL OF.** William Lee, an ardent patriot, but who, like his brother Arthur, let his zeal outrun his prudence and judgment sometimes, had been American minister at the Hague, and was made the agent of Congress at Vienna and Berlin. In 1778 Jan de Neufville, an Amsterdam merchant, procured a loan to the Americans from Holland, through his house, and, to negotiate for it, gained permission of the burgo-masters of Amsterdam to meet Lee at Aix-la-Chapelle. There they arranged terms for a commercial convention proper to be entered into between the two republics. When Lee communicated this project to the American commissioners at Paris, they (having been much annoyed by the intermeddling of his brother Arthur) reminded him that the authority for treating with the States-General belonged exclusively to them. Congress took no notice of his negotiations with De Neufville, and soon afterwards dismissed him from their service.

**Lee's (R. E.) Campaign in Western Virginia.** General Reynolds had been left by Rosecrans to confront General Robert E. Lee in the Cheat Mountain region. Lee was then in chief command in western Virginia. He had sent General Floyd to drive the Nationals out of the Kanawha valley, but the latter was defeated (Sept. 11) at Carnifex Ferry, and fled to Big Sewell Mountain. Reynolds's command consisted of Indiana and Ohio troops. With them he held the roads and passes of the mountains of the more westerly ranges of the Alleghany chain. His headquarters were at Cheat Mountain Pass, and Lee's were at Huntersville, in Pocahontas County. It was evident early in September, by the activity of Lee's scouts, that he was preparing to strike a blow somewhere. It was finally made clear that he was about to strike the Nationals at Elk Water, at the western foot of Cheat Mountain. His object evidently was to secure the

great Cheat Mountain Pass, and have free communication with the Shenandoah valley. For this purpose he marched from Huntersville, in the night of Sept. 11 (1861), to make a simultaneous attack on Elk Water, the Pass, and a station of Indiana troops on the Summit, under Colonel Kimball. About 5000 Confederates, under General Anderson, of Tennessee, attempted to take the Summit and the Pass, but were repulsed. On the 12th Lee advanced in heavy force upon Elk Water, but was driven back. He was satisfied that his grand plan for seizing and destroying Reynolds's army and opening a way to the Ohio had failed, and he hastened to join Floyd on Big Sewell Mountain (see *Carnifax Ferry, Battle at*), between the forks of the Kanawha. In the encounters during two or three days, Reynolds lost 10 men killed, 14 wounded, and 64 made prisoners. The Confederates lost about 100 killed and wounded, and 90 prisoners. The joint forces of Lee and Floyd, on Big Sewell Mountain, numbered about 20,000 men, and there they were confronted by 10,000 Nationals under Rosecrans, assisted by Generals Cox, Schenck, and Benham. The belligerents remained in sight of each other for about three weeks. Wise, then under Lee's command, was recalled to Richmond. Lee's campaign in western Virginia was regarded by the Confederate government as a failure, and he, too, was soon afterwards recalled and sent to Georgia, to take charge of coast defenses. He was succeeded in the chief command by Floyd.

**Lee's (R. E.) Farewell Address.** On the day after the surrender of the Army of Northern Virginia to General Grant, General Lee issued (April 10, 1865) the following address to his soldiers as General Order No. 9: "After four years of arduous service, marked by unsurpassed courage and fortitude, the Army of Northern Virginia has been compelled to yield to overwhelming numbers and resources. I need not tell the brave survivors of so many hard-fought battles, who have remained steadfast to the last, that I have consented to this result from no distrust of them; but feeling that valor and devotion could accomplish nothing to compensate for the loss that must attend a continuation of the contest, I determined to avoid the useless sacrifice of those whose past services have endeared them to their countrymen. By the terms of agreement, officers and men can return to their homes, and remain until exchanged. You will take with you the satisfaction that proceeds from the consciousness of duty faithfully performed, and I earnestly pray that a merciful God will extend to you his blessing and protection. With an unceasing admiration of your constancy and devotion to your country, and a grateful remembrance of your kind and generous consideration for myself, I bid you all an affectionate farewell." (See *Lee's Final Struggle*, and *Grant's Final Address to his Soldiers*.)

**Lee's Final Struggle.** While the Confederates were leaving Richmond, Lee's army was withdrawing from Petersburg. He hoped to conduct his army to Danville, on the southern

borders of Virginia, whither his government had fled. He appointed Amelia Court-house as the point for the concentration of his army. There his forces would reach the Danville Railway, and thereafter use it in their flight into North Carolina. At the time when he sent his despatch for the evacuation of Richmond he ordered commissary and quartermaster's stores to be sent from Danville to Amelia Court-house for the use of his army. They were promptly forwarded; but when the officer in charge reached Amelia Court-house he received orders from Richmond to hasten thither with his train. The stupid fellow obeyed, but took with him the supplies. The "government," in its flight, occupied the whole train. The stores were left at Richmond and destroyed in the conflagrations. Lee was almost hopeless when he discovered this calamity, for it threatened his army with starvation. He knew that Grant, for the sake of celerity in pursuit, would break up his army into detachments; and Lee hoped, by a bountifully supplied army well in hand, to fall upon these fragments and cut up the National army in detail. Now he was compelled to detach nearly one half of his army to forage for supplies to keep his forces from starving. Grant, meanwhile, had taken possession of Petersburg, and his army moved in vigorous pursuit. Sheridan's cavalry and Warren's corps struck the Danville Railway (April 4, 1865) at Jetersville, seven miles southwest of Amelia Court-house. Some of his cavalry then pushed on to Burkesville Station, at the junction of that road with the Southside Railway. Sheridan now stood squarely across Lee's pathway of retreat, and held possession of his chief channel of supplies from Lynchburg and Danville. Lee attempted to escape by way of Farnville. Sheridan sent General Davies on a reconnoissance, who found part of Lee's army moving westward (April 5), his cavalry escorting a train of one hundred and eighty wagons. Davies fell upon the escort, captured many men and five guns, and destroyed the wagons. Lee's accompanying infantry had pressed Davies for a while, but, reinforced by Generals Gregg and Smith, he extricated himself. On the morning of the 6th nearly the whole of the Army of the Potomac were at Jetersville, and moved upon Amelia Court-house. Sheridan discovered Lee's army moving rapidly westward, and made a rapid pursuit, in three columns. Great efforts were made to check Lee's retreat. He was smitten severely at Sailor's Creek, a small tributary of the Appomattox, where another train of four hundred wagons, sixteen guns, and many men were captured. By this blow Ewell's corps, following the train, was cut off from Lee's main army. Very soon afterwards that corps was captured, Ewell and four other generals and six thousand veterans becoming prisoners. With his dreadfully shattered army, Lee crossed the Appomattox that night (Aug. 6 and 7) at Farmville, setting fire to bridges behind him. They were not all consumed. The Nationals crossed and captured eighteen guns abandoned by a rear-guard. Lee's troops and animals were per-

ishing for want of food. Thousands let their muskets fall because they were too weak to carry them and walk. Lee would not listen to a proposition of his officers to give up the contest, and resolved to make further efforts to escape. Nearly the whole of Grant's army joined in vigorous pursuit of the Confederates, and, after defeat near Appomattox Court-house (April 9, 1865), Lee surrendered. (See *Appomattox Court-house, Surrender of Lee et.*)

**Lee's Second Retreat from Maryland.** After his disastrous experience at Gettysburg (July 1, 2, and 3, 1863), General Lee began a retreat for Virginia on the night of the 5th, having previously sent forward his enormous wagon-trains and sick and wounded men. Sedgwick's corps and Kilpatrick's cavalry were sent in pursuit. Sedgwick overtook the Confederate rear-guard at a pass in the South Mountain range, but was recalled, and the whole army, having rested, were put in motion for a flank movement through the lower passes of South Mountain. But the movement was so tardy that when Meade overtook Lee (July 12) he was strongly entrenched on the banks of the Potomac, near Williamsport, waiting for a flood in the river caused by recent rains to subside. While Meade was preparing to attack Lee, the latter escaped over the river. General Hill's rear-guard had been struck by Kilpatrick, and lost 125 men killed and 1500 made prisoners. Kilpatrick's loss was 105 men. Thus ended, in utter discomfiture and repulse, Lee's second formidable invasion of Maryland.

**Lee's (Charles) Treacherous Disobedience.** While the British were desolating New Jersey (November, 1776), and Washington, with his handful of troops, was powerless to prevent them, General Lee, with a large reinforcement, persistently lingered on the way. He had been urged by Washington, when the retreat from Hackensack began, to join him, but he steadily refused. Now the commander-in-chief entreated him to obey. Philadelphia was in danger, and the chief wrote, "Do come on; your arrival, without delay, may be the means of saving a city." Lee continued to persistently disobey every order of the chief. His reputation was at its zenith. The Americans were infatuated—a delusion which, in the light of subsequent history, seems very strange. He was aiming at the chief command, and he did all he dared, by insinuations and false reports, to disparage Washington in the estimation of the Congress and the people. With unparalleled insolence (which was not rebuked), he wrote to Dr. Rush, a member of Congress, "Your apathy amazes me; you make me mad. Let me not talk vainly: had I the power, I could do you much good, might I but dictate one week. Did none of the Congress ever read Roman history?" His letters at that juncture show his predetermination to disobey orders and act as he pleased with the troops which had been intrusted to him. (See *Treason of General Lee.*)

**Lee's (Charles) Trial.** Offended at the words of Washington at their interview on the battle-

field of Monmouth, General Lee wrote a disrespectful letter to the commander-in-chief on the day after. Dissatisfied with Washington's reply, he wrote a still more disrespectful one. Lee was arrested, and tried by a court-martial for disobedience of orders; for having made an unnecessary, shameful, and disorderly retreat; and for disrespect to the commander-in-chief in the two letters. He defended himself with much ability. The court acquitted him of a part of the charges, but found him guilty of the rest, and sentenced him to be suspended from service in the army for one year.

**Legacy to Posterity.** The few politicians who involved the people of the United States in civil war in 1861 left to posterity a legacy of debt and misery the burden of which will be long felt among every class of American citizens and in every part of the Republic. An official report states that the entire sum expended by the national government, on account of that civil war, from July, 1861, to July, 1879, was \$6,187,243,000. This has been the money cost of the war to only one party in the contest. What the other party expended will never be known, nor the amount of human suffering inflicted.

**Leisler, JACOB,** a republican leader in New York in 1690-91. He was born in Frankfort, Germany; died in New York, May 16, 1691. Leisler was of Huguenot descent, and came to America in 1660. Settling first in Albany, he soon became a trader in New York city. While on a voyage to Europe in 1678, he, with seven others, was captured by Turkish corsairs, and they were ransomed at a high price. In 1683 he was appointed a commissioner of the Court of Admiralty. On the accession of William and Mary to the throne of England, the Governor of New York abdicated his seat, and Leisler, at the request of the people who composed the democratic portion of the population, assumed the governorship of the province. When the royalists were reinstated in power, and a royal governor had arrived, Leisler was arrested, condemned, and executed as a traitor. (See *Leisler's Insurrection.*) Mr. Leisler purchased New Rochelle (which he so named), in 1689, as an asylum for the Huguenots in America.

**Leisler's Insurrection.** Democracy had taken firm root among the people in New York, and when news of the accession of William and Mary reached that city the people were much excited by it. The military force of the city consisted of five militia companies, of which Nicholas Bayard, a member of the governor's council, was colonel, and Jacob Leisler, a Huguenot and merchant (distinguished for his zealous opposition to Roman Catholicism), was senior captain. The people were zealous Protestants. A Roman Catholic collector appointed by King James had been retained in place, and a rumor spread of a horrible plot and intended massacre by the opponents of the deposed monarch. A crowd of citizens, followed by the five militia companies, surrounded the house of Leisler and induced him to lead a movement for the seizure of the

fort. Bayard attempted to disperse them, but was compelled to fly for his life. A distinct line was soon drawn between the *aristocrats*, headed by Bayard, Livingston, and others, and the *democrats*, led by Leisler. The fort was seized, with the public money in it. Nicholson, Andros's lieutenant, demanded the money, and was treated with disdain. A committee of safety of ten members—Dutch, Huguenot, and English—constituted Leisler "captain of the fort," and invested him with the power of commander-in-chief until orders should arrive from the new monarchs. He was, indeed, the popular governor of the province. The New-Englanders applauded the movement. Leisler proclaimed William and Mary at the sound of the trumpet, and sent a letter to the king giving an account of his doings. Nicholson, perceiving the support which the people of New York and New England gave to Leisler, departed for England; and the members of his council withdrew to Albany, where, acknowledging allegiance to William and Mary, they claimed to be the true governors of the colony, and denounced Leisler as an "arch-rebel." Leisler's son-in-law, Jacob Milborne, had just returned from England, and was sent to Albany with some soldiers to defend the place against an expected attack from Canada; but the old council there refused to give up the fort to Milborne. The people of Albany obtained aid from Connecticut, Milborne having withdrawn to avoid bloodshed. Soon after this a letter, addressed to "such as for the time being administer affairs," was received at New York, enclosing a commission as governor for Nicholson. As the latter was on the ocean, Leisler assumed the title of lieutenant-governor, construing the king's letter as a confirmation of his authority. He called an assembly to provide means for carrying on war with Canada. Leaving Leisler's letter unanswered, King William commissioned Colonel Henry Sloughter Governor of New York, and sent an independent company of regular soldiers, under Captain Ingoldsby (January, 1691) for the defence of the province. Influenced by the enemies of Leisler, Ingoldsby claimed the temporary administration of affairs, and the possession of the fort, by virtue of his commission from the king. Leisler refused compliance with the demand, but proclaimed Sloughter's appointment, and ordered Ingoldsby's troops to be quartered in the city. There was great excitement in the city between the aristocracy and democracy. Bayard and others of the old council were in prison. Leisler was, for a time, besieged in the fort, and some lives were lost; and because he refused to give up the fort at the first summons of Ingoldsby, Sloughter, on his arrival, instigated by the friends of Bayard and others, caused the democratic governor and his council to be arrested. Bayard and others of the old council, having been released, were sworn members of Sloughter's council, and a special court was organized to try the prisoners. Leisler and Milborne, denying the jurisdiction of the court, refused to plead. They were tried, nevertheless, and found guilty; but Sloughter hesitated to order their

execution, preferring to await the king's decision in the matter. Leisler's enemies burned with a desire for revenge. The Assembly, also composed of his enemies, refused to recommend a temporary reprieve. At a dinner-party given for the purpose, Sloughter, made drunk with liquor, was persuaded to sign the death-warrant. The revel was continued until morning for fear Sloughter, sober, might recall the warrant; and before he had recovered his senses Leisler and Milborne were taken from their weeping wives and children (May 16, 1691) and hurried to the scaffold, erected near the lower end of the present City Hall park. A drizzly rain was falling. A sullen crowd of citizens were spectators of the sad scene. Among them were Robert Livingston and others of Leisler's bitter enemies. The prisoners protested their loyalty and innocence of the charge to the last. Milborne said on the scaffold, "Robert Livingston, for this I will implead thee at the bar of God!" It was nothing less than a judicial murder. Some years afterwards the attainer which the crime with which they were charged had placed upon the victims was reversed by act of Parliament, and their estates were restored to their families. (See *Leisler, Jacob*.)

**Le Moyne**, the name of a distinguished Canadian family, members of which bore conspicuous parts in early American history. They were descended from Charles of Normandy, who died in Montreal, Canada, in 1633. He came to Canada in 1641, where he became a famous Indian fighter. In 1668 Louis XIV. made him seigneur of Longueil, and subsequently of Chateaugay. He had eleven sons, of whom Bienville and Ierville (which see) were the most eminent.—I. CHARLES, Baron of Longueil, was born in Montreal, Dec. 10, 1656; died there, June 8, 1729. He was made a lieutenant-general of regulars in the royal army of France, and, returning to Canada, he built churches and a fort at Longueil. He fought the English assailants of Quebec under Phipps in 1690, and was made baron and Governor of Montreal in 1700. Becoming commandant-general of Canada, he prepared to meet the expedition against Quebec under Walker in 1711. In 1720 he was Governor of Three Rivers, and again of Montreal in 1724. His influence over the Indians was very great, and in 1726 the Senecas allowed him to rebuild Fort Niagara.—II. PAUL, who was born in Montreal in 1663, and died in March, 1704, distinguished himself under his brother Ierville in Hudson's Bay. He commanded an expedition against the Iroquois, made peace with them in 1701, and acquired great influence over them.—III. JOSEPH, who was made seigneur of Serigny, was born in Montreal in July, 1668; died in Rochefort, France, in 1734. In 1694 and 1697 he commanded squadrons to assist his brother Ierville in Hudson's Bay, and brought over emigrants to Louisiana in a squadron to found a colony there. In 1718-19 he surveyed the coasts there, and took part in expeditions against the Spaniards at Pensacola and in Mobile Bay. In 1720 he commanded a ship-of-the-line, and died a rear-admiral of the royal navy.

He was also Governor of Rochefort at the time of his death, having been appointed in 1723.—**IV. ANTOINE**, seigneur of Chateaugay, was born in Montreal in July, 1683; died in Rochefort, France, March 21, 1747. He belonged to the royal army, and came with colonists to Louisiana in 1704, serving under Iberville there against the English. He was made chief commandant of Louisiana in 1717, and King's Lieutenant in the colony and Knight of St. Louis in 1718. He was in command of Pensacola in 1719; a prisoner of war for a while afterwards to the Spaniards; was Governor of Martinique; and, returning to France in 1744, became Governor of Ile Royale, or Cape Breton, in 1745.—Three other brothers obtained some prominence in history. Jacques, seigneur of St. Heléne, served under Iberville, and was mortally wounded while defending Quebec against Phipps in 1690; François, seigneur of Bienville (I.), was killed in battle with the Iroquois in June, 1691; and Louis, seigneur of Chateaugay (I.), was mortally wounded in an assault on Fort Nelson, Hudson's Bay, in 1694.

**Le Moyne, SAUVILLE**, was not of the family of Charles, but was related to it. He was born in Montreal in 1671; died at Biloxi, Miss., July 22, 1701. He accompanied the brothers Iberville and Bienville in their expedition to the mouth of the Mississippi River, and was appointed the first governor of Louisiana in 1699. He was of feeble constitution; possessed brilliant talents, a remarkably fine personal appearance, and a large fortune. Racine pronounced him a poet; Bossuet predicted that he would become a great orator; and Villars called him a "marshal in embryo." These promises were unfulfilled.

**L'Enfant, PETER CHARLES**, engineer, was born in France in 1755; died in Prince George's County, Md., Jan. 14, 1825. He came to America and entered the Continental army as an engineer in the fall of 1777. He was made a captain in February, 1778; was severely wounded at the siege of Savannah in 1779; served under the immediate command of Washington afterwards; and was made a major in May, 1783. The "order," or jewel, of the Society of the Cincinnati was designed by Major L'Enfant. He was also author of the plan of the city of Washington. In 1812 he was appointed Professor of Engineering at West Point, but declined.

**Lescarbot, MARC, IN NEW FRANCE.** When, in 1606, Pointrincourt, who founded Port Royal, in Acadia, returned from France with a company of artisans and laborers, he was accompanied by Lescarbot, a French lawyer, poet, and writer of a *History of New France*, which was published in 1609. He came to assist Pointrincourt in establishing his colony on a firm basis. While Champlain and De Mouts (see *De Mouts*) were looking for a milder climate farther south, Lescarbot took charge of the fort. With great energy he planted, builded, and wrote rhymes, and infused into his subordinates some of his own energy. When Champlain returned, he was greeted by a theatrical masque, composed by the poet, in

which Neptune and his Tritons welcomed the mariner. The dreary winter that followed was enlivened by the establishment of an "Order of Good Times" by Lescarbot, the duties of the members consisting in the preparation of good cheer daily for the table. In the spring the colonists were summoned to France by a revocation of their charter.

**Leslie, ALEXANDER**, died in December, 1794. He was a British officer of distinction in the Revolutionary War, and came to Boston with General Howe in 1775. He was made a major in June, 1759; a lieutenant-colonel in 1762, and was a brigadier-general when he came to America. In the battle of Long Island, in 1776, he commanded the light infantry, and was in the battle of Harlem Plains in September, and of White Plains in October following. General Leslie accompanied Sir Henry Clinton against Charleston in April and May, 1780. In October he took possession of Portsmouth, Va., with 3000 troops, but soon hastened to join Cornwallis in the Carolinas, which he did in December. In the Battle of Guilford (which see), he commanded the right wing. General Leslie was in command at Charleston at the close of hostilities. He was a gallant man. Colonel Tarleton having expressed with a sneer in the presence of Mrs. Ashe, at Halifax, N. C., a wish to see Colonel W. Washington, Mrs. Ashe said, "If you had looked behind, Colonel Tarleton, at the battle of the Cowpens, you would have enjoyed that pleasure." (See *Cowpens, Battle of the*.) Tarleton, much irritated, laid his hand upon his sword, when General Leslie, who was present, remarked, "Say what you please, Mrs. Ashe, Colonel Tarleton knows better than to insult a lady in my presence."

**Letter-of-Marque and Reprisal** is a commission granted in time of war to a private person commanding a vessel to cruise at sea and make prizes of the enemy's ships and merchandise. The ship so commanded is sometimes called by the same name. The word *mark* (frontier) was used by the Germans to denote the right of capturing property beyond the frontiers of another province. Sometimes the commission to privateers is called "Letter-of-Marque and Reprisal." (See *Reprisal, The Privateer*.)

**Letters of a Pennsylvania Farmer.** When Charles Townsend's obnoxious taxation bills became laws, the Americans, believing with Otis that taxes on trade, if designed to raise a revenue, are just as much a violation of the rights of people unrepresented as any other tax, acted accordingly. The colonial newspapers, then about thirty in number, had begun to be tribunes for the people, and teemed with essays on the exciting topics of the day. The most powerful of these productions were a series of essays on taxation and kindred subjects, entitled, *Letters of a Farmer of Pennsylvania to the Inhabitants of the British Colonies*, written by John Dickinson, an able lawyer of Philadelphia. They were written in a style of great vigor and animation, and were published in the *Pennsylvania Chronicle* during the summer of 1767. These let-

ters were potential in forming and leading public opinion in opposition to the oppressive measures of the British government, and they were widely read and admired. At a public meeting in Boston the author was thanked in a resolution. The Society of Fort St. David, in Philadelphia, presented an address to Mr. Dickinson in a "box of heart of oak," appropriately inscribed. On the top was represented the cap of liberty on a spear, resting on the cipher "J. D.," underneath which were the words *Pro Patria*. Around the whole was the following sentence: "The Gift of the Governor and Society of Fort St. David to the Author of the *Farmer's Letters*, in Grateful Testimony to the very Eminent Services thereby rendered to this Country, 1768." On the inside of the top was the following inscription: "The Liberties of the British Colonies in America asserted with Attic Eloquence and Roman Spirit by John Dickinson." The *Farmer's Letters* were republished in England with a preface by Dr. Franklin. They were also published in French, at Paris.

**Lewis and Clarke's Expedition.** The exploration of the continent westward of the Mississippi River had long been a subject of thought for President Jefferson. When minister to France, he suggested to Ledyard, the celebrated traveller, an exploration of western America. In 1792 he proposed to the Philosophical Society at Paris to procure such an exploration with funds raised by subscription; and it was under the auspices of this society, and under instructions prepared by Mr. Jefferson, that Michaux, the celebrated French traveller and botanist, proceeded on his exploration westward, until recalled by the French minister. The way was finally opened to such an exploration by considerations of state policy. After the purchase of Louisiana in 1803, the utility of ascertaining the character of the interior of that domain was obvious, and in January, 1804, President Jefferson, in a confidential message, recommended the sending of an exploring party to trace the Missouri River to its source, cross the mountains, and follow the best water communication that presented itself from there to the Pacific Ocean. It was approved, and Congress made an appropriation for the purpose. Meriwether Lewis, the private secretary of the President, was appointed to command the expedition, and, at his request, William Clarke, a brother of George Rogers Clarke (which see), was associated with him. Lewis led forty-five men up the Missouri River, beginning the ascent on May 14, 1804. At the mouth of the Platte River scouts were sent out to announce to the several tribes of Indians inhabiting that region the change of government, and a council was held at a place since known as Council Bluffs, in Iowa. Passing through the country of the Sioux, they reached, in September, the villages of the Mandans, a light-colored race, where they wintered. They were then sixteen hundred miles from their starting-point. In the spring (1805), the explorers pushed on to the Yellowstone, and passed through the hot springs region—the country everywhere sterile and barren, for they had begun the passage of the Rocky

Mountain range, which was there one hundred and forty miles in width. They arrived at the Falls of the Missouri in June (1805), and transferred their boats and baggage over a portage of eighteen miles. These falls have a descent of three hundred and sixty-two feet in sixteen miles, having one pitch of ninety-eight feet. After that the journey was most fatiguing. Arriving at the head-waters of the Missouri, Captain Lewis went with a party to explore the country, those with the boats ascending the river still farther. The divisions were joined on the 17th of August. Lewis had found the head-waters of the Columbia River, fifty miles distant. The entire party then left their boats and crossed the mountains, having procured more horses from the Indians. They were in the region of (present) Montana Territory and friendly Indians, the Nez Percés, who were very kind to the explorers. Down the Pacific slope of the Rocky Mountains they made their way, among precipices and snowy peaks, their provisions exhausted and game scarce. They resorted to portable soup, which had been reserved for such an emergency. At length, with great joy, they came to the foot of the mountains, and arrived at a large branch of the Columbia, among the Flat Head Indians. They distributed some medals among the principal chiefs, who furnished the explorers with canoes, and in them they floated several hundred miles in the midst of a high prairie country, depending chiefly on the natives for their food. They soon entered the Columbia proper, after passing another mountain range (Cascade Mountains), confining the Columbia for several hundred miles between it and the Rocky Mountains. On the 15th of November, 1805, the party entered the bay into which the Columbia pours, and at length came in sight of the Pacific Ocean. There they wintered, subsisting chiefly on the flesh of elk, which were abundant. In the spring (1806) the party retraced their steps, crossed the Rocky Mountains, and had one or two encounters with Indian tribes. Descending to the Mandan villages on the Missouri, Captain Lewis persuaded one of the principal chiefs, with his family, to accompany the party to St. Louis. After an absence of two years and four months, enduring much suffering, but solving a great geographical and topographical question, the expedition of Lewis and Clarke entered St. Louis, Sept. 26, 1806. By it the mythical and marvellous mist that had so long hung over the district of Louisiana was dispelled. The next year (1807) Captain Lewis was made governor of Louisiana Territory.

**Lewis, Andrew,** was born in Ulster, Ireland, in 1730; died in Bedford County, Va., in 1780. His father was of a Huguenot family which settled in Ireland, and came to Virginia in 1732. Andrew was a volunteer to take possession of the Ohio region in 1754, was with Washington, and was major of a Virginia regiment at Braddock's defeat. In the expedition under Major Grant, in the fall of 1758, he was made prisoner and taken to Montreal. In 1768 he was a commissioner to treat with the Indians at Fort Stan-

wix; was made a brigadier-general in 1774, and on Oct. 10, that year, he fought a severe battle with a formidable Indian force at Point Pleasant (which see), and gained a victory. In the Virginia House of Burgesses, and in the field, he was a bold patriot. A colonel in the army, he commanded the Virginia troops that drove Lord Dunmore from Virginian waters. In that expedition he caught a cold, from the effects of which he died. Colonel Lewis's four brothers—Samuel, Thomas, Charles, and William—were all distinguished in military annals. His statue occupies one of the pedestals around Crawford's Washington monument at Richmond.

**Lewis, FRANCIS**, a signer of the Declaration of Independence, was born in Llandaff, Wales, in March, 1713; died in New York, Dec. 30, 1803. Educated at Westminster School, he became a merchant, and emigrated to America in 1734. Mr. Lewis was aid to Colonel Mercer after the capture of Oswego by the French in 1757 (which see), and was, with other prisoners, taken to Canada and thence to France. For his services the British government gave him five thousand acres of land. Patriotic and active, he was a member of the Stamp Act Congress (which see) in 1765. He was a delegate from New York in the Continental Congress from 1775 to 1779. Settled on Long Island, which abounded with Tories, he suffered much from the destruction of his property by this class of citizens. They caused the death of his wife by brutally confining her in a prison for several months. To his patriotism he sacrificed the most of his property, and died poor.

ing, his mind was absorbed with thoughts of adventure. He was a volunteer soldier in repressing the Whiskey Insurrection (which see), after which he entered the regular army (1795) and became captain in December, 1800. Mr. Lewis became the private secretary of Mr. Jefferson, and in 1804 that President sent Captain Lewis to explore the country westward from the Mississippi to the Pacific. (See *Lewis and Clarke's Expedition*.) He made a successful exploration of the interior of the continent. Subject to fits of melancholy, in one of them he put an end to his own life. He had been made governor of Louisiana Territory, March 2, 1807, but died before he assumed the functions of his office.

**Lewis, MORGAN**, was born in New York, Oct. 16, 1754; died there, April 7, 1844. He was a son of Francis Lewis, a signer of the Declaration of Independence, and graduated at Princeton in 1773. He studied law with John Jay, and joined the army at Cambridge in June, 1775. He was on the staff of General Gates with the rank of colonel, in January, 1776, and soon afterwards became quartermaster-general of the Northern Army. He was active during the war, and at its close was admitted to the bar, and practised in Dutchess County, N. Y. He was a judge of the Court of Common Pleas, and of the Superior Court of the state in 1792, being, the year before, attorney-general of the state. He was chief-justice in 1801, and governor from 1804 to 1807. In 1812 he was appointed quartermaster-general with the rank of brigadier, and was promoted to major-general in 1813. He was active on the Niagara frontier in 1814, and was placed in com-

SKIRMISH ON THE GREEN AT LEXINGTON.\* (From an old print.)

**Lewis, MERIWETHER**, was born near Charlottesville, Va., Aug. 18, 1774; died near Nashville, Tenn., Oct. 11, 1809. Possessed of a bold and enterprising spirit, he relinquished academic studies, read with avidity true and fictitious tales of adventure, and though he pursued farm-

mand of the defences of the city of New York. After the war he devoted himself to literature

\* This was engraved by Amos Doolittle, from a drawing by Earle after the battle. The larger building was the meeting-house. The dwelling on the left was a tavern. It was yet standing in 1876.

and agriculture. In 1832 he delivered the address on the centennial of Washington's birth before the city authorities, and in 1835 became president of the New York Historical Society.

**Lexington and Concord.** In the early spring of 1775, General Gage had between 3000 and 4000 troops in Boston, and felt strong in the presence of rebellious utterances that filled the air. He observed with concern the gathering of munitions of war by the colonists. Informed that a considerable quantity had been deposited at Concord, a village about sixteen miles from Boston, he planned a secret expedition to seize or destroy them. Towards midnight, on the 18th of April, he sent 800 men, under Lieutenant-colonel Smith and Major Pitcairn, to execute his designs. The vigilant patriots had discovered the secret, and were on the alert, and when the expedition moved to cross the Charles River, Paul Revere, one of the most active of the Sons of Liberty in Boston, had preceded them, and was on his way towards Concord to arouse the inhabitants and the minute-men. Soon afterwards church-bells, musketry, and cannons spread the alarm over the country; and when, at dawn (April 19, 1775), Pitcairn, with the advanced guard, reached Lexington, a little village six miles from Concord, he found seventy determined men, under Captain Jousas Parker, drawn up on the green to oppose him. Pitcairn rode forward and shouted, "Disperse! disperse, you rebels! Down with your arms, and disperse!" They refused obedience, and he ordered his men to fire. The order was obeyed, and the war for independence was thus begun. Eight minute-men—good citizens of Massachusetts—were killed, several others were wounded, and the remainder were dispersed. It was now sunrise. On that occasion Jonathan Harrington, a youth of seventeen years, played the fife. The writer visited him and made a sketch of him in 1848, when he was past ninety years of age. Under that sketch he wrote his name and age. He was splitting wood in front of his house at the time the writer first saw him, when he politely invited the latter into the house, and took a seat in his rocking-chair. He died in March, 1854. The British pressed forward towards Concord. The citizens there had been aroused by a horseman from Lexington, and the militia were flocking towards the town from every direction. The stores were hastily removed to a place of concealment, in carts and other vehicles, by men, women, and children. The Middlesex farmers, armed with every conceivable kind of fire-arms, were drawn up in battle array in defence of their homes and their chartered rights. Major Buttrick and Adjutant Joseph Hosmer took the chief command. The British had reached the North Bridge. Colonel Barrett, then in command of the whole, gave the word to march, and a determined force, under Major Buttrick, pressed forward to oppose the invaders, who were beginning to destroy the bridge. The minute-men were fired upon by the Brit-

ish, when a full volley was returned by the patriots. Some of the invaders fell; the others retreated. They had destroyed only a few stores in the village. The invaders were terribly smitten by the gathering minute-men on their retreat towards Lexington. Shots came, with deadly aim, from behind fences, stone-walls, and trees. The gathering yeomanry swarmed from the woods and fields, from farm-houses and hamlets. They attacked from ambush and in the open highway. It was evident to the Britons that the whole country was aroused. The heat was intense; the dust intolerable. The 800 men must have perished or been captured, had not a reinforcement, under Lord Percy, met and relieved them near Lexington. After a brief rest, the whole body, 1800 strong, retreated, and were terribly assailed along the whole ten miles to their shelter at Charlestown, narrowly escap-

*Jonathan Harrington  
aged 90 the 8 July 1848*

ing 700 Essex militia, under Colonel Pickering, marching to strike their flank. Under the guns of British war-vessels, the remnant of the detachment rested that night, and passed over to Boston the next morning. During the expedition the British lost, in killed, wounded, and missing, 273 men; the Americans lost 103. (See *Uprising of the People in 1775.*)

**Lexington and Concord, EFFECT OF THE SKIRMISHES AT.** When news of the affair at Lexington and Concord went over the land, the people were everywhere aroused to action, and never before nor afterwards was there so unanimous a determination to resist British oppression. In wavering New-York there was unity

at once, and the custom-house was immediately closed, and all vessels preparing to sail for Quebec, Newfoundland, Boston, or Georgia, were detained—the latter colony not having yet sent delegates to the Continental Congress. The New-Yorkers addressed a letter to the mayor and aldermen of London—from whom Boston, in its distress (see *Boston Port Bill*), had received sympathy and aid—declaring that all the horrors of civil war could not compel the colonists to submit to taxation by the British Parliament. The inhabitants of Philadelphia followed those of the city

Mulligan resolved to defy the overwhelming force of the enemy with the means at his command. Price moved forward, drove in the National pickets, and opened a cannonade on Mulligan's hastily constructed works. Very soon some outworks were captured, after fierce struggles, but the defence was bravely maintained throughout the day. Price was anxious, for he knew that there was a large Union force near under Colonel J. C. Davis, and General John Pope was coming down from the country northward of the Missouri River. Mulligan was hopeful, for

BATTLE-GROUND AT CONCORD. (See p. 785.)

of New York. Those of New Jersey took possession of the provincial treasury, containing about \$50,000, to use for their own defence. The news reached Baltimore in six days, when the people seized the provincial magazine, containing about fifteen hundred stand of arms, and stopped all exports to the fishing-islands, to such of the islands as had not joined the confederacy, and to the British army and navy at Boston. In Virginia a provincial convention was held (see *Virginia Convention*), which took measures for the defence of the colony.

**Lexington (Mo.), SIEGE OF (1861).** After the drawn battle at Wilson's Creek (which see), General McCulloch found his assumption of authority so offensive to the Missourians that he left the state. General Price called upon the Secessionists to fill up his shattered ranks. They responded with alacrity, and at the middle of August he moved northward, in the direction of Lexington, which is situated on a curve of the Missouri River. It occupied an important position, and was garrisoned with less than 3000 troops, under Colonel James A. Mulligan. His troops, unfortunately, had only forty rounds of cartridges each, six small brass cannons, and two howitzers. The latter were useless, because there were no shells. On the morning of Sept. 11 Price appeared at a point three miles from Lexington. Hourly expecting reinforcements,

he expected some of these troops every moment. Day after day and night after night his men worked to strengthen the position, and Price's 20,000 men were kept at bay. Finally, on the 17th, the Confederates were reinforced, and their number was swelled to 25,000. Then Price cut off the communication of the garrison with the town, their chief source of water supply. The next day he took possession of the town, closed up the garrison, and began a vigorous siege. For seventy-two hours Mulligan and his little band sustained it, amid burning sun-heat by day and suffocating smoke at all times, until ammunition and provisions were exhausted, and on the morning of the 20th he was compelled to surrender. The loss of this post was severely felt, and Frémont, resolving to retrieve it, at once put in motion 20,000 men to drive Price and his followers out of Missouri. The National loss in men was 40 killed and 120 wounded; the Confederates lost 25 killed and 75 wounded. Mulligan and his officers were held prisoners of war; the men were paroled. The spoils were 6 caucions, 2 mortars, 3000 muskets, 750 horses, wagons, teams, etc., and \$100,000 worth of commissary stores. A week before the arrival of Mulligan at Lexington, Governor Jackson and his Legislature had held a session there, and had deposited \$800,000 in gold coin in the bank. They quitted it so precipitately, that they left

this money and the seal behind, which fell into Mulligan's hands. These treasures Price recovered.

**L'Hommedieu, EZRA**, was born at Southold, L. I., Aug. 30, 1734; died there, Sept. 23, 1811. He graduated at Yale College in 1754. He was of Huguenot descent; a lawyer by profession; a delegate to the New York Provincial Congress from 1775 to 1778; assisted in the formation of the first constitution of the State of New York; was a member of the Continental Congress at different times from 1779 to 1788; a State Senator and Regent of the University of the State of New York from 1787 till his death.

**Libby Prison.** This building acquired an unenviable name during the Civil War, by its being the theatre of intense sufferings by Union prisoners of war. It was a tobacco-factory, built of brick, standing on Main Street, near Twenty-fifth Street, Richmond. It was hastily prepared for the reception of prisoners, and into it officers and men taken at Bull's Run, to the number of about six hundred, were thrust within two or three days after the battle. Among the prisoners was Alfred Ely, a member of Con-

States and their descendants (who are the ruling class) and of uncivilized native tribes—was about 720,000 in 1873, of whom 19,000 were American-Liberians, and the remaining 701,000 aboriginal inhabitants. The capital and largest town is Monrovia, a seaport on Cape Mesurada, with about 13,000 inhabitants. They have public schools, churches, missionary societies, and all the ordinary machinery of civilization; and Liberia is, on the whole, a prosperous republic. It has quite a flourishing commerce, and agriculture is carried on successfully. In 1847 the Liberians, at the suggestion of the Colonization Society (which see), declared themselves a sovereign and independent nation, when a constitution, modelled after that of the United States, was adopted. It maintains that all men are born equally free in the enjoyment of life, liberty, and the pursuit of happiness; that all power is inherent in the people; that slavery shall not exist nor be countenanced in the republic; that all elections shall be by ballot; that none but persons of color shall be admitted to citizenship; that the Legislature shall be composed of a Senate and House of Repre-

LIBBY PRISON, RICHMOND.

gress from Rochester, N. Y., who went out to see the spectacle of the battle, and was caught. The prisoners were placed under the care of Brigadier-general John H. Winder, of Maryland, who had left the National army. These early prisoners suffered much for want of room, light, air, and food, but later ones suffered far more than they. The Union people of Richmond administered to their wants for a while, but were finally prevented from doing this good work by command of the Confederate leaders.

**Liberia**, a republic on the west coast of Africa, is the product of the American Colonization Society, which, in 1820, sent the first colonists there from the United States. The area of the republic is 9700 square miles. The population—composed of colored emigrants from the United

States, the members of the latter elected biennially, one representative for every 10,000 inhabitants. The president is elected by the people for a term of two years. The judicial power is vested in a supreme court and several inferior courts.

**Liberties and Franchises**—**CHARTER FOR NEW YORK.** Charles II. granted the Province of New Netherland to his brother James, Duke of York, without competent authority, and, having the power, the duke took possession by an armed force in 1664, and ruled it by governors appointed by himself. The name of the province was changed to New York. In 1683, when Thomas Dongan was made governor (see *Dongan, Thomas*), the people asked for more political privileges, and the duke instructed him to call a

representative assembly. It met in the fort at New York on Oct. 17, 1683, and sat three weeks, passing fourteen acts, all of which were approved by the governor. The first act was entitled "The Charter of Liberties and Franchises granted by his Royal Highness to the Inhabitants of New York and its Dependencies." (See *Duke's County*.) The duke approved the act. It declared that supreme legislative power should forever be and reside in the governor, council, and people, met in General Assembly; that every freeholder and freeman should be allowed to vote for representatives without restraint; that no freeman should suffer but by judgment of his peers; that all trials should be by a jury of twelve men; that no tax should be assessed, on any pretence whatever, but by the consent of the Assembly; that no seaman or soldier should be quartered on the inhabitants against their will; that no martial law should exist; and that no person professing faith in God by Jesus Christ should at any time be anywise disquieted or questioned for any difference of opinion. Two years afterwards the duke succeeded to the throne as James II., when he at once struck a severe blow at this fair fabric of liberty. James as king broke the promises of James as duke. He had become an avowed Roman Catholic, and determined to fill all offices in his realm with men of that creed. He levied direct taxes on New York without the consent of the people, forbade the introduction of printing, and otherwise established tyranny. (See *Dongan, Thomas*.) But he dared not attempt to suppress the General Assembly, the first truly representative government established in New York.

**Liberty Bell.** In a room on the ground-floor of the old State House, Philadelphia, is the old bell that rang out, in conjunction with human voices, the joyful tidings of the Declaration of Independence, in July, 1776. It was cast by

LIBERTY BELL.

Pass & Stow, Philadelphia, and was hung in the belfry of the State House early in June, 1753. It weighed 2080 pounds, and around it, near its top, were cast the words, prophetic of its destiny, "PROCLAIM LIBERTY THROUGHOUT ALL THE LAND, UNTO ALL THE INHABITANTS THEREOF. Lev. xxv. 10." When the British forces approached Philadelphia, in 1777, the bell was taken

down and carried to Allentown, to prevent its falling into the hands of the enemy. In 1781 it was placed in the brick tower of the State House, below the original belfry, which, being of wood, had become decayed. For more than fifty years the bell participated in the celebrations of the anniversary of the Declaration of Independence, when it was cracked while ringing. An effort was made to restore its tone by sawing the crack wider, but it was un-

successful. A new steeple and a new bell were put up in 1828. For many years the old bell remained in silent dignity in the tower, when it was taken down and placed on a platform in Independence Hall, whence it was removed to a room opposite in 1876, and there it remains.

**Liberty of the Press Denied (RIOT IN BALTIMORE IN 1812).** After war had been declared, intimations were given, by persons in Congress and out of it, that opposition to it must cease. The Federalists and their newspapers claimed the right to speak as freely as ever. One of the latter—the *Federal Republican*—practically asserted that right when, on publishing the Declaration of War, it declared its intention to speak of men and events with the same freedom as before. Two days afterwards the office of that paper, with its press and types, was demolished by a mob. The proprietors fled for their lives, and resumed the publication of their paper at Georgetown. Determined to vindicate their rights and the freedom of the press, they returned to Baltimore, resumed the publication of their paper at the house of one of the proprietors, and, expecting another attack from a mob, barricaded the doors and windows, and garrisoned it with about twenty armed men, under the leadership of General Henry Lee, who, with General Lingan, volunteered to defend the place. The house was attacked; one of the doors was forced open, and when the assailants attempted to ascend the stairs, they were fired upon by the defenders. Several were wounded, and the ringleader was killed. After repeated applications to the city authorities by the defenders for protection, General Stricker, of the city militia, was ordered to call out troops. He and the mayor effected an arrangement with the mob—who had brought a piece of cannon to bear on the house—by which the defenders were to submit to be taken to prison on a charge of murder, on condition that they should have personal protection, and their property guarded by a military force. The latter conditions were grossly violated. The house was entered, and its contents destroyed, and the prison in which the defenders were confined was entered by the mob; some of them were seized, and others escaped. Those who were caught were horribly beaten, after which nine of them were pitched down the stone steps of the prison, where they lay in a heap, the mob amusing themselves for three hours or more by torturing them. They stuck penknives into their flesh and dropped candle-grease into their eyes to see if they were really dead, frequently shouting for Jefferson, Madison, and others of the ruling party. General Lingan, who vainly begged them to spare his life for the sake of a young family, expired in the midst of their tortures; and General Lee, who, like Lingan, had performed noble deeds in the war for independence, escaped, but was made a cripple for life. The others, feigning death while enduring dreadful torture, escaped with their lives, but only through a happy thought of the jailer, who told the mob their bones would make good Tory skeletons, and persuaded them to allow him to carry them into

the prison. Places in or out of the city were found for the survivors, until they had fully recovered. Other atrocities were committed. Upon an investigation of this affair, the magistrates decided that the proprietors of the newspaper were to blame for persisting in publishing, at such a time, a newspaper disagreeable to the mob and the ruling party. The ringleaders were acquitted, the attorney-general so far sympathizing with them as to express a regret that every defender of the house attacked had not been killed.

**Liberty-cap Cent.** It was about three years after a mint for the coinage of money for the United States was authorized that the act went into operation, and in the interval several of the coins called "specimens," now so scarce, were struck. Among the most rare is the "liberty-cap cent," having a profile and the name of Washington on one side, and on the other a liberty-cap in the centre, with rays of light emanating from it, and the words around them "SUCCESS TO THE UNITED STATES."

**Liberty Party, THE,** grew out of the influence of societies formed for effecting the abolition of slavery throughout the Republic. It originated about the year 1844. The prime article of its political creed was opposition to African slavery in our country. The party cared not whether a man was called Whig or Democrat; if he would declare his unalterable opposition to slavery, slaveholders, and the friends of slaveholders, it gave him the cordial right hand of fellowship. A man less true to the faith was not admitted within the pale of the party. It contained, in proportion to its numbers, more men of wealth, talents, and personal worth than any other party. It was opposed to the annexation of Texas, for it regarded that as a scheme of the slaveholders to extend their domain and political power. The party could not vote for Mr. Polk, for he was favorable to that annexation; it could not vote for Mr. Clay, for he was a slaveholder: so it nominated James G. Birney (who had formerly been a slaveholder in Kentucky, but, from conscientious motives, had emancipated his slaves and migrated to Michigan) for President of the United States. It polled quite a large number of votes. In 1848 the Liberty Party was merged into the Free-soil Party (which see), and supported Mr. Van Buren for the Presidency.

**Liberty Poles.** The Sons of Liberty (which see) erected tall flag-staffs, with the Phrygian "cap of Liberty" on the top, as rallying-places in the open air. They were first erected in cities; afterwards they were set up in the rural districts wherein republicanism prevailed. On the king's birthday, in New York (June 4, 1766), there were great rejoicings on account of the repeal of the Stamp Act (which see). Governor Sir Henry Moore presided at a public dinner at the "King's Arms" (near the foot of Broadway). On the same day the Sons of Liberty feasted at their headquarters at Montague's (on Broadway, near Murray Street), and, by permission of the governor, erected a mast (which afterwards they

called a Liberty Pole) between the site of the City Hall and Broadway, in front of Warren Street, on which were inscribed the words "To his most gracious Majesty George III., Mr. Pitt, and Liberty." British soldiers were then in the city. The doings of the Sons of Liberty so annoyed the officers of the crown that thirty-six days after the liberty pole was erected with so much harmony it was cut down by the insolent troops (Aug. 16, 1766). The people re-erected it the next evening in the face of the armed mercenaries. A little more than a month afterwards the soldiers again prostrated it, and again the people upraised it, and from its top they flung the British banner to the breeze. The next spring the people met at the "mast" to celebrate the anniversary of the repeal (March 18), and inaugurated it by erecting a "Liberty Pole," which the soldiery cut down that night. The people again erected it, bound it with hoops of iron, and placed a guard there; when soldiers came with loaded muskets, fired two random shots into the headquarters of the Sons of Liberty (Montagne's), and attempted to drive the people away. Fearful retaliation would have followed but for the repression of aggressive acts by the soldiers, by order of the governor. On the king's birthday, 1767, the soldiers made an unsuccessful attempt to prostrate the liberty pole; but at midnight, June 16, 1770, armed men came from the barracks, hewed it down, sawed it in pieces, and piled it in front of Montagne's. The perpetrators were discovered, the bells of St. George's Chapel in Beekman Street were rung, and early the next morning three thousand people stood around the stump of the pole. There they passed strong resolutions of a determination to maintain their liberties at all hazards. For three days intense excitement continued, and in frequent affrays with the citizens the soldiers were worsted. A severe conflict occurred on Golden Hill (Cliff Street, between Fulton Street and Maiden Lane), when several of the soldiers were disarmed. Quiet was soon restored. The people erected another pole upon ground purchased on Broadway, near Warren Street, and this fifth liberty pole remained untouched as a rallying-place for the Whigs until the British took possession of the city in 1776, when the notorious provost-marshal Cunningham (who, it is said, had been whipped at its foot) had it hewn down.

**Library of Congress, DESTRUCTION OF THE.** On Dec. 24, 1851, the library of Congress, in the Capitol at Washington, was mostly destroyed by fire, and the whole building was in imminent danger of destruction. About thirty-five thousand volumes were destroyed, the number in the library being about fifty thousand. These included the library of Mr. Jefferson (for which Congress had paid \$20,000), purchased after the burning of the Capitol by the British in 1814. Many of these books were saved. Rare and valuable books presented by foreign governments, and a collection of twelve hundred bronze medals presented by M. Vattemare, of France, were lost. The original engrossed copy of the Declaration of Independence, on parchment,

with the autographs of the signers attached, was saved, as were also the portraits of some of the presidents, and some rare medals. In the room adjoining the main library were twenty thousand volumes, which were saved.

Lieber, FRANCIS, LL.D., publicist, was born in Berlin, March 18, 1800; died in New York city, Oct. 2, 1872. He joined the Prussian army in 1815 as a volunteer, and fought in the battles of Ligny and Waterloo. He was severely wounded in the assault on Namur. He studied at the University of Jena, was persecuted for his republicanism, and in 1821 went to Greece to take part in the struggle of its people for independence. He suffered much there. Retiring to Italy, he passed nearly two years in the family of Niebuhr, then Prussian ambassador at Rome. Returning to Germany in 1824, he was imprisoned, and while confined he wrote a collection of poems, which, on his release, were published at Berlin under the name of Franz Arnold. After spending about two years in England, he came to the United States in 1827, residing in Boston. He edited the *Encyclopædia Americana*, in thirteen volumes, published in Philadelphia between the years 1829 and 1833. He lectured on history and politics in the larger cities of the Union. In New York his facile pen was busy translating from the French and German. In 1832 he translated De Beaumont and De Tocqueville on the penitentiary system in the United States, and soon afterwards, on invitation of the trustees of Girard College, he furnished a plan of instruction for that institution, which was published at Philadelphia in 1834. In 1835 he published *Recollections of Niebuhr and Letters to a Gentleman in Germany*, and the same year he was appointed professor of history and political economy in the South Carolina College at Columbia, S. C., where he remained until 1856. He was appointed to the same professorship in Columbia College, New York city, in 1857, and afterwards accepted the chair of political science in the law-school of that institution, which he filled till the time of his death. Dr. Lieber had a very versatile mind, and whatever subject he grasped he handled it skilfully as a trained philosopher. In 1838 he published *A Manual of Political Ethics*, which was adopted as a text-book in the higher seminaries of learning; and he wrote several essays on legal subjects. Special branches of civil polity and civil administration engaged his attention, and on these subjects he wrote earnestly and wisely, especially on penal legislation. He wrote some valuable papers in the *Smithsonian Contributions to Knowledge*, and his addresses (published) on anniversary and other special occasions were numerous. While in the South he had warmly combated the doctrine of state supremacy, and when the Civil War broke out he was one of the most earnest and persistent supporters of the government. In 1863 he was one of the founders of the "Loyal Publication Society." More than one hundred pamphlets were published under his supervision, of which ten were written by himself. He wrote, at the request of the general-in-chief (Halleck), *Guerilla Parties, considered with Reference to the*

*Law and Usages of War*, which was often quoted in Europe during the Franco-German War, and his *Instructions for the Government of the Armies of the United States in the Field* was directed by the President of the United States to be promulgated in a general order (No. 100) of the War Department. Numerous essays on public subjects followed. He was an advocate for free-trade, and wrote vigorously on the subject. In 1865 he was appointed superintendent of a bureau at Washington for the preservation of the records of the Confederate government, and in 1870 he was chosen by the governments of the United States and Mexico as final arbitrator in important cases pending between the two countries. This work was unfinished at his death.—His son, Oscar Montgomery, born in 1830 and died in 1862, was a very skilful geologist. Educated at the best German universities, he took a high position as a writer on geology and kindred subjects, and at the age of twenty was state geologist of Mississippi. In 1854–55 he was engaged in a geological survey of Alabama, and from 1856 to 1860 held the position of mineralogical, geological, and agricultural surveyor of South Carolina. In the Confederate army, he died of wounds received in the battle of Williamsburg (which see).

**Lieber on Secession.** When, in 1850–51, the politicians of South Carolina were publicly preaching the right and duty of seceding from the Union, the Union men of that state attempted to stem the dangerous torrent. They celebrated the 4th of July, 1851, at Greenville, to which many distinguished men were invited, or to give their views in writing on the great topic of the Union. Among these was the late Francis Lieber, Professor of History and Political Economy in the South Carolina College at Columbia. He sent a short address to his fellow-citizens of the state, which was a powerful plea for the Union, and an unanswerable argument against secession. He warned them that secession would lead to war. He asked, "Will any one who desires secession for the sake of bringing about a Southern Confederacy honestly aver that he would insist upon a provision in the new constitution securing the full right of secession whenever it may be desired by a member of the confederacy?" Ten years later the politicians that formed the government known as the "Confederate States of America" answered the question in the affirmative; and this conceded right of secession had caused the Confederacy to feel the throes of dissolution before it was subdued by the National power.

**Lieutenant-general.** On Feb. 15, 1855, a joint resolution was adopted by Congress authorizing the President of the United States to confer the title of lieutenant-general by brevet in a single instance for eminent services. President Pierce accordingly (as was intended) bestowed the honor upon Major-general Winfield Scott.

**Lifeguard, WASHINGTON'S,** was organized in 1776, soon after the siege of Boston, while the American army was encamped in New York, on

Manhattan Island. It consisted of a major's command—180 men. Caleb Gibbs, of Rhode Island, was its first chief officer, and bore the title of captain commandant. He held that office until the close of 1779, when he was succeeded by William Colfax, one of his lieutenants. These were Henry P. Livingston, of New York; William Colfax, of New Jersey; and Benjamin Goymes, of Virginia. Colfax remained in command of the corps until the disbanding of the army in 1783. The members of the Guard were chosen with special reference to their excellences—physical, moral, and mental—and it was considered a mark of peculiar distinction to belong to the commander-in-chief's Guard. Their uniform consisted of a

BANNER OF WASHINGTON'S LIFEGUARD.

blue coat with white facings, white waistcoat and breeches, black half-gaiters, and a cocked hat with a blue and white feather. They carried muskets, and occasionally side-arms. Their motto was "Conquer or die." Care was taken to have all the states which supplied the Continental army with troops represented in the

UZEL KNAPP.

corps. Its numbers varied. During the last year of the war there were only 65; when, in 1780, the army at Morristown was in close proximity

to the enemy, it was increased from the original 180 to 250. The last survivor of Washington's Lifeguard was Sergeant Uzel Knapp, who died in the town of New Windsor, Orange Co., N. Y., Jan. 11, 1857, when he was a little past ninety-seven years of age. He was a native of Stamford, Conn., and served in the Continental army from the beginning of the war until its close, entering the Lifeguard at Morristown, N. J., in 1780. After his death Sergeant Knapp's body lay in state in Washington's headquarters at Newburgh three days, and, in the presence of a vast assemblage of people, he was buried at the foot of the flag-staff near that mansion. Over his grave is a handsome mausoleum of brown free-stone, made from a design by H. K. Brown, the sculptor. Hon. Schuyler Colfax, a grandson of the last commander of the Guard, has in his possession a document containing the autograph signatures of the corps in February, 1783, from which the fac-similes given on pages 792 and 793 were copied.

**Light-houses and Public Piers.** Congress, in 1789, assumed for the United States the support of all light-houses, buoys, beacons, and public piers, on condition that within one year the states within which they were respectively situated should vest in the United States not only the property in these structures, with the lands pertaining to them, but exclusive jurisdiction also within their circuit, reserving, however, the right of the state to serve civil and criminal processes therein.

**Ligonia, PROVINCE OF.** (See *Plough Patent*.) At about the time of the beginning of the Civil War in England, in which Sir Ferdinando Gorges took sides with the king, Alexander Rigby, a republican member of Parliament, purchased the old patent of Ligonia (Maine), and sent out George Cleves to take possession. Cleves had been an agent in that region for Gorges and Sir William Alexander. This claim was resisted by Gorges's agents, and Cleves attempted to gain the assistance of the New England Confederacy by proposing to make Ligonia a member of that alliance. The dispute went on some time, until finally the Parliamentary Commissioners for Plantations confirmed Rigby's title, and the coast of Maine, from the Kennebec to the Saco, was erected into the Province of Ligonia, Maine being then restricted to the tract from the Saco to the Piscataqua. (See *Maine and New Hampshire*.)

**Lincoln, ABRAHAM,** sixteenth President of the United States, was born in Larue County, Ky., Feb. 12, 1809; died April 15, 1865. His ancestors were Quakers in Bucks County, Penn. His parents, born in Virginia, emigrated to Kentucky, and in 1816 went to Indiana. Having had about one year's schooling in the aggregate, he went as a hired hand on a flat-boat to New Orleans when he was nineteen years of age. He made himself so useful to his employer that he gave him charge as clerk of a store and mill at New Salem, Ill. He commanded a company in the Black Hawk War. Appointed postmaster at Salem, he began to study law, was admitted to

practice in 1836, and began his career as a lawyer at Springfield. He rose rapidly in his profession, became a leader of the Whig party in Illinois, and was a popular though homely speaker at political meetings. He was elected to

Congress in 1847, and was there distinguished for his outspoken anti-slavery views. In 1858 he was a candidate for United States Senator. His opponent, Judge Douglas, won the prize from the Legislature, though Mr. Lincoln re-

of the Civil War, and just as it closed was assassinated at the national capital.

ABRAHAM LINCOLN.

Lincoln, BENJAMIN, was born at Hingham, Mass., Jan. 23, 1733; died there, May 9, 1810. His pursuit was that of a farmer. He was a firm and active patriot, and was major-general of militia when the war of the Revolution broke out. In June, 1776, he commanded an expedition that cleared Boston harbor of British vessels; and in February, 1777, was appointed a major-general in the Continental army. His services were varied and important all through the war,

BENJAMIN LINCOLN.

and at the surrender at Yorktown he received the sword of the defeated Cornwallis. (See *Cornwallis, Surrender of*.) From that time (October, 1781) until 1784 he was Secretary of War, and received a vote of thanks from Congress on his retirement. In 1787 he commanded the troops which suppressed Shays's Insurrection (which see). In that year he was chosen lieutenant-governor of Massachusetts, and from 1789 to 1808

he was collector of the port of Boston. He was fond of literary and scientific pursuits.

**Lincoln in Washington.** Just before his inauguration the President-elect arrived at Washington early on the morning of Feb. 23, 1861 (see *Lincoln's Passage through Baltimore*), and rode to Willard's Hotel, where he was received with joy by his friends. At an early hour, accompanied by Mr. Seward, he called on the President. Mr. Buchanan could hardly believe his own eyes. He gave his chosen successor a cordial welcome. The cabinet was in session, and, on invitation, the President-elect was ushered into their chamber and received with demonstrations of real delight. During the remainder of the day he received his friends, informally, at Willard's, and, in the evening, the members of the Peace Convention, in a body, formally waited upon him, after which many loyal women came to bid him welcome. On the 27th the mayor and Common Council of Washington gave him an official welcome; and that evening several senators and Governor Hicks, of Maryland, visited him. Members of the Republican Association at Washington serenaded him the same evening, to whom he made a brief speech—the last one previous to his inauguration.

**Lincoln Medal, THE.** The assassination of President Lincoln (which see) made a profound impression in Europe as well as in America; and forty thousand French Democrats testified their appreciation of his character and services and their "desire to express their sympathy for the American Union, in the person of one of its most illustrious and purest representatives," by causing a magnificent gold medal to be struck and presented to the President's widow. The medal was presented in the name of that host of Frenchmen by a committee, of which Victor Hugo and other distinguished Frenchmen were members. It is about four inches in diameter. One side bears a profile, in relief, of Mr. Lincoln, surrounded by the words, in French, "DEDICATED BY THE FRENCH DEMOCRACY. A. LINCOLN, TWICE ELECTED PRESIDENT OF THE UNITED STATES." On the reverse is an altar, bearing the following inscription, also in French: "LINCOLN, HONEST MAN. ABOLISHED SLAVERY, RE-ESTABLISHED THE UNION, AND SAVED THE REPUBLIC, WITHOUT VEILING THE STATUE OF LIBERTY. HE WAS ASSASSINATED THE 14TH OF APRIL, 1865." Below all are the words: "LIBERTY, EQUALITY, AND FRATERNITY." On one side of the altar stands winged Victory, with her right hand resting upon a sword and her left holding a civic wreath. On the other side stand two emancipated slaves—the younger, a lad, offering a palm branch, and the elder pointing him to the American eagle, bearing the shield, the olive-branch, and the lightning, with the motto of the Union. The older freedman holds the musket of the militia-man. Near them are the emblems of industry and progress. Over the altar is a triangle, emblematic of trinity—the trinity of man's inalienable rights—liberty, equality, and fraternity. See page 795.
