German science

A large group of men pursuing pure science with unflagging industry with self denying zeal and with high ideals. No secondary motives swayed their minds, no cry reaches them in their recesses of their labors "of what practical utility is your work?" but unhampered by social or theological prejudice they have been enabled to follow truth eagerly, cherishing as Helmholtz ^{has} said "the trust which has never been deceived that complete truth carries with it the antidote against the base and danger which follows in the train of half knowledge" (Helmholtz)
