CONSTRUCTION DIVISION

Jack Silver, Chief

ACKNOWLEDGMENTS—Many persons participated in the various activities of the 1972 Census of Construction Industries. Primary direction of the program was performed by Shirley Kallek, Associate Director for Economic Fields, and Melvin A. Hendry, Assistant Director for Economic and Agriculture Censuses.

This report was prepared in the Construction Statistics Division under the general direction of Jack Silver, Chief. Alan I. Blum, as Assistant Division Chief for Industry Surveys, was responsible for the planning and guidance of this project and assumed the responsibility for the overall management and implementation of the census of construction industries. A. William Visnansky was responsible for the preparation of these reports. William W. Langham, Jr., Elaine M. Thomas, Margaret A. Tannahill, Barbara Hadden, Glenda Hopkins, and Nellie Einert made important contributions to the census in such areas as developing specifications and procedures, solving problems, or reviewing the data for publication. Edward K. Ricketts developed the sampling plans, much of the computer processing specifications, and the quality control procedures. The electronic computer programs were developed under the direction of Herbert S. Isham, Jr. The computer editing and industry coding programs were developed by Katherine F. Bair, Linda M. Mersch, and Charles A. Woods. Donald E. Ball and William G. Reece developed the computer tabulation programs. Mary D. Brady was responsible for the data preparation specifications and procedures.

The mailing, collecting of data, and processing of administrative record information were conducted by the Economic Surveys Division under the direction of Roger Bugenhagen, Chief. Assistance was provided by Samuel Schweid, Andrew Grieco, Charles Venters, Shirley Roberts, Robert Viehman, Jerry McDonald, Joel Richardson, and Sandra Katis.

Forms design was performed in the Administrative Services Division, Henry J. Husmann, Chief, Gladys Potts, Joyce Teague, Helen Hindt, and Margaret Swinton made significant contributions.

Within the Publications Services Division, many individuals made significant contributions in the areas of publication planning and design, editorial review, composition, and printing procurement.

Clerical and data keying operations were performed in the Data Preparation Division at Jeffersonville, Indiana, under the direction of O. Bryant Benton, Chief, who was assisted by Don L. Adams and Robert L. Allen.

The geographic coding procedures were developed in the Geography Division under the direction of Jacob Silver, Chief, assisted by Zigmund Decker, Terence McDowell, Silla Tomasi, Robert Hamill, David Christy, Kurt LeGait, and John Hawkins. Computer processing was directed by James R. Pepal, Chief, Computer Services Division. C. Thomas DiNenna, Jesse Verdeja, and Willie E. Clark provided staff assistance.

Donald Young of the Economic Census Staff participated in the overall planning and review of the census operations.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of these data.

The statistics presented in this volume incorporate the area report series CC72-A.

HISTORY

The 1972 Census of Construction Industries covering operations during 1972 and collected in 1973 is the fifth such census for the United States. The first census covered 1929 and was collected in connection with the Fifteenth Decennial Census of 1930. Censuses were also taken covering the years 1935 and 1939. The census of construction industries—like the census of manufactures and the census of business—was suspended during World War II. The census of construction industries was not resumed until 1967.

AUTHORITY

The 1972 Census of Construction Industries was conducted as an integral part of the 1972 Economic Censuses, under authority of Title 13, United States Code. The economic censuses program also includes censuses of business, manufactures, mineral industries, and transportation.¹ Present legislation provides for economic censuses every 5 years. The

¹Separate 1972 Censuses of the Construction Industry, Manufactures, and Business were also conducted in Puerto Rico, the Virgin Islands, and Guam.

next censuses are scheduled to be taken in 1978 covering the year 1977.

SCOPE

The 1972 Census of Construction Industries covers all establishments primarily engaged in contract construction (general contractors or special trade contractors) or in construction for sale on their own account (operative builders)² or in subdividing real property into lots (subdividers and developers, except cemeteries) as defined in the 1972 edition of the *Standard Industrial Classification (SIC) Manual*.³ This is the system of industrial classification developed over a period of years by experts on classification in government and private industry under the guidance of the Office of Management and Budget. This system of classification is in general use among government agencies and also outside the government.

Construction—The *SIC Manual* defines construction to include three broad types of activity, namely, (1) building construction by general contractors or by operative builders, (2) other construction by general contractors, and (3) construction by special trade contractors.

General building contractors are primarily engaged in the construction of dwellings, office buildings, stores, farm buildings, and other projects of a similar character.

Operative builders are primarily engaged in construction on their own account for sale rather than as contractors.

General contractors in fields other than buildings, often referred to as heavy construction contractors, are primarily engaged in the construction of highways, streets, bridges, and tunnels; docks and piers; dams and water projects; sewage collection, treatment, and disposal facilities; storm sewer systems; air fields; and other heavy construction which involves either earth moving or the erection of structures and appurtenances other than buildings. The removal of overburden is classified in mining.

Special trade contractors are primarily engaged in specialized construction activities such as plumbing, painting, electrical work, and carpentry.

General contractors in both the building field and the heavy construction field usually assume responsibility for an entire

²Investment builders (establishments primarily engaged in construction on own account for lease or rental) were not included within the scope.

³Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual, 1972*.

INTRODUCTION—Continued

construction project, but may subcontract to others those portions of the project requiring special skills or equipment. Special trade contractors may work for general contractors under subcontracts or may work directly for the owner of the property.

Subdividers and Developers, Except Cemeteries—The *SIC Manual* defines subdividers and developers, except cemeteries, to include establishments engaged in subdividing real property into lots, except cemetery lots, and in developing it for resale on their own account or for others.

ESTABLISHMENT BASIS OF REPORTING

The census of construction industries is conducted on an establishment basis. For the purposes of this census, a "construction establishment" is defined as a relatively permanent office, or other place of business at which or from which the usual business activities related to construction are conducted. (With the exceptions indicated below, a relatively permanent office is one which has been established for the management of more than a single project or job and which has been or is expected to be maintained on a continuing basis.) Such "establishment" activities include (but are not limited to) estimating, bidding, scheduling, purchasing, supervision, and operation of the actual construction work being conducted at one or more construction sites.

A separate report was required from each business concern included in the census (see "Sample Design, Estimating Procedures, and Reliability of Data" section below) for each of its construction establishments. To the extent that several companies (i.e., sole proprietorships, partnerships, corporations, syndicates, cooperatives, etc.) shared or operated out of a single office or place of business, each such legal entity engaged in construction was considered, for the purposes of this census, as a separate establishment and each was requested to file the necessary "establishment" report covering its own activities which it conducted in or from that common office.

Concerns with more than one construction establishment were required to submit a separate report for each such establishment operated during all or any part of 1972.

Separate construction reports were not required for each project or construction site. Aggregate information on these projects and sites was included, however, in the report of the construction establishment responsible for the work of these construction projects and sites.

There were two exceptions to the "relatively permanent office" rule: (1) In case of joint ventures, a separate establishment report was required covering the joint venture entity even though established to undertake only a single project. (2)

To the extent that separate legal entities were set up to carry out only a given project or part of a project, then a separate establishment report was also required for each legal entity.

If a concern engaged in two or more distinctly different lines of economic activity (wholesale or retail trade, service, manufacturing, construction, mining, etc.) at the same place of business, it was requested to file a separate report appropriate for each such activity, provided that each activity was of substantial size and separate records were maintained or substantially accurate estimates could be prepared for these separate activities.

If a separate establishment report could not be prepared for each such activity, then a construction report was requested covering all activities of that establishment, provided the 1972 gross receipts from construction activities exceeded the gross receipts from each of its other activities.

An establishment is not necessarily identical with the "company" or "enterprise" which may consist of one or more establishments. The census of construction industries figures represent a summary of records for individual establishments rather than for companies. The census tabulations, therefore, differ from those prepared on a company basis.

The 1972 Census of Construction Industries reports do not include figures for separate administrative offices, warehouses, garages, or other auxiliary units which service construction establishments of the same company. Data on separate central administrative offices and auxiliaries are included in the economic censuses report entitled "1972 Enterprise Statistics."

Construction businesses with no payroll during 1972 (nonemployers) were not required to file census reports. As described in the "Sample Design, Estimating Procedures, and Reliability of Data" section below, limited data for these firms were obtained from the Internal Revenue Service. For the purpose of this census, each separate return was assumed to apply to an establishment.

Foreign construction activities were not included in this census.

METHOD OF ACCOUNTING AND TIME PERIOD COVERED

For the purposes of the census report, respondents were allowed to use any system of accounting by which they maintained their books. Therefore, reports could be based on cash, accrual, or completion of contract methods of accounting.

It was intended that each report should cover the calendar year 1972. If reporting on a calendar year basis would involve

considerable additional costs, fiscal year reporting was permitted in those cases where it did not differ greatly. However, all payroll and employment figures were required to be reported on a calendar year basis.

INDUSTRY CLASSIFICATION OF ESTABLISHMENTS

Each of the establishments covered in the census was classified in one of the construction industries in accordance with the industry definitions embodied in the Standard Industrial Classification (SIC) System. Under this system of classification, an industry is generally defined as a group of establishments primarily engaged in the same or similar lines of economic activity. Each establishment is assigned an industry code under this system on the basis of its major activity. Establishments with no payroll during 1972 were classified on the basis of the kind-of-business activity reported on the tax returns.

Each establishment receiving a report form was requested to indicate the kind-of-business activities engaged in during 1972 and if they engaged in multiple activities, to rank the activities in the order of importance based upon total receipts. This information was used for the computer assignment of appropriate industry classifications. During this work various tests were also made using other data reported on the questionnaire. The proportion of construction receipts to total receipts was checked to verify that the establishment was primarily in construction. Also taken into consideration were the types of construction work engaged in during the year and the extent work was undertaken for other contractors.

It should be recognized that construction establishments often engage in various construction activities. Only in a few instances do the industry (SIC) categories take into consideration combinations of such activities. For example, SIC 1711 includes establishments primarily engaged in plumbing, heating, air conditioning, ventilation, and refrigeration work. However, in other cases it is necessary to assign a single industry code to the establishment based on its major activity. The statistics shown for an industry, therefore, reflect not only the primary activities of the establishments in the industry but also their secondary activities.

The structure of the Standard Industrial Classification System makes it possible to classify or tabulate establishments by industry on a 2-digit, a 3-digit, or a 4-digit basis according to the degree of detail available and needed.

A revised edition of the SIC Manual was issued in 1972. In this revision extensive modifications were made in the construction sector. Each establishment report processed in the 1972 Census of Construction Industries was classified in accordance with both the old and the new SIC. The preliminary reports, the final reports, and volumes are pub-

lished in accordance with the new SIC. Among the analyses made was a "bridge" tabulation showing the disposition of each "old" industry in terms of the "new" industries and, conversely, the composition of each new industry in terms of the old industries. These "bridge" tabulations are included as an appendix in all bound volumes of the 1972 Census of Construction Industries. In addition, for industries where the classification revision was extensive, data from the "bridge" tabulations are included as table 1b in the final industry reports.

For those selected industries which were subject to the most revision under the new SIC system, 1967 establishment records were reclassified and 1972 SIC codes were assigned based on their 1967 activity. Limited data for 1967 were then retabulated to approximate new 1967 totals for the 1972 industries. These retabulated 1967 totals appear in table 2 for these industries. For other tables, historical information is unavailable for many industries because of the SIC revision. Comparable 1967 data shown for the revised SIC industries in the published tables were derived from previously published information. In some instances, the 1967 data shown are substantially comparable and the minor elements of noncomparability are explained in footnotes and in industry texts.

It should be noted that extensive revisions of industry definitions, as occurred between the 1967 and 1972 editions of the SIC, may affect totals for industries which are not changed in definition. This may best be illustrated by the following example: Consider the case of an establishment with 60 percent of its output in Industry A and 40 percent of its output in Industry B. In a revision of industry definitions, Industry B may be unchanged but Industry A may be separated into two new industries. Call the new Industries C and D. Assume that the hypothetical establishment on the new SIC produces 40 percent in B, 30 percent in C, and 30 percent in D. Such an establishment would be classified in Industry A on the old SIC and in Industry B on the new SIC. This occurs in spite of the fact that Industry B is conceptually unchanged.

SAMPLE DESIGN, ESTIMATING PROCEDURES, AND RELIABILITY OF DATA

The firms included in the 1972 Census of Construction Industries were identified as part of the operations common to all the 1972 Economic Censuses. Construction firms were divided into employers (those firms with payroll) and nonemployers (those firms with no payroll). Statistical information for the employers was obtained in the census by a survey which included all medium size and large employers and a sample of the smaller ones. Census forms were not required from the nonemployers. Statistics for the latter group were obtained from administrative records of other agencies of

INTRODUCTION—Continued

the Federal Government from information supplied directly to them.

Employer Firms

1. *Developing the Sampling Frame—Employer Firms* (those with payroll)—This operation started with obtaining a list of all construction firms in the active records of the Internal Revenue Service (IRS) which were subject to payment of the Federal Insurance Contribution Act taxes. As in recent economic censuses, beginning with 1954, the basic source of this list was the Internal Revenue Service Business Master File, a comprehensive list of firms that are engaged in business activities in the United States. This list contains the name, address, and form of ownership of each firm and also indicates whether or not the firm is subject to the Federal Insurance Contributions Act. Each firm in this list is assigned a unique employer identification number (EI number) which is used in filing its various reports with IRS. The Social Security Administration (SSA) maintains a similar list, using the same identification numbers, which also contains information on the industrial classification of each firm. The Bureau of the Census obtained both of these lists and combined them.

Under special arrangements which safeguarded the confidentiality of all the information, the Bureau also obtained administrative records data on payrolls and receipts and added these data to the combined list. The list thus created from the IRS-SSA information was a list of employer "firms." However, for the 1972 Economic Censuses the basic reporting unit is the "establishment." Therefore, steps were taken to identify the individual establishments of those firms which operate more than one place of business (or establishment). The information for making this determination was obtained by means of a mail canvass of all known multiestablishment firms and any large, apparently single-establishment firms in advance of the mailing date for the 1972 census forms. Thus, the 1972 Economic Census list for single-establishment employer firms was obtained from the IRS-SSA, but the list of establishments of multiestablishment employer companies was obtained directly from those companies by the mail canvass.

In general the IRS-SSA list provided sufficient industrial classification data to assign a firm to the proper economic census, but there were a number of firms for which this information was inadequate or unavailable. A special form (NC-X3, General Report) was mailed to all such firms on the 1972 Economic Censuses mailing list. The NC-X3 requested information on the nature of the firm's activities. Using this information, the industrial classification of the firms was determined and the firm was assigned to the

appropriate economic census. Since construction firms found in this way were identified as such only after the regular census mailing took place, it was necessary to treat them as a supplement to the basic list.

2. *Selecting the Employer Sample*—A construction universe of about 530,000 single-establishment employer firms and 3,000 multiestablishment employers accounting for another 7,600 construction establishments was developed by the procedures described above.

A sample of 145,000 employer establishments was selected from this universe which was generally organized in old SIC by State sequence. This sample was designed to provide publishable estimates for most construction industries at the State level. The sample consisted of all construction establishments in multiestablishment companies, all single-establishment companies with the equivalent of 10 or more employees and a sample of single-establishment companies with fewer than 10 employees. (The number of company employees was estimated from the 1971 payroll data in the administrative records using prior census industry average wage per employee (adjusted for change since 1967).) The sampling was accomplished using a systematic method within each 4-digit SIC. (Where the SIC code was not complete, such cases were sampled in the largest 4-digit group to which they could be assigned, e.g., 1600 was sampled as part of 1621.) For establishments with fewer than 10 employees, but more than 5 employees, every other establishment was selected (50-percent sample). For those establishments with fewer than 5 employees, a 10-percent systematic sample was selected. This basic sampling plan was not applied to 4-digit industry State cells which had fewer than 10 establishments in the 1967 census. All cases in such States were taken into the sample (100-percent sample). A 100-percent sample was also taken of the firms which became active in 1972 but were identified after the date that the census universe was developed, as well as construction firms identified from the NC-X3, General Report. Transfers from other census areas such as manufacturing also occurred during the processing stages because of changes in activity, or errors in the mail-out classification. These were added to the construction census with certainty.

3. *Estimating Procedures for 1972 Data*—Since all larger employer firms and some smaller ones were included in the census, sample estimation was required only for the universe of firms not selected with certainty. These were generally firms with the payroll equivalent of fewer than 10 employees in 1971. The published statistics are the totals of the estimates for the sampled firms and the aggregates

for the certainty (larger) firms. All estimates for 1972 published here are simple unbiased estimates of the form:

$$x'_c = \sum_{i=1}^{n_c} x_i/p_i$$

where:

x'_c is the simple unbiased estimate of a characteristic for a publication cell.

x_i is the reported value of a characteristic for an individual establishment in the publication cell.

p_i is the selection probability of that firm.

n_c is the number of firms in the sample for the cell.

This method of estimation was used for all 1972 characteristics. Note that before this formula was applied it was necessary to convert into dollars those breakdowns of construction receipts which had been reported by the establishments as percentages. This included construction receipts by type of project, location of project, etc.

4. *Estimating Procedures for 1967 Data*—The 1967 estimates shown are of two different types. For 4-digit industries that were not significantly affected by the 1972 revision of the Standard Industrial Classification Manual, the estimates shown are those originally published in the 1967 census volumes. Those estimates were derived using ratio estimates except for "number of establishments" and "number of proprietors and working partners" where simple unbiased estimations were also used in 1967. (For a full description of the 1967 estimating procedures, consult any of the 1967 Census of Construction Industries final reports.)

For industries that were significantly affected by the SIC revision, historical (1967) estimates were developed as follows:

- a. The 1967 establishment records for selected 4-digit industries were recoded into the 1972 classification system based on the reported 1967 data.
- b. Within each of the 1967 industries, the recoded records were then tabulated to produce simple unbiased estimates for each State by 1972 SIC.
- c. These simple unbiased estimates were then summed to the 1967 SIC by State level, and the sum and separate estimates were raked to the published 1967 SIC by State estimates.

This process was applied within each of the affected 1967 industries, and when completed the adjusted estimates for the 1972 industries from each old industry were summed to create the 1967 estimates for the 1972 classification.

5. *Reliability of Employer Statistics*—Since the estimates for employer establishments in these reports are based on

samples, they are subject to sampling variability and may be expected to differ from results which would have been obtained if a complete census had been taken using the same forms and procedures. The sampling errors which are shown in the tables were estimated directly from the sample reports using methods appropriate for the sample design and form of estimation used.

The standard error is a measure of sampling variability; that is, the variation that might occur by chance because only a sample of the population is surveyed. As calculated for this report, the standard error also partially reflects the effect of random errors of response and processing but does not take into account the effect of any consistent biases due to those types of errors. The chances are about 68 out of 100 that an estimate from the sample would differ from a complete census by less than the standard error. The chances are about 95 out of 100 that the difference is less than twice the standard error, and about 99 out of 100 that it is less than 2-1/2 times the standard error. Individual estimates with large standard errors have been shown in the published tables. Any such estimates should be used with caution. The very large relative standard errors generally occur for the smaller estimates.

Separate measures of the reporting and processing errors are not available. However, estimates which were subject to large errors of these types are likely to have been detected and corrected or withheld from publication in the process of the review of the data for reasonableness and consistency. Other specific qualifications of the published data are indicated in the appropriate footnotes to the tables.

U.S. Summary table 3a shows the standard error for statistics at the U.S. and regions level. Table 3 for the divisions shows the standard error for the statistics for each State. Although standard errors have been calculated for all the published statistics, space limitations dictate that the other tables show standard errors only for some characteristics.

Nonemployer firms

1. *General*—Nonemployer firms were identified in the following way. As described earlier, the information derived from the business income tax returns for all firms was matched to the census employer file on the basis of common identification numbers. Those business income tax records which could not be matched were further classified on the basis of several characteristics. Records with characteristics consistent with firms without payroll were treated as nonemployers. The nonemployer construction firms were not required to file census reports.

There were some exceptions to this general rule. Where the administrative data were not made available, report forms were mailed out to firms without employment. Such

firms were added to the nonemployer universe if they did not report any employment but did report receipts.

For "number of establishments" each separate income tax return was assumed to be an establishment. "Total receipts" is based on receipts information reported on the tax return. Although this group accounts for more than 50 percent of the total number of construction establishments, it accounts for only a small proportion of total receipts of all construction establishments.

2. *Qualifications of the Nonemployer Data*—Since no sampling was involved in the nonemployer establishments the statistics for nonemployers are not subject to sampling variability. However, these data are subject to an unknown amount of reporting and processing error which could not be detected by the Census Bureau.

CENSUS REPORT FORMS

Information for the 1972 Census of Construction Industries was obtained from employer establishments primarily through the use of one standard questionnaire (Form CC-1) irrespective of their construction industry classifications or sizes.

The standard report form was essentially the same (with two exceptions) as the one used for the 1967 Census of Construction Industries, however, the arrangement of the questions was altered. The rearrangement of the questions was done to aid the respondent in reporting and to facilitate the Bureau's use of the report form during the processing operations. Exceptions mentioned above include the addition of a question on fixed assets and depreciation and on expansion in the inquiry on types of construction engaged in during 1972.

In reviewing and developing this report form, comments and recommendations were solicited from construction trade associations, appropriate advisory groups, and large and small construction firms—totaling several hundred in all.

In addition to statistical data, information was obtained on the report form regarding the physical location, Employer Identification Number, company affiliation, and legal form of ownership. These kinds of information were necessary to assure control over the completeness of coverage, and also permitted the classification of each establishment by geographic location and type of organization.

The 1972 Census of Construction Industries benefited from several other report forms which were utilized in the 1972 Economic Censuses. Among these were the NC-X1A, NC-X1B, and NC-X2—precanvass listing forms for multiunit firms; NC-X1C—out-of-scope survey form; NC-X3—General Schedule; NC-X6—Central Administrative Office or Auxiliary Form for multiunit firms; and NC-K1—Company Summary Report for multiunit firms.

PROCESSING OF DATA

The 1972 census forms were both distributed by mail and returned by mail. Mailing of report forms took place in December 1972. Collection was essentially completed by July 1973. All mailing and receiving, including the various reminder mailings as well as routine editing and coding was done at the Census Bureau's Data Preparation Division in Jeffersonville, Ind.

The completed report forms underwent extensive processing following their receipt. A preliminary visual scanning identified obviously deficient reports and reports needing clarification. If required, these problems were resolved by further contact with the respondents. Next the data were converted through an encoding operation into magnetic tape, transmitted to Washington through a telephone-computer link-up, and transferred to other computer tapes. All computer processing, review of the tabulated data, and the preparation of the publications were performed in Washington.

All records underwent a detailed computer review and analysis with records containing significant problems being rejected. These were reviewed analytically and, where necessary, further contacts were made with the respondent. Most classification coding (industry coding, geographic coding, size coding, etc.) was also performed by the computer. Imputation for missing items or for the small number of reports not received in time for tabulation was similarly accomplished by use of the computer. All such imputation was performed on an industry (or industry group)-State (or geographic group) basis utilizing all available response and/or administrative data. The data tapes were then tabulated to produce preliminary tabulations on an industry basis. These were subjected to analytical review and selected statistics were prepared for the preliminary reports. All such reports were reviewed before publication to insure they met publication standards and did not reveal confidential data for individual companies. Corrections resulting from this review were made to the computer records and more extensive final tabulations were produced. The data again underwent analytical review in preparation for the publication of the final reports.

The final reports contain considerably more data than were available in the preliminary reports. The final reports also incorporate all revisions and corrections made as a result of the review of the various preliminary reports. Oftentimes in reviewing a preliminary report for a given industry, it was discovered that corrections or revisions were required to the data for another industry for which the preliminary report had already been published. The final reports also incorporate all revisions and corrections discovered to date by the review for the final reports. Needed errata sheets will be issued for any significant corrections to this volume which may be discovered by subsequent review.

GEOGRAPHIC CLASSIFICATIONS

The 1972 Census of Construction Industries presents data classified by two basic types of geographic distributions. Each establishment is classified on the basis of its physical location (the State, the county, and the city in which the establishment is located). The report forms for employer establishments also requested data on the State location of construction work. Separate State codes were assigned based on this information.

In addition to presenting data classified by establishment location (final industry tables 1a and 7 and the final State publications) and by location of construction work (final industry table 9), the census also provides some data geographically cross-classified. For example, table 8 of the final industry reports presents data classified by (a) establishments doing construction work only in their "home State" and (b) establishments doing work in "home State" and in other States. "Home State" is defined as the State in which the establishment is physically located.

In addition to data presented on the location of construction establishments at the State level, results are also shown for each of the four Census regions and each of the nine Census geographic divisions. Data based on establishment location are not provided for at a more detailed level than State (i.e., standard metropolitan statistical area).

DUPLICATION IN RECEIPTS

The aggregate of construction receipts reported by all construction establishments in each of the several industry, State, or other groupings in this census contains varying amounts of duplication since the construction work (and the receipts) of one firm may in turn be subcontracted out to other construction firms and also be included in their receipts. To avoid this duplication a "net construction receipts" figure has been derived for each establishment by subtracting the payments made for construction work subcontracted to others from the construction receipts.

Duplication in receipts between construction and other industries results from the use of products of other industries as input materials by construction establishments. "Value added" avoids this duplication and is, for most purposes, the best measure for comparing the relative economic importance of industries or areas. "Value added" is defined in the 1972 Census of Construction Industries as equal to total receipts less payments for construction work subcontracted to others and payments for materials, components, and supplies. However, for SIC 6552 and SIC 1531 where land receipts are significant,

a modification was made in the calculation of value added. For these industries, value added is defined as equal to total receipts less land receipts, payments for construction work subcontracted to others, and payments for materials, components, and supplies.

CONFIDENTIALITY OF DATA

In accordance with Federal law governing census reports, such data are confidential. Reports may be seen only by sworn Census Bureau employees and may be used only for statistical purposes. The Bureau of the Census is prohibited from publishing any statistics that would disclose information reported by individual companies. Provisions for protecting this confidentiality are maintained throughout the processing of the reports and the tabulation of the data. All statistical tables for publication undergo disclosure analysis.

As a result of this analysis, figures for the 1972 census were suppressed if they would, by themselves, be direct disclosures. Other figures were also withheld, where necessary, to make it impossible to derive by subtraction the previously suppressed disclosures. In deciding which figures to suppress or to publish, certain rules were generally followed. Preference was given to geographic divisions over individual States in applying the disclosure rules. On tables showing industry detail, major 2-digit industry group totals were given preference over 3-digit industry group totals which, in turn, had preference over individual 4-digit industries. Such order of precedence was used because it was considered preferable to show divisional, regional or U.S. data for an industry, even at the cost of withholding data for some (usually the least significant) States.

It should be noted that the number of establishments in a kind of business is not considered a disclosure, so that this item may appear in instances where other items of information are withheld.

SPECIAL TABULATIONS

Special tabulations of data collected in the 1972 Census of Construction Industries may be obtained on computer tape, on punch cards, or in tabular form. The data provided in such special tabulations will be in summary form and will be subject to the rules prohibiting disclosure of confidential information (including name, address, kind of business, or other data for individual business establishments or companies).

Special tabulations are prepared on a cost basis and the request for a cost estimate, as well as exact and detailed specifications of the type and format of the data to be provided, should be directed to: Chief, Construction Statistics Division, Bureau of the Census, Washington, D.C. 20233.

**COMPARABILITY OF CONSTRUCTION CENSUS DATA
WITH OTHER SERIES**

Data contained in the reports of the 1972 Census of Construction Industries are not the same as data published in the Census Bureau's C30 series of construction reports, *Value of New Construction Put in Place*. The main difference is that the C30 series covers all new construction put in place without regard to who is performing the construction activity whereas the census figures for net construction receipts cover data on both new construction and maintenance and repair work, but only for establishments classified in the construction industry. Force account construction activity (construction work performed by the labor force of a nonconstruction company for itself; or by other entities, i.e., Federal, State, or local governments for themselves; or performed by property owners for themselves) probably accounts for more than half of this difference. Other factors contributing to the difference are (1) the value of materials supplied by the

owners of projects is not included in the census; (2) the value of separate architectural and engineering services is excluded from the census; and, to a lesser extent, (3) the value of construction work performed for others by firms outside the scope of construction (manufacturers who install, lumber yards and other businesses, etc.) is not included in the census. In addition there are also other factors accounting for the lack of comparability.

Data contained in the reports of the census of construction industries also differ from industry data published in County Business Patterns (prepared by the Bureau of the Census), in the Bureau of Labor Statistics' *Employment and Earnings Statistics*, and in the Internal Revenue Service's *Statistics of Income*. These differences arise from differences in scope and coverage, timing, classification, and methods. The precise effect of each of these differences is not fully known.

United States Summary—Statistics for Construction Establishments With and Without Payroll

This report summarizes 1972 Census of Construction Industries data derived from the final reports already published for each of the States.

During 1972, 920,806 establishments in the United States operated primarily as general contractors, special trade contractors, operative builders, or subdividers or developers. These establishments had total receipts of \$164 billion.

Table 1a of this report provides summary statistics for all establishments. It also provides separate statistics for those establishments with payroll and for those with no payroll.

In the United States, 482,865 establishments, or 52 percent of all construction establishments, were "nonemployers," but they accounted for only about 5 percent of the total receipts of all construction establishments. On the other hand, 437,941 establishments, or 48 percent of all construction establishments, were "employers" and accounted for 95 percent of total receipts.

California ranked first among the States on the basis of total receipts of all establishments (with and without payroll); New York ranked second.

Tables 2 through 6 provide considerably more detailed information for employers. Total receipts for these establishments amounted to \$156 billion, of which \$149 billion were receipts for construction work. These establishments paid \$38 billion for construction work subcontracted to others, leaving net construction receipts of about \$111 billion.

Construction establishments with payroll in the United States paid \$46 billion for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments in the United States was 4.1 million employees. Total payroll for 1972 was \$40 billion. Employment for the pay period including March 12, 1972 was 3.7 million employees, while employment for the pay period including August 12, 1972, was 4.5 million employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments, their secondary construction activities, and any nonconstruction activities.

Construction Receipts by State: 1972 (Location of Establishment)

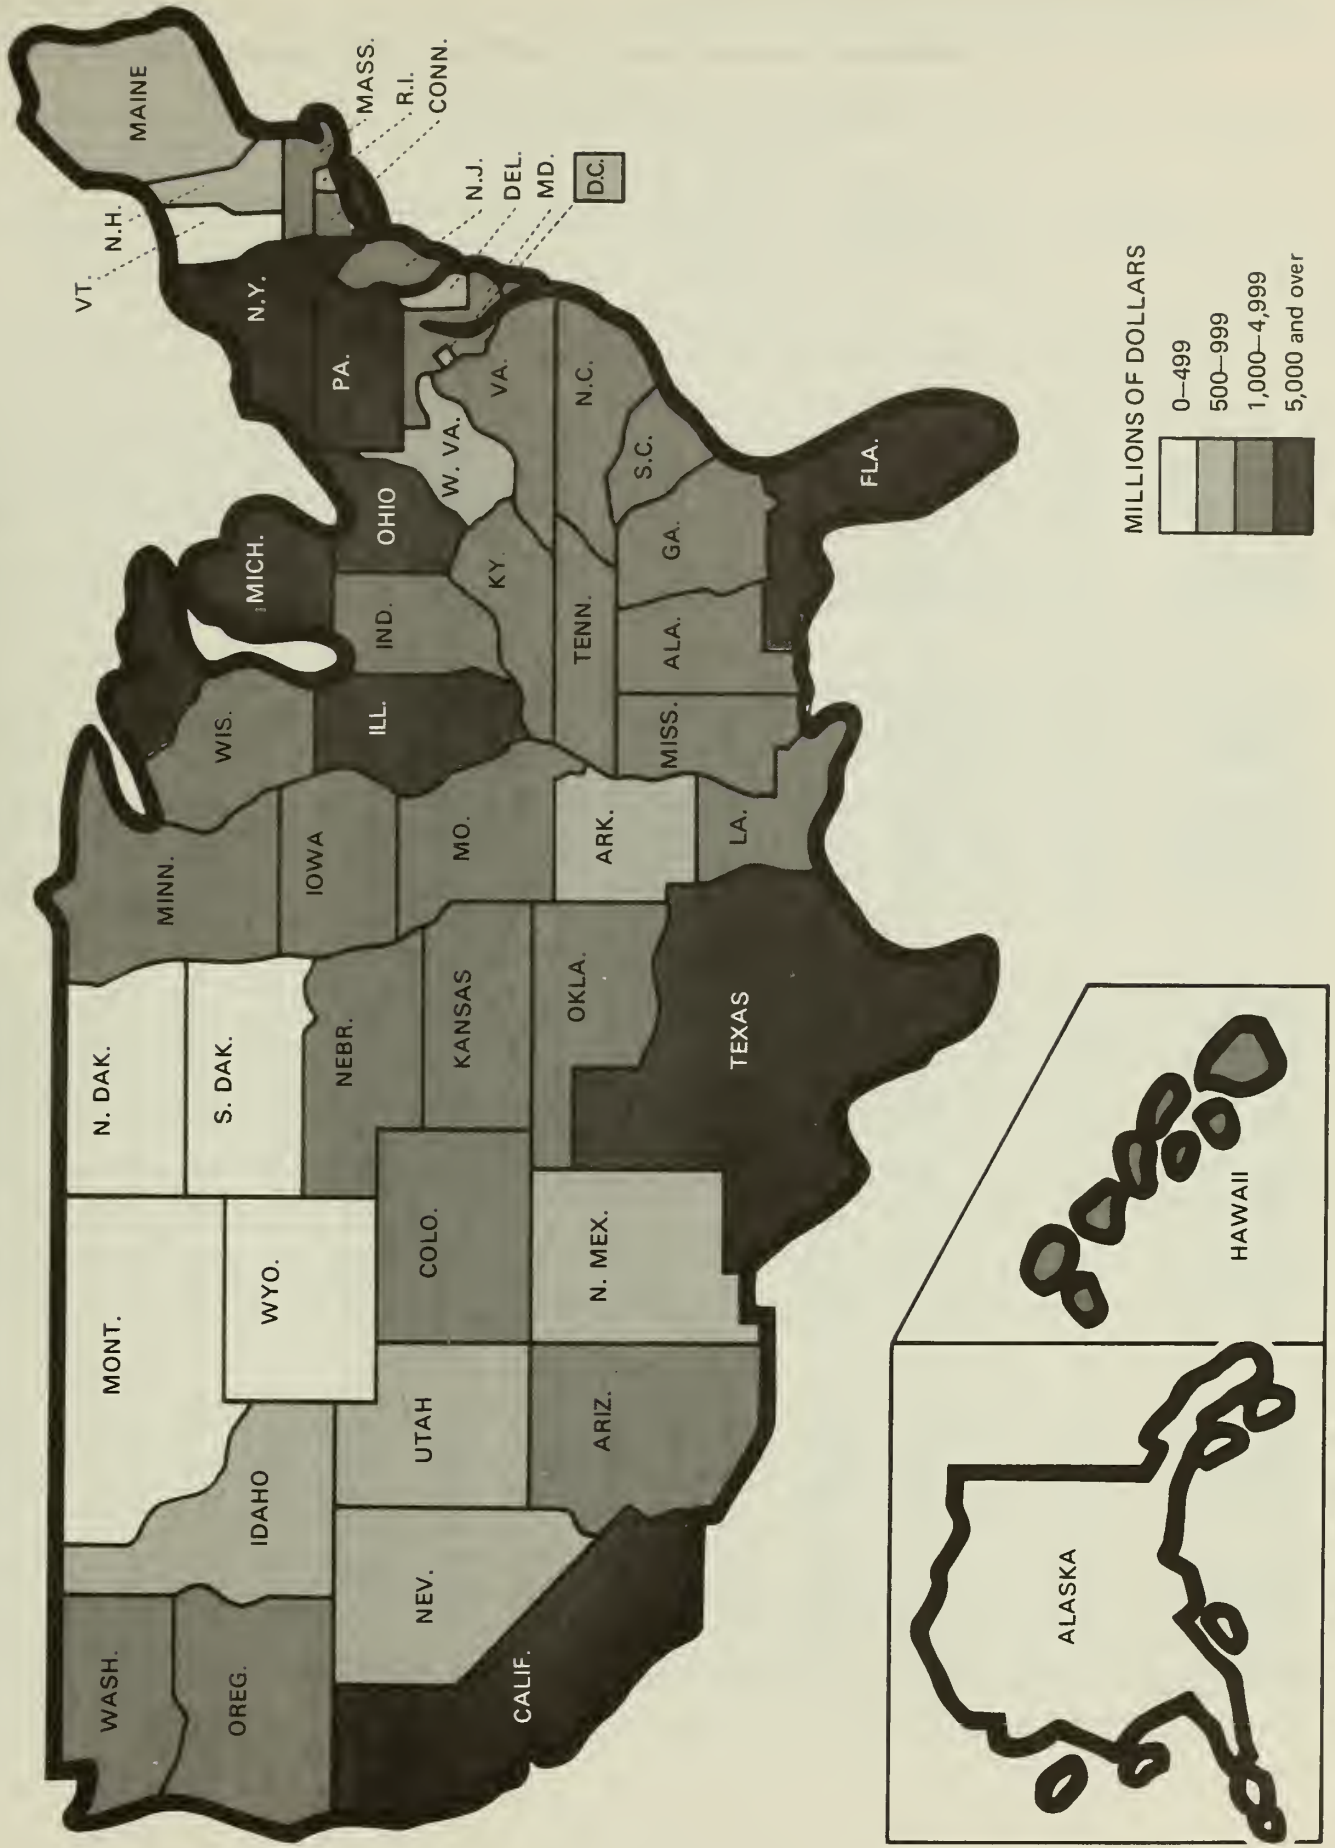

TABLE 1a. Summary Statistics, by Geographic Areas, for Establishments With and Without Payroll: 1972

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

Table with 14 columns: Establishment location, All establishments (Number of establishments, Number of proprietors and working partners, All employees, Total receipts), Establishments without payroll (Number of establishments, Number of proprietors and working partners, Total receipts), Establishments with payroll (Number of establishments, Number of proprietors and working partners, All employees, Total receipts), Standard error of estimates (percent).

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. All such figures are included in higher level totals. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Z Standard error of estimate is greater than zero but less than 1%.

1 Data shown for establishments without payroll include data for 6,758 establishments classified as Subdividers and Developers (SIC 6552). Included within this group are an unknown number of cemetery subdividers and developers.

Regions and Geographic Divisions of the United States

Maine

During 1972, 6,473 establishments in Maine operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$586 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 3,419 nonemployer establishments, or 53 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Maine. On the other hand, 3,054 establishments, 47 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$554 million, of which \$536 million were receipts for construction work. These establishments paid \$85 million for construction work subcontracted to others, leaving net construction receipts of about \$451 million.

Construction establishments with payroll located in Maine paid \$196 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Maine was 19.8 thousand employees. Total payroll for 1972 was \$146 million. Employment for the pay period including March 12, 1972, was 14.7 thousand employees, while employment for the pay period including August 12, 1972, was 23.3 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Maine are based on a sample of about 1,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

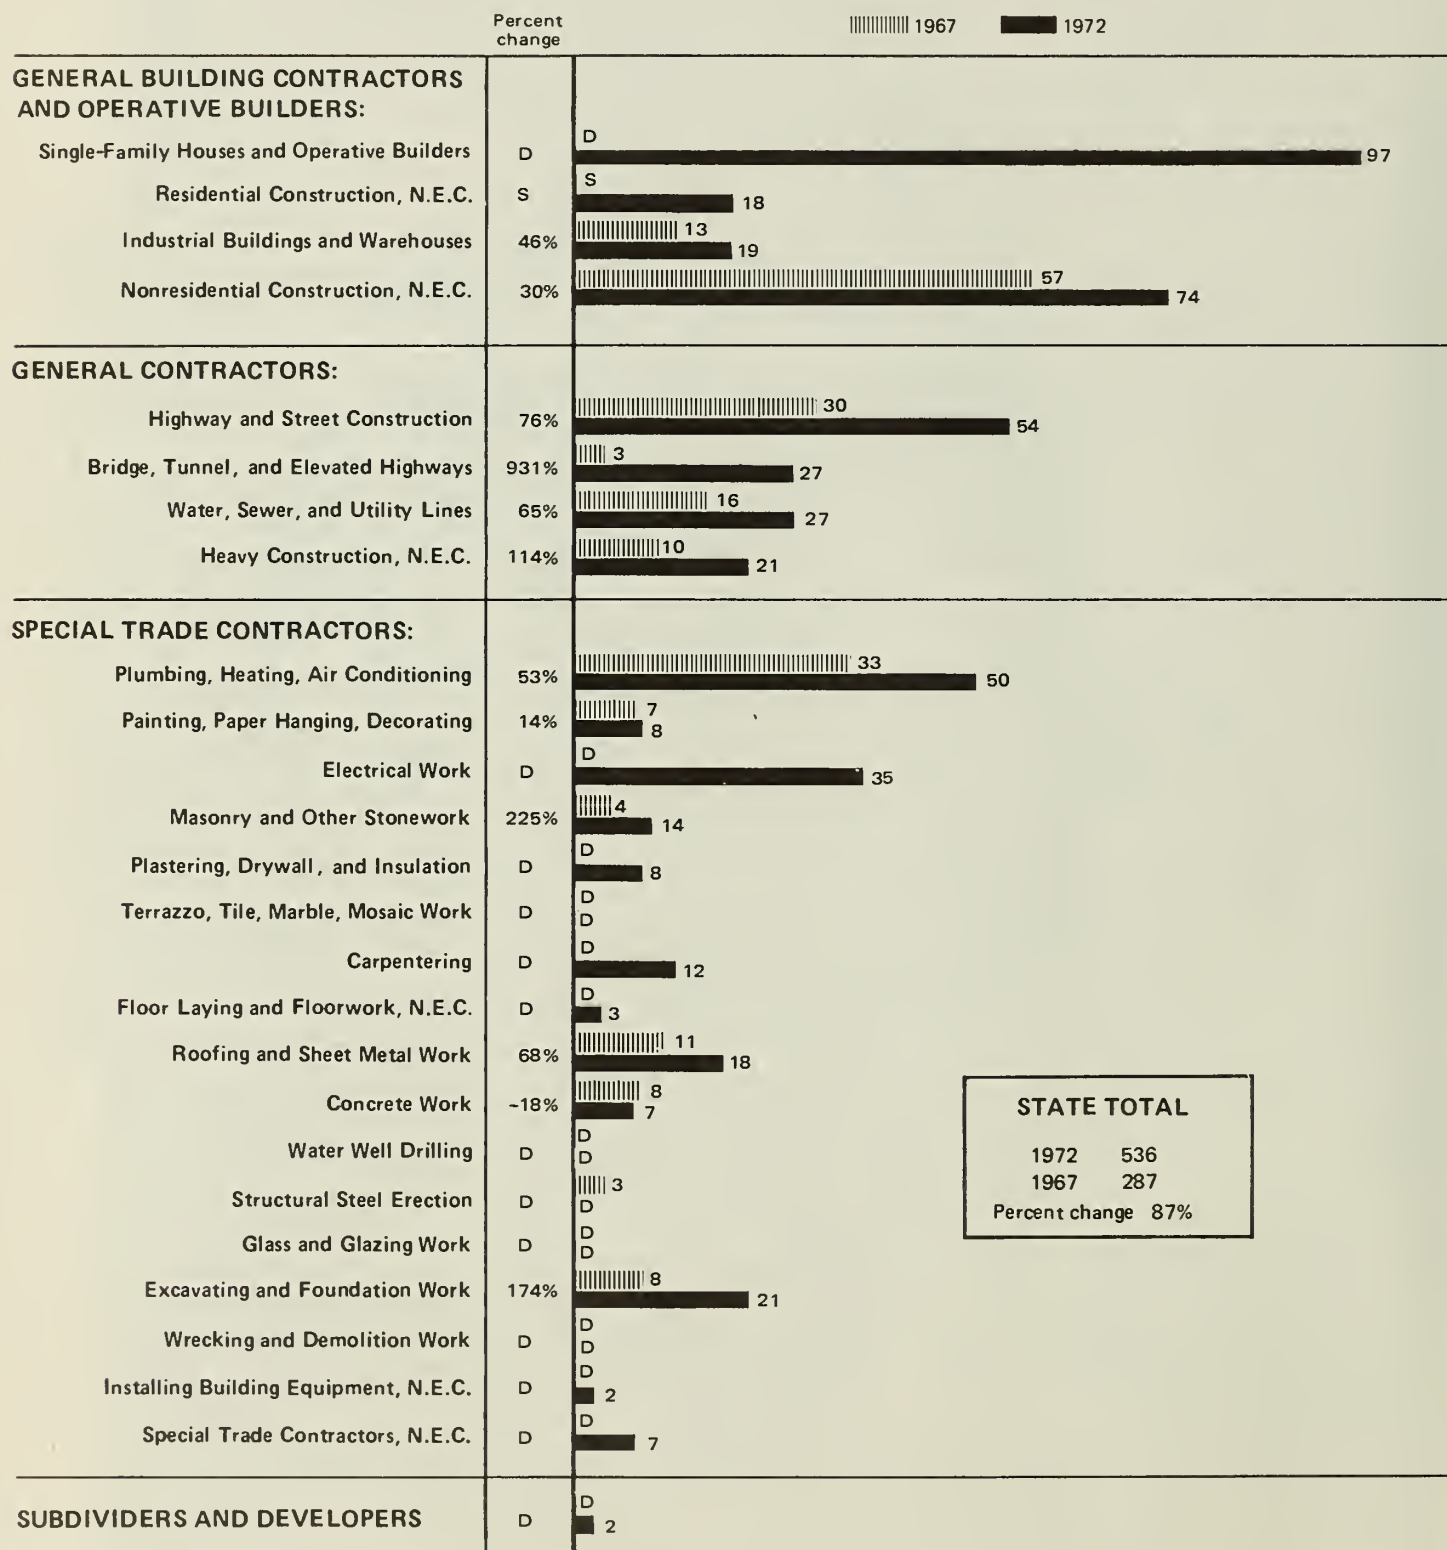

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

MAINE Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies, S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries.
²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$988(000) and for SIC 6552 were \$1,670(000).
³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries.

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

New Hampshire

During 1972, 5,780 establishments in New Hampshire operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$643 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 2,856 nonemployer establishments, or 49 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in New Hampshire. On the other hand, 2,924 establishments, 51 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$603 million, of which \$585 million were receipts for construction work. These establishments paid \$131 million for construction work subcontracted to others, leaving net construction receipts of about \$454 million.

Construction establishments with payroll located in New Hampshire paid \$195 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in New Hampshire was 18.6 thousand employees. Total payroll for 1972 was \$147 million. Employment for the pay period including March 12, 1972, was 14.4 thousand employees, while employment for the pay period including August 12, 1972, was 21.0 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for New Hampshire are based on a sample of about 1,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

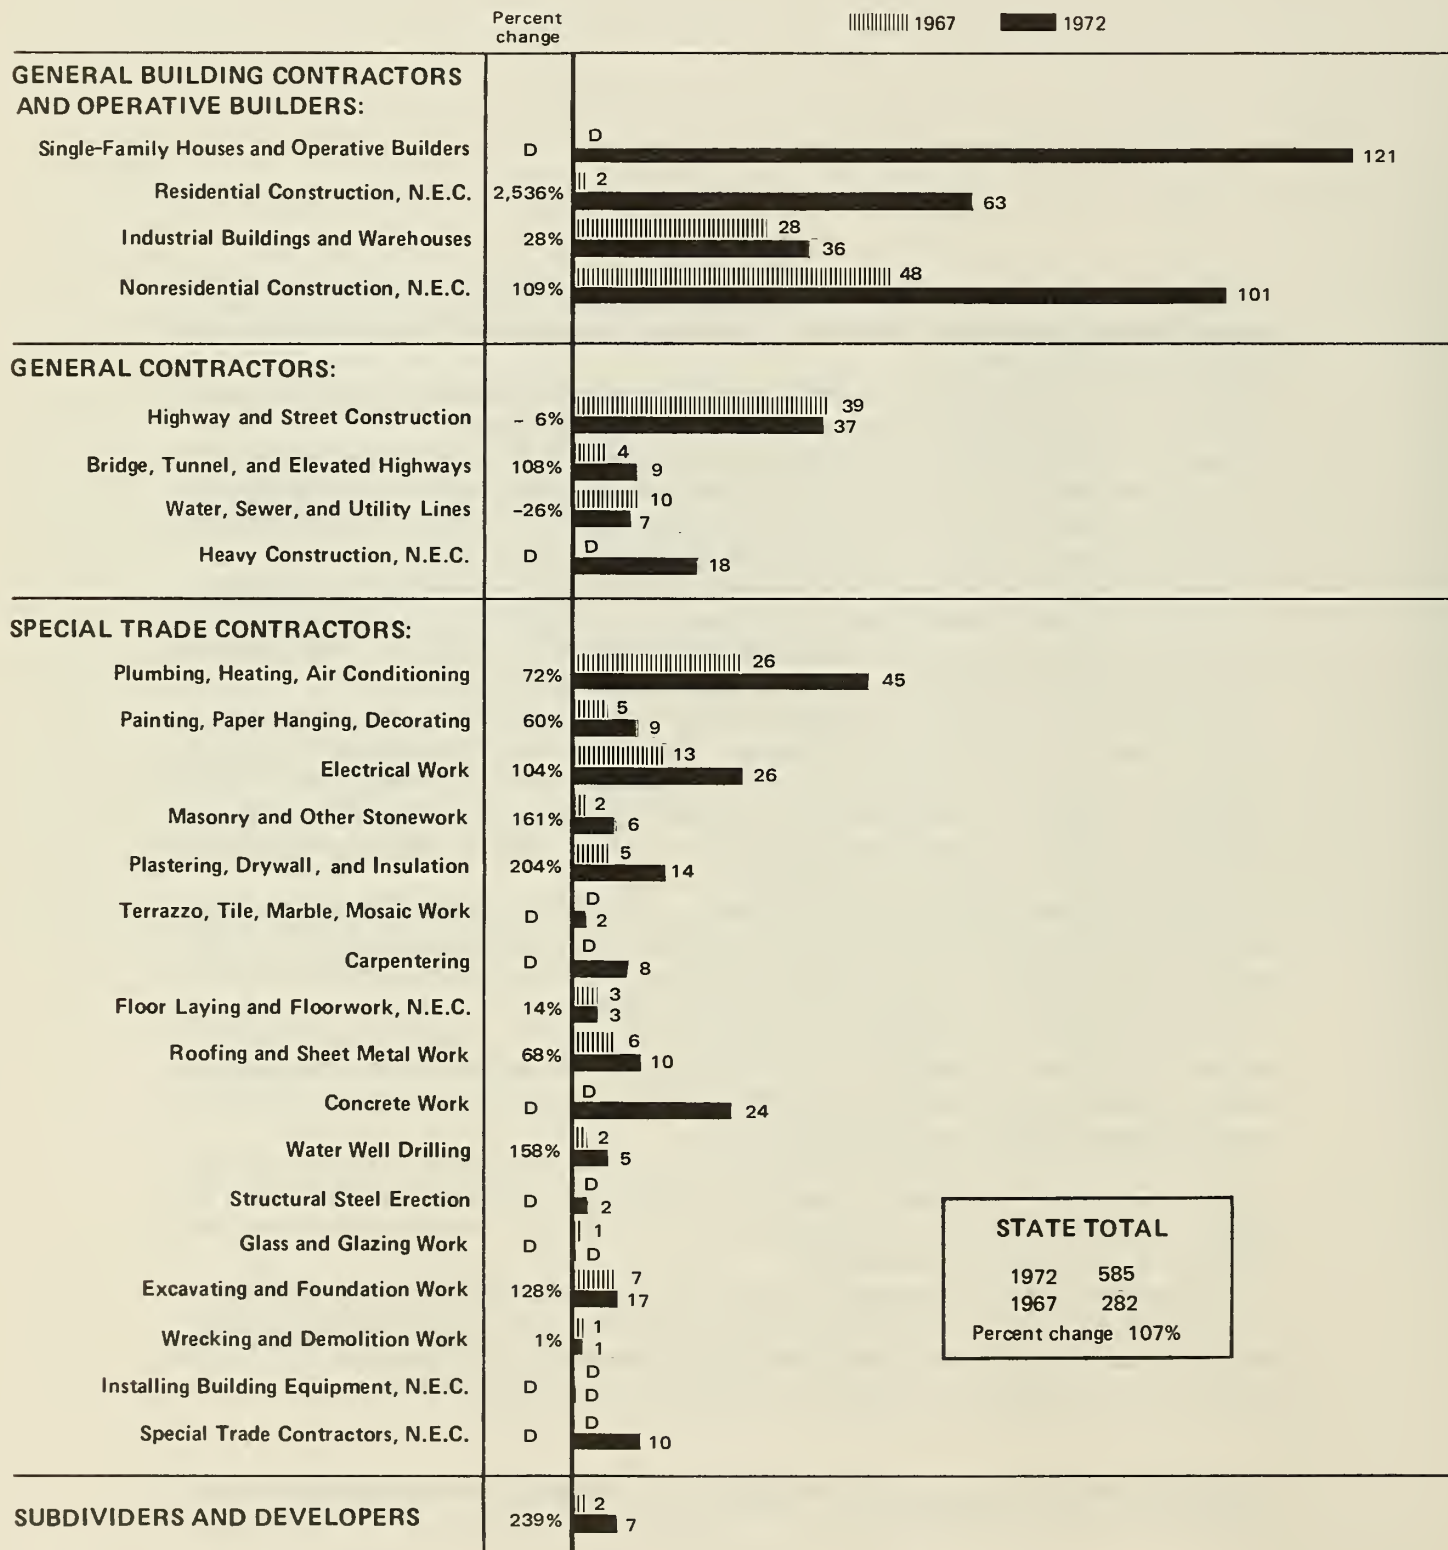

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

NEW HAMPSHIRE *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries.

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Vermont

During 1972, 3,664 establishments in Vermont operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$296 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 1,853 nonemployer establishments, or 51 percent of all construction establishments in the State. They accounted for about 7 percent of the total receipts of all construction establishments in Vermont. On the other hand, 1,811 establishments, 49 percent of all construction establishments, were "employers," who accounted for 93 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$276 million, of which \$261 million were receipts for construction work. These establishments paid \$45 million for construction work subcontracted to others, leaving net construction receipts of about \$216 million.

Construction establishments with payroll located in Vermont paid \$102 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Vermont was 9.3 thousand employees. Total payroll for 1972 was \$71 million. Employment for the pay period including March 12, 1972, was 7.2 thousand employees, while employment for the pay period including August 12, 1972, was 10.9 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Vermont are based on a sample of about 700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

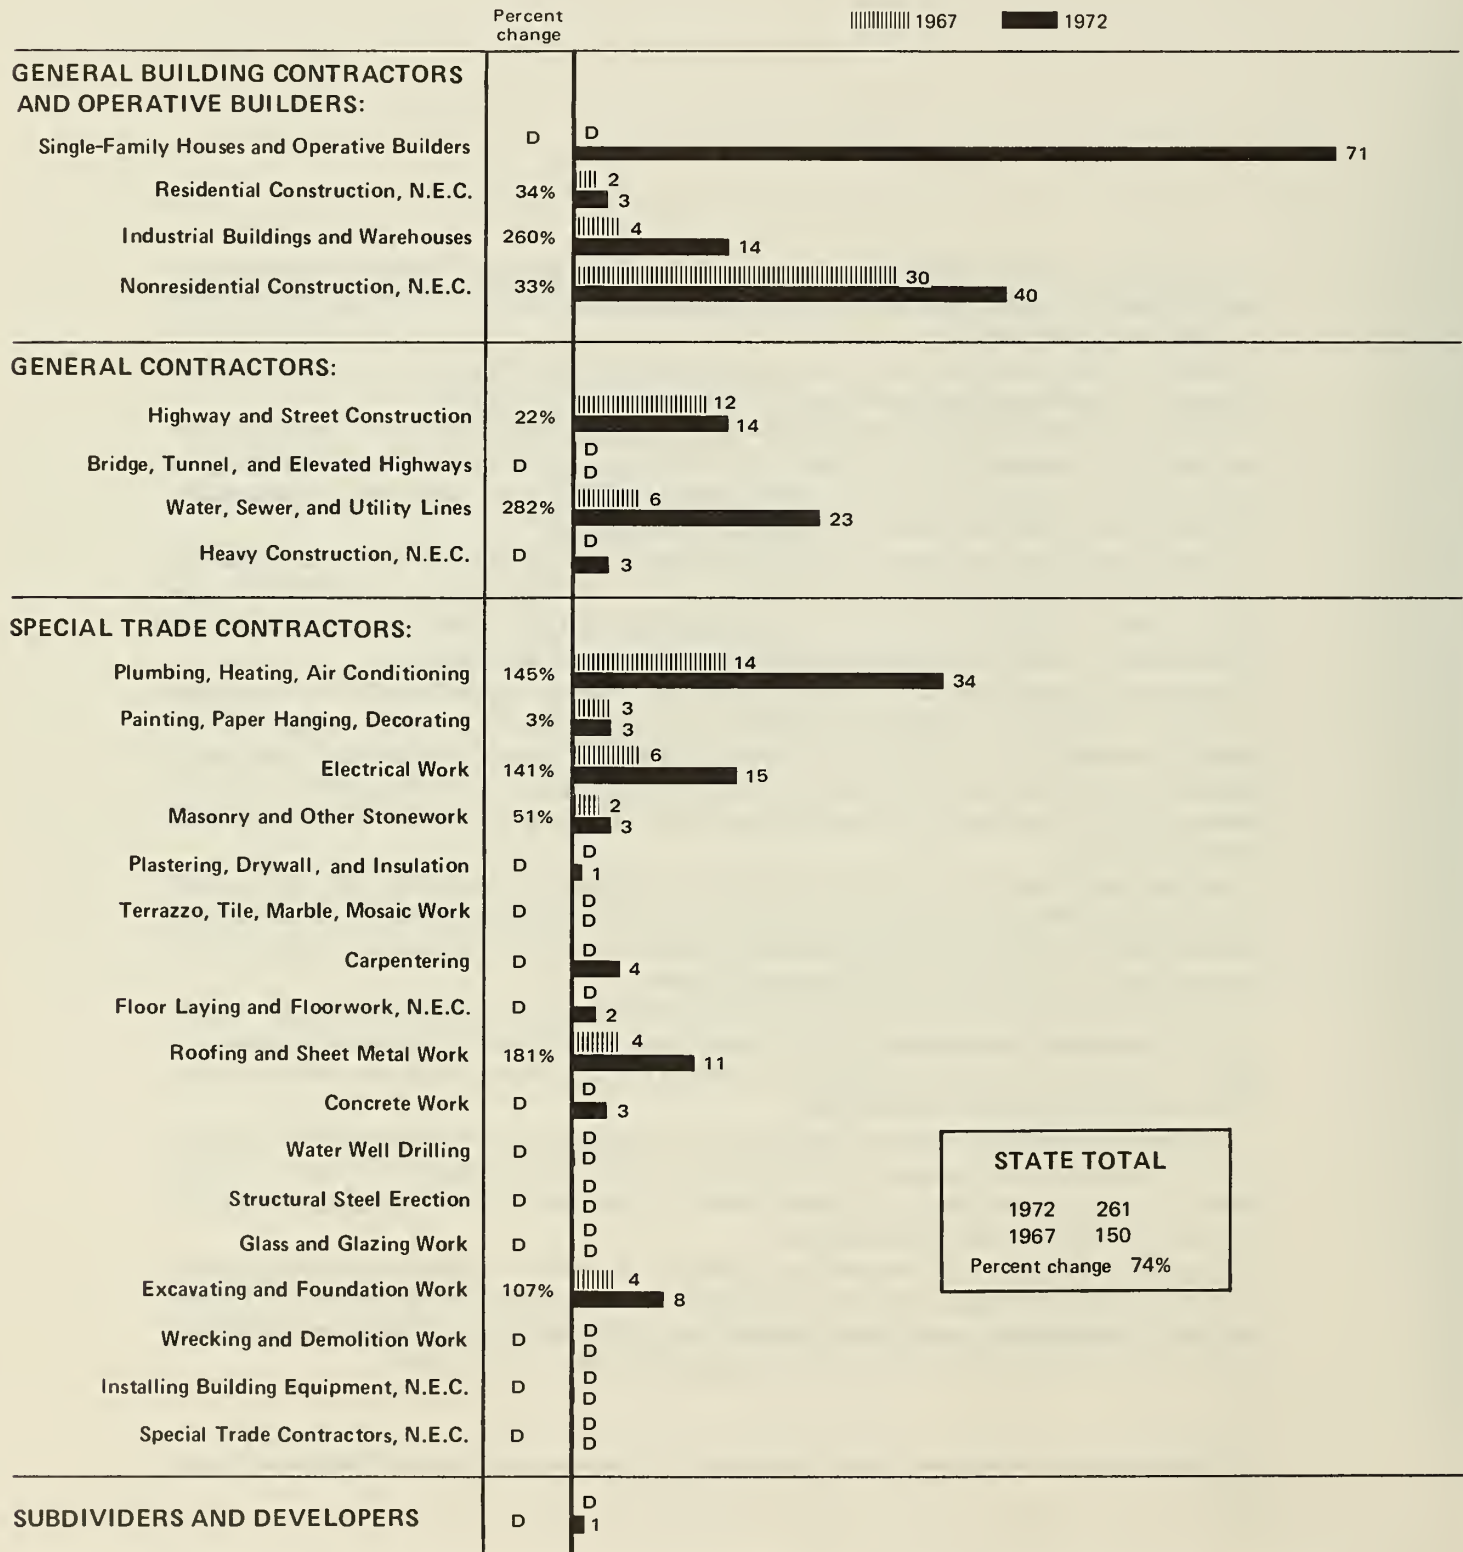

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Combined because of misclassification problems within these two industries.
²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$1,903(000).
³For 1972, over 30% of the data was estimated.
⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries.

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Massachusetts

During 1972, 26,488 establishments in Massachusetts operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$4,765 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 13,429 nonemployer establishments, or 51 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Massachusetts. On the other hand, 13,059 establishments, 49 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$4,539 million, of which \$4,442 million were receipts for construction work. These establishments paid \$1,051 million for construction work subcontracted to others, leaving net construction receipts of about \$3,391 million.

Construction establishments with payroll located in Massachusetts paid \$1,325 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Massachusetts was 113.9 thousand employees. Total payroll for 1972 was \$1,247 million. Employment for the pay period including March 12, 1972, was 96.1 thousand employees, while employment for the pay period including August 12, 1972, was 125.6 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Massachusetts are based on a sample of about 4,600 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

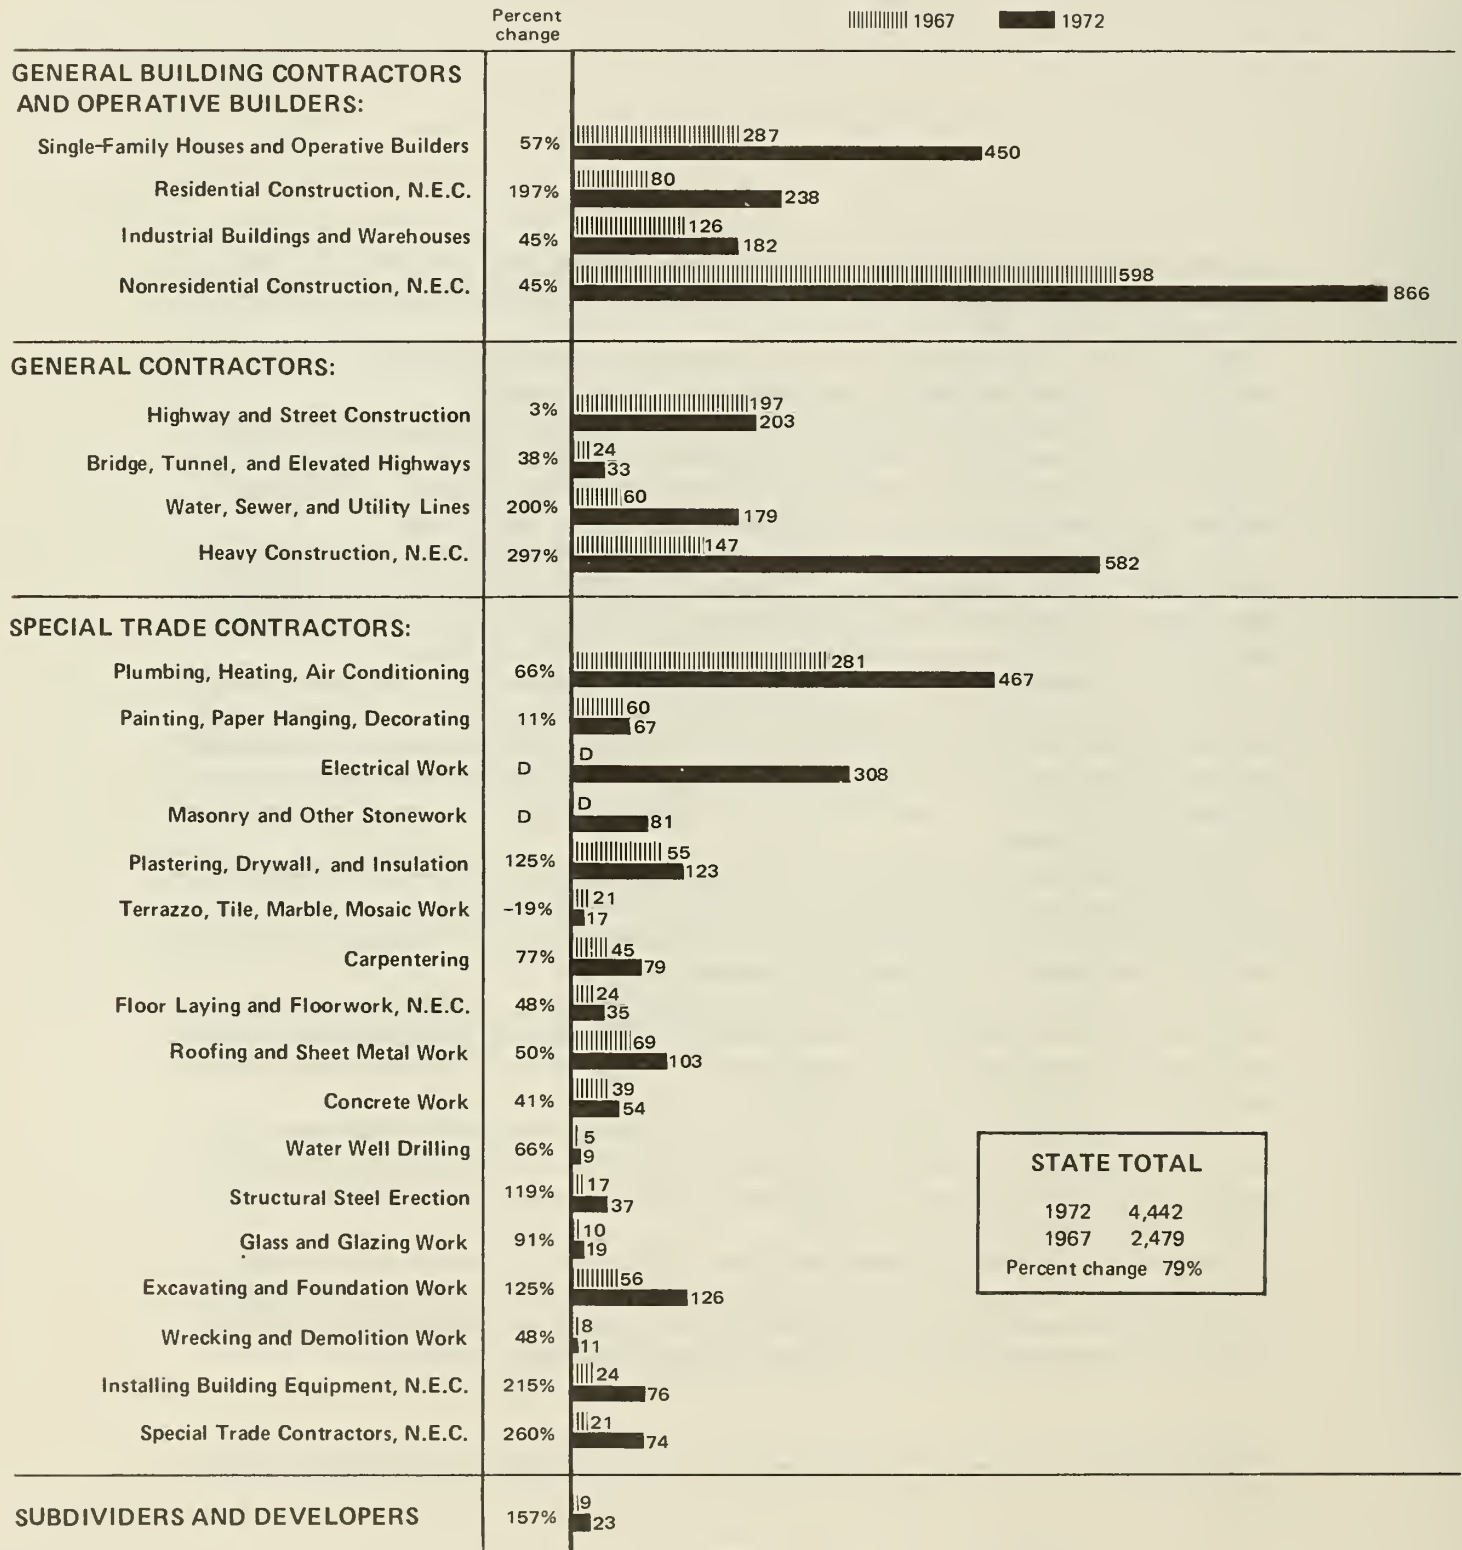

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

MASSACHUSETTS Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries.
²"Value added" equals "total receipts" less "land receipts" less "total selected payments.". "Land receipts" for SIC 1521 and SIC 1531 combined were \$12,773(000) and for SIC 6552 were \$13,670(000).
³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data is not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries.

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data is not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Rhode Island

During 1972, 4,403 establishments in Rhode Island operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$809 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 1,921 nonemployer establishments, or 44 percent of all construction establishments in the State. They accounted for about 3 percent of the total receipts of all construction establishments in Rhode Island. On the other hand, 2,482 establishments, 56 percent of all construction establishments, were "employers," who accounted for 97 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$783 million, of which \$749 million were receipts for construction work. These establishments paid \$231 million for construction work subcontracted to others, leaving net construction receipts of about \$518 million.

Construction establishments with payroll located in Rhode Island paid \$211 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Rhode Island was 20.1 thousand employees. Total payroll for 1972 was \$209 million. Employment for the pay period including March 12, 1972, was 15.4 thousand employees, while employment for the pay period including August 12, 1972, was 22.7 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Rhode Island are based on a sample of about 900 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

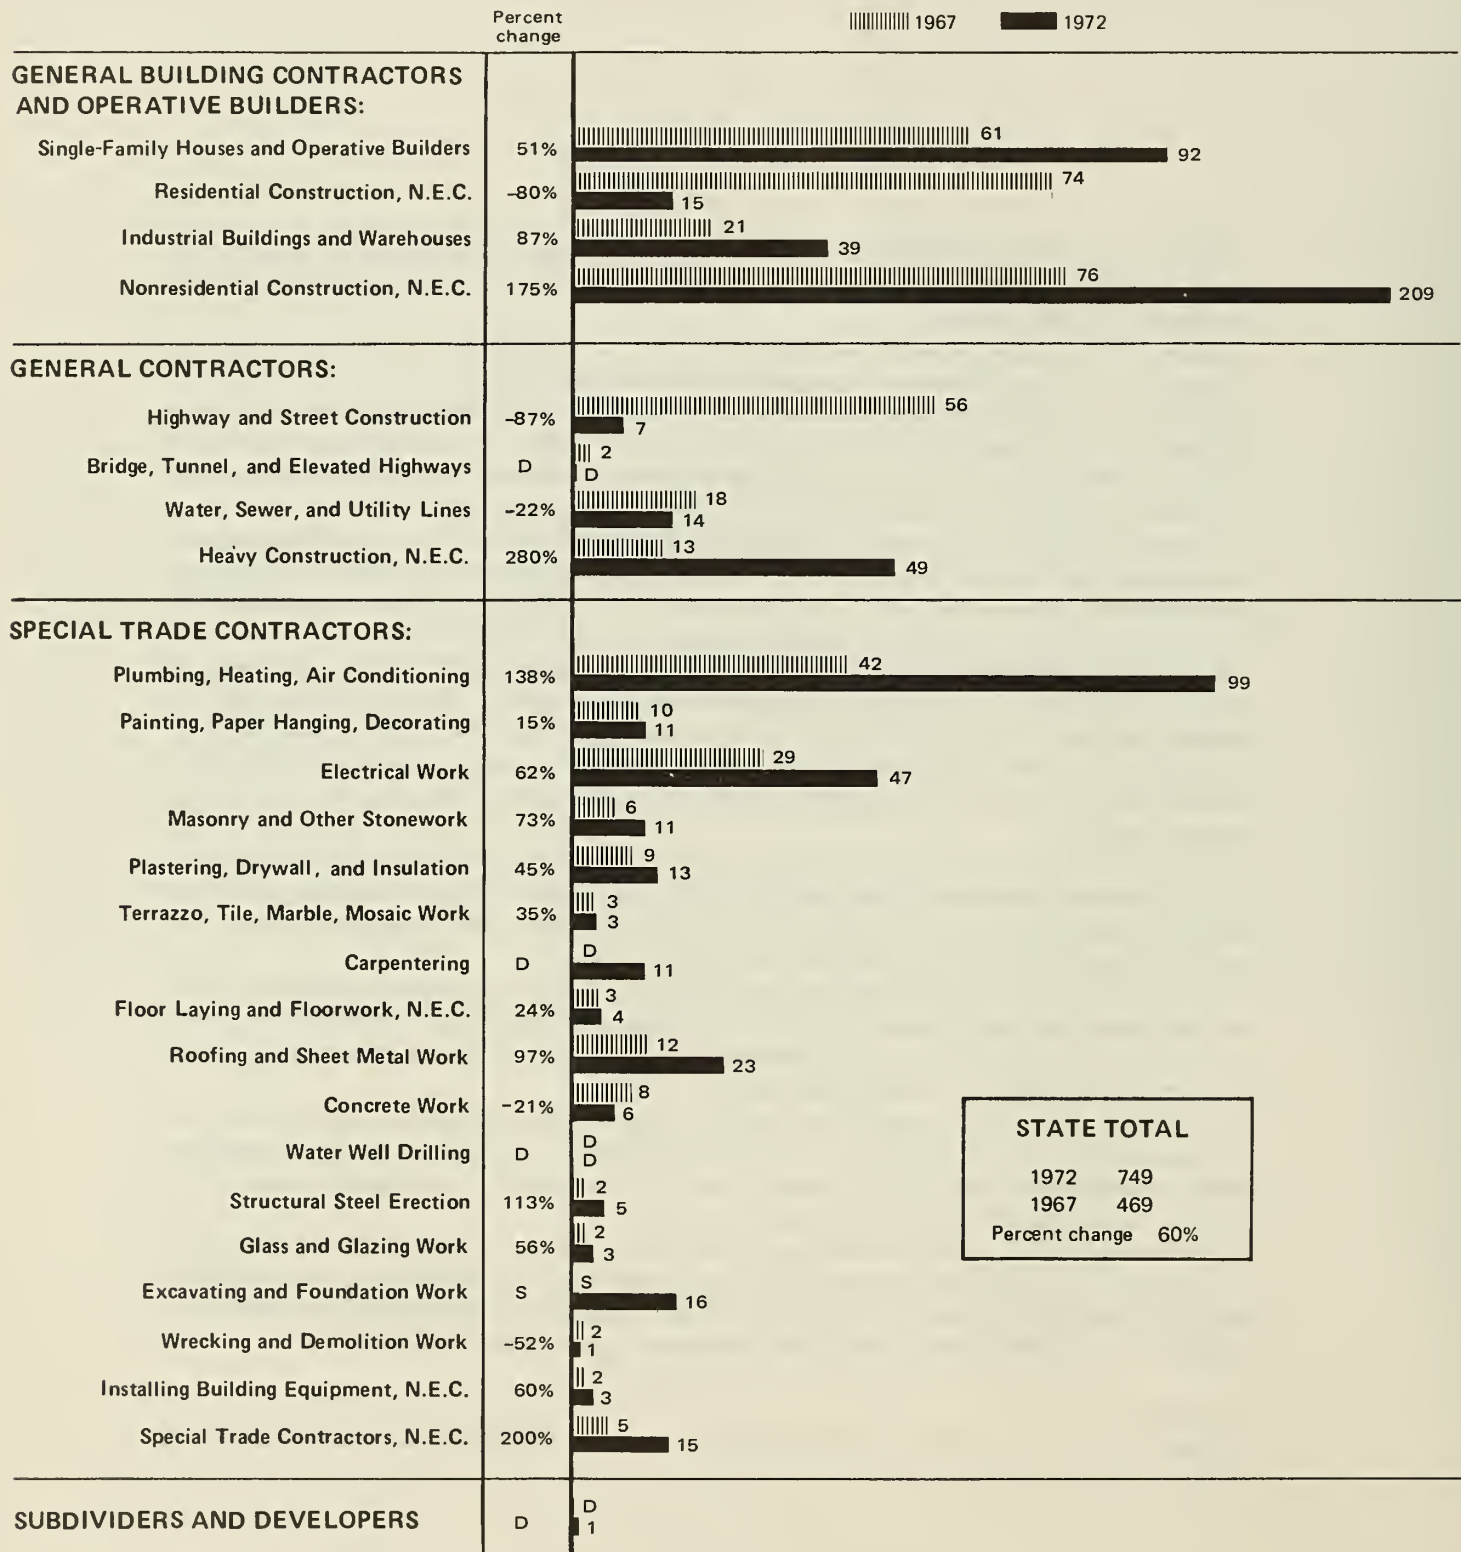

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

RHODE ISLAND *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries.

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Connecticut

During 1972, 15,182 establishments in Connecticut operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,521 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 7,220 nonemployer establishments, or 48 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Connecticut. On the other hand, 7,962 establishments, 52 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,381 million, of which \$2,331 million were receipts for construction work. These establishments paid \$578 million for construction work subcontracted to others, leaving net construction receipts of about \$1,753 million.

Construction establishments with payroll located in Connecticut paid \$647 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Connecticut was 61.5 thousand employees. Total payroll for 1972 was \$679 million. Employment for the pay period including March 12, 1972, was 51.2 thousand employees, while employment for the pay period including August 12, 1972, was 67.3 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Connecticut are based on a sample of about 2,800 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

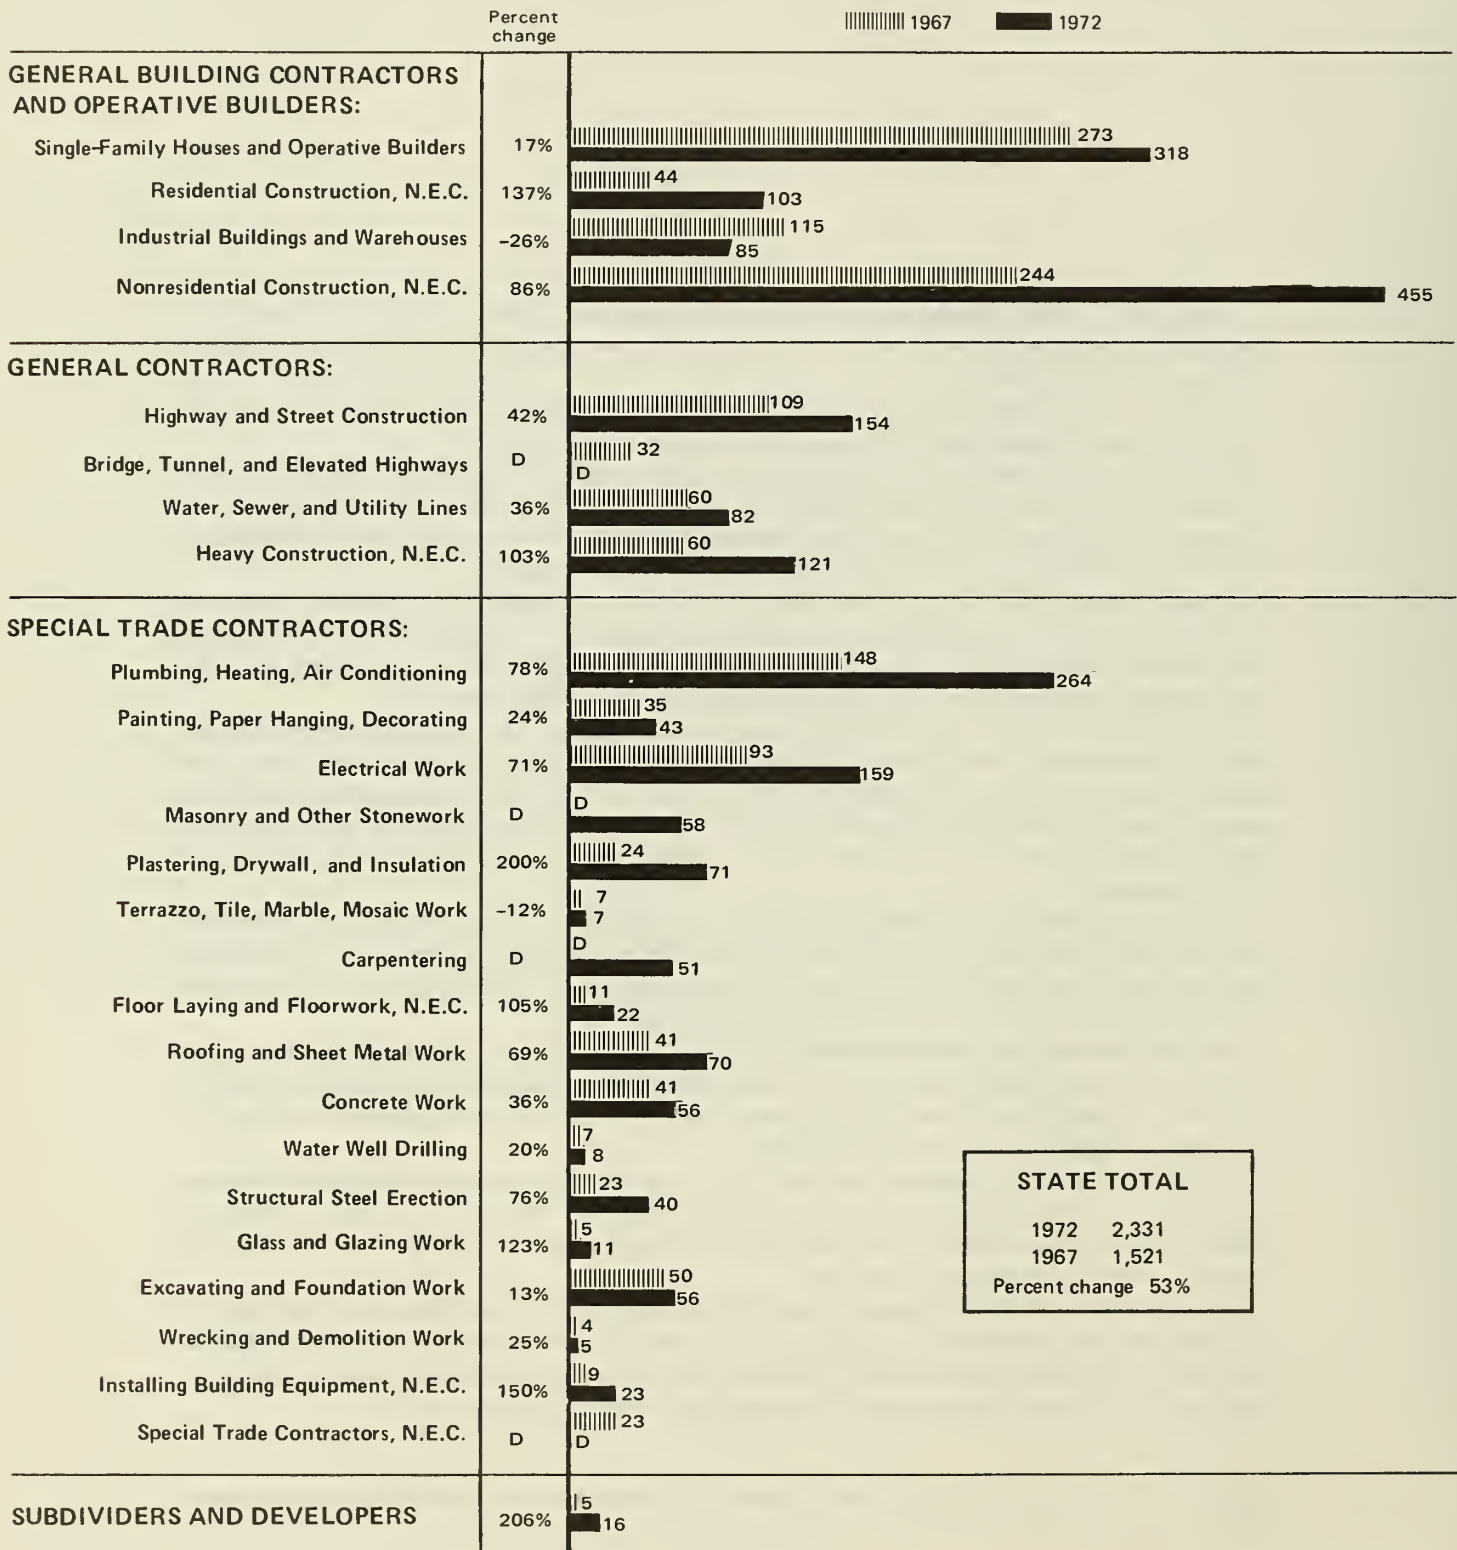

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

CONNECTICUT *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

STATE TOTAL

1972 2,331

1967 1,521

Percent change 53%

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

TABLE 1. Summary Statistics, by Industry Groups and Industries, for Establishments With and Without Payroll Located in the State: 1972

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

¹Combined because of misclassification problems within these two industries.

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$9,202(000) and for SIC 6552 were \$4,875(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

^aSampling error is greater than 40%.

¹Combined because of misclassification problems within these two industries.

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

New York

During 1972, 59,198 establishments in New York operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$12,319 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 28,834 nonemployer establishments, or 49 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in New York. On the other hand, 30,364 establishments, 51 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$11,799 million, of which \$11,549 million were receipts for construction work. These establishments paid \$3,026 million for construction work subcontracted to others, leaving net construction receipts of about \$8,523 million.

Construction establishments with payroll located in New York paid \$3,004 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in New York was 290.6 thousand employees. Total payroll for 1972 was \$3,436 million. Employment for the pay period including March 12, 1972, was 257.5 thousand employees, while employment for the pay period including August 12, 1972, was 301.5 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for New York are based on a sample of about 11,500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

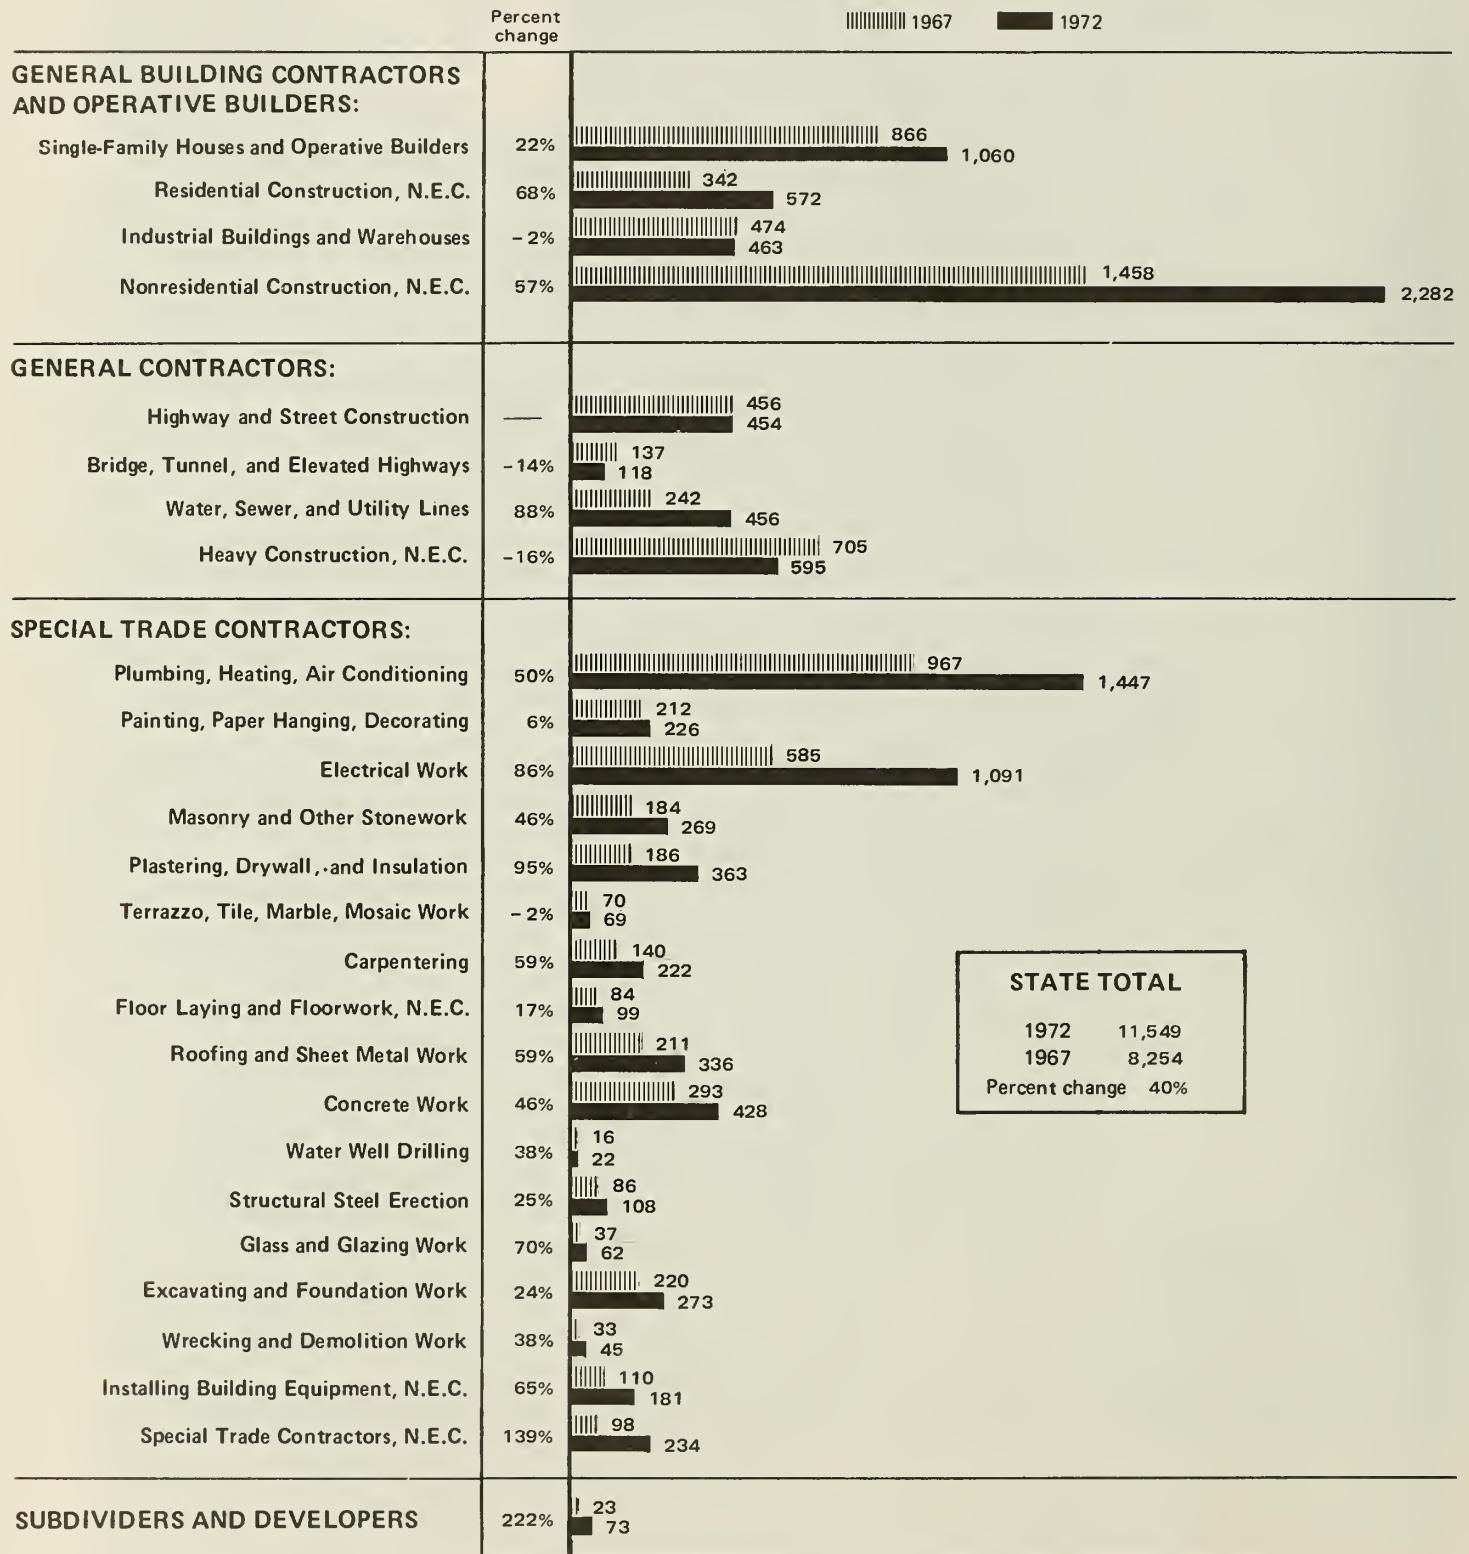

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$50,818(000) and for SIC 6552 were \$33,510(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

New Jersey

During 1972, 28,103 establishments in New Jersey operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$5,350 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 12,573 nonemployer establishments, or 45 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in New Jersey. On the other hand, 15,530 establishments, 55 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$5,108 million, of which \$4,968 million were receipts for construction work. These establishments paid \$1,207 million for construction work subcontracted to others, leaving net construction receipts of about \$3,761 million.

Construction establishments with payroll located in New Jersey paid \$1,467 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in New Jersey was 129.7 thousand employees. Total payroll for 1972 was \$1,375 million. Employment for the pay period including March 12, 1972, was 109.3 thousand employees, while employment for the pay period including August 12, 1972, was 141.3 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for New Jersey are based on a sample of about 5,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

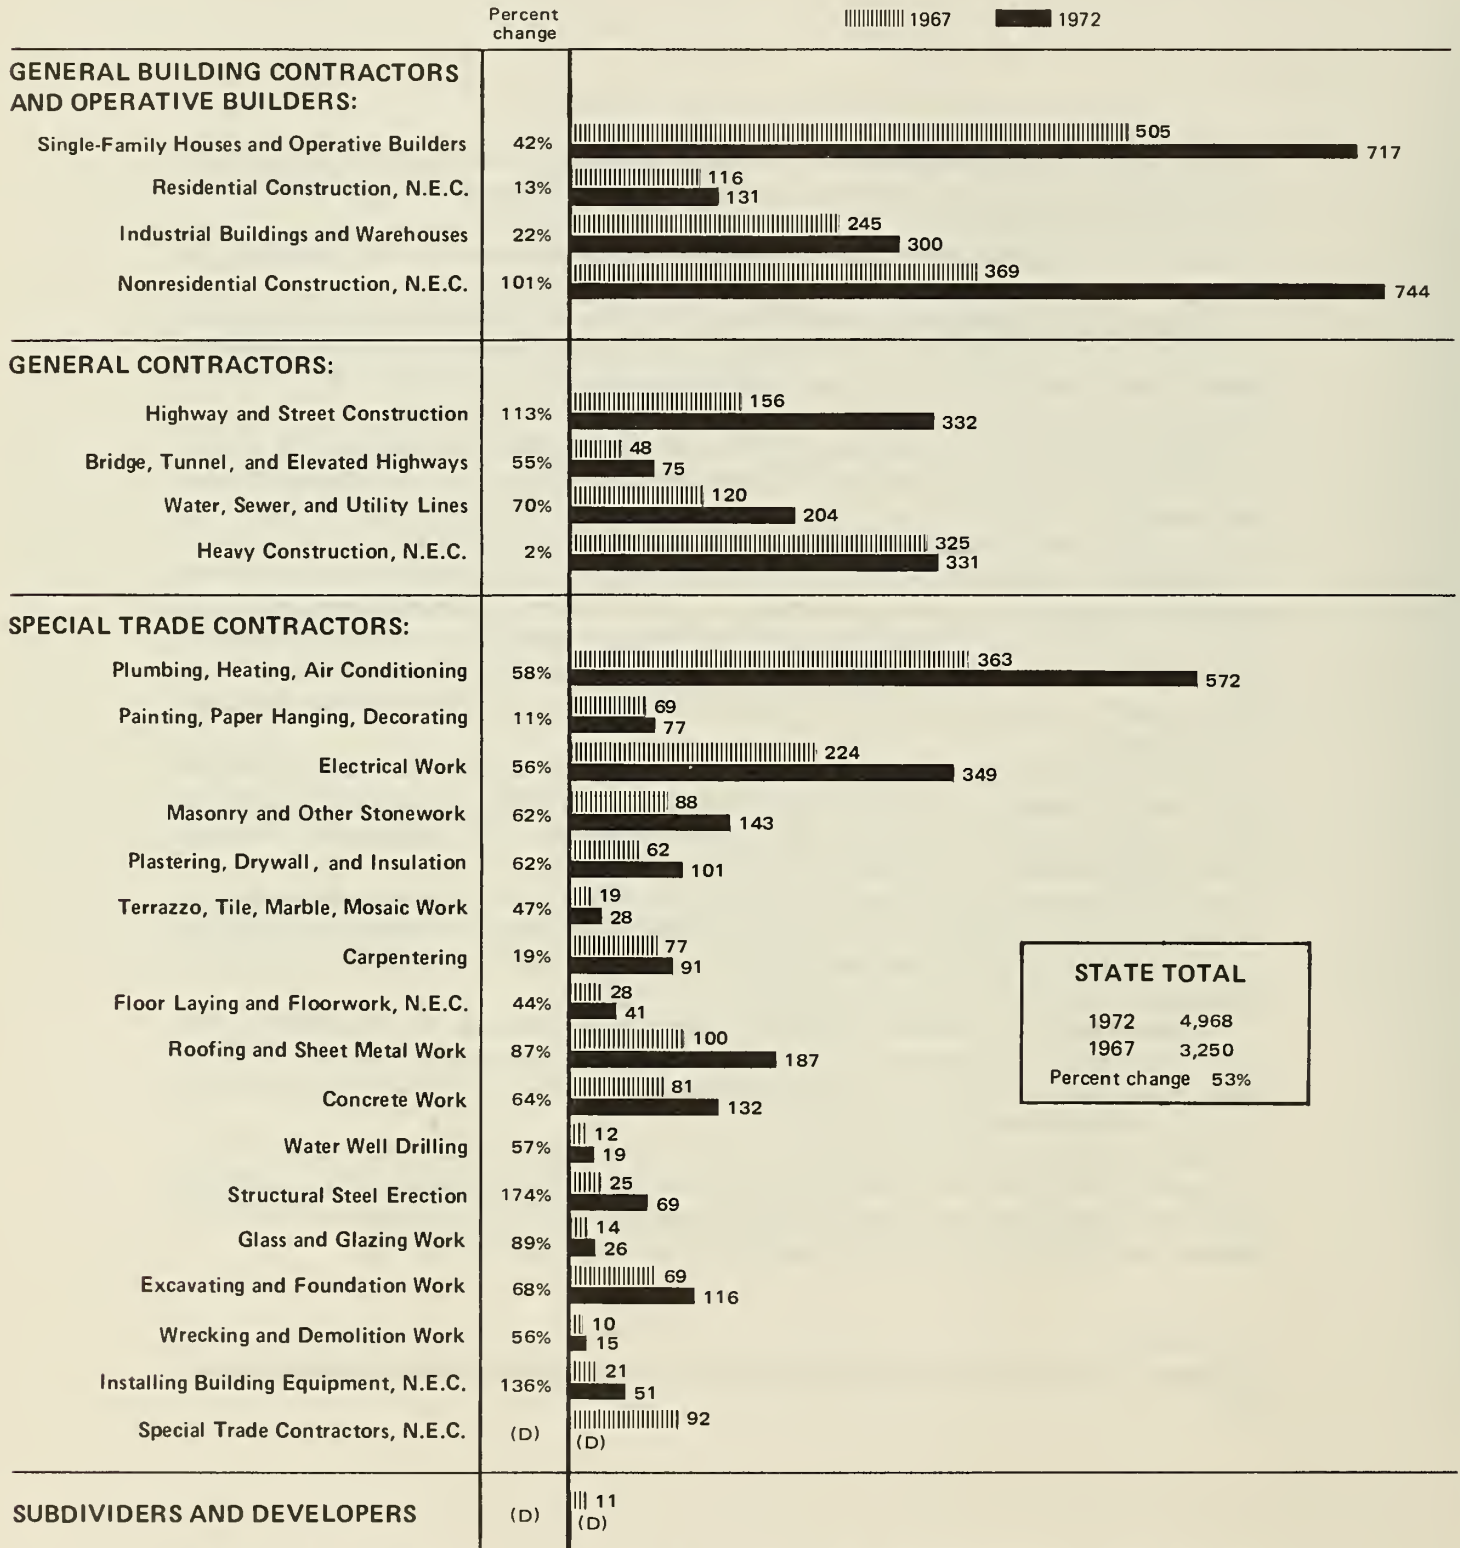

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

NEW JERSEY *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$27,671(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Pennsylvania

During 1972, 46,074 establishments in Pennsylvania operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$8,982 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 23,413 nonemployer establishments, or 51 percent of all construction establishments in the State. They accounted for about 9 percent of the total receipts of all construction establishments in Pennsylvania. On the other hand, 22,661 establishments, 49 percent of all construction establishments, were "employers," who accounted for 91 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$8,202 million, of which \$7,892 million were receipts for construction work. These establishments paid \$1,655 million for construction work subcontracted to others, leaving net construction receipts of about \$6,237 million.

Construction establishments with payroll located in Pennsylvania paid \$2,402 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Pennsylvania was 236.6 thousand employees. Total payroll for 1972 was \$2,465 million. Employment for the pay period including March 12, 1972, was 204.6 thousand employees, while employment for the pay period including August 12, 1972, was 261.6 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Pennsylvania are based on a sample of about 8,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

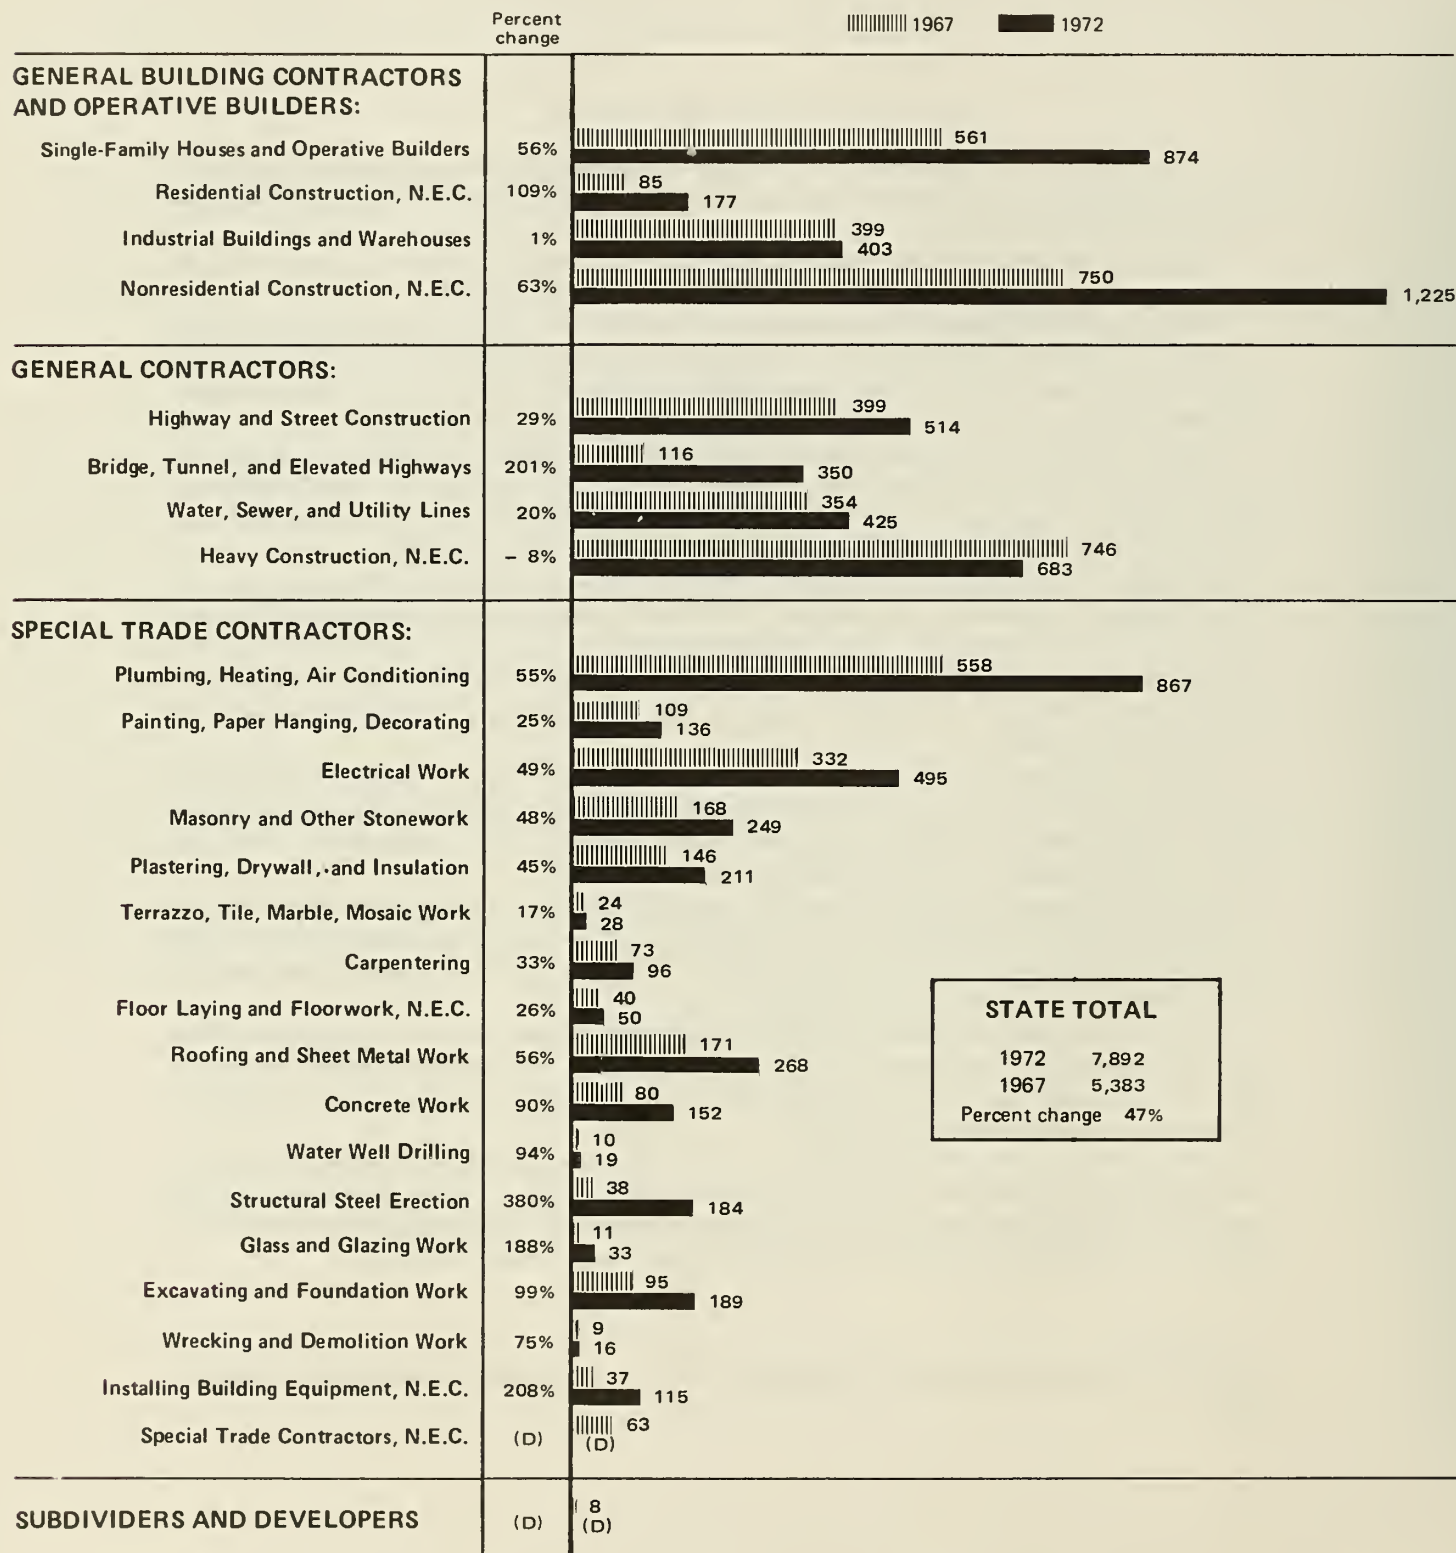

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

PENNSYLVANIA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$31,067,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

Ohio

During 1972, 45,668 establishments in Ohio operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$7,578 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 25,825 nonemployer establishments, or 57 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Ohio. On the other hand, 19,843 establishments, 43 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$7,186 million, of which \$6,968 million were receipts for construction work. These establishments paid \$1,823 million for construction work subcontracted to others, leaving net construction receipts of about \$5,146 million.

Construction establishments with payroll located in Ohio paid \$2,166 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Ohio was 180.5 thousand employees. Total payroll for 1972 was \$1,979 million. Employment for the pay period including March 12, 1972, was 152.1 thousand employees, while employment for the pay period including August 12, 1972, was 200.8 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Ohio are based on a sample of about 7,200 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

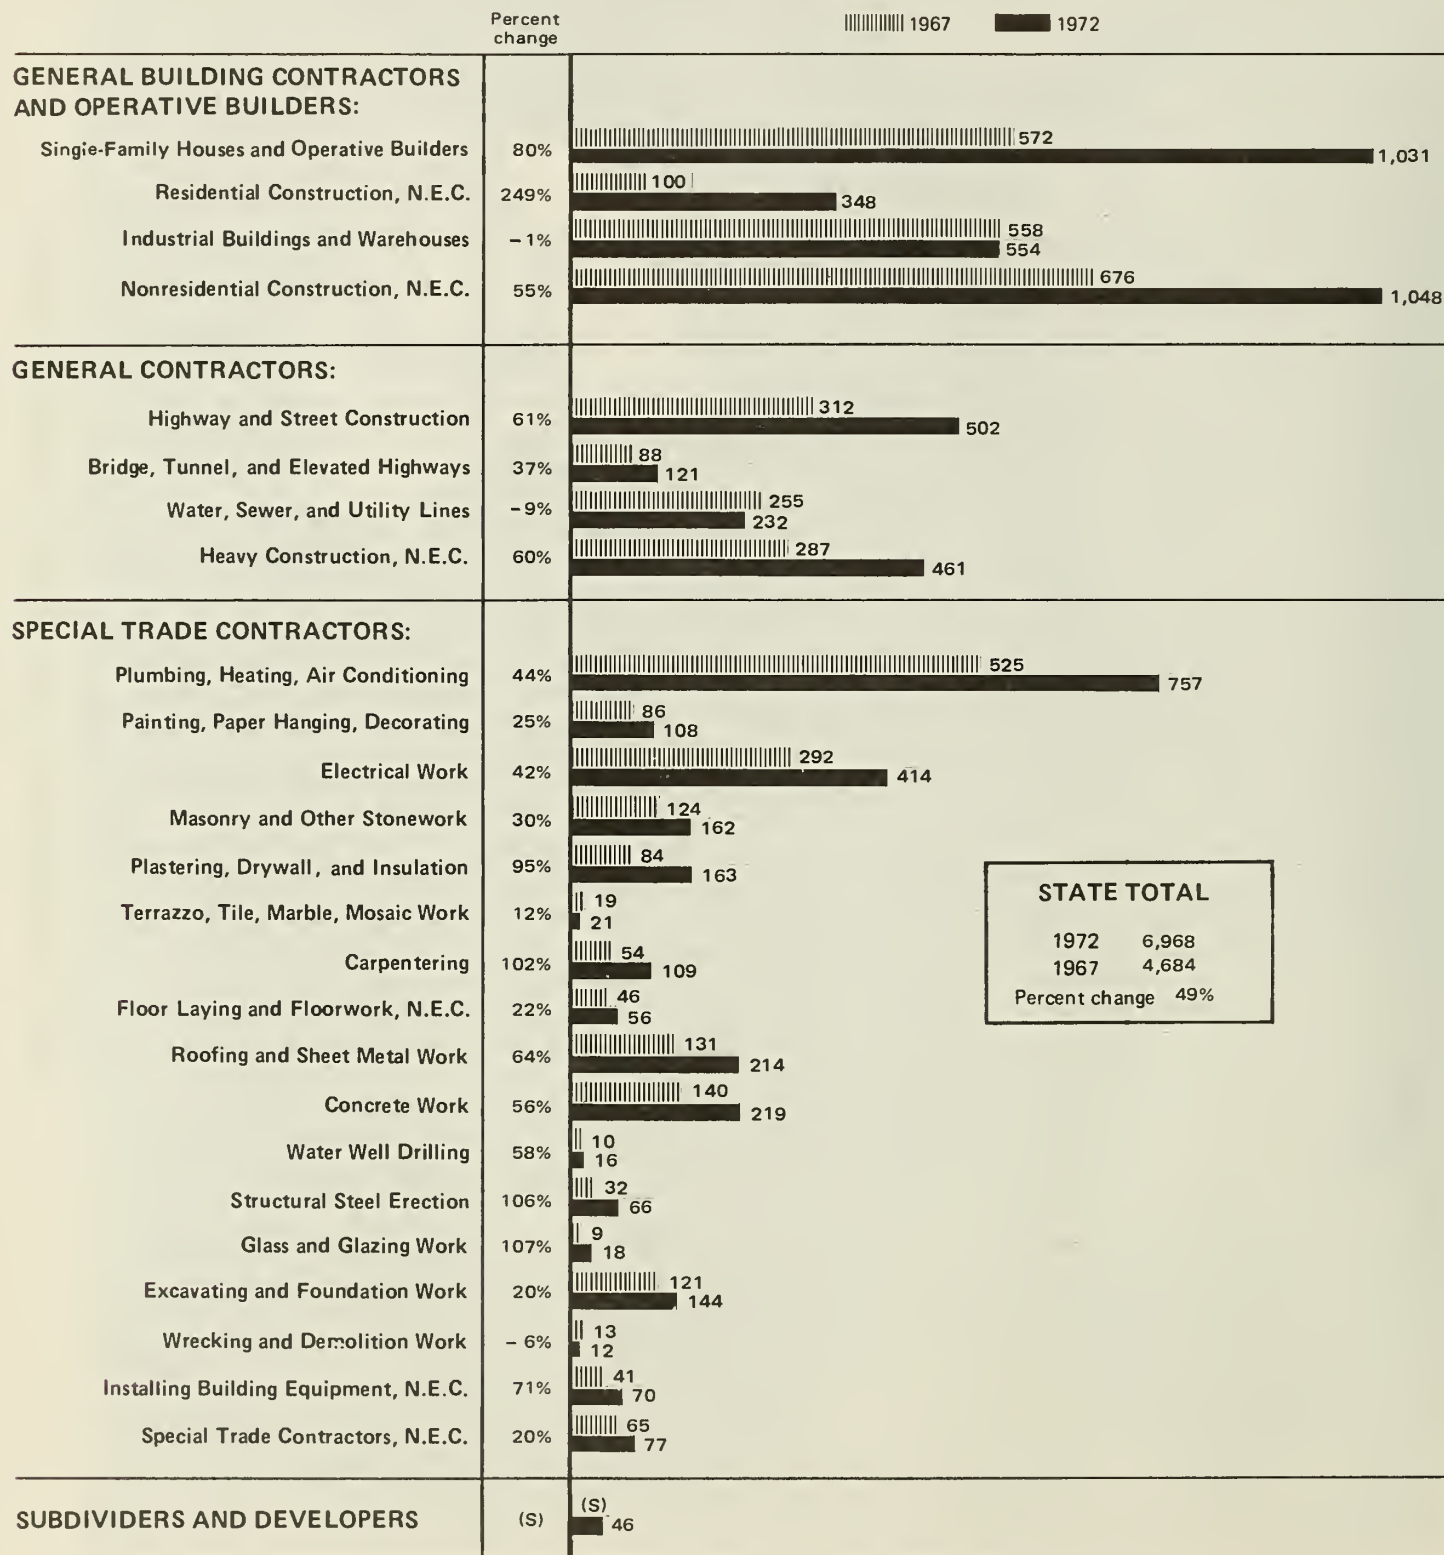

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

OHIO Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: -Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$50,485,000 and for SIC 6552 were \$35,467,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Indiana

During 1972, 22,271 establishments in Indiana operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$3,429 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 12,193 nonemployer establishments, or 55 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Indiana. On the other hand, 10,078 establishments, 45 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$3,220 million, of which \$3,116 million were receipts for construction work. These establishments paid \$688 million for construction work subcontracted to others, leaving net construction receipts of about \$2,429 million.

Construction establishments with payroll located in Indiana paid \$1,012 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Indiana was 90.9 thousand employees. Total payroll for 1972 was \$914 million. Employment for the pay period including March 12, 1972, was 76.8 thousand employees, while employment for the pay period including August 12, 1972, was 101.2 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Indiana are based on a sample of about 3,600 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

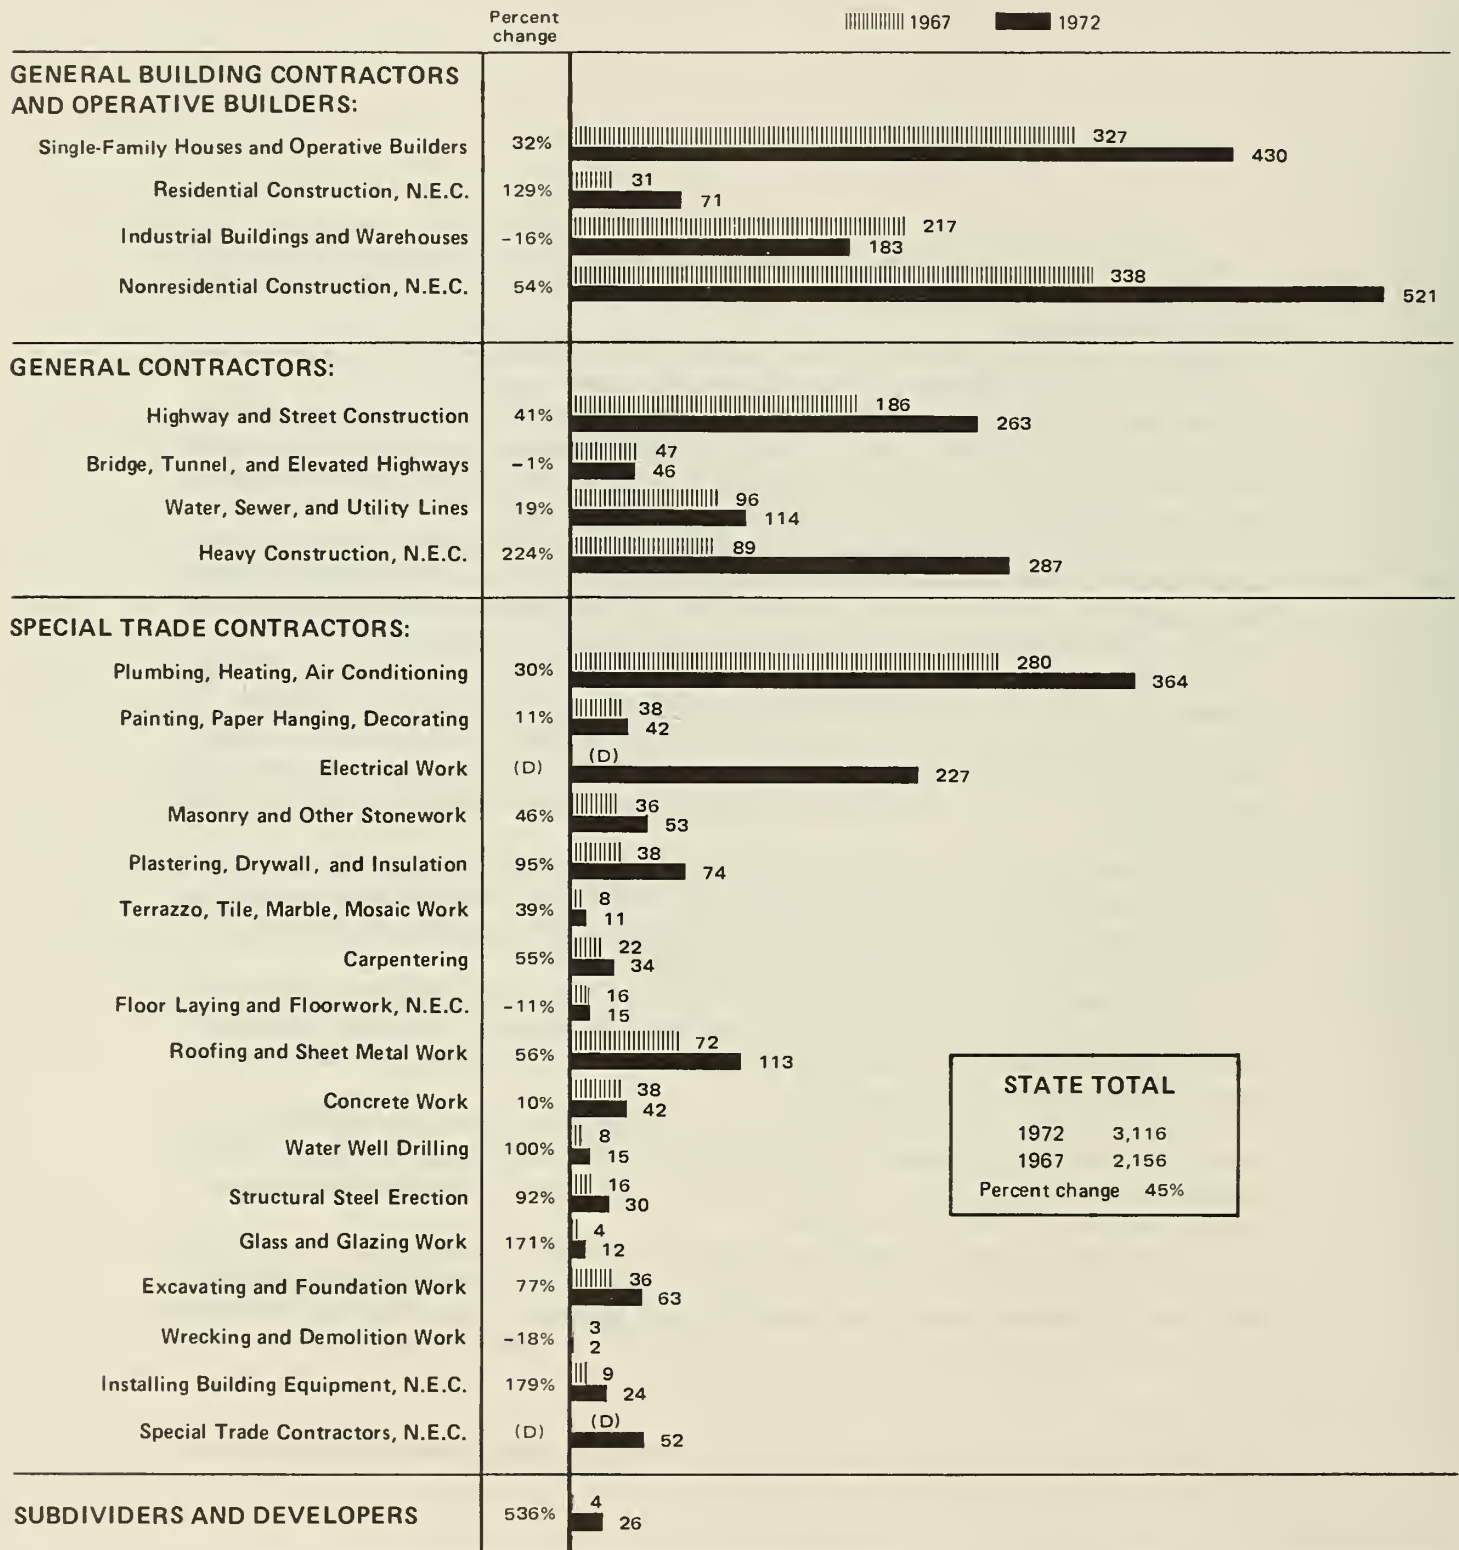

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

INDIANA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Illinois

During 1972, 39,122 establishments in Illinois operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$8,932 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 19,972 nonemployer establishments, or 51 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in Illinois. On the other hand, 19,150 establishments, 49 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$8,566 million, of which \$8,293 million were receipts for construction work. These establishments paid \$2,155 million for construction work subcontracted to others, leaving net construction receipts of about \$6,137 million.

Construction establishments with payroll located in Illinois paid \$2,281 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Illinois was 204.2 thousand employees. Total payroll for 1972 was \$2,450 million. Employment for the pay period including March 12, 1972, was 174.0 thousand employees, while employment for the pay period including August 12, 1972, was 225.1 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Illinois are based on a sample of about 7,600 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

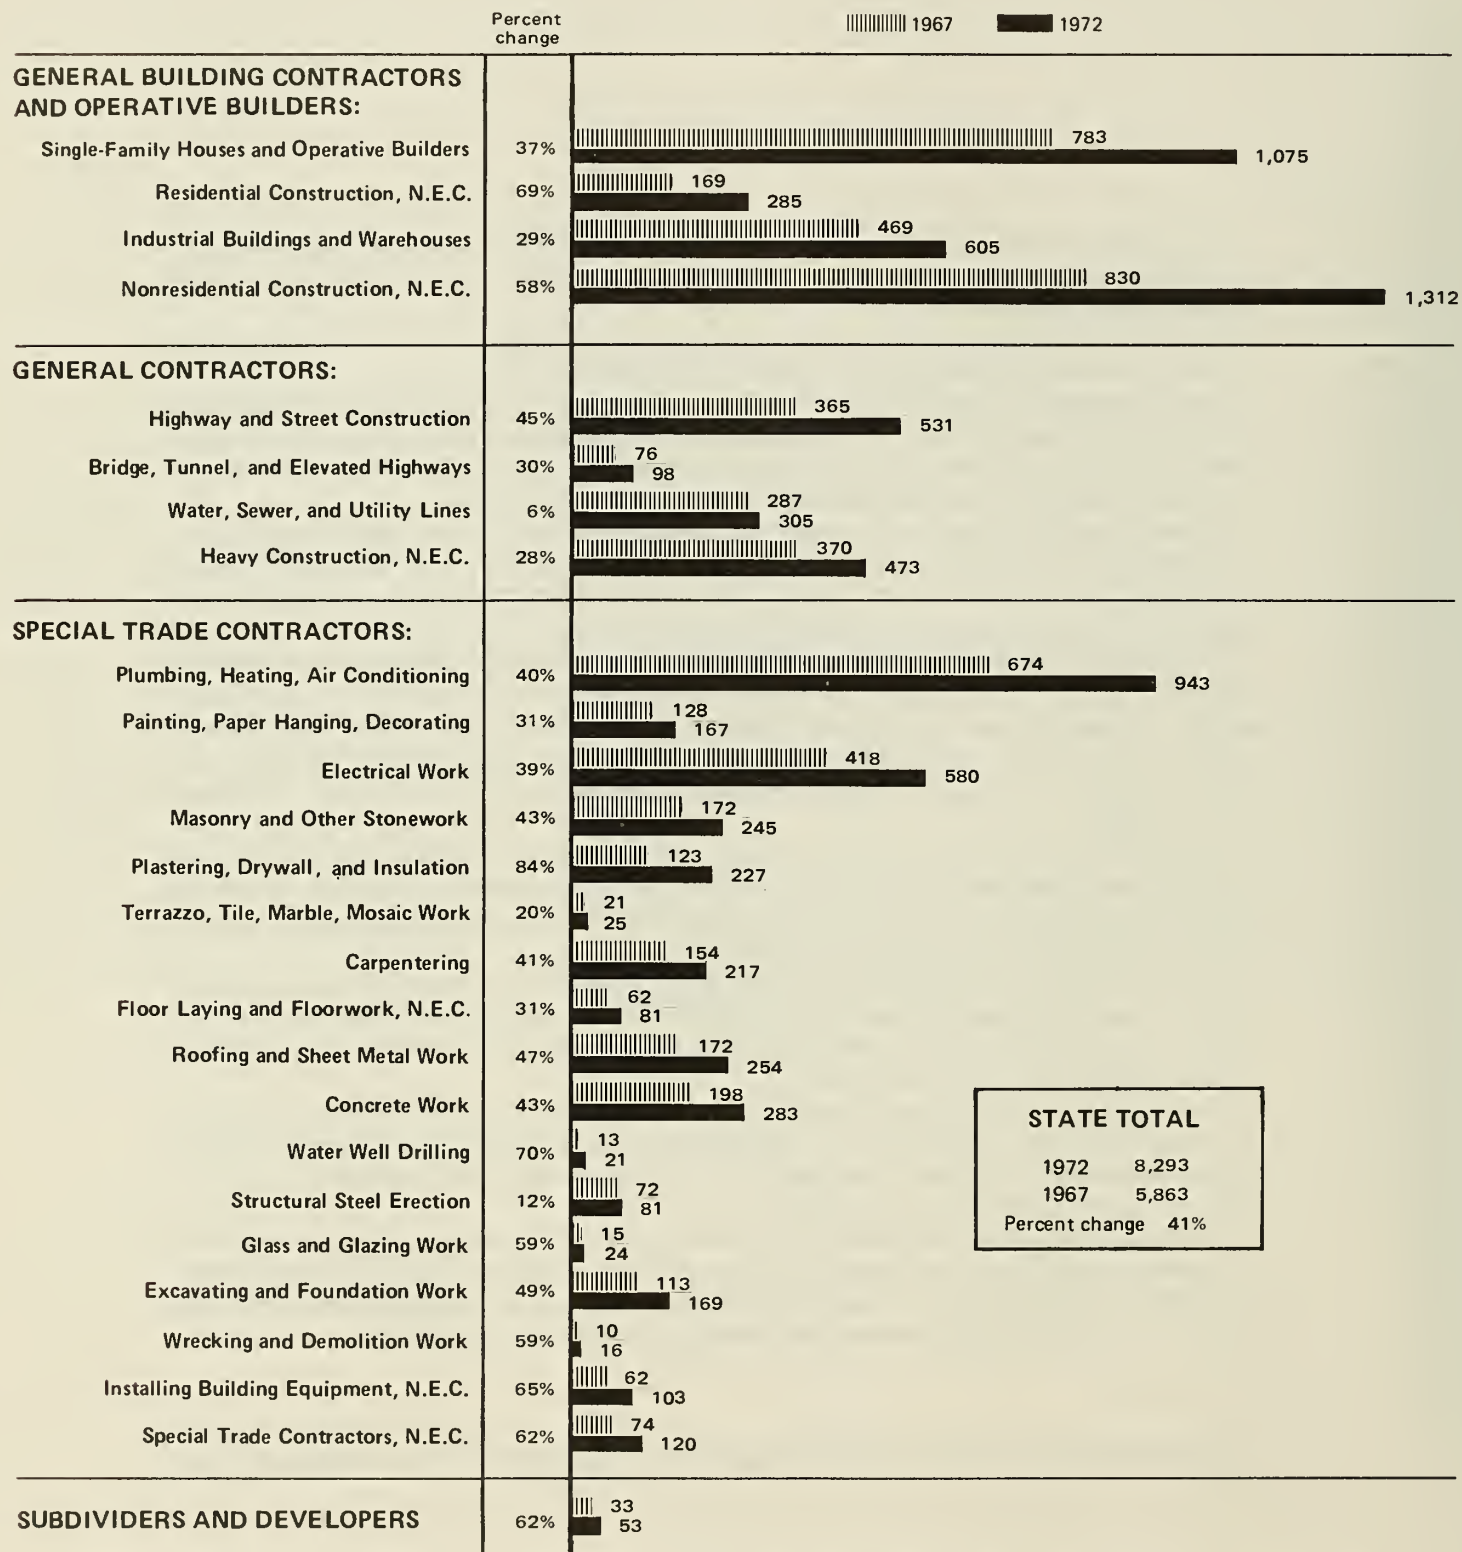

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

ILLINOIS Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$72,966(000) and for SIC 6552 were \$53,966(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Michigan

During 1972, 35,102 establishments in Michigan operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$6,306 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 18,698 nonemployer establishments, or 53 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Michigan. On the other hand, 16,404 establishments, 47 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$5,961 million, of which \$5,746 million were receipts for construction work. These establishments paid \$1,577 million for construction work subcontracted to others, leaving net construction receipts of about \$4,169 million.

Construction establishments with payroll located in Michigan paid \$1,655 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Michigan was 130.8 thousand employees. Total payroll for 1972 was \$1,528 million. Employment for the pay period including March 12, 1972, was 107.6 thousand employees, while employment for the pay period including August 12, 1972, was 146.1 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Michigan are based on a sample of about 6,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

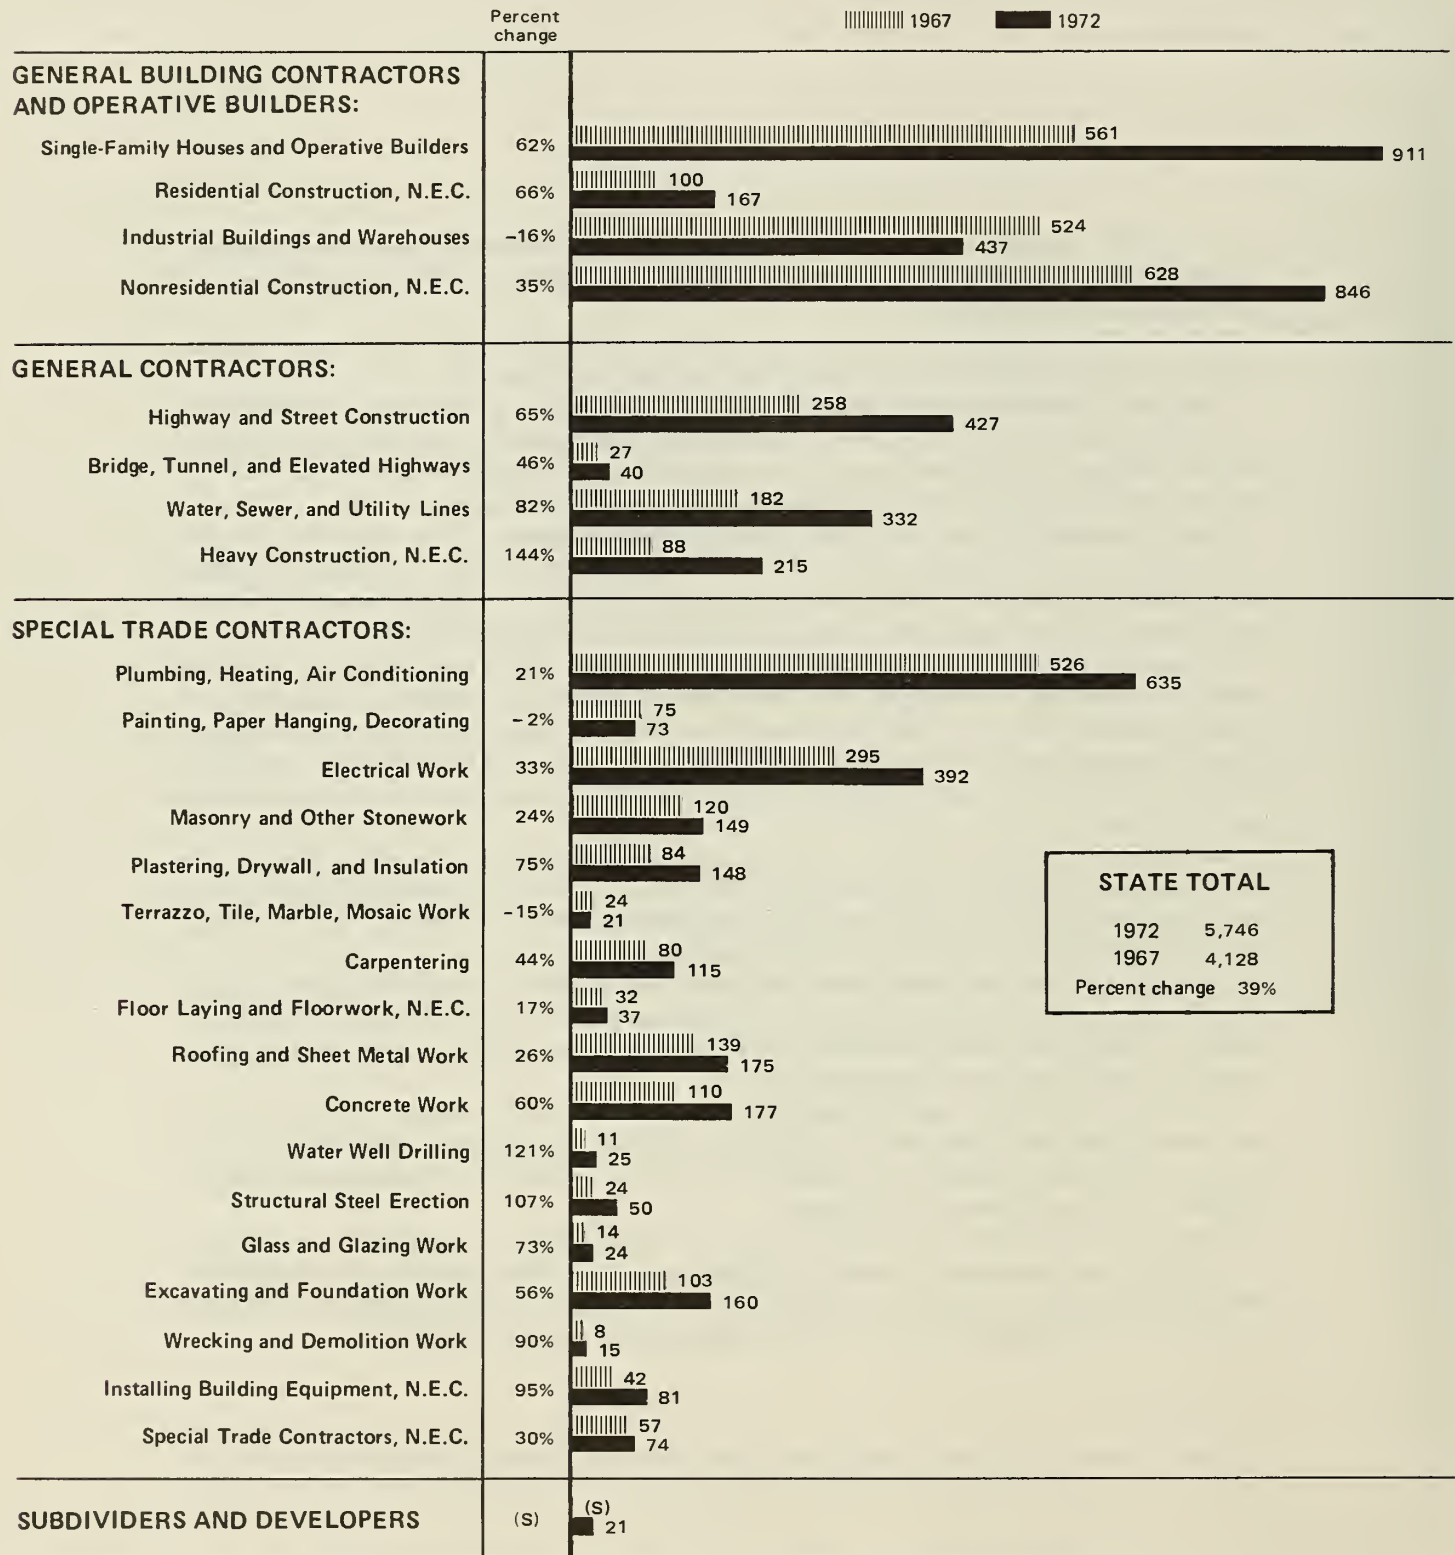

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$51,530(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Wisconsin

During 1972, 20,616 establishments in Wisconsin operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,684 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 10,945 nonemployer establishments, or 53 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Wisconsin. On the other hand, 9,671 establishments, 47 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,542 million, of which \$2,464 million were receipts for construction work. These establishments paid \$466 million for construction work subcontracted to others, leaving net construction receipts of about \$1,999 million.

Construction establishments with payroll located in Wisconsin paid \$853 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Wisconsin was 69.7 thousand employees. Total payroll for 1972 was \$728 million. Employment for the pay period including March 12, 1972, was 55.4 thousand employees, while employment for the pay period including August 12, 1972, was 78.4 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Wisconsin are based on a sample of about 3,200 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

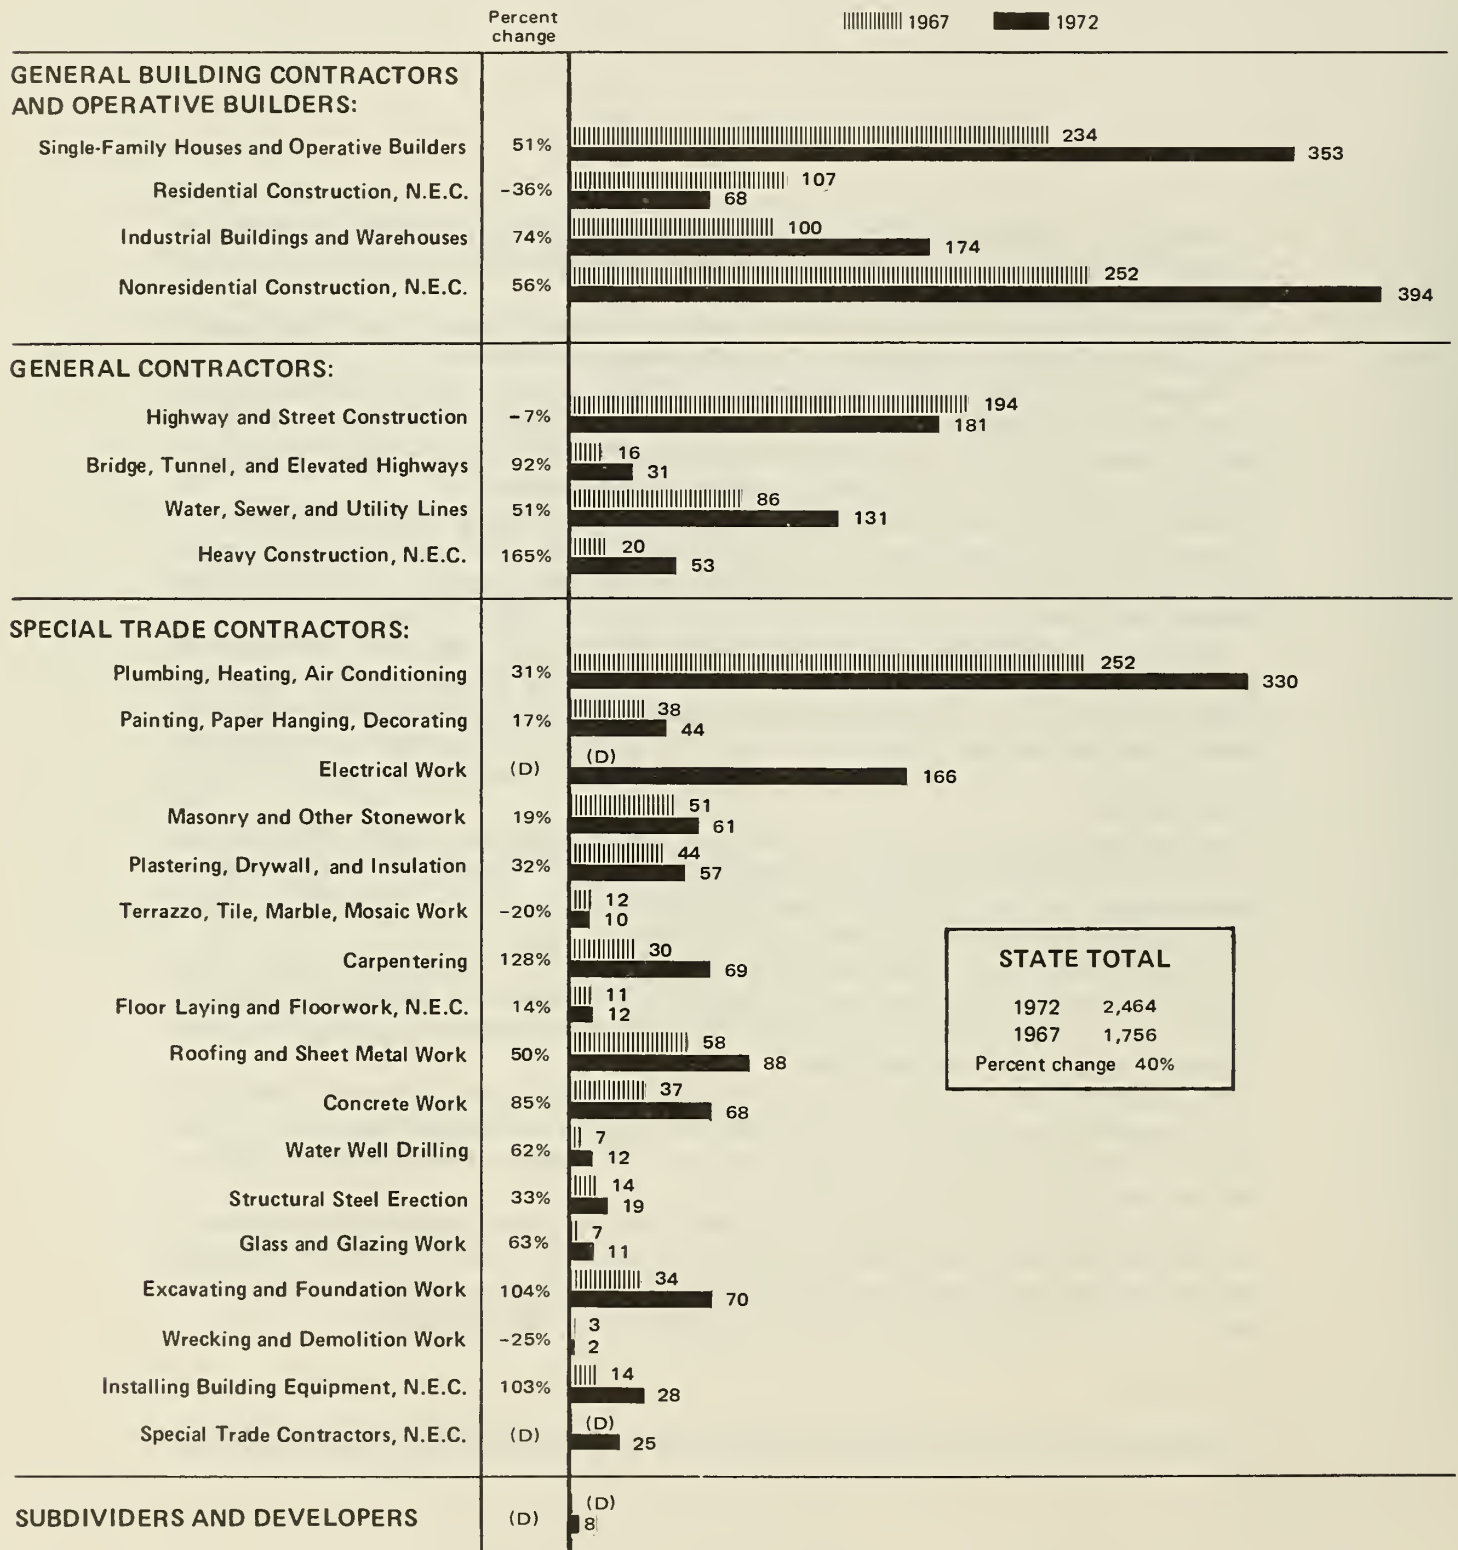

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

WISCONSIN *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family House and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$8,434(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

Minnesota

During 1972, 18,400 establishments in Minnesota operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$3,064 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 10,425 nonemployer establishments, or 57 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in Minnesota. On the other hand, 7,975 establishments, 43 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,926 million, of which \$2,840 million were receipts for construction work. These establishments paid \$653 million for construction work subcontracted to others, leaving net construction receipts of about \$2,187 million.

Construction establishments with payroll located in Minnesota paid \$916 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Minnesota was 74.7 thousand employees. Total payroll for 1972 was \$812 million. Employment for the pay period including March 12, 1972, was 58.3 thousand employees, while employment for the pay period including August 12, 1972, was 85.9 thousand employees.

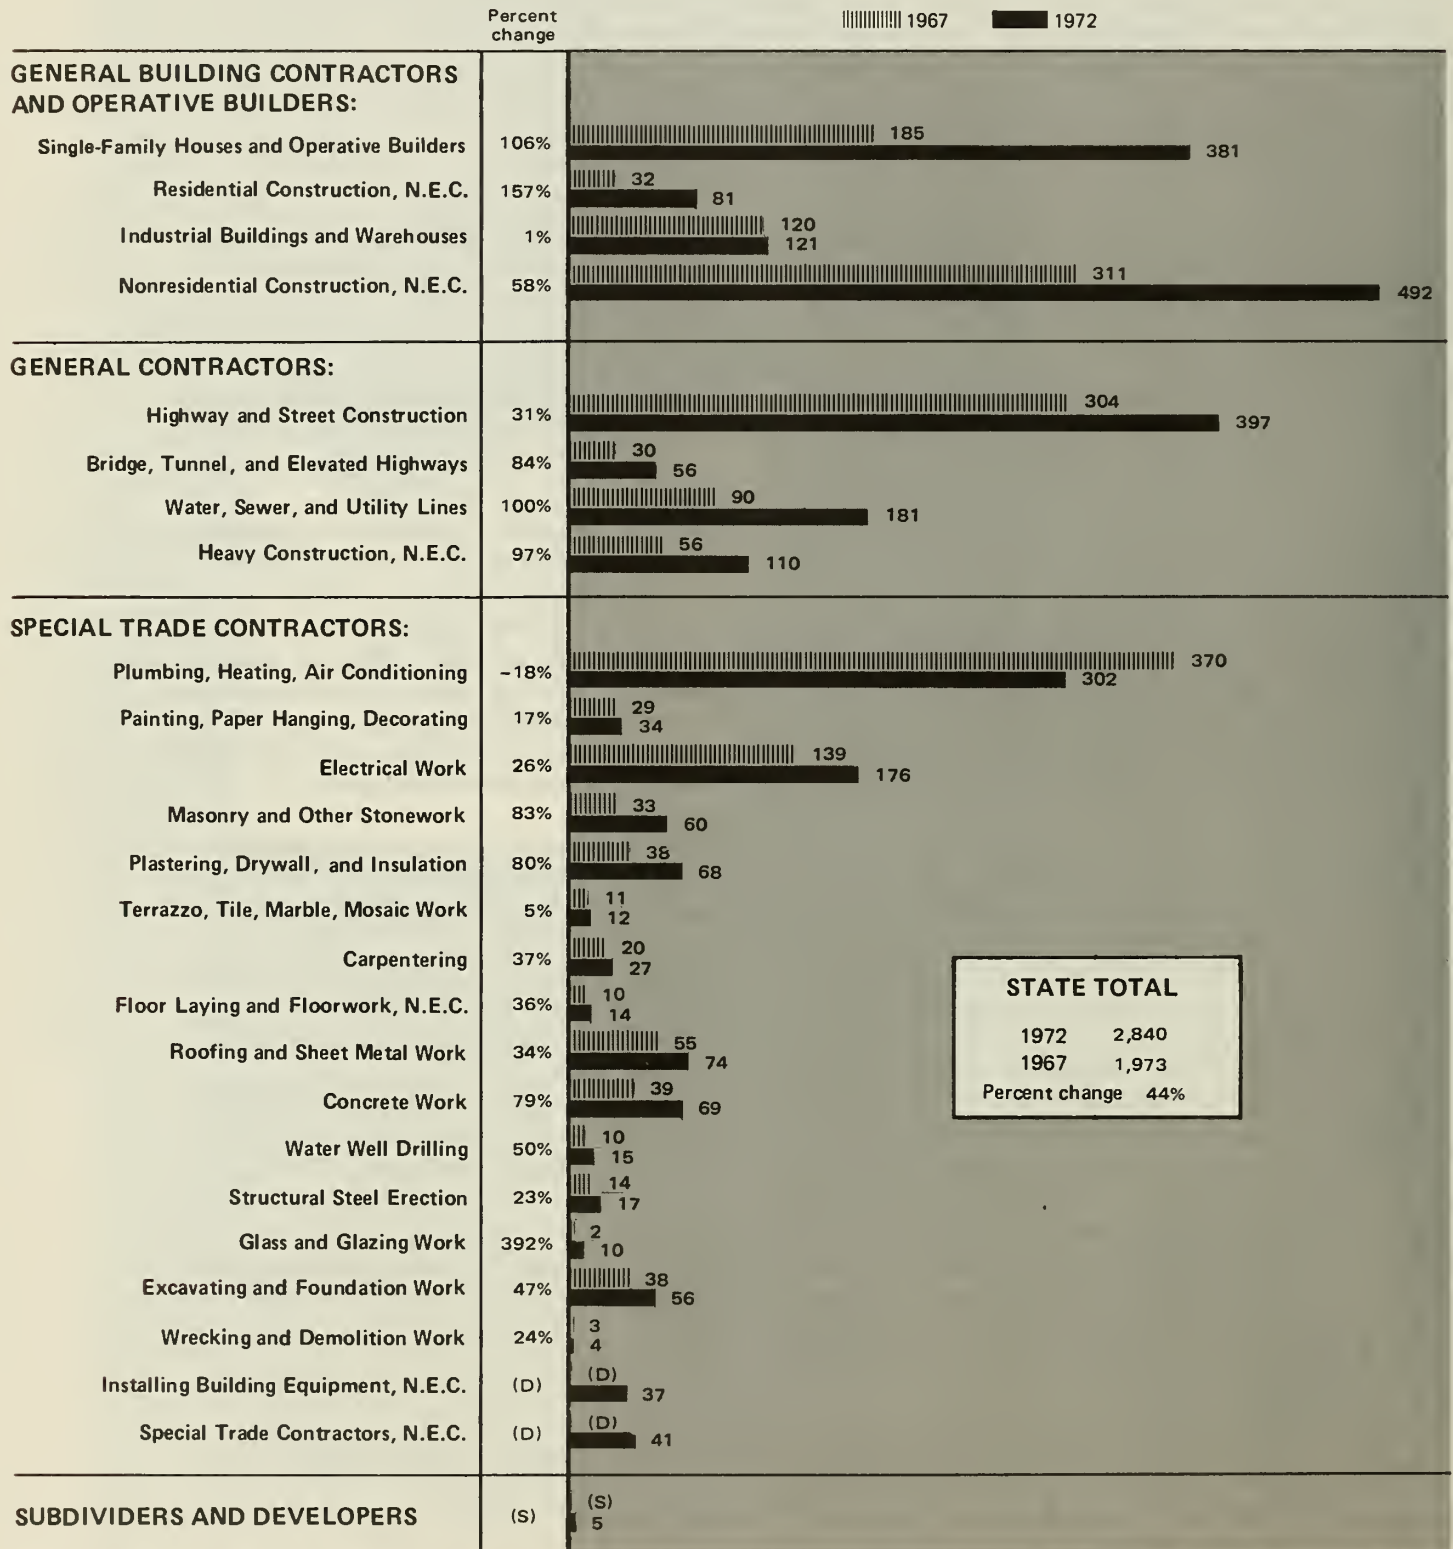

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Minnesota are based on a sample of about 2,900 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

MINNESOTA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$11,016(000) and for SIC 6552 were \$5,254(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Iowa

During 1972, 15,353 establishments in Iowa operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,553 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 8,973 nonemployer establishments, or 58 percent of all construction establishments in the State. They accounted for about 7 percent of the total receipts of all construction establishments in Iowa. On the other hand, 6,380 establishments, 42 percent of all construction establishments, were "employers," who accounted for 93 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,449 million, of which \$1,398 million were receipts for construction work. These establishments paid \$233 million for construction work subcontracted to others, leaving net construction receipts of about \$1,165 million.

Construction establishments with payroll located in Iowa paid \$536 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Iowa was 41.6 thousand employees. Total payroll for 1972 was \$365 million. Employment for the pay period including March 12, 1972, was 32.7 thousand employees, while employment for the pay period including August 12, 1972, was 49.9 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Iowa are based on a sample of about 2,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

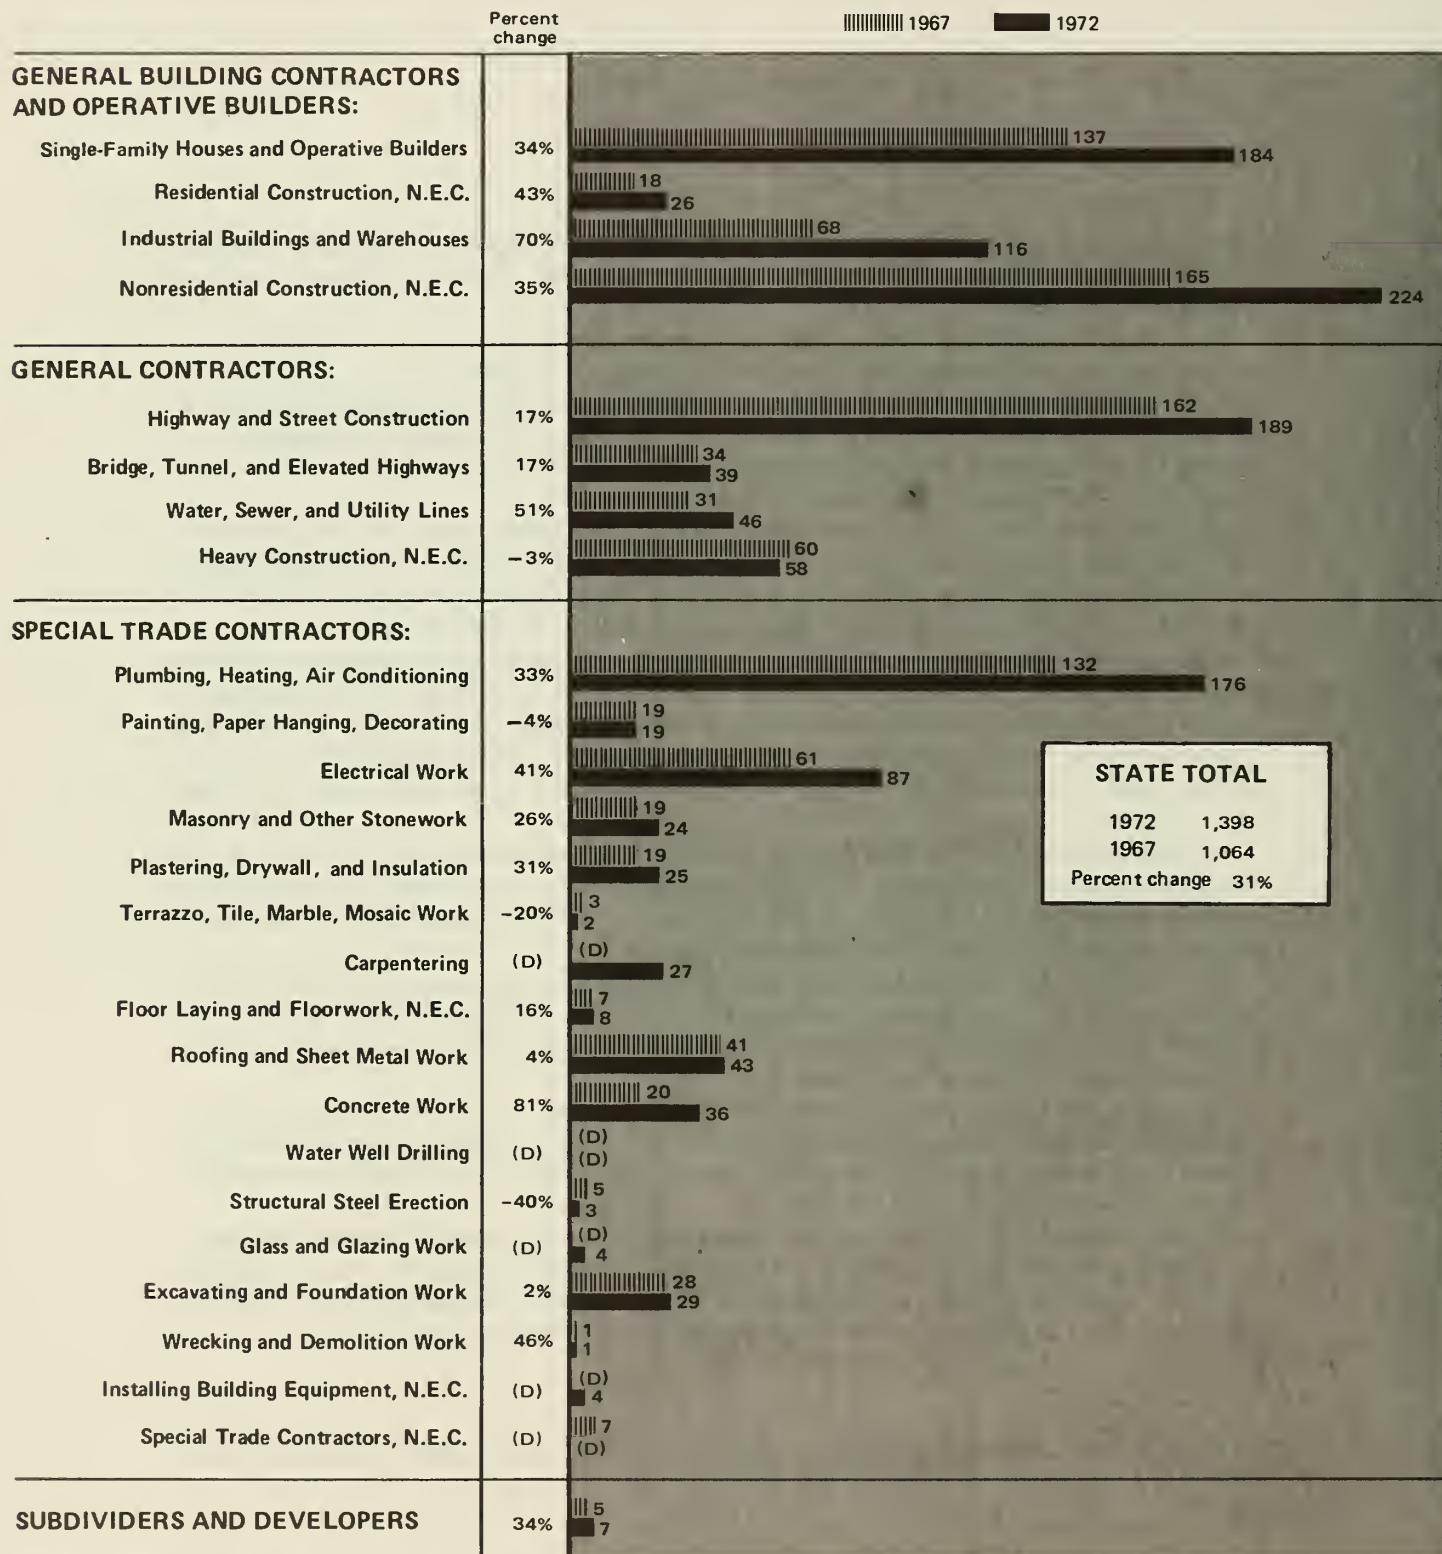

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

IOWA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$5,437(000) and for SIC 6552 were \$5,042(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Missouri

During 1972, 24,629 establishments in Missouri operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$3,248 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 15,131 nonemployer establishments, or 61 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Missouri. On the other hand, 9,498 establishments, 39 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$3,043 million, of which \$2,904 million were receipts for construction work. These establishments paid \$717 million for construction work subcontracted to others, leaving net construction receipts of about \$2,186 million.

Construction establishments with payroll located in Missouri paid \$896 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Missouri was 81.4 thousand employees. Total payroll for 1972 was \$816 million. Employment for the pay period including March 12, 1972, was 72.7 thousand employees, while employment for the pay period including August 12, 1972, was 87.1 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Missouri are based on a sample of about 3,500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

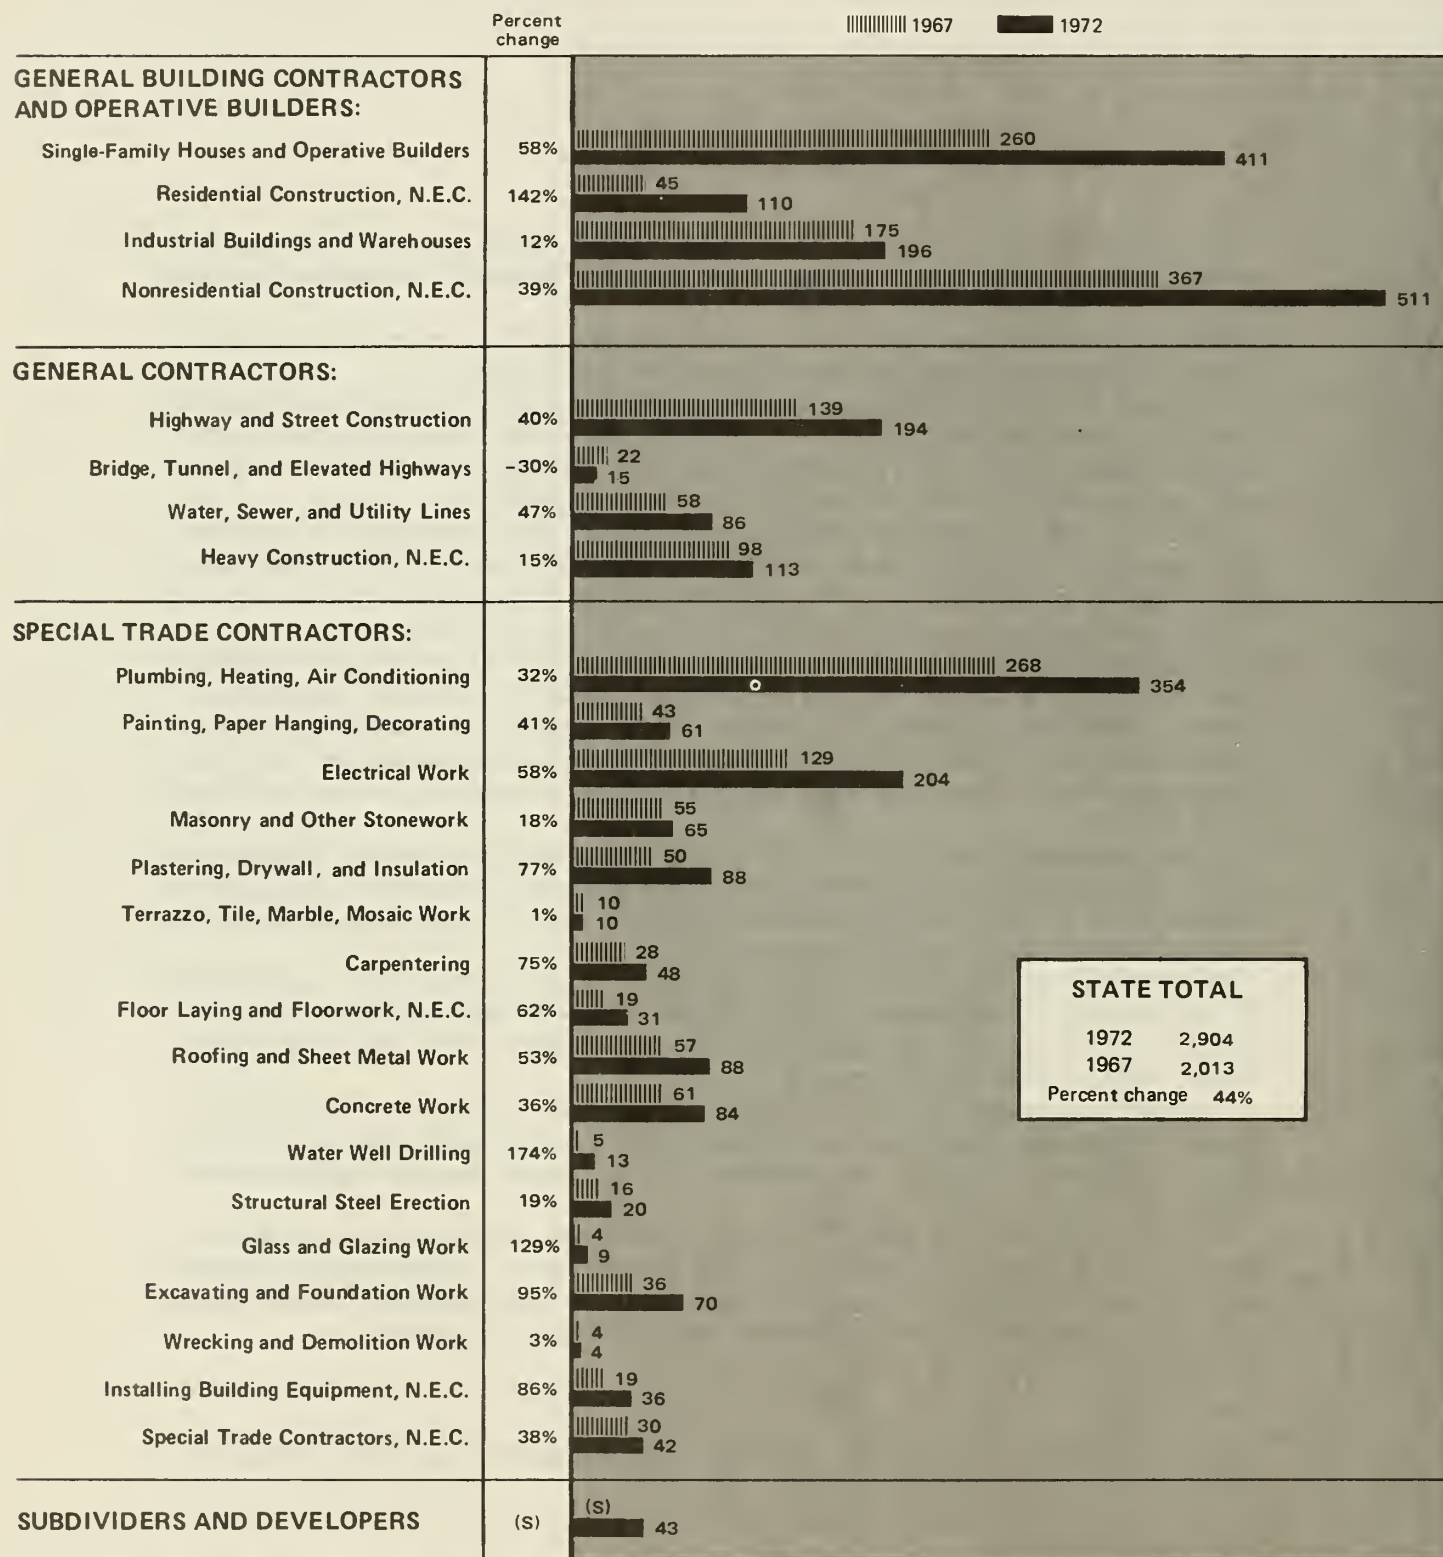

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

MISSOURI Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

North Dakota

During 1972, 3,069 establishments in North Dakota operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$382 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 1,580 nonemployer establishments, or 51 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in North Dakota. On the other hand, 1,489 establishments, 49 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$368 million, of which \$359 million were receipts for construction work. These establishments paid \$68 million for construction work subcontracted to others, leaving net construction receipts of about \$290 million.

Construction establishments with payroll located in North Dakota paid \$140 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in North Dakota was 10.2 thousand employees. Total payroll for 1972 was \$87 million. Employment for the pay period including March 12, 1972, was 6.2 thousand employees, while employment for the pay period including August 12, 1972, was 12.9 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for North Dakota are based on a sample of about 500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

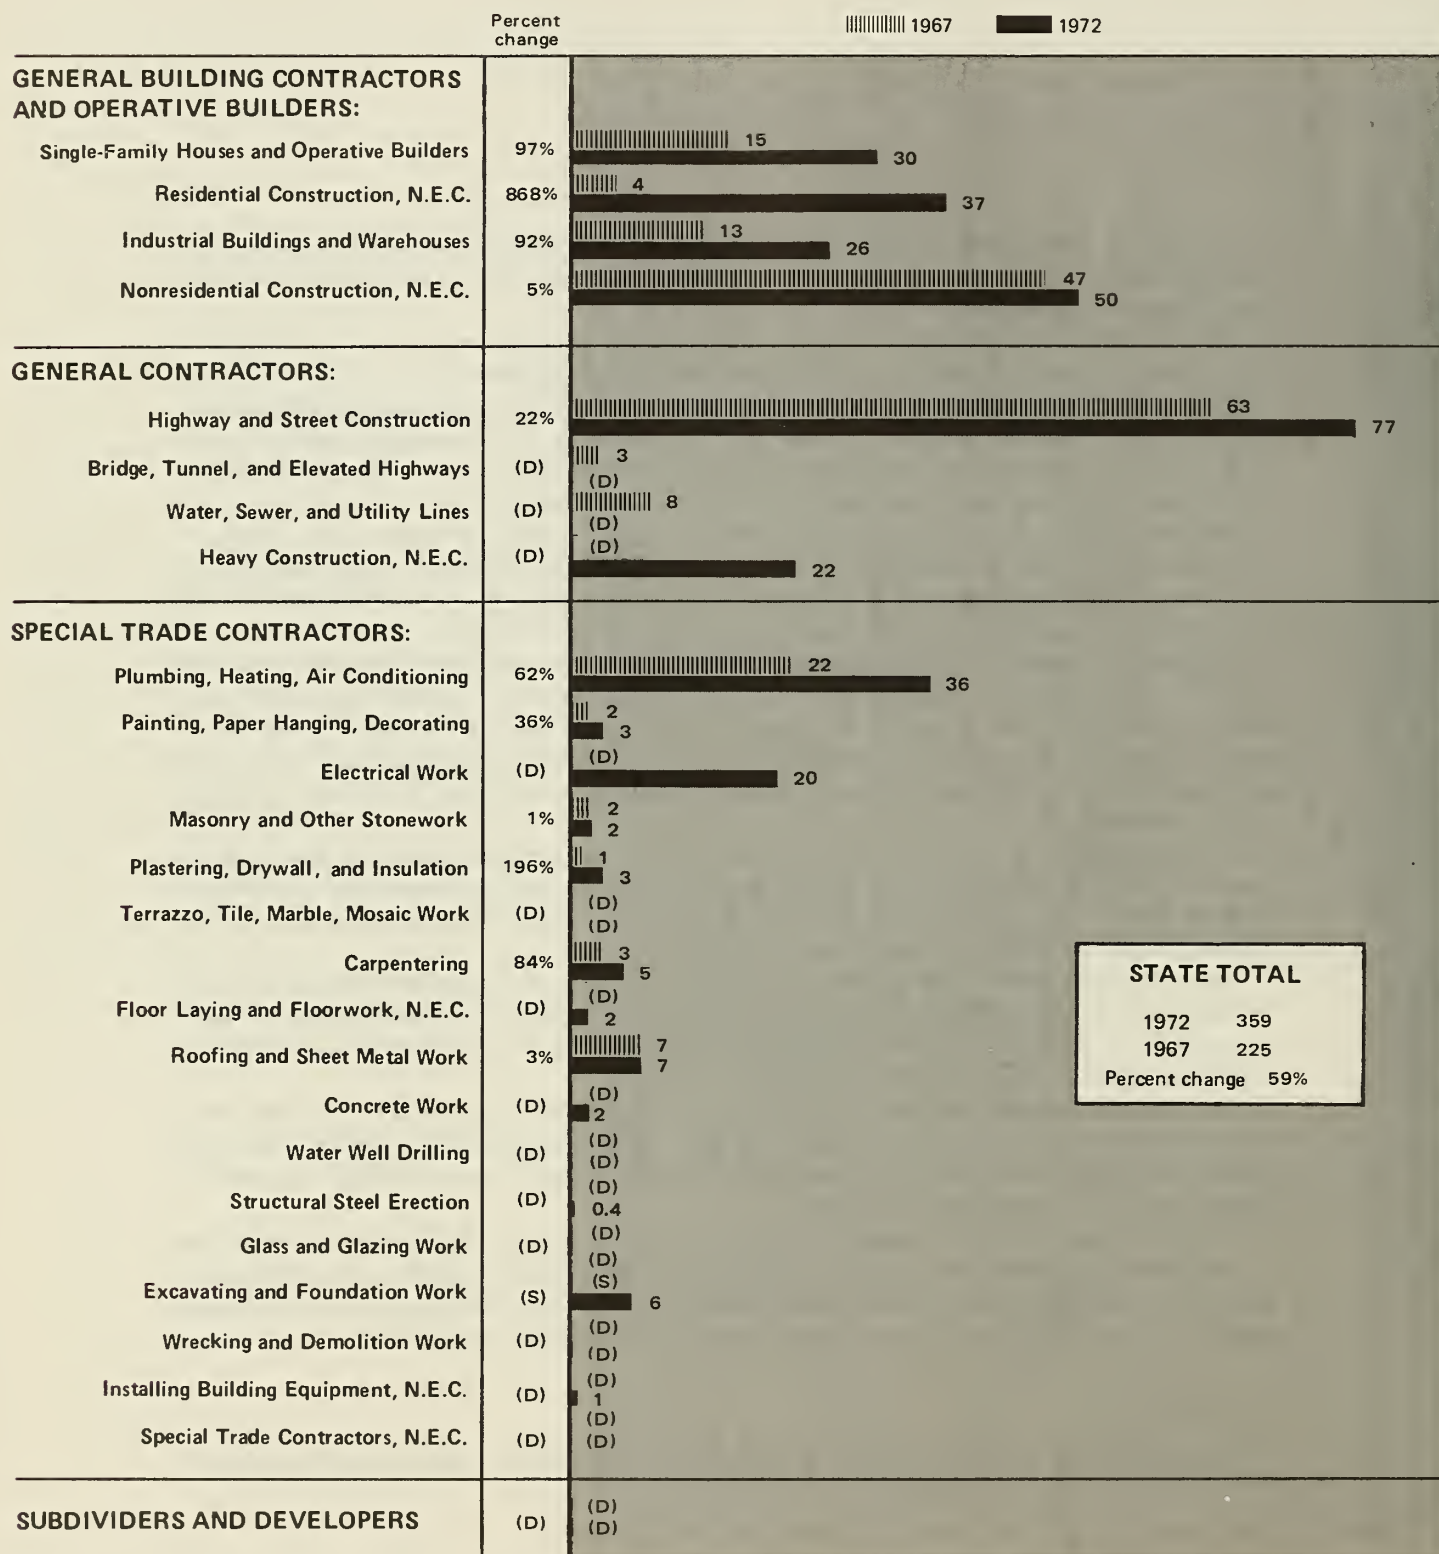

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

NORTH DAKOTA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Value added equals "total receipts" less "land receipts" less "total selected payments" for SIC 1521, SIC 1531, and SIC 6552.

²Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

³For 1972, over 30% of the data was estimated.

⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are now exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

South Dakota

During 1972, 3,741 establishments in South Dakota operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$299 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 2,228 nonemployer establishments, or 60 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in South Dakota. On the other hand, 1,513 establishments, 40 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$280 million, of which \$274 million were receipts for construction work. These establishments paid \$46 million for construction work subcontracted to others, leaving net construction receipts of about \$228 million.

Construction establishments with payroll located in South Dakota paid \$88 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in South Dakota was 9.1 thousand employees. Total payroll for 1972 was \$70 million. Employment for the pay period including March 12, 1972, was 6.3 thousand employees, while employment for the pay period including August 12, 1972, was 11.2 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for South Dakota are based on a sample of about 500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

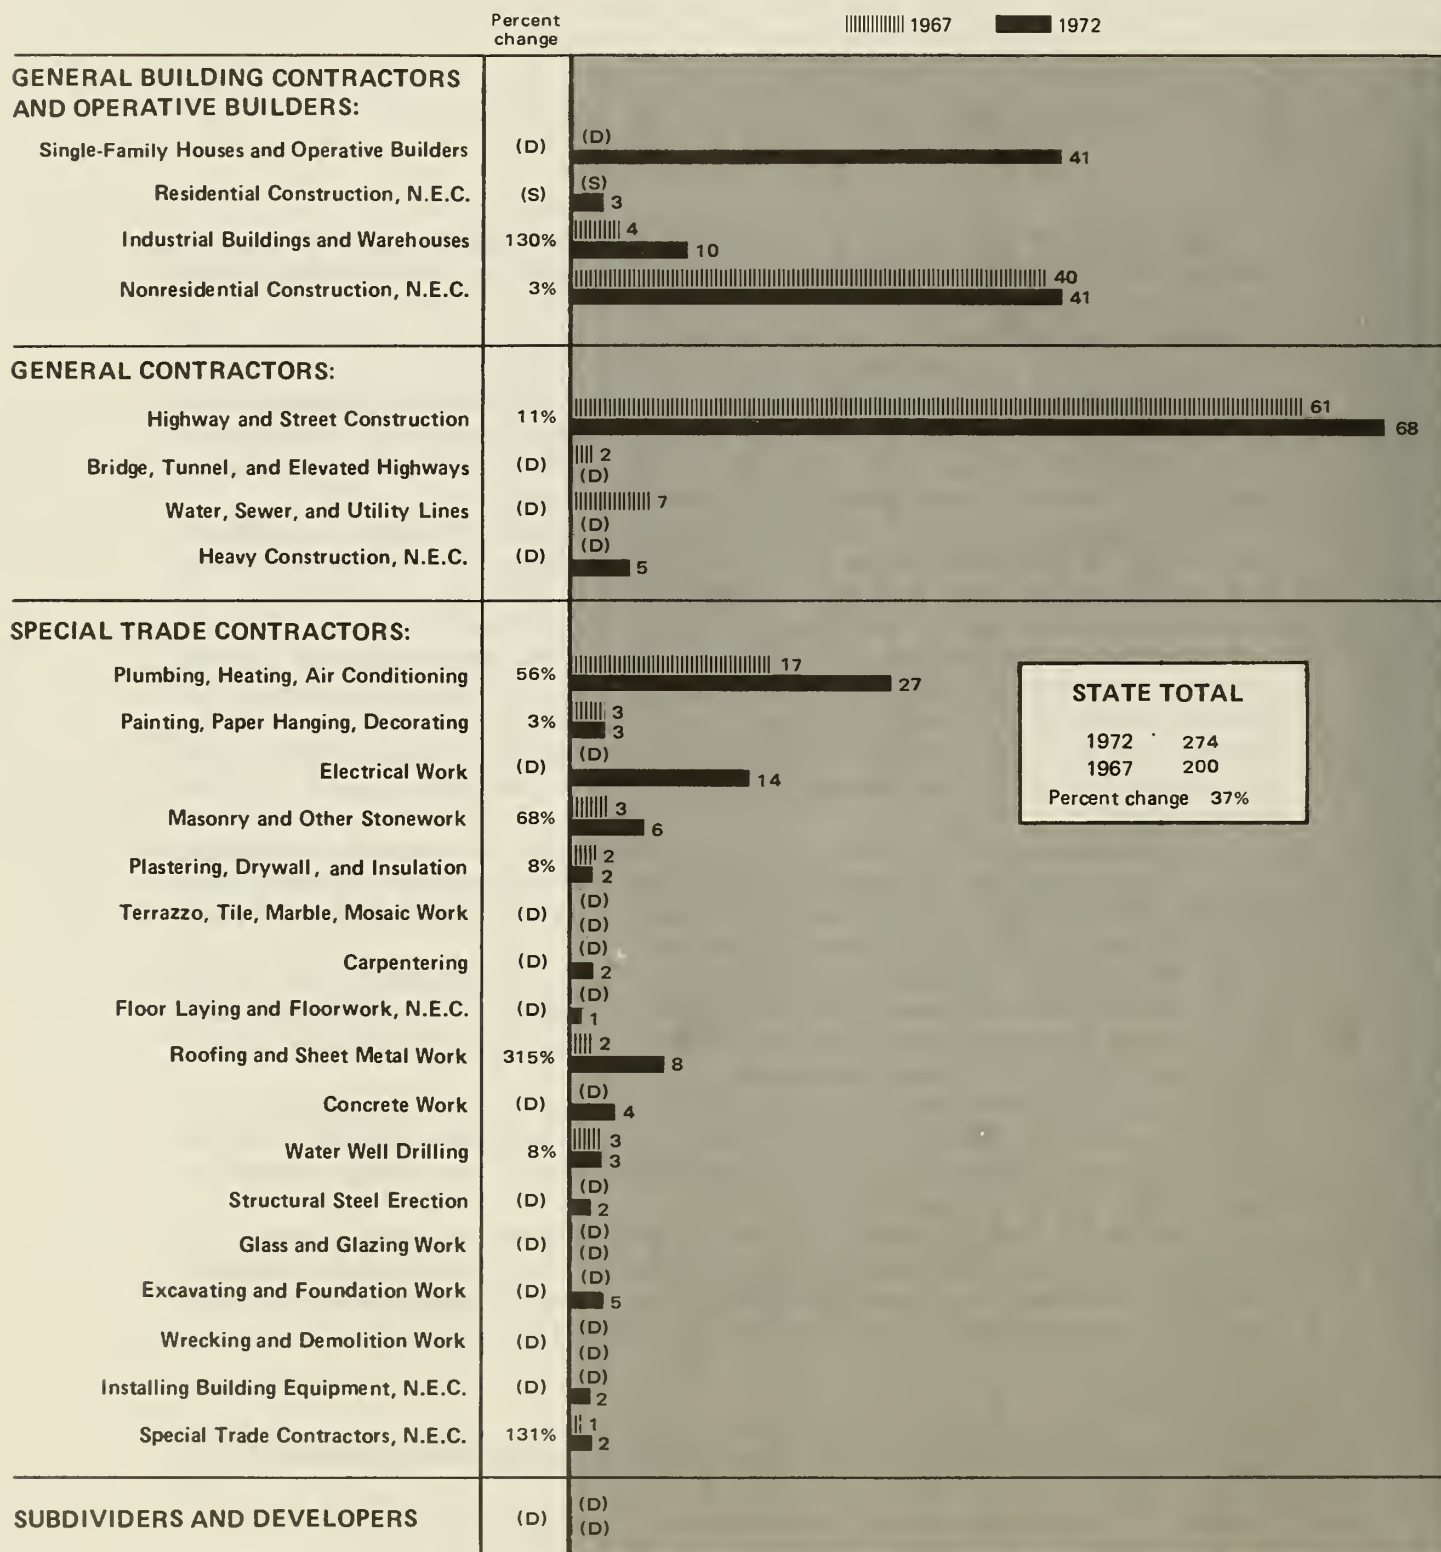

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

SOUTH DAKOTA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Value added" equals "total receipts" less "land receipts" less "total selected payments" for SIC 1521, SIC 1531, and SIC 6552.
²Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).
³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.
⁴For 1972, over 30% of the data was estimated.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Nebraska

During 1972, 8,924 establishments in Nebraska operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,101 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 5,062 nonemployer establishments, or 57 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Nebraska. On the other hand, 3,862 establishments, 43 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,043 million, of which \$1,007 million were receipts for construction work. These establishments paid \$192 million for construction work subcontracted to others, leaving net construction receipts of about \$816 million.

Construction establishments with payroll located in Nebraska paid \$342 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Nebraska was 29.4 thousand employees. Total payroll for 1972 was \$263 million. Employment for the pay period including March 12, 1972, was 25.5 thousand employees, while employment for the pay period including August 12, 1972, was 32.9 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Nebraska are based on a sample of about 1,300 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

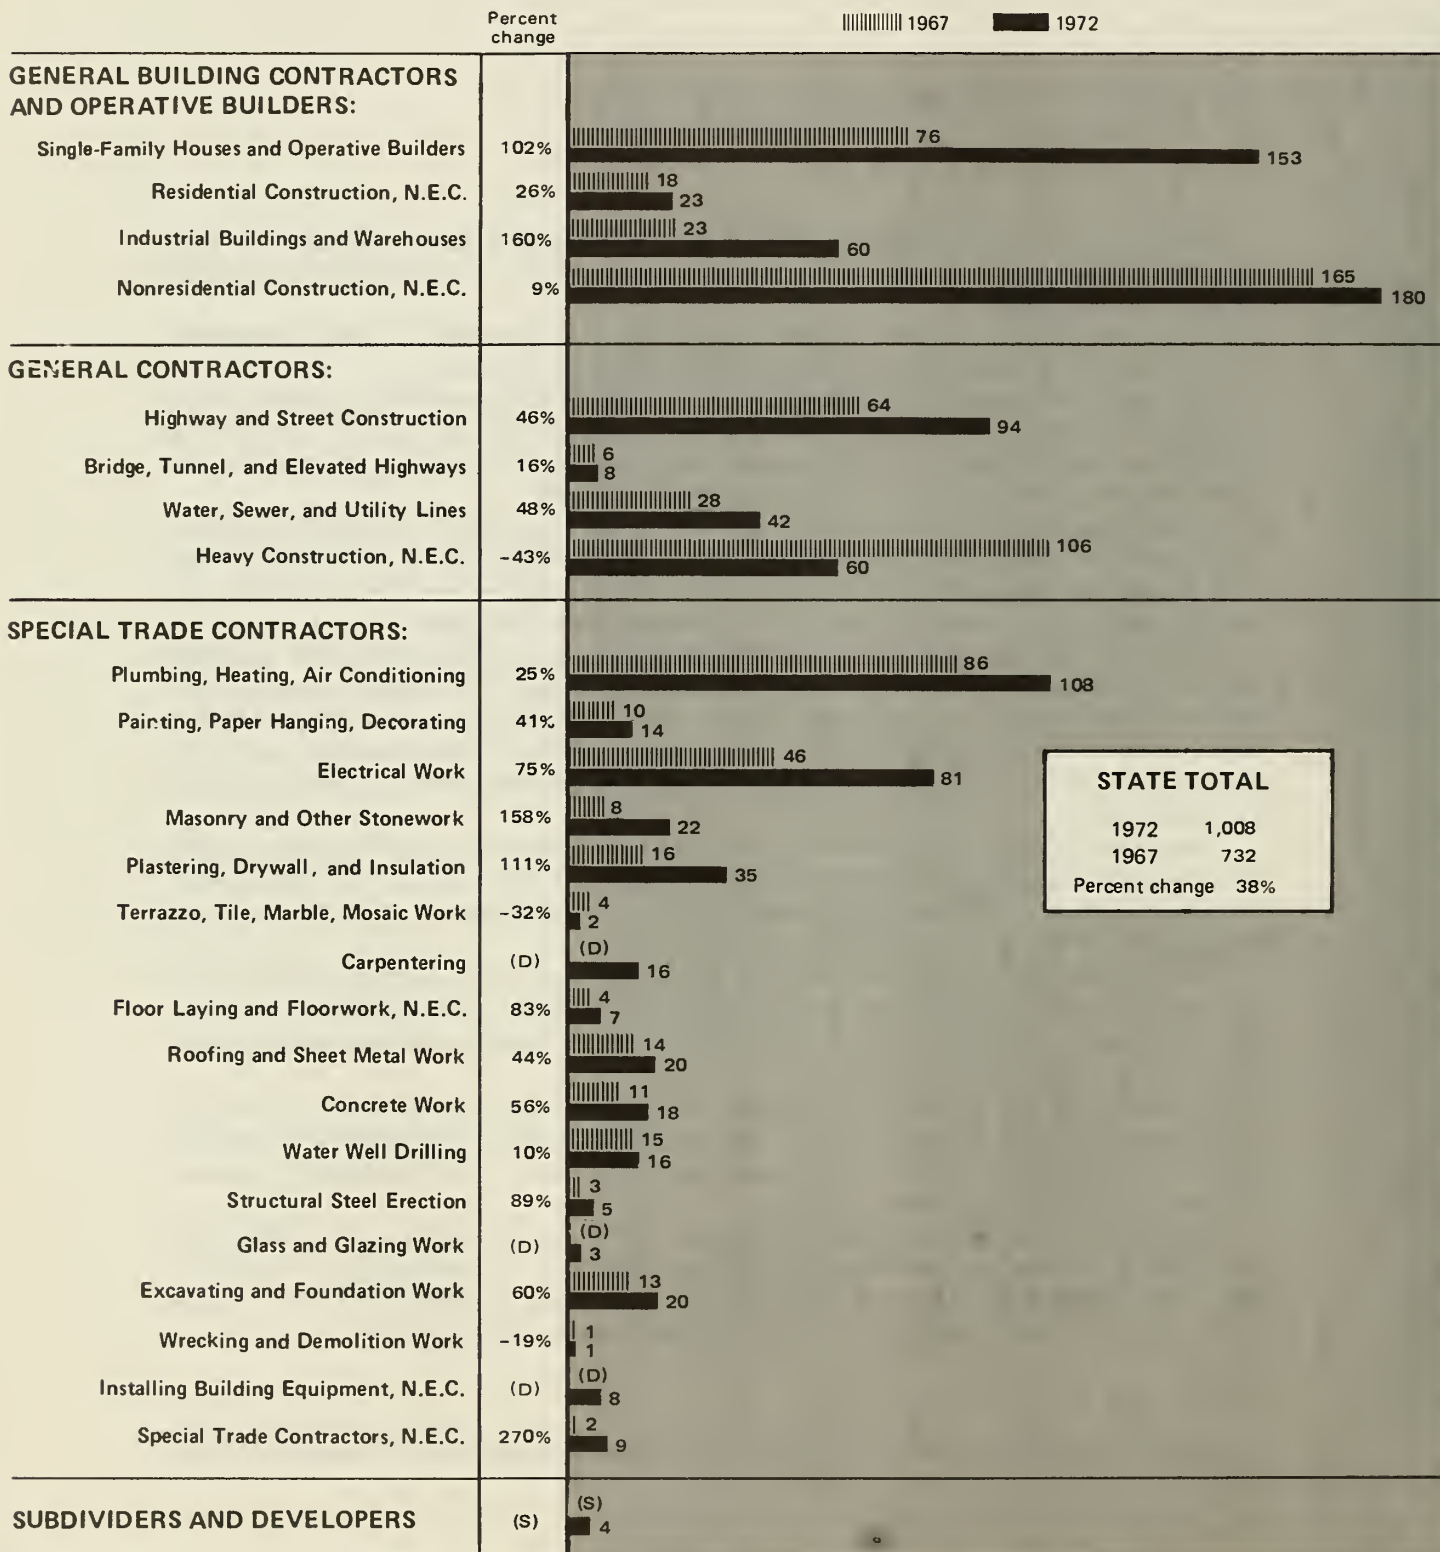

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, Standard Industrial Classification Manual, 1972.

NEBRASKA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Kansas

During 1972, 12,410 establishments in Kansas operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,516 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 7,728 nonemployer establishments, or 62 percent of all construction establishments in the State. They accounted for about 8 percent of the total receipts of all construction establishments in Kansas. On the other hand, 4,682 establishments, 38 percent of all construction establishments, were "employers," who accounted for 92 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,395 million, of which \$1,350 million were receipts for construction work. These establishments paid \$347 million for construction work subcontracted to others, leaving net construction receipts of about \$1,003 million.

Construction establishments with payroll located in Kansas paid \$441 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Kansas was 38.3 thousand employees. Total payroll for 1972 was \$337 million. Employment for the pay period including March 12, 1972, was 34.8 thousand employees, while employment for the pay period including August 12, 1972, was 41.6 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Kansas are based on a sample of about 1,700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

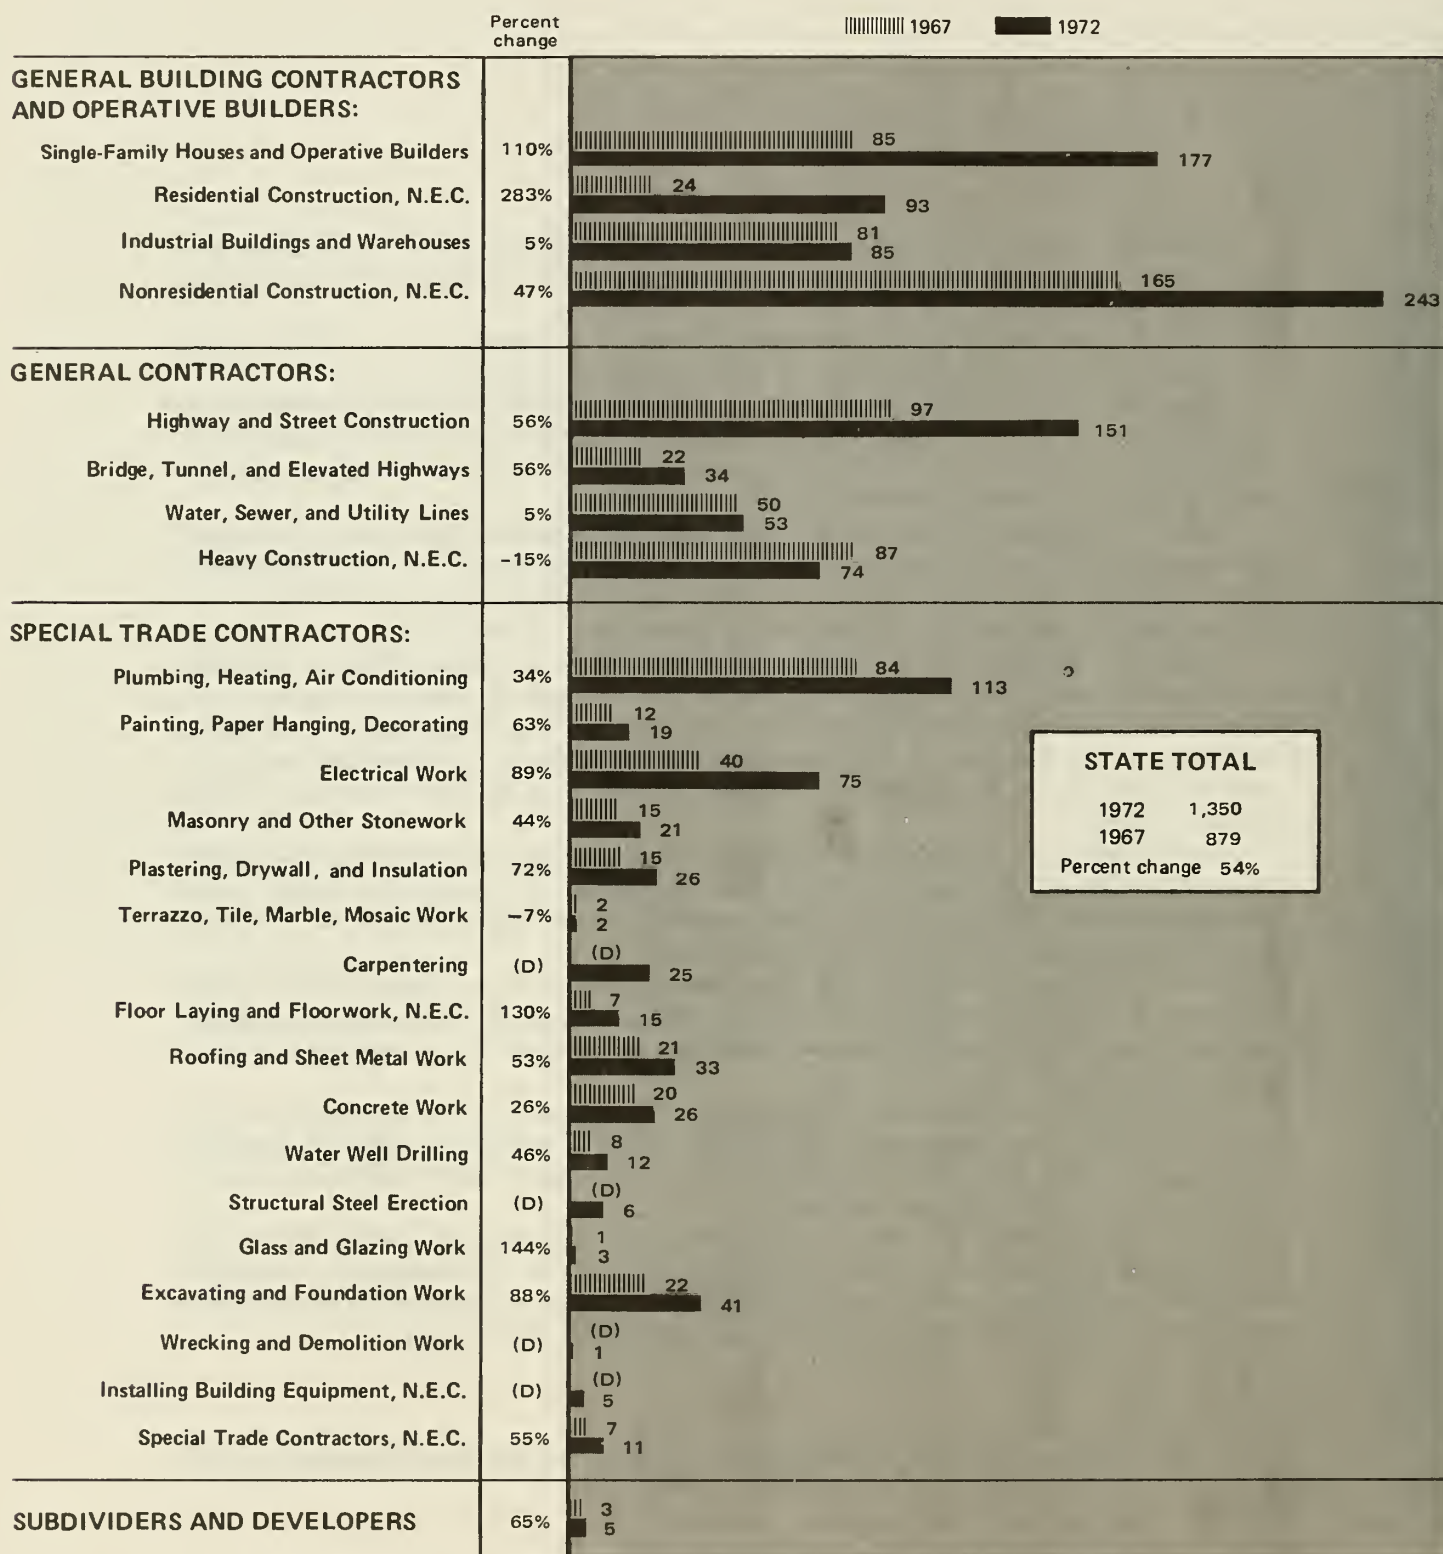

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, Standard Industrial Classification Manual, 1972.

KANSAS Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$6,902(000) and for SIC 6552 were \$9,012(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

Delaware

During 1972, 2,515 establishments in Delaware operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$898 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 1,044 nonemployer establishments, or 42 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in Delaware. On the other hand, 1,471 establishments, 58 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$863 million, of which \$840 million were receipts for construction work. These establishments paid \$241 million for construction work subcontracted to others, leaving net construction receipts of about \$598 million.

Construction establishments with payroll located in Delaware paid \$290 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Delaware was 19.0 thousand employees. Total payroll for 1972 was \$185 million. Employment for the pay period including March 12, 1972, was 17.2 thousand employees, while employment for the pay period including August 12, 1972, was 20.4 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Delaware are based on a sample of about 700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

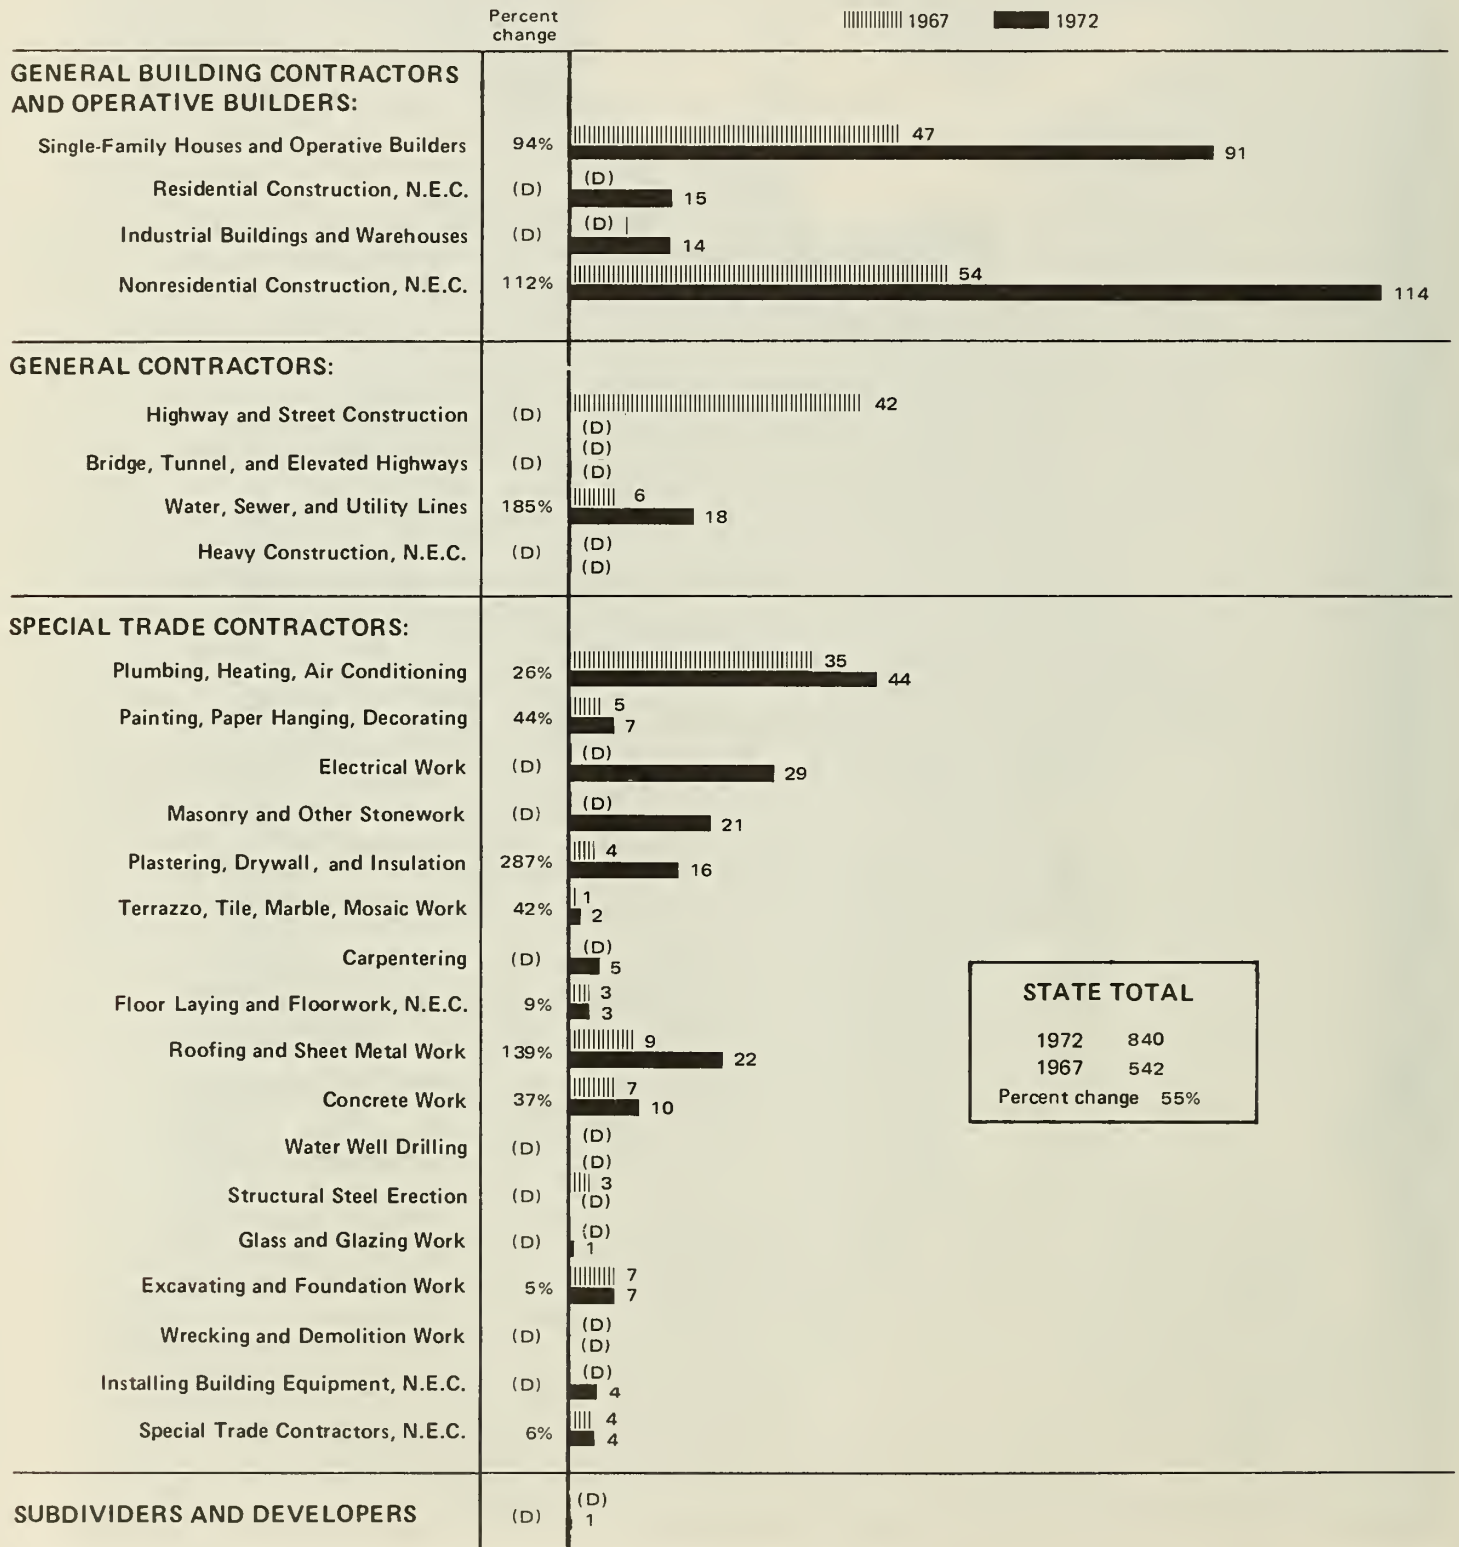

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$5,667(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

⁴For 1972, over 30% of the data was estimated.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Home and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Maryland

During 1972, 16,062 establishments in Maryland operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$4,237 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 7,399 nonemployer establishments, or 46 percent of all construction establishments in the State. They accounted for about 7 percent of the total receipts of all construction establishments in Maryland. On the other hand, 8,663 establishments, 54 percent of all construction establishments, were "employers," who accounted for 93 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$3,944 million, of which \$3,833 million were receipts for construction work. These establishments paid \$1,104 million for construction work subcontracted to others, leaving net construction receipts of about \$2,729 million.

Construction establishments with payroll located in Maryland paid \$1,163 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Maryland was 106.1 thousand employees. Total payroll for 1972 was \$1,008 million. Employment for the pay period including March 12, 1972, was 95.0 thousand employees, while employment for the pay period including August 12, 1972, was 114.3 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Maryland are based on a sample of about 3,500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

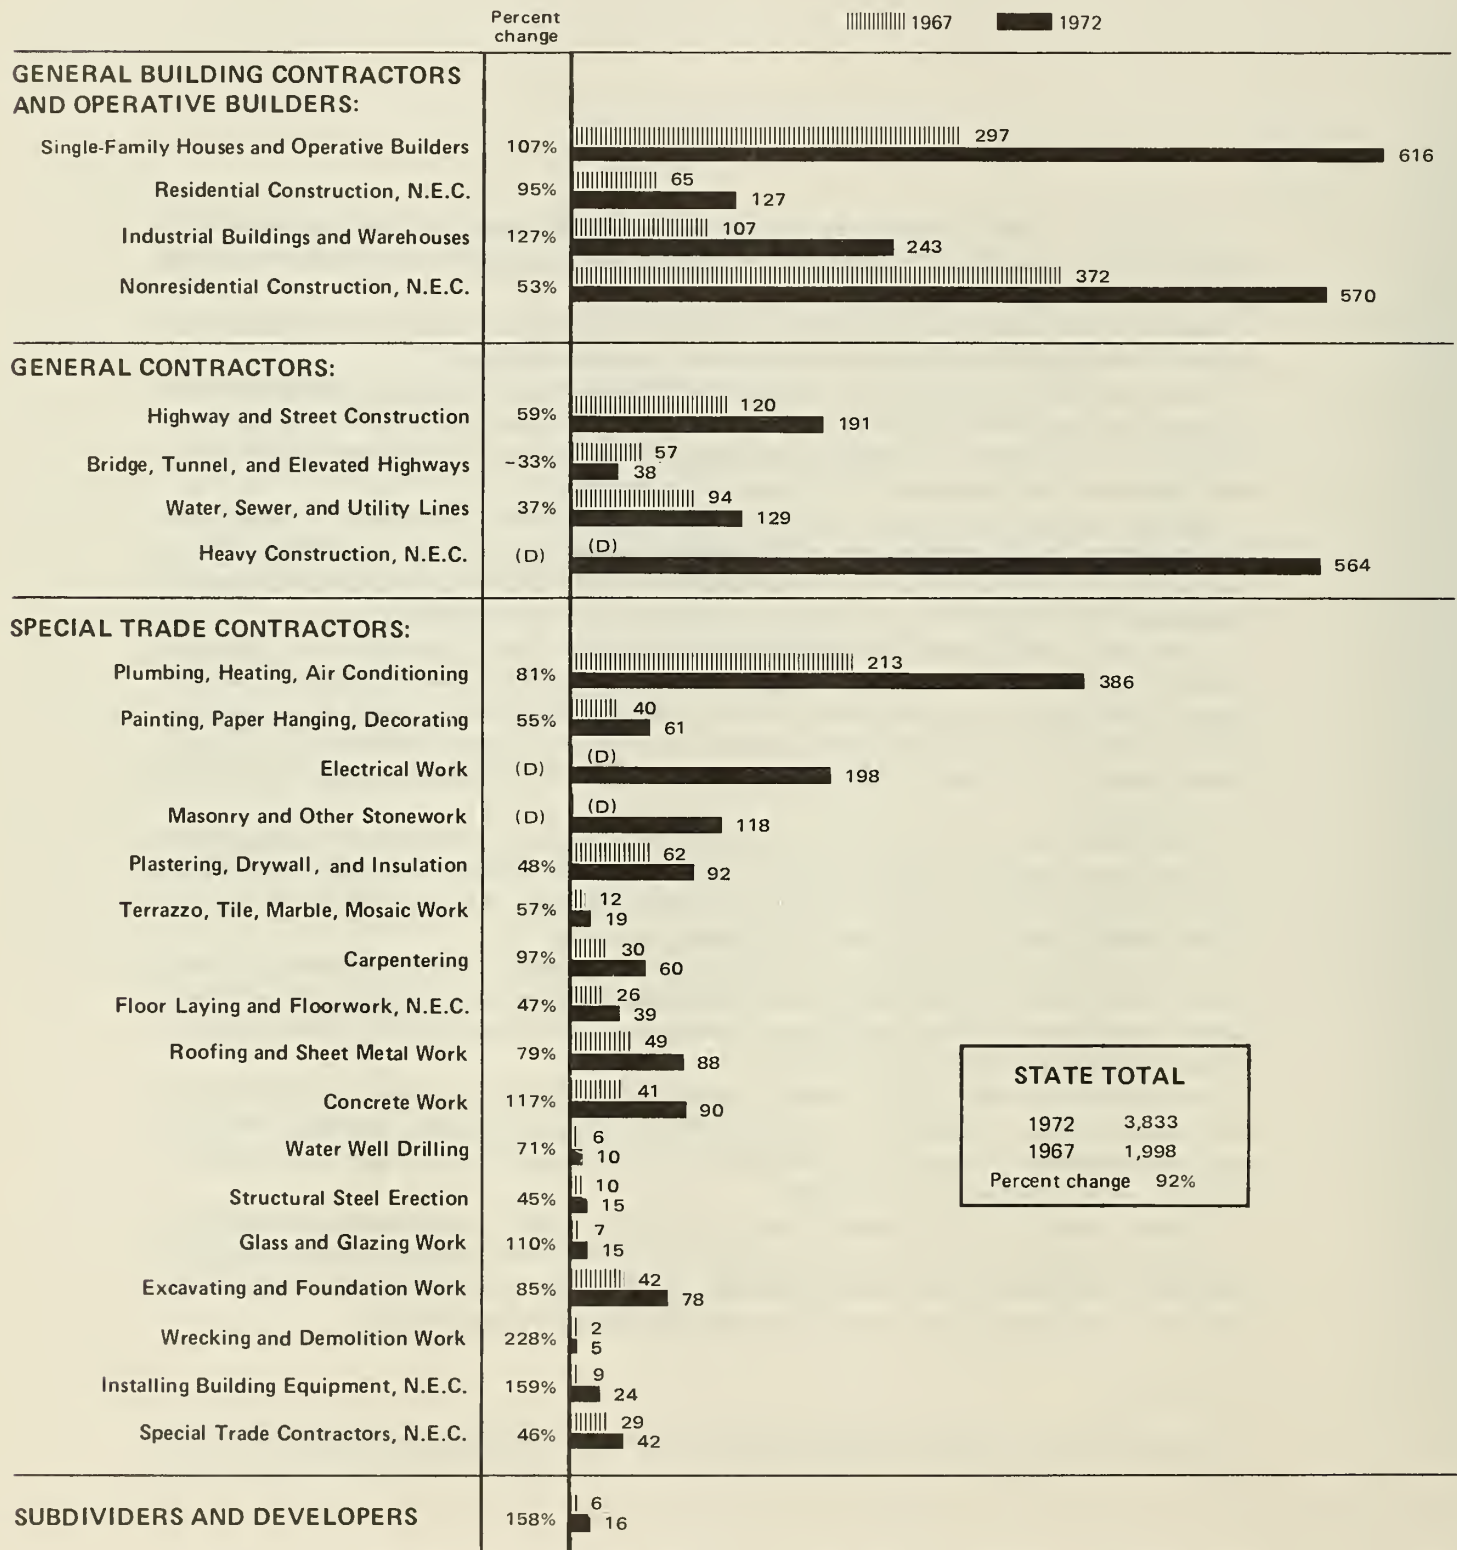

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

MARYLAND *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$37,522(000) and for SIC 6552 were \$7,143(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

District of Columbia

During 1972, 1,097 establishments in the District of Columbia operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$561 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 467 nonemployer establishments, or 43 percent of all construction establishments in the District of Columbia. They accounted for about 2 percent of the total receipts of all construction establishments in the District of Columbia. On the other hand, 630 establishments, 57 percent of all construction establishments, were "employers," who accounted for 98 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$549 million, of which \$541 million were receipts for construction work. These establishments paid \$183 million for construction work subcontracted to others, leaving net construction receipts of about \$358 million.

Construction establishments with payroll located in the District of Columbia paid \$130 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in the District of Columbia was 14.0 thousand employees. Total payroll for 1972 was \$154 million. Employment for the pay period including March 12, 1972, was 12.8 thousand employees, while employment for the pay period including August 12, 1972, was 14.4 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for the District of Columbia are based on a sample of about 400 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

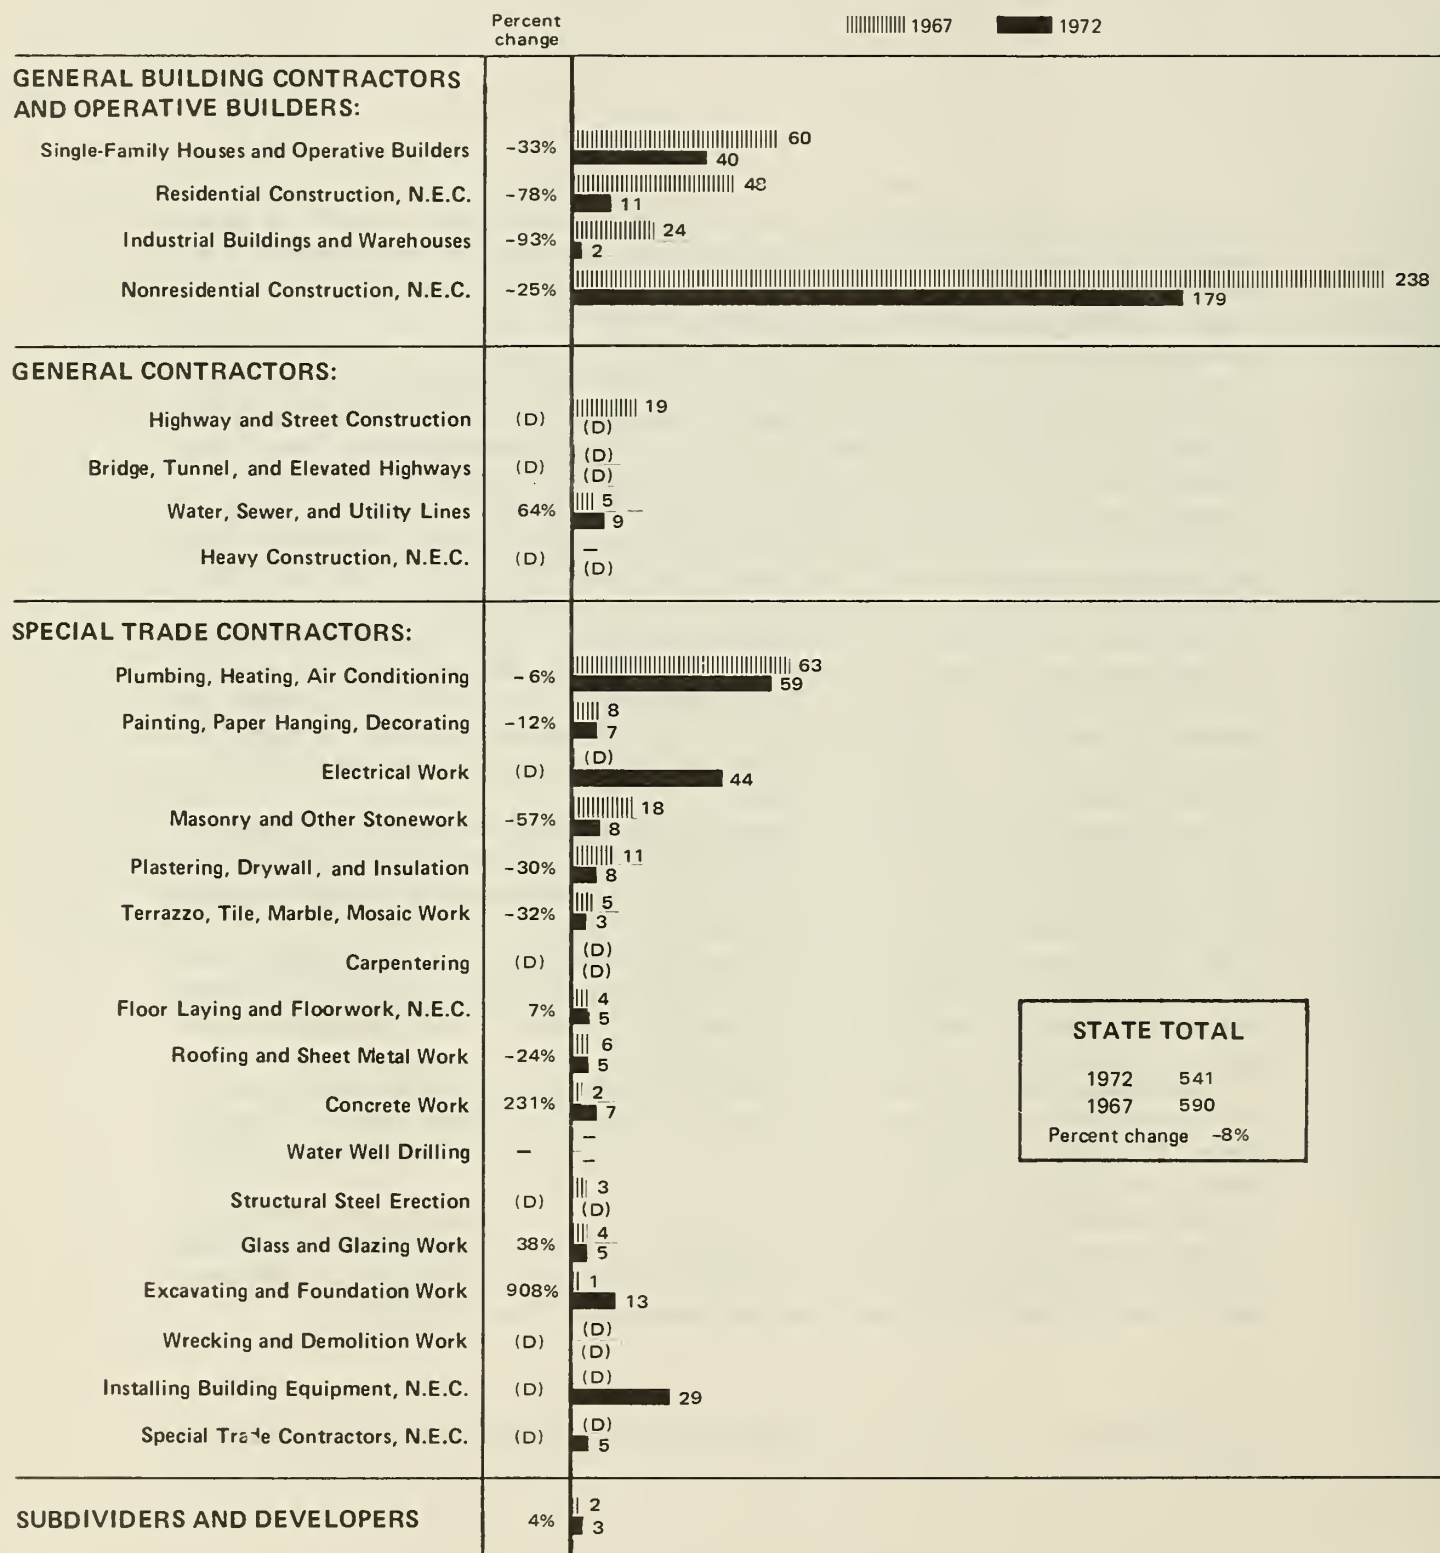

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

DIST. OF COLUMBIA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Virginia

During 1972, 20,698 establishments in Virginia operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$3,634 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 9,288 nonemployer establishments, or 45 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in Virginia. On the other hand, 11,410 establishments, 55 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$3,505 million, of which \$3,314 million were receipts for construction work. These establishments paid \$822 million for construction work subcontracted to others, leaving net construction receipts of about \$2,491 million.

Construction establishments with payroll located in Virginia paid \$1,112 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Virginia was 114.0 thousand employees. Total payroll for 1972 was \$860 million. Employment for the pay period including March 12, 1972, was 102.3 thousand employees, while employment for the pay period including August 12, 1972, was 122.4 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Virginia are based on a sample of about 4,500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

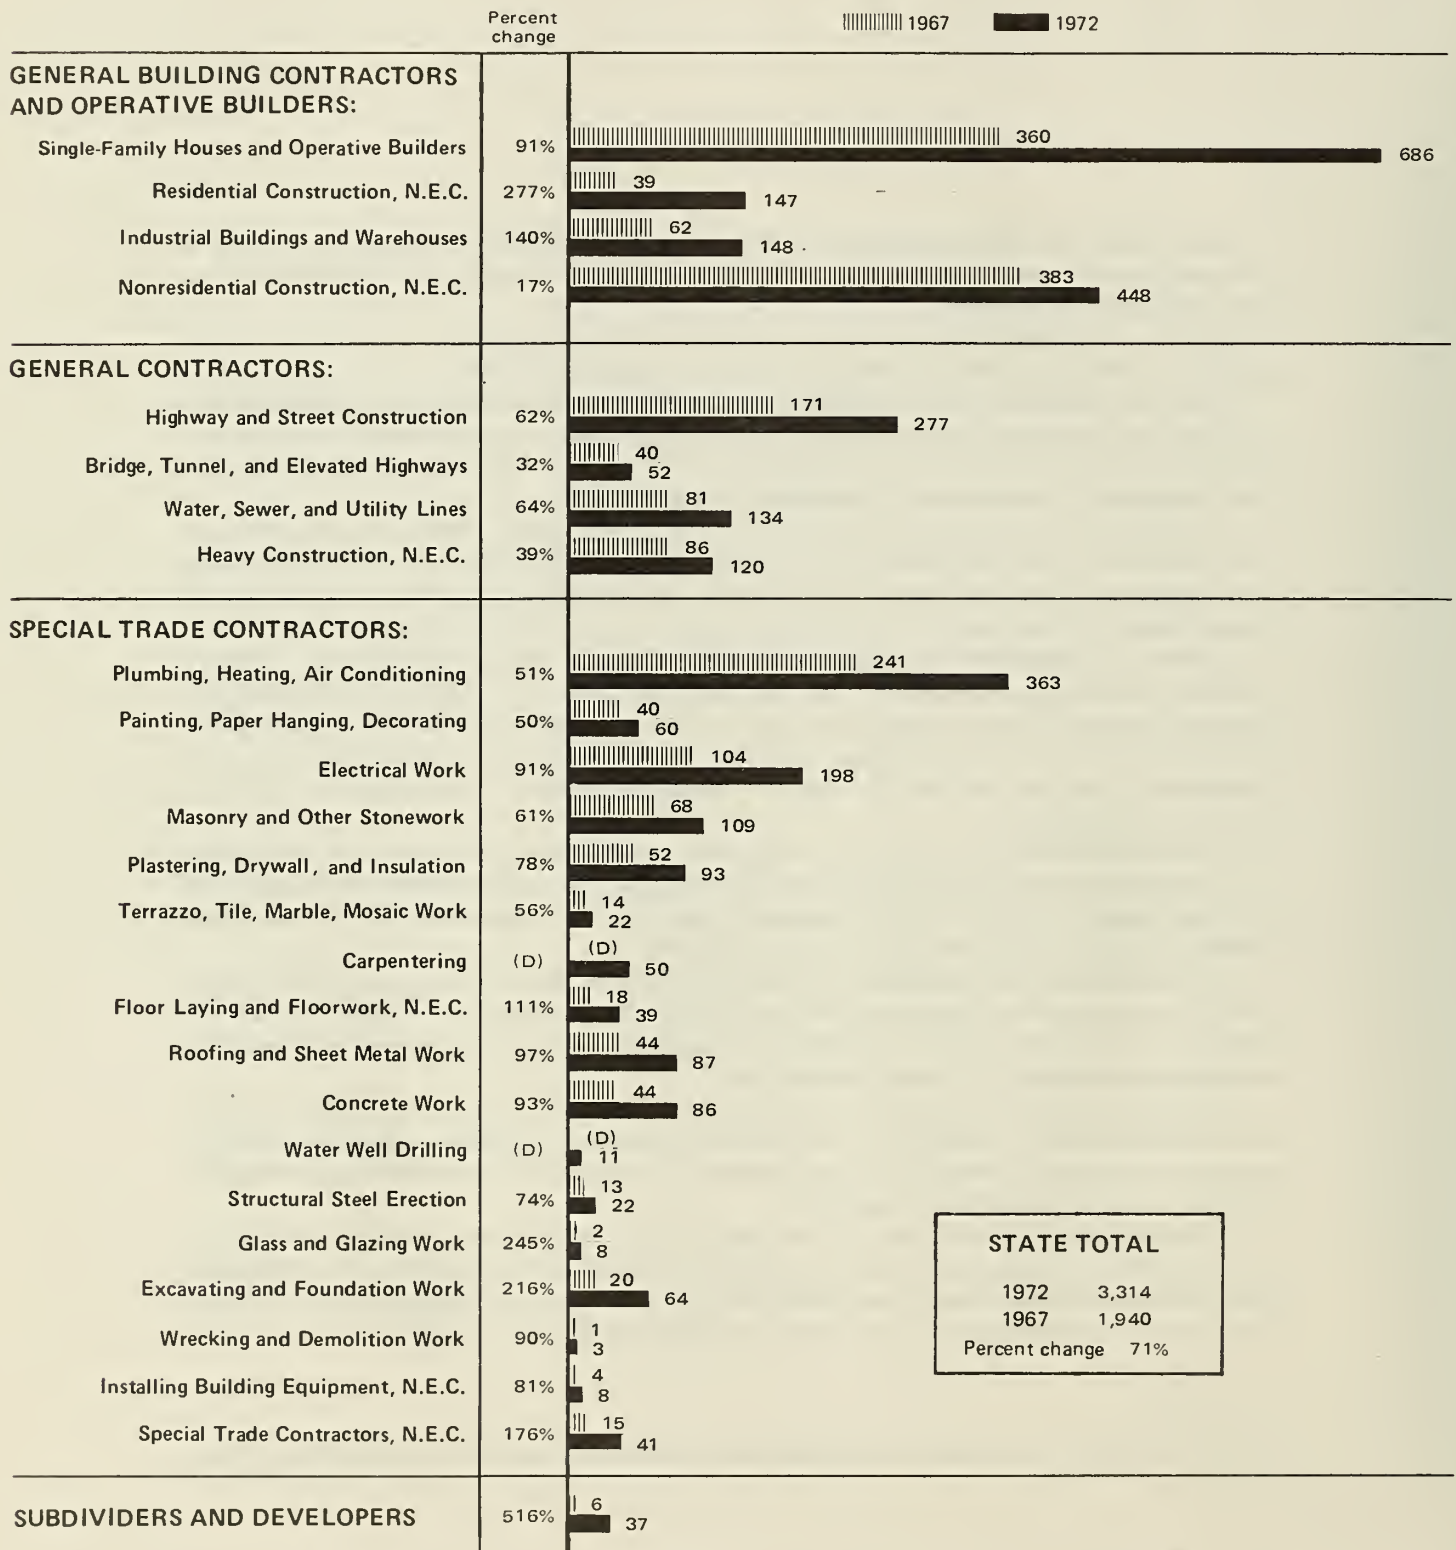

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

VIRGINIA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$49,650,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

West Virginia

During 1972, 5,652 establishments in West Virginia operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$665 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 2,835 nonemployer establishments, or 50 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in West Virginia. On the other hand, 2,817 establishments, 50 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$640 million, of which \$616 million were receipts for construction work. These establishments paid \$82 million for construction work subcontracted to others, leaving net construction receipts of about \$533 million.

Construction establishments with payroll located in West Virginia paid \$181 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in West Virginia was 22.6 thousand employees. Total payroll for 1972 was \$204 million. Employment for the pay period including March 12, 1972, was 19.0 thousand employees, while employment for the pay period including August 12, 1972, was 24.8 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for West Virginia are based on a sample of about 1,100 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

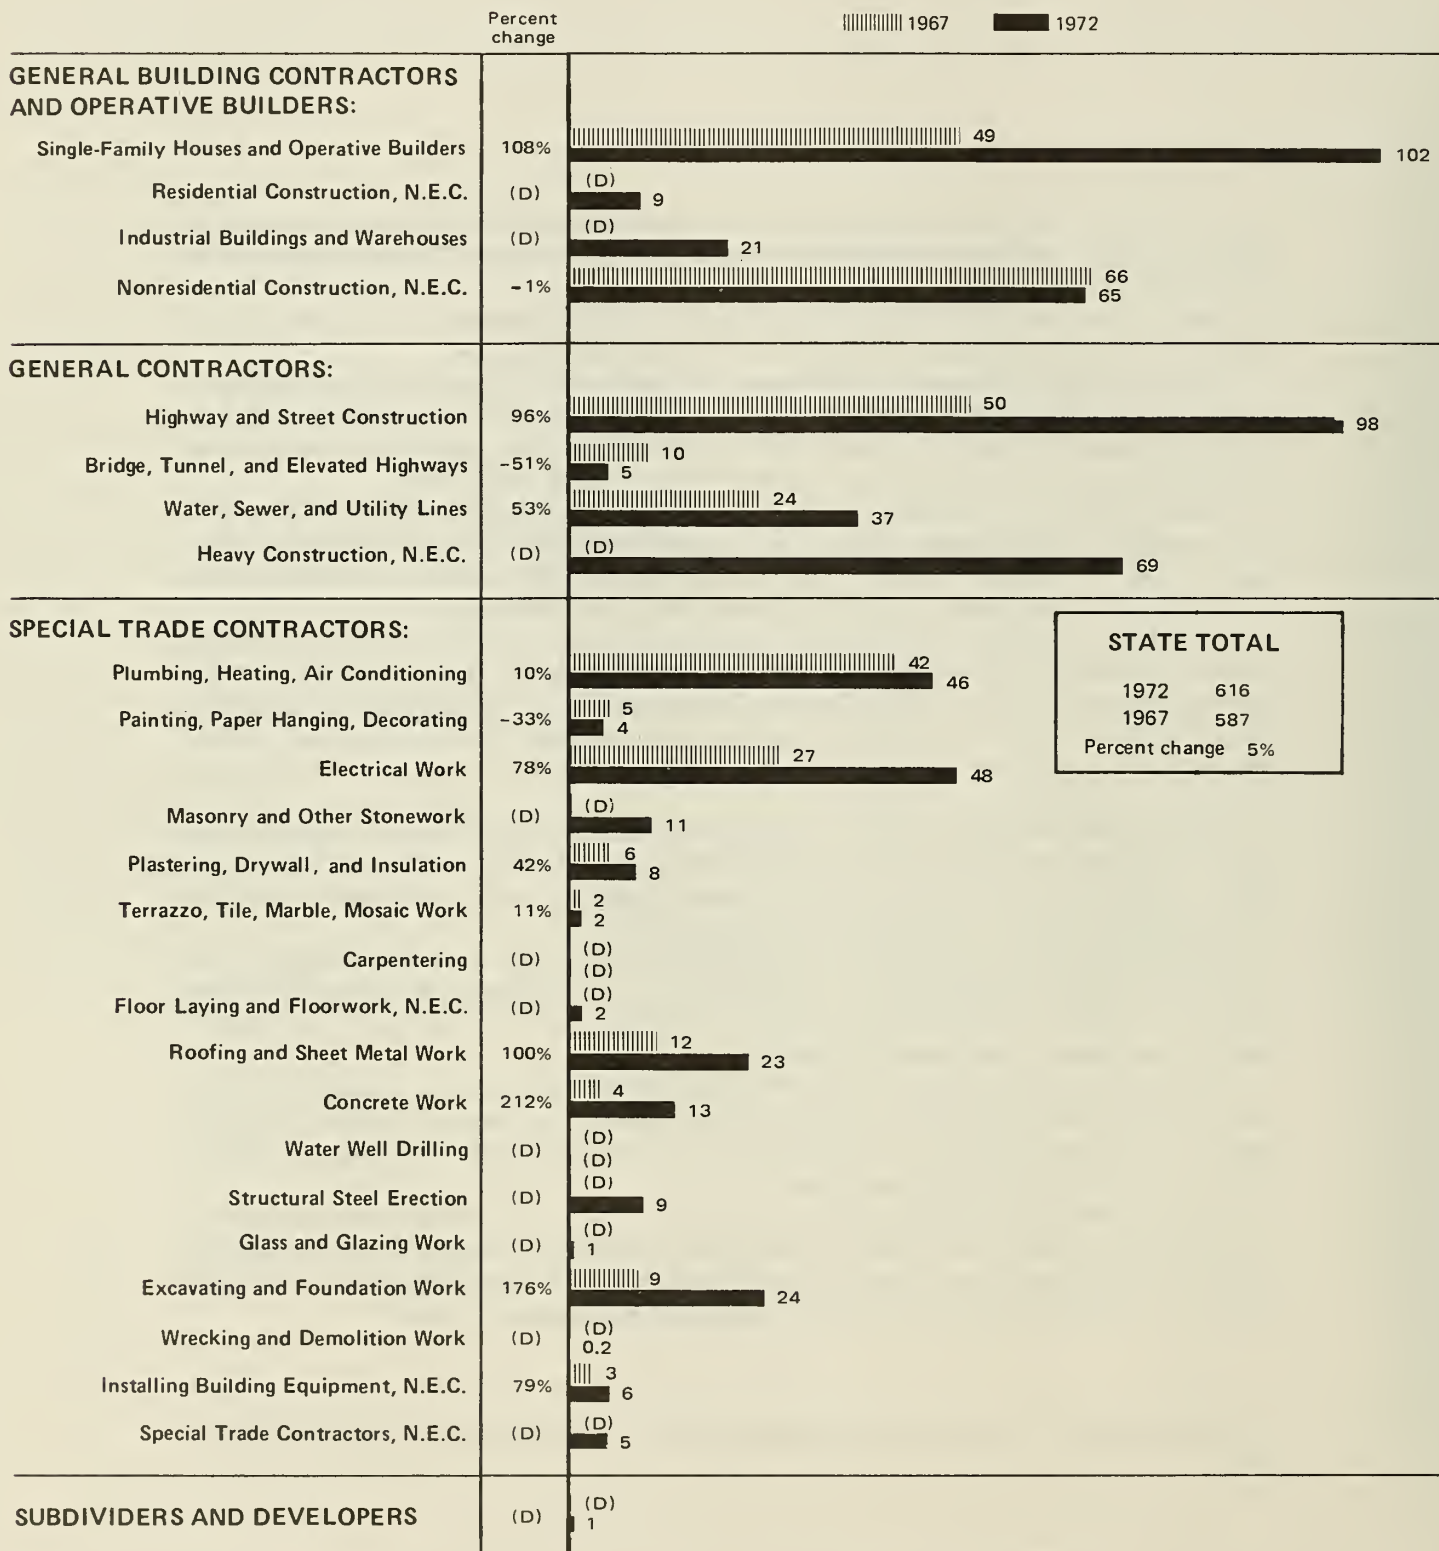

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

WEST VIRGINIA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$4,033,000 and for SIC 6552 were \$1,829,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

North Carolina

During 1972, 25,495 establishments in North Carolina operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$3,770 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 11,853 nonemployer establishments, or 46 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in North Carolina. On the other hand, 13,642 establishments, 54 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$3,610 million, of which \$3,446 million were receipts for construction work. These establishments paid \$749 million for construction work subcontracted to others, leaving net construction receipts of about \$2,697 million.

Construction establishments with payroll located in North Carolina paid \$1,276 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in North Carolina was 131.3 thousand employees. Total payroll for 1972 was \$875 million. Employment for the pay period including March 12, 1972, was 123.5 thousand employees, while employment for the pay period including August 12, 1972, was 136.8 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for North Carolina are based on a sample of about 4,700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

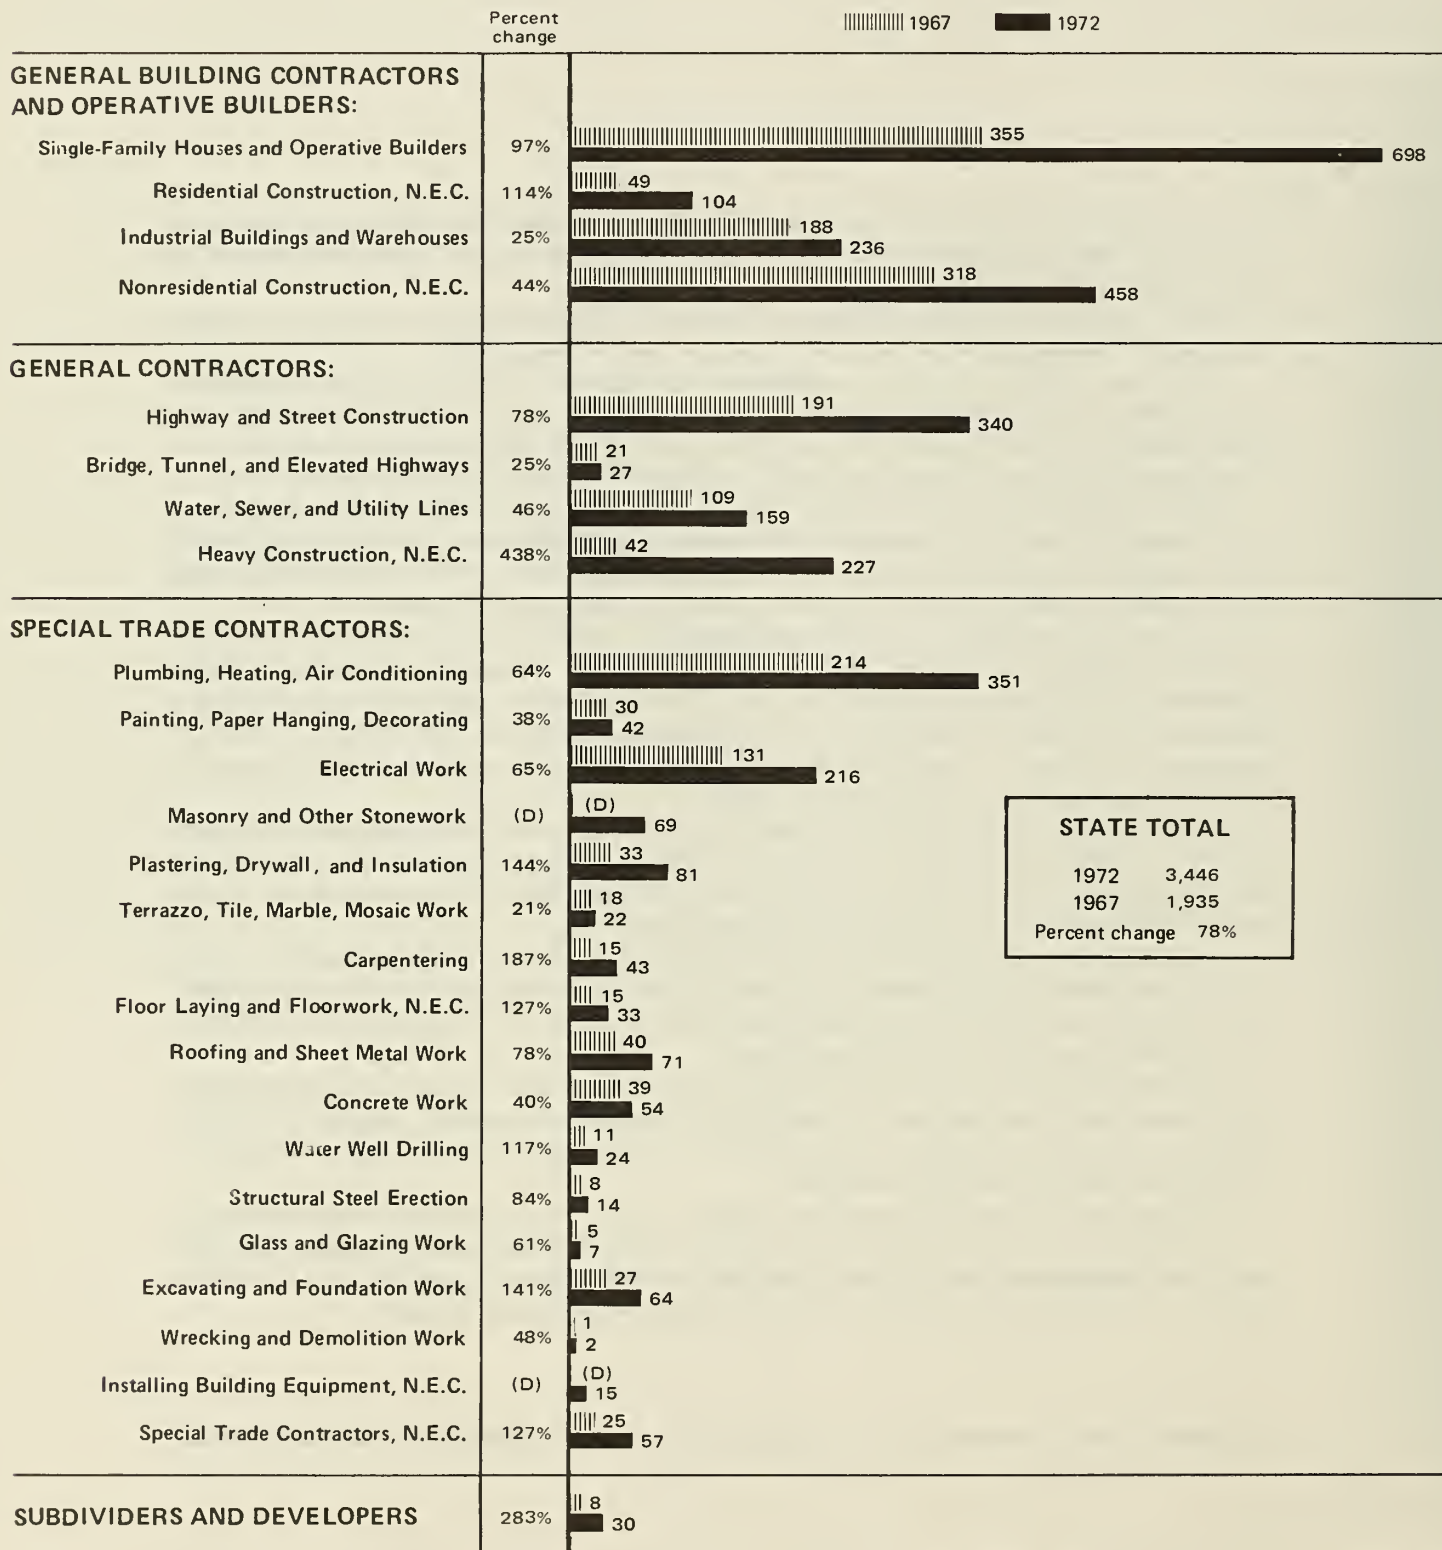

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

NORTH CAROLINA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$39,696(000) and for SIC 6552 were \$2,272(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

South Carolina

During 1972, 12,586 establishments in South Carolina operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,189 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 5,910 nonemployer establishments, or 47 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in South Carolina. On the other hand, 6,676 establishments, 53 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,093 million, of which \$2,036 million were receipts for construction work. These establishments paid \$481 million for construction work subcontracted to others, leaving net construction receipts of about \$1,555 million.

Construction establishments with payroll located in South Carolina paid \$759 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in South Carolina was 74.0 thousand employees. Total payroll for 1972 was \$520 million. Employment for the pay period including March 12, 1972, was 68.8 thousand employees, while employment for the pay period including August 12, 1972, was 77.3 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for South Carolina are based on a sample of about 2,300 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

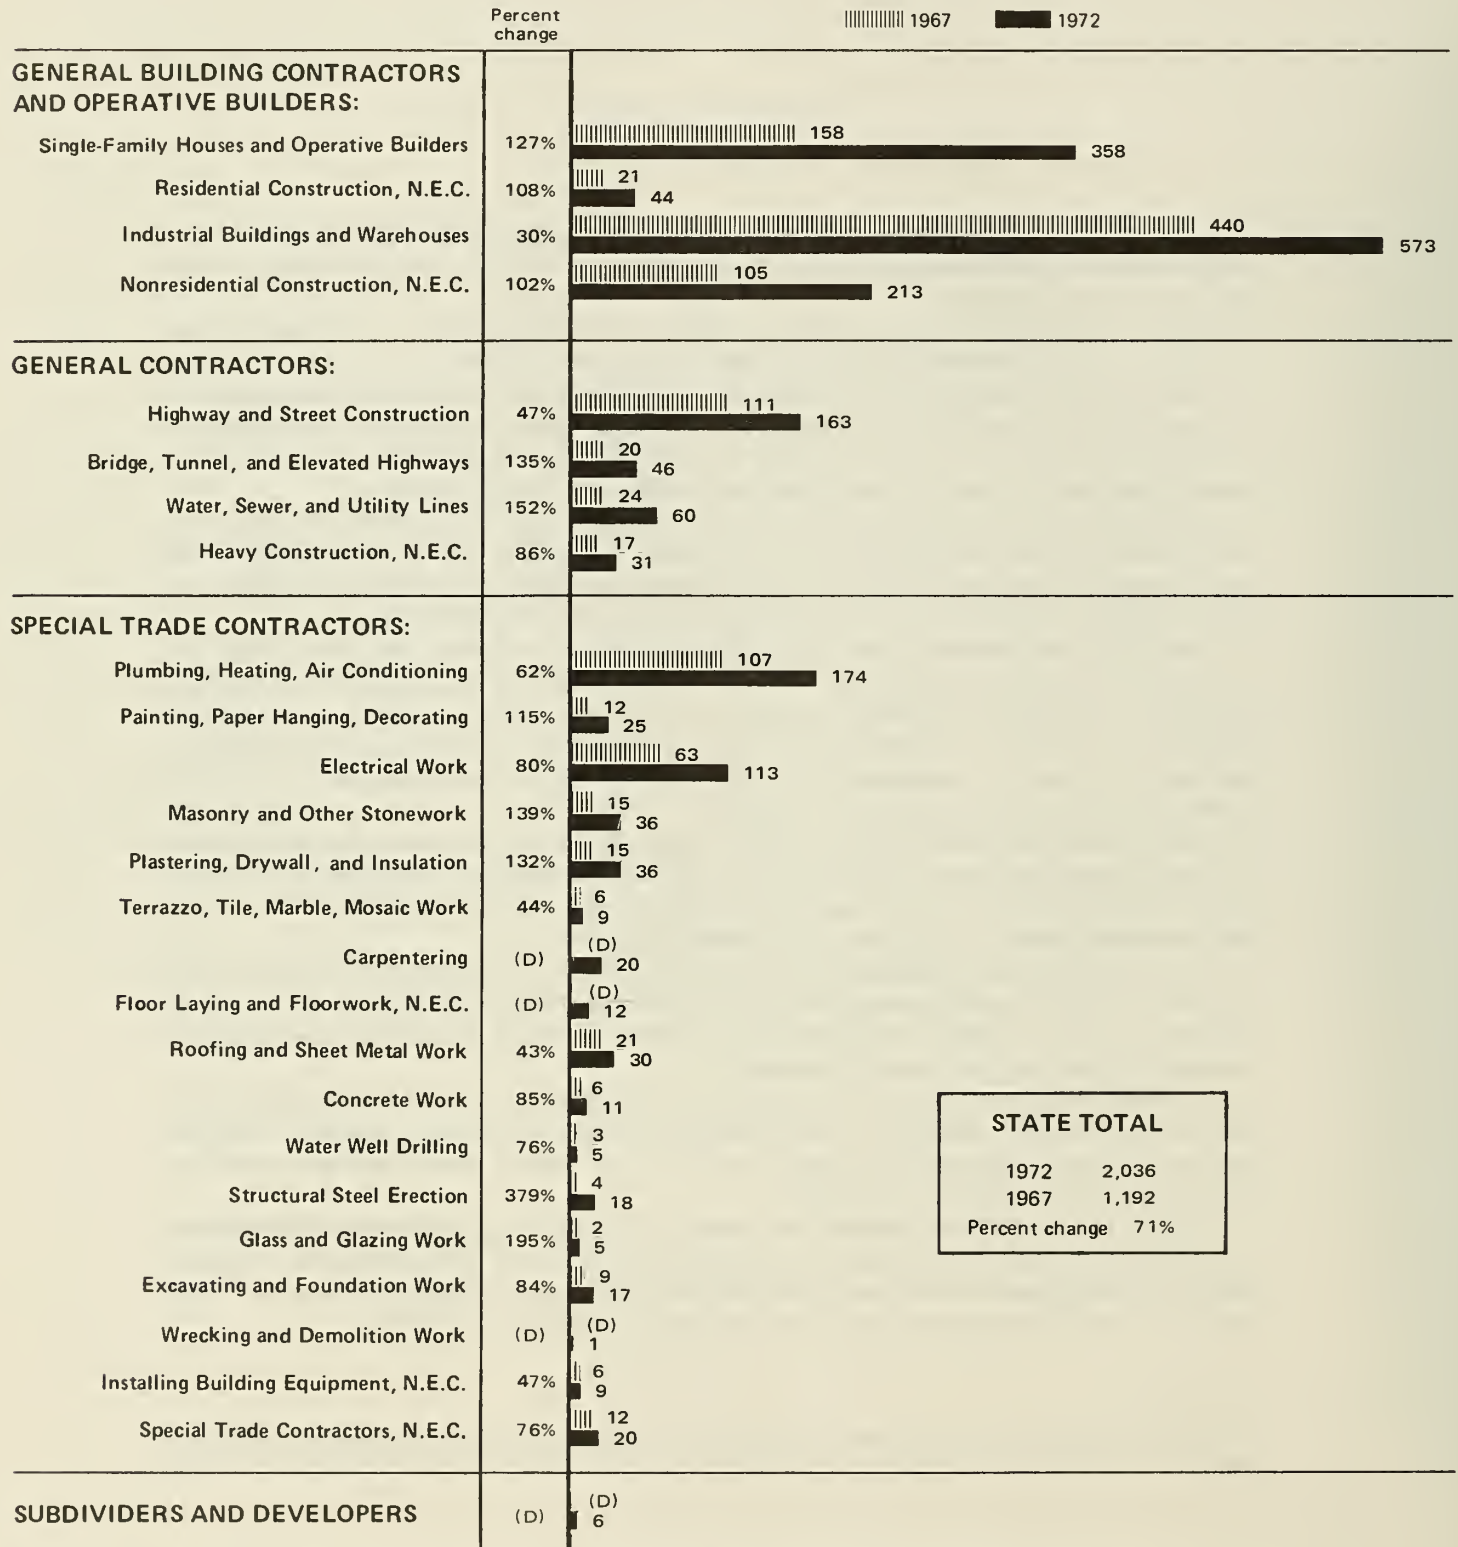

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

SOUTH CAROLINA *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Georgia

During 1972, 26,824 establishments in Georgia operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$4,072 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 13,982 nonemployer establishments, or 52 percent of all construction establishments in the State. They accounted for about 7 percent of the total receipts of all construction establishments in Georgia. On the other hand, 12,842 establishments, 48 percent of all construction establishments, were "employers," who accounted for 93 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$3,780 million, of which \$3,640 million were receipts for construction work. These establishments paid \$946 million for construction work subcontracted to others, leaving net construction receipts of about \$2,694 million.

Construction establishments with payroll located in Georgia paid \$1,281 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Georgia was 113.3 thousand employees. Total payroll for 1972 was \$829 million. Employment for the pay period including March 12, 1972, was 103.6 thousand employees, while employment for the pay period including August 12, 1972, was 120.2 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Georgia are based on a sample of about 4,700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

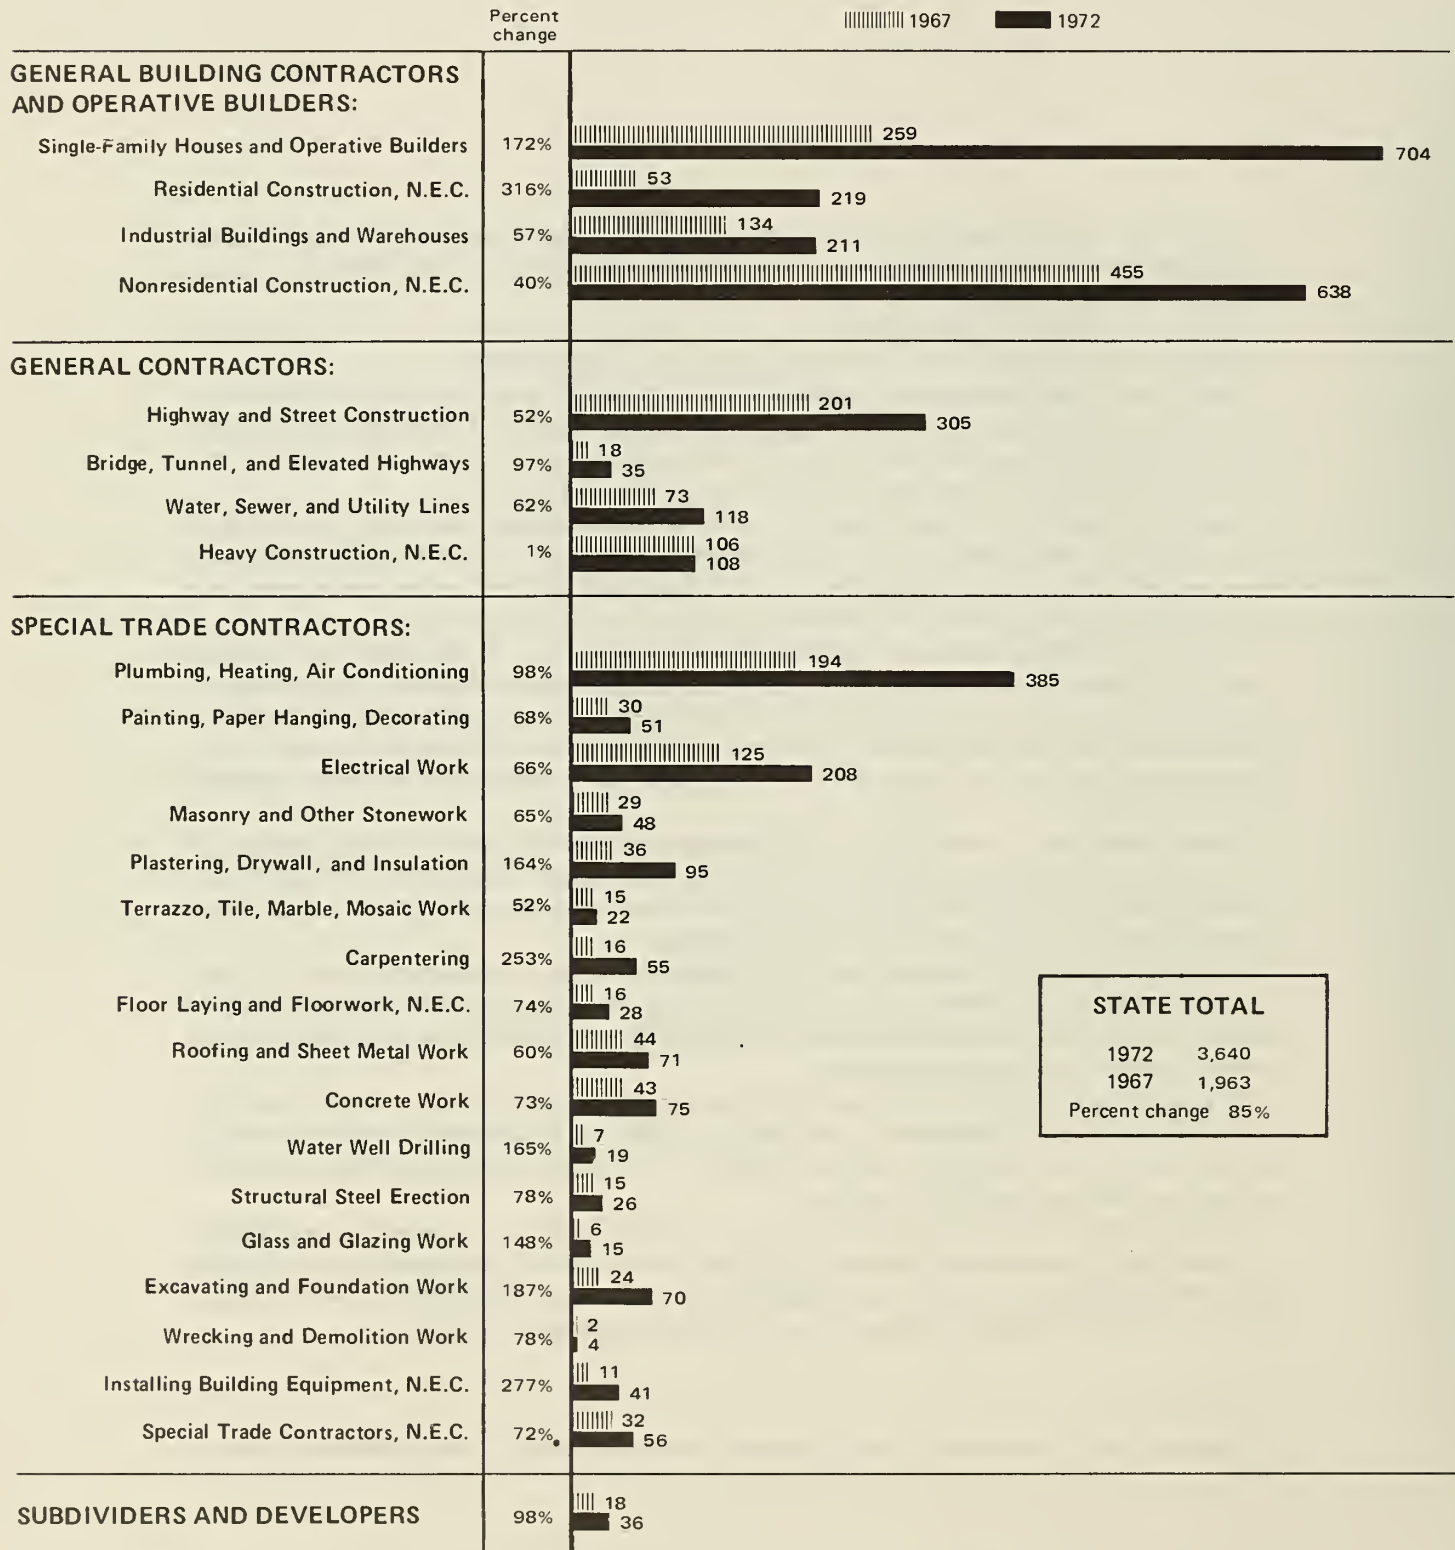

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

GEORGIA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series Report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$43,958(000) and for SIC 6552 were \$17,920(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Florida

During 1972, 43,196 establishments in Florida operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$9,075 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 20,864 nonemployer establishments, or 48 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in Florida. On the other hand, 22,332 establishments, 52 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$8,670 million, of which \$8,011 million were receipts for construction work. These establishments paid \$2,299 million for construction work subcontracted to others, leaving net construction receipts of about \$5,712 million.

Construction establishments with payroll located in Florida paid \$2,478 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Florida was 242.6 thousand employees. Total payroll for 1972 was \$1,982 million. Employment for the pay period including March 12, 1972, was 222.6 thousand employees, while employment for the pay period including August 12, 1972, was 251.2 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Florida are based on a sample of about 9,800 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

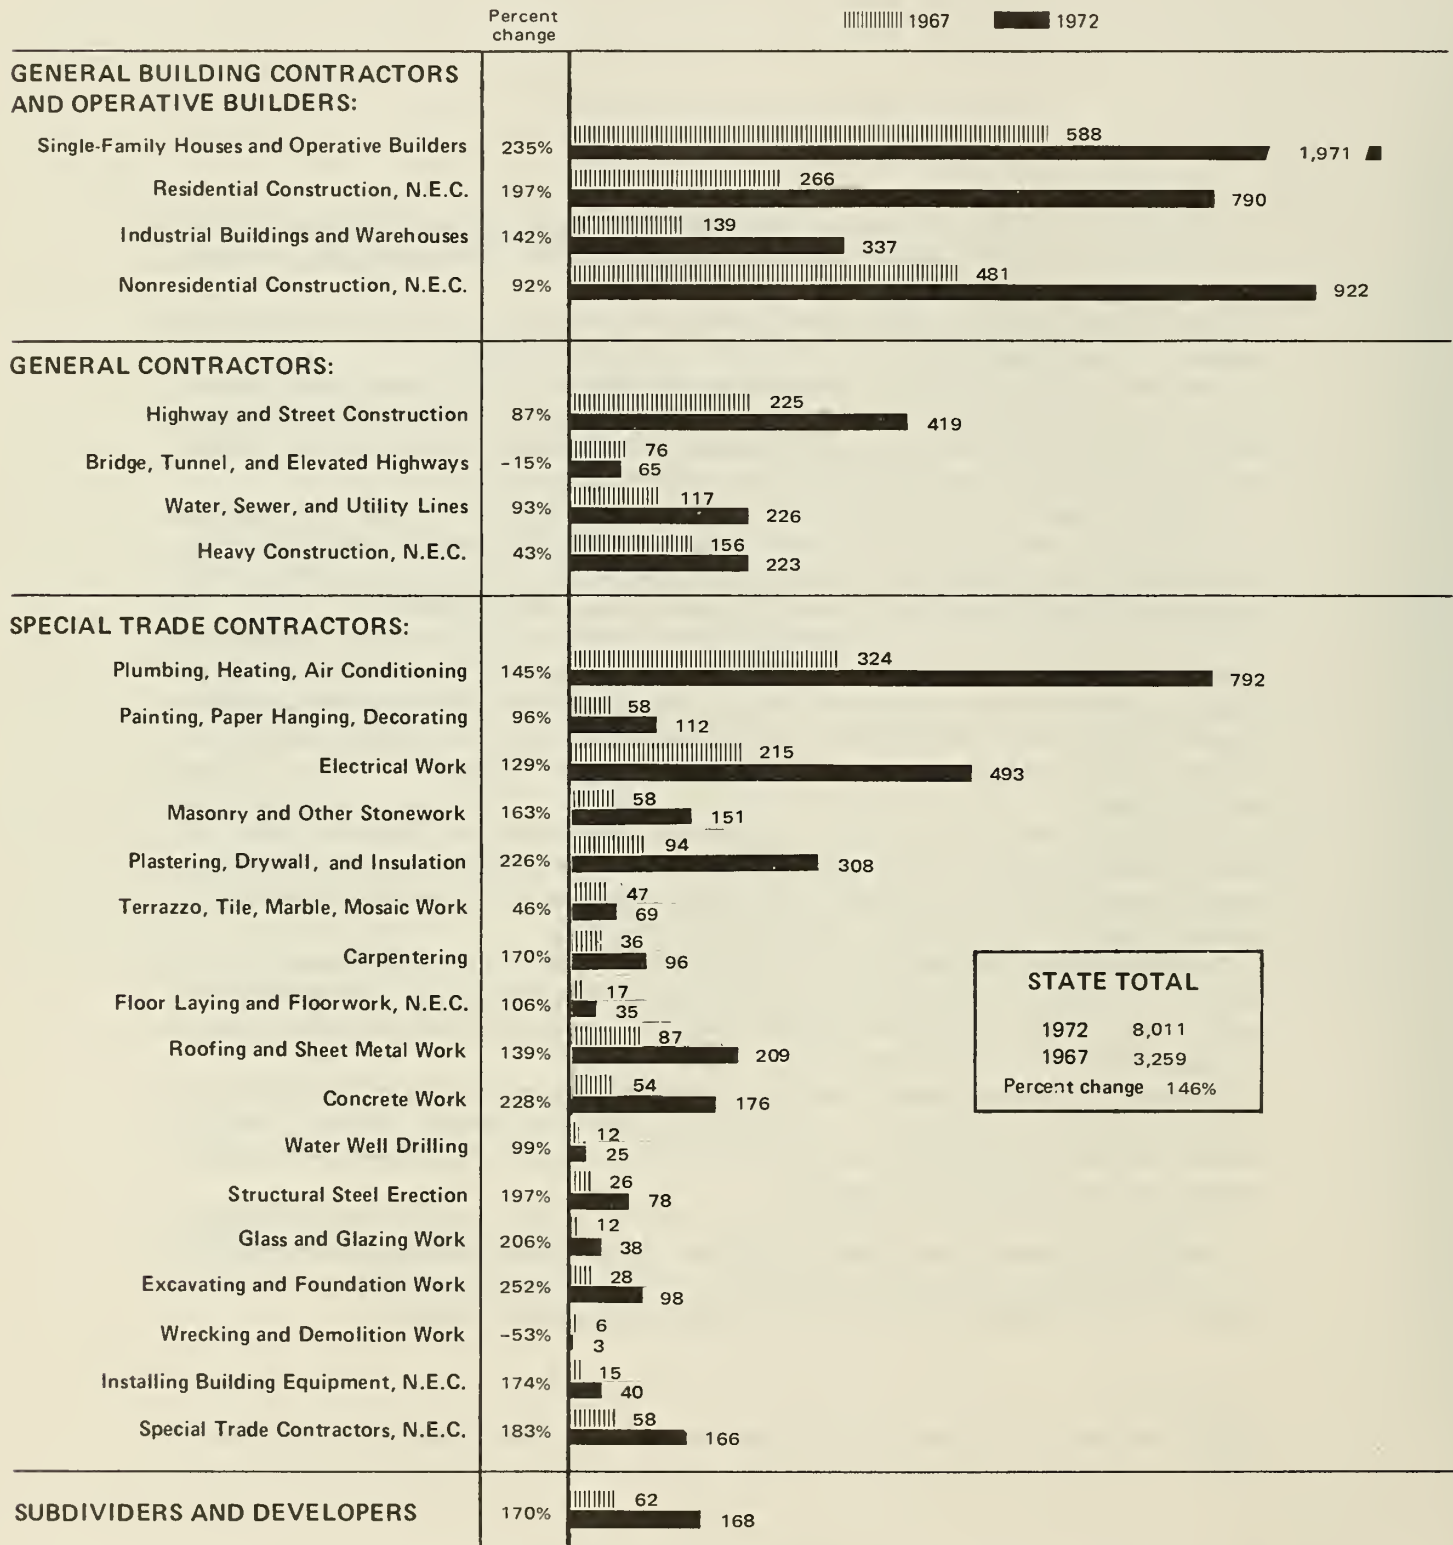

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

FLORIDA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$256,848(000) and for SIC 6552 were \$219,499(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

Kentucky

During 1972, 15,941 establishments in Kentucky operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,739 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 9,624 nonemployer establishments, or 60 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Kentucky. On the other hand, 6,317 establishments, 40 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,631 million, of which \$1,573 million were receipts for construction work. These establishments paid \$320 million for construction work subcontracted to others, leaving net construction receipts of about \$1,254 million.

Construction establishments with payroll located in Kentucky paid \$534 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Kentucky was 51.0 thousand employees. Total payroll for 1972 was \$427 million. Employment for the pay period including March 12, 1972, was 44.5 thousand employees, while employment for the pay period including August 12, 1972, was 56.5 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Kentucky are based on a sample of about 2,300 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

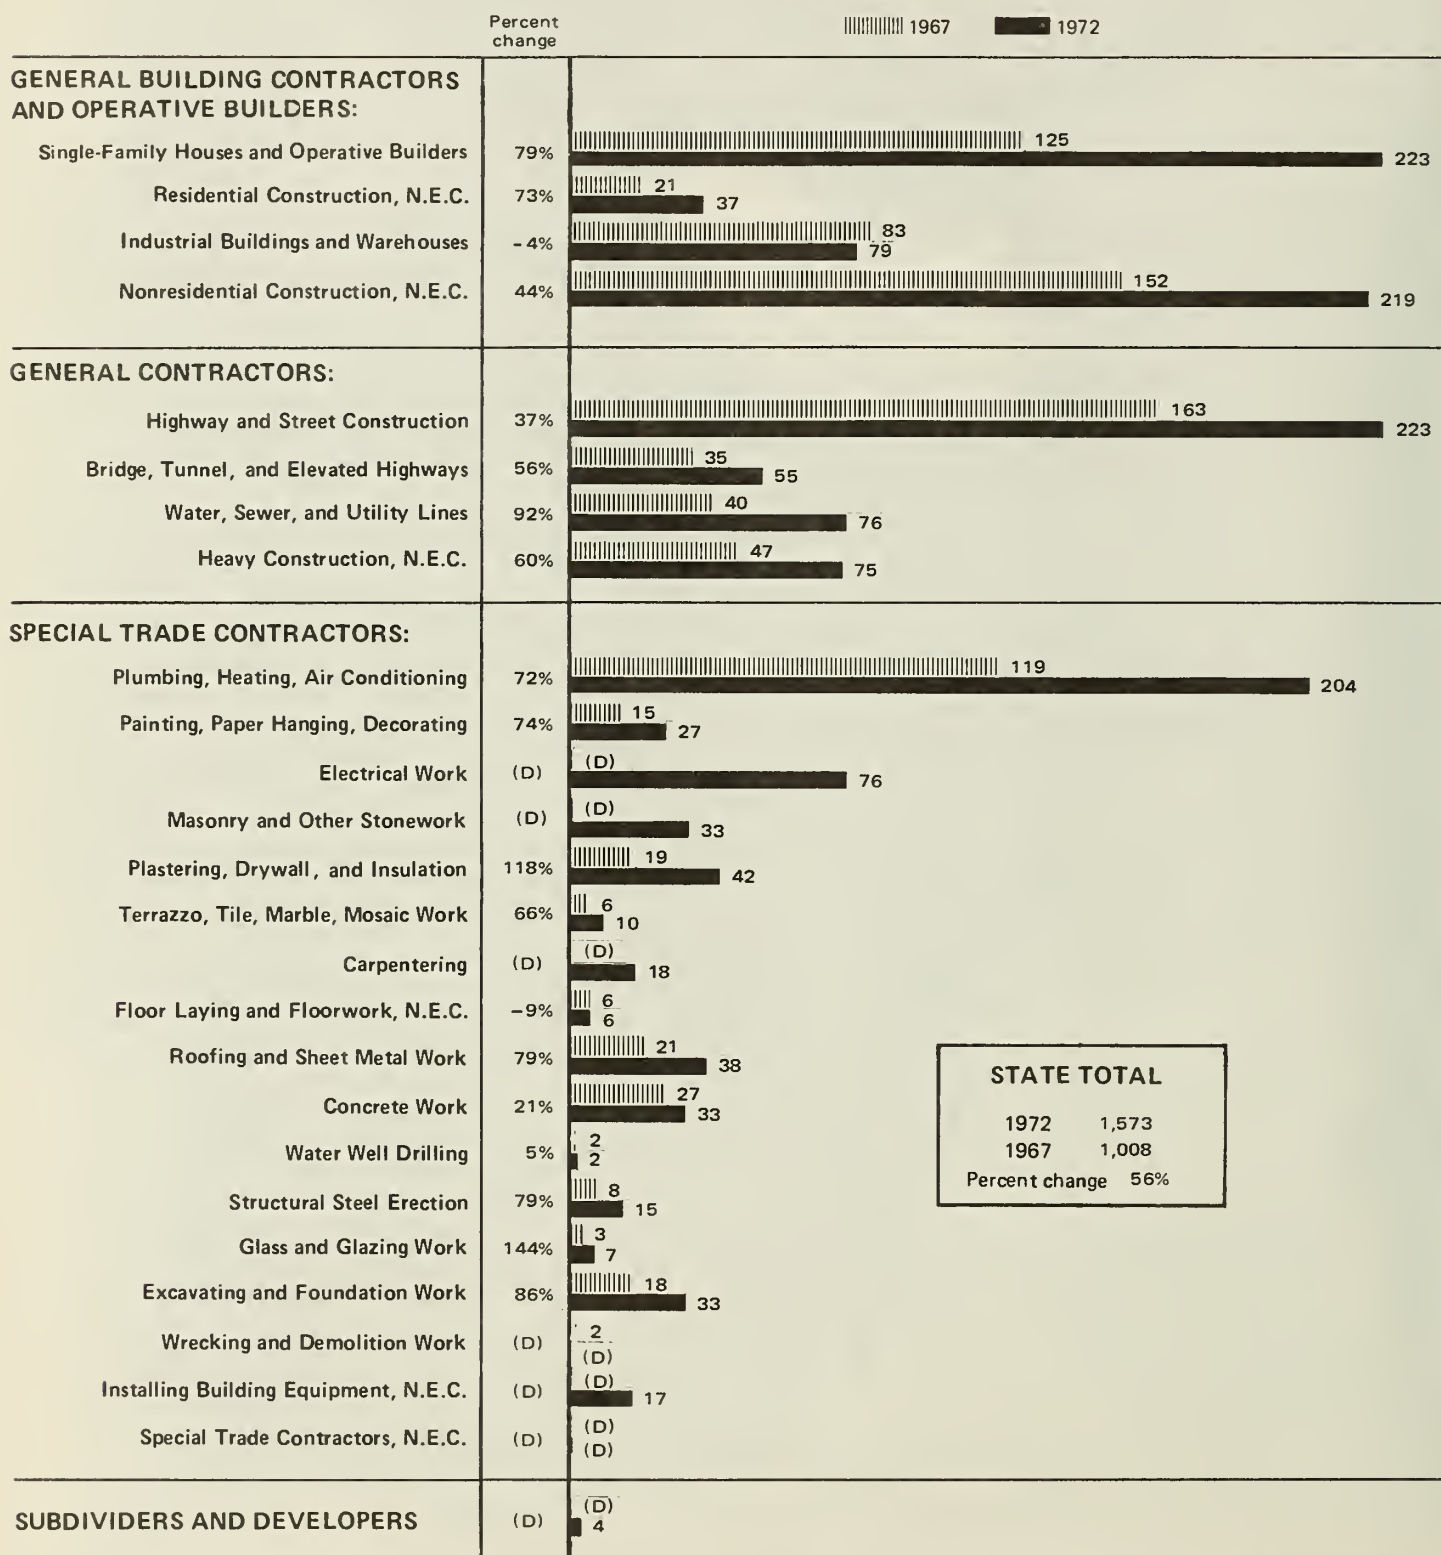

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

KENTUCKY Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$7,288(000) and for SIC 6552 were \$2,604(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Tennessee

During 1972, 19,932 establishments in Tennessee operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,995 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 11,345 nonemployer establishments, or 57 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Tennessee. On the other hand, 8,587 establishments, 43 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,848 million, of which \$2,729 million were receipts for construction work. These establishments paid \$761 million for construction work subcontracted to others, leaving net construction receipts of about \$1,967 million.

Construction establishments with payroll located in Tennessee paid \$920 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Tennessee was 85.7 thousand employees. Total payroll for 1972 was \$615 million. Employment for the pay period including March 12, 1972, was 77.9 thousand employees, while employment for the pay period including August 12, 1972, was 91.8 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Tennessee are based on a sample of about 3,400 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

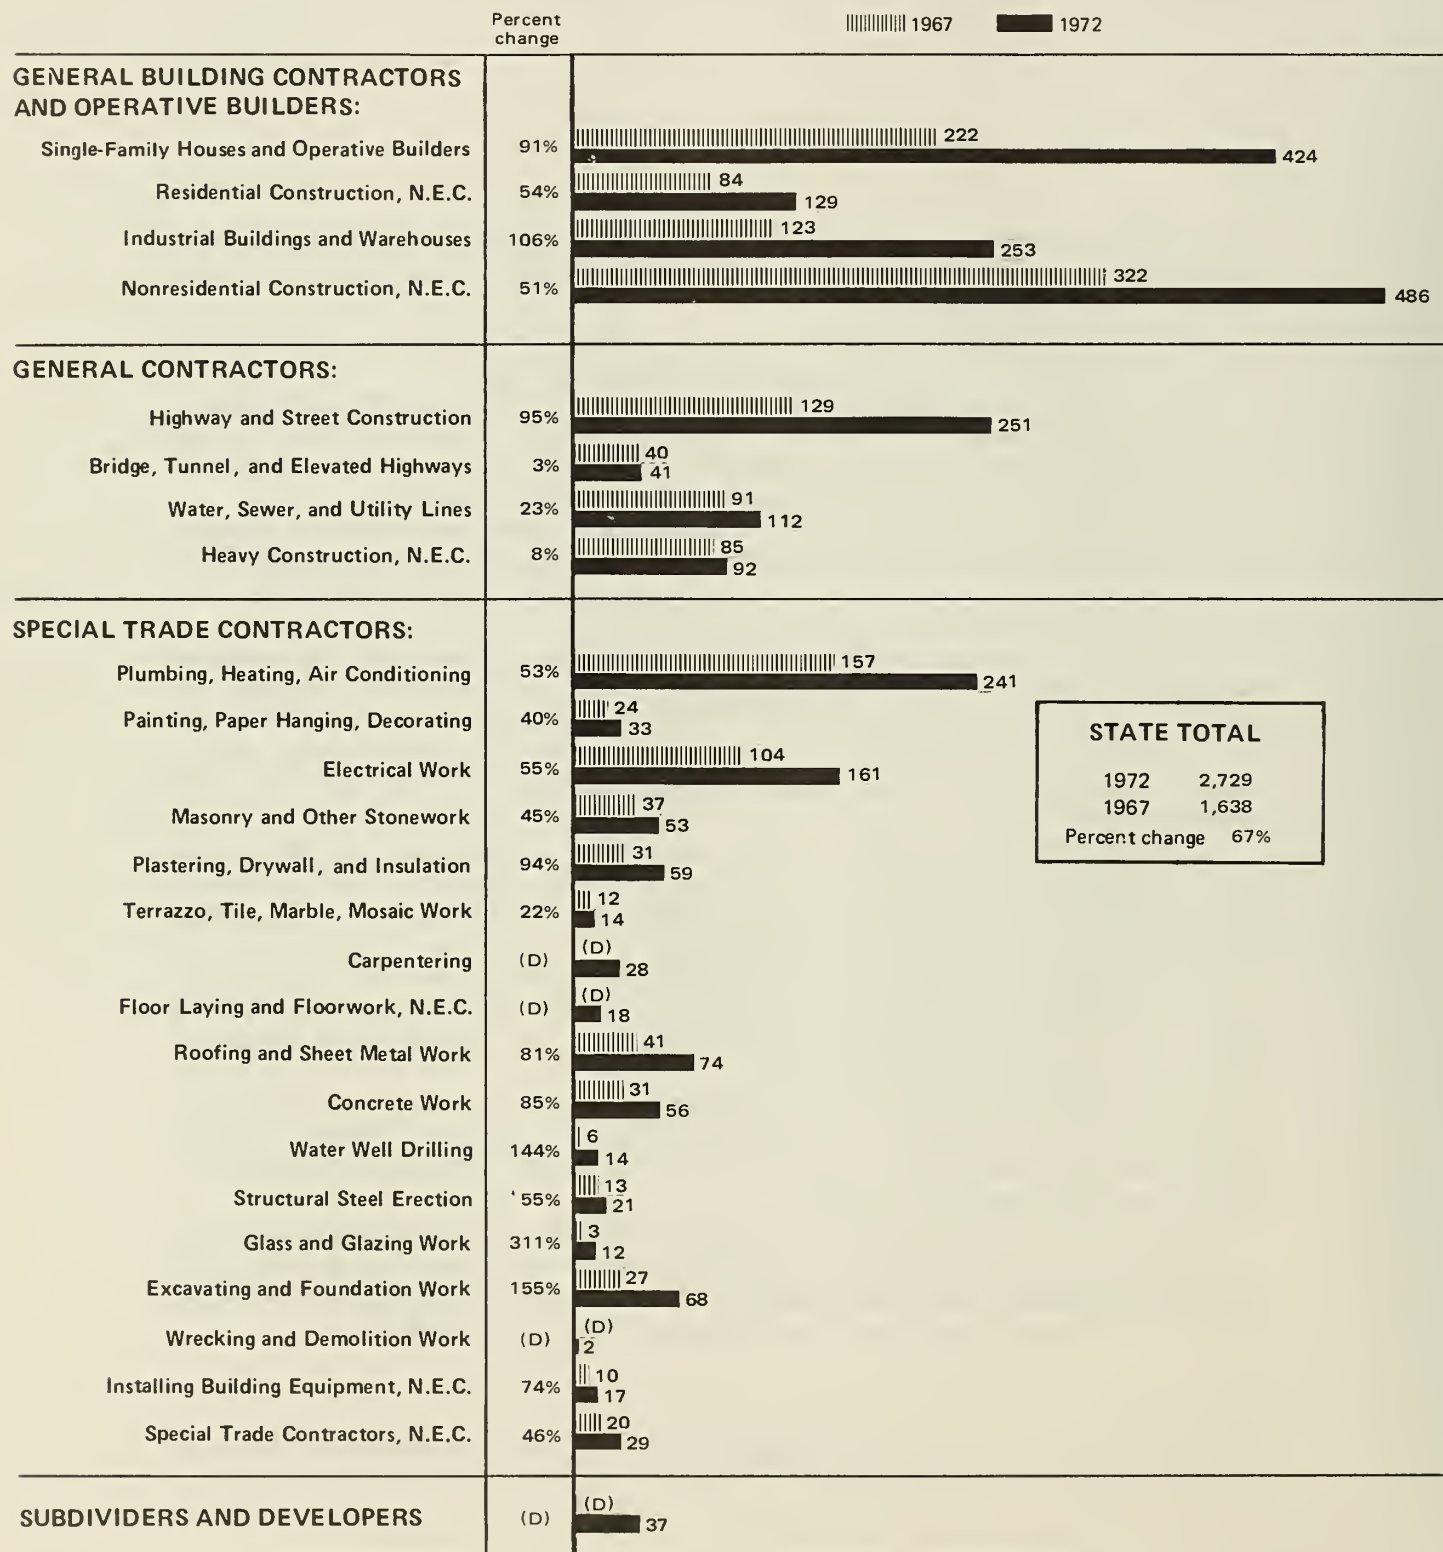

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

TENNESSEE Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$21,388,000 and for SIC 6552 were \$20,393,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Alabama

During 1972, 14,549 establishments in Alabama operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,197 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 8,008 nonemployer establishments, or 55 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Alabama. On the other hand, 6,541 establishments, 45 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,074 million, of which \$2,022 million were receipts for construction work. These establishments paid \$497 million for construction work subcontracted to others, leaving net construction receipts of about \$1,526 million.

Construction establishments with payroll located in Alabama paid \$712 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Alabama was 65.5 thousand employees. Total payroll for 1972 was \$489 million. Employment for the pay period including March 12, 1972, was 61.1 thousand employees, while employment for the pay period including August 12, 1972, was 68.9 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Alabama are based on a sample of about 2,400 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

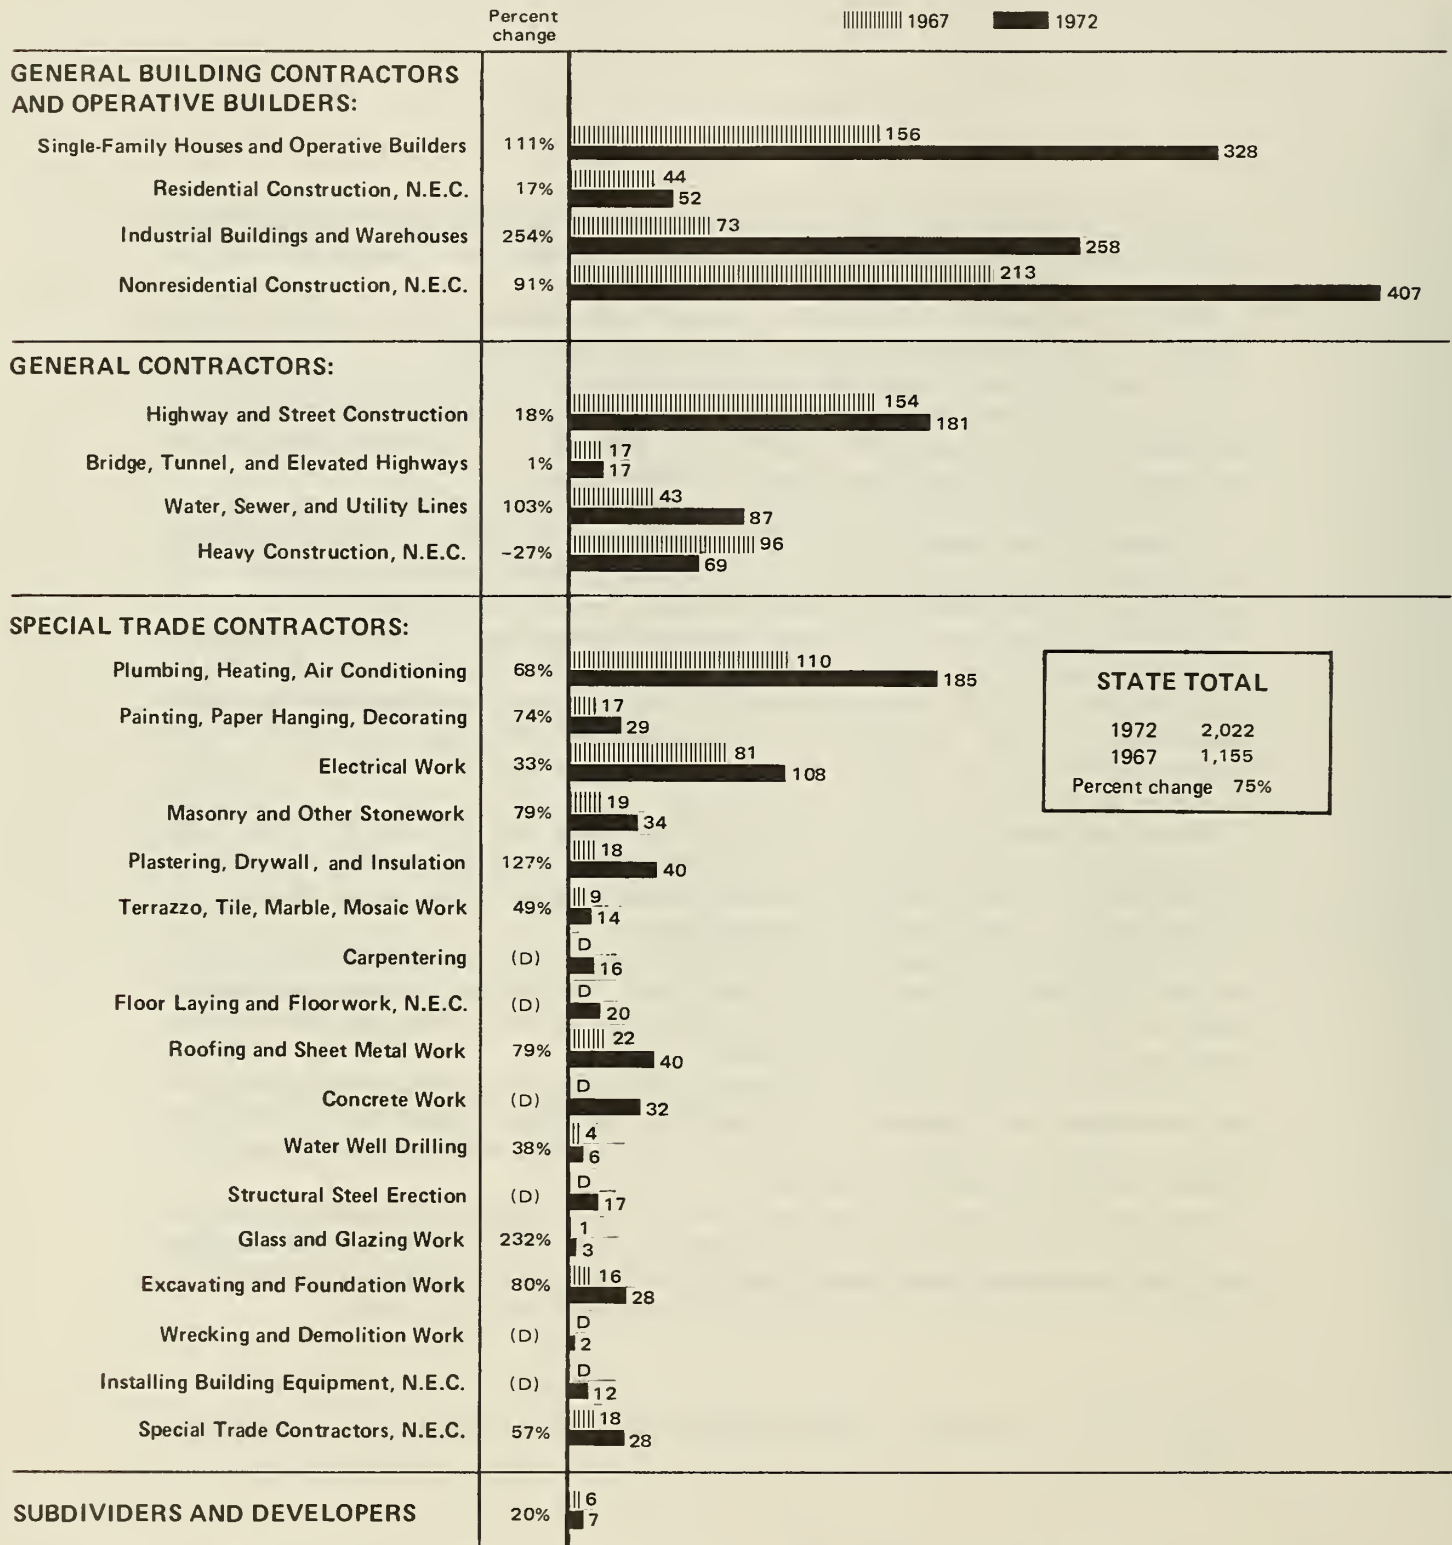

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

ALABAMA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Housea and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Mississippi

During 1972, 9,751 establishments in Mississippi operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,122 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 5,541 nonemployer establishments, or 57 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Mississippi. On the other hand, 4,210 establishments, 23 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,049 million, of which \$1,016 million were receipts for construction work. These establishments paid \$211 million for construction work subcontracted to others, leaving net construction receipts of about \$805 million.

Construction establishments with payroll located in Mississippi paid \$392 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Mississippi was 35.9 thousand employees. Total payroll for 1972 was \$225 million. Employment for the pay period including March 12, 1972, was 31.9 thousand employees, while employment for the pay period including August 12, 1972, was 39.2 thousand employees.

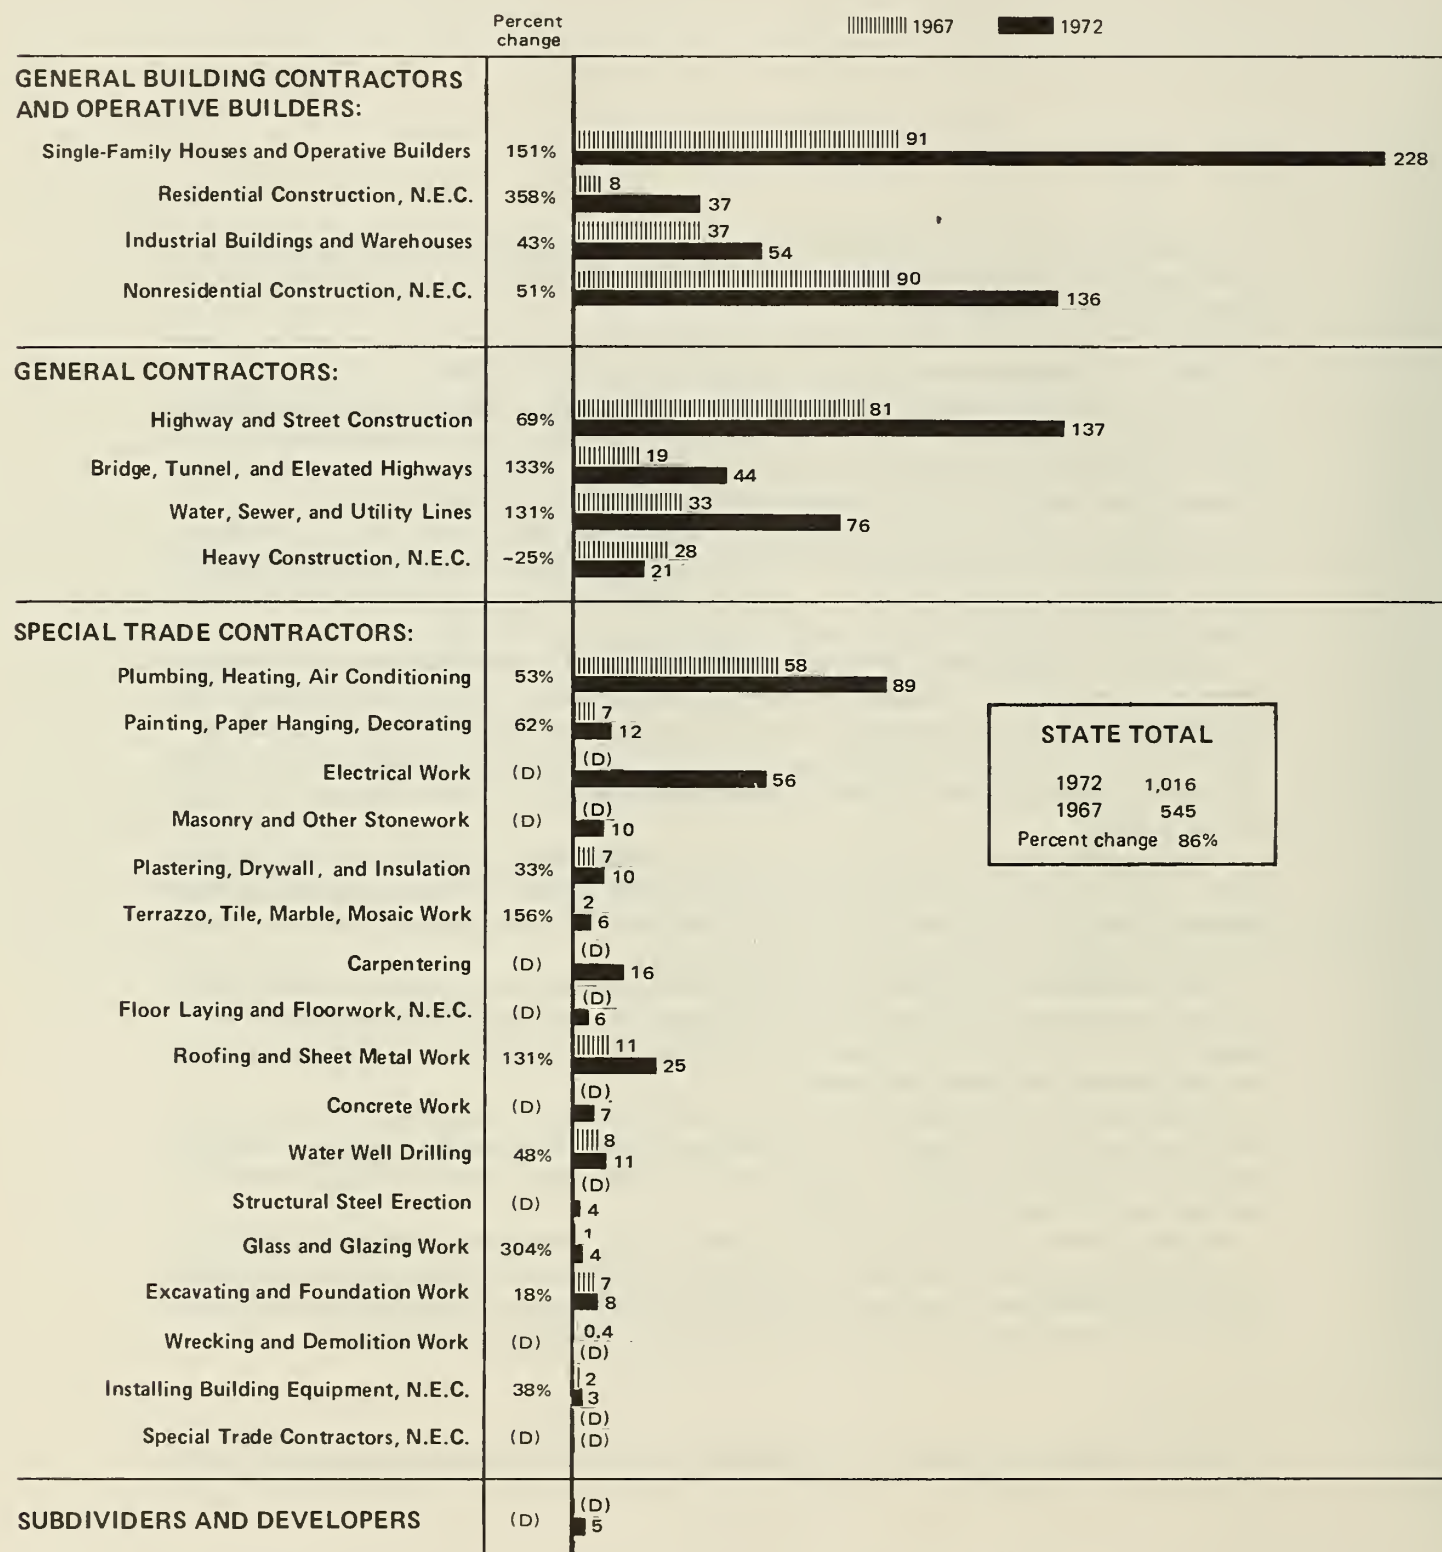

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Mississippi are based on a sample of about 1,500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, Standard Industrial Classification Manual, 1972.

MISSISSIPPI Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$9,578(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

⁴For 1972, over 30% of the data was estimated.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Regions and Geographic Divisions of the United States

Arkansas

During 1972, 13,498 establishments in Arkansas operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,244 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 8,878 nonemployer establishments, or 66 percent of all construction establishments in the State. They accounted for about 10 percent of the total receipts of all construction establishments in Arkansas. On the other hand, 4,620 establishments, 34 percent of all construction establishments, were "employers," who accounted for 90 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,120 million, of which \$970 million were receipts for construction work. These establishments paid \$214 million for construction work subcontracted to others, leaving net construction receipts of about \$755 million.

Construction establishments with payroll located in Arkansas paid \$378 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Arkansas was 35.5 thousand employees. Total payroll for 1972 was \$237 million. Employment for the pay period including March 12, 1972, was 31.2 thousand employees, while employment for the pay period including August 12, 1972, was 38.7 thousand employees.

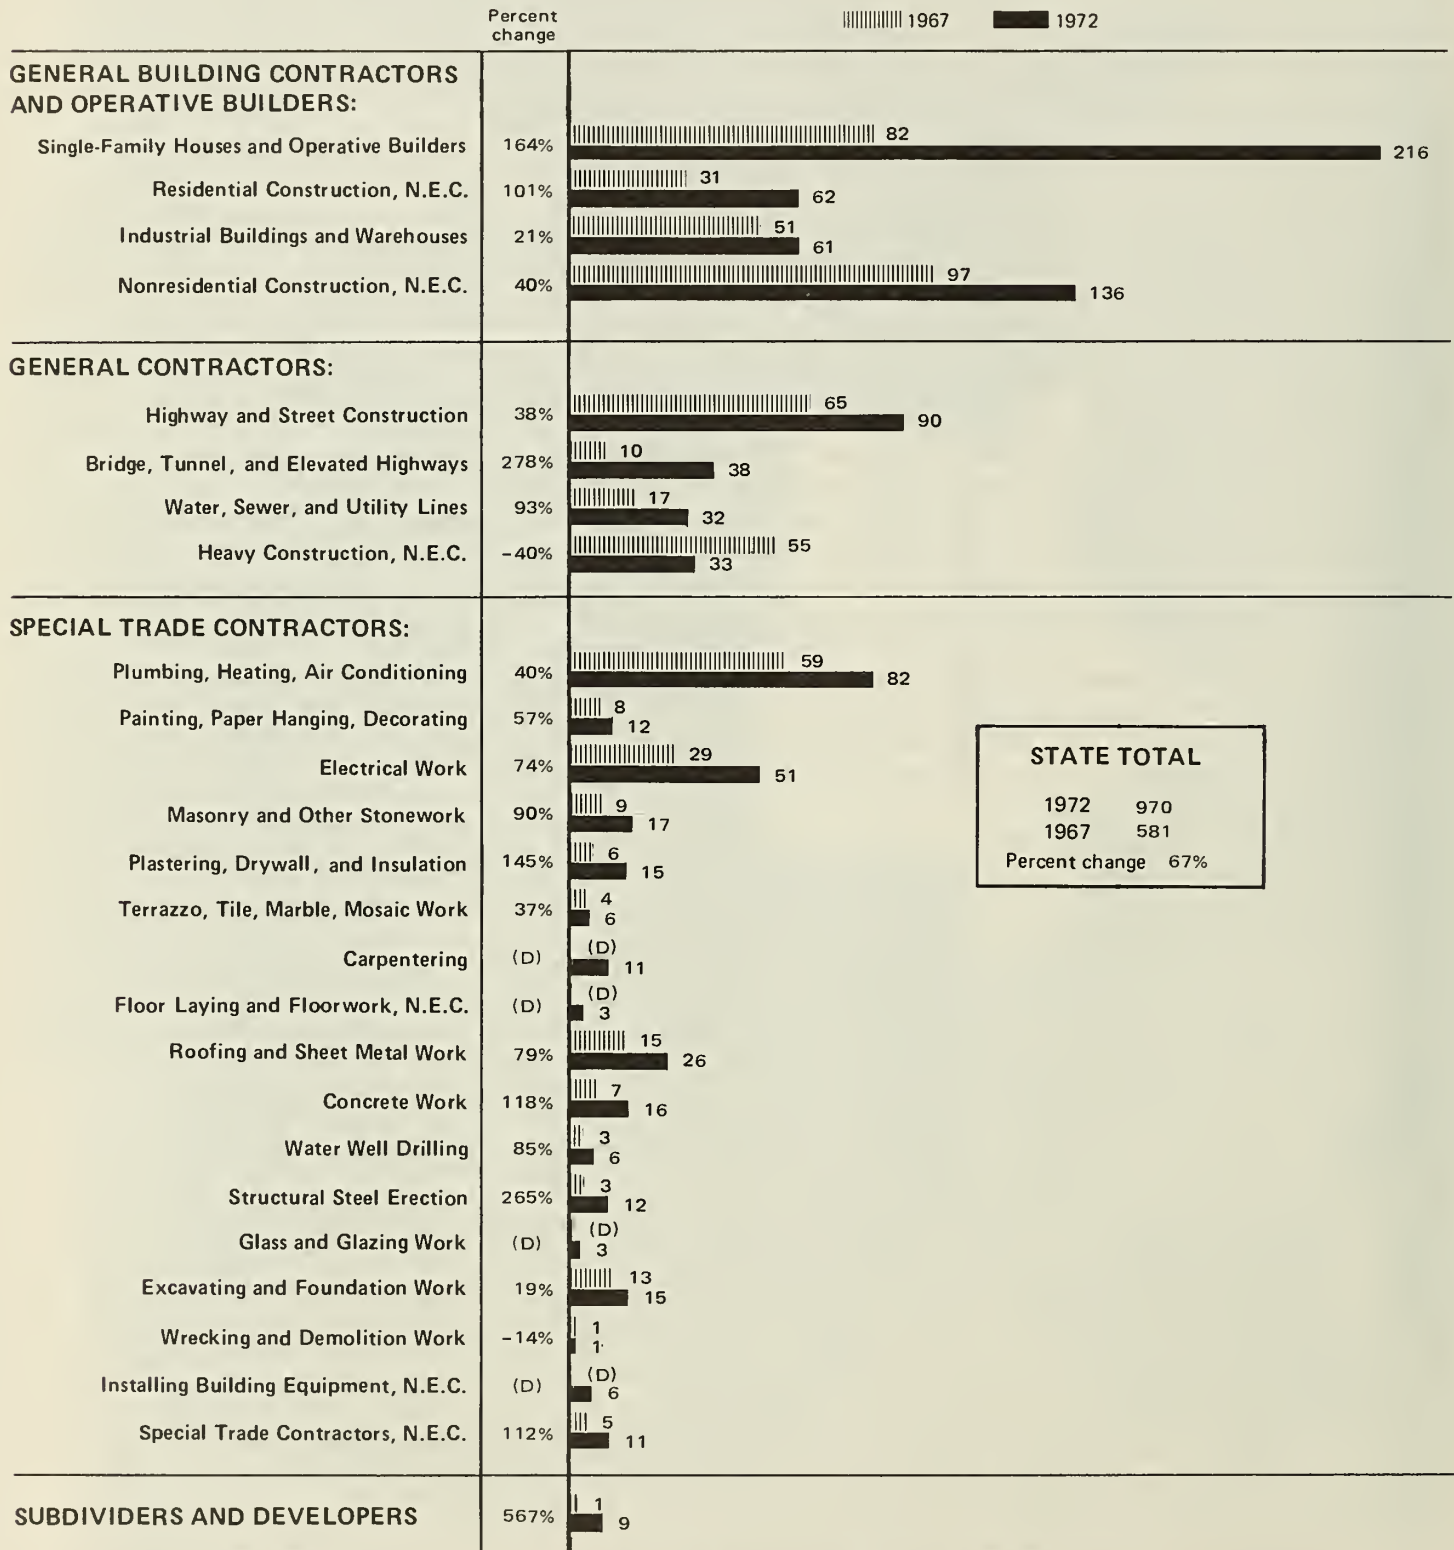

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Arkansas are based on a sample of about 1,700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

ARKANSAS Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$46,888(000).

³For 1972, over 30% of the data was estimated.

⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Louisiana

During 1972, 14,196 establishments in Louisiana operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,746 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 7,387 nonemployer establishments, or 52 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Louisiana. On the other hand, 6,809 establishments, 48 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,605 million, of which \$2,512 million were receipts for construction work. These establishments paid \$518 million for construction work subcontracted to others, leaving net construction receipts of about \$1,994 million.

Construction establishments with payroll located in Louisiana paid \$853 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Louisiana was 84.5 thousand employees. Total payroll for 1972 was \$676 million. Employment for the pay period including March 12, 1972, was 78.3 thousand employees, while employment for the pay period including August 12, 1972, was 88.8 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Louisiana are based on a sample of about 2,700 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

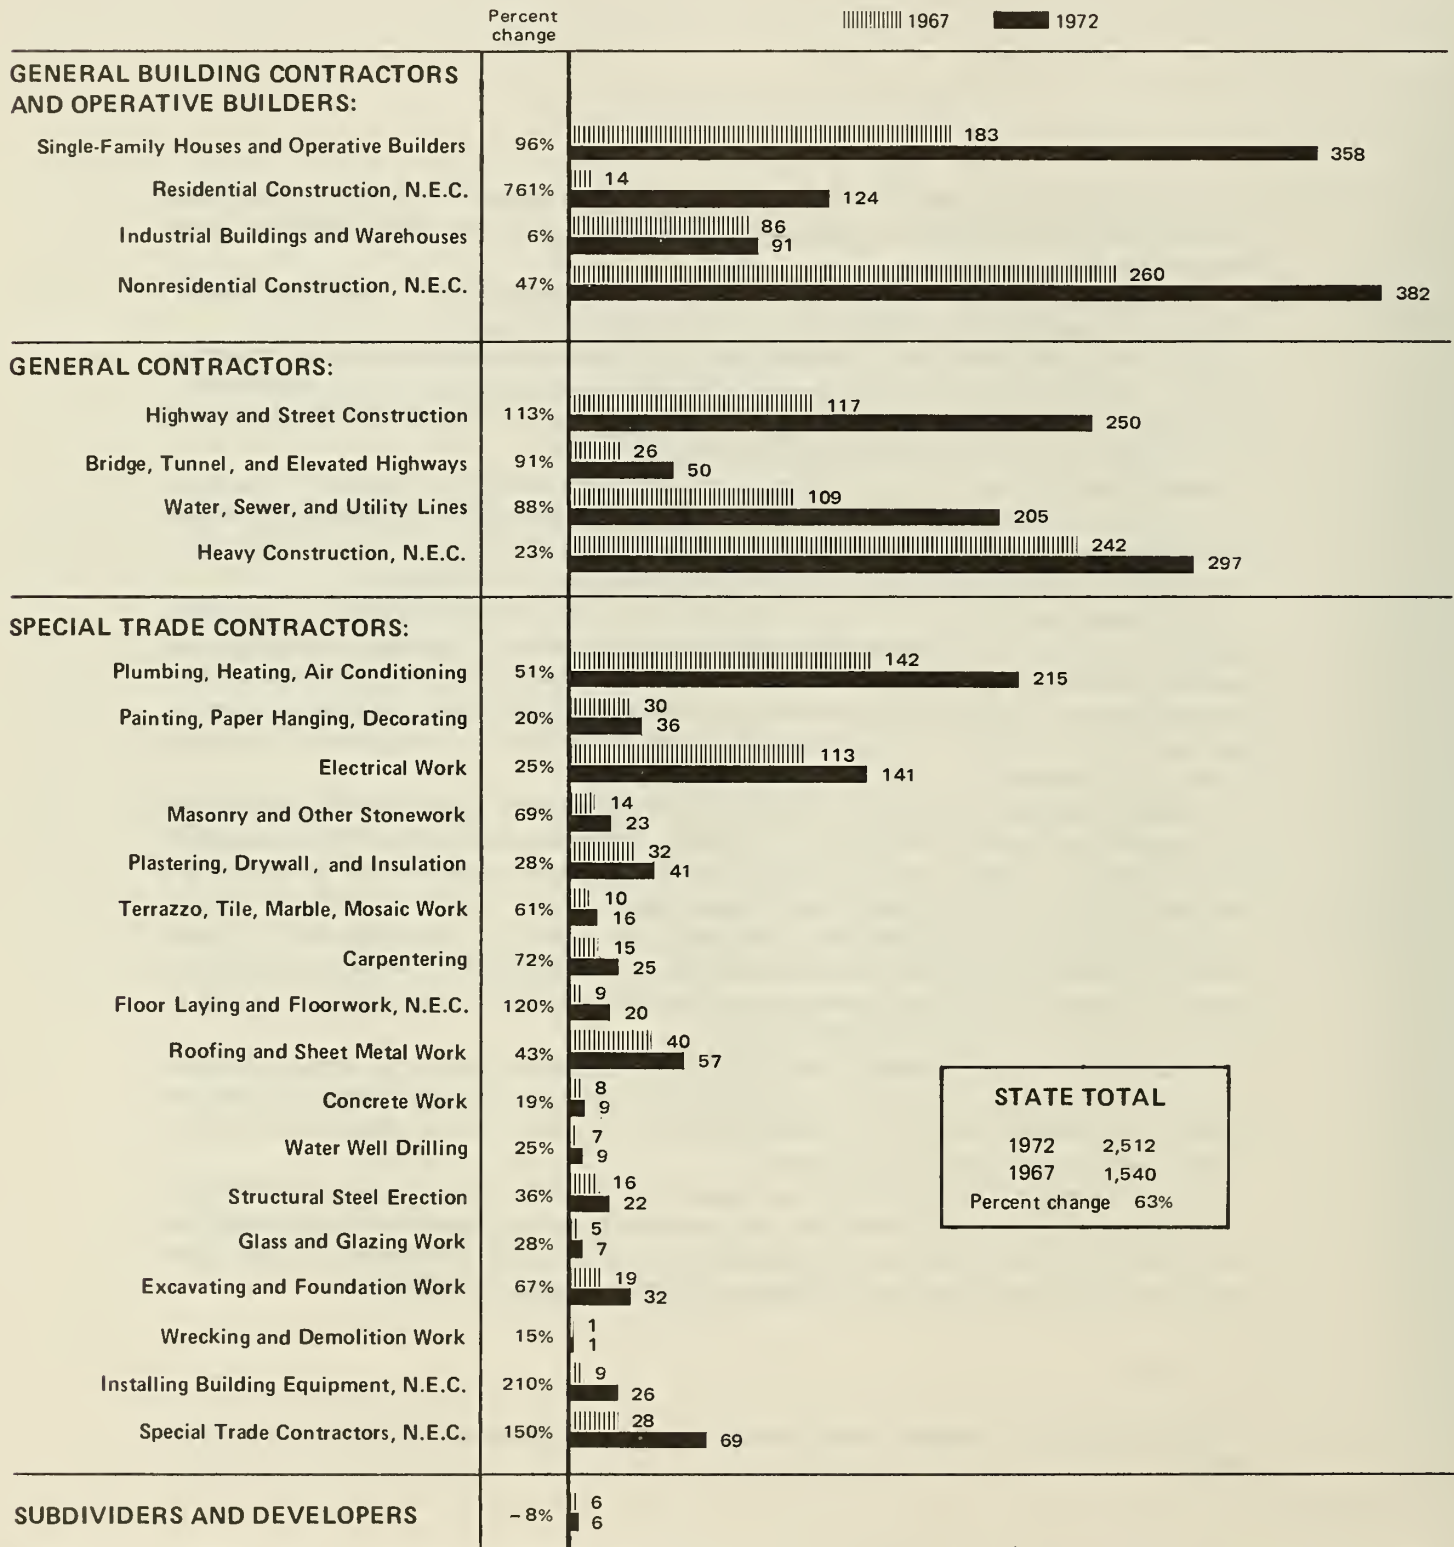

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

LOUISIANA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$19,109(000) and for SIC 6552 were \$11,059(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

⁴For 1972, over 30% of the data was estimated.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Oklahoma

During 1972, 18,397 establishments in Oklahoma operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,858 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 12,060 nonemployer establishments, or 66 percent of all construction establishments in the State. They accounted for about 11 percent of the total receipts of all construction establishments in Oklahoma. On the other hand, 6,337 establishments, 34 percent of all construction establishments, were "employers," who accounted for 89 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,651 million, of which \$1,604 million were receipts for construction work. These establishments paid \$377 million for construction work subcontracted to others, leaving net construction receipts of about \$1,227 million.

Construction establishments with payroll located in Oklahoma paid \$571 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Oklahoma was 52.1 thousand employees. Total payroll for 1972 was \$392 million. Employment for the pay period including March 12, 1972, was 47.7 thousand employees, while employment for the pay period including August 12, 1972, was 57.1 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Oklahoma are based on a sample of about 2,400 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

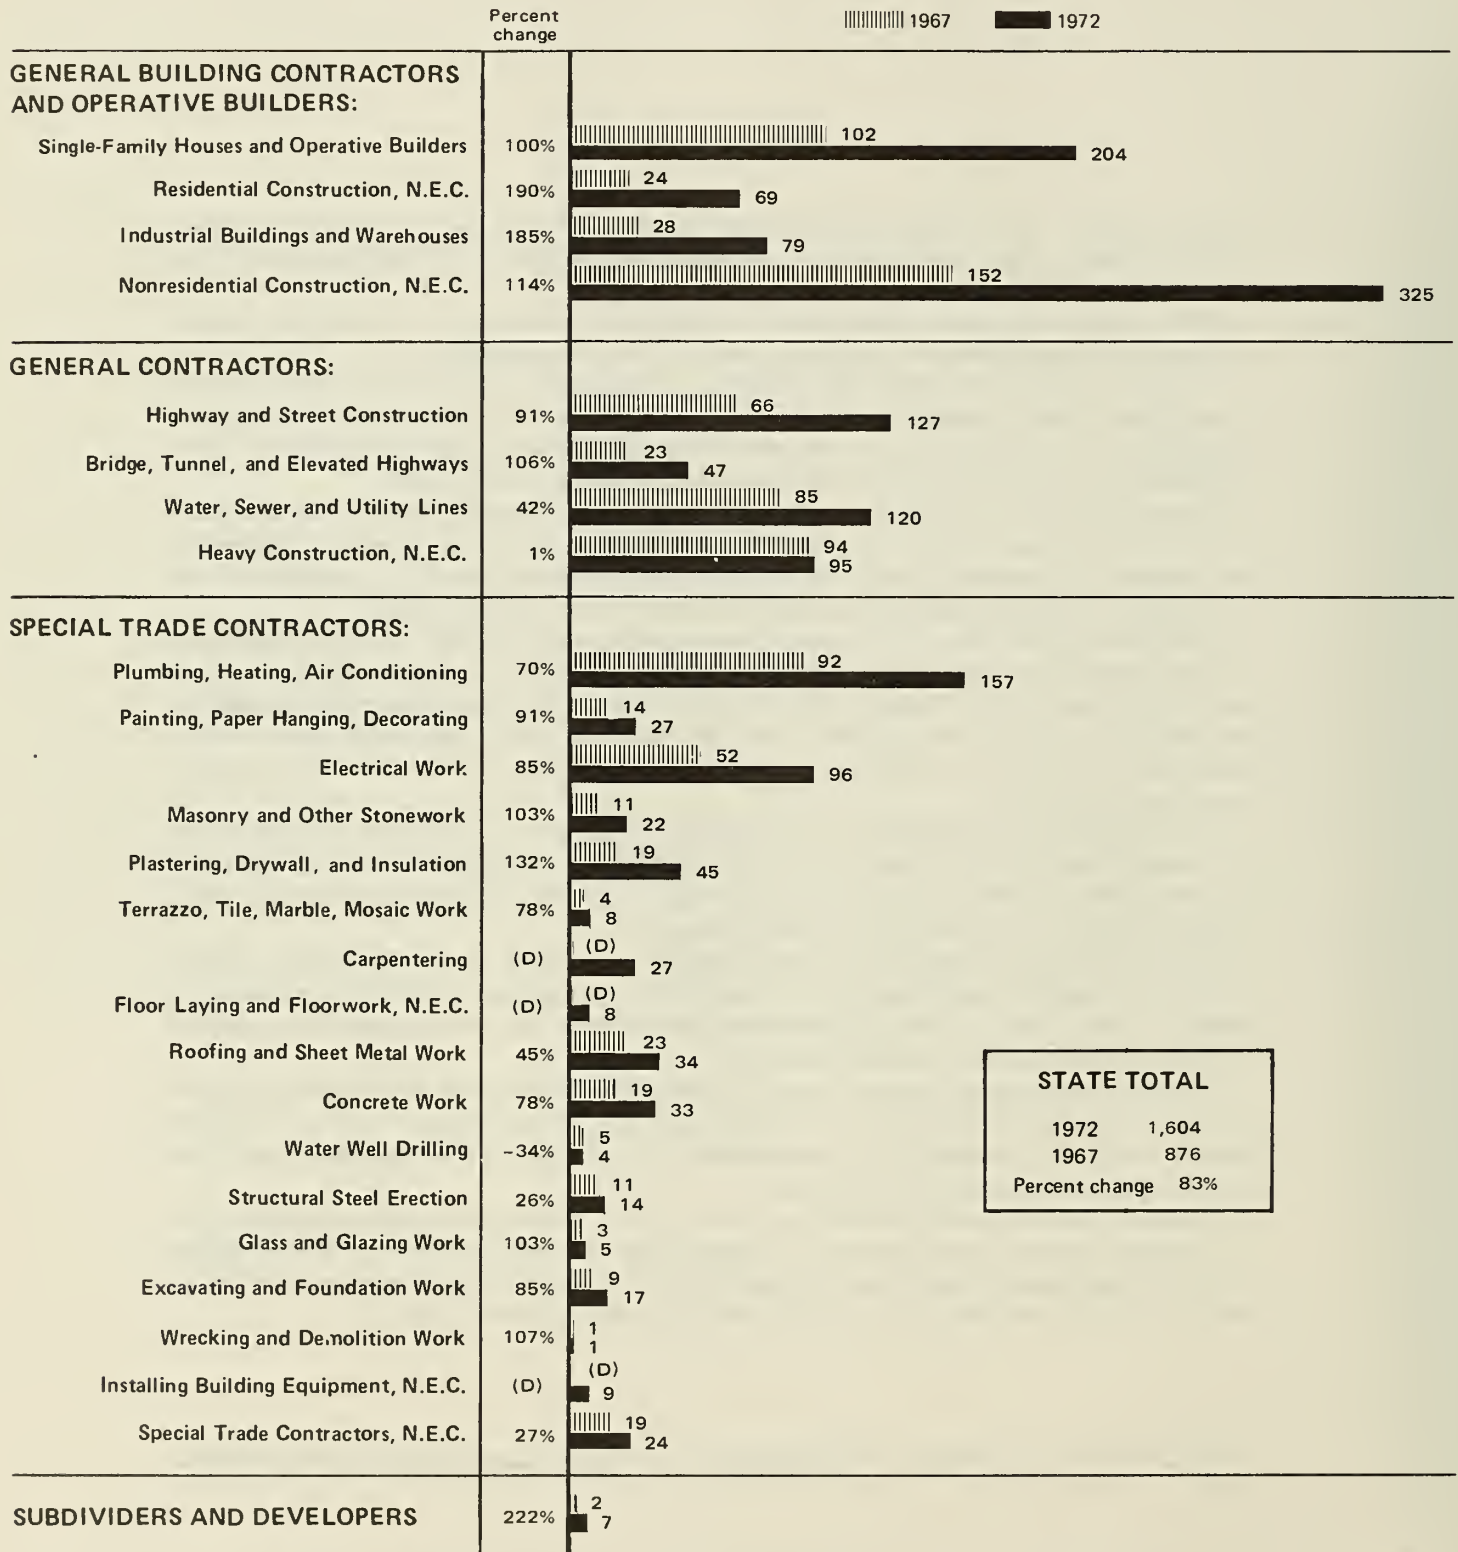

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

OKLAHOMA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: — Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Texas

During 1972, 68,634 establishments in Texas operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$11,218 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 40,760 nonemployer establishments, or 59 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Texas. On the other hand, 27,874 establishments, 41 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$10,507 million, of which \$10,004 million were receipts for construction work. These establishments paid \$2,437 million for construction work subcontracted to others, leaving net construction receipts of about \$7,567 million.

Construction establishments with payroll located in Texas paid \$3,599 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Texas was 310.3 thousand employees. Total payroll for 1972 was \$2,456 million. Employment for the pay period including March 12, 1972, was 296.8 thousand employees, while employment for the pay period including August 12, 1972, was 323.8 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Texas are based on a sample of about 11,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

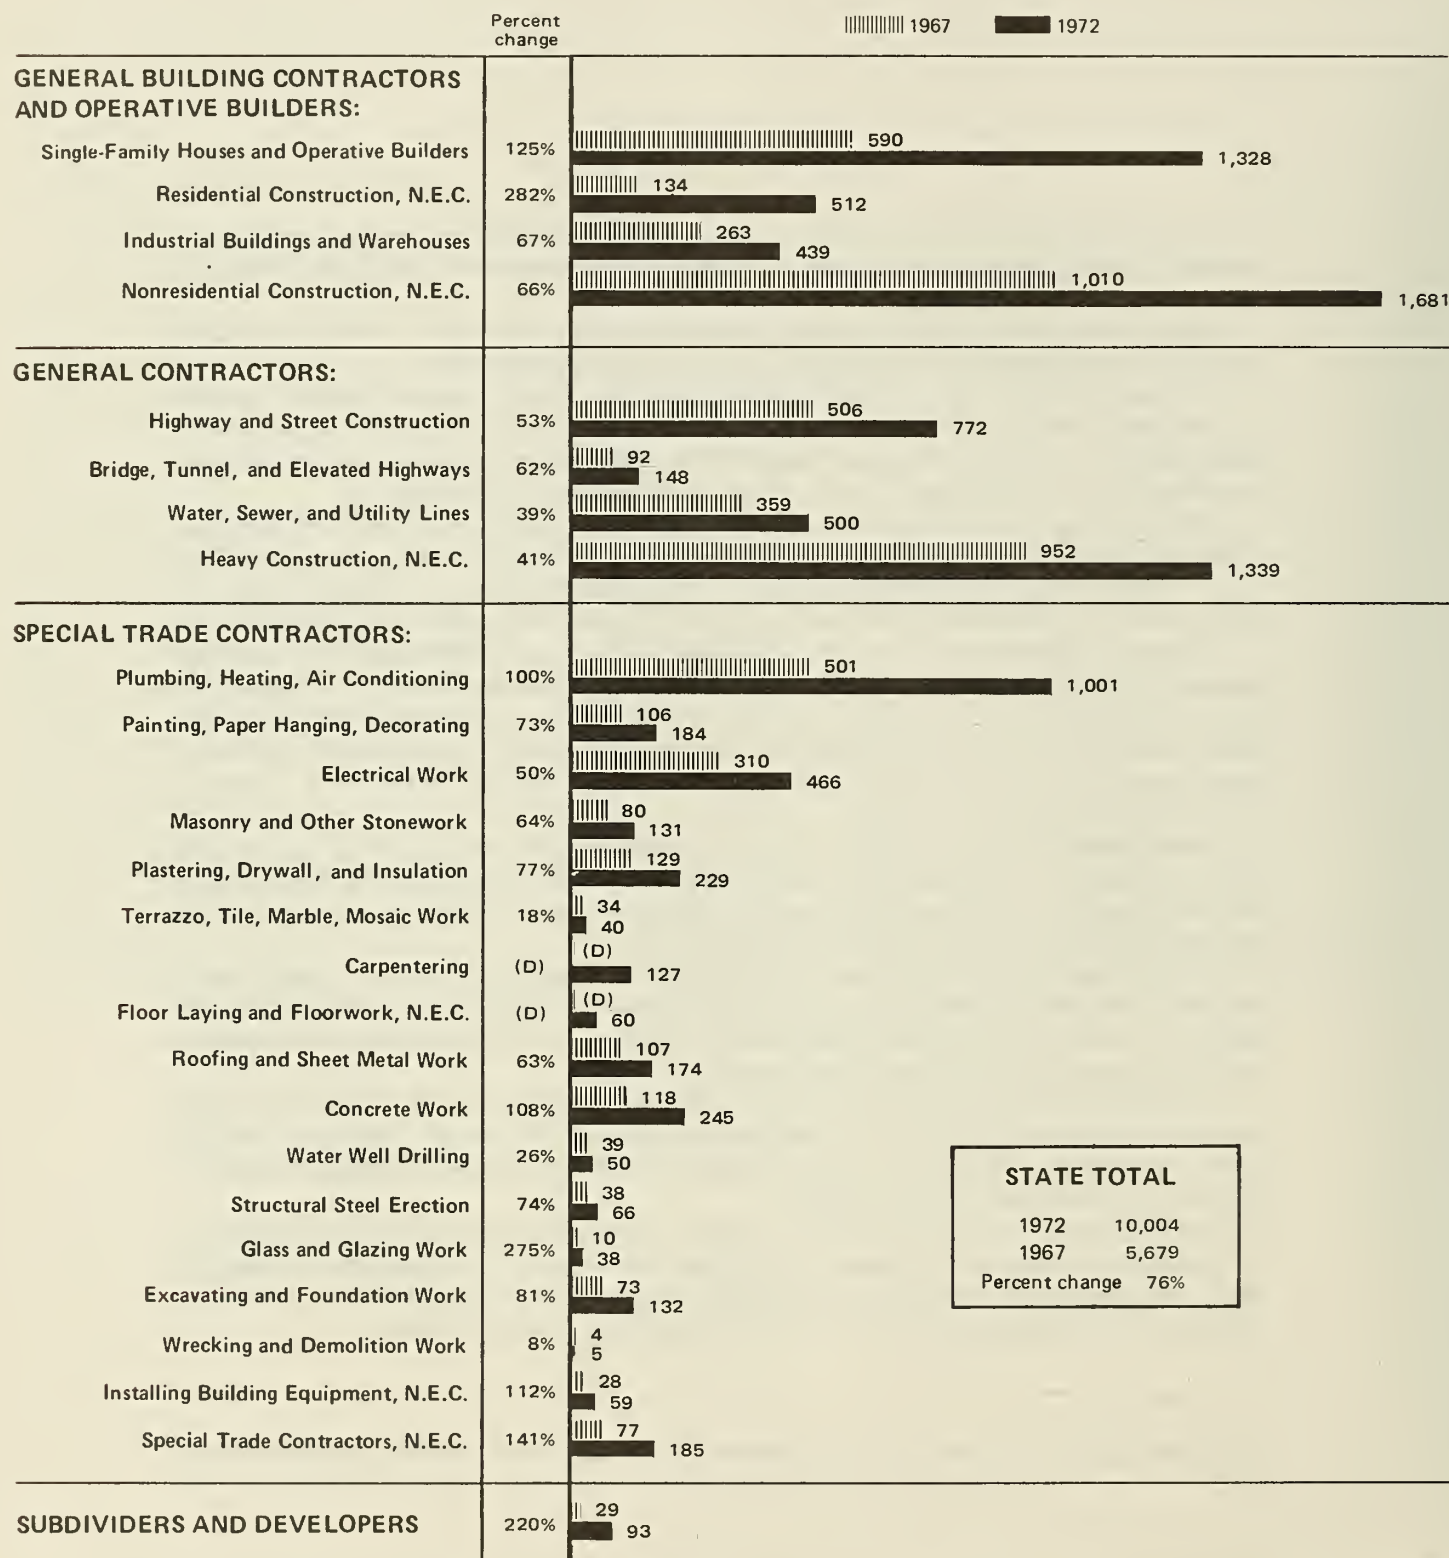

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual, 1972*.

TEXAS Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

TABLE 1. Summary Statistics, by Industry Groups and Industries, for Establishments With and Without Payroll Located in the State: 1972

(Dollar figures in thousands. Detailed figures may not add to totals because of independent rounding or dropping of fractions)

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$84,015(000) and for SIC 6552 were \$176,695(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

Montana

During 1972, 4,053 establishments in Montana operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$398 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 2,417 nonemployer establishments, or 60 percent of all construction establishments in the State. They accounted for about 7 percent of the total receipts of all construction establishments in Montana. On the other hand, 1,636 establishments, 40 percent of all construction establishments, were "employers," who accounted for 93 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$370 million, of which \$359 million were receipts for construction work. These establishments paid \$64 million for construction work subcontracted to others, leaving net construction receipts of about \$295 million.

Construction establishments with payroll located in Montana paid \$120 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Montana was 10.4 thousand employees. Total payroll for 1972 was \$91 million. Employment for the pay period including March 12, 1972, was 7.3 thousand employees, while employment for the pay period including August 12, 1972, was 12.5 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Montana are based on a sample of about 600 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

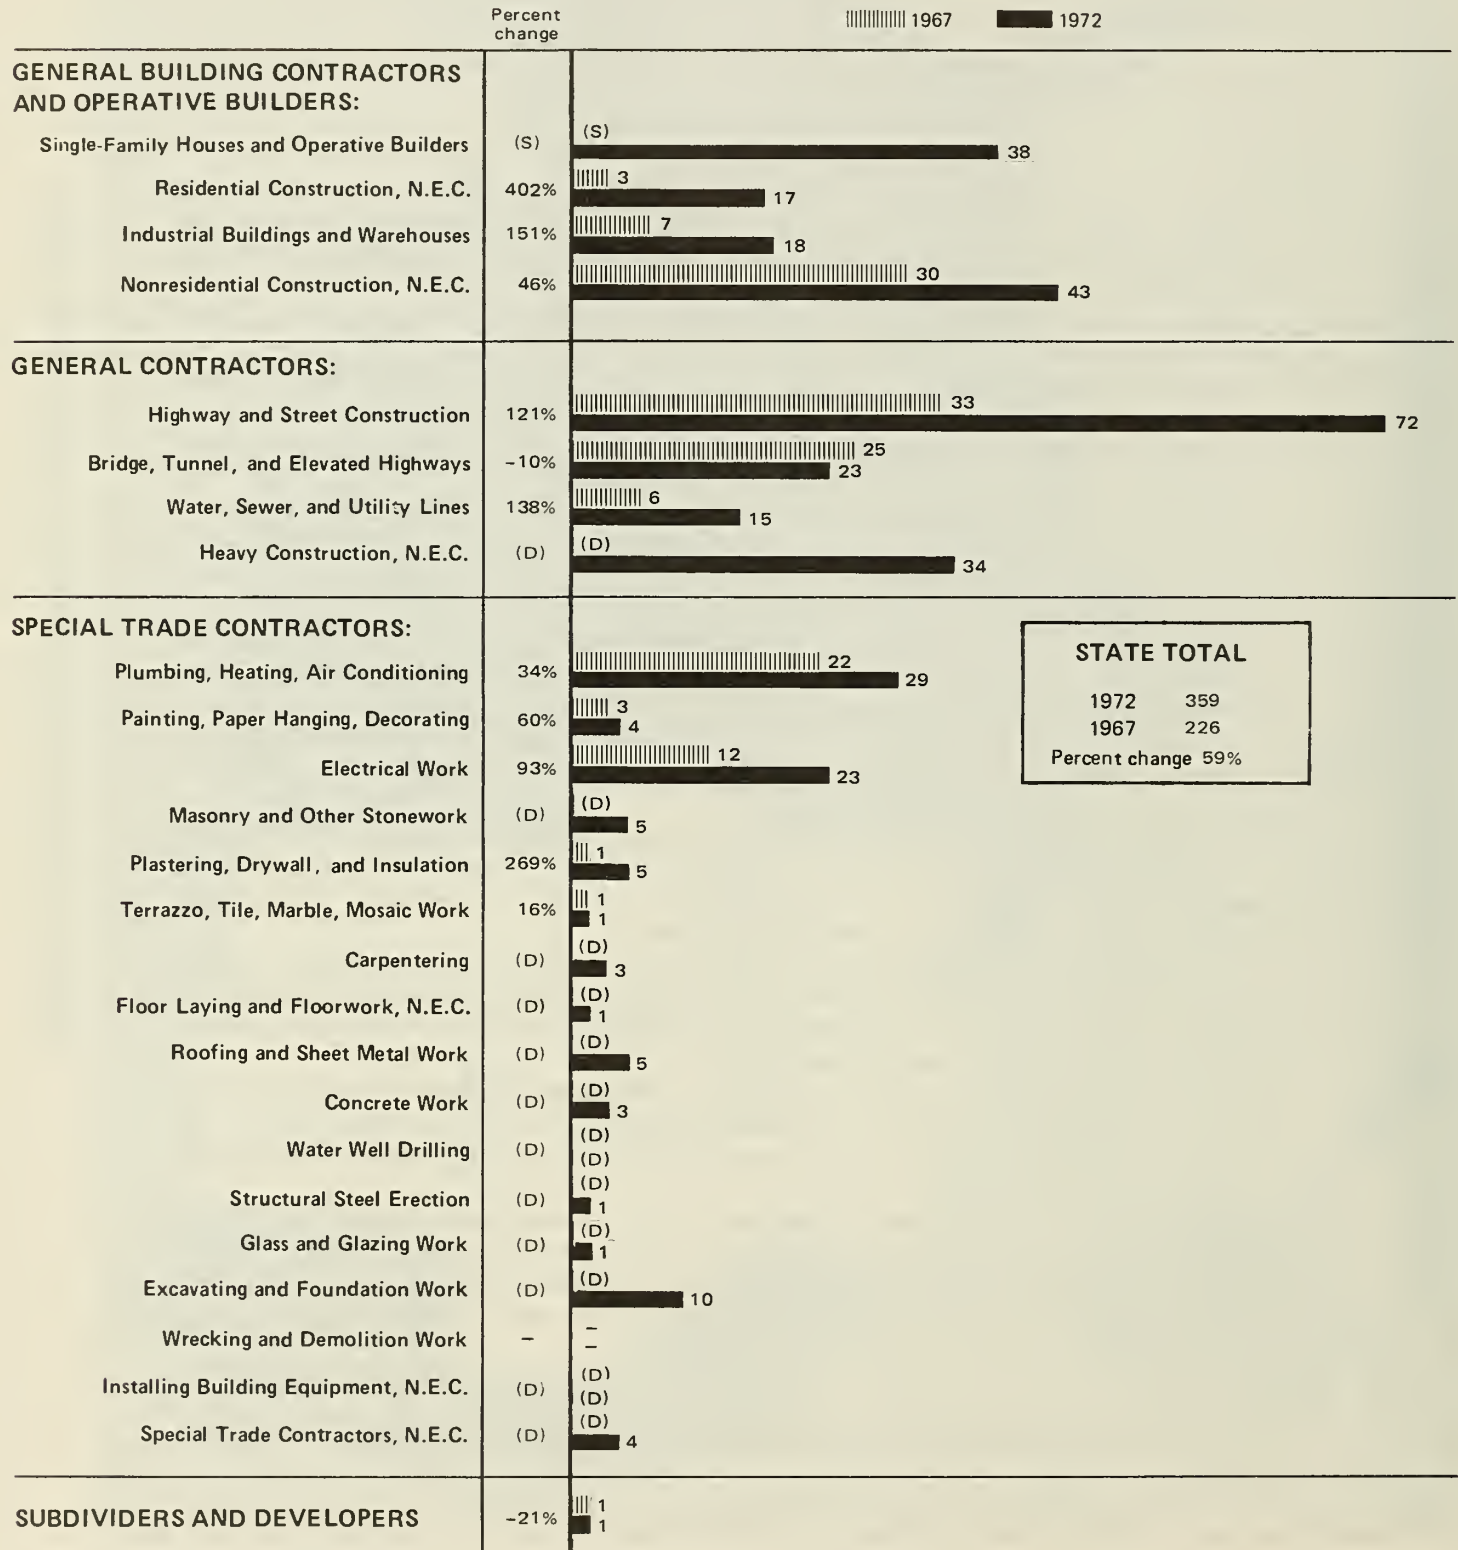

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

MONTANA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: -Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).
²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$4,014(000) and for SIC 6552 were \$761(000).
³For 1972, over 30% of the data was estimated.
⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Idaho

During 1972, 5,336 establishments in Idaho operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$670 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 3,362 nonemployer establishments, or 63 percent of all construction establishments in the State. They accounted for about 8 percent of the total receipts of all construction establishments in Idaho. On the other hand, 1,974 establishments, 37 percent of all construction establishments, were "employers," who accounted for 92 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$614 million, of which \$583 million were receipts for construction work. These establishments paid \$101 million for construction work subcontracted to others, leaving net construction receipts of about \$481 million.

Construction establishments with payroll located in Idaho paid \$222 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Idaho was 16.7 thousand employees. Total payroll for 1972 was \$178 million. Employment for the pay period including March 12, 1972, was 12.8 thousand employees, while employment for the pay period including August 12, 1972, was 18.7 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Idaho are based on a sample of about 800 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

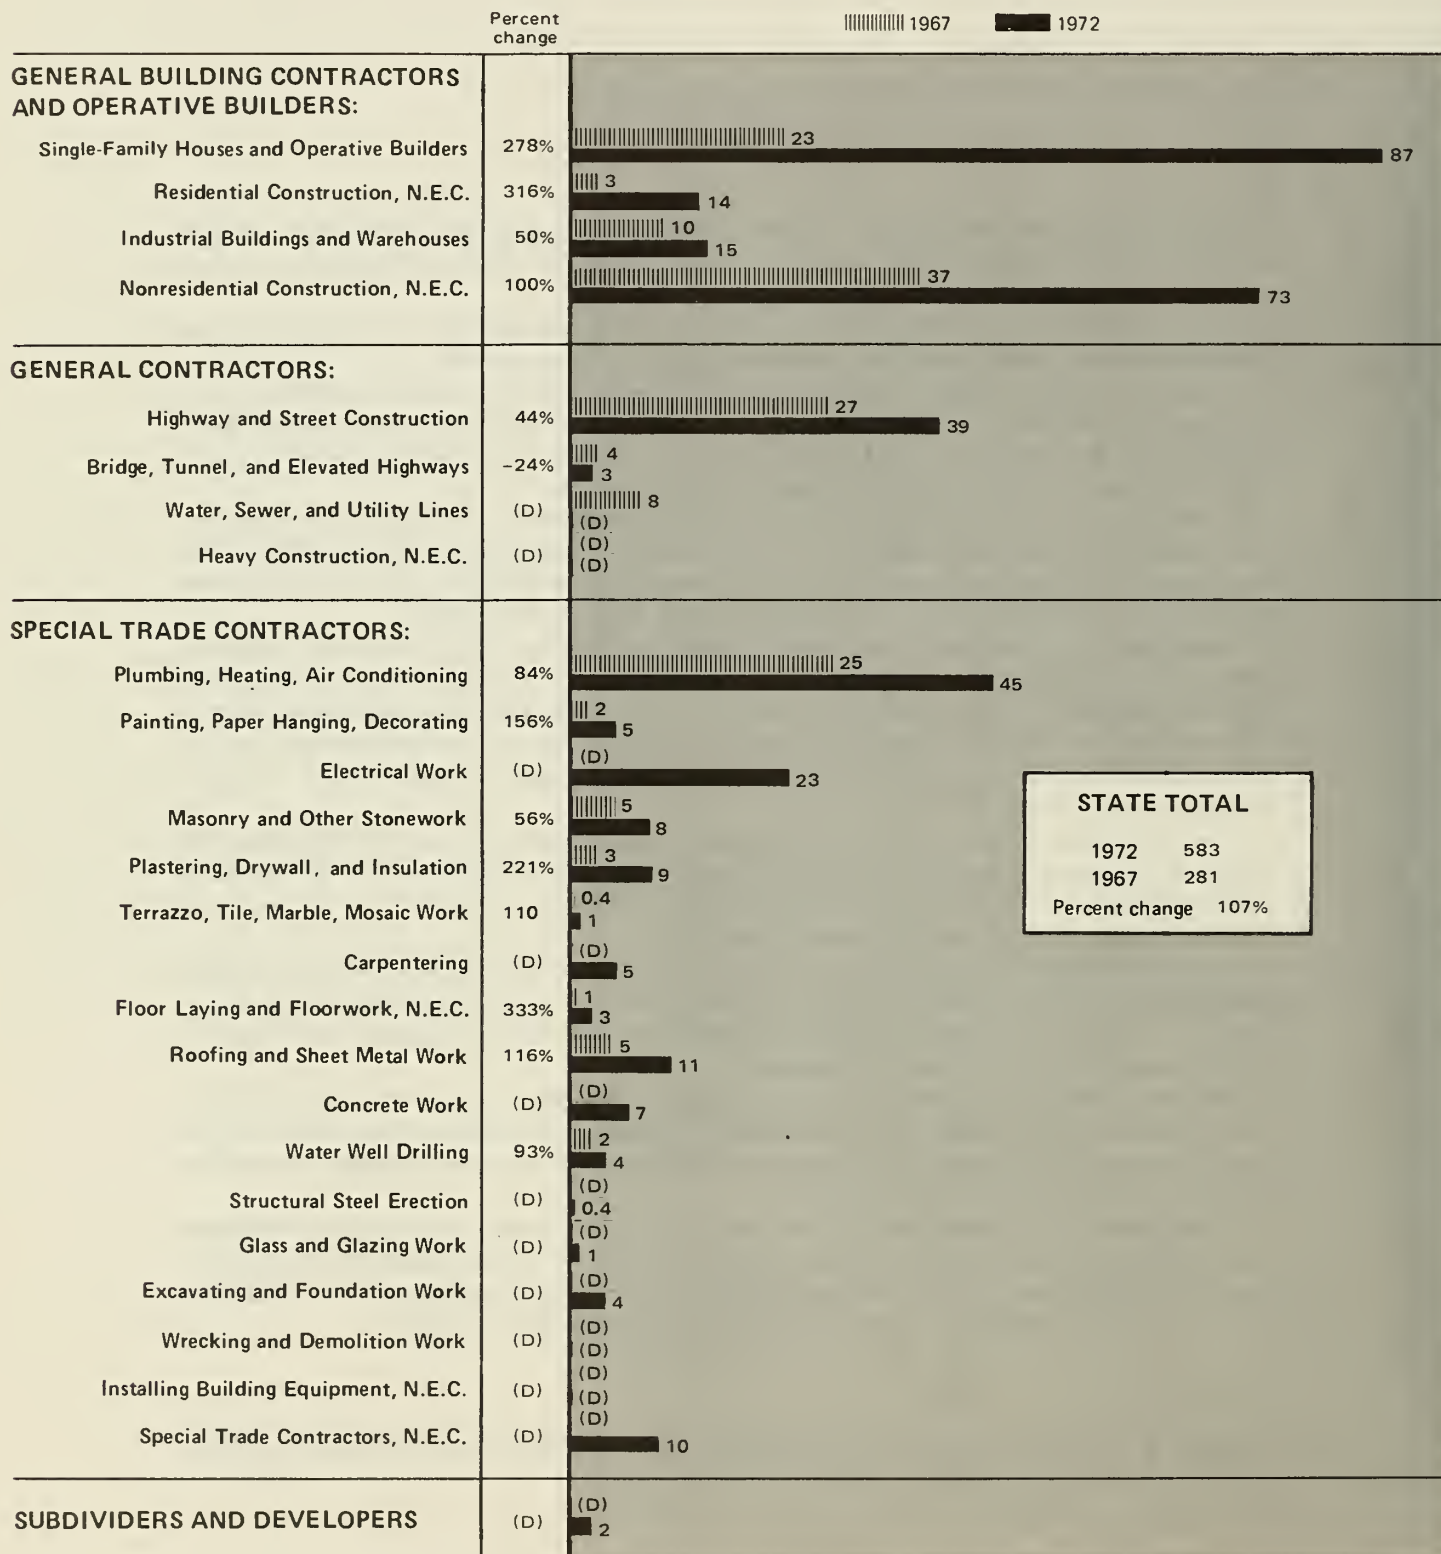

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

IDAHO Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$2,665(000).

³For 1972, over 30% of the data was estimated.

⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Wyoming

During 1972, 2,298 establishments in Wyoming operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$274 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 1,266 nonemployer establishments, or 55 percent of all construction establishments in the State. They accounted for about 8 percent of the total receipts of all construction establishments in Wyoming. On the other hand, 1,032 establishments, 45 percent of all construction establishments, were "employers," who accounted for 92 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$251 million, of which \$240 million were receipts for construction work. These establishments paid \$47 million for construction work subcontracted to others, leaving net construction receipts of about \$192 million.

Construction establishments with payroll located in Wyoming paid \$72 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Wyoming was 7.4 thousand employees. Total payroll for 1972 was \$62 million. Employment for the pay period including March 12, 1972, was 6.0 thousand employees, while employment for the pay period including August 12, 1972, was 8.6 thousand employees.

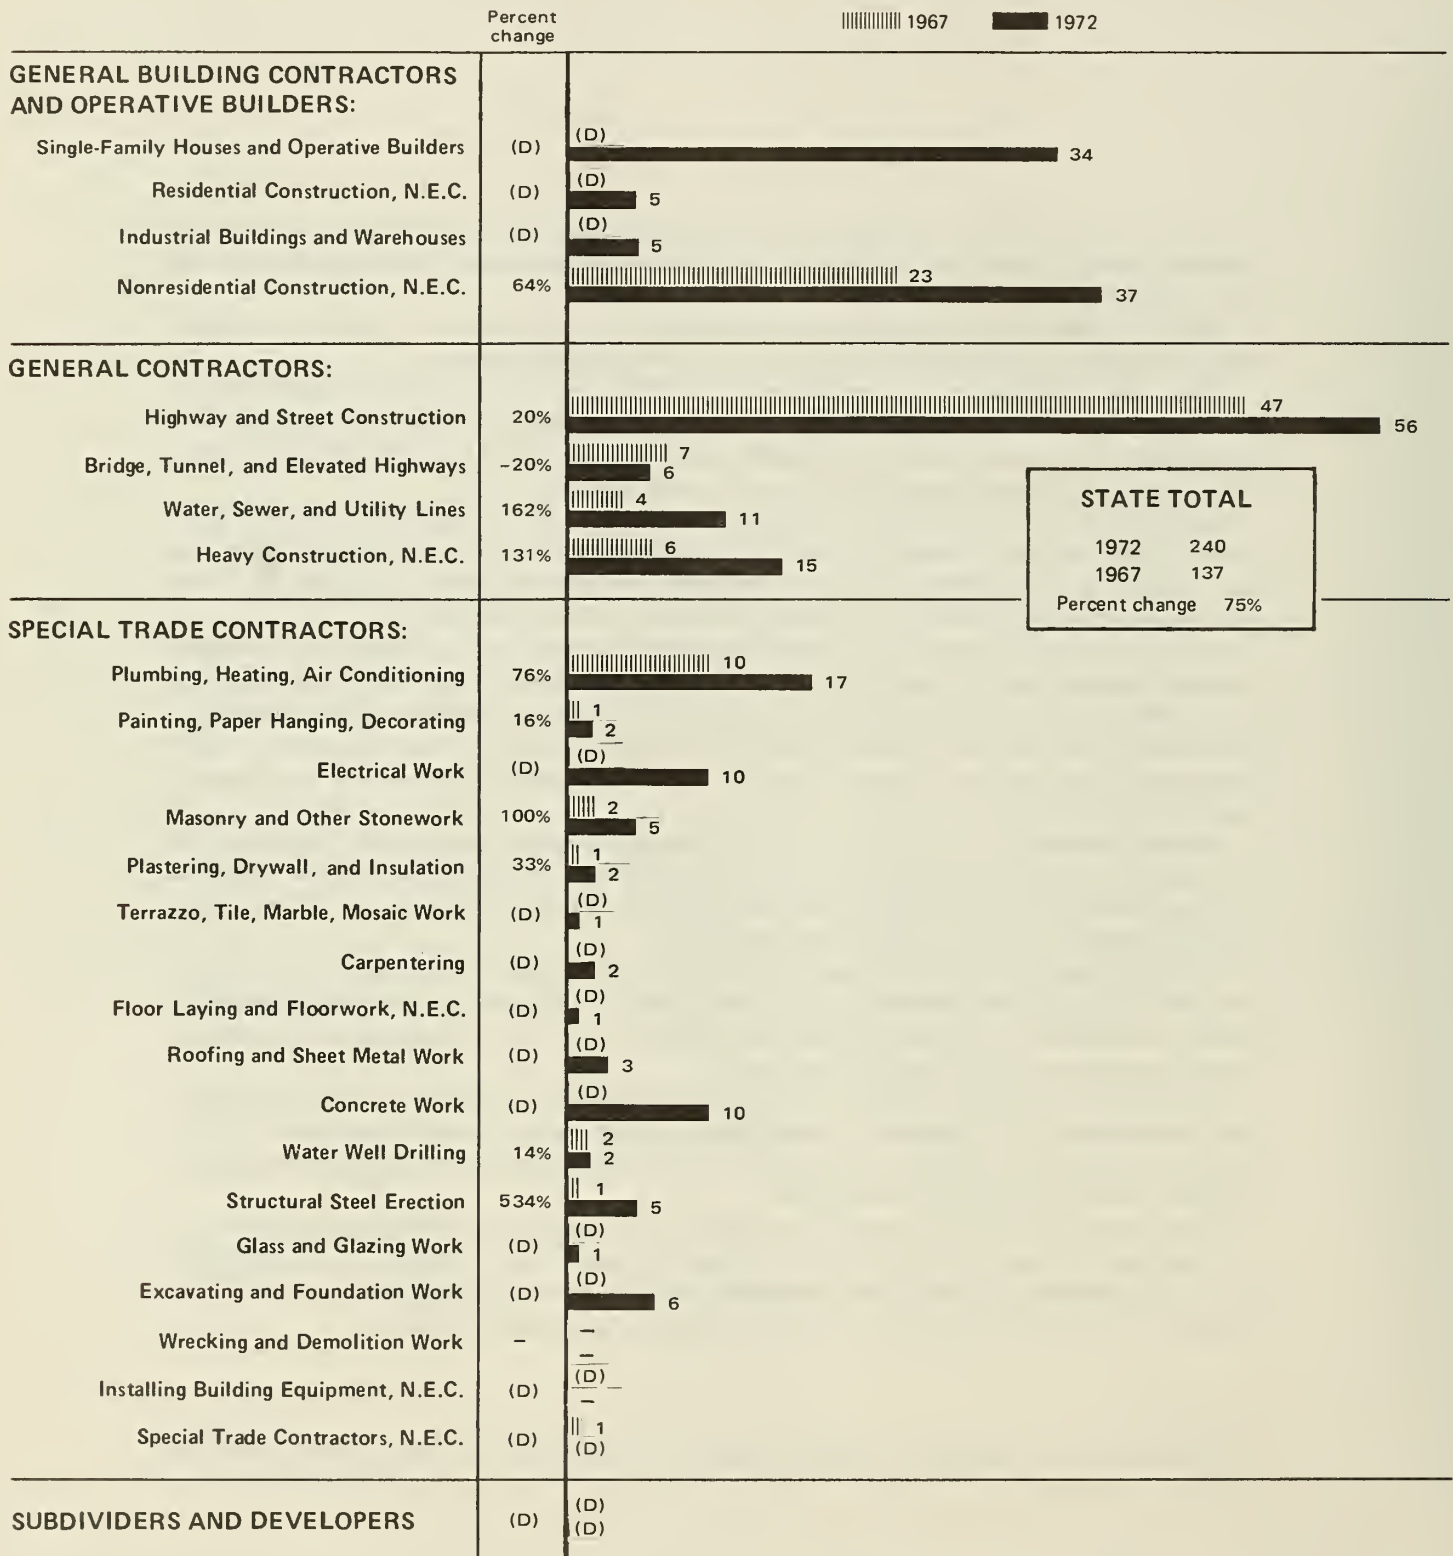

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Wyoming are based on a sample of about 500 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

WYOMING Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Millions of Dollars)

Standard Notes: - Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Colorado

During 1972, 15,917 establishments in Colorado operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,998 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 8,418 nonemployer establishments, or 53 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Colorado. On the other hand, 7,499 establishments, 47 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,852 million, of which \$2,680 million were receipts for construction work. These establishments paid \$781 million for construction work subcontracted to others, leaving net construction receipts of about \$1,900 million.

Construction establishments with payroll located in Colorado paid \$795 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Colorado was 75.9 thousand employees. Total payroll for 1972 was \$700 million. Employment for the pay period including March 12, 1972, was 67.4 thousand employees, while employment for the pay period including August 12, 1972, was 83.9 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Colorado are based on a sample of about 3,300 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

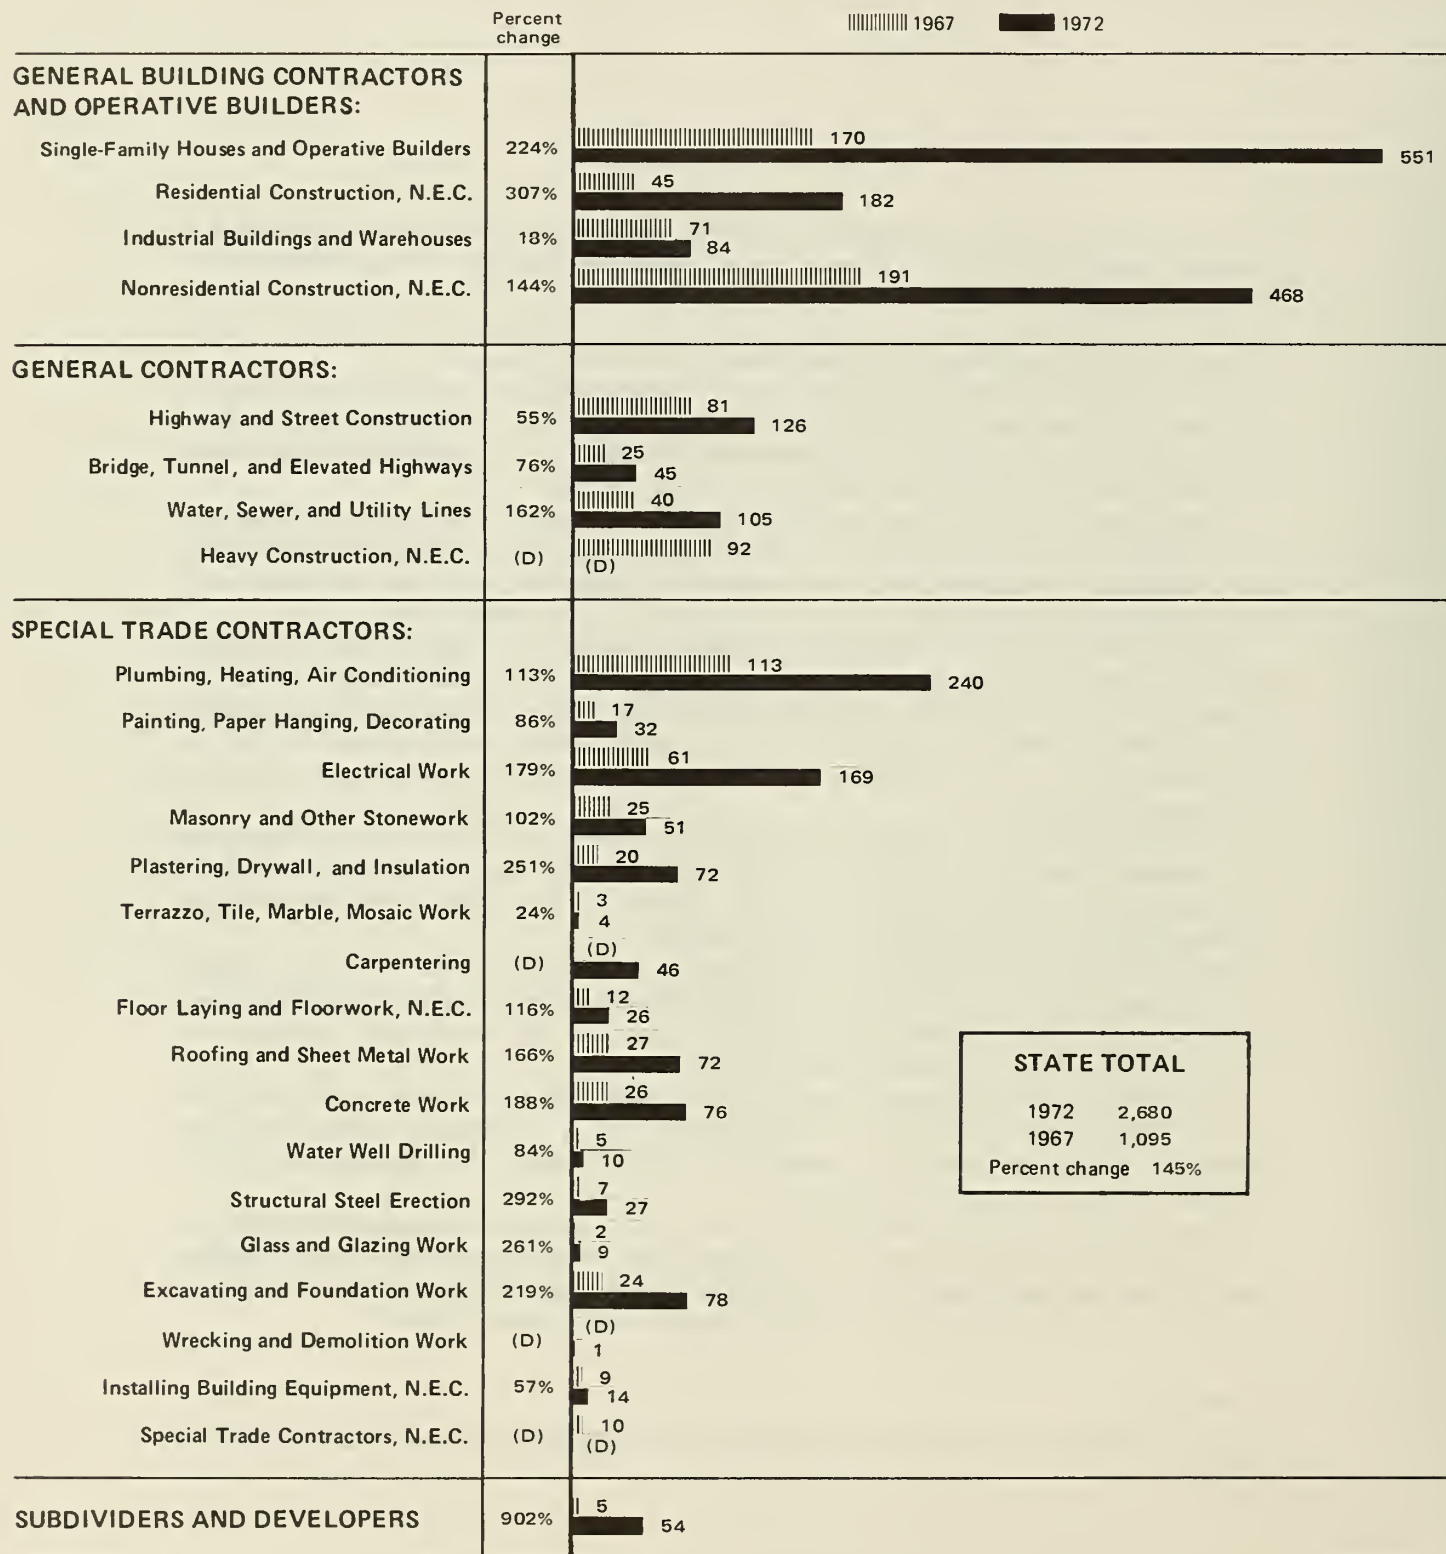

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

COLORADO Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$36,055(000) and for SIC 6552 were \$66,785(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

New Mexico

During 1972, 4,043 establishments in New Mexico operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$777 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 1,707 nonemployer establishments, or 42 percent of all construction establishments in the State. They accounted for about 3 percent of the total receipts of all construction establishments in New Mexico. On the other hand, 2,336 establishments, 58 percent of all construction establishments, were "employers," who accounted for 97 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$752 million, of which \$688 million were receipts for construction work. These establishments paid \$163 million for construction work subcontracted to others, leaving net construction receipts of about \$525 million.

Construction establishments with payroll located in New Mexico paid \$232 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in New Mexico was 23.8 thousand employees. Total payroll for 1972 was \$164 million. Employment for the pay period including March 12, 1972, was 20.9 thousand employees, while employment for the pay period including August 12, 1972, was 26.1 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for New Mexico are based on a sample of about 1,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

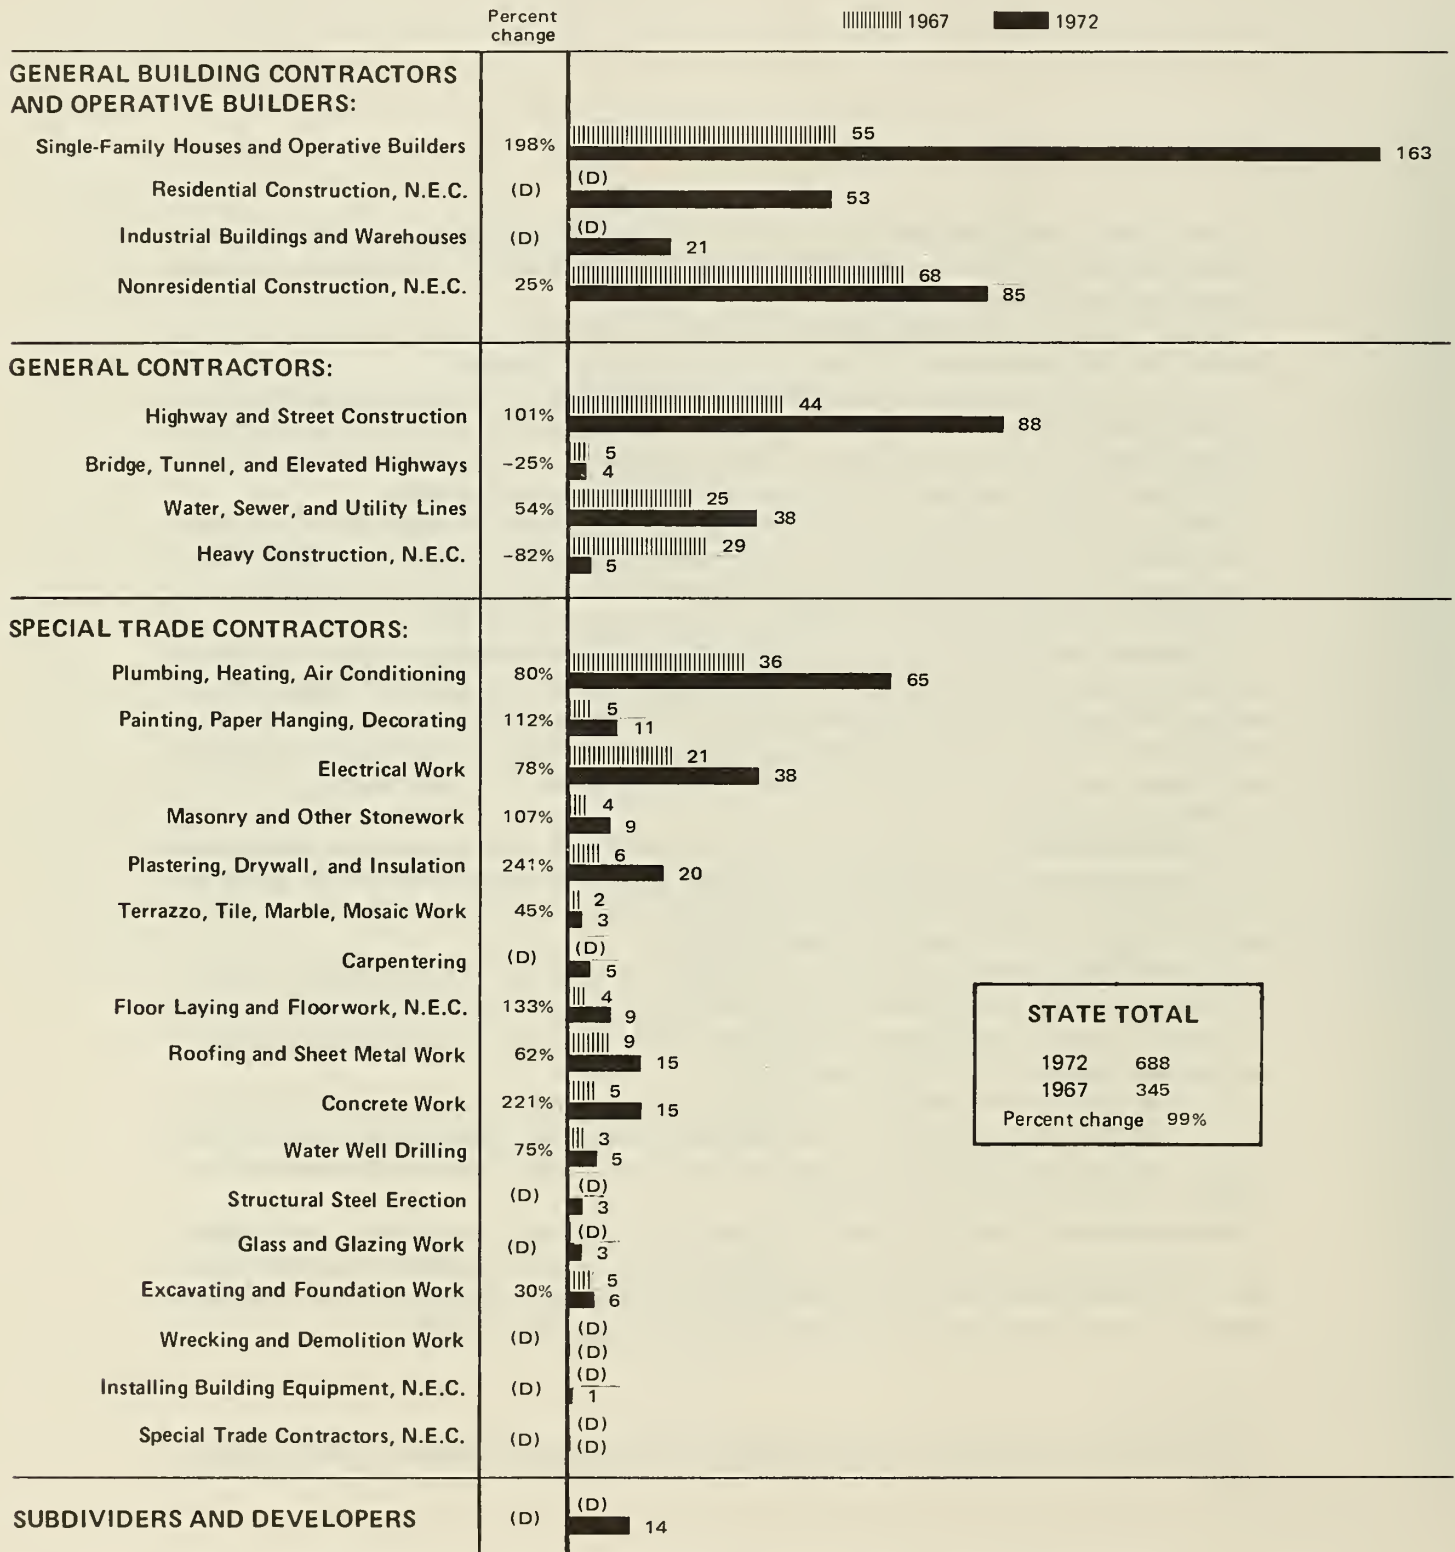

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

NEW MEXICO *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$6,760,000.

³For 1972, over 30% of the data was estimated.

⁴Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Over 30% of the data was estimated.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Arizona

During 1972, 8,669 establishments in Arizona operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,747 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 3,868 nonemployer establishments, or 45 percent of all construction establishments in the State. They accounted for about 3 percent of the total receipts of all construction establishments in Arizona. On the other hand, 4,801 establishments, 55 percent of all construction establishments, were "employers," who accounted for 97 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,668 million, of which \$2,459 million were receipts for construction work. These establishments paid \$768 million for construction work subcontracted to others, leaving net construction receipts of about \$1,691 million.

Construction establishments with payroll located in Arizona paid \$665 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Arizona was 55.9 thousand employees. Total payroll for 1972 was \$568 million. Employment for the pay period including March 12, 1972, was 53.0 thousand employees, while employment for the pay period including August 12, 1972, was 58.5 thousand employees.

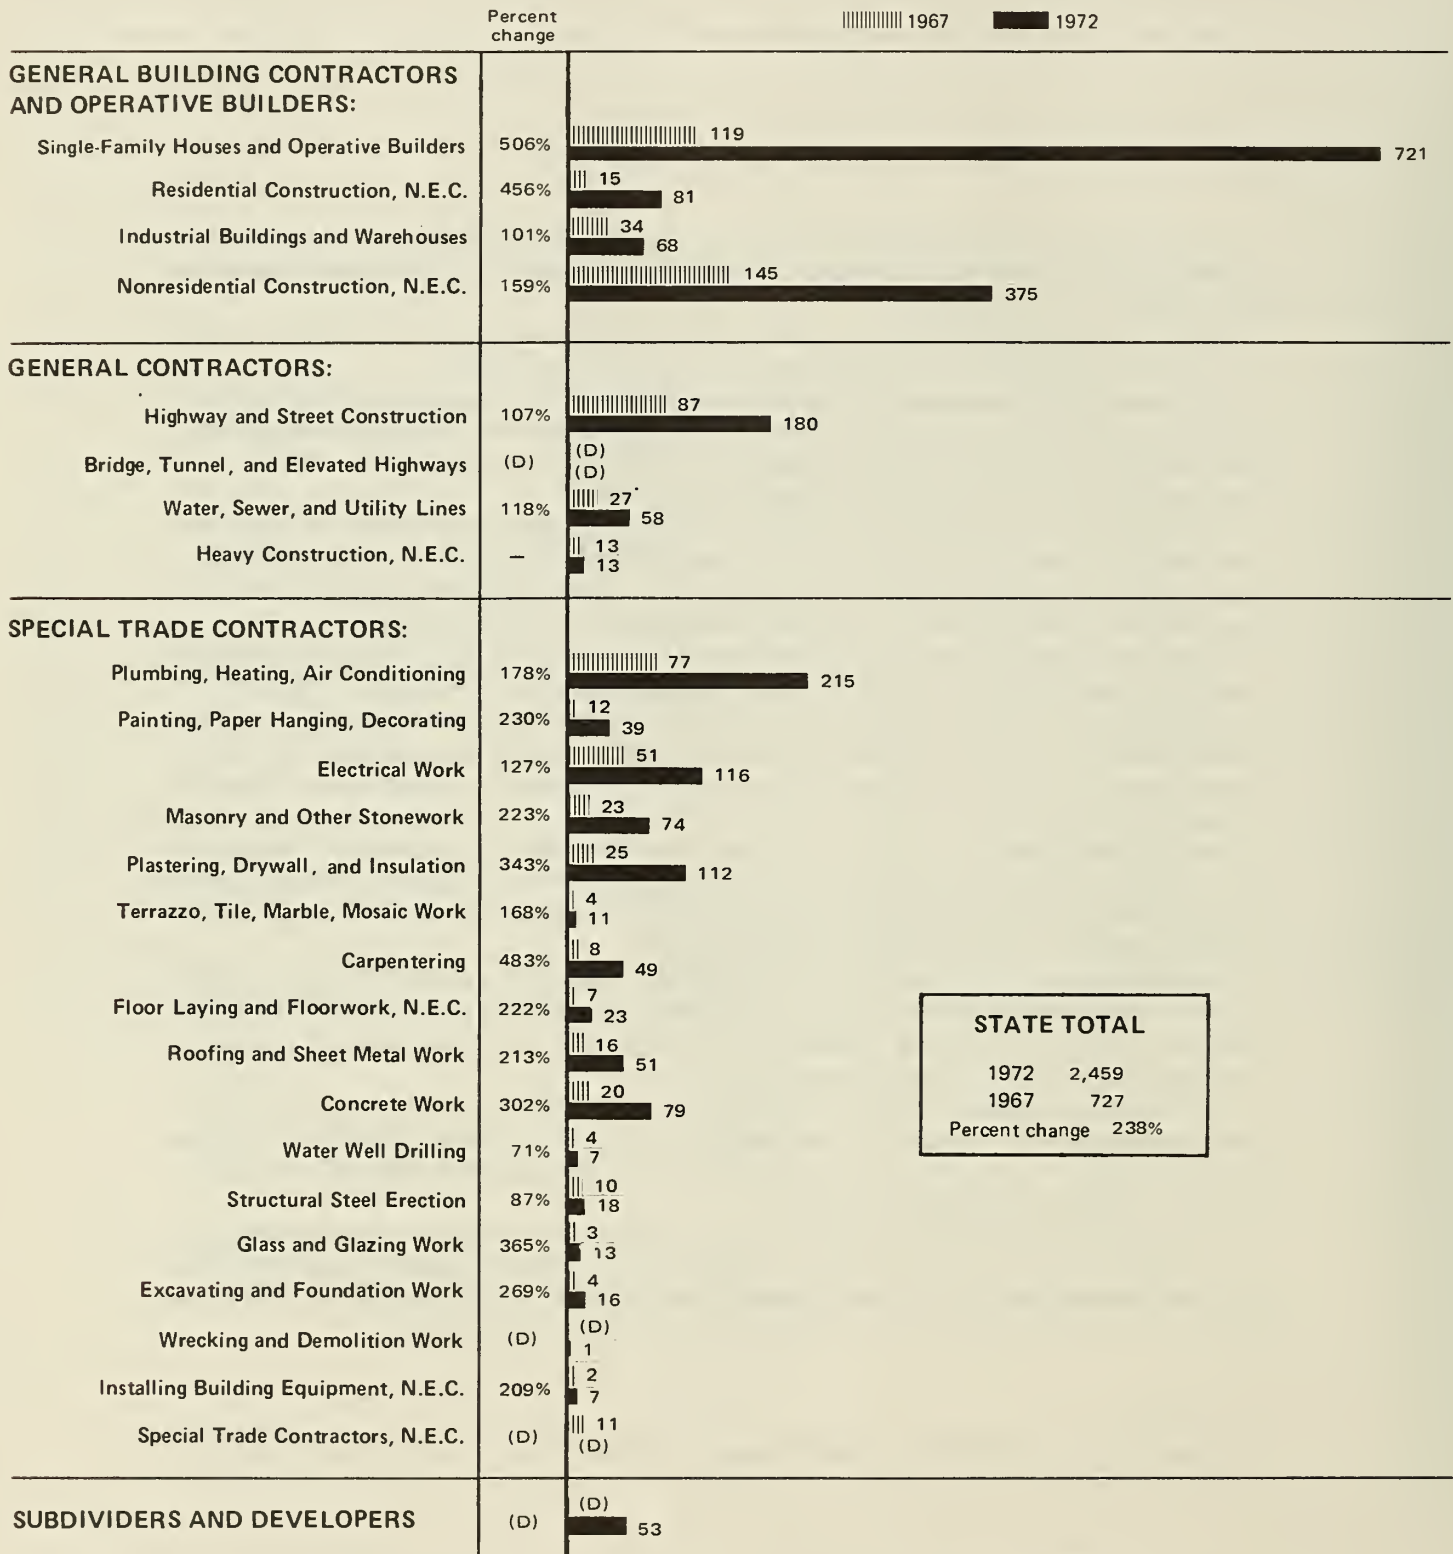

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Arizona are based on a sample of about 2,400 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

ARIZONA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Utah

During 1972, 6,041 establishments in Utah operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,008 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 2,869 nonemployer establishments, or 47 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Utah. On the other hand, 3,172 establishments, 53 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$962 million, of which \$932 million were receipts for construction work. These establishments paid \$230 million for construction work subcontracted to others, leaving net construction receipts of about \$703 million.

Construction establishments with payroll located in Utah paid \$299 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Utah was 24.7 thousand employees. Total payroll for 1972 was \$224 million. Employment for the pay period including March 12, 1972, was 20.4 thousand employees, while employment for the pay period including August 12, 1972, was 27.5 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Utah are based on a sample of about 1,300 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

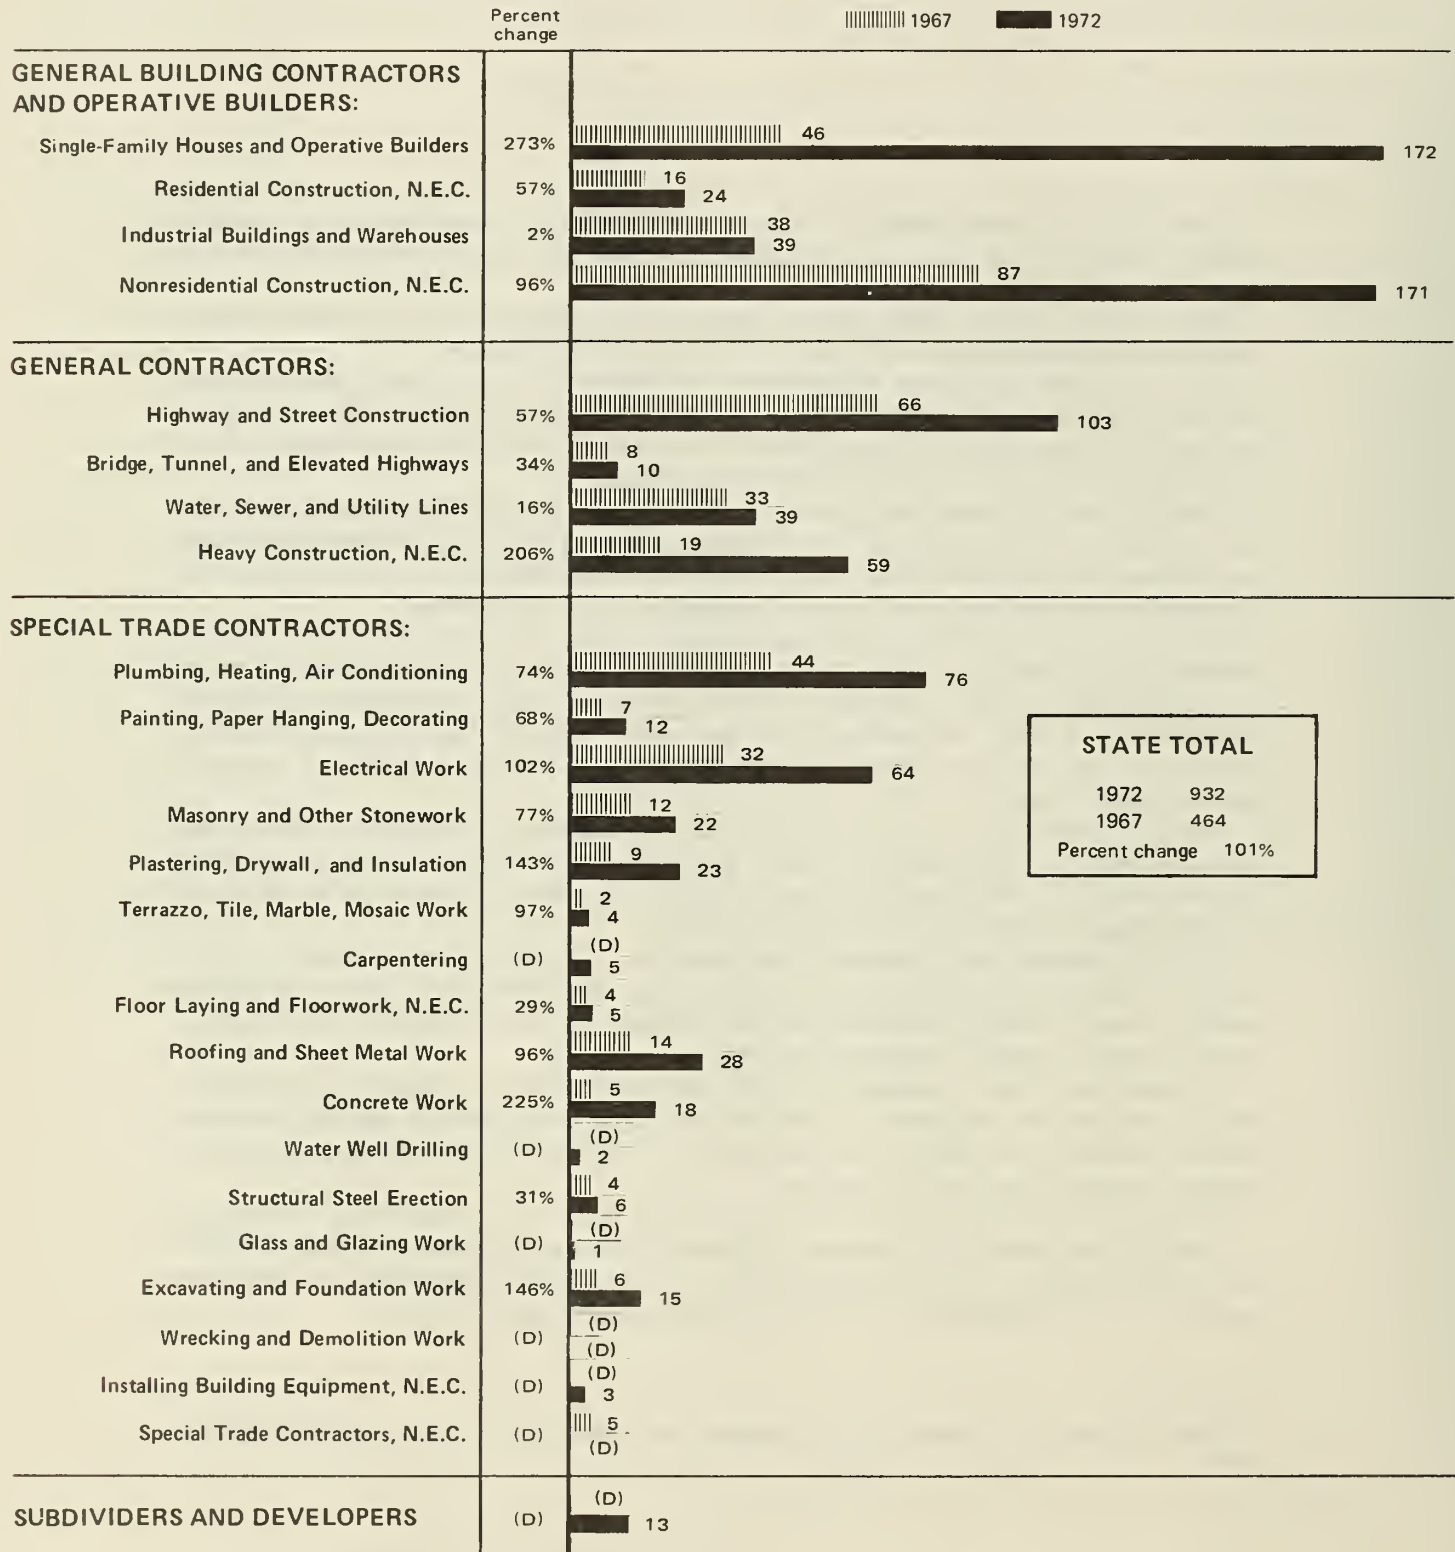

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

UTAH Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$8,626(000) and for SIC 6552 were \$4,154(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are not included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Nevada

During 1972, 2,471 establishments in Nevada operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$765 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 973 nonemployer establishments, or 39 percent of all construction establishments in the State. They accounted for about 2 percent of the total receipts of all construction establishments in Nevada. On the other hand, 1,498 establishments, 61 percent of all construction establishments, were "employers," who accounted for 98 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$748 million, of which \$670 million were receipts for construction work. These establishments paid \$169 million for construction work subcontracted to others, leaving net construction receipts of about \$500 million.

Construction establishments with payroll located in Nevada paid \$196 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Nevada was 18.3 thousand employees. Total payroll for 1972 was \$216 million. Employment for the pay period including March 12, 1972, was 17.3 thousand employees, while employment for the pay period including August 12, 1972, was 18.3 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Nevada are based on a sample of about 800 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

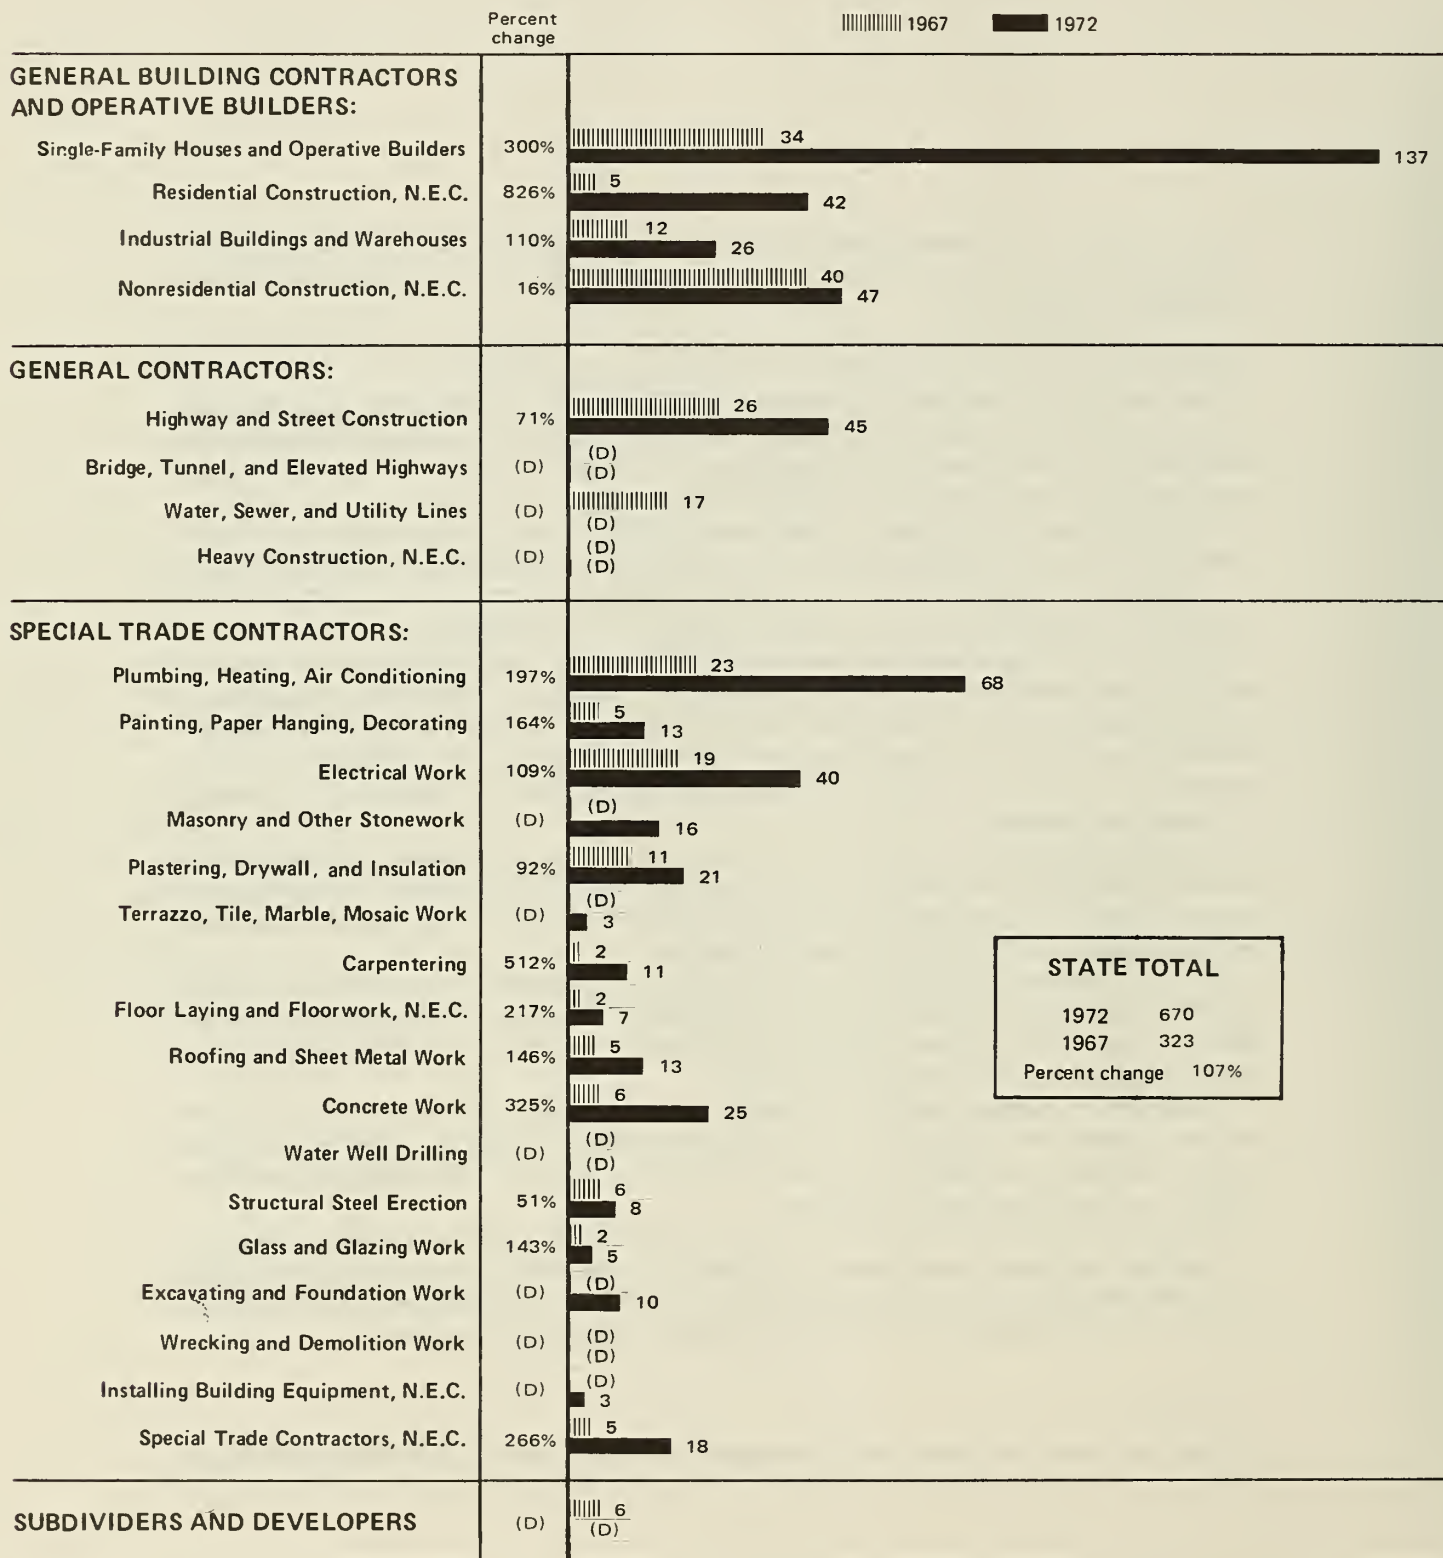

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, **Standard Industrial Classification Manual, 1972.**

NEVADA Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$7,108,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Regions and Geographic Divisions of the United States

Washington

During 1972, 16,223 establishments in Washington operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$2,665 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 8,028 nonemployer establishments, or 49 percent of all construction establishments in the State. They accounted for about 5 percent of the total receipts of all construction establishments in Washington. On the other hand, 8,195 establishments, 51 percent of all construction establishments, were "employers," who accounted for 95 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$2,534 million, of which \$2,449 million were receipts for construction work. These establishments paid \$618 million for construction work subcontracted to others, leaving net construction receipts of about \$1,832 million.

Construction establishments with payroll located in Washington paid \$737 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Washington was 61.9 thousand employees. Total payroll for 1972 was \$647 million. Employment for the pay period including March 12, 1972, was 52.3 thousand employees, while employment for the pay period including August 12, 1972, was 70.1 thousand employees.

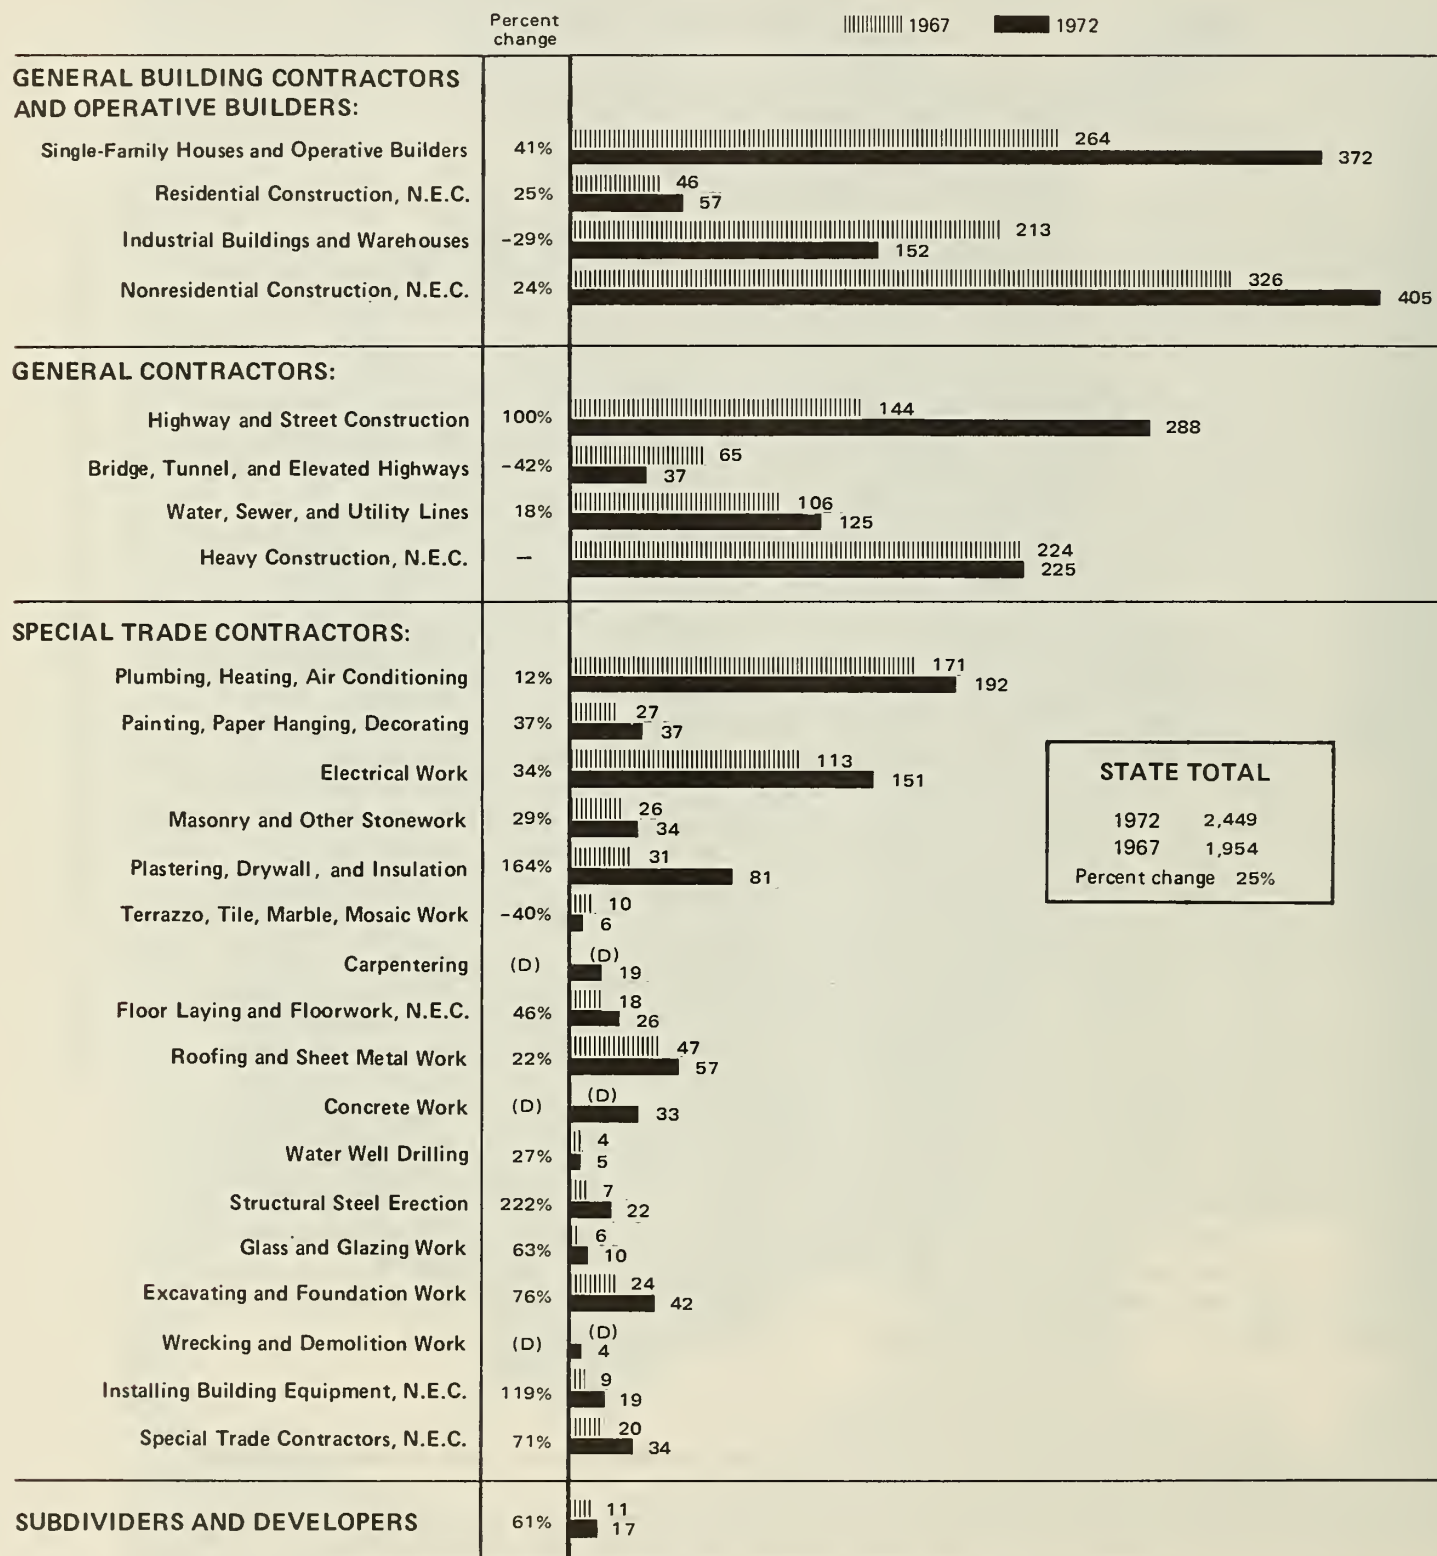

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Washington are based on a sample of about 3,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

WASHINGTON Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972 (In Millions of Dollars)

Standard Notes: —Represents zero, D Withheld to avoid disclosing figures for individual companies, S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Value added equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$20,606(000) and for SIC 6552 were \$8,141(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

⁴For 1972, over 30% of the data was estimated.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Oregon

During 1972, 12,855 establishments in Oregon operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,635 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 6,904 nonemployer establishments, or 54 percent of all construction establishments in the State. They accounted for about 7 percent of the total receipts of all construction establishments in Oregon. On the other hand, 5,951 establishments, 46 percent of all construction establishments, were "employers," who accounted for 93 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,517 million, of which \$1,444 million were receipts for construction work. These establishments paid \$349 million for construction work subcontracted to others, leaving net construction receipts of about \$1,095 million.

Construction establishments with payroll located in Oregon paid \$454 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Oregon was 38.7 thousand employees. Total payroll for 1972 was \$366 million. Employment for the pay period including March 12, 1972, was 32.5 thousand employees, while employment for the pay period including August 12, 1972, was 43.4 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Oregon are based on a sample of about 2,200 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

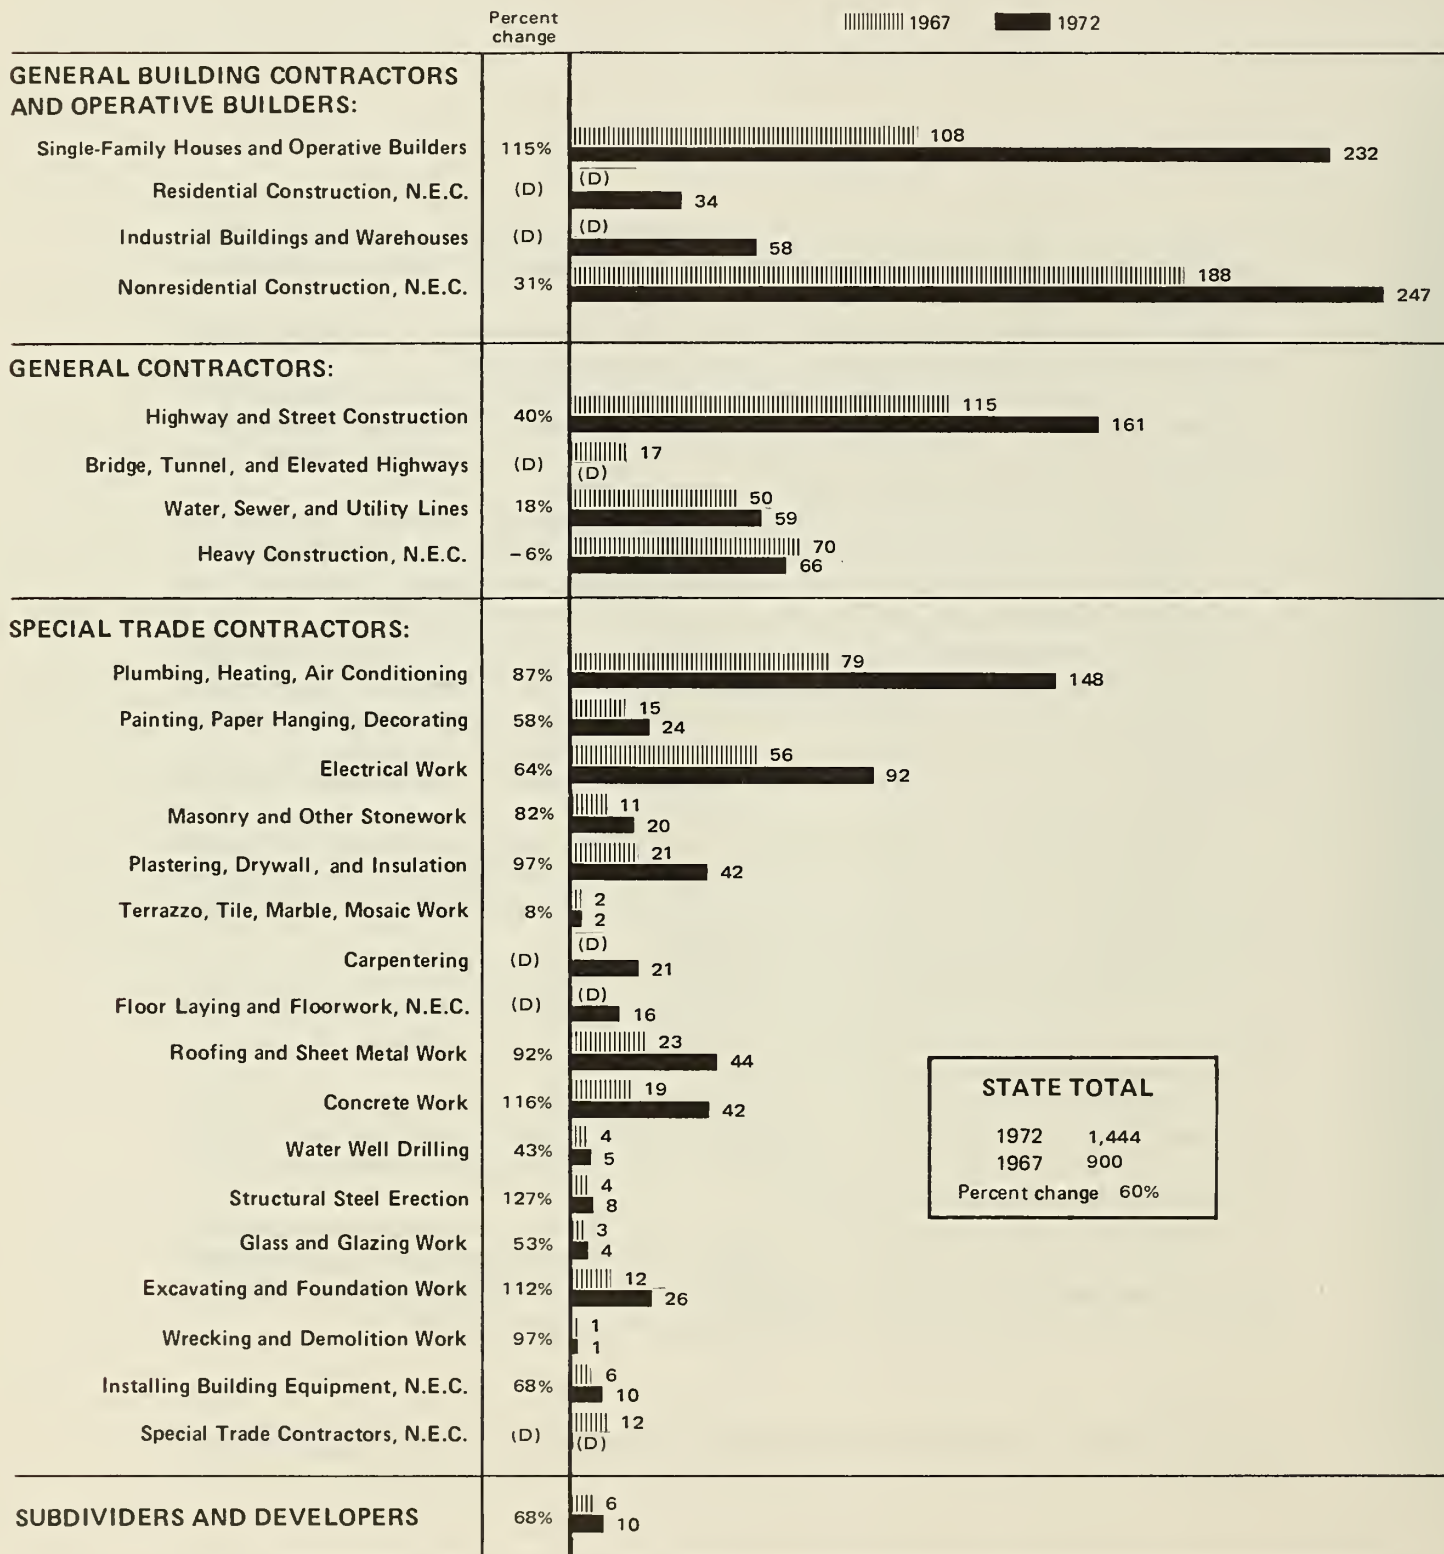

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

OREGON *Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972*

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

California

During 1972, 64,920 establishments in California operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$18,390 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 29,868 nonemployer establishments, or 46 percent of all construction establishments in the State. They accounted for about 4 percent of the total receipts of all construction establishments in California. On the other hand, 35,052 establishments, 54 percent of all construction establishments, were "employers," who accounted for 96 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$17,717 million, of which \$16,774 million were receipts for construction work. These establishments paid \$5,302 million for construction work subcontracted to others, leaving net construction receipts of about \$11,472 million.

Construction establishments with payroll located in California paid \$4,735 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in California was 361.7 thousand employees. Total payroll for 1972 was \$4,147 million. Employment for the pay period including March 12, 1972, was 343.2 thousand employees, while employment for the pay period including August 12, 1972, was 378.1 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for California are based on a sample of about 15,000 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

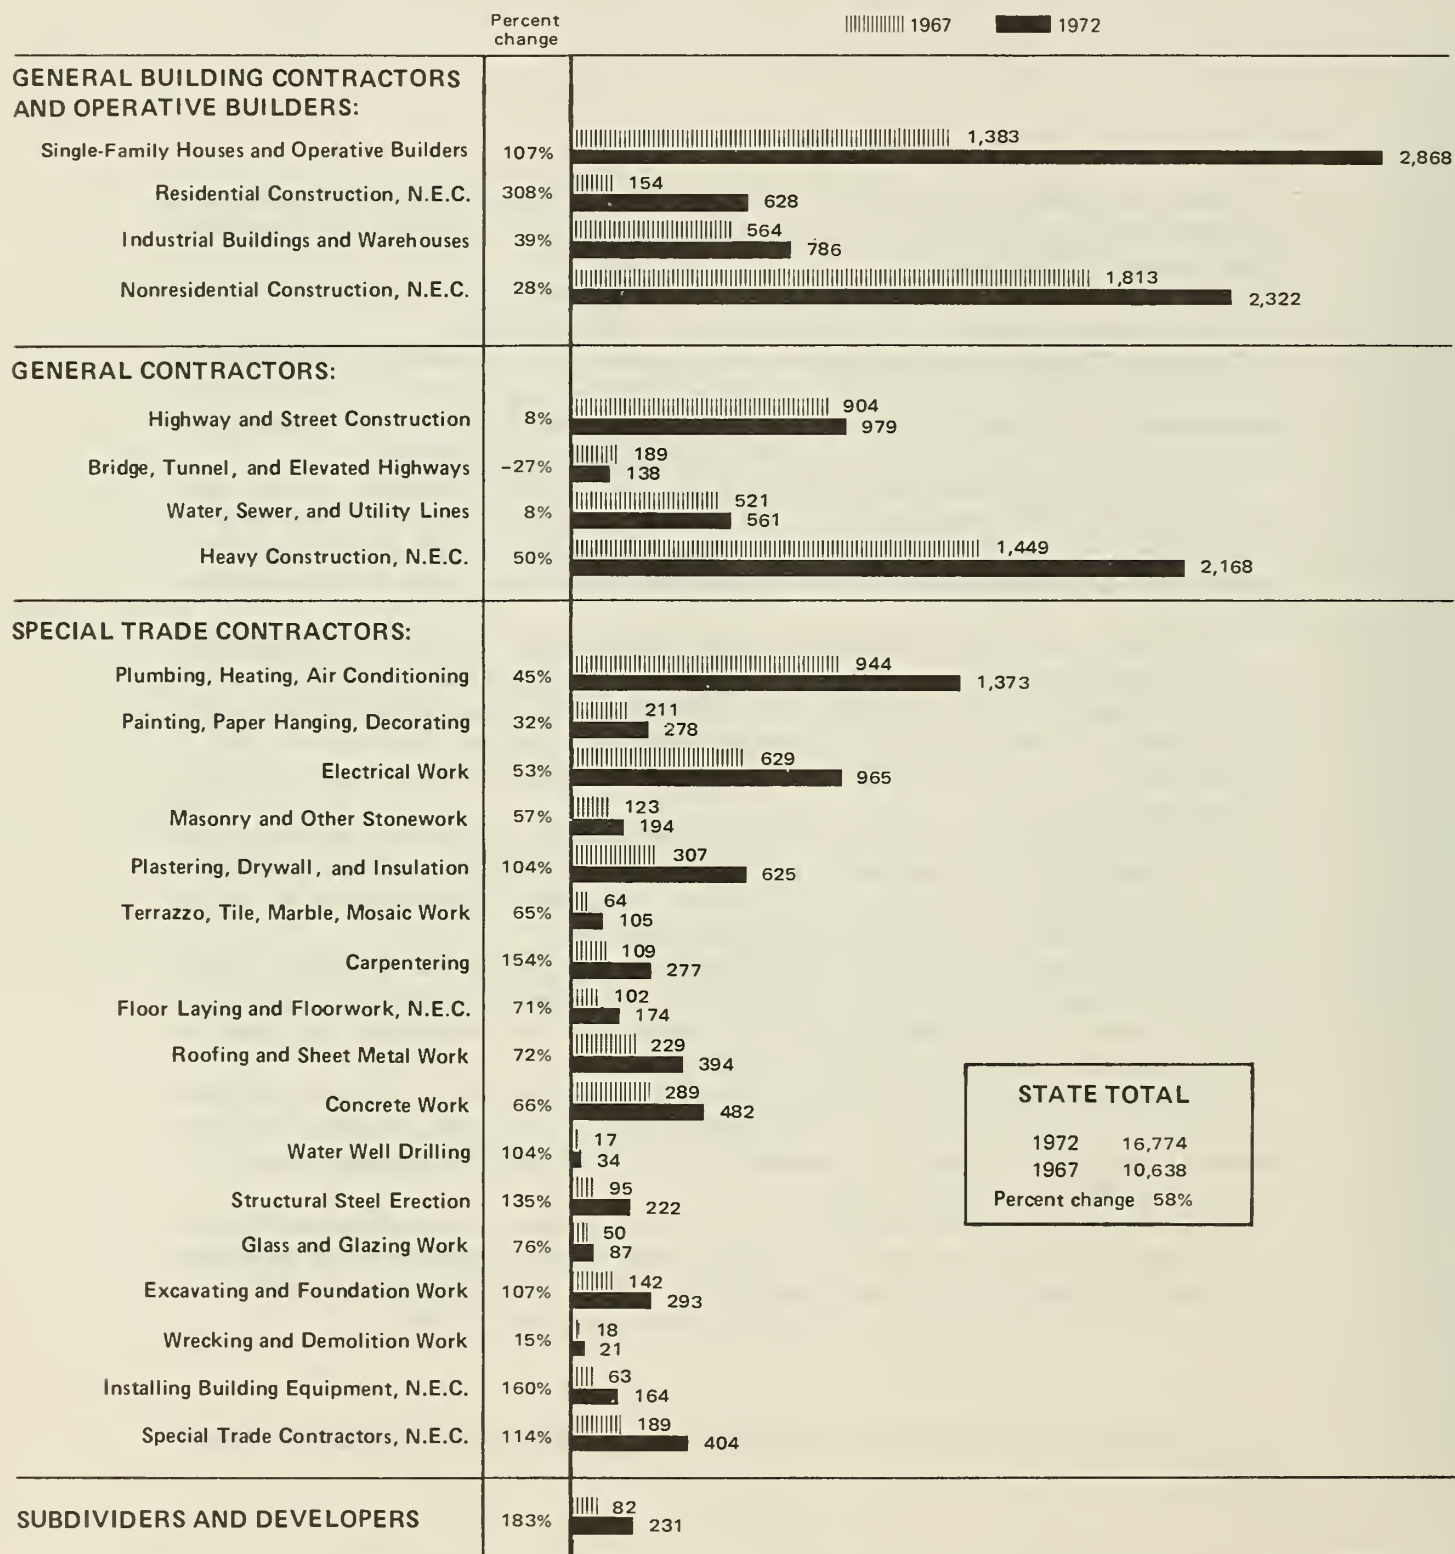

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

(D)	(D)	26 484	29 845	188 768	138 173	3 685	2 324	81 749	10 667	4	-	4	6552

¹Combined because of misclassification problems within these two industries. See industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$208,010(000) and for SIC 6552 were \$225,097(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

Alaska

During 1972, 1,969 establishments in Alaska operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$442 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 914 nonemployer establishments, or 46 percent of all construction establishments in the State. They accounted for about 6 percent of the total receipts of all construction establishments in Alaska. On the other hand, 1,055 establishments, 54 percent of all construction establishments, were "employers," who accounted for 94 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$414 million, of which \$396 million were receipts for construction work. These establishments paid \$92 million for construction work subcontracted to others, leaving net construction receipts of about \$304 million.

Construction establishments with payroll located in Alaska paid \$111 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Alaska was 6.8 thousand employees. Total payroll for 1972 was \$100 million. Employment for the pay period including March 12, 1972, was 4.1 thousand employees, while employment for the pay period including August 12, 1972, was 9.6 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Alaska are based on a sample of about 600 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

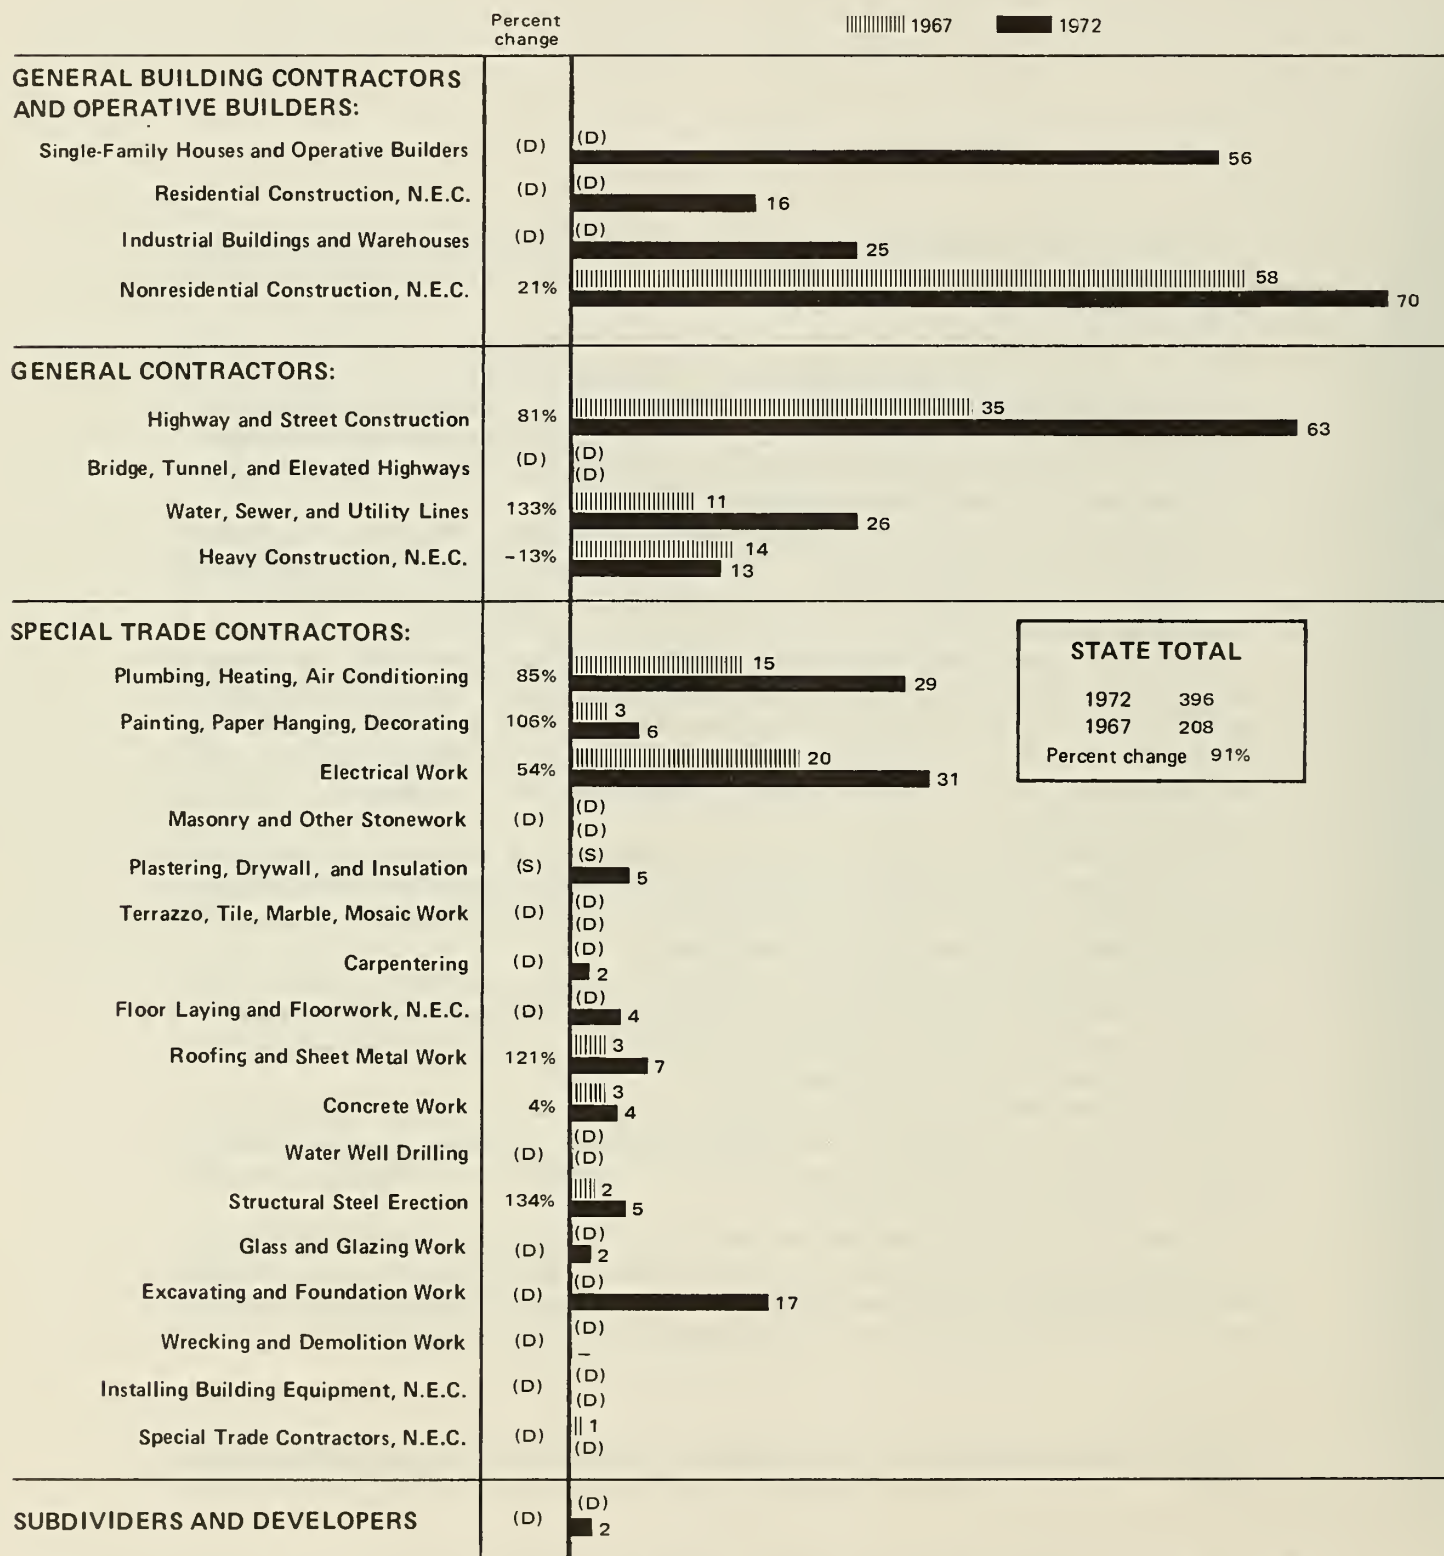

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

										1	-	1	6552

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$5,413,000.

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

⁴For 1972, over 30% of the data was estimated.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in nonbuilding construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

³Over 30% of the data was estimated.

Hawaii

During 1972, 2,318 establishments in Hawaii operated primarily as general contractors or operative builders, special trade contractors, or subdividers and developers. These establishments had total receipts of \$1,109 million.

Table 1 of this report provides summary statistics for all establishments. It also shows separate statistics for those establishments with payroll and for those with no payroll.

There were 748 nonemployer establishments, or 32 percent of all construction establishments in the State. They accounted for about 2 percent of the total receipts of all construction establishments in Hawaii. On the other hand, 1,570 establishments, 68 percent of all construction establishments, were "employers," who accounted for 98 percent of total receipts.

Tables 2 through 6 in this report provide considerably more detailed information for employers. Total receipts for these establishments in 1972 amounted to \$1,086 million, of which \$1,015 million were receipts for construction work. These establishments paid \$296 million for construction work subcontracted to others, leaving net construction receipts of about \$718 million.

Construction establishments with payroll located in Hawaii paid \$283 million for purchased materials, components, and supplies. This figure included payments for materials, components, and supplies purchased for use in construction work for others; purchased and subsequently provided to subcontractors for their use; purchased and then resold to others; and purchased and used in construction work for own account. However, materials furnished to contractors by owners of projects are not included.

Average employment during 1972 for construction establishments with payroll in Hawaii was 25.0 thousand employees. Total payroll for 1972 was \$283 million. Employment for the pay period including March 12, 1972, was 24.4 thousand employees, while employment for the pay period including August 12, 1972, was 25.4 thousand employees.

The 1972 estimates for establishments with payroll are based on a probability sample of about 167,000 construction establishments in the United States. The estimates for Hawaii are based on a sample of about 900 of these establishments. Statistics for the nonemployers were based on administrative records of the Federal Government.

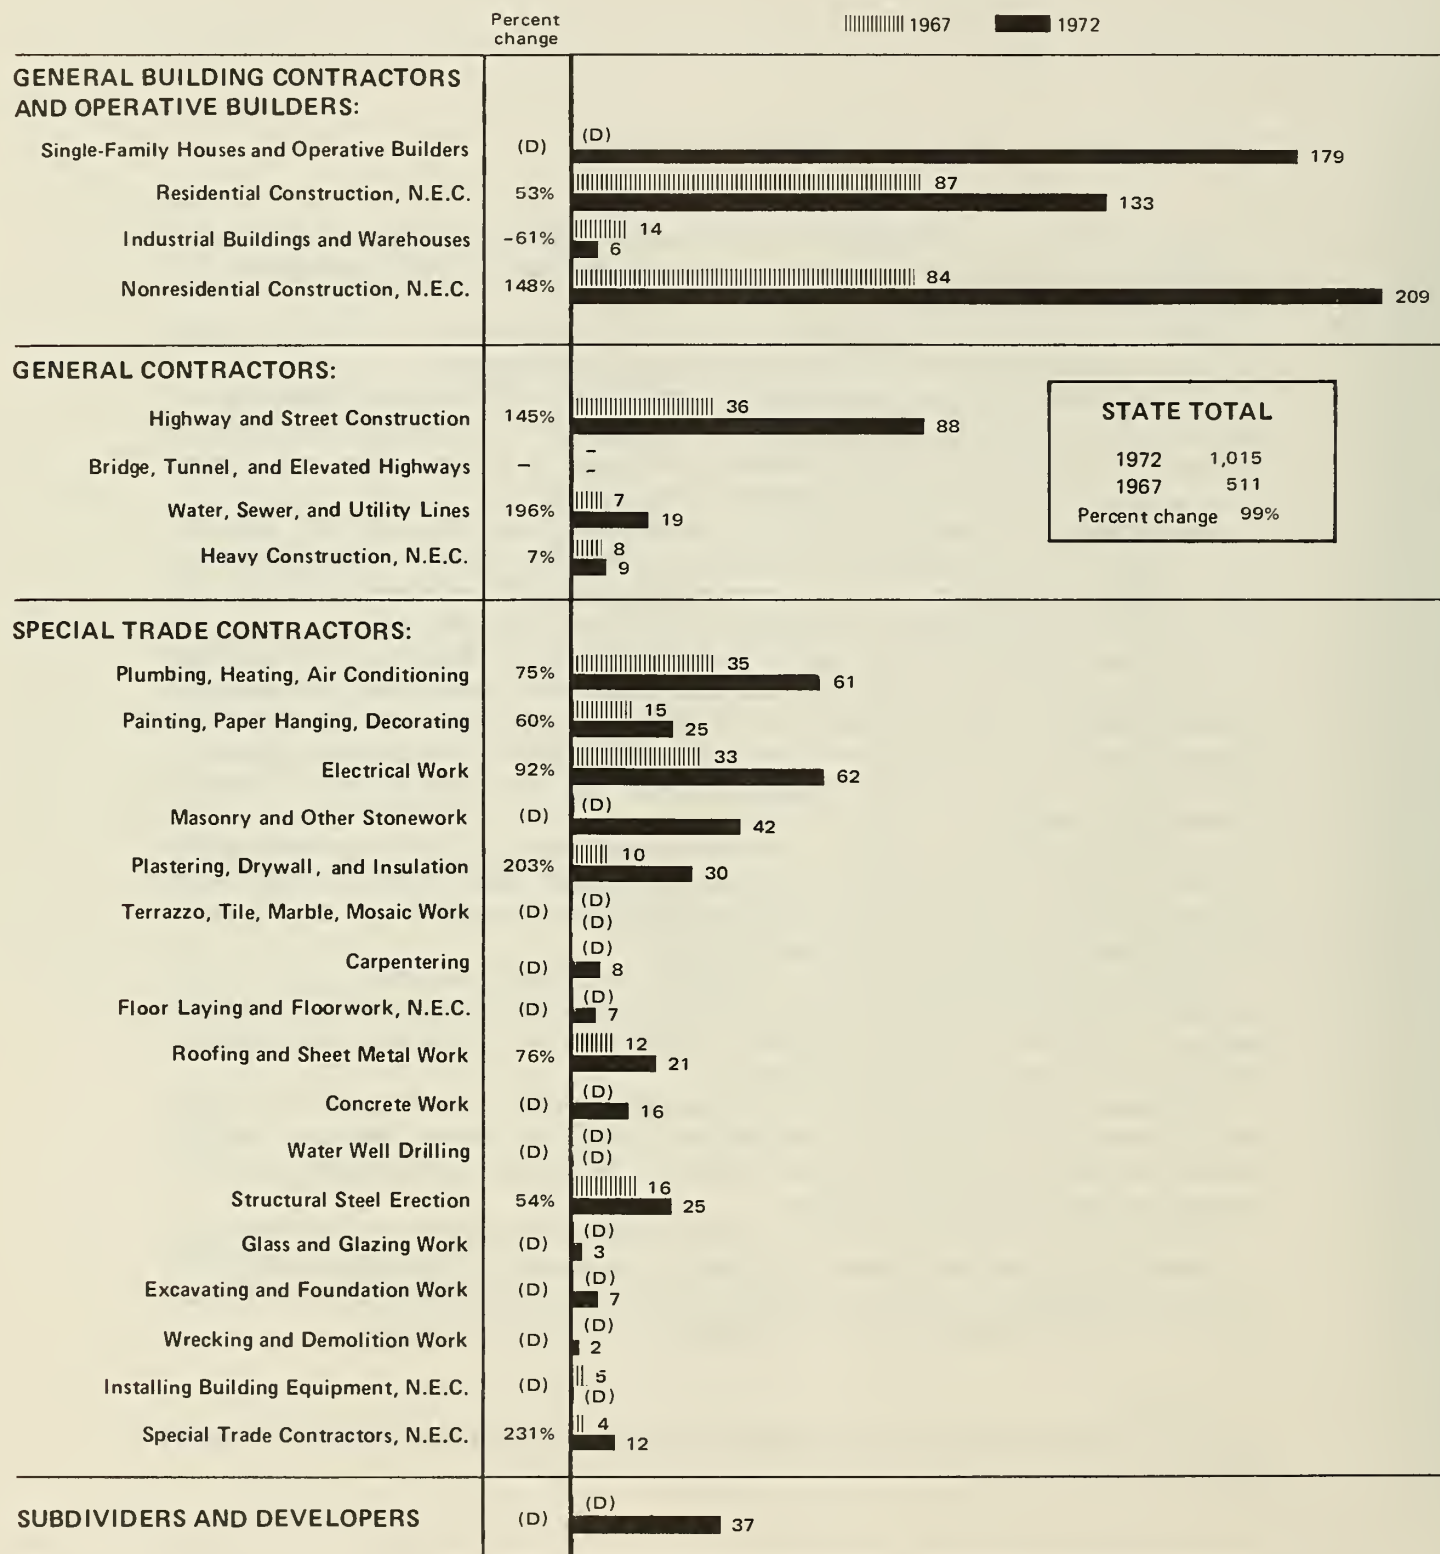

The general and detailed statistics reported by each establishment cover all of its activities rather than construction only. Aggregates of such data for a State or an industry, therefore, reflect the primary construction activities of the establishments in the industry, their secondary construction activities, and any nonconstruction activities.

A revised edition of the SIC Manual¹ was issued in 1972, which includes extensive modifications for classifying the construction industries. For those industries which underwent major reclassification, 1967 establishment records were reclassified and retabulated to approximate new 1967 totals based on the 1972 classification system. These retabulated figures appear in table 2.

¹ Executive Office of the President, Office of Management and Budget, *Standard Industrial Classification Manual*, 1972.

HAWAII Construction Receipts for Establishments With Payroll, by Industry: 1967 and 1972

(In Millions of Dollars)

Standard Notes: —Represents zero. D Withheld to avoid disclosing figures for individual companies. S Withheld because the estimate did not meet publication standards on the basis of either the associated standard error or a consistency review. Percent change calculated from detailed data in Table 2.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²"Value added" equals "total receipts" less "land receipts" less "total selected payments." "Land receipts" for SIC 1521 and SIC 1531 combined were \$15,602(000).

³Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

¹Combined because of misclassification problems within these two industries. See Industry series report, General Contractors, Single-Family Houses and Operative Builders (SIC 1521/1531).

²Identifying code number, 1791, for this industry is the same for 1972 as for 1967, but the data are not exactly comparable. Special trade contractors primarily engaged in non-building construction and classified in major group 16 in 1967 are now included in the appropriate industry in major group 17.

APPENDIX A. Explanation of Terms Used in Collection and Publication of Data

Construction—Construction covers the erection, maintenance, and repair of immobile structures (together with service facilities which become integral parts of structures and are essential to their use); the physical development of land for purposes other than agriculture; and the demolition of existing structures.

“Structures” are defined broadly to include—in addition to buildings—such works as highways and streets; dams; silos and water towers; electric light and power transmission and distribution lines; petroleum and gas pipelines and distribution lines; radio, television, and radar towers; water supply lines and sewers; and all similar work which is built into or affixed to the land.

Construction also covers those types of service facilities which, when installed, become an integral part of the structure and are necessary to the use of the structure. These include such components as plumbing, heating and ventilation, central air conditioning, electrical facilities, and elevators and escalators.

Changes to structures involving exterior or interior walls, such as the erection of partitions in a loft building to convert it to offices or the remodeling of a store front, are considered construction.

The erection of scaffolding and/or forms for concrete work is considered construction.

Clearing and developing of the site is a part of construction.

In general, construction does not include the furnishings and equipment designed to prepare the structure for a specific use. Examples of such equipment are steam tables in restaurants, pews in churches, lockers in school buildings, printing presses or stamping machines in industrial buildings, and refrigerators in homes. The installation of such furnishings and equipment is, however, included in construction when performed by construction contractors. However, the erection of “processing equipment” in certain industries, where such equipment is largely fabricated on the site, is defined as construction. (For example, the towers, vats, and related piping at chemical plants and petroleum refineries, or the blast furnace complex at steel plants.)

Construction does not include mobile structures; such as, trailers, mobile homes, floating drydocks, and ships. Also excluded from construction are those operations associated with extraction of minerals (drilling oil and gas wells, sinking mine shafts, stripping overburden, tunneling and shoring mines, open-pit mining, and activity primarily devoted to the production of sand, gravel, and other minerals by dredging) and closely related support activities on mineral properties (erecting, repairing, and dismantling of drilling rigs; building of well foundations; excavating slush pits; and cementing wells). Work which is an integral part of farming operations (such as, plowing, terracing, and the digging of drainage ditches) is also excluded from construction.

Distinction Between New Construction and Maintenance and Repairs—Construction is composed of two broad categories of activities: (1) New construction and (2) maintenance and repairs. “New construction” is defined to include the complete, original erection of structures and essential service facilities, as well as additions and alterations. Additions and alterations include such construction as the addition of a wing, a story or stories, conversion of space to other uses where structural changes are involved, or the initial installation of integral building services equipment in existing structures (e.g., elevators, escalators, or central air-conditioning systems). “Maintenance and repairs” relates to the restoration of existing buildings or other structures or their related service facilities, including replacement of integral parts. Repainting, repapering, reroofing, redredging, railroad maintenance-of-way, and street and highway patching and minor resurfacing are included.

Number of Establishments—Includes all establishments in business at any time during the year. As such it covers all full year and all part year operations. Construction establishments which were inactive or idle for the entire year were not included.

Number of Proprietors and Working Partners—This information was not collected on the census report forms. The data shown for this item in the report is based on crediting each sole proprietorship establishment with one active proprietor and each partnership establishment with two working partners. The partnership factor was based on information received during a large scale test conducted in prior years.

Employment and Related Items—The report form requested separate information on construction workers, all other employees, and total employees on the payroll in the pay periods including the 12th of March, May, August, and November. The categories defined on the questionnaire are as follows:

All Employees—Comprises all full-time and part-time employees on the payrolls of construction establishments who worked or received pay for any part of the pay period which included the 12th of March, May, August, and November. Included are all persons on paid sick leave, paid holidays, and paid vacations during these pay periods. Officers of corporations are included; proprietors and partners of unincorporated firms are, however, excluded from the count of employees.

Construction Workers—Includes all workers (up through the working foreman level) directly engaged in the construction operations—such as painters, carpenters, plumbers, electricians, etc. Included are journeymen, mechanics, apprentices, laborers, truck drivers and helpers, equipment operators, and on-site record keepers and watchmen. Supervisory employees

APPENDIX A—Continued

above the working foreman level are excluded from this category but are included in the "all other employees" category.

All Other Employees—Includes employees engaged in the following activities: Executive, purchasing, accounting, personnel, professional, and technical activities, and routine office functions. Also included are supervisory employees above the working foreman level.

The detailed employment data for the pay periods including the 12th of March, May, August, and November and described above are published in the detailed statistics tables of the final reports. In addition "annual average employment" figures are also provided for each category of employees. The "annual average" is calculated for each establishment and is derived by dividing the sum of the data reported for March, May, August, and November by "4."

This approach to an "annual average" was designed to simplify the schedule format and the reporting requirements of respondents, since it was found that the industry average of these four selected pay periods approximates very closely the average employment for the year that would be obtained from using pay periods in all 12 months for almost all of the construction industries.

In addition to the reports sent to construction establishments, information was collected on employment for the pay period including the 12th of March and annual payrolls for central administrative offices or auxiliary units of multi-establishment companies servicing more than one construction establishment. However, these figures are not included in this report. They will be included in the economic censuses report entitled "1972 Enterprise Statistics."

Payrolls—Includes the gross earnings paid in the calendar year 1972 to all employees on the payroll of construction establishments. Respondents were told that they could follow the definition of payrolls used for completing the Employer's Quarterly Federal Tax Return, Treasury Form 941. It includes all forms of compensation such as salaries, wages, commissions, dismissal pay, all bonuses, vacation and sick leave pay, and the cash equivalent of compensation in kind, prior to such deductions as employees' Social Security contributions, withholding taxes, group insurance, union dues, and savings bonds. The total includes salaries of officers of these establishments, if a corporation; it excludes payments to the proprietor or partners, if an unincorporated concern. It should be noted that this payroll definition does not include employers' Social Security contributions, or other nonpayroll labor costs incurred by employers, such as for employees' pension plans, group insurance premiums, and workmen's compensation.

Payroll data were collected and tabulated for the employment categories described above.

As in the case of employment figures, the payrolls of separate central administrative offices and auxiliary units of multi-establishment companies are not included in the totals.

Total Selected Payments—Represents the total of payments for construction work let out to other construction contractors and payments for materials, components, and supplies. Capital expenditures and rental payments for machinery and equipment are **not** included in total selected payments.

Payments for Construction Work Let Out by Establishments to Other Construction Contractors—Includes all payments made during 1972 for construction work subcontracted out to other construction contractors. General contractors were instructed to include payments to subcontractors. Builders were instructed to include payments made to general contractors and also payments made directly to subcontractors. Special trade contractors were instructed to include payments made to subcontractors. The payments made by the reporting establishment for its purchases of materials, components, and supplies are not included here even if the materials were provided to a subcontractor for his use. Such purchases of materials, components, and supplies are reported under a separate category, "payments for materials, components, and supplies." However, if payments to subcontractors covered materials **purchased directly by the subcontractors**, then the total of such payments (including material charges) should have been reported as payments for construction work let out to others.

When it was the practice for the State, local governments, or their special authorities, or utility companies to undertake the installation of certain utility services or the construction of roads, and then to bill the contractors for such work, payments in 1972 for such work were included in this item.

Payments made for the rental of construction machinery or equipment are not included.

Payments for Materials, Components, and Supplies—Includes the total payments made by the reporting establishments during 1972 for the purchase of all materials, components, and supplies, and fuels used for construction purposes. Supplies include expendable tools which are charged to current accounts. Payments include freight and other direct charges incurred by the reporting establishment in acquiring the materials, components, and supplies. Payments represent the amount paid after discounts. Payments also include the value of materials, components, and supplies obtained from other establishments of the respondent's company.

Payments for materials, components, and supplies include only payments for physical goods. Services used or overhead charges are excluded. Excluded are the cost of such services as advertising, telephone, telegraph and cable, insurance, developmental and research services of engineering, management,

APPENDIX A—Continued

marketing, and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Excluded also are such overhead items as depreciation charges against plant and equipment, rent and rental allowances, interest payments, royalties, and patent fees.

Also excluded are payments for land, for the rental of construction machinery or equipment, and payments for construction work let out to other construction contractors.

This item includes payments for materials, supplies, and components used by the reporting establishments in the construction for themselves of new plants or equipment which is chargeable to their fixed assets accounts. Payments for materials bought and resold to others are also included. As indicated above, this item also includes payments made for direct purchases of materials, components, and supplies even though subsequently provided to subcontractors for their use.

Materials furnished to contractors by the owners of projects are, of course, not included.

Total Receipts During 1972—Includes all receipts from general contracting, special trades contracting and subcontracting, and land development and improvement work. Includes all receipts from the sales of land (not recorded as fixed assets of the reporting establishments) and the sales of buildings built for sale. Does not include monies realized from the sale or other disposition of the establishment's fixed assets. Also included are all other receipts from the reporting establishment's other business operations (rental of equipment to others, wholesale or retail sales, etc.).

Money obtained during the year in the form of construction loans is not treated as receipts.

Also excluded are receipts from operations in foreign countries and nonoperating income, such as interest, dividends, etc.

Total Construction Receipts—Includes all receipts during 1972 from general contracting, special trades contracting and subcontracting, and land developing and land improvement work. Included are receipts for maintenance and repair construction work as well as for new construction. Also included is the value of any construction work done by the reporting establishments for themselves.

Builders were instructed to include in this item their 1972 receipts from the sales of buildings and other structures built for sale (excluding from these receipts all value of the land but including the value of any improvements this establishment made to the land). Builders, who when selling a new home or other building accept an existing one in trade, were instructed to include here in construction receipts the estimated value of the trade-in.

Also included in construction receipts were fees received as sponsors of joint ventures and fees received as agents for owners (for construction work).

Receipts for separately definable architectural and engineering work done by the reporting establishment for others, consultants' fees, and receipts from the rental of equipment to others are not included here.

Establishments filing this report which engaged in the sale and installation of such construction components as plumbing, heating, and central air-conditioning supplies and equipment; lumber and building materials; paint, glass, and wallpaper; and electrical and wiring supplies for construction purposes were instructed to include here as construction receipts, both the receipts for the installation and the receipts covering the value (selling price) of the items installed. (Receipts covering the selling price of such items sold, but not installed by the reporting establishments, are included in "other business receipts.")

Land Receipts—Includes receipts from the sale of land held for sale or land sold in connection with the sale of houses and other structures. Respondents were requested to exclude from these receipts, the value of any improvements they made to the land prior to the sale. (The receipts covering these improvements are included as "construction receipts.")

Other Business Receipts—Includes all business receipts not reported as "construction receipts," or "land receipts," but included in "total business receipts." Other business receipts include business receipts from retail and wholesale trade, rental of equipment, manufacturing, transportation, legal service, insurance, finance, rental of property and other real estate operations, and other nonconstruction activities. Consultants' fees as well as receipts for separately definable architectural and engineering work for others are included here.

Receipts for Work Subcontracted In From Others—The report form requested the responding establishments to report whether or not they had obtained receipts during 1972 for work done for other construction contractors or builders. Those establishments reporting "Yes" were asked to report the approximate percent of total construction receipts accounted for by such work. For each establishment the percentages so reported were applied to the reported construction receipts to develop a value for this item.

Net Construction Receipts—The aggregate of construction receipts reported by all construction establishments in each of the several industry, State, or other groupings in this census contains varying amounts of duplication since the construction work (and the receipts) of one firm may in turn be subcontracted to other construction firms and also be included in their receipts. To avoid this duplication a "net construction receipts" figure has been derived for each establishment by subtracting the payments made for construction work subcontracted to others from the construction receipts.

Value Added—Duplication in receipts between construction and other industries results from the use of products of other industries as input materials by construction establishments. "Value added" avoids this duplication and is, for most purposes, the best measure for comparing the relative economic importance of industries or areas. "Value added" is defined in the 1972 Census of Construction Industries as equal to total receipts less payments for construction work subcontracted to others and payments for materials, components, and supplies. However, for SIC 6552 and SIC 1531 where land receipts are significant, a modification was made in the calculation of value added. For these industries value added is defined as equal to total receipts less land receipts, payments for construction work subcontracted to others and payments for materials, components, and supplies.

Capital Expenditures (Excluding Land)—Refers to all costs actually incurred during 1972 which are or will be chargeable to the fixed assets accounts of the reporting establishments and which are of the type for which depreciation accounts are ordinarily maintained. These expenditures cover the acquisition, the construction, and the major alteration of the reporting establishment's own buildings and other structures (whether purchased, constructed under contract, or constructed by the reporting establishment's own forces) and the acquisition of machinery and equipment. Included are payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.

Respondents were instructed not to include any expenditures actually made prior to 1972 or after the end of 1972. For example, if construction of a building for an establishment's own use was begun before 1972 and was not completed until after 1972, only those costs which were actually incurred during 1972 were reported.

If capital expenditures were not recorded directly at the establishment level but were handled centrally at the company or division level, respondents were requested to report appropriate estimates for the individual establishments.

New Structures, Additions, and Related Facilities—Includes the total expenditures during 1972 for new buildings and structures, for major additions and alterations of buildings and structures, and expenditures for other facilities for the reporting establishment's use (such as roads, docks, tracks, parking lots, fences, etc.). Expenditures for land are excluded.

New Machinery and New Equipment—Includes expenditures for new machinery and new equipment. This item also includes capitalized repairs and improvements to used machinery and equipment.

Used Structures and Related Facilities Acquired From Others—Covers expenditures for used structures and related facilities acquired from others.

Used Machinery and Used Equipment Acquired From Others—Includes expenditures for used machinery and equipment acquired from others. Capitalized repairs and improvements to such equipment are reported as new machinery and equipment.

Fixed Assets and Depreciation—Refers to the value of all fixed tangible assets such as buildings and other structures (offices, shops, etc.); stationary machinery (generators, shop equipment, etc.); mobile machinery (tractors, trucks, etc.); and other equipment (office furniture and fixtures, etc.).

Not included were such items as current assets, depletable assets, intangible assets, nondepreciable assets, and assets which had been sold, scrapped, or otherwise destroyed during 1972.

Data on fixed assets and depreciation were collected separately for (1) structures, additions, and related facilities, (2) machinery and equipment, and (3) the total of both.

The respondents were asked to report the gross book value at the end of 1972, the accumulated depreciation at the end of 1972, and net value at the end of 1972 of the fixed assets for which depreciation accounts are ordinarily maintained. Gross book value represented the acquisition cost (original cost or other basis) of such depreciable assets.

Payments Made for Renting or Leasing Machinery and Equipment—Includes all payments made during 1972 for the renting or leasing of construction machinery and equipment, transportation equipment, production equipment, office equipment, furniture and fixtures, and scaffolding. Excluded are payments for rental of land and buildings.

Also excluded are payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized. Instead, such payments are included in "capital expenditures." Also excluded are payments made under agreements which are in effect true subcontract construction arrangements. Such payments are included in "payments for construction work let out by establishments to other construction contractors."

Classifications of Construction Work—To provide more detailed information, reporting establishments were requested to report various breakdowns, using percentages, of their construction receipts figures. For tabulation purposes these reported percentages were then applied to the construction receipts figure to derive, for each establishment, dollar values for each such classification.

It should be kept in mind that these various detailed break-outs apply to "construction receipts," not to "net construc-

tion receipts." To provide an indication of the extent of duplication in the construction receipts figures, each statistical table containing these data also provides information on total construction receipts, total payments for work subcontracted to others, and net construction receipts.

Types of Construction Engaged in During 1972—The purpose of this item is to provide a breakdown of the construction receipts in order to show the types of buildings, structures, or other facilities on which the work of the establishment was performed. **Both new construction and maintenance and repair construction are included.** The instructions to the respondent stated that ideally, each building, structure, or other facility should be classified in terms of its own function. For example, a restaurant building would be classified in the restaurant category whether it was designed as a commercial restaurant building or an auxiliary unit of an educational institution. However, it was recognized that complex projects consisting of two or more different types of buildings, structures, or other facilities are difficult to classify and that sufficient information is seldom available. Respondents were told that such complex projects could, therefore, be classified in accordance with the major function of the total complex.

Building Construction

Single-Family Houses—Includes single-family homes, townhouses, and rowhouses.

Multifamily Residential Buildings—Includes houses for two or more families, apartment houses, etc.

Other Residential Buildings—Includes hotels, motels, dormitories, nurses' homes, and other nonhousekeeping residential structures.

Industrial Buildings and Warehouses—Includes all industrial buildings and plants which are used to house the production, assembly, and warehousing activities of those establishments. Commercial warehouses, cold storage plants, grain elevators, and storage buildings are also included here.

Office and Bank Buildings—Includes all buildings which are used primarily for office space or to house banks and other financial institutions. It also includes government administrative buildings.

Stores, Restaurants, Public Garages, and Auto Service Stations—Includes all buildings which are intended for use primarily in the wholesale, retail, and service trades. For example, complete shopping centers, department stores, drug stores, restaurants, public garages, and auto service stations are in this category.

Religious Buildings—Includes all buildings which are intended for religious services and functions, such as churches, synagogues, convents, monasteries, seminaries, etc.

Educational Buildings—Includes all buildings which are used directly in the administrative and instructional activities of establishments furnishing formal academic or technical courses. These establishments include colleges and universities as well as elementary and secondary schools, and correspondence, commercial, and trade schools. Libraries, museums, and art galleries, as well as laboratories which are not a part of a manufacturing establishment, are also included as educational.

Hospital and Institutional Buildings—Includes all buildings which are primarily engaged in providing hospital and institutional care, such as general, mental, or tuberculosis hospitals, clinics or infirmaries and sanitariums, and such institutions as nursing homes, homes for the aged, orphanages, etc.

Amusement, Social, and Recreational Buildings—Includes buildings which are used primarily for entertainment, social, and recreational activities, such as sports arenas, theaters, music halls, golf and country club buildings, fraternal organization lodges, skating rinks, bowling alleys, and indoor swimming pools, etc.

Other Nonresidential Buildings—Includes buildings which are not classified elsewhere, such as fire stations, bus and air passenger terminals, and hangars, etc.

Nonbuilding Construction

Highways and Streets—Includes streets, roads, alleys, sidewalks, curbs and gutters, and forest and park roads. Also includes—in connection with highway and street construction—new and extension of old culverts, right-of-way drainage, erosion control, lighting, highway signs and guard rails, and earthwork protective structures.

Bridges and Elevated Highways—Includes elevated highways, viaducts, and bridges.

Tunnels—Includes highway, pedestrian and railway tunnels, but excludes subways.

Dam and Reservoir Construction—Includes all dams and reservoirs.

Marine Construction—Includes dredging, underwater rock removal, breakwaters, navigational channels, dikes, jetties, locks, etc.

Harbor and Port Facility Construction—Includes the construction of docks, piers, wharves, etc.

Conservation and Development Construction—Includes land reclamation, irrigation projects, drainage canals, levees, flood control projects, etc.

APPENDIX A—Continued

Power and Communication Transmission Lines, Towers, and Related Facilities—Includes telephone and telegraph lines, television and radio towers, electric light and power facilities, etc.

Power Plants—Includes electric generating plants, atomic energy plants, nuclear reactors, etc.

Sewers, Water Mains, and Related Facilities—Includes sanitary and storm sewers, water supply systems, and related facilities.

Sewage Treatment and Water Treatment Plants—Includes water filtrating plants, disposal plants, water softening plants, etc.

Pipe Line Construction—Includes pipe line construction for the transmission of gas and petroleum products, liquid oxygen, etc.

Mass Transit Construction—Includes railroads, subways, elevated railways, etc.

Heavy Industrial Facilities—Includes blast furnaces, petroleum refineries, chemical complexes, mining appurtenances (such as tipplers and washeries), etc.

Other Heavy Construction—Includes military and space facilities.

Other Types of Construction Work—Includes any types of construction not covered by the above categories.

Location of Construction Work—The report form requested respondents to report each State in which they engaged in construction work and the extent (percent of construction receipts) of that work.

Class of Construction—The purpose of this item is to provide a breakdown of construction receipts between new construction and maintenance and repair work.

The report form requested respondents to report the extent construction receipts were derived from "new construction work" and/or "maintenance and repair construction." See page A1 for detailed definitions.

Ownership of Construction Projects—The purpose of this item is to provide a breakdown of construction receipts during 1972 between public construction and private construction. This classification relates to the ownership of the projects or work undertaken and not to the financing. Public construction includes projects owned by the Federal, State, or local governments including public authorities and special districts.

APPENDIX B. Standard Industrial Classification Titles for Industries and Industry Groups Covered by the 1972 Census of Construction Industries

SIC code	Industry titles	SIC code	Industry titles
Construction Industries		Construction Industries—Continued	
15	BUILDING CONSTRUCTION—GENERAL CONTRACTORS AND OPERATIVE BUILDERS	CONSTRUCTION—SPECIAL TRADE CONTRACTORS—Continued	
152	General Building Contractors—Residential Buildings	172	Painting, Paper Hanging, and Decorating
1521	General Contractors—Single-Family Houses	1721	Painting, Paper Hanging, and Decorating
1522	General Contractors—Residential Buildings, Other Than Single-Family	173	Electrical Work
153	Operative Builders	1731	Electrical Work
1531	Operative Builders	174	Masonry, Stonework, Tile Setting, and Plastering
154	General Building Contractors—Nonresidential Buildings	1741	Masonry, Stone Setting, and Other Stonework
1541	General Contractors—Industrial Buildings and Warehouses	1742	Plastering, Drywall, Acoustical, and Insulation Work
1542	General Contractors—Nonresidential Buildings, Other Than Industrial Buildings and Warehouses	1743	Terrazzo, Tile, Marble, and Mosaic Work
16	CONSTRUCTION OTHER THAN BUILDING CONSTRUCTION—GENERAL CONTRACTORS	175	Carpentering and Flooring
161	Highway and Street Construction, Except Elevated Highways	1751	Carpentering
1611	Highway and Street Construction, Except Elevated Highways	1752	Floor Laying and Other Floorwork, Not Elsewhere Classified
162	Heavy Construction, Except Highway and Street Construction	176	Roofing and Sheet Metal Work
1622	Bridge, Tunnel, and Elevated Highway Construction	1761	Roofing and Sheet Metal Work
1623	Water, Sewer, Pipe Line, Communication and Power Line Construction	177	Concrete Work
1629	Heavy Construction, Not Elsewhere Classified	1771	Concrete Work
17	CONSTRUCTION—SPECIAL TRADE CONTRACTORS	178	Water Well Drilling
171	Plumbing, Heating (Except Electric), and Air Conditioning	1781	Water Well Drilling
1711	Plumbing, Heating (Except Electric), and Air Conditioning	179	Miscellaneous Special Trade Contractors
		1791	Structural Steel Erection
		1793	Glass and Glazing Work
		1794	Excavating and Foundation Work
		1795	Wrecking and Demolition Work
		1796	Installation or Erection of Building Equipment, Not Elsewhere Classified
		1799	Special Trade Contractors, Not Elsewhere Classified
		Other Industries	
		6552	Subdividers and Developers, Except Cemeteries

APPENDIX C. Instructions for Respondents and Census Report Form

I. GENERAL INSTRUCTIONS

INTRODUCTORY NOTE

Modern electronic processing methods require that the Bureau of the Census use identification numbers to identify all report forms and all related correspondence. The Census Bureau 11-digit Census file number assigned to your report is clearly indicated at the left side of the top line of information imprinted in the name and address box of the questionnaire. Please copy this Census file number to your file copy of the questionnaire. If you write to the Census Bureau regarding this report, please use this Census file number.

WHO SHOULD REPORT?

Every concern which receives a form is required to submit a separate report for each of its "construction establishments" in the United States, including Alaska and Hawaii. Do not include foreign construction activities.

For the purposes of this report, a "construction establishment" is defined as a relatively permanent office, or other place of business, at which or from which the usual business activities related to construction are conducted. (With the exceptions indicated below, a relatively permanent office is one which has been established for the management of more than a single project or job and which is expected to be maintained on a continuing basis.) Such "establishment" activities include (but are not limited to) estimating, bidding, scheduling, purchasing, supervision, and operation of the actual construction work being conducted at one or more construction sites.

Separate construction reports are **not** required for each project or construction site. Information on these projects and sites should be **included**, however, in the report of the construction establishment responsible for the work at these construction projects and sites. The report should also **include** information on the construction establishment's operations at temporary locations or facilities established specifically to meet the demands of such construction work.

There are two exceptions to the above general rule:

1. In case of construction joint ventures, a separate establishment report is required covering the joint venture entity even though established to undertake only a given project.
2. To the extent that separate legal entities are set up to carry out only a given project or part of a project, then separate establishment reports are also required for each legal entity.

Concerns with more than one construction establishment must submit a separate report for each such establishment operated during all or any part of 1972. Do not combine reports for two or more establishments. If you have not received a sufficient number of forms to cover each of the construction establishments of this concern, please request additional copies by

writing to the Economic Census Operations Branch, Bureau of the Census, 1201 East Tenth Street, Jeffersonville, Indiana 47130.

If a concern is engaged in two or more distinctly different lines of economic activity (wholesale or retail trade, service, manufacturing, construction, mining, etc.) at the **same** place of business, it should also request and file a separate report appropriate for each such activity, provided separate records are maintained or substantially accurate estimates can be prepared for these separate activities.

If a separate establishment report cannot be prepared for each such activity, then a construction report should be filed covering all activities of that establishment, provided the 1972 gross receipts from construction activities **exceeded** the gross receipts from each of its other activities.

If the 1972 gross receipts from construction activities do not exceed the gross receipts from each of its other activities, then appropriate entries should be made in items 1A through 1G, 3, 8, 9A, 9B, and 14 of the construction report and the questionnaire returned.

As indicated above, a separate report should be filed by each business concern for each of its construction establishments. To the extent that several companies (i.e., sole proprietorships, partnerships, corporations, syndicates, cooperatives, etc.) share or operate out of a single office or place of business, each such legal entity engaged in construction should be considered, for the purposes of this report, as a separate firm and each should file the necessary "establishment" report covering its own activities which it conducts in or from that common office.

Examples of construction establishments are:

1. The office or branch office of a construction contractor or builder. (In some cases the "office" may actually be in the home of the contractor or builder.)
2. The office or shop of a special trade contractor. (Contractors specializing in activities such as plumbing, painting, carpentering, etc.)
3. A construction division or subsidiary of a manufacturing, mining, or business firm which undertakes construction for others. (Even if the division or subsidiary only undertakes construction for the parent firm, it should be considered a construction establishment.)
4. A store or shop engaged in retail or wholesale trade, service or manufacturing, and **also** engaged in construction which meets either one of the following tests:
 - a. The store or shop can file a separate report for its construction activity.
 - b. The store or shop cannot file a separate report for its construction activity, but gross receipts from construction exceed the gross receipts from each of its other activities.

APPENDIX C—Continued

5. A separate legal entity which has been established for the purposes of undertaking a large construction project as a joint venture.

6. A real estate office or an architectural and/or engineering office that also undertakes construction and which meets either one of the following tests:

- a. The office can file a separate report for its construction activity.
- b. The office cannot file a separate report for its construction activity, but gross receipts from construction exceed the gross receipts from each of its other activities.

IS THE REPORT REQUIRED?

Response to this inquiry is required by law (Title 13 U.S. Code). By the same law, your report to the Census Bureau is confidential. It may be seen only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.

For the purposes of this report you may use any system of accounting under which you maintain your books, such as the cash, accrual, or completion of contract methods. You may estimate or prorate if book records are not readily available.

WHAT IS CONSTRUCTION?

Construction is composed of two broad categories of activities: (1) New construction and (2) Maintenance and repairs. "New construction" is defined to include the complete, original erection of structures and essential service facilities, as well as additions and alterations. Additions and alterations include such construction as the addition of a wing, a story or stories, conversion of space to other uses where structural changes are involved, or the initial installation of integral building services equipment in existing structures (e.g., elevators, escalators, or central air-conditioning systems). "Maintenance and repairs" relates to the restoration of existing buildings or other structures or their related service facilities, including replacement of integral parts. Repainting, repapering, reroofing, redredging, railroad maintenance-of-way, and street and highway patching and minor resurfacing are included.

Construction covers the erection, maintenance and repair of immobile structures (together with service facilities which become integral parts of structures and are essential to their use); the physical development of land for purposes other than agriculture; and demolition of existing structures.

Construction does not include shipbuilding or other mobile structures such as trailers, mobile homes and

floating drydocks. Also excluded from construction are those operations associated with extraction of minerals (drilling oil and gas wells, sinking mine shafts, stripping overburden, tunneling and shoring mines, open-pit mining, and activity primarily devoted to the production of sand, gravel and other minerals by dredging) and closely related support activities on mineral properties (erecting, repairing, and dismantling of drilling rigs; building of well foundations; excavating slush pits; cementing wells) except for the building of mineral preparation plants. Work which is an integral part of farming operations (such as, plowing, terracing, and the digging of drainage ditches) is also excluded from construction.

"Structures" are defined broadly to include — in addition to buildings — such works as highways and streets, dams, silos and water towers; electric light and power transmission and distribution lines; petroleum and gas pipelines and distribution lines; radio, television, and radar towers; water supply lines and sewers; and all similar work which is built into or affixed to the land.

Construction also covers those types of service facilities which, when installed, become an integral part of the structure and are necessary to the use of the structure. These include such components as plumbing, heating and ventilation, central air-conditioning, electrical facilities, and elevators and escalators.

In general, construction does not include the furnishings and equipment designed to prepare the structure for a specific use. Examples of such equipment are steam tables in restaurants, pews in churches, lockers in school buildings, printing presses or stamping machines in industrial buildings and refrigerators in homes. The installation of such furnishings and equipment is, however, included in construction when performed by construction contractors. However, the erection of "processing equipment" in certain industries, where such equipment is largely fabricated on the site, is defined as construction. (For example, the towers, vats, and related piping at chemical plants and petroleum refineries, or the blast furnace complex at steel plants.)

Changes to structures involving exterior or interior walls, such as the erection of partitions in a loft building to convert it to offices or the remodeling of a store front, are considered construction.

The erection of scaffolding and/or forms for concrete work is considered construction.

Clearing and development of the site is a part of construction.

HOW TO REPORT IF NOT ENGAGED IN CONSTRUCTION ACTIVITIES

If you did not engage in construction activities during any part of 1972, you should complete items 1A through 1G, 3, 8, 9A, 9B, and 14.

APPENDIX C—Continued

HOW TO REPORT FOR ESTABLISHMENTS NOT IN OPERATION DURING THE YEAR 1972

If any of your company's construction establishments were not in operation at all during the year, you should return the report for each such establishment with the proper entries in item 1E, "Changes in ownership or organization of this establishment during 1972." If a construction establishment was not operating, but had paid employees or obtained business receipts during the year, the information should be reported in the appropriate items of the report form.

WHAT PERIOD SHOULD EACH REPORT COVER?

Each report should cover the calendar year 1972. If your book records are not on a calendar year basis, carefully prepared estimates will be acceptable. If reporting on a calendar year basis will involve considerable additional costs, and your fiscal year covers at least ten months of the calendar year (i.e., ends between October 31, 1972, and February 28, 1973), you may report on a fiscal year basis. However, all employment and payroll figures should relate to the calendar year rather than the fiscal year. (These calendar year payroll records should be available from your tax records.)

In the certification (item 14), the dates should show the exact period which the report covers. Thus, if an establishment began to operate or ceased to operate within the year, the dates should span only that part of the year during which the establishment was in operation. If the ownership changed during the year, complete the report only for that part of the year in which your company owned or operated the establishment.

WHAT ACTIVITIES SHOULD BE REPORTED?

Each report should cover all the activities conducted by the establishment. This includes maintenance and repair work as well as new construction. The reported figures should also include activities such as rental

of construction equipment, retail and wholesale sales, equipment maintenance, storage, research, record keeping, health, safety, cafeteria, and other services, but only when carried on by the construction establishment. The construction establishment reports should exclude sales branches, sales offices, research laboratories, retail stores, manufacturing and mining activities, and general administrative offices, when these are operated as separate establishments.

Please note that establishments engaged in the activities listed on the questionnaire in item 9B (except those noted under "Business Activities Other Than Construction") are considered to be construction for the purposes of this report.

WHEN IS THE REPORT DUE?

This report form should be completed and returned before the due date indicated on the face of the report form. A self-addressed return envelope that requires no postage has been enclosed for your convenience. If filing by that date causes undue burden, a prompt request for extension should be directed to the E.C.O.B., Bureau of the Census, 1201 East Tenth St., Jeffersonville, Indiana 47130.

WHERE TO GET ADDITIONAL INFORMATION

If you have any question not answered by this instruction booklet or if you need additional information, write to the E.C.O.B., Bureau of the Census, 1201 East Tenth Street, Jeffersonville, Indiana 47130. On all correspondence, be sure to include the 11-digit Census file number imprinted on the report form.

FILE COPY

Please fill in your file copy (including the 11-digit Census file number imprinted on the original) and keep it in your files for reference. If we find it necessary to contact you again regarding the report, your file copy will help you answer our questions.

II. SPECIAL INSTRUCTIONS

CONSTRUCTION JOINT VENTURES AND JOINT VENTURE ACTIVITY

For the purpose of this report a construction joint venture is a legal entity (corporation, partnership, etc.) established by two or more firms (at least one of which is a construction firm) who join together for the purpose of undertaking a specific construction project. Usually it permits such firms to pool their financing, their bonding capacity, their know-how and/or their equipment in the performance of a large or hazardous job.

In order to avoid possible duplication in the reporting of data relating to joint ventures, it is requested that the following rules be followed:

1. A separate report covering the joint venture entity should be filed by the "sponsor." If the joint venture had no "sponsor," responsibility for filing the separate "joint venture" construction report should be determined by the participating firms.

2. If the joint venture entity subcontracted out work to the "sponsoring" or "participating" firms (or to others) during 1972, the joint venture report should show this in the item related to the payments for construction work let out to other construction contractors (item 4A). The "sponsoring" or "participating" firms of the joint venture would indicate this work in their own establishment reports, if subcontracted to them, in their answers to the question on work undertaken by this establishment for other contractors (item 10E).

3. If during 1972 construction work was done for the joint venture entity on some pro rata or share basis by the "participating" firms (instead of on a formal subcontract basis), the separate report for joint venture entity should handle such "shared" work as construction work let out by this establishment to other construction contractors (item 4A). The separate establishment reports for the "sponsoring" and

APPENDIX C—Continued

“participating” firms should include their shares of such work in their replies to the question on work done by this establishment for other contractors (item 10E).

4. Fees received by the sponsors for the management of joint ventures should be considered construction receipts and included as such in the sponsor's own report.

5. Except as indicated in 2, 3, and 4 above, the “sponsor” of and the “participating” firms in a joint venture should exclude joint venture operations from their own “construction establishment” reports.

6. The joint venture item in the identification section (item 1F) of the questionnaire should be completed by all establishments sponsoring, or operating as a joint venture entity.

7. The separate establishment report of the joint venture entity and the separate establishment reports of the sponsoring or participating firms should, of course, contain appropriate replies to all other items on the questionnaire.

SALES AND INSTALLATION OF SELECTED ITEMS

A construction establishment report is required from establishments which engage in the **sales and installation** of such items as plumbing, heating, and central air-conditioning supplies and equipment; lumber and building materials; paint, glass and wallpaper; and electrical and wiring supplies for construction purposes—if all or the major portion of their 1972 sales were limited to the above items and such sales included installation.

III. DETAILED INSTRUCTIONS — ITEMS ON THE REPORT FORM

► Item 1. IDENTIFICATION INFORMATION

(See instructions on report form.)

► Item 2. NUMBER OF EMPLOYEES

(See instructions on report form.) Report employees on the payroll for the pay periods including the 12th of March, May, August, and November 1972. Include all those on paid sick leave, paid holidays, and paid vacations. **INCLUDE** salaried officers and executives, if a corporation. **DO NOT INCLUDE** proprietors and partners, if an unincorporated business. This definition is the same as used in completing Employer's Quarterly Federal Tax Return, Treasury Form 941.

Be sure also to complete columns e and f. Always divide the total (column e) by “4” even though there may not be any employees reported for a particular pay period.

► Item 3. PAYROLLS

Report total wages, salaries, bonuses, commissions, fees, and other remuneration paid to your employees during 1972, **before** deductions such as employee's social security contributions, withholding taxes, group insurance premiums, union dues, and savings bonds. **INCLUDE** salaries of officers, if a corporation.

Also, **INCLUDE** such items as dismissal pay, vacation and sick leave pay, the cash equivalent of payments in kind (such as goods, lodging, food, and clothing). **DO NOT** include payments to, or withdrawals by, proprietors or partners of an unincorporated business. This definition is the same as used in completing Employer's Quarterly Federal Tax Return, Treasury Form 941.

► Item 4. PAYMENTS MADE BY THIS ESTABLISHMENT DURING 1972 FOR MATERIALS PURCHASED AND FOR CONSTRUCTION WORK LET OUT TO OTHERS

See items 4A and 4B in next column.

Item 4A. Payments for construction work let out by this establishment to other construction contractors — Include all payments made during 1972 for construction work let out to other construction contractors. General contractors should include payments to subcontractors. Builders should include payments made to general contractors and also payments made directly to subcontractors. Special trade contractors should include payments to subcontractors. **Note:** For the purpose of this report the payments made by **this establishment for its purchases of materials, components, and supplies** should not be included here in item 4A even if the materials were provided to a subcontractor for his use.

This establishment's purchases of materials, components, and supplies should be reported in item 4B. However, if payments to subcontractors covered materials **purchased directly by the subcontractors**, then the total of such payments (including material charges) should be reported here in item 4A.

If this establishment let out a subcontract covering the labor and the materials but required the subcontractor in turn to purchase such materials from this establishment, then the total payments (including the material charges) should be reported here in item 4A. In addition, this establishment report should include in item 8C the value of such materials sold to the subcontractor. Appropriate entries should also be made in item 9.

If it is the practice — in the areas where this establishment is engaging in new construction work — for the State, local governments, or their special authorities or utility companies to undertake the installation of certain utility services or the construction of roads for you and to then bill this establishment for such work, then payments in 1972 for such work should be included here in item 4A.

APPENDIX C—Continued

Do not include here payments made for the rental of construction machinery or equipment. Report these payments in item 5.

Item 4B. Payments for materials, components, and supplies — Enter the total payments made by this establishment during 1972 for its purchase of all materials, components, and supplies and fuels used for construction purposes. Supplies include expendable tools which are charged to current accounts. Payments should include freight and other direct charges incurred by this establishment in acquiring the materials, components, and supplies. Payments should, of course, represent only the amount paid after discounts. Payments should also include the value of materials, components, and supplies obtained from other establishments of your company.

Include only physical goods. Exclude services used or overhead charges. Exclude cost of such services as advertising, telephone, telegram and cable, insurance, developmental and research services of engineering, management, marketing and other professional consultants, etc., unless charges for such services are included in the prices paid for materials. Exclude also from item 4 such overhead items as depreciation charges against plant and equipment, rent and rental allowances, interest payments, royalties, and patent fees.

Do not include payments for land or for the rental of construction machinery or equipment. Do not include payments for construction work let out by this establishment to other construction contractors.

Include payments for materials, supplies, and components used by this establishment in the construction for itself of new plants or equipment which is chargeable to this establishment's fixed assets accounts. Include payments for materials bought and resold to others. Include payments made for this establishment's direct purchases of materials, components, and supplies even though subsequently provided to subcontractors for their use.

▶ Item 5. PAYMENTS MADE FOR RENTING OR LEASING MACHINERY AND EQUIPMENT

Include all payments made by this establishment during 1972 for the renting or leasing of construction machinery and equipment, transportation equipment, production equipment, and office equipment, furniture and fixtures. (Include the rental or leasing of scaffolding.) Exclude payments for rental of land and buildings.

Do not include here payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized. Instead, such payments should be included in item 6, "Capital Expenditures". Do not include here in item 5 payments made under agreements which are in effect true subcontract construction arrangements. Such payments should be reported in item 4A. (Payments made to you for renting or leasing your machinery and equipment to others should be reported as a receipt in item 8C.)

▶ Item 6. CAPITAL EXPENDITURES (EXCLUDING LAND)

Capital expenditures refer to all costs actually incurred during 1972 which are or will be chargeable to the fixed assets accounts of your firm and which are of the type for which depreciation accounts are ordinarily maintained. These expenditures cover the acquisition, the construction, and the major alteration of this establishment's own buildings and other structures (whether purchased, constructed under contract, or constructed by this establishment's own forces) and the acquisition of machinery and equipment. Include payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.

Do not include any expenditures actually made prior to 1972 or after the end of 1972. For example, if construction of a building, for this establishment's own use, was begun before 1972 and is not completed until after 1972, only those costs which were actually incurred during 1972 should be reported here.

If your records do not show the exact information needed, please make careful estimates. If capital expenditures are not recorded directly at the establishment level but are handled centrally at the company or division level, please report appropriate estimates for the establishments.

Item 6A. New structures, additions, and related facilities — Report the total expenditures of this establishment during 1972 for new buildings and structures, for major additions and alterations of buildings and structures, and expenditures for other facilities for this establishment's use (such as roads, docks, tracks, parking lots, fences, etc.). Do not include expenditures for land. (Report expenditures for used buildings in item 6C.)

Item 6B. New machinery and new equipment — Enter expenditures for new machinery and new equipment. Also include capitalized repairs and improvements to used machinery and equipment. (Report expenditures for used machinery and equipment in item 6D.)

Item 6C. Used structures and related facilities acquired from others — Enter expenditures for used structures and related facilities acquired from others. (Capitalized repairs and improvements to such assets should be reported in item 6A.)

Item 6D. Used machinery and used equipment acquired from others — Report expenditures for used machinery and equipment acquired from others. (Capitalized repairs and improvements to such equipment should be reported in item 6B. Expenditures for new machinery and equipment should be reported in item 6B.)

▶ Item 7. TOTAL BUSINESS RECEIPTS DURING 1972

Report the total business receipts of this establishment during 1972. Include all receipts from general contracting, special trades contracting and subcontracting, land development and improvement work.

APPENDIX C—Continued

Include all receipts from the sales of land (not recorded as fixed assets of this establishment) and the sales of buildings built for sale. Do not include monies realized from the sale or other disposition of this establishment's fixed assets. Also include all other receipts from this establishment's business operations (rental of equipment, wholesale, or retail sales, etc.).

Money obtained during the year in the form of construction loans should not be treated as business receipts.

Exclude receipts from operations in foreign countries. Do not include nonoperating income; such as, interest, dividends, etc.

► Item 8. BUSINESS RECEIPTS DURING 1972 BY TYPE OF RECEIPT

Item 8A. Construction receipts – Report in this item all receipts during 1972 from general contracting, special trades contracting and subcontracting, and land developing and land improvement work. Include receipts for maintenance and repair construction work as well as for new construction.

Also include here as receipts the value of any construction work done by this establishment for itself. This figure should also be included in item 6.

Builders should include in this item their 1972 receipts from the sales of buildings and other structures built for sale (excluding from these receipts all value of the land – but including the value of any improvements this establishment made to the land). Builders, who when selling a new home or other building accept an existing one in trade, should include here in construction receipts the estimated value of the trade-in.

Also include in construction receipts fees received as sponsors of joint ventures and fees received as agents for owners (for construction work.)

Receipts for separately definable architectural and engineering work for others, consultants' fees, and receipts from the rental of equipment to others, should not be included here. (Such receipts should be included in item 8C.)

Establishments filing this report which engage in the sale and installation of such construction components as plumbing, heating, and central air-conditioning supplies and equipment; lumber and building materials; paint, glass and wallpaper; and electrical and wiring supplies for construction purposes – should include here in item 8A, as construction receipts, both the receipts for the installation and the receipts covering the selling price of the items installed. (Receipts covering the selling price of such items sold, but not installed by this establishment, should be reported in item 8C.)

Item 8B. Receipts from land – Include receipts from the sale of land held for sale or land sold in connection with the sale of houses and other structures. Exclude from these receipts, the value of any improvements this establishment made to the land prior to the sale. (The receipts covering these improvements should be reported in item 8A.)

Item 8C. Business receipts during 1972 from other than A and B above – Include all business receipts of this establishment not reported in either item 8A, "Construction Receipts," or item 8B, "Receipts from Land," but included in item 7, "Total Business Receipts." Other business receipts should include business receipts from retail and wholesale trade, rental of equipment, manufacturing, transportation, legal service, insurance, finance, rental of property and other real estate operations, and other nonconstruction activities. Consultants' fees as well as receipts for separately definable architectural and engineering work for others should be included here. If entries are made for this item, be sure also to make appropriate entries in item 9B under "Business Activities Other Than Construction."

Item 8D. Total – Enter the total obtained by adding the entries in items 8A, "Construction Receipts," and 8B, "Receipts from Land," and 8C, "Business Receipts during 1972 from other than A and B." This total should equal the entry in item 7, "Total Business Receipts."

► Item 9. KIND OF BUSINESS

(See instructions on report form.) If you make entries in item 9B, under "Business Activities Other than Construction," you should also make entries in item 8C.

► Item 10. CLASSIFICATIONS OF CONSTRUCTION WORK

Note: Items 10A, 10B, 10C, 10D, and 10E ask for different breakdowns, using estimated percentages, of the Construction Receipts figure reported on line 8A, "Construction Receipts."

Item 10A. Types of construction this establishment engaged in during 1972 – The purpose of this item is to obtain a breakdown (estimates are acceptable) by the type of construction work for the construction receipts figure reported in item 8A. Both new construction and maintenance and repair construction are included.

Special Instructions for Special Trade Contractors. (Establishments engaged in such activities as painting, electrical work, excavation and foundation work, carpentry, masonry, etc.)

The purpose of this item is to obtain a breakdown of the construction receipts in order to show the types of buildings, structures, or other facilities on which the work of this establishment was performed.

APPENDIX C—Continued

Ideally, each building, structure, or other facility should be classified in terms of its own function. For example, a restaurant building would be classified in the restaurant category whether it was designed as a commercial restaurant building or an auxiliary unit of an educational institution. However, it is recognized that complex projects consisting of two or more different types of buildings, structures, or other facilities are difficult to classify and that sufficient information is seldom available. Such complex projects may, therefore, be classified in accordance with the major function of the total complex.

If this establishment engaged in the type of construction listed for a line, enter your best approximation of the percent of the establishment's construction receipts accounted for in 1972 by such work.

The following additional descriptions are provided to clarify reporting:

BUILDING CONSTRUCTION

Single-family houses - Includes single-family homes, town houses, and row houses.

Multifamily residential buildings - Includes houses for two or more families, apartment houses, etc.

Other residential buildings - Includes hotels, motels, dormitories, nurses' homes, and other nonhousekeeping residential structures.

Industrial buildings and warehouses - Includes all industrial buildings and plants which are used to house the production, assembly and warehousing activities of those establishments. Commercial warehouses, cold storage plants, grain elevators and storage buildings are also to be included here. Please note that heavy industrial facilities such as blast furnaces, petroleum refineries, chemical complexes, etc., should not be included under this category (line 311) but should be reported under nonbuilding construction (line 352).

Office and bank buildings - Includes all buildings which are used primarily for office space or to house banks and other financial institutions. It also includes government administrative buildings.

Stores, restaurants, public garages and auto service stations - Includes all buildings which are intended for use primarily in the wholesale, retail, and service trades. For example, complete shopping centers, department stores, drug stores, restaurants, public garages and auto service stations are in this category.

Religious buildings - Includes all buildings which are intended for religious services and functions, such as churches, synagogues, convents, monasteries, and seminaries, etc.

Educational buildings - Includes all buildings which are used directly in the administrative and instructional activities of establishments furnishing formal academic or technical courses. These establishments include colleges and universities as well as elementary

and secondary schools, and correspondence, commercial and trade schools. Libraries, museums and art galleries, as well as laboratories which are not a part of a manufacturing establishment, are also included as educational.

Hospital and institutional buildings - Includes all buildings for establishments which are primarily engaged in providing hospital and institutional care, such as general, mental, or tuberculosis hospitals, clinics or infirmaries, and sanitariums, and such institutions as nursing homes, homes for the aged, orphanages, etc.

Amusement, social and recreational buildings - Includes buildings which are used primarily for entertainment, social, and recreational activities, such as sports arenas, theaters, music halls, golf and country club buildings, fraternal organization lodges, skating rinks, bowling alleys, and indoor swimming pools, etc.

Farm buildings - Includes nonresidential farm buildings such as barns, poultry houses, implement sheds, silos, etc.

Other nonresidential buildings - Includes buildings which are not classified elsewhere, such as fire stations, bus and air passenger terminals, and hangars, etc.

NONBUILDING CONSTRUCTION

Highways and streets - Includes streets, roads, alleys, sidewalks, curbs and gutters, and forest and park roads. Also includes new and extension of old culverts; right-of-way drainage, erosion control, lighting, highway signs and guard rails; and earthwork protective structures in connection with road improvements.

Outdoor swimming pools - Includes also wading pools, reflecting pools, etc.

Bridges and elevated highways - Includes elevated highways, viaducts, and bridges.

Tunnels - Includes highway, pedestrian, and railway tunnels but excludes subways.

Dam and reservoir construction - Includes all dams and reservoirs.

Marine construction - Includes dredging, underwater rock removal, breakwaters, navigational channels, dikes, jetties, locks, etc.

Harbor and port facility construction - Includes the construction of docks, piers, wharves, etc.

Conservation and development construction - Includes land reclamation, irrigation projects, drainage canals, levees, flood control projects, etc.

Power and communication transmission lines, towers, and related facilities - Includes telephone and telegraph lines, television and radio towers, electric light and power facilities, etc.

APPENDIX C—Continued

Power plants – Includes electric generating plants, atomic energy plants, nuclear reactors, etc.

Sewers, water mains and related facilities – Includes sanitary and storm sewers, water supply systems, and related facilities.

Sewage treatment and water treatment plants.—Includes water filtration plants, disposal plants, water softening plants, etc.

Pipeline construction – Includes pipeline construction for the transmission of gas and petroleum products, liquid oxygen, etc.

Mass transit construction – Includes railroads, subways, elevated railways, etc.

Heavy industrial facilities – Includes blast furnaces, petroleum refineries, chemical complexes, mining appurtenances (such as tipples and washeries), etc.

Other heavy construction – Includes military and space facilities, etc.

Other types of construction work – Report on these lines any types of construction not covered by the above categories.

Item 10B. Location of construction work in 1972 – If all of the construction work of this establishment was undertaken within the State indicated by item 1B, i.e., actual physical location of this establishment as of December 31, 1972, then check the “yes” box in item 10B (1), and skip to item 10C. If, however, this establishment engaged in construction work in more than that one State, it will be necessary to enter the States in which the work was undertaken and your best estimate of the percent of construction receipts accounted for in 1972 by the work in each such State on the lines provided in item 10B (2). (If more space is required, use another sheet of paper and attach it to this report.)

Construction projects which involve more than one State, such as interstate bridges, should be prorated among the States involved using whatever system you prefer.

Item 10C. Ownership of construction projects – The purpose of this item is to obtain a breakdown (estimates are acceptable) of this establishment’s construction receipts during 1972 between public construction and private construction. Thus, this question relates to the **ownership** of the projects or work undertaken and not to the financing. Public construction includes projects owned by the Federal, State, or local governments including public authorities and special districts.

Item 10D. Class of construction – The purpose of this item is to obtain a breakdown (estimates are acceptable) of this establishment’s construction receipts during 1972 between new construction and maintenance and repair work.

New construction is defined to include the complete, original erection of structures and essential service facilities, as well as additions and alterations. Additions and alterations include such construction as the addition of a wing, a story or stories, conversion of space to other uses where structural changes are involved, or the initial installation of integral building service equipment in existing structures (e.g., elevators, escalators or air-conditioning systems).

Maintenance and repair work relates to the restoration of existing buildings or other structures or their related service facilities, including replacement of integral parts. Repainting, repapering, reroofing, redredging, railroad maintenance-of-way, and street and highway patching and minor resurfacing are included.

Item 10E. Work undertaken by this establishment for other construction contractors or for builders – If this establishment did not obtain receipts during 1972 for work done for other construction contractors or for builders, merely check the “no” box and skip to item 11.

If receipts were obtained during 1972 for work done for other contractors or builders, it will be necessary also to indicate the approximate percent of this establishment’s total construction receipts accounted for by such work.

► **Item 11. FIXED ASSETS AND DEPRECIATION** Include all fixed tangible assets of this establishment such as buildings and other structures (offices, garages, shops, warehouses, etc.); stationary machinery (generators, building hoists, shop equipment, etc.); mobile machinery (tractors, trucks, cranes, draglines, mixers, etc.); and other equipment (office furniture, fixtures, etc.). Be sure to include capital expenditures made during 1972 (as reported in item 6E).

Do not include such items as current assets (cash, accounts receivable, etc.); depletable assets (land, timber, mineral rights, etc.); intangible assets (copyrights, patents, etc.); non-depreciable assets (inventories, etc.); and assets which have been sold, scrapped, or otherwise destroyed during 1972.

If depreciation data is not directly available from the books at the establishment level you may, for the purposes of this report, estimate it using your company’s total depreciation/asset ratio or any other reasonable method.

APPENDIX C—Continued

▶ **Item 12. CHECKS TO ASSURE A COMPLETE AND ACCURATE REPORT**

The Census Bureau reviews your report for omissions, inconsistencies, and unusual entries. It is, therefore, suggested that this report be checked for omissions or inconsistencies prior to returning it to the Census Bureau. Follow the recommended checks in items 12A, 12B and 12C.

If the answer to item 12C is "No," please review the entries for reasonableness and revise them if in error. If the entries are correct, please confirm this in the "Explanation section," item 13.

▶ **Item 13. EXPLANATION SECTION**

Additional comments or explanations that may be helpful in understanding this report should be made in this section.

▶ **Item 14. CERTIFICATION**

Be sure to make the required entries in this item. Enter the month and day of the beginning and end of year this report covers. If a calendar year report: "From January 1, 1972 to December 31, 1972." If a fiscal year, specify which; such as, "From November 1, 1971 to October 31, 1972."

APPENDIX C-Continued

PENALTY FOR FAILURE TO REPORT

DUPLICATE DATE: FEBRUARY 15, 1973

Form Approved: O.M.B. No. 41-571119

FORM CC-1 (1010)	U.S. DEPARTMENT OF COMMERCE SOCIAL AND ECONOMIC STATISTICS ADMIN. BUREAU OF THE CENSUS	NOTICE - Response to this inquiry is required by law (Title 13, U.S. Code). By the same law, your report to the Census Bureau is confidential. It may be used only by sworn Census employees and may be used only for statistical purposes. The law also provides that copies retained in your files are immune from legal process.																								
1972 CENSUS OF THE CONSTRUCTION INDUSTRIES		In correspondence pertaining to this report, please refer to this Census File Number CC-1																								
Please return this form by February 15, 1973, TO		BUREAU OF THE CENSUS 1201 East Tenth Street Jeffersonville, Indiana 47130																								
PLEASE READ INSTRUCTION MANUAL AND INSTRUCTIONS ACCOMPANYING EACH ITEM BEFORE COMPLETING																										
If book figures are not available, carefully prepared estimates are acceptable. Complete every item. If filing by due date causes an undue burden, a request for an extension of time should be sent to the above address. Please mention the 11-digit Census File Number in the upper left of the address box if you write regarding this report. A separate Census report should be submitted for each of your "construction establishments" which operated during any part of 1972. A "construction establishment" is defined as a relatively permanent office or other place of business, at which or from which the usual business activities related to construction are conducted. Separate reports are not required for each project site. Information on individual projects should be included in the report for the "establishment" responsible for the project. Write for additional report forms if needed. The report should only cover domestic operations (the 50 States and the District of Columbia).																										
Please correct errors in name, address and ZIP code. ENTER street and number if not shown.

APPENDIX C—Continued

ITEM 2 NUMBER OF EMPLOYEES						
Report all paid employees (permanent and temporary, full-time and part-time) on the payroll of this establishment during the pay periods shown below. Be sure to include those on paid sick leave, paid holidays, and paid vacations, as well as those actually working.			If a corporation, include salaried officers and executives of this establishment, if an unincorporated concern, exclude proprietors or partners. Do not include here your subcontractors and their employees.			
Type of employees	Number of employees of this establishment during the pay period including the 12th of				Sum of columns (a) to (d) (e)	Average number of employees (Divide entry in column (e) by "4") (f)
	March 1972 (a)	May 1972 (b)	August 1972 (c)	November 1972 (d)		
A. Construction Workers — (Such as painters, carpenters, plumbers, electricians, construction laborers, etc.) Include journeymen, mechanics, apprentices, equipment operators, laborers, truck drivers and helpers, and on-site record keepers and watchmen, and others engaged directly in construction operations and supervisors up through the working foreman level	101	102	103	104	105	106
B. All other employees — All other employees such as those engaged in the following activities: Executive, purchasing, accounting, personnel, professional and technical activities, routine office functions, and supervision above the working foreman level	107	108	109	110	111	112
C. TOTAL (Sum of lines A and B)	113	114	115	116	117	118

IMPORTANT — For items 3—8 below, please report dollar figures rounded to the nearest thousand dollars. However, if you prefer you may report to the nearest dollar. In either case, please be careful to enter your figures in the correct column. SEE EXAMPLE — If the value is less than \$1,000, report the actual amount in the dollars column. Be sure to complete every item. Enter "0" if there is no dollar entry for an item.	EXAMPLE If the payroll is \$1,125,628: PREFERRED method → Acceptable method →	Mil- lions 000	Thou- sands 126	Dol- lars 628
--	--	----------------------	-----------------------	---------------------

ITEM 3 PAYROLLS				
Report the gross earnings paid in calendar year 1972 to employees of this establishment prior to such deductions as employee's Social Security contributions, withholding taxes, group insurance premiums, union dues and savings bonds. Include in gross earnings all wages, salaries, commissions, dismissal pay, paid bonuses, vacation and sick-leave pay, and the cash equivalent of compensation paid in kind. If a corporation, include salaries of officers of this establishment; if an unincorporated concern, exclude payments to proprietors or partners.				
	Key	Mil- lions	Thou- sands	Dol- lars
A. Construction workers (See definition in item 2A)	121	\$		
B. All other employees (See definition in item 2B)	122	\$		
C. TOTAL PAYROLL IN 1972 (Sum of lines A and B)	123	\$		

ITEM 4 PAYMENTS MADE BY THIS ESTABLISHMENT DURING 1972 FOR MATERIALS PURCHASED AND FOR CONSTRUCTION WORK LET OUT TO OTHERS				
A. Payments for construction work let out by this establishment to other construction contractors Enter payments made during 1972 for such contracting, including payments made to both subcontractors and general contractors. (Do NOT include here payments made by this establishment for its purchases of materials, components, and supplies. Report these payments in B below. Also do NOT include here payments made for the rental of construction machinery or equipment. Report these payments in item 5 below.)				
B. Payments for materials, components, and supplies Enter the total payments made by this establishment during 1972 for its purchases of all materials, components, and supplies. (Do NOT include payments for subcontract construction let out to others and already reported in item 4A above. Do NOT include payments for the rental of construction machinery or equipment; report these payments in item 5 below. Also do NOT include payments for land.)				
	Key	Mil- lions	Thou- sands	Dol- lars
124	\$			
125	\$			
C. TOTAL (Sum of lines A and B)	126	\$		

ITEM 5 PAYMENTS MADE FOR RENTING OR LEASING MACHINERY AND EQUIPMENT				
Enter the total payments made by this establishment during 1972 for the rental or lease of construction machinery and equipment, transportation equipment, production equipment, and office equipment, furniture and fixtures. (Do NOT include payments for subcontract work. Do NOT include payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.)				
	Key	Mil- lions	Thou- sands	Dol- lars
127	\$			

ITEM 6 CAPITAL EXPENDITURES (Exclude land)				
Report on lines A to E below all capital expenditures of this establishment during 1972. (Capital expenditures include all costs which are chargeable to the fixed assets accounts of this establishment and for which depreciation accounts are ordinarily maintained. Include here also payments made under agreements which the Internal Revenue Service regulations consider conditional sales contracts and which as a result are capitalized.) If you did not make any expenditure of the kind described, enter "0" on line E.				
	Key	Mil- lions	Thou- sands	Dol- lars
A. New structures, additions, and related facilities	128	\$		
B. New machinery and new equipment	129	\$		
C. Used structures and related facilities acquired from others	130	\$		
D. Used machinery and used equipment acquired from others	131	\$		
E. TOTAL (Sum of lines A, B, C and D)	132	\$		

ITEM 7 TOTAL BUSINESS RECEIPTS DURING 1972				
Report the total business receipts of this establishment during 1972. Report all sales and other receipts from this establishment's business operations. (Do NOT include nonoperating income; such as interest, dividends, etc.)				
	Key	Mil- lions	Thou- sands	Dol- lars
133	\$			

ITEM 8 BUSINESS RECEIPTS DURING 1972, BY TYPE OF RECEIPT				
A. Construction receipts — Of the amount reported in item 7, approximately how much represents receipts during 1972 from construction activities? (Include receipts from both new construction and from maintenance and repair work.) Include all construction receipts from general contracting, special trades contracting, land development and land improvement work. Also include receipts from the sales of buildings and other structures built for sale (exclude from these receipts all value of the land but include the value of any improvements this establishment made to the land). Be sure to include the value of any construction work done by this establishment for itself. (Exclude receipts for architectural and engineering work and exclude receipts from the rental of equipment to others.)				
	Key	Mil- lions	Thou- sands	Dol- lars
134	\$			
B. Receipts from land — Of the amount reported in item 7, approximately how much represented receipts during 1972 from land sales? (Exclude the value of improvements and land development reported in A above)	135	\$		
C. Business receipts during 1972 from other than A and B above Include the business receipts of this establishment which were obtained from other activities such as architectural and engineering work, retail and wholesale trade, rental of equipment to others, manufacturing, transportation, legal service, insurance, finance, rental of property or other real estate operations, and other nonconstruction activities not included in A and B above.	136	\$		
D. TOTAL (Sum of lines A, B, and C) (This total should be the same as the amount reported in item 7 above.)	137	\$		

APPENDIX C—Continued

Page 3

Census File Number
(Please enter from address box on page 1)

ITEM 9 KIND OF BUSINESS

A. Describe the kind of business activities this establishment (identified in item 1B) was engaged in during 1972.

B. Review all following descriptions. Place a "1" on the line next to the description which indicates this establishment's most important kind of business (based on total business receipts) in 1972. If this establishment engaged in other kinds of business during 1972, place a "2" on the line next to the second most important kind. Place a "3" next to the third most important kind of business. Then place an "X" mark next to all other descriptions that describe other kinds of business engaged in by this establishment during 1972.

BUILDING CONSTRUCTION:

AS A GENERAL CONTRACTOR (building on the land of others)

201 _____ General Building Contractor (general contractor engaged in the construction of residential, industrial, commercial, educational, religious, institutional and other buildings.)

AS AN OPERATIVE, MERCHANT, OR INVESTMENT BUILDER (building on own land for sale, lease, or rental)

202 _____ Operative or Merchant Builder (for sale to others)

203 _____ Investment Builder (for lease or rental to others)

HEAVY OR ENGINEERING CONSTRUCTION AS A GENERAL CONTRACTOR:

204 _____ Highway and Street Contractor - Excluding Elevated Highways (general contractor engaged in construction of highways and streets, parking areas, airports, light construction work for water and sewer projects incidental to street construction, and work closely related to highway and street construction such as installation of guard rails, and highway signs.)

205 _____ Other Heavy Construction Contractor (general contractor engaged in construction of bridges, tunnels; elevated highways; dams; marine construction; on site construction of industrial furnaces and appurtenances; utility construction such as heavy construction water and sewer lines, pipelines, communication and power lines; and other heavy construction)

SPECIAL TRADE CONTRACTOR:

NOTE: General Contractors who incidentally perform some of these trades under their general contract should NOT make entries in these boxes unless they also accepted this work as SPECIAL TRADE CONTRACTORS in 1972.

206 _____ Acoustical contractor

207 _____ Air conditioning contractor

208 _____ Carpentry contractor

209 _____ Concrete contractor

210 _____ Dry wall contractor

211 _____ Electrical contractor

212 _____ Elevator and escalator contractor

213 _____ Excavation and grading contractor

214 _____ Fence construction contractor

215 _____ Floor covering and floor laying (except wood) contractor

216 _____ Flooring (wood) contractor

217 _____ Foundation contractor

218 _____ Glass and glazing contractor

219 _____ Heating contractor (except electric)

220 _____ Heating contractor, electric

221 _____ Insulation contractor

222 _____ Lathing and/or plastering contractor

223 _____ Masonry and/or stone setting contractor

224 _____ Millwright (installing and/or dismantling industrial machinery and equipment)

225 _____ Ornamental metal work contractor

226 _____ Painting, paperhanging contractor

227 _____ Paving contractor

228 _____ Plumbing contractor

229 _____ Refrigeration contractor

230 _____ Residential remodeling contractor

231 _____ Roofing contractor

232 _____ Sheet metal contractor

233 _____ Siding contractor and/or applicator

234 _____ Structural steel erection contractor

235 _____ Swimming pool construction contractor

236 _____ Terrazzo, ceramic tile, marble, and mosaic contractor

237 _____ Water well drilling contractor

238 _____ Waterproofing, fireproofing, dampproofing contractor

239 _____ Wrecking and demolition contractor

240 _____ Other - Specify _____

LAND DEVELOPER:

241 _____ Developer of own land for sale to others

242 _____ Developer of land owned by others

BUSINESS ACTIVITIES OTHER THAN CONSTRUCTION UNOBTAINED BY THIS SAME ESTABLISHMENT:

243 _____ Architectural or engineering services for others

244 _____ Finance or mortgage banking

245 _____ Insurance

246 _____ Legal service

247 _____ Manufacturing - Specify kind _____

248 _____ Real estate

249 _____ Rental of construction equipment to others

250 _____ Retail trade - Specify kind _____

251 _____ Transportation

252 _____ Wholesale trade - Specify kind _____

253 _____ Other - Specify kind _____

ITEM 10 CLASSIFICATIONS OF CONSTRUCTION WORK

NOTE: Items 10A, B, C, D, and E each asks for an estimated percentage breakdown of the Construction Receipts figure reported on line A, item 8. (Construction Receipts include receipts from both new construction and from maintenance and repair work.)

A. Types of construction this establishment engaged in during 1972.

The purpose of this item is to obtain a breakdown of the construction receipts in order to show the types of buildings, structures, or other facilities on which the work of this establishment was undertaken.

On each of the lines below, enter your best estimate of the percent of this establishment's total construction receipts which were accounted for in 1972 by types of construction listed.

Be sure to read instructions for item 10A on page 6 in the instruction booklet before completing this item.

EXAMPLE FOR REPORTING PERCENTS	If figure is 38.76%: Report WHOLE percents NOT	Percent → 39 % 38.76 %
Type of construction	Key	Percent of total construction receipts
Building construction		
Single-family houses (include row or town houses)	301	%
Multifamily residential buildings (containing 2 or more housing units) including apartment houses	302	%
Other residential buildings (hotels, motels, and dormitories)	303	%
Industrial buildings and warehouses	311	%
Office and bank buildings	312	%
Stores, restaurants, public garages, and auto service stations	313	%
Religious buildings	314	%
Educational buildings	315	%
Hospital and institutional buildings	316	%
Amusement, social, and recreational buildings	317	%
Farm buildings (nonresidential)	318	%
Other nonresidential buildings - Specify →		
	319	%
Nonbuilding construction		
Highways and streets (including work closely related to highway and street construction such as installation of guard rails, highway signs, etc.)	331	%
Outdoor swimming pools	332	%
Bridges and elevated highways	341	%
Tunnels (highway, pedestrian and railway, except subway)	340	%
Dam and reservoir construction	342	%
Marine construction (dredging, underwater rock removal, breakwaters, navigational channels, locks, dikes, jetties, etc.)	343	%
Harbor and port facility construction (docks, piers, wharves, etc.)	344	%
Conservation and development construction (land reclamation, irrigation projects, drainage canals, levees, and flood control projects, etc.)	345	%
Power and communication transmission lines, towers, and related facilities	346	%
Power plants	354	%
Sewers, water mains, and related facilities	347	%
Sewage treatment and water treatment plants	355	%
Pipeline construction (gas, petroleum, etc.)	348	%
Mass transit construction (railroads, subways, elevated railways, etc.)	351	%
Heavy industrial facilities (blast furnaces, petroleum refineries, chemical complexes, etc.)	352	%
Other heavy construction - Specify →		
	353	%
Other types of construction work - Specify →		
	399	%
TOTAL CONSTRUCTION RECEIPTS		100 %

FORM CC-1

Continue with item 10 in next column

Continue with item 10B on page 4

APPENDIX C—Continued

ITEM 10 CLASSIFICATIONS OF CONSTRUCTION WORK (Continued)

B. Location of construction work in 1972
 (1) Was all of the construction work this establishment engaged in during 1972 located within the State indicated by item 1B on Page 1?
 1 Yes — SKIP to item 10C
 2 No

(2) Indicate each State in which this establishment engaged in construction work and enter your best estimate of the percent of construction receipts accounted for in 1972 by the work in each State.

State	Key	Percent	State	Key	Percent
	4	%		4	%
	4	%		4	%
	4	%		4	%
	4	%		4	%
TOTAL CONSTRUCTION RECEIPTS			100 %		

If more space is needed, please use item 13 or attach a separate sheet.

C. Ownership of construction projects (public or private)
 Indicate on the lines below your best estimate of the percent of this establishment's total construction receipts accounted for in 1972 by work on publicly owned projects and privately owned projects. (Public construction includes projects owned by Federal, State, or local governments — including public authorities and special districts.)

	Key	Percent
Public construction	501	%
Private construction	502	%
TOTAL CONSTRUCTION RECEIPTS		100 %

Continue with item 10D in next column.

D. Class of construction
 Indicate on the lines below your best estimate of the percent of this establishment's total construction receipts accounted for in 1972 by the following classes of construction:

	Key	Percent
New construction (including additions and alterations)	503	%
Maintenance and repair work	504	%
TOTAL CONSTRUCTION RECEIPTS		100 %

E. Work undertaken by this establishment for other construction contractors or for builders
 Did this establishment obtain receipts during 1972 for work undertaken for other contractors or builders?
 1 Yes — Approximately what percent of this establishment's total construction receipts was accounted for by such work?
 2 No

	Key	Percent
	505	%
	506	%

Continue with item 11 below.

ITEM 11 FIXED ASSETS AND DEPRECIATION

Report the Gross Book Value, Depreciation and Net Book Value of the fixed tangible assets of this establishment for which depreciation accounts ordinarily are maintained. Gross Book Value represents the acquisition cost (original cost or other basis) to your company of such depreciable assets. Used assets purchased or received from other establishments of your company should be included at their acquisition cost rather than original book value. Be sure to read instructions for item 11 on page 8 in the instruction booklet before completing this item.

ITEM	Structures, additions and related facilities (a)				Machinery and equipment (b)				TOTAL (Sum of columns (a) and (b)) (c)			
	Key	Millions	Thousands	Dollars	Key	Millions	Thousands	Dollars	Key	Millions	Thousands	Dollars
	A. Gross Book Value of depreciable assets at the end of 1972	601	\$			605	\$			609	\$	
B. Accumulated depreciation at the end of 1972	602	\$			606	\$			610	\$		
C. Net value of depreciable assets at the end of 1972 (Line A less Line B)	603	\$			607	\$			611	\$		
D. Depreciation charges during 1972 (Also included in Line B above)	604	\$			608	\$			612	\$		

ITEM 12 CHECKS TO ASSURE A COMPLETE AND ACCURATE REPORT

The Census Bureau reviews your report for omissions, inconsistencies, and unusual entries. To save both you and the Government costly correspondence about such problems, please make the following checks before returning your completed report.

A. Review the report carefully to see that you have not omitted answers to any items.

B. Do the reported percentages add to 100% in items 10A, 10B, 10C, and 10D?

C. Is the total for Business Receipts (item 7) greater than the sum of Payrolls (item 3C) plus Total Payments Made by this Establishment During 1972 for Materials Purchased and for Construction Work Let Out to Others (item 4C)?
 1 Yes SKIP to item 14 2 No Review those entries for reasonableness and revise them if in error. If entries are correct indicate this in item 13.

ITEM 13 EXPLANATION SECTION (Use this space for additional explanation regarding the data reported for this establishment.)

(If more space is required use another sheet of paper and attach it to this report. Be sure to include the 11-digit Census File Number shown in the address box on page 1)

ITEM 14 Name of person to contact regarding this report _____ Address (Number, street, city, State) _____ ZIP code _____ Telephone number _____
 Area code _____ Number _____ Ext. _____

CERTIFICATION This report is substantially accurate and covers the period from _____ to _____
 Signature of authorized person _____ Title _____ Date _____

APPENDIX D. Authority for Census: Title 13, United States Code

(Codification of August 1954 amended by Acts of August 1957, September 1960, and June and October 1962, and of August 1964)

Collection and publication:

Five-year periods (131)

The Secretary shall take, compile, and publish censuses of manufactures, of mineral industries, and of other businesses... in the year 1964, then in the year 1968, and every fifth year thereafter, and each such census shall relate to the year immediately preceding the taking thereof.

Geographic scope of censuses (191a)

Each of the censuses authorized by this chapter (other than censuses of population) shall include each State, the District of Columbia, Alaska, Hawaii, the Virgin Islands, Guam, and the Commonwealth of Puerto Rico, and as may be determined by the Secretary, such other possessions and areas over which the United States exercises jurisdiction, control, or sovereignty. Censuses of population shall include all geographic areas referred to in the preceding sentence. Inclusion of other areas over which the United States exercises jurisdiction or control shall be subject to the concurrence of the Secretary of State.

Wrongful disclosure of information (214)

Whoever, being an employee referred to in subchapter II of chapter 1 of this title, having taken and subscribed the oath of

office, publishes or communicates, without the written authority of the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, any information coming into his possession by reason of his employment under the provisions of this title, shall be fined not more than \$1,000 or imprisoned not more than two years, or both.

Failure to answer questions affecting companies, businesses, religious bodies, and other organizations: False answers (224)

Whoever, being the owner, official, agent, person in charge, or assistant to the person in charge, of any company, business, institution, establishment, religious body, or organization of any nature whatsoever, neglects or refuses, when requested by the Secretary or other authorized officer or employee of the Department of Commerce or bureau or agency thereof, whether such request be made by registered mail, by certified mail, by telegraph, by visiting representative, or by one or more of these methods, to answer completely and correctly to the best of his knowledge all questions relating to his company, business, institution, establishment, religious body, or other organization, or to records or statistics in his official custody, contained on any census or other schedule prepared and submitted to him under the authority of this title, shall be fined not more than \$500 or imprisoned not more than sixty days, or both; and if he willfully gives a false answer to any such questions, he shall be fined not more than \$10,000 or imprisoned not more than one year, or both.
