## PROPRIETOR'S PAGE

### OURS IS A "GROWING BUSINESS"

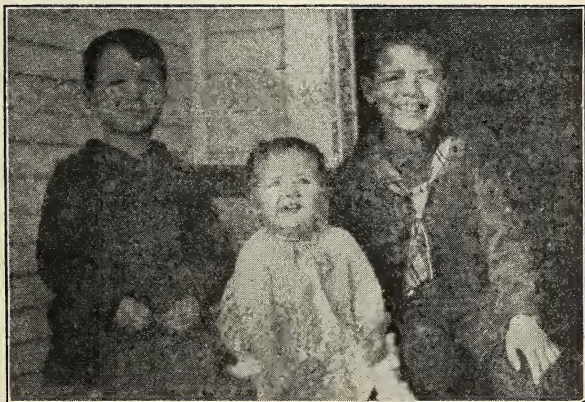

Each year more and more people in New England are learning that it is unnecessary, and often unwise, to send orders for nursery stock to distant places. In support of the claim that hundreds of home-owners, garden-lovers, farmers, fruit-growers, and others, are finding that here at The Granite State Nurseries, in the Heart of New England, they can get good nursery stock of all kinds in varieties adapted to this cold section, and also at reasonable prices, we submit the following figures.

In the year 1925 we filled over 300 more orders than in 1924; in the year 1926 over 200 more orders than in 1925; and in 1927 almost 500 more orders than in 1926; or a gain of over 1000 orders a year in three years. This is an indication to us that our business, like the stock we sell, is in a healthy condition.

In this connection, we wish to express our appreciation of the patronage and good-will of our many customers, and to thank them for the recommendations of our stock which many of them must have given their friends in order to make this phenomenal increase possible.

Each year we are more and more earnestly striving to be worthy of this confidence and patronage. We are fully conscious of the fact that your success is our success.

## FRUIT TREES

In the past two seasons several fruit growers who have bought their trees from us by the hundred have reported that their loss did not exceed one or two per cent. When you receive our trees we are sure that you will be well pleased with them, too. Cut them back well, set them out promptly, and properly, and you should have good success with them.

### STRAWBERRIES

Every garden and farm should raise a good supply for use fresh and for canning. They make a very wonderful sauce or preserve. Incidentally, they are a profitable crop to raise for market. In planting, choose well-prepared ground, free from witch grass, and set the plants with the crown or bud just at the surface of the ground. Set the plants 1 ft. apart, with the rows at least 3 ft. apart.

Our plants are what we call "Good-as-Grow" Brand. Order early and set as early as possible. Please specify if we may substitute, if sold out of any variety ordered.

## ASPARAGUS ROOTS

Every gardener and farmer should raise his own asparagus, even if all he has is a few plants in a row alongside the vegetable garden, out of the way of the plow, but where the wheel-harrow can be run over them in early spring. Asparagus should be set only on well-prepared ground which is free from witch grass. We still recommend spring-planting only, but should like to hear from anybody who has had success with Fall-planting. Upon request we will gladly mail more complete instruc-

tions on starting an Asparagus Bed.

The best variety of all is Mary Washington. Consequently we are raising only this variety. Why not plant the best and why not let us fill your order with fresh-dug roots at reasonable prices?

## HARDY GARDEN ROSES

For success with bush roses in New England, especially in the four northern states, our customers are urged to plant the Hybrid Perpetuals, unless they employ trained gardeners and are prepared to give the other classes complete winter protection. Consequently we confine our list to these more hardy varieties, with the exception of Gruss an Teplitz and Lady Hillingdon—two very good bloomers.

Choice 2 yr. Bushes, 75c each; 5 or more, 60c each.

Roses can be sent by Parcel Post. All 5c per bush.

places about houses, garages, and other buildings. Given a suitable trellis or wire on which to climb, they will furnish color and fragrance for many seasons.

2 yr. plants, 50c each, \$4.50 for any 10 (except as noted). Add 5c per bush if to be shipped by Parcel Post.

## CHOICE PEONIES

Everybody loves peonies. They are perfectly hardy and require no special care or protection. Use a little lime on the soil before planting, if convenient, to make sure it is sweet. Fertilize with wood ashes and sheep manure in the spring, and with bone meal after flowering.

On the basis of ten points as a perfect score, the American Peony Society, of which we are a member, rates all our varieties, except one, at over seven points, and most of them over eight points.

September is the best month for transplanting, but plants may also be moved with good results in the spring, if moved early.

Our plants are strong three to five eye divisions.

For Parcel Post add 5c for each root; 4c each when six or more are ordered.

## GLADIOLAS

Any good garden soil will raise good "Glads" if you plant good bulbs. Set the bulbs stem-end up, from three to five inches apart and four to six inches deep, covering them gradually as the tops come up through the soil (as in planting asparagus roots) Deep planting prevents the flowers from falling over and makes staking unnecessary. At least fifty days are required from planting to blooming. For a succession of blooms, do not plant all your bulbs at one time.

Experiments at Cornell show that best results are secured with gladiolas when the bulbs are procured not very far away—which is another good reason why you may well get your bulbs from us, here in the heart of New England.

In cutting blooms use a sharp knife and leave at least two or three leaves on the plant.

When the leaves turn brown in the fall, lift the bulbs, dry them in the sun, and after removing the old, shrivelled bulb, store in a cool dry place where they cannot freeze.

The following varieties are some of the most beautiful. They will delight the eye and gladden the heart of any flower-lover.—**Please Order Early.**

## JAPANESE IRIS

As garden-lovers are getting to know the Japanese Iris they are becoming very popular. This is deservedly so for they are truly beautiful. They should NOT be planted in low, damp places. While they like plenty of moisture in May and June, before blooming, they must have good winter-drainage.

## BEARDED IRISES

Commonly, though erroneously, called German Iris. These May-flowering, vigorous-growing plants thrive in well-drained sunny spots. See them in bloom and you will know at once why they are increasing in popularity each year. In planting, barely cover the roots, and mulch the first fall to prevent heaving.

Iris may be transplanted in the spring, in the summer or in the fall,—in short almost any time when the ground is not frozen.

Our stock of iris is large, and a visit to our nurseries at blossoming time will well repay any who like to see them in bloom. We shall be pleased to have you call.
